<th>No provision</th>
<th>Okla. Admin. Code § 380:30-1-2 (2012)</th>
<th>Oklahoma’s case law and the DOL set out several factors to be considered when determining whether an employee/employer relationship exists, including:</th>
</tr>
</thead>
</table>
|     |              | Department of Labor excludes business owners, volunteers, co-partners, and joint venturers from the definition of “employee” | (1) The nature of the contract between the parties.  
(2) The degree of control the employer may exercise on the details of the work.  
(3) Whether the one employed is engaged in a distinct occupation or business for others.  
(4) The kind of occupation with reference to whether in the locality the work is usually done under the direction of the employer.  
(5) The skill required in the particular occupation.  
(6) Whether the employer or the workman supplies the instrumentalities, tools and the place of work for the person doing the work.  
(7) The length of time for which the person is employed.  
(8) The method of payment.  
(9) Whether the work is part of the regular business of the employer.  
(10) Whether the parties believe they are creating the relationship of master and servant.  
(11) The right of either to terminate the relationship without liability.  

No one factor is controlling, and the court will look into the set of particular facts of each case.  
|     |              | Certain holders of professional licenses | (1) Free from direction and control over the means and manner of providing the services, subject only to the right of the person for whom the services are provided to specify the desired results.  
(2) Except as provided in subsection (4) of this section, is customarily engaged in an independently established business.  
(3) Is licensed under Oregon Revised Statutes Chp. 671 or 701 if the person provides services for which a licensed is required under those chapters.  
(4) Is responsible for obtaining other licenses or certificates necessary to provide services.  

This definition of independent contractor has been adopted into the worker’s compensation statute. Or. Rev. Stat. § 656.005 (2017)  
Oregon case law states that in determining whether a person is an independent contractor, the right to control is decisive. The principal factors in determining independent contractor status are:  
(1) The evidence of the right to or actual exercise of control.  
(2) The method of payment.  
(3) The furnishing of equipment.  
(4) The right to fire.

<td>No provision</td>
<td>TEX. INS. CODE ANN. §§ 406.091 to 406.098; 406.141 to 406.146; 406.161 to 406.165. Special coverage to members of certain industries, construction workers and farm and ranch employees. Texas’ workers’ compensation act defines an independent contractor as a person who contracts to perform work or provide a service for the benefit of another and who ordinarily: (1) Acts as the employer of any employee of the contractor by paying wages, directing activities, and performing other similar functions characteristic of an employer-employee relationship; (2) Is free to determine the manner in which the work or service is performed, including the hours of labor of or method of payment to any employee; (3) Is required to furnish or to have employees, if any, furnish necessary tools, supplies, or materials to perform the work or service. (4) Possesses the skills required for the specific work or service. The Texas courts will also consider the following factors when considering whether one is an independent contractor: the independent nature of the worker’s business; the worker’s obligation to furnish necessary tools, supplies and material to perform the job; the worker’s right to control progress of work; except as to final results; the time for which (s)he is employed; and method of payment, whether by time or by job. TEX. INS. CODE ANN. § 406.121 (1993); Industrial Indem. Exchange v. Southard, 138 Tex. 531 (1942); INA of Texas v. Torres, 808 S.W.2d 291 (1991).</td>

</tbody>
</table>
| State | Yes | Code | Under West Virginia’s worker’s compensation law, the burden of proving that an individual is an independent contractor is on the party asserting independent contractor status. The following factors are dispositive of whether a worker is an independent contractor:

1. Whether the individual holds himself or herself out to be in business for himself or herself, including whether he or she possesses a license, permit or other certification required to engage in the type of work the worker is performing; whether the individual enters into verbal or written contracts with the persons and/or entities for whom the work is being performed; and whether the individual has the right to regularly solicit business from different persons or entities to perform for compensation the type of work that is being performed.

2. Whether the individual has control over the time when the work is being performed.

3. The individual has control and discretion over the means and manner of the work being performed and in achieving the result of the work.

4. Unless expressly required by law, the individual is not required to work exclusively for the person or entity for whom the work is being performed.

5. If the use of equipment is required to perform the work, the individual provides most significant equipment required to perform the job.

The West Virginia courts will look at the following factors to determine if a worker is an employee or independent contractor: the right or lack of right to supervise work, the method of payment, who owns substantial equipment to be used on the job, who determines what hours are worked, and the nature and terms of the employment contract.

| State | Yes | No provision |

Wisconsin’s worker’s compensation law lists nine criteria, all of which must be met to be considered an independent contractor:

1. Maintains a separate business with his or her own office, equipment, materials and other facilities.

2. Holds or has applied for a federal employer identification number with the IRS or has filed business or self-employment income tax returns with the IRS based on that work or service in the previous year.

3. Operates under contracts to perform specific services or work for specific amounts of money and under which the independent contractor controls the means of performing the services or work.

4. Incurs the main expenses related to the service or work that he or she performs under contract.

5. Is responsible for the satisfactory completion of work or services that he or she contracts to perform and is liable for a failure to complete the work or service.

6. Receives compensation for work or service performed under a contract on a commission or per job or competitive-bid basis and not on any other basis.

7. May realize a profit or suffer a loss under contracts to perform work or service.

8. Has continuing or recurring business liabilities or obligations.

9. The success or failure of the independent contractor’s business depends on the relationship of business receipts to expenditures.

The presumption that a person injured while performing service for another is an employee rather than an independent contractor is rebuttable and ceases to have force or effect when evidence to the contrary is adduced.

WIS. STAT. ANN. § 102.07 (2016); J. Romberger Co. v. Industrial Commission, 234 Wis. 226, 229 (Wis. 1940).
<table>
<thead>
<tr>
<th>WY</th>
<th>No provision</th>
</tr>
</thead>
</table>

Wyoming’s workers’ compensation law defines independent contractor as “an individual who performs services for another individual or entity” and:

1. Is free from control or direction over the details of the performance of services by contract and by fact.
2. Represents his services to the public as a self-employed individual or an independent contractor.
3. May substitute another person to perform his services.

The Wyoming Supreme Court has defined an independent contractor as “one who, exercising an independent employment, contracts to do a piece of work according to his or her own methods and without being subject to the control of his or her employer except as to the result of the work.” An express contract between the parties is not conclusive on whether a worker is an independent contractor. However, it is an important factor in defining the relationship between the employer and the worker. The Wyoming Supreme Court stated other factors that are important to the determination, including:

1. The method of payment.
2. The right to determine the relationship without incurring liability.
3. The furnishing of tools and equipment.
4. The scope of the work.
5. The control of the premises where the work is to be done; and whether the worker devotes all of his or her efforts to the position or if he or she also performs work for others.

Introduction

In the event of a disaster that requires an extraordinary response, the [state insurance regulatory entity] has adopted the following disaster response plan.

What this document provides

Following a disaster, this document provides a template for departments of insurance (DOIs) to use when assisting consumers. In advance of a disaster, this document also provides guidance to insurers and other licensees.

This document details how a DOI can work with other agencies to assist consumers, including:

- Federal agencies
- State or local agencies
- The NAIC
- Other state DOIs

This document does not provide information regarding a Continuity of Operations Plan (COOP). Check to see if your department has a COOP that provides detailed information regarding how it is to be implemented.

The purpose of the disaster response plan

The purpose of the disaster response plan is to:

- Provide states with information regarding quick and effective responses to meet the insurance information needs of its citizens.
- Provide information regarding the coordination of resources with other state agencies to mitigate the effects of a disaster.

The disaster response plan will be activated by the commissioner, director or superintendent. It will be implemented by the disaster or incident management team.
Information the disaster response plan provides
This disaster response plan template provides information to assist state insurance departments in responding to disasters. This disaster response plan is scalable to respond to disasters affecting:

- Limited areas within the state.
- Several locations throughout the state.
- The entire state.

NAIC Disaster Assistance Program
The NAIC Disaster Assistance Program is a series of services provided by the NAIC to any member jurisdiction experiencing the aftermath of a disaster where additional support is needed.

The NAIC can provide the following services following a disaster:

- Disaster Relief Call Center
- Disaster Recovery Center (DRC) Insurance Regulator Staff
- Communications Services
- NAIC Coordinated Data Call

Services are provided once a formal request is made by an NAIC member (a jurisdiction’s appointed/elected insurance commissioner) to the NAIC officers, asking them to direct NAIC senior management to allocate budgeted funds and resources toward their need for disaster relief assistance. The day-to-day project is then overseen by the NAIC Director of Member Services who coordinates a variety of NAIC department staff overseeing operations and volunteers throughout the length of services needed.

Ways a jurisdiction can prepare to receive NAIC assistance
Jurisdictions can prepare information that will better facilitate NAIC assistance after a catastrophic event. These items may be incorporated as part of your jurisdiction’s Business Continuity Plan. Jurisdictions need to consider how they want calls and complaints tracked by NAIC volunteers and provide templates, if appropriate.

The following are some high-level action items to do prior to contacting the NAIC:

- Identify your critical staff and who will be coordinating with the NAIC.
- Assess the level of impact to your staff. This level of impact may determine the support you need from the NAIC.
- Assess the functionality of your systems and facilities—i.e., phone, internet, other communications and office—after the event.
- Assess access to power and your critical infrastructure.
- Assess business impact analysis; i.e., the minimum you need to function.
- If possible, consider the type of assistance you may need: call center overflow, onsite regulatory staff support, website, or remote office. However, the NAIC is also prepared to consider new services to meet your unique needs.
- Document how a trusted third party may access your communications systems: phone and internet.
• Prepare and provide talking points for the NAIC, frequently asked questions (FAQ), jurisdiction guidelines—i.e., emergency adjuster licensing rules—which can be shared with call center staff and onsite DRC volunteers.
• Share jurisdiction-issued bulletins and how we are to handle them.

**NAIC services set-up time after approval of assistance**

The NAIC is ready to help at any time after a member has requested assistance.

• Call center: within 24–48 hours after contact.
• DRC volunteers may be available within 48–72 hours after contact.
• Communications services are available within 24–48 hours after contact and member approval of information.
• NAIC Coordinated Data Call within 24–48 hours after contact.

**Additional information**

Where possible, the NAIC may reach out to a member jurisdiction prior to an imminent disaster to offer information about our program or answer any questions they may have about systems that may be affected in the event of a disaster.

NAIC Research and Government Relations departments are able to participate in briefings with the Financial and Banking Information Infrastructure Committee (FBIIC), the Federal Emergency Management Agency (FEMA), and Homeland Security to share information from, and to, NAIC jurisdictions.

The National Insurance Producer Registry (NIPR) and/or the Interstate Insurance Product Regulation Commission (Compact) are able to assist affected jurisdictions who may need emergency adjuster licenses and/or help processing product filings.

**Disaster relief call center**

The NAIC works with your department’s technical team to connect a 1-800 NAIC telephone line and/or computer system—State Based Systems (SBS)—with your jurisdiction’s consumer phone line and/or complaint tracking system.

• Call center is staffed with experienced insurance department regulator volunteers capable of answering consumer concerns.
• Call center is flexible enough to handle your entire call volume, allowing your staff to assist people in the field.
• Call center may also be set to roll-over to state insurance regulator volunteers whenever you experience call overflow.

**Cost:**

• There is no cost to your jurisdiction for this service.
• The NAIC covers the cost for the 1-800 phone line; call center equipment, facilities and coordination; and the travel/lodging reservations and expense for state insurance regulator volunteers.
• Your fellow members/commissioners provide their state insurance regulator staff as volunteers.
DRC insurance regulator staff

The NAIC facilitates and coordinates insurance department regulator volunteers to staff your designated DRC location(s).

- Volunteers cover one to two week shift rotations to man the daily operation of the DRC.
- The NAIC will arrange travel and lodging for the assigned state insurance regulator volunteers.
- If needed, the NAIC can help provide loaner laptops or cell phones for state insurance regulator volunteer use at a DRC location.

Cost:
- There is no cost to your jurisdiction for this service.
- The NAIC covers the cost of the loaner equipment and travel/lodging expenses for the state insurance regulator volunteers.
- Your fellow members/commissioners proffer their state insurance regulator staff as volunteers.

To deploy this service, an insurance department staff/disaster coordinator contacts Trish Schoettger, NAIC Director of Member Services at tschoettger@naic.org or 816.783.8506. She will coordinate a call with the member/commissioner, NAIC President, and NAIC Chief Executive Officer (CEO) or Chief Operating Officer (COO) to utilize these services.

NAIC-hosted insurance department website

In the case where the affected jurisdiction has lost the use of its facility or their website becomes inoperable, the NAIC can act as an interim host for the jurisdiction’s insurance department website. If needed, the NAIC can also serve as a resource to communicate your updated status to other jurisdictions and/or agencies or change information.

Cost:
- There is no cost to your jurisdiction for this service.
- The NAIC covers the cost of hosting the site.

NAIC-coordinated data call

The NAIC assists states with data calls related to the collection of claims data following disasters. Data calls are typically conducted weekly immediately after a disaster and then biweekly or monthly as a higher percentage of claims close.
Preparation

The steps to preparation

A DOI needs to promptly and efficiently respond to a disaster. Effective response to a disaster requires preparation and planning, including:

- Identifying appropriate staff to perform necessary activities.
- Training appropriate staff.
- Identifying available resources.
- Identifying any resource shortfalls and how these might be addressed.

Important planning considerations

Preparedness for disasters requires identifying resources and expertise in advance and planning how these can be used in a disaster. Planning considerations include:

- Putting procedures in place for internal tracking and reimbursement costs expended by the DOI in response to a disaster.
- Designating a team of individuals and assigning responsibilities to ensure that everyone on the team understands their roles and responsibilities during a disaster situation.
- Updating plans and procedures based upon post-mortem evaluation of the DOI’s performance in prior disaster response efforts.

Available training

As a part of efforts to prepare for response to disasters, state DOIs and agencies participate with local jurisdictions and private entities in exercises and training. Staff should be periodically trained on how to assist consumers during a disaster.

Training regarding information on FEMA assistance programs and the National Flood Insurance Program (NFIP) is recommended.

FEMA has free courses available to emergency management teams. These courses can be found by using the following link: https://training.fema.gov/is/.

The NFIP has developed a reference guide on flood-related issues for state insurance regulators and other officials. This document can be found using the following link: https://www.fema.gov/media-library-data/1525272377818-3cb0cf795a73c135c8543d2459e12c80/NFIPDeskReferencev18_508_V4.1.pdf.
Insurance contact information that a DOI should regularly collect

It is important for a DOI to maintain current insurance company contacts for insurers licensed to do business in the state, including non-admitted surplus lines insurers. Some states may maintain contact information in SBS, another database, or through a Microsoft Outlook contact list obtained by an annual request.

Partnerships with private volunteer organizations can also be useful in coordinating response after a disaster. [State Insurance Department] should identify consumer or non-profit organizations that would be open to a partnership.

Insurance company contacts:
Following a disaster, a DOI will likely need to contact insurers. The contact information should include:

- Insurers doing business in a state.
- A primary contact and a secondary contact (both would likely be a member of the insurer’s disaster response team).
- High-level senior management to respond to questions or issues promptly.

Requirements of insurance company contacts
After a disaster, state insurance regulators will need to be able to contact insurers for information. Contacts should:

- Be able to provide coverage data and loss statistics, by county or region, according to a standardized format developed by the DOI.
- Be knowledgeable regarding their internal information systems and sources and authorized to access such systems so that applicable and timely information can be provided upon the request of the DOI.
- Be able to respond to requests for information from legislators, the governor’s office, FEMA officials, or press inquiries.

Other necessary contacts
DOIs will need contacts for local, state and federal officials (these should be maintained and updated).

Contacts will report other disaster information to the DOI, including lists of company claim offices and phone numbers, adjuster information, and company toll-free numbers, etc.
Types of information that should be ready for dissemination in the event of a disaster

Following a disaster, a DOI will be responsible for helping consumers regarding claims. Some of the items a DOI will want to have on hand to provide to consumers include:

- Consumer brochures.
- Consumer alerts.
- Insurer contacts for consumers.
- Other forms of information relating to preparation and response to all types of disasters (this information should be updated prior to a disaster).

The NAIC’s Transparency and Readability of Consumer Information (C) Working Group created a document to help guide consumers through a claim following a disaster. This document can be passed out following a disaster: https://content.naic.org/sites/default/files/inline-files/Claim%20Disaster%20Guide%20-%20Generic%20FINAL%207%2023%202019.pdf.

Types of data a DOI should collect regarding disasters

A DOI should define the appropriate area in their department responsible for creating and maintaining a database that holds coverage data and loss statistics collected from insurers. If a DOI does not have the resources to maintain a database, the NAIC can provide this service.

Information to be collected (generally collected by ZIP code) includes such items as the:

- Number of claims reported
- Number of claims closed with and without payment
- Paid losses
- Incurred losses

Data collection tools the NAIC can provide

The NAIC can provide the data template adopted by the NAIC Property and Casualty (C) Committee and Executive (EX) Committee and Plenary if the DOI does not have its own data call template. This template can be found on the Catastrophe Insurance (C) Working Group’s webpage under the Related Documents tab. The link to the webpage is: https://www.naic.org/cmte_c_catastrophe.htm.

The NAIC coordinated data call

The NAIC assists states with data calls related to the collection of claims data following disasters. Data calls are typically conducted weekly immediately after a disaster and then biweekly or monthly as a higher percentage of claims close. The length of time that data is collected is usually dependent upon the severity of the event. For example, a minor hurricane, like Irma, will not necessitate weekly reporting, even in the beginning. Having the NAIC assist with a data call could require a confidentiality agreement if the state does not already have one that would encompass the data call.
Types of information a DOI, in coordination with Public Affairs, should maintain, update, post on the state’s website, and distribute via social media

- https://www.insureuonline.org/disaster_prep_wildfires.pdf
- https://www.naic.org/documents/consumer_alert_flood_insurance_understanding_risk.htm

Resources required for emergency response

The availability and capability of resources needs to be determined and includes the following:

- People
- Facilities
- Materials and supplies
- Funding
- Information regarding threats or hazards

Periodically review resources dedicated to the Disaster Response Team to make certain that there are enough cell phones, laptops, and other equipment and materials available for staff.

Disaster Recovery Team Personnel within the DOI should be identified to act as first responders if the DOI is required to respond to an emergency.

DOI employees are divided into those who will work outside of the office and those who will work at the DOI in an onsite or offsite call center.

Contact information for members of the team should be maintained.

Employees should receive periodic training and updates on procedures for assisting consumers in the event of a disaster.

The DOI shall maintain Disaster Recovery supplies and information for use by the Team.
Brief description of the Major Incident Management Functions
(See org chart template - Appendix 1)

COMMAND
Sets the incident objectives, strategies and priorities. Has overall responsibility for the incident.

OPERATIONS
Conducts operations to reach the incident objectives. Establishes tactics and directs all operational resources.

PLANNING
Supports the incident action planning process by tracking resources, collecting/analyzing information, and maintaining documentation.

LOGISTICS
Arranges for resources and needed services to support achievement of the incident objectives.

FINANCE AND ADMINISTRATION
Monitors costs related to the incident. Provides accounting, procurement, time recording and cost analysis.

Keep in mind, larger states may have more resources available than smaller states. See important note to DOIs.
Disaster Response/Incident Management Team

Response Leadership Team (Your State Emergency Management Agency would call this the Command Support Staff)

The purpose of this team is to:
- Provide direction before, during and after a disaster.
- Ensure periodic review and assessment of the State Disaster Response Plan and hold the incident management team accountable for implementation.
- Test and update the plan on a regular and consistent basis.

Location
This team is located at the [Home office] unless an alternative location is needed.

Duties:
Upon notification of a significant disaster, the commissioner, superintendent or director will notify this team to begin implementation of the Disaster Response Plan.

Identify which other disaster response units should be activated.

Members:
The response leadership team should include the following:
- Incident Commander (IC) (commissioner, director, superintendent, chief deputy or their designee).
- Public Information Officer (PIO) (the person that handles media and communication requests).
- Safety Officer (SO) (this person is the human resources (HR) chief manager).
- Finance /Administration Section Chief.
- Legal Counsel (LC).
- Emergency Operations Center (EOC) Liaison Officer (ELO) (this could be your lead consumer affairs staff member).
- Any other positions, as required, who report directly to the IC (they may have an assistant or assistants, as needed).

Incident Commander (IC) – (may be the Agency Head or their designee)
The IC is responsible for all incident action plans (IAPs) and activities to sustain critical functions and services. These tasks include:
- Developing strategies and tactics before the execution of action plans in the event of a disaster.
- Ordering and releasing resources.
- Conducting incident operations.

The IC is responsible for:
- Managing all incident operations.
- Ensuring overall incident safety.
• Assessing the situation and notifying internal teams and departments.
• Appointing others.
• Carrying out all ICS management functions until they delegate a function.
• Providing information services to internal and external stakeholders.
• Managing all operations at the disaster site.

It is possible for the IC to accomplish all management functions during the aftermath of a small event. The IC only creates the sections that are needed. If a section is not staffed, the IC will personally manage those functions.

Public Information Officer (PIO)
The PIO is responsible for interfacing with the public, industry, media, and/or other agencies with incident-related information requirements.

The PIO is responsible for:
• Drafting and issuing all public announcements.
• Making all press releases.
• Establishing an event-specific webpage (if needed).
• Sending event-specific updates out via social media and posting them online.
• Giving all interviews with the communications media relative to the incident and the Agency’s action plan to address the situation. The PIO establishes communications with PIOs in other State Agencies and the Governor’s Media Office to convey situation status, progress toward resolving the incident, and any actions needed in support of or to address the situation.

The PIO works directly with the IC and Agency Head on all sensitive communications and may seek advice and counsel from other members of the Command Support Staff on legal or personnel matters and from the Section Chiefs on background relating to the situation and the actions the Agency are taking.
Safety Officer (SO)
The SO monitors incident operations and advises the IC on all matters relating to operational safety, including the health and safety of agency personnel.

The SO is responsible for:
- Monitoring conditions and developing measures for assuring safety of personnel.
- Advising the IC about incident safety issues.
- Conducting risk analyses.
- Implementing safety measures.
- Monitoring building accessibility.
- Communicating with the IC and staff.

Legal Counsel (LC)
The LC is the member of the Incident Command Support Team who provides legal counsel to the IC.

Examples of support would include:
- Providing advice relative to Agency jurisdiction and contractual obligations.
- Completing other tasks as assigned by the IC.

The LC may also be asked to:
- Review any public statements to be issued by the PIO.
- Provide opinion and guidance on employee relations-based issues.
- Provide opinion and guidance on issues that relate to the Agency mission and the public.

Emergency Liaison Officer (ELO)
The ELO is the point of contact for representatives of other governmental agencies, nongovernmental organizations, and the private sector.

The ELO provides a liaison between the DOI and the state’s Department of Emergency Management and Homeland Security (DEMHS), especially when the DEMHS has elected to activate its EOC.

A close working relationship between the Agency and the EOC is required for timely communication and action appropriate to directives received. The ELO will represent the Agency at the EOC and establish ongoing communications and scheduled status reviews with the Agency Incident Command.
Roles and Responsibilities

Financial & Administration Section Chief

The Financial and Administration Section Chief is a member of the Incident Command General Staff. This person is also the leader of the Administration Section. In the context of the COOP, the Financial and Administration Section Chief is responsible for the internal processes within the Agency, including financial and human resource functions, which are necessary to enable the critical functions being addressed by the Operations Section.

The Administration Section Chief sustains or recovers processes to maintain the fiscal integrity of the Agency and ensure that essential human resource processes are sustained. The Administration Section Chief works closely with the Operations and Logistics Sections to identify requirements and assess available options.

The Finance/Administration Section Chief is responsible for:
- Analyzing all financial, administrative and cost aspects of an incident.
- Maintaining daily contact with agency administrative headquarters on finance and administration matters.
- Meeting with assisting and cooperating agency representatives.
- Advising the IC on financial and administrative matters.
- Developing the operating plan for the Finance/Administrative Section.
- Coordinating finances at the local level.
- Establishing or transitioning into an existing Finance/Administrative Section.
- Supervising and configuring section with units to support, as necessary.
- Negotiating and monitoring contracts.
- Timekeeping.
- Analyzing cost.
- Compensating for injury or damage to property.
- Documenting reimbursement (e.g., under mutual aid agreements and assistance agreements).

The Finance/Administration Section is set up for any incident that requires incident-specific financial management.

The Time, Compensation/Claims, Cost and Procurement Units may be established within this section.
Finance and Administration Section Team Leads

The Finance and Administration Section Team Leads should be a qualified member of the Incident Command General Staff. This person reports to the Administration Section Chief.

Finance and Administration Section Team Leads are responsible for:

- The coordination of the initial action plan execution and recovery efforts for one of the Administration Section Teams.
- Business continuity interruption preparedness.
- Response coordination.
- Post-interruption corrective action based on lessons learned for the functions that are part of the normal operational responsibilities of the work group.

In the National Incident Management System (NIMS) these Team Leads often head branches or divisions. Section Chiefs will determine the organization appropriate under respective sections.

Logistics Section Chief

This Logistics Section Chief is a member of the Incident Command General Staff and the leader of the Logistics Section.

The Logistics Section Chief is responsible for:

- Overseeing the resources and processes needed to sustain or recreate the work environment for Operations and Administration Section functions (in the context of the COOP), including facility, technology, equipment and supplies.
- Addressing plant, tool, technology and information security (including the Health Insurance Portability and Accountability Act of 1996 [HIPAA]) requirements for the Incident Command.
- Working closely with the Operations and Administration Sections to identify requirements and assess available options.

The Logistics Section is responsible for all services and support needs, including:

- Ordering, obtaining, maintaining and accounting for essential personnel, equipment and supplies.
- Providing communication planning and resources.
- Setting up food services for responders.
- Setting up and maintaining incident facilities.
- Providing support transportation.
- Providing medical services to incident personnel.
Operations Section Chief

Typically, the Operations Section Chief is the person with the greatest tactical expertise in dealing with the problem at hand. The Operations Section Chief is a member of the Incident Command General Staff and the leader of the Operations Section. This person is responsible for the sustenance or recovery of the functions within the agency that serve the citizens of the state. The Operations Section Chief may have one or more Deputies who are qualified to fill this position.

The Operations Section Chief is responsible for:
- Directly managing all incident tactical activities.
- Implementing the IAP.
- Developing and implementing strategies and tactics to carry out the incident objectives.
- Organizing, assigning and supervising the tactical response resources.
- Having one or more Deputies who are qualified to assume these responsibilities. (This is recommended where multiple shifts are needed, as well as for succession planning).

Operation Section Team Leads

An Operation Section Team Lead is a qualified member of the Incident Command General Staff who reports to the Operation Section Chief. This individual is responsible for the coordination of the initial action plan and recovery effort of the Operation Section Teams.

Operation Section Team Leads are responsible for:
- Pre-incident preparedness.
- IAP coordination.
- Post-incident corrective action based on lessons learned for the functions that are part of the normal operational responsibilities of the work group.

Planning Section Chief

The Planning Section Chief is a member of the Incident Command General Staff and leader of the Planning Section. This individual is responsible for the development of the Business Continuity Plan and COOP document and works closely with the IC, General Staff (other Section Chiefs), and Command Support Staff to ensure that critical functions and their resource requirements are identified and that preparatory actions are taken. The Planning Section Chief ensures that communications information needed to execute the COOP has been captured.

In the continuity plan action period, the Planning Section Chief is responsible for:
- Serving as a coach to Incident Command.
- Ensuring that regular crisis action plan review sessions are held.
- Ensuring that outstanding issues are identified.
- Ensuring that appropriate alternatives are considered.
- Ensuring that action assignments are clearly distributed.
The Planning Section Chief may have one or more Deputies who are qualified to assume these responsibilities. This is recommended where multiple shifts are needed, as well as for succession planning.

The major activities of the Planning Section may include:

- Collecting, evaluating and displaying incident intelligence and information.
- Preparing and documenting IAPs.
- Tracking resources assigned to the incident.
- Maintaining incident documentation.
- Developing plans for demobilization.

Deputy

The Deputy is a fully qualified individual who, in the absence of a superior, can be delegated the authority to manage a functional operation or perform a specific task. In some cases, the Deputy acts as relief for a superior; therefore, the Deputy must be fully qualified in the position.

Deputies can be assigned to the IC, Command Support Staff, and the Section Chief positions.

Statistics Operational Network Task Group

The purpose of this group is to facilitate an analysis of a catastrophe with insurance companies and the [agency name] whenever a catastrophic event occurs.

The Statistics Operational Network Task Group will be located [insert location of home office or other designated location] unless otherwise chosen due to necessity.

The Statistics Operational Network Task Group is charged with the responsibility of creating a “contact list” of insurance community liaisons. This contact list will allow for prompt contact of people within the insurance industry who should be able to provide coverage data and loss statistics, by region, according to any standardized format developed by [agency].

The Team Lead should be knowledgeable of company internal information systems and sources authorized to access such systems so that applicable and timely information can be provided to [agency] or emergency response agencies upon request.

Members of this Task Group should include divisions that perform data collection/analysis, market conduct, and financial regulation.
**Consumer Operational Team Lead**

The Consumer Operational Team Lead works with the PIO to provide consumers with the information needed to contact their insurance companies and the fundamentals to file a claim and convey necessary information to the Emergency Response Team.

A Consumer Information Task Group will be located [insert location of home office or other designated location] unless otherwise selected by the Disaster Executive Committee due to necessity.

If a disaster is declared, a consumer hotline should be immediately activated, but consideration may be needed to relocate it. The hotline:

- Should be able to ramp up to provide a 24-hour service.¹
- Should operate utilizing four six-hour shifts.

---

*Branch offices might initially be made operational through the use of cell phones until other landlines are established.*

---

Hotline staff should:

- Have a list of 800 numbers of the major property/casualty (P/C) insurers in the state.
- Have the list of Emergency Response Task Group key personnel.
- Have other emergency agency numbers to be used in the event of a disaster.
- Be provided with a communications kit, which will be used to tell consumers about claim procedures.

Members should include:

- Consumer services unit senior management.
- Internal resource senior management.

**Communications Operations Task Group**

The purpose of this group is to work with the PIO to create a central source for media information relevant to disaster insurance and the disaster plan response activities.

This Group:

- Prepares news releases about the steps to take before, during and after a disaster.
- Produces brochures about preparedness.
- Dispatches speakers to various locations, as needed.
- Maintains contact with all media.

---

¹ It may not be necessary to operate 24 hours a day, but it is likely that the hotline may need to be open for hours longer than the agency is typically open. The agency will need to be prepared for these circumstances.
The Communications Team will be [insert location of home office or other designated location] unless otherwise chosen by the Disaster Executive Committee due to necessity.

The Communications Operations Task Group is responsible for:

- Developing a consistent message to be communicated to consumers.
- Distributing advisories and brochures to units of government throughout the state so that they may reproduce them for local residents. (The NAIC may be contacted for assistance in bulk reproduction).

The Communications Task Group should:

- Be in constant contact with the [State Emergency Management Agency’s Communications Team] to coordinate media announcements.
- Contact news organizations throughout the state with a Media Advisory.
- Notify news agencies that [agency name] is the primary source for obtaining and forwarding information relative to insurance and a disaster.
- Be in constant touch with the Emergency Response Task Group and branch offices to coordinate the information flow.

**Much of the information will be obtained from the designated liaison persons of the Emergency Response Task Group.**

**This system ensures that information being supplied to the media is consistent, accurate, and up-to-the-minute.**

The Communications Task Group is:

- Responsible for ensuring that messaging is consistent.
- Responsible for developing an Outreach Team to operate quickly and efficiently in affected areas to answer questions in town meetings and other informational gatherings.
- Responsible for supplement information provided through the media and other sources about how to quickly and effectively prepare insurance claims information.

Members include:

- Senior media or communications staff.
- Legislative personnel.
- Key agency staff with public speaking experience.
Logistics Task Group

The purpose of this Task Group is:

- To consult with other task groups regarding the DOI’s logistical and technical capabilities, and requirements, to enable the efficient execution of the DOI’s State Disaster Response Plan.
- To coordinate with the Emergency Response Task Group regarding logistical and technical capabilities for Emergency Response Task Group and/or field or temporary offices.
- To coordinate with other areas regarding logistical and technical capabilities for hotline and other consumer communication needs.

The Logistics Task Group will be [insert location of home office or other designated location] unless otherwise chosen by the Disaster Executive Committee due to necessity.

The duties of the Logistics Task Group are:

- To identify resource needs of the other task groups regarding the DOI’s logistical and technical capabilities and requirements to enable the insurance department to respond better and faster to disasters and include these in the implementation plan.
- To coordinate technical requirements for an alternate designated facility to ensure its immediate activation in case the DOI’s home or central office is damaged/destroyed in a disaster and include these in the implementation plan.

Members include:

- Senior staff from internal resource or budget.
- Senior staff from the information technology (IT) unit.
- Senior staff from any branch office locations.

Branch Office(s)

Branch offices will be responsible for addressing and solving problems where possible and overseeing operations in their responsibility area.

While the composition and basic duties will be the same as those of the Emergency Response Task Group, the branch office(s) will deal with the local problems and handle them from a closer vantage point.

Branch offices will be established at the existing location of the branch offices, unless the Emergency Response Task Group indicates a more appropriate location.

The branch office will be responsible for:

- Channeling information within the zone for which the branch office is responsible.
- Forwarding requests for speakers and press contacts to the Communications Task Group.
- Obtaining general insurance information and all written material explaining how to prepare claims from the Consumer Services Task Group.
• Routinely reporting to the Emergency Response Task Group about daily activities.
• Sending all problems that cannot be worked out locally to the Emergency Response Task Group for review.
• Obtaining DOI brochures.

Members include senior staff from branch office location(s).

Where serious disputes or problems arise, the branch office will forward these back to the Emergency Response Task Group; otherwise, the branch office will manage its own operation and report only.

It is imperative that senior staff remain at the Branch Office Operations center for command purposes.

These centers fall under the direction of the Emergency Response Task Group.

Proposal from the Center for Economic Justice

To the NAIC Property Casualty (C) Committee

Revision to Financial Statements to Allow Timely Calculation of Average Premium for Private Passenger Auto and Homeowners Insurance

August 12, 2020

The measurement and reporting of average premium for private passenger auto and homeowners insurance is of great interest to consumers, policymakers and regulators. Towards this end, the NAIC publishes two reports – one for private passenger auto and one for homeowners insurance – that report these values.

The usefulness of these average premium metrics is crushed because the data are old and not timely. The auto average premiums are presented in the Auto Insurance Database report. The current database, published in January 2020, provides average auto insurance premium data through 2017 – over two years after the end of the reporting period and nearly three years after the first quarter of 2017. The homeowners average premium is reported in the “Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report,” which suffers from the same lack of timeliness. The 2017 data were published at the end of November 2019.

The lack of timeliness of the average premium values means that these data have very limited or no use for either financial or market analysis. The lack of timeliness also means that the data are no use in informing public policy debates about personal lines insurance costs. In addition, the severe time lag between actual experience and reporting fails to inform the public or policymakers of recent trends or outcomes and can, consequently, mislead the public and policymakers.

CEJ proposes modification of the state page of the annual and quarterly financial statements to add two data columns or fields – written exposures and earned exposures – for personal auto and homeowners lines of business. This simple change will enable regulators to monitor changes in average auto premium in a far-timelier manner than the current approach through the Auto Insurance Database or homeowners report.
By adding written and earned exposures to the state pages, regulators can get average premium per vehicle within 3 months after the end of the experience period. And by adding these two columns to the quarterly financial statement, regulators can get changes each quarter in average annual premium at least on a national basis. Attached is a detailed proposal for the committee to present to the Blanks Task Force. It should be noted that this additional reporting will not impose a significant burden on insurers since insurers monitor written and earned exposures and have such data readily available.

The benefits of timelier average premium data are considerable. Timely average premium data would permit financial analysts to utilize changes in average premium as part of financial analysis. Similarly, the more timely average premium data would become a valuable tool for market regulation analysts, including, but not limited to, an added data point for use the Market Conduct Annual Statement. Last, but not least, this proposal would allow the NAIC to calculate and publish average annual premium data for residential property and personal auto insurance by state in a time frame to both make the data meaningful for describing market conditions and to inform individual state regulators and policymakers of actual changes in personal lines average premiums – as opposed to expected changes gleaned from rate filings.
Draft Proposal to NAIC Blanks Working Group to
Add Exposure Data Elements to State Pages of NAIC Financial Statements

Describe Proposal

Add two columns to the property casualty annual statement state page – “Direct Exposures Written” and “Direct Exposures Earned” – to be reported, initially, only for lines 2.5 (Private Flood) 4 (Homeowners), 19.1 (PPA No Fault), 19.2 (PPA Liability) and 21.1 (PPA Physical Damage) Direct Exposures Earned would be placed between current columns 1 (Direct Premiums Written) and 2 (Direct Premiums Earned). Direct Exposures Earned would be placed between current columns 2 (Direct Premiums Earned) and 3 (Dividends Paid).

Below is an illustrative mock-up. .

Instructions

A Written Exposure for lines 2.5 and 4 is defined as a single residential property for which coverage was written at any time during the calendar reporting period and remained in force through the end of the calendar reporting year. If the coverage was written and cancelled within the calendar reporting year, the written exposure is the fraction of the year the coverage was in force.

A Written exposure for lines 19.1, 19.2 and 21.1 is defined as single motor vehicle for which coverage was written at any time during the calendar reporting year and remained in force through the end of the calendar reporting year. If the coverage was written and cancelled within the calendar reporting year, the written exposure is the fraction of the year the coverage was in force.

An Earned Exposure for lines 2.5 and 4 is defined as the fraction of the calendar reporting year for which a single residential property had coverage in force.

An Earned Exposure for lines 19.1, 19.2 and 21.2 is defined as the fraction of the calendar reporting year for which a single motor vehicle had coverage in force.

Examples. Assume a homeowners policy is written on July 1 during the reporting year and remains in force through the end of the reporting year. This activity would be reported as one (1.0) written exposure and 0.5 earned exposure.

Assume a private passenger policy with No-Fault, Liability and Physical Damage coverages was written on April 1 and cancelled by the insured on July 1. This activity would be reported as 0.25 written and 0.25 earned exposures.

Purpose and Benefits

The average written and average earned premium per exposure is an important metric for a variety of regulatory and public policy purposes. The NAIC annually produces reports of average personal auto and homeowners premiums, but the data in these reports are old and stale for timely assessment of absolute average premium and changes in average premium over time. Both reports are typically produced 24 months after the end of the experience period – average auto or homeowners premiums for 2017 are published at the beginning of 2020. While there are valid reasons for the length of time needed to produce these reports – primarily because these reports contain information beyond average premium – the average premium numbers lose significant relevance because of their age.

This Blanks proposal would allow the calculation of average written and average earned premium for residential property and personal auto coverages in a far more timely fashion – with three to four months following the reporting year instead of 24 months. The benefits of timelier average premium data are considerable. Timely average premium data would permit financial analysts to utilize changes in average premium as part of financial analysis. Similarly, the more-timely average premium data would become a valuable tool for market regulation analysts, including, but not limited to, an added data point for use the Market Conduct Annual Statement.
Last, but not least, this proposal would allow the NAIC to calculate and publish average annual premium data for residential property and personal auto insurance by state in a time frame to both make the data meaningful for describing market conditions and to inform individual state regulators and policymakers of actual changes in personal lines average premiums – as opposed to expected changes gleaned from rate filings.

The Casualty Actuarial and Statistical (C) Task Force met via conference call Aug. 5, 2020. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel J. Davis (AL); Evan G. Daniels represented by Tom Zuppan (AZ); Ricardo Lara represented by Lynne Wehmueller (CA); Andrew N. Mais represented by George Bradner and Wanchin Chou (CT); Karima M. Woods represented by Monica Dyson (DC); David Altmaier represented by Howard Eagelfeld (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel and Andria Seip (IA); Robert H. Muriel represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Julie Lederer (MO); Chris Nicolopoulos represented by Christian Citerella (NH); Marlene Caride represented by Carl Somson and Mark McGill (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (OH); Glenn Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl and Ying Liu (OR); Jessica K. Altman represented by Michael McKenney (PA); Raymond G. Farmer represented by Will Davis (SC); Kent Sullivan represented by Eric Hintikka (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and Mike Kreidler represented by Eric Slavich (WA).

Also participating was: Gordon Hay (NE).

1. **Adopted its July 14, 2020; May 19, 2020; Feb. 18, 2020; Jan. 28, 2020; and 2019 Fall National Meeting Minutes**

Mr. Vigliaturo said the Task Force met July 14, May 19, Feb. 18 and Jan. 28. During these meetings, the Task Force took the following action: 1) adopted a recommendation to the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) Task Force to defer implementation of the CAS/SOA continuing education (CE) log for 2020 and allow appointed actuaries to add a column to their existing CE log, indicating the categorization approved by the Task Force (“Appointed Actuary CE Log Categories”); 2) adopted a response on Project #2019-40 regarding Statement of Statutory Accounting Principles (SSAP) No. 53—Property Casualty Contracts—Premiums to the Statutory Accounting Principles (E) Working Group; 3) adopted a response to the Actuarial Standards Board’s (ASB’s) Request for Input on a Potential P/C Rate Filing ASOP on the Best Practices for Regulatory Review of Predictive Analytics white paper for a public comment period ending Nov. 22.

The Task Force also met June 25, May 14, April 14, and March 17 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss rate filing issues.

The Task Force held its Predictive Analytics Book Club conference calls July 28, June 23, May 26, April 28, and Feb. 25. During its July 28 meeting, Chris Gross (Gross Consulting) presented on actuarial case reserves. During its June 23 meeting, Ron Lettofsky (Arity) presented on modeling concepts, hyperparameter tuning, and telematics. During its May 26 meeting, Mathias Millberg Lindholm (Stockholm University) presented on discrimination-free insurance pricing. During its April 28 meeting, Benjamin Williams presented on the Emblem predictive model. During its Feb. 25 meeting, Christopher Holt (self-employed) presented on Python and R.

Mr. Botsko made a motion, seconded by Mr. Chou, to adopt the Task Force’s July 14, 2020 (Attachment One), May 19, 2020 (Attachment Two), Feb. 18, 2020 (Attachment Three), Jan. 28, 2020 (Attachment Four) and Dec. 7, 2019 (see NAIC Proceedings – Summer 2020, Casualty Actuarial and Statistical (C) Task Force) minutes. The motion passed unanimously.

2. **Adopted the Report of the Actuarial Opinion (C) Working Group**

Ms. Krylova said the Working Group met June 11 to discuss exam procedures and other related issues. She said the Working Group discussed review of qualification documentation and will address any related issues in its annual Regulatory Guidance on Property and Casualty Statutory Statements of Actuarial Opinion (Regulatory Guidance) document. She said the Working Group will be proposing changes to the Financial Condition Examiners Handbook and the Financial Analysis Handbook and discussing the risk repository later in the year.

Ms. Krylova made a motion, seconded by Mr. Botisko, to adopt the report of the Actuarial Opinion (C) Working Group, including its June 11 minutes (Attachment Five). The motion passed unanimously.
3. **Adopted the Report of the Statistical Data (C) Working Group**

Mr. Sornson said the preliminary data for the *Auto Insurance Database Report* and the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report) should be ready for review in September.

Mr. Sornson made a motion, seconded by Mr. Piazza, to adopt the report of the Statistical Data (C) Working Group. The motion passed unanimously.

4. **Discussed the CAS/SOA Task Force’s Appointed Actuary CE Log**

Mr. Vigliaturo said the Task Force discussed the CAS/SOA CE log for appointed actuaries. During its July 14 conference call, the Task Force adopted a recommendation to the CAS/SOA Task Force to defer the implementation of the CAS/SOA CE log for 2020 and allow appointed actuaries to add a column to their existing CE log indicating the categorization approved by the Task Force (on the adopted document titled “Appointed Actuary CE Log Categories”). He asked for the 2020 implementation plan and what steps, such as exposure, will be taken for development of the 2021 CE log for appointed actuaries.

Ann Weber (SOA) said the CAS and SOA plan to send communication in September to promote awareness of the requirement to appointed actuaries. The log will continue to be refined. She said the functionality of the log has been discussed.

Ms. Lederer requested a public exposure after the initial communication so appointed actuaries can provide comment. She asked whether anyone who attests to having met the specific qualification standards would be required to use the log even if not an appointed actuary.

Ken Williams (CAS) said anyone who might wish to be an appointed actuary for the year should use the log. Ms. Weber said anyone can use the log.

Ms. Lederer said the NAIC’s authority only applies over appointed actuaries.

Mr. Stolyarov strongly cautioned against the use of the CE log for any purpose other than evaluating the competence of appointed actuaries. He also does not want this log, if it is more likely to be audited, to deter actuaries from becoming appointed actuaries.

5. **Discussed Proposal 2019-49 (Retroactive Reinsurance Exception)**

Mr. Vigliaturo said the Statutory Accounting Principles (E) Working Group referred Project #2019-49: Retroactive Reinsurance Exception to the Task Force in January. He said this is the project initialized from a letter presented by the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy). Three volunteers are working to bring a draft proposal to the Task Force: Mr. Hay, Mr. Botsko and Ms. Fisk.

Mr. Hay said regulators met with COPLFR members to discuss the referral. He said there are risk-based capital (RBC) issues and implications, and potential changes to SSAP No. 62R—Property and Casualty Reinsurance might need to be proposed. He said the volunteer regulators will meet with the Working Group leaders to discuss the referral and related observations after the Summer National Meeting.

The *Regulatory Review of Predictive Models* white paper dated June 12 was exposed for a public comment period ending July 27 (Attachment Six). Nine comment letters were received (Attachment Seven).

Mr. Piazza suggested a drafting group review the final set of comments and propose a white paper for consideration of adoption.

Kay Noonan (NAIC) said interested parties have concerns about the scope of the white paper and its potential to alter the existing legal structure, which states follow for review of rates and rating plans. She suggested the following language to address the concerns: “As discussed further in the body of the White Paper, this document is intended as guidance for regulators as they review predictive models. Nothing in this document is intended to, or could, change the applicable legal and regulatory standards for approval of rating plans. This guidance is intended only to assist regulators as they review models to determine whether modeled rates are compliant with existing state laws and regulation. To the extent these best practices are incorporated
The Product Filing Review Handbook provides that it is intended to ‘add uniformity and consistency of regulatory processes, while maintaining the benefits of the application of unique laws and regulations that address the state-specific needs of the nation’s insurance consumers.’"

The Task Force agreed the wording reflects the Task Force’s intent and expectation that the document is only guidance.

Interested parties highlighted some of the written comments. Some Task Force members expressed the white paper is close to being finalized.

7. **Heard Reports from Professional Actuarial Organizations**

The Task Force heard reports from the Academy regarding its COPLFR and Casualty Practice Council activities; reports from the Academy, the Actuarial Board for Counseling and Discipline (ABCD) and the Actuarial Standards Board (ASB) on professionalism; and reports from the CAS and SOA on property/casualty (P/C) actuarial research (Attachment Eight).

8. **Heard a Report on a Proposed COVID-19 Data Call**

During its May 19 and July 14 calls, the Task Force discussed a potential NAIC data call on COVID-19 for multiple lines of insurance, including commercial lines and workers’ compensation. Mr. Vigliaturo said the data call differed from the Property and Casualty Insurance (C) Committee data call, which focused on the business interruption coverage. He said the Committee has started considering a second phase of COVID-19 data calls, creating potential for overlap with the Task Force’s work. He said the Task Force will no longer be working on that project but has forwarded information about its prior work to the Committee.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
The Casualty Actuarial and Statistical (C) Task Force met via conference call July 14, 2020. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo and Connor Meyer (MN); James J. Donelon, Vice Chair, represented by Warren Byrd, Rich Piazza and Larry Steinitz (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Christina Corieri represented by Vanessa Darrah, Vincent Gosz and Tom Zuppan (AZ); Ricardo Lara represented by Mitra Sanandajifar (CA); Michael Conway represented by Mitchell Bronson, Eric Unger and Sydney Sloan (CO); Andrew N. Mais represented by Susan Andrews, Wanchin Chou and Qing He (CT); Karima M. Woods represented by David Cristhifil (DC); David Altmair represented by Robert X. Lee (FL); Doug Ommer represented by Travis Grassel (IA); Robert H. Muriel represented by Reid McClintock and Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd and Heather Droge (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindsey-Myers represented by Cynthia Amann, LeAnn Cox, Kendra Fox and Julie Lederer (MO); Mike Causey represented by Arthur Schwartz (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Maureen Motter (OH); Glen Mulready represented by Landon Hubbart, Andrew Schallhorn and Shelly Scott (OK); Jessica K. Altman represented by Kevin Clark, James DiSanto, Michael McKenna and Bethany Sims (TX); Michael S. Piectak represented by Rosemary Raszka (VT); and Mike Kreidler represented by Eric Slavich (WA). Also participating were: Kevin Dyke (MI); Gordon Hay (NE); and Tomasz Serbinowski (UT).

1. **Adopted the Report of the Actuarial Opinion (C) Working Group**

2. **Discussed a COVID-19 Proposed Data Call**

Mr. Schwartz proposed an NAIC data call on COVID-19 for multiple lines of insurance, including commercial lines and workers’ compensation, on the Task Force’s May 19 call. Mr. Schwartz said the public and legislators would be interested in this data, and the data could be used in a lot of ways in the future. He said he would create templates for a data call. Mr. Schwartz explained his attached proposal (Attachment One-A). He said the data would allow actuaries to look at changes to frequency, severity and premium distribution by month by state and compare those to the same period a year ago. He said the Insurance Services Office (ISO) has a presentation on data aspects of COVID-19, but it did not provide actual data.

Mr. Schwartz proposed that the data call be completed immediately and quarterly thereafter. Data would need to be reviewed for reasonability, and companies may need to be contacted and questioned about their data; only aggregate data would be available publicly. Mr. Schwartz said the data would be useful to project premium taxes. He said the data would be useful to consumers, media, state insurance regulators, and legislators, and it could help the industry.

The following issues were discussed: 1) frequency can be calculated in different ways using the proposed data; 2) this data call potentially overlaps with work being done by the Property and Casualty Insurance (C) Committee and the Market Regulation and Consumer Affairs (D) Committee; 3) the proposed monthly breakdown is needed because each month is affected differently; 4) the 2019 distribution might not be a typical distribution for comparison to 2020; 5) 2020 data is also affected by non-COVID-19 factors; 6) accident year data would be better than calendar year data for this type of analysis; 7) the data call should be limited to lines of business severely affected; 8) a financial solvency data call might be more important; 9) the data call would be burdensome to the industry; 10) advisory organizations might be able to collect and share data; 11) data definitions are needed; and 12) projected values will be difficult to estimate.
Mr. McKenney said some accident year claim, loss, and exposure data for the lines of business affected would be useful. He said some companies are filing rate changes based on 2019 data with no analysis of the pandemic. Mr. Davis said a company filed for an auto insurance rate increase in Alabama. He questioned how the company would know that claim frequency will return to pre-COVID-19 levels. Mr. Steinert said a company provided a COVID-19 analysis in which there are drivers increasing costs, such as people driving faster, a low supply of auto parts, and recessionary influences.

Birny Birnbaum (Center for Economic Justice—CEJ) recommended that the Task Force review a data call proposed by the Consumer Federation of America (CFA), and the CEJ proposed a data call. He said: 1) new claims received would be a useful data element; 2) data should be granular and on a weekly basis; 3) new claims received could be compared to new claims received in months or a year prior; 4) COVID-19 is the dominant factor on changes to frequency and severity; 5) traditional data elements have problems from timing (e.g., paid claims include claims initiated in prior periods, and premium would be affected by refunds or rebates; 6) the key items are exposures in force; 7) the data call format should be one table rather than multiple Excel worksheets; and 8) the data should all be made public.

Angela Gleason (American Property Casualty Insurance Association—APCIA) said the Property and Casualty Insurance (C) Committee and the Market Regulation and Consumer Affairs (D) Committee data call has focused on business interruption, but there is consideration to expand to more lines. She said the proposal is for a lot of data, and companies are right in the middle managing the crisis. She said the data call could divert important resources from helping consumers. Peter Kochenburger (University of Connecticut School of Law) said companies are likely collecting the data for their own purposes, so there would be work to put the data in the regulatory requested format, but he said it would seem like there would not be much additional work.

Mr. Vigliaturo said the proposal appears to need to be refined. He suggested that ideas be sent to Kris DeFrain (NAIC), and some volunteers could then refine the proposal.

### 3. Discussed the Continued Competence Charge and the CAS/ SOA Task Force’s Appointed Actuary CE Log

Mr. Vigliaturo said the Task Force discussed the Casualty Actuarial Society/Society of Actuaries (CAS/ SOA) continuing education (CE) log for appointed actuaries on its May 19 call. One proposal was to consider allowing an actuary to add a column to the actuary’s own CE log rather than use the proposed template. It was noted that data compilation would not be as easy with this methodology, but actuaries have never been required to use a specific template. Some members expressed concern that the data output might not be very actionable by state insurance regulators, given the potential for actuaries to code different categories for the same presentation. Mr. Vigliaturo said he remains concerned with the timing, given that actuaries have used their own log for six months in 2020.

Ann Weber (SOA) said there is a new version of the log, and the aim is to finalize the log as soon as possible. She said both organizations need to get information out to membership soon. Ms. Lederer said even with the updated version of the log, her concerns expressed on the May 19 call still apply. She suggested that the CAS and SOA expose the log for comment from its current appointed actuaries and any actuary who might be an appointed actuary in the future. Mr. Dyke said the log is required via the Annual Statement instructions, and the form of the log was referred to the CAS/ SOA Task Force to decide. He said the categories of CE are posted on the Task Force’s website in a document titled, “Appointed Actuary CE Log Categories.”

Ms. Lederer made a motion, seconded by Mr. Davis, to recommend that the CAS/ SOA Task Force defer the implementation of the CAS/SOA CE log for 2020 and allow appointed actuaries to add a column to their existing CE log indicating the categorization approved by the Task Force (“Appointed Actuary CE Log Categories”).

### 4. Discussed Project #2019-49: Retroactive Reinsurance Exception

Mr. Vigliaturo said the Statutory Accounting Principles (E) Working Group referred Project #2019-49: Retroactive Reinsurance Exception to the Task Force. He said this is the project initialized from a letter presented by the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy). Mr. Hay said he would work with George Levine (Academy) to develop a proposal.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

Casualty Actuarial and Statistical (C) Task Force
Conference Call
May 19, 2020

The Casualty Actuarial and Statistical (C) Task Force met via conference call May 19, 2020. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Viggliaturo and Connor Meyer (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Larry Steinert (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis and Jerry Workman (AL); Christina Corieri represented by Vanessa Darrah and Tom Zuppan (AZ); Ricardo Lara represented by Annie Chao and Lynne Wehmueller (CA); Michael Conway represented by Sydney Sloan and Eric Unger (CO); Andrew N. Mais represented by Susan Andrews, Wanchin Chou, Qing He and Doris Schirmacher (CT); Karima M. Woods represented by David Christhilf and Monica Dyson (DC); David Altmaier represented by Jie (Peggy) Cheng, Howard Eagelfeld, and Robert X. Lee (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen, Kim Cross and Andria Seip (IA); Robert H. Muriel represented by Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by LeAnn Cox and Julie Lederer (MO); Mike Causey represented by Kevin Conley and Arthur Schwartz (NC); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (OH); Glen Mulready represented by Cuc Nguyen and Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl and Ying Liu (OR); Jessica K. Altman represented by Kevin Clark, James DiSanto, Michael McKenney and Bojan Zorkic (PA); Raymond G. Farmer represented by Will Davis and Michael Wise (SC); Kent Sullivan represented by J’ne Byckovski, Brock Childs, Nicole Elliott, Miriam Fisk, Eric Hintikka, Brian Ryder and Bethany Sims (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill represented by Tonya Gillespie and Juanita Wimmer (WV).

1. **Adopted the Report of the Actuarial Opinion (C) Working Group**

Ms. Krylova said the Actuarial Opinion (C) Working Group has not met recently, but it formed a drafting group to prepare a draft of potential changes to the *Financial Analysis Handbook* and the *Financial Condition Examiners Handbook*.

2. **Discussed the Regulatory Review of Predictive Models White Paper**

Mr. Piazza said the drafting group revised the *Regulatory Review of Predictive Models* white paper based on Oct. 15, 2019, comments. He said the revised paper was not exposed earlier to allow all parties to focus on the coronavirus pandemic and related work. He said the documentation is the same as used for previous exposures. An Excel file showing how submitted comments were addressed and/or reasons why no change was made; a Word files was also presented.

Mr. Piazza said some of the significant changes are: 1) the information elements were moved to an appendix and include cross-references to the best practices; 2) some items found to be outside of the Task Force’s charges that are not contributing to the purpose of the paper were moved to the “Other Consideration” section; and 3) the “Other Consideration” section was revised to be a bulleted topics list. Once changes are made to the paper to reflect the final ad hoc group call, the chair will expose the paper for a 45-day public comment period.

Birny Birnbaum (Center for Economic Justice—CEJ) asked questions regarding: 1) whether state insurance regulators use the phrase “justify rates” in reference to the state rating law that says rates shall not be excessive, inadequate or unfairly discriminatory; and 2) the meaning of the Task Force’s charge to issue guidance.

Mr. Piazza responded that the phrase “justifying rates” must be in line with all the state laws; and the Task Force’s guidance to the states is intended to help state insurance regulators review rate filings.

Mr. Birnbaum asked if generalized linear models (GLMs) are used for overall rate determination or classification rating plans.

Mr. Piazza said classification rating plans, but state insurance regulators must evaluate that the rates are in line with state law.
3. Discussed the Continued Competence Charge and the CAS/SOA Task Force’s Appointed Actuary CE Log

Mr. Vigliaturo discussed the history and timeline for the continued competence charge. He said the work started when the continued competence charge was adopted Oct. 24, 2017, by the Executive (EX) Committee. The Task Force adopted proposals made by the Casualty Actuarial Society/Society of Actuaries (CAS/ SOA) Appointed Actuary Continuing Education Task Force (CAS/SOA CE Task Force) to address the framework of and some details about the project. During its Jan. 28 conference call, the Task Force adopted a proposal to the Blanks (E) Working Group to modify 2020 annual financial statement instructions to outline the framework for this project. The Task Force’s proposal was exposed for comment to the Blanks (E) Working Group; it received some comments from the American Academy of Actuaries (Academy), and it will be considered for adoption during the Blanks (E) Working Group’s May 28 conference call. No modifications to the Task Force’s original proposal were proposed by the Working Group.

With the instructions in place, Mr. Vigliaturo said the Task Force needs to discuss the proposed CE log. He said the CAS/SOA CE Task Force exposed the CE log for comment and then made some changes to the proposed CE log based on submitted comments.

Ken Williams (CAS) said changes were made to make the log easier to use.

Ms. Lederer submitted a comment letter for the Task Force call (Attachment Two-A). She said several changes were made to align with her assessment in February, and she referred to recommendations in her letter. She would prefer to ask actuaries to add a column to the individual actuary’s own CE log. While the data compilation will not be as easy, she prefers that method rather than promulgating a template for the log. She said the data output will not be actionable by state insurance regulators.

Mr. Vigliaturo said he is concerned about whether: 1) the CE log can be ready for the 2020 log, given that half of the year is already gone; and 2) there will be meaningful results when one presentation can fit into multiple categories.

Kathleen C. Odomirok (Academy) said the information will not be valuable in the proposed format, and she suggested that the CE log be re-exposed.

Ralph S. Blanchard III (Travelers) supported Ms. Lederer’s proposal to add a CE column to an actuary’s own log.

Ms. Darby asked whether the Task Force might consider taking the current proposed log and improving it for future use.

Ms. Lederer said her preference is not to use the template; however, if the Task Force wants to use the template, then she offered suggestions in her comment letter. The Task Force will continue discussion on its next call.

4. Discussed COVID-19 Issues

Mr. Vigliaturo said there are numerous ratemaking and coverage issues arising from COVID-19. The Property and Casualty Insurance (C) Committee recently adopted a data call proposal to collect business interruption insurance data. He said many insurers have issued refunds or dividends to reflect significant changes in claims experience arising from more people self-quarantining. He asked state insurance regulators to discuss related state activities.

Mr. Stolyarov described activity in Nevada, such as the following: 1) private passenger auto insurers offered premium relief from 15% to 25% as a refund/credit/dividend; 2) some commercial auto insurers offered premium relief; 3) workers’ compensation insurers were asked to make changes in payroll calculations and re-classify employees who are being paid but not working; 4) the state requested a moratorium on adverse credit-based insurance scoring to the extent arisen from COVID-19; and 5) the states are focused on preventing inadvertent adverse impacts on future renewal business.

Mr. Citarella said some states might wish to require that credit-based scoring not be modified in the given situation for new business, in addition to renewals.

David F. Snyder (American Property Casualty Insurance Association—APCIA) said many states already have laws in place regarding exceptions for adverse actions in credit scores.
Mr. Birnbaum said those current laws are not effective because consumers do not know how to use them.

Mr. Zuppan said some states are waiving exclusions in personal lines policies for transporting goods and medicine. He said state insurance regulators will need to evaluate the ratemaking data to make sure such losses are excluded when they no longer waive such exclusions.

Ms. Darby said she is documenting what each company is doing so she can evaluate such actions in future filings.

Mr. Schwartz asked for consideration of an NAIC data call on COVID-19 for multiple lines of insurance, including commercial lines and workers’ compensation. He said the public and legislators would be interested in this data, and the data could be used in a lot of ways in the future. He considered proposing a state data call, but he believes the right action would be for the NAIC to do so. He said he expects little claim activity in business interruption insurance because of pandemic exclusions. He said he would create templates for a data call.

Mr. Schwartz said he annually compiles data to predict premium taxes by line of business. He said taxes vary by entity, and some have tax breaks. He said this year, this is a real issue with expectations that many will not be able to pay premiums. Individuals are out of jobs, and some businesses are going out of business.

Mr. Vigliaturo said the idea is interesting. He said the Task Force will need to discuss it with the Property and Casualty Insurance (C) Committee before proceeding.

J. Robert Hunter (Consumer Federation of America—CFA) presented issues documented in his May 7 joint comment letter with the CEJ (Attachment Two-B). He said auto rates are excessive, even after the insurers make premium relief payments. He said state insurance regulators should take action.

Mr. Snyder said the state insurance regulators are using a thoughtful approach under difficult circumstances. He said any solution needs to be evaluated company by company; there is no “one-size-fits-all” solution.

Mr. Birnbaum said the APCIA has mischaracterized the CFA/CEJ proposal; it is a data-driven approach and not a one-size-fits-all solution. All auto rates immediately became excessive when past claim history no longer represented the current situation. He said the state insurance regulators need data to assess what types of actions are needed.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.
Good evening,

I reviewed the revised CE log (attached) in light of my 2-28-20 letter (also attached) on the previous draft. I believe there have been some significant improvement to the log, and I appreciate the effort of those working on this project. Below, I list continuing concerns, improvements from the prior draft, and additional comments.

Continuing concerns, as first noted in my comment letter dated 2-28-20:

1. Though the log has improved from the prior draft, I still believe it would be preferable to ask actuaries to add a column to their existing CE log to indicate the NAIC-sanctioned category, as opposed to promulgating a required log format.
2. The dropdown menus that don’t allow free text make the categorization columns inflexible and reduce the value of aggregated data collected from these logs.
3. I recommend that actuaries not be required to use this spreadsheet to track their CE until 2021 since we are well into 2020. (In contrast, cell C9 of the INSTRUCTIONS tab suggests that this form will be used to log CE performed in 2020.)
4. My comment on general versus specific CE has been partially addressed, since the actuary completing the log can now indicate if the session is used to meet general or specific CE. But it would be helpful if the cells in columns 13-17 were grayed or locked if the actuary selected “no” in column 12.
5. As described in my letter, both the CAS and the SOA’s CE policies recommend a “brief description” of the CE activity. There is still no column for this in the log. The actuary could describe the activity in column 18, “additional notes,” but it would be preferable to add a distinct column.
6. The form sometimes refers to CE (e.g., cell C27 of the INSTRUCTIONS tab) and sometimes CPD (e.g., cell C20 of the INSTRUCTIONS tab). I recommend using CE since that aligns with the Statement of Actuarial Opinion instructions’ reference to continuing education. Regardless, the form creators should choose one acronym and stay consistent.
7. Some minor typos remain (e.g., in cells C9, C27, A36, and A37 of the INSTRUCTIONS tab).

Positive changes from the 9-26-19 to the 5-15-20 log that reflect suggestions I made in my 2-28-20 letter:

1. The categorization of CE in the log has been simplified, with some columns collapsed.
2. The log has more mechanisms in place to reduce category-related input error (specifically, in column 15, which depends on the input in column 14).
3. The distinction between the categories in USQS section 3.1.1.2 and the NAIC categories is now clear.
4. The log now calculates the total CE credits.
   a. One issue: The log should calculate credits by attestation year in column 2, but the formula in cell H88 is just a simple sum.
b. One suggestion: As I noted in my letter, it would be helpful if the log calculated additional subtotals by attestation year: specific, organized, professionalism, and general business.

Additional comments on 5-15-20 log:

1. Column 2, “attestation year,” is new with the revised log. I recommend clarifying this column, perhaps with more wording and some examples on the INSTRUCTIONS tab. (We in Missouri experienced confusion from an appointed actuary this year in regards to the attestation year. He attested to meeting the requirements for 2019 on the CAS’s website since he did his CE in 2019, whereas he should have attested for 2020.)

2. I recommend changing the wording in the peach shaded cells in row 8 from “Only required for appointed actuaries” to something like “Only required for those certifying compliance with the CE requirements of the NAIC P/C Statement of Actuarial Opinion.” I believe anyone who self-certifies compliance for NAIC SAOs on the CAS or SOA website will be subject to audit, regardless of appointed actuary status.

3. I believe actuaries may be confused about what to put in column 3 (“continuing education description”) and column 6 (“event name”). Based on the column titles, I would put a brief description of the activity in column 3 and the title of the activity in column 6; this is not what the log’s creators intend, per the INSTRUCTIONS tab.
   a. In addition, in contrast to the red shading and the text that says “required,” column 6 is only required in a specific situation per the INSTRUCTIONS tab. So this should probably be shaded peach, with the “required” label removed.

4. Column 4 (“event type”) is a dropdown menu, and the user is not allowed to enter freeform text. But some event types mentioned in the USQS (e.g., committee work and courses) aren’t included in the menu.

5. Columns 9 and 10 need editing.
   a. First, the log is incorrect in assuming that the activity isn’t organized if it’s sponsored by one’s employer. USQS Section 2.2.7 says, “Continuing education can be obtained through either ‘organized activities’ that involve interaction with actuaries or other professionals working for different organizations or ‘other activities.’... In-house meetings can satisfy the requirement of interaction with actuaries or professionals working for different organizations by using outside speakers.”
   b. Second, it’s not correct for column 10 to default to “organized” if one selects “no” for column 9. E.g., if a CE activity is self-study, one would answer “no” to column 9 since this wasn’t a presentation by the employer, but it’s not correct for column 10 to then default to “organized.”

6. Why is there a column 16 for the “other” subcategory? Could these subcategories be added to the dependent dropdown list in column 15?

Thank you for considering these comments.

Best regards,

Julie Lederer, FCAS, MAAA
Property and Casualty Actuary
Missouri Department of Commerce and Insurance

RE: Appointed Actuary 2020 CE log

Dear Ann:

I appreciate the efforts of those who developed the exposed CE log. I used my 2019 continuing education to run a pilot test, and my comments below are based on that test. I start with general comments and then offer specific comments.

General comments:

The log may have several possible goals:

1. Assist appointed actuaries in ensuring they’ve met the CE requirements
2. Allow appointed actuaries to completely and accurately describe the CE topics they covered during the year
3. Make the review of the logs by the CAS and SOA more streamlined
4. Facilitate data compilation

It seems that the exposed log may favor goals 3 and 4 over 1 and 2.

- The categorization of CE (in columns K through R of the “2019 ATTESTATION FORM” tab) is complicated, which doesn’t further goal 1.
- In contrast to goal 2, the dropdown menus in the category columns make the form inflexible. I attended several CE opportunities in 2019 that cross multiple categories (e.g., a webinar that touched on analytics, programming, and emerging issues). The form does not allow the user to enter any free-form text in a cell with a dropdown menu, so the form doesn’t appropriately reflect the variety of topics covered in those CE opportunities.

I recommend that the CAS and SOA turn away from the idea of a standardized log and simply request that appointed actuaries add a column to their existing CE log to indicate the NAIC-sanctioned category (or categories) for the 15 hours of specific CE. This would further goals 1 and 2. It would also give appointed actuaries freedom to record CE in the format of their choosing, while providing the CAS and SOA the requested information on the categorization of specific CE. Note that, while neither the CAS CE Policy nor the USQS nor the SOA CPD Requirement mandates a particular format, each does specify the type of information that the log should contain. Appointed actuaries should, of course, continue complying with these requirements as they add a new column for the specific CE category.

It’s true that my recommendation could make it harder to achieve goal 4. But, as I noted in two 2019 comment letters and on CASTF’s 1/28/20 teleconference, I question the value of the summarized data anyway. In addition, when I was filling out the exposed log with my 2019 CE, I frequently had to make a subjective decision on which category to choose. This made me realize that the summarized data on CE categories may not be very reliable.

Furthermore, my understanding is that those who meet the specific qualification standards only have to classify their CE according to the NAIC-approved categories for the 15 hours of specific CE, not for the
entire 30 hours. This spreadsheet does not permit the user to make a clear distinction between CE used to meet the general requirement and CE used to meet the specific requirement. Asking actuaries to add a “category” column to their existing CE log would allow them to enter something like “N/A” in the column for any learning opportunities that they’re not using to fulfill the specific CE requirements.

Specific comments:

If you decide to promulgate a standardized template and go forward with the exposed log (or something similar):

1. What is the planned implementation date? I recommend that actuaries not be required to use this spreadsheet to track their CE until 2021 (for work performed in 2022) since we are well into 2020. It took me awhile to figure out the attestation form and move my CE for 2019 into the form, even though my 2019 CE was fully documented in a similar Excel spreadsheet.

2. Is the intent for appointed actuaries to use this log to record both general and specific CE? If so, as noted above, the log is not set up to smoothly accommodate general CE, but there are a few simple changes that could help: The log could have a column in which the actuary indicates whether the learning opportunity is used to meet the specific CE requirements (see the sample form in Appendix 5 of the USQS); if not, then the actuary would not need to complete the category entries in columns K through R.

3. It seems like the workbook attempts to blend the topics in USQS 3.1.1.2 with the categories approved for use by the CASTF and, in so doing, mischaracterizes the USQS.
   a. For example, the categories in columns L through P of the “2019 ATTESTATION FORM” tab are not all from section 3.1.1.2 of the USQS, despite the column headers in row 13.
      i. For example, column P is labeled “Section 3.1.1.2 Requirements & Practice Notes Categorization (Secondary).” But section 3.1.1.2 of the USQS does not mention “requirements and practice notes”; rather, this is one of the NAIC-sanctioned categories.
   b. I don’t think USQS 3.1.1.2 even needs to be referenced on this attestation form, since appointed actuaries will need to classify their specific CE according to the NAIC-sanctioned categories, not the categories in USQS 3.1.1.2. If you agree, then changes need to be made to several tabs (“INSTRUCTIONS,” “USQS Section 2.3, 3.1.1.2, 3.3,” “Topic selection flow chart,” and “2019 ATTESTATION FORM”).

4. I’m not clear on column Q (“Does this meet Section 3.3 by meeting an OTHER CPD category?”). I’m not sure why section 3.3 of the USQS is referenced here; section 3.3 says nothing about the “other” categories. Rather, the “other” category referenced is category #7 of the NAIC-sanctioned categories (per https://content.naic.org/sites/default/files/inline-files/Appointed%20Actuary%20CE%20Categories.docx). So why would this category be treated differently than the other categories in columns L through P? It seems that columns Q and R could be collapsed into one column and, if an actuary got CE in one of the “other” subcategories, he or she could mark “yes” in column K and “Other” in column L, then select the subcategory (“accounting other than statutory,” “analytics,” etc.) in the combined column Q/R.

5. As noted above, the category columns are difficult to figure out. In addition, the log has few mechanisms in place to reduce category-related input error, which further reduces the value of any summarized data gathered from these logs. This is another argument for doing away with
the category columns and allowing the actuary to simply add a category column to his or her existing CE log.

a. For instance, a user is allowed to enter “no” in column K yet still select a category from the dropdown menu in column L. Ideally, the log would make it impossible to do that, perhaps by locking column L if the user selects “no” in column K.

b. Since there’s nothing prohibiting it, I assume that some actuaries will select multiple categories in columns M through R. For example, if an actuary attends a seminar session on predictive modeling in workers’ compensation reserving, he might select “Reserves” in column “L,” “Reserving Analysis” in column O, and “Modeling” in column R. Per the “Topic selection flow chart” tab of the workbook, I understand that this is not what the log’s creators are hoping for and that a user should only enter a category in one of columns M, N, O, P, or R. Regardless, this type of (technically incorrect) log entry reflects the reality of continuing education, since most sessions touch on multiple disciplines.

c. Would it be possible to use dependent dropdown menus to make the workbook more user-friendly and reduce the risk of entry error? There could be a dropdown menu in column M that depends on the primary category the user selects in column L. For example, if the user selected “Policy form/coverage” in column L, the options in the column M dropdown menu would be “Form coverage,” etc. If the user selected “Reinsurance” in column L, the options in the column M dropdown menu would be “Reinsurance collateral,” etc. This would also have the benefit of making the form more printer-friendly by reducing the number of columns.

6. Cell C24 of the “INSTRUCTIONS” tab suggests that the minutes entered by the user will be used to calculate credit hours. I don’t see where this is done. In addition, no total is calculated on the “2019 ATTESTATION FORM” tab. It would be helpful, both for the users and the reviewers, for the form to calculate various totals:

a. Total CE credits (actuaries should earn a minimum of 30, per USQS 2.2.2). (This assumes that the log is designed to be used to track both general and specific CE.)

b. Total specific CE credits (minimum of 15, per USQS 3.3)

c. Organized specific CE credits (minimum of 6, per USQS 3.3)

d. Professionalism credits (minimum of 3, per USQS 2.2.2)

e. General business credits (maximum of 3, per USQS 2.2.9)

7. Both the SOA’s CPD Requirement (Section D.1.b.i) and the CAS CE Policy (Section A.3) say that the CE log should include “a brief description” of the CE activity. My informal conversations with members of the CAS’s Continuing Education Compliance Committee have suggested that the committee members find a brief description helpful when they’re reviewing an actuary’s CE log. (I certainly found the descriptions in my 2019 log helpful when trying to determine which category to select in the exposed log.) Should there be an additional column in the log to reflect this requirement and assist the reviewers?

8. (This is more of a question on the categories, as presented in https://content.naic.org/sites/default/files/inline-files/Appointed%20Actuary%20CE%20Categories.docx, rather than on the log itself, though it’s reflected in column R of the “2019 ATTESTATION FORM” tab.) What is the difference between “7. Other” and “OTHER CE that should be tracked (may be INSIDE or OUTSIDE the specific requirements of 3.1.1.2, U.S. Qualification Standards (ASB))”? The subcategories (e.g., analytics and modeling) are the same in both categories.
9. (This is more of a comment for the CAS and SOA's reviewers rather than a comment on the log itself, but it presented itself during my pilot test of the log.) I frequently attend CE sessions on industry trends (the status of the workers' compensation residual market, historical reserve development by line of business, trends in the commercial auto segment, etc). It seems like this type of session should be eligible for specific CE, but it wasn’t clear to me how I should categorize it. One could argue that these learning opportunities are “directly relevant to” (to use the language of USQS Section 3.3) a variety of categories: form/coverage, reserving data, reserving analysis, emerging issues, etc. I bring this up because this type of CE session is so common that I assume others besides me will face the same conundrum in determining the most appropriate category.

10. CAS members may not be familiar with the term “CPD.” It’s not used in the 2019 Property/Casualty Annual Statement Instructions or in the sample CE log in Appendix 5 of the USQS. (The term is used in the CAS CE Policy but only in reference to other organizations' CE requirements.)

11. I noted some minor typos (e.g., in cell C9 of the “INSTRUCTIONS” tab).

Thank you for allowing me to comment on the exposed log.

Sincerely,

Julie Lederer, FCAS, MAAA, CPCU

Auto Insurance Premiums are Excessive in Your State

Dear Commissioner,

Consumer Federation of America and the Center for Economic Justice just released a major report detailing the current situation in auto insurance in America and the fact that, throughout every state in the country, consumers are still paying excessive premiums even after the recent voluntary relief granted by most auto insurance companies. The report is attached.

Our report demonstrates that motor vehicle accident data indicate that a minimum average 30% premium relief payment to policyholders to account for COVID-19 impacts is needed starting March 18, 2020 through May 2020, even after accounting for offsetting factors that raise insurer costs during this time. While many insurers should be applauded for their actions taken to date to help policyholders, most insurers’ auto insurance premium relief has not been sufficient. Additionally, future driving – miles driven and vehicles on the road – will not snap back to pre-COVID-19 levels anytime soon, if ever. Gradual relaxing of shelter-in-place restrictions, slow economic recovery, and permanent changes in work-related travel demonstrate the need for on-going auto insurance premium relief and a different regulatory approach until a new normal develops.

While we recognize the extraordinary challenges and demands faced by state Departments during this unprecedented time, in most states not enough attention has been paid to the need for further immediate and ongoing auto insurance premium relief. Perhaps not surprisingly, most regulatory systems have proven to be unprepared for the effects of this unprecedented pandemic. Nevertheless, statutory responsibilities – ensuring insurance rates are not excessive and not unfairly discriminatory and protecting consumers – requires your action to ensure fair treatment of consumers and prevention of windfall profits for insurers.

Below are several actions that your department can and should take to ensure that auto insurance premiums are not excessive or unfair today and throughout the COVID-19 pandemic:
1. Review the paybacks and credits insurers have implemented for the March to May 2020 period to assure adequate relief is being granted.

This step requires review of the current paybacks and credits both in terms of the amount of the action and in terms of the duration. As our new report shows, the most common plan implemented by insurers, 15% for April and May, is significantly inadequate relief for consumers. Relief should be at least in the 30% range and the time covered should be from mid-March until May 31, 2020.

2. Freeze auto insurance rates at the March 1, 2020 level to act as the base for future discount/credit action to keep rates from being excessive after May 31, 2020.

The rates in effect as of March 1, 2020, the “pre-pandemic rates,” will be the basis for pricing auto insurance going forward until more normal actuarial methods can be applied. Prospective ratemaking using normal actuarial methods is impossible at least during the tenure of the pandemic and its near-term effects. Using recent data for 1 to 5 years of experience is largely irrelevant to the conditions that will prevail starting June 1, 2020 and stretching out for an unknown period of at least months.

3. Implement an immediate, easy to apply, plan to determine discounts and credits to apply to premiums to be charged on and after June 1, 2020.

Departments can undertake simple data collection, such as new claims counts, to be used initially until a more sophisticated approach is developed. These data are accurate enough to produce reasonable discounts and credits to apply to the pre-pandemic rates now in effect. The method to be applied is a retrospective adjustment in the form of a return of premiums, which should be based on new claims for the month as compared to new claims from the pre-COVID-19 base premiums. For example, new claims filed in June 2020 will be used to calculate the discount for June to apply to the actual collected premiums for the month to calculate the payback. The payback of premiums thus determined will be made by no later than the end of July. This method will be applied, month by month, until data collection sufficient to implement a new approach is available.

4. Begin development of a more sophisticated approach as a glide path from the continued effects of the COVID-19 pandemic toward the day when enough data are available to allow normal actuarial techniques to be used again to produce prospective auto insurance rates.
Data collection of possible, more sophisticated retrospective adjustments, will be
developed and implemented as such data become available. Actuaries from
Departments of Insurance, the National Association of Insurance Commissioners,
consumer groups, and insurers should be called upon to propose and review ideas for
such data collection and methodology for returning excessive premiums, month by
month. Particular care must be taken here to develop methods not reliant on current
reserves, which are subjective and subject to manipulation.

5. After data including the COVID-19 era becomes available, department and other
actuaries (including the NAIC) should work together to determine if and when such
data might be useful and appropriate to use in prospective ratemaking.

This step will be tricky since the data during the pandemic will be affected by many
factors. Some reliance on pre-Covid-19 experience may be appropriate to consider.
The “new normal,” a post-COVID-19 era, will likely not resemble the pre-COVID-19
era and significant downward adjustments in miles driven are almost sure to be
ingrained in the society and must be recognized in ratemaking.

6. Return to normal prospective ratemaking once all the COVID-19 data are collected
and a determination that such ratemaking is possible and appropriate.

Thank you for your consideration, and please let us know if you have any questions.

Sincerely,

J. Robert Hunter, FCAS, MAAA

The Casualty Actuarial and Statistical (C) Task Force met via conference call Feb. 18, 2020. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Larry Steinert (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Christina Corieri represented by Vincent Gosz (AZ); Ricardo Lara represented by Lynne Wehmueller and Mitra Sanandajifar (CA); Michael Conway represented by Mitchell Bronson, Rolf Kaumann, Sydney Sloan and Eric Unger (CO); Andrew N. Mais represented by Susan Andrews and Qing He (CT); David Altmairer represented by Howard Eagellfield (FL); Colin M. Hayashida represented by Randy Jacobsen (HI); Doug Ommen represented by Travis Grassel (IA); Robert H. Muriel represented by Reid McClintock (IL); Vicki Schmidt represented by Nicole Boyd (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chlora Lindley-Myers represented by Julie Lederer (MO); Alexander K. Feldvebel represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko (OH); Glen Mulready represented by Andrew Schallhorn (OK); Andrew R. Stolfi represented by David Dahl and Ying Liu (OR); Jessica K. Altman represented by Kevin Clark and Michael McKenney (PA); Raymond G. Farmer represented by Michael Wise (SC); Kent Sullivan represented by J’ne Byckovski, Brock Childs, Miriam Fisk, Eric Hintikka, and Bethany Sims (TX); Michael S. Pieciak represented by Pat Murray (VT); Mike Kreidler represented by Eric Slavich (WA); and James A. Dodrill represented by Juanita Wimmer (WV). Also participating was: Gordon Hay (NE).

1. **Adopted the Report of the Actuarial Opinion (C) Working Group**

Ms. Krylova said the Actuarial Opinion (C) Working Group met in regulator-to-regulator session to discuss changes in the regulatory review procedures based on revisions to the qualified actuary definitions. The Working Group plans to review the financial examination and analysis handbooks and hold a monthly regulator-to-regulator call to discuss financial examination procedures and issues. Ms. Krylova made a motion, seconded by Ms. Lederer, to adopt the Working Group’s report. The motion passed unanimously.

2. **Discussed the CAS/SOA Task Force’s Appointed Actuary CE Log**

Mr. Vigliaturo said the blanks proposal to modify 2020 instructions for the Statement of Actuarial Opinion (SAO) was adopted during the Task Force’s Jan. 28 conference call.

Mr. Vigliaturo said the proposed continuing education (CE) log was received from the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) Appointed Actuary Continuing Education Task Force. Ralph Blanchard (Travelers) said he questions what can be done with the information, and there will be discrepancies in reporting. He said one discrepancy is that the U.S. qualification standards talk about CE “relevant to” topics, and the log says CE “in” a topic. Mr. Hay said the intention seems to be for the CAS/SOA compliance groups to gather summaries from appointed actuary submissions, thereby informing the Task Force of a profile of what the appointed actuaries are reporting for CE. Ms. Lederer volunteered to beta test the electronic version of the log. Comments are due to the CAS and SOA by March 10.

On Jan. 7, Mr. Vigliaturo received a notice from Robin Marcotte (NAIC) about the Statutory Accounting Principles (E) Working Group’s creation of Project #2019-40, and he was told that the project could affect the loss ratios and information reported in Schedule P. The Working Group requested the Task Force’s opinion about the proposed change in wording.

Mr. McKenney and Mr. Citarella drafted a response to the referral. Mr. McKenney said a few insurers are reporting significant risk-related fees and other charges as “other income” rather than as premium, thereby avoiding premium tax. He said there is a very narrow exception in a Statement of Statutory Accounting Principles (SSAP) No. 53—Property Casualty Contracts—Premiums footnote stating that installment fees can be reported to other income, but some have applied that more broadly to risk-related fees and charges. The proposal is to change the footnote on SSAP No. 53 to explain that the narrow exception is meant for non-risk-related fees and expenses. Any risk-related premium would be reported as premium and not “other income.” He said there are fees related to installment fees, but they would be postage and immaterial expenses, so they did not discuss...
expenses in the footnote. Mr. Steinert asked if motor vehicle reports (MVRs) or inspections of homes would be premium or not. Mr. McKenney said the reports would be related to the transfer of risk; and to the extent that the insurer is charging for it, the charges would be reported as premium. Mr. Jacobson said those kinds of charges to insureds are considered premium in Hawaii statutes. Mr. Eagelfeld said in Florida, if the amount is required in order for the policy to be written, it is premium. He said installment fees are not; inspection fees of a third party are. Mr. McKenney said a difference is if the insured is charging for it.

Investment income being similar to the use of premium financing companies was discussed. Mr. McKenney said the letter quotes the SSAP, and the Task Force is not opining on that.

Birny Birnbaum (Center for Economic Justice—CEJ) suggested that the Task Force recommend the narrow exception be closed and installment fees be included in premium. He said installment fees are related to the cost of investment income, and that is related to the transfer of risk. He said any loopholes will be exploited. He added that managing general agent (MGA) fees are included in the transfer of risk, so the installment fees should be treated similarly. Mr. Steinert said premium is known up front; installment fees emerge through the life of the policy and could change. Mr. Birnbaum says accounting shows past experience. Mr. McKenney said the proposal is to narrow the exception; he would caution trying to close it altogether, as that could lead to some insurers not offering installment plans. He said the exception says that if a policy would be canceled for nonpayment of installment fees, then the installment fees are premium. Mr. Stolyarov said premium taxes in Nevada would be on all installment fees, but this proposal is only for accounting purposes.

Mr. Citarella made a motion, seconded by Mr. McKenney, to adopt the letter to the Statutory Accounting Principles (E) Working Group (Attachment Three-A). The motion passed unanimously.

The Statutory Accounting Principles (E) Working Group asked the Task Force to assist with Project #2019-49: Retroactive Reinsurance Exception. This is the project initialized from a letter presented by the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries (Academy). The aim is to provide more guidance to address diversity in practice regarding the accounting for retroactive reinsurance contracts which meet the exception to be accounted for prospectively. Mr. Vigliaturo asked for volunteers on this project. He said the Working Group received some comments about inconsistent and missing information included in the COPLFR letter, and it will provide answers to the Task Force before asking the Task Force to proceed.

5. Adopted a Response to the ASB’s Request for Input on a Potential P/C Rate Filing ASOP

During the Nov. 12, 2019, conference call and the 2019 Fall National Meeting, the Task Force discussed the Actuarial Standards Board’s (ASB’s) request for input on a potential property/casualty (P/C) rate filing Actuarial Standard of Practice (ASOP). During the Jan. 28 call, the Task Force discussed compiled state insurance regulators’ responses to the ASB’s questions and how to proceed. Mr. Vigliaturo said the comment deadline is Feb. 28, and he noted that individual state insurance regulators can submit comments to the ASB also.

Mr. Stolyarov said the staff-drafted letter represents state insurance regulators’ comments and views. Mr. Eagelfeld agreed and said ASOPs can and are being used as safe harbors. He said state insurance regulators should oppose such actions.

Mr. Birnbaum said the Task Force should oppose the proposed ASOP. The letter said there are divergent views, and it does not indicate that there is opposition. Providing a letter appears to provide support unless the Task Force says it is not in favor. Mr. Vigliaturo said some state insurance regulators previously said the ASOP could provide some benefit, and others opposed. He said the letter does not support the ASOP, but there is diverse opinion.

Mr. Dahl made a motion, seconded by Ms. Darby, to adopt the response to the ASB (Attachment Three-B). The motion passed unanimously.

Mr. Piazza said the drafting group has revised the Regulatory Review of Predictive Models white paper and a mapping of submitted comments to a proposed resolution. He said the plan is to submit the new draft to the Task Force in the next two weeks. He said the drafting group plans to provide a mapping of best practices and information items to put into the paper
for the Spring National Meeting. The national meeting agenda will include time for interested party comments and discussion of the paper. Mr. Piazza said he expects to recommend a short exposure period, some edits to the paper based on submitted comments, and then consideration for adoption. He said the process for adoption involves consideration by the Task Force, its parent committee, and the Executive (EX) Committee and Plenary.

7. Reported on SOA Letters About the States’ Statutes for Qualified Actuaries

Mr. Vigliaturo said some states have received letters from the SOA about the definition of qualified actuary in state law. He said it might be helpful for the Task Force to discuss the term for other actuarial job duties beyond that needed for the annual statement instructions. The annual statement instructions define a qualified actuary for appointed actuaries who issue the SAO. Mr. Vigliaturo said state law often defines qualified actuary for other actuarial roles, such as self-insured certifications and rate filings. He asked whether the Task Force would like to recommend a definition for other roles.

Ann Weber (SOA) said the tracked changes included in the SOA’s letters to Alabama, Florida, Louisiana, Maine, Maryland and South Carolina show insertion of the SOA Fellow of the Society of Actuaries (FSA) into statutes. She said that was planned to be a placeholder and not a proposal for exact wording. Proposals beyond the financial statement duties (e.g., pricing for workers’ compensation, self-insurance, and commercial auto groups) are on hold at the SOA.

Mr. Slavich said Washington is initiating rulemaking to make qualified actuary definitions more in line with the NAIC definition.

Mr. Blanchard said COPLFR discovered that self-insured workers’ compensation was not a line of business under the California insurance department, and that is similar to other states. He said the issue of the definitions is a state matter and not an NAIC matter. Mr. Vigliaturo said if the justification for the SOA to use the credential for the law is based on something the NAIC has done, it is probably appropriate for the NAIC to respond to questions about the review and whether the NAIC definition is appropriate for other uses.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

W:\National Meetings\2020\Spring\TF\CasAct\2-18 CASTF min.docx
TO: Dale Bruggeman, Chair  
Statutory Accounting Principles (E) Working Group

FROM: Phillip Vigliaturo, Chair  
Casualty Actuarial and Statistical (C) Task Force

DATE: February 18, 2020

SUBJECT: Comments on the Statutory Accounting Principles (E) Working Group Ref# 2019-40  
Exposure Draft of Footnote 1 to SSAP No. 53 - Property Casualty Contracts–Premiums

Thank you for the opportunity to comment on the Statutory Accounting Principles (E) Working Group’s (“SAPWG”) exposure draft of changes proposed to Footnote 1 of SSAP No. 53 - Property Casualty Contracts–Premiums.

As you know, the Casualty Actuarial and Statistical (C) Task Force (“CASTF”) exists under the National Association of Insurance Commissioner (NAIC) Property and Casualty Insurance (C) Committee. The Task Force’s mission is to identify, investigate and develop solutions to actuarial problems and statistical issues in the property and casualty industry. Our members include the state insurance regulators tasked with reviewing property and casualty insurance rates in accordance with state laws, actuarial principles and actuarial standards of practice. As such, we have great interest in the SAPWG’s proposed changes to Footnote 1 of SSAP No. 53 - Property Casualty Contracts–Premiums.

In considering the treatment of various types of fees and service charges for purposes of reporting them on NAIC financial statements, we are guided by the Casualty Actuarial Society’s Statement of Principles Regarding Property and Casualty Insurance Ratemaking (https://www.casact.org/professionalism/standards/princip/sppcrate.pdf). These principles are as follows:

- Principle 1: A rate is an estimate of the expected value of future costs.
- Principle 2: A rate provides for all costs associated with the transfer of risk.
- Principle 3: A rate provides for the costs associated with an individual risk transfer.
- Principle 4: A rate is reasonable and not excessive, inadequate, or unfairly discriminatory if it is an actuarially sound estimate of the expected value of all future costs associated with an individual risk transfer.

As noted in Footnote 1 of SSAP No. 53, an installment fee “has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum” and “there is no underwriting risk” associated with an installment fee. As such, an installment fee is not related to the transfer of risk and should not be reported as premium. However, insurance companies use many other charges and fees that are related to the transfer of risk and that should be reported as premium. As actuaries, actuarial students and rate review analysts, the members of CASTF support clarification that ensures fees and charges associated with the transfer of risk are reported as premium and that fees and charges not associated with the transfer of risk will not be reported as premium. This will help ensure that actuarial analyses that make use of written and earned premium, as reported on NAIC financial statements, are consistent with the Casualty Actuarial Society’s Statement of Principles Regarding Property and Casualty Insurance Ratemaking.

For these reasons, the members of CASTF support the revisions proposed to Footnote 1 of SSAP No. 53 as detailed in SAPWG’s Ref# 2019-40.

For the same reasons, the members of CASTF would opine that, theoretically, there should be a reporting location for insurance company expenses incurred as a result of administering installment plans that is separate and distinct from underwriting and/or other expenses. However, we also understand that insurance companies are under no obligation to offer installment plans and we wouldn’t want to place additional reporting burdens on the industry that could cause some insurers to cease offering installment plans, especially when the expenses associated with their administration is of questionable materiality.

Property/Casualty Rate Filing ASOP
Actuarial Standards Board
1850 M Street, NW, Suite 300
Washington, DC 20036-4601

RE: ASB COMMENTS: Property/Casualty Rate Filing Request for Input

The Casualty Actuarial and Statistical (C) Task Force is responding to the Actuarial Standards Board (ASB) request for input concerning the development of an actuarial standard of practice (ASOP) on property/casualty (p/c) rate filings. As noted in the ASB request, the ASOP would be expected to provide guidance to actuaries on the actuarial aspects of the selection of final rates and p/c rate filings to state insurance departments. The potential standard would be guidance regarding the actuarial aspects of a rate filing for the filing actuary, the regulatory actuary, and the reviewing actuary.

The Task Force members have divergent views as to whether a rate filing ASOP is appropriate. While not offering a single consensus opinion, the attachment contains compiled state insurance regulators’ answers to your questions and some additional comments.

The Task Force appreciates this opportunity to provide comments to the ASB. If you have any questions about our comments, please contact Kris DeFrain, at kdefrain@naic.org.

Sincerely,

Phil Vigliaturo, ACAS, MAAA
Chair, Casualty Actuarial and Statistical (C) Task Force

Attachment
The Casualty Actuarial and Statistical (C) Task Force met via conference call Jan. 28, 2020. The following Task Force members participated: Steve Kelley, Chair, represented by Phil Vigliaturo (MN); James J. Donelon, Vice Chair, represented by Rich Piazza and Larry Steinert (LA); Lori K. Wing-Heier represented by Michael Ricker (AK); Jim L. Ridling represented by Daniel Davis (AL); Ricardo Lara represented by Giovanni Muzzarelli and Mitra Sanandajifar (CA); Michael Conway represented by Mitchell Bronson, Rolf Kaumann, Sydney Sloan and Eric Unger (CO); Andrew N. Mais represented by Susan Andrews, George Bradner, Wanchin Chou and Qing He (CT); Karima M. Woods represented by David Christhilf and Sharon Shipp (DC); David Altmairer represented by Howard Egelfield and Robert X. Lee (FL); Colin M. Hayashida represented by Randy Jacobson (HI); Doug Ommen represented by Travis Grassel (IA); Robert H. Muriel represented by Reid McClintock and Judy Mottar (IL); Vicki Schmidt represented by Nicole Boyd and Heather Droge (KS); Eric A. Cioppa represented by Sandra Darby (ME); Chloë Lindley-Myers represented by Cynthia Amann, LeAnn Cox, Kendra Fox, Julie Lederer and Anthony Senevey (MO); Mike Causey represented by Richard Kohan and Arthur Schwartz (NC); Alexander K. Feldvebel represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill and Carl Sornson (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson represented by Gennady Stolyarov (NV); Jillian Froment represented by Tom Botsko and Laura Miller (OH); Glen Mulready represented by Ron Kreitter, Joel Sander and Andy Schallhorn (OK); Andrew R. Stolfi represented by Karl Bitzky, Will Davis and Michael Wise (SC); Kent Sullivan represented by J’ne Byckovski, Brock Childs, Miriam Fisk, Eric Hintikka, Elizabeth Howland and Brian Ryder (TX); Michael S. Pieciak represented by Rosemary Raszka (VT); and Mike Kreidler represented by Eric Slavich (WA). Also participating was: Kevin Dyke (MI).

1. **Announced Chair and Vice Chair Appointments**

Mr. Vigliaturo announced he appointed Mr. Sornson to continue to chair the Statistical Data (C) Working Group, as well as Ms. Krylova to chair and Ms. Fisk to vice chair the Actuarial Opinion (C) Working Group.

2. **Adopted the Report of the Statistical Data (C) Working Group**

Mr. Sornson said the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report* (Homeowners Report), the *Report on Profitability by Line by State* (Profitability Report) and the *Competition Database Report* have all been released. The *Auto Insurance Database Report* was distributed to the Task Force for review. Mr. Sornson said he is working to resolve a few follow-up questions with statistical agents.

Mr. Sornson made a motion, seconded by Mr. Piazza, to adopt the Working Group’s report. The motion passed unanimously.

3. **Discussed the Regulatory Review of Predictive Models White Paper**

Mr. Piazza said the third draft of the *Regulatory Review of Predictive Models* white paper was exposed during the Task Force’s Oct. 15, 2019, conference call for a 38-day public comment period ending Nov. 22, 2019. The Task Force received 11 comment letters and offered an opportunity for an oral presentation of those comments at the 2019 Fall National Meeting. He said the drafting group is working through the comments using the same process it has for prior exposures, mapping the comments to specific sections of the paper and providing commentary as to how the comments might be addressed in the white paper. Mr. Piazza said he expects to have a revised white paper prior to the Task Force’s Feb. 18 conference call and suggested a final exposure of the paper for comments.

4. **Received Notices from the Statutory Accounting Principles (E) Working Group**

Mr. Vigliaturo said the American Academy of Actuaries (Academy) Committee on Property and Liability Financial Reporting (COPLFR) wrote a letter to the Task Force and the Statutory Accounting Principles (E) Working Group last year pointing out ambiguities in guidance for reporting portfolio retroactive reinsurance or loss portfolio transfer. COPLFR offered several suggestions for clarifying the relevant instructions. The Task Force decided the Working Group would take the lead on this project.
Mr. Vigliaturo said that on Jan. 7, the Task Force received a notice from Robin Marcotte (NAIC) regarding the Working Group’s creation of two projects (Attachment Four-A). He said he would seek a couple of volunteers to help.

Mr. Vigliaturo said the first project is called Project #2019-49: Retroactive Reinsurance Exception. This item requests comments and volunteers to address a request from COPLFR to provide more guidance to address diversity in practice regarding the accounting for retroactive reinsurance contracts that meet the exception to be accounted for prospectively.

Mr. Vigliaturo said the second project is called Project #2019-40: Reporting of Installment Fees and Expenses. This proposal could affect the loss ratios and information reported in Schedule P, so the Working Group is seeking the Task Force’s reaction to the proposed change in wording. He requested a couple of volunteers to develop a proposed response for the Task Force’s consideration. Mr. Citarella and Mr. McKenney volunteered after the conference call.

5. **Adopted the 2020 Annual Statement Instruction Changes**

Mr. Dyke said he participates on the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) Appointed Actuary Continuing Education (CE) Task Force (CAS/ SOA CE Task Force). He said the Task Force has been discussing the CAS/ SOA CE Task Force’s Appointed Actuary CE Verification Process for more than a year. At the 2019 Fall National Meeting, the Task Force exposed the revised 2020 annual statement instructions, which codify the process. He said one comment letter was received from Missouri. Ms. Lederer made suggestions via the comment letter and some additional wording changes. The Task Force discussed the proposed changes.

Ms. Lederer made a motion, seconded by Ms. Mottar, to adopt the 2020 annual statement instruction changes as revised on the conference call and refer the proposal to the Blanks (E) Working Group (Attachment Four-B). The motion passed unanimously.

Mr. Vigliaturo said the CE log proposed by the CAS and SOA was distributed. Ann Weber (SOA) requested comments from the Task Force. She said there will be a pilot test of the log. Ralph Blanchard (The Travelers Companies) requested the CAS and SOA expose the document publicly. He requested a comment period beyond March 1. Mr. Dyke said the document is not a Task Force item to adopt; the Task Force empowered the CAS and SOA to adopt a log. Kris DeFrain (NAIC) said she will post the proposed document on the Task Force’s website and direct comments to Ms. Weber.

6. **Discussed the ASB’s Request for Input on Potential P/C Rate Filing ASOP**

Mr. Vigliaturo said the Actuarial Standards Board (ASB) has requested input on a potential property/casualty (P/C) rate filing Actuarial Standard of Practice (ASOP). Numerous state insurance regulators and two interested parties submitted answers to the ASB questions and other comments to the Task Force (Attachment Four-C). Mr. Vigliaturo asked whether the Task Force wants to respond as a group or whether it wants to leave commenting to individual states. Mr. Smith suggested a compilation of comments be sent because he believes the Task Force should not be silent on the topic. Mr. Botsko said the letter should say there is diversity of opinion and that it is not an easy decision to make. Mr. Vigliaturo asked NAIC staff to draft a letter based on submitted comments, reflecting diversity of opinions, and present it during the Task Force’s Feb. 18 conference call.

7. **Reported on SOA Letters About States’ Statutes for Qualified Actuaries**

Mr. Vigliaturo said some states have received letters from the SOA about states’ statutes defining “qualified actuary.” Ms. Weber said there are some places in states’ statutes where a “qualified actuary” is defined in relation to the NAIC P/C Statements of Actuarial Opinion and other places where the definition relates to other actuarial work. She said one example is to look at different fund reserves, so the focus is broader than the NAIC project. She said the SOA recognizes states might not be able to make changes this year and that this is a long-term project. She said letters have been sent to Alabama, Florida, Louisiana, Maine and South Carolina. More states will receive letters in the future.

Having no further business, the Casualty Actuarial and Statistical (C) Task Force adjourned.

Subject: Notice of exposure/ request for volunteers

To the chairs of the Casualty Actuarial and Statistical (C) Task Force and Property and Casualty Risk Based Capital Working Group

Attached are notices of two items that were exposed by the Statutory Accounting Principles (E) Working Group at the Fall National Meeting.

- 2019-40: Reporting of Installment Fees and Expenses  this item includes a request for comments on questions including on whether to develop guidance to allow reporting of installment fee expenses outside of underwriting expenses.
- 2019-49: Retroactive Reinsurance Exception  This item is a requests comments and volunteers to address a request from the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries Working Group to provide more guidance to address diversity in practice regarding the accounting for retroactive reinsurance contracts which meet the exception to be accounted for prospectively.

Both items have the potential to affect schedule P reporting and risk based capital calculations.

Please contact NAIC staff with any questions or volunteers!

Anticipated Effective Date: Annual 2020

IDENTIFICATION OF ITEM(S) TO CHANGE

The proposal will require appointed actuaries to attest to meeting Continuing Education (CE) requirements and participate in the CAS/SOA CE review procedures, if requested. These proposed changes were adopted by the Task Force on Jan. 28, 2020.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

As charged by the Property and Casualty Insurance (C) Committee to ensure continued competence of appointed actuaries, the revisions would implement the CAS and SOA P/C Appointed Actuary Continuing Education Verification Process.
Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018

** ACTUARIAL OPINION **

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of the Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Property and Casualty.

Upon initial engagement, the Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).

b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).

c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

If subject to the U.S. Qualification Standards, the Appointed Actuary shall annually attest to having met the continuing education requirements under Section 3 of the U.S. Qualification Standards for issuing Actuarial Opinions. As agreed with the actuarial organizations, the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) will determine the process for receiving the attestations for their respective members and make available the attestations to the public. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall select one of the above organizations to submit their attestation.

In accordance with the CAS and SOA’s continuing education review procedures, an Appointed Actuary who is subject to the U.S. Qualification Standards and selected for review shall submit a log of their continuing education in a form determined by the CAS and SOA. The log shall include categorization of continuing education approved for use by the Casualty Actuarial and Statistical Task Force. As agreed with the actuarial organizations, the CAS and SOA will provide an annual consolidated report to the NAIC identifying the types and subject matter of continuing education being obtained by Appointed Actuaries. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall follow the review procedures for the organization in which they submitted their attestation.
## Individual State Regulators’ Responses to the
Actuarial Standards Board’s (ASB) Request for Input on a Potential
Property/Casualty (P/C) Rate Filing Actuarial Standard of Practice (ASOP)

<table>
<thead>
<tr>
<th>State</th>
<th>1. What are the existing or current actuarial responsibilities in determining the final proposed rates?</th>
</tr>
</thead>
</table>
| CA    | a. Ensuring that the final proposed rates are loss cost-based, and the rating variables themselves reflect a substantial relationship to the risk of loss.  
     b. Ensuring that the rates or rating relativities, at minimum, move directionally and substantially toward their indicated values, where those indicated values consider only the relationship between the rating variable and the risk of loss.  
     c. Under California regulation, there is no room for consideration of non-loss cost based factors such as an individual’s willingness to pay a higher premium, retention/lifetime value in the development of the expense premium, or competitive position. Exception: Competitive position may be a consideration if used for the development of a new product, or rating variable, for which the insurer has no data upon which to base its rates. |
<p>| CO    | Colorado currently reviews rate filings for validation of earned premium, losses, expenses, return on investment and underwriting profit utilized in determining the loss ratio and resultant premiums. We further perform reasonableness tests for factor and trend selections. Lastly, we review any predictive models for goodness of fit and compliance of variables as well as compliance with the rate capping bulletin B-5.32 and/or the price optimization bulletin B-5.36. This involves reviewing rating variables to ensure that they comply both in nature and application. |
| MN    | Must fit the legal standards of not excessive, inadequate or unfairly discriminatory and follow the unfair trade practices statute in our state. |
| NE    | “Actuarial responsibility” is an interesting concept. Responsibility or accountability for P&amp;L is typically delegated to an actuary only through his/her role in Line Management. Some actuaries are good candidates for Line Management, and may find actuarial skills helpful in those jobs, but only they can say whether they are still providing actuarial services to their superiors, themselves or subordinates when making (and selling) Line decisions. I would look for providers of actuarial services in Staff positions. The Line at tactical levels can be directed to implement recommendations from a staff actuary with or without exceptions, but upper Line Management can also permit or guide subordinates to entirely ignore the actuary. Actuarial recommendations or indications probably gain value when sensitive to, but independent of Line Management. Whether that works depends on culture, leadership, organization and execution. Assume that’s achieved for a moment. Who determined the final proposed rates? I say Line Management from Board of Directors. |</p>
<table>
<thead>
<tr>
<th>State</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>PA</td>
<td>I believe the insurance company’s management is responsible for determining the final proposed rates. Often these decisions are based on actuarial analyses, but this is not always the case. PA law, to my knowledge, does not require that an actuary be involved with the setting of final proposed rates. In fact, in my experience, many small companies do not use actuaries in many of their rate filings. When actuaries are involved, I believe ASOPs 12, 13, 23, 25, 29, 30, 38, 39, 41, 43 and 53 apply. However, they apply to the actuarial work and not to management’s decision to deviate from the actuarial analyses.</td>
</tr>
<tr>
<td>WV</td>
<td>The rate analyst determines the need for an actuarial review or performs the review using the skills and knowledge they’ve received through years of training or experience as a rate analyst. The rate analyst does have the final approval/disapproval capability of a rate filing. Note: WV does not employ in-house actuaries and all actuarial reviews are performed by a contracted actuarial firm.</td>
</tr>
</tbody>
</table>
| CA    | a. Ensuring that the data underlying the rate or rate relativity indications is accurate, reconciles to external reports, and is internally (between exhibits in the current rate filing) and time-wise (between current and prior filings) consistent.  
b. Ensuring the data provided in support of the proposed rate or rate relativities is appropriate for the product to which the filing applies.  
c. Ensuring that appropriate actuarial assumptions (e.g., trend, development, etc.) were made to project premiums, losses and DCCE for the rate effective period, and are compliant with regulations.  
d. Ensuring appropriate use of credibility, including determining the appropriate standard for full credibility, the rule for partial credibility and the complement of credibility, in the absence of regulations that prescribe those values.  
e. Ensuring proper adherence to regulations in the development of rates, even in those cases where regulations may deviate from actuarial principles or standards of practice. |
| CO    | We do not prepare rate filings as we are regulators. |
| MN    | It seems companies try to provide as little information as what they can get away with. What makes it even more difficult for the regulator to review is the filer only files what is changed, meaning there could be quite a bit of unsupported and perhaps not up to standards parts of the rating plan that does not get reviewed. This is a problem for our department due to staffing issues. |
| NE    | I’m now a regulatory actuary, but in my early years making rate filings, the company funded no actuaries, with pride. If “actuarial” or “actuarial-looking” documents were required, I was among the non-actuaries who created them. A decade or so later, an
An actuarial unit managed by an ACAS or FCAS would routinely deliver supporting documents to a state filings counterparty, but at levels well below ACAS. So managers were both credentialed actuaries (bound by the ASOP’s) and internally accountable, but employees actually creating and delivering the filing support were un-credentialed. The ACAS or FCAS was effectively anonymous in rate filings, unless the state required a credentialed actuary’s signature, or objections (e.g. litigation) caused a credentialed actuary to be named. The insurer made rate filings, but generally didn’t have to identify an actuary or even delegate work it to an actuary.

<table>
<thead>
<tr>
<th>PA</th>
<th>Same answer as #1</th>
</tr>
</thead>
<tbody>
<tr>
<td>WV</td>
<td>WV requires an actuarial certification for rate filings. All rate filings must be fully supported by actuarial data and must be adequate and fair.</td>
</tr>
</tbody>
</table>

3. Are there aspects of rate filings that you consider actuarial in nature? What aspects do you consider not actuarial in nature?

| CA  | a. Reconciliation of data underlying the rate filing, loss and premium trend, on-leveling of premiums, loss and DCCE development, catastrophe adjustment, modeling, credibility adjustment, expense loads, reinsurance, including any deviations (variances) to prescribed methods for handling these aspects, where applicable, are considered actuarial in nature.  
   b. To the extent that filed changes to underwriting guidelines and forms do not have an impact on rates, these changes are not actuarial in nature, but are still subject to regulatory review. |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>CO</td>
<td>We consider any rules that affect rate or premium to be actuarial in nature as well as any calculations involving rate development including trends, factors and relativities. Remaining rules and filing procedures are considered non-actuarial.</td>
</tr>
<tr>
<td>MN</td>
<td>If it is a rate filing all aspects of the filing would be actuarial in nature. However, filers often include information in the filing that are not actuarial in nature. Due to staffing issues, we have to filter which filings we review. Things like rate pages we have the non-technical staff spot check.</td>
</tr>
<tr>
<td>NE</td>
<td>Obviously, actuaries have developed widely accepted techniques to argue that proposed rates are not excessive or inadequate. Showing that proposed rates are not unfairly discriminatory is perhaps multi-disciplinary rather than actuarial, even in the absence of any public policy decisions. The legal standards that rates must meet are not inherently actuarial.</td>
</tr>
<tr>
<td>PA</td>
<td>It depends on the filing. Some filings are based on actuarial analyses. Some are not. Some include actuarial analyses and then deviate from the analyses based on non-actuarial decisions. I think it is typically pretty easy to identify the aspects of the filing that are actuarial in nature and the aspects that are not.</td>
</tr>
<tr>
<td>WV</td>
<td>The trending and justification is actuarial. Policy count, position in the market, marketing, etc. is not considered actuarial.</td>
</tr>
</tbody>
</table>

4. What aspects of a rate filing frequently cause issues during regulatory review?
|   | a. Do these issues cover actuarial content that should adhere to ASOP guidance?  
| b. If so, what makes these issues actuarial content in your opinion?  
| c. If not considered as actuarial content, why not?  
|   |   |
| CA | • There are frequently data issues, where the data underlying the rate filing exhibits doesn’t match to external reports, or to other exhibits within the rate filing.  
|   | • Filers may omit some of the required documentation, in the hope that the reviewer will not request it.  
|   | • Given that California is a prior approval state, actuarial support for all rate changes is required. Often, industry actuaries responsible for California filings bypass this step. There is often a lack of documentation and support for requested rate changes, especially at the segmentation level. When support is provided, it can be shoddily prepared or incomplete, or lack clarity as to assumptions and methods.  
|   | • When justifying numerical results, industry actuaries often fail to provide their calculations in Excel format, with working formulas.  
|   | • Industry actuaries tend to provide simplistic “vanilla” responses to regulator questions requesting clarification of insurer actions or assumptions, often resulting in the need for additional follow-up questions and further delay in the review of the filing. Example, a very common response to the Department’s request for justification of a trend period is “to ensure a balance between stability and responsiveness,” without any discussion of the drivers of the trends, mix shifts or why other allowable trend fits were not suitable.  
|   | • Many of the actuarial assumptions that insurers are allowed to use in personal lines are prescribed by California regulation. In other lines, there is considerable flexibility in how an industry actuary supports its rate action. The filer should provide more detailed actuarial documentation, not less, as is often the case, for these lines of business in support of their rate changes.  
| a. | Many of these issues are related to actuarial content and actuarial communication, and are already appropriately covered by existing ASOPs. Perhaps it’s only necessary to revise the ASOP on Actuarial Communication to include more emphasis on communications to regulators.  
| b. | These issues reflect concerns with the support, data and assumptions underlying the requested rate actions. The Department requires that sufficient information be provided to be able to understand what the insurer is doing with the rates, if it is actuarially appropriate and if it is allowed by regulation. Effective review of the rates cannot be accomplished in the absence of appropriate actuarial support and documentation of the assumptions and methods underlying the rate change analysis.  
| c. | --  
| CO | Review of rules for compliance, incomplete filing submissions, review of predictive models and rate transition plans for compliance.

<td>Comment</td>
</tr>
<tr>
<td>-------</td>
<td>---------</td>
</tr>
<tr>
<td>b.</td>
<td>I think it is generally pretty easy to decipher when filing issues are actuarial in nature and when they are not.</td>
</tr>
<tr>
<td>c.</td>
<td>Many rate filings and much content of rate filings do not use or require any actuarial knowledge. I think it is generally pretty easy to decipher when filing issues are actuarial in nature and when they are not.</td>
</tr>
<tr>
<td>WV</td>
<td>Nearly all companies are using modeling for most actuarial data. It’s often hard to determine if data is correct as we only receive aggregate results of trending and cannot confirm each factor calculation or if the model is appropriately used. Our sole assurance that the data is accurate is the actuarial certification which is often signed by a company representative and not an actuary.</td>
</tr>
<tr>
<td></td>
<td>5. Given that many rate filings contain the results of large computer modeling, does the proposed ASOP on Modeling (<a href="http://www.actuarialstandardsboard.org/asops/modeling-fourth-exposure-draft/">http://www.actuarialstandardsboard.org/asops/modeling-fourth-exposure-draft/</a>) sufficiently address your concerns with regard to rate filings?</td>
</tr>
<tr>
<td>CA</td>
<td>The NAIC’s draft white paper on “Regulatory Review of Predictive Models” may offer more guidance in this area, at least for certain lines and types of models.</td>
</tr>
<tr>
<td>CO</td>
<td>The proposed ASOP provides sufficient guidance on review of predictive models including evaluation of the data, user input and model output.</td>
</tr>
<tr>
<td>MN</td>
<td>No. I don’t think CASTF would be writing a white paper if it did.</td>
</tr>
</tbody>
</table>
| NE | No.  
1 First, the Modeling ASOP has been in development since December 2012, so I count eight years and we’re waiting for comments on the fourth exposure draft. Meanwhile, modeling practice continues to evolve. I’d like to see an argument that says the ASOP process is keeping up.  
2 Second, ASOP guidance is binding on credentialed actuaries only. Of people involved in making and reviewing rate filings, the vast majority are not bound by the ASOP’s, and those who are bound by them can enjoy anonymity. While ASOP’s have educational value for those not bound by them, I would not assume that the non-credentialed audience will understand or respect the Modeling ASOP, or a Rate Filings ASOP, well enough for the public to benefit.  
3 Third, I have taken another look at the Modeling 4th exposure draft, and find it rather abstract and distant compared to the relatively concrete multivariate pricing problem. I see a need to update ASOP 12 (Risk Classification) adopted in 2005, which says “The actuary should consider the interdependence of risk characteristics. To the extent the actuary expects the interdependence to have a material impact on the operation of the risk classification system, the actuary should make appropriate adjustments.” The update should try to specify the changing meaning of “appropriate adjustments” after a few decades’ trend in the power of hardware platforms and statistical software. |
<p>| PA | While modeling is common, many rate filings and much content of rate filings do not use models. |
| WV | WV is continuing the review of the fourth draft. |</p>
<table>
<thead>
<tr>
<th></th>
<th>6. What actuarial aspects need further guidance to actuaries in the rate determination process beyond the guidance already contained in existing ASOPs?</th>
</tr>
</thead>
<tbody>
<tr>
<td>CA</td>
<td>None. Most actuarial topics that would be relevant to supporting the development of rates in California already have ASOPs. Additionally, ASOPs tend to be high level and general, and rate filing requirements vary by each state’s regulatory filing law, making the development of a single overriding guidance for all jurisdictions difficult.</td>
</tr>
<tr>
<td>CO</td>
<td>We do not prepare rate filings as we are regulators.</td>
</tr>
<tr>
<td>MN</td>
<td>The biggest problem from a regulator’s point of view is that the actuaries do not make the filing and as a result, much of the actuarial support does not exist in the filing. As a result, as a regulator, we have to track down the actuary (if there is one) who has provided the support. It is not always true that this person is an actuary and most state statutes do not require credentialed actuaries to produce rate filings.</td>
</tr>
<tr>
<td>NE</td>
<td>See above. I have not agreed that any aspect of determining final rates is inherently actuarial.</td>
</tr>
<tr>
<td>PA</td>
<td>Beyond that which already exists in ASOPs 12, 13, 23, 25, 29, 30, 38, 39, 41, 43 and 53, I might offer the actuary’s reliance upon third party reports could use further guidance. There seems to be a lot of uncertainty regarding the accuracy of third party reports and the amount of information they include and exclude. Is it okay for the actuary to recommend rating values for “unknown” or “report not ordered”, etc? Is it okay for these rating values to be non-unity? Can two risks of the same class and essentially the same hazard be charged different rates only because a third party had come across data for one of the risks and not the other?</td>
</tr>
<tr>
<td>WV</td>
<td>N/A</td>

<tr>
<td>MN</td>
<td>Well it should be. This answer applies to 8a, 8b and 8c is n/a.</td>
</tr>
<tr>
<td>NE</td>
<td>Those who actually submit filings need to guide those who provide rates and/or evidence.</td>
</tr>
<tr>
<td>PA</td>
<td>I’m not sure further guidance is needed than that which already exists in ASOPs 12, 13, 23, 25, 29, 30, 38, 39, 41, 43 and 53 with the possible exception of the actuary’s reliance upon third party reports.&lt;br&gt;a. Same answer&lt;br&gt;b. Same answer. I don’t think the applicable filing review standard affects the actuarial work.&lt;br&gt;c. Same answer.</td>
</tr>
<tr>
<td>WV</td>
<td>No, often rate filings contain a single factor change that does not affect the overall rate. Those filings require very little actuarial data and no actuarial certification.&lt;br&gt;a. No, often rate filings contain a single factor change that does not affect the overall rate. Those filings require very little actuarial data and no actuarial certification.&lt;br&gt;b. No, often rate filings contain a single factor change that does not affect the overall rate. Those filings require very little actuarial data and no actuarial certification.&lt;br&gt;c. I believe it would be on a case by case basis based on various requirements noted by the State.</td>
</tr>
</tbody>
</table>

9. Should the scope of this standard be confined to filings that require an actuarial certification?

<table>
<thead>
<tr>
<th>State</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>CA</td>
<td>If an actuary, or any individual performing actuarial work, is responsible for the submission of a rate filing in a particular jurisdiction, that actuary/individual should be guided by the same ASOP, whether or not actuarial certification is required.</td>
</tr>
<tr>
<td>CO</td>
<td>No</td>
</tr>
<tr>
<td>MN</td>
<td>I see no good reason why it should be limited to just filings requiring certifications.</td>
</tr>
<tr>
<td>NE</td>
<td>No. ASOP’s should be developed for more general circumstances. Confining an ASOP’s scope this way would waste valuable volunteer hours, and if ASOP guidance happened to differ from or conflict with a state’s certification requirement would trigger a routine but gratuitous disclosure. If this became a proposed model actuarial certification requirement for P&amp;C rate filings, can the NAIC (CASTF) consider who would be an appropriate author?</td>
</tr>
<tr>
<td>PA</td>
<td>I’m not sure that this ASOP is needed, but if it is, then it should apply to the actuarial work regardless of the inclusion / exclusion of any certification.</td>
</tr>
<tr>
<td>WV</td>
<td>I believe it would be on a case by case basis but the actuarial certification should definitely require the standards be applied.</td>
</tr>
</tbody>
</table>

### Information about position and role in the rate filing process

| CA | These comments are being submitted by regulatory actuaries who work in the Rate Regulation Branch of the California Department of Insurance: Lynne Wehmueller, FCAS, MAAA
Chief Actuary – Rate Regulation Branch
California Department of Insurance

Mitra Sanandajifar, FCAS, MAAA
Senior Casualty Actuary – Rate Regulation Branch
California Department of Insurance

Edward Cimini, ACAS, MAAA
Senior Casualty Actuary – Rate Regulation Branch
California Department of Insurance

Our role as regulatory actuaries is to review rate filings on behalf of the California Insurance Department. |
| CO | I am a regulator
Review rate filings on behalf of insurance department(s) |
| MN | A regulator
Review rate filings on behalf of insurance department(s) |
| NE | I am currently a regulatory actuary, and a member of the Casualty Committee of the Actuarial Standards Board.
I review rate filings on behalf of the Nebraska insurance department, but only those referred on an exception basis for actuarial review.

My resume’ shows several decades experience beginning as an agent, then personal lines underwriter, and state filings analyst in a corporate legal context. My first actuarial job was in an IT context, where I spent a decade designing, implementing and refining automated actuarial systems including rate level indications, rating factors experience, trend data and analyses, loss development data and reserving analyses. The rate level indications, including selected trends and LDF’s, wer available for decision support “on the shelf” throughout the company, and routinely used
I spent another two decades in actuarial pricing management for personal and commercial lines. From about 1990 to 2011, as rating system development became increasingly GLM-dependent, I had various combinations of hands-on versus oversight involvement, with each project concluding with documentation, explanation, internal selling and finally rate filing deliverables. Since 2011, as the Property & Casualty Actuary at the Nebraska Department, my primary responsibilities are in the Examination Division. When the Property & Casualty Division occasionally refers rate filings to me, the typical reason is either the rating system’s dependency on a complex model, or a market segments perceived trend into rate inadequacy.

PA  --

WV  A regulator (non-actuary)
Review rate filings on behalf of insurance department(s)

Additional Comments

NV  I write these comments to express categorical opposition to the development of any Actuarial Standard of Practice (ASOP) on Property/Casualty (P/C) insurance rate filings, for the following reasons. I will be happy to discuss my reasons for opposition further during subsequent conference calls of the Casualty Actuarial and Statistical Task Force (CASTF) and in any other contexts that may be considered beneficial. However, in prior conversations with other States’ regulatory actuaries, it has become apparent to me that significant differences of opinion exist on this subject, and thus a single combined comment from the CASTF to the American Academy of Actuaries’ Actuarial Standards Board (ASB) would not be practical or reflective of the broad spectrum of regulatory actuaries’ views and preferences. Accordingly, I am of the view that comments submitted to the ASB on this subject should be sent by individual regulatory actuaries on their own behalf.

The views expressed herein are my own and not necessarily a reflection of the views of any organization in which I am a member or participant.

1. Requirements for rate filings are prescribed pursuant to State law, and an ASOP would not add any rigor those requirements or ensure any beneficial outcomes that State requirements do not already produce. Indeed, State law and regulatory guidance takes precedence over ASOPs, as the text of many ASOPs already acknowledges.

2. However, an ASOP may serve to dilute the efficacy of State-based insurance regulation by reducing the diversity of State-specific requirements – some of which facilitate cutting-edge awareness of insurers’ predictive models and other filing innovations and the evaluation of the consumer impacts of such proposals – to the lowest common denominator. ASOPs are by nature broad and general and could not be a substitute for the detailed set of filing-related statutes, regulations, guidelines, and precedents that individual States have developed. Especially in prior-approval
jurisdictions, it would be difficult to imagine an ASOP adding any useful aspects that
the State had not already considered, but it would be easy to imagine a filer referring
to the ASOP as perceived justification for creating a filing that falls significantly short
of State-specific requirements.

3. Indeed, as has been observed with other ASOPs related to elements of ratemaking
and risk classification in the past, some insurers and insurer-aligned interested parties
are likely to use the new ASOP as an attempted shield from regulatory scrutiny,
alleging that because certain regulatory inquiries or principles of filing review are not
found in the ASOP, they are therefore illegitimate for the regulator to delve into. This
has been particularly observed with a prevalent industry remark that because ASOP
No. 12 on Risk Classification does not require causation to be demonstrated,
therefore, regulators should not consider questions of causation at all. Many
regulatory actuaries have justifiably pushed back against this interpretation, but a
Rate-Filing ASOP would create many more openings for certain interested parties to
seek to challenge regulatory inquiries instead of appropriately responding to them.
These kinds of challenges often will not prevail, but they could bog down the
conversation on emerging rating treatments in unnecessary retreading of the same
generic territory for many years – time which could have been better spent examining
the substance of specific rating treatments, models, variables, and supporting data.

4. Currently there is no legal requirement, at least in the majority of jurisdictions, for a
credentialed actuary to be involved either in the development of a P/C rate filing or in
its review. Having actuaries involved in both roles is, of course, a benefit given the
extensive additional technical knowledge and subject-specific expertise that actuaries
bring (albeit, not a benefit that is practically achievable in every rate-filing situation).
A Rate-Filing ASOP would bind the actuaries but not the non-actuaries involved in
filing creation and review. This would have an undesirable and unintended effect on
the incentives of the principals on both sides of the process. If it is more burdensome
to utilize the actuaries in rate filings (because they personally would have to comply
with an additional set of requirements to which non-actuaries are not bound), then
why not (per the logic that would tempt such principals) opt to develop and process
the filings using non-actuaries only, especially if this is permitted by law? It is
important to keep in mind that the principals on each side of the rate-filing
interaction are concerned about their own objectives and requirements being met
(the insurer’s business goals and speed to market in a jurisdiction and the regulator’s
responsibility to protect consumers and enforce the law, as well as a desire for
efficiency in processing an often-considerable filing workload) – and would view the
superimposition of another set of requirements by a third interest (that of the
promulgators of the ASOP) as an inconvenience and a complicating factor. The
promulgators of the ASOP are presumably motivated by a desire to strengthen the
actuarial profession, yet the Rate-Filing ASOP would have the opposite effect in
practice by discouraging the utilization of credentialed actuaries in rate-filing
contexts. For the prospects of the members of the actuarial profession to be advanced, it needs to be as easy as possible for both insurers and regulatory agencies to utilize actuaries in developing, reviewing, and corresponding on rate filings.

5. Because the Rate-Filing ASOP, at least per the wording of the ASB’s exposure document, would appear to encompass the roles of “the regulatory actuary” and “the reviewing actuary”, and because the American Academy of Actuaries is composed predominantly of actuaries practicing within the private sector and employed by regulated entities, a serious concern arises that the creation of a Rate-Filing ASOP would invert the regulator-industry relationship, and would effectively create a situation wherein industry members would be “regulating the regulators” – a scenario that could even be termed regulatory capture. This concern could be averted if the proposed ASOP clearly expresses that it only applies to those actuaries submitting the rate filings, not those actuaries who review the filings on behalf of State regulatory agencies. Those who review rate filings should only be bound by the requirements of applicable law and the policies, procedures, precedents, and deliberations of the regulatory agencies whom they represent. All of these aforementioned requirements were developed with the interests of consumers and the general public in mind, whereas there is no guarantee that an ASOP developed predominantly by private-sector actuaries – even persons of the highest integrity – would have this as its primary motivation. Even exceptional good character and good motives on the part of industry decision-makers cannot be a justification for a situation where they come to “regulate the regulators” – for this would be inconsistent with the very reasons for the existence of insurance regulation in the first place.

6. Especially if the Rate-Filing ASOP binds regulatory actuaries, this leaves an opening for a filing company’s actuaries to allege violations of the ASOP on the part of a regulatory actuary who attempts to inquire regarding certain matters within the filing where there is a disagreement between the company and the regulators regarding the appropriateness of certain treatments. It is important to prevent any situation where filers may be able to utilize this kind of tactic to thwart regulatory reviewers from performing their jobs. Currently, more so than in any prior era, it is imperative for regulators to thoroughly review emerging predictive models and ask new and different types of questions to ensure that long-standing objectives of transparency and fair treatment of consumers are maintained. Hence it is vital to preserve an environment in which questioning of new filing methodologies and new types of rating classifications – an activity to which regulatory actuaries are uniquely suited – does not carry with it the potential for personal adverse consequences.

7. Especially given the NAIC’s ongoing efforts to express regulatory predictive-model-review best practices / guidance – as exemplified by the white paper in progress regarding the Regulatory Review of Predictive Models – the proposal for a Rate-Filing ASOP appears to be duplicative and to create parallel and potentially conflicting standards with those expressed in the NAIC guidance. The NAIC guidance explicitly
recognizes the sovereignty of individual States and the ability of individual States to
tailor the NAIC guidance to their own unique contexts. The Rate-Filing ASOP, on the
other hand, is vulnerable to becoming a one-size-fits-all approach. Furthermore, the
simultaneous existence of the NAIC white-paper guidance and the Rate-Filing ASOP
could engender confusion among both filers and regulators.

8. The entire project for a Rate-Filing ASOP appears to expand the domain of ASOPs
beyond the context in which they are useful or beneficial. It is reasonable to have
ASOPs that articulate guidelines for behavior in areas where only private parties are
involved, or areas where the law is straightforward and highly consistent across States
(as is the case, for instance, with regard to annual Statements of Actuarial Opinion
pertaining to loss and loss-adjustment-expense reserves carried on insurers’ NAIC P/C
Annual Statements). However, in areas where the requirements of law and the
guidance of regulators are both highly varied and highly detailed, an ASOP drafted
predominantly by private parties can only undermine the objectives of the regulatory
process. I fully support the concept of a self-regulating actuarial profession – but that
self-regulation must always subordinate itself to the official regulation that States
perform in the course of reviewing and making decisions on insurers’ P/C rate filings.
Where the official regulation has clearly expressed itself, the self-regulation needs to
take a step back and let the regulators regulate as they know best.

9. Existing ASOPs already address such areas relevant to ratemaking as risk
classification (ASOP No. 12), trending (ASOP No. 13), credibility (ASOP No. 25) expense
provisions in ratemaking (ASOP No. 29), profit and contingency provisions and cost of
capital (ASOP No. 30), catastrophe losses (ASOP No. 39) – as well as other areas that
would be applicable in a ratemaking context. I do not see any reason that insurers’
actuaries would need any additional ASOP-style guidance for rate filings in particular
that would not be encompassed by the guidance in the aforementioned concept-
specific ASOPs. Both insurers and regulators who wish to draw upon ASOPs for any
portion of their work product or the justification thereof already have an ample and
extensively developed set of provisions to reference.

For the aforementioned reasons, I recommend that individual regulatory actuaries
oppose the establishment of any manner of ASOP specific to P/C Rate Filings. Again, it
is my view that CASTF as a whole would not be able to express a unified view on this
proposal because of the considerable difference in individual members’ views. I do,
however, respect these differences – an expression of the desirable variety inherent
in State-based insurance regulation – and am open to discussing this topic further
with any CASTF members who express an interest in doing so.

Lead Actuary, Property and Casualty Insurance, Nevada Division of Insurance

| NE | Those in favor of a P&C Rate Filings ASOP should make their case. |
• If most people involved in rate filings will not be bound by the proposed ASOP (or perhaps more importantly ASOP #41), and if those who are bound by the ASOP’s can choose anonymity, how does the proposed Rate Filings ASOP help? In particular, to attract participation by regulatory actuaries, how should regulators expect to benefit from the proposed Rate Filings ASOP?

• Some have suggested starting with ASOP #8, which addresses Health Rate Filings. After appropriate edits, the P&C guidance appears to depend on references to ASOP #53 on “Estimated Future Costs” adopted in 2018 and ASOP’s 12, 13, 25, 29, 30, 38 and 39 adopted earlier. Is there anything in the Health Rate Filings ASOP that’s applicable to P&C filings but not already adopted for P&C actuaries’ work?

• I have studied the previously accumulated comments, but briefly, instead of reasons in favor I saw assertions regarding scope. Those in favor of a P&C Rate Filings ASOP need to describe the problem(s) they’re perceiving and explain how their envisioned ASOP would help. Unless compelling reasons surface in favor, the ASB should focus elsewhere.

Background (legal context for an actuarial role)

• An assertion that filed rates (or loss costs) are neither excessive nor inadequate can be efficiently supported by actuarial evidence that has evolved into familiar exhibits, ranging in sophistication from a one-page experience exhibit to a rate level indication summary supported by detailed ancillary exhibits and rigorous explanatory narrative. Rate advisory organizations, insurers, state regulators, actuaries and sometimes consumer advocates have given this much attention. For brevity, the current technical regulatory requirements often reflect a hard-won working balance between interested parties, with actuaries facilitating much of the long transition from trial and error toward more of a science that can be memorialized. A series of ASOP’s document evidentiary practices that previously evolved and stabilized among actuaries, regulators and others (e.g. insurers’ managements and occasionally litigators) over decades.

• Evidence for an assertion that filed rates (or loss costs) are not unfairly discriminatory is a more complex problem, with subjective aspects well known long before recent decades’ technological developments. Market leading insurers historically adhered fairly closely to rate advisory organizations’ coverage forms and loss cost relativities. Innovation has accelerated following various tipping points, including a proliferation of increasingly powerful personal computers, internet connectivity, affordable multi-source datasets and easily-accessible software. It is a matter of decades since insurers writing standard or specialty coverages began using statistical models to create increasingly complex independent rating plans for competitive advantage and/or defense. Advisory organization aggregations of competitors’ statistical data are much further removed from final prices for a viable competitor than
the days when advisory organizations filed final rates. Now, insurers commonly develop and implement independent and specialized classification systems for their most populated personal and commercial coverages, and they commonly assert trade secrets deserving of confidentiality for their supporting evidence. So evidence sufficient to justify classification systems and pricing relationships within them is stubbornly unsettled territory. States’ allocated resources seem to vary a lot, but my general impression is that increasingly granular classification systems have progressed far ahead of regulators’ capacity for review and response. Efforts are in their infancy to balance products’ speed-to-market versus consumer protection and market stability. A consensus definition of “not unfairly discriminatory” would be helpful, but we’ve often diverged. A main reason is that statistical evidence alone isn’t probative. Meanwhile, products and rates evolve, and generally, insurance markets function despite lack of agreement.

- All this evidence supporting assertions that rates meet legal standards can come from any source, not necessarily actuarial or a credentialed actuary. A credentialed actuary’s certification or testimony is sometimes legally required, but generally the whole product development cycle can at least theoretically exist without actuaries. Even if we think actuaries or their subordinates should be involved, or know for a fact that they are, it is arguably not in the rate filer’s interest to identify one or more of their most recruitable employees in a public record. The regulatory focus should be on the evidence provided and whether it is sufficient.
The Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force met via conference call June 11, 2020. The following Working Group members participated: Anna Krylova, Chair (NM); Miriam Fisk, Vice Chair (TX); Susan Andrews and Qing He (CT); David Christhilf (DC); Patrick Hyde, Chantel Long and Judy Mottar (IL); Tom Botsko (OH); Nicolas Lopez (OK); and Kevin Clark and James DiSanto (PA). Also participating were: Michael Ricker (AK); Robert Lee (FL); and Cynthia Amann and Julie Lederer (MO).

1. Discussed the Risk Repository

Miguel Romero (NAIC) described the Technical Group’s processes and reasoning. He said the Technical Group’s membership is mostly accounting types, but they did have some actuaries under contract at the time. The tendency was to only make changes that would affect the character, nature or procedure performed. They did not add anything to the benefit of external auditors because it is believed that the relationship is the external auditors are input into the examination process and not the other way around. He said the document would be exposed for public comment in August or later. He said if there are any proposed changes that the Working Group believes might have been misunderstood, comments are requested.

Ms. Fisk suggested that the Working Group work from a clean version because all the different tracked changes are confusing. The Working Group decided to discuss this again when the Technical Group exposes its proposed document.

Ms. Lederer said she does not have a good feel for the goal of the Technical Group. She said harmonization of the property/casualty (P/C), life and health repositories would have an impact on the acceptance of some of the proposed changes. She said the change in the definition of “qualified actuary” might be an issue to propose again. She said the Working Group can explain why that is needed.

Ms. Lederer said the new risk proposal around P/C long-duration contracts might be helpful to the examiner; therefore, further explanation might be useful. She said some of the new risks proposed could use further commentary to aid examiner understanding of why the new risks were proposed.

Ms. Krylova said volunteers from the Working Group prepared a first draft of a proposal. She said changes focus on the revisions made to the actuarial opinion instructions.

Mr. Lee said an associate of the Casualty Actuarial Society (CAS) would be required to have the advanced reserving exam, and all would be required to have the U.S. statutory examination.

Ms. Krylova said the first mention matches the exhibit in the actuarial opinion, and the wording was modified later on the same page. She said she attempted to not rewrite the instructions and rather just refer to the instructions.

Ms. Lederer said the analysis document is the Statement of Actuarial Opinion (SAO) worksheet. The qualification matches Exhibit B. Now that the definition has been expanded, analysts or actuaries need to use the qualification documentation to evaluate qualification. In Missouri, the qualification documentation would be requested in three situations: 1) there is a new appointed actuary; 2) the company is going under examination; and 3) state insurance regulators have concerns. In review of the qualification documentation, Ms. Lederer made sure that the documentation matches the instructions defining “qualified actuary.”
Ms. Krylova said if the states do not have an actuary, the *Financial Analysis Handbook* might need instructions on how to assist such review.

Mr. Botsko said the actuaries in Ohio do something similar to Missouri, where background information and attestation are gathered to show that the actuary is qualified. He said Ohio has an automated system that fills out the checklist from downloaded documents.

Ms. Andrews said the *Financial Analysis Handbook* needs a paragraph for the states that do not have actuaries.

Ms. Krylova asked members to submit suggestions with expectations to expose the document for comment soon thereafter.

No one suggested changes to the proposal for the *Financial Condition Examiners Handbook*.

Having no further business, the Actuarial Opinion (C) Working Group adjourned.
EXPOSURE NOTE: The drafting group considered comments submitted based on the 10/15/19 draft. Please submit comments on this 6/12/20 draft to Kris DeFrain (kdefrain@naic.org) by Monday, July 27. The plan is to adopt a white paper at the Summer National Meeting, so proposed edits (rather than general comments) are more likely to be considered.

Casualty Actuarial and Statistical (C) Task Force

Regulatory Review of Predictive Models

I. INTRODUCTION

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive analytic techniques are evolving rapidly and leaving many regulators, who must review these techniques, without the necessary tools to effectively review insurers’ use of predictive models in insurance applications.

When a rate plan is truly innovative, the insurer must anticipate or imagine the reviewers’ interests because reviewers will respond with unanticipated questions and have unique educational needs. Insurers can learn from the questions, teach the reviewers, and so forth. When that back-and-forth learning is memorialized and retained, filing requirements and insurer presentations can be routinely organized to meet or exceed reviewers’ needs and expectations. Hopefully, this paper helps bring more consistency to the art of reviewing predictive models within a rate filing and make the review process more efficient.

The Casualty Actuarial and Statistical (C) Task Force (CASTF) has been charged with identifying best practices to serve as a guide to state insurance departments in their review of predictive models underlying rating plans. There were two charges given to CASTF by the Property and Casualty Insurance (C) Committee at the request of the Big Data (EX) Working Group:

- Draft and propose changes to the Product Filing Review Handbook to include best practices for review of predictive models and analytics filed by insurers to justify rates.
- Draft and propose state guidance (e.g., information, data) for rate filings based on complex predictive models.

This paper will identify best practices for the review of predictive models and analytics filed by insurers with regulators to justify rates and will provide state guidance for review of rate filings based on predictive models. Upon adoption of this paper by the Executive (EX) Committee and Plenary, CASTF will make a recommendation to incorporate these best practices into the Product Filing Review Handbook and will forward that recommendation to the Speed to Market (EX) Working Group.

II. WHAT IS A “BEST PRACTICE?”

A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions…will solve a problem or achieve a goal” 2. Best practices are used to maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking. 3 Therefore, a best practice represents an effective method of problem solving. The “problem” regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations?

Key Regulatory Principles

In this paper, best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

1. State insurance regulators will maintain their current rate regulatory authority and autonomy.
2. State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly across the states.
3. State insurance regulators will share expertise and discuss technical issues regarding predictive models to make the review process in any state more effective and efficient.

---

1 In this paper, references to “model” or “predictive model” are the same as “complex predictive model” unless qualified.
4. State insurance regulators will maintain confidentiality, in accordance with state law, regarding predictive models.

Best practices are presented to regulators for the review of predictive models and to insurance companies as a consideration in filing rating plans that incorporate predictive models. A by-product of identifying these best practices, general and specific information elements were identified that could be useful to a regulator when reviewing a rating plan that is wholly or in part based on a generalized linear model (GLM). For states that are interested, the information elements are identified in Appendix B, including comments on what might be important about that information and, where appropriate, providing insight as to when the information might identify an issue the regulator needs to be aware of or explore further. Lastly, provided in this paper are glossary terms (Appendix B) and references (contained in the paper’s footnotes) that can expand a regulator’s knowledge of predictive models (GLMs specifically).

III. SOME ISSUES IN REVIEWING TODAY’S PREDICTIVE MODELS

The term “predictive model” refers to a set of models that use statistics to predict outcomes4. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium. The generalized linear model5 is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan.

Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In this modeling space, predictive modeling is often referred to as predictive analytics.

Before GLMs became vogue, rating plans were built using univariate methods. Univariate methods were considered intuitive and easy to demonstrate the relationship to costs (loss and/or expense). Today, many insurers consider univariate methods too simplistic since they do not take into account the interaction (or dependencies) of the selected input variables.

Today, the majority of predictive models used in personal automobile and home insurance rating plans are GLMs.6 According to many in the insurance industry, GLMs introduce significant improvements over univariate-based rating plans by automatically adjusting for correlations among input variables. However, it is not always easy to understand the complex predictive model output’s relationship to cost. This creates a problem for the regulator when model results are difficult to explain to someone with little to no expertise in modeling techniques, e.g., a consumer.

Generalized Linear Models

A GLM consists of three elements7:

- A target variable, , which is a random variable that is independent and follows a probability distribution from the exponential family, defined by a selected variance function and dispersion parameter.
- A linear predictor \( \eta = X\beta \).
- A link function \( g \) such that \( E(Y) = \mu = g^{-1}(\eta) \).

As can be seen in the description of the three GLM components above, it may take more than a casual introduction to statistics to comprehend the construction of a GLM. As stated earlier, a downside to GLMs is that it is more challenging to interpret the GLMs output than with univariate models.

To further complicate regulatory review of models in the future, modeling methods are evolving rapidly and not limited just to GLMs. As computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these methods are predictive models utilizing random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as ensembles). These

---

5 The generalized linear model (GLM) is a flexible family of models that are unified under a single method. Types of GLM include logistic regression, Poisson regression, gamma regression and multinomial regression.
7 Information on model elements can be found in most statistics’ books.
Evolving techniques will make the regulators’ understanding and oversight of filed rating plans incorporating predictive models even more challenging.

In addition to the growing complexity of predictive models, many state insurance departments do not have in-house actuarial support or have limited resources to contract out for support when reviewing rate filings that include use of predictive models. The Big Data (EX) Working Group identified the need to provide states with guidance and assistance when reviewing predictive models underlying filed rating plans. The Working Group circulated a proposal addressing aid to state insurance regulators in the review of predictive models as used in personal automobile and home insurance rate filings. This proposal was circulated to all of the Working Group members and interested parties on December 19, 2017, for a public comment period ending January 12, 2018. The Big Data Working Group effort resulted in the new CASTF charges (see the Introduction section) with identifying best practices that provide guidance to states in the review of predictive models.

Credibility of GLM Output

If the underlying data is not credible, then no model will improve that credibility, and segmentation methods could make credibility worse. GLM software provides point estimates and allows the modeler to consider standard errors and confidence intervals. GLMs effectively assume that the underlying datasets are 100% credible no matter their size. If some segments have little data, the resulting uncertainty would not be reflected in the GLM parameter estimates themselves (although it might be reflected in the standard errors, confidence intervals, etc.). Even though the process of selecting relativities often includes adjusting the raw GLM output, the resultant selections are typically not credibility-weighted with any complement of credibility. And, selected relativities based on GLM model output may differ from GLM point estimates. Lack of credibility for particular estimates could be discerned if standard errors are large relative to the point estimates and/or if the confidence intervals are broad.

Because of this presumption in credibility, which may or may not be valid in practice, the modeler and the regulator reviewing the model would need to engage in thoughtful consideration when incorporating GLM output into a rating plan to ensure that model predictiveness is not compromised by any lack of actual credibility. Another consideration is the availability of data, both internal and external, that may result in the selection of predictor variables that have spurious correlation with the target variable. Therefore, to mitigate the risk that model credibility or predictiveness is lacking, a complete filing for a rating plan that incorporates GLM output should include validation evidence for the rating plan, not just the statistical model.

IV. DO REGULATORS NEED BEST PRACTICES TO REVIEW PREDICTIVE MODELS?

It might be better to revise the question “Do regulators need best practices to review predictive models?” to “Are best practices in the review of predictive models of value to regulators and insurance companies?” The answer is “yes” to both questions. Regulatory best practices need to be developed that do not unfairly or inordinately create barriers for insurers and ultimately consumers while providing a baseline of analysis for regulators to review the referenced filings. Best practices will aid regulatory reviewers by raising their level of model understanding. Also, with regard to scorecard models and the model algorithm, there is often not sufficient support for relative weight, parameter values, or scores of each variable. Best practices can potentially aid in addressing this problem.

Best practices are not intended to create standards for filings that include predictive models. Rather, best practices will assist the states in identifying the model elements they should be looking for in a filing that will aid the regulator in understanding why the company believes that the filed predictive model improves the company’s rating plan, making that rating plan fairer to all consumers in the marketplace. To make this work, both regulators and industry need to recognize that:

- Best practices provide guidance to regulators in their essential and authoritative role over the rating plans in their state.

---

9 All comments received by the end of January were posted to the NAIC website March 12 for review.
10 Sometimes insurers do review complements of credibility and further weight the GLM output with those complements. While this may not be a standard practice today, new techniques could result in this becoming more standard in the future.
11 GLMs provide confidence intervals, credibility methods do not. There are techniques such as penalized regression that blend credibility with a GLM and improve a model’s ability to generalize.”
• All states may have a need to review predictive models whether that occurs with approval of rating plans or in a market conduct exam. Best practices help the regulator identify elements of a model that may influence the regulatory review as to whether modeled rates are appropriately justified, compliant with state laws and regulations, and whether to act on that information.

• Best practices provide a framework for states to share knowledge and resources to facilitate the technical review of predictive models.

• Best practices can lead to improved quality in predictive model reviews across states, aiding speed to market and competitiveness of the state marketplace.

• Best practices aid training of new regulators and/or regulators new to reviewing predictive models. (This is especially useful for those regulators who do not actively participate in NAIC discussions related to the subject of predictive models.)

• Each regulator adopting best practices will be better able to identify the resources needed to assist their state in the review of predictive models.

V. SCOPE

The best practices identified in this paper were derived from a ground-up study and analysis of how GLMs are used in personal automobile and home insurance rating plans. These three components (GLM, PPA, and HO) were selected as the basis to develop best practices for regulatory review of predictive models because many state regulators are very familiar with and have expertise in such filings. In addition, the legal and regulatory constraints (including state variations) are likely to be more evolved, and challenging, for personal automobile and home insurance. It is through review of these personal lines and the knowledge needed to review GLMs used in their rate filings that will provide meaningful best practices for regulators. The identified best practices should be readily transferrable when the review involves other predictive models applied to other lines of business or for an insurance purpose other than rating.

VI. CONFIDENTIALITY

Each state determines the confidentiality of a rate filing and the supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. Regulatory reviewers are required to protect confidential information in accordance with applicable state law. Regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietary or trade secret. However, insurers should be aware that a rate filing might become part of the public record. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate filing.

State authority, regulations and rules governing confidentiality always apply when a regulator reviews a model used in rating. When NAIC or a third party enters into the review process, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed will continue to apply.

VII. BEST PRACTICES FOR REGULATORY REVIEW OF PREDICTIVE MODELS

Best practices will help the regulator understand if a predictive model is cost based, if the predictive model is compliant with state law, and how the model improves a company’s rating plan. Best practices can, also, improve the consistency among the regulatory review processes across states and improve the efficiency, of each regulator’s review thereby assisting companies in getting their products to market faster. With this in mind, the regulator's review of predictive models should:

1. Ensure that the selected rating factors, based on the model or other analysis, produce rates that are not excessive, inadequate, or unfairly discriminatory.

See Appendix B.
a. Review the overall rate level impact of the proposed revisions to rate level indications provided by the filer.

b. Determine that individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk.

c. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.

d. Review the individual input characteristics to and output factors from the predictive model (and its sub-models), as well as associated selected relativities, to ensure they are compatible with practices allowed in the state and do not reflect prohibited characteristics.

2. Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all aspects of the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output.

a. Obtain a clear understanding of how the selected predictive model was built.

b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.

c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to, trending, development, capping and removal of catastrophes.

d. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated and whether the model is periodically refreshed, so model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.

a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models).

b. Obtain a clear understanding how the insurer integrates the model into the rating plan and how it improves the rating plan.

c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.

a. Enable innovation in the pricing of insurance through acceptance of predictive models, provided models are in compliance with state laws, particularly prohibitions on unfair discrimination.

b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.

c. Review predictive models in a timely manner to enable reasonable speed to market.
VIII. PROPOSED CHANGES TO THE PRODUCT FILING REVIEW HANDBOOK

The Task Force was charged to propose modifications to the 2016 Product Filing Review Handbook to reflect best practices for the regulatory review of GLM predictive analytics. The following are the titled sections in Chapter Three “The Basics of Property and Casualty Rate Regulation.”

CHAPTER THREE
The Basics of Property and Casualty Rate Regulation

No changes are proposed to the following sections at the beginning of Chapter Three: Introduction; Rating Laws; Rate Standards; Rate Justification and Supporting Data; Number of Years of Historical Data; Segregation of Data; Data Adjustments; Premium Adjustments; Losses and LAE; Loss Adjustments; Data Adjustments; Premium; Catastrophe or Large Loss Provisions; Loss Adjustment Expenses; Data Quality; Rate Justification: Overall Rate Level; Contingency Provision; Calculation of Overall Rate Level Need; Methods (Pure Premium and Loss Ratio Methods); Rate Justification: Rating Factors; Calculation of Deductible Rating Factors; Calculation of Increased Limit Factors; and Credibility for Rating Factors.

The following are the proposed changes to the remainder of Chapter Three:

Interaction between Rating Variables (Multivariate Analysis)

If each rating variable is evaluated separately, statistically significant interactions between rating variables may not be identified and, thus, may not be included in the rating plan. Care should be taken to have a multivariate analysis when practical. In some instances, a multivariate analysis is not possible. But, with computing power growing exponentially, insurers believe they have found many ways to improve their operations and competitiveness through use of complex predictive models in all areas of their insurance business.

Approval of Classification Systems

With rate changes, companies sometimes propose revisions to their classification system. Because the changes to classification plans can be significant and have large impacts on the consumers’ rates, regulators should focus on these changes.

Some items of proposed classification can sometimes be deemed to be contrary to state law, such as the use of education or occupation. You should be aware of your state’s laws and regulations regarding which rating factors are allowed, and you should require definitions of all data elements that can affect the charged premium. Finding rating or underwriting characteristics that may violate law/regulation is becoming more difficult for regulators with the increasing and innovative ways insurers use predictive models.

Rating Tiers – (No change is proposed.)

Rate Justification: New Products – (No change is proposed.)

Predictive Modeling

The ability of computers to process massive amounts of data (referred to as “big data”) has led to the expansion of the use of predictive modeling in insurance ratemaking. Predictive models have enabled insurers to build rating, marketing, underwriting, and claim models with significant predictive ability.

Data quality within and communication about models are of key importance with predictive modeling. Depending on definitional boundaries, predictive modeling can sometimes overlap with the field of machine learning. In the modeling space, predictive modeling is often referred to as predictive analytics.

Insurers’ use of predictive analytics along with big data has significant potential benefits to both consumers and insurers. Predictive analytics can reveal insights into the relationship between consumer behavior and the cost of insurance, lower the cost of insurance for many, and provide incentives for consumers to better control and mitigate loss. However, predictive
analytic techniques are evolving rapidly and leaving many regulators without the necessary tools to effectively review insurers’ use of predictive models in insurance applications. To aid the regulator in the review of predictive models, best practices have been developed.

The term “predictive model” refers to a set of models that use statistics to predict outcomes. When applied to insurance, the model is chosen to estimate the probability or expected value of an outcome given a set amount of input data; for example, models can predict the frequency of loss, the severity of loss, or the pure premium.

To further complicate regulatory review of models in the future, modeling technology and methods are evolving rapidly. Generalized linear models (GLMs) are relatively transparent and their output and consequences are much clearer than many other complex models. But as computing power grows exponentially, it is opening up the modeling world to more sophisticated forms of data acquisition and data analysis. Insurance actuaries and data scientists seek increased predictiveness by using even more complex predictive modeling methods. Examples of these methods are predictive models utilizing logistic regression, K-nearest neighbor classification, random forests, decision trees, neural networks, or combinations of available modeling methods (often referred to as “ensembles”). These evolving techniques will make the regulators’ understanding and oversight of filed rating plans even more challenging.

Generalized Linear Models

The GLM is a commonly used predictive model in insurance applications, particularly in building an insurance product’s rating plan. Because of this and the fact most Property/Casualty regulators are most concerned about personal lines, NAIC has developed an appendix in its white paper for guidance in reviewing GLMs for personal automobile and home insurance.

What is a “Best Practice”? A best practice is a form of program evaluation in public policy. At its most basic level, a practice is a “tangible and visible behavior… [based on] an idea about how the actions…will solve a problem or achieve a goal”¹⁴. Best practices can maintain quality as an alternative to mandatory legislated standards and can be based on self-assessment or benchmarking.¹⁵ Therefore, a best practice represents an effective method of problem solving. The "problem" regulators want to solve is probably better posed as seeking an answer to this question: How can regulators determine that predictive models, as used in rate filings, are compliant with state laws and regulations? However, best practices are not intended to create standards for filings that include predictive models.

Best practices are based on the following principles that promote a comprehensive and coordinated review of predictive models across states:

- State insurance regulators will maintain their current rate regulatory authority and autonomy.
- State insurance regulators will be able to share information to aid companies in getting insurance products to market more quickly across the states.
- State insurance regulators will share expertise and discuss technical issues regarding predictive models to make the review process in any state more effective and efficient.
- State insurance regulators will maintain confidentiality, in accordance with state law, regarding predictive models.

Best Practices for the Regulatory Review of Predictive Models

Best practices will help the regulator understand if a predictive model is cost based, if the predictive model is compliant with state law, and how the model improves the company’s rating plan. Best practices can also improve the consistency among the regulatory review processes across states and improve the efficiency of each regulator’s review, thereby assisting companies in getting their products to market faster. With this in mind, the regulator’s review of predictive models should:

1. Ensure that the selected rating factors, based on the model or other analysis, produce rates that are not excessive, inadequate, or unfairly discriminatory.
   a. Review the overall rate level impact of the proposed revisions to rate level indications provided by the filer.

¹³ Refer to Appendix B in the NAIC’s white paper titled Regulatory Review of Predictive Models found at the NAIC website.
b. Determine that individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk.

c. Review the premium disruption for individual policyholders and how the disruptions can be explained to individual consumers.

d. Review the individual input characteristics to and output factors from the predictive model (and its sub-models), as well as associated selected relativities, to ensure they are compatible with practices allowed in the state and do not reflect prohibited characteristics.

2. Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all aspects of the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output.

a. Obtain a clear understanding of how the selected predictive model was built.

b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.

c. Determine that any adjustments to the raw data are handled appropriately, including but not limited to, trending, development, capping and removal of catastrophes.

d. Obtain a clear understanding of how often each risk characteristic, used as input to the model, is updated and whether the model is periodically refreshed, so model output reflects changes to non-static risk characteristics.

3. Evaluate how the model interacts with and improves the rating plan.

a. Obtain a clear understanding of the characteristics that are input to a predictive model (and its sub-models).

b. Obtain a clear understanding how the insurer integrates the model into the rating plan and how it improves the rating plan.

c. Obtain a clear understanding of how model output interacts with non-modeled characteristics/variables used to calculate a risk’s premium.

4. Enable competition and innovation to promote the growth, financial stability, and efficiency of the insurance marketplace.

a. Enable innovation in the pricing of insurance through acceptance of predictive models, provided models are in compliance with state laws, particularly prohibitions on unfair discrimination.

b. Protect the confidentiality of filed predictive models and supporting information in accordance with state law.

c. Review predictive models in a timely manner to enable reasonable speed to market.

Confidentiality

Each state determines the confidentiality of a rate filing and the supplemental material to the filing, when filing information might become public, the procedure to request that filing information be held confidentially, and the procedure by which a public records request is made. Regulatory reviewers are required to protect confidential information in accordance with applicable state law. Regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietary or trade secret. However, insurers should be aware that a rate filing might become part of the public record. It is incumbent on an insurer to be familiar with each state’s laws regarding the confidentiality of information submitted with their rate filing.

State authority, regulations and rules governing confidentiality always apply when a regulator reviews a model used in rating. When NAIC or a third party enters into the review process, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed will continue to apply.

Advisory Organizations – (No change is proposed.)

Workers’ Compensation Special Rules – (No change is proposed.)

Premium Selection Decisions – (No change is proposed.)

Installment Plans – (No change is proposed.)

Policy Fees – (No change is proposed.)

Potential Questions to Ask Oneself as a Regulator – (No change is proposed.)

Questions to Ask a Company
If you remain unsatisfied that the company has satisfactorily justified the rate change, then consider asking additional questions of the company. Questions should be asked of the company when they have not satisfied statutory or regulatory requirements in the state or when any current justification is inadequate and could have an impact on the rate change approval or the amount of the approval.

If there are additional items of concern, the company can be notified so they will make appropriate modifications in future filings.

The CASTF white paper, *Regulatory Review of Predictive Models*, documents questions that a regulator may want to ask when reviewing a model. These questions are listed as “information elements” in Appendix B of the paper. Note that although Appendix B focuses on GLMs for personal automobile and home insurance, many of the “information elements” and concepts they represent may be transferable to other types of models, other lines of business, and other applications beyond rating.

**Additional Ratemaking Information**

The Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) have extensive examination syllabi that contain a significant amount of ratemaking information, on both the basic topics covered in this chapter and on advanced ratemaking topics. The CAS and SOA websites contain links to many of the papers included in the syllabi. Recommended reading is the *Foundations of Casualty Actuarial Science*, which contains chapters on ratemaking, risk classification, and individual risk rating.

**Other Reading**

Some additional background reading is recommended:

  - Chapter 1: Introduction
  - Chapter 3: Ratemaking
  - Chapter 6: Risk Classification
  - Chapter 9: Investment Issues in Property-Liability Insurance
  - Chapter 10: Only the section on Regulating an Insurance Company, pp. 777–787
- Casualty Actuarial Society (CAS) Statements of Principles, especially regarding property and casualty ratemaking.
- Association of Insurance Compliance Professionals: “Ratemaking—What the State Filer Needs to Know.”
- Review of filings and approval of insurance company rates.
- NAIC Casualty Actuarial and Statistical (C) Task Force’s white paper: “Regulatory Review of Predictive Models.”

**Summary**

Rate regulation for property/casualty lines of business requires significant knowledge of state rating laws, rating standards, actuarial science, statistical modeling and many data concepts.

- Rating laws vary by state, but the rating laws are usually grouped into prior approval, file and use or use and file (competitive), no file (open competition), and flex rating.
- Rate standards typically included in the state rating laws require that “Rates shall not be inadequate, excessive, or unfairly discriminatory.”
- A company will likely determine their indicated rate change by starting with historical years of underwriting data (earned premiums, incurred loss and loss adjustment expenses, general expenses) and adjusting that data to reflect the anticipated ultimate level of costs for the future time period covered by the policies. Numerous adjustments are made to the data. Common premium adjustments are on-level premium, audit, and trend. Common loss adjustments are trend, loss development, Catastrophe/large loss provisions, and an adjusting and other (A&O) loss adjustment expense provision. A profit/contingency provision is also calculated to determine the indicated rate change.
- Once an overall rate level is determined, the rate change gets allocated to the classifications and other rating factors.
Individual risk rating allows manual rates to be modified by an individual policyholder’s own experience.

Advisory organizations provide the underlying loss costs for companies to be able to add their own expenses and profit provisions (with loss cost multipliers) to calculate their insurance rates.

Casualty Actuarial Society’s Statement of Principles Regarding Property and Casualty Insurance Ratemaking provides guidance and guidelines for the numerous actuarial decisions and standards employed during the development of rates.

NAIC model laws also include special provisions for workers’ compensation business, penalties for not complying with laws, and competitive market analysis to determine whether rates should be subject to prior approval provisions.

Best practices for reviewing predictive models are provided in the CASTF white paper titled Regulatory Review of Predictive Models. The best practices and many of the information elements and underlying concepts may be transferrable to other types of models, other lines of insurance, and applications beyond rating.

While this chapter provides an overview of the rate determination/actuarial process and regulatory review, state statutory or administrative rule may require the examiner to adopt different standards or guidelines than the ones described.

No additional changes are proposed to the Product Filing Review Handbook.

IX. PROPOSED STATE GUIDANCE

This paper acknowledges that different states will apply the guidance within the paper differently, based on variations in the legal environment pertaining to insurance regulation in those states, as well as the extent of available resources, including staff members with actuarial and/or statistical expertise, the workloads of those staff members, and the time that can be reasonably allocated to predictive-model reviews. States with prior-approval authority over personal-lines rate filings often already require answers in connection with many of the information elements expressed in this paper. However, states – including those with and without prior-approval authority – may also use the guidance in this paper to choose which model elements to focus on in their reviews and/or to train new reviewers, as well as to gain an enhanced understanding of how predictive models are developed, supported, and deployed in their markets. Ultimately, the insurance regulators within each state will decide how best to tailor the guidance within this paper to achieve the most effective and successful implementation, subject to the framework of statutes, regulations, precedents, and processes that comprise the insurance regulatory framework in that state.

X. OTHER CONSIDERATIONS

During the development of state guidance for the review of predictive models used in rate filings, important topics that may impact the review arose that were not within the scope of this paper. These topics are listed here without elaboration, not in any order of importance, and is not an exhaustive list but may need to be addressed during the regulator’s review of a predictive model. It may be that one or more of these topics will be addressed by an NAIC committee in the future. These topics are:

- Provide guidance for regulators to identify when a rating variable or rating plan becomes too granular.
- Provide guidance for regulators on the importance of causality vs. correlation when evaluating a rating variable's relationship to risk, in general and in relation to Actuarial Standard of Practice 12 (ASOP 12).
- Provide guidance for regulators on the value and/or concerns of data mining, including how data mining may assist in the model building process, how data mining may conflict with standard scientific principles, how data mining may increase "false positives" during the model building process, and how data mining may result in less accurate models or models that are unfairly discriminatory.
- Provide guidance and/or tools for the regulator to determine how a policy premium is calculated and to identify the most important risk characteristics that underlie the calculated premium.
- Provide guidance for regulators when reviewing consumer-generated data in insurance transactions including disclosure to the consumer, ownership of data, and verification of data procedures.
- Provide guidance, research tools, and techniques for regulators to monitor consumer market outcomes resulting from insurers’ use of data analytics underlying rating plans.
- Provide guidance for regulators to expand the best practices and information elements contained in this white paper to non-GLM models and insurance applications other than for personal automobile and home insurance rating plans.
- Provide guidance for regulators to determine that individual input characteristics to a model or a sub-model, as well as associated relativities, are not unfairly discriminatory or a “proxy for a protected class.”
- Provide guidance for regulators to identify and minimize unfair discrimination manifested as “disparate impact.”
- Provide guidance for regulators that seek a causal or rational explanation why a rating variable is correlated to expected loss or expense, and why that correlation is consistent with the expected direction of the relationship.
APPENDIX A – BEST PRACTICE DEVELOPMENT

Best-practices development is a method for reviewing public policy processes that have been effective in addressing particular issues and could be applied to a current problem. This process relies on the assumptions that top performance is a result of good practices and these practices may be adapted and emulated by others to improve results.\(^{16}\)

The term “best practice” can be a misleading one due to the slippery nature of the word “best”. When proceeding with policy research of this kind, it may be more helpful to frame the project as a way of identifying practices or processes that have worked exceptionally well and the underlying reasons for their success. This allows for a mix-and-match approach for making recommendations that might encompass pieces of many good practices\(^{17}\).

Researchers have found that successful best-practice analysis projects share five common phases:

**Scope**

The focus of an effective analysis is narrow, precise and clearly articulated to stakeholders. A project with a broader focus becomes unwieldy and impractical. Furthermore, Bardach urges the importance of realistic expectations in order to avoid improperly attributing results to a best practice without taking into account internal validity problems.

**Identify Top Performers**

Identify outstanding performers in this area to partner with and learn from. In this phase, it is key to recall that a best practice is a tangible behavior or process designed to solve a problem or achieve a goal (i.e. reviewing predictive models contributes to insurance rates that are not unfairly discriminatory). Therefore, top performers are those who are particularly effective at solving a specific problem or regularly achieve desired results in the area of focus.

**Analyze Best Practices**

Once successful practices are identified, analysts will begin to observe, gather information and identify the distinctive elements that contribute to their superior performance. Bardach suggests it is important at this stage to distill the successful elements of the process down to their most essential idea. This allows for flexibility once the practice is adapted for a new organization or location.

**Adapt**

Analyze and adapt the core elements of the practice for application in a new environment. This may require changing some aspects to account for organizational or environmental differences while retaining the foundational concept or idea. This is also the time to identify potential vulnerabilities of the new practice and build in safeguards to minimize risk.

**Implementation and Evaluation**

The final step is to implement the new process and carefully monitor the results. It may be necessary to make adjustments, so it is likely prudent to allow time and resources for this. Once implementation is complete, continued evaluation is important to ensure the practice remains effective.

© 2020 National Association of Insurance Commissioners 13
APPENDIX B – INFORMATION ELEMENTS AND GUIDANCE FOR A REGULATOR TO MEET BEST PRACTICES’ OBJECTIVES (WHEN REVIEWING GLMS)

This appendix identifies the information a regulator may need to review a predictive model used by an insurer to support a personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to sufficient information that helps determine if the rating plan meets state specific filing and legal requirements.

Documentation of the design and operational details of the model will ensure business continuity and transparency of models used. Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be shared with regulators in a timely manner and documented, and IT controls should be in place, such as a record of versions, change control and access to model.18

Many information elements listed below are probably confidential, proprietary or trade secret and should be treated as such according to state law. Regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietary or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may compromise the model’s protection.19

Though the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).

The “Level of Importance to the Regulator’s Review” is a ranking of information a regulator may need to review is based on the following level criteria:

**Level 1** - This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

**Level 2** - This information is necessary to continue the review of all but the most basic models; such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

**Level 3** - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Levels 1 and 2. These data elements address even more detailed aspects of the model. This information does not necessarily need to be included with the initial submission, unless specifically requested in a particular state, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws.

**Level 4** - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Levels 1, 2, and 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested in a particular state. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, or unfairly discriminatory.

---

19 There are some models that are made public by the vendor and would not result in a hindrance of the model’s protection.
Lastly, though the best practices presented in this paper will readily be transferrable to review of other predictive models, the information elements presented here might be useful only with deeper adaptations when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply, for example, not all predictive models generate p-values or F tests. Depending on the model type, other considerations might be important but are not listed here. When information elements presented in this appendix is applied to lines of business other than personal automobile and home insurance or other type of models, unique considerations may arise. Regulators should be aware of the context in which a predictive model is deployed, the uses to which the model is proposed to be put, and the potential consequences the model may have on the insurer, its customers, and its competitors. This paper does not delve into these possible considerations, but regulators should be prepared to address them as they arise.
### A. SELECTING MODEL INPUT

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to the Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Available Data Sources</td>
<td></td>
<td>Request details of all data sources, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal or policy year and when it was last evaluated. For each data source, get a list all data elements used as input to the model that came from that source. For insurance data, get a list all companies whose data is included in the datasets. Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the Fair Credit Reporting Act. If the data is from an outside source, find out what steps were taken to verify the data was accurate, complete and unbiased in terms of relevant and representative time frame, representative of potential exposures and lacking in obvious correlation to protected classes. Note that reviewing source details should not make a difference when the model is new or refreshed; refreshed models would report the prior version list with the incremental changes due to the refresh.</td>
</tr>
<tr>
<td>A.1.a</td>
<td>Review the details of sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model).</td>
<td>1</td>
<td>Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer's data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer's data banks without further modification (e.g., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.</td>
</tr>
<tr>
<td>A.1.b</td>
<td>Reconcile aggregated insurance data underlying the model with available external insurance reports.</td>
<td>4</td>
<td>The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing and validation. The company should provide an explanation where the data came from geographically and that it is a good representation for a state, i.e., the distribution by state should not introduce a geographic distribution.</td>
</tr>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>2</td>
<td></td>
</tr>
</tbody>

### 2. Sub-Models

<table>
<thead>
<tr>
<th>A.2.a</th>
<th>Consider the relevance of (e.g., is there a bias) of overlapping data or variables used in the model and sub-models.</th>
<th>1</th>
<th>Check if the same variables/datasets were used in both the model, a sub-model or as stand-alone rating characteristics. If so, verify there was no double-counting or redundancy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.2.b</td>
<td>Determine if the sub-model was previously approved (or accepted) by the regulatory agency.</td>
<td>1</td>
<td>If the sub-model was previously approved, that may reduce the extent of the sub-model’s review. If approved, verify when and that it was the same model currently under review. However, previous approvals do not necessarily confer a guarantee of ongoing approval, for example when statutes and regulations have changed or if a model’s indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator’s efforts and determine whether or not the prior decision needs to be revisited.</td>
</tr>
<tr>
<td>A.2.c</td>
<td>Determine if sub-model output was used as input to the GLM; obtain the vendor name, and the name and version of the sub-model.</td>
<td>1</td>
<td>To accelerate the review of the filing, get the name and contact information for a representative from the vendor. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The &quot;contact&quot; can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with a Subject Matter Expert (SME) at the vendor. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. SMEs on sub-model may need to be brought into the conversation with regulators (whether in-house or 3rd-party sub-models are used).</td>
</tr>
<tr>
<td>A.2.d</td>
<td>If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run.</td>
<td>1</td>
<td>For example, it is important to know hurricane model settings for storm surge, demand surge, long/short-term views. To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The &quot;SME&quot; can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor.</td>
</tr>
<tr>
<td>A.2.e</td>
<td>If using catastrophe model output (a sub-model) as input to the GLM under review, verify whether loss associated with the modeled output was removed from the loss experience datasets.</td>
<td>1</td>
<td>If a weather-based sub-model is input to the GLM under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause...</td>
</tr>
</tbody>
</table>
distortions in the modeled results by double counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model, inclusion of freeze losses when using a winter storm model or including demand surge caused by any catastrophic event.

Note that, the rating plan or indications underlying the rating plan, may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large BI losses, in the case of personal automobile insurance, be capped or excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model's training, test and validation data?

<table>
<thead>
<tr>
<th>A.2.f</th>
<th>If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model's output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.</td>
</tr>
</tbody>
</table>

### 3. Adjustments to Data

<table>
<thead>
<tr>
<th>A.3.a</th>
<th>Determine if premium, exposure, loss or expense data were adjusted (e.g., developed, trended, adjusted for catastrophe experience or capped) and, if so, how? Do the adjustments vary for different segments of the data and, if so, identify the segments and how was the data adjusted?</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be capped, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model's training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane or severe convective storm losses for personal automobile comprehensive or home insurance.</td>
</tr>
<tr>
<td>A.3.b</td>
<td>Identify adjustments that were made to aggregated data, e.g., transformations, binning and/or categorizations. If any, identify the name of the characteristic/variable and obtain a description of the adjustment.</td>
</tr>
<tr>
<td>-------</td>
<td>-------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>This is most relevant for variables that have been &quot;scrubbed&quot; or adjusted.</td>
</tr>
<tr>
<td></td>
<td>Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it.</td>
</tr>
<tr>
<td></td>
<td>It would be useful to the regulator if the percentage of exposures and premium for missing information from the model data by category were provided. This data can be displayed in either graphical or tabular formats.</td>
</tr>
<tr>
<td>A.3.c</td>
<td>Ask for aggregated data (one data set of pre-adjusted/scrubbed data and one data set of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.</td>
</tr>
<tr>
<td></td>
<td>This is most relevant for variables that have been &quot;scrubbed&quot; or adjusted.</td>
</tr>
<tr>
<td></td>
<td>Though most regulators may never ask for aggregated data and do not plan to rebuild any models, a regulator may ask for this aggregated data or subsets of it.</td>

### B. BUILDING THE MODEL

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. High-Level Narrative for Building the Model</td>
<td>Identify the type of model underlying the rate filing (e.g. Generalized Linear Model – GLM, decision tree, Bayesian Generalized Linear Model, Gradient-Boosting Machine, neural network, etc.). Understand the model's role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>It is important to understand if the model in question is a GLM, and therefore these information elements are applicable or, if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/coverage. Note, if the model is not a GLM, the information elements in this white paper may not apply in their entirety.</td>
</tr>
<tr>
<td></td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product and a software version reference used in model development.</td>
<td>3</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a &quot;contact&quot; in the event the regulator has questions. The &quot;contact&quot; can be an intermediary at the insurer who can place the regulator in direct contact with appropriate SMEs. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</td>
</tr>
<tr>
<td></td>
<td>Obtain a description how the available data was divided between model training, test and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation why that came to occur. Obtain a discussion of whether the model was rebuilt using all of the data or if it was only based on the training data.</td>
<td>1</td>
<td>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all. It would be unexpected if validation and/or test data were used for any purpose other than validation and/or test, prior to the selection of the final model.</td>
</tr>
<tr>
<td></td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan.</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
</tr>
<tr>
<td>B.1.e</td>
<td>Obtain a narrative on whether loss ratio, pure premium or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.f</td>
<td>Identify the model’s target variable.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.g</td>
<td>Obtain a description of the variable selection process.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.h</td>
<td>In conjunction with variable selection, obtain a narrative on how the company determine the granularity of the rating variables during model development.</td>
<td>3</td>
<td></td>
</tr>
<tr>
<td>B.1.i</td>
<td>Determine if model input data was segmented in any way. For example, was modeling performed on a by-coverage, by-peril, or by-form basis? If so, obtain a description of data segmentation and the reasons for data segmentation.</td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>B.1.j</td>
<td>If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied.</td>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>

**2. Medium-Level Narrative for Building the Model**

<p>| B.2.a | At crucial points in model development, if selections were made among alternatives regarding model assumptions or techniques, obtain a narrative on the judgment used to make those selections. | 3 |</p>
<table>
<thead>
<tr>
<th>B.2.b</th>
<th>If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.</th>
<th>2</th>
<th>Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding how these adjustments were done, including any statistical improvement measures relied upon.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.2.c</td>
<td>Obtain a description of the testing that was performed during the model-building process and a discussion of why interaction terms were included (or not included).</td>
<td>3</td>
<td>There should be a description of testing that was performed during the model-building process. Examples of tests that may have been performed include univariate testing and review of a correlation matrix.</td>
</tr>
<tr>
<td>B.2.d</td>
<td>For the GLM, identify the link function used. Identify which distribution was used for the model (e.g., Poisson, Gaussian, log-normal, Tweedie). Obtain an explanation why the link function and distribution were chosen. Obtain the formulas for the distribution and link functions, including specific numerical parameters of the distribution. Obtain a discussion of applicable convergence criterion.</td>
<td>1</td>
<td>Solving the GLM is iterative and the modeler can check to see if fit is improving. At some point convergence occurs, though when it occurs can be subjective or based on threshold criteria. The convergence criterion should be documented with a brief explanation of why it was selected. If the software's default convergence criteria were relied upon, the regulator should look for a description of the default convergence criterion and an explanation of any deviation from it.</td>
</tr>
<tr>
<td>B.2.e</td>
<td>Obtain a narrative on the formula relationship between the data and the model outputs, with a definition of each model input and output. The narrative should include all coefficients necessary to evaluate the predicted pure premium, relativity or other value, for any real or hypothetical set of inputs.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>B.2.f</td>
<td>If there were data situations in which GLM weights were used, obtain an explanation of how and why they were used.</td>
<td>3</td>
<td>Investigate whether identical records were combined to build the model.</td>
</tr>
</tbody>
</table>

### 3. Predictor Variables

<table>
<thead>
<tr>
<th>B.3.a</th>
<th>Obtain a complete data dictionary, including the names, types, definitions and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable and all other variables in the model used on their own or as an interaction with other variables (including sub-models and external models).</th>
<th>1</th>
<th>Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of its purpose and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact.</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.3.b</td>
<td>Obtain a list of predictor variables considered but not used in the final model, and the rationale for their removal.</td>
<td>4</td>
<td>The purpose of this requirement is to identify variables that the company finds to be predictive but ultimately may reject for reasons other than loss-cost considerations (e.g., price optimization). Also, look for variables the company tested and then rejected. This item could help address concerns about data dredging. The reasonableness of including a variable with given significance level could depend greatly on the other variables the company evaluated for inclusion in the model and the criteria for inclusion or omission. For instance, if the company tested 1,000 similar variables...</td>
</tr>
</tbody>
</table>
and selected the one with the lowest p-value of 0.001, this would be a far, far weaker case for statistical significance than if that variable was the only one the company evaluated. Note, context matters.

<table>
<thead>
<tr>
<th>B.3.c</th>
<th>Obtain a correlation matrix for all predictor variables included in the model and sub-model(s).</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>While GLMs accommodate collinearity, the correlation matrix provides more information about the magnitude of correlation between variables. The company should indicate what statistic was used (e.g., Pearson, Cramer's V). The regulatory reviewer should understand what statistic was used to produce the matrix but should not prescribe the statistic.</td>
<td></td>
</tr>
<tr>
<td>B.3.d</td>
<td>Obtain a rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>The explanation should go beyond demonstrating correlation. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate. For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the connection that variable has to increasing or decreasing the target variable.</td>
<td></td>
</tr>
<tr>
<td>B.3.e</td>
<td>If the modeler made use of one or more dimensionality reduction techniques, such as a Principal Component Analysis (PCA), obtain a narrative about that process, an explanation why that technique was chosen, and a description of the step-by-step process used to transform observations (usually correlated) into a set of linearly uncorrelated variables. In each instance, obtain a list of the pre-transformation and post-transformation variable names, and an explanation how the results of the dimensionality reduction technique was used within the model.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td>For models that are built using multi-state data, validation data for some segments of risk is likely to have low credibility in individual states. Nevertheless, some regulators require model validation on State-only data, especially when analysis using state-only data contradicts the countrywide results. State-only data might be more applicable but could also be impacted by low credibility for some segments of risk. Look for geographic stability measures, e.g., across states or territories within state.</td>
<td></td>
</tr>
</tbody>
</table>

4. Adjusting Data, Model Validation and Goodness-of-Fit Measures

<table>
<thead>
<tr>
<th>B.4.a</th>
<th>Obtain a description of the methods used to assess the statistical significance/goodness of the fit of the model to validation data, such as lift charts and statistical tests. Compare the model's projected results to historical actual results and verify that modeled results are reasonably similar to actual results from validation data.</th>
<th>1</th>
</tr>
</thead>
</table>
### B.4.b

For all variables (discrete or continuous), review the appropriate parameter values, confidence intervals, chi-square tests, p-values and any other relevant and material tests. Determine if model development data, validation data, test data or other data was used for these tests.

1. Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed.

### B.4.c

Identify the threshold for statistical significance and explain why it was selected. Obtain a reasonable and appropriately supported explanation for keeping the variable for each discrete variable level where the p-values were not less than the chosen threshold.

1. The explanation should clearly identify the thresholds for statistical significance used by the modeler. Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests.
| B.4.d | For overall discrete variables, review type 3 chi-square tests, p-values, F tests and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests. | 2 | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed. |
| B.4.e | Obtain evidence that the model fits the training data well, for individual variables, for any relevant combinations of variables and for, the overall model. | 2 | For a GLM, such evidence may be available using chi-square tests, p-values, F tests and/or other means. The steps taken during modeling to achieve goodness-of-fit are likely to be numerous and laborious to describe, but they contribute much of what is generalized about GLM. We should not assume we know what they did and ask "how?" Instead, we should ask what they did and be prepared to ask follow-up questions. |
| B.4.f | For continuous variables, provide confidence intervals, chi-square tests, p-values and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests. | 2 | Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model, e.g., the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around the modeled parameters; for example, confidence intervals around each level of an AOI curve might be more than what is needed. |
| B.4.g | Obtain a description how the model was tested for stability over time. | 2 | Evaluate the build/test/validation datasets for potential time-sensitive model distortions (e.g., a winter storm in year 3 of 5 can distort the model in both the testing and validation datasets).
Obsolescence over time is a model risk (e.g., old data for a variable or a variable itself may no longer be relevant). If a model being introduced now is based on losses from years ago, the reviewer should be interested in knowing whether that model would be predictive in the proposed context. Validation using recent data from the proposed context might be requested. Obsolescence is a risk even for a new model based on recent and relevant loss data. The reviewer may want to inquire as to the following: What steps, if any, were taken during modeling to prevent or delay obsolescence? What controls will exist to measure the rate of obsolescence? What is the plan and timeline for updating and ultimately replacing the model?
The reviewer should also consider that as newer technologies enter the market (e.g., personal automobile) their impact may change claim activity over time (e.g., lower frequency of loss). So, it is not necessarily a bad thing that the results are not stable over time. |
| B.4.h | Obtain a narrative on how potential concerns with overfitting were addressed. | 2 | Visual review of plots of actual errors is usually sufficient.
The reviewer should look for a conceptual narrative covering these topics: How does this particular GLM work? Why did the rate filer do what it did? Why employ this design instead of alternatives? Why choose this particular distribution function and this particular link function? A company response may be at a fairly high level and reference industry practices. If the reviewer determines that the model makes no assumptions that are considered to be unreasonable, the importance of this item may be reduced. |
| B.4.i | Obtain support demonstrating that the GLM assumptions are appropriate. | 3 | |
| B.4.j | Obtain 5-10 sample records with corresponding output from the model for those records. | 4 | |
### 5. “Old Model” Versus “New Model”

| B.5.a | Obtain an explanation why this model is an improvement to the current rating plan. If it replaces a previous model, find out why it is better than the one it is replacing; determine how the company reached that conclusion and identify metrics relied on in reaching that conclusion. Look for an explanation of any changes in calculations, assumptions, parameters, and data used to build this model from the previous model. | 2 | Regulators should expect to see improvement in the new class plan’s predictive ability or other sufficient reason for the change. |
| B.5.b | Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison. | 3 | One example of a comparison might be sufficient. This is relevant when one model is being updated or replaced. Regulators should expect to see improvement in the new class plan’s predictive ability. This information element requests a comparison of Gini coefficient from the prior model to the Gini coefficient of proposed model. It is expected that there should be improvement in the Gini coefficient. A higher Gini coefficient indicates greater differentiation produced by the model and how well the model fits that data. This comparison is not applicable to initial model introduction. Reviewer can look to CAS monograph for information on Gini coefficients. |
| B.5.c | Determine if double lift charts were analyzed and obtain a narrative on the conclusion drawn from this analysis. | 2 | One example of a comparison might be sufficient. Note that "not applicable" is an acceptable response. |
| B.5.d | If replacing an existing model, obtain a list of any predictor variables used in the old model that are not used in the new model. Obtain an explanation why these variables were dropped from the new model. Obtain a list of all new predictor variables in the new model that were not in the prior old model. | 2 | Useful to differentiate between old and new variables so the regulator can prioritize more time on variables not yet reviewed. |

### 6. Modeler Software

| B.6.a | Request access to SMEs (e.g., modelers) who led the project, compiled the data, built the model, and/or performed peer review. | 3 | The filing should contain a contact that can put the regulator in touch with appropriate SMEs and key contributors to the model development to discuss the model. |
C. THE FILED RATING PLAN

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator's Review</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (how it was used) in the rating system.</td>
<td>1</td>
<td>The &quot;role of the model&quot; relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model's goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.a</td>
<td>Obtain an explanation of how the model was used to adjust the rating algorithm.</td>
<td>1</td>
<td>Models are often used to produce factor-based indications, which are then used as the basis for the selected changes to the rating plan. It is the changes to the rating plan that create impacts. Consider asking for an explanation of how the model was used to adjust the rating algorithm.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain language) of each listed characteristic/variable.</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>
</tr>
</tbody>
</table>
## 2. Relevance of Variables and Relationship to Risk of Loss

| C.2.a | Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced. | 2 | The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model results should be consistent with the expected direction of the relationship. This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated. |

## 3. Comparison of Model Outputs to Current and Selected Rating Factors

| C.3.a | Compare relativities indicated by the model to both current relativities and the insurer's selected relativities for each risk characteristic/variable in the rating plan. | 1 | “Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical. |

| C.3.b | Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected values. | 1 | The documentation should include explanations for the necessity of any such adjustments and explain each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. This information is especially important if differences between model indicated values and selected values are material and/or impact one consumer population more than another. |

| C.3.c | For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures. | 2 | Modeling loss ratio with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations, e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan. One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals. |
### 4. Responses to Data, Credibility and Granularity Issues

<table>
<thead>
<tr>
<th>C.4.a</th>
<th>Determine what, if any, consideration was given to the credibility of the output data.</th>
<th>2</th>
<th>At what level of granularity is credibility applied. If modeling was by-coverage, by-form or by-peril, explain how these were handled when there was not enough credible data by coverage, form or peril to model.</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.4.b</td>
<td>If the rating plan is less granular than the model, obtain an explanation why.</td>
<td>2</td>
<td>This is applicable if the insurer had to combine modeled output in order to reduce the granularity of the rating plan.</td>
</tr>
<tr>
<td>C.4.c</td>
<td>If the rating plan is more granular than the model, obtain an explanation why.</td>
<td>2</td>
<td>A more granular rating plan implies that the insurer had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications.</td>
</tr>
</tbody>
</table>

### 5. Definitions of Rating Variables

| C.5.a | Obtain a narrative on adjustments made to model output, e.g., transformations, binning and/or categorizations. If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment. | 2 | If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation how model output was translated into these rating tiers or intermediate rating categories. |

### 6. Supporting Data

| C.6.a | Obtain aggregated state-specific, book-of-business-specific univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation whether it is raw or adjusted and, if the latter, obtain a detailed explanation for the adjustments. | 4 | For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference. |
Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the multivariate indicated relativity is 1.25, this is potentially a plausible application of the multivariate techniques. If, however, the univariate indicated relativity is 0.7 and the multivariate indicated relativity is 1.25, a regulator may question whether the attribute in question is negatively correlated with other determinants of risk. Credibility of state data should be considered when state indications differ from modeled results based on a broader data set. However, the relevance of the broader data set to the risks being priced should also be considered. Borderline reversals are not of as much concern.

### 7. Consumer Impacts

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.6.b</td>
<td>Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.</td>
<td>4</td>
</tr>
</tbody>
</table>

These rating variables may represent changes to rating factors, be newly introduced to the rating plan, or have been removed from the rating plan.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.7.a</td>
<td>Obtain a listing of the top five rating variables that contribute the most to large swings in premium, both as increases and decreases.</td>
<td>4</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.7.b</td>
<td>Determine if the insurer performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing.</td>
<td>3</td>
</tr>
</tbody>
</table>

One way to see sensitivity is to analyze a graph of each risk characteristic’s/variable’s possible relativities. Look for significant variation between adjacent relativities and evaluate if such variation is reasonable and credible.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.7.c</td>
<td>For the proposed filing, obtain the impacts on expiring policies and describe the process used by management, if any, to mitigate those impacts.</td>
<td>2</td>
</tr>
</tbody>
</table>

Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense, and hence may be viewed as unfairly discriminatory by some states.
<table>
<thead>
<tr>
<th>Section</th>
<th>Description</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.7.d</td>
<td>Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business), and sufficient information to explain the disruptions to individual consumers.</td>
<td>2</td>
</tr>
<tr>
<td>C.7.e</td>
<td>Obtain exposure distributions for the model's output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business.</td>
<td>3</td>
</tr>
<tr>
<td>C.7.f</td>
<td>Identify policy characteristics, used as input to a model or sub-model, that remain &quot;static&quot; over a policy's lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as &quot;static,&quot; yet change over time.</td>
<td>3</td>
</tr>
</tbody>
</table>

The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan.

While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated.

See Appendix C for an example of a disruption analysis.

See Appendix C for an example of an exposure distribution.

Some examples of "static" policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured's risk profile based on "static" variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured's true and current risk profile.

A few examples of "non-static" policy characteristics are age of driver, driving record and credit information (FCRA related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company.
| C.7.g | Obtain a means to calculate the rate charged a consumer. | 3 | The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. Ability to calculate the rate charged could allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note that this information may be proprietary. |
| C.7.h | In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors. | 1 | If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, data may need to be documented with an overview of who owns it and the topic of consumer verification may need to be addressed, including how consumers can verify their data and correct errors. |

### 8. Accurate Translation of Model into a Rating Plan

| C.8.a | Obtain sufficient information to understand how the model outputs are used within the rating system and to verify that the rating plan’s manual, in fact, reflects the model output and any adjustments made to the model output. | 1 | The regulator can review the rating plan's manual to see that modeled output is properly reflected in the manual's rules, rates, factors, etc. |

### 9. Efficient and Effective Review of Rate Filing

<p>| C.9.a | Establish procedures to efficiently review rate filings and models contained therein. | 1 | &quot;Speed to market&quot; is an important competitive concept for insurers. Though regulators need to understand the rate filing before accepting the rate filing, the regulator should not request information which does not increase their understanding of the rate filing. Regulators should review their state's rate filing review process and procedures to ensure that they are fair and efficient. Regulators need to be aware that requesting information that is not necessary for a decision to be made on a rate filing's compliance with state laws and regulations. |
| C.9.b | Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state law. | 1 | This is a primary duty of regulators. The regulator should be knowledgeable of their state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination. |</p>
<table>

APPENDIX C – GLOSSARY OF TERMS

Adjusting Data – Adjusting data refers to any changes made when the modeler makes any to the raw data. For example, capping losses, on-leveling, binning, transformation of the data, etc. This includes scrubbing of the data.

Aggregated Data - Data summarized or compiled in a manner that is meaningful to the intended user of the data. Aggregation involves segmenting and combining individual data entries into categories based on common features within the data. For example, aggregated raw data requested for a predictive model would be categorized in the same manner as the categories of variables which receive specific treatments within the model outputs.

Big Data – “Big Data” refers to extremely large data sets analyzed computationally to infer laws (regressions, nonlinear relationships, and causal effects) to reveal relationships and dependencies or to perform predictions of outcomes and behaviors.

Composite Characteristic - A composite characteristic is the combination of two or more individual risk characteristics. Composite characteristics are used to create composite variables.

Composite Score - A composite score is a number derived by combining multiple variables by means of a sequence of mathematical steps - for example, a credit-based insurance scoring model.

Composite Variable - A composite variable is a variable created by incorporating two or more individual risk characteristics of the insured into a single variable.

Continuous Variable - A continuous variable is a numeric variable that represents a measurement on a continuous scale. Examples include age, amount of insurance (in dollars), and population density.

Control Variable - Control variables are variables whose relativities are not used in the final rating algorithm but are included when building the model. They are included in the model so that other correlated variables do not pick up their signal. For example, state and year are frequently included in countrywide models as control variables so that the different experiences and distributions between states and across time do not influence the rating factors used in the final rating algorithm.

Correlation Matrix - A correlation matrix is a table showing correlation coefficients between sets of variables. Each random variable (X_i) in the table is correlated with each of the other variables in the table (X_j). Using the correlation matrix, one can determine which pairs of variables have the highest correlation. Below is a sample correlation matrix showing correlation coefficients for combinations of 5 variables B1:B5. The table shows that variables B2 and B4 have the highest correlation coefficient (0.96) in this example. The diagonal of the table is always set to one, because the correlation coefficient between a variable and itself is always 1. The upper-right triangle would be a mirror image of the lower-left triangle (because correlation between B1 and B2 is the same as between B2 and B1). In other words, a correlation matrix is also a symmetric matrix.

Data Dredging - Data dredging is also referred to as data fishing, data snooping, data butchery, and p-hacking. It is the misuse of data analysis to find patterns in data that can be presented as statistically significant when, in fact, there is no real underlying effect. Data dredging is done by performing many statistical tests on the data and focusing only on those that produce significant results. Data dredging is in conflict with hypothesis testing, which entails performing at most a handful of tests to determine the validity of the hypothesis about an underlying effect.
Data Source - A data source is the original repository of the information used to build the model. For example, information from internal insurance data, an application, a vendor, credit bureaus, government websites, a sub-model, verbal information provided to agents, external sources, consumer information databases, etc.

Discrete Variable - A discrete variable is a variable that can only take on a countable number of values/categories. Examples include number of claims, marital status, and gender.

Discrete Variable Level - Discrete variables are generally referred to as "factors" (not to be confused with rating factors), with values that each factor can take being referred to as "levels." ²⁴

Double-Lift Chart - Double lift charts are similar to simple quantile plots, but rather than sorting based on the predicted loss cost of each model, the double lift chart sorts based on the ratio of the two models’ predicted loss costs. Double lift charts directly compare the results of two models.²⁵

Exponential Family - The exponential family is a class of distributions that share the same general density form and have certain properties that are used in fitting GLMs. It includes many well-known distributions, such as the Normal, Poisson, Gamma, Tweedie, and Binomial, to name a few.²⁶

Fair Credit Reporting Act – The Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 (FCRA) is U.S. Federal Government legislation enacted to promote the accuracy, fairness and privacy of consumer information contained in the files of consumer reporting agencies. It was intended to protect consumers from the willful and/or negligent inclusion of inaccurate information in their credit reports. To that end, the FCRA regulates the collection, dissemination and use of consumer information, including consumer credit information.²⁷ Together with the Fair Debt Collection Practices Act (FDCPA), the FCRA forms the foundation of consumer rights law in the United States. It was originally passed in 1970 and is enforced by the US Federal Trade Commission, the Consumer Financial Protection Bureau and private litigants.

Generalized Linear Model - Generalized linear models (GLMs) are a means of modeling the relationship between a variable whose outcome we wish to predict and one or more explanatory variables. The predicted variable is called the target variable and is denoted y. In property/casualty insurance ratemaking applications, the target variable is typically one of the following:

- Claim count (or claims per exposure)
- Claim severity (i.e., dollars of loss per claim or occurrence)
- Pure premium (i.e., dollars of loss per exposure)
- Loss ratio (i.e., dollars of loss per dollar of premium)

For quantitative target variables such as those above, the GLM will produce an estimate of the expected value of the outcome. For other applications, the target variable may be the occurrence or non-occurrence of a certain event. Examples include:

- Whether or not a policyholder will renew his/her policy.
- Whether a submitted claim contains fraud.

For such variables, a GLM can be applied to estimate the probability that the event will occur.

The explanatory variables, or predictors, are denoted x₁, . . . , xₚ, where p is the number of predictors in the model. Potential predictors are typically any policy term or policyholder characteristic that an insurer may wish to include in a rating plan.

Some examples are:

- Type of vehicle, age, or marital status for personal auto insurance.
- Construction type, building age, or amount of insurance (AOI) for home insurance.²⁸

²⁴https://www.casact.org/pubs/dpp/dpp04/04dpp1.pdf
Geodemographic - Geodemographics is the study of the population and its characteristics, divided according to regions on a geographical basis. This involves application of clustering techniques to group statistically similar neighborhoods and areas with the assumption that the differences within any group should be less than the difference between groups. While the main source of data for a geodemographic study is the census data, the use of other sources of relevant data is also prevalent. Geodemographic segmentation is based on two principles:

1. People who live in the same neighborhood are more likely to have similar characteristics than are two people chosen at random.
2. Neighborhoods can be categorized in terms of the characteristics of the population that they contain. Any two neighborhoods can be placed in the same category, i.e., they contain similar types of people, even though they are widely separated.

Granularity of Data - Granularity of data is the level of segmentation at which the data is grouped or summarized. It reflects the level of detail used to slice and dice the data.

For example, a postal address can be recorded, with coarse granularity, as:
- Country

Or, with finer granularity, as multiple fields:
- Country
- State

Or, with much finer granularity, as multiple fields:
- Country
- State
- County
- ZIP Code
- Property Geo Code

Home Insurance - Home insurance covers damage to the property, contents, and outstanding structures (if applicable), as well as loss of use, liability and medical coverage. The perils covered, the amount of insurance provided, and other policy characteristics are detailed in the policy contract.

Insurance Data - Data collected by the insurance company. For example, data obtained from the consumer through communications with an agent or on an insurance application would be "insurance data." However, data obtained from a credit bureau or census would not be considered "insurance data" but would be considered "non-insurance data" instead.

Interaction Term - Two predictor variables are said to interact if the effect of one of the predictors on the target variable depends on the level of the other. Suppose that predictor variables X₁ and X₂ interact. A GLM modeler could account for this interaction by including an interaction term of the form X₁X₂ in the formula for the linear predictor. For instance, rather than defining the linear predictor as \( \eta = \beta_0 + \beta_1X_1 + \beta_2X_2 \), they could set \( \eta = \beta_0 + \beta_1X_1 + \beta_2X_2 + \beta_3X_1X_2 \).

The following two plots of modeled personal auto bodily injury pure premium by age and gender illustrate this effect. The plots are based on two otherwise identical log-link GLMs, built using the same fictional dataset, with the only difference between the two being that the second model includes the Age-Gender interaction term while the first does not. Notice that the male curve in the first plot is a constant multiple of the female curve, while in the second plot the ratios of the male to female values differ from age to age.

---

29 Granularity (also called graininess), https://en.wikipedia.org/wiki/Granularity#Data_granularity
31 To see that this second definition accounts for the interaction, note that it is equivalent to \( \eta = \beta_0 + \beta_1X_1 + \beta_2X_2 \) and to \( \eta = \beta_0 + \beta_1X_1 + \beta_2X_2 + \beta_3X_1X_2 \), with \( \beta_1' = \beta_1 + \beta_3X_2 \) and \( \beta_2' = \beta_2 + \beta_3X_1 \). Since \( \beta_1' \) is a function of \( X_2 \) and \( \beta_2' \) is a function of \( X_1 \), these two equivalences say that the effect of \( X_1 \) depends on the level of \( X_2 \) and vice versa.
**Lift Chart** - See definition of quantile plot.

**Linear Predictor** - A linear predictor is the linear combination of explanatory variables ($X_1, X_2, \ldots, X_k$) in the model... e.g.,
$$\hat{\eta} = \beta_0 + \beta_1 X_1 + \beta_2 X_2.$$

**Link Function** - The link function, $g(\mu)$, specifies how the expected value of the response relates to the linear predictor of explanatory variables; e.g., $\eta = g(E(Y_i)) = E(Y_i)$ for linear regression, or $\eta = \logit(\pi)$ for logistic regression.

**Missing data** - Missing data occurs when some records contain blanks or "Not Available" or "Null" where variable values would normally be available.

**Non-Insurance Data** - Non-insurance data is data provided by another party other than the insurance company. For example, data obtained from a credit bureau or census would be considered "non-insurance data." However, data obtained from the consumer through communications with an agent or on an insurance application would not be considered "non-insurance data" but would be "insurance data" instead.

**Offset Variable** – Offset variables (or factors) are model variables with a known or pre-specified coefficient. Their relativities are included in the model and the final rating algorithm, but they are generated from other studies outside the multivariate analysis and are fixed (not allowed to change) in the model when it is run. The model does not estimate any coefficients for the offset variables, and they are included in the model, so that the estimated coefficients for other variables in the model would be optimal in their presence. Examples of offset variables include limit and deductible relativities that are more appropriately derived via loss elimination analysis. The resulting relativities are then included in the multivariate model as offsets. Another example is using an offset factor to account for the exposure in the records; this does not get included in the final rating algorithm.

**Overfitting** – Overfitting is the production of an analysis that corresponds too closely or exactly to a particular set of data and may, therefore, fail to fit additional data or predict future observations reliably.

**PCA Approach (Principal Component Analysis)** – The PCA method creates multiple new variables from correlated groups of predictors. Those new variables exhibit little or no correlation between them—thereby making them potentially more useful in a GLM. A PCA in a filing can be described as “a GLM within a GLM.” One of the more common applications of PCA is geodemographic analysis, where many attributes are used to modify territorial differentials on, for example, a census block level.

**Personal Automobile Insurance** – Personal automobile insurance is insurance for privately owned motor vehicles and trailers for use on public roads not owned or used for commercial purposes. This includes personal auto combinations of private passenger auto, motorcycle, financial responsibility bonds, recreational vehicles and/or other personal auto. Policies

---

33 https://online.stat.psu.edu/stat504/node/216
include any combination of coverage such as the following: auto liability, personal injury protection (PIP), medical payments (MP), uninsured/underinsured motorist (UM/UIM); specified causes of loss, comprehensive, and collision.36

**Post-model Adjustment** - Post-model adjustment is any adjustment made to the output of the model including but not limited to adjusting rating factors or removal of variables.

**Probability Distribution** – A probability distribution is a statistical function that describes all the possible values and likelihoods that a random variable can take within a given range. The chosen probability distribution is supposed to best represent the likely outcomes.

**Proxy Variable** - A proxy variable is any variable that indirectly captures the characteristics of another variable, whether or not that other variable is used in the insurer’s rating plan.

**Quantile Plot** - A quantile plot is a visual representation of a model’s ability to accurately differentiate between the best and the worst risks. Data is sorted by predicted value from smallest to largest, and the data is then bucketed into quantiles with the same volume of exposures. Within each bucket the average predicted value and the average actual value are calculated and for each quantile the actual and the predicted values are plotted. The first quantile contains the risks that the model predicts have the best experience and the last quantile contains the risks predicted to have the worst experience. The plot shows two things: how well the model predicts actual values by quantile, and the lift of the model, the difference between the first and last quantile, which is a reflection of the model's ability to distinguish between the best and worst risks. By definition, the average predicted values would be monotonically increasing, but the average actual values may show reversals.37 An example follows:

![Quantile Plot](image)

**Rating Algorithm** – A rating algorithm is the mathematical or computational component of the rating plan used to calculate an insured’s premium.

**Rating Category** - A rating category is the same as a rating characteristic and can be quantitative or qualitative.

**Rating Characteristic** - A rating characteristic is a specific risk criterion of the insured used to define the level of the rating variable that applies to the insured. Ex. Rating variable- Driver age, Rating characteristic- Age 42

**Rating Factor** – A rating factor is the numerical component included in the rate pages of the rating plan's manual. Rating factors are used together with the rating algorithm to calculate the insured’s premium.

**Rating Plan** – The rating plan describes in detail how to combine the various components in the rules and rate pages to calculate the overall premium charged for any risk. The rating plan is very specific and includes explicit instructions, such as:
- the order in which rating variables should be considered,
- how the effect of rating variables is applied in the calculation of premium (e.g., multiplicative, additive, or some unique mathematical expression),

36 NAIC, [https://content.naic.org/cipr_topics/topic_auto_insurance.htm](https://content.naic.org/cipr_topics/topic_auto_insurance.htm)
the existence of maximum and minimum premiums (or in some cases the maximum discount or surcharge that can be applied), and
specifics associated with any rounding that takes place.
If the insurance product contains multiple coverages, then separate rating plans by coverage may apply.38

Rating System - The rating system is the insurance company's IT infrastructure that produces the rates derived from the rating algorithm.

Rating Tier - A rating tier is rating based on a combination of rating characteristics rather than a single rating characteristic resulting in a separation of groups of insureds into different rate levels within the same or separate companies. Often, rating tiers are used to differentiate quality of risk, e.g., substandard, standard, or preferred.

Rating Treatment - Rating treatment is the manner in which an aspect of the rating affects an insured’s premium.

Rating Variable - A rating variable is a risk criterion of the insured used to modify the base rate in a rating algorithm.39

Rational Explanation – A “rational explanation” refers to a plausible narrative connecting the variable and/or treatment in question with real-world circumstances or behaviors that contribute to the risk of insurance loss in a manner that is readily understandable to a consumer or other educated layperson. A “rational explanation” does not require strict proof of causality but should establish a sufficient degree of confidence that the variable and/or treatment selected are not obscure, irrelevant, or arbitrary.

A “rational explanation” can assist the regulator in explaining an approved rating treatment if challenged by a consumer, legislator, or the media. Furthermore, a “rational explanation” can increase the regulator’s confidence that a statistical correlation identified by the insurer is not spurious, temporary, or limited to the specific data sets analyzed by the insurer.

Raw Data - Data originating straight from the insurer's data banks without modification (e.g., not scrubbed, transformed). Raw data may occur with or without aggregation. Aggregated raw datasets are those summarized or compiled prior to data selection and model building.

Sample Record - A sample record is one line of data from a data source including all variables. For example:

<table>
<thead>
<tr>
<th>Record</th>
<th>ZIP</th>
<th>Coverage Type</th>
<th>Lot Size</th>
<th>Roof</th>
<th>Age</th>
<th>Replacement Cost</th>
<th>Heating</th>
<th>Living Area</th>
<th>Num Stories</th>
<th>Num Bathrooms</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>04254</td>
<td>garage, basement</td>
<td>25700</td>
<td>asphalt shingle</td>
<td>1680</td>
<td>213000</td>
<td>FORCED HOT WATER</td>
<td>1680</td>
<td>1</td>
<td>Ranch</td>
</tr>
</tbody>
</table>

Scrubbed Data - Scrubbed data is data reviewed for errors, where "N/A" has been replaced with a value, and where most transformations have been performed. Data that has been "scrubbed" is now in a useable format to begin building the model.

Scrubbing Data - Scrubbing is the process of editing, amending, or removing data in a dataset that is incorrect, incomplete, improperly formatted, or duplicated.

SME - Subject Matter Expert.

Sub-Model - A sub-model is any model that provides input into another model.

Variable Transformation - A variable transformation is a change to a variable by taking a function of that variable, for example, when age's value is replaced by the value (age)^2. The result is called a transformation variable.

Voluntarily Reported Data - Voluntarily reported data is data directly obtained by a company from a consumer. Examples would be data taken directly from an application for insurance or obtained verbally by a company representative.

Univariate Model – A univariate model is a model that only has one independent variable.

APPENDIX D – SAMPLE RATE-DISRUPTION TEMPLATE

- First, fill in the boxes for minimum and maximum individual impacts, shaded in light blue. Default values in the cells are examples only.
- The appropriate percent-change ranges will then be generated based on the maximum/minimum changes.
- For every box shaded in light green, replace “ENTER VALUE” with the number of affected insureds within the corresponding change range.
- Once all values are filled in, use the “Charts” feature in Excel to generate a histogram to visually display the spread of impacts.

**NOTE:** Values of Minimum % Change, Maximum % Change, and Total Number of Insureds must reconcile to the Rate/Rule Schedule in SERFF.

Kris DeFrain, FCAS, MAAA, CPCU
Director of Research and Actuarial Services
National Association of Insurance Commissioners

Sent via email

Dear Kris:

I appreciate this opportunity to comment on the Casualty Actuarial and Statistical Task Force (CASTF)’s June 12, 2020, exposure draft containing potential best practices for the Regulatory Review of Predictive Models (RRPM). I note that it appears that the CASTF is working to bring the review process of its white paper to a close. Clearly this is a topic of interest for the Academy’s membership. As in our prior two letters,1,2 we would like to offer just some brief comments.

I would like to revisit a point from my prior letter. Specifically, in Section VII there is a discussion of regulatory best practices. Item 1.b. discusses the need to determine that individual input characteristics and resulting rating factors are related to the expected loss or expense differences in risk. Later in the document, Appendix B, *Information Elements A.4.b and B.3.d* seeks to obtain information as to the rational relationship or rational explanation that predictive data or predictor variables have to the predicted variable. Predictive data or predictor variables that are related to risk of loss (as demonstrated by analysis of historical insurance loss or expense data across the predictors) are key rational relationships. As we consider this, actuaries are guided by Actuarial Standard of Practice (ASOP) No. 12, *Risk Classification*. Within that ASOP, there are several key considerations to guide both regulators and modelers.

The RRPM White Paper provides considerable latitude in its scope. Perhaps this is in keeping with the range of possibilities that new data sources coupled with broad computing power brings to the predictive modeling field. Insurance underwriting has, for decades, been moved in the direction of greater granularity in its use of data and underwriter judgment. All the while, these efforts have facilitated better pricing accuracy and broader availability of insurance products.

---

short, model innovation has many potential benefits to the insurance market. At the same time, there is the potential for modeling to be stretched too far through such innovations. One would hope that application of the RRPM White Paper best practices, used effectively, finds a balance between innovation and control.

New data sources are ever changing, and especially when considered in the context of technological improvements possible for the insurance industry, pose interesting challenges and opportunities. Properly used, these new tools and access to data should lead to expense reductions that ultimately yield lower costs in the insurance system. That said, new data sources require considerable due diligence as they are assimilated into the modeling process. ASOP No. 23, *Data Quality,* is available to guide actuaries as they consider new information sources. We would again hope that a RRPM process will work collaboratively with ASOP No. 23 around new data sources.

Finally, as CASTF moves toward finalizing its recommendations for the RRPM process and thus toward implementation across the various states, I think that it is important to understand the workload challenges that will perhaps result from the new RRPM requirements. Specifically, will the state regulators have the necessary staffing and/or resources to move toward effective implementation?

Thanks once again for allowing this input. The Academy remains available to assist as CASTF moves forward with this.

Sincerely,

Richard Gibson, MAAA, FCAS
Senior Casualty Fellow
American Academy of Actuaries
The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to provide comment on the NAIC Casualty Actuarial and Statistical Task Force (CASTF) exposure draft, dated June 12, 2020, regarding the Regulatory Review of Predictive Models.

APCIA is committed to working collaboratively with the NAIC in support of innovation and the effort to leverage the advancements in technology and data analytics to effectively respond to the changing risks and needs of insurance consumers. APCIA appreciates some changes have been made by the drafting group, such as mapping the best practices with the information elements. In reviewing the document as a whole, however, APCIA’s conclusion remains that the information collected in Appendix B will lead to significant increase in the length of time and costs for filing approval with limited regulatory benefit. Importantly, several of these information elements are redundant, highly prescriptive, and overly detailed. Approval time is going to be significantly extended and our ability to respond to the needs of the insurance consumer negatively delayed.

Finally, the Key Regulatory Principles identify principles that the best practices are based on to promote a comprehensive and coordinated review of predictive models across states. Principle two indicates that “State regulators will be able to share information to aid companies in getting insurance products to market more quickly across the states.” APCIA recognizes that this is not necessarily new for this version of the White Paper but inquires if CASTF could explain what is meant by that particular principle.

We have included a red-line version of Appendix B for your consideration. A description of the APCIA reasoning for each recommended change is provided in the final column of the chart.

Thank you for your consideration of these comments and APCIA is happy to answer any questions that you may have.

Respectfully submitted,

Angela Gleason
APENDIX B – INFORMATION ELEMENTS AND GUIDANCE FOR A REGULATOR TO MEET BEST PRACTICES’ OBJECTIVES (WHEN REVIEWING GLMS)

This appendix identifies the information a regulator may need to review a predictive model used by an insurer to support a personal automobile or home insurance rating plan. The list is lengthy but not exhaustive. It is not intended to limit the authority of a regulator to request additional information in support of the model or filed rating plan. Nor is every item on the list intended to be a requirement for every filing. However, the items listed should help guide a regulator to sufficient information that helps determine if the rating plan meets state specific filing and legal requirements.

Documentation of the design and operational details of the model will ensure business continuity and transparency of models used. Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose. The theory, assumptions, methodologies, software and empirical bases should be explained, as well as the data used in developing and implementing the model. Relevant testing and ongoing performance testing need to be documented. Key model limitations and overrides need to be pointed out so that stakeholders understand the circumstances under which the model does not work effectively. End-user documentation should be provided and key reports using the model results described. Major changes to the model need to be shared with regulators in a timely manner and documented, and IT controls should be in place, such as a record of versions, change control and access to model. APCIA Comment for Consideration: This paragraph describes documentation that needs to be kept on the model, but also adds to the IT controls for model revisions. Since the majority of the models within the review are the pricing models, which need to be filed with the department of insurance, the IT controls are on the rating plans and not necessarily the model version. Additionally, companies are already subject to robust IT controls. It is also unclear on what is meant by the following sentence: “Major changes to the model need to be shared with regulators in a timely manner . . .” If a company refreshes the model and notices an indication changed for a particular attribute, won’t the appropriate mechanism for sharing that information be part of a filing to adjust the rating plan? This sentence could be read to suggest a different type of information being necessary.

Many information elements listed below are probably confidential, proprietary or trade secret and should be treated as such according to state law. Regulators should be aware of their state laws on confidentiality when requesting data from insurers that may be proprietary or trade secret. For example, some proprietary models may have contractual terms (with the insurer) that prevent disclosure to the public. Without clear necessity, exposing this data to additional dissemination may compromise the model's protection. Though the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).

The “Level of Importance to the Regulator’s Review” is a ranking of information a regulator may need to review is based on the following level criteria:

- **Level 1** - This information is necessary to begin the review of a predictive model. These data elements pertain to basic information about the type and structure of the model, the data and variables used, the assumptions made, and the goodness of fit. Ideally, this information would be included in the filing documentation with the initial submission of a filing made based on a predictive model.

- **Level 2** - This information is necessary to continue the review of all but the most basic models; such as those based only on the filer’s internal data and only including variables that are in the filed rating plan. These data elements provide more detailed information about the model and address questions arising from review of the information in Level 1. Insurers concerned with speed to market may also want to include this information in the filing documentation.

- **Level 3** - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on review of the information in Levels 1 and 2. These data elements address even more detailed aspects of the model. This information does not necessarily need to be included with the initial submission, unless specifically requested in a particular state, as it is typically requested only if the reviewer has concerns that the model may not comply with state laws.

- **Level 4** - This information is necessary to continue the review of a model where concerns have been raised and not resolved based on the information in Levels 1, 2, and 3. This most granular level of detail is addressing the basic building blocks of the model and does not necessarily need to be included by the filer with the initial submission, unless specifically requested in a particular state. It is typically requested only if the reviewer has serious concerns that the model may produce rates or rating factors that are excessive, inadequate, or unfairly discriminatory.

Lastly, though the best practices presented in this paper will readily be transferrable to review of other predictive models, the information elements presented here might be useful only with deeper adaptations when starting to review different types of predictive models. If the model is not a GLM, some listed items might not apply, for example, not all predictive models generate p-values or F tests. Depending

---

2 There are some models that are made public by the vendor and would not result in a hindrance of the model's protection.
on the model type, other considerations might be important but are not listed here. When information elements presented in this appendix is applied to lines of business other than personal automobile and home insurance or other type of models, unique considerations may arise, in particular data volume and credibility may be lower for other lines of business. Regulators should be aware of the context in which a predictive model is deployed, the uses to which the model is proposed to be put, and the potential consequences the model may have on the insurer, its customers, and its competitors. This paper does not delve into these possible considerations, but regulators should be prepared to address them as they arise.

**A. SELECTING MODEL INPUT**

<table>

</thead>
<tbody>
<tr>
<td>1. Available Data Sources</td>
<td>Review the details of sources for both insurance and non-insurance data used as input to the model (only need sources for filed input characteristics included in the filed model).</td>
<td>1</td>
<td>Request details of all data sources, with a proportionate impact on rates, whether internal to the company or from external sources. For insurance experience (policy or claim), determine whether data are aggregated by calendar, accident, fiscal or policy year and when it was last evaluated. For each data source, get a list of all data elements used as input to the model that came from that source recognizing the need for exceptions for the proprietary components when sufficient confidentiality and trade secret protections are not available. For insurance data, get a list all companies whose data is included in the datasets. Request details of any non-insurance data used (customer-provided or other), whether the data was collected by use of a questionnaire/checklist, whether data was voluntarily reported by the applicant, and whether any of the data is subject to the Fair Credit Reporting Act. If the data is from an outside source, find out what steps the insurer has taken to verify the outside source has processes and procedures in place to assess the data’s accuracy, completeness and unbiased characteristics in terms of relevant and representative time frame, representative of potential exposures and lacking in obvious correlation to protected classes. Note that reviewing source details should not make a difference when the model is new or refreshed—refreshed models would report the prior version list with the incremental changes due to the refresh.</td>
<td>Not all</td>
</tr>
<tr>
<td></td>
<td>A.1.a</td>
<td></td>
<td>Requesting a contributing company list is an unnecessary overreach and, in some cases, will be unknown due to aggregation and anonymization. In addition, there could be contractual restrictions for sharing this information. APCIA respectfully believes that the remaining data elements should be sufficient. At the very least this should not be considered essential level 1 data. Insurance companies can take some verification steps, but most of the work will have to be completed by the third-party. The suggestion for refreshed models infers that a company needs to document changes in data source on a refresh and that is not a requirement. There may need to be some clarification around what is considered “insurance” and non-insurance data. Also, consideration should be given to the application of CAS ASOP 12.</td>
<td></td>

<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td>A.1.b</td>
<td>Reconcile aggregated insurance data underlying the model with available external insurance reports.</td>
<td>4</td>
<td>Accuracy of insurance data should be reviewed. It is assumed that the data in the insurer's data banks is subject to routine internal company audits and reconciliation. “Aggregated data” is straight from the insurer's data banks without further modification (e.g., not scrubbed or transformed for the purposes of modeling). In other words, the data would not have been specifically modified for the purpose of model building. The company should provide some form of reasonability check that the data makes sense when checked against other audited sources.</td>
<td></td>
</tr>
<tr>
<td>A.1.c</td>
<td>Review the geographic scope and geographic exposure distribution of the raw data for relevance to the state where the model is filed.</td>
<td>2</td>
<td>The company should explain how the data used to build the model makes sense for a specific state. The regulator should inquire which states were included in the data underlying the model build, testing and validation. The company should provide an explanation where the data came from geographically and that it is a good representation for a state, i.e., the distribution by state should not introduce a geographic bias. For example, there could be a bias by peril or wind-resistant building codes. Evaluate whether the data is relevant to the loss potential for which it is being used. For example, verify that hurricane data is only used where hurricanes can occur.</td>
<td></td>

### 2. Sub-Models -

<p>| | | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A.2.a</td>
<td>Consider the relevance of (e.g., is there a bias) of overlapping data or variables used in the model and sub-models.</td>
<td>1</td>
<td>Check if the same variables/datasets were used in both the model, a sub-model or as stand-alone rating characteristics. If so, verify the insurance company has processes and procedures in place to assess and address there was no double-counting or redundancy.</td>
</tr>
<tr>
<td>A.2.b</td>
<td>Determine if the sub-model was previously approved (or accepted) by the regulatory agency.</td>
<td>1</td>
<td>If the sub-model was previously approved, that may reduce the extent of the sub-model’s review. If approved, obtain the SERFF number and verify when and that it was the same model currently under review. However, previous approvals do not necessarily confer a guarantee of ongoing approval, for example when statutes and regulations have changed or if a model's indications have been undermined by subsequent empirical experience. However, knowing whether a model has been previously approved can help focus the regulator's efforts and determine whether or not the prior decision needs to be revisited.</td>
</tr>
</tbody>
</table>

Many models are developed using a countrywide or a regional dataset, rarely is a model built for a specific state. This review must balance the question of relevance with potential scarcity of data for a particular state. Confidentiality and competitiveness issues may arise when disclosing vendor information. Since this is an element for expediting review, it is reasonable to make sure the insurance company consents to the vendor identification and dialogue. In addition, the insurer may not have the right to disclose if a sub-model is purchased. Extending the regulator’s review to the underlying sub-model in the same breadth and depth as the insurer’s filed model seems very impractical.
| A.2.c | Determine if sub-model output was used as input to the GLM; obtain the vendor name, and the name and version of the sub-model. | 1 | To accelerate the review of the filing, and consented to by the company, get the name and contact information for a representative from the vendor. The company should provide the name of the third-party vendor and a contact in the event the regulator has questions. The "contact" can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with a Subject Matter Expert (SME) at the vendor. Examples of such sub-models include credit/financial scoring algorithms and household composite score models. Sub-models can be evaluated separately and in the same manner as the primary model under evaluation. A sub-model contact for additional information should be provided. SMEs on sub-model may need to be brought into the conversation with regulators (whether in-house or 3rd-party sub-models are used). |
| A.2.d | If using catastrophe model output, identify the vendor and the model settings/assumptions used when the model was run. | 1 | For example, it is important to know hurricane model settings for storm surge, demand surge, long/short-term views. To accelerate the review of the filing, get contact information for the SME that ran the model and an SME from the vendor. The "SME" can be an intermediary at the insurer, e.g., a filing specialist, who can place the regulator in direct contact with the appropriate SMEs at the insurer or model vendor. |
| A.2.e | If using catastrophe model output (a sub-model) as input to the GLM under review, verify whether loss associated with the modeled output was removed from the loss experience datasets. Obtain an explanation of how catastrophic models are integrated into the model to ensure no double-counting. | 1 | If a weather-based sub-model is input to the GLM under review, loss data used to develop the model should not include loss experience associated with the weather-based sub-model. Doing so could cause distortions in the modeled results by double counting such losses when determining relativities or loss loads in the filed rating plan. For example, redundant losses in the data may occur when non-hurricane wind losses are included in the data while also using a severe convective storm model in the actuarial indication. Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses when using a flood model, inclusion of freeze losses when using a winter storm model or including demand surge caused by any catastrophic event. Note that, the rating plan or indications underlying the rating plan, may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should In addition to the recommended changes in the comments, they should clarify that this element is directed at vendor contact information and not the accuracy of the vendor data. If it is vendor data accuracy, then the burden of that question, as noted elsewhere in these comments, will be on the vendor, not the insurer. This note is not discussing catastrophe model outputs but rather a general statement about large losses and should be removed from the Sub-Model section and moved into the Data section or at the very least the weight of this observation should be lowered. |
A.2.f If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.

1 Any sub-model should be reviewed in the same manner as the primary model that uses the sub-model’s output as input. Depending on the result of item A.2.b, the importance of this item may be decreased.

If the scoring algorithm is purchased, an insurer may not have the right to disclose this information. It would be much more efficient to instead point to filing of sub-models. Additionally, similar to the comment above, given the numerous sub-models common in the industry, extending the regulator’s review to the underlying model, in the same breadth and depth as the insurer’s filed model, seems impractical.

Finally, there should be clarity as to the difference between a “scoring model” and a “sub-model.”

### 3. Adjustments to Data

A.3.a Determine if premium, exposure, loss or expense data were adjusted (e.g., developed, trended, adjusted for catastrophe experience or capped) and, if so, how? Do the adjustments vary for different segments of the data and, if so, identify the segments and how was the data adjusted?

2 The rating plan or indications underlying the rating plan may provide special treatment of large losses and non-modeled large loss events. If such treatments exist, the company should provide an explanation how they were handled. These treatments need to be identified and the company/regulator needs to determine whether model data needs to be adjusted. For example, should large bodily injury (BI) liability losses in the case of personal automobile insurance be excluded, or should large non-catastrophe wind/hail claims in home insurance be excluded from the model’s training, test and validation data? Look for anomalies in the data that should be addressed. For example, is there an extreme loss event in the data? If other processes were used to load rates for specific loss events, how is the impact of those losses considered? Examples of losses that can contribute to anomalies in the data are large losses or flood, hurricane or severe convective storm losses for personal automobile comprehensive or home insurance.

The way that an insurer adjusts premium could be trade secret and APCIA is concerned about confidentiality. Further, insurers may be willing to describe the process at a high level, but getting into each transformation to each variable, is extensive.
| A.3.b | Identify adjustments that were made to aggregated data, e.g., transformations, binning and/or categorizations. If any, identify the name of the characteristic/variable and obtain a description of the adjustment. | 1 | Previous sections will detail the adjustments made, so providing a comparison is not necessary. |
| A.3.c | Ask for aggregated data (one data set of pre-adjusted/scrubbed data and one data set of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data. | 4 | If a regulator may never ask for the aggregated information, as pointed out in the note, what is the purpose of including it? |
| A.3.d | Determine how missing data was handled. | 1 | |
| A.3.e | If duplicate records exist, determine how they were handled. | 1 | |
| A.3.f | Determine if there were any material outliers identified and subsequently adjusted during the scrubbing process. | 3 | Drafters should make it clear that this section is looking for a description of the type of outliers and the treatment and not a listing. |

4. Data Organization
| A.4.a | Obtain documentation on the methods used to compile and organize data, including procedures to merge data from different sources or filter data based on particular characteristics and a description of any preliminary analyses, data checks, and logical tests performed on the data and the results of those tests. | 2 | This should explain how data from separate sources was merged or how subsets of policies, based on selected characteristics, are filtered to be included in the data underlying the model and the rationale for that filtering. | We are unclear as to the value of documenting the procedure to merge data as such the value of the information is disproportionate to the work needed to provide this information. At the very least this question should not be asked often and should be a level 3 or 4, instead of a 2. |
| A.4.b | Obtain documentation on the insurer’s process for reviewing the appropriateness, reasonableness, consistency and comprehensiveness of the data, including a discussion of the rational relationship the data has to the predicted variable. | 2 | An example is when by-peril or by-coverage modeling is performed, the documentation should be for each peril/coverage and make rational sense. For example, if “murder” or “theft” data are used to predict the wind peril, provide support and a rational explanation for their use. | This question gets into the debate on correlation versus causation. Is actuarial justification sufficient or does this imply a logical argument is required? Insurers can provide information related to accuracy, consistency, and comprehensiveness, but have concerns with expanding the inquiry into causational questions. Further, the Information Element and Comment do not match. The information element is talking more about data as a whole, while the comment is going to specific variables, which is something better suited for “Building the Model.” The comment does not reflect what the perceived intent of the information element is. |
| A.4.c | Identify material findings the company had during their data review and obtain an explanation of any potential material limitations, defects, bias or unresolved concerns found or believed to exist in the data. If issues or limitations in the data influenced modeling analysis and/or results, obtain a description of those concerns and an explanation how modeling analysis was adjusted and/or results were impacted. | 1 | A response of “none” or “n/a” may be an appropriate response. | What is the justification for this request? Is the request for the final elements or for the exploratory dataset? Bias in data is almost impossible to know without a full dataset to compare to – we can only make assumptions or inferences. The question does not necessarily speak to the appropriateness of the model. For example, where a new data element is only available on 40% of the exposure – how does this impact the model or output? |
B. BUILDING THE MODEL

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance to Regulator’s Review</th>
<th>Comments</th>
<th>APCIA comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.1.a</td>
<td>Identify the type of model underlying the rate filing (e.g. Generalized Linear Model – GLM, decision tree, Bayesian Generalized Linear Model, Gradient-Boosting Machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.</td>
<td>1</td>
<td>It is important to understand if the model in question is a GLM, and therefore these information elements are applicable or, if it is some other model type, in which case other reasonable review approaches may be considered. There should be an explanation of why the model (using the variables included in it) is appropriate for the line of business. If by-peril or by-coverage modeling is used, the explanation should be by-peril/coverage. Note, if the model is not a GLM, the information elements in this white paper may not apply in their entirety.</td>
<td>APCIA suggests that there should be additional clarity, if not deleted, as to the expectation for asking for an explanation of why the model is appropriate for the line of business. Different techniques may be suitable depending on the intended application of the model, however this is not specifically related to the line of business.</td>
</tr>
<tr>
<td>B.1.b</td>
<td>Identify the software used for model development. Obtain the name of the software vendor/developer, software product and software version reference used in model development.</td>
<td>3</td>
<td>Changes in software from one model version to the next may explain if such changes, over time, contribute to changes in the modeled results. The company should provide the name of the third-party vendor and a “contact” in the event the regulator has questions. The “contact” can be an intermediary at the insurer who can place the regulator in direct contact with appropriate SMEs. Open-source software/programs used in model development should be identified by name and version the same as if from a vendor.</td>
<td>What is the purpose for this information? It is unclear how the software used for building the model is relevant to the review and B.1.a already asks for information about the type of model. Without reviewing the code, which is impractical, it is unclear what the regulator will do with the version information. APCIA is uncertain as to how this applies to whether or not the model and output are appropriate. Also, if the insurer has developed their own internal tools, how will this be disclosed since those tools are proprietary. Ultimately, we feel this section should be deleted in its entirety. Otherwise, we offer a few suggested edits for your consideration.</td>
</tr>
<tr>
<td>B.1.c</td>
<td>Obtain a description how the available data was divided between model training, test and/or validation datasets. The description should include an explanation why the selected approach was deemed most appropriate, whether the company made any further subdivisions of available data and reasons for the subdivisions (e.g., a portion separated from training data to support testing of components during model building). Determine if the validation data was accessed before model training was completed and, if so, obtain an explanation why that came to occur. Obtain a discussion of whether the model was rebuilt using all of the data or if it was only based on the training data.</td>
<td>1</td>
<td>The reviewer should be aware that modelers may break their data into three or just two datasets. Although the term “training” is used with little ambiguity, “test” and “validation” are terms that are sometimes interchanged, or the word “validation” may not be used at all. It would be unexpected if validation and/or test data were used for any purpose other than validation and/or test, prior to the selection of the final model.</td>
<td>Cross validation is commonly used when there is limited data available. Cross validation should be listed as an option in this section.</td>
</tr>
<tr>
<td>B.1.d</td>
<td>Obtain a brief description of the development process, from initial concept to final model and filed rating plan.</td>
<td>1</td>
<td>The narrative should have the same scope as the filing.</td>
<td></td>
</tr>
<tr>
<td>B.1.e</td>
<td>Obtain a narrative on whether loss ratio, pure premium or frequency/severity analyses were performed and, if separate frequency/severity modeling was performed, how pure premiums were determined.</td>
<td>1</td>
<td>There should be an option for “deviation from current rate” in this list as well.</td>
<td></td>
</tr>
<tr>
<td>B.1.f</td>
<td>Identify the model’s target variable.</td>
<td>1</td>
<td>A clear description of the target variable is key to understanding the purpose of the model. It may also prove useful to obtain a sample calculation of the target variable in Excel format, starting with the “raw” data for a policy, or a small sample of policies, depending on the complexity of the target variable calculation.</td>
<td>It is unnecessary to comment on the data mining, because the general model validation should cover this.</td>
</tr>
<tr>
<td>B.1.g</td>
<td>Obtain a description of the variable selection process.</td>
<td>1</td>
<td>The narrative regarding the variable selection process may address matters such as the criteria upon which variables were selected or omitted, identification of the number of preliminary variables considered in developing the model versus the number of variables that remained, and any statutory or regulatory limitations that were taken into account when making the decisions regarding variable selection.</td>
<td>The modeler should comment if any form of data mining to identify selected variables was performed and explain how the modeler...</td>
</tr>
<tr>
<td>B.1.h</td>
<td>In conjunction with variable selection, obtain a narrative on how the company determine the granularity of the rating variables during model development.</td>
<td>3</td>
<td>This discussion should include discussion of how credibility was considered in the process of determining the level of granularity of the variables selected.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
<td>---</td>
<td></td>
</tr>
<tr>
<td>B.1.i</td>
<td>Determine if model input data was segmented in any way. For example, was modeling performed on a by-coverage, by-peril, or by-form basis? If so, obtain a description of data segmentation and the reasons for data segmentation.</td>
<td>4</td>
<td>The regulator would use this to follow the logic of the modeling process. This information is duplicative of B.1.a</td>
<td></td>
</tr>
<tr>
<td>B.1.j</td>
<td>If adjustments to the model were made based on credibility considerations, obtain an explanation of the credibility considerations and how the adjustments were applied.</td>
<td>2</td>
<td>Adjustments may be needed given models do not explicitly consider the credibility of the input data or the model’s resulting output; models take input data at face value and assume 100% credibility when producing modeled output. The use of “credibility” seems to be referring to the actuarial concept of credibility. It is not clear what the relevance is of that concept in modeling. Rather, the question should focus on approach and philosophy to feature engineering in model statistics to determine the appropriateness of features and levels. The comments should clarify that this refers to model credibility, not actuarial. If this information element is trying to address credibility as it relates to adjustments made to model factors/results post model building, then this information may be more relevant in the filed rating plan section where selections are made to the factors due to credibility concerns.</td>
<td></td>
</tr>
</tbody>
</table>

2. Medium-Level Narrative for Building the Model

<p>| B.2.a | At crucial points in model development, if selections were made among alternatives regarding model assumptions or techniques, obtain a narrative on the judgment used to make those selections. | 3 | 4 | This should be a level 4 instead of a 3. If a state has serious concerns with a model, this does not seem like an item that would come up. |</p>
<table>
<thead>
<tr>
<th>B.2.b</th>
<th>If post-model adjustments were made to the data and the model was rerun, obtain an explanation on the details and the rationale for those adjustments.</th>
<th>2</th>
<th>Evaluate the addition or removal of variables and the model fitting. It is not necessary for the company to discuss each iteration of adding and subtracting variables, but the regulator should gain a general understanding how those adjustments were done, including any statistical improvement measures relied upon. This is duplicative of B.1.d, so long as there is no clarity in when the “beginning” and “end” of a modeling exercise. APCIA does not believe this information is relevant if focused on the iterations of model building. As an example, is a model refresh considered a new modeling exercise or a continuation/update to an open modeling exercise?</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.2.c</td>
<td>Obtain a description of the testing that was performed during the model-building process and a discussion of why interaction terms were included (or not included).</td>
<td>3</td>
<td>There should be a description of testing that was performed during the model-building process. Examples of tests that may have been performed include univariate testing and review of a correlation matrix. The interaction element is irrelevant unless a regulator has concerns around the interaction that was recommended to be included.</td>
</tr>
<tr>
<td>B.2.d</td>
<td>For the GLM, identify the link function used. Identify which distribution was used for the model (e.g., Poisson, Gaussian, log-normal, Tweedie). Obtain an explanation why the link function and distribution were chosen. Obtain the formulas for the distribution and link functions, including specific numerical parameters of the distribution. Obtain a discussion of applicable convergence criterion.</td>
<td>1</td>
<td>Solving the GLM is iterative and the modeler can check to see if fit is improving. At some point convergence occurs, though when it occurs can be subjective or based on threshold criteria. The convergence criterion should be documented with a brief explanation of why it was selected. If the software's default convergence criteria were relied upon, the regulator should look for a description of the default convergence criterion and an explanation of any deviation from it. The request for formulas for the distribution and link functions seems like unnecessary “textbook” information. Additionally, obtaining a description of convergence criterion does not provide any valuable information and should be deleted.</td>
</tr>
<tr>
<td>B.2.e</td>
<td>Obtain a narrative on the formula relationship between the data and the model outputs, with a definition of each model input and output. The narrative should include all coefficients necessary to evaluate the predicted pure premium, relativity or other value, for any real or hypothetical set of inputs.</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>B.2.f</td>
<td>If there were data situations in which GLM weights were used, obtain an explanation of how and why they were used.</td>
<td>3</td>
<td>Investigate whether identical records were combined to build the model. Are there level 1 or level 2 Information elements that could get to this information?</td>
</tr>
<tr>
<td>3. Predictor Variables</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>B.3.a</td>
<td>Obtain a complete data dictionary, including the names, types, definitions and uses of each predictor variable, offset variable, control variable, proxy variable, geographic variable, geodemographic variable and all other variables in the model used on their own or as an interaction with other variables (including sub-models and external models).</td>
<td>1</td>
<td>Types of variables might be continuous, discrete, Boolean, etc. Definitions should not use programming language or code. For any variable(s) intended to function as a control or offset, obtain an explanation of its purpose and impact. Also, for any use of interaction between variables, obtain an explanation of its rationale and impact. Certainly, key variables must be clearly explained, but such a comprehensive and formal dictionary is not necessary. Including “uses” also raises confidentiality concerns.</td>
</tr>
<tr>
<td>B.3.b</td>
<td>Obtain a list of predictor variables considered but not used in the final model, and the rationale for their removal.</td>
<td>4</td>
<td>The purpose of this requirement is to identify variables that the company finds to be predictive but ultimately may reject for reasons other than loss cost considerations (e.g., price optimization). Also, look for variables the company tested and then rejected. This item could help address concerns about data dredging. The reasonableness of including a variable with given significance level could depend greatly on the other variables the company evaluated for inclusion in the model and the criteria for inclusion or omission. For instance, if the company tested 1,000 similar variables and selected the one with the lowest p-value of 0.001, this would be a far, far weaker case for statistical significance than if that variable was the only one the company evaluated. Note, context matters. APCIA appreciates the intent behind this but there may be an extensive list of variables not considered, which could significantly detract from the primary focus of the regulator’s review, which is to assess the model presented including the variables that were ultimately selected. Additionally, going through this list of variables that will have no impact on a customer’s premium in the final rating plan is extensive and not relevant. The fact that an insurer looked at a variable that was later deemed to be rejected for some reason, should not have a bearing on the validity and approval of the model within the filing.</td>
</tr>
<tr>
<td>B.3.c</td>
<td>Obtain a correlation matrix for all predictor variables included in the model and sub-model(s).</td>
<td>3</td>
<td>While GLMs accommodate collinearity, the correlation matrix provides more information about the magnitude of correlation between variables. The company should indicate what statistic was used (e.g., Pearson, Cramer's V). The regulatory reviewer should understand what statistic was used to produce the matrix but should not prescribe the statistic.</td>
</tr>
<tr>
<td>B.3.d</td>
<td>Obtain a rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.</td>
<td>3</td>
<td>The explanation should go beyond demonstrating correlation. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate. For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the connection that variable has to increasing or decreasing the target variable. This Information element is vague. Most of the rational explanations will relate to the correlation. Since causation cannot be proven it potentially can come with biases or misunderstanding of the characteristics. For example, the data can suggest as a predictor increases so does the loss cost and thus the predicted factors, however, to opine on potential reasonings for this may not be appropriate. We should let the data drive the discussion. However, a welcomed discussion on how the data aligns is appropriate. To ask if there is a frequency or severity component, how a variable interacts with those variables (for example, limit), or is there are large losses that drive the results are appropriate. This demonstrates that the modeler spent time to understand the data and what is driving the results that they see.</td>
</tr>
<tr>
<td>B.3.e</td>
<td>If the modeler made use of one or more dimensionality reduction techniques, such as a Principal Component Analysis (PCA), obtain a narrative about that process, an explanation why that technique was chosen, and a description of the step-by-step process used to transform observations (usually correlated) into a set of linearly uncorrelated variables. In each instance, obtain a list of the pre-transformation and post-transformation variable names, and an explanation how the results of the dimensionality reduction technique was used within the model.</td>
<td></td>
<td></td>

<table>
<thead>
<tr>
<th>4. Adjusting Data, Model Validation and Goodness-of-Fit Measures</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>B.4.a</td>
<td>Obtain a description of the methods used to assess the statistical significance/goodness of the fit of the model to validation data, such as lift charts and statistical tests. Compare the model's projected results to historical actual results and verify that modeled results are reasonably similar to actual results from validation data.</td>
</tr>
<tr>
<td>1</td>
<td>For models that are built using multi-state data, validation data for some segments of risk is likely to have low credibility in individual states. Nevertheless, some regulators require model validation on State-only data, especially when analysis using state-only data contradicts the countrywide results. State-only data might be more applicable but could also be impacted by low credibility for some segments of risk. Look for geographic stability measures, e.g., across states or territories within state.</td>
</tr>
<tr>
<td>1</td>
<td>It is excessive to have the statement about geographic stability measures when the 1st paragraph talks about state level data being potentially low credibility.</td>
</tr>
<tr>
<td>B.4.b</td>
<td>For all variables (discrete or continuous), review the appropriate parameter values, confidence intervals, chi-square tests, p-values, and any other relevant and material tests. Determine if model development data, validation data, test data or other data was used for these tests.</td>
</tr>
<tr>
<td>4</td>
<td>Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model. Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests. For variables that are modeled continuously, it may be sufficient to obtain statistics around</td>

<td>This is overly prescriptive and could include trade secret information. The information can be sufficiently gleaned elsewhere without this amount of detail.</td>
</tr>
</tbody>
</table>
the modeled parameters; for example, confidence intervals around each level of an AQL curve might be more than what is needed.

B.4.c Identify the threshold for statistical significance and explain why it was selected. Obtain a reasonable and appropriately supported explanation for keeping the variable for each discrete variable level where the p-values were not less than the chosen threshold.

The explanation should clearly identify the thresholds for statistical significance used by the modeler. Typical p-values greater than 5% are large and should be questioned. Reasonable business judgment can sometimes provide legitimate support for high p-values. Reasonableness of the p-value threshold could also vary depending on the context of the model. For example, the threshold might be lower when many candidate variables were evaluated for inclusion in the model.

Overall lift charts and/or statistical tests using validation data may not provide enough of the picture. If there is concern about one or more individual variables, the reviewer may obtain, for each discrete variable level, the parameter value, confidence intervals, chi-square tests, p-values and any other relevant and material tests.

This is overly prescriptive and could include trade secret information. The information can be sufficiently gleaned elsewhere without this amount of detail. Additionally, the information element is focused very specifically on p-values, yet in prior discussions it was mentioned that other tests may be leveraged as p-values may not be appropriate.

### 5. “Old Model” Versus “New Model”

| B.5.a | Obtain an explanation why this model is an improvement to the current rating plan. If it replaces a previous model, find out why it is better than the one it is replacing; determine how the company reached that conclusion and identify metrics relied on in reaching that conclusion. Look for an explanation of any changes in calculations, assumptions, parameters, and data used to build this model from the previous model. | 2 | Regulators should expect to see improvement in the new class plan’s predictive ability or other sufficient reason for the change. |
| B.5.b | Determine if two Gini coefficients were compared and obtain a narrative on the conclusion drawn from this comparison. | 2 | One example of a comparison might be sufficient. This is relevant when one model is being updated or replaced. Regulators should expect to see improvement in the new class plan’s predictive ability. This information element requests a comparison of Gini coefficient from the prior model to the Gini coefficient of proposed model. It is expected that there should be improvement in the Gini coefficient. A higher Gini coefficient indicates greater differentiation produced by the model and how well the model fits that data. This comparison is not applicable to initial model introduction. Reviewer can look to CAS monograph for information on Gini coefficients. This is too prescriptive and should be eliminated. |
| B.5.c | Determine if double lift charts were analyzed and obtain a narrative on the conclusion drawn from this analysis. | 2 | One example of a comparison might be sufficient. Note that “not applicable” is an acceptable response. This is too prescriptive and should be deleted. |
| B.5.d | If replacing an existing model, obtain a list of any predictor variables used in the old model that are not used in the new model. Obtain an explanation why these variables were dropped from the new model. Obtain a list of all new predictor variables in the new model that were not in the prior old model. | 2 | Useful to differentiate between old and new variables so the regulator can prioritize more time on variables not yet reviewed. |

### 6. Modeler Software

| B.6.a | Request access to SMEs (e.g., modelers) who led the project, compiled the data, and/or built the model, and/or performed peer review. | 2 4 | The filing should contain a contact that can put the regulator in touch with appropriate SMEs and key contributors to the model development to discuss the model. This should be a level 4 as opposed to a 3. At a level 3 requesting access to the modelers appears excessive. Also requesting access to the SMEs that performed a peer review is quite excessive and |
would require companies to think about how to ensure the peer reviewer is prepared for discussions.

### C. THE FILED RATING PLAN

<table>
<thead>
<tr>
<th>Section</th>
<th>Information Element</th>
<th>Level of Importance</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. General Impact of Model on Rating Algorithm</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>C.1.a</td>
<td>In the actuarial memorandum or explanatory memorandum, for each model and sub-model (including external models), look for a narrative that explains each model and its role (how it was used) in the rating system.</td>
<td>1</td>
<td>The &quot;role of the model&quot; relates to how the model integrates into the rating plan as a whole and where the effects of the model are manifested within the various components of the rating plan. This is not intended as an overarching statement of the model's goal, but rather a description of how specifically the model is used. This item is particularly important, if the role of the model cannot be immediately discerned by the reviewer from a quick review of the rate and/or rule pages. (Importance is dependent on state requirements and ease of identification by the first layer of review and escalation to the appropriate review staff.)</td>
</tr>
<tr>
<td>C.1.b</td>
<td>Obtain an explanation of how the model was used to adjust the rating algorithm.</td>
<td>4</td>
<td>Models are often used to produce factor-based indications, which are then used as the basis for the selected changes to the rating plan. It is the changes to the rating plan that create impacts. Consider asking for an explanation of how the model was used to adjust the rating algorithm. This information is already addressed in section B.</td>
</tr>
<tr>
<td>C.1.c</td>
<td>Obtain a complete list of characteristics/variables used in the proposed rating plan, including those used as input to the model (including sub-models and composite variables) and all other characteristics/variables (not input to the model) used to calculate a premium. For each characteristic/variable, determine if it is only input to the model, whether it is only a separate univariate rating characteristic, or whether it is both input to the model and a separate univariate rating characteristic. The list should include transparent descriptions (in plain text).</td>
<td>1</td>
<td>Examples of variables used as inputs to the model and used as separate univariate rating characteristics might be criteria used to determine a rating tier or household composite characteristic.</td>
</tr>
</tbody>
</table>
### 2. Relevance of Variables and Relationship to Risk of Loss

<table>
<thead>
<tr>
<th>C.2.a</th>
<th>Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model results should be consistent with the expected direction of the relationship. This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated.</td>
</tr>
</tbody>
</table>

The narrative is going to be subjective, instead the data should just speak for itself.

### 3. Comparison of Model Outputs to Current and Selected Rating Factors

<table>
<thead>
<tr>
<th>C.3.a</th>
<th>Compare relativities indicated by the model to both current relativities and the insurer's selected relativities for each risk characteristic/variable in the rating plan.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>“Significant difference” may vary based on the risk characteristic/variable and context. However, the movement of a selected relativity should be in the direction of the indicated relativity; if not, an explanation is necessary as to why the movement is logical.</td>
</tr>
</tbody>
</table>

Insurers are willing to provide a high-level explanation of the selection, but not the factors due to confidentiality concerns. This Information Element may be more relevant on model refresh/updates to indications.

<table>
<thead>
<tr>
<th>C.3.b</th>
<th>Obtain documentation and support for all calculations, judgments, or adjustments that connect the model's indicated values to the selected values.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>The documentation should include explanations for the necessity of any such adjustments and explain each significant difference between the model's indicated values and the selected values. This applies even to models that produce scores, tiers, or ranges of values for which indications can be derived. This information is especially important if differences between model indicated values and selected values are material and/or impact one consumer population more than another.</td>
</tr>
</tbody>
</table>

This Information Element is duplicative of C.3.a.
For each characteristic/variable used as both input to the model (including sub-models and composite variables) and as a separate univariate rating characteristic, obtain a narrative how each characteristic/variable was tempered or adjusted to account for possible overlap or redundancy in what the characteristic/variable measures.

Modeling loss ratio with these characteristics/variables as control variables would account for possible overlap. The insurer should address this possibility or other considerations, e.g., tier placement models often use risk characteristics/variables that are also used elsewhere in the rating plan.

One way to do this would be to model the loss ratios resulting from a process that already uses univariate rating variables. Then the model/composite variables would be attempting to explain the residuals.

### 4. Responses to Data, Credibility and Granularity Issues

<table>
<thead>
<tr>
<th>C.4.a</th>
<th>Determine what, if any, consideration was given to the credibility of the output data.</th>
<th>2</th>
<th>At what level of granularity is credibility applied. If modeling was by-coverage, by-form or by-peril, explain how these were handled when there was not enough credible data by coverage, form or peril to model.</th>
</tr>
</thead>
<tbody>
<tr>
<td>C.4.b</td>
<td>If the rating plan is less granular than the model, obtain an explanation why.</td>
<td>2</td>
<td>This is applicable if the insurer had to combine modeled output in order to reduce the granularity of the rating plan. Consider combining this C.4.b and C.4.c.</td>
</tr>
<tr>
<td>C.4.c</td>
<td>If the rating plan is more granular than the model, obtain an explanation why.</td>
<td>2</td>
<td>A more granular rating plan may imply that the insurer had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. However, it may be necessary to extrapolate due to data availability or other considerations. APCIA believes the comment for this information element is presumptive and needs to be balanced out with recognition that there could be other explanations.</td>
</tr>
</tbody>
</table>

### 5. Definitions of Rating Variables

| C.5.a | Obtain a narrative on adjustments made to model output, e.g., transformations, binning and/or categorizations. If adjustments were made, obtain the name of the characteristic/variable and a description of the adjustment. | 2 | If rating tiers or other intermediate rating categories are created from model output, the rate and/or rule pages should present these rating tiers or categories. The company should provide an explanation how model output was translated into these rating tiers or intermediate rating categories. This is too detailed and it is not clear how this provides value to the review. It also could be trade secret. There is a risk of exposing intellectual property without serving any benefit. This is simply more documentation and does not help in the review. |

### 6. Supporting Data

| C.6.a | Obtain aggregated state-specific, book of business-specific, univariate historical experience data, separately for each year included in the model, consisting of loss ratio or pure premium relativities and the data underlying those calculations for each category of model output(s) proposed to be used within the rating plan. For each data element, obtain an explanation whether it is raw or adjusted and, if the latter, obtain a detailed | 4 | For example, were losses developed/undeveloped, trended/untrended, capped/uncapped, etc.? Univariate indications should not necessarily be used to override more sophisticated multivariate indications. However, they do provide additional context and may serve as a useful reference. Caution must be exercised whenever drilling down on actual results, including by year, as these may volatile and in and of themselves not reflective of the model’s predictive power. This variability should be visible and contemplated through appropriate statistical metrics and testing. Additionally, there are confidentiality considerations. While this does not have individual record consumer information, with enough of these data cuts a competitor could back into |

© 2020 National Association of Insurance Commissioners
### C.6.b
Obtain an explanation of any material (especially directional) differences between model indications and state-specific univariate indications.

<table>
<thead>
<tr>
<th>Explanation for the adjustments</th>
<th>Multivariate indications may be reasonable as refinements to univariate indications, but possibly not for bringing about significant reversals of those indications. For instance, if the univariate indicated relativity for an attribute is 1.5 and the multivariate indicated relativity is 1.25, this is potentially a plausible application of the multivariate techniques. If, however, the univariate indicated relativity is 0.7 and the multivariate indicated relativity is 1.25, a regulator may question whether the attribute in question is negatively correlated with other determinants of risk. Credibility of state data should be considered when state indications differ from modeled results based on a broader data set. However, the relevance of the broader data set to the risks being priced should also be considered. Borderline reversals are not of as much concern. Consider adding a comment that if the multivariate performs well against the state level data, then this should suffice. However, credibility considerations need to be made as state level segmentation comparisons generally do not have enough credibility.</th>
</tr>
</thead>
</table>

### C.7.a
Obtain a listing of the top five rating variables that contribute the most to large swings in premium, both as increases and decreases.

| These rating variables may represent changes to rating factors, be newly introduced to the rating plan, or have been removed from the rating plan. |
| This is complicated to answer. A company would need additional objective information before they could answer this. For example, does a large swing refer to a renewal or difference between two customers? |

### C.7.b
Determine if the insurer performed sensitivity testing to identify significant changes in premium due to small or incremental change in a single risk characteristic. If such testing was performed, obtain a narrative that discusses the testing and provides the results of that testing.

| One way to see sensitivity is to analyze a graph of each risk characteristic's/variable's possible relativities. Look for significant variation between adjacent relativities and evaluate if such variation is reasonable and credible. |
| This is also complicated to answer and not all transition testing can be done and requires a lot of simulations. Not all companies will have this capability. |

### C.7.c
For the proposed filing, obtain the impacts on expiring policies and describe the process used by management, if any, to mitigate those impacts.

| Some mitigation efforts may substantially weaken the connection between premium and expected loss and expense, and hence may be viewed as unfairly discriminatory by some states. |

---

7. Consumer Impacts – This is an important consideration for implementing a plan. However, this is not a statistical concept and reliance upon this may actually lead to rates that are not cost based. Rather than an obstacle to approval we suggest consumer impacts must be clearly understood, and the regulator and the company must work together to develop an implementation plan that addresses any concerns. However, these should not be the basis for evaluating the predictive model itself. Additionally, there should be more clarity as to what is meant by “consumer.”
| C.7.d | Obtain a rate disruption/dislocation analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by rerating the current book of business), and sufficient information to explain the disruptions to individual consumers. | The analysis should include the largest dollar and percentage impacts arising from the filing, including the impacts arising specifically from the adoption of the model or changes to the model as they translate into the proposed rating plan. While the default request would typically be for the distribution/dislocation of impacts at the overall filing level, the regulator may need to delve into the more granular variable-specific effects of rate changes if there is concern about particular variables having extreme or disproportionate impacts, or significant impacts that have otherwise yet to be substantiated. See Appendix C for an example of a disruption analysis. |
| C.7.e | Obtain exposure distributions for the model's output variables and show the effects of rate changes at granular and summary levels, including the overall impact on the book of business. | See Appendix C for an example of an exposure distribution. | Item C.7.d should suffice for this. The impacts shown here are combined with all changes occurring, not just those related to variables in the model. |
| C.7.f | Identify policy characteristics, used as input to a model or sub-model, that remain "static" over a policy's lifetime versus those that will be updated periodically. Obtain a narrative on how the company handles policy characteristics that are listed as "static," yet change over time. | Some examples of "static" policy characteristics are prior carrier tenure, prior carrier type, prior liability limits, claim history over past X years, or lapse of coverage. These are specific policy characteristics usually set at the time new business is written, used to create an insurance score or to place the business in a rating/underwriting tier, and often fixed for the life of the policy. The reviewer should be aware, and possibly concerned, how the company treats an insured over time when the insured’s risk profile based on "static" variables changes over time but the rate charged, based on a new business insurance score or tier assignment, no longer reflect the insured’s true and current risk profile. A few examples of "non-static" policy characteristics are age of driver, driving record and credit information (FCRA related). These are updated automatically by the company on a periodic basis, usually at renewal, with or without the policyholder explicitly informing the company. |
| C.7.g | Obtain a means to calculate the rate charged a consumer. | The filed rating plan should contain enough information for a regulator to be able to validate policy premium. However, for a complex model or rating plan, a score or premium calculator via Excel or similar means would be ideal, but this could be elicited on a case-by-case basis. Ability to calculate the rate charged would allow the regulator to perform sensitivity testing when there are small changes to a risk characteristic/variable. Note that this information may be proprietary. This is logistically challenging for companies to execute and it is more a market conduct item than a filing review item. Additionally, the rate order of calculation rule around ration policy should suffice here. |
| C.7.h | In the filed rating plan, be aware of any non insurance data used as input to the model (customer provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors. | If the data is from a third-party source, the company should provide information on the source. Depending on the nature of the data, data may need to be documented with an overview of who owns it and the topic of consumer verification may need to be addressed, including how consumers can verify their data and correct errors. If this information element is concerning the non-insurance (3rd party data) that is used in the development of the model, then other Section A would already have discussed this item. If this information element is concerning the non-insurance (3rd party data) that is used to rate a policy, then we would request replacing “as input to the model” with “as variables in the rating of a policy” for clarity. |

### 8. Accurate Translation of Model into a Rating Plan

| C.8.a | Obtain sufficient information to understand how the model outputs are used within the rating system and to verify that the rating plan's manual in fact, reflects the model output and any adjustments made to the model output. | The regulator can review the rating plan's manual to see that modeled output is properly reflected in the manual's rules, rates, factors, etc. Is this information element asking for a new piece of documentation or is it just recommending that the regulator should seek to understand this information? |

### 9. Efficient and Effective Review of Rate Filing

<p>| C.9.a | Establish procedures to efficiently review rate filings and models contained therein. | &quot;Speed to market&quot; is an important competitive concept for insurers. Though regulators need to understand the rate filing before accepting the rate filing, the regulator should not request information which does not increase their understanding of the rate filing. Regulators should review their state's rate filing review process and procedures to ensure that they are fair and efficient. Regulators need to be aware that requesting information that is not necessary for a decision to be made on a rate filing's compliance with state laws and regulations. The last sentence in the second paragraph of the comment is incomplete. |
| C.9.b | Be knowledgeable of state laws and regulations in order to determine if the proposed rating plan (and models) are compliant with state law. | This is a primary duty of regulators. The regulator should be knowledgeable of their state laws and regulations and apply them to a rate filing fairly and efficiently. The regulator should pay special attention to prohibitions of unfair discrimination. |</p>
<table>
<thead>
<tr>
<th>C.9.c</th>
<th>Be knowledgeable of state laws and regulations in order to determine if any information contained in the rate filing (and models) should be treated as confidential.</th>
</tr>
</thead>
<tbody>

Dear Ms. DeFrain,

I write you as director of finance, insurance and trade policy at the R Street Institute, a nonprofit, nonpartisan public policy research organization (“think tank”). We appreciate the opportunity afforded by the Casualty Actuarial and Statistical Task Force to offer input on the revised draft of the Regulatory Review of Predictive Models White Paper.

We commend the Task Force for its work and are heartened by several updates in the revised paper. For example, in the section on relevance of variables and relationship to risk of loss, we welcome the revised paper’s substitution that a rate-filing narrative ought to explain a variable’s “rational” relationship to cost, rather than original “logical and intuitive.” Actuarially credible and statistically significant variables may, in fact, prove to be counter-intuitive.

However, we remain concerned that the paper exceeds the scope of its stated purpose and that it could be interpreted to recommend more stringent reviews of existing models that have served consumers well for decades. In response to earlier comments we filed, the Ad Hoc Team asserted “the fact that predictive models have been reviewed in depth by regulators for many years under the current confidentiality provisions...is prima facie evidence that the negative impacts that R Street is alleging will not arise.” However, the team elsewhere notes that it “would be unfortunate if a model is withdrawn from the market because the modeler is unwilling to share information with regulators.”

Our position is that it would be not just unfortunate, but disruptive, and threatens to reverse progress made over three decades toward more competitive insurance markets that better serve consumers. We will continue to recommend that regulators exercise to avoid such market disruption.

Sincerely,

R.J. Lehmann
Director of Finance, Insurance and Trade Policy
R Street Institute
Honorable Steve Kelley  
Commissioner, Minnesota Department of Commerce  
Chairman, NAIC Casualty Actuarial and Statistical Task Force  
Minnesota Department of Commerce

Submitted Electronically to kdefrain@naic.org

Dear Chairman Kelley and Vice Chair Donelon:

I write on behalf of the Consumer Data Industry Association (CDIA) to comment on the exposure draft concerning best practices when reviewing predictive models and analytics. This draft was released by your Casualty Actuarial and Statistical Task Force (“Task Force”) on June 12, 2020. Thank you for allowing CDIA another chance to offer comments on behalf of our consumer reporting agency (“CRA”) members. We offer comments on section VI in the body of the whitepaper and sections A, B and C in the modeling guide.

The Consumer Data Industry Association is the voice of the consumer reporting industry, representing consumer reporting agencies including the nationwide credit bureaus, regional and specialized credit bureaus, background check and residential screening companies, and others. Founded in 1906, CDIA promotes the responsible use of consumer data to help consumers achieve their financial goals, and to help businesses, governments and volunteer organizations avoid fraud and manage risk. Through data and analytics, CDIA members empower economic opportunity all over the world, helping ensure fair and safe transactions for consumers, facilitating competition and expanding consumers’ access to financial and other products suited to their unique needs.

Section VI, 1. c (p. 5) addresses a “Review [of] the individual input characteristics to and output factors from the predictive model (and its sub-models), as well as, associated selected relativities to ensure they are not unfairly discriminatory”. We appreciate your feedback on our initial comments expressing concerns related to including “sub-models” like Credit-Based Insurance Scores (“CBIS”) into the regulatory
review process. However, we do respectfully believe this will increase the burden of regulatory compliance for CRAs, slowdown the speed to market and impede the relationship between insurers and consumers. These new burdens can inject unnecessary friction into consumers who seek quick decisions and competitive prices from their insurers.

We respectfully believe these are “new, proposed obligations”. The review of CBIS models has been established and ongoing in many States for close to two decades like you highlight, but those occur in other forms of insurance and not under the forms the Casualty Actuarial and Statistical (C) Task Force is seeking to add to its handbook and make an industry wide practice. The current reviews may include the same CBIS models, but if they are not currently being reviewed then we would argue these are in fact new obligations on CRAs.

Many States have provided certain confidentiality protections from the general public for CBIS models in accordance with their State law, but many is not all states. CDIA members spend significant amounts of time and resources developing their models and complying with current regulations. only takes one employee in one state to make one mistake and decades of hard work, investment and research is available for anyone to view, replicate, deceive or use to commit fraud. We are encouraged by the inclusion of new confidentiality language in Section VII of the Whitepaper, pertaining state confidential, proprietary, or trade secret state laws and relevant contractual provisions, and request inclusion of the language as a proposed change to the Product Filing Review Handbook. Even with the new language, the lack of a national exemption from public records remains a concern because information that has never previously been requested could be subject to the myriad of public disclosure laws around the country. There is no surety to how all states will respond to public records requests.

New language in Section V of the Whitepaper suggests that reliance on state confidentiality authority, regulations, and rules may not govern if the NAIC or another third party becomes involved in the review process on behalf of the states. NAIC or third-party participation in the review process causes significant trade secret and proprietary information protection concerns. It is not clear from the new language what protections, law, or authority would apply in such a case. We request clarifying language be added that, as a floor, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed apply.

We understand no information should be confidential from the regulators themselves. However, if the CBIS models are reviewed and accepted elsewhere, it would seem that a repetitive and costly process is occurring for not much if any added value to the final product for the consumers. The credit reporting system is a consistent nationwide process. Exposing individual characteristics of scoring models to public record requests allows competitors access to information that they can use to gain an unfair advantage over another company. It also reduces the incentive to continue to
create new solutions, reducing a competitive environment, which ultimately hurts consumers. Regulators should be able to know whether scoring models are in compliance with the law, but this information should not be accessible as a public record.

The potential for confidentiality concerns is not only with the CRAs, but the companies they work with (date furnishers and lenders) in the credit reporting system and their consumers. We are not convinced that including CBIS in this type of review is mission critical. Yet, if this review needs to be in the process, CDIA recommends the establishment of highly specific rules to protect confidentiality and proprietary information. Additionally, a separate review process of sub-models as an optional request with defined valid concerns would help in addressing concerns.

Credit-based insurance scores do not unfairly discriminatory towards any race, religion, gender, ethnicity, or other established suspect classes and there are studies that show the lack of illegal discrimination. A myth of illegal discrimination pervades many media accounts and public policy debates, but in truth, credit-based insurance scores do not promote redlining or other illegal insurance practices.

Section VI 3.a. (p. 6) addresses how to “[e]valuate how the model interacts with and improves the rating plan” and how to “[o]btain a clear understanding of the characteristics that are input to a predictive model (and its sub-models), their relationship to each other and their relationship to non-modeled characteristics/variables used to calculate a risk’s premium.” We recognize the goal of the regulator in seeking to understand how the individual components of the rating plan interrelate to produce a consumer’s premium, but we feel the NAIC’s comment to CDIA comments on this add further confusion to our members. The white paper only mentions “characteristics”, but your comment refers to “information that the ‘CRAs use to create CBIS’ is essential to understanding the structure of the CBIS models, the variables used, and their justification.”. CRAs could provide general characteristics of the model without having confidentiality concerns, but the “information they use to create CBIS” appears to be far more specific.

If these provisions are meant to include information relating to the scoring models that CRAs use to create CBIS, there would be a significant new regulatory burden on CRAs and this would impede the relationship between insurers and consumers. These new burdensome requirements can inject unnecessary friction on to consumers who seek quick decisions and competitive prices from their insurers. Along with heightening the risk of disclosing proprietary information that is currently kept confidential because of its importance.

In “Selecting Model Input” under subsections A.1.a “Available Data Sources”,

© 2020 National Association of Insurance Commissioners
we appreciate the edits made to address our concerns around FCRA requirements being extended to all external data sources and the review for CBIS models being restricted to credit variables used in the model and not all credit variables.

We appreciate the task force’s comment related to being open to changing the level for A.2.b “Determine if the sub-model was previously approved (or accepted) by the regulatory agency,” the review level change is appreciated as it will eliminate unnecessary and duplicative reviews of third-party and vendor models that have been previously approved. To be consistent with the A.2.b review level change, a change from a review level 1 to a 3 or 4 is requested for current A.2.f, former A.2.e, “If using output of any scoring algorithms, obtain a list of the variables used to determine the score and provide the source of the data used to calculate the score.”

Section A.4.c addresses “Identifying material findings the company had during their data review and obtain an explanation of any potential material limitations, defects, bias or unresolved concerns found or believed to exist in the data. If issues or limitations in the data influenced modeling analysis and/or results, obtain a description of those concerns and an explanation how modeling analysis was adjusted and/or results were impacted”. This provision should be recategorized from its current score of 1 to a 3 or 4 score. Existing regulations around actuarial rate making standards and state regulations should prevent these items from entering a “final/proposed” model. This should be categorized as three of four (i.e. if model review uncovers issues).

We have several comments regarding Section B, “building the model”:

- Sec. B.2.c, “Obtain a description of univariate balancing and the testing that was performed during the model-building process, including an explanation of the thought processes involved and a discussion of why interaction terms were included (or not included).” Only included interactions should be discussed. Interactions not be included, but default are not in a model, and therefore should not need to be justified.
- Secs. B.3.a and B.3.c, Both subsections pose trade secret protection and confidentiality issues.
- Sec. B.3.b, “Obtain a list of predictor variables considered but not used in the final model, and the rationale for their removal”. The best practices and guidelines should be limited to only the variables that were in the final and proposed models.
- Sec. B.3.d, “Obtain an rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.” CDIA agrees with the current and actuarially accepted practice of rate making guidelines not requiring intuitive or rational explanations of predictive values. We support use of variables that are statistically and actuarially predictive of insurance losses.
Additionally, this subsection poses a risk exposing trade secret and confidential information.

- Secs. B.4.b, through B.4.b CDIA recommends recategorizing these scores from their current scores of two to a three or four score, along with only making this a requirement if deemed necessary.
- Sec. B.4.c “Identifying the threshold for statistical significance and explain why it was selected. Obtain a reasonable and appropriately supported explanation for keeping the variable for each discrete variable level where the p-values were not less than the chosen threshold”. We thank NAIC for accepting our recommended language change of adding “threshold for statistical significance” into the list of required elements and changing this score from its current one to a three or four.

We have several comments regarding “Section C, “The Filed Rating Plan”: 

- Sec. C.1.c, like many other areas, this provision creates potential trade secret and confidentiality issues.
- Sec. C.7.h, we thank NAIC for easing the FCRA requirement section here.

The “Supporting Data” section, specifically Secs. C.6.a and C.6.b, on “Obtaining an explanation of any material (especially directional) differences between model indications and state-specific univariate indications” pose some concerns for CRAs and could interfere with the insurance process for consumers.

Section VIII of the Whitepaper proposes several changes to the Handbook. Section X, “Other Considerations” of the Handbook suggest advisory organization regulation of model and algorithm vendors. As explained further in this comment, CIBS modelers are already heavily regulated.

Credit Based Insurance Scores are constructed using nationwide data sets. Scoring or grading their performance out at a state level may not be supported accurately with this approach. It is also a common occurrence for certain contracts to prevent model providers from sharing distinct or customer specific data with third parties. There are several factors besides credit information and CBIS that go into the rate setting process. Credit Information and CBIS may be the only ones that are consistent and transferrable across the country, while some of the other factors used can and do differ greatly on a state by state basis.
The insurance industry has been using CBIS models for decades and they have been approved by nearly every state’s insurance department for auto and home insurers. Adding the work CASTF proposes will be burdensome and repetitive. The lack of trade secret and proprietary information protection will always remain a source of concern. In the long run we see this as something only large insurers will be able to absorb and the small to medium sized insurers that rely on third parties help will get squeezed out. We strongly feel that this will give large insurers a competitive edge in the marketplace. This will come at great cost to the consumers when their options decrease because of the eventual lack of competition.

There is already a large regulatory review presence on the industry. It is already over seen at the federal level by the Consumer Financial Protection Bureau (CFPB) and Federal Trade Commission (FTC), along with several states implementing their own regulations and the Conference of State Banking Commissioners looking into the industry as well. This increased regulation not only hurts the industry, but the consumers it serves. It will significantly hamper speed to market for the products consumers need and does not appear to add much, if any, benefit to the outcome for the industry and its consumer.

In conclusion, we believe that these potential new best practices will create burdensome regulatory difficulties for our members, speed to market issues for insurance companies, their product and the consumers that need them. CDIA members provide quality products that are already regulated and accepted by the insurance industry. CDIA and its members respectfully request consideration and inclusion of its comments in the task force’s whitepaper. Thank you for the opportunity to comment and please feel free to contact us with any questions you may have.

Sincerely,

Eric J. Ellman
Senior Vice President, Public Policy & Legal Affairs

Comments for the Center for Economic Justice

To the Casualty Actuarial Task Force

Regulatory Review of Predictive Models White Paper

July 27, 2020

The Center for Economic Justice offers the following comments on the June 12, 2020 exposure draft of the “Regulatory Review of Predictive Models White Paper.”

CEJ greatly appreciates the effort CASTF has expended to grapple with regulatory review of complex models. However, the most recent exposure misses the mark in at least two foundational ways.

1. The use of “rational explanation” is used incorrectly and inappropriately; and

2. The absence of guidance to address proxy discrimination against protected classes is a huge hole in regulatory review and a baffling omission.

1. Rational Explanation

The terms “rational explanation,” “rational relationship” and “rational sense” are used several times in the exposure draft.

On page 12, as a topic for future discussion, the paper states, “Provide guidance for regulators that seek a causal or rational explanation why a rating variable is correlated to expected loss or expense, and why that correlation is consistent with the expected direction of the relationship.”

On page 20 in Appendix A, “Data Organization” Section A.4.b, the paper states: “Obtain documentation on the insurer’s process for reviewing the appropriateness, reasonableness, consistency and comprehensiveness of the data, including a discussion of the rational relationship the data has to the predicted variable,” and “An example is when by-peril or by-coverage modeling is performed; the documentation should be for each peril/coverage and make rational sense. For example, if “murder” or “theft” data are used to predict the wind peril, provide support and a rational explanation for their use.”
On page 34, in Appendix B, “Predictor Variables” Section B.3.d, the paper states, “Obtain a rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted,” and “The explanation should go beyond demonstrating correlation. Considering possible causation may be relevant, but proving causation is neither practical nor expected. If no rational explanation can be provided, greater scrutiny may be appropriate. For example, the regulator should look for unfamiliar predictor variables and, if found, the regulator should seek to understand the connection that variable has to increasing or decreasing the target variable.”

On page 30, in Appendix C, Section C 2 – Relevance of Variables and Relationship to Risk of Loss,” the paper states, “Obtain a narrative regarding how the characteristics/rating variables included in the filed rating plan relate to the risk of insurance loss (or expense) for the type of insurance product being priced,” and “The narrative should include a discussion of the relevance each characteristic/rating variable has on consumer behavior that would lead to a difference in risk of loss (or expense). The narrative should include a rational relationship to cost, and model results should be consistent with the expected direction of the relationship. This explanation would not be needed if the connection between variables and risk of loss (or expense) has already been illustrated.”

On page 46, the paper defines “Rational Explanation” -- A “rational explanation” refers to a plausible narrative connecting the variable and/or treatment in question with real-world circumstances or behaviors that contribute to the risk of insurance loss in a manner that is readily understandable to a consumer or other educated layperson. A “rational explanation” does not require strict proof of causality but should establish a sufficient degree of confidence that the variable and/or treatment selected are not obscure, irrelevant, or arbitrary. A “rational explanation” can assist the regulator in explaining an approved rating treatment if challenged by a consumer, legislator, or the media. Furthermore, a “rational explanation” can increase the regulator’s confidence that a statistical correlation identified by the insurer is not spurious, temporary, or limited to the specific data sets analyzed by the insurer.”

It is important to note that while “rational explanation” is defined, the undefined terms “rational relationship and “rational sense” are also used.

The paper also uses the term “rationale” in several instances. “Rationale” is used in Section A.4.a, B.2.b., B.3.a and B3.b. In each instance, the term “rationale” is synonymous with “explanation” or “justification.”
1.1 The use of “rational explanation” is inappropriate because it introduces subjective interpretation by the regulator in place of a valid statistical analysis to evaluate the potential for a spurious correlation.

The clear intent of the paper’s use of “rational explanation” or similar terms is two-fold. First, it is used to mean the insurer must provide a “rationale” for the purported relationship. Second, it is used to mean that this “rationale” must be “reasonable” or “plausible” to the regulator.

The clear intent of the use of “rational explanation” is to identify spurious correlations – correlations\(^1\) – “two or more events or variables that are associated but not causally related due to either coincidence or a third unseen factor.”\(^2\) The problem with a spurious correlation is that the purported relationship is either transitory or illusory. As discussed below, regulators have always had the authority and responsibility to identify and stop the use of classifications that are spuriously correlated to particular insurance outcomes. And as discussed below, spurious correlation can reflect and perpetuate systemic racism and lead to proxy discrimination against protected classes.

The problem with the use of “rational explanation” is that it is inherently subjective and, consequently, arbitrary. To point out the obvious, each of our views about what constitutes a reasonable or rational explanation is based in very large part on our cultural biases – where and how we grew up and what our life experiences have been. The Black Lives Matters movement – and the response of insurer CEO and NAIC leadership to address systemic racism and inherent bias and to start a dialogue on race and diversity – speaks to the fact that what might be seen as rational to one person is understood as irrational and racist by another. For example, leading up to the Civil War, many in the country viewed slavery as rational. In the 1950’s and 1960s, many viewed segregation of races as rational.

These historical examples are, of course, relevant. But, we can look at insurance examples today. Over the past few weeks and months, insurers have been offering “rational explanations” why they shouldn’t provide auto insurance premium relief or why the premium relief offered wasn’t greater. In some states, regulators have simply accepted those explanations as “rational,” while regulators in other states have found the rationales offered failed the test of reasonableness.

We fully support regulators’ interest in and actions to identify and eliminate spurious correlations in complex, predictive models. But relying upon a “rational explanation” is simply not the way to go because it is inherently subjective and lacks scientific rigor.

---

1. [https://tylervigen.com/spurious-correlations](https://tylervigen.com/spurious-correlations)
In place of “rational explanation,” we suggest that the white paper utilize “rationale” when the intent is for the insurer to explain or justify a practice. We also suggest that the white paper include specific guidance for scientific inquiry not just when the regulator suspects a spurious correlation, but guidance for insurers to test for spurious correlations – particularly when the spurious correlation may be a proxy for discrimination against a protected class.

1.2 The NCOIL and industry trades’ argument that “rational explanation” usurps legislative authority is without merit or evidence.

We are aware of NCOIL passing a resolution declaring that legislative intent has always been that, other than specific prohibitions of particular risk classifications, the only requirement for use of a risk classification is a correlation. Attached, please find CEJ’s comments to NCOIL, in which we demonstrate that

- There is no support for this proposition is statutory or regulatory language
- There is no support for this proposition in actuarial standards of practice
- The statutory language in NAIC models clearly requires more than a simple correlation as justification for a risk classification
- Regulatory practice refutes the “correlation-only” argument as regulators have long believed of their authority to act and have acted to address spurious correlations.

While we urge the removal of “rational explanation” in the white paper, we also urge the CASTF to forcefully reject the false claim of legislative authority usurpation and to respond to the flawed NCOIL/Industry analysis regarding “correlation only.”

2. The white paper’s failure to address proxy discrimination against protected classes is a glaring omission and renders the white paper largely irrelevant.

In CEJ’s November 22, 2019 comments, we suggested that the white paper better address proxy discriminating against protected classes.

- We suggested a clarification that unfair discrimination means both the absence of a cost-based relationship and proxy discrimination against protected classes in Section.

- We also suggested the addition to the regulatory review of data used in the development and validation of the model the following:

  *Determine if data used for model development and testing are biased against protected classes of consumers, if insurers have tested the data for such bias and if any action has been taken to eliminate or reduce bias in data.*

- We also suggested the addition of a section “Testing for and Minimizing Disparate Impact Unfair Discrimination.”
All of CEJ’s suggestions were intended to identify and minimize the impact of systemic racism and inherent bias in insurance within the cost-based foundation of insurance.

CASTF did not respond to the first or third comment. In response to the second comment, CASTF largely rejected our comments. In response to CEJ’s comment on regulatory review of data for bias against protected classes, CASTF wrote:

*Industry does not collect information that could clearly demonstrate if there is disparate impact on protected classes. It is beyond the scope of this paper to propose that the collection of data on protected classes is necessary in order to review models underlying rating plans.*

Further, the white paper included the assessment of proxy discrimination as an “other considerations” that “were not within the scope of this paper.”

### 2.1 Proxy discrimination against protected classes must be a central focus of regulatory review and, consequently, of the white paper.

The use of predictive models in pricing is overwhelmingly oriented towards risk segmentation. While there are a few examples of predictive models used for estimating aggregate losses – catastrophe models – insurers use predictive models to develop and employ risk classification for underwriting, tier placement and rating. Traditional actuarial techniques are largely employed for overall rate need – the “not excessive” and “not inadequate” components of the rate standards. But predictive models are used – with few exceptions – for risk classification and are therefore subject to the “not unfairly discriminatory” rate standard.

With the understanding that the vast majority of predictive models used by insurers and reviewed by regulators for risk classification, the primary goal of regulatory review of these models is to identify and prevent unfair discrimination.

Given that the purpose of regulatory review of complex, predictive models is primarily – and overwhelmingly – to identify unfair discrimination, it is inconceivable that the white paper suggest that examining these models for unfair discrimination against protected classes is outside of the scope of the paper. CASTF has arbitrarily and mistakenly eliminated a core and crucial component of regulators’ statutory responsibility by claiming examination of proxy discrimination against protected classes is outside the scope of the white paper.

### 2.2 Proxy discrimination against protected classes is a clear concept.

“Proxy discrimination against protected classes” is a clear concept for regulators. It means discriminating against a class of consumers identified for protection in statutes or regulation by means of a proxy for the class identification. Both parts of the phrase are well understood – protected classes and proxy discrimination.
Further, we know before the murder of George Floyd that proxy discrimination against protected classes is one of the major consumer protection issues with big data analytics and predictive models. We also know that addressing such algorithm bias has been at the core of every set of AI principles produced around the world, including the current draft of the NAIC Principles on AI.

However, the murder of George Floyd and the Black Lives Matter movement has put proxy discrimination resulting from systemic racism and inherent bias into stark relief. The issue of proxy discrimination against protected classes is at last as important as the issue of cost-based justification in regulatory review of predictive models.

2.3 Proactive efforts to identify and minimize proxy discrimination against protected classes is not just consistent with the cost-based foundation of insurance, but improves cost-based pricing.

There is a lengthy history of applying disparate impact unfair discrimination analysis in a variety of industries, including insurance. The federal Fair Housing Act has recognized proxy discrimination or disparate impact against protected classes for over 40 years and the history of disparate impact challenges shows that such challenges, when successful, improve cost-based pricing.

For example, in the 1990’s, fair housing groups brought a disparate impact challenge against insurers’ use of age and value of the home for underwriting. The groups argued that these underwriting guidelines discriminated against minority communities because these communities’ housing was characterized by low value and old age. The challenges were largely successful and, in response, insurers developed more detailed underwriting based on, for example, age and type of electrical system and age and condition of the roof. The result was not just fairer treatment of minority communities, but improvements in cost-based pricing by insurers.

2.4 The fact that insurers do not collect protected class characteristics from applicants and policyholders is not an impediment to proactive efforts to identify and minimize proxy discrimination against protected classes.

As noted above, CASTF failed to address the core issue of proxy discrimination against protected classes in the white paper by, among other things, falsely equating insurers’ non-collection of protected class characteristics with insurers’ inability to analyze their data and models for proxy discrimination.
In fact, data and other tools are available for insurers to assign proxies for race to data records in order to test for proxy discrimination. In some instances, the tests will be simple. For example, in one of the CASTF book clubs, a vendor developing auto telematics pricing models stated they don’t do anything to test for bias against protected classes. Yet, it would be easy for this vendor to examine whether the telematics data used in the development of the models reflects fair and unbiased availability of the telematics program across all communities – by simply mapping the garaging address to Census data – namely, the majority racial composition of census blocks. Yet, the vendor dismissed even this simple test of bias in data despite the well-known evidence that biased data reflect and perpetuate historic discrimination.

Further, valid statistical proxies for race / ethnicity are available and have been used to test for proxy discrimination against protected classes. For example, attached to our comment letter, please find:

*Using publicly available information to proxy for unidentified race and ethnicity*, Consumer Financial Protection Bureau, 2014

”Assessing Fair Lending Risks Using Race/Ethnicity Proxies.” Yan Zhang, Office of the Comptroller of the Currency

“Awareness in Practice: Tensions in Access to Sensitive Attribute Data for Antidiscrimination,” Bogen, Ricke and Ahmed, 2020

These resources just touch the surface of possibilities for insurers to test for and minimize proxy discrimination against protected classes. If regulators were to routinely ask for – or include in the white paper as a routine part of the review of predictive models – insurer actions to detect and minimize proxy discrimination against protected classes, insurers – as well as data vendors and consulting firms – would develop the tools to fulfill this core analysis of unfair discrimination.

2.5 **CEJ asks the CASTF to include of guidance regarding testing for and minimizing proxy discrimination against protected classes.**

We ask CASTF to revise the white paper to include CEJ’s suggested guidance regarding identification and minimization of proxy discrimination against protected classes. CASTF’s rationales for exclusion – that protected class data are not available and that proxy discrimination against protected classes is outside the scope of the white paper – are demonstrably incorrect.
Data to perform analyses of proxy discrimination analysis are available, as noted above. The fact that the data may not be perfect is not a valid excuse. Data do not have to be perfect to be sufficiently valid to produce a reliable analysis.

Further, the issue of proxy discrimination against protected classes is directly related to CASTF’s concern about “rational explanations.” Just as proxy discrimination against protected classes represents a spurious correlation – as in the example above where the age and value of the home had a spurious correlation to claims – so does CASTF’s concern with “rational explanation.” The analytic tools to identify and minimize proxy discrimination against protected classes is a scientific, statistically-valid and objective approach to addressing the spurious correlation concern reflected in the “rational explanation” guidance. Pages 5 to 8 of the attached “CEJ’s Call on Insurers and Regulates to Address Systemic Bias and Inherent Racism in Insurance” explains the scientific foundation of a disparate impact analysis.

Finally, given the NAIC’s recent commitment to address race and diversity and the variety of actions that reflect this commitment, it would be contradictory for the CASTF to ignore the issues of systemic racism and inherent bias in a white paper providing guidance for regulatory review of predictive models.
Comments of the Center for Economic Justice

To NCOIL Regarding the Proposed

“Resolution Urging the National Association of Insurance Commissioners to Refrain from Intruding on the Constitutional Role of State Legislators.”

June 28, 2020

The Center for Economic Justice (CEJ) suggests that NCOIL withdraw the ill-conceived “Resolution Urging the National Association of Insurance Commissioners to Refrain from Intruding on the Constitutional Role of State Legislators.” The Resolution suffers from a number of false statements, fails to recognize the reality of current ratemaking and regulatory review, miscomprehends the oft-repeated term “correlation,” represents an endorsement of proxy discrimination against protected classes and misdiagnoses the problem with the white paper’s use of rational explanation. Among the problems with the resolution:

1. It is unclear why NCOIL has decided that a technical paper regarding review of complex pricing algorithms is the target for the proclamation of correlation as the intent and sole purview of state legislators. The fact that, among the many critical issues facing insurance consumers, NCOIL has prioritized an industry complaint feeds the perception by some that NCOIL’s actions reflect the priorities of its industry corporate sponsors.

2. The premise of the resolution – “established rate filing review is based on correlation” – is demonstrably false and unsupported by statutory language. Neither of the NCOIL rating models cited in the resolution used the term “correlation.” The purported reliance on “correlation-only” conflicts with the language of the NCOIL models regarding unfair discrimination.

3. As a former regulator charged with review and approval of rate filings and an expert witness in administrative and judicial proceedings on unfair discrimination and risk classification in insurance for nearly 30 years, simple correlation has never been sufficient justification for a risk classification.

4. The repeated references to “correlation” divorce the resolution from the reality of rate filings today. Insurers now use algorithms – whether for pricing, claims, anti-fraud or more – based on statistical techniques light years from simple correlation.
5. The repeated references to “correlation” are an endorsement of proxy discrimination. By declaring that any correlation is sufficient justification – even if that correlation is a proxy for discrimination against a protected class – and defending such proxy discrimination on the basis of states’ rights the resolution ignores and repudiates the commitment and efforts by industry and regulators to address systemic racism in insurance.

6. The problem with the use of “rational explanation” in the CASTF White Paper is not a usurpation of legislative prerogative. Rather, “rational explanation” is a subjective approach to the problem of identifying spurious correlations.

Why This Resolution Targeting a NAIC Technical White Paper Now?

Insurance regulators at the NAIC have been grappling for over five years with the revolution in insurance operations resulting from insurers’ use of big data analytics, complex algorithms, artificial intelligence and machine learning. The regulators’ concerns are being examined in the NAIC’s Artificial Intelligence Working Group, the Accelerated Underwriting Working Group, the Big Data Working Group, the Innovation and Technology Task Force, the Casualty Actuarial Task Force and more. Insurers’ use of big data analytics represents a revolution in insurer operations that has challenged both regulators’ ability to keep up with industry practices and for decades-old statutory authorities to provide the necessary consumer protections.

Of all the NAIC activities related to regulatory responses to insurers’ use of big data analytics, it is curious that NCOIL has prioritized – in the current period of pandemic and systemic racism issues – with a phrase in a 50-page NAIC white paper – to proclaim a resolution. The fact that NCOIL chooses to prioritize this particular industry complaint about a NAIC technical white paper will fuel the contention of some that NCOIL parrots the interests of its industry corporate sponsors.

As discussed further below, the problem with the term “rational explanation” in the white paper, is not that it challenges state legislative authority, but that it is a technically incorrect approach to addressing problems of spurious correlations.

False Foundation – “Correlation” Does Not Appear in NCOIL and NAIC Rating Models

The foundation of resolution is that claim, “WHEREAS, established rate filing review is based on correlation, which demonstrates that rating variables are valid so long as they correlate with a loss.”

Yet, the term “correlation” does not appear in either of the NCOIL rating models cited in the resolution. Nor does “correlation” appear in any of the NAIC property casualty rating
models.1 Nor does “correlation” appear in the Casualty Actuarial Society’s “Statement of Principles Regarding Property and Casualty Insurance Ratemaking.”2 Nor does it appear in the American Academy of Actuaries “Risk Classification Statement of Principles.”3 The term “correlative classes” appears once in the Risk Classification of Principles in a section on Credibility and not in the manner suggested by the resolution.4 These risk classification principles identify a variety of considerations in developing risk classifications, including stability in avoiding abrupt changes in prices, maximizing the availability of coverage, minimizing ability to manipulate or misrepresent a risk characteristic and the need for public acceptability.

Any risk classification system must recognize the values of the society in which it is to operate. This is a particularly difficult principle to apply in practice, because social values:

- are difficult to ascertain;
- vary among segments of the society; and
- change over time.

The following are some major public acceptability considerations affecting risk classification systems:

- They should not differentiate unfairly among risks.
- They should be based upon clearly relevant data.
- They should respect personal privacy.
- They should be structured so that the risks tend to identify naturally with their classification.

In fact, a simple “correlation” is not the basis for fair discrimination. NAIC models define unfair discrimination to exist if “after allowing for practical limitations, price differentials fail to reflect equitably the differences in expected losses and expenses.” The NCOIL models don’t define unfair discrimination other than discrimination “on the basis of race, color, creed, or national origin.”

If, as claimed in the resolution that “rate filing review is based on correlation,” then the appropriate test for discriminating “on the basis of race, color, creed, or national origin” would also be a simple correlation between the rating factor and the prohibited classifications.

---

Page 4

Miscomprehension of “Correlation” and Regulatory Review of Rate Filings

The resolution incorrectly equates simple correlation with the statutory standards for rates. A correlation is simply the extent to which a pair of variables are related. There are many correlations between variables that bear no relationship to one variable predicting the other variable – and that latter is the essence of a rating factor identifying price differentials among consumers in the cost of the transfer of risk.

Here are some examples of very highly correlated variables, which are also examples of “spurious correlation”5 – “two or more events or variables that are associated but not causally related due to either coincidence or a third unseen factor.”6 A perfect correlation is 100%. No correlation is 0%.

- There was a 94.7% correlation between per capita cheese consumption and the number of people who dies by becoming tangled in their bedsheets from 2000 to 2009.
- There was a 99.3% correlation between the divorce rate in Maine and per capita consumption of margarine from 2000 to 2009. As an aside, the Indiana Department of Insurance disapproved a rate filing in which the insurer sought to use per-capita margin consumption as a risk classification.
- There was a 98.5% correlation between total revenue generated by arcades and computer science doctorates awarded in the US from 2000 to 2009.

In the 30 years that I have been reviewing rate filings and risk classifications and regulatory activity in this arena, a simple correlation has never been a sufficient justification for a rating factor.

We offer two real life examples to demonstrate why this is the case. First, in the early 1990s in Texas, an insurer in Texas sought approval for a homeowners discount based on tenure with insurer – if an insured was with the company for several years, they would bet a discount. The insurer provided the following information7:

<table>
<thead>
<tr>
<th>Tenure (Years)</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
</tr>
</thead>
<tbody>
<tr>
<td>Loss Ratio</td>
<td>64.0%</td>
<td>63.4%</td>
<td>62.8%</td>
<td>62.2%</td>
<td>61.6%</td>
<td>61.0%</td>
<td>60.4%</td>
<td>60.0%</td>
</tr>
</tbody>
</table>

5 https://tylervigen.com/spurious-correlations
7 These are not the actual numbers, but an illustration of the actual situation.
Based on this simple “correlation,” the loss ratio seemed to track years of tenure with the company. By the standards of the resolution, this presentation of loss ratios would have been the end of discussion and prohibited any further inquiry by the regulator. In fact, the company was asked to produce loss ratios by years of tenure separate for homeowners (e.g., HO-3) policies and renters’ policies (e.g. HO-4). It turned out that the company had combined the experience.

When looked at separately, the loss ratios for each of the two types of policies didn’t vary with tenure. Homeowners loss ratios were consistent and consistently lower than those for renters’ policies. The spurious findings in the table above were a result of the percentage of renters’ policies declining as a share of total homeowners policies over time – far fewer people rent for five, six, or seven years than for one or two years so the declining loss ratios in the table were a result of fewer high-loss ratio renters’ policies for each additional year of tenure.

A second example comes from a disparate impact challenge under the federal Fair Housing Act. In the mid 1990s, fair housing groups challenged insurers’ use of age and value of the home as underwriting factors for homeowners insurance. The insurers used these factors because of a correlation to expected losses. The fair housing groups showed that using age and value of the home served as proxies for race and income. Because of historical discrimination in housing and mortgages, the housing in communities of color was characterized by older age and lower values. When confronted with the data, the insurers recognized they were using a proxy for condition of the home that was, in fact, a proxy for race. The insurers stopped using age and value of the home and started using more accurate variables like age and condition of the roof and type of electrical system. By responding to the disparate impact challenge, insurers stopped penalizing minority homeowners who maintained their homes with race-based underwriting.

**Miscomprehension of Insurer Rating Practices and the Challenges for Regulators**

The resolution’s references to “correlation” seem like a quaint reference to a long-gone – by 50 years – era. The same NAIC Casualty Actuarial Task Force holds monthly “book clubs” in which insurers and experts make presentations on current ratemaking practices. This past week was an example in which Allstate subsidiary Arity made a presentation on the development of their telematics pricing models for auto insurance. 8 The title of the presentation was “Modeling concepts, hyperparameter tuning, and telematics.” The presentation reviewed the parts of a scoring (pricing) model, including ordinary least squares regression, generalized linear models, generalized linear models with log link functions, decision tree models, neural nets, gradient descent, hyperparameters and extreme gradient boosting. Needless to say, that when a regulator is presented with rating factors based on such a model, it is meaningless to try to look for a simple correlation.

---

8 https://content.naic.org/sites/default/files/call_materials/Modeling%20concepts%20hyperparameter%20tuning%20and%20telematics.pdf
It is this new and massive complexity – actuarial science merged with data science merged with astrophysics – that presents the challenge for regulators to enforce current statutes. We suggest that instead of a resolution harkening back to a by-gone era that never really existed, NCOIL’s efforts would be better spent working with regulators to modernize regulatory authorities and capabilities to deal with the reality of complex models in insurance.

A challenge for insurers and regulators that has always existed and continues to exist is whether a particular relationship – correlation – is real or spurious. When insurers have tried to utilize the closest thing to a simple correlation, insurers and regulators have found problems. Thirty or more years ago, insurers may have presented justification for a particular rating factor with what is known as a univariate analysis – comparing one predictive variable to, say, loss ratio. With traditional actuarial practices, looking at two or more variables at the same time was difficult because each additional variable required more data for a credible – or reliable – analysis. But the univariate analysis always had problems because insurers and regulators knew that, in addition to any correlation between particular rating factors and loss ratio, there was correlation between the rating factors with the result that univariate analysis led to double counting.

For example, both age and miles driven are related to expected losses. But as drivers get older – and retire from work – they drive less. So, a simple analysis of age and expected losses is reflecting the correlation miles driven and vice versa. So using both based on independent analyses yields double counting.

Since the early 1990s – at least – insurers have moved to new statistical techniques to develop and analyze rating factors. These techniques permit the simultaneous analysis of multiple variables and remove the correlation among the variables to eliminate double counting of impact on outcomes. Stated differently, the multivariate techniques used today advance from and address the limitations of “correlation.”

This issue is discussed in greater detail in the attached “CEJ Call to Insurers and Insurance Regulators to Address Systemic Racism in Insurance.”

Tacit Endorsement of Proxy Discrimination against Minority Consumers and Other Protected Classes in the name of States’ Rights.

The repeated references to “correlation” in the resolution are an endorsement of proxy discrimination. By declaring that any correlation is sufficient justification – even if that correlation is a proxy for discrimination against a protected class and defending such proxy discrimination on the basis of states’ rights – ignores the commitment and efforts by industry and regulators to address systemic racism in insurance.
By the standard espoused in the resolution, a rating factor that was a proxy for being a Black American is legitimate as long as there is a correlation to losses. Never mind that the factor is a proxy for a prohibited class or that that the factor discriminates on the basis of a prohibited factor.

Some data vendors offer a criminal history score that purports to score homeowners insurance on the basis of complaints filed with courts. Based on the resolution, as long as there was a “correlation,” that would not only be okay, but regulators are prohibited from further inquiry. What would the use of a criminal history score look like in the case of George Floyd, if he lived? What would the use of a criminal history score look like in Ferguson, Missouri, where the US Department of Justice found the following.

**US DOJ Investigation of the Ferguson Police Department**

Ferguson’s approach to law enforcement both reflects and reinforces racial bias, including stereotyping. The harms of Ferguson’s police and court practices are borne disproportionately by African Americans, and there is evidence that this is due in part to intentional discrimination on the basis of race.

Ferguson’s law enforcement practices overwhelmingly impact African Americans. Data collected by the Ferguson Police Department from 2012 to 2014 shows that African Americans account for 85% of vehicle stops, 90% of citations, and 93% of arrests made by FPD officers, despite comprising only 67% of Ferguson’s population.

FPD appears to bring certain offenses almost exclusively against African Americans. For example, from 2011 to 2013, African Americans accounted for 95% of Manner of Walking in Roadway charges, and 94% of all Failure to Comply charges.

Our investigation indicates that this disproportionate burden on African Americans cannot be explained by any difference in the rate at which people of different races violate the law. Rather, our investigation has revealed that these disparities occur, at least in part, because of unlawful bias against and stereotypes about African Americans.

It would be interesting to count the number of NCOIL members who have received citations for Manner of Walking in Roadway, let alone been penalized with higher insurance rates as a result.

In the aftermath of the murder of George Floyd, many insurer CEOs made statements declaring their personal and corporate opposition to inherent bias and systemic racism. The NCOIL resolution goes in the other direction – it defends systemic racism in insurance by prohibiting inquiry into proxy discrimination. This unfortunate position by NCOIL is also tone-deaf. It relies upon the same states’ rights argument used by those opposing the abolition of slavery and integration.
The Problem with the White Paper’s Use of “Rational Explanation” is Not a Challenge to Statutory Standards, but a Technical Issue with Identifying Spurious Correlations

The CASTF’s white paper use of “rational explanation” is problematic because it is a subjective approach to addressing spurious correlations. It is not a challenge to the mythical statutory standards in the resolution because regulators and actuarial standards of practice have always sought to distinguish between real and false relationships among predictive variables in insurance. “Rational explanation” is problematic because “rational” is subjective – a rational explanation to one person may not be rational to another. The way to address the problem with “rational explanation” is to urge regulators to utilize more of the advanced analytic and statistical tools to distinguish between fair and proxy discrimination. Again, the attached CEJ paper discusses this in more detail.

The NAIC Casualty Actuarial and Statistical Task Force deals generally with actuarial issues in property casualty lines of insurance. The Task Force is currently developing a white paper to provide best practices for regulatory review of complex pricing models used by insurers to justify rates. The current draft does not incorporate identification and minimization of systemic bias or disparate impact, but simply lists it as another consideration. Insurance rate standards include rates not being excessive, not being inadequate and not being unfairly discriminatory.

The use of complex predictive models for pricing by insurers is focused on risk segmentation and the development of risk classifications and rating factors. Traditional actuarial techniques – not complex predictive models – are generally used for overall rate level indications – the metric for assessing whether rates are excessive or inadequate. The overwhelming reason for close scrutiny of complex predictive models by regulators is to assess whether the risk classifications are fair or unfairly discriminatory. It is an understatement to say that the current draft white paper has a massive whole because of the failure to address proxy discrimination and disparate impact. Guidance to insurance regulators for regulatory review of complex insurance predictive models should prioritize the identifications and minimization of systemic bias and disparate impact.

Conclusion

For a myriad of reasons, CEJ suggests that NCOIL withdraw this deeply-flawed resolution.
The Center for Economic Justice’s Call to Insurers and Insurance Regulators

To Address Societal Systemic Bias and Inherent Racism in Insurance
By Explicit Recognition of Disparate Impact as Unfair Discrimination in Insurance

Action, Not Just Words, Needed

The murder of George Floyd has led to widespread corporate recognition of and opposition to systemic bias and inherent racism in America. Corporate CEOs have spoken out, including major insurer CEOs.

“In the coming days, I encourage each of us to step outside of our comfort zones, seek to understand, engage in productive conversations and hold ourselves accountable for being part of the solution. We must forever stamp out racism and discrimination.” Those are the words of Kirt Walker, Chief Executive Officer of Nationwide.

Floyd’s death in Minneapolis is the latest example of “a broken society, fueled by a variety of factors but all connected by inherent bias and systemic racism. Society must take action on multiple levels and in new ways. It also requires people of privilege—white people—to stand up for and stand with our communities like we never have before,” Those are the words of Jack Salzwedel, the CEO of American Family.
Perhaps this will be a turning point in insurer and regulatory practices, but insurers have consistently opposed proposals to address systemic bias and inherent racism in insurance. This opposition has come in two general themes – opposition to any responsibility by insurers or regulators to identify and minimize disparate impact\(^1\) in insurance and opposition to any form of regulatory data collection to allow regulators and the public to assess market outcomes and thereby hold insurers accountable for their practices.

While insurers have been constant in opposing any responsibility to address systemic bias and inherent racism – in contrast to the recent public statements of insurer CEOs – most state insurance regulators believe they have the authority to stop proxy discrimination against protected classes. This belief, however, has never manifested itself, in regulatory standards, models laws or consistent approaches across states.

If insurers and insurance regulators truly want to address systemic bias and inherent racism in insurance, two long-overdue actions are needed.

1. Explicit recognition of disparate impact as unfair discrimination against protected classes in insurance coupled with responsibility for insurers and insurance regulators to identify such disparate impact and take steps to minimize this proxy discrimination within the overall regulatory framework of cost-based pricing.

2. Development of regulatory data collection and analysis infrastructure and capabilities for insurance regulators and the public to meaningfully monitor market outcomes for all consumers, to identify discriminatory outcomes and trace disparate impact to the causes.

---

\(^1\) Disparate impact refers to practices that have the same effect as disparate treatment or intentional discrimination against protected classes. Protected classes refer to those consumer characteristics which may not be the basis for discrimination and include, in most states, race, religion and national origin. Disparate impact is also known as disparate effect or proxy discrimination – discrimination against the protected class through a proxy for the protected class characteristic. Dis disparate impact as unfair discrimination has long been recognized under federal employment and housing laws. In 2015, the U.S. Supreme Court affirmed disparate impact as unfair discrimination under the Fair Housing Act which covers a variety of housing-related issues, including insurance, with Justice Kennedy writing, “Recognition of disparate-impact liability under the FHA plays an important role in uncovering discriminatory intent: it permits plaintiffs to counteract unconscious prejudices and disguised animus that escape easy classification as disparate treatment.”
The mechanisms to accomplish these actions are straightforward.

1. Development of, and implementation by the states, through the National Association of Insurance Commissioners (NAIC) of a model law addressing algorithmic bias including recognition of disparate impact as unfair discrimination against protected classes in insurance with guidance and safe havens for insurers to identify and minimize disparate impact in marketing, pricing, claims settlement and anti-fraud efforts.

2. Development of, and implementation by the states, through the NAIC, of a market regulation data collection and analysis infrastructure to timely and meaningfully monitor consumer insurance outcomes – similar in scope and capability to what state insurance regulators and the NAIC currently have for monitoring the financial condition of insurers.

In the absence of the necessary actions by insurers and the states, Congress and federal agencies will eventually address these problems through civil rights legislation and enforcement.

In An Era of Big Data Analytics and Insurers’ Rapidly Growing Use of Third-Party Data and Complex Algorithms, the Potential For Algorithmic Bias and Proxy Discrimination Has Grown Dramatically.

The potential for big data, artificial intelligence, machine learning – implemented through rapid deployment of complex algorithms – has increased the potential for intentional or unintentional proxy discrimination through algorithmic bias. This potential is well recognized. Barocas and Selbst state the issue succinctly:

Advocates of algorithmic techniques like data mining argue that they eliminate human biases from the decision-making process. But an algorithm is only as good as the data it works with. Data mining can inherit the prejudices of prior decision-makers or reflect the widespread biases that persist in society at large. Often, the “patterns” it discovers are simply preexisting societal patterns of inequality and exclusion. Unthinking reliance on data mining can deny members of vulnerable groups full participation in society.

Most data sets of personal consumer information as well data sets of the built environment reflect historical discrimination against protected classes. For example, TransUnion has an insurance score used for pricing based on criminal violations filed with the courts – not just convictions, but all criminal filings regardless of the eventual outcome. TransUnion’s marketing materials state:

---

2 https://content.naic.org/index_about.htm
“TransUnion recently evaluated the predictive power of court record violation data (including criminal and traffic violations)

“Also, as court records are created when the initial citation is issued, they provide insight into violations beyond those that ultimately end up on the MVR—such as violation dismissals, violation downgrades, and pre-adjudicated or open tickets.”

It did not take the recent murders of Black Americans by police to recognize that this “criminal history score” will reflect historic discrimination in policing against Black Americans and perpetuate that discrimination in insurance. Consider policing records in Ferguson, Missouri.

**US DOJ Investigation of the Ferguson Police Department**
Ferguson’s approach to law enforcement both reflects and reinforces racial bias, including stereotyping. The harms of Ferguson’s police and court practices are borne disproportionately by African Americans, and there is evidence that this is due in part to intentional discrimination on the basis of race.

Ferguson’s law enforcement practices overwhelmingly impact African Americans. Data collected by the Ferguson Police Department from 2012 to 2014 shows that African Americans account for 85% of vehicle stops, 90% of citations, and 93% of arrests made by FPD officers, despite comprising only 67% of Ferguson’s population.

FPD appears to bring certain offenses almost exclusively against African Americans. For example, from 2011 to 2013, African Americans accounted for 95% of Manner of Walking in Roadway charges, and 94% of all Failure to Comply charges.

Our investigation indicates that this disproportionate burden on African Americans cannot be explained by any difference in the rate at which people of different races violate the law. Rather, our investigation has revealed that these disparities occur, at least in part, because of unlawful bias against and stereotypes about African Americans.

One of the oft-cited benefits of big data analytics in insurance is greater personalization – the ability of insurers to develop products and pricing tailored to individual needs and characteristics. But the other side of personalization is exclusion. Insurers’ use of algorithmic techniques called price optimization, claim optimization and customer lifetime value are examples of the flip side of big data personalization – differential treatment of groups of consumers that reflect and perpetuate inherent bias and systemic racism.
The TransUnion Criminal History Score is just one example – egregious and obvious – of algorithms that reflect and perpetuate historic discrimination against protected classes in insurance – algorithms that reinforce inherent bias and systemic discrimination. Others include:

- Employment categories and education levels for marketing, underwriting and pricing
- Price Optimization and Customer Lifetime Value Algorithms used for marketing, underwriting, pricing and claims settlement
- Facial analytics used in life insurance underwriting
- Household composition used for underwriting and pricing
- Credit scores for marketing, underwriting, pricing, claims settlement and anti-fraud efforts
- Fraud detection models based on biased learning data

Many of these practices have shown to discriminate unfairly against protected classes, generally, and Black Americans, specifically. A number of cities – as well as Google and IBM – have stopped using facial recognition technology because of the biases against Black Americans. After the New York Department of Financial Services developed a regulation permitting the use of employment and education characteristics in auto insurance pricing only if the insurer could demonstrate the practice did not unfairly discriminate against protected classes, insurers’ use of the “risk” characteristics disappeared.

The Consumer Federation of America has produced a number of extraordinary studies of discriminatory market outcomes resulting from rating factors that reflect systemic racism. Insurance industry trade associations have dismissed the CFA’s discriminatory findings with the claim that insurers engage in cost-based, race-neutral practices – while refusing to both provide the data to back up these claims and refusing to recognize that systemic racism will show up as disparate impact.

If insurers and insurance regulators are serious about addressing inherent bias and systemic racism in insurance, then action is needed. Fortunately, the insurance industry has the precise skill set needed to identify and minimize disparate impact and insurance regulators have the resources to develop the necessary guidance and infrastructure.

**Disparate Impact Analysis is Straightforward and Particularly Suited to Insurance.**

The mechanics of a disparate impact analysis in insurance are straightforward and use well-accepted statistical and actuarial methods. Any algorithm – whether for pricing, anti-fraud, claims settlement, lifetime customer value, price optimization or other – takes the basic form of an equation in which certain variables or factors – the explanatory factors – seek to explain or predict a particular outcome.

---

Consider the following general model.

\[ b_0 + b_1X_1 + b_2X_2 + b_3X_3 + e = y \]

Say that \( X_1, X_2 + X_3 \) are explanatory variables used to predict \( y \) – the frequency of an auto claim, for example.

Let’s assume that all three \( X \)s are statistically significant predictors of the likelihood of a claim and the \( b \) values associate with each \( X \) are how much each \( X \) contributes to the explanation of claim.

\( b_0 \) is the “intercept” – a base amount and \( e \) is the error term – the portion of the explanation of the claim not provided by the independent variables.

When the algorithm or model is developed, the modeler will typically data mine some database of personal consumer information, built environment or natural environment for characteristics that are correlated with the desired outcome. These variables are combined into a model, but a variable that might be predictive on its own can lose its predictive capability when combined with other variables because the variables might be correlated with one another. In that event, the variable serving as the proxy for the other variable loses its individual explanatory power. In our example, above, if, say, \( X_1 + X_2 \) are highly correlated, when the two variables are used in the same algorithm, one of the variables will lose its predictive power.

From a statistical and actuarial perspective, a disparate impact analysis does two things. First, it examines the amount of correlation between explanatory variables or factors and protected class characteristics to determine if any of the explanatory variables have significant correlation with, and thereby serve as proxies – in whole or in part – for protected class characteristics.

The second function of a disparate impact analysis is to remove the correlation between the explanatory variables and protected class characteristics with the result that the remaining explanatory power of the explanatory variables is the independent contribution – independent of correlation to protected class characteristics – of the explanatory variables relationship to the outcome.

Consider the following example. Suppose an explanatory factor was perfectly correlated with being a Black American. In statistical terms, this means a perfect or 100% correlation and the explanatory factor is a perfect proxy for being African-American. Assume that when used in an algorithm, this perfect proxy for being a Black American shows us as predictive of some outcome variable. Assume variable \( X_1 \) in our simple model above is the perfect proxy characteristic and further assume that the proxy variable shows a correlation to / is predictive of the outcome variable. Given our assumption that variable \( X_1 \) is a perfect proxy for being Black American, then the results of the model would be identical whether we used the proxy variable or used Black American explicitly. If the proxy variable is used, this would not be intentional discrimination – defined as explicit use of a protected class characteristic – even though it has
precisely the same effect. While most regulators believe they have the authority and obligation to stop the use of such proxies for protected class characteristics, the insurance industry view, as espoused by the American Property Casualty Insurance Association, is that even in this extreme case, there is no unfair discrimination against a protected class.

When the data are run through the model, variable \( X_1 \) shows some correlation to the outcome variable and is, therefore, “predictive.” But, what it is really doing is simply standing in for being Black American and indirectly discriminating on the basis of race. This proxy factor is, in fact, simply reflecting and perpetuating discrimination against Black Americans.

One approach to disparate impact analysis – among many which generally try to remove the correlation between predictive variables and protected class characteristics – is to include a control explanatory variable for being Black American in the algorithm. Let’s know add a new variable to algorithm – a specific variable for being Black American.

\[
b_0 + b_1X_1 + b_2X_2 + b_3X_3 + b_4R_1 + e = y
\]

In statistical and actuarial terms, this is known as adding a control variable. The purpose of the control variable is to remove known correlations and biases in the other explanatory variables in order to better assess the independent and unique explanatory power of these other explanatory variables. For example, in personal auto pricing models, an insurer developing a national pricing model will utilize a control variable for State to remove the effects of correlations with other explanatory variables of State-specific characteristics, such as different minimum liability limits, different tort and no-fault systems and different population distributions by age or other factors, among other things. In our example, our control variable \( R_1 \) is being Black American.

Now, when the data are run through the model, explanatory variable \( X_1 \) – the perfect proxy for being Black American – shows no explanatory power and the control variable now shows the explanatory power that explanatory variable \( X_1 \) had in the original model. This is statistical evidence that explanatory variable \( X_1 \) was discriminating on the basis of race.

Let’s consider two other examples – one in which there is a 50% correlation between variable \( X_1 \) and being Black American and a second in which there is a 0% correlation. In the 50% correlation, the variable \( X_1 \) may still show up as predictive of the outcome, but that predictive power will be different than from our first model without the control variable for being Black American. \( X_1 \)’s new contribution to explaining or predicting the outcome will now be its contribution independent of any correlation to being Black American. Consequently, disparate impact is recognized and minimized. Again, this is a common statistical and actuarial technique.5

---

5 For example, the technique is explained in the chapter, “Credit Scoring and the Fair Lending Issue of Disparate Impact,” in *Credit Scoring for Risk Managers*, Elizabeth May, editor, 2004.
In our third example there is 0% correlation between the variables $X_i$ and $R_i$. In this situation, the predictive power of $X_i$ remains the same as in the original model because there is no disparate impact.

As noted above, disparate impact analysis is particularly suited to insurance because the actuarial justification required for insurance risk classifications is a statistical test – is the characteristic correlated with risk of loss? The same statistical test can be used to evaluate and minimize disparate impact. Stated differently – if a particular correlation and statistical significance is used to justify, say, insurance credit scoring, those same standards of correlation and statistical significance are reasonable evidence of disparate impact and unfair discrimination on the basis of prohibited factors.

In addition, the ability of insurers to identify and minimize disparate impact can be easily built into the development of pricing, marketing or claim settlement models by including consideration of prohibited characteristics as control variables in the development of the model and then omitting these prohibited characteristics when the model is deployed. Again, this is one of many ways to remove the correlations between explanatory variables in algorithms and the protected class characteristics that result in reflection of and perpetuation of historic discrimination or disparate impact.

Recognition by regulators and insurers of disparate impact as unfair discrimination in insurance against protected classes and requirements to identify and

- Minimizes Disparate Impact – Stop the Cycle of Perpetuating Historical Discrimination.
- Promotes Availability and Affordability for Underserved Groups
- Improves Cost-Based Insurance Pricing Models
- Improve Price Signals to Insureds for Loss Mitigation Investments
- Help Identify Biases in Data and Modelers / Improve Data Insights
- Improve Consumer Confidence of Fair Treatment by Insurers

What NAIC Committees and Working Groups Should Be Doing

The NAIC has spread work streams related to Big Data Analytics over a number of groups. With the exception of the Artificial Intelligence Working Group, none of these groups’ work efforts address systemic bias in insurance.
Artificial Intelligence Working Group

The NAIC Artificial Intelligence (AI) Working Group is developing insurance-specific principles for the governance and use of AI in insurance. While there are a number of consumer protection issues associated with insurers’ use of AI (or Big Data Analytics, generally), such as protection of personal data and transparency and accountability to consumers and regulators, the most important consumer protection is establishing a responsibility for insurers and regulators to identify and minimize algorithmic bias and proxy discrimination. Recognition of disparate impact and responsibility of insurers and regulators to minimize such systemic bias must be a core AI insurance principle.

Big Data Working Group

The NAIC Big Data Working Group is examining big data analytics issues across a variety of insurance operations and lines of business. The two actions called for by CEJ regarding disparate impact and data collection should be at the core of all the working group’s inquiries and activities. The Big Data Working Group should be developing the model law or revisions to existing model laws regarding explicit recognition of disparate impact, guidelines for identify and minimizing proxy discrimination and safe harbors for insurers.

Market Regulation and Consumer Affairs Committee

The NAIC Market Regulation and Consumer Affairs Committee is the parent committee for a number of working groups related to insurance market regulation, including data collection for market regulation, market surveillance, market conduct examinations and antifraud efforts. The Committee should be a contributor to the development of model laws regarding disparate impact, but must take the lead on market regulation data collection – both to identify the types of data and algorithms used by insurers and what these data are used for and to re-engineer market regulation data collection to match the granularity and frequency of financial regulation data collection.

Casualty Actuarial and Statistical Task Force

The NAIC Casualty Actuarial and Statistical Task Force deals generally with actuarial issues in property casualty lines of insurance. The Task Force is currently developing a white paper to provide best practices for regulatory review of complex pricing models used by insurers to justify rates. The current draft does not incorporate identification and minimization of systemic bias or disparate impact, but simply lists it as another consideration. Insurance rate standards include rates not being excessive, not being inadequate and not being unfairly discriminatory.

The use of complex predictive models for pricing by insurers is focused on risk segmentation and the development of risk classifications and rating factors. Traditional actuarial techniques – not complex predictive models – are generally used for overall rate level indications – the metric for assessing whether rates are excessive or inadequate. The overwhelming reason
for close scrutiny of complex predictive models by regulators is to assess whether the risk classifications are fair or unfairly discriminatory. It is an understatement to say that the current draft white paper has a massive whole because of the failure to address proxy discrimination and disparate impact. Guidance to insurance regulators for regulatory review of complex insurance predictive models should prioritize the identifications and minimization of systemic bias and disparate impact.

**Accelerated Underwriting Working Group**

The NAIC Accelerated Underwriting Working Group continues the NAIC’s multi-year examination of life insurers’ use of Big Data analytics and predictive models in place of traditional actuarial practices for underwriting and pricing life insurance. While the predictive models now used by life insurers have the same function as those used in auto, home and other property casualty lines of insurance – namely, using non-traditional data and an algorithm to predict claims (or other outcomes of value to the insurer). While there are requirements for property casualty insurers to file these predictive models for regulatory review for some purposes – justifying rates – and special laws and provisions governing property casualty insurers’ use of consumer credit information, there are no similar regulatory requirements for life insurers. The time is long overdue for this working group to develop the model laws for regulatory guidance and consumer protections to ensure consumer protections in the face of life insurers’ growing use of non-traditional, non-insurance data and complex algorithms. And the core of such models laws and regulatory guidance must be identification and minimization of disparate impact and systemic racism.

**Conclusion**

Recent events have highlighted a long-standing gaps in insurer and insurance regulatory practices – the failure to monitor consumer market outcomes for discriminatory impacts against protected classes and the failure to incorporate identification and minimization of proxy discrimination in insurers’ development of predictive models for all aspects of their operations and regulators’ review of these algorithms. The tools are available to address these problems – analysis of disparate impact and improved data collection. CEJ calls on insurers and regulators to match their statements of outrage over systemic racism with the actions needed to identify and minimize such unfair discrimination in insurance.
Using publicly available information to proxy for unidentified race and ethnicity

1. Executive summary

The Consumer Financial Protection Bureau (CFPB) is charged with ensuring that lenders are complying with fair lending laws and addressing discrimination across the consumer credit industry. Information on consumer race and ethnicity is required to conduct fair lending analysis of non-mortgage credit products, but auto lenders and other non-mortgage lenders are generally not allowed to collect consumers’ demographic information. As a result, substitute, or “proxy” information is utilized to fill in information about consumers’ demographic characteristics. In conducting fair lending analysis of non-mortgage credit products in both supervisory and enforcement contexts, the Bureau’s Office of Research (OR) and Division of Supervision, Enforcement, and Fair Lending (SEFL) rely on a Bayesian Improved Surname Geocoding (BISG) proxy method, which combines geography- and surname-based information into a single proxy probability for race and ethnicity. This paper explains the construction of the BISG proxy currently employed by OR and SEFL and provides an assessment of the performance of the BISG method using a sample of mortgage applicants for whom race and ethnicity are reported. Research has found that this approach produces proxies that correlate highly with self-reported race and national origin and is more accurate than relying only on demographic information associated with a borrower’s last name or place of residence alone. The Bureau is committed to continuing our dialogue with other federal agencies, lenders, advocates, and researchers regarding the methodology.
2. Introduction

The Equal Credit Opportunity Act (ECOA) and Regulation B generally prohibit a creditor from inquiring “about the race, color, religion, national origin, or sex of an applicant or any other person in connection with a credit transaction”\(^1\) with a few exceptions, including for applications for home mortgages covered under the Home Mortgage Disclosure Act (HMDA).\(^2\) Information on applicant race and ethnicity, however, is often required to conduct fair lending analysis to identify potential discriminatory practices in underwriting and pricing outcomes.\(^3\)

Various techniques exist for addressing this data problem. Demographic information that reflects applicants’ characteristics—for example, whether or not an individual is White—can be approximated by constructing a proxy for the information. A proxy may definitively assign a characteristic to a particular applicant—an individual is classified as being either White or non-White—or may yield an assignment that is probabilistic—an individual is assigned a probability, ranging from 0% to 100%, of being White. When characteristics are not reported for an entire population of individuals, as is usually the case for non-mortgage credit products, techniques focused on approximating the demographic data generally require relying on additional sources of data and information to construct proxies.

---

\(^1\) 12 C.F.R. § 1002.5(b).

\(^2\) 12 C.F.R. § 1002.5(a)(2) and 12 C.F.R. § 1002.13. For HMDA and its implementing regulation, Regulation C, see 29 U.S.C § 2801-2810 and 12 C.F.R. Part 1003. For the Regulation B provisions concerning requests for information generally, see 12 C.F.R. § 1002.5.

\(^3\) The ECOA makes it unlawful for “any creditor to discriminate against any applicant, with respect to any aspect of a credit transaction (1) on the basis of race, color, religion, national origin, sex or marital status, or age (provided the applicant has the capacity to contract); (2) because all or part of the applicant’s income derives from any public assistance program; or (3) because the applicant has in good faith exercised any right under the Consumer Credit Protection Act.” 15 U.S.C. § 1691(a).
3. Using census geography and surname data to construct proxies for race and ethnicity

In a variety of settings, including the analysis of administrative health care data and the evaluation of fair lending risk in non-mortgage loan portfolios, researchers, statisticians, and financial institutions often rely on publicly available demographic information associated with an individual’s surname and place of residence from the U.S. Census Bureau to construct proxies for race and ethnicity when this information is not reported. A proxy for race and ethnicity may be based on the distribution of race and ethnicity within a particular geographic area. Similarly, a proxy for race and ethnicity may be based on the distribution of race and ethnicity across individuals who share the same last name. Traditionally, researchers and statisticians have relied on information associated with either geography or surnames to develop proxies.\(^4\)

A research paper by Elliott et al. (2009) proposes a method to proxy for race and ethnicity that integrates publicly available demographic information associated with surname and the geographic areas in which individuals reside and generates a proxy that is more accurate than those based on surname or geography alone.\(^5\) The method involves constructing a probability of

\(^{4}\) For example, in conducting fair lending analysis of indirect auto lending portfolios, the Federal Reserve relies on the U.S. Census Bureau’s Spanish Surname List to proxy for Hispanic borrowers. Information on the Federal Reserve’s methodology is available at: http://www.philadelphiafed.org/bank-resources/publications/consumer-compliance-outlook/outlook-live/2013/indirect-auto-lending.cfm.

\(^{5}\) Marc N. Elliott et al., Using the Census Bureau’s Surname List to Improve Estimates of Race/Ethnicity and Associated Disparities, HEALTH SERVICES & OUTCOMES RESEARCH METHODOLOGY (2009) 9:69-83.
assignment to race and ethnicity based on demographic information associated with surname and then updating this probability using the demographic characteristics of the census block group associated with place of residence. The updating is performed through the application of a Bayesian algorithm, which yields an integrated probability that can be used to proxy for an individual’s race and ethnicity. Elliott et al. (2009) refer to this method as Bayesian Improved Surname Geocoding (BISG).

The Office of Research (OR) and the Division of Supervision, Enforcement, and Fair Lending (SEFL) employ a BISG proxy methodology for race and ethnicity in our fair lending analysis of non-mortgage credit products that relies on the same public data sources and general methods used in Elliott et al. (2009).6 The following sections describe these public data sources, explain the construction of the BISG proxy, identify any differences from the general methods used by Elliott et al. (2009), and provide an assessment of the performance of the BISG proxy.

Statistical analysis based on proxies for race and ethnicity is only one factor taken into account by OR and SEFL in our fair lending review of non-mortgage credit products. This paper describes the methodology currently employed by OR and SEFL but does not set forth a requirement for the way proxies should be constructed or used by institutions supervised and regulated by the CFPB.7 Finally, our proxy methodology is not static: it will evolve over time as enhancements are identified that improve accuracy and performance.

---

6 We also rely on a proxy for sex based on publicly available data from the Social Security Administration, available at: http://www.ssa.gov/oact/babynames/limits.html. The focus of this paper, however, is on the BISG methodology and the construction of the proxies for race and ethnicity.

7 The federal banking regulators have made it clear that proxy methods may be used in fair lending exams to estimate protected characteristics where direct evidence of the protected characteristic is unavailable. The CFPB adopted the Interagency Fair Lending Examination Procedures as part of its CFPB Supervision and Examination Manual. See CFPB Supervision and Examination Manual, Part II, C, ECOA, Interagency Fair Lending Examination Procedures at 19, available at http://files.consumerfinance.gov/f/201210_cfpb_supervision-and-examination-manual-v2.pdf (explaining that “[a] surrogate for a prohibited basis group characteristic may be used” in a comparative file review and providing examples of surname proxies for race/ethnicity and first name proxies for sex).
3.1 Data sources

3.1.1 Surname

Information used to calculate the probability of belonging to a specific race and ethnicity given an individual’s surname is based on data derived from Census 2000 that was released by the U.S. Census Bureau in 2007.\(^8\) This release provides each surname held by at least 100 enumerated individuals, along with a breakdown of the percentage of individuals with that name belonging to one of six race and ethnicity categories: Hispanic; non-Hispanic White; non-Hispanic Black or African American; non-Hispanic Asian/Pacific Islander; non-Hispanic American Indian and Alaska Native; and non-Hispanic Multiracial. These categories are consistent with 1997 Office of Management and Budget (OMB) definitions.\(^9,10\) In total, the list provides 151,671 surnames, covering approximately 90% of the U.S. population. Word et al. (2008) provides a detailed description of how the census surname list was constructed and describes the routines used to standardize surnames appearing on the list.\(^11\)

3.1.2 Geography

Information on the racial and ethnic composition of the U.S. population by geography comes from the Summary File 1 (SF1) from Census 2010, which provides counts of enumerated

---

\(^8\) The data and documentation are available at: \url{http://www.census.gov/genealogy/www/data/2000surnames/}. The most recent census year for which the surname list exists is 2000. We will rely on more current data when it becomes available.

\(^9\) This classification holds Hispanic as mutually exclusive from the race categories, with individuals identified as Hispanic belonging only to that category, regardless of racial background. The Census relies on self-identification of both race and ethnicity when determining race and ethnicity for these individuals, with an exception made for classification to the “Some Other Race” category. In Census 2000, some individuals identifying as “Some Other Race” also specified a Hispanic nationality (e.g., Salvadoran, Puerto Rican); in these instances, the Census identified the respondent as Hispanic. OMB definitions are available at: \url{http://www.whitehouse.gov/omb/fedreg_1997standards}.

\(^10\) In the census surname data, the Census Bureau suppressed exact counts for race and ethnicity categories with 2-5 occurrences for a given name. Similarly to Elliott et al. (2009), in these cases we distribute the sum of the suppressed counts for each surname evenly across all categories with missing nonzero counts.

© 2020 National Association of Insurance Commissioners 68
individuals by race and ethnicity for various geographic area definitions, with census block serving as the highest level of disaggregation (the smallest geography). In the decennial Census of the Population, the Census Bureau uses a classification scheme for race and ethnicity that differs slightly from the scheme used by OMB. Census treats Hispanic as an ethnicity and the other OMB categories as racial identities. However, Census does report population counts by race and ethnicity in a way that allows for the creation of race and ethnicity population totals that are consistent with the OMB definition. Our method relies on race and ethnicity information for the adult (age 18 and over) population at the census block group, census tract, and 5-digit zip code levels, as discussed in the next section.

### 3.2 Constructing the BISG probability

Constructing the BISG proxy for race and ethnicity for a given set of applicants requires place of residence (address) and name information for those applicants, the census surname list, and census demographic information by census block group, census tract, and 5-digit zip code. The process occurs in a number of steps:

1. Applicants’ surnames are standardized and edited, including removing special characters and titles, such as JR and SR, and parsing compound names.

---

12 The hierarchy of census geographic entities, from smallest to largest, is: block, block group, tract, county, state, division, region, and nation. Block group level information appears in Table P9 (“Hispanic or Latino, and Not Hispanic or Latino by Race”) in the SF1. Table P11 in the SF1 provides similar counts for the restricted population of individuals 18 and over. The public can access these data in a variety of ways, including through the American FactFinder portal at: [http://factfinder2.census.gov/faces/nav/jsf/pages/index.xhtml](http://factfinder2.census.gov/faces/nav/jsf/pages/index.xhtml).

13 In the 2010 SF1, Census produced tabulations that report counts of Hispanics and non-Hispanics by race. These tabulations include a “Some Other Race” category. As in Elliott et al. (2009), we reallocate the “Some Other Race” counts to each of the remaining six race and ethnicity categories using an Iterative Proportional Fitting procedure to make geography based demographic categories consistent with those on the census surname list.

14 Throughout this paper, we use 5-digit zip code, when referring to zip code demographics, as a synonym for ZIP Code Tabulation Areas (ZCTAs) as defined by the U.S. Census Bureau. More information on the construction of ZCTAs is available at: [https://www.census.gov/geo/reference/zctas.html](https://www.census.gov/geo/reference/zctas.html).

15 From the SF1, we retain population counts for the contiguous U.S., Alaska, and Hawaii in order to ensure consistency with the population covered by the census surname list.
2. Standardized surnames are matched to the census surname list. For applicants with compound surnames, if the first word of the compound surname successfully matches to the surname data, it is used to calculate the surname based probability. If the first word does not match, the second word is then tried. For example, if an applicant’s last name is Smith-Jones, the demographic information associated with Smith is used if Smith appears on the name list. If Smith does not appear on the name list, then the information associated with Jones is used if Jones is on the list.

3. For each name that matches the census surname list, the probability of belonging to a given racial or ethnic group (for each of the six race and ethnicity categories) is constructed. The probability is simply the proportion (or percentage) of individuals who identify as being a member of a given race or ethnicity for a given surname. For example, according to the census surname list, 73% of individuals with the surname Smith report being non-Hispanic White; thus, for any individual with the last name Smith, the surname-based probability of being non-Hispanic White is 73%. For applications with names that do not match the census surname list, a probability is not constructed. These records are excluded in subsequent analysis.\(^\text{16}\) Given that approximately 10% of the U.S. population is not included on the census surname list, one would reasonably expect roughly a 10% reduction in the number of records in a proxied dataset due to non-matches to the census surname list.

4. Applicant address information is standardized in preparation for geocoding. Standardization includes basic checks such as removing non-numeric characters from zip codes, making sure zip codes with leading zeroes are accurately identified, and ensuring address information is in the correct format, for example, that house number, street, city, state, and zip code are appropriately parsed into separate fields.

5. Addresses are mapped into census geographic areas using a geocoding and mapping software application.\(^\text{17}\) The geocoding application used by OR and SEFL in building the

---

\(^{16}\) Elliott et al. (2009) retain records in their assessment data that do not appear on the surname list. To do so, they use the distribution of race and ethnicity appearing on the name list and the national population counts in the Census 2000 SF1 to characterize the unlisted population. OR and SEFL continue to evaluate the approach undertaken by Elliott et al. (2009) and may adopt a method for proxying the unlisted surname population in future updates to the proxy methodology.

\(^{17}\) We currently use ArcGIS Version 10.1 with Street Map Premium 2011 Release 3 to geocode data when building the proxy. We may rely on updated releases as they become available or may move to different geocoding technology in the future. The BISG proxy methodology does not require the use of a specific geocoding technology.
proxy identifies the geographic precision to which an address is geocoded, and the precision of geocoding determines the precision of the demographic information relied upon.\textsuperscript{18} For addresses that are geocoded to the latitude and longitude of an exact street address (often referred to as a “rooftop”), information on race and ethnicity for the adult population residing in the census block group containing the street address is used; if the census block group has zero population, information for the census tract is used. For addresses that are geocoded to street name, 9-digit zip code, and 5-digit zip code, the race and ethnicity information for the adult population residing in the 5-digit zip code is used. Addresses that cannot be geocoded or that can be geocoded only to a geographical area that is less precise than 5-digit zip code (for example, city or state) are excluded in subsequent analysis.

6. For geocoded addresses, the proportion (or percentage) of the U.S. adult population for each race and ethnicity residing in the geographic area containing the address or associated with the 5-digit zip code is calculated.

7. Bayes Theorem is used to update the surname-based probabilities constructed in Step 3 with the information on the concentration of the U.S. adult population constructed in Step 6 to create a probability—a value between, or equal to, 0 and 1—of assignment to each of the 6 race and ethnicity categories. These proxy probabilities can be used in statistical analysis aimed at identifying potential differences in lending outcomes.

Appendix A provides the mathematical formula associated with Step 7 and an example of the construction of the BISG proxy probabilities for an individual with the last name Smith residing in California. The statistical software code, written in Stata, and the publicly available census data files used to build the BISG proxy are available at: https://github.com/cfpb/proxy-methodology. Because OR and SEFL currently use ArcGIS to geocode address information when building the proxy, the geocoding of address information must occur before running the Stata code that builds the BISG proxy. The use of alternative geocoding applications may return slightly different geocoding results and, therefore, may yield different BISG probabilities than those generated using ArcGIS.

Steps 1 through 7 describe the general process currently undertaken by OR and SEFL to construct proxies for race and ethnicity for fair lending analysis. Unique features of a dataset

\textsuperscript{18} The precision of the geocoding is driven by the availability of address information and the geocoding software application’s assessment of the quality of address information provided.

© 2020 National Association of Insurance Commissioners
under review, for example, the quality of surname data and the ability to match individuals to the census surname list, or the quality of address information and the ability to geocode to an acceptable level of precision, may lead to a modification of the general methodology, as appropriate.
4. Assessing the ability to predict race and ethnicity: an application to mortgage data

Elliott et al. (2009) demonstrate, using health plan enrollment data with reported race and ethnicity, that the BISG proxy methodology is more accurate than either the traditional surname-only or geography-only methodologies. In this section, we discuss a similar validation of the BISG proxy in the mortgage lending context.

To assess the performance of the BISG proxy in this context, the geography-only, surname-only, and BISG proxies for race and ethnicity were constructed for applicants appearing in a sample of mortgage loan applications in 2011 and 2012 for which address, name, and race and ethnicity were reported. These data were provided to the CFPB by a number of lenders pursuant to the CFPB’s supervisory authority. Applications with surnames that did not match the surname list were excluded.

19 The geography-only probability proxy is constructed in a manner that is similar to the construction of the surname-only proxy. For each geocoded address, the probability of belonging to a given racial or ethnic group (for each of the six race and ethnicity categories) is constructed. The probability is simply the proportion (or percentage) of individuals who identify as being a member of a given race or ethnicity who reside in the block group, census tract, or area corresponding to the 5-digit zip code, depending on the precision to which an applicant’s address is geocoded.

20 The reported race and ethnicity used in the assessment are derived from the HMDA reported race and ethnicity contained in the mortgage data sample. Ethnicity (Hispanic) and race—American Indian/Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White—are reported at the applicant level. For a given applicant, up to five races may be reported. The reported HMDA race and ethnicity are used to classify applicants in a manner consistent with the six mutually exclusive race and ethnicity categories defined by the Office of Management and Budget and used on the census surname list. Applications for which race or ethnicity information was not provided were omitted from the initial sample.
and with addresses that could not be geocoded to at least the 5-digit zip code were omitted from the analysis. Table 1 shows that for the initial sample of 216,798 mortgage applications, 26,363 applications—approximately 12% of the initial sample—were omitted from the analysis, resulting in a final sample of 190,435.

</table>

For each applicant, three probabilities of assignment to each of the six race and ethnicity categories were constructed: a probability based on census race and ethnicity information associated with geography (geography-only); a probability based on census race and ethnicity information associated with surname (surname-only); and the BISG probability based on census race and ethnicity information associated with surname and geography (BISG). As previously discussed, the probabilities themselves may be used to proxy for race and ethnicity by assigning to each record a probability of belonging to a particular racial or ethnic group. These probabilities can be used to estimate the number of individuals by race and ethnicity and to identify potential disparities in outcomes through statistical analysis.

Assessing the accuracy of the proxy involves comparing a probability that can range between 0 and 1 (a continuous measure) to reported race and ethnicity classifications that, by definition, take on values of only 0 or 1 (a dichotomous measure). Accuracy can be evaluated in at least two ways: (1) by comparing the distribution of race and ethnicity across all applicants based on the proxy to the distribution based on reported characteristics and (2) by assessing how well the proxy is able to sort applicants into the reported race and ethnicity categories. The tendency for low values of the proxy to be associated with low incidence of individuals in a particular racial or ethnic group and for high values of the proxy to be associated with high incidence is measured by the correlation between the proxy and reported classification for a given race and ethnicity. Additional diagnostic measures, such as Area Under the Curve (AUC) statistics, reflect the extent to which a proxy probability accurately sorts individuals into target race and ethnicity and provides a statistical framework for assessing improvements in sorting attributable to the BISG proxy. Section 4 provides an evaluation of the use of the BISG probability proxy and
assesses performance relative to reported race and ethnicity, illustrating the merits of relying on the BISG probability proxy rather than on a proxy based solely on information associated with geography or surname alone.

### 4.1 Composition of lending by race and ethnicity

Table 2 provides the distribution of reported race and ethnicity (Reported) and the distributions based on the BISG, surname-only, and geography-only proxies. For the Reported row, the percentage in each cell is calculated as the sum of the reported number of individuals in each racial or ethnic group divided by the number of applicants in the sample (multiplied by 100). For the proxies, the percentage is simply the sum of the probabilities for each race and ethnicity divided by the number of applicants in the sample (multiplied by 100). For example, two individuals each with a 0.5 probability of being Black and a 0.5 probability of being White would contribute a count of 1 to both the Black and the White totals.

21 In this table and in subsequent tables, we refer only to the race for a non-Hispanic race group. For instance, the “White” category refers to “Non-Hispanic White.”
As the table indicates, all three proxies tend to approximate the reported population race and ethnicity. However, each also tends to underestimate the population of non-Hispanic Whites and overestimate the other race and ethnicity categories, which may reflect differences between the racial and ethnic composition of the census based populations used to construct the proxies and the racial and ethnic composition of individuals applying for mortgages.

Importantly, however, the BISG proxy comes closer to approximating the reported race and ethnicity than the traditional proxy methodologies, with the only exception being for Asian/Pacific Islanders and Multiracial. Though we see small absolute gains in accuracy from use of a BISG proxy for some groups relative to the traditional methods of proxying, these gains frequently represent a sizeable improvement in terms of relative performance. For example, the gap between reported race and estimated race for non-Hispanic Whites shrinks by 1.1% (from 82.9% – 78.6% = 4.3% to 82.9% – 79.7% = 3.2%) when moving from a geography-only to the BISG proxy. Given the initial gap of 4.3% this represents an almost 25% reduction in the difference between estimated and reported race. The gaps for non-Hispanic Black, non-Hispanic American Indian/Alaska Native, and Hispanic shrink in a similar manner. For non-Hispanic Asian/Pacific Islander, the gap between estimated and reported totals increases by 0.2% in absolute terms compared to the geography-only alternative and by 0.1% compared to the surname-only alternative. For the non-Hispanic Multiracial category, the BISG proxy does slightly better than the surname-only and slightly worse than the geography-only proxy in approximating the reported percentage.

4.2 Predicting race and ethnicity for applicants

4.2.1 Correlations between the proxy and reported race and ethnicity

Table 3 provides the correlations between reported race and ethnicity and the BISG, surname-only, and geography-only proxies.

Correlation is a statistical measure of the relationship between different variables—in this case the race and ethnicity proxy and an applicant’s reported race and ethnicity. Positive values indicate a positive correlation (as one variable increases in value, so does the other), negative values imply negative correlation (as one variable increases in value, the other decreases), and 0 indicates no statistical relationship. By definition, a correlation coefficient of 0 means that the proxy probability has no predictive power in explaining movement in the reported value, while a coefficient of 1 means that an increase in the proxy probability perfectly predicts increases in the reported values. Higher values of the correlation measure indicate a stronger ability to accurately sort individuals both into and out of a given race and ethnicity classification.

Correlations associated with the BISG proxy probabilities for Hispanic and non-Hispanic White, Black, and Asian/Pacific Islander are large and suggest strong positive co-movement with reported race and ethnicity. This means, for example, that the Hispanic proxy value is higher on average for individuals who are reported as Hispanic than for those who are not. For non-Hispanic American Indian/Alaska Native and the Multiracial classifications, correlations are positive but close to zero for all proxy methods, suggesting a low degree of power in predicting reported race and ethnicity for these two groups.

Looking across the rows in Table 3, correlations associated with the BISG are higher than those associated with the surname-only and geography-only proxies, notably for non-Hispanic Black and non-Hispanic White, reflecting the increase in the strength of the relationship between the proxy and reported characteristic from the integration of information associated with surname and geography in the BISG proxy. These results align closely with those found in Elliott et al.
(2009), which, as previously noted, assessed the BISG proxy using national health plan enrollment data. 

4.2.2 Area Under the Curve (AUC)

While correlations illustrate the overall extent of co-movement between the proxies and reported race and ethnicity, it is also important to assess the extent to which the proxy probabilities successfully sort individuals into each race and ethnicity.

A statistic that can be used to calculate this is called the Area Under the Curve (AUC), which represents the likelihood that the proxy will accurately sort individuals into a particular racial or ethnic group. For example, if one randomly selects an individual who is reported as Hispanic and a second individual who is reported as non-Hispanic, the AUC represents the likelihood that the randomly selected individual reported as Hispanic has a higher proxy value of being Hispanic than the randomly selected individual reported as non-Hispanic. The AUC can be used to test the hypothesis that one proxy is more accurate than another at sorting individuals in order of likelihood of belonging to a given race and ethnicity. An AUC value of 1 (or 100%) reflects perfect sorting and classification, and a value of 0.5 (or 50%) suggests that the proxy is only as good as a random guess (e.g., a coin toss).

Table 4 provides the results of statistical comparisons of the geography-only, surname-only, and BISG probabilities. The AUC statistics associated with the BISG proxy for Hispanic and non-Hispanic White, Black, and Asian/Pacific Islander are large and exceed 90%. For instance, the AUC statistic associated with the BISG proxy for non-Hispanic Black is 0.9540, suggesting that 95% of the time, a randomly chosen individual reported as Black will have a higher BISG probability of being Black than a randomly chosen individual reported as non-Black.

---

22 Table 4 of Elliott et al. (2009): Non-Hispanic White (0.76); Hispanic (0.82); Black (0.70); Asian/Pacific Islander (0.77); American Indian/Alaska Native (0.11); and Multiracial (0.02).

23 The AUC is based on the Receiver Operating Characteristic (ROC) curve, which plots the tradeoff between the true positive rate and the false positive rate for a given proxy probability over the entire range of possible threshold values that could be used to classify individuals with certainty to the race and ethnicity being proxied. See Appendix B for more detail on the construction of the ROC curves and calculation of the AUC.

</table>

For each of these four race and ethnicity categories, the AUC for the BISG proxy probability is statistically significantly larger than the AUC for the surname-only and geography-only probabilities, suggesting that, at or above the 99% level of statistical significance, the BISG more accurately sorts individuals than the traditional proxy methodologies. The greatest improvements in the AUC are associated with the BISG proxy for non-Hispanic White and Black, as the AUC is considerably higher than the AUCs associated with the geography-only and surname-only proxies. For Hispanic and non-Hispanic Asian/Pacific Islander, this improvement is only marginal relative to the performance of the surname-only proxy. Performance for non-Hispanic American Indian/Alaska Native and Multiracial, while generally improved by the use of the BISG proxy probabilities, is weak overall regardless of proxy choice, with only an 18% improvement in sorting over a random guess. These results suggest that proxies based on census geography and surname data are not particularly powerful in their ability to sort individuals into these two race and ethnicity categories.

24 The p-values for the tests of equivalence of the AUC statistics for the BISG and geography-only proxies and the BISG and surname-only proxies for each race and ethnicity appear in the last two rows of Table 4.
4.2.3 Classification over the range of proxy values

The BISG proxy’s ability to sort individuals is made clear through an evaluation of the number of applicants falling within ranges of proxy probability values. For example, for 10% bands of the BISG proxy probability for Hispanics, Table 5 provides: the number of total applicants (column 1); the estimated number of Hispanic applicants based on the summation of the BISG probability (column 2); the number of reported Hispanic applicants (column 3); the number of reported non-Hispanic White applicants (column 4); and the number of reported other minority, non-Hispanic applicants (column 5). A few results are worth noting.

</table>

*Estimated Hispanic (BISG) is calculated as the sum of the BISG probabilities for being Hispanic within the corresponding proxy probability range.
First, the distribution of the BISG proxy probability is bimodal with concentrations of total applicants for low (e.g., 0%-20%) and high (e.g., 80%-100%) values of the proxy, which illustrates the sorting feature of the proxy. Reported Hispanic applicants are concentrated within high values of the proxy. For example, 65% \( \frac{(1,347+5,883)}{11,073} \) of reported Hispanic applicants (column 3) have BISG proxy probabilities greater than 80%; this concentration is mirrored by the estimated number of Hispanic applicants (column 2), 68% of whom have BISG proxy probabilities greater than 80% \( \frac{(1,529+6,312)}{11,516} \). While the BISG proxy may assign high values to some non-Hispanic applicants, 98% \( \frac{(153,974+1,207)}{157,856} \) of the reported non-Hispanic White and 97% \( \frac{(20,465+350)}{21,506} \) of the reported other non-Hispanic minority borrowers have Hispanic BISG proxy probabilities that are less than 20%.

Second, there are reported Hispanic applicants over the full range of values of the BISG proxy; this is also reflected by the estimated counts in column 2. For example, there are 597 applicants with BISG proxy values between 50% and 60%, of whom 279 are reported as being Hispanic, while the BISG proxy estimate of the number of Hispanic applicants in this range—calculated by summing probabilities for individuals within this probability range—is 328.

As suggested by Table 5 the BISG proxy tends to overestimate the number of Hispanic applicants for the mortgage pool under review. In the final row of column (3) we see that the total number of reported Hispanic applicants is 11,073. The estimated total number of Hispanic applicants—calculated as the sum of the BISG probabilities for Hispanic applicants—is 11,516 (column 2), which overestimates the number of Hispanic applicants by 4%. This overestimation may reflect, as discussed in Section 4.1, the use of demographic information based on the population at large to proxy the characteristics of mortgage applicants. According to the 2010 Census of Population, 14% of the U.S. adult population was Hispanic; 67% non-Hispanic White; 12% non-Hispanic Black; 5% Asian/Pacific Islander; and 1% American Indian/Alaska Native. According to the 2010 HMDA loan application data for all reporting mortgage originators, only 7% of applicants for home mortgages were Hispanic; 80% non-Hispanic White; 6% non-Hispanic Black; 6% Asian/Pacific Islander; and less than 1% American Indian/Alaska Native. Mortgage borrowers tend to be disproportionately non-Hispanic White and, in particular, underrepresent Hispanic and non-Hispanic Blacks relative to the population of the U.S.

\(^{25}\) The HMDA distributions for race and ethnicity are based only on applicant information for which race and ethnicity is reported and for applications that were originated, approved but not accepted, and denied by lenders.
OR and SEFL rely directly on the BISG probability in our fair lending related statistical analyses. In contrast, some practitioners rely on the use of a probability proxy and a threshold rule to classify individuals into race and ethnicity. When a threshold rule is used, individuals with proxy probabilities equal to and greater than a specific value, for example 80%, are considered to belong to a group with certainty, while all others are considered non-members with certainty. Consider two individuals who are assigned BISG probabilities of being non-Hispanic Black: individual A with 82% and individual B with 53%. The application of an 80% threshold rule for assignment would force individual A’s probability to 100% and classify that individual as being Black and force individual B’s probability to 0% and classify that individual as being non-Black.

The threshold rule removes the uncertainty about group membership at the cost of decreased statistical precision, with that precision deteriorating with decreases in the proxy’s ability to create separation across races and ethnicity. In situations in which researchers can obtain clear separation between groups—for instance, situations for which the probabilities of assignment tend to be very close to 0 or 1—the consequences of using a threshold assignment rule, beyond simple measurement error, would be minor. However, when insufficient separation exists—for example, when there are a significant number of individuals with probabilities between 20% and 80% of belonging to a particular group—the use of thresholds can artificially bias, usually downward, estimates of the number of individuals belonging to particular racial and ethnic groups and potentially attenuate estimates of differences in outcomes between groups.

Table 5 makes clear the consequence of applying a threshold rule to the BISG proxy probability to force classification with certainty. If an 80% threshold rule is applied, the estimated number of Hispanic applicants is 8,314—the sum of all applicants in column (1) with a BISG probability equal to or greater than 80%—which underestimates the reported number of 11,073 Hispanic applicants by 25%. The underestimation is driven by the failure to count the large number of individuals in column (3) who are reported as being Hispanic in the mortgage sample but for whom the BISG probability of assignment is less than 80%.

It is worth noting that the application of an 80% threshold rule to classify individuals also yields false positives: individuals who are reported as being non-Hispanic but, nonetheless, are assigned BISG proxy probabilities of being Hispanic equal to or greater than 80%. For the mortgage pool under review, 881 applicants who are reported as being non-Hispanic White and 203 applicants who are reported as being some other minority would be classified as Hispanic by an 80% threshold rule. The false positive rate associated with these 1,084 observations is 0.6%, measured as the number of false positives (1,084) as a percentage of the total number of false positives plus the 178,278 true negative reported non-Hispanics with BISG probabilities.
less than 80%. The false discovery rate for these same 1,084 observations is 13%, measured as the number of false positives (1,084) as a percentage of 8,314 applicants identified as Hispanic by the 80% threshold rule.

Classification and misclassification tables for the other five race and ethnicity categories appear in Appendix C.
5. Conclusion

Information on consumer race and ethnicity is generally not collected for non-mortgage credit products. However, information on consumer race and ethnicity is required to conduct fair lending analysis. Publicly available data characterizing the distribution of the population across race and ethnicity on the basis of geography and surname can be used to develop a proxy for race and ethnicity. Historically, practitioners have relied on proxies based on geography or surname only. A new approach proposed in the academic literature—the BISG method—combines geography- and surname-based information into a single proxy probability. In supervisory and enforcement contexts, OR and SEFL rely on a BISG proxy probability for race and ethnicity in fair lending analysis conducted for non-mortgage products.

This paper explains the construction of the BISG proxy currently employed by OR and SEFL and provides an assessment of the performance of the BISG method using a sample of mortgage applicants for whom race and ethnicity are reported. Our assessment demonstrates that the BISG proxy probability is more accurate than a geography-only or surname-only proxy in its ability to predict individual applicants’ reported race and ethnicity and is generally more accurate than a geography-only or surname-only proxy at approximating the overall reported distribution of race and ethnicity. We also demonstrate that the direct use of the BISG probability does not introduce the sample attrition and significant underestimation of the number of individuals by race and ethnicity that occurs when commonly-relied-upon threshold values are used to classify individuals into race and ethnicity categories.

OR and SEFL do not require the use of or reliance on the specific proxy methodology put forth in this paper, but we are making available to the public the methodology, statistical software code, and our understanding of the performance of the methodology for a pool of mortgage applicants in an effort to foster transparency around our work. The methodology has evolved over time and will continue to evolve as enhancements are identified that improve accuracy and performance. Finally, the Bureau is committed to continuing our dialogue with other federal agencies, lenders, advocates, and researchers regarding the methodology.
6. Technical Appendix A: Constructing the BISG probability

For race and ethnicity, demographic information associated with surname and place of residence are combined to form a joint probability using the Bayesian updating methodology described in Elliott, et al. (2009). For an individual with surname $s$ who resides in geographic area $g$:

1. Calculate the probability of belonging to race or ethnicity $r$ (for each of the six race and ethnicity categories) for a given surname $s$. Call this probability $p(r|s)$.

2. Calculate the proportion of the population of individuals in race or ethnicity $r$ (for each of the six race and ethnicity categories) that lives in geographic area $g$. Call this proportion $q(g|r)$.

3. Apply Bayes’ Theorem to calculate the likelihood that an individual with surname $s$ living in geographic area $g$ belongs to race or ethnicity $r$. This is described by

$$Pr(r|g, s) = \frac{p(r|s)q(g|r)}{\sum_{r \in R} p * q}$$

where $R$ refers to the set of six OMB defined race and ethnicity categories. To maintain the statistical validity of the Bayesian updating process, one assumption is required: the probability of residing in a given geography, given one’s race, is independent of one’s surname. For example, the accuracy of the proxy would be impacted if Blacks with the last name Jones preferred to live in a certain neighborhood more than both Blacks in general and all people with the last name Jones.
Suppose we want to construct the BISG probabilities on the basis of surname and state of residence for an individual with the last name Smith who resides in California. Table 6 provides the distribution across race and ethnicity for individuals in the U.S. with the last name Smith. For individuals with the surname Smith, the probability of being non-Hispanic Black, based on surname alone, is simply the percentage of the Smith population that is non-Hispanic Black: 22.22%.

<table>

<tr>
<td>American Indian/Alaska Native</td>
<td>0.85%</td>
</tr>
<tr>
<td>Multiracial</td>
<td>1.63%</td>
</tr>
</tbody>
</table>

To update the probabilities of assignment to race and ethnicity, the percentage of the U.S. population residing in California by race and ethnicity is calculated. These percentages appear in Table 7.

---

26 In the example, we choose to use state to make the example easy to understand. In practice, a finer level of geographic detail is used as discussed earlier.

27 “Smith” is the most frequently occurring surname in the 2000 Decennial Census of the Population. There are 2,376,206 individuals in the 2000 Decennial Census of Population with the last name “Smith” according to the surname list (http://www.census.gov/genealogy/www/data/2000surnames/).
Given the information provided in these two tables, we can now construct the probability that Smith’s race is non-Hispanic Black, given surname and residence in California using Bayes’ Theorem. The probability of being non-Hispanic Black for the surname Smith (22.22%) is multiplied by the percentage of the non-Hispanic Black population residing in California (6.03%) and then divided by the sum of the products of the surname-based probabilities and percentage of the population residing in California for all six of the race and ethnicity categories:

\[
\frac{.2222 \times .0603}{.7335 \times .0791 + .0156 \times .2776 + .2222 \times .0603 + .0040 \times .3335 + .0085 \times .0786 + .0163 \times .1752} \approx 16.61\%
\]

This same calculation is performed for the remaining race and ethnicity categories. Table 8 provides the surname-only and updated BISG probabilities for all six race and ethnicity categories for individuals with the last name Smith residing in California.
TABLE 8: SURNAME-ONLY AND BISG PROBABILITIES FOR "SMITH" IN CALIFORNIA

<table>
<thead>
<tr>
<th>Race/Ethnicity</th>
<th>Surname-only</th>
<th>BISG</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hispanic</td>
<td>1.56%</td>
<td>5.37%</td>
</tr>
<tr>
<td>White</td>
<td>73.35%</td>
<td>72.00%</td>
</tr>
<tr>
<td>Black</td>
<td>22.22%</td>
<td>16.61%</td>
</tr>
<tr>
<td>Asian and Pacific Islander</td>
<td>0.40%</td>
<td>1.65%</td>
</tr>
<tr>
<td>American Indian/Alaska Native</td>
<td>0.85%</td>
<td>0.83%</td>
</tr>
<tr>
<td>Multiracial</td>
<td>1.63%</td>
<td>3.54%</td>
</tr>
</tbody>
</table>

The impact of the adjustment of the surname based probabilities is readily apparent: the surname probability is weighted downward or upward depending on the degree of overrepresentation or underrepresentation of the population of a given race and ethnicity in California relative to the percentage of the U.S. population residing in California. For example, just under 12% of the U.S. population resides in California but nearly 28% of Hispanics in the U.S. reside in California. Knowing that Smith resides in California and that California is more heavily Hispanic than the nation as a whole leads to an increase in the probability that Smith is Hispanic compared to the probability calculated based on surname information alone.
7. Technical Appendix B: Receiver Operating Characteristics and Area Under the Curve

One way to characterize the proxy’s ability to sort individuals into race and ethnicity is to plot the Receiver Operating Characteristic (ROC) curve. The ROC curve is constructed by applying a threshold rule for classification to each race and ethnicity, where probabilities above the threshold yield classification to a given race and ethnicity and those below do not, and then plotting the relationship between the false positive rate and the true positive rate over the range of possible threshold values.

Figures 1 through 6 show the ROC curves for the geography-only, name-only, and BISG probabilities by race and ethnicity. In each plot, the true positive rate is measured on the y-axis and the false positive rate is measured on the x-axis. The slope of the ROC curve represents the tradeoff between identifying true positives at the expense of increasing false positives over the range of possible threshold values. The ROC curve for a perfect proxy—one that could classify individuals into and out of a given race and ethnicity with no misclassification—moves along the edges of the figure from (0,0) to (0,1) to (1,1). The closer that the ROC curve is to the left and upper edge of the plot area, the better the proxy is at correctly classifying individuals.

---

28 The true positive rate is defined as the ratio of the number of applicants correctly classified into a reported race and ethnicity by a given threshold divided by the total number applicants reporting the race and ethnicity; the false positive rate is defined as the ratio of applicants incorrectly classified into a reported race and ethnicity by a given threshold divided by the total number of applicants not reporting the race and ethnicity.
that provides no useful information instead moves along the 45-degree line that runs through the middle of the figure. Movement along this line implies that a proxy measure has no ability to meaningfully identify more true members of a group without simultaneously identifying a similar proportion of non-members.

The graphs demonstrate that for Hispanic and non-Hispanic White, Black, and Asian/Pacific Islander, the BISG proxy is generally associated with a higher ratio of true positives to false positives across all possible threshold values, as shown by the general tendency for BISG’s ROC curve to be located to the left and above of the ROC curves for the surname-only and geography-only proxies. The BISG proxy’s overall ability to improve sorting, relative to the surname-only or geography-only proxy, is especially notable for non-Hispanic Whites and Blacks. The AUC statistic discussed in Section 4.2.2 simply represents the area beneath the ROC curve and above the x-axis.

A New Method for Estimating Race/Ethnicity and Associated Disparities Where Administrative Records Lack Self-Reported Race/Ethnicity

Marc N. Elliott, Allen Fremont, Peter A. Morrison, Philip Pantoja, and Nicole Lurie

Abstract

Objective

To efficiently estimate race/ethnicity using administrative records to facilitate health care organizations’ efforts to address disparities when self-reported race/ethnicity data are unavailable.

Data Source

Surname, geocoded residential address, and self-reported race/ethnicity from 1,973,362 enrollees of a national health plan.

Study Design

We compare the accuracy of a Bayesian approach to combining surname and geocoded information to estimate race/ethnicity to two other indirect methods: a non-Bayesian method that combines surname and geocoded information and geocoded information alone. We assess accuracy with respect to estimating (1) individual race/ethnicity and (2) overall racial/ethnic prevalence in a population.

Principal Findings

The Bayesian approach was 74 percent more efficient than geocoding alone in estimating individual race/ethnicity and 56 percent more efficient in estimating the prevalence of racial/ethnic groups, outperforming the non-Bayesian hybrid on both measures. The non-Bayesian hybrid was more efficient than geocoding alone in estimating individual race/ethnicity but less efficient with respect to prevalence ($p<.05$ for all differences).

Conclusions

The Bayesian Surname and Geocoding (BSG) method presented here efficiently integrates administrative data, substantially improving upon what is possible with a single source or from other hybrid methods; it offers a powerful tool that can help health care organizations address disparities until
self-reported race/ethnicity data are available.

**Keywords:** Bayes's theorem, health disparities, health plans, race, surname

Efforts to measure, monitor, and address racial/ethnic disparities in health care have been limited by the paucity of data regarding the race/ethnicity of users of the health care system. Indeed, until recently, many viewed the collection of such data as illegal (Fremont and Lurie 2004). One result is that the preponderance of studies on racial/ethnic differences in quality of care and patient outcomes has been limited to patients enrolled in Medicare or Medicaid. Several reports from the Institute of Medicine and the National Academy of Sciences recommend universal collection of self-reported data regarding race, ethnicity, and socioeconomic status as a first step toward addressing disparities (Institute of Medicine 2002; National Research Council 2004). While self-reported data are widely considered to be the gold standard, absent a mandate to do so, collection of such data will be slow and inconsistent.

Several efforts to collect and use such data are underway. For example, the Health Research and Educational Trust, an independent research affiliate of the American Hospital Association, has developed a toolkit for and is assisting a growing number of hospitals with collection of racial, ethnic, and language data. Similarly, a group of hospitals funded by the Robert Wood Johnson Foundation to address disparities in cardiovascular care have committed to collecting race/ethnicity data and monitoring quality of care for different racial/ethnic groups. State policy has also moved toward collecting racial/ethnic data. For example, as part of the Massachusetts health care reform legislation, collection of race/ethnicity data from all hospitalized patients is required by law (Boston Public Health Commission 2006). In California, SB 853 and related regulations require HMO plans to collect race, ethnicity, and language information (California State Senate 2007). Finally, several of the plans participating in the National Health Plan Collaborative to Improve Quality and Eliminate Disparities have begun voluntary collection of self-reported data on the race/ethnicity of their enrollees (National Health Plan Collaborative 2006). Aetna has the most experience in doing so, but even with a mandate from their CEO and significant investment of resources over the past 4 years, the plan has been able to obtain data on only one-third of their enrollees thus far. Although a few smaller regional plans that followed Aetna's lead have obtained a similar proportion of self-reported data in less time, completing the process will likely take several more years.

**Surname and Geocoding Approaches**

Because the process of obtaining self-reported race/ethnicity data can take years to complete, investigators have developed methods of estimating race/ethnicity indirectly from other sources. Two such methods are geocoding and surname analysis. Geocoding uses an individual's address to link individuals to census data about the geographic areas where they live. For example, knowing that a person lives in a Census Block Group (a small neighborhood of approximately 1,000 residents) where 90 percent of the residents are African American provides useful information for estimating that person's race.

Surname analysis infers race/ethnicity from surnames (last names). Insofar as a particular surname belongs almost exclusively to a particular group (as defined by race, ethnicity, or national origin), it is possible to identify its holder's probable membership in the group by using well-formulated surname dictionaries. Such dictionaries now exist for identifying Hispanics and various Asian nationalities (Perkins 1993; Abrahamse, Morrison, and Bolton 1994; Kestenbaum et al. 2000; Lauderdale and Kestenbaum 2000; Falkenstein 2002). Separate surname lists have been generated for Chinese, Indian, Japanese, Korean, Filipino, and Vietnamese Americans. Experimental dictionaries for identifying Arab Americans are under development (Morrison et al. 2003). Both surname analysis and geocoding have
recognized limitations—the former has almost no ability to distinguish blacks from non-Hispanic whites whereas the latter has little ability to identify Hispanics or Asians. Although these limitations have been partially overcome by combining the two approaches, the accuracy of prior combined approaches varies widely by geographic area, depending on the prevalence and degree of segregation of racial/ethnic groups (Fremont et al. 2005; Fiscella and Fremont 2006).

A New Hybrid Approach

To further address limitations of current indirect estimation approaches, we developed a new hybrid approach using Bayes's theorem. Bayes's theorem is commonly applied to medical diagnostic testing; in the context of evaluating diagnostic tests, the probability of a given individual having a disease depends both upon (1) an individual's prior probability of having the disease (usually determined from a base rate appropriate to the individual's risk group) and (2) the result of a diagnostic test. Bayes's Theorem updates prior probabilities with test results by considering the sensitivity, $S_e$ (probability of a positive test result for a positive individual), and specificity, $S_p$ (probability of a negative test result for a negative individual), of the diagnostic test to produce an updated (posterior) probability, called the positive predictive value, $PPV$, that efficiently incorporates both sources of information using the formula:

$$PPV = \frac{P \times S_e}{P \times S_e + (1 - P) \times (1 - S_p)}$$

Here, we extend the approach from the two-category prior probability that characterizes baseline disease prevalence rates and treat the racial/ethnic distribution of where an individual lives as a four-category prior, the categories being Hispanic, African American, Asian, and non-Hispanic white or other. Our “baseline prevalence” is based on the racial/ethnic composition of the Census Block Group to which the residence of the individual was geocoded. We treat the combined results of the Census Bureau Spanish Surname List and the Lauderdale–Kestenbaum Asian Surname List as another diagnostic test with three possible outcomes (surname appears on Asian list regardless of appearance on Hispanic list, surname appears on Spanish but not Asian list, surname appears on neither surname list).

Using a more general form of Bayes's Theorem, we then use the surname lists to update the prior probabilities of membership in each of the four race/ethnic categories with the surname list results to produce efficient, updated posterior probabilities of membership in the four groups. The extent of this updating increases with the sensitivity and specificity of the surname lists for the population in question. We refer to this new hybrid method as the Bayesian Surname and Geocoding method (BSG) to note that it uses a Bayesian approach to combine surname and geocoded information. These probabilities, in turn, can be used to estimate racial/ethnic composition. Though not the focus of the current validation analyses reported here, the estimates can also be used to identify possible disparities in health care or in health outcomes by race/ethnicity.

We compare the accuracy of BSG in estimating race/ethnicity to two other approaches, in all instances evaluating performance against a gold standard of self-report. The first alternative approach is a previous algorithm for combining the two information sources (Fremont et al. 2005; Fiscella and Fremont 2006) that we will here call the Categorical Surname and Geocoding approach (CSG) in order to note that it combines surname and geocoded information in a categorical fashion, described below. The second approach to which we compare BSG is one based solely on the geocoded racial/ethnic composition of the Census Block Group where each member lives. We call this final strategy the Geocoding Only (GO) approach. These three approaches are summarized in Table 1.

Methods

Data

We used national enrollment data from Aetna, a large national health plan. The data set consists of self-reported race/ethnicity (as a “gold-standard” used for validation), surname, geocoded address of residence (Census 2000 Block Group level, using the SF1 file), and gender for all 1,973,362 enrollees who voluntarily provided this information to the plan for quality monitoring and improvement purposes. While voluntarily reported race/ethnicity was predominantly non-Hispanic white or other (78.1 percent), the data set included a reasonable distribution of Hispanics (8.9 percent), blacks (8.0 percent), and Asians (5.0 percent); 51.2 percent (1,010,043) were female. Data disclosed to RAND were done so in compliance with HIPAA regulations.

Implementation of the BSG

The Appendix S1 describes the implementation of the BSG algorithm in detail. If the BSG produced classifications instead of probabilities, we could describe its performance in terms of the sensitivity and specificity of the BSG. Instead, we use alternative measures described below. The sensitivities and specificities of the surname lists do play a role with BSG, however. They are inputs or tuning parameters that determine how the geocoded and surname data are combined to produce posterior probabilities, as detailed in the Appendix S1 (the greater the sensitivity and specificity, the more the surname results change the probabilities derived from geocoding). Thus these surname list sensitivities and specificities are not directly evaluative of performance in this context, but are primarily intermediate parameters.

As applied to the primary data set, the sensitivity of the Spanish and Asian surname lists themselves were calculated at 80.4 and 51.5 percent, respectively. The specificities are 97.8 and 99.6 percent, respectively. These sensitivities and specificities are characteristics of the surname lists, not of the BSG. Table S1 describes the probability of members of a given group appearing on each surname list or neither given these sensitivities and specificities. For example, Asians will appear on the Asian list 51.5 percent of the time (irrespective of appearance on the Spanish list), on the Spanish list but not the Asian list 1.1 percent of the time, and on neither list 47.4 percent of the time at these levels of sensitivity and
specificity under the assumptions stated earlier.

Because we find higher sensitivity for males than females (83.1 versus 77.8 percent on the Spanish Surname List; 52.7 versus 50.2 percent on the Asian Surname List, \( p < .05 \) for each) and slightly higher specificity for males than females for the Spanish Surname List (98.0 versus 97.5 percent, \( p < .05 \)) that are presumably related to retention of surnames after marriage, the BSG uses gender-specific sensitivities and specificities. Thus, for example, a male who appears on the Spanish surname list in a given block group receives a slightly higher posterior probability of being Hispanic than a female who appears on that same list from the same block group because the surname list is known to be more accurate for males than females. The Appendix S1 provides additional examples of how the BSG generates posterior probabilities as well as other details of its implementation.

Other Algorithms Used for Comparison with the BSG

The second method, GO, simply uses the racial/ethnic prevalences from Census Block Groups as probabilities. Surname lists provide no means by which to distinguish blacks from non-Hispanic whites, so do not permit estimates of disparities between these two groups. For this reason, a “surname only” approach is not considered.

Instead, we consider a previously described alternative combination of geocoding and surname information, the CSG (Fiscella and Fremont 2006). CSG categorizes individuals through a series of steps. It (1) labels a person Hispanic if their name appears on the Spanish surname list; if not, it (2) labels a person Asian if the name appears on the Asian surname list; if neither of these applies, geocoded race/ethnic information is used to adjudicate classifications among the remaining individuals into black or non-Hispanic white categories. In particular, (3) if an individual not appearing on either surname list resides in a block group that is at least 66 percent black, they are classified as black; (4) otherwise they are classified as non-Hispanic white. In an application using Medicare enrollees in a national health plan, this algorithm produced estimates of racial/ethnic health disparities that were similar to those obtained with self-reported race-ethnicity (Fremont et al. 2005; Fiscella and Fremont 2006).

Outputs of BSG, CSG, and GO: Classifications versus Probabilities

CSG discretely classifies each plan member into one of four racial/ethnic categories, whereas BSG and GO produce probabilities of membership in each of these four groups. As an illustration, consider a hypothetical Bob Jones living in a Census Block Group that was 67 percent white/other, 11 percent black, 11 percent Hispanic, and 11 percent Asian. CSG would note that “Jones” was on neither surname list and that his block group was <66 percent black and would therefore classify Mr. Jones as white/other. GO would simply use these four prevalences as probabilities and estimate that Mr. Jones had a 67 percent chance of being white/other and an 11 percent chance of being a member of each of the other three groups. As illustrated in Table 2, BSG would note that “Jones” was on neither surname list and integrate that information with the sensitivities and specificities of those lists, as well as the racial/ethnic composition of his block group to estimate that Mr. Jones has a 78.7 percent chance of being white/other, a 12.9 percent chance of being black, a 6.1 percent chance of being Asian, and a 2.2 percent chance of being Hispanic. Note that being on neither surname list makes white/other and black more likely than they were before surnames were considered, and that the probability of being Hispanic falls more than the probability of being Asian (because the Spanish surname list has greater sensitivity than the Asian list). Additional examples appear in Table S3.

</table>

One can estimate prevalences, means, and disparities by race/ethnicity by working directly with probabilities, without ever producing individual classifications. For example, if one's goal were a prevalence estimate, averaging probabilities is more accurate than classifying and rounding before summing (McCaffrey and Elliott forthcoming). For example, in an area with 10 people who had a 57 percent chance of being white and a 43 percent chance of being black and another 10 people with a 69 percent chance of being white and a 31 percent chance of being black, racial/ethnic prevalences would be more accurately estimated as 63 percent white and 37 percent black (averaging probabilities) than as 100 percent white (classifying each person into the group that was most likely for them). Please see Table S4 for additional examples. Similarly, if the goal is to compare racial/ethnic groups in terms of a clinical process measure, such as adherence to diabetes care recommendations as measured by administrative records, one need not classify individuals into discrete categories. Instead, one can enter an individual's probabilities of membership in each of several racial/ethnic groups (omitting one as a reference group) as predictors in a linear or logistic regression and the coefficients will be unbiased estimates of the difference of each racial/ethnic group from the reference racial/ethnic group in the outcome. Moreover, McCaffrey and Elliott show that such direct use of these probabilities, while less accurate than truly knowing race/ethnicity with certainty for each individual, is more accurate and efficient than using categorical classifications based on these probabilities. In each of these instances, categorizing continuous probabilities into discrete classifications is an unnecessary step that discards substantial information by ignoring distinctions in probabilities. While there may be some instances in which one must make a discrete decision for specific individuals (e.g., whether to mail Spanish-language materials to specific addresses), direct use of probabilities will be more efficient for aggregate statistical inferences, including the comparison of racial/ethnic groups.

If we were only examining CSG, we could describe its accuracy of classification in terms of sensitivity, specificity, and positive predictive value. Because we are comparing both classification-based and probability-based methods, we employ different performance measures.

Evaluation

We compare BSG, CSG, and GO in terms of how closely the estimates of race/ethnicity that they produce match those derived from self-reported race/ethnicity for the same individuals. We develop two
performance metrics applicable to all three approaches (BSG, CSG, and GO). We then compare the relative efficiency of the three methods according to these two metrics. The first metric assesses accuracy in matching the four-category distribution of self-reported racial/ethnic prevalence in a population. The second metric assesses the accuracy of predicting individual race/ethnicity—the extent to which those who self-report a given race/ethnicity are assigned higher probabilities of that race/ethnicity (or are more likely to be classified as that race/ethnicity). The two measures are complementary in that the first detects systematic errors in four-category classifications (e.g., a method is overly likely to classify someone as white and insufficiently likely to classify someone as black), and the second measure detects unsystematic errors (e.g., a method doesn't overestimate or underestimate any group in aggregate, but is just not very accurate in predicting the race/ethnicity of specific individuals).

**Performance Metric for Predicting Racial/Ethnic Prevalence**

For each of the three methods, we report the prevalence estimates derived for each of four racial/ethnic groups and compare these with self-reported proportions. In order to summarize the accuracy across these four categories, we compute the average error of the four categorical racial/ethnic prevalences estimates, weighted by their true (self-reported proportions). Ratios of average squared errors can be used to measure the relative efficiency of two methods in estimating prevalences. To say that method one has a relative efficiency of 3.0 relative to method two means that the accuracy of method one using a given sample size is the same as what would be obtained with three times the sample size using method two.

**Performance Metric for Predicting Individuals’ Race/Ethnicity**

The Brier score ([Brier 1950](#)) is the mean squared deviation of a prediction from the true corresponding dichotomous outcome. The Murphy decomposition of the Brier score ([Yates 1982](#)) distinguishes (a) uncontrollable variation due to the prevalence of the outcome from (b) the extent to which predictions correlate with the dichotomous outcome. We use this correlation (b) as our measure of performance in predicting individual race/ethnicity. This metric rescales predictive performance to a (0, 1) scale regardless of prevalence.

In particular, we use the correlation of the dichotomous or probabilistic prediction with a dichotomous indicator of true self-reported race-ethnicity for each of four racial/ethnic groups. Whether a method produces classifications or probabilities, it is a comparable measure of the accuracy with which individual race/ethnicity is predicted. Estimates for the four racial/ethnic measures are not independent, but are negatively correlated. To summarize performance across all four racial/ethnic categories, we also calculate an average correlation, weighted by prevalence, for each method. By comparing ratios of squared correlations, we can compare the relative efficiency of methods in predicting individual race/ethnicity.

**Results**

**Predicting Racial/Ethnic Prevalences: Comparing BSG, CSG, and GO**

[Table 3](#) displays the overall proportions of self-reported race/ethnic data falling into the four categories, along with estimates derived from each of the three methods using the primary data set. The average deviation from self-report is also displayed for each method. When comparing methods, it may be noted that the sampling error in assessing accuracy in prevalence is sufficiently small that all differences of 0.1 percent or more are statistically significant. GO substantially overestimates the prevalence of Hispanics, moderately overestimates the prevalence of blacks, and moderately underestimates the
prevalence of Asians ($p < .05$ for each). CSG is very accurate for Hispanics, but it underestimates the prevalence of Asians by nearly a factor of two and underestimates the prevalence of blacks by nearly a factor of three ($p < .05$ for both). These patterns result in overestimating the proportion of plan members who are white.

</tbody>
</table>

Ninety-five percent margins of sampling error are <0.1% for a single prevalence estimate, a difference in prevalences estimates across methods.

BSG is the most accurate overall, with a weighted average prevalence error (deviation from self-reported) of 1.6 percent, followed by 2.0 percent for GO and 6.2 percent for CSG ($p < .05$ for all pairwise comparisons). BSG moderately overestimates Hispanic and black prevalence, while underestimating whites and Asians somewhat ($p < .05$ for each). BSG is 56 percent more efficient than geocoding alone in prevalence estimates, whereas CSG is less efficient for this purpose than geocoding alone.

**Predicting Individual Race/Ethnicity: Comparing BSG, CSG, and GO**

Table 4 displays the correlation with self-reported race/ethnicity for each of the three methods and four race/ethnic groups in the primary data set. All reported correlations are statistically significant and differ across methods at $p < .05$. BSG predictions correlate with individual indicators of race/ethnicity at 0.61 to 0.79, with a weighted average correlation of 0.70.
Table 4

<tr>
<td>BSG</td>
</tr>
<tr>
<td>GO</td>
</tr>
<tr>
<td>CSG</td>
</tr>
</tbody>
</table>

All differences in correlations by methods are significant at \( p<.05 \).

CSG is the next best by this measure (average correlation 0.63), with similar performance for Hispanics and Asians, somewhat lower performance for whites, and notably lower performance for blacks. GO (average correlation 0.53) was near the performance of the BSG and notably better than CSG for blacks, but performed less well than the other two algorithms for all other groups, performing especially poorly for Hispanics and Asians. Overall, BSG was 74 percent more efficient than geocoding alone in estimating individual race/ethnicity and CSG was 41 percent more efficient than geocoding alone in predicting individual race/ethnicity. This means that 1,000 observations from BSG provide as much information as 1,740 observations using geocoding alone. For Hispanics and Asians, BSG has 2.6 and 3.9 times the efficiency of geocoding alone, respectively.

BSG performed better than each of the alternatives by both performance metrics and increases efficiency by 56–74 percent relative to geocoding alone. In contrast, the CSG improves upon direct use of geocoded data by only one of these metrics, highlighting the importance of how surname and geocoded information is combined.

Discussion

We have described a method for estimating race/ethnicity using administrative data. This approach, which applies Bayes's Theorem to a four-category geocoding and surname analysis, appears to be a particularly useful means of integrating these sources of information and substantially outperforms a classification-based means of combining this information (CSG). The advantage of BSG over CSG probably stems from two factors: (1) better identification of blacks in areas of low residential segregation and (2) greater precision through the direct use of probabilities.

In addition to its ability to estimate race/ethnicity, the BSG approach has substantial potential for use in routine assessment and monitoring of health disparities in a population. It can also be used when estimated race/ethnicity is to be a predictor in multivariate regression or other models; thus its usefulness is not limited to estimation of disparities or to health applications.

One limitation, which applies to all methods of inferring race/ethnicity, is that while BSG supports modeling at the individual level, it is not accurate enough to support individual-level interventions and
requires large sample sizes for good precision, because there is some inherent loss of information compared with self-reported race/ethnicity for a sample of the same size. Secondly, although results were evaluated on a large, racially and ethnically diverse national sample, results may differ somewhat for those not insured by this health plan or those who do not self-report race-ethnicity.

An additional limitation is that the direct use of predicted probabilities is somewhat more complex than the use of 1/0 categorical indicators of race/ethnicity and may be unfamiliar to some analysts. Traditionally, analysts have either used a single categorical variable with each level representing a particular racial/ethnic group, or a series of “dummies,” that is—separate variables (one for each race/ethnicity) that have a value of “0” if the person is not, for example, Asian, or “1” if the person is Asian. The posterior probabilities from the BSG and GO are continuous variables with values from 0 to 1 that are used somewhat differently. Nonetheless, this approach is still relatively straightforward, and one can interpret the coefficients as if they were from racial/ethnic dummy variables. The Appendix S1 provides examples of how these probabilities can be used within \textit{SAS}.

Our new method of estimating race/ethnicity substantially outperforms other widely used indirect methods and provides health plans and others a timely means to infer race/ethnicity among plan members. Although self-reported race/ethnicity represents a gold standard in many situations, indirect methods offer a powerful and immediate alternative for estimating health experiences by racial/ethnic status using only administrative data. In combination with geographic information systems (GIS) tools, these methods can be of great use to health plans, researchers, and others (\textit{National Health Plan Collaborative 2006}).

Future work can directly examine the accuracy of BSG in estimating health disparities, as well as seek further improvements in the accuracy of BSG estimates of race/ethnicity. One way to do the latter might be to develop regional sensitivity and specificity parameters. Such data would also provide insight into the extent to which BSG performance varies by plan or region. One could model racial-ethnic selection into health insurance within Block Group conditional on surname results, further improving BSG performance (because our results imply there are lower rates of health coverage for blacks and Hispanics than for Asians and whites/others even within the same Block Groups).

Finally, when applying BSG to a specific population, such as a commercially insured population, one could use Census racial/ethnic data within block groups that were restricted to ages that better matched the target population. To the extent that age differed by race/ethnicity, this would further reduce BSG bias and improve its performance. Future work should follow along these paths to refine an already promising and useful approach to inferring race/ethnicity from names and addresses alone.

Assessing Fair Lending Risks Using Race/Ethnicity Proxies

Yan Zhang

yan.zhang@occ.treas.gov

Abstract

Fair lending analysis of non-mortgage credit products often involves proxying for race/ethnicity since such information is not required to be reported. Using mortgage data, this paper evaluates a series of proxy approaches (geo, surname, geo-surname, and BISG) as compared with the race/ethnicity reported under HMDA. The BISG proxy predicts the reported race/ethnicity the best as judged by prediction bias, correlation coefficient, and discriminatory power. In assessing fair lending risks where classification of race/ethnicity is called for, we propose the BISG maximum classification, which produces a more accurate estimation of mortgage pricing disparities than the current practices. The above conclusions withhold various robustness tests. Additional analysis is performed to assess the proxies on non-mortgage credits by leveraging consumer credit bureau data.

Keywords: fair lending risk, race/ethnicity, proxy, BISG, Bayesian, measurement error, misclassification.
JEL classifications: C11, C81, D18, J15.
I. Introduction

The Equal Credit Opportunity Act (ECOA) prohibits a creditor from discriminating against any borrower on the basis of race, color, religion, national origin, sex, marital status, or age. Under ECOA, regulatory agencies assess fair lending risks of lending institutions by comparing lending outcomes based on the above-mentioned prohibited basis factors. Failure to comply with ECOA can subject a financial institution to civil liability for actual and punitive damages in individual or class actions.¹

Consumer lending products can be categorized into two groups: mortgage and non-mortgage products. Common non-mortgage products are credit card, auto loan, student loan, consumer loan, and small business loan. Historically, fair lending analysis and research have been more focused on mortgage than non-mortgage loans. One important reason for this is the availability of accurate data on prohibited basis factors. The Home Mortgage Disclosure Act (HMDA) authorizes lenders to collect information on the race, ethnicity, and gender of mortgage applicants and co-applicants. However, lenders generally are not permitted to collect such information for non-mortgage products.

Nonetheless, the fair lending evaluation of non-mortgage credit products is indispensable in ensuring that a lending institution is fully compliant with ECOA. Since its inception in July 2011, the Consumer Financial Protection Bureau (CFPB) has made multiple Department of Justice (DOJ) referrals on non-mortgage lending, especially indirect auto lending. In March 2013, the CFPB issued Bulletin 2013-02 regarding fair lending risks in indirect auto finance. As a result of the CFPB referral, Ally Bank was ordered to pay $80 million in damages to harmed applicants in December 2013. The proportion of non-mortgage referrals has also been increasing overall. Among the 18 referrals made by regulatory agencies to the DOJ for violation of ECOA in 2014, 15 involve discrimination in non-mortgage lending.²

The CFPB and DOJ used race/ethnicity proxies to estimate disparities in dealer markups on the basis of race and national origin at Ally Bank. Since mid-1990, proxy methods have been used in fair lending analysis when self-reported prohibited basis factors are not available (Baines and Courchane, 2014), leveraging findings from other fields, mainly epidemiology. For race/ethnicity, which this paper focuses on, the common approaches are surname and geocoding (or simply geo) methods, which use the Census surname list or geographic composition to impute race/ethnicity. Fiscella and Fremont (2006) provide a comprehensive review of literature that uses geocoding and surname approaches to assess disparities in health care. In addition, hybrid approaches have been suggested that attempt to create a more refined measure using both pieces of information. The most recent and advanced hybrid approach is the Bayesian Improved Surname Geocoding method (BISG) by Elliott et al. (2009), which is the proxy

¹ The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) granted rule-making authority under ECOA to the Consumer Financial Protection Bureau (CFPB).
method adapted by CFPB and DOJ in the Ally Bank case. The BISG method aims to improve upon the information in the Census surname list by incorporating the race/ethnicity composition of the applicant’s neighborhood of residence. Elliott et al. (2009) use health plan enrollment data with reported race/ethnicity to evaluate how well the BISG method predicts race/ethnicity and find that the BISG methodology is more accurate than the geo-only or surname-only approach. Simpler approaches to integrate multiple sources of information have also been proposed and evaluated. Coldman et al. (1988) compare four rules to combine first name, middle name, and surname to identify Chinese vs. non-Chinese. They find that the linear rule, which averages the three individual probabilities of name components, achieves the best sensitivity and specificity.

Assessing fair lending risks using imputed race/ethnicity is a timely topic, but relevant research is rather recent and still limited. Attempting to evaluate redlining risk of credit cards, Cohen-Cole (2011) links the location-based information on race to an individual borrower’s access to credit cards. The CFPB (2014) evaluates the BISG methodology using mortgage data and concludes that the BISG proxy is more accurate than the geo-only or surname-only proxy in predicting an individual applicant’s reported race/ethnicity. The CFPB study evaluates the accuracy of BISG over other proxies as measured by correlation coefficient and Gini index, but not its impact on fair lending risk assessment. Baines and Courchane (2014) claim that the BISG methodology produces biased race/ethnicity proxies, which result in inflated differences in assessing lending disparities. Using a mortgage dataset, they show that the classification errors of BISG are correlated with creditworthiness factors and conduct regression analysis to estimate the raw mortgage pricing disparities using the reported race/ethnicity vs. the BISG proxy. However, despite acknowledging the importance of considering creditworthiness factors, Baines and Courchane’s regression analysis does not control for legitimate factors that lenders consider in mortgage pricing decisions, which weakens their conclusion.3

The BISG proxy produces a continuous value between 0 and 1 as the probability of the borrower belonging to a specific race/ethnicity, with the probabilities of all race/ethnicity groups summing up to 1. Since fair lending assessment aims to estimate the lending differences between a particular prohibited basis group (PBG) and the control group (CG), borrowers need to be assigned to one of the race/ethnicity groups exclusively and completely, which requires the continuous BISG probability to be dichotomized into a binary race/ethnicity indicator. Practically, there have been two approaches adopted by fair lending analysis so far: one is to dichotomize the BISG probability using a fixed threshold (Baines and Courchane, 2014), while the other is to use the continuous probability as it is (CFPB, 2014). We term the former approach the BISG fixed and the latter the BISG continuous. Since CFPB (2014) does not

3 Baines and Courchane (2014) do evaluate the adjusted disparities using auto lending data, but as the data do not contain reported race/ethnicity, the potential bias caused by using the BISG proxy cannot be directly validated.
describe whether they conduct a regression analysis or how they use the BISG continuous in the
regression setting, we take the liberty to assume that regression analysis using the BISG continuous
estimates the disparities between all PBGs against the CG simultaneously in one equation. Conducting
separate regressions by PBG is not feasible because the BISG continuous does not assign a borrower to a
definitive race/ethnicity group. The one regression approach adopted by the BISG continuous restricts the
other explanatory variables in the regression to be of the same effect for all PBGs, which is an assumption
often too strong to be valid because loan and borrower characteristics tend to be correlated with
race/ethnicity. Moreover, the BISG continuous is subject to estimation bias: The population with a
specific credit product could be different from the U.S. population on which the reference surname and
geo databases are based; and the calculation of BISG probabilities assumes conditional independence,
which is often not satisfied in reality. Since the BISG fixed uses the BISG continuous as an input, the bias
of the BISG continuous can transit into the misclassifications of the BISG fixed. The fixed classification
approach itself might cause additional misclassifications. The BISG fixed requires a threshold to classify
the continuous probability into a binary indicator. False positives decrease with the threshold, but false
negatives increase with the threshold. If the threshold is too high, a borrower might not be assigned to any
of the race/ethnicity groups; if the threshold is too low, a borrower might end up in more than one
race/ethnicity group.

In the field of machine learning, the “maximum a posteriori” (MAP) decision rule is
recommended for the BISG type of naive Bayesian probability model, as naive Bayesian probability often
reserves the rank ordering of the probabilities among classes despite having estimation errors. Moreover,
not dependent on a fixed threshold, the MAP rule ensures that each probability is assigned to one class
exclusively and completely. Leveraging the expertise from machine learning, we propose the BISG
maximum classification (BISG max), which assigns a borrower to the race/ethnicity with the highest
BISG probability and compare it with the BISG continuous and BISG fixed threshold classification.

This paper contributes to the fair lending literature by providing a comprehensive review of the
race/ethnicity proxy methods and a rigorous analysis of their suitability for and limitations in fair lending
risk assessment. Using mortgage data, this paper compares a series of proxies with the race/ethnicity
reported under HMDA. In addition to the geo, surname, and BISG proxies, it also considers the linear rule
(Coldman et al., 1988), which combines the geo and surname information by taking their average.4 Our
analysis shows that the BISG produces the most accurate estimates of race/ethnicity probabilities among
the four proxies, as judged by estimation bias, correlation coefficient, and discriminatory power of the

4 Elliott et al. (2008) have already shown that the Bayesian Surname Geocoding (BSG) proxy, which is the
predecessor of BISG, performs better than the Categorical Surname and Geocoding (CSG) proxy (Fremont et al.,
2005). The CSG proxy uses either the surname or the geographic information to categorize race/ethnicity in a
sequential order of Hispanic, Asian, Black, and non-Hispanic White.
reported race/ethnicity. By merging HMDA with DataQuick, we obtain important factors typically considered in mortgage pricing decisions\(^5\) to enable a more comprehensive regression analysis. Our analysis shows that the BISG max greatly reduces the estimation bias in disparity coefficient as compared with the BISG continuous and BISG fixed, which holds true under a series of robustness analyses.

Furthermore, as a remedy to the lack of non-mortgage data, this paper links mortgages with non-mortgages using the credit bureau data (CBD) of the Office of the Comptroller of the Currency (OCC) to shed light on non-mortgages. Among the CBD borrowers who have at least one form of major credits (we consider mortgage, credit card, auto loan, and student loan), about 38% of the CBD borrowers have at least one mortgage, and almost all of them have one or more of the other three credit products. Therefore, despite being a population conditional on having a mortgage, the linked non-mortgage population covers a great portion of the non-mortgage universe. Though regression analysis is not feasible due to data limitations, the non-mortgage analysis replicates the univariate results of the mortgage analysis: The BISG is a better predictor of reported race/ethnicity than the geo, surname, and geo-surname proxies, and the BISG max has a better coverage than the BISG fixed.

This paper also adds to the research on dichotomization of mismeasured predictors. Using race/ethnicity proxies in fair lending regression analysis presents a complicated and yet intriguing case for such study. First, the continuous race/ethnicity probabilities are expected to have measurement errors (and moreover) with bias. Second, fair lending regression analysis often accounts for various legitimate factors, with which race/ethnicity could be correlated. Third, there are multiple race/ethnicity probabilities associated with one borrower. Fourth, separate regression is preferred to one general regression to allow the effect of other covariates to vary by PBG. This paper provides an empirical study that compares the effects of continuous covariate mismeasurement vs. dichotomized covariate misclassification involving the above-mentioned challenges. To the best of our knowledge, there has not been such a discussion in the existing relevant literature. McCaffrey and Elliott (2008) examine the efficiency of using predicted probability for a binary independent variable in predicting continuous outcome and recommend direct substitution rather than classification. Allowing for another predictor variable that is potentially correlated with the predictor of interest, Gustafson and Le (2002) find that dichotomization can actually reduce the estimation bias due to mismeasured covariate in some instances. However, both studies assume that there is only one dichotomous covariate and it is measured without bias; these conditions are not satisfied in the fair lending risk assessment.

Additionally, this paper contributes to the Bayesian literature by presenting an empirical application of Bayes’ rule. Comparing the BISG proxy that uses Bayes’ rule with the linear approach

\(^5\) Typical lending outcomes include underwriting and pricing. We focus on pricing disparity analysis because DataQuick data only report originated mortgage loans.
illustrates the benefit of using the more sophisticated BISG approach. This paper introduces the MAP rule from the field of machine learning into fair lending analysis. It confirms empirically that the max classification of naive Bayesian probability also leads to optimal results in assessing fair lending risks.

The rest of the paper is organized as follows. Section II discusses the race/ethnicity proxy methods: geo, surname, geo-surname, and BISG. Section III describes the mortgage data used. Section IV compares the performance of the continuous race/ethnicity proxies in predicting HMDA reported race/ethnicity. Section V lays out the classification methods. Section VI evaluates the mortgage pricing disparities using the proposed BISG max classification and existing approaches. Section VII assesses the proxies on non-mortgage data. Section VIII concludes the paper.

II. The Proxy Methodologies for Race/Ethnicity

The main methods to proxy for race/ethnicity can be summarized into two groups and four types: the single-sourced geocoding and surname approaches, and the hybrid geo-surname and BISG approaches.

II.A. Geocoding and Surname Methods

The geocoding method infers an individual’s race/ethnicity based on where he/she lives. The Census data provide socioeconomic status aggregated at various geographic area levels, among which is race/ethnicity. By linking the individual to the Census database, the prevalence of the race/ethnicity shown by the Census data is used as the probability of the individual belonging to the corresponding race/ethnicity. The geocoding approach can be mathematically expressed as the following

\[
p(r|g) = \frac{N_{rg}}{N_g}, \tag{1}
\]

in which \(N_g\) is the number of people in the geographic area \(g\) where the individual lives, and \(N_{rg}\) is the number of people belonging to race/ethnicity \(r\) in the same area \(g\). Geocoding is found to be effective in more segregated areas, where one race/ethnicity has a dominantly high concentration, and less predictive in integrated areas, where multiple races/ethnicities coexist without a dominant one. Among the various race/ethnicity categories, Blacks tend to live in more segregated areas; therefore, geocoding is deemed to be more powerful in identifying Blacks (Fiscella and Fremont, 2006).

The surname approach generates a probability of race/ethnicity using the surname of an individual. By matching the individual’s surname to an existing surname database with a corresponding percentage for each race/ethnicity, the race/ethnicity percentage is adopted as the race/ethnicity prediction of the individual. The calculation for the surname approach is

\[
p(r|s) = \frac{N_{rs}}{N_s}, \tag{2}
\]
where \( N_s \) is the number of people nationwide with surname \( s \), and \( N_{rs} \) is the number of people of race/ethnicity \( r \) with surname \( s \). In order to produce a high confidence in a race/ethnicity proxy, the surname needs to be highly associated with a certain race/ethnicity. Empirically, surnames of Hispanics and Asians are relatively easy to be identified due to their uniqueness, leading to higher imputation accuracy for them by this approach (Fiscella and Fremont, 2006).

II.B. The Geo-Surname and BISG Methods

As the prediction accuracy of geocoding and surname methods is limited to certain races/ethnicities, hybrid approaches that can integrate both the location and surname of an individual are proposed to generate more accurate race/ethnicity predictions across all race/ethnicity groups. Coldman et al. (1988) compare four rules (multiplicative, linear, maximum, last name) in integrating first name, middle name, and last name to identify the Chinese ethnic group and find that the linear rule performs best. Similarly, we test the linear rule in combining both the location and surname of a borrower, which, denoted as the geo-surname proxy, is constructed as

\[
Geo - surname = \frac{p(r|g) + p(r|s)}{2}.
\]

Elliott et al. (2008) develop the Bayesian Surname Geocoding (BSG) method, which uses a Bayesian approach to combine surname and geocoded information. The Bayesian method consists of two parts. The first is the creation of a “prior” probability of an individual belonging to a race/ethnicity using the surname information. The second generates the “posterior” probability, which involves updating the “prior” probability using the information on the demographic characteristics of the person’s place of residence. Elliott et al. (2009) further refine the BSG method by proposing the Bayesian Improved Surname Geocoding (BISG) method. The BISG method improves over the previous BSG method by using a more recent surname list to create the prior probability and using more categories of race and ethnicity, but the information integration technique remains the Bayesian approach.

Using the same notations as those for surname or geocoding proxy, let \( r \) denote race, \( s \) denote surname, and \( g \) denote geography or location. The prior probability is the person’s race based on his/her surname and can be written as \( p(r|s) \), where \( r \) takes on values 1 through 6 for each of the six mutually exclusive races: Hispanic, non-Hispanic White, non-Hispanic Black or African American, non-Hispanic Asian/Pacific Islander (API), non-Hispanic American Indian and Alaska Native (AIAN), and non-

---

6 The surname list used by the BSG is derived from the 1990 Census, while the BISG method uses the list derived from Census 2000. The BSG method uses a four-category race/ethnicity definition, compared with the six categories used by BISG.
Hispanic multiracial.\(^7\) This probability is then updated using the race/ethnicity composition of the place of residence. The posterior probability \(p(r|g, s)\) is the BISG proxy. Using Bayes’ rule and the chain rule, the BISG proxy can be written as

\[
BISG: p(r|g, s) = \frac{p(r, g, s)}{p(g, s)} = \frac{p(r|s) p(g|r,s)}{\sum_r p(r|s) p(g|r,s)} = \frac{p(r|s) p(g|r,s)}{\sum_r p(r|s) p(g|r,s)},
\]

where \(p(g|r,s)\) is the probability of a borrower residing in a certain location given race \(r\) and surname \(s\). However, there is no nationwide public database for \(p(r|g, s)\), so Elliott et al. (2008) introduce the conditional independence assumption to enable the calculation of Eqn. (4). The assumption is that the probability of an individual residing in a certain location given a person’s race does not vary by surname; i.e., \(p(g|r, s) = p(g|r)\). Different from the geocoding probability \(p(r|g)\), the term \(p(g|r)\) is calculated as the proportion of the entire U.S. population with race \(r\) in location \(g\)

\[
p(g|r) = \frac{N_{rg}}{N_r},
\]

where \(N_r\) is the U.S. population with race \(r\), and \(N_{rg}\) is the number of residents with race \(r\) in location \(g\).

Assuming conditional independence and plugging Eqn. (2) and (5) into Eqn. (4), the BISG estimator can be simplified as:

\[
BISG\ simplified: p(r|g, s) = \frac{p(r|s) p(g|r)}{\sum_r p(r|s) p(g|r)} = \frac{N_{rg} N_{rg}}{\sum_r N_{rg} N_{rg}} = \frac{N_{rg}}{N_g},
\]

The BISG algorithm requires a geo-match to run, which is typically satisfied. When a surname does not match to the Census surname list, the BISG method first imputes the probability of race/ethnicity given the surname, \(p(r|s)\), using the national average of race/ethnicity. It then combines that with the geographic location information to calculate the final prediction using Bayesian probability theory. Theoretically, the resulting BISG prediction is the same as the geo-only prediction.\(^8\)

II.C. The Geocoding and Surname Databases

The BISG method uses the Census 2010 Summary File 1 (SF1) for calculating \(p(r|s)\) and Census 2000 surname list to extract \(p(r|g,s)\), as these two datasets are the most recent and comprehensive data sources for tabulating surname and geographic area with race/ethnicity. They are the same data sources that will be used by other proxy methods discussed here.

\(^7\) For simplicity, we omit “non-Hispanic” when referring to race throughout the rest of the paper; for example, White means non-Hispanic White.

\(^8\) Let \(N\) denote the total population of the U.S., so \(N_r = \frac{N_{rg}}{N}\) is the national average of race \(r\); inserting \(N_{rg} = \frac{N_r}{N}\) into Eqn. (6), the BISG prediction for race \(r\) given \(g\) for surname non-matches is \(BISG\ Surname\ nonmatch: p(r|g, s) = \frac{N_{rg}}{N_g}\), which reduces to the geo-only method.
The Census 2010 SF1 provides population counts by race/ethnicity across geographic regions at six levels (from largest to smallest): nation, state, county, tract, block group, and block. Imputation of race/ethnicity at a more granular geographic level enables capturing local level segregation, but on the other side, the smaller population for race/ethnicity imputation could impact the robustness of the race/ethnicity distribution. Based on the 2010 Census, there are 73,057 tracts, 217,740 block groups, and 11,078,297 blocks, with average populations of roughly 4,200, 1,200, and 28 respectively.\(^9\) The Census tract and block group are commonly used in geocoding race/ethnicity, as they contain a reasonably sufficient number of residents and yet are not too large.\(^10\) We present the results using Census SF1 data at the Census tract level. We also evaluate the proxies using block group SF1 data (details are provided in Appendix 1 of the e-companion\(^11\)), and the results are almost identical to the tract level results.

The Census surname database is based on Census 2000, which was released by the Census Bureau in 2007. The Census surname database contains 151,671 surnames listed by 100 or more individuals and represents about 89.8% of all individuals enumerated in Census 2000. For each surname, the surname database provides the percentage of individuals who belong to one of six mutually exclusive and exhaustive race/ethnicity categories: Hispanic, White, Black, API, AIAN, and multiracial.

In order to assign probabilities using the above-mentioned surname and geography databases, the dataset needs to be prepared so that it can be matched to the Census databases. Elliott et al. (2009) develop SAS programs to clean and standardize\(^12\) the surnames as a part of their BISG algorithm, which we leverage in our analysis. If the dataset does not contain the matching variables (such as Census tract or block group), geocoding software\(^13\) can be used to obtain such information using the exact street address as the input.

### III. Mortgage Data

We first use mortgage data to evaluate race/ethnicity proxies because race/ethnicity is self-reportable under HMDA.\(^14\) The data consist of mortgages originated for the purpose of home purchase

---

\(^10\) Elliott et al. (2008, 2009) use Census SF1 at the block group level and go to the next higher geographic level (tract) if block group geocoding is not feasible; similarly, CFPB (2014) adopts a geocoding hierarchy composed of block group, tract, and five-digit zip code; and Baines and Courchane (2014) use Census demographics at the tract level.

\(^11\) An electronic companion to this paper is available as part of the online version that can be found at http://mansci.journal.informs.org/.

\(^12\) For example, removing special characters and titles, and parsing hyphenated or compound names.

\(^13\) For example, ArcGIS (http://www.esri.com/).

\(^14\) We acknowledge that reported race/ethnicity is potentially subject to reporting errors. But as this paper focuses on the accuracy of race/ethnicity proxies, we assume the reported race/ethnicity is true to the real race/ethnicity and use it as the benchmark for proxy comparison.
from 2004 through 2007 in 10 major Metropolitan Statistical Areas (MSAs) of the U.S.\textsuperscript{15} The 10 MSAs are selected so that the data cover major U.S. MSAs with various race/ethnicity compositions. We focus on originations of this time period because HMDA did not adopt the current race/ethnicity definition until 2004. Moreover, as we leverage the DataQuick private label securitized (PLS) loan database, ABS/MBS, to extract more detailed loan level information, we would like to select a time period for which PLS loans are more representative of U.S. mortgage loans. As Figure 1 shows, the private label securitization of residential mortgage loans went through unprecedented growth during 2004–2007, such that its loan volume became comparable to or exceeded that of the government-sponsored enterprises (GSEs). It began to decrease starting in 2007Q3 and became negligible after 2007.

To obtain surnames and locations needed to derive the proxies, we leverage DataQuick Property data. The Property database reports data compiled daily from local county recorder transactions on residential and commercial properties nationwide, including the full names and addresses of those listed on the title. We use the surnames of sole applicants or primary applicants if the mortgage is owned jointly. The addresses are geocoded to obtain the 2010 Census tracts. The Origination table of the DataQuick ABS/MBS data lists important information at loan origination, including FICO, loan-to-value (LTV) ratio, combined LTV (CLTV) ratio, interest rate in the form of note rate, origination date, collateral type, loan product, etc. The DataQuick ABS/MBS data contain nearly 23 million loan originations, consisting of about 95% of the non-agency securitized securities.\textsuperscript{16}

Through a meticulously crafted matching scheme, the analysis dataset is created by first merging HMDA with the Property data of DataQuick. Specifically, a match is declared between HMDA and DataQuick if they match exactly on loan amount, Census tract, loan type, and their closing dates are no more than 30 days apart. If multiple matches are found after imposing the above matching criteria, lender name is used to further narrow down. To be conservative, all the multiple matches are dropped if comparing lender names cannot produce a unique match. As some banks report to OCC with HMDA-plus data that append borrowers’ names to regular HMDA, we leverage such HMDA-plus data to examine the quality of HMDA-DataQuick (HMDA-DQ) matching. Based on the HMDA-plus data of a particular financial institution over a specific time period, we find a very low error rate of 0.6% for the name matching. Fully acknowledging its limited coverage, this validation analysis lends us comfort to the quality of the HMDA-DQ matching algorithm.\textsuperscript{17} The HMDA-DQ matched sample is then further

\textsuperscript{15} The 10 MSAs are 12060 (Atlanta-Sandy Springs-Marietta, GA), 14460 (Boston-Cambridge-Quincy, MA-NH), 16980 (Chicago-Naperville-Joliet, IL-IN-WI), 19820 (Detroit-Warren-Livonia, MI), 31080 (Los Angeles-Long Beach-Anaheim, CA), 33100 (Miami-Fort Lauderdale-Miami Beach, FL), 35620 (New York-Northern New Jersey-Long Island, NY-NJ-PA), 38300 (Pittsburgh, PA), 41740 (San Diego-Carlsbad-San Marcos, CA), and 41860 (San Francisco-Oakland-Fremont, CA).

\textsuperscript{16} Source: http://www.mbsdata.com/datasets_new.html.

\textsuperscript{17} For complete details of the data merge, please refer to appendix A of Mayock and Spritzer (2015).
enriched with detailed origination information by linking to the DataQuick ABS/MBS data through DataQuick internal property ID and origination date.

The final HMDA-DQ data contain 630,807 observations with non-missing surnames and Census tracts as well as origination information. All the 630,807 loans can be linked to the Census SF1 via Census tracts. We then ran the surname cleanup program and matched the cleaned surnames to the Census 2000 surname database. The overall surname matching rate of the HMDA-DQ data is 86.3%, which is quite close to the 89.8% matching rate of the Census surname database. In the range of 83-90%, the surname matching rate is fairly stable by the race/ethnicity category, MSA, or loan origination year.

Panel A of Table 1 contains the self-reported race/ethnicity composition of the HMDA-DQ data, as compared with the U.S., the 10-MSA, and the 10-MSA adult (with age equal to or older than 18) populations. We report four out of the six race/ethnicity categories (Hispanic, Black, API, and White) since AIAN and multiracial are very limited in the U.S. The 10-MSA population contains a high proportion of Hispanic, Black, and API, and a lower proportion of White, as compared with the entire U.S. population. Imposing the age restriction alleviates the difference to some extent, as shown by the race/ethnicity composition based on the 10-MSA adult population. The HMDA-DQ dataset is composed of 33.0% Hispanic, 11.5% Black, 9.9% API, and 45.1% White, providing sufficient numbers of racial/ethnic minorities to achieve a robust evaluation of proxy approaches. On the other hand, given the noticeable differences in the race/ethnicity composition between the Census and the HMDA-DQ data, the latter is unlikely to be a random sample of the former and therefore the race/ethnicity proxies constructed for the analysis data using Census information are subject to bias.

Panels B and C of Table 1 show that the analysis dataset covers various levels of race/ethnicity composition across MSAs and over time. As much as 52.1% of the population in the Miami MSA (33100) is Hispanic; the Atlanta MSA (12060) shows a high concentration of Black (45.0%); the San Francisco MSA (41860) has 24.2% API; and the Pittsburgh MSA (38300) is predominantly (87.5%) occupied by White. We observe a noticeable increase in purchases by White and API, and a similar decrease by Hispanic and Black in 2007, which coincides with the beginning of the subprime crisis.

IV. Comparing BISG with Other Proxies

In this section we compare the performance of BISG with the geo, surname, and geo-surname methods in predicting HMDA reported race/ethnicity. Since the direct output of all four proxies is a continuous race/ethnicity probability for a borrower, the comparison measures here are prediction bias, correlation coefficient, and discriminatory power, which are common statistics used to evaluate a continuous probability prediction of a binary outcome.
IV.A. Prediction Bias

Panel A of Table 2 lists the prediction bias of the BISG, geocoding, surname, and geo-surname for each race/ethnicity, which is calculated as the difference between the mean predicted probability of the proxy and the average of reported race/ethnicity indicator. Often, the prediction bias deviates from zero, which confirms that the proxies are biased, as discussed in Section III. In particular, the BISG shows the smallest bias and the geocoding the largest bias for Hispanic; the BISG predicts Black with the best accuracy and the surname the worst; for API and White, the geocoding is the most accurate and the surname is the worst. The prediction bias of the geo-surname falls between (is the average, to be exact) that of the geo’s and the surname’s because the geo-surname is an arithmetic average of the geo and surname.

IV.B. Correlation Coefficient

The correlation coefficient is used to measure how related two variables are. The correlation coefficient takes a continuous value from -1 to 1, and the closer its absolute value is to 1, the more related the two variables are. The sign of the correlation coefficient indicates the direction of the relationship, with positive indicating the two variables move in the same direction and negative the opposite. The Pearson correlation coefficient detects a linear relationship between two variables, and a rank correlation such as Spearman evaluates an ordinal relationship.

Panel B of Table 2 displays the Pearson correlation coefficient between each proxy and the self-reported race/ethnicity. There are several important findings. First, the BISG and geo-surname proxies are more highly correlated with the self-reported race/ethnicity than the geo-only and surname-only proxies across all four race/ethnicity categories. In addition, most correlation coefficients of the hybrid approaches are high, with absolute values above 70%, suggesting that they are reasonably well correlated with the actual values. This finding attests the benefit of considering both location and surname of a borrower. Second, between the two hybrid approaches, the correlation coefficients of the BISG are higher than those of the geo-surname, showing the advantage of using the more sophisticated Bayesian approach over the simple averaging approach. Third, with the exception of Black, the surname-only proxy has a higher correlation coefficient than the geo-only proxy. This is consistent with the prior assessment of the geo-only proxy that its effectiveness is limited to areas with a dominant race/ethnicity, usually Black.

IV.C. Discriminatory Power

18 Spearman correlation analysis leads to the same conclusion and is not provided here for brevity.
The Receiver Operating Curve (ROC) illustrates the discriminatory power of a probability prediction as its classification threshold varies from 0 through 1. It is created by plotting the true positive rate (sensitivity) on the y-axis against the false positive rate (1-specificity) on the x-axis for every possible value of the probability that the threshold may take. Each point on the ROC represents a trade-off between sensitivity and specificity. A perfect prediction will have a 100% true positive rate without any false positives; therefore, an ideal ROC would run vertically from the origin (0,0) upwards to point (0,1), and then run horizontally from there to point (1,1). The worst ROC is the 45 degree diagonal line, indicating that the corresponding prediction does not have any discriminatory power as it assigns equal chances of true positives and false positives. The Area under the Curve (AUC) is a quantitative measure of the discriminatory power of a probability prediction. Note that another commonly used measure of discriminatory power, the Gini coefficient, is just a monotonic transformation of AUC, which can be calculated as \((2 \times \text{AUC}-1)\). The higher the AUC or Gini coefficient is, the better a predictor can classify a binary outcome.

Figure 2 presents the ROC and AUC for each race/ethnicity. Consistent with the pattern found in the correlation analysis, the BISG has the highest AUC (all above 92%) among the proxies, followed by the geo-surname, the surname-only, and finally the geo-only, whose performance is the weakest among the four. Statistical tests show that under each race/ethnicity, the AUC of the BISG is higher than any of the other three methods at the 1% statistical significance level.

To summarize, the BISG produces the most accurate prediction of the reported race/ethnicity among the four proxies as measured by prediction bias, correlation coefficient, and discriminatory power.

V. Classification

As fair lending analysis compares lending differences between one particular PBG and the CG (which is usually White), it calls for a classification that dichotomizes the continuous probability of race/ethnicity into a binary indicator of race/ethnicity. We compare the classification methods using the BISG probability as the underlying continuous variable, since it has demonstrated better performance than the other three proxies in predicting race/ethnicity under a series of performance measures in Section IV.

A common approach to transforming a continuous probability into a binary indicator of race/ethnicity is to use a fixed threshold. Under the fixed threshold classification, if any of the six BISG probabilities of race/ethnicity (Hispanic, Black, API, White, AIAN, and multiracial) is greater than or equal to the threshold, the corresponding race/ethnicity indicator takes the value of 1; otherwise it takes the value of 0. Adjaye-Gbewonyo et al. (2014) find that cutoffs in the range of 0.50–0.57 optimize sensitivity and specificity for White, Black, API, and Hispanic health plan members. Using mortgage and auto loan data, Baines and Courchane (2014) evaluate classification errors of BISG under the 50% and
80% threshold and strongly urge using a threshold no smaller than 50% in evaluating disparities and calculating consumer harm.

Several limitations exist for the fixed threshold classification. First, there are situations in which none of the six BISG probabilities meet the threshold, and therefore the borrower will not be identified as belonging to any of the six race/ethnicity categories, especially when the threshold is set at a high level. We term this situation as “uncovered”. On the other side, if the cutoff is less than 50%, a borrower might be “over-covered” with more than one race/ethnicity assigned. Moreover, the distribution of the underlying continuous probability greatly impacts the choice of the threshold. Therefore, one threshold that proves to be optimal on one data sample might no longer be so on another. Generally speaking, the false positives decrease and the false negatives increase as the threshold increases. However, the sensitivity of such changes is determined by the probability distribution. Figure 3 plots the kernel densities of the BISG probabilities, which obviously do not follow a uniform distribution. The observations of Black and API are heavily skewed to the left, where the probability value is low. The density curves for Hispanic and White are bimodal, with high density occurring at the low and high ends of the probability line. For all the race/ethnicity groups, at the probability range 0.2–0.8, the kernel densities are flat and at a very low level, indicating that moving the threshold in this range is unlikely to lead to a significant change in classifying race/ethnicity. This paper presents the BISG fixed with 80% as the threshold (the BISG 80%).

The BISG type of models have been used not only in health studies but also in the machine learning field, under the name of naive Bayes (or simple Bayes, independence Bayes) models because they rely on the conditional independence assumption to simplify the calculation of the posterior probability. A common decision rule used in machine learning research is to pick the most likely classification outcome, which is known as the “maximum a posteriori” or MAP decision rule. Despite its seemingly strong assumption of conditional independence which is often hard to satisfy in reality, naive Bayes classifiers have proved to work quite well. Domingos and Pazzani (1997) provide a list of such studies and suggest that even though naive Bayes might produce an inaccurate probability estimate for each class, it tends to assign the highest probability to the correct class. Zhang (2004) provides further explanation for the optimality of naive Bayes. His rationale is that it is not just the dependencies between attributes that matter, rather, how they are distributed. In this paper, we leverage the relevant findings in machine learning and propose the max classification approach to dichotomize the BISG proxy. Under this approach, a race/ethnicity indicator takes the value of 1 if the corresponding race/ethnicity prediction is the maximum of the six predictions. The max classification has a full coverage in the sense that it

---

19 We explore the BISG fixed with 50% cutoff as well. The conclusions remain unchanged.
guarantees an assigned race/ethnicity for each borrower, therefore eliminating the “uncovered” situation under the fixed threshold classification. It is rare to have “over-covered” either under the BISG max since BISG probabilities are likely to be different across the six race/ethnicity groups. In addition, without a fixed threshold, the race/ethnicity assignment is less dependent on the value of probability whose distribution could vary across data samples.

Panel A of Table 3 tabulates the coverage of the BISG max and BISG 80%. Judging by the number of borrowers with an assigned race/ethnicity, the BISG max has a coverage very similar to that of the self-reported race/ethnicity. The BISG 80% only covers 462,736 borrowers, about 74% of the 627,638 total borrowers for Hispanic, Black, API, and White. The under-coverage of the BISG 80% is more severe for Black, API, and White than for Hispanic.

The binary indicators derived using the two classification approaches are then compared with the reported race/ethnicity. Four outcomes can be created by overlaying the reported over the dichotomized race/ethnicity: No/No (true negatives, TN), No/Yes (false positives, FP), Yes/No (false negatives, FN), and Yes/Yes (true positives, TP). As the BISG 80% demands a high value of probability to assign 1 to a race/ethnicity, we expect it to have lower false positives and higher false negatives than the BISG max.20 Since the six race/ethnicity probabilities add up to 100%, a probability greater than or equal to 80% must be the maximum probability; however the maximum probability does not necessarily meet the 80% threshold criteria. Panel B of Table 3 tabulates the four outcomes for the BISG max and BISG 80% for each race/ethnicity and the corresponding false positive rate (FPR=FP/(FP+TN)) or Type I error rate and the false negative rate (FNR=FN/(TP+FN)) or Type II error rate. The results support our hypothesis. Taking Hispanic for example, the FPR is 8% for the max classification vs. 4% for the BISG 80%; the max classification FNR is 12%, lower than the 19% FNR for the BISG 80%. It is also noted that the absolute level of FNR for the BISG 80% is quite high for Black, API, and White, taking values of 51%, 48% and 36%, respectively.

Panel C of Table 3 lists the average values of mortgage price (note rate) and important variables in mortgage pricing decisions, including income, FICO, CLTV, and LTV, for each classification outcome (TN, FP, FN, and TP). The first thing observed is that note rate, income, FICO, and CLTV are significantly correlated with the classification outcome groups. Comparison of TN with TP shows that true Hispanic and Black on average have higher note rate and CLTV, and lower income and FICO, than the true non-Hispanic and non-Black, respectively; API and White are the opposite, with lower note rate and CLTV, and higher income and FICO. The mean statistics for the two misclassified groups (FP and FN)

---

20 This feature of the BISG 80% makes it potentially more attractive for certain tasks where a lower FPR is valued more than a lower FNR, for instance, to identify consumers who are eligible for restitution or other remediation actions. However, in general, fair lending risks analysis treats FPR and FNR equally.
FN) are less extreme than for the TN and TP groups. Taking the BISG max classification for Hispanic for example, while the TP group has the highest note rate of 7.77% and TN has the lowest note rate of 6.95%, the FP and FN have a note rate in between, at 7.33% and 7.39% respectively. When the race/ethnicity classification errors interact with target and control variables in the regression, it is therefore expected that the disparity estimates will be impacted.

VI. Using the BISG Proxy in Assessing Pricing Disparities in Mortgage Lending

In this section, we evaluate the effect of using BISG proxy in fair lending regression analysis of mortgage pricing. Specifically we compare the proposed BISG max with the BISG 80% and BISG continuous. The pricing disparity estimate generated by the reported race/ethnicity is used as the benchmark to assess the estimation bias.

VI.A. Measuring Pricing Disparities in Mortgage Lending

Since Munnell et al. (1996) introduced multivariate regression into fair lending analysis in their famous Boston Fed study, this technique has been widely used in evaluating potential disparities in mortgage lending. Extensive literature exists in testing whether substantial differences exist in mortgage pricing between similarly situated PBGs and CGs. Similarly, we estimate the pricing disparities using ordinary least square (OLS) regression with the specification

\[
\text{Note Rate} = \beta_0 + \beta_r r + \beta_X X + \epsilon. \tag{7}
\]

The rate spread reported by HMDA is less informative than the continuous note rate, as the former is only reportable above a certain threshold. We obtain the continuous note rate from the DataQuick ABS/MBS to allow better capturing of mortgage price differences. The variable \( r \) identifies the race/ethnicity of the PBG (Hispanic, Black, API, AIAN, or multiracial) from the CG (White). The corresponding coefficient \( \beta_r \) flags potential pricing disparities if it is different from 0 with statistical significance. A significant and positive/negative \( \beta_r \) suggests that the PBG receives a higher/lower price than the CG.

The control vector is denoted as \( X \). When \( X \) is empty, \( \beta_r \) estimates the raw disparity; when \( X \) contains legitimate factors considered in pricing, \( \beta_r \) estimates the adjusted disparity. We control for common creditworthiness factors and loan characteristics, which include income (in the natural logarithm

\[21\] For example, Courchane and Nickerson, 1997; Crawford and Rosenblatt, 1999; Black et al., 2003; Boehm et al., 2006; Boehm and Schlottmann, 2007; Courchane, 2007; Bocian et al., 2008; and Zhang, 2013.

\[22\] Rate spread is the difference between the loan’s annual percentage rate (APR) and a survey-based estimate of APRs currently offered on prime mortgage loans of a comparable type. A lender reports rate spread in HMDA if it is equal to or greater than 1.5 percentage points for a first-lien loan or 3.5 percentage points for a subordinate-lien loan.

\[23\] Because we don’t know the full details of the pricing policies and procedures, and the data potentially lack certain factors considered, the disparities estimated in this paper should not be considered as indicative of existence or non-existence of disparities in mortgage pricing decisions.
form), FICO, LTV, and CLTV. Mortgage interest rate tends to differ by collateral type and product type; we therefore control for them in the regression as well. The DataQuick ABS/MBS database identifies collateral types, with the four major ones being jumbo A, Alt A, subprime, and second lien; Eqn. (7) thus includes dummies for the four collateral types with the remaining collateral types grouped as the reference. The DataQuick ABS/MBS product type provides detailed information on product features (such as fixed rate [FRM] vs. adjustable rate [ARM], interest only [IO], or balloon) and loan term for each corresponding product feature. Indicators are created for the top 14 products that comprise 90% of the loans. Certain lenders specialize in specific products or target certain borrowers, which we account for by including a subprime lender indicator\textsuperscript{24} in the regression. Furthermore, Eqn. (7) controls for fixed effect of lenders to account for individual lender differences within lender type (subprime vs. non-subprime). Dummies are created for the top 20 lenders that originated about 60% of the loans with the reference group containing the remaining miscellaneous lenders. The specification also includes fixed effects of MSA, loan origination year, and MSA×origination year. Appendix 2 of the e-companion provides more detail of the control variables.

We run regressions of note rate for raw and adjusted disparities using race/ethnicity under the reported, BISG max, BISG 80%, and BISG continuous. With the reported race/ethnicity, the variable $r$ is an indicator $I_r$ that takes the value of 1 if a borrower belongs to the PBG and 0 if he/she belongs to the CG. Under the BISG max, $r = 1$ if $p_r = \max_i p_i$ and $r = 0$ if $p_{\text{White}} = \max_i p_i$, with $i$ being Hispanic, Black, API, AIAN, multiracial, and White. Under the BISG 80%, $r = 1$ if $p_r \geq 80\%$ and $r = 0$ if $p_{\text{White}} \geq 80\%$. The regression compares all five PBGs simultaneously against the CG if the BISG continuous is used, so $r = \left(p_{\text{Hispanic}} p_{\text{Black}} p_{\text{API}} p_{\text{AIAN}} p_{\text{multiracial}}\right)$, which is a vector of continuous probabilities for all PBGs. There is an additional regression “Reported II” for adjusted disparity,\textsuperscript{25} which is introduced to help decompose the bias of using BISG continuous in estimating pricing disparities. Reported II estimates all reported PBG effects simultaneously with $r$ being a vector of the reported race/ethnicity dummies, i.e., \(\left(I_{\text{Hispanic}}, I_{\text{Black}}, I_{\text{API}}, I_{\text{AIAN}}, I_{\text{multiracial}}\right)\).

Table 4 Panel A tabulates the modeling sample composition for each regression. Separate regression is performed for each PBG under the reported, BISG max, and BISG 80%, so each sample consists of borrowers associated with the particular PBG and the CG. Due to misclassification, the data samples of BISG max and 80% are not exactly the same as those of the reported, but the samples of the

\textsuperscript{24} For the period 2004–2007, HUD produced subprime lender lists for 2004 and 2005 (http://www.huduser.gov/portal/datasets/manu.html). The 2004 and 2005 lists are very similar, so we decided to use the 2005 list to create the subprime lender indicator.

\textsuperscript{25} Since raw pricing disparity does not consider other control variables except race/ethnicity, the regression of reported II resolves to the reported for raw pricing disparity.
BISG max are much closer. One regression is fitted on the entire sample for all five PBGs against the CG under the reported II and BISG continuous. The count of the PBGs and CG for the BISG continuous is calculated as the weighted average of the corresponding BISG probability. Again it shows that the BISG continuous is a biased estimate of the reported race/ethnicity.

Table 4 then lists the estimated raw and adjusted pricing disparities in Panels B and C, respectively. The coefficient $\beta$, its standard error, and adjusted R-squared of each regression are provided. We observe that introducing control factors greatly reduces the estimated pricing disparities and improves the goodness of fit, indicating that much of the price differences can be explained by legitimate factors considered in the lender’s decision process. For example, based on the reported race/ethnicity, the raw disparity for Hispanic is 1.0143, suggesting that Hispanic paid a note rate 1 percentage point higher than that of White. However, the adjusted price difference is reduced to 11 basis points once considering for income, FICO, LTV, CLTV, collateral, product, lender, MSA, and origination year. Compared with similarly situated White, Black has the largest price difference of about 26 basis points, followed by Hispanic with a price difference of 11 basis points; API has the least price difference, of approximately 3 basis points.

The disparity estimates of the two BISG classifications are much closer to those of the reported than the BISG continuous, presenting a case that dichotomizing a mismeasured covariate reduces bias. The BISG continuous greatly (more than 100 percent) overestimates the pricing disparities for Hispanic, Black, and API, which we attribute to the measurement errors of the continuous probabilities and to the one regression approach that does not allow other covariates to vary by minority group. Comparing estimates under the reported with reported II shows that the impact of performing one regression instead of separate regressions is relatively small: Disparity estimate increases by 1–3 basis points for Hispanic, Black, and API. Therefore, most of the estimation bias displayed by the BISG continuous can be attributed to its measurement errors. For example, if the biased probability instead of reported race/ethnicity is used, ceteris paribus, the disparity estimate for Hispanic increases by 11 basis points from 12 basis points under the reported II to 23 basis points under the BISG continuous.

The BISG max produces disparity estimates closer to those of the reported with smaller standard errors than the BISG 80%, attesting that maximizing posterior probability is the optimal Bayesian decision rule. However, while the BISG max assesses the disparities quite accurately for Hispanic and API, its performance for Black is not as accurate as that for Hispanic and API.

VI.B. Robustness Analyses

We perform a series of analyses to ensure the robustness of the results.
VI.B.1. Bootstrap

We replicate the adjusted pricing disparity analysis using the bootstrap method (Efron, 1979). The HMDA-DQ dataset is 100% sampled with replacement for 1,000 times, then the regressions are run for each replicated sample, resulting in 1,000 regressions and 1,000 $\beta_i$ s for each scenario. We report the summary statistics (mean and standard error) of the coefficient $\beta_i$ in Table 5. The mean and standard error of $\beta_i$ based on the bootstrapped samples are highly consistent with the results contained in Panel C of Table 4.

VI.B.2. Performance by Subsample

We examine the performance of race/ethnicity proxies on subsamples to see if the proxies can capture pricing disparities accurately as they vary across subpopulations. The results are provided in Table 6.

As a prohibited basis, the borrower’s gender might be associated with differential pricing practice; therefore we compare the price received by single female vs. by single male applicants. The HMDA-DQ data contain about 172,000 single female applicants and 255,000 single male applicants, with a ratio of 40:60. Based on the reported race/ethnicity, Panel A of Table 6 shows that single female applicants receive a slightly higher, thus unfavorable, price than the single male applicants for API, but not for Hispanic and Black, after accounting for borrower’s creditworthiness and loan characteristics. Despite the variations in pricing disparities, the BISG max consistently produces more accurate estimates of pricing disparities than the BISG 80% and BISG continuous.

The same pattern is found when we compare the performance of BISG proxies on other subsamples. Panels B, C, D, and E of Table 6 tabulate the proxy performance by origination year, MSA, collateral type, and lender type, respectively. As the race/ethnicity composition differ by origination year and MSA (as shown in Table 1), or by types of collateral and lender (as shown in Table A2 in the e-companion), the price disparities might change as well. For example, Panel B of Table 6 shows that mortgage price received by Hispanic is 17 basis points higher than similarly situated White in 2004, but the difference decreases to 10, 4, and 11 basis points in 2005, 2006, and 2007, respectively. Among the 10 MSAs, the adjusted price difference between Black and White ranges from 44 basis points in Atlanta to 10 basis points in Boston. The pricing disparities vary by the underlying collateral, with second lien having the highest disparities. Among the first lien loans, Alt A loans show a higher adjusted price difference between a minority race/ethnicity and the White than jumbo A and subprime loans. This is possibly because Alt A loans are usually originated without full documentation and therefore more vulnerable to potential manipulation. Started with a higher raw price, after accounting for the loan and borrower characteristics, loans originated by subprime lenders actually have a smaller price difference for
Hispanic and Black as against White than non-subprime lenders. Despite the variations in price differences displayed by the subsamples, the BISG max consistently generates price disparity estimates with the smallest error among the three proxies, while the BISG continuous significantly over-predicts pricing disparities across subsamples.

VI.B.3. Quantile Regression

The existence of outliers might impact the performance of race/ethnicity proxies differently. To quantify the potential impact of outliers, we replace the OLS regression with quantile regression (Koenker and Bassett, 1978) in estimating the adjusted pricing disparities; specifically, we conduct the median regression (quantile=0.5). As Table 7 reveals, the pricing disparities becomes smaller if estimated using quantile regression, however the BISG max consistently delivers better performance than the other two proxies.

VI.B.4. Price Disparities Using Rate Spread

So far we have used the continuous note rate to measure the price differences. However, note rate is not publicly available as HMDA only reports the rate spread for mortgage pricing, which is a continuous variable truncated above certain thresholds. We compare the proxies using rate spread as another robustness analysis. To identify whether a borrower receives a highly priced mortgage loan or not, we generate a high rate spread indicator that equals 1 if the rate spread is above the threshold and 0 if below. The probability of the high rate spread incidence, \( \pi = \text{prob}(\text{High Rate Spread Indicator} = 1) \), can be modeled using the logistic regression

\[
\pi = \frac{1}{1 + \exp(\beta_0 + \beta_r r + \beta_x X)}^{-1},
\]

where the logit, \((\beta_0 + \beta_r r + \beta_x X)\), is essentially the right hand side of Eqn. (7). The variable of interest in the rate spread regression is the adjusted odds ratio for race/ethnicity, \(\exp(\beta_r)\). For example, Table 8 reports an adjusted odds ratio of 1.6807 if reported Hispanic is used, meaning that Hispanic is 1.6807 times more likely to have a highly priced mortgage than the CG White. Overall, the BISG max achieves the best performance among the proxies. However, the BISG 80% and BISG continuous predict API slightly better than the BISG max for the discrete outcome.

VII. Proxy Performance for Non-Mortgage Credit Products

Due to the lack of reported race/ethnicity for non-mortgage credits, our analysis so far is limited to mortgage loans. To gain insights on the performance of race/ethnicity on non-mortgage products, we leverage credit bureau data. Credit bureau data is borrower based, thus providing a common basis for mortgages to be linked to non-mortgages belonging to the same borrower. If a mortgage loan in the
HMDA-DQ data can be matched to a mortgage loan in the credit bureau data, a comprehensive view of a borrower’s credit profile can be obtained. Since the HMDA-DQ data now have both reported and imputed race/ethnicity for the borrower, by matching it to bureau data, we can then assess the accuracy of race/ethnicity proxies for various non-mortgage products, conditional on the borrower having had a mortgage loan at least once.

We extract borrower’s credit bureau information from the OCC’s CBD. The CBD is longitudinal, containing a 0.7% random sample of all Equifax credit files at the base year (calendar year of 2005), with new files added each year to rebalance the sample due to attrition. Information archived as of June 30 of each year is provided. The CBD contains five segments, covering consumer, tradeline, collections, inquiries, and public records, and this paper utilizes the first two segments. The consumer segment provides characteristics of a consumer, including a unique consumer identity key (CID), the age and gender, credit score, the archive year, credit record starting date, etc. The tradeline segment lists the detail of a credit account, including consumer and tradeline identity key, account description (account ownership, type of creditor, type of account, loan purpose, lender subscriber code), credit limit or the highest balance, term duration, current balance, payment performance (for the past 48 months and current month), and account dates (for example, open date, report date, close date). The consumer segment and the tradeline segment can be linked by the CID. Types of credit account include mortgage, credit card, auto loan/lease, student loan, consumer loan, small business loan, etc.

The population with mortgages represents a great portion of borrowers with credit products. Figure 4 shows the borrower composition by main credit products (here we consider mortgage, credit card, auto loan, and student loan). Out of the 1.9 million borrowers with 5.3 million transactions reported by CBD during the period 2005–2012, about 38% of them have at least one mortgage. A majority of the borrowers with mortgage have other credit products: 20% CBD borrowers also have credit card and auto loan; 9% have credit card; and 6% have credit card, auto loan, and student loan. The proportion of borrowers with only mortgage is very small (roughly 1%).

We carefully match the HMDA-DQ data with CBD mortgage trades of the period 2005–2012 by origination date, location of the property, loan amount, and loan term. Out of the 630,807 HMDA-DQ loans, 6,648 (1.06%)26 loans find a match in CBD. Then through the CID, we extract borrower’s non-mortgage (including credit card, auto loan, and student loan) tradelines. The tri-merged data is termed HMDA-DQ-CBD.27 Its distribution of borrowers is very similar to that of the mortgage subset of CBD (as

26 The matching rate of 1.06% is reasonable, given that CBD is a 0.7% random sample of Equifax data.
27 Note that the non-mortgage trades can be originated before or after the matched mortgage trade, as long as they have ever been reported to CBD during 2005–2012, which enables us to obtain more non-mortgage tradelines.
shown in Figure 5), suggesting that matching with PLS mortgages does not distort the population, which represents the universe of mortgage borrowers.

Panel A of Table 9 tabulates the race/ethnicity composition of the HMDA-DQ-CBD data by product. Compared with the HMDA-DQ data (as shown in Panel A of Table 1), the mortgage trades have very similar race/ethnicity composition, again suggesting the good quality of matching HMDA-DQ with CBD. Conditional on having a mortgage loan, borrowers on average have 3.6 credit cards, 1.4 auto loans, and 0.42 student loans. The race/ethnicity of credit card and auto loan remain similar to that of mortgage, but a significant shift is observed in student loan. The proportion of Hispanic decreases from 30.4% to 25.3% and the proportion of Black increases from 10.6% to 16.7%. Overall the distribution of race/ethnicity is intuitive given the product.

The BISG proxy is compared with the geo, surname, and geo-surname proxies in predicting the reported race/ethnicity for each product. Panel B of Table 9 lists the Pearson correlation coefficient between the proxy and the reported race/ethnicity. The BISG proxy is shown to have the highest correlation coefficient, followed by geo-surname proxy. The geo and surname proxies that use a single data source are less correlated with the reported race/ethnicity. The surname proxy performs better than the geo proxy for Hispanic, API, and White, but not for Black. The proxies demonstrate the same pattern as shown by the AUC statistics reported in Panel C of Table 9. We also evaluate the classification approaches using the HMDA-DQ-CBD data. As Panel D of Table 9 shows, the BISG max replicates the reported race/ethnicity fairly well, while the BISG 80% cannot assign a definitive race/ethnicity to almost 30% of the population for each credit product.

The bureau data do not report either underwriting or pricing outcome, therefore we cannot evaluate proxies in estimating disparities in non-mortgage lending. Despite the limitation of the non-mortgage analysis data, it is reassuring to see that the univariate results on mortgage are replicable on non-mortgage credits.

VIII. Conclusion and Future Developments

Often, as race/ethnicity is not available for non-mortgage products, conducting fair lending analysis involves imputing race/ethnicity first. One common remedy is to proxy for race/ethnicity using publicly available information provided by the Census Bureau on geographic and/or surname composition. Compared with the geo-only or surname-only proxy, hybrid approaches are proposed, mainly in other fields, to combine both surname and geographic information to improve accuracy, including the simple linear rule or the more sophisticated BISG proxy. The CFPB has adapted the use of...
the BISG methodology in regulating indirect auto lending, as showcased by the Ally Bank case. However, research on assessing fair lending risks using race/ethnicity proxies is still limited, and this paper aims to fill the void.

In addition to the geo or surname proxy which uses a single data source, we evaluate the hybrid BISG and the geo-surname proxy which is constructed using the linear rule. Based on mortgage data, we gauge the performance of the four proxies in predicting the reported race/ethnicity by prediction bias, correlation coefficient, and discriminatory power, and find that the BISG is the best predictor. Specifically, our analysis shows that considering both surname and geo instead of just one source of information significantly improves accuracy, and the BISG performs better than the geo-surname proxy. Furthermore, we evaluate the impact of using race/ethnicity proxies on fair lending assessment. Besides the BISG continuous and BISG fixed used in existing analyses, we introduce the BISG max, which assigns a borrower to the race/ethnicity with the maximum probability. Pricing disparities estimated using the three BISG proxies are compared with those using the reported race/ethnicity. The BISG max and BISG 80% produce more accurate pricing disparity estimates than the BISG continuous. Between the two BISG classifiers, the BISG max surpasses the BISG 80% as expected. The above conclusions withstand comprehensive robustness tests. We extend the univariate analysis to a non-mortgage dataset and again find the superiority of the BISG proxy in predicting race/ethnicity and the better coverage of the BISG max than BISG fixed.

While our analysis shows that the BISG method is more accurate in approximating race/ethnicity than other methods, it is important to recognize that it is still a proxy method and inevitably it has measurement errors compared with the reported race/ethnicity. Although we have shown that dichotomizing the imprecise race/ethnicity could reduce the impact of measurement errors in assessing disparities, as fair lending risks of non-mortgage credit products gain more and more attention, regulators might want to consider the ultimate solution, which is to require lenders to collect race/ethnicity and gender information for non-HMDA products as well.

In the interim, we ought to continually understand and improve the proxies. Besides refining the proxy algorithm, another direction to improve the proxies is to leverage additional information that is indicative of race/ethnicity. Our study, as well as existing research (Elliott et al., 2008 and 2009), has shown that proxies utilizing both geographic and surname surpass those single-sourced proxies. One promising data is the first name, for which currently there is no Census database, as there is for surname or geography. Nanchahal et al. (2001) develop an algorithm, the South Asian Names and Group Recognition Algorithm (SANGRA), to identify South Asian ethnicity based on surname and first name, surname only, first name only, or middle name only. Coldman et al. (1988) consider first and middle
names in addition to surname in identifying Chinese. A publicly available database on first name can facilitate more comprehensive assessment of using first name in proxying for race/ethnicity.

This table reports Panel A) the prediction bias of the proxies as the difference between their mean predicted probability and the mean reported race/ethnicity, and Panel B) the Pearson correlation coefficients of the proxies with self-reported race/ethnicity. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. All the correlation coefficients are statistically significant at the 1% significance level.

</table>
The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. The BISG max classification assigns a borrower to a race/ethnicity if the corresponding probability is the maximum among the six race/ethnicities probabilities; the BISG 80% classification assigns a race/ethnicity if the corresponding probability is greater than or equal to 80%. TN: true negatives, FP: false positives, FN: false negatives, TP: true positives, FPR: false positive rate, FNR: false negative rate.

This table reports raw and adjusted pricing disparities (in note rate difference) using reported (also reported II for adjusted pricing disparities), BISG max, BISG 80%, and BISG continuous race/ethnicity, estimated by OLS regression. Regression of the adjusted pricing disparities controls for income (in the form of logarithm), FICO, LTV, CLTV, collateral type, product type, lender type, and fixed effects of lender, MSA, origination year, and MSA×origination year. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. ***, **, and * denote statistical significance at 1%, 5%, and 10%, respectively.

The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. Then the data is resampled with replacement for 1,000 times. Each sample is estimated for the adjusted pricing disparities (in note rate difference) using reported, BISG max, BISG 80%, and BISG continuous race/ethnicity. The OLS regression is used to estimate the disparities, controlling for income (in the form of logarithm), FICO, LTV, CLTV, collateral type, product type, lender type, and fixed effects of lender, MSA, origination year, and MSA×origination year. The 1,000 estimated pricing disparity coefficients are then used to calculate the mean and standard error. ***, **, and * denote statistical significance at 1%, 5%, and 10%, respectively.

</table>

This table reports adjusted pricing disparities (in note rate difference) using reported, BISG max, BISG 80%, and BISG continuous race/ethnicity by subsample. The OLS regression is used to estimate the disparities, controlling for income (in the form of logarithm), FICO, LTV, CLTV, collateral type, product type, lender type, and fixed effects of lender, MSA, origination year, and MSA×origination year. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. ***, **, and * denote statistical significance at 1%, 5%, and 10%, respectively.

* Pittsburgh reports “NA” for Hispanic under BISG 80% classification as the algorithm categorizes no one as Hispanic.

Data source: HMDA-DQ-CBD tri-merged data. All the correlation coefficients are statistically significant at the 1% significance level.
Figure 1: Growth of Private Label Securitized Mortgage Loans

Data source: 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge.
Figure 3: Kernel Densities of BISG Proxy

Data source: 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge.

Figure 4: Borrower Composition by Credit Product

Source: OCC CBD database, 2005–2012, covering 1.9 million customers with 5.3 million transactions of mortgage, credit card, auto loan, and student loan. The credit product follows the naming convention of mortgage (M), credit card (C), auto loan (A), and student loan (S).
Figure 5: Borrower Composition Comparison: CBD and HMDA-DQ-CBD

Data source: 1.9 million borrowers from OCC CBD database with mortgage, credit card, auto loan, and student loan tradelines during 2005–2012, and 6,648 borrowers contained in the HMDA-DQ-CBD tri-merged data. The credit product follows the naming convention of mortgage (M), credit card (C), auto loan (A), and student loan (S).
Appendix 1: Compare Race/Ethnicity Proxies Using Census Block Group vs. Tract Level Data

If we use the race/ethnicity composition at the block group instead of tract level, the values of geo, geo-surname, and BISG proxies are subject to change. Out of the total 630,807 loans, 99.35% can be matched to the Census block group level SF1 file; 76 loans have a valid block group but it does not have SF1 population; the remaining 4,037 loans cannot be matched to a valid block group. For the latter two groups with no valid block group SF1 population, the BISG algorithm uses the tract level SF1 file instead. We compare kernel density curves (Figure A1) of the proxies using block group vs. tract level geographic data, and find only minor differences for the geo proxy and no visible differences for the geo-surname and BISG proxies. We further quantify the potential improvement of using the more granular block group level information in assessing price differences. The results are listed in Table A1. Comparing the results using block group level vs. tract level Census data (as shown in Table 4 Panel C), we conclude that there are no significant differences in proxying for race/ethnicity as to which geographic level to use.

Figure A1: Kernel Densities of Proxies using Census Block Group vs. Tract Level Data

![Kernel Densities of Proxies](image)

Data source: 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. Suffix “BLG” is for proxies calculated using block group Census SF1.
Table A1: Adjusted Pricing Disparities using Block Group Level Census Data

This table reports adjusted pricing disparities (in note rate difference) using reported, BISG max, BISG 80%, and BISG continuous race/ethnicity using Census block group level data to proxy for race/ethnicity. The OLS regression is used to estimate the disparities, controlling for income (in the form of logarithm), FICO, LTV, CLTV, collateral type, product type, lender type, and fixed effects of lender, MSA, origination year, and MSA × origination year. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. ***, **, and * denote statistical significance at 1%, 5%, and 10%, respectively.

Appendix 2: Control Variables Used in Regression Analysis of Mortgage Pricing Disparities

Table A2 provides summary statistics of note rate, income, FICO, LTV, CLTV, and reported race/ethnicities of the entire data sample, as well as subsamples, by types of collateral, product, and lender. It shows that loan pricing, borrower, and loan characteristics do vary significantly by collateral, product, and lender types. For example, compared with the overall population, loans originated with subprime collateral, on average, have a higher note rate, lower income and FICO, higher LTV and CLTV, more Hispanic and Black, and fewer API and White.
This table reports average values of observables for the overall as well as subsamples by types of collateral, product, and lender. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge.

We also conduct an analysis of variance (ANOVA) to assess the contributions of the controls in Eqn. (7). Table A3 lists the ANOVA Type III F statistics. All the factors are statistically significant with LTV, FICO, CLTV, and collateral type being the top four with the largest F statistics, which is intuitive and supports the setup of the pricing regression analysis.

This table reports ANOVA Type III F statistics using reported race/ethnicity. The ANOVA is used to evaluate the explanation power of various factors used in Eqn. (7) for note rate. The data contain 630,807 mortgage purchases originated during 2004–2007 in 10 MSAs based on a HMDA and DataQuick merge. ***, **, and * denote statistical significance at 1%, 5%, and 10%, respectively.
Awareness in Practice: Tensions in Access to Sensitive Attribute Data for Antidiscrimination

1 INTRODUCTION

Statistical models, including those created with machine learning, can reproduce biases in the historical data used to train them. As powerful institutions increase their reliance upon these models to automate decisions that affect people’s rights and life opportunities, researchers have begun developing new techniques to help detect and address these biases. The real-world implementation of these techniques could be an essential part of ensuring the continued viability of civil and human rights protections.

Many machine learning fairness practitioners rely on awareness of sensitive attributes—that is, access to labeled data about people’s race, ethnicity, sex, or similar demographic characteristics—to test the efficacy of debiasing techniques or directly implement fairness interventions. A significant body of research presumes the modeler has ready access to data on these characteristics as they build and test their models [13, 19, 21]. The need for this data is plain to see. As a 2003 analysis of racial disparities in healthcare powerfully concluded: “The presence of data on race and ethnicity does not, in and of itself, guarantee any subsequent actions ... to identify disparities or any actions to reduce or eliminate disparities that are found. The absence of data, however, essentially guarantees that none of those actions will occur.” [23]

Increasingly, companies that utilize machine learning are being asked to detect and address bias in their products. But they are not the first to grapple with these issues. This paper explores the legal and institutional norms surrounding the collection, inference, and use of sensitive attribute data in three key corporate domains. This analysis has significant implications for machine learning fairness research: If private institutions that mediate access to life opportunities are unable or hesitant to collect or infer sensitive attribute data, then emerging awareness-based techniques to detect and mitigate bias in machine learning models might never be implementable in real-world settings.

Notably, this paper does not discuss complex and important questions about how “fairness” should be measured or addressed, recognizing that definitions are manifold [53]. Rather, we make a simpler point: If sensitive attribute data are not available, interventions that rely on them will be severely impaired.

We conduct this exploration through the lens of U.S. civil rights law in the domains of credit, employment, and healthcare. For each domain, we describe when and how private companies collect or infer sensitive attribute data, then found. The absence of data, however, essentially guarantees that none of those actions will occur.” [23]

Increasingly, companies that utilize machine learning are being asked to detect and address bias in their products. But they are not the first to grapple with these issues. This paper explores the legal and institutional norms surrounding the collection, inference, and use of sensitive attribute data in three key corporate domains. This analysis has significant implications for machine learning fairness research: If private institutions that mediate access to life opportunities are unable or hesitant to collect or infer sensitive attribute data, then emerging awareness-based techniques to detect and mitigate bias in machine learning models might never be implementable in real-world settings.

Notably, this paper does not discuss complex and important questions about how “fairness” should be measured or addressed, recognizing that definitions are manifold [53]. Rather, we make a simpler point: If sensitive attribute data are not available, interventions that rely on them will be severely impaired.

We conduct this exploration through the lens of U.S. civil rights law in the domains of credit, employment, and healthcare. For each domain, we describe when and how private companies collect or infer sensitive attribute data to pursue antidiscrimination goals. These are not the only contexts where collection of sensitive attributes is likely to be justified or important, but they are quintessential areas where such data are already being used to measure and mitigate discrimination. They also highlight major divergences in policy, motivation, and practice.

ABSTRACT

Organizations cannot address demographic disparities that they cannot see. Recent research on machine learning and fairness has emphasized that awareness of sensitive attributes, such as race and sex, is critical to the development of interventions. However, on the ground, the existence of these data cannot be taken for granted.

This paper uses the domains of employment, credit, and healthcare in the United States to surface conditions that have shaped the availability of sensitive attribute data. For each domain, we describe how and when private companies collect or infer sensitive attribute data for antidiscrimination purposes. An inconsistent story emerges: Some companies are required by law to collect sensitive attribute data, while others are prohibited from doing so. Still others, in the absence of legal mandates, have determined that collection and imputation of these data are appropriate to address disparities.

This story has important implications for fairness research and its future applications. If companies that mediate access to life opportunities are unable or hesitant to collect or infer sensitive attribute data, then proposed techniques to detect and mitigate bias in machine learning models might never be implemented outside the lab. We conclude that today’s legal requirements and corporate practices, while highly inconsistent across domains, offer lessons for how to approach the collection and inference of sensitive data in appropriate circumstances. We urge stakeholders, including machine learning practitioners, to actively help chart a path forward that takes both policy goals and technical needs into account.
Comparing these sectors, a complex and inconsistent story emerges. In credit, the law requires some lenders to collect sensitive attribute data, while largely prohibiting others from doing so. In employment, the collection of sensitive attribute data is a familiar part of large employers’ day-to-day practice. And in health care, companies’ motivation for collecting sensitive attribute data is not just basic antidiscrimination compliance, but rather a moral imperative to address staggering disparities in health outcomes.

We observe that these norms and practices, divergent as they are, typically extend only to traditionally regulated actors. Technology companies that mediate access to opportunities as platforms (e.g., social networks, job boards, and rental sites) or act as vendors to other companies rarely receive clear guidance about when to collect or infer sensitive attribute data. As a result, today, many major technology companies do not collect or infer certain kinds of sensitive attribute data and may therefore struggle to define, detect, and address harms to those protected groups.

We conclude that there are few clear, generally accepted principles about when and why companies should collect sensitive attribute data for antidiscrimination purposes. We emphasize the importance of the machine learning research community engaging on the future development of policy in this area, and urge conversations among stakeholders about whether and how to adapt existing practices or establish new ones.

### 1.1 Defining “sensitive attribute data”

Throughout this paper, we use the term “sensitive attribute data” to refer to details about people’s membership in “protected classes” as defined throughout U.S. civil rights laws. This approach to classification is not without its problems: Rigid categories such as these do not currently accommodate nonbinary identities or membership across multiple groups [3, 34, 37, 51]. We acknowledge the reductive and potentially harmful nature of these classification regimes, while simultaneously emphasizing the importance of understanding how they have motivated data collection practices for bias mitigation, and how the history of these practices can inform contemporary contexts.

### 1.2 Related work

The fair ML research community has long reflected on the social and policy contexts of its work, recognizing legal tensions [8], historical parallels in prior debates over definitions of fairness [37], and the limitations of data-dependent problem formulation [64, 70]. However, when emphasizing the importance of awareness of sensitive attributes in developing and implementing fairness-enhancing interventions, fair ML research and toolkits [9, 38, 67] often take for granted when framing problems and their solutions that sensitive attribute data are available as inputs [17, 32, 39, 40, 48, 50, 65].

When labeled data are not available, researchers have made powerful discoveries by augmenting existing data through the inference or construction of labeled data de novo [5, 10, 27, 46]. At times, this work has insufficiently acknowledged the full range of challenges to generating or obtaining those data in applied contexts [35, 76, 77].

Veale and Binns [76] and Kilbertus et al [41] propose approaches to dealing with such information deficits without collecting or revealing sensitive data. Chen et al propose a method to impute unavailable protected class data [13]. Veale et al [77] and Holstein et al [35] outline the contextual needs for implementing fairness. Zliobaite and Custers use theoretical and linear regression-based examples to argue that sensitive data must be included in the modeling process in order to avoid discrimination [79]. Focusing on the European regulatory environment, their study distinguishes between direct and indirect discrimination, but does not address how different sectoral laws enable or prevent detection of either type.

This paper aims to bridge gaps between theoretical approaches and practical constraints, extracting lessons for fair ML practitioners from three real-world case studies.

### 2 CASE STUDIES

#### 2.1 Credit

United States federal law prohibits creditors from discriminating on the basis of certain protected characteristics. However, across the credit sector, there are sharply divergent approaches to collecting sensitive attribute data. On one hand, mortgage lenders are required to collect such data from their borrowers. On the other, consumer lenders are largely prohibited from doing so. The reason for this difference is not immediately apparent, and likely turns on historical details underlying the development of overlapping legal doctrines.

2.1.1 Background. In the mid-1970s, policymakers acknowledged that discriminatory practices in the consumer credit and home mortgage industries shut out women, people of color, low-income groups, and others from accessing these vital economic resources. The Equal Credit Opportunity Act (ECOA), passed in 1974, initially made discrimination on the bases of marital status and sex illegal, and was later expanded to include other protected groups. The following year, the Home Mortgage Disclosure Act (HMDA) similarly made discriminating against low-income home mortgage borrowers illegal. Like ECOA, HMDA grew to encompass categories including race, gender, and national origin through subsequent amendments.

The origins of ECOA trace back to an era when lenders required unmarried women to have male cosigners on their loans. From the outset, regulators feared that mandatory collection of protected class data beyond gender for the purpose of detecting discriminatory lending might itself facilitate such practices. Thus, under ECOA, the collection of these data is banned. Regulation B, which implements ECOA, has made exceptions for some voluntary collection of data on applicants’ color, national origin, religion, race, and sex as “monitoring information” in instances where lenders conduct self-testing to determine whether loans are not being granted to individuals on discriminatory grounds.

The Federal Reserve Board (FRB) twice considered amendments to ECOA that would allow voluntary collection of protected class data for non-mortgage loan applicants in order to surface discriminatory lending decisions. In 1995, the first proposal to lift the ban on collecting sensitive attribute data garnered a mix of support and opposition. Noting that discrimination on protected class bases only covered a limited set of criteria for potential disparate treatment during in-person lending scenarios, supporters of the change pointed to the successful identification and reduction of biased
mortgage lending decisions that resulted from HMDA’s strict data collection practices [74]. These advocates disagreed with the FRB’s long-held claim that recording these data would lead to discrimination in consumer lending, noting that this predicted harm did not unfold in the home mortgage industry.

The argument that voluntary collection of protected characteristic information would lead to discriminatory lending persisted, however, in large part due to credit industry representatives’ complaint letters opposing the amendments. Banks and other lending institutions were not inclined to support a measure that would incur higher costs and stricter reporting standards and presumably may have revealed discriminatory practices. They additionally warned that being asked about sensitive attributes could deter some minority applicants. In response to these public comments following the proposed amendment in 1995, the FRB decided to leave the decision about collecting protected class data up to Congress.

After introducing a second proposal to remove the ban on collecting these data in 1998, the FRB once again determined in 2003 that consumer lending institutions should not gather this information. Standing by their original conviction that sensitive attribute information collection would lead to outright discrimination, the FRB also reasoned that making this a voluntary action could result in incomplete data collection and inconsistent data formatting that would hinder cross-market comparison between creditors [74].

The ECOA’s evolution was in many ways the opposite of HMDA’s expansive push to seek evidence of unfair practices in the mortgage lending industry. HMDA grew out of home mortgage depository institutions’ disproportionate withdrawal of investments in largely urban areas from which they drew their deposits: a form of redlining that devitalized older neighborhoods, since residents could not access the credit required to sell and refurbish their homes [42]. HMDA’s initial reporting requirements involved publicizing geographic data about lending patterns. As the contexts and causes of home mortgage lending discrimination changed, HMDA was amended between 1980 and the early ’00s to expand the scope of institutions covered and to call for reporting of sensitive attribute data on borrowers’ gender, race, income, and other categories. When regulators determined these data were insufficient to demonstrate discrimination, they called for further data collection including data about rejected applications and loan pricing.

2.1.2 Data practices. While ECOA prohibits collection of sensitive attribute data for most purposes, its implementing regulations allow banks and “anyone who, in the ordinary course of business, regularly participates in decisions about whether or not to extend credit or how much credit to extend” to collect, in a narrow set of circumstances, sensitive attribute data on individuals applying for non-mortgage loans [71]. If lenders opt to collect this data, they must indicate that the information is being recorded for self-testing and monitoring purposes. If an applicant prefers not to provide their race and sex information, the lender is allowed to make their own determinations of these characteristics from visual observation and surname analysis. If the self-test demonstrates that the institution may have violated ECOA, the lender must attempt to identify the cause and extent of the violation. Save for in some instances, the results of the self-test are considered privileged information that government agencies cannot access in investigations related to ECOA transgressions.

HMDA, by contrast, requires expansive collection of both sensitive attribute data and related mortgage loan application data that can be used to build arguments that discrimination has occurred. Under HMDA, protected data that must be collected as part of a Loan/Application Register (LAR) include sex, race, and ethnicity, with additional requirements that data on income, loan amount and type, property location, and reasons for loan denial (among others) must be reported [42]. Lenders are allowed to use visual observation and surname analysis to guess the sex, race, and ethnicity of applicants who choose not to self-identify these traits. The data are published in different formats depending on the intended recipient. Lenders submit these data to the FRB annually, whereas if a member of the public requested access they would be presented with a modified LAR scrubbed of any identifying information. Finally, the Federal Financial Institutions Examination Council (FFIEC) creates disclosure statements for each lender based on their LAR data, and publishes openly available aggregate reports of HMDA data at city, national, and census-tract levels.

2.1.3 Results and reactions. The question of whether sensitive attribute data should be collected to detect discrimination in consumer lending remains controversial. As one scholar put it, “Even if computerized credit scoring arguably has the potential to eliminate disparate treatment results, disparate impact discrimination may still occur” [74]. Another scholar has suggested creditors should be required to conduct self-testing using sensitive attribute data,[4] Lenders and other proponents of credit scoring systems may argue that expanded collection of data on race and other protected class characteristics would be insufficient to prove discrimination given the increasing complexity of how credit scores are calculated.

Today, as was the case when ECOA was passed, the absence of sensitive attribute data makes it difficult to document and mitigate inequitable consumer lending practices. For example, one of the few robust public studies on credit scores and discrimination in the United States was performed by the FRB in 2007, at the direction of Congress [56]. To conduct its analysis, the FRB created a database that, for the first time, combined sensitive attribute data collected by the Social Security Administration (SSA) with a large, nationally representative sample of individuals’ credit records. The FRB noted its study was unique in part because of the lack of sensitive attribute data in this domain, and this unusual undertaking would not have been possible without significant governmental time and resources.

The shortage of sensitive attribute data in the consumer lending space also complicates regulatory enforcement. For example, in 2013, the Consumer Financial Protection Bureau (CFPB) and the Department of Justice found that Ally Financial, an auto lending firm, overcharged over 230,000 minority borrowers on their car loans. Two years later, the CFPB required Ally Financial to send checks from its $80 million settlement to customers believed to have unfairly paid higher prices for their loans [66]. Lacking access to data on which exact individuals had overpaid, however, the CFPB instead used a Bayesian Improved Surname Geocoding (BISG) method to predict which customers were likely to be racial minorities, and were therefore more likely to be victims of Ally Financial’s allegedly
discriminatory pricing. Although BISG’s probabilistic means of using publicly available surnames and geographical information as proxies for race and ethnicity is regarded as among the most advanced technique of its kind [11], it is not without flaws. In the use of BISG during the Ally Financial payout, some white Americans were misidentified as having been overcharged for car loans on a discriminatory basis and received compensatory checks [7]. Had data collection practices in non-mortgage lending included sensitive attributes, such mistakes could have been averted. Moreover, predictive power of these techniques might diminish over time if housing and marital segregation patterns change.

By contrast, the amendments to HMDA that spurred collection of protected class data came into effect in 1990, and data from 1992 reflected a significant rise in mortgage lending to low- and moderate-income and minority communities [49]. Moreover, in the longer term, the publication of the 1991 data fueled community activism and helped change home mortgage lenders’ practices. Making HMDA data mutually accessible to lending institutions and community organizations is correlated with beneficial outcomes for banks and borrowers alike [20]. However, it remains difficult to know for certain to what extent this data led to reductions in discriminatory lending practices or merely documented changes that were already underway.

2.2 Employment

United States federal law prohibits employers and employment agencies from discriminating on the basis of certain protected attributes. In this context, the collection of demographic information is a familiar part of most employers’ day-to-day practice. For example, many large employers are required to collect demographic data about job applicants and employees to facilitate regulatory enforcement and research. And for many decades, employment selection procedures have been subject to regulatory guidelines that assume “adverse impact” can be readily quantified.

2.2.1 Background. Following sustained, nationwide demands to end racial discrimination and segregation, Congress passed sweeping protections in the Civil Rights Act in 1964. Title VII of the Act pertains specifically to employment, prohibiting employers from directly or indirectly discriminating in their employment practices and laying out expectations around data collection and reporting for enforcement purposes. The following year, President Lyndon B. Johnson signed Executive Order 11246, which prohibits federal contractors from discriminating in employment decisions, and also requires employers to take affirmative action to increase the representation of women and minorities in their workforces. The order, enforced by the Department of Labor’s Office of Federal Contract Compliance (OFCCP), also outlines related requirements around the documentation of recruitment activities, including the collection of demographic information about job applicants and employees in order to facilitate the detection of discrimination at different points in the recruitment pipeline.

Title VII requires employers and other covered entities to “make and keep such records relevant to the determinations of whether unlawful employment practices have been or are being committed,” as defined by the Equal Opportunity Employment Commission (EEOC), which enforces the law [1]. Since employers may be liable for employment practices that result in disparate impact on the basis of protected categories including race and gender, EEOC guidance points to Title VII as a legal basis for requiring the collection of applicant data as necessary to detect, mitigate, or defend against claims of disparate impact. The Uniform Guidelines on Employment Selection Procedures, which reflects the U.S. government’s unified position on employment tests, detail how employment tests must be evaluated for unjustified adverse impact on the basis of race, sex, or ethnicity. The EEOC may allow employers to use selection procedures with disparate impact provided that the procedure has been “validated” according to these guidelines [31].

In order to support enforcement of these legal protections, monitor progress in workplace diversity, and enable employer self-assessment, the EEOC also requires private employers with 100 or more employees and contractors with more than 50 employees to collect aggregate statistics about the demographics of their workforce and report them to regulators on a yearly basis, known as EEO-1 reports.

2.2.2 Data practices. Collection of sensitive attribute data in the employment sector is highly standardized, reflecting well-defined federal reporting requirements.

For EEO-1 reports, employers must collect data on sex, a binary field (male or female), as well as race, divided into predefined categories of Black, Hispanic, Asian/Pacific Islander, American Indian/Alaskan Native, white, or “two or more races” [16]. These categories were last updated in 2005 (after 40 years), and in 2007 the EEOC advised that employers were permitted—but not required—to collect more detailed demographic data [55, 63]. Employers must offer employees the opportunity to voluntarily self-identify in the predefined categories. If and only if an employee declines to self-identify, the employer may use “employment records or observer identification,” elsewhere described as “visual surveys of the workforce” to categorize the worker to complete their reporting requirements [16].

Although not all employers are required to track sensitive attributes from job applicants, many opt to solicit this information at the time of application, and federal contractors are required to do so. Contractors may solicit demographic data from applicants at any time during the employee selection process so long as the data is solicited from all applicants. Regulators advise that “voluntary self-reporting or self-identification is still generally the preferred method for collecting data on race, ethnicity, and gender, but in situations where self-reporting is not practicable or feasible, observer information may be used to identify race, ethnicity, and gender” [62]. After making “reasonable efforts to identify applicant race, gender, and ethnicity information,” contractors may record the applicant’s race and gender as “unknown”—with the exception that employers may visually identify applicants “when the applicant appears in person and declines to self-identify” [61]. Notably, employers may not use these data as a part of their employment selection procedures, but may use them to evaluate outcomes and inform changes to those procedures.

2.2.3 Results and reactions. As of 2017, nearly 70 thousand employers file EEO-1 reports per year, documenting data for over 50 million employees [14]. Multiple studies have used EEO and other sources of demographic data to measure trends in occupational
segregation, finding that it has declined since the passage of Title VII [44, 69, 78]. Others use this data to more closely examine race and sex inequality in managerial positions and within specific industries, as well as gender and racial pay gaps [36, 45, 69]. Several researchers were able to determine that OFCCP monitoring and enforcement in particular likely contributed to greater representation of Black workers in skilled occupations [47]. The EEOC and OFCCP themselves commonly use EEO-1 and other mandatorily collected data to support investigations of individual and systemic employment discrimination [15, 75].

Some have pointed out that unlike other government survey instruments, the EEOC merges data on race and ethnicity, which may lead to measurement errors [69]. Others critique the allowance of observed data, but concede that because observed data relate to how workers may be perceived, these data may still have utility in understanding employment discrimination [72]. However, we identified relatively little criticism of the overall exercise of collecting sensitive attribute data in the context of employment, perhaps because the law requiring and justifying their collection is so clear.

Here again, it is not clear that the relationship between demographic data collection and any occupational desegregation is a causal one. Without this disaggregated employment data, however, documentation of these trends would be significantly more difficult. Indeed, researchers have found that while EEO-1 data do have some constraints, they can be a particularly powerful tool to study workplace inequality and segregation, especially as compared with other data sources [69].

2.3 Health

United States federal law prohibits discrimination in the provision of various health care services. For example, those who qualify for federal health insurance programs such as Medicare or Medicaid may not be subjected to discrimination based on certain sensitive attributes. However, unlike in credit and employment, a major driving factor behind collection of sensitive attribute data in this sector has been voluntary industry efforts to address racial and ethnic disparities in health outcomes, rather than compliance with antidiscrimination laws alone.

2.3.1 Background. The passage of the Civil Rights Act in 1964 and the establishment of Medicare the following year created a need for data to confirm that patients had equal access to health care and that hospitals were not segregated. As a result, many hospitals initially collected data about sensitive attributes for compliance purposes only [68].

A shift in approach was prompted not long after by Secretary of Health and Human Services (HHS) Margaret Heckler’s observation in a 1983 national health report that minority health lagged behind that of white Americans, and the subsequent formation of the Task Force on Black and Minority Health to research this gap. The 1986 publication of the Report of the Secretary’s Task Force on Black and Minority Health (Heckler Report) marked the first study highlighting the significant health disparities racial minorities experienced in the U.S. [57]. Although the Heckler Report’s findings drew awareness to racial inequality in healthcare provision, they did not themselves effect a shift away from compliance-based sensitive attribute data collection toward a model of using these data to reduce discrimination.

At the request of Congress in 2003, the Institute of Medicine (IOM) published a follow-up report, Unequal Treatment, affirming that unacceptable levels of racial and ethnic disparities in health outcomes persisted [60]. The IOM report concluded that without data on patients’ race, ethnicity, socioeconomic status, and primary language, it would be impossible for healthcare providers to detect or address these disparities, and recommended the systematic collection and reporting of race and ethnicity data as a critical step toward eliminating them.

The IOM report jump-started health insurance and other care providers’ joint, voluntary effort to collect and use data for healthcare quality improvement and disparity reduction [68]. Organizations such as the National Health Plan Collaborative (NHPC) connected health research institutes to national and regional health plans in order for the former to provide these firms with educational tools and recommendations for how to detect and mitigate discrimination [73]. While initially, many insurance providers believed collecting race and ethnicity data was illegal, legal analysis determined that collection was justified under (though not explicitly required by) Title VI of the Civil Rights Act and the Affordable Care Act, as well as several state laws. Under these statutes, health plans are prohibited from using demographic data for discriminatory purposes, including steering patients toward certain healthcare products [18, 43]. However, health plans are allowed to use these data in order to report aggregate trends and join initiatives to provide equitable services.

2.3.2 Data practices. Some health providers have found it necessary to collect data on patients’ race, ethnicity, and primary spoken language (REL) to identify health care disparities [23]. However, there is substantial variability in the precise categories and level of granularity different health providers opt to use to do so. Industry-wide efforts to standardize these data are ongoing.

Physicians and hospitals often collect REL data at intake—usually by asking patients directly, though sometimes determined by intake specialist observation [28]. Health plans, on the other hand, tend to use surveys and incentive programs to collect data after people have signed up for coverage. In some cases, insurers are prohibited from asking for race/ethnicity data during the sign-up process [25, 29]. Some health providers also appear to be able to share and obtain data from federal agencies (e.g. Medicaid), though the exact mechanics of this process remain obscure.

Policymakers and practitioners recognize that in general, data that patients self-report are strongly preferred [24, 33], but in practice, providers have struggled to convince most patients to voluntarily self-report. In the interest of generating data necessary to reduce disparities, methods to estimate race and ethnicity have been widely adopted to supplement self-reported data [54]. Early inference methods involved basic geocoding and surname analysis; more advanced probabilistic techniques have since been developed to refine these estimates. These algorithms produce probabilities that individuals belong to a particular racial or ethnic group, which can then be used to assess disparities between subgroups at an
aggregate level [29, 68]. A number of health plans combine self-reported and estimated data to increase accuracy of their analysis [54].

Experts have recommended that race/ethnicity data based on indirect estimation methods should be stored separately from or be clearly marked in medical systems. Inferred data should not be placed in individuals’ clinical medical records—that is, probabilistic methods should not be used to assign someone a particular race or ethnicity classification [68]—but should only be used for aggregate statistical analysis [25]. The IOM recommended that when possible, estimations should be accompanied by their respective probabilities [68]. Whether actual data management practice follows these recommendations likely varies by institution.

2.3.3 Results and reactions. While significant healthcare disparities remain, they have narrowed since the publication of the IOM report that motivated increased data collection [22, 59]. Moreover, granular data has enabled ongoing monitoring and benchmarking of health outcomes, motivated substantial scientific and policy research, and supported federal, state, local, industry, and practitioner-driven disparity reduction initiatives.

Although many health plans have internal policies on confidentiality and use of race/ethnicity data [30], low rates of participation in voluntary data collection may indicate continued lack of trust in healthcare institutions that collect these data, and fear that demographic data might be used to discriminate against patients or otherwise be misused [33]. Health plans have admitted that they sometimes hesitate to collect data for fear of being accused of discrimination [25], on top of other challenges like privacy concerns, IT limitations, and inconsistency or insensitivity in the available categories [54]. But many healthcare providers circumvent these challenges by using techniques to generate demographic data in a probabilistic manner.

Critiques of direct and indirect data collection efforts in healthcare have also emerged on the grounds that concepts of race and ethnicity are merely sociopolitical constructs [25], and therefore categorizing patients using those constructs may reinforce and calcify them. However, the broadly recognized harms of race- and ethnicity-related health disparities seem to have outweighed this critical perspective for the time being.

3 DISCUSSION

Clearly, debates about collection of sensitive attribute data for antidiscrimination purposes are not new. There are decades of precedent that can inform the machine learning fairness research community, the broader technology industry, and other stakeholders.

It is important to reiterate that our case studies do not indicate whether collection of sensitive attribute data has contributed causally to more fair and equitable outcomes. A more fulsome analysis of this question remains for future work. However, we remain convinced that measurement is often a precondition for meaningful improvements.

While the case studies above merely scratch the surface, they offer some important insights. First, they show that U.S. legal frameworks do not offer consistent, extensible guidance about when and how corporations should collect sensitive attribute data. Rather, there are divergent and sometimes contradictory approaches: Some companies are required to collect sensitive data to comply with antidiscrimination laws, while others are explicitly prohibited from doing so. Second, they show that companies’ primary incentives for collecting sensitive attribute data may not—and need not—be compliance or legal requirements at all. The healthcare industry is one such example. Here, deliberate, sustained, and ongoing debates on data collection and inference practices across the industry and stakeholder communities were needed to align on an approach to combating disparities.

If awareness-based techniques remain a primary approach to bias mitigation in predictive modelling, there is a need to thoughtfully consider what efforts must be undertaken to expand collection of sensitive attribute data in a responsible manner.

3.1 Lessons regarding traditionally regulated companies

For traditionally regulated entities like banks and employers, modernization or clarification of laws and regulatory guidance may be needed to encourage the collection of sensitive attribute data for new antidiscrimination efforts. Because these companies can be liable for discriminatory outcomes, they are unlikely to voluntarily collect or analyze sensitive attribute data that could introduce new vectors for liability. Thus, they might resist legal reforms that make it easier to collect sensitive attribute data.

Looking ahead, policymakers, researchers, and and civil society will need to work together to assess what kinds of sensitive attribute data are needed to protect people against discrimination and create the policy conditions for that collection to occur. These stakeholders will need to consider what data ought to be collected and in what form, and the appropriate scope of “safe harbor” provisions to incentivize thorough and transparent study. These are not clear or settled questions, even with decades of practice under longstanding civil rights laws.

3.2 Lessons regarding less regulated companies

Many technology platform companies, including those using models to mediate access to important life opportunities, are not squarely covered by civil rights laws. These companies often operate as internet intermediaries, and thus enjoy some special legal protections from liability arising from content posted by third party users [26]. Nonetheless, many are grappling with how to prevent bias. For example:

- Airbnb recently assembled “a permanent team of engineers, data scientists, researchers, and designers whose sole purpose is to advance belonging and inclusion and to root out bias” [32]. The announcement came on the heels of reports of discrimination against African Americans seeking housing opportunities on its platform. The company has not yet publicly discussed the details of this work, or whether it collects or infers sensitive attribute data in its efforts to combat discrimination. However, it is difficult to imagine an approach that would avoid these questions.
- Facebook, in delivering advertisements on its platform, introduces demographic skews along gender and race lines [5]. This practice is currently being challenged in court by the
United States Department of Housing and Urban Development (HUD) [58]. Furthermore, as part of a legally enforceable settlement with civil rights organizations, Facebook recently committed to studying the potential for unintended biases in algorithmic modeling [6]. However, this research will likely be impossible without collecting or inferring sensitive attributes of the company’s users. It is not yet clear how Facebook will approach this issue.

- LinkedIn, in an effort to promote equity in hiring, recently updated its recruiter tools to balance the gender distribution in candidate search results, rather than sorting candidates purely by “relevance” [12]. With this update, if the pool of potential candidates who fit an employer’s search parameters reflects a certain proportion of women, LinkedIn will re-rank candidates so that every page of search results reflects that proportion. The company also plans to offer employers reports that track the gender breakdown of their candidates across several stages of the recruitment process, as well as comparisons to the gender makeup of peer companies. These features rely on inferring gender data about jobseekers on the platform, which the company was already doing for advertising purposes.

It’s not surprising that each of the above examples was motivated by some combination of public pressure or litigation. Technology companies are unsure about what kinds of sensitive attribute collection are appropriate. As a result, the path of least resistance is to simply not to collect or infer data that may create controversy or highlight disparities that may be difficult to address. This is especially true given that perceived violations of privacy are likely to garner intensive media coverage, or where applicable, increased attention from regulators. It will likely fall to a wide range of stakeholders, including advocates, researchers, and policymakers, to ensure that sensitive attribute data is collected and used under appropriate circumstances.

### 3.3 The need for multidisciplinary collaboration

The implementation of awareness-based antidiscrimination approaches cannot, and should not, move forward without robust involvement of public interest, technical, and regulatory stakeholders. Even amid clear and compelling risks of discrimination or unjust demographic disparities, it can be difficult for policymakers to recommend the collection of sensitive attribute data. There is no evidence this issue will become easier in the future, despite the rapid adoption of machine learning models involved in important life decisions for which these data may be critical to prevent harm.

Privacy laws can sometimes sit in tension with antidiscrimination goals, and might prevent well-meaning actors from collecting data that are necessary to detect and remediate bias in machine learning-based models. Privacy advocates will need to ensure that new legal requirements around data minimization and restrictions on the processing of sensitive data do not deter or impede companies from good faith self-testing and bias remediation. At least one recent U.S. legislative proposal provides an explicit exception for such testing [2], reinforcing the need for more detailed implementation guidance. Meanwhile, European laws and norms diverge significantly from the U.S. approach, prioritizing privacy heavily over awareness-based antidiscrimination approaches [79]. Private entities may need to navigate conflicting laws, guidance, and public expectations across social and geopolitical contexts.

Finally, there is no shortage of critical questions that still need to be answered:

- **When should sensitive attribute data be collected?** Given the practices described above, non-industry actors should consider under what conditions, if any, they would trust certain private actors with sensitive attribute data that are needed for antidiscrimination efforts. It’s obvious that data collection would be justified in some contexts, but the risks may outweigh potential benefits in others. It’s far less obvious (and beyond the scope of this paper to suggest) where those lines should be drawn. These norms are especially unsettled for technology companies, who have not had the same historical obligations as traditionally regulated entities, and suffer from significant trust deficits around their data practices.

- **How should sensitive attribute data be created?** Sensitive attribute data can be collected directly from subjects or inferred from non-sensitive data. However, inference presents challenges around consent, forced classification, and error. Stakeholders must work together to determine under what conditions inference is acceptable, appropriate inference methodologies, and how to treat inferred data responsibly. The cases considered in this paper offer instructive approaches, including retaining probabilistic values and uncertainty in inferred data, clearly marking when data are observed or inferred, and storing inferred data separately from data collected with permission. Other approaches might include enforceable commitments to use these data only for detecting and mitigating discrimination.

- **How should sensitive attribute data be treated and secured?** Ideally, sensitive data would be stored separately from other data and used only for limited purposes, but such technical safeguards may be difficult to guarantee. New privacy-protective techniques to access sensitive attribute data, including secure multi-party computation tools like private set intersection and homomorphic encryption, may allow companies to securely sequester these sensitive data from general purpose user data, or even enable trusted third parties to collect, infer, or hold sensitive data while making their insights available to the private entities whose products implicate people’s rights [76]. However, these techniques are still nascent and have yet to be broadly deployed for the purpose of bias testing or mitigation.

### 4 CONCLUSION

Policy debates about the collection and use of sensitive attribute data will decide the fate of awareness-based bias mitigation techniques. There is an urgent need for machine learning scholars to drive these conversations forward, along with other stakeholders, so policy and technical approaches can be developed in accordance with each other. The ability to detect and address bias in algorithms—and the durability of foundational civil rights protections—may hang in the balance.
July 27, 2020

Fair Isaac Corporation (FICO) appreciates the opportunity to submit these brief comments on the most recently released draft white paper, **Best Practices – Regulatory Review of Predictive Models**.

FICO fully understands and respects the value of regulatory scrutiny as well as the need for regulatory flexibility to help ensure that consumers continue to enjoy greater access to more affordable insurance through the industry’s use of credit-based insurance scores. We believe it is important to preserve this consumer benefit.

FICO remains concerned that the predictive model review provisions proposed in the white paper, if adopted and implemented by state departments of insurance, will reduce the effectiveness of the time-tested and proven regulatory processes that exists today with respect to credit-based insurance scores. FICO believes that implementation of the proposed provisions is likely to severely strain the strong competitive nature of the auto and home insurance industry, which leads to lower insurance costs for consumers. Greater competition drives to greater access of insurance and at lower costs for consumers.

More importantly, however, the majority of consumers who have benefitted—via lower premium payments—from the industry’s use of credit-based insurance scores for the past two decades will see their premiums increase as this key risk segmentation tool is restrained or restricted in those states that adopt the proposed provisions. Properly utilized and proven risk segmentation tools allow insurers to identify those risks requiring more or less premium based on the likelihood of future claim activity.

For nearly two decades, in support of successful rate filings throughout the nation by our FICO® Insurance Score clients, FICO has provided model documentation to all requesting departments of insurance that are able to provide appropriate confidentiality protections for FICO’s proprietary information. FICO’s submissions generally include specific consumer credit characteristics, attributes and weights for the filed model, reason code/factor definitions, and a general discussion of our model development process.
FICO will continue to provide that filing support for our clients’ use of FICO Insurance Scores by answering all appropriate regulatory questions to the best of our ability and by offering as much insight into FICO’s proprietary modeling analytics and technologies as possible, while still protecting our intellectual property.

Thank you for allowing FICO to once again comment on this important issue.

Sincerely,

Lamont D. Boyd, CPCU, AIM
Insurance Industry Director, Scores

Re: CASTF Predictive Model White Paper – Proposed Edits

Dear Ms. DeFrain:

In support of the finalization of the Regulatory Review of Predictive Models White Paper, we respectfully submit the following suggested edits.

**COMMENTS**

Our comments are summarized in the following table:

<table>
<thead>
<tr>
<th>Page</th>
<th>Section</th>
<th>Exposure Draft Text</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>11</td>
<td>X. Other Considerations</td>
<td>Provide guidance for regulators on the value and/or concerns of data mining including how data mining may assist in the model building process, how data mining may conflict with standard scientific principles, how data mining may increase “false positives” during the model building process, and how data mining may result in less accurate models or models that are unfairly discriminatory.</td>
<td>Previous exposure draft comments have mentioned the potential issues of brief mentions of other topics that suggest concerns without sufficient discussion. “Data mining” is no longer defined within the paper, and we believe some readers may associate “data mining” with the general application of machine learning and statistical models. Done with appropriate validation, this use of “data mining” is not inherently problematic. We suggest this item be reworded to refer to “data dredging” or “the use of predictive modeling methods without sufficient validation.”</td>
</tr>
<tr>
<td>14</td>
<td>Appendix B, paragraph 2</td>
<td>Documentation should be sufficiently detailed and complete to enable a qualified third party to form a sound judgment on the suitability of the model for the intended purpose.</td>
<td>We suggest adding guidance based on ASOP 56 - Modeling, clarifying that “the degree of such documentation may vary with the complexity and purpose of the model.”</td>
</tr>
<tr>
<td>16</td>
<td>A.1.a</td>
<td>If the data is taken from an outside source, find out what steps were taken to verify the data was accurate, complete and unbiased in terms of relevant and representative time frame, representative of potential exposures and lacking in obvious correlation to protected classes.</td>
<td>We suggest an example to illustrate what would be considered “obvious correlation.”</td>
</tr>
<tr>
<td>18</td>
<td>A.2.e</td>
<td>Such redundancy may also occur with the inclusion of fluvial or pluvial flood losses, when using a flood model, inclusion of freeze losses, when using a winter storm</td>
<td>It is not clear how including demand surge on catastrophe model output would create overlap/redundancy with historical claims data. We suggest a clarification, or the</td>

<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>For all variables (discrete or continuous), review the appropriate parameter values, confidence intervals, chi-square tests, p-values and any other relevant and material tests. Determine if model development data, validation data, test data or other data was used for these tests.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>26</td>
<td>B.4.d</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>For overall discrete variables, review type 3 chi-square tests, p-values, F tests and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>26</td>
<td>B.4.f</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>For continuous variables, provide confidence intervals, chi-square tests, p-values and any other relevant and material test. Determine if model development data, validation data, test data or other data was used for these tests.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>27</td>
<td>B.4.g</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Obtain a description how the model was tested for stability over time.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

This comment appears in sections A.2.e and A.3.a. We suggest removing it from A.2.e as it is not related to the issue of redundancy between modeled losses and historical claims.

The term “data mining” is used without definition. We suggest replacing with: “The modeler should comment on the use of automated feature selection algorithms to choose predictor variables, and explain how potential overfitting which can arise from these techniques was addressed.”

Replace “determine” with “determined.”

The “and” suggests that the best practice is to review not only multiple but every possible test of significance. We believe this unnecessary and impractical, and suggest that the information element should be reworded to “review the appropriate parameter values and relevant tests of significance, such as confidence intervals, chi-square tests, p-values, or F tests.”

Examples of how a modeler would perform such tests could help clarify what is meant by “stability over time.” Is this...

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>28</td>
<td>B.5.b</td>
<td>It is expected that there should be improvement in the Gini coefficient. This element seems to suggest that the Gini coefficient is a “gold standard” for model selection. We suggest a clarification that the choice of a final model may be based on other technical measures of model performance, as well as business considerations.</td>
</tr>
<tr>
<td>31</td>
<td>C.4.c</td>
<td>A more granular rating plan implies that the insurer had to extrapolate certain rating treatments, especially at the tails of a distribution of attributes, in a manner not specified by the model indications. A more granular rating plan may also arise if the insurer interpolates factors for a continuous variable that was binned into a discrete variable for modeling purposes.</td>
</tr>
<tr>
<td>32</td>
<td>C.7.a</td>
<td>Obtain a listing of the top five rating variables that contribute the most to large swings in premium, both as increases and decreases. The comments do not provide much guidance on how an insurer or regulator would determine these variables in practice. An example would be helpful.</td>
</tr>
<tr>
<td>32</td>
<td>C.7.c</td>
<td>For the proposed filing, obtain the impacts on expiring policies and describe the process used by management, if any, to mitigate those impacts. Item C.7.c refers to “expiring policies” and item C.7.d refer to “renewal business (created by renewing the current book of business)”. Are these referring to the same thing (the insurance book of business)? If so it would be clearer to use consistent terminology. If not, please provide a comment that clarifies the difference between the two.</td>
</tr>
<tr>
<td>33</td>
<td>C.7.d</td>
<td>Obtain a rate disruption/disco location analysis, demonstrating the distribution of percentage and/or dollar impacts on renewal business (created by renewing the current book of business), and sufficient information to explain the disruptions to individual consumers. It is not clear what it required for “sufficient information to explain the disruptions to individual consumers.” Since this is a Level 2 item, examples would be helpful for insurers that seek speed to market. Does the example analysis in the Appendix provide “sufficient information to explain the disruptions to individual consumers,” or is more required? Also “Appendix C” should be changed to “Appendix D.”</td>
</tr>
<tr>
<td>33</td>
<td>C.7.e</td>
<td>See Appendix C for an example of an exposure distribution. Revise “Appendix C” to “Appendix D.”</td>
</tr>
</tbody>
</table>

Re: NAMIC Comments on CASTF’s Predictive Model White Paper – 6/12/2020 Exposure

Dear Chair and Members of the Task Force,

Please find included herein the following comments of the National Association of Mutual Insurance Companies (hereinafter “NAMIC”)1 regarding the June 12, 2020 exposure draft of the Casualty Actuarial and Statistical Task Force (CASTF) Regulatory Review of Predictive Models White Paper. NAMIC wishes to thank the task force for the ability to provide additional comments on the white paper as amended. As mentioned in previous comments, dealing with the concept of predictive modeling is an extremely important undertaking as it impacts industry and consumers. NAMIC is cognizant of the need to assure that there are appropriate parameters around predictive model usage to ensure appropriate implementation.

Throughout this more than year and one-half process, there have been many revisions and detailed analysis concerning the paper contents and comments submitted. NAMIC wishes to thank CASTF for its thorough and granular review of the submitted comments and its substantive review and response to each aspect of the submissions. The work of CASTF has been exemplary from a transparency and responsiveness viewpoint.

Woven into this discussion is also the need to recognize the current national discussion of race and discrimination that has rightfully permeated public discourse. Additionally, with the ongoing COVID-19 pandemic causing widespread loss to the world, CASTF has no doubt been mindful of these events and wants to center discussion on being responsive to consumer and regulatory concerns. NAMIC is firmly against intentional and unfair discrimination against any protected class and adamantly supports any efforts to eliminate such conduct. We believe that current regulatory authority is more than ample in assisting regulators in performing their required duties under the law but understand and appreciate the need to explore further.

1NAMIC membership includes more than 1,400 member companies. The association supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies write $278 billion in annual premiums. Our members account for 58 percent of homeowners, 44 percent of automobile, and 30 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
NAMIC also firmly supports risk-based pricing for insurance products that use facially neutral rating factors to objectively base pricing on a person’s correlated risk of future loss. This has been the insurance dynamic for many years. These discussions should and will continue and we are confident that common ground can be found in these areas with further elucidation.

The task force is charged with producing a white paper that helps provide guidelines and parameters to rate and form filings concerning predictive model usage for homeowner and auto personal lines insurance. We understand that this work is nearing its end and are mindful of the Chair’s admonition not to continue to re-visit prior comments. Therefore we would respectfully like to limit our comments to concerns with the new exposure draft and only very briefly note that some of our concerns from the beginning continue through the current draft so as to avoid any misinterpretation that we no longer believe they are issues that should be addressed.

First of all, we appreciate that there have been many positive changes to the paper such as dividing the informational elements into categories of need, removing extraneous or redundant elements, and attempting to clarify or remove some potentially problematic terminology. CASTF has also endeavored to remove issues from the paper that are beyond its scope and list topics for future discourse. These are positive and again we want to thank CASTF for the effort in this regard.

However, we would recommend additional edits to make the paper the best product for review and usage by the states in their respective roles and duties. NAMIC strongly supports clear and fair regulatory guidance that protects consumers and provides a level playing field for all participants.

With those principles in mind, we are concerned that the use of “rational explanation” does not clear up the issue of correlation versus causation. In fact, in the explanatory notes in information element B.3.d, it states “[t]he explanation should go beyond demonstrating correlation.” It goes on further to state that “[i]f no rational explanation can be provided; greater scrutiny may be appropriate.” This interjects a highly subjective standard and moves away from traditional actuarial justification based upon correlation. The paper goes on to state in C.2.a, that a narrative should include “a rational relationship to cost.” Finally, in the “Rational Explanation” definition in the Glossary of Terms the paper states – “A ‘rational explanation’ refers to a plausible narrative connecting the variable and/or treatment in question with real-world circumstances or behaviors that contribute to the risk of insurance loss in a manner that is readily understandable to a consumer or other educated layperson. A “rational explanation” does not require strict proof of causality but should establish a sufficient degree of confidence that the variable and/or treatment selected are not obscure, irrelevant, or arbitrary.”

The use of rational explanation is still a move to a heightened standard of actuarial justification from existing law. Rates must be adequate, not excessive, or unfairly discriminatory according to state laws across the country. Actuarial soundness is dependent upon correlation to loss. We appreciate that the paper stops short of recommending a causality standard, an impossible standard where there must be absolute linkage between a variable and loss (creating an expectation that insurers
accurately and with absolute precision predict the future). A rational explanation, utilizing the provided definition, does not protect against subjective interpretation and ambiguity and therefore does not meet the goal of providing clear regulatory guidance. Therefore, we respectfully would submit that the statements concerning rational relationship and the movement beyond correlation be removed, or at least moved to the list of issues for further consideration.

Mindful of the Chair’s admonition, we will only briefly touch upon concerns that we have previously raised but remain. In this regard, NAMIC would highlight among others:

- The prescriptive nature of the document is more akin to a model law or regulation and therefore should proceed in that fashion as opposed to a white paper;
- The remaining information elements (especially categories 1 and 2) still may cause a significant compliance burden, potentially slowing speed to market and ultimately stifling innovation;
- Broad terminology such as “improve” the rating plan or make the rating plan “fairer” can mean many different things to different people. Such words are not necessary to carry out the intent of the paper and may be creating a new standard;
- The sharing of proprietary models could cause irreparable harm to insurers’ research and development of suitable products (we appreciate the added language on this issue, but it is still unclear how this filing information will be utilized and potentially shared inside NAIC and with the states); and
- The need for the inclusion of robust confidentiality protections for proprietary information by regulators.2

Finally, and in summary, we mention these items not to be repetitive or unmindful of the concerns of CASTF, but to emphasize that the eventual output of NAIC and CASTF may be utilized or interpreted improperly which we are certain is not the intent. However, the paper cannot be summarily characterized as merely guidance or best practices that states can ignore. We believe that NAIC documents may be utilized in litigation or in administrative reviews to inappropriately apply standards that are not found in law. NAIC’s actions carry a great deal of weight in the public domain which is why NAMIC remains so focused on tethering NAIC work products - including aspirational products - to existing authority lest confusion develop.

NAMIC wants to thank the task force for its diligent and thorough process, the ability to respond to various drafts, and looks forward to providing continued input and finding common ground in this endeavor. We believe with a few, but significant surgical corrections the document can provide its intended goal without sacrificing the clarity and direction it intends to provide.

---

2 NAMIC collaborated on a white paper concerning the CASTF white paper entitled, The State Rating Statutes and Constitutional Policymaking: Causation and Disparate Impact Standards in NAIC’s Draft White Paper, Shapo, 2020, that discusses these and other issues, although there have been updates to the CASTF paper since publication. See https://www.namic.org/pdf/publicpolicy/200309_castf_issuanalysis_final.pdf.
Sincerely,

Andrew Pauley, CPCU
Government Affairs Counsel

Kris DeFrain, FCAS, MAAA, CPCU
Director, Research and Actuarial Services
National Association of Insurance Commissioners

Sent via email: kdefrain@naic.org

Pinnacle Actuarial Resources, Inc. (Pinnacle) is pleased to have the opportunity to provide the following comments in regards to National Association of Insurance Commissioner’s (NAIC) Casualty Actuarial and Statistical Task Force (CASTF) second draft of the Regulatory Review of Predictive Models White Paper.

Below are specific comments regarding the second draft of the white paper.

1. Page 3: The first bullet in the description of the GLM states that the target variable follows a probability distribution from the exponential family, but a GLM does not need to be from the exponential family. There are several different distribution family options for a GLM. The phrase “from the exponential family” should be deleted from the bullet.

2. Page 12: “Provide guidance for regulators to determine that individual input characteristics to a model or a sub-model, as well as associated relativities, are not unfairly discriminatory or a “proxy for a protected class.”

The only way this can be done definitively is by either having insurers collect this information or requiring insurance companies to provide detailed data to regulators and letting them add the protected data. Other approaches without having access to actual protected data will have statistical issues.

Commitment Beyond Numbers

The phrase “disparate impact” is used often, but is not really defined well anywhere. It will be important for the NAIC to be clear in defining what disparate impact really means. A definition of “disparate impact” should be added to the paper.

4. Page 12: “Provide guidance for regulators that seek a causal or rational explanation why a rating variable is correlated to expected loss or expense, and why that correlation is consistent with the expected direction of the relationship.”

Page 24 (B.3.d): “Obtain a rational explanation for why an increase in each predictor variable should increase or decrease frequency, severity, loss costs, expenses, or any element or characteristic being predicted.”

These items introduce very subjective criteria. A regulator can say that the explanation does not meet the standard or is not reasonable, and does not provide any real recourse for the insurance company. What options will an insurance company have if a regulator thinks a company explanation is not reasonable?

It can be difficult to prove causation for a correlated variable. It is going to be nearly impossible to define what is acceptable in a clear manner.

5. Page 19 (A.3.c): “Ask for aggregated data (one data set of pre-adjusted/scrubbed data and one data set of post-adjusted/scrubbed data) that allows the regulator to focus on the univariate distributions and compare raw data to adjusted/binned/transformed/etc. data.”

The two data sets being described here are not aggregate data, but more granular data. “Aggregated” should be removed from the statement.

6. Page 34: “In the filed rating plan, be aware of any non-insurance data used as input to the model (customer-provided or other). In order to respond to consumer inquiries, it may be necessary to inquire as to how consumers can verify their data and correct errors.”

What is meant by non-insurance data? Technically, an MVR could be considered as non-insurance data. Does “non-insurance data” mean data external to the insurance company? Non-insurance data should be defined in the paper.
The comments above are the collected comments of the consultants employed or affiliated with Pinnacle. If you have any questions regarding our comments, please contact Laura Maxwell, Pinnacle’s Professional Standards Officer, at lmaxwell@pinnacleactuaries.com.

re: 6/12/20 Draft White Paper on Best Practices

Dear Ms. DeFrain,

Insurance Services Office, Inc. (ISO) is a countrywide licensed rating/advisory organization serving the property/casualty market. We have extensive experience and expertise in the development of advisory insurance pricing tools including prospective loss costs, rating plans and predictive analytics, including related regulatory issues.

ISO appreciates the opportunity to provide comments on the latest Draft White Paper on Best Practices for Regulatory Review of Predictive Models as published by the CASTF in June 2020. We would like to offer several general comments on the purpose and direction of the best practices document, as well as some specific comments and questions on particular elements within the document.

CASTF has identified 79 information items that should be included in a review of GLM's. The 79 information items appear to go far beyond the aggregation of the current regulatory review practices. We are concerned that the current draft could potentially have the unintended effect of stifling innovation. Given the extensive amount of information being requested some filers may decide that the burden of proof in supporting a GLM is too great and maybe forgo the advantage of a GLM given the cost of complying with the draft best practices.

Here are our detailed comments on the draft.

- On page 3 of the draft, the following sentence refers to the wrong appendix: “Lastly, provided in this paper are glossary terms (Appendix BC) and references.”
• The following statement appears on page 4

“Though the list of information is long, the insurer should already have internal documentation on the model for more than half of the information listed. The remaining items on the list require either minimal analysis (approximately 25%) or deeper analysis to generate for a regulator (approximately 25%).”

Can you identify which items the CASTF thinks will require minimal analysis and which will require deeper analysis? This information will be useful to regulators who are concerned with speed to market and want to minimize the additional burden on insurers.

• On page 5 in “Confidentiality” section the following statement is made:

“State authority, regulations and rules governing confidentiality always apply when a regulator reviews a model used in rating. When NAIC or a third party enters into the review process, the confidential, proprietary, and trade secret protections of the state on behalf of which a review is being performed will continue to apply.”

Can you provide the NAIC legal analysis that concluded that that confidential, proprietary and trade secret protection from the state would apply to NAIC staff that reviews a model?

• B.1.a states “Identify the type of model underlying the rate filing (e.g. Generalized Linear Model – GLM, decision tree, Bayesian Generalized Linear Model, Gradient-Boosting Machine, neural network, etc.). Understand the model’s role in the rating system and provide the reasons why that type of model is an appropriate choice for that role.”

The information items are intended for GLMs used for personal auto and personal property, so it inconsistent that other model types are mentioned

• B.1.c addresses how validation (hold out) data is used. The GLM paper (Generalized Linear Models for Insurance Rating) that is on the CAS Exam 8 syllabus addresses the use of hold out data. On page 39 it says “Once a final model is chosen, however, we would then go back and rebuild it using all of the data, so that the parameter estimates would be at their most credible.”

• B.3.b asks for a list of predictor variables considered but not used in the final model and the rationale for their removal. While we appreciate that this is a level 4 item we don’t see how the variables not used in a model are relevant to reviewing the filed model. This would be analogous to asking for policy wording considered but not used in a filed policy form.
• C.7.g Obtain a means to calculate the rate charged a consumer.

While it is feasible for a filer to provide the algorithm with proper trade secret protection, it may not be feasible for a regulator to get all of the input data necessary to produce the model output. Credit and telematics models are examples of model types where the input data would not be readily available to the regulator,

• On page 43, the following definition of Home Insurance is given “Home insurance covers damage to the property, contents, and outstanding structures (if applicable), as well as loss of use, liability and medical coverage. The perils covered, the amount of insurance provided, and other policy characteristics are detailed in the policy contract.”

The definition should mention that the policy needs to cover a residential dwelling in order for it to be home insurance.

• Appendix B – while we didn’t do an exhaustive review of Appendix B on pages 36-40 of the draft we did notice some inconsistencies between Appendix B: Table 1 and Appendix B: Table 2 regarding the mapping of Best Practice Code and Information Element.

For example, Best Practice Code 2.a in Table 2 references Information Element A.1.a but Best Practice Code 2.a is missing from the mapping in A.1.a in Table 1

<table>
<thead>
<tr>
<th>A. Selecting Model Input</th>
</tr>
</thead>
<tbody>
<tr>
<td>A.1. Available Data Sources</td>
</tr>
<tr>
<td>A.1.a</td>
</tr>
</tbody>
</table>

2. Obtain a clear understanding of the data used to build and validate the model, and thoroughly review all aspects of the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output.

a. Obtain a clear understanding of how the selected predictive model was built.

2.a

b. Determine that the data used as input to the predictive model is accurate, including a clear understanding how missing values, erroneous values and outliers are handled.

Another example if inconsistent mappings is Appendix B: Table 1 C.9 and Appendix B: Table 2 4.a, 4.b, 4.c.

Surplus Lines (C) Task Force 2021 Proposed Charges (Attachment One) ........................................ 8-435
Proposed Referral to the Blanks (E) Working Group to Add a New Schedule T – Part 3 to the
Property/Casualty (P/C) Blank (Attachment Two) ........................................................................ 8-436
Comment Letters Regarding Proposed Referral to the Blanks (E) Working Group to Add a New
Schedule T – Part 3 to the P/C Blank (Attachment Three) ............................................................. 8-440
The Surplus Lines (C) Task Force met via conference call Aug. 5, 2020. The following Task Force members participated:
James J. Donelon, Chair, and Stewart Guerin (LA); Larry D. Deiter, Vice Chair (SD); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain represented by William Lacy (AR); Ricardo Lara represented by Kim Hudson (CA); Michael Conway represented by Eric Fletcher (ID); Robert H. Muriel represented by Marcy Savage (IL); Vicki Schmidt represented by Heather Droge (KS); Sharon P. Clark represented by DJ Wasson (KY); Kathleen A. Birrane represented by Todd Switzer (MD); Mike Causey represented by Fred Fuller (NC); Barbara D. Richardson and Gennady Stolyarov (NV); Glen Mulready represented by Eli Snowbarger (OK); Raymond G. Farmer represented by Ryan Basnett (SC); Mike Kreidler represented by Jeff Baughman (WA); Jeff Rude and Donna Stewart (WY). Also participating was: Robert Wake (ME).

1. **Adopted its 2019 Fall National Meeting Minutes**

Mr. Fletcher made a motion, seconded by Mr. Baughman, to adopt the Task Force’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Surplus Lines (C) Task Force). The motion passed unanimously.

2. **Adopted the Report of the Surplus Lines (C) Working Group**

Mr. Guerin reported that since the 2019 Fall National Meeting, the Surplus Lines (C) Working Group met Dec. 18, 2019; March 10, 2020; and June 29, 2020, in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.

During these meetings, the Working Group heard a summary of eight applications for admission to the Quarterly Listing of Alien Insurers. All eight of the applying companies were discussed, and seven applicants were admitted to the listing.

Mr. Guerin updated the Task Force that on May 6, NAIC staff sent out a COVID-19 survey to the quarterly listed insurers and syndicates. The survey addressed equity market impact, writings exposed to COVID-19 claims, and claims status. Mr. Guerin indicated that survey responses would be analyzed in conjunction with the annual renewal analysis that staff completes.

Mr. Kaumann made a motion, seconded by Mr. Hudson, to adopt the report of the Surplus Lines (C) Working Group. The motion passed unanimously.

3. **Adopted its 2021 Proposed Charges**

Commissioner Donelon stated that the 2021 proposed charges for the Task Force and the Surplus Lines (C) Working Group contain nonsubstantive changes compared to the 2020 charges.

Ms. Droge made a motion, seconded by Mr. Stolyarov, to adopt the Task Force’s 2021 proposed charges (Attachment One). The motion passed unanimously.

4. **Discussed Model #870**

Commissioner Donelon referenced a March 16 NAIC staff memorandum on the Nonadmitted Insurance Model Act (#870). He stated that Model #870 was last modified in 2002, and it has not been updated since the passage of the Nonadmitted and Reinsurance Reform Act (NRRA) in 2001. He asked for a discussion as to whether Model #870 should be reviewed and brought up to date with current standards. He instructed Andy Daleo (NAIC) to provide a summary of the memorandum and supporting materials.

Mr. Daleo stated that NAIC staff completed a cursory review of Model #870 in March 2020 that led to the topic’s inclusion on the agenda. He stated that Model #870 came into existence as a result of the compilation of three previous NAIC surplus lines models that date back to 1983: 1) the Unauthorized Insurers Model Act; 2) the Model Surplus Lines Law; and 3) the Model Nonadmitted Insurance Act. He indicated that Model #870 was adopted in the third quarter of 1994, and it has been enacted by 31 states.
Mr. Daleo stated that the most recent activity regarding Model #870 was Oct. 11, 2011, following the implementation of the NRRA. He indicated that Model #870 was not modified; however, a Nonadmitted Insurance Reform Sample Bulletin (Bulletin) was released to state insurance departments following its adoption by the Executive (EX) Committee and Plenary, and it was subsequently distributed to state insurance departments. He summarized that the Bulletin outlined the nationwide regulatory changes that affected the placement of nonadmitted insurance, and it included the scope of the NRRA, the implementation of the “Home State” policy, licensure requirements for brokers, diligent search requirements, and eligibility requirements for nonadmitted insurers.

Mr. Daleo commented that the Task Force should consider one of three options:

- **Model Law Request** – Direct staff to develop a model law request for consideration at the next national meeting.
- **Develop a Drafting Group** – The drafting group would produce a summary document that outlines the significant updates to modernize Model #870 and present a recommendation to the Task Force at a future national meeting.
- **No Action** – Do not amend Model #870 and rely on the Bulletin for guidance.

Mr. Stolyarov supported pursuing Model #870 amendments, with a caveat to limit revisions only to update the sections affected by the NRRA. He stated that most states have revised their statutes to conform to the NRRA, so whatever revisions are made to Model #870 should be of a nature that is compatible with the actions that the states have already taken.

Bob Woody (American Property Casualty Insurance Association—APCIA) stated that his members do not have any objections to updating Model #870 to conform with the standards included in the NRRA. However, he expressed reservations to a model law request before knowing the exact portions of Model #870 that would be changed. He said his members would be more comfortable with the option two to develop a drafting group.

Keri Kish (Wholesale & Specialty Insurance Association—WSIA) stated that most states have accepted the NRRA in regulations. She said only two states have not accepted the NRRA, but they have issued declarations and bulletins and made comments that they recognize that the NRRA supersedes state laws. She offered her organization’s assistance in providing information as to what the states are currently doing from a regulatory perspective.

Jeff Klein (McIntyre & Lemon PPLC) agreed that option two to develop a drafting group would best conform to the consensus of opinions previously expressed. He said an outline of the areas of Model #870 to be amended would be appropriate.

Commissioner Donelon indicated that he also favors a drafting group. He asked Task Force members their preference on the three options.

Mr. Hudson, Ms. Droge, Mr. Baughman and Mr. Kelly all voiced support for the development of a drafting group. Commissioner Donelon said that their support constituted consensus, and he will discuss with Mr. Daleo and Director Deiter on how to proceed.

5. **Discussed a Blanks Proposal Regarding Home State Direct Premiums Written**

Commissioner Donelon reminded the Task Force that this proposal regarding the reporting of “Home State” direct premiums written was introduced at the 2019 Fall National Meeting, where discussion was halted due to time constraints. He stated that he would like to come to a consensus during this meeting on whether to refer the proposal (Attachment Two) to the Blanks (E) Working Group. He stated that if a referral is made to the Working Group, all technical details should be resolved by the Task Force, explaining that the Working Group will not discuss the technical issues.

Commissioner Donelon summarized that the proposal was exposed for a 45-day public comment period ending Oct. 10, 2019. He stated that comment letters were received from three interested parties (Attachment Three), which were discussed at the 2019 Fall National Meeting. Further, he stated that several states commented that this blanks proposal would provide a means for an insurance department to arrive at an estimate of surplus lines premium taxes and allow the states to better reconcile taxes collected.

Commissioner Donelon agreed that the proposal is not a perfect solution for the problem of reconciling surplus lines premiums taxes. He said it has been several years since Louisiana last conducted an audit of a surplus lines broker. However, audits performed pre- and post-NRRA discovered only a slight difference between what was reported by the broker compared to the audit.
Director Deiter said South Dakota utilizes the Florida Surplus Lines Service Office to track its nonadmitted premiums, but he understands that this may not be a viable option for some states with limited resources.

Mr. Wake said Maine’s tax department sought his advice on this issue last year because it thought the proposed Schedule T section would benefit Maine’s tax collection efforts. He commented that the big question relates to the degree of burden this would be for the companies. He said the industry analysis of surplus lines taxes prepared by the WSIA showed a minimal variance between their best aggregate guess and the aggregate guess provided by current reporting. However, he stated that the important point was not in the aggregate variance but what was occurring in each state.

Commissioner Donelon agreed, but he added that he did not see how the proposal would come close to solving the problem of creating a more efficient tax system for surplus lines.

Mr. Stolyarov said he is concerned that the proposal may cause confusion in how it would address the distinction between surplus lines premium and independently procured nonadmitted insurance. He indicated that in Nevada, surplus lines premiums are reported to the Nevada Surplus Lines Association (NSLA), whereas independently procured premiums are reported to the Nevada Department of Taxation. He said he is concerned that the proposed reporting by insurers might combine the two types of nonadmitted insurance premiums.

Mr. Wake stated that the industry had not persuaded him that there is not a problem, but industry had persuaded him that this proposal does not appear to be a solution worth pursuing.

John Meetz (WSIA) summarized the WSIA’s analysis of surplus lines premium taxes. He offered that there will always be differences between premium reported by carriers and the taxable transaction revenue reported by brokers. He stated that those differences will be caused by the timing of reporting, additional fees collected as part of the transaction, non-taxable premiums that brokers have no incentive to report, and the effect of cancellations and mid-term endorsements. Based on these differences, he said the reporting by carriers of “Home State” surplus lines premiums would be burdensome to carriers, state insurance regulators, and brokers.

Ms. Stewart suggested that if the Schedule T proposal is implemented, the Task Force would consider drafting a memorandum to the states noting the information that would be available in the new supplement and explaining some of the differences between “Home State” premium reporting by carriers and the surplus lines reporting by brokers.

Mr. Woody added that a joint trades letter submitted by the APCIA, the National Association of Mutual Insurance Companies (NAMIC) and the Council of Insurance Agents & Brokers (CIAB) opposes the blanks proposal.

Commissioner Donelon stated that based on the comments made, there does not appear to be consensus in favor of advancing the blanks proposal.

Mr. Hudson made a motion, seconded by Director Deiter, to table the blanks proposal. The motion passed unanimously.

Having no further business, the Surplus Lines (C) Task Force adjourned.
SURPLUS LINES (C) TASK FORCE

The mission of the Surplus Lines (C) Task Force is to monitor the surplus lines market and regulation, including the activity and financial condition of U.S. and alien surplus lines insurers by providing a forum for discussion of issues and to develop or amend relevant NAIC model laws, regulations and/or guidelines.

Ongoing Support of NAIC Programs, Products or Services

1. The Surplus Lines (C) Task Force will:
   A. Provide a forum for discussion of current and emerging surplus lines-related issues and topics of public policy and determine appropriate regulatory response and action.
   B. Review and analyze quantitative and qualitative data on U.S. domestic and alien surplus lines industry results and trends.
   C. Monitor federal legislation related to the surplus lines market and ensure all interested parties remain apprised.
   D. Develop or amend relevant NAIC model laws, regulations and/or guidelines.
   E. Oversee the activities of the Surplus Lines (C) Working Group.

2. The Surplus Lines (C) Working Group will:
   A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing surplus lines topics and policy issues, such as amendments to the International Insurers Department (IID) Plan of Operation.
   B. Maintain and draft new guidance within the IID Plan of Operation regarding standards for admittance and continued inclusion on the NAIC Quarterly Listing of Alien Insurers.
   C. Review and consider appropriate decisions regarding applications for admittance to the NAIC Quarterly Listing of Alien Insurers.
   D. Analyze renewal applications of alien surplus lines insurers on the NAIC Quarterly Listing of Alien Insurers and ensure solvency and compliance per the IID Plan of Operation guidelines for continued listing.
   E. Provide a forum for surplus lines-related discussion among jurisdictions.

Anticipated Effective Date: 2020 Annual

IDENTIFICATION OF ITEM(S) TO CHANGE

Add a new Schedule T – Part 3 to the Property/Casualty blank for the purpose of collecting direct premiums written data allocated by “home State.”

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The intent is to provide a basis for state regulators to reconcile broker reported surplus lines premium with company provided information to better ensure that states are receiving the proper amount of surplus lines premium taxes. Premium taxes on surplus lines premiums are based on the total policy premium and paid by surplus lines brokers solely to the “home State” of the insured as defined in Section 527 of the Nonadmitted and Reinsurance Reform Act of 2010 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. Currently, the only resource available to the state for tax reconciliation is Schedule T – Exhibit of Premiums Written, which allocates premium by geographic concentration of risk. Collecting premium information within the annual blank for “Home State Direct Premiums Written” provides the state a starting point for surplus lines premium tax reconciliation. Throughout the year NAIC staff receives frequent inquiries regarding assistance with surplus lines premium tax reconciliation and cannot provide a resource to the state. This blanks proposal will provide significant value to the states/territories regarding surplus lines tax reconciliation.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: __________________________________________

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

**SCHEDULE T – PART 3**

**EXHIBIT OF PREMIUMS WRITTEN**

**ALLOCATED BY HOME STATES AND TERRITORIES**

This schedule is intended to report surplus lines premiums written to a state or territory of the insured that conforms to the definition of “home State” as provided in the Dodd-Frank Wall Street Reform and Consumer Protection Act. Allocation of surplus lines premiums reported on this schedule should be based on the “home State” of the insured, regardless of jurisdiction where the risks are located.

All U.S. surplus lines business must be allocated to the “home State” of the insured, regardless of license status or concentration of risk.

The following is provided to illustrate appropriate allocation bases for surplus lines of business:

- All surplus lines policy premiums are to be allocated to the appropriate state that conforms to the “home State” definition as provided in Section 527 of the Nonadmitted and Reinsurance Reform Act within the Dodd-Frank Wall Street Reform and Consumer Protection Act:

**Definition:**

(6)HOME STATE.

(A) IN GENERAL.—Except as provided in subparagraph (B), the term “home State” means, with respect to an insured—

(i) the State in which an insured maintains its principal place of business or, in the case of an individual, the individual’s principal residence; or

(ii) if 100 percent of the insured risk is located out the State referred to in clause (i), the State to which the greatest percentage of the insured’s taxable premium for that insurance contract is allocated.
(B) AFFILIATED GROUPS.—If more than 1 insured from an affiliated group are named insureds on a single nonadmitted insurance contract, the term “home State” means the home State, as determined pursuant to subparagraph (A), of the member of the affiliated group that has the largest percentage of premium attributed to it under such insurance contract.

Column 3  –  Percentage of Total Home State Direct Premiums Written

Amount represents the percentage of the individual line items in Column 2 to the Total Home State Direct Premiums Written amount presented in Column 2, Line 59.

Line 59 should equal 100%.

The allocation method established by the reporting entity in compliance with these instructions and the instructions of the domiciliary state should be consistently applied to all policies and reporting periods.

The data reported in Schedule T – Part 3 of the annual statement may or may not be used for the calculation of the amount of premium tax due to a state/jurisdiction. Individual states/jurisdictions may require a separate schedule to support premium tax calculations.

NOTE: Existing state laws and regulations need to be considered when applying these instructions.

Footnote (a):

Provide the total of each active status code in Column 1. The sum of all the counts of all active status codes should equal 57.

Dear Commissioners Donelon and Deiter,

Thank you for the opportunity to comment on the proposal to revise the manner by which surplus lines carriers report their annual premium in Schedule T. We would like to express our opposition for the proposal and our agreement with WSIA that the proposal will not achieve the goals of the task force for the reasons outlined in the WSIA letter dated March 12, 2020. We would like to reiterate the following points:

- The differences between carrier Schedule T reporting and surplus lines broker tax filings are too numerous to facilitate an accurate reconciliation of specific surplus lines broker taxes, even after accounting for home state premium.
- WSIA’s data analysis conclusively shows that national surplus lines tax revenues are virtually identical to expected revenues based upon carrier reporting.
- The clarity provided by the Nonadmitted and Reinsurance Reform Act of 2010 has facilitated a tremendous increase in surplus lines tax compliance.

The nonadmitted and surplus lines industry stands ready to assist the NAIC and its members where issues of surplus lines tax compliance exist but for these reasons, we urge the committee to oppose the proposed changes to the Schedule T.

Sincerely,

Robert W. Woody

SUBJECT: Surplus Lines Task Force Proposal Regarding Schedule T Modification

Dear Commissioner Donelon:

On behalf of the Excess Line Association of New York (“ELANY”), a nonprofit industry advisory association charged with facilitating and encouraging compliance with the excess line law of New York, thank you for the opportunity to comment on the Surplus Lines Task Force’s proposal regarding home state direct premiums written. ELANY supports uniformity in regulation whenever possible and practical. ELANY supported passage of the NRRA and works diligently to educate excess and surplus line brokers regarding the NRRA’s requirements.

After careful study we respectfully submit the Schedule T proposed modifications will produce duplicative, incomplete and inconsistent information, confuse insurers and prove to be too flawed to be useful for regulators. Due to the practical reasons discussed below, ELANY urges the Task Force to reject its adoption.

1. E&S brokers are licensees charged with the legal duty to determine the insured’s Home State and pay taxes accordingly. E&S insurers have no such legal obligation.
2. Many E&S insurers do not currently collect this data. A significant volume of business is written through brokers with binding authorities which allows insurers to reduce costs and not duplicate broker data collection.
3. 25% of New York E&S risks are written by alien insurer markets. These insurers are not required to produce Schedule T. To the extent, state by state, data is reported by Alien insurers at all, there is no requirement to segment it by Home State. As such the proposal will place a burden on U.S. insurers that is not placed on alien insurers with whom they compete. If adopted as proposed, 25% of the data sought will not be reported.
4. If the proposal is adopted, it is likely the insurers will obtain Home State information from the brokers which will mirror the information reported by brokers, making the new report of little value.
5. To the extent the proposal is intended to impose a duty on insurers to determine Home State independently, discrepancies are likely to occur. What happens then? Will brokers...
be audited against data provided by insurers which had no legal duty to determine Home State in the first place?

6. When determining Home State for an affiliated group, the broker is charged to determine home state by choosing the affiliate “to which the largest percentage of premium is attributable under the policy.” Is that determination based on “insured values” or perhaps “premiums based on rates charged by insured location” or some other criteria? If the broker and insurer choose different criteria, data discrepancies will occur. Furthermore, the states have adopted non uniform approaches to the reporting and taxation of purchasing group business and other master policy type transactions. This will create further complexity and discrepancies.

7. Requiring E&S insurers to attest to the accuracy of a new Schedule T, the data for which is not linked to statutory accounting nor financial analysis appears to go beyond the scope of what the attestation is intended to accomplish.

8. One last concern interested parties are compelled to raise, respectfully, is whether the proposal is within the province of the NAIC to require. Industry representatives are concerned about the direction of designing part of the Statutory Annual Statement primarily for tax reconciliation purposes. The long accepted purpose of the Statutory Annual Statement is financial analysis and helping regulators understand the financial performance, stability and solvency of an insurer. ELANY respectfully suggests that state tax revenue reconciliation is quite different from financial analysis and is inconsistent with the general understanding state policymakers may have as to the Statutory Annual Statement’s purpose. Is it the NAIC’s intent to make this exhibit an accreditation standard?

In light of the above, ELANY maintains that the proposed exhibit will not accomplish its stated goal and will create confusion among the states and marketplace participants. We therefore urge the Task Force to reject the proposed exhibit and to instead permit the NRRA to function as intended with the duty to select and report Home State squarely on the broker. If there is anything else you would like from ELANY, we will be happy to offer additional information.

Sincerely,

Daniel F. Maher

March 12, 2020

Commissioner Jim Donelon  Commissioner Al Redmer, Jr.
Chair, NAIC Surplus Lines (C) Task Force  Vice Chair, NAIC Surplus Lines (C) Task Force

Sent in care of Andy Daleo, adaleo@naic.org

Dear Commissioners Donelon and Redmer,

Thank you for the opportunity to follow-up with additional details from the Task Force’s December 7, 2019 discussion of the proposal to revise the manner by which surplus lines carriers report their annual premium in Schedule T. Based on that discussion, we further developed our commentary to include specific illustrations that we believe can be helpful as the Task Force continues to consider this proposal.

Since the Austin meeting, we have analyzed surplus lines tax revenue data from Business Insurance (collected annually through a survey of state regulators and stamping offices) with surplus lines premium data from the NAIC Insurance Department Resources Report. Based on our analysis and comparison of these data sources, we expanded the comments of our October 4, 2019 letter to highlight three more specific comments with examples and illustrations, which follow in the attached materials.

We reiterate that we understand the motivation for states to reconcile carrier and broker premium reports. However, as you will see in the attached materials, we find that, when comparing taxes collected and premium reported on a nationwide basis, the variances are small considering the known and valid differences between carrier reporting and broker tax requirements. We believe this analysis illustrates that surplus lines premium taxes are being appropriately remitted and collected across the nation. Therefore, before implementing an imperfect, potentially time-consuming and costly reconciliation process, we encourage the NAIC and the Task Force to consider conducting similar analysis as that outlined in the attached.

We look forward to discussing our analysis with the Task Force on the April 9 conference call. If you or other members have questions or need any additional information, we are happy to assist in any way.

Sincerely,

Brady R. Kelley  Keri Kish  John Meetz
Executive Director  Director of Government Relations  Senior State Relations Manager
Comment One: A comparison of surplus lines premium tax through the comparison of premium reported by surplus lines carriers on the NAIC Schedule T to the premium reported and taxes remitted by surplus lines brokers will not result in an accurate or conclusive reconciliation.

Examples: Exhibit I illustrates that comparing broker tax reports to carrier premium reports will often not reconcile based on a variety of factors that we outlined in our October 4, 2019 comment letter (Attachment A), the most common of which include:

- **Fees.** Additional fees and costs beyond the carrier’s base premium are reported by the broker only and will not be reflected in the premium reported by a carrier. Some states require that surplus lines premium tax be paid on these fees as well, such that the tax base for the broker will be different than the premium reported by the carrier. Broker fee reporting is denoted by line 5 of Exhibit I.

- **Non-taxable premium.** Not all premium is taxable in some states. For example, it is not unusual for certain risks, such as inland marine, boiler & machinery, native lands and interstate commerce related railways, to be exempt from taxation. These are risks that carriers would report as premium but would not be reflected in broker tax filings, further distinguishing the carrier’s premium base from the broker’s tax base and skewing any reconciliation thereof. Non-taxable premium is denoted in line 3 of Exhibit I.

- **Home state.** It is the statutory responsibility of the surplus lines licensee to determine and report the home state of the insured, and a carrier may not always underwrite and report premium based on the same determination factors. Most carrier underwriting and reporting systems are designed based upon the physical location of the risk and underwriting requirements in those particular physical locations or states, such that carrier reporting by home state will require significant system and process changes. Such changes seem unwarranted when their purpose will not achieve the intended result for the reasons described herein. Brokers determine the home state of the insured for multi-state policies, which is denoted in line 1 of Exhibit I, whereas the carriers allocate and report premium based on the location of the risk as denoted in lines 1 and 2.

- **Return premium, midterm endorsements and cancellations.** Policies can change throughout the year and the original premium reported by a carrier may differ based on the broker reporting period for these factors. This is very common and another key reason why reconciliation will be ineffective. Return premium and the discrepancy in reporting timeframes between the broker and the carrier are denoted in lines 6 and 7 of Exhibit I.

In addition to those variables illustrated in Exhibit I, the following factors could also provide discrepancies between broker and carrier reporting:

- **Independent Procurement.** Some states exempt taxation or have a different tax requirement or structure if a consumer is allowed to procure policies without an insurance producer. These premiums are reported by carriers but there would be no record of the transaction from a broker to cross reference. Again, these would skew any reconciliation results.

- **Reporting.** States have different reporting and payment dates for surplus lines brokers, whereas all surplus lines carriers report their quarterly and annual premium at the same NAIC-required intervals.

Conclusion: Exhibit I illustrates known variances based on the difference in how surplus lines carriers report premium and how surplus lines brokers report and remit taxes. These differences are based on each parties’ regulatory responsibilities as well as underwriting standards and industry protocols. Even though both brokers and carriers each report premium, there are differences between the premium received and reported by the carrier in its Annual Statement and the premium (or tax basis) and related taxes collected and reported by the surplus lines broker. Carriers must establish premium based on the underwriting characteristics of the entire risk, which may be in many locations,
and only a small portion may be in the insured’s home state. However, the broker must determine the home state of the insured (i.e., where the premium tax is to be paid). The basis upon which the broker must calculate and remit tax to the state is different from the premium reported by the carrier for the reasons illustrated in Exhibit I. Therefore, if carriers reported premium data based upon the “home state,” the carrier and broker reports would still not be an “apples to apples” comparison. Conducting a reconciliation based on two irreconcilable bases will result in significant administrative investments by regulators, carriers and brokers. As is illustrated in Exhibit II, such administrative investments are unwarranted when there is no apparent gap in tax revenues nationwide.

The known variances illustrated in Exhibit I are for one surplus lines insurance policy. Should a state try to reconcile the total difference between carrier and broker reported premium, the illustration would grow much more complex as you factor in the volume of surplus lines policies with such variances. Add to that the number of surplus lines brokers and surplus lines carriers doing business in each state, parties for which there is no one-to-one direct reporting within the Annual Statement, and the reconciliation grows more complex. Our concern is that regulators will not know if the reconciling variance is one policy, thousands of policies, one broker and carrier, or multiple brokers and carriers. In fact, we anticipate the known variances to apply to a high volume of policies and nearly all brokers and carriers, which makes the reconciliation process administratively unworkable.

While we understand the motivation for states to seek a reconciliation method, we are concerned that the proposal installs sweeping changes that will lead to a lengthy reconciliation process for a relatively small number of jurisdictions. States with surplus lines stamping offices that serve as intermediaries between surplus lines brokers and state tax collection entities have more certainty that all necessary surplus lines tax revenues are being collected. These states collectively represent 64% of all surplus lines premium written in the U.S. in 2018 according to the NAIC Insurance Department Resources Report.

Finally, we do not believe that changing the carrier’s Schedule T reporting basis will result in a starting point for states. Rather, the proposal will facilitate significant work and cost to reconcile valid differences in carrier and broker reporting. It facilitates an extensive and costly process, impacting all parties with no benefit or gain in the end.
### Scenario A (Policy fees are not taxable)

**4% Tax**

</tbody>
</table>

1 In this example, the carrier will credit $970,554 of premium to the home state and $10,676 of premium to other states within its 2019 Schedule T. This is based upon the allocation of taxable, tax-exempt, endorsement and return premium proportionately between the home state and other states in which the risk physically located.

2 If policy is endorsed and premium is paid in 2019, premium may be reported by the carrier in 2019 but not reported by the broker until tax is due in 2020.

3 If a policy is cancelled in 2018, premium will be returned to the consumer by the broker. However, the carrier and broker may report returned premium in different quarters or calendar years.

4 If a policy is cancelled in 2019, premium will be returned to the consumer by the broker. Again, the timing of carrier and broker reporting may vary.
Comment Two: Comparing carrier premium reporting within Schedule T to broker premium and tax reports will not result in substantial changes to surplus lines tax revenues for any of the states.

Example: Comparing surplus lines tax revenue data from Business Insurance (collected annually through a survey of state regulators and stamping offices) with NAIC Insurance Department Resource Report (IDRR) data (collected primarily from NAIC Schedule T filings) indicates miniscule variances in surplus lines taxes collected – variances which are expected as illustrated in Exhibit I. To illustrate this, WSIA has:

1. Estimated the tax revenue for each state based upon IDRR data from 2016 to 2018, based simply upon IDRR premium as collected predominately from all carriers’ Schedule T reporting multiplied by the applicable surplus lines tax rate in each state;
2. Calculated any variance between the tax estimated in item 1 above and the tax collected according to the Business Insurance survey; and
3. Calculated the 3-year average of the variances identified in item 2 above from 2016 to 2018.

From 2016 – 2018, the Business Insurance tax revenue lagged our estimated tax revenue by an average of 1.96%. However, Florida is the only state remaining to collect surplus lines taxes at rates based upon where the risk is located, rather than 100% at their 5% rate, which lowers Florida’s effective tax rate and has a fairly significant impact on the 3-year average given the size of the Florida surplus lines market. Excluding Florida illustrates actual tax revenue lagged expected revenue by only $3.7 million, or 0.22% when averaged for 2016-2018.

See Exhibit II for complete detail by state and by year.

Conclusion: Taxes collected nationwide are falling within 0.22% of WSIA’s estimate of surplus lines taxes by state. Because WSIA’s estimated revenue is based solely on carrier reported premium, the miniscule variances can be explained by the premium reporting and tax remittance responsibilities between surplus lines brokers and carriers described in Exhibit I (e.g., taxation of fees, risk and premium tax exemptions, differences in the timing of broker and carrier reporting, etc.). Implementing home state premium reporting for carriers will require them to obtain additional information from the broker, with a significant and costly compliance impact that will have no demonstrable benefit. By way of example, suppose a carrier writes 8,000 policies worth $250 million in premium in a state through 300 surplus lines producers. To reconcile these figures, the state adds up the premium reported by all 300 surplus lines producers, compares the result to the carrier’s Schedule T, and finds a discrepancy of $500,000. That difference could be comprised
of hundreds of variances, which are not errors but known and valid differences between carrier reporting and broker tax requirements. It’s entirely possible that a lengthy reconciliation will find overpayment of premium tax requiring refunds and amended reductions to the overall tax revenue. Current data available, as summarized in Exhibit II, demonstrates that taxes are being accurately remitted for surplus lines premium. Therefore, before implementing an imperfect, potentially time-consuming and costly reconciliation process, we encourage the NAIC and the Surplus Lines Task Force to consider conducting similar analysis as that outlined in Exhibit II, to assess the reasonableness of surplus lines tax collections nationwide.

Comment Three: Surplus lines tax revenue is increasing at a higher rate than surplus lines premium growth.

Example: Since 2010, when the Nonadmitted and Reinsurance Reform Act (NRRA) was enacted, average annual tax revenue per state has increased by 7.67%. During this time period, five states (Delaware, Oregon, South Carolina, Tennessee and West Virginia) increased their tax rates and one state (Louisiana) lowered their rate. When these six states are removed from the data, there is no significant change to an annual increase in revenue per state, which reduces the total just slightly to 7.45%. According to NAIC Insurance Department Resource Reports data, surplus lines premium grew by only 6.57% annually during the same time period and only 6.46% when the same six states are removed.

See Exhibit III for complete detail by state.

Conclusion: Surplus lines tax collection has significantly improved as a result of the clarity brought about by the passage of the NRRA in 2010. The intent of the NRRA was to simplify the taxation and regulation of the surplus lines transaction. This change has led to significant improvements for the states and the industry clarifying the brokers' ability to clearly assign a “home state” to each surplus lines transaction. Exhibit III helps us conclude the tax revenue is growing at a faster rate than premium, which further suggests the need for some level of analysis on an annual basis, for purposes of assessing the reasonableness of surplus lines tax collections nationwide, before implementing an imperfect and potentially time-consuming and costly reconciliation process given the known causes of the variances that will exist between surplus lines broker and carrier premium reporting.

The Honorable James J. Donelon
Chair, Surplus Lines (C) Task Force
National Association of Insurance Commissioners
1100 Walnut Street
Kansas City, MO 64106

Sent via email to: adalex@naic.org

Re: Surplus Lines Premium Home State Blanks Proposal

Dear Commissioner Donelon:

On behalf of the Wholesale & Specialty Insurance Association (WSIA), we appreciate the opportunity to comment on the Task Force’s proposal to include “home state” reporting of surplus lines premium through Schedule T on domestic carriers’ Annual Statement filings. As the professional trade association representing the wholesale, specialty and surplus lines industry, WSIA is unique in that we represent both surplus lines brokers and surplus lines carriers. Although this proposal is directed at the reporting of premium by insurance carriers, it will impact both carriers and brokers such that we have worked with various representatives of both to conduct our analysis of the proposal and provide these comments.

Our members fully understand the motivation for this proposal is to help individual states reconcile surplus lines premium reported by surplus lines carriers to surplus lines taxes remitted by surplus lines brokers. They also understand and take seriously their surplus lines tax obligations; however, we are concerned that the proposed premium reporting changes will not yield the desired results. We are further concerned that an imperfect reconciliation process will require a significant investment of financial and human resources for all parties (i.e., carriers, brokers and regulators) and will result in no substantial change in surplus lines revenues for any of the states.

Reconciliation of surplus lines premium tax through the comparison of premium reported by surplus lines carriers to the surplus lines taxes remitted by surplus lines brokers will not result in an accurate or appropriate outcome for the regulators. Some of the most significant reasons that this approach to reconciliation will not produce accurate results are:

- **Fees.** Additional fees and costs beyond the carrier’s base premium are reported by the broker only and will not be reflected in the premium reported by a carrier. Some states require that surplus lines premium tax be paid on these fees as well, such that the tax base for the broker will be different than the premium reported by the carrier.

- **Non-taxable premium.** Not all premium is taxable in some states. For example, it is not unusual for certain risks, such as inland marine, boiler & machinery, native lands and interstate commerce related railways, to be exempt from taxation. These are risks that carriers would report as premium but would
not be reflected in broker tax filings, further distinguishing the carrier’s premium base from the broker’s tax base and skewing any reconciliation thereof.

- **Independent Procurement.** Some states exempt taxation or have a different tax requirement or structure if a consumer is allowed to procure policies without an insurance producer. These premiums are reported by carriers but there would be no record of the transaction from a broker to cross reference. Again, these would skew any reconciliation results.

- **Home state.** It is the statutory responsibility of the surplus lines licensee to determine and report the home state of the insured, and a carrier may not always underwrite and report premium based on the same determination factors. Most carrier underwriting and reporting systems are designed based upon the physical location of the risk and underwriting requirements in those particular physical locations or states, such that carrier reporting by home state will require significant system and process changes. Such changes seem unwarranted when their purpose will not achieve the intended result for the reasons described herein.

- **Return premium, midterm endorsements and cancellations.** Policies can change throughout the year and the original premium reported by a carrier may differ based on the broker reporting period for these factors. This is very common and another key reason why reconciliation will be ineffective.

- **Reporting.** States have different reporting and payment dates for surplus lines brokers, whereas all surplus lines carriers report their annual premium at the same time each year (March 1) for the prior calendar year.

Based on these particular examples, we know that reconciliation is not a simple undertaking for any of the impacted parties (i.e., regulators, carriers or brokers). The above factors illustrate how difficult, if not impossible, it is to get an “apples to apples” accounting to effectively reconcile surplus lines premium taxes remitted by brokers to surplus lines premium reported by carriers. Attempts at reconciliation between broker and carrier data in the past on a state-by-state basis have rarely resulted in additional tax owed.

Finally, compliance with this proposal will have a significant impact on certain carriers. For some carriers, this change may be easier to implement because they generally write single state policies or monoline business. This could also be true for larger carriers writing personal lines or casualty risks where multistate policies are less common. However, this proposal gets much more complex and potentially costly, from a systems and administration perspective, when the surplus lines products are more complex and cover risks across many state lines. Regardless of the size of the carrier, all will be required to invest in technology changes to capture this information to comply with the proposal.

In closing, states should continue to rely on broker filings, with brokers remitting surplus lines taxes on 100% of the premium to the home state of the insured at the home state’s tax rate. While we understand that states desire an easy reconciliation, we are concerned that implementing this Schedule T proposal will not yield the desired results. Before the states decide to move forward with a reconciliation approach, we encourage a more detailed discussion with the carriers and brokers regarding any underlying state concerns. We further suggest discussing reconciliation efforts with representatives from the fifteen Stamping Offices because of their significant experience in this area, either in performing reconciliations or electing not to because of their experiences. We want to work with the states to better understand any concerns and/or help identify the right solution, and, for all of the above factors, we respectfully request that the Task Force table this proposal and further study it with the industry’s help.
We appreciate the opportunity to work with our members and provide their perspective on this proposal. Please contact us with questions or if you need any additional information.

Sincerely,

Keri Kish

TITLE INSURANCE (C) TASK FORCE

Title Insurance (C) Task Force Aug. 5, 2020, Minutes .......................................................... 8-456
The Title Insurance (C) Task Force met via conference call Aug. 5, 2020. The following Task Force members participated: Michael S. Pieciak, Chair, represented by Kevin Gaffney (VT); James J. Donelon, Vice Chair, and Warren Byrd (LA); Elizabeth Perri (AS); Michael Conway represented by Damion Hughes (CO); David Altmaier represented by Anoush Brangaccio (FL); Colin M. Hayashida represented by Paul Yuen (HI); Vicki Schmidt represented by Heather Droge (KS); Kathleen A. Birrane represented by Erica Bailey (MD); Steve Kelley represented by Paul Hanson (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Causey represented by Fred Fuller (NC); Bruce R. Ramge (NE); Marlene Caride represented by Randall Currier (NJ); Barbara D. Richardson represented by Erin Summers (NV); Jillian Froment represented by Michelle Brugh Rafeld (OH); Jessica K. Altman represented by Shannen Logue and Michael McKenney (PA); Raymond G. Farmer represented by Joe Cregan (SC); Larry D. Deiter represented by Maggie Dell (SD); Scott A. White represented by Mike Beavers (VA). Also participating was Matthew Gendron (RI).

1. Heard a Presentation on Veritable Data Solutions’ New Title Fraud Prevention Smartphone App

David Fleck (Veritable Data Solutions) said Veritable Data Solutions created the new smartphone app to help notaries serve as gatekeepers against identity theft, forgery and title fraud. The app, called Veri-Lock, uses blockchain to ensure the authenticity of notarized documents. The first primary vector in title fraud is tricking the notary by using fake identification, which results in no leads for investigators, or using forged signatures on pre-signed deeds. The second primary vector is to skip the notary by using a fake or stolen stamp and forged signatures. The third primary vector is to force or trick the signer by false pretenses or undue pressure. The primary victims of title fraud are elderly homeowners because they tend to have a lot of equity and title insurance. Veri-Lock provides a solution by empowering the 4.4 million notaries to detect fake identifications, prevent forgeries, and preserve evidence. The app works by first verifying the identity and presence of the notary to prevent forged documents. It then verifies the identity and presence of the signer(s) to prevent identification theft. Its final step is to link the notary and signer(s) to signed documents on blockchain permanently and immutably. Blockchain provides decentralized and distributed chains of transactions by notaries and documents by address. It is encrypted end-to-end with permissioned access. In the worst-case scenario of the app not preventing a fraudulent claim, Veritable Data Solutions serves as an additional deep pocket to resolve claims through its liability insurance.

Mr. Gaffney said it is very interesting to see how blockchain is being used in this app to help shield vulnerable homeowners.

Mr. Gendron asked if Veri-Lock uses closed or open blockchain. Mr. Fleck said blockchain is basically the storage system. It is not public, but rather a permissioned blockchain, so various players will have different levels of access. The notaries, for example, will have access to their transaction. Title insurance carriers can have access to public and real estate information. There will also be some data, for example, that is totally private, and these will be permanently stored encrypted on the blockchain. In those rare circumstances when fraud does come up, it is accessible by court order. Mr. Gendron said he believes the app is using blockchain in a safe way. He also said most databases could probably work for such an application.

Mr. Cregan asked via chat who insures the notary for errors and omissions coverage. He also asked what creates liability for title insurers for the errors of the non-employee notary. Mr. Fleck said most states do not require errors and omissions insurance, but most insurance carriers do require it for their signing agent. He also said if the title issue is a title claim, the notary is in the position to stop the fraud that would lead to the title point.

Jeffrey M. Klein (McIntyre & Lemon) asked via chat if the app is secure against being hacked. Mr. Fleck said the app data is saved in the cloud with Amazon, and it services the encrypted blockchain. Worst case scenario, Veritable Data Solutions does have cyber security insurance.

Mr. McKenney said notaries in a lot of states are required to be bonded, and as Mr. Fleck said, state statutes define the business of title insurance and legal liability.

2. Heard a Panel Discussion on the Effectiveness of CPLs

Elizabeth Blosser (American Land Title Association—ALTA) said the pandemic changed the title industry overnight when it struck in March. The title industry is doing more digital transactions and touchless transactions like other industries. ALTA’s
May survey showed that nearly 30% of its members are offering some type of digital closing option, up from 17% in 2019. There are a lot of people who want to take advantage of the historically low interest rates. So, what was once talk about the digital closings of the future, has become the digital closings of the present. ALTA has a multi-pronged approach to growing consumer access to remote closing options. This includes working with state land title associations to get state legislation passed that allows for the use of remote, online notarization. Additionally, ALTA has also been working at the federal level to support the Securing and Enabling Commerce Using Remote and Electronic Notarization Act of 2020 (SECURE Notarization Act). The SECURE Notarization Act would allow for expanded use of remote online notarization and provide some certainty about its interstate recognition. ALTA has also become very interested in how short-term emergency orders can help facilitate remote closing options.

Ronald J. Blitenthal (Old Republic National Title Insurance Company) said title insurance is an agent centric business, with more than half of all title insurance transactions closed by title insurance agents. Title insurance agents are agents of title insurers for the issuance of title insurance policies, but not for escrow or settlement purposes. Closing protection letters (CPLs) were originally developed decades ago for commercial lending institutions to cover acts of independent title agents or approved attorneys, specifically to protect against misappropriation of funds or failure to follow closing instructions. Most states have monoline restrictions for title insurers, meaning they may not provide errors and omissions or fidelity coverage. For this reason, coverage under the CPL is confined to matters affecting the status of title to the subject property or the priority of the insured mortgage. Due to these regulatory restrictions, CPLs cannot and were never meant to cover every eventuality or loss that could take place resulting from a closing. Basic coverages include: 1) acts of fraud, theft, dishonesty or negligence in handling settlement funds or documents in connection with a closing, but only to the extent that the acts affect status or priority of title in the real estate insured by the title insurance; and 2) failure to comply with written closing instructions by a proposed insured when agreed to by the title agency or title agent relating to title insurance coverage, but only to the extent that the acts affect status or priority of title in real estate insured by the title insurance. There is no coverage under a CPL unless a title insurer has issued a title insurance policy or has legally committed to do so. Coverage under CPLs extends to proposed insureds (e.g., lenders, and borrowers) and, in a few states, to sellers. CPLs are subject to the oversight and regulation of state insurance regulators and title insurance laws. Where title insurance policies are subject to claims and unfair practices statutes, state insurance regulators consistently apply such laws to claims on CPLs. Common claims under a CPL include: 1) theft of settlement funds by title insurance agent/attorney; 2) fraudulent flips; 3) fraudulent down payment undisclosed by title insurance agent; 4) unresolved title defects; and 5) failure to comply with written instructions. A consumer wiring funds to a fraudster without authorization would not be covered. If the lender’s conduct solely caused the loss or the lender itself acted fraudulently or illegally, the underwriter is not liable under the CPL. A lender withholding information about a known tax lien from a loan investor would not trigger CPL coverage because the fraud was not connected to any closing instruction. Coverage is tied to the status of the title, and there needs to be a causal relationship between the closer’s actions and loss. To prevent loss, there is a lengthy application process, and insurers frequently do background, reputation and credit checks; require current errors and omissions coverage and/or fidelity bonds; verify licensing; and require submission to an examination and/or reconciliation of an agent’s escrow accounts. Onboarded agents receive regular audits by the title insurer. In some cases, title insurers have begun to offer centralized escrow disbursement services that bypass agent disbursement services and rely directly on the financial strength of the title insurer.

Diane Evans (Land Title Guarantee Company) said CPLs are used in every market but New York, and they are requested by most lenders and issued automatically, often at the time of order or commitment. Lenders do not distinguish between the agent and underwriter. Rates are collected by agents, but remitted in total to the underwriter, with the cost of issuance and remittance being absorbed by the agent. Now, almost every agent/attorney can issue CPLs, with authorization being reviewed by the underwriter. CPLs allow small agents to compete in markets. ALTA leads the industry to enhance procedures for consumers’ protections. Best practices are developed in consultation with technology providers, accountants, auditors, claims attorneys and industry. They encourage standardized training, strict protocols and procedures, and recommendations for additional insurance coverages. There are also certification processes included in the model. Agents follow written closing instructions, which often arrive late or conflict with the contract. Instructions are not uniform and subject to interpretation. Agent defalcations are rare—the loss that sometimes occurs is minimal, such as missed taxes and incorrect homeowner’s association (HOA) payments. If theft or misappropriation is intended, a CPL is a loss mitigation tool and not a preventative resource. The pandemic has created an urgency for technology development with title industry and lenders across the nation. Agents were forced to redefine how to safely engage with consumers, and they have been using creative approaches to deliver and execute closing documents. Closing and wire fraud most often involves a third-party hacker who may follow the consumer or realtor online and attempt to intersect wire transfer and/or instructions. Preventive measures include enhanced communications with parties, use of secure/password protected systems, and increased consumer awareness.

Director Ramge asked via chat if the industry maintains any statistics on CPL claims versus other title claims and whether there are loss statistics on file. Mr. Blitenthal said some underwriters might track those separately, but he is not aware of...
those statistics being collected on an industry basis.

Mr. Cregan asked how frequent claims by a lender citing to the CPL occur and if they are typically ultimately resolved by the firms’ errors and omissions coverage to recoup what was paid to the lender. Mr. Blitenthal said the coverage would be invoked in certain situations, but there is not a typical claim. Every situation would differ by the facts of the claim. Mr. Cregan asked if a representative from the title insurance industry could provide the Task Force with a sense of the volume and frequency of claims. Mr. Fleck said he is not sure if the industry collects such data. Ms. Blosser said she would investigate it and report back to the Task Force.

Mr. Byrd asked what the key differences are between a CPL from the buyer versus one for the seller. Mr. Blitenthal said the text will not necessarily be different, but what each wants from the CPL is different. The borrower wants a clean property title and the seller wants to make sure they get their money. There is no policy for the seller, but there is a policy for the buyer and the lender, if applicable.

Having no further business, the Title Insurance (C) Task Force adjourned.
WORKERS’ COMPENSATION (C) TASK FORCE

Workers’ Compensation (C) Task Force Aug. 5, 2020, Minutes................................................................. 8-460
Workers’ Compensation (C) Task Force July 22, 2020, Minutes (Attachment One)........................................ 8-464
Workers’ Compensation Policy and the Changing Workforce White Paper (Attachment One-A).................. 8-465
Workers’ Compensation (C) Task Force June 2, 2020, Minutes (Attachment Two)....................................... 8-499
The Workers’ Compensation (C) Task Force met virtually Aug. 5, 2020. The following Working Group members participated: James J. Donelon, Chair, Patrick Bell, Warren Byrd, Richard Piazza and Thomas Travis (LA); Jim L. Ridling, Vice Chair represented by Gina Hunt (AL); Andrew N. Maes represented by Susan Gozzo Andrews, George Bradner, Wanchin Chou, Jared Kosky, Lady Mendoza and Doris Schirmacher (CT); Karima M. Woods represented by Angela King (DC); Trinidad Navarro represented by Robin David, Leslie Ledogar and Tanisha Merced (DE); David Altmairer represented by Greg Jaynes, Jane Nelson and Sandra Starnes (FL); John F. King represented by Steve Manders and Elizabeth Nunes (GA); Colin M. Hayashida represented by Tiffany Chang, Randall Jacobson, Kathleen Nakasone, Colin Okutsu, Eunice Park, Ian Robertson, Grant Shintaku and Paul Yuen (HI); Dean L. Cameron represented by Michele MacKenzie and Randy Pipal (ID); Robert H. Muriel represented by Justin Hammersmith, Brad Lucchini, Judy Mottar, KC Stralka and Erica Weyhlenmeyer (IL); Vicki Schmidt represented by Heather Droege, Shannon Lloyd, Justin McFarland and Jennifer Ouellette (KS); Sharon P. Clark represented by Rob Roberts (KY); Eric A. Cioppa represented by Sandra Darby (ME); Steve Kelley represented by Erin Hadricts, Jonathan Kelly, Tammy Lohmann, Michael Marben, Connor Meyer, Philip Mosbrugger, Myra Morris, Jacqueline Olson, Christine Peters, Matthew Vatter, Megan Verdeja and Phil Vigliaturo (MN); Chlora Lindley-Myers, LeAnn Cox, Rebecca Shavers and Jeana Thomas (MO); Mike Causey represented by Fred Fuller (NC); Marlene Caride represented by Mark McGill (NJ); Russell Toal represented by Robert Doucette and Anna Krylova (NM); Barbara D. Richardson represented by Jack Childress, Mark Garratt, Tim Ghan, Gennady Stolyarov and Erin Summers (NV); Glen Mulready represented by Cuc Nguyen, Andrew Schallhorn and Ashley Scott (OK); Andrew R. Stolfi represented by Alexander Cheng, Brian Fordham, Ying Liu and Jan Vitus (OR); Jessica K. Altman represented by Inna Gnipp, Shannen Logue, Mike McKenney and Neel Vaidya (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Raymond G. Farmer represented by Ryan Basnett, Joe Cregan, Will Davis, Daniel Morris and Michael Shull (SC); Larry D. Deiter, Maggie Dell and Frank Marnell (SD); Todd E. Kiser represented by Tracy Klausmeier and Reed Stringham (UT); Michael S. Pieciak represented by Kevin Gaffney, Pat Murray, Rosemary Raszka, Jill Rickard, Wyatt Shea, Jessica Sherpa and Marcia Violette (VT); and James A. Dodrill, Greg Elam, Tonya Gillespie, Erin Hunter and Jamie Taylor (WV). Also participating were: Sydney Sloan (CO); Kevin Clark, Kim Cross, Travis Grassel, Scott Rupp and Andria Seip (IA); Rasheda Chairs and Gail Rice (MD); Amanda Felder and John Wells (MS); Chris Aufenthie (ND); Thomas Green and Connie Van Slyke (NE); Christian Citarella (NH); Marc Allen, Karen Curtin, Gloria Huberman, Sioin Lei, Alexander Vajda and Jia Zhang (NY); Rebecca Nichols and Michael Smith (VA); Mike Shinnick (TN); Monica Avila, Marianne Baker, Miriam Fisk, Andy Liao, John Mooney and Bethany Sims (TX); and Rebecca Rebholz (WI).

1. **Adopted its July 22 and June 2 Minutes**

Mr. Doucette made a motion, seconded by Director Wing-Heier, to adopt the Task Force’s July 22 (Attachment One) and June 2 (Attachment Two) minutes. The motion passed.

2. **Heard a Presentation on Workers’ Compensation Treatment Guidelines and Formularies**

Joseph Guerriero (Reed Group) said the Reed Group is the owner and publisher of MDGuidelines. He said many states know the Reed Group by the American College of Occupational and Environmental Medicine (ACOEM) clinical practice guidelines and drug formularies. Mr. Guerriero said the Reed Group acquired ACOEM and its clinical practice guidelines in 2013. At that time, the Reed Group began having conversations with the states after developing a drug formulary based on the ACOEM clinical practice guidelines. Mr. Guerriero said the Reed Group has an ongoing relationship with ACOEM, and all the guidelines must go through the ACOEM methodology and external peer review before publishing its guidelines. He said the Reed Group’s clinical practice guidelines and its drug formulary are developed by a research team located at the University of Utah, namely the Rocky Mountain Center for Occupational and Environmental Health. The guidelines and formulary meet all the criteria that was set forth by the National Academy of Medicine, formerly known as the Institute of Medicine. During 2015 and 2016, California went through a thorough review to decide what it was going to do in terms of its guidelines and its drug formulary.

Ms. Baker said the biggest concern faced during the California workers’ compensation reform was to make sure there was access to the best medical treatment by using an independent method and ensuring compliance with the treatment. She said the
group was able to improve medical care delivery; remove waste, friction, and fraud; and use the savings to increase benefits for employees and reduce workers' compensation rates for employers. Rates were decreased by approximately 40%.

Ms. Baker said workers’ compensation reductions were $3 billion a year and the pure premium rate has decreased 41% since 2015; the pure premium rate continues to decrease. She said the basis for these decreases are due to the proper guidelines and the proper formularies interacting with these guidelines. The independent medical review system ensures compliance with decisions made by independent providers to guarantee the appropriate care.

Ms. Baker said reforms led to significant improvements in the quality of care for injured workers. California’s workers’ compensation system has seen: 1) a 28% decrease in the overall number of medical services since 2013; 2) an 80% decrease in overall prescription cost per claim since the implementation of Senate Bill 863; 3) a 43% decrease in the number of claims with opioid prescriptions since the adoption of the formulary; 4) a 72% decrease in laboratory tests; 5) a 39% decrease in medical equipment purchases; 6) a 30% increase in payments for physical therapy; and 7) a 9% increase in physician evaluation and management. She said the treating physician is able to better manage the care.

Ms. Baker said, according to the California Workers’ Compensation Insurance Rating Bureau (WCIRB), claim settlement rates continue to accelerate. The claims community believes this acceleration is attributable to policy reforms that allowed the claims adjusters to concentrate more on claims handling than other frictional costs before the system and the court.

Ms. Baker said the way improvements were made in the workers’ compensation system in California were due to: 1) improving health care quality and delivery; 2) using evidence-based guidelines for presumptive first-level treatment decisions; 3) reducing over-care (i.e., providing evidence-based care first before consideration of surgery); 4) establishing protocols for escalating to other treatment regimens based on individual circumstances; and 5) eliminating litigation over issues that belong to the health care experts, not lawyers and judges.

Ms. Baker said the foundation of effective reform includes: 1) access to quality medical care through medical provider networks and ombudsman; 2) standardized reference material (i.e., medical treatment guidelines for first-level evidence-based treatment); 3) fully integrating a drug formulary with treatment parameters; 4) securing trust in the efficacy and integrity of guidelines for medical treatment, which fundamentally includes the use of drugs as part of treatment; and 5) an independent medical review (IMR) conducted by objective providers.

Ms. Baker said California contracted with the RAND Corporation to conduct a comprehensive study of existing medical treatment guidelines. She said the ACOEM guidelines overwhelmingly stood out as being the best choice, particularly with its adherence to evidence-based validation. Ms. Baker said ACOEM subsequently addressed recommendations of the RAND study for continuous improvement. She said the result of the evaluation was that ACOEM guidelines became the legal standard in California.

Ms. Baker said the ACOEM guidelines were selected in California because: 1) they provide the clinician with an analytical framework for the evaluation and treatment of injured workers in the workers’ compensation system; 2) they serve as the primary source of guidance for treating physicians and physician reviewers in workers’ compensation; 3) they are the presumed correct first-level standard for appropriate patient care, and enable streamlined approval of treatment requests; 4) they help to protect workers from over-care, under-care or otherwise inappropriate treatment; and 5) they include a comprehensive drug formulary as a fully integrated component of treatment.

Ms. Baker said California selected a drug formulary following the decision to select a guideline. She said the goals for implementing evidence-based formulary goals include: 1) implementing an evidence-based formulary as part of the medical treatment utilization schedule (MTUS); 2) facilitating the provision of appropriate medications to injured workers by establishing a list of preferred medications, with the goal of encouraging usage of the most appropriate medications, and minimizing disputes and associated medical costs; and 3) designing evidence-based formularies to maximize high-quality health care for injured workers and improve work-related outcomes through policies consistent with the MTUS.

Ms. Baker said the California Department of Industrial Relations (DIR) contracted the RAND Corporation to conduct a study of five existing formularies: 1) Washington State Department of Labor and Industries; 2) Reed Group ACOEM; 3) Work Loss Data Institute ODG; 4) Ohio Bureau of Workers’ Compensation; and 5) California Department of Health Care Services (Medi-Cal).

Ms. Baker said California selected the Reed Group ACOEM formulary for several reasons: 1) reliance on evidence-based criteria in determining drug lists; 2) compatibility with the MTUS; 3) transparency in the decision process to maintain the drug
list; 4) established process for regular updates to the formulary drugs; 5) ease of use by treating physicians; and 6) a focus on drugs needed for injured worker conditions.

Ms. Baker said California also looked at the independent medical review process. When looking at this process the following things were considered: 1) medical decisions made by independent medical professionals based on evidence-based medicine; 2) expedited medical decisions; 3) transparency on medical transactions; and 4) antifraud capability.

Ms. Baker said there is always resistance to change. She said California is exploring broadening the user base to include all levels of health care professionals, claims professionals, etc.

3. **Heard a Presentation from the NCCI on COVID-19 and Its Atlas Initiative**

Susan Donegan (National Council on Compensation Insurance—NCCI) said the NCCI is currently tracking 216 insurance-related COVID-19 bills. She said 95 of the 216 bills focus on items related to workers’ compensation. The NCCI is assessing the various workers’ compensation presumptions and compensability measures that have introduced and enacted. There are approximately 51 bills, both state and federal, addressing the topics of presumptions and compensability. Ms. Donegan said 20 states have proposed legislation regarding workers’ compensation issues, noting that there are multiple bills in some states. She said seven states have enacted some type of legislation addressing the issues of presumptions and compensability.

Ms. Donegan said seven states have issued executive orders, directives, emergency rules or department bulletins. She said bills regarding presumptions and compensability fall into three categories: 1) bills that primarily address first responders and health care workers; 2) bills that add frontline workers, such as a restaurant employees or pharmacy employees; and 3) bills that include broader classes of workers.

Ms. Donegan said the NCCI is also tracking post-traumatic stress disorder (PTSD), as it is unknown if there will be workers’ compensation claims related to COVID-19 that come about. She said some insurers are anticipating the possibility of receiving PTSD claims related to COVID-19, particularly from frontline health care workers.

Ms. Donegan said there are two categories of filings the NCCI has worked with regarding COVID-19. She said the first filing was for national item filings, and the NCCI worked quickly and extensively with its 36 state jurisdictions on three different filings and rule changes related to COVID-19. These three filings included: 1) creating class codes to report COVID-19 claims; 2) excluding COVID-19 claims from experience rating calculations; and 3) excluding payroll for furloughed employees in premium calculations. These measures have been approved in most all of the NCCI’s 36 state jurisdictions.

Ms. Donegan said July began the NCCI’s rate and loss cost season and some states have already been seeing those filings. This year, the NCCI is adding a new feature to the rate and loss cost filings. NCCI has added an executive summary providing a narrative discussing what the filings contain. This summary will include: 1) an introduction that includes filing details and numbers presented for insurance department recommendations; 2) a methodology section explaining what drove the recommendation, which will include state-specific issues if they exist; and 3) COVID-19. COVID-19 is not being addressed in the rate filings this year.

Ms. Donegan said the NCCI is in the process of gathering information to preliminarily gauge the impact of COVID-19 and looking for benchmarks to better understand future impact. She said there are tools referenced on the NCCI’s website. There is also a posting on the NCCI’s website titled, “2020-2021 Rate Filing Season: What You Need to Know,” which provides more details.

Director Wing-Heier asked if the NCCI has any projections or numbers regarding COVID-19. She said she knows, in some cases, people who have been diagnosed with COVID-19 are relatively symptom-free while, in other cases, a person may be in the intensive care unit (ICU) for months. Director Wing-Heier was curious to know if the NCCI had seen any of these costs begin to be reported.

Ms. Donegan said the NCCI has an estimator on its website for each state; however, the NCCI does not have any information regarding claims data. She said the NCCI will begin to see medical information in September or October; however, it will be the second quarter of 2021 before the NCCI will be able to get a true sense of medical costs. Ms. Donegan said the NCCI is hearing anecdotally from insurers that they are not receiving claims quickly. She said she is also hearing the concern that it is unknown medically what some of the long-term effects of COVID-19 might encompass.
Ms. Donegan said the NCCI’s Atlas initiative is a multi-year project intended to modernize accessibility and delivery of the NCCI’s manuals and circulars. She said the NCCI rolled out the Class Look-Up tool two years ago. Ms. Donegan said the NCCI is now ready to roll out the regulatory requests for the rewritten basic scopes and residual market manuals in the fourth quarter of 2020. She said NCCI states will be hearing from their state relations executive to learn more about this tool. Ms. Donegan said North Carolina and Michigan, which are both bureau states, are going to be part of a pilot program regarding this tool.

Having no further business, the Workers’ Compensation (C) Task Force adjourned.
Workers’ Compensation (C) Task Force
E-Vote
July 22, 2020

The Workers’ Compensation (C) Task Force of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded July 22, 2020. The following Working Group members participated: James J. Donelon, Chair (LA); Jim L. Ridling, Vice Chair, represented by Gina Hunt (AL); Lori K. Wing-Heier represented by Michael Ricker (AK); Evan G. Daniels represented by Tom Zuppan (AZ); Alan McClain (AR); Ricardo Lara represented by Mitra Sanandajifar (CA); Andrew N. Mais represented by George Bradner (CT); Trinidad Navarro represented by Frank Pyle (DE); Karima M. Woods represented by Angela King (DC); John F. King represented by Steve Manders (GA); Colin M. Hayashida (HI); Dean L. Cameron represented by Michele Mackenzie (ID); Vicki Schmidt represented by Heather Droge (KS); Sharon P. Clark (KY); Eric A. Cioppa (ME); Steve Kelley represented by Tammy Lohmann (MN); Chlora Lindley-Myers (MO); Barbara D. Richardson represented by Gennady Stolyarov (NV); Marlene Caride represented by Carl Sornson (NJ); Russell Toal represented by Robert Doucette (NM); Mike Causey represented by Fred Fuller (NC); Jessica K. Altman represented by Michael McKenney (PA); Elizabeth Kelleher Dwyer represented by Beth Vollucci (RI); Raymond G. Farmer (SC); Larry Deiter (SD); Todd E. Kiser represented by Tracy Klausmeier (UT); Michael S. Pieciak represented by Kevin Gaffney (VT); and James A. Dodrill represented by Tanya Gillespie (WV).

1. Adopted the Workers’ Compensation Policy and the Changing Workforce White Paper

The Working Group conducted an e-vote the concluded July 22, 2020, to consider adoption of the Workers’ Compensation Policy and the Changing Workforce white paper. The motion passed, with a majority of the Working Group members voting in favor of adopting the white paper (Attachment One-A).

Having no further business, the Workers Compensation (C) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\WC\0722 Minutes WCTF.docx
Workers’ Compensation Policy and the Changing Workforce

ABSTRACT

This paper explores how changes in work and the evolving landscape of legal employment are shifting responsibility for coverage and benefits for occupational injuries, illnesses, and fatalities. Policymakers and regulators need to understand how these changes may create gaps in coverage for workers and leave employers vulnerable to uncertain liability for injuries and deaths on the job. The paper also explores alternative policy solutions to ensure workers have access to benefits if they suffer workplace injury.

INTRODUCTION

Today’s workforce and workplace look very different from the workforce and workplace when the first workers’ compensation laws were passed. The cumulative impact of these changes has made it important to consider the role public policy plays in protecting workers from the health and economic consequences of an occupational injury, illness, or fatality. For most of the past century, a significant portion of workers in the U.S. labor force were protected against economic strain and physical harm through state workers’ compensation laws. As work relationships have grown increasingly complex, there is uncertainty in workers’ compensation protections for some in the labor force. The changes and discussions in this paper are a part of broader discussions on how employment benefits and protections might be revised, redesigned, or reimagined to reflect the contemporary work environment more accurately.

The twenty-first century workforce is more diverse, more de-centralized and more mobile than ever before. This is often at odds with employment classification laws, which were adopted when workers were predominately male and work was conducted in centralized facilities with a rigidly defined management hierarchy. Increasing work fluidity and the application of often conflicting state and federal law are resulting in business uncertainty and legislative proposals across the country. This paper presents an overview of the existing employment classification models and describes the latest legislation aimed at clarifying employment status.

Finally, the paper raises important policy questions that must be considered in light of the new work environment. Policymakers, in addition to business and labor leaders, will also appreciate the description of models and pilot programs that seek to deliver health and economic benefits to injured workers beyond the traditional workers’ compensation system. Discussion and development of solutions is essential for continued economic prosperity and social stability.
Part I: Changing Relationships with Work

Background

An individual’s connection to work shapes his or her life in visible and invisible ways – from lifestyle habits to self-esteem to social benefits. Throughout the last two centuries, those connections to work have become more formal and enshrined in local, state, and federal law. This work, or employment relationship, is important to individuals and their families as benefits and social protections are frequently gained through employment.¹

The first workers’ compensation laws in the United States arose out of changes in the nature and connection to work. The Industrial Revolution saw workers move from farms and villages to cities, transitioning from farm and community-based work to manufacturing and industrial jobs. These changes resulted in more workers in employee/employer relationships with defined wages, hours, and job requirements.

Workers’ compensation insurance prevents employees from taking legal action against their employers for workplace injuries, illnesses and deaths. In return, employees get defined benefits for covered injuries, illnesses and deaths regardless of fault or liability.²

Industrial work was dangerous, and work injuries and fatalities rose, reaching more than 61,000 deaths at work in the U.S. in 1914.³ Recognizing the economic and social cost of these injuries and deaths, state policymakers successfully passed workers’ compensation laws in the majority of states by 1920. Workers’ compensation was no-fault, providing guaranteed wage replacement and medical benefits for employees injured or killed at work.

A Century of Change

The past century has witnessed a transformation across the workforce and the workplace. The number of women in the labor force has steadily increased since 1948. Women represented 57.1% of the U.S. labor force in 2018.⁴ The labor force has increased in ethnic diversity. Hispanics represented 17% of the U.S. labor force in 2016 and all minorities (African-Americans, Asian-Americans, Hispanics/Latinos, and Native Americans) are projected to make up 37% of the working-age population by 2020.⁵ The labor force is steadily getting older. Workers 55 and older are projected to be close to 25% of the labor force by 2024. Union participation has been in decline; 10.7% of wage and salary workers were union members in 2017 (Figure 1).⁶ Higher education has also played a part in the labor force. Between 1992 and 2016, workers with college degrees, including advanced degrees, has increased steadily.⁷

¹ Employment benefits can include health, disability, and/or life insurance, retirement contributions, paid time off, flexible spending accounts, and/or tuition reimbursement. Social protections can include unemployment, workers’ compensation, accommodations, equal opportunity, etc.

Attachment One-A
Workers’ Compensation (C) Task Force
8/5/20
The workplace is physically different. Offices that had rows of desks with telephones and typewriters have been replaced by flex workstations and collaboration rooms. It is estimated that 4.3 million employees, close to 3% of the U.S. labor force, worked at home at least half the time in 2016. Additionally, regular work-at-home by employees have grown 140% over the last decade.\(^8\) Manufacturing facilities have moved from manually operated heavy equipment to technology-run, highly automated processing. \(\text{https://globalworkplaceanalytics.com/telecommuting-statistics}\)

\(\text{https://qz.com/work/1392302/more-than-5-of-americans-now-work-from-home-new-statistics-show/}\)

The kind of work is changing. The last century saw steady decline in agricultural work, manufacturing has remained steady, and service work has dramatically increased. The U.S. Bureau of Labor Statistics (BLS) projects that nine out of 10 new jobs in the next decade will be in the service-providing sector.\(^9\) Healthcare, personal care, community and social services, and computer and mathematical employment are some of the expected fastest-growing occupations.

These changes have dramatically impacted the way people work and live across the U.S. The cumulative impact of these changes is an expansion of the U.S. economy. Real gross domestic product (GDP) has grown from approximately $3 trillion in 1957 to $19 trillion in 2019.\(^10\) Labor productivity was 3.8 times higher in 2016 than in 1950 (Figure 2).\(^11\)

---

\(^8\) Work at home: \(\text{http://globalworkplaceanalytics.com/telecommuting-statistics}\)

\(^10\) Data source found at: \(\text{https://www.thebalance.com/us-gdp-by-year-3305543}\)

Over the century, work has also gotten safer. Workplace injuries and fatalities have declined dramatically. The workplace fatality rate was 3.5 workers per 100,000 in 2018\textsuperscript{12} contrasted with 61 workers per 100,000 in 1914\textsuperscript{13}. The rate of injuries/illnesses requiring time away from work was 2.8 per 100 workers in 2018 contrasted with five per 100 workers in 1914.\textsuperscript{14}

The decrease in occupational injuries, illnesses, and fatalities is especially good for workers’ compensation. These declines are keeping more employees engaged in the labor force and making it more affordable for businesses to obtain coverage. However, demographic and work changes have raised other challenges for the workers’ compensation system. The kinds of injuries and illnesses are different, compensability questions are different, and treatment options are different. These, taken with the evolving employment relationship landscape, raise important questions about the central principles of workers’ compensation and if and how they should evolve in the future.

Connections to Work

Another significant change happening within the U.S. labor force is how individuals are connected to work. From the legal perspective, there are two classifications of workers - employees and independent contractors. The common picture of an independent contractor is a person with specialized skills, talents, or expertise who works on a project basis. Independent contractors would typically have multiple clients and conduct their work with a fair degree of autonomy. Businesses would use independent contractors to supplement knowledge or experience of their existing workforce on a temporary basis to meet demand or deadlines.

Employee or Independent Contractor

Workers’ compensation is generally compulsory for employers,\textsuperscript{15} and each state has rules that define employees for the purpose of workers’ compensation coverage. Securing workers’ compensation coverage for each of its employees is a direct business cost. In contrast, independent contractors are generally not required to have workers’ compensation coverage.

\textsuperscript{12} https://www.bls.gov/news.release/pdf/cfoi.pdf
\textsuperscript{14} Bureau of Labor Statistics.
\textsuperscript{15} All states, except Texas and South Dakota, have compulsory workers’ compensation requirements for employers. Exclusions for certain employers or kinds of employees exist in most states. The IAIABC/WCRI Inventory of Workers’ Compensation laws describes coverage exclusions for each of the states.
Defining an employee or independent contractor has been a challenge within state workers’ compensation systems, but classification has become more difficult as employment relationships have increased in complexity. These changes have important implications for workers’ compensation, including which workers should be covered under workers’ compensation and who should bear the costs of coverage. Additionally, policymakers are needed to explore how coverage requirements align incentives for businesses and workers.

While many businesses use independent contractors for highly specialized or project-based work, many organizations have made contract labor a more permanent part of their workforce. July 2018 headlines noted that the number of contractors now exceeds the number of employees at Google. Countless large businesses, including Apple, Facebook, and Amazon, have noted the same trend. Contract labor is used by businesses for everything from security and food service to coding and sales.

The decision by a business in how to classify its workers is significant as many protections and benefits for workers are tied to employment, including workers’ compensation coverage requirements. Businesses weigh many factors when considering utilizing employees or independent contractors, but the direct cost to businesses for employees is estimated at 20-30% higher than independent contractors.

**Alternative Work Arrangements**

Whether a worker benefits from the protection of a workers’ compensation policy depends on whether he or she is classified as an employee or an independent contractor. However, several alternative work relationships exist that fall along the spectrum of employee and independent contractor. These alternative work relationships create additional complexity in determining employment classification. The following alternative work arrangements are defined and tracked by the BLS:

- **Independent contractors**: Workers identified as independent contractors, independent consultants, or freelance workers, regardless of whether they are self-employed or wage and salary workers.
- **On-call workers**: Workers called to work only as needed, although they can be scheduled to work for several days or weeks in a row.
- **Temporary help agency workers**: Workers paid by a temporary help agency, whether or not their job is temporary.
- **Workers provided by contract firms**: Workers employed by a company that provides them or their services to others under contract, are usually assigned to only one customer, and usually work at the customer’s work site.

For the purposes of this paper, alternative work arrangements refer to any work performed by anyone not legally defined as an “employee.” Alternative work arrangements raise important questions about coverage for injuries, illnesses, or fatalities occurred while working.

**Platform Work**

Alternative work arrangements are not new; however, expanded internet connectivity has created new ways to connect to work. Companies allowing workers or service providers to connect to clients or customers via the internet are often described as online platforms. Online platforms have created additional complexity in defining the legal work relationship. The rise of online platforms is often seen as being synonymous with the sharing or “gig” economy; however, these platforms reflect an example of a way to facilitate an alternative work arrangement.

Some platform workers may use this type of work as supplemental income while having a full-time job. Others work for multiple platforms at one time, piecing together a living wage.17 Platform work has expanded broadly across industries, with many types of work and services offered.

**By the Numbers**

Quantifying the number of individuals within these various work arrangements is important in understanding how many workers are not covered if they have an occupational injury, illness or fatality. A rising number of individuals in alternative work arrangements could necessitate the need for new private or public solutions to address coverage gaps. Design and implementation of new programs will be influenced by who and how many workers they will serve.

Numerous public and private research efforts have attempted to quantify individuals in various work arrangements. Estimates range from less than 3% to more than 40% of the workforce. There are many

reasons for the significant difference in estimates, including data sources, survey methodology, definitions of work arrangements, and counting primary or supplemental income.¹⁸

</tbody>
</table>

This broad range and lack of research consensus has resulted in inconsistent focus and no clear mandate for policy change.

Beyond measuring the number of individuals in different types of work arrangements, it is also useful to examine multi-year trends. Besides the 2017 BLS Contingent Workforce Supplement, most studies have charted an increase over the last decade in the percentage of individuals engaged in independent or alternative work for primary or supplemental income. If this trend continues it may have important implications for labor and employment policy, including workers’ compensation programs.

**Impact of Change**

These changes and continued technological advancement will influence the U.S. workforce and workplace in the years to come.

Some of these changes have a direct impact on workers’ compensation systems. The long-term trend of declining injuries and illnesses has translated to stable or reduced premiums for employers and robust private insurance markets in most states. Other changes have influenced how care is delivered and return-to-work opportunities for those displaced from work.

Other changes, including labor force demographics and new work environments, could influence workers’ compensation both directly and indirectly. Demographic changes are influencing who, how, and where individuals are connecting to work. The differing needs (flexibility, portability, supplemental income, debt repayment, etc.) of these diverse workers may result in accelerating growth in alternative work arrangements. The ability to engage and perform services in new ways, virtual and remote, blurs lines between control and the direction of work.

Taken in whole, these changes are increasing the need to examine existing labor law and how social benefits and protections are delivered in the future. The workers’ compensation system does not exist in a vacuum. Coverage for an occupational injury, illness, or fatality must be considered in the context of the large-scale changes within the

---

¹⁹ Offline services could include caregiving or house-cleaning and offline sales could include flea markets or thrift sales; online services could include platform or app work and online sales could include selling items online.
economy. At the heart of this discussion is how workers are connecting to work and who will bear responsibility for any occupational injury, illness, or fatality that occurs.

**Part II: Determining Employment Status**

Employment status is essential for understanding the benefits and protections to which a worker is entitled and the financial obligations a business must pay. The rules for this determination are found in federal and state statute. This is a complex and nuanced area of the law, with determinations of employment status dependent on the application of various tests and characteristics.\(^{20}\) There is no coordination of employment determination between federal and state law.

**Federal Standard**

Federal statutes define “employee” in many different ways. Employment related tests are considered by the Internal Revenue Service (IRS), U.S. Social Security system, Federal Insurance Contributions Act (FICA), federal Fair Labor Standards Act (FLSA), federal Civil Rights Act, federal Age Discrimination in Employment Act (ADEA), Americans with Disabilities Act (ADA), Federal Unemployment Tax Act (FUTA), and many others.

Three tests have been used in employment determination under federal law. Depending on the law, test used, and case-specific facts, a worker could be considered an employee under one law and an independent contractor under another. Employee determination under federal law does not influence workers’ compensation coverage obligations under state law. However, there are similarities in the many characteristics considered at the state and federal level. In addition, continued changes in how workers connect to work may result in pressure to clarify and/or align employment under various areas of the law.

**Tests for Employment Determination under Federal Law**\(^{21}\)

- **Common law (control):** The common law test hinges on control of the means and methods of work. This can include a variety of different factors including direction and supervision of work activities, tools and materials, payment, and intent of the relationship. The IRS uses the common law test and advises three broad categories of consideration: 1) behavioral control; 2) financial control; and 3) relationship of the parties.\(^{22}\)

- **Economic realities:** The economic realities test looks at the financial dependence of a worker on services performed for a specific business. This can include a variety of different factors, including the level of financial risk, whether services are integral to the business operation, and investment in facilities and equipment. The economic realities test is commonly applied under the FLSA which governs minimum wage and overtime requirements. The economic realities test is broader than the control test and generally favors employee status.

- **Hybrid:** The hybrid test looks at both economic and common law factors. Under the hybrid test, economic realities are more heavily weighted than common law characteristics. The hybrid test has been applied in employment determinations under Title VII of the Civil Rights Act. (see https://www.bls.gov/opub/mbr/2002/01/art1full.pdf)

Numerous cases have tested the interpretation of federal law in determining employment status. A series of FedEx cases across 20 states\(^{23}\) found the company improperly classified ground delivery drivers as independent contractors. The decisions hinged largely on the direction and control of drivers. Factors considered included requirements by FedEx drivers to wear uniforms, adhere to appearance standards, drive approved vehicles, and deliver packages on specific days and within certain times.

Decisions of the National Labor Relations Board (NLRB) have also been influential in the interpretation of federal law in this area. Most recently, a January 2019 ruling overturned a 2014 decision\(^{24}\) in favor of employee status based on the application of factors related to entrepreneurial opportunity. The NLRB decision in SuperShuttle DFW noted the independence of drivers in setting hours, ownership/lease of vans, and control of payment methods results in

---

\(^{20}\) Even the courts have expressed frustration in the lack of clarity in employment determinations. The Supreme Court, for example, has referred to the definition of an employee under the Americans with Disabilities Act as a “mere ‘nominal definition,’” Clackamas Gastroenterology Assocs. v. Wells, 538 U.S. 440, 444 (2003), and has stated that the definition of an employee under the Employee Retirement Income Security Act is “completely circular and explains nothing,” Nationwide Mut. Ins. Co. v. Darden, 503 U.S. 318, 323 (1992)

\(^{22}\) See IRS at https://www.irs.gov/newsroom/understanding-employee-vs-contractor-designation

\(^{23}\) Numerous lawsuits against FedEx were filed beginning in 2004. Two class action lawsuits were heard and decided by the Seventh Circuit Court of Appeals and the Ninth Circuit Court. The decisions resulted in mediated settlements with FedEx of more than $400 million.

\(^{24}\) NLRB in a 2014 FedEx case found in favor of employee status for drivers based on application of the common law test emphasizing direction and control.
significant entrepreneurial opportunity. The greater the entrepreneurial opportunity the more likely it is an independent business which would favor independent contractor status. *(see SuperShuttle DFW, Inc. and Amalgamated Transit Union Local 1338.)*

This decision was influential in shaping the NLRB Advice Memorandum related to Uber and Uber drivers’ ability to unionize. The memo finds drivers for Uber are independent contractors based on the factors discussed in SuperShuttle DFW, with significance placed on control over manner and means and how the driver is compensated. Both decisions cite entrepreneurial independence as a key consideration in independent contractor status.

The NLRB notes, “Whether to take advantage of these opportunities were among the many entrepreneurial judgments UberX drivers made due to their freedom to set their work schedules, choose log-in locations, and pursue earnings opportunities outside the Uber system.” The ability to work for competitors beyond Uber outweighed other factors of control asserted by the platform, including baseline fares, inability to subcontract work or repeated rejection of trips. Additionally, they noted that minimum service standards and driver ratings had little impact on the driver’s earning potential. *(see Uber Technologies, Inc. Cases 13-CA-163062, 14-CA-158833, and 29-CA-177483).*

In considering platform workers, the U.S. Department of Labor (DOL) issued an opinion letter in April 2019 which designated service providers of one platform as independent contractors under the FLSA. In applying the “economic realities” test, the U.S. DOL considered six factors of service providers who secured jobs through the virtual platform. The opinion letter described the platform as a referral service not an employer.

These recent opinions have been interpreted by many as a signal of the current administration’s leaning toward liberal application of independent contractor status. It is noted again these interpretations have no bearing in employment classification status under state workers’ compensation laws. It remains to be seen if state courts will evaluate control or economic realities tests in similar ways.

**State Standards**

In 2017, more than 140 million U.S. jobs were covered under state workers’ compensation systems (NASI, Workers’ Compensation Benefits, Cost, and Coverage, 2019). State law defines workers’ compensation coverage requirements across the U.S. In all states but Texas and South Dakota, coverage is compulsory for employers. However, coverage exemptions are common. Many states do not require that workers’ compensation coverage be purchased for domestic and agricultural workers and small employers.

The general trend over the past century has been expansion of coverage to increase the number of workers protected under the workers’ compensation system. The rise of alternative employment relationships may signal a reversal of this trend. The more workers that find themselves in alternative work arrangements, the more likely they will fall outside the protection of workers’ compensation.

Much like federal law, there may be multiple definitions of “employee” within a state that apply to different areas of the law. This can include intra-state variation across the department of revenue, unemployment insurance, and/or workers’ compensation.

In an effort to simplify and reduce confusion from differing “employment” determinations across state agencies, some states have sought to develop a statewide definition of “employee.” One such effort was in Maine, when the governor created a cross-agency task force comprised of the Maine DOL, Maine Workers’ Compensation Board, and the Maine Attorney General’s Office, to develop a single definition of “employee.” The result was the following:

> Services performed by an individual for remuneration are considered to be employment subject to this chapter unless it is shown to the satisfaction of the bureau, that the individual is free from the essential direction and control of the employing unit, both under the individual's contract of service and in fact, the employing unit proves that the individual meets all of the criteria in Number 1 and three (3) of the criteria in Number 2 as listed below. *(See [https://www.maine.gov/labor/misclass/employment_standard.shtml](https://www.maine.gov/labor/misclass/employment_standard.shtml))*

---

25 The six factors included control; permanency of relation; investment in facilities, equipment, and helpers; skill, initiative, judgment, or foresight required; opportunity for profit and loss; and integrality.

26 Workers’ compensation is voluntary in both Texas and South Dakota. In both states, employers lose the right to the exclusive remedy if they fail to purchase coverage.

27 Recently, exemptions for agricultural workers have been challenged. The New Mexico Supreme Court ruled in 2016 that the agricultural exemption was unconstitutional.

28 A list of state-by-state exemptions can be found in Table 2 of the WCRI/IAIABC Workers’ Compensation Laws as of January 1, 2019.
A similar effort is underway in Alaska, which is in response to the adoption of a new eight-part independent contractor test passed in 2018. (See HB 79).

**State Employment Classification**

Classification of a worker as an employee or independent contractor is essential for the workers’ compensation system as it determines the coverage obligation. From the legal perspective, states are varied in their approach to employment classification. In general, states fall into the following categories:

**“Employee” Presumption:** Twenty-five states presume a worker is an employee unless they meet the requirements of an independent contractor. A worker may be found to be an independent contractor by meeting certain criteria as defined by law (i.e. they meet all nine provisions set forth in statute) or as determined by an opinion of a judicial body (i.e., determination by a commissioner or judge based on case specific facts).

**“Independent Contractor” Presumption:** Two states presume independent contractor status for those workers who have completed necessary requirements before beginning work. These requirements generally include a written contract/form filed with the state confirming independent contractor status. The presumption of independent contractor status can be overcome.

**Silent:** Twenty-three states have no presumption of status for a worker. The criteria for determining employment status may be described but are applied to cases individually.

Appendix A compiles the state standards used to determine employment classification status for purposes of workers’ compensation coverage.

**State Employment Tests**

Similar to federal law, states have developed a variety of tests and/or criteria that are used in the decision of employment status. There are numerous factors considered in state law but generally states evaluate based on:

**Control of the means, manner, and methods of work:** Rooted in common-law, decisions about what work must be accomplished and how it should be done are central to considering control in the employment relationship. Factors of control vary across states but include who sets days/hours of work, manner in how work is conducted, service standards, appearance requirements, quality specifications or other factors interpreted as giving direction to a worker.

**Relative nature of work:** Considers the type of work and how it relates to core business functions. Examines how fundamental the work is to what the business does or how it operates.

**Hybrid:** Weights factors of both control and the relative nature of work.

Each state has a body of case law that interprets statutes and rules based on case-specific facts. A single decision may be precedential, resulting in more or less workers considered employees for purposes of workers’ compensation coverage. The opinion of the California Supreme Court in Dynamex demonstrates the time, cost, complexities and impact a case can have with respect to employment classification.

In 2004, Dynamex converted its delivery drivers to independent contractors. The company was sued, and the final ruling was issued in 2018, which found the delivery drivers were in fact employees of the company. In the decision, the California Supreme Court applied the ABC test, which requires all three factors be met to be considered an independent contractor. The three factors include:

1. Freedom from control or direction in the performance of work under the contract or engagement.
2. Work is outside the work of the hiring entities normal business.
3. Worker is engaged in an independently established trade, occupation or business of which they are performing the work.

Many have interpreted the application of the ABC test as significantly expanding those workers considered employees in California.

---

29 Employment status may also affect the funding mechanism of state worker’s compensation agencies. In many states, the agency is funded through a maintenance tax or surcharge of gross workers’ compensation insurance premiums. Typically, workers’ compensation premium is calculated based on an employer’s payroll. The lower the payroll, the lower the premium, which results in less maintenance tax collected to support the workers’ compensation system administration in the state.

30 The ABC test standard for employment classification in California took effect on January 1, 2020 as a result of the passage of House Bill 5.
In contrast, courts in other states did not find an employer-employee relationship based on similar factors. In 2018, the New York Appellate Division held there was no employer-employee relationship in Vega vs. Postmates Inc. because couriers failed to provide sufficient proof of Postmates’ control over the way work was performed. Sebago vs. Boston Cab Dispatch in 2015 found that taxicab drivers were independent contractors because they were free from control and direction of the cab companies.

**Marketplace Contractors**

The state-by-state nature of employment law, uncertainty, cost and time to confirm employment status creates a volatile business environment. In the past several years, platform companies have worked to change laws to clarify the status of platform service providers as independent contractors. A new term of art, marketplace contractors, was defined, which applies to service providers who are connecting to work through a virtual platform.

Between 2016 and 2018, eight states successfully passed legislation or rule related to marketplace contractors. The eight states are: Arizona, Florida, Indiana, Iowa, Kentucky, Tennessee, Texas, and Utah. Under these new laws, platform service providers are independent contractors if they meet certain requirements. Common marketplace contractor criteria include:

- Written agreement between the platform and the marketplace contractor that says the marketplace contractor is providing services as an independent contractor and not an employee. Most of the legislation granted retroactive status if these agreements were in place previously.
- The platform must be virtual: a web, mobile application or software program. Some legislative language specifically excludes phone or fax services or prohibits services being carried out in a physical location within the state.
- Payment for services performed must be paid on a contract or rate basis. The marketplace contractor is responsible for all tax obligations.
- The marketplace contractor is responsible for providing their own tools or materials to complete the work.
- The marketplace contractor can set his or her own hours.

Some states may have exclusions include transportation networking companies (TNCs), freight transportation, political subdivisions, religious/charitable/educational organizations, and American Indian tribes.

**Impact of Legal Uncertainty of Employment Classification**

Changes in the workforce noted in Part I raise questions about the application and applicability of current methods of determining employment status, especially as related to control of means and methods of work. Work is being organized and performed in ways that allow both independence and oversight in ways that does not fit neatly within current legal frameworks described in Part II. The continued evolution of workers connecting and performing work in new ways may require revision or a redesigned framework for employment classification.

**Part III: Alternative Coverage Models**

Changes in work relationships raise important public policy questions about the protections and benefits currently linked to employment. A continued increase in alternative work arrangements may necessitate new models and programs for social protections, including wage replacement and medical care for occupational injuries, illnesses and fatalities. New programs might exist within the current workers’ compensation system or outside of it. Regardless, consideration of the human, economic and social costs of injuries, illnesses and fatalities at work is an important element to be included in future policy conversations.

Several ideas have emerged that consider benefits and protections in new forms. The following are strategies considered for protecting workers and businesses from the health and economic costs of a work injury:

**Independent Contractor Coverage**

One way to extend coverage is to amend the state workers’ compensation statute to allow a business to optionally provide workers’ compensation coverage to designated independent contractors. Elective coverage for an independent contractor would extend exclusive remedy for the business and be considered

---

31 The Texas Workforce Commission adopted a rule (40 T.A.C. § 815.134) which defines a “Marketplace Contractor” as an independent contractor and makes those individuals ineligible for unemployment benefits. Since workers’ compensation is optional in Texas it has no impact on workers’ compensation coverage.

32 There have been discussion papers on alternative options for employment classification. Some have argued for dependent contractor and others have lobbied for independent workers. Any new direction would clearly need to identify which benefits and protections, including workers’ compensation, would be conferred by that status.
a benefit for the contractor. If properly structured, this would not affect the individual’s independent contractor status for unemployment insurance and wage purposes. Texas allows this option for hiring contractors in Texas Labor Code, Section 406.144.

**Black Car Fund**

The Black Car Fund is a mechanism that provides workers’ compensation coverage for more than 70,000 black car drivers in New York. The Fund was created in 1999 and is funded by a surcharge paid by the customer on each ride provided by an eligible driver.33 Drivers obtain coverage through their dispatch organizations, which are members of the Fund. The unique statutory nature of the Black Car Fund designates drivers as “employees,” so they are eligible for workers’ compensation benefits under New York state law. They retain independent contractor status for all other purposes.

More generically, this concept could be considered a “guild model” where workers providing services in a specific industry (transportation, hairdressing, engineering, etc.) could access workers’ compensation coverage collectively. This could be an attractive alternative for platform companies because the statutory nature of the fund gets around paying “benefits” that could be interpreted as “employee status.”

**Occupational Accident Insurance**

The private insurance market offers occupational accident insurance policies for those workers not eligible for workers’ compensation. These policies are often associated with high-risk industries with a significant number of independent operators/contractors (i.e. long-haul trucking). An occupational accident insurance policy offers defined coverage for a work-related injury or fatality by the policyholder. Coverage can be purchased directly by an operator/independent contractor or offered by a platform/contracting company.

As a general matter, occupational accident insurance typically includes coverages and benefits associated with workers’ compensation insurance including medical, wage replacement and death benefits. However, there are important differences in a workers’ compensation policy and an occupational accident policy. Occupational accident policies generally have a total benefits cap: a cap on medical benefits, and a cap on wage replacement. In addition, there may be no compensation for permanent impairment or consideration of vocational rehabilitation. There are often exclusions for kinds of injuries/illnesses covered, and abbreviated injury or claim reporting requirements. While there is limited access to an external dispute resolution system, occupational accident insurance is subject to the standard insurance claim dispute processes (e.g., a claimant is permitted to file a complaint with his/her state insurance department, and the insurer is subject to fair claims handling and bad faith laws).

One example is the driver injury protection policy offered to Uber drivers by Aon and Atlantic Specialty Insurance. Uber drivers pay $0.03 per mile, and coverage includes medical benefits, wage replacement benefits and death benefits if they suffer a covered injury while on the app is on. Likewise, as of June 2019, DoorDash now maintains occupational accident insurance on behalf of all U.S. “Dashers” while on a delivery.

Occupational accident insurance is regulated under a different line of insurance than workers’ compensation. This may create a disconnect or confusion for both businesses and workers regarding benefits across the two types of coverage.

**Disability Insurance**

Another mechanism for providing coverage is expanded use of disability insurance. Disability insurance provides wage replacement benefits for an individual who suffers a sickness or injury. Disability insurance has both private and public insurance options, and five states34 have mandatory disability insurance programs.

There are key differences between disability insurance and workers’ compensation: Disability insurance does not pay medical benefits, wage replacement is capped, and there is no consideration of either permanent partial or total disability or fatalities.

33 The current surcharge is 2.5%, [https://www.nybcf.org/faqs](https://www.nybcf.org/faqs)
34 California, Hawaii, New Jersey, New York, and Rhode Island
Portable Benefits

Portable Benefit accounts de-couple social protections from the employer and offer coverages to an individual worker. An account is funded and can then be used to obtain various coverages including healthcare, disability or occupational accident insurance, and/or workers’ compensation. Funding of the account could be designed in many ways but could include contributions from an employer(s), platform(s), contract organization(s), client(s), and/or the worker.

Portable benefit accounts have been conceptually supported by policymakers, businesses, labor leaders, and think tank organizations but have not been widely piloted. Important policy, design, and administrative questions must be defined in order to understand if portable accounts would be effective in deliver benefits for work-related injuries, illnesses, and fatalities.

Each of these mechanisms could serve as a model for extending work-related injury, illness and fatality coverage for workers in alternative work arrangements.

Policy Questions and Considerations

Exclusive remedy: One of the central principles of workers’ compensation is exclusive remedy. Employees who have a work-related injury, illness or fatality receive the medical and wage replacement benefits afforded to them by state law. Once those have been received, employers have no further liabilities. If alternative coverage mechanisms are developed, should exclusive remedy be afforded to those businesses? What provisions or standards must be met to have exclusive remedy?

Universal coverage: Workers’ compensation started off as a voluntary program but trended toward universal coverage (with some exceptions). Coverage had clear benefit for both employers and employees. If universal coverage is desirable, you must decouple the mandate from the employment relationship (i.e., employee only) and determine how coverage can be delivered in different environments (i.e., Do independent contractors have to purchase a workers’ compensation policy?).

Standard benefits: Workers’ compensation benefits (wage replacement and medical) are defined in state statute and applied in the same way for all employees in a state. The advantage of a statutory benefit scheme is that it creates equity across all employees/employers and promotes societal stability (given adequacy of benefits). The disadvantage of this scheme is that benefits may not always be “fair” (i.e., account for pain/suffering; maximums penalize high income earners, etc.).

Funding/Delivery: Workers’ compensation policies are funded by employers who pay premiums or self-fund. In nonstandard work arrangements, the financial responsibility for an occupational injury is ambiguous and, therefore, who funds coverage bears discussion. Is it the contracting firm’s responsibility (i.e. for all workers regardless of employment status), or is there a cost-sharing obligation by classification or work type?

Market Access: Workers’ compensation has developed market solutions for businesses who are unable to purchase coverage in the voluntary market (residual market or insurer of last resort). Is a solution like this required or desired for workers in alternative work arrangements? Should the cost of coverage be a consideration in developing or determining solutions (i.e., if you are making $1,000 a year in additional income should you have to buy a policy that costs you some fraction of that?).

Safe Harbor: Should safe harbor provisions exist for businesses who purchase or offer some coverages (health, workers’ compensations, etc.) to ensure they are not interpreted as employment status? What provisions would need to be met for safe harbor? What liabilities would the business and worker face in these situations?
Conclusions

Workers’ compensation is an essential element of the protections and benefits businesses and workers have had in the last century. Employers gain certainty and limit their liability to injuries, illnesses, or fatalities that occur at work. Employees receive healthcare and wage replacement to heal and recover with lessened financial burden. This fragile balance has resulted in sustained stability and equity for most American businesses and their workers.

The employee-employer framework on which the U.S. workers’ compensation system is built has become increasingly complex. Businesses are relying more and more on a labor force that does not neatly fit within legally defined employees and independent contractors. These external changes have the potential for significantly changing employment related protections and benefits.

This presents real questions for the workers’ compensation system. Policymakers, labor, management, and other system stakeholders need to begin considering and preparing for these impacts. 100 years ago, workers’ compensation was adopted after countless lives were lost or seriously damaged by a work injury. Proactively addressing new changes in work and the workplace are the key to responding without more lives lost by American workers.
### Appendix A: State Standards Used to Determine Independent Contractor Status (2019)

<table>
<thead>
<tr>
<th>State</th>
<th>Presumption of Employee Status</th>
<th>Special Rules Specific Occupations</th>
<th>General Description of Criteria</th>
</tr>
</thead>
</table>
| AL    | No provision                  | ALA. CODE § 25-5-50 (2017)        | If the employer’s right of control over the individual extends no further than directing what is to be ultimately accomplished, the individual is an independent contractor. The employer must not retain the right to dictate the manner of operation or how the work should be done. The factors to be considered in determining whether an individual or an entity has retained the right of control include:  
  (1) Direct evidence demonstrating a right or an exercise of control.  
  (2) The method of payment for services.  
  (3) Whether equipment is furnished.  
  (4) Whether the other party has the right to terminate the employment.  
| AK    | No                            | ALASKA STAT. § 23.30.230 (2017)   | The Alaska Supreme Court has adopted the “relative nature of the work” test for distinguishing between employees and independent contractors. The test first considers the character of the individual’s work or business, which is determined by considering three factors:  
  (1) The degree of skill involved.  
  (2) Whether the individual holds himself out to the public as a separate business.  
  (3) Whether the individual bears the accident burden.  
The test then considers the relationship of the individual’s work or business to the purported employer’s business, which is also broken into three factors:  
  (1) The extent to which the individual’s work is a regular part of the employer’s regular work.  
  (2) Whether the individual’s work is continuous or intermittent.  
  (3) Whether the duration of the work is such that it amounts to hiring of continuous services rather than a contract for a specific job.  
The Alaska Workers’ Compensation Board applies a similar “relative nature of the work” test. The test weighs six factors, the first two being the most important; at least one of these two factors must be resolved in favor of an “employee” status for the board to find that a person is an employee. The six factors are whether the work:  
  (1) Is a separate calling or business. If the person performing the services has the right to hire or terminate others to assist in the performance of the service for which the person was hired, there is an inference that the person is not an employee. If the employer:  
  (a) Has the right to exercise control of the manner and means to accomplish the desired results, there is a strong inference of employee status.  
  (b) And the person performing the services has the right to terminate the relationship at will, without cause, there is a strong inference of employee status.  
  (c) Has the right to extensive supervision of the work, then there is a strong inference of employee status.  
  (d) Provides the tools, instruments and facilities to accomplish the work and they are of substantial value, there is an inference of employee status; if the tools, instruments and facilities to accomplish the work are not significant, no inference is created regarding the employment status.  
  (e) Pays for the work on an hourly or piece rate wage rather than by the job, there is an inference of employee status. |
(f) And person performing the services entered into either a written or oral contract, the employment status the parties believed they were creating in the contract will be given deference. However, the contract will be construed in view of the circumstances under which it was made and the conduct of the parties while the job is being performed.

(2) Is a regular part of the employer’s business or service. If it is a regular part of the employer’s business, there is an inference of employee status.

(3) Can be expected to carry its own accident burden. This element is more important than factors (4)-(6). If the person performing the services is unlikely to be able to meet the costs of industrial accidents out of the payment for the services, there is a strong inference of employee status.

(4) Involves little or no skill or experience. If so, there is an inference of employee status.

(5) Is sufficient to amount to the hiring of continuous services, as distinguished from contracting for the completion of a particular job. If the work amounts to hiring of continuous services, there is an inference of employee status.

(6) Is intermittent, as opposed to continuous. If the work is intermittent, there is a weak inference of no employee status.

**ALASKA ADMIN. CODE tit. 8, § 45.890 (2017); ALASKA STAT. § 23.30.395 (2017).**

**ARIZ.**

**Rebuttable presumption of independent contractor status created upon the execution of a written agreement compliant with ARIZ. REV. STAT. ANN. § 23-902 (2017).**

An independent contractor is a person engaged in work for a business who is:

1. Independent of that business in the execution of the work and not subject to the rule or control of the business for which the work is done.
2. Engaged only in the performance of a definite job or piece of work.
3. Subordinate to that business only in effecting a result in accordance with that business design.

As for the first element, Arizona courts have adopted the “right to control” test, which examines the following factors:

1. The duration of the employment.
2. The method of payment.
3. Who furnishes necessary equipment.
4. The right to hire and fire.
5. The extent to which the employer may exercise control over the details of the work.
6. Whether the work was performed in the usual and regular course of the employer’s business.

A business or independent contractor may prove the existence of an independent contractor relationship by executing a written agreement stating that the business:

1. Does not require the independent contractor to perform work exclusively for the business.
2. Does not provide the independent contractor with any business registrations or licenses required to perform the specific services set forth in the contract.
3. Does not pay the independent contractor a salary or hourly rate instead of an amount fixed by contract.
4. Will not terminate the independent contractor before the expiration of the contract period, unless the independent contractor breaches the contract or violates the Arizona law.
5. Does not provide tools for the independent contractor.
6. Does not dictate the time of performance.
7. Pays the independent contractor in the name appearing on the written agreement.
8. Will not combine business operations with the person performing the services rather than maintaining these operations separately.

**ARIZ. REV. STAT. ANN. § 23-902 (2017).**

© 2020 National Association of Insurance Commissioners 16
| AR | Yes | **Silvicraft, Inc. v. Lambert**, 661 S.W.2d 403 (Ark. Ct. App. 1983) | **ARK. CODE ANN. § 11-9-102 (2017)** | Various factors are considered to determine the status of a worker:

1. The right to control the means and the method by which the work is done.
2. The right to terminate the employment without liability.
3. The method of payment.
4. The furnishing, or the obligation to furnish, the necessary tools, equipment, and materials.
5. Whether the person employed is engaged in a distinct occupation or business.
6. The skill required in a particular occupation.
7. Whether the employer is a business.
8. Whether the work is an integral part of the regular business of the employer.
9. The length of time for which the person is employed.

However, the “right to control” test is usually sufficient to decide most disputes. The ultimate question in these cases is whether the employer has the right to control over the doing of the work, not whether the employer actually exercises such control. **ARK. CODE ANN. § 11-9-102 (2017); Riddell Flying Service v. Callahan, 206 S.W.3d 284 (Ark. Ct. App. 2005).** |
| CA | Yes | **CAL. LAB. CODE § 2750.5 (2017)** | **CAL. LAB. CODE § 3352 (2017)** | California adopted Assembly Bill No. 5, effective Jan. 1, 2020. This bill addresses employment status when a hiring entity claims that the person it hired is an independent contractor. AB 5 requires the application of the “ABC test” to determine if workers are employees or independent contractors.

Under the ABC test, a worker is considered an employee and not an independent contractor, unless the hiring entity satisfies all three of the following conditions:

1. The worker is free from the control and direction of the hiring entity in connection with the performance of the work, both under the contract for the performance of the work and in fact.
2. The worker performs work that is outside the usual course of the hiring entity’s business.
3. The worker is customarily engaged in an independently established trade, occupation or business of the same nature as that involved in the work performed.

Cal. Labor Code § 2750.3 (West 2019) |
| CO | Yes | **COLO. REV. STAT. ANN. § 8-40-202 (West 2017)** | **COLO. REV. STAT. ANN. § 8-40-202 (West 2017)** | Colorado courts have adopted both the “control” test and the “relative nature of the work” test for purposes for determining a worker’s status. If either test is met, the worker is considered an employee for workers’ compensation purposes. The “control” test primarily considers whether the alleged employer exercises control over the means and methods of accomplishing the contracted service. Other factors include:

1. Whether compensation is measured by time or lump sum.
2. Which party furnishes the necessary tools and equipment to perform the work.

The “relative nature of the work” test considers the following factors:

1. The character of the individual’s work.
2. The relationship of the individual’s work to the alleged employer’s business.

</tr>
<tr>
<td>FL</td>
<td>No</td>
<td>FL No. provision</td>
<td>FLA. STAT. § 440.02 (2017)</td>
<td>A worker is considered an independent contractor provided at least 4 of the following criteria are met: (1) The independent contractor maintains a separate business with his or her own work facility, truck, equipment, materials, or similar accommodations. (2) The independent contractor holds or has applied for a federal employer identification number, unless the independent contractor is a sole proprietor who is not required to obtain a federal employer identification number under state or federal regulations. (3) The independent contractor receives compensation for services rendered or work performed, and such compensation is paid to a business rather than to an individual.</td>
</tr>
</tbody>
</table>
The independent contractor holds one or more bank accounts in the name of the business entity for purposes of paying business expenses or other expenses related to services rendered or work performed for compensation.

The independent contractor performs work or is able to perform work for any entity in addition to or besides the employer at his or her own election without the necessity of completing an employment application or process.

The independent contractor receives compensation for work or services rendered on a competitive-bid basis or completion of a task or a set of tasks as defined by a contractual agreement, unless such contractual agreement expressly states that an employment relationship exists.

If four of the criteria above do not exist, an individual may still be presumed to be an independent contractor and not an employee based on full consideration of the nature of the individual situation with regard to satisfying any of the following conditions:

1. The independent contractor performs or agrees to perform specific services or work for a specific amount of money and controls the means of performing the services or work.

2. The independent contractor incurs the principal expenses related to the service or work that he or she performs or agrees to perform.

3. The independent contractor is responsible for the satisfactory completion of the work or services that he or she performs or agrees to perform.

4. The independent contractor receives compensation for work or services performed for a commission or on a per-job basis and not on any other basis.

5. The independent contractor may realize a profit or suffer a loss in connection with performing work or services.

6. The independent contractor has continuing or recurring business liabilities or obligations.

7. The success or failure of the independent contractor’s business depends on the relationship of business receipts to expenditures.

If four of the criteria above do not exist, an individual may still be presumed to be an independent contractor and not an employee based on full consideration of the nature of the individual situation with regard to satisfying any of the following conditions:

1. The independent contractor performs or agrees to perform specific services or work for a specific amount of money and controls the means of performing the services or work.

2. The independent contractor incurs the principal expenses related to the service or work that he or she performs or agrees to perform.

3. The independent contractor is responsible for the satisfactory completion of the work or services that he or she performs or agrees to perform.

4. The independent contractor receives compensation for work or services performed for a commission or on a per-job basis and not on any other basis.

5. The independent contractor may realize a profit or suffer a loss in connection with performing work or services.

6. The independent contractor has continuing or recurring business liabilities or obligations.

7. The success or failure of the independent contractor’s business depends on the relationship of business receipts to expenditures.

FLA. STAT. § 440.02 (2017).

An individual is an independent contractor if such person meets all of the following criteria:

1. Is a party to a contract which intends to create an independent contractor relationship.

2. Has the right to exercise control over the time, manner, and method of the work to be performed.

3. Is paid on a set price per job or a per unit basis, rather than on a salary or hourly basis.

Both the “control” and “relative nature of the work” tests are used to determine an individual’s status.

Under the “control” test, an employment relationship exists when the person in whose behalf the work is done has the power to dictate the means and methods by which the work is to be accomplished. Conversely, “[o]ne who contracts with another to do a specific piece of work for him [or her], and who furnishes and has the absolute control of his [or her] assistants, and who executes the work entirely in accord with his [or her] ideas, or with a plan previously given him [or her] by the person for whom the work is done, without being subject to the latter’s orders in respect of the details of the work, with absolute control thereof…is an independent contractor.”

The “relative nature of the work test” involves a balancing of factors regarding the general relationships which the employee has with regard to the work performed for each of his employers. Relevant factors include:

1. Whether the work done is an integral part of the employer’s regular business.

2. Whether the worker, in relation to the employer’s business, is in a business or profession of his own.

HI. REV. STAT. § 386-1 (2017).

<tr>
<td>IA</td>
<td>Yes</td>
<td>Daggett v. Nebraska-Eastern Exp., Inc., 107 N.W.2d 102 (Iowa 1961)</td>
<td>Iowa courts have adopted two tests for determining a worker’s status. First, in determining the existence of an employer-employee relationship, the courts analyze the following five factors: (1) The right of selection, or to employ at will. (2) Responsibility for payment of wages by the employer. (3) The right to discharge or terminate the relationship. (4) The right to control the work. (5) The identity of the employer as the authority in charge of the work or for whose benefit it is performed. Second, in determining whether a worker qualifies as an independent contractor, the courts consider the following eight factors:</td>
</tr>
</tbody>
</table>
The existence of a contract for the performance by a person of a certain piece or kind of work at a fixed price.

The independent nature of the business or of a distinct calling.

The employment of assistants, with the right to supervise their activities.

The obligation to furnish necessary tools, supplies and materials.

The right to control the progress of the work, except as to final result.

The time for which the worker is employed.

The method of payment, whether by time or by job.

Whether the work is part of the regular business of the employer.

Above all, the “right to control” is the most important consideration.

The parties’ intent may also be considered as a factor in the analysis, although the courts have warned that this analysis should not be determinative and should only be considered if the “right to control” factor is debatable.

</tr>
<tr>
<td>KY</td>
<td>Yes</td>
<td>KY. REV. STAT. ANN. § 342.640 (2014)</td>
</tr>
</tbody>
</table>

Kansas courts have adopted the Restatement factors in determining a worker’s status. However, the single most important factor is whether the employer controls, or has the right to control, the manner and methods of the worker in doing the particular task. Additional considerations include:

1. Whether or not the one employed is engaged in a distinct occupation or business.
2. The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.
3. The skill required in the particular occupation.
4. Whether the employer or the workman supplies the instrumentalities, tools and the place of work for the person doing the work.
5. The length of time for which the person is employed.
6. The method of payment, whether by the time or by the job.
7. Whether the work is part of the regular business of the employer.
8. Whether the parties believe they are creating the relation of master and servant.
9. Whether the principal is or is not in business.

Kentucky courts analyze four predominant factors to determine a worker’s status:

1. The alleged employer’s right to control the details of the work.
2. The nature of the work as related to the business generally carried on by the alleged employer.
3. The professional skill of the individual.
4. The true intent of the parties.

The “right to control” factor is the most important in the analysis, which is determined by analyzing the following factors:

1. Method of payment.
2. Which party furnishes the equipment.
3. Whether the alleged employer has the right to discharge the individual performing the work.

Louisiana courts consider the following factors in determining a worker’s status:

1. Whether there is a valid contract between the parties.
2. Whether the work being done is of an independent nature such that the individual may employ non-exclusive means in accomplishing it.
3. Whether the contract calls for specific piecework as a unit to be done according to the individual’s own methods without being subject to the control and direction of the principal, except as to the result of the services to be rendered.
4. Whether there is a specific price for the overall undertaking.
Whether the specific time or duration is agreed upon and not subject to termination at the will of either side without liability for breach.

Maryland courts consider five criteria in determining a worker’s status. The decisive consideration is the “control” test: whether the employer has the right to control and direct the employee in the performance of the work and in the manner in which the work is done. The following factors are also relevant:

(1) The power to select and hire the employee.
(2) The power to discharge.
(3) The power to control the details of the work.
(4) Whether the work is part of the regular business of the employer.

The standard in determining a worker’s status is the same as the common law agency standard, the primary factor being the right to control. Massachusetts courts consider the factors set out in the Restatement (Second) of Agency, which are as follows:

(1) The extent of control which, by the agreement, the master may exercise over the details of the work.
(2) Whether or not the one employed is engaged in a distinct occupation or business.
(3) The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.
(4) The skill required in the particular occupation.

| NV    | Nevada’s worker’s compensation law defines an independent contractor as any person who renders service for a specified recompense for a specified result, under the control of the person’s principal as to the result of the person’s work only and not as to the means as to which the result is accomplished. Under Nevada’s Industrial Insurance Act, if a worker meets three or more of the following criteria, there is a presumption that the worker is an independent contractor:  
(1) The person has control and discretion over the means and manner of the performance of any work and the result of the work, rather than the means or manner by which the work is performed, and is the primary item bargained for by the principal in the contract.  
(2) The person generally has control over the time the work is performed.  
(3) The person is not required to work exclusively for one principal unless a law, regulation or ordinance otherwise prohibits the person from providing services to more than one principal or the person has entered into a written contract to provide services to only one principal.  
(4) The person is free to hire employees to assist with the work.  
(5) The person contributes a substantial investment of capital in the business of the person, including without limitation:  
(a) Purchase or lease of ordinary tools, material and equipment.  
(b) Obtaining of a license or other permission from the principal to access any work space of the principal to perform the work.  
(c) Lease of any work space from the principal required to perform the work for which the person was engaged.  
The fact that a person does not satisfy three or more of the listed criteria does not automatically create a presumption that the person is an employee. | NEV. REV. STAT. §§ 608.0155 (2015); 616A.255. |
| NH    | Under New Hampshire’s worker’s compensation law, the presumption of employee status can be rebutted if a person meets all of the following criteria:  
(1) The person possesses or has applied for a federal employer identification number or a social security number, or in the alternative, has agreed in writing to carry out the responsibility imposed on employers under this chapter.  
(2) The person has control and discretion over the means and manner of performance of the work, in that the result of the work, rather than the means or manner by which the work is performed, is the primary element bargained for by the employer.  
(3) The person has control over the time when the work is performed, and the time of performance is not dictated by the employer, although the employer may still prescribe a completion schedule, range of work hours and maximum number of work hours to be provided by the person.  
(4) The person hires and pays the person’s assistants, if any, and to the extent such assistants are employees, supervises the details of the assistants’ work.  
(5) The person holds himself or herself out to be in business for himself or herself or is registered with the state as a business and the person has continuing or recurring business liabilities or obligations.  
(6) The person is responsible for satisfactory completion of work and may be held contractually responsible for failure to complete the work.

| NJ    | Yes    | N.J. STAT. ANN. § 43:21-19 (2010) | Under New Jersey’s unemployment law, services provided for remuneration shall be deemed to be under an employment relationship unless it is shown that:  
1. An individual has been and will continue to be free from control or direction over the performance of such service, both under his contract of service and in fact.  
2. Such service is either outside the usual course of the business for which such service is performed, or that such service is performed outside of all the places of business of the enterprise for which such service is performed.  
3. Such individual is customarily engaged in an independently established trade, occupation, profession or business.  
The New Jersey Supreme Court in Hargrove v. Sleepy’s, LLC, 106 A.3d 449 (2015) adopted the above test for worker’s compensation purposes and stated that for determining whether an individual is an employee or an independent contractor, the courts must consider twelve factors:  
1. The employer’s right to control the means and manner of the worker’s performance.  
2. The kind of occupation and whether the work is supervised or unsupervised.  
3. The amount of skill involved.  
4. Who furnishes the equipment and workplace.  
5. The length of time in which the individual has worked.  
6. The method of payment.  
7. The manner of termination of the work relationship.  
8. Whether there is annual leave.  
9. Whether the work is an integral part of the business of the employer.  
10. Whether the worker accrues retirement benefits.  
11. Whether the employer pays social security taxes.  
12. The intention of the parties.  
| NM    | Yes    | No provision | New Mexico courts will first employ a “right-to-control” test to determine whether a worker is an employee or independent contractor. If the right-to-control test points to independence, the court will then apply a “relative-nature of the work” test.  
Factors that may be considered in determining existence of employment relationship include:  
1. Direct evidence of exercise of control.  
2. The right to terminate employment relationship at will by either party without liability  
3. The right to delegate work or to hire and fire assistants.  
4. The method of payment whether by time or by job.  
5. Whether the party employed engages in distinct operation or business.  
6. Whether the work is part of employer’s regular business.  
7. Skill required in particular occupation.  
8. Whether the employer supplies instrumentalities, tools or place of work.  
9. Duration of person’s employment.  
10. Whether the person works full-time or part-time of control by one and submission to control by the other.  
| NY    | Yes    | Presumption for employment for construction workers unless the worker is a “separate business entity” § 861-c; N.Y. WORKER’S | An independent contractor is one who is:  
1. Free from control and direction in performing the job, both under his contract and in fact.  
2. The service is performed outside the usual course of business for which the service is performed.  
3. The individual is customarily engaged in an independently established trade, occupation, profession or business that is similar to the service at issue.

| NC    | § 97-5.1 (2013) | North Carolina courts define “independent contractor” as one who exercises an independent employment and contracts to do certain work according to his own judgment and method, without being subject to his employer except as to the result of his work. The determinative factor in North Carolina courts as to whether a person is an employee or independent contractor for purposes of workers’ compensation is control. North Carolina courts will use the “right to control” when determining whether a person is an employee or an independent contractor for purposes of the Workers’ Compensation Act. Generally, where an employer has the right to control over the means and the methods of an employee’s work, there will be an employer-employee relationship. The requirement of control is sufficiently met where its extent is commensurate with that degree of supervision that is necessary and appropriate considering the type of work to be done and the capabilities of the person doing it. The North Carolina courts will also look at eight factors which indicate classification as independent contractor, including:

1. The worker is engaged in independent business, calling, or occupation.
2. The worker has independent use of his or her special skill, knowledge, or training in execution of work.
3. The worker is doing specified piece of work at fixed price or for lump sum or upon quantitative basis.
4. The worker is not subject to discharge because he adopts one method of doing work rather than another.
5. The worker is not in regular employ of other contracting party.
6. The worker is free to use such assistants as he or she may think proper.
7. The worker has full control over such assistants.
8. The worker is able to select his or her own time. |
| ND    | N.D. CENT. CODE § 65-01-03 | N.D. ADMIN CODE § 92-01-02-49 (2012) states that 20 factors are to be considered when determining whether a worker is an independent contractor or an employee:

1. The amount of instructions given to the employee by the employer.
2. The amount of training given to the employee.
3. The amount of integration of a person’s services into the business operations.
4. Services rendered personally. If the services must be rendered personally, the person whom the services are performed for are interested in the methods used, which goes towards employer-employee relationship.
5. The ability to hire, supervise, and pay assistants.
6. The continuing relationship between the person and person(s) for whom the services are performed.
7. Set hours of work.
8. Whether full-time is required. An independent contractor is one who is free to work when and for whom he or she chooses. Full-time required suggests an employer-employee relationship.
9. Where the work is performed.
10. The order or sequence set the work must be performed.
11. Whether there is a requirement for regular oral or written reports.
12. How the worker is paid.
13. Whether there is payment of business or traveling expenses, or both.
14. Who is responsible for furnishing of tools and materials.
15. Whether there is significant investment in facilities used by the workman.
16. Realization of profit or loss: A person who may realize a profit or suffer a loss as a result of the person’s services (in addition to the profit or loss ordinarily realized by employees) is generally an independent contractor, but the person who cannot is an employee. |

</table>

There is no certain number of the 20 factors of the common-law test that must be met to qualify as an independent contractor, and the degree of each factor varies depending on the occupation and the factual context in which the services are performed.

The general test for determining independent contractor status considers the following factors: who has the right to direct what shall be done and when and how it shall be done; the existence of a contract for the performance by a person of a certain piece or kind of work at a fixed price; the independent nature of the worker’s business; the worker’s employment of assistants with the right to supervise their activities; his or her obligation to furnish the necessary tools, supplies, and materials; his or her right to control the progress of the work except as to final results; the time for which the workman is employed; the method of payment, whether by time or by job; and whether the work is part of the regular business of the employer.

Gillum v. Ind. Com’n, 141 Ohio St. 373 (1943).
Department of Labor excludes business owners, volunteers, co-partners, and joint venturers from the definition of “employee”

Oklahoma’s case law and the DOL set out several factors to be considered when determining whether an employee/employer relationship exists, including:

1. The nature of the contract between the parties.
2. The degree of control the employer may exercise on the details of the work.
3. Whether the one employed is engaged in a distinct occupation or business for others.
4. The kind of occupation with reference to whether in the locality the work is usually done under the direction of the employer.
5. The skill required in the particular occupation.
6. Whether the employer or the workman supplies the instrumentalities, tools, and place of work for the person doing the work.
7. The length of time for which the person is employed.
8. The method of payment.
9. Whether the work is part of the regular business of the employer.
10. Whether the parties believe they are creating the relationship of master and servant.
11. The right of either to terminate the relationship without liability.

No one factor is controlling, and the court will look into the set of particular facts of each case.

Certain holders of professional licenses

OR. REV. STAT. § 670.600 (2005) defines an independent contractor as a person who provides services for remuneration and who is:

1. Free from direction and control over the means and manner of providing the services, subject only to the right of the person for whom the services are provided to specify the desired results.
2. Except as provided in subsection (4) of this section, is customarily engaged in an independently established business.
3. Is licensed under Oregon Revised Statutes Chp. 671 or 701 if the person provides services for which a licensed is required under those chapters.
4. Is responsible for obtaining other licenses or certificates necessary to provide services.

This definition of independent contractor has been adopted into the worker’s compensation statute. OR. REV. STAT. § 656.005 (2017)

Oregon case law states that in determining whether a person is an independent contractor, the right to control is decisive. The principal factors in determining independent contractor status are:

1. The evidence of the right to or actual exercise of control.
2. The method of payment.
3. The furnishing of equipment.
4. The right to fire.

| PA    | Yes       | Domestic Service, Real Estate, Construction Workers 77 P.S. § 676; 43 P.S. § 933.3 In determining employee or independent contractor status, the following factors should be considered, but all do not need to be present:  
(1) Control of the manner in which work is to be done.  
(2) Responsibility for result only.  
(3) Terms of agreement between the parties.  
(4) Nature of the work or occupation.  
(5) Skill required for performance.  
(6) Whether one employed is engaged in distinct occupation or business.  
(7) Who supplies the party tools.  
(8) Whether payment is by time or by job.  
(9) Whether work is part of regular business or alleged employer.  
(10) Whether alleged employer had right to terminate employment at any time.  
Control over the work to be completed and the manner in which it is to be performed are the primary factors in determining employee status for purposes of the worker’s compensation act.  
| RI    | No provision | 28 R.I. GEN. LAWS. ANN. §§ 28-29-2; 28-29-7 to 28-29-7.2; 28-29-15 Certain industries have special status or are exempted Under Rhode Island’s workers’ compensation law, an independent contractor is a person who has filed a notice of designation as independent contractor with the director pursuant to or as otherwise found by the workers’ compensation court. In determining whether a worker is an employee or independent contractor, the status depends on the employer’s right or power to exercise control over methods and means of performing the work and not the exercise of actual control. Whether an injured worker is an employee or independent contractor must be decided by the employment contract in the particular case and the surrounding particular circumstances.  
| SC    | Yes | S.C. CODE ANN. § 42-1-360 (2007) Exemption of casual employees and certain other employments from worker’s compensation law Case law establishes the criteria for distinguishing between employee and independent contractor under South Carolina’s worker’s compensation law. Determination of whether a worker’s compensation claimant is an employee or independent contractor focuses on the issue of control. In determining whether an employer had a right to control a workers’ compensation claimant in performance of his or her work, there are four factors the court will look at:  
(1) Direct evidence of the right or exercise of control.  
(2) Furnishing of equipment.  
(3) Method of payment.  
(4) Right to fire.  
It is not actual control exercised, but whether there exists a right and authority to control and direct the particular work or undertake as to the manner or means of its accomplishment.  
| SD    | No provision | S.D. CODIFIED LAWS §§ 62-1-4 to 62-1-5.1 Certain industry exceptions There are three primary factors South Dakota courts look at to determine whether one is employee or independent contractor include:  
(1) Whether individual has been and will continue to be free from control or direction over performance of services.  
(2) Both under contract of service and in fact.  
(3) Whether the individual is customarily engaged in independent established trade, occupation, profession or business. Specifically, courts will employ a “right of control” test is used to determine independent contractor status, which includes consideration of the following factors:  
(1) Direct evidence of rate of control.  
(2) Method of payment. |

| WV    | Yes    | W. VA. CODE R. § 85-8-6 (2008) | Under West Virginia’s worker’s compensation law, the burden of proving that an individual is an independent contractor is on the party asserting independent contractor status. The following factors are dispositive of whether a worker is an independent contractor:  
(1) Whether the individual holds himself or herself out to be in business for himself for herself, including whether he or she possesses a license, permit or other certification required to engage in the type of work the worker is performing; whether the individual enters into verbal or written contracts with the persons and/or entities for whom the work is being performed; and whether the individual has the right to regularly solicit business from different persons or entities to perform for compensation the type of work that is being performed.  
(2) Whether the individual has control over the time when the work is being performed.  
(3) The individual has control and discretion over the means and manner of the work being performed and in achieving the result of the work.  
(4) Unless expressly required by law, the individual is not required to work exclusively for the person or entity for whom the work is being performed.  
(5) If the use of equipment is required to perform the work, the individual provides most significant equipment required to perform the job.  

The West Virginia courts will look at the following factors to determine if a worker is an employee or independent contractor: the right or lack of right to supervise work, the method of payment, who owns substantial equipment to be used on the job, who determines what hours are worked, and the nature and terms of the employment contract.  
| WI    | Yes    | No provision | Wisconsin’s worker’s compensation law lists nine criteria, all of which must be met to be considered an independent contractor:  
(1) Maintains a separate business with his or her own office, equipment, materials and other facilities.  
(2) Holds or has applied for a federal employer identification number with the IRS or has filed business or self-employment income tax returns with the IRS based on that work or service in the previous year.  
(3) Operates under contracts to perform specific services or work for specific amounts of money and under which the independent contractor controls the means of performing the services or work.  
(4) Incurs the main expenses related to the service or work that he or she performs under contract.  
(5) Is responsible for the satisfactory completion of work or services that he or she contracts to perform and is liable for a failure to complete the work or service.  
(6) Receives compensation for work or service performed under a contract on a commission or per job or competitive-bid basis and not on any other basis.  
(7) May realize a profit or suffer a loss under contracts to perform work or service.  
(8) Has continuing or recurring business liabilities or obligations.  
(9) The success or failure of the independent contractor’s business depends on the relationship of business receipts to expenditures.  

The presumption that a person injured while performing service for another is an employee rather than an independent contractor is rebuttable and ceases to have force or effect when evidence to the contrary is adduced.  
WIS. STAT. ANN. § 102.07 (2016); J. Romberger Co. v. Industrial Commission, 234 Wis. 226, 229 (Wis. 1940). |

<td>Wyoming’s workers’ compensation law defines independent contractor as “an individual who performs services for another individual or entity” and:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(1) Is free from control or direction over the details of the performance of services by contract and by fact.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(2) Represents his services to the public as a self-employed individual or an independent contractor.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(3) May substitute another person to perform his services.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>The Wyoming Supreme Court has defined an independent contractor as “one who, exercising an independent employment, contracts to do a piece of work according to his or her own methods and without being subject to the control of his or her employer except as to the result of the work.” An express contract between the parties is not conclusive on whether a worker is an independent contractor. However, it is an important factor in defining the relationship between the employer and the worker. The Wyoming Supreme Court stated other factors that are important to the determination, including:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(1) The method of payment.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>(2) The right to determine the relationship without incurring liability.</td>
</tr>
<tr>

The Workers’ Compensation (C) Task Force met via conference call June 2, 2020. The following Task Force members participated: James J. Donelon, Chair (LA); Jim L. Ridling, Vice Chair, represented by Gina Hunt (AL); Lori K. Wing-Heier represented by Michael Ricker (AK); Christina Corieri represented by Tom Zuppan (AZ); Alan McClain (AR); Ricardo Lara represented by Mitra Sanandajifar and Patricia Hein (CA); Andrew N. Mais represented by Qing He (CT); Trinidad Navarro represented by Frank Pyle (DE); Karima M. Woods represented by Angela King (DC); David Altmaier (FL); John F. King represented by Steve Manders (GA); Colin M. Hayashida (HI); Dean L. Cameron represented by Katie Deaver and Michele Mackenzie (ID); Robert H. Muriel represented by Reid McClintock and Erica Weyhenmeyer (IL); Vicki Schmidt represented by Heather Droge and Brenda Johnson (KS); Sharon P. Clark represented by Kevin Gaffney (VT); and Millicent M. Landrum (VA). Also participating were: Robert Wake (ME); Bob Lutton (MI); Tom Green (NE); David Dahl (OR); Mike Shinnick (TN); Marianne Baker and Nicole Elliott (TX); and Millcent M. Landrum (VA).

1. **Adopted its 2019 Fall National Meeting Minutes**

Ms. Droge made a motion, seconded by Commissioner Dodrill, to adopt the Task Force’s Dec. 9, 2019, minutes *(see NAIC Proceedings – Fall 2019, Workers’ Compensation (C) Task Force)*. The motion passed unanimously.

2. **Considered Adoption of the Workers’ Compensation Policy and the Changing Workforce White Paper**

Commissioner Donelon said the NAIC/IAIABC Joint (C) Working Group produced a white paper, *Workers’ Compensation Policy and the Changing Workforce*. This white paper addresses the changing relationships with work, a discussion regarding the determination of employee status, and alternative coverage models. The white paper was exposed for comments, and comments were received in January 2020 and incorporated into the white paper.

Commissioner Altmaier made a motion, seconded by Director Lindley-Myers, to adopt the white paper.

Mr. Stolyarov asked that the adopted version of the white paper incorporate some changes. The first change is to correct the formatting in the chart in Appendix A, as the letter “e” in the word “state” and the letter “n” in the word “presumption” spill over into the second line. He also asked that the word “once” in the “NV” section, page 51, bullet 3 be changed to read “one.” Finally, he said item 5 in the same section is missing punctuation at the end of the preface and the sub items. NAIC staff agreed to make these changes. Mr. Stolyarov made a motion, seconded by Mr. Kelly, to make these changes. The motion passed unanimously.

Ms. Sanandajifar said she had some formatting changes she would like to suggest making. The first change was under the “State Employment Tests” section, under the “Hybrid” subsection. The word “weights” should be changed to “weighs.” The next change suggested was to change the word “cap” to “cab” in the last paragraph of the “State Employment Tests” section. NAIC staff agreed to make these changes.

Ms. Sanandajifar said she had some formatting changes she would like to suggest making. The first change was under the “Marketplace Contractors” section should not be a bullet-point uten, but it should lie outside of the bulleted section. The bullet-point item will be removed from the sentence “Common exclusions include…organizations, and Indian tribes.” NAIC staff agreed to make these changes.

© 2020 National Association of Insurance Commissioners
Ms. Sanandajifar said there was a grammatical error in the “Black Car Fund” section. The sentence currently reads, “This is could be… ‘employee status.’” This sentence should read, “This could be… ‘employee status.’” The footnote in this same section should be changed to reflect the correct source, which is, “The current surcharge is 2.5%, https://www.nybcf.org/faqs.” NAIC staff agreed to make these changes.

Ms. Sanandajifar said under the “Policy Questions and Considerations” section, in the “Exclusive remedy” subsection, the word “business,” should be replaced with the word “businesses.” NAIC staff agreed to make these changes. Ms. Sanandajifar said she was unable to check all of the links in the footnotes. NAIC staff will check the links in the footnotes ensure that they are all referencing the correct information.

Ms. Sanandajifar made a motion, seconded by Commissioner Altmaier, to amend the white paper with the changes she suggested. The motion passed unanimously.

Commissioner McClain made a motion, seconded by Commissioner Altmaier, to adopt the amended white paper. The motion passed unanimously.

Commissioner Donelon, however, asked for a motion for the Task Force to reconsider adoption of the white paper by e-vote once the changes are made to the document.

Mr. Doucette made a motion, seconded by Commissioner Dodrill, to reconsider adoption of the white paper by e-vote once changes are made. The motion passed.

3. Discussed Possible Collection of Workers’ Compensation Data Related to COVID-19

Commissioner Donelon said the NAIC is currently collecting information from insurers regarding business interruption coverage due to the COVID-10 pandemic. The Property and Casualty Insurance (C) Committee formed a drafting group to draft the business interruption data call. The drafting group is currently discussing the need to consider collection of some type of workers’ compensation data. The financial regulators have raised the possibility of collecting information regarding exposures to address possible solvency needs for certain professions, such as health care workers and first responders like law enforcement.

Bruce Jenson (NAIC) said the drafting group held some discussion on its last call regarding the possible collection of workers’ compensation data. He said the drafting group identified the areas where some additional information might provide some valuable information. One of these areas includes exposure for workers that are classified as essential workers that may have COVID-19 claims.

Mr. Jenson said focusing on essential workers, such as first responders and health care workers would be the most important, as this is where most of the activity is being seen regarding presumptions. The drafting group has suggested that getting information from insurers writing these “essential workers” might prove helpful to state insurance regulators.

Mr. Jenson suggested finding out what percentage of business an insurer writes in these areas, as well as the percentage of employees the insurer provides workers’ compensation coverage to that fall into those categories. The idea would to be to try to identify individual insurers that may have a concentration in that market.

Mr. Jenson said, in speaking to some of the state insurance regulators, it was indicated that some insurers focus on writing workers’ compensation for market segments such as health care workers and first responders to see how heavy that concentration is so that state insurance regulators can monitor those insurers more closely from a solvency perspective. The second item the drafting group discussed obtaining for the workers’ compensation line of business is claims data. State insurance regulators expressed the desire to know the number of COVID-19 claims being received, the dollar amounts of those claims, the number of claims being approved, and the number of claims being denied. State insurance regulators also expressed the desire to collect this information by “essential worker” status.

Mr. Jenson said some of the state insurance regulators indicated that they have concerns with the possibility of premium declines due to payroll decreases across the country. Some of this information will come to light with the P/C quarterly financial statement filings; however, state insurance regulators are suggesting we may want to be more proactive in this regard.
Mr. McKenney said the COVID-19 pandemic is ongoing, and there is a possibility that there will be an increase in infection rates in the fall. He asked if the data collection drafting group was looking to conduct a data call in the immediate future and then do another data call at a later date.

Mr. Jenson said the data call would include a one-time data call to identify the insurers that may have a concentration of exposure to “essential workers.” The claims portion of the data call would be an ongoing data call that would be refreshed on a monthly basis so the development of claims over time can be tracked.

In addition to collecting claims data on an ongoing basis, Mr. Stolyarov said the exposure data should also be tracked on an ongoing basis. He said this should be done as long as the pandemic exists, and there will likely be a socioeconomic impact. Even if a second wave of the pandemic arises, there could be different implications as to any payroll reduction. One reason might be a lack of mandatory lockdown during a subsequent wave of the pandemic, if for instance there are improved medical measures to keep the virus under control, or if it is recognized that lockdowns have largely failed as a strategy. In either of these situations, payroll reductions may be less pronounced than they were during the first wave of the pandemic.

Mr. Stolyarov said that while working with the Nevada governor’s office to estimate premium tax reductions, using unemployment insurance claims data was the only data that was granular enough to use for his estimations. He said this data allowed him to create a rough proxy for an unemployment rate to be used on a weekly basis. Mr. Stolyarov said it would be ideal to have the data regarding payroll or other insured exposures directly from the insurer.

Mr. McKenney asked Mr. Stolyarov if he was concerned that the decrease in payroll may not be known until after the policy expires and the audit is completed.

Mr. Stolyarov said there could be preliminary estimates or adjustments. Nevada has encouraged self-audits or virtual audits and to make the adjustments sooner rather than later, with the understanding that there would be a final verification process at a later date. In the meantime, Mr. Stolyarov said he believes that a lot of insurers have adjusted their adjustments of payroll in recognition of the pandemic and its impact. He said there could be refinements to those figures in the course of subsequent audits, but if it is just random variation that is driving those refinements, they should roughly cancel one another. The only way this would not be the case would be if there was some systemic factor that almost everyone, including the insurers and the employers miss in providing and accepting estimates of payroll.

Mr. Kelly said he understands the desire to find the concentration of “essential workers” and the claims data. He asked if there would be anything in future data calls that would look at health care workers’ compensation data. Mr. Kelly said one of the major issues being faced in Minnesota is that health care workers are self-insured employers and a presumption for these workers and first responders was put into legislation in Minnesota.

Mr. Jenson said the drafting group did not focus on this issue; however, he does believe it was brought up in conversation. He said the challenge is that the data call has to be limited to entities that file data with the NAIC. It would be difficult for the NAIC to collect data from entities that do not file financial statements with the NAIC.

Mr. Doucette said he agrees that it would be difficult to collect data from self-insureds. He said New Mexico’s workers’ compensation office could obtain data from self-insureds. He said he did not know if this was the case for other states.

Mr. Wake said Maine would be able to collect this information, noting that most health care workers in Maine are self-insured.

Mr. McKenney agreed and said police, fireman and municipalities are largely self-insured in Pennsylvania, as well.

Mr. Kelly said Minnesota has a workers’ compensation reinsurance pool that is a quasi-private/public entity with a board that is overseen by the Minnesota Labor and Industry Commissioner. He said the Department of Commerce provides actuarial assistance. Minnesota has a self-insured security fund that only steps in to pay claims in the event of a bankruptcy. Mr. Kelly said Minnesota has found that the U.S. Department of the Treasury (Treasury Department) guidance allows for federal
Coronavirus Aid, Relief, and Economic Security (CARES) Act dollars to pay for government frontline workers, but they are still looking for backstops for the private self-insureds.

Mr. McKenney said he could see where a solvency group would not be as concerned with the self-insured companies, but he believes this is where the various state special funds would come into play if a self-insured was not able to cover its exposure. He said there is a desire to capture data for self-insureds’ exposures.

Mr. Kelly said they have entities that are health insurers, health care workers, and hospitals, so they are both a regulated entity and an insurance company, but they also have the health care system where they employ lots of frontline health care workers. He said that while they have a program, the retention limit varies from $500,000 to $5,000,000 and a lot of these costs cover COVID-19. This leaves only two weeks across the entire frontline workforce, and they are never going to hit that limit to trigger that program. This is front and center for Minnesota right now.

Mr. Dahl said it is his understanding that many self-insureds a lot of times set their contributions based on a reserve review, and they are not actually priced based on exposure.

In Pennsylvania, Mr. McKenney said they have large group municipalities and self-insured trusts that largely deal with first responders, and they are not insurance companies; however, they get an exemption in Pennsylvania law. He said there might be some state-by-state differences in the way this is handled.

4. Discussed Key Topics and Future Work Product Regarding Workers’ Compensation Issues Related to COVID-19

Commissioner Donelon said COVID-19 has raised several issues regarding workers’ compensation. Some of the issues include presumptions for certain workers, possible premium increases due to presumptions, possible solvency issues for insurers that write niche businesses, and possible economic effects due to the effects of COVID-19. Commissioner Donelon asked the Task Force members if they had any input regarding initiatives or future work products they might want to consider.

No Task Force members had topics they wanted to discuss at this time. Commissioner Donelon asked for a motion to invoke the help of the NAIC/IAIABC Joint (C) Working Group to help with possible work products concerning COVID-19 in the future.

Mr. Doucette made a motion, seconded by Ms. Lohman, to invoke the help of the NAIC/IAIABC Joint (C) Working Group to help with possible work products concerning COVID-19 in the future. The motion passed.

Having no further business, the Workers’ Compensation (C) Task Force adjourned.

Market Regulation and Consumer Affairs (D) Committee  
Virtual Summer National Meeting  
August 11, 2020

The Market Regulation and Consumer Affairs (D) Committee met via conference call Aug. 11, 2020. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair (KY); Trinidad Navarro (DE); Dean L. Cameron (ID); Robert H. Muriel (IL); Chlora Lindley-Myers and Cindy Amann (MO); Matthew Rosendale represented by Jeannie Keller (MT); Russell Toal represented by Robert Doucette (NM); Kent Sullivan represented by Ignatius Wheeler (TX); Michael S. Pierrick represented by Kevin Gaffney and Phil Keller (VT); and Mark Afsbile and Rebecca Rebolz (WI). Also participating were: Doug Ommen (IA); Bruce R. Ramge and Laura Arp (NE); Larry D. Deiter (SD); and John Haworth (WA).

1. **Adopted its July 27 Minutes**

Commissioner Richardson said the Committee met July 27 and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted standardized data requests (SDRs) for farmowners claims and farmowners policy in force; and 3) adopted revised Market Conduct Annual Statement (MCAS) data call and definitions for life and annuities, homeowners, private passenger auto, and lender-placed auto and homeowners. Mr. Doucette made a motion, seconded by Ms. Biehn, to adopt the Committee’s July 27 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its Task Force and Working Group Reports**

   a. **Antifraud (D) Task Force**

Commissioner Navarro said the Antifraud (D) Task Force met Aug. 3 and adopted its May 20 minutes. He said the Task Force continues to collaborate with the states, industry and antifraud organizations monitoring insurance fraud directly related to the COVID-19 pandemic. He said the Task Force received updates from California, Florida and Texas.

Commissioner Navarro said the Task Force received updates from the Coalition Against Insurance Fraud (CAIF) and the National Insurance Crime Bureau (NICB). He said the Task Force advised it will continue monitoring the pandemic and conference calls will be scheduled as necessary to continue its discussions and bring awareness to the public.

Commissioner Navarro said the Task Force received and update from the Antifraud Education Enhancement Working Group. He said the Working Group updated the “Safety Training for Private Sector Field Employees” course (EDU 330-130) to include COVID-19 safety precautions. He a webinar for the private sector will be held Aug. 26. In addition, the Working Group worked with fraud directors to finalize the content of the NAIC Investigator Safety Training Program. He said the program was initially offered several years ago and the was incorporated into the “Basic Fraud Investigations” course (EDU 330-107). This training will be held Sept. 30. He said the Working Group is also planning to present additional webinars to benefit both the state and private industry investigators.

Commissioner Navarro said the Task Force also received an update from the Antifraud Technology (D) Working Group. He said the Working Group has two projects it is working on or monitoring. The first project is the Online Fraud Reporting System (OFRS) redesign, which is being worked on by NAIC staff. They are finalizing the conversion of the existing system over to the new platform and are planning a demonstration of the new platform during the NAIC Insurance Summit in September. He said the second project is the creation of a single-point online repository for insurers to file their antifraud plans. He said the Working Group is in the initial stages of this process and currently revising the 2011 Antifraud Plan Guideline (#1690) before proceeding with the creation of the repository. He said the Working Group will be distributing a new draft of Guideline #1690 for a public comment period ending Aug. 28.

   b. **Market Information Systems (D) Task Force**

Director Wing-Heier said the Market Information Systems (D) Task Force met Aug. 4. She said that during the meeting, the Task Force heard a report from the Market Information Systems Research and Development (D) Working Group concerning its work during its July 8 and July 22 meetings. She said the Task Force adopted the Working Group’s approval of two Uniform System Enhancement Request (USER) forms to add additional codes to the NAIC’s Complaints Database System (CDS). The codes to be added are a new subject code for “pandemic” and three new coverages codes for “business interruption,” “lender-
placed insurance” and “pet insurance.” Director Wing-Heier said the Task Force also heard a presentation from Birny Birnbaum (Center for Economic Justice—CEJ) regarding the use of artificial intelligence (AI) in market analysis and market regulation.

c. Producer Licensing (D) Task Force

Director Deiter said the Producer Licensing (D) Task Force met Aug. 3 and adopted its May 6 minutes. Director Deiter said the Task Force discussed producer licensing issues arising from COVID-19. He said the Task Force continues to focus on access to producer licensing examinations. He noted that while 30 states issued bulletins offering temporary licensing, 15 states reported the implementation of online, proctored examinations and that increased to 20 states since Aug. 3. He said for those states offering online examinations, approximately 50%–60% of all examinations have been taken online. He said for the latest information on state bulletins, he encourages everyone to visit the NIPR’s COVID-19 message center. Director Deiter said examination vendors (PSI, Pearson Vue and Prometric) all reported they can implement online examinations for a state in less than 60 days, but it could be as quick as one week. Director Deiter also said the Task Force will have additional discussions on licensing uniformity and reciprocity for independent adjuster licensing in the coming months.

d. Market Conduct Examination Standards (D) Working Group

Director Ramge said the Market Conduct Examination Standards (D) Working Group met July 23, 2020; March 4, 2020; and Dec. 18, 2019.

Director Ramge said that during its July 23 meeting, the Working Group welcomed Illinois as a new member state, and new regulator representation for New Mexico and Ohio. The Working Group also adopted new examination standards addressing limited long-term care insurance for inclusion in the Market Regulation Handbook. He said the new examiner guidance is based on the Limited Long-Term Care Insurance Model Act (#642) and the Limited Long-Term Care Insurance Model Regulation (#643). He said the Working Group also adopted a new inland marine in-force policies SDR and a new inland marine claims SDR for inclusion in the reference documents of the Market Regulation Handbook.

Director Ramge said that during its March 4 meeting, the Working Group welcomed North Carolina as a new member state, and new regulator representation for Nevada, Oklahoma and Oregon. The Working Group also discussed its 2020 charges and potential tasks. He said the Working Group also continued its discussion of limited long-term care insurance draft examination standards.

Director Ramge said that during its Dec. 18, 2019, meeting, the Working Group adopted a new farmowners policy in force SDR and a new farmowners claims SDR. He said the Working Group also reviewed and discussed comments received on draft examination standards addressing limited long-term care insurance.

e. Market Analysis Procedures (D) Working Group

Mr. Haworth said the Market Analysis Procedures (D) Working Group met July 30 and adopted its March 23 minutes, which included the adoption of travel insurance as the next line of business in MCAS. He said also during its March 23 meeting, the Working Group agreed to a 60-day extension of the 2020 MCAS due date to allow companies to address COVID-19-related issues. Because of the extension, most lines of business were due June 30 and the health and disability lines of business are due at the end of August. Mr. Haworth said that during its July 30 meeting, the Working Group adopted scorecard ratios for the private flood MCAS blank. He noted that the MCAS will require companies to file private flood data for the first time on the next MCAS due date in April 2021.

f. Market Conduct Annual Statement Blanks (D) Working Group

Ms. Rebholz said the Market Conduct Annual Statement Blanks (D) Working Group met July 31. During this meeting, the Working Group adopted its June 24 minutes. Ms. Rebholz said the Working Group discussed homeowners MCAS clarifications related to newly added underwriting data elements; life and annuity MCAS reporting of national producer numbers (NPNs) for third party administrators (TPAs) within the interrogatories; and homeowners and private passenger automobile MCAS reporting of NPNs for TPAs and managing general agents (MGAs) within the interrogatories. Additionally, the Working Group discussed possible reporting of accelerated underwriting within the life MCAS; placement options for the complaints and lawsuit data elements within the homeowners and private passenger automobile MCAS; and possible homeowner MCAS claims reporting of digital claims settlements and other than digital claims settlements in the dwelling and personal property coverage types. Ms. Rebholz said the Working Group also heard and discussed industry concerns about the addition of a newly adopted data element to collect claims closed without payment below the deductible for the private passenger automobile MCAS.
g. **Market Regulation Certification (D) Working Group**

Mr. Haworth said the Market Regulation Certification (D) Working Group has not met since February because of the need to address the COVID-19 crisis. He said that during the Working Group’s Feb. 20 and Jan. 30 meetings, the Working Group considered suggestions submitted by interested parties and interested insurance regulators. Mr. Haworth said the Working Group also began discussions on the pass/fail metrics for the Market Regulation Certification Program. He said the Working Group is still planning to provide its draft revisions to the Committee during the Fall National Meeting.

h. **Privacy Protections (D) Working Group**

Ms. Amann said the Privacy Protections (D) Working Group met July 30 and adopted its May 5 minutes. Ms. Amann said the Working Group received updates on data privacy legislation by NAIC Legal Division staff, which included federal privacy legislation and state data privacy legislation. Ms. Amann said the Working Group also heard a presentation that included a comparative analysis and comments from the Blue Cross and Blue Shield Association (BCBSA) and Arbor Strategies LLC, representing a coalition of several insurers. Ms. Amann said the Working Group also reviewed plans to begin a gap analysis discussion by Working Group members, interested state insurance regulators and interested parties using the *Privacy of Consumer Financial and Health Information Regulation* (#672) as a baseline model.

i. **Market Actions (D) Working Group**

Commissioner Richardson thanked Mr. Wheeler his leadership as chair of the Market Actions (D) Working Group in 2020, as well as his long-term service to state insurance regulation. She congratulated him on his retirement at the end of August. Commissioner Richardson said Matt Gendron (RI), the current vice chair of the Working Group, will assume the role of chair, and Ms. Biehn will serve as the new vice chair for the rest of this year.

j. **Advisory Organization Examination Oversight (D) Working Group**

Commissioner Ommen said the Advisory Organization Examination Oversight (D) Working Group was appointed to coordinate and provide oversight of the examinations of multistate advisory organizations, which includes rating organizations and statistical agents. He said the goal is to be more efficient than having multiple single-state exams of advisory organizations and leverage the collective expertise of the Working Group members.

Commissioner Ommen said the Working Group met July 28 in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings. He said that during the meeting, the Working Group agreed to ask three companies to complete a Comprehensive Annual Audit (CAA) form seeking more information about their operations. He noted the Working Group is considering adding these three advisory organizations to the Working Group’s current list of companies that the Working Group members regularly examine. Additionally, he said the Working Group heard a final update on the conclusion of one examination and discussed the planning of the next examination to begin in about a month.

Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt the following reports: 1) Antifraud (D) Task Force; 2) Market Information Systems (D) Task Force, including its recommendation to add a “pandemic” subject code and the coverage codes for “business interruptions,” “lender-placed insurance” and “pet insurance” to the CDS; 3) Producer Licensing (D) Task Force; 4) Market Analysis Procedures (D) Working Group, including its July 30 minutes (Attachment Two) and its recommendation to add travel insurance as the next line of business for MCAS and implement new scorecard ratios for the private flood MCAS blank; 5) Market Conduct Annual Statement Blanks (D) Working Group, including its July 31 minutes (Attachment Three) and its recommended clarification to the definition of “individual indexed variable annuity” for the MCAS blank; 6) Market Conduct Examination Standards (D) Working Group, including its July 23 minutes (Attachment Four); 7) Privacy Protections (D) Working Group, including its July 30 minutes (Attachment Five); 8) Market Regulation Certification (D) Working Group, including its Feb. 20 minutes (Attachment Six); 9) Market Actions (D) Working Group; and 10) Advisory Organization Examination Oversight (D) Working Group. The motion passed unanimously.

3. **Heard Presentation from Alliance Health Care Sharing Ministries**

Katy Talento (Alliance of Health Care Sharing Ministries—Alliance) provided background on what health care sharing ministries (HCSMs) are and noted they are defined in and exempted from the federal Affordable Care Act (ACA). She said Alliance is a nonprofit, nonpartisan coordinating body of seven HCSMs. Alliance provides issue advocacy and public relations on behalf of its member HCSMs. She said the member HCSMs must be certified by the federal Centers for Medicare &
Medicaid Services (CMS) and adhere to Alliance’s standards. Additionally, she said Alliance is moving toward developing accreditation requirements to be an Alliance member.

Ms. Talento said the U.S. Department of Health and Human Services (HHS) has certified that 108 HCSMs meet the federal definition of “health care sharing ministry.” She said 1.5 million Americans are active members of an HCSM and reside in all 50 states. She said HCSM are not insurance. She noted that HCSMs share 100% of eligible medical bills and, in 2019, there were $1.3 billion in shared medical expenses.

Ms. Keller said the use of the term “accreditation” can create confusion. This term is used by the state departments of insurance (DOIs) to demonstrate that a DOI has met certain NAIC requirements in its conduct of financial analysis and regulations and their financial regulation activities can be relied on by other DOIs. Commissioner Clark agreed with Ms. Keller. Ms. Talento acknowledged their concerns and noted that many different entities outside the field of insurance use the term “accreditation.” Commissioner Clark asked who would conduct the accreditation audits. Ms. Talento said it would be an outside vendor.

Director Cameron asked if Alliance is opposed to the DOIs doing the accreditation audits. Ms. Talento said the concern would be that Alliance HCSMs want to be treated as religious organizations, not insurers. She suggested maybe the state attorneys general offices could do the audits. Director Cameron said he understood the concern but noted that DOIs regulate multiple types of organization and have the resources and experience. He said he believes audits could be done by the DOIs without indicating an HCSM is an insurer.

Superintendent Toal questioned the figure that 100% of eligible expenses have been shared. He said it implies that all medical bills are paid when they are, in fact, not all paid. Ms. Talento said each HCSM has guidelines that explain what types of medical bills are eligible and paid, and which are not eligible. She appreciated the feedback and said Alliance strives to be clear about eligible and non-eligible expenses. Commissioner Clark asked what percentage of the total submitted eligible expenses the $1.3 billion in shared expenses represent. Ms. Talento said she would have to get back with that information. Ms. Arp asked if Alliance could provide a list of the 108 HHS-certified HCSMs.

Commissioner Oommen asked if Alliance is concerned that if the definition of HCSM is little more than an ethical or shared belief in human health, then this will collapse the concept as an exclusion from insurance. Ms. Talento said she could only speak on behalf of the Alliance members that require common religious, biblical beliefs. She said the ACA definition requires a common ethical or religious belief, but Alliance members are strictly biblically based religious HCSMs.

Ms. Biehn asked if the Alliance HCSM could share the eligibility guidelines used by its members. Ms. Talento said she believes each HCSM has its guidelines posted online. She said she would provide links. Mr. Keller asked whether any non-religious HCSMs have wanted to be an Alliance member. Ms. Talento said all of Alliance’s HCSMs have religious affiliations. She said Alliance believes that makes for the clearest distinction.

4. **Discussed Template for Waiver of On-Site Reviews**

Commissioner Richardson said the American Property Casualty Insurance Association (APCIA) produced a template for a state bulletin on the waiver of on-site reviews requirements during a public health emergency. She said this is not a bulletin developed by the Committee or any of its working groups. She said the APCIA raised this issue with NAIC staff and, in response, NAIC staff worked with the APCIA to draft the bulletin template. Commissioner Richardson said this is an important enough issue to provide Lisa Brown (APCIA) an opportunity to make some comments on the topic and briefly review the template for state use in the event a state would like to issue such a bulletin.

Tim Mullen (NAIC) said Ms. Brown reached out to him to discuss what the states were doing about waiving on-site reviews of MGAs and TPAs during the current COVID-19 crisis. He said the APCIA suggested the use of its state bulletin template. He said NAIC staff provided information on the model laws related to on-site reviews for reference in the template. He said similar templates have been used for producer licensing. He said this is an informational document for members to consider for use.

Ms. Brown said the APCIA worked with NAIC leadership regarding regulatory relaxations during the early stages of the crisis. She said on-site reviews were overlooked and she asked the Committee to please consider this bulletin template to waive on-site reviews until the end of the COVID-19 crisis.
5. **Adopted New Examination Standards and SDRs**

Director Ramge said that on July 23 the Market Conduct Examination Standards (D) Working Group adopted new examination standards addressing limited long-term care; a new inland marine policy in force SDR; and a new inland marine claims SDR. Director Ramge said the limited long-term care examination standards are based on Model #642 and Model #643 and will be included in the *Market Regulation Handbook*. Director Ramge said the inland marine SDRs will be incorporated in the *Market Regulation Handbook* reference documents. Director Cameron made a motion, seconded by Commissioner Afable, to adopt the limited long-term care examination standards (Attachment Seven) and the two inland marine SDRs (Attachment Eight and Attachment Nine). The motion passed unanimously.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.

W:\National Meetings\2020\Summer\Cmte\D\8-D Cmte
The Market Regulation and Consumer Affairs (D) Committee met via conference call July 27, 2020. The following Committee members participated: Barbara D. Richardson, Chair (NV); Sharon P. Clark, Vice Chair (KY); Alan McClain represented by Jimmy Harris (AR); Trinidad Navarro (DE); John F. King (GA); Dean L. Cameron (ID); Robert H. Muriel represented by Erica Weyhenmeyer (IL); Anita G. Fox represented by Michele Ridering (MI); Chlora Lindley-Myers represented by Cynthia Amann (MO); Russell Toal represented by Robert Doucette (NM); Mike Causey represented by Tracy Biehn (NC); Kent Sullivan represented by Doug Slape, Matthew Tarpley, Jamie Walker and Ignatius Wheeler (TX); Michael S. Pieciak represented by Christina Rouleau (VT); and Mark Afable represented by Jo LeDuc and Rebecca Rebholz (WI). Also participating was: Bruce R. Ramge (NE).

1. **Adopted its 2019 Fall National Meeting Minutes**

Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt the Committee’s Dec. 9, 2019, minutes (see NAIC Proceedings – Fall 2019, Market Regulation and Consumer Affairs (D) Committee). The motion passed unanimously.

2. **Adopted Farmowners SDRs**

Director Ramge said the Market Conduct Examination Standards (D) Working Group adopted on Dec. 18, 2019, a farmowners claims standardized data request (SDR) and a farmowners policy in-force SDR. There were no questions or comments on the SDRs.

Commissioner Clark made a motion, seconded by Ms. Biehn, to adopt the farmowners claims SDR (Attachment One-A) and the farmowners policy in-force SDR (Attachment One-B). The motion passed unanimously.

3. **Adopted Revised MCAS Blanks**

Ms. Rebholz said the Market Conduct Annual Statement Blanks (D) Working Group met May 28, May 27, May 21 and May 20 and adopted edits to existing Market Conduct Annual Statement (MCAS) lines of business. The Working Group also met June 24 and adopted instructional clarifications needed that related to changes adopted in May. Ms. Rebholz provided the following summary of changes.

   a. **Life and Annuities Data Call and Definitions**

Two data elements were added that related to policy surrenders. An interrogatory was added to identify third-party administrators (TPAs) used by the company along with their function. Reporting was added for external replacements of unaffiliated company policies and external replacements of affiliated company policies. Lawsuits data elements were added for consistency across the MCAS lines of business. Reporting for individual fixed annuities was broken out into individual indexed fixed annuities and individual other fixed annuities. Reporting for individual variable annuities was broken out into individual indexed variable annuities and individual other variable annuities.

   b. **Homeowners Data Call and Definitions**

Wording for interrogatories related to the explanation of company changes was updated for clarity. Interrogatories were added to report managing general agents (MGAs) and TPAs used by the company. Lawsuits data elements and definitions were updated to be consistent across MCAS lines of business. Policy count data elements were added to the underwriting for the reporting of: 1) dwelling fire policies; 2) homeowners policies; 3) tenant/renter/condo policies; and 4) all other residential property policies.
c. **Private Passenger Auto Data Call and Definitions**

Wording for interrogatories related to the explanation of company changes was updated for clarity. Interrogatories were added to report MGAs and TPAs used by the company. Lawsuits data elements and definitions were updated to be consistent across MCAS lines of business. An interrogatory was added to report the use of telematics or usage-based data. A data element was added for “claims closed without payment because the amount claimed is below the insured’s deductible.”

d. **Lender-Placed Data Call and Definitions**

Separate reporting of blanket vendor single interest (VSI) auto and blanket VSI homeowners was added.

Ms. Rebholz said interrogatories I-28 and I-20, which ask for the percentage of lender-placed coverage, were inadvertently included and should be deleted from the interrogatories for lender-placed auto insurance and lender-placed homeowners insurance.

Commissioner Clark made a motion, seconded by Mr. Doucette, to adopt the four revised MCAS blanks—life and annuities (Attachment One-C), homeowners (Attachment One-D), private passenger auto (Attachment One-E) and lender-placed (Attachment One-F)—with the deletion requested by Mr. Rebholz to the lender-placed interrogatories. The motion passed unanimously.

Having no further business, the Market Regulation and Consumer Affairs (D) Committee adjourned.
CLAIMS STANDARDIZED DATA REQUEST

Property & Casualty Line of Business
Farmowners

Contents: This file should be downloaded from company system(s) and contain one record for each claim transaction (i.e. paid/denied/pending/closed w/o payment) that the company processed within the scope of the examination. Include all claims open during the examination period. Do not include expense payments to vendors.

Uses: Data will be used to determine if the company follows appropriate procedures with respect to the handling of Farmowners claims within the scope of the examination.
- Cross-reference to annual statement claims data (amount) to ensure completeness of exam data submitted;
- Cross-reference with the company’s in force data file to ensure completeness of exam data submitted; and
- Cross-reference to state(s) licensing information to ensure proper adjuster licensure.

POLICY IN FORCE STANDARDIZED DATA REQUEST

Property & Casualty Line of Business
Farmowners

Contents: This file should be downloaded from company system(s) and contain one record for each property insured under a Farmowners policy issued in [applicable state] which was in force at any time during the examination period.

For multiple dwellings, non-dwelling structures, and scheduled farm property, please repeat records as necessary.

Uses: Data will be used to determine if the company follows appropriate procedures with respect to the issuance and/or termination of Farmowners policies in [applicable state] within the scope of the examination.

- Cross-reference with the claims data file to validate the completeness of the in force file; and
- Cross-reference to state(s) licensing information to ensure proper producer licensure.

</table>

In determining what business to report for a particular state, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages and in accordance with each applicable state’s regulations.

**Definitions:**

**Annuity** – A contract under which an insurance company promises to make a series of periodic payments to a named individual in exchange for a premium or a series of premiums. Data is being requested for individual annuities only; data for group annuity contracts are not being requested.

**Annuity Considerations** – Funds deposited to or used to purchase annuity contracts issued by the company. For the purpose of this statement, annuity considerations should be determined in the same manner used for the state pages of the company's financial annual statement. Do not report “Other Considerations” or “Deposit-Type Contract” considerations. MCAS requires that you report only allocated considerations on contracts that have a mortality or morbidity risk.
**Market Conduct Annual Statement**  
**Life & Annuities Data Call & Definitions**

**Cash Value Product** – A life insurance policy that generates a cash value element. Term life policies with cash value are considered cash value products.

**Claim** – A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Claims with multiple beneficiaries should be counted as one claim. If a single insured dies and has multiple policies (for individual life products), a claim should be reported for each of the insured’s policies (for example, if an insured had 3 individual life policies (2 cash value products and one non-cash value product), 3 claims would be reported (2 claims under schedule 1B ICVP and 1 claim under schedule 1B INCVP.) It does not include events that were reported for “information only” or an inquiry of coverage since a claim has not actually been presented (opened) for payment.

**Claim Closed with Payment** – A claim where the final decision was payment of the claim.

**Complaint** – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:
- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties

**Contestability Period** – The period of time before a policy’s incontestability clause becomes effective. During this period, a company may contest a claim based upon material misrepresentation or concealment during the policy application process. The contestability period is usually 2 years.
- Do not report claims on guaranteed issue life policies
- Do not report claims that are contested after the incontestability clause is in effect.

**Conversion** – The process by which a policyholder exercises his/her right under the policy contract to exchange a policy without submitting evidence of insurability. In most cases this involves exchanging a term policy for a permanent policy (e.g., whole life insurance, universal life, variable.)

**Corporate Owned Life Insurance** – Insurance on the life of an individual, paid for by the company, with the company being a beneficiary under the policy. Corporate Owned Life Insurance policies are included in the scope of this statement and should be reported in the applicable schedule.
Market Conduct Annual Statement
Life & Annuities Data Call & Definitions

Date Claim Received – The date the company, or a third party acting on the company’s behalf, is notified of the claim.

Date of Due Proof of Loss – The date the company received the necessary proof of loss on which to base a claim determination.

Denied Claim - A claim where a demand for payment was made but payment was not made under the contract.

Direct Written Premium – The actual amount of direct premiums written during the reporting period and should be determined in the same manner used for the financial annual statement. Data for subject business reported by the company on the financial annual statement should be reported for the purposes of this project regardless of any 1) reinsurance agreements or 2) arrangements to administer the business that may exist with another insurer. (See also: “Life Insurance Premium” and “Annuity Considerations”)

External Replacement - An external replacement is when the policy and/or annuity to be replaced was issued by another company.

External Replacement of Affiliated Company Policies – An external replacement of an affiliated company policy is when the policy and/or annuity to be replaced was issued by a company affiliated to the MCAS reporting company.

External Replacement of Unaffiliated Company Policies – An external replacement of an unaffiliated company policy is when the policy and/or annuity to be replaced was issued by a company not affiliated to the MCAS reporting company.

Face Amount – Sum of insurance provided by a policy at death or maturity. In determining the face amount to be reported, companies should follow the same methodology/definitions used to file the financial annual statement and its corresponding state pages. For example, the face amount would include the basic policy plus any riders or amounts for policies with increasing death benefits if these amounts in addition to the basic policy are reported on the company’s financial annual statement.

Fixed Annuity – An annuity under which the insurer guarantees that at least a defined amount of monthly annuity benefit will be provided for each dollar applied to purchasing the annuity.

Free Look – A set number of days provided in an insurance or annuity contract that allows time for the purchaser to review the contract provisions with the right to return the contract for a full refund of all monies paid. Report the number of policies or contracts that were returned by the owner under the free look provision during the period, regardless of the original issuance date. Count any policy returned under the Free Look provision even if an alternative policy was ultimately purchased by the insured.
**Market Conduct Annual Statement**

**Life & Annuities Data Call & Definitions**

**Immediate Annuity** – An annuity (either fixed or variable) that begins its payment stream to the policyholder within 12 months after a single premium is paid. Immediate annuities are included within the scope of this statement and should be reported as a new immediate contract issued when issued during the reporting period. In addition, immediate annuities still in force at the end of the period should be included as well.

**Individual Indexed Fixed Annuity** – A fixed annuity whose accumulation or policy value is, in whole or in part, linked to an index or indices and offers principal protection. Indexed fixed annuities include equity indexed annuities or fixed indexed annuities that offer principal protection through a 0% floor feature.

**Individual Indexed Variable Annuity** – A variable annuity whose accumulation or policy value is, in whole or in part, linked to an index or indices and may offer some principal protection. Variable indexed annuities include buffer annuities or registered index-linked annuity that offer some principal protection but do not provide a guaranty against loss of principal.

**Internal Replacement** - An internal replacement is when the policy and/or annuity to be replaced was also issued by your company.

**Issued During the Period** - Report the number of policies that have an issue date within the reporting period.

- When reporting the policies/contracts that are broken out by the age of the insured or annuitant
  - for joint policies/contracts, use the age of the oldest insured or annuitant for determining the age category
- Internal and external replacements should be reported as new policies or contracts issued during the reporting period as well as reported in the number of internal and external replacements.

**Lawsuit**—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits for Life & Annuities products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
Market Conduct Annual Statement
Life & Annuities Data Call & Definitions

- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy or contract was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Life Insurance Premiums – Funds used to purchase life insurance products issued by the company. Exclude Group Life and Credit Life premiums. For the purpose of this statement, life insurance premiums should be determined in the same manner used for the state pages of the company's financial annual statement.

NAIC Company Code – The five-digit code assigned by the NAIC to all U.S. domiciled companies which file a Financial Annual Statement with the NAIC.

NAIC Group Code – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of an insurance holding company.

Non-Cash Value Product – A life insurance policy that does not contain a cash value element. Do not include life insurance covering only Accidental Death and Dismemberment (AD&D.)

Policies/Contracts Applied For – Applications for life insurance or annuities that are submitted to the company which have or will result in a formal offer of an insurance or annuity contract or a formal declination of the application by the company. Applications that are declined by a broker-dealer or producer and never reviewed by the company are not included in this count.

Replacement Policy – A policy and/or annuity contract application received by your company that is intended to replace an existing policy and/or annuity contract according to each states definition of a replacement. This may include both external and internal replacements according to each state's replacement law.
Market Conduct Annual Statement
Life & Annuities Data Call & Definitions

Include:
- loan purchases, if the original policy is surrendered,
- surrenders, if a replacement policy is issued in conjunction with the surrender
- 1035 exchanges

Do not include:
- policy conversions
- exchanges of a group policy for an individual policy

Resisted Claim – A claim is considered resisted when it is in dispute and not resolved on the financial statement date for the reporting period. Where the company is holding up payment for sufficient evidence or where a beneficiary has made a claim and then withdraws it, such items should be considered as in the course of settlement.

Surrendered Policy/Contract – A life insurance policy or annuity contract terminated at the request of the policy owner. It does not include life insurance policies or annuity contracts not taken or cancelled during the free look period. For annuities, systematic withdrawals (the withdrawal of a certain amount on a predetermined periodic basis for deferred annuities) and partial withdrawals should not be reported as “surrenders” for this statement.

Term Life Insurance – Life insurance that provides a death benefit if the insured dies during the specified period.

Universal Life Insurance – A form of whole life insurance that is characterized by flexible premiums, flexible face amounts and flexible death benefit amounts and its unbundling of the pricing factor.

Variable Annuity – An annuity under which the amount of the contract’s accumulated value and the amount of the monthly annuity benefit payment fluctuate in accordance with the performance of a separate account.

Variable Life Insurance – A form of whole life insurance under which the death benefit and the cash value of the policy fluctuate according to the investment performance of a separate account.

Variable Universal Life Insurance – A form of whole life insurance that combines the premium and death benefit flexibility of universal life insurance with the investment flexibility and risk of variable life insurance.

Withdrawal – For annuity contracts, see Surrendered Policy/Contract.

Whole Life Insurance – Life insurance that provides lifetime insurance coverage. Whole life insurance policies generally build cash value and cover a person for as long as he or she lives if premiums are paid as required. It would include life insurance policies that start accumulating cash value once the insured reaches a certain age as specified in the terms of the policy.

Schedule 2—Homeowners Claims Activity, Counts Reported by Claimant and by Coverage

Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two liability claimants, two medical payment claims, one dwelling claim for the insured, and one personal property claim for the insured, you would report as follows: Dwelling – 1; Personal Property – 1; Liability – 2; Medical Payments – 2. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

</tbody>
</table>
Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of dwellings insured under the policy.

Report cancellations separately for:

- Policies cancelled for non-payment of premium or non-sufficient funds.
  - These should be reported every time a policy cancels for the above reasons. (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted.)
- Policies cancelled at the insured’s request.
- Policies cancelled for underwriting reasons.

Exclude:

- Policies cancelled for ‘re-write’ purposes where there is no lapse in coverage.

Cancellations within the first 59 days – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations from 60 to 90 days – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations greater than 90 days – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

- This time frame should be used regardless of individual state requirements related to the 'underwriting' period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Claim - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.

Include:
- Both first and third party claims.

Exclude:
- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarification:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims closed with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim / Subsequent Supplemental Payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on that supplemental payment from
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

the time the request for supplemental payment was received to the date of the final payment was made.

**Claims Closed Without Payment** – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:
- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Calculation Clarification:
- For each coverage identifier, the sum of the claims closed without payment across each closing time interval should equal the total number of claims closed without payment during the reporting period.

**Complaint** – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state’s insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:
- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

**Coverage - Dwelling (includes – Other Structures)** – Coverage for dwellings under Homeowners Policies and Dwelling Fire and Dwelling Liability Policies. It includes coverage for Other Structures.

**Coverage - Loss of Use** – Loss of Use provided under Homeowners Policies.

**Coverage - Personal Property** – Personal Property provided under Homeowners Policies.

**Coverage - Liability** – Liability insurance provided under Homeowners Policies.

**Coverage - Medical Payments** – Medical Payments provided under Homeowners Policies.
Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:
- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment date was made during the reporting period regardless of the date of loss or when the claims was received.
- Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.
- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
  - The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
  - The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her loss to either the company or insurance agent.

Direct Written Premium - The total amount of direct written premium for all polices covered by the market conduct annual statement (new and renewal) written during the reporting period.

Calculation Clarification:
- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement filing in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Dwelling – A personally occupied residential dwelling.
Calculation Clarification:
- A 2 or 3 family home covered under one policy would be considered 1 dwelling.

**Dwelling Fire and Dwelling Liability Policies** – Coverage for dwellings and their contents. It may also provide liability coverage and is usually written when a residential property does not qualify according to the minimum requirements of a homeowner's policy, or because of a requirement for the insured to select several different kinds of coverage and limits on this protection.

Include:
- Dwelling Fire and Dwelling Liability policies should be included ONLY IF the policies written under these programs are for personally occupied residential dwellings, not policies written under a commercial program and/or on a commercial lines policy form.

**Homeowners Policies** – Policies that combine liability insurance with one or more other types of insurance such as property damage, personal property damage, medical payments and additional living expenses.

Include:
- Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.
- Renters insurance.-Policies covering log homes, land homes, and site built homes are included.
- Inland Marine or Personal Articles endorsements.
- Include policies written on the HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8 policy forms.

Exclude:
- Farmowners is not included as it is considered to be Commercial Lines for purposes of this project.
- Umbrella policies.
- Lender-placed or creditor-placed policies.

**Inland Marine or Personal Articles Endorsements** – Provides coverage via endorsement to a homeowners policy for direct physical loss to personal property as described in the endorsement.

Exclude:
- Stand-alone Inland Marine Policies.

**Lawsuit**—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

For purposes of reporting lawsuits for Homeowners products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy or contract was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Liability Insurance – Coverage for all sums that the insured becomes legally obligated to pay because of bodily injury or property damage, and sometimes other torts to which an insurance policy applies.

Loss Of Use – Coverage for additional living expenses incurred by the insured or fair rental value when the insured dwelling becomes uninhabitable as the result of an insured loss or when access to the dwelling is barred by civil authority.

Median Days to Final Payment – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:

- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:

- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:

- Subrogation payments.
Calculation Clarification / Example:
- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

**Median** - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

Consider the following simple example of the number of days it took to settle each of the following seven claims:

<table>
<thead>
<tr>
<th>Claim Nbr</th>
<th>Days to Settle</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>2</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td>4</td>
</tr>
<tr>
<td>4</td>
<td>5</td>
</tr>
<tr>
<td>5</td>
<td>6</td>
</tr>
<tr>
<td>6</td>
<td>8</td>
</tr>
<tr>
<td>7</td>
<td>20</td>
</tr>
</tbody>
</table>

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

<table>
<thead>
<tr>
<th>Claim Nbr</th>
<th>Days to Settle</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
</tr>
<tr>
<td>2</td>
<td>4</td>
</tr>
<tr>
<td>3</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>20</td>
</tr>
</tbody>
</table>

Median Days to Final Payment = (5 + 6)/2 = 5.5

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

**Closing Time # of Claims**

- < 30: 22
- 31-60: 13
- 61-90: 18
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

<table>
<thead>
<tr>
<th>Closing Time Interval</th>
<th>Reported Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e. less than 61 or greater than 90) will indicate a data error.

**Medical Payments Coverage** – Provides coverage for medical expenses resulting from injuries sustained by a claimant regardless of liability.

**NAIC Company Code** – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

**NAIC Group Code** – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

**New Business Policy Written** – A newly written agreement that puts insurance coverage into effect during the reporting period.

Exclude:
- ‘Re-written’ policies unless there was a lapse in coverage.

**Non-Renewals** – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the “non-renewal” clause of the policy.

Include:
- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:
- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

**Calculation Clarification:**
- The number of nonrenewals should be reported on a policy basis regardless of the number of dwellings insured under the policy.

**Other Structures** – Structures on the residence premises (1) separated from the dwelling by a clear space or (2) connect to the dwelling by a fence, wall, wire, or other form of connection but not otherwise attached.
Property & Casualty Market Conduct Annual Statement
Homeowner Data Call & Definitions

**Personal Property Damage Coverage** – Provides coverage for damage to dwelling contents or other covered personal property caused by an insured peril.

**Personally Occupied** – A dwelling in which the person owning the policy personally occupies the dwelling and lives there.

**Property Damage Coverage** – Provides coverage for damage to the dwelling and/or other insured structures caused by an insured peril.

**Policy In-force** – A policy in which the coverage is in effect as of the end of the reporting period.

**Tenant/Renters/Condo Policies** – Policies that provide coverage for the personal property of tenants, renters, condominium and cooperative unit owners. Include policies typically written on the HO-4 and HO-6 policy forms.

**Schedule 2—Private Passenger Auto Claims Activity, Counts Reported by Claimant, by Coverage**
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two bodily injury claimants (one property damage claimant, one collision claim for the insured, and one medical payment claim for the insured), it would be reported as follows: Collision – 1, Bodily Injury – 2; Property Damage – 1; and Medical Payments – 1. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Data should be reported for both private passenger automobiles and motorcycles. Exclude antique vehicles and primarily off-road vehicles such as dune buggies or three-wheel ATVs.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of automobiles insured under the policy.

Report cancellations separately for:
- Policies cancelled for non-payment of premium or non-sufficient funds
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

- These should be reported every time a policy cancels for the above reasons (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted).
  - Policies cancelled at the insured’s request
  - Policies cancelled for underwriting reasons.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Exclude:
- Policies cancelled for ‘re-write’ purposes where there is no lapse in coverage.

**Cancellations within the first 59 days** – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

**Cancellations from 60 to 90 days** – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

**Cancellations greater than 90 days** – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

**Claim** - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Include:
- Both first- and third-party claims.

Exclude:
- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarifications:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims settled with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim/Subsequent Supplemental Payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on the supplemental
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

payment from the time the request for supplemental payment was received to the date the final payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:

- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Complaint – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

Coverage - Collision Insurance – Coverage to provide protection against physical contact of an automobile with another inanimate object resulting in damage to the insured automobile.

Clarification:

- Rental/transportation/tow expenses which are paid as a result or part of a collision claim should not be counted as separate claims.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

Coverage - Comprehensive/Other than Collision Insurance – Coverage providing protection in the event of physical damage (other than collision), including theft of the insured automobile.

Clarification:
- Rental/transportation/tow expenses which are paid as a result or part of a comprehensive/other than collision claim should not be counted as separate claims.

Coverage - Bodily Injury – Physical damage to one’s person. The purpose of liability (casualty) insurance is to cover bodily injury to a third party resulting from the negligent acts and omissions of an insured.

Coverage - Property Damage Liability Insurance – Coverage in the event that the negligent acts or omissions of an insured result in damage or destruction to another’s property.

Include:
- ‘Property Damage Rental’ coverage (i.e. amounts paid for a third party claimant’s rental car).

Coverage - UMBI – Includes both Uninsured Motorist Coverage and Underinsured Motorists Coverage for bodily injury claims.

- Underinsured Motorist Coverage (UIM) – Provides coverage for bodily injury sustained by an insured who is involved in an accident caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.

- Uninsured Motorist Coverage (UM) – Provides coverage for bodily injury sustained by an insured involved in an accident caused by an at-fault driver who does not have liability insurance.

Coverage - UMPD – Includes both Uninsured Motorist Property Damage Coverage and Underinsured Motorist Property Damage Coverage.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

- **Underinsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.

- **Uninsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have liability insurance.

**Coverage - Medical Payments Coverage** – First party coverage for injuries incurred in a motor vehicle accident.

**Coverage - Combined Single Limit** – Bodily injury liability and property damage liability expressed as a single sum of coverage.

**Coverage - Personal Injury Protection (PIP)** – A first party benefit. coverage to pay basic expenses for an insured and his/her family in states with no fault automobile insurance laws. No-fault laws generally require drivers to carry personal injury protection coverage to pay for basic medical needs of the insured, such as medical expenses, in the event of an accident. For the purposes of this project, all PIP coverages (wage, funeral, death, medical, etc) that would correspond to first party coverages in the applicable participating states should be included.

**Date of Final Payment** – The date final payment was issued to the insured/claimant.

Calculation Clarification:
- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment was made during the reporting period regardless of the date of loss or when the claims was received.
- Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.)
- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

- The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
- The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her loss to either the company or insurance agent.

Direct Written Premium - The total amount of direct written premium for all polices covered by the market conduct annual statement (new and renewal) written during the reporting period.

Calculation Clarification:
- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Lawsuit—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits for Private Passenger Auto products:
- Include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy or contract was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Median Days to Final Payment – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:
- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:
- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:
- Subrogation payments should not be included.

Calculation Clarification / Example:
- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for
supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

**Median** - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

- Consider the following simple example of the number of days it took to settle each of the following seven claims:

<table>
<thead>
<tr>
<th></th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
<th>Nbr 7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

<table>
<thead>
<tr>
<th></th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Days to Settle</td>
<td>2</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

Median Days to Final Payment = (5 + 6)/2 = 5.5

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

<table>
<thead>
<tr>
<th>Closing Time</th>
<th># of Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 30</td>
<td>22</td>
</tr>
<tr>
<td>31-60</td>
<td>13</td>
</tr>
<tr>
<td>61-90</td>
<td>18</td>
</tr>
</tbody>
</table>
## Property & Casualty Market Conduct Annual Statement
### Private Passenger Auto Data Call & Definitions

<table>
<thead>
<tr>
<th>Time Interval</th>
<th>Count</th>
</tr>
</thead>
<tbody>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e., less than 61 or greater than 90) will indicate a data error.

**NAIC Company Code** – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

**NAIC Group Code** – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

**New Business Policy Written** – A newly written agreement that puts insurance coverage into effect during the reporting period.

Exclude:
- Renewals or ‘re-written’ policies unless there was a lapse in coverage.

**Non-Renewals** – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the “non-renewal” clause of the policy.

Include:
- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:
- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

**Calculation Clarification**:
- The number of non-renewals should be reported on a policy basis regardless of the number of autos insured under the policy.
Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

Policy In-force – A policy in which the coverage is in effect as of the end of the reporting period.

Private Passenger Auto Insurance – Those policies issued on automobiles owned or leased by an individual or by husband and wife resident in the same household that are reported on lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement.

Include:
- This covers four-wheel vehicles including station wagons, vans, or pick-up trucks with a gross vehicle weight up to 10,000 pounds or less and not customarily used in the occupation, profession, or business of the insured.
- Vehicles as defined above that are reported on Lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement which meet the definition of private passenger automobiles.
- Motorcycles
- Policies where the insured’s vehicle is titled privately to the insured but is used by the insured for work should be included, unless the coverage is written on a commercial auto form.
- Policies written on a volunteer basis and those written through a residual market mechanism such as assigned risk pools should be included.
- Policies written on RV’s and motor homes are included as they are licensed vehicles that fall under the various states’ Motor Vehicle Responsibility laws.

Exclude:
- Policies written on antiques, collectibles, all-terrain vehicles, snowmobiles, trailers, dune buggies.
- Miscellaneous vehicles written on Inland Marine policies.
- Other vehicles classified by ISO as miscellaneous that do not fall under the various states’ Motor Vehicle Responsibility laws.
- ‘Fleet’ policies are generally considered to be a commercial policy and would not be included unless the premium for these policies is being reported as ‘private passenger auto’ insurance on lines 19.1, 19.2 or 21.1 of the state page of the financial annual statement.
- Non-owned vehicle insurance policies.
- Lender-placed or creditor-placed policies.
- Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.
Property & Casualty Market Conduct Annual Statement
Private Passenger Auto Data Call & Definitions

**Telematics and Usage-Based Data** – Data which is collected through devices installed in a vehicle, through mobile applications, or other method. These devices then transmit the data in real time back to insurers. Examples of usage-based data collected via telematics includes - but is not limited to - miles driven, time of day, where the vehicle is driven (Global Positioning System or GPS), rapid acceleration, hard braking, hard cornering and air bag deployment.
**Property & Casualty Market Conduct Annual Statement**

**Lender-Placed Data Call & Definitions**

**Lines of Business:** Lender-Placed Auto and Lender-Placed Homeowners

**Reporting Period:** January 1, 2021 through December 31, 2021

**Filing Deadline:** April 30, 2022

### Participation Requirements:

All companies licensed and reporting at least $50,000 of lender-placed auto, $50,000 of lender-placed homeowners (hazard, wind-only, and flood collectively), or $50,000 of blanket vendor single-interest auto and home gross premium within any of the participating MCAS jurisdictions. (This threshold is subject to individual jurisdiction requirements.)

### Definitions:

Lender-placed insurance has the same meaning as “Creditor-placed insurance” to be reported in the Credit Insurance Experience Exhibit (CIEE) of the Statutory Annual Statement. Lender-placed insurance means insurance that is purchased unilaterally by the creditor, who is the named insured, subsequent to the date of the credit transaction, providing coverage against loss, expense or damage to the property as a result of fire, theft, collision or other risk of loss that would either impair a creditor’s interest or adversely affect the value of collateral.

Except for data element “Net premium written during period for policies/certificates for which no separate charge is made to the borrower,” report experience for lender-placed insurance products for which a separate charge is made to the borrower regardless of whether the charge to the borrower is made at loan origination, periodically while the loan is outstanding or following issuance of coverage under the master policy.

Lender-placed auto has the same meaning as “creditor-placed auto” to be reported in the CIEE. Lender-placed auto means lender-placed insurance on autos, boats or other vehicles.

Lender-placed homeowners has the same means as “creditor-placed homeowners” to be reported in the CIEE. Lender-placed homeowners means lender-placed insurance on homes, mobile homes and other real estate.

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the CIEE. Specifically, the business to be reported is the direct business of the reporting company. Reinsurance ceded is not deducted and reinsurance assumed is not included.

Lender-placed homeowners hazard means that portion of lender-placed homeowners required to be reported in the CIEE covering perils other than flood or wind-only (in those states in which insurers may exclude wind coverage).

Lender-placed homeowners flood means that portion of lender-placed homeowners required to be reported in the CIEE covering the peril of flood only.

<table>
<thead>
<tr>
<th>3-79</th>
<th>Dollar of claims paid during the period</th>

</thead>
<tbody>
<tr>
<td>3-80</td>
<td>Dollars of claims incurred during the period</td>
</tr>
<tr>
<td>3-81</td>
<td>Number of complaints received directly from the DOI</td>
</tr>
<tr>
<td>3-82</td>
<td>Number of complaints received directly from any person or entity other than the DOI</td>
</tr>
</tbody>
</table>
Lender-placed wind-only means that portion of lender-placed homeowners required to be reported in the CIEE covering the peril of wind only.

Lender-placed blanket vendor means that portion of lender-placed

Single-interest means insurance that protects only the creditor’s interest in the collateral securing the debtor’s credit.

Dual-interest means insurance that protects the creditor’s and the debtor’s interest in the collateral securing the debtor’s credit transaction. Dual-interest includes insurance commonly referred to as limited dual-interest.

Blanket Vendor Single-Interest (VSI), for purposes of reporting experience in this Lender-Placed MCAS, means coverage issued to a lender or servicer to protect a lender’s interest and which:

- Is provided through a blanket policy covering eligible collateral securing loans in the lender/servicer’s portfolio
- Premium charges to the lender/servicer are based on aggregate exposures insured as opposed to any characteristics specific to any individual vehicle or property;
- No individual certificates or policies are issued to borrowers
- Has no ongoing tracking of insurance on borrower’s loans; and
- If there is a charge to the borrower at loan origination, the same charge is made for all borrowers with eligible collateral regardless of insurance status.

Blanket VSI Auto experience and Blanket VSI Home experience is reported separately from Single-Interest Auto, Dual-Interest Auto, Single-Interest Home, and Dual-Interest Home.

**Average Gross Placement Rate** – The total number of coverages placed before cancellations during the reporting period divided by the average number of exposures during the reporting period. Average number of exposures means the average number of vehicles covered by Lender Placed Auto policies or average number of properties covered by Lender Placed Home policies during the reporting period.

**Cancellations** – Includes all cancellations of the policies/certificates where the cancellation was executed during the reporting year regardless of the date of placement of the coverage. *See also Flat Cancellation*

**Certificate** – Lender-placed insurance issued under a master policy for an individual vehicle or property, respectively.

Example:

- If the insurer issues 300 certificates under a lender-placed master policy or policies, report 300.

**Claim** – A request or demand for payment of a loss that may be included within the terms of
coverage of an insurance policy/certificate. Each claimant/insured reporting a loss is counted separately.

Include:
- Both first and third party claims.

Exclude:
- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

**Claims Closed With Payment** – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:
- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarifications:
- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is $0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:
- For each coverage identifier, the sum of the claims settled with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling additional payment on previously reported claim/subsequent supplemental payment for claims closed with payment during the reporting period:
- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on the supplemental payment from the time the request for supplemental payment was received to the date the final payment was made.

**Claims Closed Without Payment** – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was...
closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:
- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy/certificate was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Complaints Received Directly from any Person or Entity Other than the Department of Insurance – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:
- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties, including, but not limited to, lenders or servicers

Complaints Received Directly from the Department of Insurance – All complaints:
- As identified by the DOI as a complaint.
- Related to LPI or insurance tracking.
- Sent or otherwise forwarded by the DOI to the reporting company.

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:
- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment was made during the reporting period regardless of the date of loss or when the claim was received.
- Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.)
- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:
- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
  - The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

**Date the Claim was Reported** – The date an insured or claimant first reported his or her claim to either the company or insurance agent.

**Dollars of Claims Incurred During Period** – The total dollars incurred for claims for the particular type of lender-placed insurance during the period. Include incurred claim dollars only for lender-placed insurance for which a separate charge is made to the borrower.

**Dollars of Claims Paid During Period** – The total dollars paid for claims for the particular type of lender-placed insurance during the period. Include paid claim dollars only for lender-placed insurance for which a separate charge is made to the borrower.

**Flat Cancellation** – The coverage was cancelled effective the date of coverage with 100% refund of premium.

**Gross Premium Written During Period** – The total premium written before any reductions for refunds for the particular type of lender-placed insurance during the reporting period. Include premium only for lender-placed insurance for which a separate charge is made to the borrower.

**In-force** – A master policy, individual policy, or certificate in effect during the reporting period.

**Individual Policy** – Lender-placed insurance issued for an individual vehicle or property, respectively.

Example:
- If the insurer issues 300 lender-placed policies for individual vehicles or properties (as opposed to issuing master policies to lenders or servicers), report 300.

**Lawsuit** – An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.
For purposes of reporting lawsuits in the MCAS blank:
- Include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies, count the number of policies involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
• Report a lawsuit in the jurisdiction in which the policy was issued with the exception of class action lawsuits;
• Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides. Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

**Lawsuits Closed During the Period with Consideration for the Consumer** – A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting company before the lawsuit was brought.

**Master Policy** – A group policy providing coverage for the vehicles or property serving as collateral for a portfolio of loans. Individual coverage, typically in the form of a certificate, is issued from the Master Policy at the direction of the lender/servicer or automatically at the point in time when the borrower’s required voluntary insurance ceases to be in-force.

**Median Days to Final Payment** – The median value for all claims closed with payment during the period.

Calculation for claims with one final payment date during the reporting period:
• Date the claim was reported to the company to the date of final payment.

Calculation for claims with multiple final payment dates during the reporting period:
• Date the request for supplemental payment was received to the date of final payment (for each different final payment date.)

Exclude:
• Subrogation payments.

**Calculation Clarification / Example:**
• To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the claim was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

**Median** - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

Consider the following simple example of the number of days it took to settle each of the following seven claims:
In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

<table>
<thead>
<tr>
<th>Days to Settle</th>
<th>Nbr 1</th>
<th>Nbr 2</th>
<th>Nbr 3</th>
<th>Nbr 4</th>
<th>Nbr 5</th>
<th>Nbr 6</th>
<th>Nbr 7</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2</td>
<td>4</td>
<td>4</td>
<td>5</td>
<td>6</td>
<td>8</td>
<td>20</td>
</tr>
</tbody>
</table>

Median Days to Final Payment = (5 + 6)/2 = 5.5

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

<table>
<thead>
<tr>
<th>Closing Time</th>
<th># of Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 30</td>
<td>22</td>
</tr>
<tr>
<td>31-60</td>
<td>13</td>
</tr>
<tr>
<td>61-90</td>
<td>18</td>
</tr>
<tr>
<td>91-180</td>
<td>11</td>
</tr>
<tr>
<td>181-365</td>
<td>12</td>
</tr>
<tr>
<td>&gt;365</td>
<td>15</td>
</tr>
</tbody>
</table>

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval “61-90 days.” Any reported median that falls outside of this range (i.e. less than 61 or greater than 90) will indicate a data error.

**NAIC Company Code** — The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

**NAIC Group Code** — The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

**Net Premium Written During Period** — Gross premium written less refunds for the particular type of lender-placed insurance during the reporting period. Include premium only for lender-placed insurance for which a separate charge is made to the borrower.
**Net Premium Written During Period for Policies/Certificates for Which No Separate Charge is Made to the Borrower** — Gross premium written less refunds for the particular type of lender-placed insurance during the reporting period. Include premium only for lender-placed insurance for which no separate charge is made to the borrower.

**Premiums Earned During Period** — Earned premiums for the particular type of lender-placed insurance during the reporting period. Include premium only for lender-placed insurance for which a separate charge is made to the borrower.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call July 30, 2020. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Maria Ailor (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Robin David (DE); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Russell Hamblen (KY); Nathan Strebeck (LA); Dawna Kokosinski (MD); Timothy Schott (ME); Michele Riddering (MI); Paul Hanson (MN); Teresa Kroll (MO); Jeannie Keller (MT); Reva Vandevoorde (NE); Edwin Pugsley (NH); Ralph Boeckman (NJ); Leatrice Geckler (NM); Peggy Willard-Ross (NV); Larry Wertel (NY); Todd Oberholtzer (OH); Landon Hubbart (OK); Gary Jones (PA); Matt Gendron (RI); Michael Bailes (SC); Tanji Northrup (UT); Melissa Gerachis (VA); and Christine Rouleau (VT). Also participating was: Paul Yuen (HI).

1. **Adopted its March 23 Minutes**

Mr. Haworth said the Working Group met March 23 and took the following action: 1) extend the Market Conduct Annual Statement (MCAS) filing due dates by 60 days due to the COVID-19 crisis; and 2) adopt travel insurance as the next line of business for MCAS.

Ms. Rouleau made a motion, seconded by Mr. Hamblen, to adopt the Working Group’s March 23 minutes (Attachment Two-A). The motion passed unanimously.

2. **Discussed Revisions to the MCAS Best Practices Guide**

Ms. Rebholz said the work on the *MCAS Best Practices Guide* was put on hold while the state departments of insurance (DOIs) and the NAIC concentrated on critical work that was either related to COVID-19 or time sensitive. She said beginning with the Summer National Meeting, the drafting group will re-start the work on editing the *MCAS Best Practices Guide* and other MCAS documents.

Ms. Rebholz said much of the work on the *MCAS Best Practices Guide* was to bring it up to date with the changes to the MCAS since 2014. These changes include new lines of business and changed web page links. The drafting group also created two new appendices to highlight the best practices and provide a list of resources for analysts. Ms. Rebholz said the drafting group expects to finish the edits to the *MCAS Best Practices Guide* during its next meeting.

Ms. Rebholz said editing the *MCAS Best Practices Guide* is only the first piece of a larger project to update all MCAS reference documents with the goal of: 1) identifying “threshold” issues, such as the number of extension requests that a company has made in recent years and the reasons the company cites; 2) specifying the length of the extensions allowed in order to try to bring consistency in the states’ responses to company extension requests; 3) mapping out a generic process the states can use as a template; and 4) developing templates for extension request response letters and orders to be available to the states.

Ms. Rebholz said the materials that the drafting group will be reviewing are: 1) the *MCAS Best Practice Guide*; 2) the MCAS web page; 3) the MCAS Frequently Asked Questions (FAQ); 4) the MCAS Industry User Guide; 5) the MCAS data call letters; and 6) all MCAS training materials.

Ms. Rebholz said the drafting group will also explore what type of extension request report the NAIC can provide on an annual basis to help us determine where threshold issues are triggered. As part of the *State Ahead* strategic plan, the NAIC market regulation staff will be developing a Tableau report that will be able to track historical extension and waiver requests. Our work on the drafting group will provide input into what should be included in this tool and its design.
3. Discussed the Market Analysis Framework

Mr. Haworth said during the Working Group’s March 23 conference call, he asked for volunteers to help draft the revisions to the market analysis chapters. He said Ms. Rebholz, Sarah Crittenden (GA) and Rob McCullough (NE) volunteered, but because of the hiatus on Working Group activities, this group has not met. Mr. Haworth said others still have a chance to volunteer before the group’s first meeting. He encouraged comments or suggestions from anyone who has an interest, but it may not be the time to volunteer.

4. Adopted Scorecard Ratios for the Private Flood MCAS Blank

Mr. Haworth said the Private Flood blank was adopted last year, and the first collection of Private Flood MCAS data will be due on April 30, 2021. He said scorecard ratios are published each year for each line of business in the MCAS. The scorecards are useful to companies because a company can see how their ratios compare to the overall ratios in each state. Mr. Haworth said the aggregate ratios for each MCAS state are public, and they are also available to consumers.

Mr. Haworth said the ratios include a cross section of underwriting and claims data elements, but they are by no means exclusive. He said any number of ratios can be generated using MCAS data, but the scorecard ratios are some of the more useful measurements.

Mr. Haworth said he would like to adopt the scorecards during this meeting to allow NAIC staff to begin programming them into the MCAS for the 2020 data year.

Mr. Haworth said for Private Flood, there will be two sets of ratios—one for first dollar coverage and a second set for excess coverage. He said the two coverages are distinct enough to generate significantly different results.

Mr. Haworth said there are eight proposed ratios. He noted that they track very closely to the homeowners ratios. The first three ratios are the same as the homeowners ratios. However, ratio 3 measures the percentage of claims paid beyond 60 days. Mr. Haworth said flood claims may take longer to settle than the typical automobile or homeowners claim, he and asked if the Working Group wants to consider using a different time period for this ratio, such as 90 or 180 days.

Ms. Ailor said she would like to hear the experience of state insurance regulators or industry representatives prior to deciding on the time period to use. Mr. Hamblen said 60 days seemed to be a quick turnaround for flood claims. He said flood losses are often accompanied by other perils, such as wind, that can take significant time to adjust. He suggested beginning with a ratio using 60 days and adjusting it, if necessary, as the data is received and analyzed. Ms. Ailor suggested beginning with 90 days and adjusting, if necessary. Ms. Rouleau said she was inclined to begin with 60 days and adjust later, if necessary. Mr. Yuen said from his experience with Hawaiian flood claims, 60 days is tight.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she agrees with beginning with a ratio using at least 90 days. Birny Birnbaum (Center for Economic Justice—CEJ) said private flood coverage on homeowners insurance does not face the same multi-peril issues as policies written through the National Flood Insurance Program (NFIP). He said if the ratio was extended to 90 days, there would be a mismatch with the Homeowners MCAS ratios.

Mr. Haworth said ratios 4 and 5 are presented as 4a and 4b and 5a and 5b. He said the Working Group is being asked to decide whether to use 4a and 5a or 4b and 5b rather than all four. He said the Private Flood MCAS blank added a data element asking the company to provide the number of policies in force at the beginning of the reporting period. He said ratios 4a and 5a use this data element in the denominator. He said using this denominator more closely matches with “non-renewals” and “cancellations over 60 days.” He said for non-renewals (ratio 4), flood policies usually have a term of at least one year. He said that means policies only from the prior reporting period would be up for renewal during the reporting period, and policies written during the current reporting period should not be included in the denominator. He said for cancellations greater than 60 days from inception, ratio 5a’s denominator includes both “beginning policies in-force” and “policies written during”, i.e., the entire universe of possible policies that can be cancelled greater than 60 days from inception. Using policies in force at the end of the reporting period excludes policies that were terminated for other reasons during the year, so it does not contain all the possible policies.

Mr. Haworth said the other option is to keep ratios 4 and 5 the same as the ratios used in the Homeowners MCAS scorecard ratios. He said the advantage to this is being able to compare the Private Flood ratios to the Homeowners ratios.
Mr. Hamblen said it is important to be able to compare the Private Flood ratios with the Homeowners ratios.

Mr. Haworth said ratios 6 and 7 duplicate the Homeowners MCAS ratios.

Mr. Haworth said ratio 8 is a new ratio taking advantage of the additional data element asking for the number of lawsuits closed with consideration for the consumer. This is measured against the number of lawsuits closed during the period.

Mr. Hamblen made a motion, seconded by Ms. Vandevoorde, to adopt the Private Flood MCAS ratios (Attachment Two-B), using 60 days for ratio 3 and matching the Homeowners MCAS ratios 4 and 5. The motion passed unanimously.

5. Discussed the MCAS Attestation

Mr. Haworth noted that ever since the MCAS was centralized, the Working Group usually gets a few questions each year regarding the attestation process and requests for clarification or changes to the process. He said a few years back, the Working Group added a second attestation to address who is responsible for the recreation of reported data from the source data. He said one concern recently expressed is whether the attestation can be provided at a more granular level. He said currently, the MCAS tool is designed to collect the attestations at the NAIC company code level even if the same company reports different lines of business in multiple states. He said it is possible, for example, that a Property and Casualty company may also report Health business, and the appropriate people to attest for each would be different.

Joseph E. Zolecki (Blue Cross Blue Shield Association—BCBSA) thanked the Working Group for the MCAS extension for the Health MCAS this year. He said the additional time was appreciated by the carriers.

Mr. Zolecki said the single attestation per NAIC company code is a concern for carriers. He asked for some time for industry to consider this and other issues and come back to the Working Group with a more complete discussion. Mr. Birnbaum said it was not clear what the problem is. Mr. Zolecki said it is important for the governance of a specific line of business to be the ones to attest to the data. They are more likely to understand the data and its sources. Mr. Zolecki said the attestation should be a higher-level rubber stamp of a submission made at a lower level, especially submissions to multiple states on different lines of business. Mr. Birnbaum said a single attessor can attest to the data.

Mr. Haworth said the Working Group will address the issue after industry has an opportunity to consider it more fully.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call March 23, 2020. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Jimmy Harris (AR); Maria Ailor (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Sharon Shipp (DC); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Lori Cunningham and Sandra Stumbo (KY); Jeff Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy Schott (ME); Jill Huisken (MI); Paul Hanson (MN); Teresa Kroll (MO); Jeannie Keller (NE); Karen McAllister and Douglas Rees (NH); Ralph Boeckman (NJ); Hermoliva Abejar (NV); Larry Wertel (NY); Angela Dingus (OH); Landon Hubbart (OK); Jeffrey Arnold (PA); Matt Gendron and Segun Daramola (RI); Michael Bailes (SC); Tracy Klausmeier (UT); Julie Fairbanks (VA); Christina Rouleau (VT); Theresa Miller (WV).

1. Adopted its Feb. 20 Minutes

The Working Group met Feb. 20 and took the following action: 1) adopted its Jan. 30 minutes; 2) discussed revisions to the MCAS Best Practices Guide; and 3) discussed a proposal to add travel insurance as the next line of business in the Market Conduct Annual Statement (MCAS).

Ms. Kroll made a motion, seconded by Ms. Dingus, to adopt the Working Group’s Feb. 20 minutes (Attachment Two-A1). The motion passed unanimously.

2. Discussed Revisions to the MCAS Best Practices Guide

Ms. Rebholz said the drafting group began work revising the MCAS Best Practices Guide, but it has temporarily stopped meeting. She said the main document has been updated, and the drafting group is identifying the best practices that will be highlighted and added to a separate appendix. She said another appendix will be added to provide links to resources.

3. Extended the MCAS Filing Due Date

Mr. Haworth said most companies have their employees working remotely due to the COVID-19 crisis, and he asked if any members of the Working Group have given thought to an extension of the MCAS due date.

Mr. Hanson suggested polling the companies to see if they need extensions to meet the filing due date. He stated his general agreement with providing an extension to the filing due date. Ms. Ailor said the Arizona Department of Insurance (DOI) has already begun discussions of providing an extension. She thought it was better to meet the need for an extension proactively for all companies instead of handling each company’s extension request individually. Ms. Rebholz said she did not agree with a poll because it would intrude on critical business functions. She agreed with a 60-day or 90-day extension. Mr. Harris said the Arkansas DOI would agree with a 60-day extension. Ms. Rouleau said companies have herculean tasks ahead of them and she favored reasonable accommodations. Ms. Moran also agreed with an extension. Ms. Miller agreed with extending the due date.

Ms. Dingus said she was in favor of an extension only for companies that are required to file on April 30. She said the June 30 due date for the health insurance and disability income insurance MCAS filings could be addressed when we get past April 30. Ms. Abejar agreed with Ms. Dingus. Mr. Arnold said he favored a blanket extension for all lines of business so companies can support essential functions. Mr. Bailes suggested a 90-day extension just for the filings due April 30 and the consideration of other lines of business as the due dates get closer. Ms. Shipp agreed with Mr. Bailes. Mr. Daramola said the Rhode Island DOI supported a 90-day extension.

Michael Lovendusky (American Council of Life Insurers—ACLI) said the ACLI members have said they are pressed with sustaining daily operations, such as claims and underwriting. The companies would be appreciative of an extension to file their MCAS. He said the California DOI has granted 60-day extensions for many of their regulatory filings, and New York is providing 90-day extensions for many of their filings. He said a 60-day or 90-day filing extension seems the most reasonable since no one knows what the COVID-19 situation will look like in 30 days. Lisa Brown (American Property Casualty Insurers Association—APCIA) agreed with Mr. Lovendusky, and she said the majority of APCIA members are working from home.
She said staff normally dedicated to MCAS filings are being used to assist in other critical company functions. Joseph E. Zolecki (Blue Cross Blue Shield Association—BCBSA) said he supported a 60-day extension for all lines of business. He said working remotely slows down the process of cross-validating data.

Birny Birnbaum (Center for Economic Justice—CEJ) said he supports a blanket extension of 60-days for all lines of business. Mr. Lovendusky said he supported a blanket extension of all due dates. He said companies that have a June 30 due date are currently working on gathering data, and an extension of the due date would help them.

Ms. Dingus asked whether the MCAS portal would be open for filings once companies are prepared to file if there was an extension given. Randy Helder (NAIC) said the MCAS portal is open and accepting filings. If companies want to file early, they may.

Mr. Gendron made a motion, seconded by Ms. Rouleau, to extend all 2020 filing due dates by 60 days. The motion passed unanimously.

4. Adopted Travel Insurance as the Next Line of Business in the MCAS

Mr. Haworth said the Working Group has considered travel insurance for the MCAS a couple times. He said it was not adopted the first time because of an ongoing multistate examination, and the Travel Insurance Model Act (#632) was still under consideration. He said Mr. Birnbaum has proposed travel insurance again since the examination has been concluded and Model #632 has been adopted. Mr. Haworth said he is often asked, especially now due to the COVID-19 crisis, about how many travel insurance policies are written and in-force in Washington, and he cannot answer the question because they are not broken out in the financial annual statement.

John P. Fielding (US Travel Insurance Association—UStiA) said the last time travel insurance was proposed as the next line of business in the MCAS, it was not adopted because of the ongoing work of drafting Model #632. He said that even though the Model #632 was adopted, it has only been enacted in eight states. The UStiA is working towards having the Model #632 enacted in all states so there will be a level playing field and uniformity. He said with the differences remaining in the states, it does not make sense to have uniform reporting in the MCAS. He also noted that industry is still being closely monitored by the states since the multistate examination.

Mr. Birnbaum said if travel insurance was adopted for inclusion in the MCAS, the earliest it could be collected would be for 2022 data collected in 2023. He said that in 2023, Mr. Fielding’s concerns would no longer exist. Mr. Birnbaum said travel insurance will continue to grow even more rapidly after the COVID-19 crisis. He said the wide variety in the types of coverage, both medical and non-medical, in travel insurance makes it important to be collected in the MCAS. He said the market is large and growing quickly but he noted that even if the travel insurance market is smaller than many lines of insurance, it makes it more suitable for collection in the MCAS, as that is one of the only tools that would be available to state insurance regulators to monitor the market. He said more competition in a market does not translate to less abuse. He said that was the reason for the multistate examination, and he noted that the Regulatory Settlement Agreement (RSA) monitoring will end by 2023. He also said there does not have to be uniformity in the statutory standards of all the jurisdictions. He noted that states have different standards for many other lines of business, such as private passenger auto. He said the MCAS questions are very high level and generic. They apply to all states regardless of the differing standards.

Mr. Gendron asked what other regulatory scrutiny is occurring other than the Market Actions (D) Working Group multistate examination. Mr. Fielding said he was not aware of any other scrutiny, but he noted that the multistate examination was significant. Mr. Gendron said Rhode Island adopted the Model #632 with the assistance of the UStiA, and he expects more states to adopt it; however, to be most effective, it would help state insurance regulators to know who writes travel insurance and how much they write in their jurisdiction. Because travel insurance is reported within the inland marine line on the financial annual statement, an MCAS filing would be the most efficient way to know who is writing how much travel insurance. He said in is his experience, more consideration is put into the development of an MCAS blank than other data calls.

Ms. Brown agreed with Mr. Fielding that it is too early to consider adding travel insurance to the MCAS. She also asked whether now is the right time to begin creating a new line of business while state insurance regulators and companies are responding to the COVID-19 crisis. Mr. Birnbaum said adopting travel as the next line of business in the MCAS gets it in the queue for creation, but work would not have to begin right away. Ms. Ailor confirmed Mr. Birnbaum’s statement. She said when she chaired the Market Conduct Annual Statement Blanks (D) Working Group, the work was prioritized and did not always begin immediately because of other work being done. Ms. Dingus said the Market Conduct Annual Statement Blanks
(D) Working Group is currently working on a few other issues and likely would not get to travel insurance until later in the year. She said she did not want to delay a vote. Mr. Arnold and Mr. Haworth agreed.

Ms. Rebholz made a motion, seconded by Ms. Moran, to adopt travel insurance as the next line of business in the MCAS. The motion passed unanimously.

5. Discussed Other Matters

Ms. Moran asked if the automatic deletion of the unapproved Market Analysis Review System (MARS) could be put on hold while states respond to the COVID-19 crisis. Mr. Helder said he would look into this. [Note to minutes—the automatic deletion of unapproved MARS reviews and the notification of unapproved reviews was turned off in late 2018.]

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Feb. 20, 2020. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Ryan James (AR); Maria Ailor (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Sandra Stumbo (KY); Jeffrey Zewe (LA); Dawn Kokosinski (MD); Timothy Schott (ME); Paul Hanson (MN); Stewart Freilich and Teresa Kroll (MO); Jeannie Keller (MT); Reva Vandevenoord (NE); Karen McAllister (NH); Ralph Boeckman (NJ); Peggy Willard-Ross (NV); Larry Wertel (NY); Angela Dingus (OH); Landon Hubbard (OK); Jeffrey A. Arnold (PA); Matt Gendron (RI); Michael Bailes (SC); Tracy Klausmeier (UT); Julie Fairbanks (VA); Christina Rouleau (VT); Tom Whitener (WV). Also participating was: Sarah Crittenden (GA).

1. **Adopted its Jan. 30 Minutes**

The Working Group met Jan. 30 and took the following action: 1) adopted its Dec. 8, 2019, minutes; 2) discussed revisions to the *MCAS Best Practices Guide*; and 3) discussed a proposal to add travel insurance as the next line of business in the Market Conduct Annual Statement (MCAS).

Ms. Dingus made a motion, seconded by Mr. James, to adopt the Working Group’s Jan. 30 minutes (Attachment Two-A1a). The motion passed unanimously.

2. **Discussed Revisions to the *MCAS Best Practices Guide***

Ms. Rebholz said the small group began work revising the *MCAS Best Practices Guide*. She said revisions to the *MCAS Best Practices Guide should be complete* by March 4.

3. **Discussed the Market Analysis Framework**

Mr. Haworth asked for volunteers to form a small group to review the NAIC *Market Regulation Handbook* (Handbook) market analysis chapters. Ms. Rebholz agreed that was a good idea. Ms. Crittenden volunteered to be in the group. Mr. Haworth asked anyone who is interested to contact Randy Helder (NAIC).

4. **Discussed New Lines of Business for the MCAS**

Mr. Haworth said a suggestion was received from Birny Birnbaum (Center for Economic Justice—CEJ) to add travel insurance as the next line of business to be added to the MCAS. He said the Market Regulation and Consumer Affairs (D) Committee adopted travel insurance examination standards for the Handbook. He said since there is an examination standard, state insurance regulators need data to determine which companies may need to be examined. Mr. Haworth also noted that pet insurance may be proposed by the Property and Casualty Insurance (C) Committee.

Ms. Ailor said travel insurance needs to be considered for the MCAS because of the growth in the line of business. She said it is important to know who is writing travel insurance and to what degree.

Mr. James said only a few states have adopted the *Travel Insurance Model Act (#632)* and are still promulgating rules. He asked if it is possible to create a travel insurance blank if not all states may define travel insurance the same way. Mr. Haworth said the MCAS asks for items such as policies written and claims paid. The MCAS measures the activity in the state and can help determine what companies are writing in the state.

John Fielding (United States Travel Insurance Association—UStiA) asked if interested parties will be allowed to submit comments. Mr. Haworth said the Working Group would welcome comments.

Mr. Birnbaum said that given the timelines for adopting new lines of business if the travel insurance line of business were adopted at this meeting, the earliest it could possibly be implemented would be for 2022 data reported in 2023. He said if the
rate of growth for the travel insurance line of business continues at the same pace, there will be more than 100 million policies in the market when the MCAS collection begins.

5. Discussed Private Flood Insurance MCAS Scorecard Ratios

Mr. Haworth said the private flood MCAS blank was adopted in 2019, and the initial filing will be April 30, 2021, for the 2020 data year. He said the Working Group is responsible for developing the scorecard ratios for the MCAS lines of business. He said the number of ratios per line of business varies. He asked if there were any thoughts regarding the number of ratios that would be needed for the private flood MCAS blank. Ms. Ailor said it is difficult to say how many scorecard ratios are needed. She suggested that the available data elements need to be examined and that the Working Group needs to know what state insurance regulators need. She said referring to other line of business scorecard ratios would be good idea to see which scorecard ratios have been useful and which have been less useful.

Mr. Haworth said a small group will be formed to begin the process of developing scorecard ratios for the private flood insurance MCAS blank. He said volunteers should contact Mr. Helder. Mr. Helder said the scorecard ratios would need to be developed by September or October 2020.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
Market Analysis Procedures (D) Working Group
Conference Call
January 30, 2020

The Market Analysis Procedures (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Jan. 30, 2020. The following Working Group members participated: John Haworth, Chair (WA); Rebecca Rebholz, Vice Chair (WI); Ryan James (AR); Cheryl Hawley (AZ); Don McKinley (CA); Damion Hughes (CO); Kurt Swan (CT); Scott Woods (FL); Erica Weyhenmeyer (IL); Tate Flott (KS); Lori Cunningham and Sandra Stumbo (KY); Jeffrey Zewe (LA); Mary Lou Moran (MA); Dawna Kokosinski (MD); Timothy Schott (ME); Jill Huisken (MI); Paul Hanson (MN); Teresa Kroll (MO); Jeannie Keller (MT); Reva Vandevoorde (NE); Douglas Rees (NH); Ralph Boeckman (NJ); Peggy Willard-Ross (NV); Larry Wertel (NY); Angela Dingus (OH); Joel Sander (OK); Jeffrey A. Arnold (PA); Michael Bailes (SC); Julie Fairbanks (VA); Isabelle Keiser (VT); Desiree Mauller (WV).

1. **Adopted its Dec. 8, 2019, Minutes**

The Working Group met Dec. 8, 2019, and took the following action: 1) adopted its Nov. 21, 2019, minutes; 2) discussed its 2020 charges; 3) discussed a uniform process for addressing Market Conduct Annual Statement (MCAS) extension requests; and 4) discussed concerns arising from its decision to adopt “Other Health” as the next line of business in the MCAS.

Ms. Dingus made a motion, seconded by Mr. Zewe, to adopt the Working Group’s Dec. 8 minutes (see NAIC Proceedings – Fall 2019, Market Regulation and Consumer Affairs (D) Committee, Attachment Six). The motion passed unanimously.

2. **Received an Update on the STLD Medical Data Call Template**

Ms. Rebholz said NAIC staff sent the short-term, limited duration (STLD) data filings to all the participating states on Jan. 6. Along with the data, there was another spreadsheet showing all the companies that should have received a call letter. The spreadsheet indicated which companies filed and which companies sent an email advising they do not write STLD business. Ms. Rebholz said each state now needs to decide what to do with the information. She said Wisconsin sent 909 emails to companies that did not report or inform the NAIC they had nothing to report. She said more than 400 responses have been received, and all of them said they did not write STLD. She said the Working Group needs to consider whether it will take any concerted action against the companies that did not respond or leave this to the discretion of each state. She said Jo LeDuc (WI) input the data into Tableau, and Wisconsin has begun analysis. She said Wisconsin is willing to assist any other states.

Ms. Dingus said Ohio has not yet begun its analysis but has noticed a couple groups that indicated they had no business to report but the state has consumer complaints regarding STLD policies written by companies in the group. She said she is not ready to accept the data as complete or accurate and added she would be wary of collectively penalizing the wrong companies. Ms. Rebholz suggested states should share any information they have that indicates a company writes STLD even though they said they do not. Mr. Haworth noted that some companies said the call letter and reminder went to their spam email.

Ms. Rebholz said Wisconsin is willing to share a template of its communication to the companies that did not report to the initial NAIC data call.

3. **Discussed Revisions to the MCAS Best Practices Guide**

Ms. Rebholz said a small group has formed to begin work on needed revisions to the *MCAS Best Practices Guide* and other MCAS materials. She said the other materials are the MCAS web page, the MCAS Frequently Asked Questions (FAQ), the MCAS Users Guide, the MCAS call letter and training materials. She said that the group would begin with the best practices guide to make sure all changes to the guide are reflected in the other materials.

Joe Zolecki (Blue Cross Blue Shield Association—BCBSA) asked if input will be accepted from industry. Mr. Haworth said for now it will be regulator only and will be exposed to interested parties at the Working Group level.
4. **Discussed the Market Analysis Framework**

Mr. Haworth said the current framework used by most market analysts on the state departments is described in Volume 2 of the *NAIC Market Regulation Handbook* which includes Chapters 6 through 8. He reviewed the contents of the chapters with the Working Group. He said the goal would be to identify changes that need to be made or insert additional relevant information and provide the recommended changes to the Market Conduct Examination Standards (D) Working Group.

5. **Discussed New Lines of Business for the MCAS**

Mr. Haworth said a suggestion was received from Birny Birnbaum (Center for Economic Justice—CEJ) to add travel insurance as the next line of business to be added to the MCAS.

Mr. Birnbaum said the travel insurance line of business was considered by the Working Group in 2018 but was declined because the multistate examination was still being finalized and the *Travel Insurance Model Act* (#632) was still being drafted. He said since that time, the examination has been completed, the model act has been adopted and standards for conducting a travel insurance examination are in the *NAIC Market Regulation Handbook*.

Mr. Birnbaum said the travel insurance market is growing rapidly, experiencing a 41% increase in premium from 2016 to 2018. He said 66 million people each year purchase a travel insurance product. He said the number of covered individuals increased 49% from 2016 to 2108, and the number of plans sold increased 36% in the same period. He said this type of growth warrants additional regulatory oversight because it is a fast-growing market with a complex product with many different coverages. He said there is currently no routine monitoring of the travel insurance market.

Mr. Haworth said there are some health products that are marketed with travel insurance but are marketed by both life and disability carriers, as well as property/casualty (P/C) carriers. He said in some states, the coverage is split between P/C and health. He said it is unclear how to track the premium in the financial annual statement. Mr. James asked if the health products should be reported on the “other health” MCAS. Mr. Haworth said that is a valid question and needs to be considered, but “other health” is typically critical illness or fixed indemnity type products. He said no framework for the “other health” blank has been developed yet.

John Fielding (United States Travel Insurance Association—UStiA) said Model #632 was adopted at the end of 2018 and has been adopted in eight states. He said it has provided a uniform approach for filing. He said 49 states require travel insurance to be filed as inland marine, and nine states additionally require it to be filed as health. He said uniformity will increase as Model #632 is adopted in more states. He also noted the multistate action has ended, but implementation and enforcement of the multistate action is continuing.

Mr. Birnbaum said that even if the travel insurance line of business were adopted at this meeting, the earliest it could possibly be implemented would be for 2021 data reported in 2022.

Mr. Haworth said the Working Group will continue to consider the travel insurance line of business.

Having no further business, the Market Analysis Procedures (D) Working Group adjourned.
Property & Casualty (Private Flood)

Same Ratios Apply Separately for First Dollar Coverage (stand-alone plus endorsements) and Excess Coverage (stand-alone plus endorsements)

Ratio 1.  **The number of claims closed without payment compared to the total number of claims closed**

\[
\frac{\text{Number of claims closed during the period, without payment}}{\text{Number of claims closed with payment} + \text{Number of claims closed without payment}}
\]

Ratio 2. **Percentage of claims unprocessed at the end of the period**

\[
\frac{\text{Number of claims open at the beginning of period} + \text{Number of claims opened during period} - \text{Number of claims closed with payment} - \text{Number of claims closed without payment}}{\text{Number of claims open at the beginning of period} + \text{Number of claims opened during the period}}
\]

Ratio 3. **Percentage of claims paid beyond 60 days**

\[
\frac{\text{total number of claims closed with payment beyond 60 days}}{\text{total number of claims closed with payment for all durations}}
\]

Ratio 4. **Company-Initiated Non-renewals to policies in force**

\[
\frac{\text{number of company-initiated non-renewals}}{\text{number of private flood policies or endorsements in force at the end of the reporting period}}
\]

Ratio 5. **Company-Initiated Cancellations over 60 days to policies in force**

\[
\frac{\text{number of company-initiated cancellations that occur 60 days or more after the effective date}}{\text{number of private flood policies or endorsements in force at the end of the reporting period}}
\]
Ratio 6. **Company-Initiated Cancellations under 60 days to new policies issued**

\[
\left( \frac{\text{number of company-initiated cancellations that occur in the first 59 days after effective date}}{\text{number of private flood policies or endorsements written during the reporting period}} \right)
\]

Ratio 7. **Suits opened during the period to claims closed without payment**

\[
\left( \frac{\text{number of lawsuits opened during the period}}{\text{number of claims closed during the reporting period, without payment}} \right)

Ratio 8. **The percentage of lawsuits closed with consideration for the consumer**

\[
\left( \frac{\text{number of lawsuits closed during the period with consideration for the consumer}}{\text{number of lawsuits closed during the period}} \right)
\]
The Market Conduct Annual Statement Blanks (D) Working Group met via conference call July 31, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Crystal Phelps (AR); Sarah Borunda (AZ); Kurt Swan (CT); Sharon P. Clark and Lori Cunningham (KY); Paul Hanson (MN); Teresa Kroll (MO); Todd Oberholtzer (OH); Katie Dzurec (PA); Michael Bailes (SC); and John Haworth (WA).

1. ** Adopted its June 24 Minutes**

The Working Group met June 24 and took the following action: 1) adopted its May 28, May 27, May 21 and May 20 minutes; 2) discussed Market Conduct Annual Statement (MCAS) Data Call and Definitions clarifications needed after adoption of changes to the life, annuity, homeowners and auto MCAS lines of business; and 3) adopted a motion to edit part of the first sentence of the definition for individual indexed variable annuity from “offers some principal protection” to “may offer some principal protection.”

Mr. Haworth made a motion, seconded by Mr. Swan, to adopt the Working Group’s June 24 minutes (Attachment Three-A). The motion passed unanimously.

2. **Discussed Possible Clarifications for Recently Adopted MCAS Updates**

   a. The first item discussed was clarification on how the definitions of the types of insurance (TOIs) are to be used within reporting for the data elements added in the homeowners underwriting section. Four new data elements were added during the June 24 call: 1) the number of dwelling fire policies in force at the end of the period; 2) the number of homeowner policies in force at the end of the period; 3) the number of tenant/renter/condo policies in force at the end of the period; and 4) the number of all other residential property policies in force at the end of the period. Draft language was included in the call materials, and it was posted to the Working Group’s web page for review.

   Ms. Rebholz stated that a note could be added at the beginning of the definitions section of the Data Call and Definitions to clarify how the definitions should be used. There were no comments by Working Group members, interested state insurance regulators or interested parties.

   Any thoughts, suggestions or comments on this topic were requested to be submitted to Teresa Cooper (NAIC) by Aug. 19 for consideration.

3. **Discussed Possible MCAS Updates Previously Tabled**

   a. The first item for discussion was related to the third-party administrator (TPA) and managing general agent (MGA) reporting that was previously adopted for the life, annuity, homeowners and auto interrogatories. For the life and annuity MCAS, an interrogatory was added to ask if the company uses TPAs; if so, it was asked to name each TPA and its function. For the homeowners and auto MCAS, two interrogatories were added. One was to ask if the company uses MGAs; if so, it was asked to name each MGA. The other added interrogatory was to ask if the company uses TPAs; if so, it was asked to name each TPA.

   Ms. Rebholz stated that Ms. Nickel has also suggested adding an interrogatory for the inclusion of the TPA’s and MGA’s national producer number (NPN). Mr. Hanson asked if all TPAs and MGAs would have an NPN. Ms. Nickel stated that she believes they are required to have an NPN. Mr. Haworth stated that some states do not license TPAs, so they may be tracked differently as a result.

   Any thoughts, comments or suggestions on this topic were requested to be submitted to Ms. Cooper by Aug. 19 for consideration.
b. The next item discussed was the suggestion from the Center for Economic Justice (CEJ) to add definitions and data elements related to accelerated underwriting to the life MCAS reporting. Comments for this suggestion were included in the meeting materials for the call. The suggested definition is: “accelerated underwriting means underwriting or pricing of life insurance in whole or in part on non-medical data obtained from other than the applicant or policyholder and includes, among other things, facial analytics, social media and consumer credit information.”

Birny Birnbaum (CEJ) stated that the life insurance industry is using non-medical, non-traditional data to develop models that replicate its traditional underwriting. Issues associated with accelerated underwriting may be of interest to market regulators. The proposal includes a definition for accelerated underwriting and three interrogatories. The suggestion would be that some of the data elements would be reported separately for accelerated underwriting related business versus non-accelerated underwriting business. For example, there is currently a data element for the total number of new policies issued by the company during the period; the proposal would suggest separating this into two data elements: one for the total number of policies issued by the company during the period utilizing accelerated underwriting and one for the total number of policies issued by the company during the period utilizing other than accelerated underwriting.

David Leifer (American Council of Life Insurers—ACLI) stated that there is a lot of work going on related to this subject among other NAIC working groups. He does not know if the definition proposed for accelerated underwriting is accurate, and he suggested working with other groups that are discussing this topic before making any final decisions here.

Mr. Birnbaum stated that the CEJ has only proposed this, and if the Working Group decides this is an issue that should be considered as part of the MCAS blanks, the definition of accelerated underwriting will then be developed. He said he does not believe this subject should be delayed, as working on this now means that the earliest reporting would be 2022 data reported in 2023.

Brendan Bridgeland (Center for Insurance Research—CIR) stated support for Mr. Birnbaum’s proposal. He stated that consumers should have some idea of what is going into their rating and underwriting and why they have been denied access. For example, there could be duplicate factors disqualifying someone, such as a credit score in addition to a personal bankruptcy. Mr. Bridgeland stated that it would be useful to track the information proposed by the CEJ.

Commissioner Clark stated that the CEJ’s suggestion holds merit, and she would like the Working Group to consider collecting this data.

Mr. Haworth stated that it is warranted to explore this topic because of the concerns with how different types of consumer information are being used, especially with the current economy. He stated that the Working Group can collaborate with others to create a definition, along with inserting terms for predictive analytics and a couple of others regarding algorithms. Ms. Nickel agreed.

Any thoughts, comments or suggestions on this topic were requested to be submitted to Ms. Cooper by Aug. 19 for consideration.

c. The next item discussed was related to the placement of lawsuit and complaints data elements within the homeowners and auto MCAS. There is concern that complaint counts are not reported accurately. Previous discussion noted four options. The first option discussed was to create a new reporting section for lawsuits and complaints. The concern with this option is that complaints are currently reported in total in the underwriting section, while lawsuits are reported by coverage in the claims section. Other lines require reporting of complaints by coverage. The second option discussed was to move the complaints questions to the interrogatories. The concern with this option is that it could cause issues when trending past data, and it would be inconsistent with other MCAS lines of business. The third option discussed was to add clarification to the complaint definition. The fourth option was to change the claims section title to be “Claims and Total Complaints.”

Mr. Haworth stated that he does not see a need to make a change here. Ms. Nickel stated that she believes the concern here is that carriers are not reporting this data correctly.
Mr. Haworth stated that he has seen situations in which the company does not have a correct way of tracking what a complaint is, by definition, so the insurance department shows more complaints than the company because of underlying reporting issues within the company.

Mr. Birnbaum stated that one of the concerns that was raised is that the current placement suggests that companies only report certain types of lawsuits or certain types of complaints. By pulling this information out into a section called “complaints and lawsuits,” it would be much clearer to reporting companies that the MCAS is looking for any type of complaint, or any type of lawsuit, regardless of whether it is related to claims, underwriting, or any other matter.

Any thoughts, suggestions or comments on this topic were requested to be submitted to Ms. Cooper by Aug. 19 for consideration.

d. The next item discussed was the suggestion from the CEJ to break claims data elements for Homeowner Dwelling and Personal Property coverages into Digital Claims Settlements and Other than Digital Claims Settlement. This suggestion is detailed within the CEJ’s May 25 comment letter, which was included in the meeting materials.

Mr. Birnbaum stated that a digital claims settlement, sometimes referred to as “virtual claims handling,” refers to a loss appraisal not involving a human on-site inspection of the property, but it is based on digital information, including photos taken by the insured or claimant, a plane or drone, or information provided by sensors or cameras within or near the property. For some cars, if there is an accident, the car will be able to send information to the insurer, who can run information through an algorithm and almost instantaneously produce a claim settlement proposal for the insured. While there are some great potential benefits, there are also some consumer protection issues, such as whether these digital/virtual claims settlements are fair or significantly different from those that involve a human being.

Because of this change in claim settlements, the CEJ is suggesting that for homeowners and auto, the claim data elements be broken out into digital claims settlement and other than digital claims settlement. Then market analysts can determine whether any significant differences exist by company or by industry in the nature of the timing or the outcomes for digital claims settlements versus other than digital claims settlements. The CEJ proposal included a definition for each category and gave an example of how the two categories might be presented in the MCAS.

Mr. Birnbaum discussed the definitions proposed, and he provided examples. He added that the volume of these types of claims has grown as a result of the pandemic, and it is unlikely that there will be a movement back to fewer digital claims.

Ms. Nickel stated that it would be a good idea to consider this because digital claims will likely increase as time goes on. She stated that considering the effects of underwriting on this topic would be something to think about going forward, as well.

Ms. Cunningham agreed that consideration of digital practices regarding underwriting would be useful.

Mr. Haworth asked if the CEJ proposal applies to homeowners and auto lines. He stated that customers are using applications to submit photos of auto damages, and he pointed out the need to consider how supplements on claims would be addressed. Mr. Birnbaum stated that the proposal does apply to homeowners and auto.

Ms. Rebholz stated that in Wisconsin, auto repair facilities are stating that they see a high number of supplemental claims on digital claims settlements because the initial settlement does not address the full scope of the damage.

Mr. Birnbaum stated that there would be a presentation during the NAIC/Consumer Liaison Committee meeting on Aug. 14 regarding the issue of digital claims settlements for auto if anyone would like to learn more on this issue.

Any thoughts, suggestions or comments on this topic were requested to be submitted to Ms. Cooper by Aug. 19 for consideration.
4. Discussed Other Matters

Richard L. Bates (State Farm Insurance) stated that State Farm recently learned that there was an adopted change to the auto MCAS to add a data element for claims closed without payment when the damage is below the deductible. He asked what the purpose of adding this data element is, how the data would be used, and if the industry was consulted on if they could produce this information and the extent to which it would be accurate. He stated that there would be significant costs imposed on carriers, and therefore consumers, in trying to understand the regulatory concern here.

Ms. Nickel stated that it is important for state insurance regulators to know how many claims are being denied, and separating out claims that were closed just because they were below the deductible was a way to better understand the data being presented by carriers and determine if further analysis of a carrier is warranted. She also stated that there were industry representatives present for the discussion on this topic and the call was open to anyone that wanted to participate. She stated that if Mr. Bates could provide an analysis, comments, and any additional feedback from State Farm and/or other carriers by Aug. 19, they would be reviewed and considered. She also stated that if he has any suggestions that would remedy this issue for state insurance regulators and be suitable for insurers, those ideas would be welcome.

Mr. Birnbaum stated that this seems like a useful distinction. He explained that there can be a variety of reasons a claim is closed without payment, and if claims closed without payment due to being below the deductible are separated out, the remaining data on other claims closed without payment is more meaningful. He asked Mr. Bates how much State Farm would have to raise its rates to provide this information to state insurance regulators.

Mr. Bates stated that he did not know and would check on that. He stated that he is looking at the assumption that there is always an ability for insurers to provide the reasons for claims closed without payment, and he suspects that State Farm will be able to satisfy some of that. He explained that there are times when a claim can close without payment below the deductible, and the insurer would not know that is the reason because the policyholder decided not to pursue their claim after filing it, as perhaps the policyholder learned the damages were below the deductible but never shared that with the insurer.

Ms. Rebholz stated that there is a ratio for claims closed without payment compared to the total number of claims closed. She stated that part of the discussion on this issue related to separating out claims closed without payment due to being below the deductible to ensure this ratio accurately reflected the claims that were being closed without payment for other reasons so that a carrier would not appear as an outlier just because they had so many high deductible plans.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call June 24, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Maria Ailor (AZ); Kurt Swan represented by Steve DeAngelis (CT); Scott Woods (FL); Lori Cunningham (KY); Michael Bailes (SC); Ned Gaines and John Haworth (WA); and Letha Tate (WV).

1. **Adopted May 28, May 27, May 21 and May 20 Minutes**

The Working Group met May 28, May 27, May 21 and May 20 and took the following actions: 1) adopted its May 6 minutes; 2) discussed survey results and adopted various changes to the life, annuity, homeowners and private passenger auto (PPA) Market Conduct Annual Statement (MCAS) blanks and Data Call and Definitions; 3) adopted edits to the lender-placed insurance (LPI) MCAS regarding blanket vendor single interest (VSI); and 4) adopted a motion to add an interrogatory for the homeowners and auto MCAS.

Ms. Nickel noted that it appeared that a change needed to be made to the May 28 minutes regarding the motion she made under Section 1, Item E, for reporting claims closed without payment that are below the deductible. Her understanding and intention of the motion was for the data element for claims closed without payment that are below the deductible be its own field.

Ms. Cunningham agreed that she understood the motion to add a data element for reporting claims closed without payment that are below the deductible to be a separate field that would not remove those claims from the total number of claims closed without payment.

Birny Birnbaum (Center for Economic Justice—CEJ) asked if the minutes as they were written just need to have the portion removed that states, “and to remove claims closed because the amount claimed is below the insured’s deductible from the reporting of the claims closed without payment data element.” Ms. Nickel said that was correct.

Ms. Ailor noted that currently the questions on claims closed without payment include those claims that are closed because they were below the deductible. She asked if the proposed change is to collect that data in the same fashion that it has been collected previously, but to add a new data element to only collect claims closed without payment that were closed because they are below the deductible. Ms. Nickel said that was her understanding of the motion.

Ms. Nickel made a motion, seconded by Ms. Cunningham, to correct the May 28 minutes under Section 1, Item E, to read, “Ms. Nickel made a motion, seconded by Ms. Cunningham, to add a data element for reporting claims closed without payment that are below the deductible. The motion passed unanimously.” The motion passed unanimously.

Mr. Haworth made a motion, seconded by Ms. Nickel, to accept the May 28 (Attachment Three-A1), May 27 (Attachment Three-A2), May 21 (Attachment Three-A3) and May 20 minutes (Attachment Three-A4). The motion passed unanimously.

2. **Discussed MCAS Data Call and Definitions Clarifications Needed After Adoption of Changes to the Life, Annuity, Homeowners and Auto MCAS Lines of Business**

   a. The first items discussed were the changes adopted for the Life and Annuity MCAS lines of business. Surrender data elements were added for the number of policies surrendered with a surrender fee and the number of policies surrendered more than 10 years from policy issue. No clarifications were added for these data elements.

   The interrogatory added for the life and annuity MCAS was, “Does the company use third party administrators (TPAs) for purposes of supporting the business being reported? If yes, provide the names and functions of each TPA.” These updates were also added for the Home and Auto lines, but the function is not required for the other lines.
Ms. Nickel suggested that in addition to this interrogatory, the definition of what a TPA is should be added, and it should include the TPA’s National Producer Number (NPN).

Mr. Birnbaum noted that he did not believe this could be presented as clarification, as it appears to be a substantive change and it was not completed by June 1. He also believes a change like this would need to be a data element. After discussion among the Working Group, the decision was made to table this suggestion for next year.

The next item changed in the life and annuity MCAS was replacements. The number of external replacements issued during the period was removed and replaced with the following: 1) number of external replacements of unaffiliated company policies issued during the period; and 2) number of external replacements of affiliated company policies issued during the period. Definitions for external replacement of affiliated company policies and external replacement of unaffiliated company policies were also added.

The final changes discussed on the life and annuity MCAS were the lawsuit data elements and related definitions that were added, as used in the other lines of business.

b. The next items of discussion were the adopted changes for only the annuity MCAS line of business. “Individual Fixed Annuities” was replaced with “Individual Indexed Fixed Annuities and Individual Other Fixed Annuities.” A definition was also added for “Individual Indexed Fixed Annuity.”

“Individual Variable Annuities” was replaced with “Individual Indexed Variable Annuities and Individual Other Variable Annuities.” A definition was also added for “Individual Indexed Variable Annuity.”

Ms. Nickel noted that the definition of “Individual Indexed Variable Annuity” does not specify anything for the variable portion, and she asked if more clarification could be added.

Mr. Birnbaum noted that the definition starts with stating variable annuities and limits the types of variable annuities to those whose accumulation or policy value is linked to an index or indices and offers some principal protection. He believes the variability is adequately covered by starting the definition with a variable annuity. He noted that if you wanted to add the word “may” in the first sentence so that the portion of the definition is “may offer some principal protection” instead of just “offers some principal protection,” he does not believe that harms the definition at all.

Ms. Nickel made a motion, seconded by Mr. Gaines, to edit part of the first sentence of the definition for “Individual Indexed Variable Annuity” from, “offers some principal protection” to, “may offer some principal protection.” The motion passed unanimously.

c. The next set of adopted changes discussed applied to the homeowners and auto MCAS lines of business. The following interrogatories were added: 1) Does the company use TPAs for the purposes of supporting the business being reported? If yes, provide the names of each TPA; and 2) Does the company use managing general agents (MGAs) for the purposes of supporting the business being reported? If yes, provide the names of each MGA. No clarifications were added for this data element. Whether or not the MGA or TPA’s NPN should be included in the reporting is an item that will be tabled and discussed next year.

A data element was also added for lawsuits closed with consideration for the consumer. Suits was updated to lawsuits within the existing lawsuit data elements, and related lawsuit definitions were added from other lines of business to make everything consistent across the blanks.

d. The next set of adopted changes discussed applied only to the homeowners line of business. Updates were made to interrogatory 12 and interrogatory 13, and no clarification was needed.

The underwriting data element for number of homeowners policies in force at the end of the period was replaced with the following: 1) number of dwelling fire policies in force at the end of the period; 2) number of homeowner policies in force at the end of the period; 3) number of tenant/renter/condo policies in force at the end of the period; and 4) number of all other residential property policies in force at the end of the period.
The definition of “Dwelling Fire and Dwelling Liability Policies” was updated to just be “Dwelling Fire Policies.” Homeowners policies were updated to include policies written on HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8 policy forms. The definition of “tenant/renter/condo policies” was also added.

Ms. Rebholz noted that the Working Group needs to discuss clarification for renter’s insurance within the “homeowners policy” definition and how to ensure that claims reporting is not altered. Removing renter’s insurance from the definition of “homeowners policy” could cause renter’s insurance data to be left out of the claims reporting.

Ms. Nickel noted that she believes tenant and renter’s policies should be included in the “homeowners policy” definition so they can be reported in claims, cancellations, nonrenewals and other areas, in addition to the dwelling fire.

Mr. Birnbaum discussed his understanding of the adopted change for the renter’s and tenant policies made during the May 27 call.

Mr. Gaines noted that his intent was not to completely break everything down, it was just to be able to capture that information. He said he does not want to make it more difficult on the carriers.

Ms. Rebholz asked if the way the adopted changes are outlined correctly, and Mr. Gaines confirmed they were. After further discussion, Ms. Rebholz suggested that the adopted changes remain as they are written for now, and if issues are seen in collecting these data elements, review and corrections can be made as needed in the future.

e. The next items discussed were the adopted changes to the auto MCAS. Wording was updated in interrogatory 16 and interrogatory 17. No clarification was needed.

The following interrogatory was added: Does the company use telematics or usage-based data? A definition was also added for Telematics and Usage-Based Data. A data element was also added for claims closed without payment because the amount claimed is below the insured’s deductible.

Mr. Haworth noted that the definition of “lawsuit” needs to be corrected under the homeowners Data Call and Definitions, as it indicates it is for life and annuity.

Teresa Cooper (NAIC) confirmed that was a typo that would be corrected. It will also be corrected in the PPA Data Call and Definitions.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group
Conference Call
May 28, 2020

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 28, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Crystal Phelps (AR); Maria Ailor (AZ); Mark Duffy (CT); Scott Woods (FL); Lori Cunningham (KY); Angela Dingus and Guy Self (OH); Jeffrey Arnold (PA); Michael Bailes (SC); Ned Gaines and John Haworth (WA); and Letha Tate (WV).

1. Discussed and Adopted Edits to the PPA MCAS Blanks Data Call and Definitions

Ms. Rebholz said that the survey results and a summary of items in the survey for this discussion are posted on the Working Group’s web page. A summary of the decisions made during the Working Group’s May 27 conference call for the homeowners Market Conduct Annual Statement (MCAS) was provided.

   a. Exclusions

   The first item discussed was to change the granularity of the private passenger auto (PPA) reporting to exclude reporting for uninsured motorist bodily injury (UMBI), uninsured motorist property damage (UMPD), medical payments, combined single limit (CSL) and personal injury protection (PIP). This would mean going forward, the MCAS would focus only on collision, comprehensive, liability and property damage (PD). The Working Group did not express interest in making this change.

   b. Policies in Force

   The next suggestion discussed was to require companies to report the number of policies in force by coverage type within the interrogatories. The Working Group did not express interest in making this change.

   c. Update to Question 16 and Question 17

   The next item of discussion was to make a change to question 18 in the interrogatories to include “last three data years.” It appears the intent was to update question 16 and question 17 similarly to the update suggested for homeowners. The decision made for homeowners was to change the wording in question 12 and question 13 from “Has all or part of this block of business been sold, closed or moved to another company during the year?” to “Has all or part of the this block of business been sold, closed or moved to another company during the reporting period?”

Ms. Nickel made a motion, seconded by Mr. Haworth, to update the wording in question 16 and question 17 of the PPA MCAS to match the reporting for question 12 and question 13 in the homeowners MCAS. The motion passed unanimously.

   d. Telematics or Usage-Based Data

   The next item discussed was the suggestion to add two interrogatories for: “offers a transportation network company (Uber, Lyft) or similar rideshare endorsement” and “offers or uses telematics or usage-based products.” Working Group members, interested state insurance regulators and interested parties discussed the suggestion.

Ms. Nickel made a motion, seconded by Mr. Arnold, to add the interrogatory “Does the company use telematics or usage-based data?” with a “yes” or “no” response. The motion passed unanimously.

   e. Reporting Claims Closed Without Payment That Are Below the Deductible

   The next topic discussed was to add a data element for reporting claims closed without payment that are below the deductible. Ms. Nickel and Ms. Cunningham expressed interest in adding this data element.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said this does not seem to provide information on a company’s market activity and stated a better approach may be redefining claims closed without payment to exclude those
that were closed because the claim was below the deductible. Ms. Nickel said some carriers report these claims incorrectly and explained this could be an indication of a company’s procedural or compliance issue. Further discussion took place.

Ms. Nickel made a motion, seconded by Ms. Cunningham, to add a data element for reporting claims closed without payment that are below the deductible. The motion passed unanimously.

f. **Phantom Claims**

The next suggestion was to edit the claim definition to avoid phantom claims. Mr. Self said an event reported for information only and coverage inquiries are not supposed to be included in claim counts. Ms. Brown said many states have statutes indicating an insurer cannot open a claim file based solely on an inquiry from a policyholder based on the potential of a claim. After discussion among Working Group members, there was no motion to make changes regarding this suggestion.

g. **Claims Closed With Payment Beyond 180 Days**

The next suggestion discussed was to remove data elements for claims closed with payment beyond 180 days. It was explained that removing these data elements removes the ability of NAIC staff to determine if the median days to final payment is reasonable. Mr. Arnold said he thinks these questions should remain due to the long tails that can take place on bodily injury (BI) claims. Ms. Ailor also supported keeping these data elements as PD claims can also last a long time and can be problematic if there are unnecessary delays in paying claims. There was no interest in removing these data elements.

h. **Separate Reporting for Each MGA**

The next suggestion was for reporting to be done separately for each managing general agent (MGA) to allow state insurance regulators to focus more on the MGAs that are potentially causing issues. During the Working Group’s May 27 conference call related to the homeowners MCAS, it was decided to add an interrogatory question to ask if the company uses any MGAs and if so, to list them by name.

Mr. Gaines made a motion, seconded by Ms. Nickel, to add the interrogatory question asking if the company uses any MGAs and if so, to list them by name. The motion passed unanimously.

i. **Company-Initiated Cancellations**

The next suggestion discussed was to break out the reporting of company-initiated cancellations after effective date in the underwriting section, excluding rewrites to a related company, to 0–29 and 30–59 days. Currently, the breakouts for this data element are 0–59 days, 60–90 days and beyond 90 days. This suggestion would add an extra bucket to separate those within the first 59 days. The Working Group did not express interest in making this change.

j. **Reporting of Terminations Triggered by Nonsufficient Funds**

The next suggestion discussed was to separate reporting of terminations triggered by nonsufficient funds and the insured’s request. Ms. Rebholz explained this data is already broken out by number of cancellations for non-pay or nonsufficient funds and number of cancellations at the insured’s request. There was no further discussion raised in making changes here.

k. **MD&A Section**

The next suggestion discussed was to add the submission of a management discussion and analysis (MD&A) section. This was discussed during the Working Group’s May 27 conference call, and the Working Group decided this suggestion would be passed to the Market Analysis Procedures (D) Working Group.

l. **Lawsuits Closed With Consideration for the Consumer**

The next suggestion discussed was to add a data element to reflect lawsuits closed with consideration for the consumer and adjust wording of lawsuits to make it consistent across all lines of business. The decision was made to add a question for lawsuits closed with consideration for the consumer for the homeowners line and to change the wording of lawsuits questions to use “lawsuits” versus “suits” and consistent definitions across the lines of business.
Ms. Nickel made a motion, seconded by Mr. Arnold, to add the “number of lawsuits closed with consideration for the consumer,” to adjust the wording to say “lawsuits” instead of “suits” and to keep the definitions consistent to the other lines of business. The motion passed unanimously.

m. Non-Renewals and Digital Claims

The next topic discussed was the letter received from Birny Birnbaum (Center for Economic Justice—CEJ). Mr. Birnbaum said that the auto and homeowners blanks have data elements for company-initiated non-renewals during the period. He said it would be useful to get more granular information on the cause of non-renewals to see what is driving them and suggested four buckets: 1) non-renewals based in whole or in part on claims history; 2) non-renewals based on catastrophe risk exposure; 3) non-renewals based on changes in credit score other algorithm using non-insurance personal consumer information; and 4) all other company-initiated non-renewals. The proposal has definitions for each bucket to ensure they are mutually exclusive and to avoid overlap.

Ms. Nickel asked the NAIC if this would change any of the current ratios being used. Teresa Cooper (NAIC) said it would not cause any issues with any current ratios.

Ms. Brown said the insurers she communicated with on this suggestion indicated they do not capture this information in their systems. They said they do not code the reasons for non-renewals as outlined in this suggestion. Mr. Birnbaum advised the MCAS timeline is set up the way it is to give companies time to prepare their systems to collect the data being requested in the future. After further discussion among Working Group members and interested parties, it was suggested that this suggestion would be tabled for future discussion and review. There was no motion to make changes here.

Ms. Rebholz advised there was also a suggestion by Mr. Birnbaum regarding breaking claims elements into digital claims versus other than digital claims. Mr. Birnbaum said unless there was a member of the Working Group that has an interest in this, it can also be tabled for future discussion. Ms. Nickel said she likes the idea and agrees it should be reviewed in the future. She expressed interest in knowing about inspections on structures for homes, specifically regarding claims and whether adjusters are looking at the damages. She asked how this would apply to personal property. Mr. Birnbaum advised it would apply in the same way as it would to structural damage—for example, if your home was hit by a hurricane and you sent pictures of the damage, and the claim was settled based on the pictures.

Ms. Brown said that homeowners and auto writers she discussed this with indicated they have a lot of claims that would have aspects of both, where initially they would accept a drone assessment of the policyholder’s loss but then later an adjuster is sent to inspect the damage. The same thing happens with auto claims, where initially the policyholder sends photos and then goes to a body shop, and then subsequent damage is found at the body shop. She said having these things be a part of the future discussion would be appreciated. Ms. Nickel said she sees a lot more of the drone use or use of Google images of homes before they are damaged. Carriers sometimes assess damage based on an older image that was taken years prior to the loss. Mr. Birnbaum said the definitions address some of the issues raised. He also said the National Insurance Crime Bureau (NICB) has a database of aerial photography. The NICB has planes flying over the country taking high-resolution photographs of properties that show resolution within two to three inches of every part of the country. It can use this to show the condition before a hurricane, and then a drone can look at the condition afterwards. This topic was tabled for future discussion.

2. Adopted Edits to the LPI MCAS Regarding Blanket VSI

Ms. Rebholz said that a subject matter expert (SME) group has discussed the lender-placed insurance (LPI) auto and home reporting issue for vendor single interest (VSI) products. The meeting material attachments four and five show redline copies of the LPI blank and data call and definitions that the SME group proposed. The proposal is to add separate reporting for blanket VSI auto and blanket VSI home. Mr. Birnbaum pointed out that the mock-up of the data call and definitions should be updated to have the new interrogatory wording consistent with those added in the blank. Each should say “Blanket Vendor” Single Interest.

Mr. Haworth said several different parties and state insurance regulators have reviewed and provided input on these proposed changes. Ms. Brown said the APCIA supports the proposal. Tom Keepers (Consumer Credit Industry Association—CCIA) said that while the CCIA was a part of the SME group and appreciated the collaboration on defining the data elements and being able to contribute to the process, the CCIA is still not supportive of reporting VSI.
Ms. Nickel made a motion, seconded by Mr. Haworth, to add separate reporting for blanket VSI auto and blanket VSI home, with interrogatory questions to be added for each additional coverage and additional columns to be added for the reporting of data. The motion passed unanimously.

3. **Adopted a Motion to Add an Interrogatory for the Homeowners and Auto MCAS**

Tanya Sherman (INS Companies) said that during the life and annuity conference calls last week, the Working Group agreed that third-party administrators (TPAs) would be added to the interrogatories. She said that during the conference calls today and yesterday, the Working Group agreed to add MGAs for property/casualty (P/C). She asked if also adding TPAs and not just MGAs to the P/C reporting would be appropriate. Ms. Nickel said she does not see a lot of TPA usage in Idaho Mr. Haworth said Washington sees a lot of TPA use, and it has companies that contract out a lot of services either for underwriting or claim handling.

Ms. Nickel made a motion, seconded by Mr. Arnold, to add an interrogatory for the homeowners and auto MCAS asking if the company uses a TPA, and if so, to list the name and function. The motion passed unanimously.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 27, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Crystal Phelps (AR); Sarah Borunda (AZ); Kurt Swan (CT); Scott Woods (FL); Lori Cunningham (KY); Paul Hanson (MN); Teresa Kroll (MO); Angela Dingus (OH); Jeffrey Arnold (PA); Michael Bailes (SC); Ned Gaines and John Haworth (WA); and Letha Tate (WV). Also participating were: Sarah Crittenden (GA); and Jill Huisken (MI).

1. **Adopted its May 6 Minutes**

The Working Group met May 6 and took the following actions: 1) adopted its Feb. 26 minutes; 2) received an update on existing market conduct annual statement (MCAS) reviews and the other health MCAS development; and 3) adopted a $50,000 premium threshold for the private flood MCAS reporting.

Mr. Gaines made a motion, seconded by Mr. Arnold, to adopt the Working Group’s May 6 minutes (Attachment Three-A2a). The motion passed unanimously.

2. **Discussed and Adopted Edits to the Homeowners MCAS Blanks Data Call and Definitions**

Ms. Rebholz said the Working Group should come to consensus and vote on needed edits prior to the June 1 deadline for changes that would apply to the 2021 data year. She said some issues may require more in-depth consideration and review. If such an issue arises, it may be necessary to table it for a future discussion. She said the survey results and a summary of items in the survey for this discussion are posted on the Working Group web page. The items highlighted in gray are related to the MCAS Market Analysis Prioritization Tool (MAPT). Ms. Rebholz said the Market Analysis Procedures (D) Working Group will forward rankings and ratios to Mr. Haworth for discussion.

   a. **Policies in Force**

The first item discussed was a suggested interrogatory change dealing with policies in force. The suggestion was to add a question to the interrogatories where a company could provide an explanation for any significant difference between the number of policies in force at the end of the prior year and the number reported in force for the beginning of the current reporting period. The other related suggestion is to add a data element to report the number of total, in-force policies by coverage type in the interrogatories. There was no interest expressed to make changes here.

   b. **Renter’s and Tenant Policies**

The next suggestion to the interrogatories was to break out reporting for renter’s and tenant policies. Working Group members discussed this suggestion.

Birny Birnbaum (Center for Economic Justice—CEJ) advised if the Working Groups want to get the information on the number of renter’s policies, it should ask about the number of homeowners policies in force at the end or beginning of the period, how many dwelling fire policies were in force and how many renter/tenant/condo policies grouped together were in force.

Ms. Rebholz said the next suggestion to the interrogatories along this subject is to break out renter’s policies and homeowner coverage separate from dwelling since there is a separate definition within the data call and definitions.

Teresa Cooper (NAIC) said another option is to add the reporting of these values to the underwriting section since data is already collected for policies in force in that section for homeowners, renter’s and dwelling. Mr. Haworth and Mr. Arnold said they agree.
Mr. Birnbaum stated the NAIC Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative Unit Owner’s Insurance Report (Homeowners Report) outlines how residential properties groups are categorized. The groups are: 1) dwelling fire, which is HO1; 2) homeowners, which is HO3 and HO5; and 3) renter’s/condo/co-op, which are HO4 and HO6. He suggested using the same three categories if adding them to the underwriting section.

Mr. Gaines made a motion, seconded by Mr. Arnold, to create three additional categories in the underwriting section: 1) dwelling fire; 2) homeowners; and 3) renter’s/condo/co-op. The motion passed unanimously

c. Interrogatories

The next item of discussion was to make a change to question 12 and question 13 in the interrogatories. The question currently asks: “Has all or part of this block of business been sold, closed or moved to another company during the year?” The suggestion is to change the end of the question to ask for information during the “last three data years.”

Ms. Ailor asked if this is data that could be obtained from the dashboard.

Tressa Smith (NAIC) confirmed the interrogatories will be available in the dashboard and that information on a current year would be available, as well as information up to five years back to see how responses have varied over time.

Ms. Crittenden said the three-year question seems to go outside of the MCAS annual reporting for the data year.

Ms. Rebholz asked if it would be better to change the wording to: “Has all or part of this block of business been sold, closed or moved to another company during this reporting period?” with the understanding that the dashboard can provide information three years back. Mr. Haworth supported this idea.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she agrees with Ms. Crittenden and Mr. Haworth in that the companies have been reporting this data for quite a while on an annual basis and if the information can be obtained off the dashboard, the APCIA would support just changing the wording as suggested.

Ms. Nickel made a motion, seconded by Ms. Ailor, to edit the wording in the end of the question from “during the year” to “during this reporting period.” The motion passed unanimously.

d. Private Flood Coverage

The next item discussed was to add an interrogatory asking if the company writes private flood coverage outside the National Flood Insurance Program (NFIP).

Mr. Haworth said if he wants to know this information, he reviews the private flood MCAS. After discussion among Working Group members and interested parties, there was no motion made to make this change.

e. Claims Closed Without Payment

The next topic discussed was to add a data element to the Claims category for reporting claims closed without payment for those that are below the deductible. Currently, claims that are for amounts below the insured’s deductible are reported as claims closed without payment, but they are not separated out from other claims closed without payment. If a data element is added, it might be necessary to exclude these from the current reporting of claims closed without payment.

There was no motion to add this data element.

f. Phantom Claims

The next suggestion was a concern related to phantom claims. The current definition of a claim and the clarification instructing the insurer what to exclude was discussed.

There was no motion to make edits here.
g. **Claims Closed with Payment Beyond 90 Days**

The next suggestion discussed was to remove claims question 26, question 27 and question 28. This would eliminate the reporting of claims closed with payment beyond 90 days. NAIC staff use the numbers reported in lines 23 through 28 to determine if the value reported on line 22 (median days to final payment) is reasonable. If elements 26 through 28 are removed, this check can no longer be done.

After discussion among Working Group members and interested state insurance regulators, there was no motion to make changes here.

h. **Separate Reporting for Each MGA**

The next suggestion discussed was for reporting to be done separately for each managing general agent (MGA) to allow state insurance regulators to focus more attention on the MGAs that are potentially causing issues. During previous life and annuity discussions, the Working Group decided that an interrogatory would be added to ask for a listing of third-party administrators (TPAs) that the company uses and each TPA’s function.

Mr. Gaines said that being able to identify which MGAs a company is using would be helpful.

Ms. Nickel made a motion, seconded by Mr. Haworth, to add an interrogatory to list the names of MGAs that a company is using. The motion passed unanimously.

i. **Complaints Questions in the Underwriting Section**

The next suggestion discussed is to entirely remove the complaints questions in the underwriting section because companies do not seem to report the complaint counts correctly.

Mr. Haworth, Mr. Arnold and Ms. Brown said they do not think it should be removed.

Ms. Ailor said the location of the complaints question being in the underwriting section could be causing confusion.

Mr. Birnbaum advised the complaints data and lawsuit data in other lines of business are broken out in different categories and suggested doing the same here to eliminate confusion that may exist.

Ms. Nickel made a motion to create a new category for complaints and lawsuit information and move the question that currently exists for complaints to that new category.

Ms. Smith pointed out that currently the number of complaints received directly from any person or entity other than the insurance department is under the underwriting section, but that section is not broken out by coverage type. Data for complaints is not collected separately for dwelling, personal property, liability, medical payments and loss of use. Currently, complaints are collected as a whole, and lawsuits are collected by coverage type, so data collected for complaints and lawsuits are collected in different manners.

Ms. Nickel made a motion to move the complaint question out of the underwriting section and to the interrogatory section.

Mr. Haworth asked if the data could still be pulled if the complaints were in the interrogatory section and expressed concern with consistency among other lines.

Mr. Birnbaum said if there is concern about having this question in the interrogatory section in terms of ease of access to the data, it could be kept as a data element. He said a reporting instruction could be added to report all complaints in the dwelling coverage and block out the other coverage boxes for that particular data element.

Ms. Rebholz asked NAIC staff what would be the easiest option and if that was an option.

Ms. Smith advised leaving the question in the underwriting section and said that adding some clarification would be the easiest solution, especially when considering looking at past data. The past data would still be in the underwriting section, and the new
data would be in interrogatories if the question was moved, which is something to be aware of in considering changes here and future analysis.

Ms. Brown asked if it would be easier to change the category name to “Underwriting and Total Complaints.”

Mr. Birnbaum said he believes there is a benefit to pulling out the lawsuits and the complaints data into a separate schedule as it has been done in other categories, so it is clearer that it is all complaints and all lawsuits.

Ms. Nickel made a motion to pull the two elements out for complaints and lawsuits and make one new section for complaints and lawsuits with all related questions into that category. There was no second and no changes or edits were made regarding that suggestion at this time.

Ms. Rebholz advised this can be discussed in the future.

j. Fire Protection Classes

The next suggestion discussed was to add a data element to capture fire protection classes used and to collect information regarding fire protection classes that are used.

Mr. Gaines said the Washington Insurance Examination Bureau conducts exams on companies for this, so Washington would not benefit from this addition.

There was no interest expressed in collecting this information.

k. Terminations Triggered by Nonsufficient Funds and the Insured’s Request

The next suggestion discussed was to separate reporting of terminations triggered by nonsufficient funds and the insured’s request. There is also a suggestion to separate reporting of terminations triggered by nonsufficient funds and the insured’s request. Currently, there are two data elements for this information: 1) the number of cancellations for non-pay or non-sufficient funds; and 2) the number of cancellations at the insured’s request.

There was no interest expressed in making changes here.

l. MD&A Section

The next suggestion discussed is for the addition of a Management Discussion & Analysis (MD&A) section to the MCAS. The suggestion is to add the submission of an MD&A. Insurers currently submit an MD&A document with their financial annual statement filings.

Ms. Nickel said she made this recommendation and explained why she supports this.

Ms. Huiskens asked if this information would be reported on a state-by-state basis. Ms. Nickel said she envisions the reporting would be on a national basis.

Ms. Brown asked if there would be a different MD&A for market versus financial or if it would be a replication of what is done on financial.

Ms. Nickel said it would focus on areas that would primarily affect the market, such as closed books of business and moving/shifting products from indexed annuities to variable products, use of TPAs and other general questions.

Ms. Brown said she thinks this should be a separate market report on a national basis, separate from MCAS reporting since MCAS data is reported by state.

Ms. Rebholz asked if Mr. Haworth could discuss this with the Market Analysis Procedures (D) Working Group to see if there was an interest there. He agreed to do so and said he does not believe it is suitable for MCAS reporting.
m. Lawsuits Closed with Consideration for the Consumer

The next suggestion discussed was to add a fifth data element to reflect lawsuits closed with consideration for the consumer and adjust wording of lawsuits to make it consistent across all lines of business. The MCAS lines of business of long-term care (LTC), disability, private flood and lender-placed have a data element for: “number of lawsuits closed with consideration for the consumer.” These were just added, along with: “number of lawsuits open at the beginning of the period,” “number of lawsuits opened during the period,” “number of lawsuits closed during the period” and “number of lawsuits open at the end of the period.” The current home and auto blanks do not have the “number of lawsuits closed with consideration for the consumer” and also refer to lawsuits as “suits.”

Ms. Brown said companies have indicated that this data is not easily captured. She said they would have to manually look at what offer was made prior to litigation in the settlement, and what payment or other thing of value would need to be added and defined to the claims handling process.

Mr. Birnbaum said that in addition to the data element, the data definitions used in the other blanks should be updated to have consistency with other lines on the data elements and definitions. He also said this information is useful and can eventually be programmed into company systems.

Ms. Nickel made a motion, seconded by Mr. Haworth, to add a data element for “number of lawsuits closed with consideration for the consumer” and to update the language from “suits” to “lawsuits” for consistency purposes. Ms. Cooper asked if the motion includes the definitions for the other lines, and Ms. Nickel said it does. The motion passed unanimously.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 6, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Crystal Phelps (AR); Maria Ailor (AZ); Kurt Swan (CT); Scott Woods (FL); Lori Cunningham (KY); Paul Hanson (MN); Teresa Kroll (MO); Angela Dingus (OH); Katie Dzurec and Jeffrey Arnold (PA); Michael Bailes (SC); John Haworth (WA); and Letha Tate (WV).

1. **Adopted its Feb. 26 Minutes**

The Working Group met Feb. 26 and took the following action: 1) adopted its Dec. 17, 2019, minutes; 2) discussed the review of the life and annuity market conduct annual statement (MCAS); 3) discussed the review of the homeowners (HO) and private passenger auto (PPA) MCAS; 4) discussed vendor single interest (VSI) concerns for the lender-placed MCAS; and 5) discussed the “other health” MCAS data call approved by the Market Analysis Procedures (D) Working Group.

Mr. Haworth made a motion, seconded by Ms. Kroll, to adopt the Working Group’s Feb. 26 minutes (Attachment Three-A2a). The motion passed unanimously.

2. **Received an Update on the Existing MCAS Line of Business Reviews and the Other Health MCAS Development**

Ms. Rebholz noted that due to the COVID-19 situation, the Working Group was previously asked to pause meetings. The Market Regulation and Consumer Affairs (D) Committee has since determined that the work of the Working Group is important and should move forward to avoid delays in the progress of MCAS edits and additions.

The first subject-matter expert (SME) group that will now resume their work is for lender-placed VSI MCAS data reporting. Discussions on this topic will continue May 13. In January, the Consumer Credit Industry Association (CCIA) raised some concerns about the VSI products being collected with the other lender-placed business collected in the MCAS. First, the CCIA said VSI business is commercial business meant to protect only the bank. Second, VSI is written as a blanket policy prior to the consumer transactions. There are no consumer cancellations, claims, or any tracking of insurance. The CCIA also noted that the inclusion of these types of products in the MCAS would skew the numbers because they are not individually underwritten. The Center for Economic Justice (CEJ) agreed with the CCIA on the concerns about including the VSI numbers in the aggregate totals of the lender-placed insurance (LPI) filings. However, Birny Birnbaum (CEJ) made the argument that rather than exclude VSI business, it should be broken out on the MCAS blank as a separate type of LPI coverage.

The LPI VSI subgroup met March 11 and determined that VSI should be broken out and included in the MCAS. Mr. Birnbaum and Tom Keepers (CCIA) submitted recommended edits for the blank, which are posted on the Working Group web page. These will be discussed during the May 13 call. Once the SME group agrees on needed edits, they will then be sent to the Working Group for consideration.

Ms. Rebholz asked if Ms. Dzurec would like to discuss the upcoming call for the “other health” MCAS drafting. Ms. Dzurec noted that the “other health” SME group that is developing the new “other health” MCAS blank and Data Call and Definitions will be meeting tomorrow, May 7. The “other health” drafting group had only one meeting before everyone’s focus was drawn to addressing the COVID-19 crisis. That call was held in regulator-to-regulator session, and it was intended to allow the state insurance regulators to discuss the specifics of the recent short-term limited-duration (STLD) data call and produce a rough draft that could be exposed to a drafting group of state insurance regulators, consumer representatives, and industry representatives. After some discussion at the working group level, a decision was made that all drafting group calls should be open to interested parties.

After two cancellations of the drafting group conference calls, the Working Group was finally given permission to begin its work again. All interested parties who have volunteered to be on the drafting group should have received a notice of the upcoming call. If anyone did not receive the notice and would like to participate, they were advised to contact Randy Helder (NAIC).
Ms. Dzurec also noted that work will begin on the STLD portion of the “other health” MCAS Data Call and Definitions. Consumer representatives were the only stakeholders to submit comments on what was exposed in the past. She advised that if there are others who have comments on this matter, they should also provide them to Mr. Helder.

Ms. Rebholz noted that the SME group discussed life and annuity next. To review the results and suggestions from the life and annuity survey, there will be two Working Group meetings. These meetings will be held May 20 and May 21.

Ms. Nickel noted that a survey was conducted in 2018 asking the states to provide their input regarding needed edits to the life and annuity MCAS blanks and Data Call and Definitions. Since that time, there have been SME group meetings to discuss the results, but no recommendations have been returned to the Working Group. During the last SME group call to discuss the life and annuity MCAS lines of business, the group discussed having each of the SMEs pick the top three issues they would like to address. No feedback from the SME group was received. In addition to the compilation of the 2018 survey results that are currently posted to the Working Group’s web page, a summarized list of issues from the life and annuity MCAS survey will be reviewed at the upcoming Working Group meetings to discuss the life and annuity MCAS lines. Possible additions, revisions and deletions for the life and annuity blanks and Data Call and Definitions will be determined. The meetings to discuss this further will be May 20 and May 21 to determine what the priorities are and move forward from there. Anyone interested in reviewing the survey and providing comments were asked to do so prior to the May 20 call. Comments can be emailed to Tressa Smith (NAIC), Mr. Helder or Ms. Nickel.

Ms. Rebholz noted that two additional meetings will be held to discuss the results from the homeowners and auto MCAS survey and any revisions that should be made for these lines of business. These meetings will be held May 27 and May 28. The homeowners and auto survey results were recently compiled, and they will be distributed prior to the calls. During these calls, the homeowners and auto MCAS survey results will be reviewed, as well as a summarized list of the survey results. As with the life and annuity discussions and possible additions, revisions and deletions for the auto and homeowners MCAS blanks and Data Call and Definitions will be determined.

The meetings for both the life and annuity and the homeowners and auto MCAS data calls will need to move quickly to complete the reviews and determine any needed updates within the allotted times. After completing the series of four calls, the goal is to have approved edits for all four lines of business that will be passed up to the Committee for its approval. If the review and edits are approved by the Working Group within the four calls, the June 1 deadline for proposals from the Working Group will be met. This would allow approved edits to be made applicable to the 2021 MCAS data year reported in 2022.

Materials containing the items to be discussed will be posted on the Working Group’s web page prior to the calls. Meeting notices will be sent soon.

Ms. Nickel asked whether the revisions would go to the Committee or back to the Working Group first after the homeowners and auto SME group meetings. Ms. Rebholz stated that her understanding is that the revisions would go to the Committee.

Ms. Ailor asked if the changes will be exposed for a comment period. Ms. Smith explained that the calls will be at the Working Group level so that they are open, more transparent and documented. The blanket VSI and “other health” lines will still be small group/SME calls, but the other two lines will be at the Working Group level.

3. Considered the Private Flood MCAS Premium Threshold for Reporting

Ms. Rebholz advised that the Working Group needs to determine a reporting threshold for the private flood MCAS. In 2019, the Working Group and the Committee adopted the private flood MCAS blank and Data Call and Definitions; however, no premium reporting threshold was included in the Data Call and Definitions. Mr. Rebholz noted that, to date, all other MCAS lines of business have a $50,000 premium threshold, except long-term care (LTC), which has no threshold.

Mr. Haworth stated that he would be in favor of setting the threshold for the private flood MCAS at $50,000 to be consistent with the other MCAS lines of business. Ms. Dingus agreed.

Mr. Birnbaum stated that the CEJ does not object to the $50,000 threshold, but he would like to clarify that this amount applies to all private flood premium reported in the blank and that it is not $50,000 for each specific coverage, but an aggregate total of $50,000.
Ms. Rebholz confirmed that this was her understanding, noting that if a company writes $50,000 in private flood coverage, it meets the premium threshold and would need to report.

Lisa Brown (American Property Casualty Insurance Association—APCIA) noted that the APCIA would support the $50,000 threshold, and she agreed with Mr. Birnbaum’s suggestion that it should include all individual sublines that were developed for the private flood MCAS blank.

Mr. Haworth made a motion, seconded by Mr. Arnold, to adopt the $50,000 premium threshold for the private flood MCAS. The motion passed unanimously.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group Conference Call February 26, 2020

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Feb. 26, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Jimmy Harris (AR); Maria Ailor (AZ); Scott Woods (FL); Sandra Stumbo (KY); Brent Kabler (MO); Angela Dingus (OH); Katie Dzurec (PA); John Haworth and Ned Gaines (WA); and Letha Tate (WV).

1. **Adopted its Dec. 17, 2019, Minutes**

The Working Group met Dec. 17, 2019, and took the following action: 1) adopted its Nov. 21, 2019, minutes; 2) discussed the review of the life and annuity market conduct annual statement (MCAS); 3) discussed the review of the homeowners (HO) and private passenger auto (PPA) MCAS; 4) discussed vendor single interest (VSI) concerns for the lender-placed MCAS; 5) discussed the other health MCAS data call approved by the Market Analysis Procedures (D) Working Group; and 6) discussed the extraordinary circumstance definition for health extension requests.

Prior to adopting the Dec. 17, 2019, minutes, Tom Keepers (Consumer Credit Industry Association—CCIA) pointed out a word change that needed to be made under item 4, in the first sentence of paragraph 5, regarding fees charged for blanket VSI by lenders. The wording was changed from “carriers” to “lenders” for his response.

Ms. Dingus made a motion, seconded by Ms. Nickel, to adopt the Working Group’s Dec. 17, 2019, minutes (Attachment Three-A2a1A). The motion passed unanimously.

2. **Discussed the Review of the Life and Annuity MCAS**

Ms. Rebholz advised that during the last meeting it was discussed that the life and annuity MCAS review subject-matter expert (SME) group was being reformed to explore changes to the life and annuity MCAS blanks. These changes include not only the definitions and current data elements, but also the possible inclusion of new types of life insurance products beyond just cash value products and non-cash value products.

If interest was previously expressed in being included in this group, individuals should have received an email this week with documentation and a meeting invitation. The meeting is scheduled to take place Wednesday, March 4. Ms. Nickel will lead this effort, with the goal of having recommendations to the Working Group by June 1, if possible, but by the Fall National Meeting at the latest.

Anyone interested in participating in the group that did not receive any communication was advised to send a note to Tressa Smith (NAIC). There was no further discussion on this matter.

3. **Discussed the Review of the HO and PPA MCAS**

Ms. Rebholz said one of the Working Group’s charges for 2020 is to review the MCAS data elements and the data call and definitions for those lines of business that have been in effect for longer than three years and update them as necessary.

Volunteers for this group have come forward, but before review begins, a survey needed to be conducted to see what, if any, appetite there is for changes to the HO and auto lines of business. Market conduct analysis chiefs and MCAS contacts for the states were sent a survey on Feb. 25, 2020. The collection of survey responses will run through March 20 and then survey results will be analyzed. Volunteers will then meet to determine what action needs to be taken with the results of the survey.

The goal is to have recommendations to the Working Group preferably before June 1, if possible, but by the Fall National Meeting at the latest.

Individuals interested in participating in the group that did not receive communication about it, should send a note to Ms. Smith. There was no further discussion on this matter.
4. **Discussed VSI Concerns for the Lender-Placed MCAS**

Ms. Rebholz advised that regarding the questions on the lender-placed insurance MCAS that were discussed during the Dec. 17, 2019, conference call, an SME group has been formed to discuss this. The first discussion will take place March 11, and Ms. Rebholz will be leading the group discussions.

Individuals that expressed interest in participating should have received an email and meeting invitation from Ms. Smith on Feb. 24. Those interested in participating in the group that did not receive communication about it should send a note to Ms. Smith. There was no further discussion of this matter.

5. **Discussed the “Other Health” MCAS Data Call Approved by the Market Analysis Procedures (D) Working Group**

Ms. Dzurec said that state insurance regulators met Feb. 25 to discuss the direction and agenda for a full meeting of the other health MCAS SME group. They will meet next March 6. The “other health” line of business can be separated into short-term limited-duration (STLD) and mini-med-type products like limited benefits and other products that are used to create a federal Affordable Care Act (ACA) look-alike product or that are being marketed in a way that looks like an alternative ACA product. Because of the data collection needs, the SME group recommends separating this data into two separate blanks. The group will move forward with the STLD blank first, with the goal to get it done and forwarded to the Working Group in the next six weeks to meet the deadline for collecting 2021 data year STLD data in 2022, so state insurance regulators can have the information to meet legislative requests and understand their marketplace.

In order to get this done within the next six weeks, comments should be provided by March 4. Comments should be sent to Randy Helder (NAIC). The MCAS blank review for the non-STLD types of products will proceed after the STLD blank review is complete, as this review will take more time.

Tanya Sherman (The INS Companies) indicated that there was nothing in the Working Group web page exposure drafts for interested parties to provide comments on and asked if comments should be based on the previous survey conducted.

Ms. Dzurec explained that creating an exposure draft involves incorporating all considerations, so there is no wording to be considered yet; and all comments are welcome so that as many issues as possible can be factored in, in the context of an MCAS blank. She said the STLD data call that was due Dec. 13, 2019, has information that can be reviewed for relevant information. There is also a memorandum from West Virginia dated July 27, 2018, addressed to Mr. Haworth regarding creating this MCAS blank.

Ms. Ailor said it would be helpful if the data call documents were posted on the Working Group’s web page. Ms. Smith said this information would be posted.

Birny Birnbaum (Center for Economic Justice—CEJ) asked if the SME group has a working definition of STLD products available for review. Ms. Dzurec said there is not and that proposals for this are welcome.

Mr. Birnbaum also asked why the Feb. 25 and March 6 calls being held in regulator-to-regulator session and why interested parties are not being asked to participate.

Ms. Dzurec said the call is to pull together information for an exposure draft on a short timeline, and she explained that there is specific content regarding actual cases that states have experienced being discussed in these calls that are confidential under the state examination laws. She said the information gathered will be provided back to interested parties for feedback because right now this is still in the preparation phase. Interested parties can provide comments in preparation for the March 6 conference call. She said future calls will be open after the draft is created to be sure that all feedback is considered.

Ms. Dingus asked how often other health SME group conference calls would be discussed. Ms. Dzurec said once there is a draft to work from, calls will likely be on a weekly basis, and limited benefit calls will be more spread out.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group
Conference Call
December 17, 2019

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Dec. 17, 2019. The following Working Group members participated: Maria Ailor, Chair (AZ); Angela Dingus, Vice Chair (OH); Jimmy Harris (AR); Kurt Swan (CT); Scott Woods (FL); October Nickel (ID); Lori Cunningham (KY); Paul Hanson (MN); Teresa Kroll (MO); Jeffrey Arnold (PA); Michael Bailes (SC); Ned Gaines (WA); Jo LeDuc (WI); and Letha Tate (WV).

1. **Adopted its Nov. 21 Minutes**

The Working Group met Nov. 21 and took the following action: 1) adopted its Oct. 23 minutes; 2) agreed to change the Market Conduct Annual Statement (MCAS) due dates occurring on weekends and federal holidays to the next business day; and 3) extended the health MCAS filing deadline for 2020, 2021 and 2022 from April 30 to June 30.

Ms. Dingus made a motion, seconded by Mr. Swan, to adopt the Working Group’s Nov. 21 minutes (see NAIC Proceedings – Fall 2019, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven). The motion passed.

2. **Discussed the Review of the Life and Annuity MCAS**

Ms. Ailor said that the small group looking into changes to the life and annuity MCAS blanks will be reformed due to continued interest in this topic by some state insurance regulators and consumer representatives. The survey conducted in 2018 indicated most state insurance regulators thought the life MCAS needed to be more granular than just cash value and non-cash value products. Respondents seemed to favor variable and universal life products as the types of products they would like to have more data about. There was also a strong interest in individual pre-need, funeral and final expense life insurance. While most state insurance regulators were satisfied with the current data elements collected, there were still some suggestions for improvements. The responses were similar for the annuity blank but with less interest in more granular level beyond the fixed and variable annuities. More interest was expressed for additional data on equity indexed annuities.

Ms. Ailor asked for volunteers to lead this small group next year with the goal of having recommendations to the Working Group preferably before June 1, 2020, if possible, but no later than the NAIC Fall National Meeting. Those interested in leading or participating in the group are to send a request to Tressa Smith (NAIC).

3. **Discussed the Review of the HO and PPA MCAS**

Ms. Ailor said one of the Working Group’s charges for 2020 is to review the MCAS data elements and the Data Call and Definitions for those lines of business that have been in effect for longer than three years and update them as necessary. In addition to the Life and Annuity lines, she stated the private passenger auto (PPA) and homeowners (HO) lines should be reviewed. She suggested a similar survey as the one done for life and annuity be sent for PPA and HO.

Ms. Ailor asked for volunteers to lead this group next year with the goal of having recommendations to the Working Group preferably before June 1, 2020, but no later than the NAIC Fall National Meeting. Those interested in leading or participating in the group are to let Ms. Smith know.

4. **Discussed Vendor Single Interest Concerns for the Lender-Placed MCAS**

Ms. Ailor said that during the Market Analysis Procedures (D) Working Group meeting on Oct. 31, members heard comments from Tom Keepers (Consumer Credit Industry Association—CCIA) about blanket vendor single interest (VSI) being included in the lender-placed MCAS blank. He expressed concern that due to the way blanket VSI is written and issued, the reporting in the MCAS may be skewed and noted it is a small market with premiums only in the tens of millions nationwide. Birny Birnbaum (Center for Economic Justice—CEJ) said during that same Market Analysis Procedures (D) Working Group meeting that blanket VSI is a lender-placed insurance product that is necessary for state insurance regulators to receive data for and recommended creating a special data call and developing a separate MCAS blank for it. Ms. Ailor said the issue would be
referred to this Working Group for discussion and next steps, and in response received letters from Mr. Keepers and Mr. Birnbaum. The letters were made available to the Working Group for review.

Ms. Ailor asked if Mr. Keepers was on the conference call and would like to comment. Mr. Keepers explained that blanket VSI is a two-party, single-interest commercial insurance policy that protects the lender’s interest in the collateral against damage. He said consumers are not really engaged in the insurance transaction as no coverage is issued at point of sale, they are not a party to the lender-insurer master policy, and they are not issued individual certificates, so consumer cancellations and refunds do not apply. He explained that consumers are engaged in the lending process, not the insurance claims process, as by the time a claim is filed, the consumer has already defaulted on loan payments and the vehicle has been repossessed by the lender, such that the claim is between the lender and the insurer only. He further explained that there is not always a charge to consumers at loan closing and that he does not think the blanket VSI product should be included in the MCAS.

Ms. Ailor asked what kind of fee could be charged for this product, and Mr. Keepers said it generally ranges from $25 to $100 and sometimes higher. She also asked what kind of disclosures are provided to consumers, and he said in the lending documents, consumers are informed of this charge and their option to purchase it separately. He said the fee covers the collateral, and the lender may or may not charge the borrower.

Ms. Nickel said her understanding was that lenders always charged a fee for this type of product, and Mr. Keepers responded that there are plenty of lenders that do not charge fees for blanket VSI. She asked if insurers could track these types of claims, and Mr. Keepers confirmed they can. However, he said that this product is a commercial activity and that while it has fees that may be charged to consumers, it is a commercial product helping lenders mitigate their risks and consumers are not involved. He advised there is no forced placement and that it is just a claim filed to the insurer by the lender and that the only consumer involvement is the one-time fee at the time of the initial loan.

Mr. Birnbaum said one of the things that distinguishes VSI from other types of lender-placed insurance (LPI) is that consumers are charged for force-placed insurance regardless of whether they have a lapse of coverage or not. The other difference is how premium is calculated because rather than being based on an individual vehicle, it is based on the entire portfolio. The third difference is the absence of tracking the borrower’s insurance. He said VSI is a commercial policy issued to the lender and the insurers charge a premium to the lender, not to the borrower. The insurers are not involved in the fee charged by the lender to the borrower. It is a master policy issued to the lender and like traditional LPI, there is no individual lender or property for the underwriting. This puts consumers in a vulnerable position with no market power in the event of damage to the vehicle. Because of the differences in premium calculation and exposure count versus traditional LPI, blanket VSI and traditional LPI comparisons for underwriting, claims and suit data are not compatible and need to be reported separately. The CEJ recommends that VSI be broken out as a separate coverage within the LPI exhibit, which would enable state insurance regulators to address any problems with VSI that are raised by the CCIA.

Ms. Ailor said the Working Group needs to evaluate and decide on how to move forward, whether it be keeping the blank the same and offering further instructions and clarity as to how these products should be reported, adding it as a separate coverage in the blanks or removing it completely. Ms. Ailor asked that everyone review the comments submitted by the CEJ and the CCIA and consider the discussion today and let Ms. Smith know if volunteers are interested in being part of the small group that will review this topic further in 2020.

5. Discussed the Other Health MCAS Data Call Approved by the Market Analysis Procedures (D) Working Group

Ms. Ailor said the Marketing Analysis Procedures (D) Working Group adopted “other health” as the next line of business for MCAS, and the Market Regulation and Consumer Affairs (D) Committee adopted it during the Fall National Meeting. Industry and state insurance regulators expressed concerns with how broad and ambiguous the term “other health” is, and this Working Group must carefully draft the data call so that the data elements, definitions and instructions are detailed and clear and there is no ambiguity about what is reported. Ms. Ailor said an immense amount of experience was gained from the health blank implementation. Data from the short-term, limited duration (STLD) template is available for review as a starting point.

For the “other health” MCAS blank to be successful, industry representatives, individual companies, state insurance regulators and consumer representatives participating in the group will need to be tasked with developing the draft. Ms. Ailor asked that volunteers be on the drafting group, and that those interested in leading or participating in this to notify Ms. Smith.
6. Discussed the Extraordinary Circumstance Definition for Health Extension Requests

Ms. Ailor said the due date for the health MCAS that was extended to June 30 for 2020, 2021 and 2022 will return to April 30 in 2023. Industry representatives made assurances that companies will not ask for individual extensions beyond June 30 except in extraordinary circumstances. Industry representatives have provided a letter with a proposed definition of “extraordinary circumstances,” and the letter has been made available on this Working Group’s web page for review.

Ms. Ailor asked if Joe Zolecki (Blue Cross and Blue Shield Association—BCBSA) would like to address the Working Group to discuss the letter, and Samantha Burns (America’s Health Insurance Plans—AHIP) said Mr. Zolecki was unable to attend the conference call and addressed the Working Group with regard to the letter on behalf of the Health Industry Interested Parties (HIIP) group. Ms. Burns stated the determination for extension request would be at the ultimate discretion and approval of the domestic state. She said the circumstances they consider to be extraordinary and outside of the carrier’s control, among other things, are the following: acts of God, mergers and requisitions, system issues, vendor issues, delayed new or modified federal Centers for Medicare & Medicaid Services (CMS) requirements, and substantive new health MCAS reporting requirements implemented by state insurance regulators.

Mr. Birnbaum stated the list of extraordinary circumstances provided by the HIIP group is far too expansive and that mergers and acquisitions are under the discretion and control of the carrier. System and vendor issues are also subject to the control of the carrier, which reinforces concerns about granting the extension for health MCAS data. He suggested that a list be specified by state insurance regulators for situations that would not qualify as an extraordinary circumstance.

Ms. Burns advised she does not believe carriers have control over the issues that arise stemming from mergers and requisitions and vendor issues and that these items should qualify as extenuating circumstances and be left up to the state to decide.

Mr. Gaines said in Washington, they receive requests extensions the day before the due date, claiming issues with collecting third-party data, even though the carrier just requested data from the vendor. Ms. Burns agreed this type of scenario should not fall under an extraordinary circumstance.

Ms. Ailor explained the extension to June 30 from April 30 has already been granted and that any additional extension is at the discretion of the state, not the domestic state, but the state in which the MCAS must be filed. Requests for extensions are addressed individually, and system issues, vendor issues and the laborious tasks sometimes associated with collecting information from third parties are some of the reasons that the extension to June 30 was granted.

Ms. Burns asked if there would be a vote on this definition, and Ms. Ailor said she does not believe a vote is needed. Randy Helder (NAIC) confirmed a vote is not necessary as the decision to extend beyond June 30 is ultimately up to the state that is receiving the filing.

7. Discussed Any Other Matters Brought Before the Working Group

Ms. Ailor advised she is stepping down as Working Group chair. She said Arizona will still be a member of this Working Group and that anyone interested in learning more about the chair role is asked to contact the NAIC, Mr. Helder, Ms. Smith or Ms. Ailor directly.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
Market Conduct Annual Statement Blanks (D) Working Group

Conference Call

May 21, 2020

The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 21, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Crystal Phelps (AR); Sara Borunda (AZ); Kurt Swan (CT); Scott Woods (FL); Lori Cunningham (KY); Teresa Kroll (MO); Angela Dingus (OH); Katie Dzurec (PA); Michael Bailes and Rachel Moore (SC); Ned Gaines and John Haworth (WA); and Letha Tate (WV). Also participating was: Sarah Crittenden (GA).

1. **Discussed Annuity MCAS Survey Results and Possible Edits to the Blanks and Data Call and Definitions**

Ms. Rebholz noted that the focus of this call is possible edits to the annuity Market Conduct Annual Statement (MCAS) blank and Data Call and Definitions. The results of the 2018 survey results are posted on the Working Group web page. In addition, a summary of items in the survey for this discussion is included in the materials for this call. The items highlighted in gray are related to the MCAS Market Analysis Prioritization Tool (MAPT) rankings and ratios, and they will be discussed by the Market Analysis Procedures (D) Working Group. These items are being passed along to Mr. Haworth for the Market Analysis Procedures (D) Working Group to discuss.

Ms. Rebholz said the Working Group should come to consensus and vote on needed edits prior to the June 1 deadline for changes that would apply to the 2021 data year. Some issues may not be easily resolved, and they may require more in-depth consideration and review. If such an issue arises, it may be necessary to table it for a future discussion. She noted that Ms. Nickel would lead the discussions today, and she explained that time would be allowed for comments on each item discussed.

Ms. Nickel noted that many of the topics discussed yesterday for the life MCAS would also apply to the annuity portion of the MCAS and would be discussed to see if similar changes should be made. The survey results and possible edits specific to the annuity MCAS will then be reviewed.

   a. **Life MCAS Blank**

The first item discussed was to review the changes made to the life MCAS on yesterday’s call and determine if the same changes should apply to the annuity MCAS.

The first change discussed was adding a data element requesting the number of policies surrendered with a surrender fee. Mr. Haworth expressed an interest in making this change. Ms. Crittenden agreed.

Mr. Swan asked if the same 10 year and over methodology would be applied here.

Ms. Nickel explained that the number of policies surrendered greater than 10 years from policy issue date was added to the life MCAS, and she asked if there was also an interest in making this change on the annuity line, explaining that this would be two separate additions. One addition would be for the number of policies surrendered with a surrender fee and one would be for the number of policies surrendered greater than 10 years from the policy issue date.

The next item of discussion was to add an interrogatory asking the company to identify all third-party administrators (TPAs) the company uses and their function.

The next suggestion was to add the following data elements related to lawsuits: 1) the number of lawsuits open at the beginning of the period; 2) the number of lawsuits opened during the period; 3) the number of lawsuits closed during the period; 4) the number of lawsuits closed during the period with consideration for the customer; and 5) the number of lawsuits open at the end of the period.

Ms. Nickel asked if there were any comments regarding the above changes being made to the life MCAS and applying them all to the annuity MCAS.
Birny Birnbaum (Center for Economic Justice—CEJ) asked whether the intent was to add the interrogatory about TPAs for both life interrogatories and annuity interrogatories, or to get one set of interrogatories regarding TPAs.

Randy Helder (NAIC) noted that there would be a TPA question for the life MCAS blank and then a separate TPA question for the annuity MCAS blank in the interrogatories for both.

Mr. Haworth made a motion, seconded by Ms. Nickel, to add the data elements and interrogatory additions discussed here that were added to the life MCAS blank yesterday to the annuity blank. The motion passed unanimously.

b. Internal/External Replacements

The next item discussed was having internal and external replacements further defined, and possibly adding another category for external replacements for those that are replaced by another company within the same group of companies.

Tanya Sherman (INS Companies) asked for clarification on this topic.

Mr. Birnbaum noted that the blank defines internal replacement as being issued by your company and an external replacement as being issued by another company. There probably needs to be some clarification on what “another company” means. It can mean another insurer outside of your group, or it can mean another company within your group if you have multiple companies issuing annuities. Mr. Birnbaum said he would not want to categorize a replacement by another company within the group as an external replacement, as that appears misleading. He noted that it may be helpful to break down external replacements into two data elements; one could be when a policy or annuity is replaced and was issued by a company unaffiliated with your company, and the other could be an external replacement issued by another company that is affiliated with your company. The internal replacement would stand.

Ms. Rebholz noted that one of the suggestions along this line was to add a separate field to report a sister company replacement to help identify if churning may be occurring.

Ms. Nickel asked if anyone wanted to move to add an additional level of detail regarding affiliated or unaffiliated company relationships on replacements.

Mr. Haworth asked whether a motion made here would be consistent for the life MCAS too. Ms. Nickel said that would be appropriate.

Mr. Haworth made a motion, seconded by Mr. Swan, to make the changes as discussed and clarify the external versus internal replacements including affiliated companies.

Mr. Birnbaum noted that the definition for internal replacement is described as a replacement by your company, and the current definition for external replacement is described as being issued by another company. He asked if the proposal is to retain the current definition of internal replacement and then to create two data elements for external replacement where one refers to another company affiliated with your company and then the second definition would be issued by another company unaffiliated with your company.

Mr. Helder noted that his understanding of Mr. Haworth’s motion is to add a separate field to identify external replacements to an affiliated company, and he believes Mr. Birnbaum is asking if there would be a commensurate definition in the data call and definitions.

Mr. Haworth confirmed that the definitions would have to be added, as there is a data field that will need to be explained and clarified.

Ms. Nickel asked for clarification about whether external would be broken out into two separate definitions and internal would remain the same as a replaced policy.

Mr. Helder said that is correct, and one more data element for external replacements would be added for affiliated companies and the definitions would be revised to explain what that means.

Ms. Phelps asked if all companies would understand what the term “affiliated” means.
Mr. Birnbaum noted that the term “affiliated” is standard in the insurance industry, and when companies file their annual financial statement, they complete an organizational chart showing any affiliations. He believes that it is a straightforward term.

Ms. Nickel made a motion, seconded by Mr. Haworth, to add these additional data elements and definition pieces clarifying the external versus internal replacements to the life MCAS blank, as well. The motion passed unanimously.

c. **Granularity of Annuity Reporting**

The next item of discussion was the granularity of annuity reporting. Mr. Gaines expressed an interest in pulling out the variable annuity product data.

Mr. Birnbaum noted that the current MCAS breaks annuities into fixed and variable categories. The fixed category includes immediate fixed, deferred, qualified longevity annuity contract, and indexed annuities. The data includes experiences for different product types sold to different types of consumers, sold by different types of producers in different markets. Variable annuities currently include variable; traditional variable; fixed variable; indexed variable, now called buffered annuities; and contingent deferred annuities. Mr. Birnbaum suggested breaking out the annuities into more granular categories to assist in a more useful and detailed market analysis.

Mr. Haworth noted that it looks like only 10 people responded to this topic on the survey and 22 people did not respond, and he asked if that was correct.

Tressa Smith (NAIC) confirmed that as correct, and she said survey participants were not required to respond to these questions. The first part of the survey had a question that asked if it would be beneficial to have data broken down into a more granular level. Eleven people said “yes,” and 11 people said “no.” Of the 11 people who indicated that they would like more granularity, 10 of those then said they would like more granularity on this category.

Mr. Haworth asked if Working Group members would like more granularity here.

Mr. Gaines noted that he is interested in additional data on the variable side, specifically variable indexed annuities, and not as much on the fixed side.

Mr. Birnbaum suggested categories for variable annuities of indexed variable and all variable annuities other than indexed. Then, the same thing could be done for fixed, having fixed-indexed annuities and all fixed annuities other than fixed-indexed annuities. This would add two additional categories.

After some discussion by the Working Group, Ms. Rebholz asked if there was a motion to make changes here. She explained that currently all fixed annuities are in one bucket and all variable annuities are in the other. The idea is to break out fixed annuities into fixed-indexed and all other fixed annuities, and then break out the all variable bucket into indexed variable and all other variable.

Mr. Haworth made a motion, seconded by Mr. Swan, to add the additional lines as discussed. The motion passed unanimously.

Ms. Nickel asked if there was any interest from the Working Group regarding adding additional levels of granularity here, such as immediate fixed annuities and deferred fixed annuities. There were no comments expressed to make additional changes here.

d. **Other Topics**

The next topic discussed was the suggestion of adding a definition of in-force. There was no interest in making this addition to the annuity MCAS. The next topic discussed was a comment regarding death claims closed with payment that does not fit for annuities, so this was not discussed. The next topic discussed was the suggestion to collect information based on contract state and resident state. There was no interest in making this addition to the annuity MCAS.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Annual Statement Blanks (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 20, 2020. The following Working Group members participated: Rebecca Rebholz, Chair (WI); October Nickel, Vice Chair (ID); Jimmy Harris (AR); Sara Borunda (AZ); Kurt Swan (CT); Scott Woods (FL); Lori Cunningham (KY); Paul Hanson (MN); Teresa Kroll (MO); Angela Dingus (OH); Jeffrey Arnold (PA); Rachel Moore (SC); Ned Gaines and John Haworth (WA); and Letha Tate (WV). Also participating was: Sarah Crittenden (GA); and Karen McCallister (NH).

1. Discussed Survey Results and Possible Edits to the Life MCAS Blank and Data Call and Definitions

Ms. Rebholz noted that, in 2018, a survey was sent to state market analysis chiefs and Market Conduct Annual Statement (MCAS) contacts to get their input regarding possible updates to the life and annuity MCAS. The results of the survey are posted on the Working Group’s web page. In addition, a summary of the items in the survey for this discussion is included in materials for this call. The items highlighted in gray are related to the MCAS Market Analysis Prioritization Tool (MAPT) rankings and ratios, and they will need to be discussed by the Market Analysis Procedures (D) Working Group. These items are being passed along to Mr. Haworth for the Market Analysis Procedures (D) Working Group to discuss. Tomorrow, the annuity MCAS Blank and Data Call and Definitions will be discussed.

Ms. Rebholz said the Working Group should come to a consensus and vote on needed edits prior to the June 1 deadline for changes that would apply to the 2021 data year. Some issues discussed today may not be easily resolved, and they may require more in-depth consideration and review. If such an issue arises, it may be necessary to table it for a future discussion. Ms. Rebholz noted that Ms. Nickel would lead the discussions today, and she explained that time would be allowed for comments on each item discussed.

Ms. Nickel started by thanking the Center for Economic Justice (CEJ) and the American Council of Life Insurers (ACLI) for the comments submitted to the Working Group. Messages were also received in support of the CEJ comments. These letters of support were from Brendan Bridgeland (Center for Insurance Research—CIR), J. Robert Hunter (Consumer Federation of America—CFA) and Ken Klein (California Western School of Law). Some CEJ comments were related to the frequency of MCAS data submissions. These comments will be shared with the Market Analysis Procedures (D) Working Group chair and vice chair for inclusion in its upcoming meetings. The CEJ, the ACLI and other interested parties will be able to provide input on all edits discussed today.

Ms. Nickel said that during the last subject-matter expert (SME) call, in which possible edits to the life and annuity MCAS were discussed, participants were asked to review the survey responses in detail and bring back their top three selections for changes to the next meeting. In the responses received from Working Group members, there was no consensus regarding the level of granularity needed. There was mention of adding some data elements to the life MCAS blank.

a. Level of Reporting Granularity

The first item discussed was the level of reporting granularity for the life MCAS blank. The meeting materials provided in advance of the call include the survey results related to life granularity. It is a percentage based on each different coverage line. There were comments made for additional areas that were not identified in that coverage by line of business or coverage type. The comments were related to credit and other products with no cash value, preneed, final expense, and funeral contracts. The ACLI provided a basic overview with differences related to those types of products, specifically for final expense and preneed products.

Ms. Nickel asked if Working Group members had an interest in pulling out preneed and final expenses. She noted that the credit line was already rejected by the Market Analysis Procedures (D) Working Group for a new line of business for the Market Conduct Annual Statement Blanks (D) Working Group to work on. Therefore, this will also need to be brought back up with the Market Analysis Procedures (D) Working Group for it to be the Market Conduct Annual Statement Blanks (D) Working Group’s charge to discuss the credit line of business.
Tanya Sherman (INS Companies) noted that it is challenging when conducting analysis when these unique products are mixed in with other lines, and she felt that it would be nice to break these out.

Ms. Nickel asked for clarification about whether Ms. Sherman meant these products should be separated or they could be grouped into one. Ms. Sherman said they could be grouped into one category.

Birny Birnbaum (CEJ) noted that there are two reasons to segregate preneed and final expense. One would be because you have an interest in consumer outcomes for a specific product. The second is that you do not want consumer outcomes in a specific product line to muck up the data for other product lines that you have an interest in. Mr. Birnbaum noted that both instances for preneed and final expense warrant separation from the current overly aggregated categories of cash and non-cash values. He believes that during prior calls, industry stakeholders expressed that preneed was significantly different than final expense, and he felt that these comments should be reviewed so they are not aggregated together.

Ms. Nickel noted that it did not appear that there was a large consensus to make changes here, but it would be beneficial in some respects to pull apart the preneed and final expense. Based on the comments made, there does not appear to be enough interest to make these changes now.

Ms. Rebholz agreed, and she asked if there was a motion from the Working Group members to break out individual preneed and final expense to the life MCAS reporting blanks. There was no motion made.

Mr. Bridgeland noted that he has reviewed this and looked at what information can be gathered by consumers, academics and consumer organizations. It used to be that in the annual statement, you could gather some basic information about generally smaller face value life insurance policies because they fell into the industrial life policy category. Now, however, because of the way it is defined, there is no information reported and industrial life does not exist as its own category. Over the years there have been changes in terms of what information is available about certain types of life insurance products that you used to be able to segregate from the financial data, which you can no longer do because of the way industrial life has been defined and classified over the years.

Mr. Bridgeland noted that there is a gap here because state insurance regulators used to be able to pick up information from annual statement reporting, but it is missing now. He feels that market conduct assessment would help because as a consumer advocate, when he hears from families or funeral service directors, it is commonly related to preneed and burial policies. From a consumer perspective, he believes it is important; and he wants to note that because of changes over the years, there is a gap in data available to state insurance regulators and consumers.

Monica Sole (Lincoln Heritage) noted that one of the problems Lincoln Heritage faces is that there is only one line of business for Lincoln Heritage and it is final expense. Final expense is not defined by the NAIC or any state insurance regulator, and it is not the same as preneed. Ms. Sole asked how bigger companies would report what a is final expense policy is and what is not since it is just a way of marketing a small face policy and there is no definition. She asked if large companies would report differently based on the face value of a policy. She feels that it should be separated from preneed, as it is its own line of business.

Mr. Birnbaum noted that the March 4 letter from the ACLI outlines the difference between final expense and preneed. Final expense is a whole life policy that is marked as final expense, and preneed is a whole life policy used to prepay a funeral on a contingent assignment. Preneed could be easily defined as a contractual relationship. To separate out final expense, you could segregate it as a whole life policy marketed for final expense. He said this would be a straightforward way of doing it, as a company knows if they are marketing something as final expense or not.

Ms. Nickel agreed that companies generally would know what their different product lines are and how to properly file them.

Ms. Rebholz asked if anyone from the Working Group wanted to make a motion to add this endowment coverage to the life MCAS reporting. There was no motion made.

b. Individual Universal Life Insurance and Individual Variable Universal Life Insurance

The next item of discussion was individual universal life insurance and individual variable universal life insurance. There was no interest from the Working Group or any state insurance regulators to segregate universal life products.
Mr. Birnbaum noted that for most of these product lines, there is a different market and a different target population. There have been different types of market problems associated with that. If you look at traditional universal life, there have been problems with companies that promise vanishing premium, and now consumers are being faced with extraordinary premium. With indexed universal life (IUL), there is a different set of issues with unrealistic or misleading illustrations or hidden fees. If you aggregate all of this into cash value products, there is no way to distinguish what is happening with whole life versus universal life versus IUL versus variable life; as a result, the market analysis is ineffective. A company that might be an outlier if you were looking at IUL does not show up as an outlier because that experience is hidden through aggregation with other products.

Mr. Birnbaum said he believes that the pandemic illustrates why there is a problem. People are now being marketed certain products, claiming that they can be protected in the event if a market turndown; yet, there is no way to see what is going on in the marketplace in the aftermath of the pandemic. For those reasons, the CEJ suggests not only a breakout for universal life separate from IUL, but also a break-out for variable life and whole life as part of the cash value breakouts.

Ms. Nickel asked if anyone else has comments to add, and there were none. There was not enough interest here to make changes to universal life.

Ms. Nickel then asked for comments on individual variable universal life.

Mr. Birnbaum noted that he believes there should be a breakout here, as well.

Ms. Sherman noted that she was looking at the survey notes for the life MCAS, and she asked for clarification on the percentages.

Tressa Smith (NAIC) noted that the survey results are on the Working Group’s web page, and they are more than just the summaries for anyone that would like to review them in more detail. There were 32 responses; 19 of those answered that “yes,” they would like additional break outs for more granularity for the life MCAS. The percentages shown are from the 19 people that answered “yes” as to what they would find beneficial.

Mr. Birnbaum further expressed his support for breaking out these lines further to assist with a more detailed market analysis.

Ms. Rebholz encouraged Working Group members to speak up on these matters to have a good understanding of how they feel about making changes to each item as the call progresses. She asked if there was a motion to make any changes to the individual universal life and individual variable universal life, and there were none.

c. Individual Term Life Insurance with no Cash Value and Other Individual Life Insurance with no Cash Value

Ms. Nickel noted that the next topic to discuss is individual term life insurance with no cash value and other individual life insurance with no cash value. She asked if any Working Group members have an opinion or interest to include this as a separate line.

Mr. Gaines noted that he does not believe that this needs to be broken down further. There were no comments by interested state insurance regulators or interested parties made on this topic. There was no motion to make changes here.

d. Individual Equity Indexed Life Insurance

The next topic discussed was individual equity indexed life insurance products. There were no comments from Working Group members, other state insurance regulators, or interested parties with an interest to break this product line out, so no motions were made to make changes here.

e. Individual Whole Life Insurance and Individual Variable Life Insurance

The next item discussed was whether there is an interest in separating individual whole life insurance and individual variable life Insurance.

Mr. Gaines noted that based on the survey, if there is a specific line that has a clear number of states in the majority, the Working Group should consider making changes.
Ms. Nickel noted that the 19 people who indicated that they would like to see changes represented 15 states, which did not seem to represent a significant enough interest from the majority. She explained that in future surveys, it may need to be a requirement for the states to answer these kinds of questions to have a better understanding of all the states.

There were no other comments from Working Group members, other state insurance regulators, or interested parties on this topic, and no motion to make changes was made here.

f. Surrenders

Ms. Nickel noted that the next item of discussion is regarding comments received on surrenders. She asked if any Working Group members want to discuss surrenders being broken out by years and how that would be useful. She asked what the current options are, and Teresa Cooper (NAIC) noted that the options are contracts surrendered under two years of issuance, between two and five years of issuance, and between six and 10 years of issuance. Ms. Nickel asked if there was any interest in modification to these time frames.

Mr. Birnbaum suggested adding an option for 10 years or longer.

Ms. Crittenden noted that she supports adding the option for 10 years or longer, and she expressed interest in knowing about surrender fees.

Ms. Nickel asked if she had a proposal regarding surrender fees.

Ms. Rebholz noted that there was a suggestion in the survey that suggested adding a data element to collect the number of policies surrendered where a surrender fee was applied. She noted that the questions for the Working Group to decide are: 1) whether it would be useful to know how many policies were surrendered; and 2) of those surrendered, how many had a surrender fee applied.

After some discussion among Working Group members, Mr. Haworth made a motion, seconded by Ms. Nickel, to collect the number of policies surrendered where a surrender fee was charged. The motion passed unanimously.

Mr. Haworth asked if adding the option for contracts surrendered past 10 years is going to be discussed further.

After some discussion, Ms. Nickel made a motion, seconded by Mr. Woods, to add the option for contracts surrendered beyond 10 years. The motion passed unanimously.

g. In-Force Contracts and Definitions

Ms. Nickel noted that there was feedback received for in-force contracts and definitions needing more clarity. There was dialogue in the survey regarding policies taken and not taken.

Ms. McCallister noted that she was the one that made this comment, as she had several companies that were not including their non-taken, and she found it odd that some companies are including non-taken while some are not. She said she believes that because it is a formal offer, they should be included, and she is looking for clarity here. There was no interest from other call participants to make changes here, so this subject has been tabled for future discussions if filing discrepancies continue to be a concern.

Ms. McCallister noted that the next matter up for discussion on adding data elements to both individual cash value policies and individual non-cash value policies could be disregarded, as she was referring to the annual financial statement and the comment does not apply here, so there is no need to discuss it.

h. Individual Cash Value Policies Related to Nonforfeiture

Ms. Nickel noted that the next item to discuss is the individual cash value policies related to nonforfeiture. She noted that this relates to the surrender topic discussed earlier on this call, and even though the surrender and nonforfeiture options are different, this could be clearer with the changes being made to the surrender data. She asked if additional separation here is necessary or if the surrender changes agreed on would suffice.
Mr. Haworth agreed that with the changes being made regarding surrender fee data, clarity for nonforfeiture is also gained. There were no additional comments here, so no changes will be made.

i. TPA Information

Ms. Nickel noted that the next topic to discuss is the comment made regarding the life interrogatories and whether it would be valuable information to include third-party administrator (TPA) information. The comment suggested requesting whether the company utilizes a TPA for the line of business, the name(s) of the TPA, and what the TPA does.

Mr. Haworth noted he could see merit with this request because this also came up in the short-term limited-duration (STLD) data call as a topic people wanted to be aware of. He advised it would probably need to be an interrogatory that says whether a TPA is utilized to list the name and for what function.

Mr. Haworth made a motion, seconded by Ms. Nickel, to collect TPA information on an interrogatory and the functions that they carry out. The motion passed unanimously.

Mr. Birnbaum noted that the reporting here is limited to individual coverages, as group coverages are not provided. He asked whether the question about TPAs is intended to relate to the use of TPAs for individual coverages or if it is a broad application question.

Mr. Haworth noted that for this context, it would just be for individual business; however, by being able to track it this way, they can see who these companies work with.

j. Potential Outliers

The next item discussed was for a comment received that stated the following: “We find that most companies do not have comments about being a potential outlier because they do not have any basis for comparison to state and national averages at the time of their filing.”

Ms. Nickel asked if the person who made the comment was on the call and available to elaborate on this. There was no response. Ms. Nickel noted that the score cards are available for everyone to review, including insurance companies and consumers; and even at an individual state level, carriers have the ability to review where they fall and review trends over periods of time to determine what kind of outliers they may have. She asked if anyone else had comments.

Mr. Haworth noted that he believes this is more of an educational comment, as he has had to assist various parties by showing them the tools available to find information on potential outliers. There were no changes to be made here.

k. Illustration Certification Fields

Ms. Nickel noted that the final comment regarding the life MCAS interrogatories supports the incorporation of illustration certification fields. She asked that Working Group members interested in this topic provide further clarification on this request by email to Randy Helder (NAIC) or other NAIC staff to get a better idea of what is being asked for.

l. Resident State vs. Issue State

Ms. Nickel noted that there were some questions on definitions for data being reported by a resident state or an issue state. She advised that this should fall in line with what is used in the annual financial statement. For example, if you issue a policy to a resident of the state of Idaho, then it is an Idaho policy. Ms. Nickel asked that anyone interested in elaborating on this topic further email their comments and feedback to her, Mr. Helder, Ms. Smith or Mr. Haworth.

m. Lawsuits

The next item discussed was the proposal from the CEJ. Mr. Birnbaum has suggested edits to the MCAS related to lawsuit questions that are asked within the life, annuity, home and auto MCAS blanks. His suggestion is to make the lawsuit questions consistent across all lines of business. The current life and annuity lines of business do not contain information related to lawsuits. The other lines of business include the number of lawsuits open as of the end of the period, the number of lawsuits open as of the beginning of the period, the number of lawsuits opened during the period, and the number of lawsuits closed.
during the period in total. With exception of homeowner and private passenger auto, the other lines also include a data element
to collect the number of lawsuits closed during the period with consideration for the consumer. It needs to be determined
whether lawsuit data collection is an addition that should be made to the life MCAS blank.

Mr. Birnbaum noted that all MCAS blank lines have data elements related to lawsuits except life and annuity, and all recent
MCAS blanks have five lawsuit data elements: 1) the number of lawsuits open at the beginning of the period; 2) the number of
lawsuits opened during the period; 3) the number of lawsuits closed during the period; 4) the number of lawsuits closed during
the period with consideration for the consumer; and 5) the number of lawsuits open at the end of the period. He suggested that
these data elements be added to the life MCAS blank.

Ms. Nickel made a motion, seconded by Mr. Arnold, to add these lawsuit elements to the life MCAS. The motion
passed unanimously.

n. Accelerate Underwriting

Ms. Nickel noted that Mr. Birnbaum has also suggested new data elements to address accelerated life underwriting. With
accelerated life underwriting, insurers use credit scores, facial analytics, and other non-medical data to underwrite applicants
and price policies. Mr. Birnbaum has suggested a definition of accelerated underwriting and several interrogatory questions
asking whether a company utilizes accelerated underwriting, on what products, and what data sources and vendors they use, to
replicate the underwriting questions to answer specifically for accelerated underwriting. For example, in addition to asking for
the total number of policies issued, we would also ask for the total policies issued utilizing accelerated underwriting. Ms. Nickel
said she sees the benefits with this.

David Leifer (ACLI) asked if there is a definition of “accelerated underwriting” that would be used.

Mr. Birnbaum stated that they proposed a definition and explained that historically, life insurers have relied on information
provided by consumers and medical information through blood tests, family histories, and things of that nature. In the last five
years, life insurers have started predictive modeling, and they are projecting mortality using non-medical third-party data
sources. The reason the CEJ is making these suggestions is that this is a qualitatively different approach to underwriting and
sales than has been done in the past. In some ways, it is an almost completely digital process as opposed to a traditional, in-
person and hands-on process. There may be different consumer outcomes when there is information being used that the
consumer is not aware of and has no idea how that information is being used. There is not much information that state insurance
regulators have about accelerated underwriting outcomes in the marketplace right now.

The suggestion from the CEJ is that there be some additions to the life blank related to accelerated underwriting, starting with
the definition of accelerated underwriting meaning underwriting and pricing of life insurance in whole or in part on non-medical
data obtained from other than the applicant or policy holder and includes, among other things, facial analytics, social media,
and consumer credit information.

The CEJ also suggests adding interrogatories: 1) whether the company uses accelerated underwriting for life insurance; 2)
whether the company uses accelerated underwriting for life insurance and for what product categories it is used; and 3) whether
the company uses accelerated underwriting for life insurance and a list of the data sources used and vendors supplied, the data,
or the algorithm.

The CEJ also suggests that the specific underwriting data elements have an addition for the total number of new policies issued
by the company during the period utilizing accelerated underwriting, so state insurance regulators could get some sense of how
much accelerated underwriting is being used and what portion of the book of business is developed using accelerated
underwriting.

Mr. Haworth asked if this information could be reviewed as possible data elements to see what this looks like when trying to
capture this information, as he believes that there is some merit to this request.

Ms. Rebholz asked if he was suggesting a mock set of blanks for review. Mr. Haworth confirmed that that is what he is
suggesting. Ms. Rebholz agreed.
Mr. Birnbaum noted that he would provide the mock set of data elements related to accelerated underwriting for review if that would be helpful. Ms. Nickel agreed.

Mr. Leifer noted that insurers are not allowed to change rates after policies are issued, nor do they generally use rating models. He stated that there is no good definition of accelerated underwriting, and life insurance companies have used things like credit and other non-medical information for decades. He believes that this is an extremely complicated topic, and he noted that the NAIC has a working group dedicated to looking at life insurance and accelerated underwriting. He said he believes that this level of granularity could be premature.

Ms. Nickel noted that reviewing the mock set of data elements and then having further discussion about it would be a good place to start, but it may need to be tabled for another year.

Ms. Rebholz agreed and explained that the Working Group already working on this topic may need to be consulted once this is reviewed further.

Having no further business, the Market Conduct Annual Statement Blanks (D) Working Group adjourned.
The Market Conduct Examination Standards (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met July 23, 2020. The following Working Group members participated: Bruce R. Ramge, Chair, Laura Arp and Reva Vandevoorde (NE); Russell Hamblen, Vice Chair (KY); Mel Heaps and Crystal Phelps (AR); Sarah Borunda and DeLon Price (AZ); Damion Hughes (CO); Kurt Swan (CT); Cheryl Wade (DC); Doug Ommen and Lindsay Bates (IA); Erica Weyhenmeyer (IL); Mary Lou Moran (MA); Jill Huiskes (MI); Paul Hanson (MN); Win Nickens (MO); Tracy Bieln and Teresa Knowles (NC); Maureen Belanger and Edwin Pugsley (NH); Ralph Boeckman (NJ); Laura Baca and Leatrice Geckler (NM); Sylvia Lawson (NY); Nick Stosic and Peggy Willard-Ross (NV); Rodney Beetch, Rick Campbell and Todd Oberholtzer (OH); Landon Hubbart and Shelly Scott (OK); Brian Fordham (OR); Katie Dzurec and Gary Jones (PA); Julie Fairbanks and Bryan Wachtcher (VA); Christina Rouleau (VT); Ned Gaines and John Haworth (WA); and Barbara Belling, Darcy Paskey and Rebecca Rebholz (WI).

1. **Heard Opening Comments**

Director Ramge welcomed returning Working Group members and a new member state, Illinois, represented by Ms. Weyhenmeyer. Changes in Working Group member state representation since the Working Group’s last meeting include New Mexico, represented by Ms. Baca and Ms. Geckler, and Ohio, represented by Mr. Oberholtzer.

Director Ramge said the Working Group has not met since March 4 due to the COVID-19 pandemic and is now resuming scheduled conference calls. He said he would like to keep state insurance regulators’ many commitments related to COVID-19 in mind and to make sure that Working Group members, interested state insurance regulators, subject-matter expert (SME) volunteers and any other parties are not overwhelmed with any workload arising from Working Group calls. Director Ramge asked the Working Group and interested state insurance regulators to reach out to him if that is the case, now, and as the Working Group moves forward on its tasks throughout the year.

2. **Adopted its March 4 Minutes**

The Working Group met March 4 and took the following action: 1) continued discussion on draft limited long-term care insurance (LTCI) examination standards for inclusion in the Market Regulation Handbook (Handbook), which was a carryover item from 2019; 2) began discussion of a new inland marine in force policies standardized data request (SDR) and an inland marine claims SDR for incorporation into the Handbook; and 3) discussed its 2020 charges and potential tasks, which include, but are not limited to, updating SDRs and revising the Handbook with updated examination standards corresponding to recent amendments to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170), the amendments adopted in February to the Suitability in Annuity Transactions Model Regulation (#275) and monitoring the planned activity of the MHPAEA (B) Working Group.

Mr. Haworth made a motion, seconded by Mr. Swan, to adopt the Working Group’s March 4 minutes (Attachment Four-A). The motion passed unanimously.

3. **Adopted the Dec. 11, 2019, Draft of New Limited LTCI Examination Standards Chapter for Inclusion in the Handbook**

Director Ramge said the draft limited LTCI examination standards were developed by state insurance regulator SMEs for the Working Group’s review, discussion and consideration of adoption for inclusion as a new market conduct examination standards chapter in the Handbook. The draft standards were initially exposed Oct. 29, 2019, for public comment and have been discussed during the Working Group’s Nov. 20, 2019, Dec. 18, 2019, and March 4, 2020, meetings.

Director Ramge said the limited LTCI examination standards draft was revised by Ms. Moran and redistributed on Dec. 11, 2019, to Working Group members, interested state insurance regulators and interested parties for the Working Group’s Dec. 18, 2019, meeting. He said Ms. Vandevoorde indicated during that meeting that the revisions made by Ms. Moran addressed the issues raised in Ms. Vandevoorde’s Dec. 3, 2019, comments.
Director Ramge said the Dec. 11, 2019, exam standards draft was discussed during the Working Group’s March 4 meeting, and the Working Group decided not to adopt the draft at that time since it was the first Working Group meeting of 2020. Director Ramge said the draft that was circulated for the July 23, 2020, meeting is identical to the Dec. 11, 2019, draft, except for the attachment numbering and the copyright date.

Mr. Swan made a motion, seconded by Mr. Pyle, to adopt the Dec. 11, 2019, draft “Conducting the Limited Long-Term Care (LTC) Examination” chapter for inclusion in the Handbook (see NAIC Proceedings – Summer 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment Seven). The motion passed unanimously.

Director Ramge said the draft inland marine in force policies SDR and the draft inland marine claims SDR, which were circulated Feb. 24, were developed by state insurance regulator SMEs for the Working Group’s review, discussion and consideration of adoption. Director Ramge said the drafts were discussed for the first time during the Working Group’s March 4 meeting. No comments have been received on the drafts.

Mr. Hamblen made a motion, seconded by Mr. Haworth, to adopt the Feb. 24 draft inland marine in force policies SDR and the inland marine claims SDR for incorporation into the reference documents of the Handbook (see NAIC Proceedings – Summer 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment Eight and Attachment Nine). The motion passed unanimously.

5. Discussed Other Matters

Mr. Hamblen said additional SDRs the Working Group plans to work on in 2020 includes, but are not limited to, LTCI, title insurance and business owners policy (BOP).

Director Ramge said two state insurance regulator volunteers have been tasked with reviewing the Handbook with regard to recent amendments to Model #170, and they will report during the next Working Group meeting on what corresponding changes may need to be made to the applicable chapters of the Handbook.

Director Ramge said that with regard to the February amendments to Model #275, Director Ommen, chair of the Annuity Suitability (A) Working Group, has asked the Market Conduct Examination Standards (D) Working Group to wait before proceeding to update the “Conducting the Life and Annuity Examination” chapter in the Handbook until the Annuity Suitability (A) Working Group has completed its current draft Annuity Suitability Q&A document.

Ms. Arp said the Working Group has drafted a new Mental Health Parity and Addiction Equity Act (MHPAEA) chapter for the Handbook in 2018 (Chapter 24B—Conducting the MHPAEA Related Examination); the chapter was a combined work product resulting from Working Group members, federal agencies that enforce MHPAEA and industry working together to develop numerous revisions during the comment process, and the draft was ultimately adopted by the Working Group, the Market Regulation and Consumer Affairs (D) Committee and the Executive (EX) Committee and Plenary. Ms. Arp said the U. S. Department of Labor (DOL) has included a reference to the Handbook’s MHPAEA chapter in its 2020 revision of its self-compliance tool.

Director Ramge said that with regard to the MHPAEA (B) Working Group’s charge to “provide supplemental resources to support documentation and reporting in the MHPAEA chapter of the NAIC Market Regulation Handbook,” he will be looking for guidance and support from the Market Regulation and Consumer Affairs (D) Committee and the Health Insurance and Managed Care (B) Committee leadership to see how this Working Group and the MHPAEA (B) Working Group should coordinate their efforts to create additional examiner guidance, as the DOL continues to update its MHPAEA guidance and compliance tools, keeping in mind that the Market Conduct Examination Standards (D) Working Group does not create policy; the Working Group creates examiner guidance to support policy created by DOL.

Ms. Dzurec, chair of the MHPAEA (B) Working Group said she would welcome communication and coordination between the two working groups, because having a clearly defined direction regarding what type of guidance is to be developed by which working group would provide more clarity to MHPAEA examiners, as well as regulated entities.
Director Ramge said NAIC staff will provide advance email notice of the next Working Group conference call, which is anticipated to occur in late August or early September.

Having no further business, the Market Conduct Examination Standards (D) Working Group adjourned.
The Market Conduct Examination Standards (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met March 4, 2020. The following Working Group members participated: Bruce R. Ramge, Chair, (NE); Russell Hamblen, Vice Chair (KY); Jimmy Harris, Mel Heaps and Gwen McClendon (AR); Sarah Borunda and DeLon Price (AZ); Damion Hughes (CO); Kurt Swan (CT); Sharon Shipp (DC); Sarah Crittenden (GA); Jill Huisken (MI); Win Nickens (MO); Tracy Biehn and Teresa Knowles (NC); Maureen Belanger and Edwin Pugsley (NH); Ralph Boeckman (NJ); Hermoliva Abejar, Nick Stosic and Peggy Willard-Ross (NV); Rodney Beetch and Angela Dingus (OH); Kevin Foor and Shelly Scott (OK); Gary Jones and Christopher Monahan (PA); Julie Fairbanks and Yolanda Tennyson (VA); John Haworth and Jeanette Plitt (WA); Barbara Belling, Diane Dambach, Mary Kay Rodriguez, Darcy Paskey and Rebecca Rebholz (WI).

1. Heard Opening Comments

Director Ramge welcomed returning Working Group members and a new member state, North Carolina, represented by Ms. Knowles. Changes in Working Group member state representation in 2020 include Ms Abejar, Landon Hubbard (OK), and Brian Fordham and Tasha Sizemore (OR).

2. Adopted its Dec. 18, 2019, Minutes

The Working Group met Dec. 18, 2019, and took the following action: 1) adopted a new farmowners in force standardized data request and a new farmowners claims standardized data request for inclusion in the reference documents of the Market Regulation Handbook (Handbook); and 2) discussed a new chapter of limited long-term care insurance (LTCI) examination standards for inclusion in the Handbook. The new examiner guidance is based on the Limited Long-Term Care Insurance Model Act (#642) and the Limited Long-Term Care Insurance Model Regulation (#643).

Ms. Plitt made a motion, seconded by Ms. Dingus, to adopt the Working Group’s Dec. 18, 2019, minutes (Attachment Four-A1). The motion passed unanimously.

3. Discussed Potential 2020 Tasks

Director Ramge said the charges of this Working Group, as adopted by the Market Regulation and Consumer Affairs (D) Committee, are to:

- Develop market conduct examination standards and uniform market conduct procedural guidance, as necessary.
- Monitor the adoption and revision of NAIC models and develop market conduct examination standards to correspond with adopted NAIC models by the Fall National Meeting.
- Develop updated standardized data requests for inclusion in the Market Regulation Handbook by the Fall National Meeting.

Director Ramge said the Working Group will not meet at NAIC national meetings; it will accomplish its assigned tasks via regularly scheduled conference calls, to occur approximately every four to six weeks.

Regarding the adopted 2020 charges, the Working Group plans to continue discussion on draft limited LTCI examination standards, which is a carryover item from 2019. Additional state insurance regulator guidance the Working Group plans to work on in 2020 includes, but is not limited to: 1) updating NAIC standardized data requests; and 2) revising the Handbook with updated examination standards corresponding to recent amendments to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170), the new Guideline on Nonadmitted Accident and Health Coverages (#1860), and the recent amendments to the Suitability in Annuity Transactions Model Regulation (#275).

Director Ramge asked for state insurance regulator volunteers to: 1) review any of the identified adopted models; and 2) report to the Working Group at its next call regarding whether the Handbook needs updating in these subject areas. Ms. Crittenden and Ms. Plitt volunteered to review Model #170. Director Ramge asked for additional volunteers to review Guideline #1860 and Model #275. He indicated that state insurance regulator subject matter expert (SME) volunteers will subsequently be
needed to draft revisions to the examination standards regarding these two models and guideline, and he asked that all
volunteers for these drafting projects contact either himself or Petra Wallace (NAIC).

Current, but not yet completed, NAIC model development activity which the Working Group will be monitoring in 2020—for
the purpose of developing corresponding examination standards in the future—includes, but is not limited to: 1) amendments
to the Unfair Trade Practices Act (#880) currently being considered by the Innovation and Technology (EX) Task Force; 2)
the planned activity of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, which will begin drafting a new NAIC
model in 2020 to address certain pharmacy benefit manager (PBM) activities; and 3) the planned activity of the recently formed
MHPAEA (B) Working Group, as one of its charges is “to provide supplemental resources to support documentation and
reporting in the MHPAEA chapter of the NAIC Market Regulation Handbook.” Director Ramge asked the Working Group and
interested state insurance regulators to forward any additional areas of focus to himself or Ms. Wallace.

4. **Discussed Dec. 11, 2019, Draft of New Limited LTC Chapter for Inclusion in the Handbook**

Director Ramge said that the draft limited long-term care (LTC) examination standards were developed by state insurance
regulator SMEs for the Working Group’s review, discussion, and consideration of adoption for inclusion as a new market
conduct examination standards chapter in the Handbook. The draft was initially exposed Oct. 29, 2019, for a public comment
and has been discussed during the Working Group’s Nov. 20, 2019, and Dec. 18, 2019, calls.

Director Ramge said that the limited LTC examination standards draft was revised by Ms. Moran and redistributed on Dec. 11,
2019, to Working Group members, interested state insurance regulators, and interested parties for the Dec. 18, 2019, call. He
said that Reva Vandevoorde (NE) indicated during the Dec. 18, 2019, call that the revisions made by Ms. Moran addressed the
issues raised in Ms. Vandevoorde’s Dec. 3, 2019, comments. He said the draft that was forwarded for the March 4, 2020, call
is identical to the Dec. 11, 2019, draft, except for the attachment numbering and the copyright date. He extended the due date
on the draft to April 1, 2020.

5. **Discussed New Draft Inland Marine Standardized Data Requests for Inclusion in the Reference Documents of the
Handbook**

Director Ramge said the new draft inland marine in force standardized data request and the new draft inland marine claims
standardized data request, which were circulated Feb. 24, 2020, were developed by state insurance regulator SMEs for the
Working Group’s review, discussion and consideration of adoption. When the inland marine standardized data requests are
adopted, they will be included in the Handbook reference documents. Director Ramge asked that comments on the inland
marine standardized data requests be submitted by March 25, 2020.

6. **Discussed Other Matters**

Director Ramge asked the Working Group members to participate in as many Working Group conference calls as possible this
year so the Working Group can accomplish the tasks that are planned in 2020.

Director Ramge said NAIC staff will provide advance email notice of the next Working Group conference call, which is
anticipated to occur in April.

Having no further business, the Market Conduct Examination Standards (D) Working Group adjourned.
Market Conduct Examination Standards (D) Working Group
Conference Call
December 18, 2019

The Market Conduct Examination Standards (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met on Dec. 18, 2019. The following Working Group members participated: Bruce R. Ramge, Chair, and Reva Vandevoorde (NE); Russell Hamblen, Vice Chair (KY); Jimmy Harris (AR); DeLon Price AZ); Damion Hughes (CO); Kurt Swan (CT); Sharon Shipp (DC); Frank Pyle (DE); Sarah Crittenden (GA); Mary Lou Moran (MA); Maureen Belanger (NH); Ralph Boeckman (NJ); Peggy Willard-Ross (NV); Rodney Beethe (OH); Kevin Foor, Joel Sander and Shelly Scott (OK); Brian Fordham (OR); Katie Dzurec (PA); Julie Fairbanks and Yolanda Tennyson (VA); John Haworth (WA); Barbara Belling, Diane Dambach, Sue Ezalarab, Darcy Paskey and Rebecca Rebholz (WI); and Desiree Mauller (WV).

1. **Adopted New Farmowners SDRs for Inclusion in the Reference Documents of the Handbook**

Director Ramge said that a new draft farmowners in force standardized data request (SDR) and a new draft farmowners claims SDR were developed by state insurance regulator subject-matter experts (SMEs) for the Working Group’s review, discussion, and consideration of adoption for inclusion in the reference documents of the Market Regulation Handbook (Handbook). The drafts were initially exposed Oct. 29 for a public comment period ending Dec. 2.

Director Ramge said the farmowners in force SDR was subsequently revised and redistributed to Working Group members, interested state insurance regulators, and interested parties on Dec. 11, along with the Oct. 29 farmowners claims SDR, for the Dec. 18 conference call. Mr. Hamblen said the description of the field name CanTerRs (reason for cancellation/termination of coverage) in the Dec. 11 draft farmowners in force SDR was revised so that it would not duplicate the data obtained by field name CanTer (who cancelled the coverage); and the field name CanTer was moved up one row so that it would more logically occur above field name CanTerRs.

Ms. Crittenden made a motion, seconded by Mr. Hamblen, to adopt the Oct. 29 draft farmowners claims SDR (see NAIC Proceedings – Summer 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment One-A) and the Dec. 11 draft farmowners in force SDR (see NAIC Proceedings – Summer 2020, Market Regulation and Consumer Affairs (D) Committee, Attachment One-B). The motion passed unanimously.

2. **Discussed Dec. 11 Draft of New Limited LTC Chapter for Inclusion in the Handbook**

Director Ramge said that new draft limited long-term care (LTC) exam standards were developed by state insurance regulator SMEs for the Working Group’s review, discussion, and consideration of adoption for inclusion as a new market conduct examination standards chapter in the Handbook. The draft was initially exposed Oct. 29 for a public comment period ending Dec. 2.

Director Ramge said the limited LTC examination standards draft was revised by Ms. Moran and redistributed on Dec. 11 to Working Group members, interested state insurance regulators, and interested parties. Ms. Vandevoorde said that the revisions made by Ms. Moran in the Dec. 11 draft addressed the issues raised in Ms. Vandevoorde’s Dec. 3 comments. Director Ramge extended the due date on the draft to the Dec. 31 conference call and indicated that the work on the draft would continue into 2020.

3. **Discussed Other Matters**

Director Ramge welcomed Mr. Harris to the Working Group, representing Arkansas.

Director Ramge said NAIC staff will provide advance email notice of the next Working Group conference call, which is anticipated to occur early in 2020, after the Working Group is reappointed by the Market Regulation and Consumer Affairs (D) Committee.

Having no further business, the Market Conduct Examination Standards (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call July 30, 2020. The following Working Group members participated: Cynthia Amann, Chair, and Marjorie Thompson (MO); Ron Kreiter, Vice Chair (OK); Damon Diedrich (CA); Erica Weyhenmeyer (IL); LeAnn Crowe and Brenda Johnson (KS); T.J. Patton and Paul Hanson (MN); Chris Aufenthie and Anders Odegard (ND); Martin Swanson (NE); Tasha Sizemore (OR); Gary Jones (PA); and Don Beatty (VA). Also participating were: Jimmy Harris and Crystal Phelps (AR); Damion Hughes (CO); Evangelina Brooks (FL); Doug Ommen (IA); Kristen Finau and Michele Mackenzie (ID); Kate Kixmiller (IN); Peggy Willard-Ross (NV); Don Layson (OH); Landon Hubbart (OK); Ignatius Wheeler and Carole Cearley (TX); John Haworth (WA); and Barbara Belling (WI).

1. Adopted its May 5 Minutes

Ms. Amann said the Working Group met May 5 and took the following action: 1) adopted its Feb. 19 minutes; 2) heard an update on state and federal privacy legislation; and 3) discussed comments received on the NAIC Insurance Information and Privacy Protection Model Act (#670).

Mr. Kreiter made a motion, seconded by Ms. Weyhenmeyer, to adopt the Working Group’s May 5 minutes (Attachment Five-A). The motion passed unanimously.

2. Received an Update on State and Federal Privacy Legislation

Jennifer McAdam (NAIC) said a review of the laws about consumer privacy start with data privacy, addressing how data is collected and used by businesses, while data security addresses how data is stored and protected. Ms. McAdam said the NAIC has three model laws governing data privacy: 1) Health Information Privacy Model Act (#55); 2) NAIC Insurance Information and Privacy Protection Model Act (#670); and 3) Privacy of Consumer Financial and Health Information Regulation (#672).

Ms. McAdam said Model #670 was adopted in 1980 to set standards for the collection, use and disclosure of information gathered in connection with insurance transactions. She said it has been enacted by 17 states and addresses how information is collected by insurance institutions, agents and insurance support organizations (ISOs). She said Model #670 balances the need for information by those conducting the business of insurance and the public’s need for fairness; establishes a regulatory mechanism to enable consumers to ascertain what information is being or has been collected about them and to have access to such information so they can verify or dispute its accuracy; limits the disclosure of information collected in connection with insurance transactions; and enables insurance applicants and policyholders to find out the reasons for any adverse underwriting decision. She said Model #670 does this by requiring insurers to provide notice that alerts the individual of the insurer’s information practices and giving consumers the right to request that an insurer: 1) give access to recorded personal information; 2) disclose the identity of the third parties to whom the insurer disclosed the information; 3) provide a right to amend PHI; 4) correct and amend the collected information; 5) amend the personal information; and 6) delete the collected personal information.

Ms. McAdam said the federal Fair Credit Reporting Act (FCRA) was enacted in 1970 to address the fairness, accuracy and privacy of the personal information contained in the files of the consumer reporting agencies and the Federal Privacy Act was enacted in 1974 to govern the collection, maintenance, use, and dissemination of personally identifiable information about individuals that is maintained in systems of records by federal agencies.

Ms. McAdam said following enactment of the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA), the NAIC adopted Model #55 in 1998. She said Model #55 set standards to protect health information from unauthorized collection, use and disclosure by requiring carriers to establish procedures for the treatment of all health information. She said it requires carriers to: 1) create policies and procedures governing health information; 2) notify consumers about those policies and procedures; 3) provide consumers a right to access their protected health information (PHI); 4) provide a right to amend PHI; 5) provide a list of disclosures of consumer PHI; and 6) obtain authorization for collection, use or disclosure of PHI.
Ms. McAdam said the federal Gramm-Leach-Bliley Act (GLBA), enacted in 1999, imposed privacy and security standards on financial institutions and directed state insurance commissioners to adopt certain data privacy and data security regulations.

Ms. McAdam said the NAIC adopted Model #672 in 1999 to: 1) require insurers to provide notice to consumers about their privacy policies and practices; 2) describe the conditions under which a licensee may disclose nonpublic personal health information and nonpublic personal financial information about individuals to affiliates and nonaffiliated third parties; and 3) provide methods for individuals to prevent a licensee from disclosing that information with “opt out” for financial information and “opt in” for health information. She said Model #672 is intended to be enforced via states’ Unfair Trade Practices Act. She said the provisions governing protection of health information were taken directly from Model #55 and the health information privacy regulations promulgated by U.S. Department of Health and Human Services (HHS) pursuant to HIPAA. She also said the provisions governing protection of financial information are based on privacy regulations promulgated by federal banking agencies. Ms. McAdam said the key difference between the treatment of financial information and health information is that insurers must give consumers the right to “opt out” of the disclosure or sharing of their financial information but insurers must get explicit authorization prior to sharing health information (which is considered “opt in”). She said every state has adopted a version of Model #672.

Ms. McAdam said generally applicable data privacy laws, such as the European Union’s General Data Protection Regulation (GDPR), are not insurer-specific and require companies to obtain explicit consent from consumers to collect their data (“opt in”) with an explanation of how the data will be used. The GDPR also contains standards for safeguarding the data. She said the California Consumer Privacy Act (CCPA) became effective this year and gives consumers the right to request that a business: 1) disclose the categories and specific pieces of personal information collected, the categories of sources the information was collected from, the business purpose for collecting the information, the categories of third parties with whom the information is shared, and the specific pieces of personal information that was shared; 2) delete any personal information; and 3) give consumers the right to opt-out of their information being disclosed to third parties. It also prevents companies from discriminating against consumers who exercise their rights under the law and provides a full exemption for PHI governed by HIPAA and a partial exemption for information subject to the GLBA. However, if the information subject to the GLBA is breached, the consumer can pursue a private civil action against the company.

Ms. McAdam said there has not been much change in the state legislative arena. She said in 2019, 24 states considered some type of data privacy legislation but only three states enacted laws: Illinois; Maine; and Nevada. She said five states—Connecticut, Hawaii, Louisiana, North Dakota and Texas—passed bills establishing task forces to study the issue of data privacy by reviewing laws in other states and making recommendations for what would be appropriate privacy standards. Ms. McAdam said more than 15 states introduced data privacy legislation in 2020 but none of them has been passed. She said many of these bills were fairly comprehensive and similar to the CCPA.

Brooke Stringer (NAIC) said there has not been a lot of activity on the federal level since the last Working Group call. She said for today’s federal update, she would provide: 1) an overview of a new federal data privacy bill from U.S. Sen. Sherrod Brown (D-OH), who serves as the ranking Democrat on the U.S. Senate Committee on Banking, Housing and Urban Affairs; 2) briefly recap the four other bills previously proposed; and 3) conclude with a mention of some COVID-19 data privacy bills that have been introduced.

Ms. Stringer said, as she had mentioned before, the key issues for congressional debate focus on trade-offs regarding the extent of preemption, private rights of action, and the stringency of the standard. She said the most recent draft bill is from Sen. Brown, the “Data Accountability and Transparency Act,” which: 1) establishes a new federal agency to protect individuals’ privacy that would have rulemaking, supervisory and enforcement authority, the ability to issue civil penalties for violations of the act, and an Office of Civil Rights to protect individuals from discrimination; 2) prohibits the use of personal data to discriminate in housing, employment, credit, insurance and public accommodations; 3) requires anyone using decision-making algorithms to provide accountability reports to the new federal agency; 4) does not preempt more protective state laws and provides for enforcement by the state attorneys general; 5) bans the use of facial recognition technology, as well as the collection, usage or sharing of any of that personal data; 6) and contains a private right of action.

Ms. Stringer said, as a recap, she would mention some of the other legislative proposals the Working Group has discussed previously:

- U.S. Senate Committee on Commerce, Science and Transportation Chairman Roger Wicker’s (R-MS) draft bill, the “Consumer Data Privacy Act,” that proposes stringent data privacy standards and preempts all state data privacy and
security laws. She said it has a GLBA carveout, which should protect some state data privacy laws. A technical fix
was proposed to clarify that the bill preserves state laws and regulations developed in accordance with the GLBA. She
said it also provides standards for transparency; consumer rights to access, correct, delete their data; requires
affirmative consent before collecting, processing or transferring data; calls for a Federal Trade Commission (FTC)
study examining the use of algorithms that may violate anti-discrimination laws; and provides enforcement of the
bill’s provisions by the FTC and state attorneys general.

- U.S. Sen. Maria Cantwell (D-WA), the ranking Democrat on the U.S. Senate Committee on Commerce, Science and
Transportation, introduced the “Consumer Online Privacy Rights Act (S. 2968),” which contains standards similar to
the Wicker proposal, but would establish a preemptive floor and allow for a private right of action.
- The U.S. House of Representatives’ Committee on Energy and Commerce’s bipartisan draft proposal would provide
the FTC with significant rulemaking authority to implement standards. Ms. Stringer said the questions surrounding
preemption and private right of action remain subject to negotiation. NAIC staff have had discussions with
congressional staff about the NAIC’s privacy models and efforts to update them.
- U.S. Sen. Jerry Moran’s (R-KS) “Consumer Data Privacy and Security Act (S. 3456)” has concepts like the Wicker
and Cantwell proposals. Ms. Stringer said it preempts state data privacy and security laws but would not supersede
state laws that address financial information held by financial institutions defined in Title V of the GLBA (the GLBA
covers persons providing insurance).

Ms. Stringer said, in addition to comprehensive data privacy proposals, she wanted to mention that there have been several
bills introduced that specifically address COVID-19 data privacy. She said the following proposals would put temporary rules
in place regarding the collection, processing and transfer of data used to combat the spread of COVID-19: 1) Chairman Wicker’s
“COVID-19 Consumer Data Protection Act (S. 3663),” which requires covered entities to obtain affirmative consent before collecting, processing or transferring an individual’s personally identifiable information for the purpose of contact tracing with respect to COVID-19. It preempts state laws and has no private right of action; and
Anna Eshoo (D-CA) requires opt-in consent and data minimization, has a private right of action and does not preempt state
laws. Ms. Stringer noted that the U.S. Congress is struggling with passing the next COVID-19 relief bill, so it is unlikely there
will be any immediate action on the aforementioned COVID-19 bills.

Ms. Stringer said, in terms of future actions on comprehensive data privacy legislation, given the pandemic, the fact that it is
an election year and with the general partisan discord, she said it is unlikely there will be any major congressional movement
before the November elections. She also said it may be the next U.S. Congress that ultimately tackles these issues.

3. Heard a Presentation that Included a Comparative Analysis and Comments Received July 24

Chris Peterson (Arbor Strategies, LLC), representing America’s Health Insurance Plans (AHIP), the Blue Cross and Blue Shield
Association (BCBSA) and the Coalition (an organization that includes Aetna, Anthem, Cigna, Health Care Service Corporation
and UnitedHealthcare), said phase one of any gap analysis by the Working Group should be a side-by-side comparison. He
said the health insurance industry he represents has submitted a side-by-side comparison as a first step in completing a gap
analysis.

Mr. Peterson said this analysis compares various approaches to regulating privacy, which the NAIC would use to determine
whether those gaps are significant and/or relevant to state insurance regulators, insurance consumers and the insurance industry.
He said before conducting this final analysis or final phase of its gap analysis, the Working Group should establish a base for
conducting comparative analysis, as well as determine parameters for conducting analysis and evaluating gaps. Mr. Peterson
agreed with the Working Group that the most logical approach would be to use Model #672 because it reflects the NAIC’s
most current thinking on privacy regulation; it is universally adopted at the state level; and other NAIC models have previously
been rejected as base models by the Working Group during its meetings. He said the parameters for conducting the analysis
should be focused solely on insurance licensees, insurance practices and insurance transactions.

Mr. Peterson said the analysis should not regulate business in general, non-insurance practices or non-insurance transactions.
He said any gaps that are identified should only be filled by concepts that have consensus support at the state level (also known
as the “Walter Bell Rule”) and that the resulting model should be aligned with existing federal laws. Mr. Peterson provided a
comparison of the following aspects of Model #672, HIPAA, Model #670, the CCPA and the GDPR: 1) applicability;
2) definition of “covered or personal information”; 3) privacy notices; 4) opt-in/opt-out rights; and 5) consumer rights.
Lauren Choi (BCBSA) said while she applauds the Working Group’s efforts, she reiterated that updates made to any privacy model would require a deliberative and considered approach based on facts and policy. She said state insurance regulators and the industry together can move forward only if the current landscape of existing federal law in the privacy arena is understood. To assist the Working Group in its efforts, she said the BCBSA and the Coalition has conducted a gap analysis of the specific privacy requirements with which certain insurance licensees must comply, including HIPAA, the CCPA, Model #670, Model #672 and the GDPR.

Ms. Choi said she hopes this material will be helpful to the Working Group to increase the Working Group’s understanding of the existing consumer protections under current regimes. She said the BCBSA and the Coalition have learned that the Working Group has determined it is more beneficial for to focus its efforts on Model #672 instead of Model #670. Ms. Choi said the BCBSA fully supports and appreciates this decision, because, as it compares to Model #670, the newer Model #672 was developed to improve on Model #670; is much more reflective of current regulatory thinking and attitudes; and has been far more widely accepted in the states. She said Model #672 is a viable foundation for the Working Group to review and to determine what changes, if any, are needed to effectively protect consumer interests in the insurance arena.

4. Discussed Plans to Begin a Gap Analysis Discussion by Working Group Members, Interested State Insurance Regulators and Interested Parties Using Model #672 as a Baseline Model

Ms. Amann said the Working Group will begin its gap analysis discussion using Model #672 as a baseline. She said the plan is to break the analysis discussion down into three separate areas: 1) consumer issues; 2) industry obligations; and 3) regulatory enforcement. She said to help the Working Group visualize each of the topics to be discussed, two comparison charts created by Ms. McAdam indicating how Model #670, Model #672, the GLBA, HIPAA and the CCPA address them were posted to the Working Group’s page on the NAIC website prior to this meeting. She said the Working Group would start its discussion at its next meeting with consumer issues such as disclosures, notifications, portability, opt-in/opt-out, changes, deletions, etc.

Having no further business, the Privacy Protections (D) Working Group adjourned.
Privacy Protections (D) Working Group
Conference Call
May 5, 2020

The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call May 5, 2020. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (OK); Damon Diederich (CA); Erica Weyhenmeyer (IL); LeAnn Crowe (KS); T.J. Patton (MN); Kendall Cotton (MT); Chris Aufenthie (ND); Brian Fordham (OK); and Don Beatty (VA). Also participating were: Jimmy Harris and Crystal Phelps (AR); Damion Hughes (CO); Evangelina Brooks (FL); Doug Ommen (IA); Kristen Finau and Michele Mackenzie (ID); Kate Kixmiller (IN); Brenda Johnson (KS); Paul Hanson (MN); Marjorie Thompson (MO); Anders Odegard (ND); Peggy Willard-Ross (NV); Don Layson (OH); Landon Hubbell (OK); Ignatius Wheeler and Carole Cearley (TX); John Haworth (WA); and Barbara Belling (WI).

1. Heard Opening Remarks

Ms. Amann said this is the Working Group’s second conference call in 2020. She said the Working Group is still in the process of building its membership, as well as forming distribution lists for interested state insurance regulators and interested parties. She asked those interested in joining the Working Group or being added to a distribution list to contact Lois E. Alexander (NAIC). Ms. Amann said the Working Group is charged with addressing the privacy of consumer data. She said data privacy is concerned with how data is collected and used by businesses; however, she said the security of consumer data is concerned with how data is stored and protected. She said data security is not being addressed by this Working Group, but it is being addressed by other working groups. She said NAIC staff support for related working groups are coordinating efforts to ensure that there is no overlap nor duplication of effort. She said the Working Group will continue to track and work closely, as needed, with the other working groups in this arena—the Artificial Intelligence (EX) Working Group, the Accelerated Underwriting (A) Working Group, etc.—as each has its unique set of issues that nevertheless require coordination. She said a significant change going forward is that the Working Group will address health care privacy as it applies to the NAIC Insurance Information and Privacy Protection Model Act (#670) and the Privacy of Consumer Financial and Health Information Regulation (#672) after more general privacy issues have been reviewed and discussed. She also said the Working Group will have conference calls approximately every six weeks following the Workplan/Briefing document posted on the webpage.

2. Adopted its Feb. 19, 2020, Minutes

Mr. Beatty made a motion, seconded by Ms. Weyhenmeyer, to adopt the Working Group’s Feb. 19 minutes (Attachment Five-A1). The motion passed unanimously.

3. Heard an Update on State and Federal Privacy Legislation

Jennifer McAdam (NAIC) said there have not been very many state legislative changes since the Working Group’s Feb. 19 call. She said more than 15 states are now considering data privacy legislation. She said regulations for the California Consumer Privacy Act (CCPA) are currently under review and posted to the California Attorney General’s website. She said four research charts updated by NAIC Legal staff on April 20 were posted on the Working Group’s web page prior to today’s call.

Brooke Stringer (NAIC) said there has not been a lot of activity on the federal level since the last Working Group call either. She said there has been one new bill on privacy and security introduced by U.S. Sen. Jerry Moran (R-KS), the “Consumer Data Privacy and Security Act (S. 3456).” She noted that the bill would preempt state data privacy and security laws with exceptions, and it would not supersede state laws that address financial information held by financial institutions as defined in Title V of the Gramm-Leach-Bliley Act, which includes persons providing insurance.

4. Discussed Comments Received on Model #670

Ms. Amann thanked everyone who submitted comments on the exposure draft that the state insurance regulator subject matter expert (SME) group created of key issues. She said all comments received would be discussed by the Working Group on future conference calls. She said sections 14–19 and 22–24 had been referred to NAIC Legal staff for review and an update with similar language from other NAIC models that were adopted recently in the interest of saving time and not recreating the wheel.
She said sections 20 and 21 would require a great deal of discussion, so they will be delayed until later. She said Mr. Kreiter is working on replacing outdated definitions with pertinent standard definitions that were already adopted in other models or taken from the NAIC Market Regulation Handbook or IT Exam Standards Handbook. She asked that the Working Group read the charts prepared by NAIC Legal staff closely, as they provide a very good overview of the CCPA, the European Union’s (EU’s) General Data Protection Regulation (GDPR), and other state legislation. She said the Working Group may decide to update Model #670, Model #672 or both.

Chris Petersen (Arbor Strategies LLC) suggested that the Working Group consider doing a gap analysis of the existing laws first to compare the consumer privacy protection requirements in the current NAIC models to the desired future privacy protection requirements. Ms. McAdam noted that Model #670 is based on the federal Fair Credit Reporting Act (FCRA), so its requirements are closer to those required by the CCPA.

Ms. Amann said the Working Group can have this discussion when this is added to the strikeout version going forward, but it will follow the agenda and walk through Model #670 comments at this time starting with the Preamble. Mr. Hanson suggested replacing the word “institutions” with the word “entities” throughout the document. Ms. Kitt objected to the phrase “natural person,” and she recommended that it be changed. Mr. Diederich said this term was defined in the Fourteenth Amendment to distinguish individuals from a legal entity. Mr. Hanson said it referred to a physical person rather than a corporation, and Mr. Kreiter concurred. Ms. McAdam said she would check to see how this was handled in the recently adopted Insurance Data Security Model Law (#668). Bob Ridgeway (AHIP) said this is an exclusive state standard, and there is only one, not several, set by the Attorney General in each state.

Kate Kiernan (American Council of Life Insurers—ACLI) said the ACLI distinguishes the lines of business separately, and she suggested that the modernized wording from Model #672 be inserted into Model #670. She said this would help all lines of business by having clear instruction about what consumers need to know by the line of business they are considering. She said legal transparency is very important in situations dealing with the privacy protection of insurance consumers.

Ms. Amann said the data that is currently being collected on consumers is very broad and from a multitude of sources, so it is important to use the same consumer privacy protection requirements for all lines of business. Mr. Petersen said it is not separated in Model #668. Mr. Hanson said “institutions” should be changed to “licensee” throughout the document to agree with Model #672 in order to clarify it as not meaning an agent (producer). He said Section D under Scope may not be needed, as it relates to title insurance, or it may need to be cleaned up, as it is unique to title coverage. Elizabeth Blosser (American Land Title Association—ALTA) said language specific to insurance needs to use publicly recognizable terms. Ms. Kiernan said industry finds the Definitions section the most troubling obstacle about areas needing updating. Ms. Amann said the state insurance regulators who are SMEs would refer the Working Group to other models or federal legislation.

Ron Troy (Blue Cross Blue Shield Association—BCBSA) asked what gap the Working Group is trying to fill, and he suggested that the Market Regulation and Consumer Affairs (D) Committee be contacted for clarification of the Working Group’s charges.

Karrol Kitt (The University of Texas at Austin) and Brenda J. Cude (The University of Georgia) said they will submit comments related to the protection of consumer data privacy for the next Working Group call.

Ms. Kiernan said she would send the technical terms she mentioned to the Working Group.

Mr. Petersen said he would send the Model #672 terms to be used in Model #670 to the Working Group.

Having no further business, the Privacy Protections (D) Working Group adjourned.
The Privacy Protections (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Feb. 19, 2020. The following Working Group members participated: Cynthia Amann, Chair (MO); Ron Kreiter, Vice Chair (OK); Damon Diederich (CA); Erica Weyhenmeyer (IL); LeAnn Crowe (KS); T. J. Patton (MN); Kendall Cotton (MT); Bob Harkins (NE); Chris Aufenthie (ND); Brian Fordham (OR); and Don Beatty (VA). Also participating were: Vanessa Darrah (AZ); Michele Mackenzie (ID); Jennifer Demory and Don Layson (OH); John Haworth (WA); Barbara Belling (WI); and Bill Cole (WY).

1. **Heard Opening Remarks**

Ms. Amann said this is the first conference call of the Working Group since its 2020 charges were adopted by the Market Regulation and Consumer Affairs (D) Committee during its Dec. 9, 2019, meeting in Austin, TX. She said the Working Group is still in the process of building its membership, as well as forming distribution lists for interested state insurance regulators and interested parties. She asked those interested in joining the Working Group or being added to a distribution list to contact Lois E. Alexander (NAIC).

2. **Adopted its 2019 Fall National Meeting Minutes**

Mr. Kreiter made a motion, seconded by Ms. Cotton, to adopt the Working Group’s Dec. 8, 2019, minutes (see NAIC Proceedings – Fall 2019, Market Regulation and Consumer Affairs (D) Committee, Attachment Ten). The motion passed unanimously.

3. **Heard an Update on State and Federal Privacy Legislation**

Jennifer McAdams (NAIC) said 15 states—i.e., Arizona, Florida, Hawaii, Illinois, Maryland, Massachusetts, Minnesota, Nebraska, New Hampshire, New Jersey, New York, Pennsylvania, South Carolina (applies only to biometric information), Virginia and Washington—have pending data privacy legislation.

Ms. McAdams said many of the bills are comprehensive and like the California Consumer Privacy Act (CCPA). She also said several of the bills contain exemptions for entities or information subject to the Gramm-Leach-Bliley Act (GLBA). She said the New York bill was carried over from 2019, would go further than the CCPA, and would establish a fiduciary duty for companies to act in the consumer’s best interest regarding the consumer’s personal information. However, she said the legislation in South Carolina applied only to biometric information.

Ms. McAdams said updated legal research charts on the Privacy Protections (D) Working Group web page will be posted soon. She said one of the charts lists general state data privacy laws—laws that are applicable to all businesses and not specific to insurers. She said the chart lists the entity responsible for enforcement, exemptions, whether it is “opt-in” or “opt-out,” and consumer notice requirements.

Brooke Stringer (NAIC) said there are three major legislative proposals in the U.S. Congress (Congress) currently, all of which apply to both data security and data privacy. She said some of the key issues focus on trade-offs regarding the extent of preemption, private rights of action, and the stringency of the standard.

Ms. Stringer said the Chairman of the U.S. Senate (Senate) Committee on Commerce, Science, and Transportation, Sen. Roger Wicker (R-MS), has released draft legislation that contains data privacy standards that are very high—higher than California law in several instances according to the committee website. She said it broadly preempts all state laws on data privacy and data security. She said the bill provides standards for transparency and consumer rights to access, correct and delete their data; requires affirmative consent before collecting, processing or transferring data; calls for a Federal Trade Commission (FTC) study examining the use of algorithms that may violate anti-discrimination laws; and provides for the enforcement of the bill’s provisions by the FTC and state Attorney General. She said the legislation currently has a carve out for the GLBA; however, she said the net effect of the proposal would be to preempt all state data privacy or data security laws. She said NAIC staff is
working with the Senate Committee on Commerce, Science, and Transportation to try to clarify the bill language with respect to insurance.

Ms. Stringer said Sen. Maria Cantwell (D-WA), the Ranking Democrat on the Senate Committee on Commerce, Science, and Transportation has introduced her own legislation (S. 2968). She said this legislation contains standards like those in Sen. Wicker’s proposal, but Sen. Cantwell’s proposal allows for a private right of action and would establish a preemptive floor.

Ms. Stringer said the U.S. House of Representatives (House) Committee on Energy and Commerce has released a bipartisan draft proposal that provides the FTC with significant rulemaking authority to implement standards. However, she said questions surrounding preemption and private right of action remain subject to negotiation at this time.

4. Discussed Next Steps

Ms. Amann said it was suggested during the 2019 Fall National Meeting that a public hearing be held to determine how insurers are using the data they collect on consumers. However, she said it was determined that a public hearing will not be necessary since the charges for the Working Group are very clear regarding this issue. She said next steps include the Working Group meeting at 11:00 am on Sunday, March 22, 2020, in Phoenix, AZ at the Spring National Meeting. She said a regulator subject matter expert (SME) group would create a draft of key issues to be exposed to the Working Group for comment prior to the Spring National Meeting. She said all comments received prior to the national meeting will be discussed by the Working Group in Phoenix, AZ.

Having no further business, the Privacy Protections (D) Working group adjourned.
The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Feb. 20, 2020. The following Working Group members participated: John Haworth, Chair (WA); Bill Cole, Vice Chair (WY); Lindsay Bates (IA); Erica Weyhenmeyer (IL); Mary Lou Moran (MA); Jason Decker (MD); Paul Hanson (MN); Cynthia Amann (MO); Tracy Biehn (NC); Reva Vandevoorde (NE); Edwin Pugsley (NH); Robert Doucette (NM); Angela Dinges (OH); Landon Hubbart (OK); Brian Fordham (OR); Christopher Monahan (PA); Michael Bailes (SC); Julie Fairbanks (VA); Christina Rouleau (VT); and Theresa Miller (WV). Also participating were: Pam O’Connell (CA); Jill Huisken (MI); and Matt Gendron (RI).

1. **Adopted its Jan. 30 Minutes**

The Working Group met Jan. 30 to discuss the pilot volunteers’ suggested revisions to the Voluntary Market Regulation Certification Program (Program).

Mr. Doucette made a motion, seconded by Ms. Moran, to adopt the Working Group’s Jan. 30 minutes (Attachment Six-A). The motion passed unanimously.

2. **Discussed Comments Concerning Certification Pilot Volunteers’ Suggestions**

Mr. Haworth said one set of comments was received since the Working Group’s Jan. 30 conference call. The comments were from Michael Lovendusky (American Council of Life Insurers—ACLI). Mr. Haworth said the comments recommended requirement 5 include a provision that the department of insurance (DOI) have cybersecurity requirements equal to or more rigorous than those required of regulated entities. He said the comments also discussed requirement 3 for overseeing contractors. Because contractor costs can be very high, the ACLI comment letter recommends companies be allowed to enter into tri-party agreements with contract examiners. Finally, the comment letter said the ACLI cannot support requirement 6 because the Market Actions (D) Working Group policies and procedures are for state insurance regulators only and cannot be viewed by the regulated entities.

Mr. Haworth said the NAIC *Market Regulation Handbook* (Handbook) summarizes the Market Actions (D) Working Group processes. Mr. Lovendusky said there was no understanding by industry of the Market Actions (D) Working Group deliberation processes. He suggested it may be helpful for the Working Group to hold an open meeting with industry to discuss industry concerns.

Ms. Moran said she took issue with Mr. Lovendusky’s comments concerning contractor costs. She said Massachusetts is very careful about keeping costs for examinations down. She said Massachusetts only uses approved contractors and requires and reviews the contractor budgets for every examination. The DOI will conduct an examination if it is too costly. No work is begun until there is direct approval from the DOI. The DOI makes sure that costs are as low as possible. She said most states control the cost of contractors. Mr. Doucette said the New Mexico DOI has a robust procedure for selection and takes Mr. Lovendusky’s charges seriously. Mr. Cole said the Wyoming DOI use contractors frequently because of the DOI’s size and if the cost is exorbitant, the DOI would find another way to address a concern.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said the cost of contractors has been a concern for many years and is beyond the scope of the Working Group’s discussion regarding the certification program revisions. She said she has been told the Market Actions (D) Working Group’s policies and procedures are confidential and cannot be shared with industry. She agreed with Mr. Lovendusky’s comments that the APCIA cannot support requirement 6 for this reason. She suggested that the requirement could reference the Handbook’s description of the Market Actions (D) Working Group’s processes rather than reference its policies and procedures manual. She also asked if a request could be made to the Market Actions (D) Working Group to make their policies and procedures public. Mr. Haworth said that is a consideration for the Market Actions (D) Working Group to take up.
3. Discussed Pass and Fail Metrics

Mr. Haworth said the discussion of the definitions for “unqualified pass” and “provisional pass” in requirement 4 leads to a broader discussion of what the criteria for passing or failing for each requirement should be, as well as the passing and failing of the entire certification program. He noted the terms “unqualified pass” and “provisional pass” are only found in requirement 4. He asked if those measurements should be used for other requirements or not used at all. He noted within requirement 4, it was not clear when a pass would be unqualified or provisional. Mr. Cole said he sees the usefulness of allowing a jurisdiction to pass provisionally if there are conditions outside of their control such as a collective bargaining agreement.

Mr. Haworth suggested possibly using a percentage of positive responses to all the checklist questions to determine whether a jurisdiction passes or fails. For example, if a jurisdiction had a positive response for 70% of the questions, it would pass. He said it would make sense, however, to weight some requirements more than others. He said, for example, if a jurisdiction failed the requirement to be able to maintain confidentiality, the jurisdiction should fail the entire certification program. Mr. Doucette agreed with the importance of weighting more important requirements heavier than the less important requirements. Mr. Cole noted the requirement for participation in the Market Conduct Annual Statement (MCAS) may be weighted less. He said the Working Group would need to determine which requirements are weighted heavier and by how much.

Ms. Amann asked whether each requirement would be rated as “1, 2, 3” or “High, Medium, Low,” and Mr. Haworth said it seemed to be the way the Working Group was leaning. He said in that manner, a jurisdiction would also know which requirements it needs to work on. Ms. Huiskens suggested using the financial accreditation program scoring methodology as a template. Mr. Gendron said he supports a weighted scoring. Ms. Dingus also said a weighted option is appropriate but said she needs some time to consider how each would be weighted.

Ms. O’Connell said it makes sense that some requirements are make or break but others are not so important. A single aggregate score may not be appropriate if they are missing a requirement that must be in place.

Mr. Haworth said that he and Mr. Cole would develop a matrix for scoring based on the discussions.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.

W:\National Meetings\2020\Spring\Cmte\D\MRCWG\January\0130 MRCWG.docx
The Market Regulation Certification (D) Working Group of the Market Regulation and Consumer Affairs (D) Committee met via conference call Jan. 30, 2020. The following Working Group members participated: John Haworth, Chair (WA); Bill Cole, Vice Chair (WY); Jimmy Harris (AR); Lindsay Bates (IA); Erica Weyhenmeyer (IL); Holly Williams-Lambert (IN); Mary Lou Moran (MA); Jason Decker (MD); Cynthia Aman (MO); Tracy Biehn (NC); Edwina Vandevoorde (NE); Edwin Pugsley (NH); Angela Dingus (OH); Landon Hubbard (OK); Scott Martin (OR); Christopher Monahan (PA); Michael Bailes (SC); Tracy Klausmeier (UT); Isabelle Keiser (VT); and Theresa Miller (WV). Also participating were: Pam O’Connell (CA); and October Nickel (ID).

1. Adopted its Nov. 20, 2019, Minutes

The Working Group met Nov. 20 to discuss the pilot volunteers’ suggested revisions to the Voluntary Market Regulation Certification Program (Program).

Ms. Dingus made a motion, seconded by Ms. Biehn, to adopt the Working Group’s Nov. 20, 2019, minutes (see NAIC Proceedings – Fall 2019, Market Regulation and Consumer Affairs (D) Committee, Attachment Nine). The motion passed unanimously.

2. Discussed Comments Concerning Certification Pilot Volunteers’ Suggestions

Ms. O’Connell said the reorganization of the Program is an improvement. She said placing the checklist for each requirement with its corresponding requirement and guidelines makes it clearer to understand, but some of the criteria for what constitutes success on some of the standards is still unclear.

Regarding requirement 1, Ms. O’Connell said the guidelines are not clear as to what standards a jurisdiction must meet in order to pass the requirement. She said the fourth paragraph of the guidelines for this requirement only describes one item as something a jurisdiction must have in order to pass, which is the authority to coordinate with other jurisdictions. The paragraph then says a jurisdiction should have the authority to conduct analysis, examinations and enforcements but does not say it must be able to. She said the paragraph then describes a jurisdiction with the “ability” to conduct analysis, examinations and enforcement, but not the ability to perform continuum actions as marginally passing. She said it is not clear whether the word “ability” is really intended to mean “authority.” She said “authority” seems to be the correct word, or else how would a jurisdiction’s “ability” to do continuums be measured?

Ms. O’Connell said it is not clear how a jurisdiction’s authority or ability to conduct analysis, examinations, enforcement and continuum actions relates to whether the jurisdiction has the authority to collaborate with other states, which is the only specified “must have” according to the guidelines. Ms. O’Connell said the guidelines should be precise with respect to what is required for a jurisdiction to pass this aspect of the requirement.

Ms. O’Connell said while the requirement says part of the evaluation pertains to whether the jurisdiction has adopted or is in the process of adopting key consumer protection laws and the guidelines list a series of key laws a jurisdiction should have, the checklist collects no information regarding the reporting jurisdiction’s consumer protection laws. She said it is unclear how it will be determined whether a jurisdiction meets this portion of the requirement.

Ms. O’Connell said if the items in the second paragraph under the guidelines for requirement 2 are required in order for a jurisdiction to pass this requirement, they should be incorporated into the third paragraph, which begins, “To evaluate whether your jurisdiction passes Requirement 2 ... “.

Ms. O’Connell said that because the checklist for requirement 3 has been modified to create one question about staff examiners and a separate question about contract examiners, the second bullet point in the sixth paragraph of the guidelines needs to be revised to account for the new structure and for the new wording of all of the other questions that follow the current question 3e. She said the original intent of these bullet points, when 3d addressed both staff and contract examiners, was to say if a jurisdiction uses contract examiners for exams and continuums, additional criteria surrounding contractor
hiring practices and oversight must be met in order to pass. She said the second bullet point no longer tracks in this manner due to the changes to lettering.

For checklist item 3c, Ms. O’Connell asked the reasoning behind separating the numbers of companies upon which market analysis is performed during the year between single-state/multistate and L&H/P&C. She said there is not any pass/fail metric tied to the mix of companies analyzed during the review period. She recommended removing the additional layer of detail in order to make the self-reporting for this item less time intensive.

For the newly number questions 3i and 3j, Ms. O’Connell said it is not clear what they are intended to measure and what is meant by “quantitative and subjective measurements” to ascertain whether the Department of Insurance (DOI) is achieving its staffing policies and procedures. She said the Working Group should define these more specifically so jurisdictions will be clear on the standards to which they may be held in the future.

Ms. O’Connell said the narrative for question 3g seems to say the written premium to be entered into the table should be the combined written premium of all entities examined or subject to an action during the calendar year. She said it is not clear how this will demonstrate that the jurisdiction has enough staff to properly oversee its market. For example, she said if state A has total premium writings of $10 billion in its market overall but only did one exam on an insurer with premium writings of $5 million, comparing the $5 million figure with the number of examiners state A has on staff or under contract would provide no perspective on whether that examiner count is reasonable compared to the overall size of state A’s $10 billion market.

Ms. O’Connell said item 3h’s demand for a list of all examiners either on staff or contracted by name, along with specifics about their educational and work history backgrounds, is not relevant to whether the DOI has a properly sized staff or the ability to hire contractors to meet market regulation needs as stated in requirement 3. She noted that item 3g already asks for counts of examiners. She said 3h should be deleted.

Ms. O’Connell said under the requirement 4 structure proposed for unqualified pass and provisional pass for the various subparts of the guidelines, a jurisdiction whose rules for hiring and establishing conditions of employment are subject to collective bargaining and specific civil service rules could only ever attain a provisional pass. In the note to evaluators, it says that for provisional pass items, progress is recommended and expected during successive reviews. She said it is not clear what progress the Working Group expects to see a jurisdiction, bound by collective bargaining, make from year to year when these items are outside the control of the DOI. She said it also is not clear what the consequence would be if a jurisdiction is not able to demonstrate the desired progress.

Ms. O’Connell said the core competencies section of the NAIC Market Regulation Handbook (Handbook) with which, according to requirement 4, a jurisdiction’s methods of ensuring qualifications of staff should be consistent, lists and describes a number of designations and credentials indicative of a high degree of proficiency in market regulation. She said, however, that it also very specifically says the designations listed are not intended to be exhaustive nor is it intended for designations to be required for qualification. She said California is not in favor of the current structure of the guidelines because they set a higher standard for passing than is called for by the language of the requirement and the Handbook. She recommended simplifying this set of guidelines to eliminate the unqualified pass and provisional pass distinctions and instead establish clear criteria to measure whether jurisdictions have hiring processes allowing them to select applicants with appropriate education, work experience, skills and abilities to perform market regulation work regardless of specific designations, and whether the jurisdictions have programs and procedures to encourage and promote professional development of staff.

Ms. O’Connell noted the first line of the second paragraph of the requirement 6 guidelines incorrectly refers to the Market Actions (D) Working Group as the Market Analysis (D) Working Group.

Ms. O’Connell said for requirements 6, 7 and 8 at the bottom of each checklist, there is an unnumbered item that states, “Have there been any changes to your requirements since last year’s review. If “yes,” provide an explanation.” She said it is unclear what the phrase “your requirements” is in reference to. She said the question should be more specific to clarify what the jurisdiction should be reporting in the way of changes during the interim period.

Ms. O’Connell said the requirement 9 guidelines are not clear with respect to expectations for participation in working groups and task forces beyond the Market Analysis Procedures (D) Working Group and Market Conduct Examination Standards (D) Working Group. She said the fourth paragraph of the guidelines, which begins “To evaluate whether your jurisdiction passes Requirement 9,” lists three things the jurisdiction must be able to do at a minimum to pass—1) answer “yes” to 9a and 9b; 2) document who in the department monitors or participates in the Working Groups; and 3) accurately document a list of any other market analysis or market conduct related working groups or task forces the jurisdiction participates in or monitors. She
said the third element conflicts with the last paragraph of the guidelines that says it is at the jurisdiction’s discretion to participate in or monitor the Market Information Systems (D) Task Force or any other working group or task force that reports to the Market Regulation and Consumer Affairs (D) Committee. She said the Working Group should modify the guidelines to eliminate this conflict by either making participation in or monitoring of these other groups mandatory or discussing them in the guidelines as something the jurisdiction should consider being a best practice.

Ms. O’Connell recommended modifying the requirement 11 guidelines and the criteria for what passes this requirement to mirror the current national analysis program process with the recognition that the process could change in the future, in which case the guidelines will be reevaluated and modified. She said the current structure of the national analysis program calls for:

1) a lead state for each line of business that is responsible for the selection process; 2) individual jurisdictions to perform analysis on selected companies; and 3) a summarizing jurisdiction responsible for compiling the results of all individual state analysis for a single company. She said a state currently gets no credit under the certification program for acting as a summarizing jurisdiction. She said the limited number of lead state spots per year will not allow all 56 jurisdictions to have the opportunity be a lead state every other year as needed to pass the requirement. She recommended restructuring the requirement, guidelines and checklist to allow a state to pass the requirement if it reviews national analysis data on an annual basis and on an every other year basis either acts as a lead state responsible for the selection process or acts as a summarizing jurisdiction.

Finally, Ms. O’Connell said the years identified throughout the Proposal for Implementation need to be updated to reflect the current timeline. She said the Working Group should consider a more generic description, such as “two weeks before the Fall National Meeting of the first year following adoption by the membership” since it is not known when the Market Regulation and Consumer Affairs (D) Committee and the Executive (EX) Committee and Plenary will adopt the program. Mr. Decker agreed with updating the implementation dates.

Ms. Nickel said the word “or” needs to be included in the second sentence of the requirement 1 wording. “Additionally, the jurisdiction has adopted, is in the process of adopting, …” to read, “… or is in the process of adopting …”.

Ms. Nickel said the fourth bullet point under section b of the requirement 4 guidelines references “similar organizations.” She said this needs to be defined to specify whether it includes associate or higher-level designations from the Society of Financial Examiners (SOFE) or the Life Office Management Association (LOMA), which are already a requirement in other NAIC standards. She said Ms. O’Connell’s idea to be more general is the best solution.

Ms. Nickel said section d of the requirement 4 guidelines asks if the market regulation section recognizes the licenses and credentials of cybersecurity and information technology (IT) experts. She said this may be duplicative because the financial examinations section of DOIs uses these experts on targeted examinations of domiciled companies where a cyber event occurs. She said this is part of any financial examinations conducted as scheduled by Idaho and is already required by the NAIC financial accreditation standards. Mr. Haworth noted that non-domestic examinations are often left to the market regulation departments to conduct. Ms. Amann noted that the IT Examination (E) Working Group has a charge to work with the Market Conduct Examination Standards (D) Working Group to assist in the development of regulatory oversight policy with respect to cybersecurity examination issues, as requested by the Innovation and Technology (EX) Task Force. She said the guidance from this work may assist smaller states.

Ms. Nickel said the first paragraph of requirement 8 should be rewritten to be more in line with the objective statement and checklist of requirement 8. She suggested (suggested changes in italics): “The department enters data as information is available for sharing into all NAIC systems, including, but not limited to, the Complaint Database System (CDS) and the Regulatory Information Retrieval System (RIRS). Except for immediate concerns as defined in the Market Regulation Handbook, the department enters data into the Market Action Tracking System (MATS) at least 60 days prior to the start of the on-site examination. Additionally, the department enters continuum actions into MATS as appropriate.”

Ms. Nickel said the reporting of continuum actions should be “as appropriate.” She noted the objective statement of requirement 8 indicates the goal is to ensure other jurisdictions are timely informed of market conduct actions that “have occurred, are ongoing, or that are anticipated.” In the checklist, the entry into MATS for on-site examinations are required 60 days prior, but there is no other requirement for continuum activities entry to be 60 days prior. She said that is correct since it would be impossible to enter continuum activities 60 days prior if they were the result of a Market Analysis Review System (MARS) Level 1 or Level 2 recommendation, a referral from the consumer complaints section, a company self-reporting, or if there was an immediate concern.
Ms. Nickel said the checklist item 8c reference to “appropriate databases” is unclear. She said if there are databases other than MATS, she suggested rewording 8c to say: “Does the department enter continuum actions into the other appropriate NAIC database, such as MATS, as recommended and the resulting applicable final status reports or updates (if applicable) at least quarterly?” However, if 8c is intended to be specific to MATS and continuum activities, and there is no quarterly reporting requirement, she suggested rewording 8c to: “Does the department enter continuum actions into MATS including the resulting applicable final status reports or updates as appropriate (or as recommended/required by the Department)?”

Ms. Nickel noted Idaho does not have the resources to continuously update MATS actions quarterly. She said as part of the DOI’s market analysis procedure, MATS actions are entered and updated throughout the course of the continuum activity, which may only be when initially entered and at finalizing the action. She said this may take longer than three months.

Ms. Nickel asked what was necessary to pass certification overall. Do all requirements need to be passed or simply most requirements be passed, or some other number of requirements?

Mr. Decker said he has the same concerns as Ms. O’Connell about needing more objective standards for passing requirement 1. He also noted the same issues with being sure the checklist references are correct for renumbered item numbers.

Mr. Decker asked if any of the pilot program participating states that answered “yes” to requirement 3 checklist items 3i and 3j would share examples of their policies and procedures and the quantitative and subjective measurements that they used in determining if they passed. He said the standards for determining whether a state passed seemed subjective.

For the requirement 8 checklist, Mr. Decker asked if a jurisdiction must be 100% compliant for items 8c and 8e. If not, he suggested incorporating error tolerance rates.

Mr. Decker suggested a metric for measuring success in meeting requirement 9. He said the current measurement is subjective and would be improved by adding a percentage metric similar to the 50% attendance requirement that is used in requirement 10 checklist item 10c.

Mr. Decker said the requirement 10 checklist item 10d does not define how “actively monitor” will be measured. He said a metric should be added for item 10d. He also suggested adding “or their designee” to the individuals who monitor bulletin board discussions.

Lisa Brown (American Property Casualty Insurance Association—APCIA) noted the certification program contains discussion of rating such as “pass,” “unqualified pass,” or “provisional pass” but no discussion on what a “fail” rating would be. She asked if this was because the checklist would only be submitted by jurisdictions that passed each requirement, or because it is intended for each jurisdiction to pass.

Ms. Brown also noted the absence of any requirements to protect insurers, such as requiring states to submit budgets, time frames for review and confidential feedback mechanisms when contract examiners are used.

Ms. Brown said she agrees with Ms. O’Connell regarding requirement 3 checklist item 3j that it is difficult to measure whether a jurisdiction has achieved its policies and procedures for staffing.

Ms. Brown said the use of premium volume of companies examined since it implies jurisdictions will be measured by the premium volume examined. She noted this could skew jurisdictions into examining only large companies rather than companies where potential problems or misconduct exist. Mr. Haworth said it may be more helpful to measurement staffing needs by total market premium rather than the premium of just the examined entities.

Ms. Brown also said requirement 6 asks if a jurisdiction’s policies and procedures are consistent with the Market Actions (D) Working Group’s policies and procedures. She said industry objected to a requirement conditioned on a document to which it has no access.

Michael Lovendusky (American Council of Life Insurers—ACLI) said the ACLI agrees with the comments submitted by the APCIA. In addition, he said he would recommend a new bullet point for requirement 5 that would read: “The department shall have the authority and capability to: Comply with cybersecurity requirements equal or more rigorous than those required of regulated entities.” He said the regulated entities have concerns that government agencies have processes and protections to ensure against cybersecurity breach, especially as they increasingly use contract vendors.

© 2020 National Association of Insurance Commissioners
Mr. Lovendusky said the proposal to delete checklist items pertaining to contract examiners would eliminate critical information about the cost of contract examiners, which is often passed on to the regulated entity.

Mr. Lovendusky agreed with the APCIA’s concern that industry has no access to the Market Actions (D) Working Group’s policies and procedures and said it is more critical if the Market Actions (D) Working Group or a member state relies on contract examiners.

Mr. Haworth said he and Mr. Cole would incorporate the recommended changes and circulate the next version of the certification program prior to the next meeting.

Having no further business, the Market Regulation Certification (D) Working Group adjourned.
Chapter 26A—Conducting the Limited Long-Term Care Examination

IMPORTANT NOTE:
The standards set forth in this chapter are based on established procedures and/or NAIC models, not on the laws and regulations of any specific jurisdiction. This handbook is a guide to assist examiners in the examination process. Since it is based on NAIC models, use of the handbook should be adapted to reflect each state’s own laws and regulations with appropriate consideration for any bulletins, audit procedures, examination scope and the priorities of examination. Further important information on this and how to use this handbook is included in Chapter 1—Introduction.

This chapter applies to limited long-term care insurance policies. This chapter does not apply to qualified limited long-term care insurance contracts, group and individual annuities and life insurance policies or riders that provide directly or supplement limited long-term care insurance. This chapter also does not apply to life insurance contracts that accelerate benefits in the form of a lump sum payment, in anticipation of death or some other specified occurrence.

This chapter provides a format for conducting limited long-term care insurance examinations. Procedures for conducting other types of specialized examinations may be found in separate chapters.

The examination of limited long-term care insurance operations may involve any review of one or a combination of the following business areas:

A. Operations/Management
B. Complaint Handling
C. Marketing and Sales
D. Producer Licensing
E. Policyholder Service
F. Appeal of Benefit Trigger Adverse Determination
G. Underwriting and Rating
H. Claims

When conducting an exam that reviews these areas, there are essential tests that should be completed. The tests are applied to determine if the entity is meeting standards. Some standards may not be applicable to all jurisdictions. The standards may suggest other areas of review that may be appropriate on an individual state basis.

When an examination involves a depository institution or their affiliates, the bank may also be regulated by federal agencies such as the Office of the Comptroller of the Currency (OCC), the Federal Reserve Board, the Office of Thrift Supervision (OTS) or the Federal Deposit Insurance Corporation (FDIC). Many states have executed an agreement to share complaint information with one or more of these federal agencies. If the examination results find adverse trends or a pattern of activities that may be of concern to a federal agency and there is an agreement to share information, it may be appropriate to notify the agency of the examination findings.

IIPRC-Approved Products
When conducting an exam that includes limited long-term care insurance products, rates, advertisements and associated forms approved by the Interstate Insurance Product Regulation Commission (IIPRC) on behalf of a compacting state, it is important to keep in mind the uniform standards, and not state-specific statutes, rules and regulations, are applicable to the content and approval of the product. The IIPRC website is www.insurancecompact.org and the uniform standards are located on its rulemaking record. Compacting states have access through the NAIC System for Electronic Rate and Form Filing (SERFF) to product filings submitted to the IIPRC for approval and use in their respective state or jurisdiction and can also use the export tool in SERFF to extract relevant information. Each IIPRC-approved product filing has a completed reviewer checklist(s) to document the applicable uniform standards compliance review. The IIPRC office should be included when a
compacting state(s) is concerned that an IIPRC-approved product constitutes a violation of the provisions, standards or requirements of the IIPRC (including the uniform standards). Under the uniform standards, a limited long-term care insurance product approved by the IIPRC can be used in a compacting state’s partnership program provided the company has obtained the necessary approval from the compacting state or made the necessary certification to the compacting state, as applicable. Please note that the company must still comply with a compacting state’s laws for minimum daily benefit amounts, minimum benefit periods and maximum elimination periods when selling a limited long-term care insurance product approved by the IIPRC.

A. Operations/Management

Use the standards for this business area that are listed in Chapter 20—General Examination Standards, in addition to the standards set forth below.

NAIC Model References

Limited Long-Term Care Insurance Model Act (#642)
Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Each insurer shall file with the insurance commissioner, prior to offering group limited long-term care insurance to a resident of the state, evidence that the group policy or certificate has been approved by a state having statutory or regulatory limited long-term care insurance requirements substantially similar to those adopted in the state of issue (Model #643 Section 20 & Model 642 Section 5). (Note: Section 20 of the Limited Long-Term Care Model Regulation (#643) requires an evidentiary filing only from discretionary groups.

Each insurer should file with the insurance commissioner a copy of any limited long-term care insurance advertising intended for use in the state—whether through written, radio or television medium—for review or approval to the extent required by state law. All advertisements should be retained for at least three years from the date of first use.

Determine if replacement/lapse reporting is submitted by the entity as required. Items to be reported are:

- Top 10 percent of producers with the highest percentage of replacements and lapses; and
- Number of lapsed policies as a percentage of annual sales and policies in force at the end of the previous calendar year.

Determine that the entity complies with filing and certification requirements set forth by statutes, rules and regulations for associations endorsing or selling limited long-term care insurance. Generally, these requirements are imposed on an association group meeting the definition of a professional/trade/occupational association found in Section 4E(2) of the Limited Long-Term Care Insurance Model Act (#642).
Ensure that the insurer has filed all requested advertising with the insurance department regarding association sold or endorsed limited long-term care insurance, as may be requested by the insurance department. Any such advertising must disclose:

- The specific nature and amount of compensation that the association receives from the endorsement or sale of the policy or certificate to its members; and
- A brief description of the process under which the policies and the issuing insurer were selected.

Determine that the entity submits suitability and rescission information as required by applicable statutes, rules and regulations.

Determine the regulated entity has proper procedures in place to ensure its producers are properly trained and that the training meets the minimum standards established by the applicable laws and regulations.

Insurers subject to the Limited Long-Term Care Insurance Model Act (#642) shall maintain records with respect to the training of its producers concerning the distribution of its partnership policies that will allow the state insurance department to provide assurance to the state Medicaid agency that producers have received the training contained in Subsection B(2)(a) as required by Subsection A of the Long-Term Care Insurance Model Act (#640) and that producers have demonstrated an understanding of the partnership policies and their relationship to public and private coverage of limited long-term care, including Medicaid, in a state. These records shall be maintained in accordance with state record retention requirements and shall be made available to the commissioner upon request. Pursuant to Model#642, Section 9 – Producer Training Requirements are optional.

Most states have a limited long-term care partnership policy forms certification process in order for limited long-term care partnership forms to be sold in their state.
B. Complaint Handling

Use the standards for this business area that are listed in Chapter 20—General Examination Standards.

C. Marketing and Sales

Use the standards for this business area that are listed in Chapter 20—General Examination Standards, in addition to the standards set forth below.
STANDARDS

NAIC Model References

Limited Long-Term Care Insurance Model Act (#642)
Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Determine whether the entity makes multiple sales to individuals of the same product. Use random selection of policyholders and have the entity run a policyholder history to identify the number of policies sold to those individuals.

Determine if entity guidelines place limitations on multiple sales; i.e., limits on coverage, determination of suitability, detection of predatory sales practices, etc.

Determine if the entity has developed and uses suitability standards and procedures to determine whether the purchase or replacement of limited long-term care insurance is appropriate for the needs of the applicant. Suitability standards and procedures should include:

- Consideration of the advantages and disadvantages of insurant to meet the needs of the applicant; and
- Discussion with applicants of how the benefits and costs of limited long-term care insurance compare with long-term care insurance.
- Agent training in its suitability standards and procedures
- Maintain a copy of suitability standards and procedures and make them available for inspection upon request by the commissioner.
If the issuer determines that the applicant does not meet its financial suitability standards, or if the applicant has declined to provide the information, the issuer may reject the application. However, if the applicant has declined to provide financial information, the issuer may use some other method to verify the applicant’s intent. Either the applicant’s returned letter or a record of the alternate method of verification shall be made a part of the applicant’s file.

Note: Pursuant to Section 25H of the Limited Long-Term Care Insurance Model Regulation (#643), suitability standards do not apply to life insurance policies or riders that accelerate benefits for limited long-term care as defined in the Limited Long-Term Care Model Act, Section (#642), Section 4(D).

Determine if the insurer is reporting suitability information to the insurance commissioner as required by applicable statutes, rules and regulations.

Determine whether marketing materials encourage multiple issues of policies; for example, use of existing policyholder list for additional sales of similar products to those held, birth date solicitations, scare tactics, etc.

Determine if negative enrollment practices are permitted and used by the entity.

Ensure the entity maintains a written statement specifying the standards of suitability used by the insurer and provides the standards to its producers, and that both follow the standards. The standards should specify that no recommendation should be made and/or no policy issued in the absence of reasonable grounds to believe that the purchase of the policy is not unsuitable for the applicant (based on information known to the insurer or producer making the recommendation).
Standard 2
Policy forms provide required disclosure material regarding standards for benefit triggers.

Limited Long-Term Care Insurance Model Regulation (#643)
Life Insurance Disclosure Model Regulation (#580)
Life Insurance Illustrations Model Regulation (#582)
Unfair Trade Practices Act (#880)

Review Procedures and Criteria

Verify that the entity uses applications for limited long-term care insurance policies or certificates containing clear and unambiguous questions designed to ascertain the health condition of the applicant. (In most cases, application forms should have been reviewed by the insurance department’s rates and forms division.)

Verify that the entity complies with right to return/“free look” requirements.

Verify that the outline of coverage is delivered to the applicant at time of initial solicitation through means that prominently directs the attention of the recipient to the document and its purpose.
Verify that at the time of policy delivery the insurer has delivered a policy summary for an individual life insurance policy that provides limited long-term care benefits within the policy or by rider. In the case of direct response solicitations, verify that the insurer has delivered the policy summary upon the applicant’s request, but regardless of request has made delivery no later than at the time of policy delivery. In addition to complying with all applicable requirements, ensure that the summary also includes:

- An explanation of how the limited long-term care benefit interacts with other components of the policy;
- Any exclusions, reductions and limitations on benefits of limited long-term care; and
- A statement that any limited long-term care inflation protection option required by the applicable state’s statutes, rules and regulations regarding inflation protection option requirements comparable to Section 13 of the Limited Long-Term Care Insurance Model Regulation (#643) is not available under this policy.

In addition to the above, if applicable to the policy type, ensure that the summary includes the following:

- A disclosure of the effects of exercising other rights under the policy; and
- A disclosure of guarantees related to limited long-term care costs of insurance charges.

The required provisions of the policy summary may be incorporated into a basic illustration required to be delivered in accordance with the applicable state’s basic illustration requirements comparable to Sections 7 and 8 of the Life Insurance Illustrations Model Regulation (#582) or into the life insurance policy summary, which is required to be delivered in accordance with the applicable state’s life insurance policy summary requirements comparable to Section 5 of the Life Insurance Disclosure Model Regulation (#580).

Verify that the entity complies with records maintenance and reporting requirements:

- Entity must maintain records for each producer of that producer’s amount of replacement sales as a percentage of the producer’s total annual sales and the amount of lapses of limited long-term care insurance policies sold by the producer as a percentage of the producer’s total annual sales;
- Every insurer shall report annually by June 30 the 10 percent of its producers with the greatest percentages of lapses and replacements;
- Every insurer shall report annually by June 30 the number of lapsed policies as a percentage of its total annual sales and as a percentage of its total number of policies in force as of the end of the preceding calendar year; and
- Every insurer shall report annually by June 30 the number of replacement policies sold as a percentage of its total annual sales and as a percentage of its total number of policies in force as of the preceding calendar year.

*Limited Long-Term Care Insurance Model Act (#642)*
*Limited Long-Term Care Insurance Model Regulation (#643)*
*Unfair Trade Practices Act (#880)*

**Review Procedures and Criteria**

Evaluate the company’s system for controlling advertisements. Every insurer should have and maintain a system of control over the content, form and method of dissemination of all advertisements of its policies. All advertisements, regardless of by whom written, created, designed or presented, are the responsibility of the insurer.

Ensure the company maintains, at its home or principal office, a complete file containing a specimen copy of every printed, published or prepared advertisement of its individual policies and specimen copies of typical printed, published or prepared advertisements of its blanket, franchise and group policies. There should be a notation indicating the manner and extent of distribution and the form number of every policy advertised. All advertisements should be maintained in the file for a period of either at least three years from the date the advertisement was first used or later if required by state statutes, rules and regulations.
Review advertising materials in conjunction with the appropriate policy form. Materials should not:

- Misrepresent policy benefits, advantages or conditions by failing to disclose limitations, exclusions or reductions, or use terms or expressions that are misleading or ambiguous;
- Make unfair or incomplete comparisons with other policies;
- Make false, deceptive or misleading statements or representations with respect to any person, company or organization in the conduct of insurance business;
- Offer unlawful rebates;
- Use terminology that would lead prospective buyers to believe that they are purchasing an investment or savings plan. Problematic terminology may include the following terms: investment, investment plan, founder’s plan, charter plan, deposit, expansion plan, profit, profits, profit sharing, interest plan, savings or savings plan;
- Omit material information or use words, phrases, statements, references or illustrations, if such omission or such use has the capacity, tendency or effect of misleading or deceiving purchasers or prospective purchasers as to the nature or extent of any policy benefit payable, loss covered, premium payable or state or federal tax consequences;
- Use terms such as “non-medical” or “no medical examination required,” if the issue is not guaranteed, unless the terms are accompanied by a further disclosure of equal prominence and juxtaposition that issuance of the policy may depend on the answers to the health questions set forth in the application;
- State that a purchaser of a policy will share in or receive a stated percentage or portion of the earnings on the general account assets of the company;
- State or imply that the policy or combination of policies is an introductory, initial or special offer, or that applicants will receive substantial advantages not available at a later date, or that the offer is available only to a specified group of individuals, unless that is a fact. Enrollment periods may not be described in terms such as “special” or “limited” when the insurer uses successive enrollment periods as its usual method of marketing its policies;
- State or imply that only a specific number of policies will be sold, or that a time is fixed for the discontinuance of the sale of the particular policy advertised because of special advantages available in the policy;
- Offer a policy that utilizes a reduced initial premium rate in a manner that overemphasizes the availability and the amount of the reduced initial premium. When an insurer charges an initial premium that differs in amount from the amount of the renewal premium payable on the same mode, all references to the reduced initial premium should be followed by an asterisk or other appropriate symbol that refers the reader to that specific portion of the advertisement that contains the full rate schedule for the policy being advertised;
- Imply licensing beyond limits, if an advertisement is intended to be seen or heard beyond the limits of the jurisdiction in which the insurer is licensed;
- Exaggerate, suggest or imply that competing insurers or insurance producers may not be licensed, if the advertisement states that an insurer or insurance producer is licensed in the state where the advertisement appears;
- Create the impression that the insurer, its financial condition or status, the payment of its claims or the merits, desirability or advisability of its policy forms or kinds of plans of insurance are recommended or endorsed by any governmental entity. However, where a governmental entity has recommended or endorsed a policy form or plan, that fact may be stated, if the entity authorizes its recommendation or endorsement to be used in the advertisement;
- State or imply that prospective insureds are or become members of a special class, group or quasi-group and enjoy special rates, dividends or underwriting privileges, unless that is a fact; and
- Misrepresent any policy as being shares of stock.
Materials should:

- Clearly disclose the name and address of the insurer;
- If using a trade name, disclose the name of the insurer, insurance group designation, name of the parent company of the insurer, name of a particular division of the insurer, service mark, slogan, symbol or other device or reference, if the advertisement would have the capacity or tendency to mislead or deceive as to the true identity of the insurer or create the impression that a company other than the insurer would have any responsibility for the financial obligation under a policy;
- Prominently describe the type of policy being advertised;
- Indicate that the product being marketed is insurance;
- Comply with applicable statutes, rules and regulations;
- Cite the source of statistics used;
- Identify the policy form that is being advertised, where appropriate;
- Clearly define the scope and extent of a recommendation by any commercial rating system;
- Only include testimonials, appraisals or analysis if they are genuine, represent the current opinion of the author, are applicable to the policy advertised and accurately reproduced to avoid misleading or deceiving prospective insureds. Any financial interest by the person making the testimonial in the insurer or related entity must be prominently disclosed; and
- Only state or imply endorsement by a group of individuals, society, association, etc., if it is a fact. Any proprietary relationship or payment for the testimonial must be disclosed.

Determine if the company approves producer sales materials and advertising. Ensure that copies of sales material other than company-approved materials, if permitted, are maintained in a central file. Determine if advertisements or lead-generating calls falsely project the image that they were sent by a government agency.

Determine if the advertising and solicitation materials mislead consumers relative to the producer’s capacity as an insurance producer. Improper terms may include “financial planner,” “investment advisor,” “financial consultant” or “financial counseling,” if they imply the producer is primarily engaged in an advisory business in which compensation is unrelated to sales, if such is not the case.

Review the use of the words “free,” “no cost,” “without cost,” “no additional cost,” “at no extra cost” or words of similar import. Those words should not be used with respect to any benefit or service being made available with a policy, unless it is a fact. If there is no charge to the insured, then the identity of the payor must be prominently disclosed. An advertisement may specify the charge for a benefit or a service or may state that a charge is included in the premium or use other appropriate language.

Ensure the advertisement does not contain a statement or representation that premiums paid for a limited long-term care insurance policy can be withdrawn under the terms of the policy. Reference may be made to amounts paid into an advance premium fund, which are intended to pay premiums at a future time, to the effect that they may be withdrawn under the conditions of the prepayment agreement. Reference may also be made to withdrawal rights under any unconditional premium refund offer.

Determine that company procedures and materials relative to limited long-term care products comply with right to return/“free look” requirements.

Review the company and producer’s Internet sites with the following questions in mind:

- Does the website disclose who is selling/advertising/servicing for the website?
- Does the website disclose what is being sold or advertised?
- If required by statutes, rules or regulations, does the website reveal the physical location of the company/entity?
- Does the website reveal the jurisdictions where the advertised products are (or are not) approved, or use some other mechanism (including, but not limited to, identifying persons by geographic location) to accomplish an appropriate result?
For the review of Internet advertisements:

- Run an inquiry with the company’s name;
- Review the company’s home page;
- Identify all lines of business referenced on the company’s home page;
- Research the ability to request more information about a particular product and verify that the information provided is accurate; and
- Review the company’s procedures related to producers’ advertising on the Internet and ensure that the company requires prior approval of the producers’ web pages, if the company name is used.

Limited Long-Term Care Insurance Model Act (#642)
Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Determine if the required notification of lapse or termination is sent to the proper addressee(s), within the required time frames and that the required information is provided, per applicable statutes, rules and regulations.

Ensure that the entity receives designation of a person(s), other than the insured, to receive notice of lapse or termination of the policy or certificate for nonpayment of premiums or a written waiver by the insured not to designate an additional person(s) to receive notice.

Ensure that the insurer notifies existing insureds of their right to change their written designation at least once every two years, or as specified by state statutes, rules and regulations.

Verify that nonforfeiture and reinstatement provisions were applied consistently and in a non-discriminatory manner. Nonforfeiture provisions upon lapse and reinstatements should be applied per policy provisions and in accordance with applicable statutes, rules and regulations.

Ensure that the policy includes a provision that provides for reinstatement of coverage in the event of lapse, if the entity has provided evidence that the policyholder was cognitively impaired or had a loss of functional capacity before the grace period contained in the policy expired. This option should be made available to the insured for a period of 5 months after the date of termination.

NAIC Model References

Limited Long-Term Care Insurance Model Act (#642)
Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Determine if the entity offers applicants the opportunity to purchase a limited long-term care policy that includes a nonforfeiture benefit, as required by applicable statutes, rules and regulations.

If the applicant declines the nonforfeiture benefit, ensure that the entity provides a contingent benefit upon lapse of the policy for a specified period following a substantial increase in premium rates, as required and defined by applicable statutes, rules and regulations.

Ensure that a policy offered with nonforfeiture benefits contains the same coverage elements, eligibility, benefit triggers and benefit length as a policy without the nonforfeiture benefit.

Determine if the entity provides notice as required by applicable statutes, rules and regulations prior to the due date of the premium reflecting a substantial premium increase.

Ensure that the entity offers the proper nonforfeiture benefit and nonforfeiture credit, as required by applicable statutes, rules and regulations.

Determine if the policy contains the proper time frames for nonforfeiture benefit and the contingent benefit upon lapse, as required by applicable statutes, rules and regulations.

Determine if the correct nonforfeiture option is provided in case of policy lapse.
Review correspondence with policyholders to determine if options were explained adequately.

If there are questions related to nonforfeiture values, refer to applicable statutes, rules and regulations regarding the calculation of nonforfeiture values.

Review the entity’s procedures and policies regarding the handling of each type of nonforfeiture transaction (including whether the request may be made verbally).

Ensure that the entity notifies policyowners of material changes to any nonforfeiture benefits in accordance with applicable statutes, rules and regulations.

**NAIC Model References**

*Limited Long-Term Care Insurance Model Regulation (#643)*

### Review Procedures and Criteria

Ask insurer how it describes its appeal procedures to the insured.

Ask for copies of correspondence on actual claimants who have appealed benefit trigger decisions (e.g., request for appeal, acknowledgement of appeal, appeal outcome communicated) after state statutes, rules and regulations became effective.

In the event the insurer has determined that the benefit trigger of a limited long-term care insurance policy has not been met, verify that the insurer has provided a clear, written notice to the insured and the insured’s authorized representative, if applicable, of all of the following:

- The reason that the insurer determined that the insured’s benefit trigger had not been met;
- The insured’s right to internal appeal and the right to submit new or additional information relating to the benefit trigger denial with the appeal request within 120 calendar days of receipt of the notice; and
- The insured’s right, after exhaustion of the insurer’s internal appeal process, to have the benefit trigger determination to contact their state insurance department and their State Health Insurance Program (SHIP) office.

Ensure that the individual or individuals making the internal appeal decision are not the same individual or individuals who made the initial benefit determination.

© 2020 National Association of Insurance Commissioners
Verify that the insurer, within 30 calendar days of the insurer’s receipt of all necessary information upon which a final determination can be made, has completed and sent written notice of the internal appeal decision to the insured and the insured’s authorized representative, if applicable.

If the insurer’s original determination is upheld upon internal appeal, ensure that the notice of the internal appeal decision describes any additional internal appeal rights offered by the insurer.

If the insurer’s original determination is upheld after the internal appeal process has been exhausted, and new or additional information has not been provided to the insurer, the insured has the right to contact their state insurance department and their State Health Insurance Program (SHIP) office, pursuant to applicable state statutes, rules and regulations.

Verify that if any new or additional information not previously provided to the insurer is submitted by the insured or the insured’s authorized representative, the insurer either (1) considers and affirms or (2) overturns its benefit trigger determination.

If the insurer overturns its benefit trigger determination, verify that the insurer has provided notice to the insured and the insured’s authorized representative, if applicable, and the commissioner of its decision.
G. Underwriting and Rating

1. Purpose

The underwriting portion of the examination is designed to provide a view of how the entity treats the public and whether that treatment is in compliance with applicable statutes, rules and regulations. It is typically determined by testing a random sampling of files and applying various tests to the sampled files. It is concerned with compliance issues. The areas to be considered in this kind of review include:

- Rating practices;
- Underwriting practices;
- Use of correct and properly filed and approved forms and endorsements;
- Termination practices;
- Unfair discrimination;
- Use of proper disclosures, outlines of coverage and delivery receipts;
- Reinsurance; and
- Marketing and sales materials.

2. Techniques

During an examination, it is necessary for examiners to review a number of information sources, including:

- Rating manuals and rate cards;
- Underwriting manuals, guidelines and classification manuals;
- Medical underwriting manuals;
- Individual and group issued and renewed policy files;
- Policy summaries;
- Replacement and conservation materials;
- Documentation of required disclosures and delivery receipts;
- Individual and group canceled policy files and certificates;
- Documentation of premium refund upon election of “free look” period;
- Recessions occurring prior to a claim;
- Policy forms, endorsements and applications, along with appropriate filings;
- Producer licensing information;
- Producer compensation agreements, where applicable;
- Premium statements and billing statements;
- Group trust arrangements, where applicable;
- Declined applications and notices;
- Individual and group lapsed policy files and notices;
- Individual and group nonforfeiture files and notices;
- Reinsurer policies/treaties; and
- Reinsurer guidelines and manuals.

For the purposes of this chapter, “underwriting file” means the file or files containing the new business application, renewal application, certificates or evidences of coverage, including binders, rate calculation sheets, billings, medical information, credit information, inspection or interview reports, all underwriting information obtained or developed, policy summary page, endorsements, cancellation or reinstatement notices, correspondence and any other documentation supporting selection, classification, rating or termination of the policy.
In selecting samples for testing, individual policies should generally not be combined with group policies. Because these two areas are generally not homogeneous, any conclusions or inferences made from the results of sampling may not be valid if combined. The examiner should be familiar with the process for gathering and processing underwriting information and the quality controls for the issuance of policies, endorsements and premium statements. The list of files from which a sample is to be drawn may be generated through a computer run or, in some cases, through a policy register covering the period of time selected in the notice of the examination.

Next, determine the entity’s policy population (policy count) by line of business. Review a random selection of business for application of a particular test or apply specific tests to a census population using automated tools. (In the event specific files are chosen for a target review, the examiner must be certain that the examination results are clearly identified as representative of the target selection.) The examiner should maintain a list of the various tests to be applied to each file in the sample. This will aid in consistency by ensuring that each test is considered for each file in the sample.

If exceptions are noted, the examiner must determine if the exception is caused by such practices as the use of faulty automated rating systems, or the development and use of improperly or vaguely worded manuals or guidelines. When exceptions are noted, it is advisable to determine the scope and extent of the problem. The examiner’s responses should maximize objectivity; the examiner should avoid replacing examiner judgment for entity judgment.

a. Rating Practices

It is necessary to determine if the entity is in compliance with rating systems that have been filed with and, in some cases, approved by the insurance department. Where rates are not required to be filed with an applicable regulatory agency, it is prudent to determine if rates are being applied consistently and in accordance with the entity’s own rating methods. In general, rates should not be unfairly discriminatory. Wide-scale application of incorrect rates by an entity might raise financial solvency questions or be indicative of inadequate management oversight. Deviation from established rating plans might also indicate that an entity is engaged in unfair competitive practices. Inconsistent application of rates or classifications can result in unfair discrimination.

If rating exceptions are noted, the examiner must determine if the exception is caused by such practices as the use of faulty automated rating systems or the use of improperly worded, vague or obsolete rating manuals. When exceptions are noted, it is advisable to determine the scope and extent of the problem.

Occasionally, the examiner may need to review loss statistics to determine if premiums are fair and reasonable in relation to the associated claims experience. When possible, the examination team should make use of audit software to verify the correct application of specific rating components and the consistent use of rates. This allows for a more thorough review and can save time during the examination process. All new automated audit applications that are developed should be submitted to the NAIC File Repository, in order to assist in building a comprehensive set of audit programs.

The rating practices for renewal policies and newly issued policies should be reviewed. The examination team should also review premium notices and billing statements. The examiner should ensure the proper application of rate increases or rate decreases.

The examiner should also ensure that the underwriting files contain sufficient information to support the rates that have been developed.
b. Underwriting Practices

The examiner should review relevant underwriting information; e.g., the entity’s underwriting manuals, underwriting guidelines, underwriting bulletins, declination procedures, agency agreements and correspondence with producers. Interoffice memoranda and entity minutes that may furnish evidence of anti-competitive behavior may also be requested. In addition to reviewing the content of the above information for indications of unfairly discriminatory practices, the examination team also should use the above information to determine the entity’s compliance with its own manuals and guidelines. The examiner should confirm that the entity’s underwriters and producers consistently apply the entity guidelines for all business selected or rejected. The examination team should verify that the entity has correctly classified insured individuals.

File documentation should be sufficient to support the underwriting decisions made. Underwriting decisions that are adequately documented generally afford the entity’s management team with the opportunity to know what business it has selected through its underwriters and producers. The examiner should verify that properly licensed and appointed (where applicable) producers have been used in the production of the business. Underwriting guidelines may vary by geographic areas in the jurisdiction and, therefore, such guidelines should be reviewed for each applicable field office.

Any practice suggesting anti-competitive behavior may involve legal considerations that should be referred to the insurance department’s counsel. Ultimately, the information obtained may be useful in drafting legislation or regulations.

c. Use of Correct and Properly Filed Forms and Endorsements

The examination team should verify that all policy forms and endorsements used have been filed with the appropriate regulatory authority, if applicable. In addition, the examination team should verify the consistent and correct use of policy forms and endorsements. The examiner should be mindful of possible outdated forms or endorsements. If coverage and riders requested by the applicant are not issued, proper notification should be provided to the applicant. In some cases, supplemental applications are appropriate.

d. Termination Practices

The examination team should review the entity’s policy cancellation and reinstatement practices to determine compliance with applicable statutes, rules and regulations, as well as to determine compliance with the entity’s own rules, guidelines and policy provisions.

Cancellation and lapsed policy processing should include a formal notice to the insured, including secondary addressees, where elected by the insured. Adherence to policy provisions for renewal language and for applicable grace periods should be reviewed.

The examination team should verify that premium refunds upon election of “free look” provisions are handled correctly, uniformly and in a timely manner.

The examination team should review reinstatement offers and determine what the entity’s practice is for offering reinstatement. In addition, the examination team should be mindful of billing practices that may encourage policy lapses.
e. Unfair Discrimination

The examination team should be mindful of entity underwriting practices that may be unfairly discriminatory. The classification of insureds into rating or underwriting groups must be based on sound business or actuarial principles. Failure to follow established rating and underwriting guidelines may result in unintentional, yet unfair discrimination. Unfair trade practice acts and related regulatory rules adopted by the applicable jurisdiction also may prohibit specific underwriting practices.

f. Use of Proper Disclosures, Buyer’s Guides and Outlines of Coverage

The examination team should review the entity’s use of required disclosure forms, buyer’s guides, policy summaries, replacement notices, “free look” periods and outlines of coverage. In addition to the use of such required items, the examiner may wish to verify that the above items contain the correct content and are in the correct format.

g. Reinsurance

Most state statutes include a feature that for many lines of business the entity is not permitted to place more than 10 percent of its surplus to policyholders at risk on any one placement of insurance. While this is primarily a solvency issue, it is one that market conduct examiners are in an ideal position to test in view of the sampling of underwriting files.

Adherence to the requirement is easy to test, but requires familiarity with the structure and content of the reinsurance treaties covering the business written by the entity. This item is particularly important for companies that hold minimal policyholder surplus accounts (i.e., surplus of less than $10 million). It also may reflect on the care that the entity’s management places on its selection of business, and represent a danger to the financial health of the entity. Errors in this area should be forwarded to the appropriate state financial examiners. Any tests of this type must be coordinated with the state’s financial examiners.

h. Marketing and Sales Materials

It is recommended that a review of all forms and materials be conducted by reviewing the marketing and sales standards simultaneously during the underwriting and rating review.

3. Tests and Standards

The underwriting and rating review includes, but is not limited to, the following standards addressing various aspects of the entity’s underwriting activities. The sequence of the standards listed here does not indicate priority of the various standards.
<table>

_____ _________________________________________
_____ _________________________________________

NAIC Model References

Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Ensure the entity does not use medical records indicating AIDS-related concerns to discriminate against applicants without medical evidence of disease. Companies shall establish reasonable procedures related to the administration of an AIDS-related test.

Medical underwriting guidelines may consider factual matters that reveal the existence of a medical condition. For example, no adverse underwriting decision shall be based on medical records that only indicate the applicant demonstrated AIDS-related concerns by seeking counseling from a health care professional.

Disclosure forms signed by the applicant must clearly disclose the requirement, if any, for applicants to take an AIDS-related test, and should be a part of the underwriting file. Applications must contain a consent form for such testing.

Review any application forms and health questionnaires used by the entity or its producers for questions that would require the applicant to provide information regarding sexual orientation.

Questions may ask if the applicant has been diagnosed with AIDS or ARC, if they are designed to establish the existence of the condition, but are not to be used as a proxy to establish sexual orientation of the applicant.
Ensure the entity or insurance support organization does not use the sexual orientation of an applicant in the underwriting process or in the determination of insurability.

Underwriting guidelines must not consider an applicant’s sexual orientation a factor in the determination of insurability.

Review a sample of underwriting files for denied applications in order to verify that denials were non-discriminatory.

Review inspection reports to determine if they are being used in a discriminatory manner, or ordered on the basis of the entity guidelines (e.g., based on the amount of insurance).

Neither the marital status, the living arrangements, the occupation, gender, medical history, beneficiary designation, nor the ZIP code or other territorial classification may be used to establish the applicant’s sexual orientation.

- [ ]  

**NAIC Model References**

- Limited Long-Term Care Insurance Model Act (#642)  
- Limited Long-Term Care Insurance Model Regulation (#643)  

**Review Procedures and Criteria**

Determine if the policy contains the required terms and definition of such terms per applicable statutes, rules and regulations, including, but not limited to:

- Guaranteed renewable and noncancellable;  
- Activities of daily living, acute condition, adult day care, bathing, cognitive impairment, continence, dressing, eating, hands-on assistance, home health care services, Medicare, mental or nervous disorder, personal care, skilled nursing care, toileting and transferring. In addition, coverage specific to limited long-term care benefits may include non-skilled nursing care by providers of service, including but not limited to skilled nursing facility, extended care facility, convalescent nursing home, personal care facility, specialized care providers, assisted living facility, and home care agency; and  
- Reasonable and customary/usual and customary.  

Determine if riders and endorsements added after the original date of issue, at reinstatement or renewal that reduce or eliminate benefits or coverage (except as requested by the insured) require signed acceptance by the insured.  

Ensure that the entity has not established a new waiting period in the event existing coverage is converted or replaced by a new or other form within the same entity, except with respect to an increase in benefits voluntarily selected by the individual or group policyholder.
Ensure that the entity does not apply preexisting condition provisions more restrictive than “…a condition for which medical advice or treatment was recommended by, or received from, a provider of health care services within 6 months preceding the effective date of coverage of an insured person,” unless the insurance commissioner has extended limitation periods.

A limited long-term care insurance policy or certificate, other than a policy or certificate issued to a defined group, may not exclude coverage for a loss or confinement that is the result of a preexisting condition, unless such loss or confinement begins within 6 months following the effective date of coverage of an insured person.

A limited long-term care insurance policy or certificate may not exclude or use riders or waivers to exclude, limit or reduce benefits for specifically named or described preexisting conditions or physical conditions beyond the defined waiting period.

Determine if the policy meets the requirements under applicable statutes, rules and regulations with regard to prior hospitalization/institutionalization. The policy may not:

- Condition eligibility of any benefits on a prior hospitalization requirement, or, in the case of benefits provided in an institutional care setting, on the receipt of a higher level of institutional care;
- Condition eligibility for benefits (other than waiver of premium, post-confinement, post-acute care or recuperative benefits) on a prior institutionalization requirement;
- Condition eligibility of non-institutional benefits based on the prior receipt of institutional care on a prior institutional stay of more than 30 days; and
- Condition the receipt of benefits following institutionalization upon admission to a facility for the same or related conditions within a period of less than 30 days after discharge.

A policy or rider containing post-confinement, post-acute care or recuperative benefit shall contain in a separate paragraph titled “Limitations or Conditions on Eligibility for Benefits” such limitations or conditions, including any required number of days of confinement.

Determine if the policy contains any limitations regarding preexisting conditions, and, if so, ensure that they are outlined in a separate paragraph titled “Preexisting Condition Limitations.”

Ensure that the policy measures the need for limited long-term care on the activities of daily living (ADLs) and cognitive impairment, and that they are described—along with any additional benefit triggers, benefits and entity-required certification of functional dependency—in a separate paragraph titled “Eligibility for the Payment of Benefits.”

If a limited long-term care policy provides benefits for home health care or community care services, ensure that it meets the required minimum standards required by applicable statutes, rules and regulations.
STANDARDS
UNDERWRITING AND RATING

Standard 5
Underwriting and rating for limited long-term care products complies with applicable statutes, rules and regulations.

Apply to: All group limited long-term care products

Priority: Essential

Documents to be Reviewed

____ Applicable statutes, rules and regulations (Note: Reference applicable Interstate Insurance Product Regulation Commission (IIPRC) uniform standards for products approved by the IIPRC)

____ Policy contract

____ Notice of cancellation/nonrenewal

____ Insurance department approval of forms

____ Underwriter’s file or notes on a system log

____ Insured’s request (if applicable)

____ Entity cancellation/nonrenewal guidelines

____ Certificate of mailing

Others Reviewed

Limited Long-Term Care Insurance Model Act (#642)
Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Determine if the notice of cancellation/nonrenewal was valid according to policy provisions and applicable statutes, rules and regulations.

Review entity procedures for cancellation/nonrenewal to determine if the entity is following its own guidelines.

Review cancellation and billing notices, grace period descriptions, reinstatement offers, lapse notices, etc., to ensure the forms, if necessary, were approved by the insurance department.
In addition to other applicable review procedures, verify the following:

- The entity has not cancelled, nonrenewed or otherwise terminated on the grounds of the age or the deterioration of the mental or physical health of the insured individual or certificateholder;
- The entity has not established a new waiting period in the event existing coverage is converted to or replaced by a new or other form within the same entity, except with respect to an increase in benefits voluntarily selected by the insured individual or group policyholder;
- The entity does not provide coverage for skilled nursing care only or provide significantly more coverage for skilled care in a facility than coverage for lower levels of care; and
- The entity does not apply preexisting condition provisions more restrictive than “…a condition for which medical advice or treatment was recommended by, or received from, a provider of health care services within 6 months preceding the effective date of coverage of an insured person,” unless limitation periods have been extended by the insurance commissioner.

Verify that standards for incontestability periods are no more restrictive than as follows:

- Within 6 months, misrepresentations must be material;
- Within 2 years and more than 6 months, misrepresentation must be material and pertain to the condition for which benefits are sought; and
- After 2 years, benefits are contestable only upon a showing that the insured knowingly and intentionally misrepresented relevant facts relating to the insured’s health.

Verify that the entity’s underwriting practices reflect minimum requirements related to guaranteed renewability, noncancellability and continuation or conversion.

Replacement of a group limited long-term care policy with another group limited long-term care policy shall offer coverage to all persons covered under the previous group policy on its date of termination, with no preexisting condition exclusions that would have been covered on the prior policy and shall not vary or otherwise depend on the individual’s health or disability status, claim experience or use of limited long-term care services.

Verify that the entity provides notice to the designated person, in addition to the applicant, for termination of a policy or certificate for nonpayment of premium.

Verify that the entity allows for reinstatement of coverage in the event of lapse if provided proof that the policyholder or certificateholder was cognitively impaired or had a loss of functional capacity before the grace period contained in the policy expired.

Verify that prior to issuance of a limited long-term care policy or certificate to an applicant age 80 or older, the insurer obtains one of the following:

- A report of a physical examination;
- An assessment of functional capacity;
- An attending physician’s statement; or
- Copies of medical records.

Verify that the entity delivers a copy of the completed application or enrollment form (whichever is applicable) to the insured no later than at the time of delivery of the policy or certificate, unless it was retained by the applicant at the time of application.

Verify that the entity maintains a record of all policy or certificate rescissions, both state and countrywide, except those that the insured voluntarily effectuated. The entity shall annually furnish this information to the insurance commissioner in the format prescribed by applicable statutes, rules and regulations.

Verify that the premium charged does not increase due to increase of age beyond 65 or the duration the insured has been covered under the policy.
STANDARDS
UNDERWRITING AND RATING

Standard 6
The company’s underwriting practices are not unfairly discriminatory. The company adheres to applicable statutes, rules and regulations and company guidelines in the selection of risks.

Apply to: All limited long-term care products

Priority: Essential

Model Regulation on Unfair Discrimination in Life and Health Insurance on the Basis of Physical or Mental Impairment (#887)
Model Regulation on Unfair Discrimination on the Basis of Blindness or Partial Blindness (#888)
Unfair Discrimination Against Subjects of Abuse in Life Insurance Model Act (#896)
Unfair Trade Practices Act (#880)
Credit Reports and Insurance Underwriting White Paper
**Review Procedures and Criteria**

Ensure the file documentation adequately supports the decisions made:

- The application should be complete and signed;
- Determine when, and under what conditions the company requires motor vehicle reports, inspection reports, credit reports, Medical Information Bureau (MIB) or other medical physician reports or other underwriting information to confirm exposure or premium basis;
- Determine if the file contains the necessary information to support the classification, rating and selection decision made; and
- Verify that when a policy is issued on a basis other than applied for, that notice of an adverse underwriting decision is provided in accordance with applicable statutes, rules and regulations.

Review relevant underwriting information to ensure that no unfair discrimination is occurring, according to the state’s definition of unfair discrimination.

Determine if the company is following its underwriting guidelines, and that the guidelines conform to applicable statutes, rules and regulations, including, but not limited to:

- The insurer shall obtain one of the following prior to issuance of a policy or certificate to an applicant aged 80 or older:
  - A report of physical examination;
  - An assessment of functional capacity;
  - An attending physician’s statement; or
  - Copies of medical records.
- All applications for limited long-term care, except policies issued on a guaranteed-issue basis, shall contain clear and unambiguous questions designed to ascertain the health condition of the applicant; and
- If an application for limited long-term care coverage contains a question regarding whether the applicant has had medication prescribed by a physician, the company shall also ask the applicant to list the medication.

Determine if the company underwriting guidelines have been filed, where applicable.

Review interoffice memoranda for evidence of anti-competitive behavior, collusive practices or improper replacement tactics.

Underwriting guidelines may vary by geographic areas in the jurisdiction and, therefore, such guidelines should be reviewed for each office being examined.

Inconsistent handling of rating or underwriting practices, even if not intentional, can result in unfair discrimination. Companies may not permit discrimination between individuals of the same class and equal health status.

Ensure that underwriting requirements are not applied in an unfairly discriminatory manner.

Review guaranteed-issue criteria to ensure correct handling.

Review policy provisions for skilled nursing care to ensure that no restrictions are placed on the proper level of care; i.e., the company does not provide only skilled nursing care or does not provide more coverage for skilled care in a facility than coverage for lower levels of care.

Verify that the questions on applications are sufficiently clear and applicable to the coverage being requested.

Verify that Medical Information Bureau (MIB) information is not used as the sole basis for an underwriting decision.
Companies may not refuse to insure, continue to insure or limit coverage based on:

- Sex;
- Marital status;
- Race;
- Religion;
- National origin;
- Physical or mental impairment (except where based on sound actuarial principles or actual or reasonably anticipated experience);
- Blindness or partial blindness only* (however, all other conditions, including the underlying cause of the blindness or partial blindness, are subject to the same standards of sound actuarial principles or actual or reasonably anticipated experience as a sighted person); and
- Abuse status.

*Note: Review individual state statutes, rules and regulations that may provide that an insurer may not refuse to insure, refuse to continue to insure or limit the amount, extent or kind of coverage available to an individual solely because of blindness or partial blindness.

Many jurisdictions have enacted legislation regarding subjects of abuse. Examiners should be familiar with their statutes, rules and regulations in this area.

Examine new business applications for the required fraud statement.
H. Claims

Use the standards for this business area that are listed in Chapter 20—General Examination Standards, in addition to the standards set forth below.

NAIC Model References

- Insurance Fraud Prevention Model Act (#680)
- Limited Long-Term Care Insurance Model Act (#642)
- Unfair Claims Settlement Practices Act (#900)
- Unfair Life, Accident and Health Claims Settlement Practices Model Regulation (#903)
- Limited Long-Term Care Insurance Model Regulation (#643)

Review Procedures and Criteria

Review company procedures, training manuals and claim bulletins to determine if company standards exist and whether standards comply with state statutes. Determine if company procedures provide for the detection and reporting of fraudulent or potentially fraudulent insurance acts to the insurance commissioner.

Determine if claim handling meets applicable statutes, rules and regulations, including:

- Correct payees and addresses; and
- Correct benefit amounts.
Ascertain whether the company has misrepresented relevant facts or policy provisions relating to coverages at issue.

Determine if claim files are handled according to policy provisions.

If a claim under a limited long-term care insurance contract is denied, the issuer shall, within 60 days of the date of a written request by the policyholder or certificateholder, or a representative thereof:

- Provide a written explanation of the reasons for the denial; and
- Make available all information directly related to the denial.

Determine if the insurer is in compliance with proper payment of “clean claims,” as defined in applicable state statutes, rules and regulations. Verify that the insurer pays clean claims within 30 business days after receipt of a clean claim. For claims that do not fall within the category of a clean claim, verify that the insurer has sent a written notice acknowledging the date of receipt of the claim and containing one of the following provisions within 30 business days:

- The insurer has declined to pay all or part of the claim and the specific reason(s) for denial; or
- That additional information is necessary to determine if all or any part of the claim is payable and the specific additional information that is necessary.

Verify that the insurer has paid clean claims within 30 business days after receipt of all requested additional information, or has sent a written notice that the insurer has declined to pay all or part of the claim within 30 days. The notice should specify the specific reason(s) for denial.

If, upon review of insurer clean claim payment practices, an examiner determines that an insurer has failed to comply with clean claim requirements, verify that the insurer has paid interest at the rate of one percent per month on the amount of the claim that should have been paid but that remains unpaid 45 business days after the receipt of the claim or, in the event the insurer has requested additional information, upon receipt of all requested additional information.

Verify that the insurer has included interest payable in any late reimbursement without requiring the individual who filed the original claim to make any additional claim for such interest.

It is an unfair practice to settle, or attempt to settle, a claim on the basis of an application that was materially altered without the consent of the insured.

Confirm that a monthly report is issued to the policyholder whenever limited long-term care benefits are issued through acceleration of death benefit provisions of a life insurance product.

Confirm that mandatory nonforfeiture benefits are offered.

Determine that eligibility for the payment of benefits is based on a deficiency in the ability to perform not more than 3 of the activities of daily living (ADLs) or the presence of cognitive impairment.

Ensure that determination of deficiency is not more restrictive than:

- Requiring the hands-on assistance of another person to perform the prescribed ADLs; and
- For a cognitive impairment, supervision or verbal cueing by another person is needed to protect the insured or others.

Ensure that licensed or certified professionals, such as physicians, nurses or social workers, perform assessments of ADLs and cognitive impairment.
POLICY IN FORCE STANDARDIZED DATA REQUEST  
Property/Casualty Line of Business  
Inland Marine

Contents: This file should be downloaded from the company system(s) and contain one record for each inland marine policy issued in [applicable state] which was in force at any time during the examination period.

For any fields where there are multiple entries, please repeat field as necessary.

Uses: Data will be used to determine if the company follows appropriate procedures with respect to the issuance and/or termination of inland marine policies in [applicable state] within the scope of the examination.

- Cross-reference with the claims data file to validate the completeness of the in force file; and
- Cross-reference to state (s) licensing information to ensure proper producer licensure

ANTIFRAUD (D) TASK FORCE

Antifraud (D) Task Force Aug. 3, 2020, Minutes................................................................................................................. 9-182
Antifraud (D) Task Force May 20, 2020, Minutes (Attachment One) .................................................................................. 9-185
The Antifraud (D) Task Force met via conference call Aug. 3, 2020. The following Task Force members participated: Trinidad Navarro, Chair (DE); Jillian Froment, Vice Chair, represented by Michelle Brugh Rafeld (OH); Lori K. Wing-Heier represented by Alex Romero (AK); Alan McClain represented by Paul Keller; Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Dean L Cameron represented by Randel Pipal (ID); Doug Ommen represented by Scott Rupp (IA); Vicki Schmidt represented by Nicole Turner (KS); Sharon P. Clark (KY); James J. Donelon represented by Matthew Stewart (LA); Kathleen A. Birrane represented by Steve Wright (MD); Anita G. Fox represented by Lee McCallister (MI); Steve Kelley represented by Michael Marben (MN); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Chaney represented by John Hornback (MS); Matthew Rosendale represented by Jeannie Keller (MT); Mike Causey represented by Tracy Biehn (NC); Jon Godfread represented by JR Arnold (ND); Bruce R. Ramge represented by Martin Swanson and Peg Jas (NE); Marlene Caride represented by Richard Besser (NJ); Russell Toal represented by (NM); Barbara D. Richardson represented by Tim Gahn (NV); Glen Mulready represented by Rick Wagnon (OK); Andrew R. Stolfi represented by Stephanie Noren (OR); Kent Sullivan represented by Christopher Davis and Kyson Johnson (TX); Todd E. Kiser represented by Armand Glick (UT); and Scott A. White represented by Mike Beavers (VA). Also participating was David Altmaier represented by Simon Blank (FL).

1. **Adopted its May 20 Minutes**

Mr. Beavers made a motion, seconded by Mr. Mueller, to adopt the Task Force’s May 20 minutes (Attachment One). The motion passed unanimously.

2. **Discussed State Activity Concerning COVID-19**

Commissioner Navarro said the Task Force has continued to collaborate with the states, industry and antifraud organizations to monitor potential insurance fraud resulting from the COVID-19 pandemic. He said the Task Force met May 20 and took the following action: 1) discussed the COVID-19 pandemic; and 2) heard updates from California, Delaware, Florida, Ohio and antifraud organizations—the Coalition Against Insurance Fraud (CAIF) and the National Insurance Crime Bureau (NICB). He said during this meeting the Task Force will hear updates from California, Florida, Texas, the CAIF and the NICB.

   a. **California DOI**

Mr. Mueller said the California Department of Insurance (DOI) has reached out to 58 counties regarding the COVID-19 pandemic. He said the DOI has sent mailings to approximately 88 contacts in those counties to assist with promoting awareness on potential insurance fraud due to COVID-19. He said these alerts address possible threats of fraudsters scamming the public with different types of fraud, including email phishing. These alerts were sent out in English and Spanish formats to hit a wider range of the public. Mr. Mueller said the DOI’s communications department has been using Twitter and Instagram for social media distribution, which has helped widen its audience. He said the DOI has also used local newspapers to help educate the public. He said the DOI has used the CAIF info-graphic tools on the California website, and it has received great feedback. He said the DOI has put a lot of focus on small businesses, with the purpose to educate them on potential fraud. He said the DOI has utilized public forums to bring awareness, and it has even been on the Dr. Phil show to discuss potential fraud that may be experienced during the pandemic. He said the DOI will continue to monitor fraud trends and bring awareness to the public.

   b. **Texas DOI**

Mr. Johnson said the Texas DOI has made big steps towards public outreach to both consumers and industry. He said the Texas DOI website has been made into a robust source of information concerning potential insurance fraud from COVID-19. He said the DOI has also utilized social media to help educate the public as much as possible about possible fraud schemes.

Mr. Johnson said the DOI has not received many insurance fraud referrals specific to COVID. He said since February, there have been approximately 50 fraud referrals that could be directly related to COVID-19. He said overall, the insurance fraud trends to date have been tracking along about the same as previous years.
c. Florida Office of Insurance Regulation

Mr. Blank said the Florida DOI has seen a decrease in fraud during the COVID-19 pandemic. He said if anything, the past six months have remained consistent with the types of fraud referrals it is receiving; it has just been at a lower rate. He said some of the types of fraud the DOI is witnessing are workers’ compensation and other injuries due to the restrictions of staying at home brought on by COVID-19. He said the DOI has also seen a 25% decrease in health care fraud. He said the expectation was that fraud would increase, but at this time, the DOI is seeing the opposite. He said regarding the fraud that the DOI is beginning to watch more closely, there seems to be a parallel between COVID-19 and substance abuse treatments. The DOI is tracking this area for additional action to be take. Mr. Blank said the DOI is working with partners in the federal arena to continue with cases and arrests. He said the DOI will continue monitoring, and it will be waiting to see how COVID-19 will affect the state in the long term. He said the DOI will continue to collaborate with the Task Force and share any new trends that come about in the future.

d. CAIF

Matthew J. Smith (CAIF) said from what the CAIF has been tracking, all indications show that the insurance fraud cases have remained consistent as in previous years. He said this could be due to a lag in reporting that has been brought on by COVID-19. He said the CAIF is monitoring the fraud trends to see what the long term will bring. He said the CAIF has been reviewing the current pandemic compared to the Great Recession. During this time, there was a significant spike in insurance fraud due to the recession, and that data indicates that we will see the same due to the economic decline caused by COVID-19. Mr. Smith said the CAIF will be rolling out a survey to the fraud directors in effort to collect data from the states concerning fraud during the COVID-19 pandemic. The survey will be issued out to the states’ fraud directors in September, and then the CAIF will follow up six months later. Mr. Smith said the information collected will be confidential and not public information. He said the CAIF is tracking the ability to use artificial intelligence (AI) to track fraud occurrences during the pandemic, and the survey will also collect this information.

3. Received an Update from the Antifraud Education Enhancement (D) Working Group

Ms. Rafeld said during the month of June, with the assistance of Nationwide’s SIU Major Case Director, Steve Bodge, the Antifraud Education Enhancement (D) Working Group updated and finalized the content of the Private Sector Field Safety Course. The webinar will take place Aug. 26. Ms. Rafeld said in addition to the Private Sector Field Safety Course, fraud directors from California, Delaware, Ohio, Oklahoma, Nevada and Utah met via conference call on several occasions over the past two months to revise and finalize the content of the NAIC’s Investigator Safety Training program. The program was initially offered years ago, then it was incorporated as part of the Basic Fraud Investigations Course offered by the NAIC. Ms. Rafeld said the Working Group felt it would be beneficial to offer the course in 2020. The course has been updated to touch on significant safety issues, especially regarding COVID-19. The Working Group believes the new content incorporated into the program will be beneficial to all investigative staff members, regardless of the number of years they have been investigating agent misconduct and insurance fraud. The NAIC Investigator Safety Training Program will be held Sept. 30 at a time to be determined in the future. The Working Group will make sure all members of the Task Force receive the training announcement once it is published by the NAIC Education & Training Department. Ms. Rafeld said the Working Group is also looking to schedule additional investigative courses that would benefit both state and private industry investigators.

4. Received an Update from the Antifraud Technology (D) Working Group

Mr. Glick said the Antifraud Technology (D) Working Group has two projects it has been working on or monitoring. The first is the Online Fraud Reporting System (OFRS) Redesign Project being worked on by NAIC staff. Mr. Glick said the NAIC is finalizing the conversion of the existing system over to the new platform. When finished, the OFRS will be on a new platform with its current level of functionality. Mr. Glick said the Working Group will then have the opportunity to present changes and enhancements to the platform to add increased functionality in the future. He said the NAIC is planning a demo for the new platform at the NAIC Insurance Summit in September. He said the second project is the creation of a single point online repository for insurers to submit their antifraud plans to each state. The Working Group previously decided that it made sense to first evaluate the existing 2011 Antifraud Plan Guideline (#1690) to determine if updates are necessary. Mr. Glick said he, Ms. Rafeld and NAIC staff have been working with a small group of fraud directors to complete a draft revising Guideline #1690. Mr. Glick said the focus has been to reorganize the guideline into a more intuitive order, to eliminate repetitive requirements within the existing guidelines, and add suggestions that will better meet existing requirements for nearly all states. He said they have also tried to incorporate suggestions from industry and other interested parties into these guidelines. The intent of the revision was to not only update the guidelines, but to also better enable the future creation of electronic submission
data fields that insurers can fill out as part of their submission of antifraud plans when the repository is created. Mr. Glick said the draft will be sent out for review, and a comment period will be set for the members to submit their suggestions.

5. Heard Reports from Antifraud Organizations Concerning Insurance Fraud Related to COVID-19

a. CAIF

Mr. Smith said things continue to go well with the CAIF. He said Jim Quiggle, Senior Communications Director, will be retiring, and the CAIF has hired Arinze Ifekauche to step in as the new Communications Director. Mr. Smith said the CAIF has been monitoring state activity, and to date, there have been 26 laws that have passed. He said compared to previous years, that is much lower; however, there is still movement in the right direction. He said, as he mentioned previously, the CAIF will be issuing a survey out to the states that tracks fraud, including the use of AI to fight insurance fraud. This survey will be issued out to fraud directors in September, and additional follow up will take place six months later. Mr. Smith said the legal affairs is working on developing a model act based on the California and Illinois False Claims Acts. The work on this has just started, so it will be next year before it is completed; however, the CAIF welcomes any input from the state fraud directors. Mr. Smith said the CAIF has also been monitoring work by the National Council of Insurance Legislators (NCOIL) to update a model concerning health care sharing ministries (HCSMs). This would subject the same standards that states have in place with health care sharing. Mr. Smith said lastly, he would like to encourage all states to join the CAIF; membership is free, and all the CAIF’s resources would be available for states to utilize.

b. NICB

Alan Haskins (NICB) said the NICB has been monitoring the questionable claims that are coming in, and it is seeing that there is a potential delay for the claims to be filed or potentially not filed at all. He said due to the current nationwide situation with the pandemic, many claims will be paid through the normal insurance process, then they will later be identified as a COVID-19 related claim. He said the NICB is seeing fraudulent activity in the form of organized crime, specific attacks on the elderly regarding identity theft, chiropractic treatment claims, and fraudulent testing sites. He said there has also been a rise on property and auto types of claims, especially with towing and autobody shops. He said towing and autobody shops are charging extra for sanitization of the vehicles due to COVID-19. In addition, due to the economic hardships, which may prohibit some people to make car loan payments, they are seeing a rise in car owner arson. Mr. Haskins said due to the pandemic, the NICB’s National Insurance Crime Training Academy (NICTA), has gone 100% virtual and has fraud courses available. He said moving into the next year, the NICB’s legislative priority will be to assist the states on many fronts, including potential budget cuts in some states due to the pandemic. He said some of the budget cuts may affect state prosecutors, and the NICB will assist to make sure that these areas have the proper funding to continue fighting insurance fraud.

Having no further business, the Antifraud (D) Task Force adjourned.
The Antifraud (D) Task Force met via conference call May 20, 2020. The following Task Force members participated: Trinidad Navarro, Chair (DE); Jillian Froment, Vice Chair, represented by Michelle Brugh Rafeld (OH); Lori K. Wing-Heier represented by Alex Romero (AK); Ricardo Lara represented by George Mueller (CA); Michael Conway represented by Damion Hughes (CO); Andrew N. Mais represented by Kurt Swan (CT); Karinn M. Woods represented by Phil Comstock (DC); John F. King (GA); Vicki Schmidt represented by Dennis Jones (KS); Sharon P. Clark represented by Juan Garrett (KY); Sharon P. Clark represented by Matthew Stewart (LA); Anita G. Fox represented by Lee McCallister (MI); Mike Causey represented by Marty Sumner (NC); Jon Godfread represented by Dale Pittman (ND); Bruce R. Ramge represented by Martin Swanson (NE); Marlene Caride represented by Richard Besser (NJ); Russell Toal and Roberta Baca (NM); Barbara D. Richardson (NV); Eileen Mulready represented by Ron Kreiter (OK); Andrew R. Stolfi represented by Stephanie Noren (OR); Kent Sullivan represented by Leah Gillum and Chris Davis (TX); Todd E. Kiser represented by Armand Glick (UT); and Scott A. White represented by Mike Beavers (VA). Also participating were: Frank Pyle (DE); David Altmaier represented by Evangelina Brooks (FL); and Colin M. Hayashida (HI).

1. **Adopted its 2019 Fall National Meeting Minutes**

Commissioner Richardson made a motion, seconded by Ms. Rafeld, to adopt the Task Force’s Dec. 8, 2019, minutes (see NAIC Proceedings – Fall 2019, Antifraud (D) Task Force). The motion passed unanimously.

2. **Heard Reports from State Fraud Departments Concerning Insurance Fraud Related to COVID-19**

Commissioner Navarro said the Task Force has continued to collaborate with the states, industry and antifraud organizations to monitor potential insurance fraud resulting from the COVID-19 pandemic. He advised that to assist with bringing awareness to insurance fraud, the Task Force has asked the states’ fraud directors and antifraud organizations to provide an update on what they are experiencing.

   a. **California DOI**

Mr. Mueller said the California Department of Insurance (DOI) has been seeing an uptick in insurance fraud claims this quarter compared to previous quarters. He said the DOI currently has an outreach unit, which includes its communication division devoted to insurance fraud related to COVID-19. He said the DOI has contacted its network partners with the California low cost auto program to assist with insurance fraud awareness. The DOI has telephoned 480 community base organizations to bring awareness. Mr. Mueller said the biggest issue the DOI is seeing is with small businesses, and it has formed special outreach teams to assist in this area. He said the DOI conducted a tele-townhall to assist small businesses, which had approximately 1,500 people attend to receive education. He said the DOI has used the Coalition Against Insurance Fraud (CAIF) info-graphic tools to be used on the California website, and it has received great feedback. He said the DOI has also completed a senior fraud outreach for over 1,000 organizations, providing a town hall meeting to provide education. He said this outreach for senior fraud was completed through email and regular mail, which provided to be very successful.

   b. **Delaware DOI**

Mr. Pyle said Delaware has been partnering with federal and state law enforcement, the U.S. Attorney’s Office, the Federal Bureau of Investigation (FBI), and many others to assist with the fight against insurance fraud concerning COVID-19. He said the Delaware DOI created a COVID-19 Antifraud Coalition, which has been invaluable, with many more resources available than other areas. He said the DOI has seen a slight uptick in insurance fraud cases, but nothing specific to COVID-19. He said there are no trends at this time, but the DOI has experienced some cases, including bogus robocalls focused on seniors attempting to get themselves signed up for bogus health plans and bogus assistance offered for individuals that are out of work because of COVID-19. He said Delaware is preparing for upcoming scams concerning fake vaccines for COVID-19. He said there has been some cases that he is aware of concerning the rise in new family pet scams. Due to the rise in families getting new pets because of everyone being stuck at home, these scammers will post potential pets available, request a deposit, and...
then the pet is never delivered. He said Delaware will continue monitoring this, as they expect to see more insurance fraud cases relating to COVID-19 in the future.

c. Ohio DOI

Ms. Rafeld said shortly after the pandemic began, Ohio issued a consumer alert warning consumers about all the various scams resulting from COVID-19. She said the Ohio DOI worked with its communications department to get this alert out through social media and local press. She said the DOI has also worked with senior groups to aid with conducting educational events. She said a call was scheduled with the Ohio industry special investigation units to hear what the industry is witnessing and what can be done to assist with collaboration throughout the state. She said the biggest item the DOI have been witnessing concerning COVID-19 is body shop scams. Body shops have been listing additional cleaning fees for vehicles due to COVID-19. She said some body shops are contracting with towing companies to commit a scam, claiming that a vehicle is being inspected for COVID-19 exposure; this vehicle is then towed even when drivable, which creates an additional expense to the consumer. She said the DOI is working with state and federal organizations to assist on these cases. She said the DOI is also witnessing private chiropractor practices providing COVID-19 prevention methods. She said Ohio is instituting COVID-19 safety precautions for their investigators in the field. She said due to the courts being temporarily closed and prosecutors stuck working from home, the DOI is making efforts to work with these prosecutors regarding potential cases taken to court once reopened.

d. Florida Office of Insurance Regulation

Ms. Brooks said the Florida DOI, as of this morning, received a report that there is a small uptick in COVID-19 cases. She said this could be due to many things, including an increase in testing. She said Florida is seeing some of the same issues as other states. She said the DOI has been tracking insurance fraud specific to COVID-19 since January, but it has seen no specific trends at this time. She said Florida has been discussing the liability for homeowner claims from individuals providing service to someone’s home and claiming that they have contracted COVID-19. She said the DOI is expecting to see personal injury claims on behalf of employees claiming that their employer has not provided proper precautions to protect against COVID-19. She said while the DOI is continuing to monitor all fraud at this time, it is not seeing an uptick in insurance fraud specific to COVID-19.

3. Heard Reports from Antifraud Organizations Concerning Insurance Fraud Related to COVID-19

a. CAIF

Matthew J. Smith (CAIF) said from what the CAIF has been seeing, it looks as though COVID-19 will be the largest spike in insurance fraud in history. He said the CAIF is comparing the pandemic to what was witnessed during the great recession. He said the economic downturn will result in a spike in insurance fraud throughout the country. He said COVID-19 has been considered a worldwide natural disaster that will bring higher than normal cases of insurance fraud. He said the CAIF research found from Google that there was a 125% increase in people searching how to commit arson.

Mr. Smith said during the initial stage of the pandemic, the CAIF partnered with the National Insurance Crime Bureau (NICB) and the International Association of Special Investigation Units (IASIU) to provide a webinar concerning COVID-19. The webinar had approximately 3,000 attendees, which was the largest gathering of antifraud fighters in history. Mr. Smith said COVID-19 has had an impact around the world, and the CAIF has taken part with its international partners to provide 10–12 webinars specific to the pandemic. In addition, the CAIF has partnered with the American Association of Retired Persons (AARP) to fight insurance fraud against the elderly. Mr. Smith said the states have been utilizing the CAIF’s info-graphic tool kit to bring awareness to insurance fraud.

Mr. Smith said the mid-year meeting scheduled for June has been cancelled due to the pandemic, but the CAIF plans to hold the end of year meeting in December as scheduled. He said the CAIF will be conducting a study on artificial intelligence (AI), specifically how companies are using AI to fight COVID-19 insurance fraud.

b. NICB

Alan Haskins (NICB) said the NICB launched an COVID-19 resource center immediately following the pandemic shut down. He said the NICB coordinated with state and trade national fraud groups during the shutdown. He said the NICB has started seeing states like New Jersey and Nevada put together state and federal task forces to investigate insurance fraud due to COVID-19. He said some of the fraudulent claims are unlawful hoarding of medical supplies, price gouging, phishing schemes, and
fake investment opportunities. He said the NICB has been working with the Las Vegas Metro Police Department concerning an increase in vehicle break-ins, specifically against doctors and medical professionals while their car is in parking lot at work. He said thieves are taking information from these cars to locate the individuals’ home addresses and burglarize their homes. He said the NICB has been offering a virtual pandemic safety training course, which is available on its webpage. He said the NICB is holding monthly National Dialog Meetings on COVID-19 concerning fraud claims and insurance fraud trends. He said overall, the NICB has seen a 9% increase in questionable claims, including burglarized vehicles and homes, homeowner claims, and work comprehensive. He said the NICB has witnessed towing and storage claims like what Ms. Rafeld stated that Ohio is experiencing. He said the NICB has also seen tele-medicine schemes, physical therapy, and chiropractor service schemes. Lastly, he said the NICB Geospatial Intelligence Center (GIC), which is its insurance industry global energy provider, has continued to be utilized after natural disasters.

c. **NHCAA**

Leigh McKenna (National Healthcare Antifraud Association—NHCAA) said the NHCAA focuses primarily on education and training regarding health care fraud and the sharing of information. She said one of the NHCAA’s key education and trainings, the annual program focusing on novice fraud investigators, has had to be moved to December due to the pandemic. She said a few of the NHCAA’s educational programs have been moved to a virtual format because of the pandemic. She said the NHCAA’s large annual conference that takes place in November is undetermined at this time as to whether it will be virtual or in-person. She said this conference typically brings 1,300–1,500 health care fraud investigators. She said the NHCAA has been holding monthly information sharing calls for its members and providing webinars for education and information sharing. She said the NHCAA is also holding weekly board member meetings to discuss what is being seen specific to COVID-19. She said the NHCAA has pulled together several valuable resources, which are available on its webpage. She said most of what the NHCAA is seeing is fraudulent COVID-19 testing, the billing of higher hours by providers, and the improper coding of services due to COVID-19. She said the NHCAA continues to monitor and identify schemes quickly so they can be shut down as soon as possible.

d. **HFPP**

Scott Caspall (Healthcare Fraud Prevention Partnership—HFPP) said the HFPP provides two key items: the data analytics to partners and the facilitation of sharing health care fraud intelligence among the partners of the partnership.

Jacob Gray (HFPP) said the HFPP is seeing an increase in health care data, which will add value at the state and federal level. He said the HFPP has increased its support for law enforcement departments, and it has partnered with academic institutions like Stanford to provide useful whitepapers. He said the HFPP has seen a lot of billing for COVID-19, specifically for testing. He said the HFPP ais monitoring known compromised numbers from Medicare and Medicaid, along with stolen identity information, which is used for improper billing. He said the HFPP will be monitoring new providers that are created due to COVID-19.

Having no further business, the Antifraud (D) Task Force adjourned.
The Market Information Systems (D) Task Force met via conference call Aug. 4, 2020. The following Task Force members participated: Lori K. Wing-Heier, Chair (AK); Chlora Lindley-Myers, Vice Chair (MO); Alan McClain represented by Crystal Phelps (AR); Elizabeth Perri (AS); Evan G. Daniels represented by Maria Ailor (AZ); Ricardo Lara represented by Don McKinley and Pam O’Connell (CA); Alan Conway represented by Damion Hughes (CO); Trinidad Navarro represented by Frank Pyle (DE); Doug Ommen (IA); Robert H. Muriel represented by Erica Weyhenmeyer (IL); Vicki Schmidt represented by Tate Flott (KS); Sharon P. Clark represented by Russell Hamblen (KY); Michael Conway represented by Johnny Palsgraaf (ND); Steve Kelley represented by Matthew Vatter (MN); Jon Godfread represented by Jeff Zewe (LA); Marlene Caride represented by Ralph Boeckman (NJ); Barbara D. Richardson represented by Nick Stosic (NV); Jillian Froment represented by Robert Stroup (OH); Kent Sullivan represented by Rachel Cloyd (OK); James A. Dodrill (WV). Also participating: Brent Kabler (MO); and Larry Wertel (NY).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Mr. Haworth made a motion, seconded by Director Lindley-Myers, to adopt the Task Force’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Market Information Systems (D) Task Force). The motion passed unanimously.

   Mr. Kabler said the Working Group met July 22 and July 8. These meetings were held in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings.

   Mr. Kabler said the Working Group heard an update on the request to implement the Market Actions Tracking System (MATS) web service in State Based Systems (SBS). He said the requirements for this request have been defined and approved by the interested states. He said this will allow users to open and update actions in the MATS. SBS is in the beginning stages of development.

   Mr. Kabler said the Working Group approved two USER forms to add a subject code of “pandemic” and three coverage codes of “business interruption,” “lender-placed insurance,” and “pet insurance” in the Complaints Database System (CDS). He said the Working Group also approved the USER form to update the Regulatory Information Retrieval System (RIRS) to display data retention policies and terminology related to action dates.

   Mr. Kabler said the Working Group is reviewing the detailed analysis of a USER form to add previously eliminated reason codes in the CDS. The reason codes are to assist in meeting federal reporting requirements under the federal Affordable Care Act (ACA).

   Mr. Kabler said the Working Group is continuing to review RIRS codes through the RIRS Code Review Working Group. The subject matter expert (SME) group is updating its original proposal to address questions from the Working Group.

   Finally, Mr. Kabler said the Working Group began its review of the 2019 MIS Data Analysis Metrics results.

3. **Heard a Report on Outstanding USER Forms**

   Director Wing-Heier said one of the Working Group’s charges is to serve as the business partner to review and prioritize submitted USER forms to ensure an efficient use of available NAIC staffing and resources. She said during the 2019 Summer National Meeting, some concern was expressed about the number of USER forms that have not progressed in the last few years. The Task Force requested that the Working Group take a closer look at the prioritization list to determine which projects should be re-prioritized and identify USER forms that are not active.
Director Wing-Heier said the USER form report has now been split into three major sections: 1) Active USER Forms; 2) USER Forms Being Addressed by State Ahead Project; and 3) USER Forms Pending Detailed Analysis. She said the last section consists of those USER form projects that have not yet begun but that the Working Group would like to keep on the report, so the Working Group does not lose track of them. These USER forms are still important, but they have been prioritized lower than those above them on the report.

Director Wing-Heier said the report on USER forms is informational, but the Task Force will consider adoption of two USER forms concerning CDS coding.

Ginny Ewing (NAIC) said USER form 10051 is a request to implement the MATS web service in SBS. She said when the MATS was developed, services were created that could be used by state back office systems to update the MATS. She said this request eliminates the need for states to dual enter data in back office system as well as the MATS. She said the SBS team worked with interested states to define requirements, and it is currently in the process of implementing the first phase, which will allow users to open an action in SBS and send updates to the MATS.

Ms. Ewing said USER form 10053 is a request to enhance the RIRS. She said the RIRS SME group has reviewed comments received after the Working Group’s review of its proposed changes, and the SME group is planning to submit an updated proposal for the Working Group to consider later this month.

Ms. Ewing said USER form 10069A is a request to enhance CDS codes. She said it requests adding previously eliminated reason and disposition codes and adding new reason codes. She said the results of a detailed analysis were reviewed during the Working Group’s last call, and it will be considered during its next meeting on Aug. 27.

Ms. Ewing said USER form 10080 is a request to update RIRS to provide data retention policies and terminology related to action dates. She said the request includes seven components to provide clarity around the states’ regulatory action data in the RIRS. She said two of those components are related to data definitions and will be assisted by the RIRS SME group, and three components are complete. The completed components are: 1) adding the RIRS Data Retention Policy to iSite+; 2) adding an explanation of the RIRS Custody Date to iSite+; and 3) renaming the “Regulatory Systems Participating State Report” to the “RIRS Participating State Report.”

Ms. Ewing said USER form 10072 is a request to allow companies to file new Market Conduct Annual Statement (MCAS) submissions for prior years. She said the request was completed and released in the first quarter of 2020.

4. **Adopted USER Form 10069B and USER Form 10082**

Ms. Ewing said USER form 10069B is a request to add CDS coverage codes for: 1) Lender-Placed Insurance, consisting of Automobile 2nd Level coverage codes for Lender-Placed, Single Interest and Dual Interest; and Homeowner 2nd Level Coverage codes for Lender-Placed, Dual Interest and Hazard; and 2) Pet Insurance, consisting of a miscellaneous coverage code for Pet Insurance. She said the Lender-Placed Insurance codes will allow for better tracking of complaints specific to lender placed insurance on both auto and homeowners that will align with MCAS data reporting. She said it will also allow for the removal of the MCAS data element that companies must report insurance department complaints. She said the Pet Insurance code will allow for more accurate tracking of Pet Insurance complaints. She said the recommended codes are clearly defined, not duplicative of existing codes, and they will add value. She said states’ back office systems used to collect complaint data will need to be updated to include the new codes. She said testing will be coordinated with SBS and Sircon. She noted that iSite+ and Consumer Insurance Search (CIS) reports are easily updated via metadata. She said the scope of this project includes updates to the CDS in coordination with state back office systems to include the new codes. The level of effort is between 40 hours and 120 hours.

Ms. Ewing said USER form 10082 is a request to add new CDS codes for “business interruption” and “pandemic.” She said the new codes will allow the states to track complaints related to pandemic events, such as COVID-19, and the tracking of complaints related to business interruption, which is a critical coverage in a catastrophic event. She said the “pandemic” code would be added as a subject code that allows tracking complaints related to a specific condition, which leads to a reason for the complaint. She said CDS is currently capturing subject codes; however, it is not displaying them anywhere. The current CDS reports need to be reviewed to determine where subject code can should be added. Ms. Ewing said the states’ back office systems will need to be updated to include the new codes, and NAIC staff will coordinate testing with the vendors.
A new CDS Tableau dashboard is being developed, and it is scheduled to be made available to state insurance regulators this quarter. Since it uses the current metadata, when a new type of coverage code is added, it will be available in the dashboard. Ms. Ewing said the “business interruption” code will be added as a miscellaneous coverage code.

Ms. Ewing said the scope for adding “pandemic” and “business interruption” includes updates to the CDS in coordination with state back office systems to include the new codes and determining what CDS reports and dashboards to update. She said the level of effort is between 40 and 120 hours.

Mr. Flott made a motion, seconded by Director Lindley-Myers, to adopt USER form 10069B (Attachment One) and USER form 10082 (Attachment Two). The motion passed unanimously.

5. **Heard a Presentation on the Use of AI in MIS**

Birny Birnbaum (Center for Economic Justice—CEJ) gave a presentation regarding artificial intelligence (AI), how it used by insurers, the requirements for AI to be effective, and how AI can be used in market regulation. He clarified the distinction between AI and machine learning, noting that AI uses algorithms to mimic human functions, and machine learning takes AI a step further by enabling machines to change the algorithms as they gain more information. He said AI is dependent upon massive amounts of data to be effective. The data must be timely, reliable, granular and sufficient. He noted the current data within NAIC systems is not timely, granular or sufficient enough to be effective in developing algorithms for AI. He outlined two options for using AI in market regulation. One option is to build AI tools for the existing systems, with each AI tool designed to meet a specific purpose. The second option is to determine what the desired outcomes and functionality are and then determine what data is needed to build AI tools to accomplish the functionality.

Having no further business, the Market Information Systems (D) Task Force adjourned.
Complaint Database System (CDS)
Add Codes for LPI and Pet Insurance
Detail Analysis for Request 10069B

Request:

<table>
<thead>
<tr>
<th>ID</th>
<th>Date Received</th>
<th>Requestor</th>
<th>Request</th>
<th>NAIC Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>10069B</td>
<td>7/12/2017</td>
<td>Jo LeDuc WI</td>
<td>New CDS Type of Coverage Codes for lender placed insurance and pet insurance.</td>
<td>Proceed to Development</td>
</tr>
</tbody>
</table>

1) New Lender Placed MCAS Statement is slated to collect data for Lender-Placed insurance for the following eight coverage types:
   - Single-Interest Lender-Placed Auto
   - Dual-Interest Lender-Placed Auto
   - Single-Interest Lender-Placed Homeowners Hazard
   - Dual-Interest Lender-Placed Homeowners Hazard
   - Single-Interest Lender-Placed Homeowners Flood
   - Dual-Interest Lender-Placed Homeowners Flood
   - Single-Interest Lender-Placed Homeowners Wind-Only
   - Dual-Interest Lender-Placed Homeowners Wind-Only

   Recommending the following second level coverage codes be added to allow for complaints to be tracked in a fashion that aligns to the new MCAS statement:

   **Auto (Second Level Coverages):**
   - Lender Placed
   - Single Interest
   - Dual-Interest

   **Homeowners (Second Level Coverages):**
   - Lender Placed
   - Dual-Interest
   - Hazard

2) Recommend adding the following new first level coverage code help states track pet insurance complaints:

   **Miscellaneous (First Level Coverage)**
   - Pet Insurance
Benefits:
Allow for better tracking of complaints specific to lender placed insurance on both auto
and homeowners that will align better with the new MCAS statement, which will also
allow for the removal of the data element whereby companies must report the insurance
department complaints received during the reporting period.

Also allow for more accurate tracking of Pet Insurance complaints.

Preliminary Analysis
(Completed on 7/2/2020 by Brian Whittall)

Preliminary Findings:
- Requested codes can be added to CDS metadata for capture and presentation.

Preliminary Considerations:
- The project size for this request is expected to be medium.
- Outstanding open USER Forms requesting updates to CDS codes (10069A and 10082) could be
  worked concurrently with this request.

Preliminary NAIC Staff Recommendation:
NAIC staff recommends moving forward to detailed analysis.

Detailed Analysis
(Completed on 7/2/2020 by Brian Whittall)

Detailed Analysis Findings:
1) Lender Placed Insurance - Adding the following second level coverage codes will allow for
complaints to be tracked in a fashion that aligns to the new MCAS statement:

Auto (Second Level Coverages):
- Lender Placed
- Single Interest
- Dual-Interest

Homeowners (Second Level Coverages):
- Lender Placed
- Dual-Interest
- Hazard
Auto Coding Explanation
Lender-placed auto insurance complaints would be coded under the appropriate 1st level auto coverage. In addition, the second level coverage code of Lender Placed would be selected. If more detailed information about the contract type is known, the appropriate addition second level coverage code would also be selected.

Auto complaint coding examples:
1. Complaints involving lender placed coverage for a private passenger automobile where it is not known whether it is a single or dual interest contract would be coded as:
   - First Level Coverage Auto
   - Second Level Coverage Lender Placed
2. Complaints involving single-interest lender placed coverage for a private passenger automobile would be coded as:
   - First Level Coverage Auto
   - Second Level Coverage Lender Placed
   - Single Interest
3. Complaints involving dual-interest lender placed coverage for a private passenger automobile would be coded as:
   - First Level Coverage Auto
   - Second Level Coverage Lender Placed
   - Dual Interest

Homeowners Coding Explanation
The following second level coverages for homeowners already exist, so they do not need to be added at this time:
   - Flood
   - Single-Interest
   - Windstorm
Like lender-placed auto insurance complaints, homeowners complaints would be coded under the appropriate 1st level homeowners coverage. In addition, the second level coverage code of Lender Placed would be selected. If more detailed information about the contract is known, the appropriate addition second level coverage code(s) would also be selected.

Homeowners complaint coding examples:
1. Complaints involving lender placed coverage for a homeowners where additional information about the contract is not known would be coded as:
   - First Level Coverage Homeowners
   - Second Level Coverage Lender Placed
2. Complaints involving lender placed single-interest flood coverage for a homeowners would be coded as:
   - First Level Coverage Homeowners
   - Second Level Coverage Lender Placed
3. Complaints involving lender placed hazard coverage for a homeowners but the type of contract (dual vs. single interest) is not known would be coded as:
   - First Level Coverage Homeowners
   - Second Level Coverage Lender Placed
   - Hazard

2) Pet Insurance - Adding a Miscellaneous code for Pet Insurance will help states track pet insurance complaints.

Detailed Analysis Considerations:

1. Recommended Codes
   The recommended codes are clearly defined, not duplicative of existing codes, and would add value for regulators.

2. State Implementation
   States’ back office systems will need to include the requested codes to allow for their submission to the NAIC with each closed complaint. States will need to work with their back-office systems vendor to ensure inclusion of these codes.

3. Reports
   Once added to the NAIC metadata, current CDS reports in iSite+ and in CIS (Consumer Insurance Search) will automatically display the new codes.

4. Other CDS USER Forms
   USER Forms 10069A and 10082 both request additions to complaint codes. USER Form 10069A needs more information regarding (1) the definitions of requested codes and (2) reasons why they should be added back when they were approved for removal by the D Committee in 2008. USER Form 10082 is being submitted with an NAIC staff recommendation to proceed to Development. Should these USER forms be included in the timeline for this USER form?

Scope:
   The scope of this project includes the Complaints Database System, coordination with state back office systems to include the new codes.

Project Size:
   Level of Effort for this request is Medium.
NAIC Staff Recommendation:
NAIC staff recommends moving forward to development as noted:
- Add second level coverage codes for Lender Placed, Single Interest and Dual-Interest to Auto.
- Add second level coverage codes for Lender Placed, Dual-Interest and Hazard to Homeowners.
- Add Miscellaneous type of coverage for Pet Insurance.
- Address USER form 10082 concurrently with this request.

An updated Complaints form, which reflects these recommendations, is attached.
Complaints Database System (CDS)
Add Pandemic Code and Business Interruption Code
Detailed Analysis for Request 10082

Request:

<table>
<thead>
<tr>
<th>ID</th>
<th>Date Received</th>
<th>Requestor</th>
<th>Request</th>
<th>NAIC Recommendation</th>
</tr>
</thead>
<tbody>
<tr>
<td>10082</td>
<td>6/23/2020</td>
<td>Randy Helder</td>
<td>Add Pandemic and Business Interruption codes for complaint tracking and reporting</td>
<td>Proceed to Development</td>
</tr>
</tbody>
</table>

Request Description:
This Request is to add a second level coverage code of Business Interruption to Fire, Allied and CMP or as Miscellaneous coverage.

Track how many complaints state regulators submit to the NAIC due to a “Pandemic.” The “Pandemic” is not a reason but is perhaps a root cause and should be tracked.

Benefits:
This request will allow jurisdictions to track complaints related to pandemic events such as the COVID-19 pandemic. Additionally, in a catastrophic event, business interruption is a critical coverage and may generate many complaints. This request will allow jurisdictions to track business interruption complaints. NAIC will be able to capture and present this information to users of CDS.

Preliminary Analysis
(Completed on 7/2/2020 by Brian Whittall)

Preliminary Findings:
- Requested codes can be added to CDS metadata for capture and presentation.
- Subject Codes are currently captured but not presented. NAIC reports will need to be updated to display Subject codes.

Preliminary Considerations:
- The project size for this request is expected to be medium.
- Outstanding open USER Forms requesting updates to CDS codes (10069A and 10069B) could be worked concurrently with this request.

Preliminary NAIC Staff Recommendation:
NAIC staff recommends moving forward to detailed analysis.
Detailed Analysis Findings:

1. The Complaint Handling and Reporting Standards (D) Working Group, which was formed at NAIC’s 2006 Spring National Meeting, was charged to create uniformity in complaint handling and reporting. (The Group has since dissolved.) In December 2008, the Market Regulation and Consumer Affairs (D) Committee adopted a timeline for implementation of the Working Group’s proposed complaint coding scheme. This scheme included the addition of a subject code to properly track complaint themes and to prevent using reason codes for this purpose. An excerpt from the “CDS Definitions and Basics” document, which was adopted by the D Committee on June 16, 2009, provides additional historic information:

“Prior to the revision, there were 118 Reason codes in the CDS database. The group recommended dropping 43 of these codes as duplicative, unneeded (based on NAIC utilization data), or inappropriate as they did not constitute a “reason” for a complaint but rather identified a subject area of a complaint.

The “reason” for a complaint is the action, or inaction, an insurance entity took which caused the consumer to seek redress. The subject area of the complaint may be a specific condition which led to the “reason.” For example, the proliferation of mold-related complaints led to the inclusion of “mold” as a reason code. However, consumers do not file complaints because of mold per se; rather, they file complaints based on their policy coverage (or lack thereof) for mold remediation, the handling of their mold claims, etc. The action the company took in regard to the consumer’s claim, i.e. denial, delay, unsatisfactory settlement offer, etc. is the “reason” while the “subject” is mold.

Creation of this new “subject” field will permit regulators to track issues of interest such as mold without improperly using a “reason” code to do so.”

2. Although regulators may include a subject code with the submission of closed complaints to the NAIC, and the subject code is captured in the NAIC’s State Producer Licensing Database, that code is not currently displayed in any CDS reports in iSite+ or in CIS (the Consumer Insurance Search) web site.

3. Since subject code was introduced, the following codes have been available for regulators to select when they close a complaint and submit it to the NAIC. There are currently 8 subject codes. However, all subject codes allow users to include free-form text (subject description) to better describe the code being used. This free-form text is primarily used with the OTH (other) code. The counts of subject codes and descriptions are listed below:

<table>
<thead>
<tr>
<th>SUBJECT ID</th>
<th>SUBJECT ID NAME</th>
<th>SUBJECT DESCRIPTION (Count)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 HUR</td>
<td>Hurricane</td>
<td>(11072)</td>
</tr>
<tr>
<td>2 INT</td>
<td>Internet Related</td>
<td>(1186)</td>
</tr>
<tr>
<td>3 LEA</td>
<td>Lead</td>
<td>(8)</td>
</tr>
<tr>
<td>4 MOL</td>
<td>Mold</td>
<td>(180)</td>
</tr>
<tr>
<td>5 OBS</td>
<td>Obesity</td>
<td>(66)</td>
</tr>
</tbody>
</table>
4. Users of CDS should be aware of restrictions currently in place when determining whether to add a first level coverage in the Miscellaneous category or a second level coverage of Business Interruption in the Fire, Allied Lines & Commercial Multi-Peril (CMP). The restrictions are as follows:
   - Type of Coverage is divided into seven mutually exclusive categories: (1) Auto; (2) Fire, Allied Lines & Commercial Multi-Peril (CMP); (3) Homeowners; (4) Life & Annuity; (5) Accident & Health; (6) Liability; and (7) Miscellaneous.
   - Each complaint may have only one major category.
   - All the major categories, except the “Miscellaneous” category, have subcategories of First Level Coverage (of which only one can be selected) and Second Level Coverage, of which up to three can be selected.

5. With the addition of subject and coverage codes, the requested codes must be added to the CDS metadata (decode tables) in order to capture and present this data. States' back office systems will also need to include the requested codes to allow for their submission to the NAIC with each closed complaint. States will need to work with their back-office system vendor to ensure inclusion of these codes.

6. Current CDS reports in iSite+ and in CIS will automatically display a new Business Interruption code, whether it is a second level coverage code in the Fire, Allied Lines & Commercial Multi-Peril (CMP) coverage type or it is a new coverage in the Miscellaneous coverage type.

7. A new CDS Tableau dashboard is in development and tentatively scheduled for release in 3rd Quarter 2020. This dashboard already includes all types of coverage, first level coverage codes, and second level coverage codes. Therefore, a Business Interruption code would be displayed, based on this request. The dashboard could be modified to include subject code in a future iteration.

Detailed Analysis Considerations:

1. Reports
   As noted, the subject code is not displayed anywhere in CDS, although that data is captured from states with the submission of closed complaints. If the subject code can be presented for display in the new CDS Tableau dashboard, NAIC staff, working with regulators will need to determine which CDS reports in iSite+ and in CIS should also display the subject code. There are currently 5 reports in iSite+ for consideration: Closed Complaints Count by Code, Closed Complaints Count by State, Closed Complaint Trend Report, Closed Complaint Index, and the Closed Complaint Record Detail File. All these reports are company specific. There are currently 3 reports in CIS: Complaint Code, Complaint State, Complaint Trend. The reports will automatically display a Business Interruption code once it is added to the CDS metadata because coverage codes are already included in these reports.

   NAIC staff, working with regulators, will also need to determine if a new CDS Summary Report should be developed so that users of CDS can analyze complaint data at more than a company-specific level. The new CDS Tableau dashboard could also be a consideration for this type of analysis, mitigating the need for a new Summary Report in iSite+.
2. Other CDS USER Forms
   USER Forms 10069A and 10069B both request additions to complaint codes. USER Form 10069A needs
   more information regarding (1) the definitions of requested codes and (2) reasons why they should be added
   back when they were approved for removal by the D Committee in 2008. USER Form 10069B has the
   necessary information to consider adding the requested codes to CDS.

3. Business Interruption Code
   The request to add this code could be completed in 2 different ways:
   - Add Business Interruption as a second level coverage code to the Fire, Allied and CMP type of coverage.
   - Add it as a Miscellaneous type of coverage.

   Adding a Miscellaneous code requires less development work and testing than adding a second level
   coverage code. However, if the Working Group approves USER Form 10069B for development, then adding
   second level coverage codes for that request negates the benefit of only adding a first level coverage code.

4. State Implementation
   States' back-office systems will also need to include the requested codes to allow for their submission to the
   NAIC with each closed complaint. States will need to work with their back-office systems vendors to ensure
   inclusion of these codes.

Scope:
The scope of this project includes the Complaints Database System, coordination with state back office systems to
include the new codes, and determining what CDS reports/dashboards to update and when.

Project Size:
Level of effort for this request is Medium.

NAIC Staff Recommendation:
NAIC staff recommends moving forward to development as noted:
- Add subject code for Pandemic.
- Add Miscellaneous type of coverage for Business Interruption.
- Address USER form 10069B concurrently with this request.
- Defer addressing USER form 10069A until required information is available and further analysis is completed.
- Update the CDS dashboard to display Subject code.
- Submit a new USER form to determine where and how to display Subject code in iSite+ and CIS reports, as
  well as consideration for development of a new CDS Summary report.

An updated Complaints form, which reflects these recommendations, is attached.
PRODUCER LICENSING (D) TASK FORCE

Producer Licensing (D) Task Force Aug. 3, 2020, Minutes ................................................................. 9-202
Producer Licensing (D) Task Force May 6, 2020, Minutes (Attachment One)................................. 9-204
The Producer Licensing (D) Task Force met via conference call Aug. 3, 2020. The following Task Force members participated: Larry D. Deiter, Co-Chair (SD); Elizabeth Kelleher Dwyer, Co-Chair (RI); Lori K. Wing-Heier represented by Chris Murray (AK); Jim L. Ridling (AL); Alan McClain represented by Crystal Phelps (AR); Ricardo Lara represented by Charlene Ferguson (CA); David Altmaier represented by Matt Guy (FL); Doug Ommen represented by Jackie Russo (IA); Vicki Schmidt represented by Nancy Strasburg (KS); Sharon P. Clark (KY); James J. Donelon represented by Patrick Bell (LA); Anita G. Fox represented Michele Riddering (MI); Chlora Lindley-Myers (MO); Mike Kreidler represented by Jeff Baughman (WA); and James A. Dodrill represented by Robert Grishaher (WV). Also participating was: Colleen Draper (NY).

1. **Adopted its May 6 Minutes**

Commissioner Clark made a motion, seconded by Director Lindley-Myers, to adopt the Task Force’s May 6 minutes (Attachment One). The motion passed unanimously.

2. **Discussed Producer Licensing Issues Arising from the COVID-19 Crisis**

Superintendent Dwyer said Washington was the only state offering online, proctored examinations when the pandemic began, and she said the Task Force will receive updates from states, industry representatives and examination vendors on the state implementation of online examinations.

Ms. Draper said New York recently implemented remote testing as a permanent way to deliver examinations. She said New York has administered 4,000 remote exams and remote testing accounts for 60% of examinations administered. She said there has not been a negative impact on pass rates, and remote testing is very helpful to candidates who live in rural areas of the state.

Mr. Baughman said Washington made all examinations available through remote testing on March 1. He said Washington administered over 200 remote exams in March. He said his biggest concern was security, but very few incidents have been identified, such as a candidate having a cell phone or materials in sight, or background communication heard that might indicate that someone is assisting a candidate with answers. He said approximately 60% of Washington’s exams are administered through the remote platform. He said the pass rate in Washington has increased a little with remote testing.

Superintendent Dwyer said Rhode Island will begin offering remote exams on Aug. 11. Mr. Beavers said Virginia began offering remote testing on June 1, and approximately 60% of Virginia’s exams are administered through the remote platform. He said Virginia administers approximately 1,200 exams per month, and it did not issue temporary licenses. Ms. Anderson said Oregon began offering remote testing two weeks ago, and the implementation process was very smooth. Ms. Hatchell said North Carolina offered temporary licenses to address the closure of examination centers and a lack of fingerprinting, which is administered through the Federal Bureau of Investigation (FBI) in North Carolina. She said North Carolina is working to implement remote testing.

Douglas Wheeler (New York Life Insurance Company) said New York Life has captive agents, and it set a goal in 2020 of investing upwards of $500 million on recruiting and training new agents. He said COVID-19 and the closure of examination centers disrupted this goal. He said the issuance of temporary licenses was helpful, and he encouraged states to implement remote testing. He said remote testing allows candidates to take exams in a safe and secure environment.

Bill Johnson (Fidelity Investments Life Insurance) said New York Life helps Fidelity meet the security needs of its customers. He said the need for financial advice has increased during the pandemic, and Fidelity has seen an increase in the purchase of new annuities compared to this time last year. He said Fidelity needs 4,000 new associates to meet the demand, and the limited availability of examinations has hindered Fidelity’s ability to meet client demands and provide employment opportunities for
new associates. He said the issue of temporary licenses has helped and encouraged states to implement remote testing. He said there are protocols to ensure that remote exams are secure and that states that have implemented remote testing have had a positive experience.

Brad Burd (GoHealth) said GoHealth said the closure of exam centers creates a backlog of exam availability, and access to fingerprinting was also a challenge. He said he agrees with prior comments and the direction to implement remote testing. He said insurance and financial security becomes very important to consumers, especially for health insurance and seniors. He said GoHealth would like to see further implementation of remote testing, and he suggested the creation of a best practice checklist for states to conduct a self-review of the state examination process. He said the issue of temporary licenses was helpful, but individuals holding a temporary license were unable to obtain appointments with companies. He encouraged states to explore additional options available for fingerprinting beyond exclusive contracts with examination vendors.

David Leifer (American Council of Life Insurers—ACLI) said the ACLI appreciates the states’ issuance of temporary licenses and the progress of implementing remote exams. Julie Mix McPeak (Greenberg Traurig) requested that states be deliberative in unwinding their emergency regulations, and she asked for communication and transparency with stakeholders.

Brad Erickson (Prometric) said Prometric will implement remote testing in its ninth state. He said Prometric worked with the Financial Industry Regulatory Authority (FINRA) on its implementation of remote testing, and it can implement a state with remote testing as quickly as one week. He said the pass rate for remote tests is within 1% of traditional examinations. He said Prometric also facilitates fingerprints, but a paper fingerprint requirement is a challenge with social distancing guidelines.

Jason McCartney (PSI Services) said PSI worked with Washington, and approximately 50–60% of exams administered in Washington are administered via a remote testing platform. He said PSI can implement remote testing in a state within 60 days. He said PSI implemented remote testing in Washington in October, in New York in June, and in Pennsylvania and Oregon in July. Mr. He said PSI will implement remote testing in South Carolina and Michigan in August and in New Jersey in September. Paula Sisneros (Pearson VUE) said Pearson VUE implemented remote testing in Colorado and Rhode Island in August. She said approximately 30% of the exams in Colorado are scheduled as remote exams.

3. Received an Update from the Producer Licensing Uniformity (D) Working Group and the Uniform Education (D) Working Group

Mr. Murray said the Producer Licensing Uniformity (D) Working Group has not met because of COVID-19. He said the Working Group remains ready to assist the Task Force, and it will be reviewing its charges and holding a call in the coming months. Superintendent Dwyer provided the Uniform Education (D) Working Group update on behalf of Rachel Chester (RI), chair of the Working Group. Superintendent Dwyer said the Working Group will be monitoring state implementation of the Continuing Education Reciprocity (CER) Agreement. She said the Working Group has not met because of COVID-19, but it will also review its charges in the coming months. She said the Working Group will review the course guidelines for classroom webinar delivery.

4. Received a Report from the NIPR Board of Directors

Director Deiter said 48 states have issued over 100 separate bulletins regarding producer licensing since the onset of the COVID-19 pandemic. Thirty-three bulletins specifically address license renewal extensions, and 30 states issued bulletins offering temporary licensing. These bulletins and state changes required the National Insurance Producer Registry (NIPR) to complete significant coding work to move the states’ license expiration dates and provide an electronic solution for a new temporary producer license class through NIPR. Director Deiter said NIPR has also been developing enhancements to its Attachment Warehouse product, which allows insurance producers and other licensees to upload licensing related documents for review by state insurance regulators.

Having no further business, the Producer Licensing (D) Task Force adjourned.
The Producer Licensing (D) Task Force met via conference call May 6, 2020. The following Task Force members participated:

Larry D. Deiter, Co-Chair (SD); Elizabeth Kelleher Dwyer, Co-Chair (RI); Lori K. Wing-Heier represented by Chris Murray (AK); Jim L. Ridling represented by Jimmy Gunn, Antwione Dunklin, Reyn Norman and William Rodgers (AL); Alan McClain (AR); Ricardo Lara represented by Charlene Ferguson and Tyler McKinney (CA); Trinidad Navarro represented by Stacy Washburn (DE); David Altmair represented by Matt Guy (FL); Doug Ommen (IA); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon represented by Lorie Gasior (LA); Anita G. Fox represented by Jill Huusken, Paige McCully, Leslie Page and Michele Riddering (MI); Chloria Lindley-Myers (MO); Mike Causey represented by Angela Hatchell and Teresa Knowles (NC); Jon Godfread represented by Stephanie Butz (ND); Bruce R. Ramge represented by Kevin Schlautman (NE); Marlene Caride represented by Joe McDougal (NJ); John Godfread represented by John Arnold (ND); Jillian Froment represented by Tynesia Dorsey and Karen Vourvopoulos (OH); Glen Mulready (OK); Andrew R. Stolfi represented by Kirsten Anderson and Carol Ruda (OR); Jessica K. Altman represented by Adriane Force and Christopher Monahan (PA); Raymond G. Farmer represented by Andrea Bourgoin and (SC); Kent Sullivan represented by Rachel Cloyd, Randall Evans and Chris Herrick (TX); Todd E. Kiser represented by Randy Overstreet (UT); Scott A. White represented by Pat Murray (VA); Mike Kreidler represented by Jeff Baughman (WA); and James A. Dodrill represented by Greg Elam (WV). Also participating was Christina Rouleau (VT).

1. Adopted its 2019 Fall National Meeting Minutes

The Task Force met Dec. 7, 2019, and took the following action: 1) adopted revisions to the NAIC State Licensing Handbook; 2) adopted the 2019 Continuing Education Reciprocity (CER) Agreement; 3) adopted the report of the Producer Licensing Uniformity (D) Working Group; 4) adopted the report of the Uniform Education (D) Working Group; 5) discussed the Surplus Lines (C) Task Force request to consider whether the requirement of a resident producer to hold underlying property/casualty (P/C) licenses before a surplus lines license is issued should be expanded to permit an accident and health (A&H) license to fulfill this requirement; 6) heard a report from the National Insurance Producer Registry (NIPR) Board of Directors.

Superintendent Dwyer made a motion, seconded by Commissioner Schmidt, to adopt its Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Producer Licensing (D) Task Force). The motion passed unanimously.

2. Discussed Producer Licensing Issues Arising from the COVID-19 Crisis

In response to industry representatives requesting regulatory relief for the onboarding of new producers and the state issuance of bulletins on temporary licenses, Director Deiter said he and Superintendent Dwyer worked with NAIC and NIPR staff to develop a list of best practices and a template bulletin to assist the states wanting to implement temporary licenses without requiring an examination or fingerprinting applicants. He said they did this in their capacity as co-chairs of the Task Force and leadership roles on the NIPR Board; however, the documents did not go through the Task Force, as each state needs to make its own policy determination on how best to respond to the closure of examination centers. These documents were distributed to the NAIC members and state producer licensing directors on April 17. Director Deiter said 29 jurisdictions have issued bulletins on temporary licenses. Some common provisions among the states, which were incorporated into the template bulletin, include the following:

- A Temporary Producer License automatically expires (insert appropriate timeframe) days after a State of Emergency is lifted by the Governor and examinations and background check services are available.
- A Temporary Insurance Producer License shall not exceed 180 days from the date of issue.
- A Temporary Insurance Producer License is not renewable.
- A Temporary Insurance Producer License allows the producer to operate only as a resident temporary producer. Temporary producers are not eligible for non-resident licenses in other states.
- An insurer or responsible license producer must assume responsibility for all acts of a Temporary Insurance Producer.

Director Deiter said two states in the process of rescinding temporary producer license orders and testing sites are beginning to reopen. In response to Director Deiter’s request for an update from NIPR, Laurie Wolf (NIPR) said NIPR added a COVID-19
resource center to the NIPR website where all state bulletins regarding producer licensing are available. Ms. Wolf said 33 jurisdictions have issued bulletins on the extension of license renewals and continuing education (CE) compliance, and 29 jurisdictions have issued bulletins on the issuance of temporary licenses. A total of 47 jurisdictions have issued producer licensing related bulletins. Ms. Wolf said NIPR is processing temporary licenses for Arizona, Rhode Island, South Carolina, and Tennessee, and it is working with Mississippi, New Jersey and North Carolina.

Commissioner Schmidt said Kansas has been fully operational with their examination vendor, Pearson VUE, since April 16. She said the Kansas Department of Insurance (DOI) made a video to explain how applicants can take fingerprints and submit them for licensure. She said Kansas has not had issues with the availability of examinations due to social distancing requirements, but she said the examination centers are serving people on a first-come-first-serve basis and operating at a reduced capacity.

Director Deiter asked if the states are implementing remote, proctored examinations. Mr. Baughman said Washington has had online, proctored exams available since October 2019 through PSI, its examination vendor. He said Washington had administered over 200 online, proctored examinations since the middle of March. He said examination sites have also remained open, and Washington has not seen any disruption in the availability of examinations. Ms. Ruder said Michigan has had 400 applications for temporary licenses, and its examination centers opened on May 1. She said there have been problems finding proctors to monitor examination centers. Ms. Ferguson said California exam centers are open, but close to 40% of individuals who register to take an examination do not show up. Mr. Herrick said Texas issues a temporary license bulletin on March 22, and it has had 4,500 individuals apply for a temporary license. He said Texas contracts with Pearson VUE, and it has 3,000 exams for permanent licenses scheduled in May.

Superintendent Dwyer said she spoke with the three examination vendors. Based on these discussions, she thinks remote, proctored examinations will be available in June. Mr. Arnold said North Dakota contracts with Prometric as its examination vendor, and Prometric has been offering remote, proctored exams for the past two weeks. He said applicants can schedule the exam and take it within two days to a week. Ms. Rouleau said Vermont contracts with Prometric, and it was told remote testing will not be available in Vermont until July or August. Mr. Schlautman said Nebraska contracts with Prometric, and it has had remote testing available since April 17. Mr. Overstreet said Utah contracts with Prometric, but it has not been administering producer examinations because digital fingerprinting is not available. Mr. Arnold said applicants can get fingerprints elsewhere and submit hard copy fingerprints to the DOI. Mr. Baughman said applicants in Washington usually facilitate their fingerprints somewhere else other than the examination center. Ms. Ferguson said California exam centers are open, but close to 40% of applicants who register to take an examination do not show up. Mr. Herrick said Texas issues a temporary license bulletin on March 22, and it has had 4,500 individuals apply for a temporary license. He said Texas contracts with Pearson VUE, and it has 3,000 exams for permanent licenses scheduled in May.

David Leifer (American Council of Life Insurers—ACLI) said the members of the ACLI appreciate the work of state insurance departments, but he said he has heard of exam availability in some states. Because of this, he requested that the states keep temporary licenses in place until any backlog on the availability of examinations for permanent licenses is resolved. He said the ACLI supports the use of remote, proctored exams, and he stated that the Task Force might develop a white paper on the best practices for the use of remote, proctored examinations.

Wes Bissett (Independent Insurance Agents and Brokers of America—IIABA) said he thinks the NAIC template bulletin for temporary licenses is written from a company-centric view, which presents a problem for independent insurance producers. He said the states should permit either an insurer or a responsible licensed producer to assume responsibility for the acts of a temporary license.

Kristy Croushore (Fidelity Investments) said her company has been working with the Financial Industry Regulatory Authority (FINRA) on remote, proctored exams, and FINRA is making remote, proctored exams available to all broker/dealers by the end of May. She said allowing a temporary licensee to be appointed to one carrier limits Fidelity Investments’ ability to offer the best recommendations to clients. She said limiting a temporary license to resident states also limits the ability of a Fidelity Investments associate to serve all the needs of a client. She said Fidelity Investments is hiring 2,000 associates in the coming weeks, and it wants to make sure the best services are available to clients.

Mr. Dunklin said Alabama issued temporary licenses prior to the COVID-19 crisis, and it requires oversight of a licensed insurer. He said Alabama experienced an increase in improper activity when this requirement was not in place.
3. **Discussed Licensing for Independent Adjusters**

Superintendent Dwyer said a priority for the NAIC members in 2020 is improving licensing uniformity and reciprocity for independent adjuster licensing. Before discussing these broader policy issues, she asked if there were any immediate market access and consumer protection issues arising from the COVID-19 crisis. She did not hear any comments, but she said Rhode Island is looking at both remote, proctored exams for both producer and independent adjusters. David Farber (King & Spalding), representing the Association of Claims Professionals (ACP), asked the states to extend COVID-19 bulletins issued for insurance producers to independent adjusters.

Mr. Farber discussed the broader policy issues regarding independent adjuster licensing. He said 34 of the 50 states license independent adjusters, and the average independent adjuster holds eight to 12 licenses. He said the lack of uniformity and reciprocity negatively affects consumers. For example, he said an independent adjuster who misses a license renewal date must refer his/her clients to another adjuster. He said it would also be better to have an ample number of adjusters licensed prior to a catastrophe rather than trying to process license applications after a catastrophe.

Mr. Farber said the issue of licensing is a process issue and not a substantive licensing issue. He said he does not expect all states to immediately adopt identical laws and regulations, but he suggested that administrative changes could be accomplished very quickly. For example, he said the states could use a uniform application and have uniform license renewal dates. He said the ACP looks forward to working with the states to implement changes, and he believes that taking small steps to change administrative processes can lead to greater uniformity and reciprocity across the states.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she supports the efforts of the ACP, and she said the same issues that apply to independent adjusters also apply to company adjusters. Superintendent Dwyer agreed with this from a licensing perspective, and she said she would work to address uniformity and reciprocal licensing issues for both independent adjusters and company adjusters.

Having no further business, the Producer Licensing (D) Task Force adjourned.
The Financial Condition (E) Committee met via conference call Aug. 11, 2020. The following Committee members participated: Scott A. White, Chair (VA); Eric A. Cioppa, Vice Chair (ME); Michael Conway (CO); David Altmaier (FL); Robert H. Muriel (IL); Stephen W. Robertson (IN); Steve Kelley represented by Kathleen Orth (MN); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Russell Toal (NM); Raymond G. Farmer (SC); Kent Sullivan represented by Doug Slape (TX); James A. Dodrill (WV); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its July 1, June 12, May 15 and March 26 Minutes**

Commissioner White said the Committee met July 1, June 12, May 15 and March 26. During its July 1 meeting, the Committee adopted its Feb. 27 and Dec. 9, 2019, minutes. During its Feb. 27 meeting, the Committee took the following action: 1) adopted a Request for NAIC Model Law Development from the Receivership and Insolvency (E) Task Force and a separate Request for NAIC Model Law Development from the Financial Stability (EX) Task Force; and 2) adopted a request for extension from the Mortgage Guaranty Insurance (E) Working Group regarding ongoing work on an NAIC model. During its July 1 meeting, the Committee also took the following action: 1) adopted technical revisions to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) and acknowledged similar technical revisions made to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) by the Life Insurance and Annuities (A) Committee; and 2) adopted actions from the Capital Adequacy (E) Task Force, the Valuation of Securities (E) Task Force, and the Accounting Practices and Procedures (E) Task Force, with the exception of Interpretation (INT) 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends, which was rejected and sent back to the Accounting Practices and Procedures (E) Task Force. During its June 12 meeting, the Committee took the following action: 1) adopted a memorandum from the Committee to all commissioners regarding the treatment of the London Interbank Offered Rate (LIBOR) under state investment laws; and 2) adopted an extension of mortgage forbearance previously adopted by the Committee through Sept. 30, 2019. During its March 26 meeting, the Committee adopted mortgage forbearance through June 30. The Committee’s May 15 meeting was an educational session on LIBOR.

Commissioner Caride made a motion, seconded by Commissioner Dodrill, to adopt the Committee’s July 1 (Attachment One), June 12 (Attachment Two), May 15 (Attachment Three) and March 26 (Attachment Four) minutes. The motion passed unanimously.

2. **Adopted INT 20-08**

Commissioner White reminded the Committee that on July 1, the Committee rejected a previous version of a proposed interpretation on this topic and gave direction to the Accounting Practices and Procedures (E) Task Force to revise it, with a strong recommendation to add more flexibility. Since then the Task Force has revised and adopted, with only one no vote, a new interpretation that notes that premium treatment is the default methodology, but it also provides the flexibility requested to allow underwriting expense treatment as a limited-time exception. The limited-time exception addresses the concern voiced by industry regarding permitted practices, as it allows reporting entities to apply the limited-time exception without having to seek a permitted practice. This flexibility only applies to Property and Casualty products to avoid the potential negative implications to the medical loss ratio (MLR) for underwriting expense reporting on health products. All payment types will be disclosed, and for those that apply the limited exception, the interpretation provides the transparency needed through disclosure in Note 1 in a similar manner as a prescribed practice. This will assist the states in analyzing the impact compared to the default method if such flexibility is not chosen. Director Farmer made a motion, seconded by Commissioner Caride, to adopt the revised interpretation (Attachment Seven). The motion passed unanimously.

3. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner White stated that items adopted within the Committee’s task force and working group reports that are considered technical, noncontroversial and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to NAIC members shortly after
completion of the Fall National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to an item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

Commissioner Robertson made a motion, seconded by Superintendent Cioppa, to adopt the following task force and working group reports: the Accounting Practices and Procedures (E) Task Force, the Capital Adequacy (E) Task Force, the Receivership and Insolvency (E) Task Force, the Reinsurance (E) Task Force, the Valuation of Securities (E) Task Force, the Group Capital Calculation (E) Working Group (Attachment Five), and the Group Solvency Issues (E) Working Group (Attachment Six). The motion passed unanimously.

The Financial Analysis (E) Working Group met July 15, June 17, May 13, May 12, May 6 and May 5 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses related to second-quarter 2019 financial results. Additionally, the Valuation Analysis (E) Working Group met in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.

Having no further business, the Financial Condition (E) Committee adjourned.

Financial Condition (E) Committee
Conference Call
July 1, 2020

The Financial Condition (E) Committee met via conference call July 1, 2020. The following Committee members participated:
Scott A. White, Chair, Doug Stolte and David Smith (VA); Eric A. Cioppa, Vice Chair (ME); Michael Conway (CO);
David Altmaier (FL); Robert H. Muriel represented by Kevin Fry (IL); Stephen W. Robertson and Roy Eft (IN); Steve Kelley
represented by Kathleen Orth (MN); Mike Chaney represented by David Browning (MS); Marlene Caride (NJ); Russell Toal
(NM); Raymond G. Farmer (SC); Kent Sullivan represented by Doug Slape and Jamie Walker (TX); James A. Dodrill
represented by Jamie Taylor (WV); and Jeff Rude (WY). Also participating were: Trinidad Navarro (DE); Chlora Lindley-
Myers (MO); and Jillian Froment (OH).

1. **Adopted its Feb. 27, 2020, and 2019 Fall National Meeting Minutes**

Commissioner White said the agenda for the conference call is focused on considering actions taken by the Committee’s
technical groups that provide annual updates to various solvency-related publications. He said, before doing that, the Committee
should consider adoption of the Committee’s minutes from the 2019 Fall National Meeting and the Feb. 27, 2020, conference
call in which the Committee adopted two model law development requests and an extension to the Mortgage Guaranty
Insurance (E) Working Group, which has been working on its own model law changes for mortgage insurers.

Commissioner Toal made a motion, seconded by Commissioner Caride, to adopt the Committee’s Feb. 27, 2020
(Attachment One-A) and Dec. 9, 2019 (see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee) minutes. The
motion passed unanimously.

2. **Adopted Technical Edits to Model #787**

Commissioner White said the next item is to consider adoption of technical edits to the *Term and Universal Life Insurance
Reserve Financing Model Regulation* (#787). He noted how NAIC staff identified a small number of purely editorial items
during a Jan. 29 conference call of the Reinsurance (E) Task Force, where these were adopted. He said similar technical edits
were also being made by the Life Insurance and Annuities (A) Committee to *Actuarial Guideline XLVIII—Actuarial Opinion
and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC
Valuation of Life Insurance Policies Model Regulation* (AG 48), noting that both Model #787 and AG 48 will be presented to
the Executive (EX) Committee and Plenary for consideration at the Summer National Meeting.

Commissioner Caride made a motion, seconded by Commissioner Toal, to adopt the technical edits to Model #787
(Attachment One-B). The motion passed unanimously.

3. **Adopted Reports from Select Task Forces**

Commissioner White said the Committee received summary reports from the Accounting Practices and Procedures (E) Task
Force (which met June 22), the Capital Adequacy (E) Task Force (which met June 3) and the Valuation of Securities (E) Task
Force (which met May 14), noting that—with the exception of INT 20-08: *COVID-19 Premium Refunds, Rate Reductions and
Policyholder Dividends* (INT 20-08), which would be considered separately—the intent is to adopt each Task Force’s actions
and include such items that are technical, non-controversial and/or considered to be of a routine nature in maintaining the
insurance financial solvency framework in a Financial Condition (E) Committee Technical Changes Report sent to all NAIC
members. He noted that, under the process previously adopted by the Plenary, NAIC members will have 10 days to comment;
otherwise, the technical changes will be considered adopted by the NAIC membership and effective immediately.

Commissioner Robertson made a motion, seconded by Ms. Orth, to adopt the actions taken by the Accounting Practices and
Procedures (E) Task Force, the Capital Adequacy (E) Task Force and the Valuation of Securities (E) Task Force, with the
exception of INT 20-08. The motion passed unanimously.
4. Discussed INT 20-08

Commissioner White said the last item is to consider INT 20-08, which was adopted by the Accounting Practices and Procedures (E) Task Force during its June 22 conference call, with more than 75% of the Task Force voting in favor of the adoption. Under this interpretation, the refunds and rate reductions that have been issued by many property/casualty insurers and some health insurers in response to COVID-19 and decreased exposure are treated as a reduction of premium.

Commissioner White said he participated on the Task Force’s June 22 conference call, and described how there was a lot of debate and not total agreement on the issue, as some of the regulators believed it would more be appropriate to treat these refunds as an underwriting expense. He stated that the interpretation as adopted utilizes the same accounting approach that has existed for years on premium refunds, which is a reduction of premium. He also noted the opinions of consumer representatives, who had emphasized the substance of these refunds being economically the equivalent of a return of premium, because it was due to a reduction in exposure and not an expense to the company.

Commissioner White described how the reduction also comes up in discussing the concerns of others related to the impact on premium taxes, because, in many cases, the tax law on premium taxes may be reduced for premiums returned. He explained that, in Virginia, matters dealing with premium taxes are outside of the insurance code and noted that, for Virginia, it really does not matter what guidance the NAIC issues for solvency purposes; Virginia taxes are determined by state taxation laws and paragraph 24 of the interpretation makes this point.

Commissioner White described how the interpretation retains the fundamental concepts of consistency and comparability, and specifically allows the use of prescribed and permitted practices to be issued by any insurance commissioner, with disclosure of that difference in Note 1. By doing so, non-domestic regulators can consider such accounting practice in their review of such insurers’ financial statements and will know that the loss ratios for those companies would be understated. He said he believes all of these points are what played into why the Task Force adopted the interpretation with 75% of the states voting in favor. For this reason, and due to the underlying policies of the Statutory Accounting Principles (E) Working Group, this guidance is actually considered adopted unless overturned by the Task Force with a two-thirds vote in opposition; however, only nine states dissented, so it was passed easily over what was required. He concluded by noting that this policy exists specifically to allow the NAIC membership to issue accounting interpretations quickly, noting how that same policy has already allowed the NAIC membership to provide guidance to many insurers on various COVID-19 issues.

Commissioner Robertson asked if the Committee could prevent this interpretation from moving forward if the Committee were to vote in opposition to INT 20-08. Commissioner White said this is a good question, because there would be no available accounting for the issue for the second quarter statements coming due. He described how, if that is the result, it would be best if the Committee sends the issue back to the Task Force to come to a decision supported by two-thirds of the members of that Task Force, because the current interpretation was adopted by more than two-thirds of the states.

Dan Daveline (NAIC) indicated that the Committee has the authority to overrule the issue. Commissioner White noted that the intent is to take a vote and, if the interpretation is not adopted, it would go back to the Task Force. Commissioner Robertson asked how many members are needed to overturn the Task Force’s adoption; specifically, if a two-thirds vote or a majority vote is required. Mr. Daveline responded that a majority vote would be sufficient to send the issue back to the Task Force.

Commissioner Robertson noted that a letter was distributed to the members of the Committee from the American Property Casualty Insurance Association (APCIA), which requests flexibility in accounting for the monies returned or credited to policyholders. He stated his preference that no company be allowed to use this as a reduction of premium and described how, in Indiana, the state would lose $1,250,000, which would equate to 20 jobs, or 20 people who would lose their jobs to make up that amount of money. He noted that while the Task Force emphasized comparability, he believes the Committee has a different duty, noting that the members have never experienced anything like this. He suggested that the Committee use more flexibility and not be so rigid and bureaucratic, and he warned against listening to the industry that the states regulate, noting that he believes the APCIA’s request is reasonable. He said he is not willing to tell his governor that he lost $1,250,000 in revenue due to a technicality vote that he does not think is necessary. He said each member must make their own decision, but the 28 people who voted not to honor the request of the APCIA will likely all have safe jobs, and a lot of people will lose their jobs if this goes through as-is. He described the need to take advantage of every opportunity to collect revenue for the state. He encouraged those voting to take a “bigger picture” perspective.

Commissioner Robertson made a motion to adopt the position of the APCIA as the method to treat the funds.
Commissioner White clarified that flexibility is allowed within the interpretation and simply needs to be disclosed in Note 1 of the financial statements. Commissioner Robertson asked if he only has authority over domestic companies or all companies doing business in Indiana. Commissioner White responded that his authority would only cover domestic insurers. Mr. Daveline agreed but noted that the commissioner may also have authority to prescribe certain tax treatment. Mr. Stolte said the Commissioner could issue a prescribed practice for all licensed companies. Commissioner Robertson stated his appreciation for Mr. Stolte’s comment but will make his motion later.

Commissioner Caride said it is her understanding that it only takes one state to not grant the same prescribed or permitted practice for the entire situation to be stalled. She said all states have been impacted by COVID-19, noting that New Jersey has asked its insurance companies to be flexible with consumers and give them the benefit of the doubt, even if it should not have been given. She described how New Jersey’s companies have worked with the state and taken its request to heart with regard to consumers in New Jersey and have worked to put consumers first at a time when there is high unemployment, health issues, health insurance being cancelled, and little money to pay rent, let alone car insurance. She said the industry has shown good faith, noting that the companies have been good corporate citizens and agree that the NAIC should show some flexibility during this period. She said this is something we have never seen before in our lifetime. She described the benefits of using consistent accounting but noted at the same time this is not a normal, everyday event; therefore, flexibility is needed. She said the accounting may not be pretty in terms of how the companies have to account for this, but her understanding from her carriers is that if they do it according to the interpretation, they would have to go back and deal with commissions paid and other issues. She said the least that can be done right now is to show flexibility. She said she abstained during the Task Force’s vote on the interpretation, but would vote against it if the Committee were to consider its adoption today.

Director Farmer expressed his appreciation for the work of the Task Force, but he could not say it any better than Commissioner Caride. He said regulators have asked companies to go outside of their comfort zone to give forbearance, and companies have made decisions to give refunds or dividends or whatever method they choose, noting that the companies have done this on their own. He said this was commendable and because we had asked them to be flexible, we should be as well. He noted that the states have not been down this road before and all states have had to be flexible on a number of issues.

Director Farmer made a motion to send the issue back to the Task Force and to provide flexibility to regulators and insurers.

Director Froment agreed with what has been said by the other Committee members, noting that Ohio has concerns with the interpretation. She discussed how Ohio worked with companies to provide relief and every company did something different in their offerings as a means to get monies into the hands of consumers, even though each company crafted things differently compared to the next. She described that in Ohio, not in one instance was a rate filing required; therefore, Ohio did not approve a reduction of premium but, rather, allowed the companies to offer relief. She said little upfront guidance was provided. She said Ohio would not be following the interpretation and will be providing flexibility to Ohio domestics, but she also has concerns about things not being done uniformly nationwide.

Director Lindley-Myers expressed her support for the positions taken by Ohio, South Carolina and New Jersey. She said she agrees that companies have sprung into action to do the best they could during this pandemic, and she wants to make sure Missouri is as flexible as possible to the companies.

Commissioner Conway said he would like to make sure he understands why the states do not want to provide the flexibility. He asked if there was something to consider besides consistency.

Commissioner White said one thing he hears often is the need for transparency, so that a non-domestic can look at Note 1. He said he believes there is flexibility through permitted and prescribed practices. He stated there is also concern that this could create a bad precedent. He noted that while everyone agrees with the way the industry has handled the issue, 28 “yes” votes at the Task Force was based on the principles of consistency and comparability, and using the same methodology that has been used in the past through Note 1 disclosure.

Commissioner Toal complimented the chair for explaining this appropriately. He described that he voted for INT 20-08 at the Task Force and would support it today. He said if he believed the states were not granted flexibility, he would not support it.

Commissioner Conway asked for a greater explanation of the permitted practices.
Superintendent Cioppa agreed with that request because Maine voted in favor of INT 20-08, but if, at the end of the day, another step is needed to get where things are desired, he is somewhat concerned. He stated that for that reason he is in favor of hearing more.

Mr. Stolte described the historical work completed by the Statutory Accounting Principles (E) Working Group to develop an accounting model that works and emphasized how it was never meant to overrule a state’s authority, and that is how prescribed and permitted practices were created. Footnote 1 shows both the state’s basis used in the financial statements and the NAIC’s basis to allow comparability, which has served its purpose for a long period of time. He said he does not understand the stigma or problem with the prescribed or permitted practices.

Commissioner White said he believes the question is the extra burden on the companies and the states, noting that the concern is more with the prescribed practices as it pertains to non-domestic companies. Mr. Stolte described that if a state issues a prescribed practice for all licensed companies, then that is the manner in which the item would have to be reported in all companies’ financial statements for the business in Virginia.

Robin Marcotte (NAIC) read from the Accounting Practices and Procedures Manual (AP&P Manual) and, more specifically, Question and Answer #2, which describes a permitted practice as an accounting practice requested by an individual insurer that departs from statutory accounting principles and has received approval from the domestic state. She said the AP&P Manual defines a prescribed practice as an accounting practice that is incorporated directly by state law, regulation or general administrative rule applicable to all applicable insurers. She said the AP&P Manual is not intended to preempt a state’s legislative and regulatory authority. In a prescribed practice, a state could tell all its licensed companies to follow a particular practice. She explained that it is possible for two states to decide to tax these refunds differently and it would apply to all carriers licensed in their respective state. She said, for example, Virginia could have a different practice for filing premium taxes than Missouri, and both would be disclosed in Note 1 if either differed from the accounting practice outlined in the AP&P Manual.

Commissioner Conway asked Ms. Marcotte if the non-domiciliary state issues a prescribed practice that disagrees with the domestic state, would the same result be the case. Ms. Marcotte said the company files the annual financial statement in accordance with its domiciliary state requirements. Ms. Marcotte noted that the distinction she made is related to premium and related premium taxes because those are driven by state law; therefore, domestic companies are required to follow all the rules in that state. So, for example, Virginia does not control premium and premium taxes for companies domiciled in Missouri.

Commissioner White asked if Colorado wants it to be treated as an expense for Colorado-licensed companies, if that would be allowed. Ms. Marcotte noted that for purposes of premium and related premium taxes, all Colorado licensed companies would be required to follow Colorado law.

Mr. Slape said he would like to make the distinction on the interpretation related to accounting and transparency through disclosure, noting that the accounting could have an impact on loss ratios but that is a completely different conversation than taxes. He stated that no matter what the NAIC says, it has no impact on how this is handled for premium taxes; he stated this needs to be clear because that is controlled by state law on how premium tax is determined. He noted that the state statute may define the terms generally, noting for example, in Texas, the Department of Insurance is not the premium tax agent; it is the comptroller. He said the members of the Committee should not think this has any impact on premium for premium tax purposes.

Commissioner White agreed with Mr. Slape, noting that paragraph 24 of the interpretation makes this same point.

Mr. Fry discussed the negative moniker that comes with permitted practices and how, for this particular interpretation, comes with an additional degree of administrative duties. He noted that the states need flexibility, given the transparency is also built in with the disclosure and, therefore, supports such flexibility.

Mr. Navarro said he believes Indiana made a motion and either a second must be made or the motion must be withdrawn, or at least that is normally the case.

Commissioner White said he believes a couple of motions were made, one by Commissioner Robertson and another by Director Farmer, noting that he would like to receive comments first.

Commissioner Robertson said he would withdraw his motion and instead second Director Farmer’s motion.
Commissioner White said Director Farmer’s motion was to send the issue back to the Task Force. Commissioner White asked if Director Farmer would like to proceed with the motion and take a vote at this time or if Director Farmer is supportive of hearing from the industry and interested parties, and then returning back to the motion to take a vote. Director Farmer said he is supportive of hearing further discussion and then returning back to the motion.

Philip Carson (APCIA) said the commissioners have raised the APCIA’s issues, noting that what the APCIA offered was a compromise that many of the commissioners seem to support. He said flexibility and fairness to policyholders was requested and the APCIA believes the commissioners should do the same thing. He stated that the discussion related to permitted and prescribed practices is one that creates a lot of confusion, noting that there would be a lot of burden on permitted practices, especially for those companies that operate in multiple states. He said there would be confusion if the states adopt different positions on the request for permitted practices, which would add a complication, stating that if the interpretation is adopted as it reads now, the companies would have no recourse if they were not allowed to obtain permitted practices in all the states in which they operate. He said the APCIA’s proposal harms no one, respects the good faith effort the companies put forth, and would be the fairest and cleanest way to proceed with the issue.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) echoed the comments made by the APCIA and noted the unprecedented times. He described how the discussion on permitted and prescribed practices demonstrates the complexity of the issue and noted how flexibility seemed to be the preference of the Committee, noting that it is just a matter of how that flexibility is granted. He said NAMIC believes the transparency exists with the APCIA’s proposal, regardless of whether it is recorded as a reduction of premium or as an expense.

Keith Bell (Travelers) said Travelers went through this issue and initially determined it was properly accounted for as a return of premium, even though companies have filed amendments to change their policies. Staff at Travelers wondered if they had missed something but when they went back and reviewed the guidance, it confirmed that they believe it is more properly reported as a return of premium, as it does not meet the definition of an expense and actually violates the Level 5 guidance in the Preamble of the AP&P Manual. Mr. Bell noted, however, in stepping back and looking at it, the amount charged to customers as premiums is one of the most important measures to insurer companies because it is a measure of risk and is used in several leverage ratios, but other financial measures used by insurers. Additionally, because the payments being made back to policyholders are the result of reduced possibility of loss, Travelers believes it should be recorded as a reduction of premium, because premium should represent the amount charged to take on the risk. He said he does not believe the accounting is that difficult when treated as a contra-revenue, recording the original premium and then the return premium would be reported separately as a contra amount, allowing the company to track the original premium so that they could pay agents and brokers on the appropriate original amount, but would also allow the track of the gross and net amount so they can pay the correct premium tax based on the differences in state law or state requirements. He said Travelers’ lead state is having its Department of Revenue issue a bulletin to apply the premium tax to the gross amount and not the net amount on this matter.

Commissioner White thanked everyone for their comments, noting that there was not consensus, either among the industry or among regulators. He returned to the motion by Director Farmer to send the issue back to the Task Force to have INT 20-08 revised in a way that is still supported by two-thirds of the Task Force members. Director Farmer concurred that was his motion but added that he strongly urges the Task Force to incorporate flexibility so that the permitted practice burden does not have to be utilized. The motion was seconded by Commissioner Robertson. The motion passed, with New Mexico dissenting.

Having no further business, the Financial Condition (E) Committee adjourned.
1. **Adopted a Request for NAIC Model Law Development from the Receivership and Insolvency (E) Task Force**

Commissioner White made the Committee aware that the Executive (EX) Committee approved a Request for NAIC Model Law Development from the Group Capital Calculation (E) Working Group with respect to the *Insurance Holding Company System Regulatory Act* (Model #440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (Model #450), which could have implications for this new request from the Receivership and Insolvency (E) Task Force related to the same models.

Commissioner White stated that while the two items are unrelated, it is important for the Committee to understand whether this new work could slow down the work of the Group Capital Calculation (E) Working Group. More specifically, the goal is for the group capital calculation (GCC) to be adopted by the Working Group at the Summer National Meeting so the states can begin introducing it in early 2021. With that as a backdrop, Commissioner White requested that Mr. Baldwin provide a summary of the Task Force’s request.

Mr. Baldwin stated that on Jan. 8, the Receivership and Insolvency (E) Task Force adopted a request to the Committee. He stated that the background for the Task Force’s request is a common issue that can arise in a receivership of an insurance company where affiliated entities provide essential services through inter-company agreements. The continuation of these services can be critical to the operation of the receivership, particularly when all staffing and information technology (IT) functions are outsourced. This issue is specific to agreements with affiliated entities that are formed for the sole purpose of providing services to the insurance company. For example, affiliated entities may handle all the insurance company’s administrative functions (e.g., handling, underwriting, statutory accounting and premium collection), but provide no services to entities outside of the group.

Mr. Baldwin said that when an insurance company is placed in receivership, the unilateral termination of services by an affiliate can lead to delay, waste, and significant expense to the receivership estate. An interruption in obtaining data can also impede a guaranty association’s ability to pay claims. Mr. Baldwin stated that the Task Force recognizes that there are some existing protections under the current Model #440, specifically the requirement for prior approval of affiliate transactions, which can afford state insurance regulators an opportunity to identify problematic agreements in advance of a receivership. There are also provisions in Model #450 that restrict such agreements from including unilateral or automatic terminations if an insurer is placed in receivership. Mr. Baldwin noted that a receiver can file legal action against an affiliated service provider that refuses to continue essential services under a contract or seek a court order requiring the affiliate to provide records. However, protracted litigation can result in delays and additional costs. Additionally, when the affiliate is in another jurisdiction, these efforts can be challenging.

Mr. Baldwin stated that in some cases the insurance company and an affiliate are inextricably intertwined. He stated that if the operations and records of the entities are commingled, it is difficult to handle the receivership without the affiliate’s cooperation. Sometimes it is necessary to place an affiliate in receivership and administer it with the insurance company. However, if the affiliate does not consent, the ensuing litigation will involve further time and expense.

Mr. Baldwin stated that one potential solution that the Task Force identified is to consider revisions to Model #440 by modifying the definition of “insurer” under state insurance holding company laws to encompass affiliated entities whose sole purpose is to provide services to an insurer. While the Task Force recognizes that there are significant issues to be worked through, including potential conflicts with other laws, the Task Force would endeavor to address those and any other issues as part of the work in developing a solution within Model #440 and Model #450.
Commissioner Caride made a motion, seconded by Mr. Kaumann, to adopt the Request for NAIC Model Law Development to amend Model #440 and Model #450 to develop revisions to address issues with continuity of essential services (Attachment One-A1). The motion passed unanimously.

2. **Adopted a Request for Extension from the Mortgage Guaranty Insurance (E) Working Group**

Commissioner White reminded Committee members that the NAIC requires model law requests, such as the one adopted from the Receivership and Insolvency Task Force, to be adopted as NAIC model laws or model law changes within one year of the original request to the Executive (EX) Committee. He stated that to the extent that a model change is not completed within one year from the date approved by the Executive (EX) Committee, an extension must be requested and approved.

With respect to the specific request from the Mortgage Guaranty Insurance (E) Working Group, Commissioner White stated that while this work has been ongoing for a significant period, this was a project that he supported being completed, and he supported the request. He stated that the ongoing work has largely been the product of its technical nature and need for the NAIC to hire consultants and then modifications based upon the consultant’s work. He stated he was encouraged to hear that the Working Group does now appear to be close on finalizing this work, as they have now exposed a new loan level capital model for these mortgage insurers; all of the states on this Working Group are supportive of the direction.

Superintendent Toal made a motion, seconded by Commissioner Caride, to adopt the request by the Mortgage Guaranty Insurance (E) Working Group for an extension its Request for NAIC Model Law Development to amend the Mortgage Guaranty Insurance Model Act (#630) (Attachment One-A2). The motion passed unanimously.

3. **Adopted a Request for NAIC Model Law Development from the Financial Stability (EX) Task Force**

Commissioner White stated that the Committee had received an additional Request for NAIC Model Law Development from the Financial Stability (EX) Task Force on Feb. 26, and it relates to a liquidity stress test that has been in the process of being developed for some time. He stated that while the actual stress test is not yet completed, it is like the GCC in that the primary purpose of any type of legislative change is to provide the necessary confidentiality protections. He stated that, similar to the request from the Receivership and Insolvency (E) Task Force, it is too early to know whether the completion of this work could affect the GCC, but the idea is to make all three of the different legislative changes to Model #440 and Model #450 at the same time, assuming that all are ultimately supported and adopted.

Commissioner White stated that during the Feb. 26 conference call of the Financial Stability (EX) Task Force, one comment letter on this item was received from the American Council of Life Insurers (ACLI), and the general response on adopting the request was that while Model #440 and Model #450 might not ultimately be chosen as the ideal placement for holding this tool confidential, if it is, it makes sense that all three of the items be addressed at the same time. He described how far fewer companies were likely be impacted by this liquidity stress test than the GCC, with as few as 23 for this test.

Commissioner Robertson and Mr. Eft expressed support for the confidentiality aspect of this request, but they expressed concern about one of the provisions that limits and decides what stress test gets used in a liquidation because it seems to reduce the states’ right to choose the stress.

Commissioner Caride stated that work is ongoing, and all comments are welcome.

Commissioner Robertson asked what was being voted on and whether the issue of what stress test is being used is still open for consideration.

Commissioner White responded that the issue before the Committee is not adoption of the actual stress test, but rather the request to work on changes to Model #440 and Model #450 that would provide the authority and confidentiality protections of the liquidity stress test, but the stress test itself is still being developed.

Commissioner Caride agreed that the item on the table was only to consider if the model is the appropriate venue. She stated that she would be happy to reach out to Commissioner Robertson subsequent to the conference call to better understand his concern regarding the actual stress test.
Commissioner Robertson stated that he would like it to be clear in the minutes that the action contemplated is only requesting the authority for the Task Force to work on the changes to Model #440 and Model #450 and not the actual stress test to be required.

Commissioner White stated that was the case, and he stated that Commissioner Robertson’s concern would be noted in the minutes.

Commissioner Caride made a motion, seconded by Superintendent Cioppa, to adopt the Request for NAIC Model Law Development from the Financial Stability (EX) Task Force to amend Model #440 and Model #450 (Attachment One-A3). The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.

RE: Model Law Request for Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

The Receivership and Insolvency (E) Task Force requests the Committee consider opening the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to consider revisions to address issues with continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company, specifically agreements with affiliated entities whose sole business purpose is to provide services to the insurance company.

The Task Force is cognizant of other unrelated revisions being considered for Models 440 and 450 under an existing open Model Law Request and understands the sensitivity of the timing of that work. Work related to the continuation of essential services is not intended to delay or impede any other revisions; however, the Task Force feels it may be efficient to conduct its review and drafting concurrently with that work.

Background and Rationale

In 2018 the Financial Stability (EX) Task Force made a referral to the Receivership and Insolvency (E) Task Force as part of the Macro Prudential Initiative (MPI). At the 2019 Summer National Meeting, the Receivership and Insolvency (E) Task Force adopted a report including recommendations to address receivership powers that are implicit in state laws, rather than explicit. One such area is the power to ensure the continuity of essential services and functions within a holding company group once an insurer is placed into receivership.

The Financial Stability Board’s (FSB) Key Attributes (KAs) of Effective Resolution Regimes for Financial Institutions KA 3.2 states that a resolution authority should have the power to ensure the continuity of essential services and functions by requiring companies in the group to continue providing services. Under Common Framework for the supervision of Internationally Active Insurance Groups (ComFrame) (CF 12.7a), a resolution authority may take steps to provide continuity of essential services by requiring other entities within the IAIG (including non-regulated entities) to continue services. The
Task Force identified the following authority and remedies available within the US regime related to these international standards:

- The *Insurance Holding Company System Model Act* (#440) requires approval of affiliated transactions, allowing a regulator to identify agreements that could create obstacles in a receivership. The *Insurance Holding Company System Model Regulation* (#450), Section 19, provides that cost sharing and management agreements specify if the insurer is placed in receivership that an affiliate has no automatic right to terminate the agreement.

- The Receiver can take action against a provider that refuses to continue services under a contract, or seek an order requiring it to turn over records. If an affiliate providing services is inextricably intertwined with the insurer, the Receiver could also seek to place the affiliate into receivership.

However, it was noted that some of these authorities and remedies may not address the immediate need to continue services in some receiverships. Despite these available remedies, receivers continue to be challenged by this issue in receivership, often resulting in significant additional legal and administrative expenses to the receivership estate.

One potential solution is to revise the definition of “insurer” under state insurance holding company laws to encompass affiliated entities whose sole purpose is to provide services to the insurer.

The NAIC adopted 2020 charges for the Receivership Law (E) Working Group to: “Review and provide recommendations for remedies to ensure continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Consult with the Group Solvency Issues (E) Working Group as the topic relates to affiliated intercompany agreements.”

**Scope of the Proposed Revisions to Models 440 and 450**

The scope of the request is limited to addressing the issue of continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company. The Receivership Law (E) Working Group under the Receivership and Insolvency (E) Task Force would complete the review and recommend proposed draft Models 440 and 450 revisions. Revisions may be necessary to the following sections of Models 440 and 450 including, but not limited to:

- Model 440 Section 1. Definitions
- Model 440 Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System
- Model 440 Section 12. Receivership
- Model 450. Consistency with any revisions to Model 440

Any questions about this memorandum may be directed to NAIC staff, Jane Koenigsman (jkoenigsman@naic.org, 816-783-8145).
To: Commissioner Scott White (VA), Chair, Financial Condition (E) Committee

From: Kevin Conley (NC), Chair, Mortgage Guaranty Insurance (E) Working Group

Date: February 7, 2020

Re: Updated Request for Extension

The Mortgage Guaranty Insurance (E) Working Group is in the process of fulfilling its charge to update the Mortgage Guaranty Insurance Model Act (Model #630). The Working Group anticipated completion of its Charge by the 2020 Spring National Meeting. As chair, I would like to update that request to the Financial Condition (E) Committee in accordance with NAIC procedures.

As background, the NAIC engaged Milliman to assist the Working Group in finalizing a Mortgage Guaranty Insurance Capital Model that will become the new capital standard for mortgage insurers. Following some delays due to a shift in focus directed by the Working Group, Milliman’s work was completed in early December of last year. Subsequent to discussion at the Fall National Meeting, the Working Group exposed the Draft Mortgage Guaranty Insurance Capital Model, Mortgage Guaranty Insurance Model Act (#630), Mortgage Guaranty Insurance Standards Manual, and a proposed Mortgage Guaranty Insurance Exhibit. The Working Group will discuss and address comments received on the exposure and send a referral to the Blanks (E) Working Group regarding the proposed exhibit during the next several months.

At this time, we believe we can complete this work by the 2020 Fall National Meeting. The request for additional time is to allow the necessary time to address comments regarding the above referenced documents and ensure that a comprehensive regulatory framework is in place to effectively regulate these complex insurance entities. We are aware that we have been unable to complete our work within the one-year time period expected under the NAIC model law process and request an extension until the 2020 Fall National Meeting in order to finalize a product that can be adopted by the domestic states of the mortgage insurers, as well as any other state also wishing to adopt the same.
To: Financial Condition (E) Committee  
From: Financial Stability (EX) Task Force  
Date: February 26, 2020  
RE: Model Law Request for Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

The Financial Stability (EX) Task Force requests the Financial Condition (E) Committee consider opening the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to consider revisions to establish regulatory authority to require liquidity stress testing processes and confidentiality protections for the data reported from the liquidity stress tests.

The Task Force is cognizant of other unrelated revisions being considered for Models 440 and 450 under an existing open Model Law Request and understands the sensitivity of the timing of that work. Work related to liquidity stress testing is not intended to delay or impede any other revisions; however, the Task Force feels it may be efficient to conduct its review and drafting concurrently with that work.

Background and Rationale

In the Task Force’s recent exposure of the 2019 Liquidity Stress Test, the regulatory authority and confidentiality rely upon the specific lead state’s examination laws and supporting processes (e.g., confidentiality agreements). For the ongoing liquidity stress tests performed in future years, a specific provision needs to be made in state statutes and/or regulations to provide more consistency in this authority and confidentiality protection.

Scope of the Proposed Revisions to Models 440 and 450

The scope of the request is limited to addressing the issue of establishing regulatory authority to require stress testing and disclosures related to liquidity risk and to establish in statute the confidentiality of those disclosures as appropriate. The Financial Stability (EX) Task Force would complete the review and recommend proposed draft Models 440 and 450 revisions. It is anticipated that these revisions will need to reference Liquidity Stress Testing Framework documents that will need to be able to be modified annually without opening up the models themselves (e.g., directions regarding the liquidity stress test, reporting templates, stress scenarios). Revisions may be necessary to the following sections of Models 440 and 450 including, but not limited to:

- Model 440 Section 1. Definitions
- Model 440 Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System
- Model 440 Section 8: Confidential Treatment
- Model 450. Consistency with any revisions to Model 440

Any questions about this memorandum may be directed to NAIC staff, Todd Sells (tsells@naic.org, 816-783-8403).
TERM AND UNIVERSAL LIFE INSURANCE RESERVE FINANCING MODEL REGULATION

TABLE OF CONTENTS:

Section 1. Authority
Section 2. Purpose and Intent
Section 3. Applicability
Section 4. Exemptions from this Regulation
Section 5. Definitions
Section 6. The Actuarial Method
Section 7. Requirements Applicable to Covered Policies to Obtain Credit for Reinsurance; Opportunity for Remediation
Section 8. Severability
Section 9. Prohibition against Avoidance
Section 10. Effective Date

Section 1. Authority

This regulation is adopted and promulgated by [title of supervisory authority] pursuant to [insert provision of state law equivalent to section 5B of the Credit for Reinsurance Model Law] of the [name of state] Insurance Code.

Section 2. Purpose and Intent

The purpose and intent of this regulation is to establish uniform, national standards governing reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees; and to ensure that, with respect to each such financing arrangement, funds consisting of Primary Security and Other Security, as defined in Section 5, are held by or on behalf of ceding insurers in the forms and amounts required herein. In general, reinsurance ceded for reserve financing purposes has one or more of the following characteristics: some or all of the assets used to secure the reinsurance treaty or to capitalize the reinsurer (1) are issued by the ceding insurer or its affiliates; or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any if its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty).

Section 3. Applicability

This regulation shall apply to reinsurance treaties that cede liabilities pertaining to Covered Policies, as that term is defined in Section 5B, issued by any life insurance company domiciled in this state. This regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation] shall both apply to such reinsurance treaties; provided, that in the event of a direct conflict between the provisions of this regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation], the provisions of this regulation shall apply, but only to the extent of the conflict.

Section 4. Exemptions from this Regulation

This regulation does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

(1) Policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6F of the Valuation of Life Insurance Policies Model Regulation] or [insert provision of state law equivalent to Section 6G of the Valuation of Life Insurance Policies Model Regulation]; and which are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than Jan 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6E of the Valuation of Life Insurance Policies Model Regulation] and which are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than Jan. 1, 2020;

(3) Any universal life policy that meets all of the following requirements:
(a) Secondary guarantee period, if any, is five (5) years or less;
(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the Commissioners Standard Ordinary (CSO) valuation tables and valuation interest rate applicable to the issue year of the policy; and
(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; nor

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provision of state law equivalent to Section 2D of the Credit for Reinsurance Model Law]; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in addition:

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer’s reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1 (“SSAP 1”); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in [insert provision of state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in addition:
(1) Is not an affiliate, as that term is defined in [insert provision of state law equivalent to Section 1A of the Insurance Holding Company System Regulatory Model Act], of:

(a) The insurer ceding the business to the assuming insurer; or

(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;

(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and

(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in [insert provision of state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its Risk-Based Capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus; or

E. Reinsurance ceded to an assuming insurer that meets the requirements of either [insert provision of state law equivalent to Section 5B(4)(a) of the Credit for Reinsurance Model Law, pertaining to certain certified reinsurers] or [insert provision of state law equivalent to Section 5B(4)(b) of the Credit for Reinsurance Model Law, pertaining to reinsurers meeting certain threshold size and licensing requirements]; or

Drafting Note: A state may satisfy the requirements of Section 4E above by either adopting Section 5B(4) of the Credit for Reinsurance Model Law (#785), or it may include the specific provisions of Section 5B(4) of the Credit for Reinsurance Model Law (#785) directly into its adoption of this regulation, Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

E.F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this regulation (as described in Section 2 above);

(2) The risks are included within the scope of this regulation only as a technicality; and

(3) The application of this regulation to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 4F to exempt a reinsurance treaty from this regulation, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: The exemption set forth in Section 4F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this regulation purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 4A, B, C, D, or E or meet the substantive requirements of this regulation.
Section 5. Definitions

A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 6.

B. “Covered Policies” means the following: Subject to the exemptions described in Section 4, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:

1. Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,

2. Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:

1. Issued prior to January 1, 2015; and

2. Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 4 had that section then been in effect.

D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

F. “Primary Security” means the following forms of security:

1. Cash meeting the requirements of [insert provision of state law equivalent to Section 3A of the Credit for Reinsurance Model Law];

2. Securities listed by the Securities Valuation Office meeting the requirements of [insert provision of state law equivalent to Section 3B of the Credit for Reinsurance Model Law], but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and

3. For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:

   a. Commercial loans in good standing of CM3 quality and higher;

   b. Policy Loans; and

   c. Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

Drafting Note: Section 5H presumes that each state is permitted under its state laws to directly reference the Valuation Manual adopted by the NAIC. If a state is required by its state laws to reference a state law or regulation, it should modify Section 5H as appropriate to do so.

Drafting Note: Sections 5H and I presume that each state is permitted under its state laws to “adopt” the Valuation Manual in a manner similar to how the Accounting Practices and Procedures Manual becomes effective in many states, without a separate regulatory process such as adoption by regulation. It is desirable that all states adopt the Valuation Manual requirements and that such adoption be achieved without a separate state regulatory process in order to achieve uniformity of reserve standards in all states. However, to the extent that a state may need to adopt the valuation manual through a formal state regulatory process, these sections may be amended to reflect any state’s need to adopt the Valuation Manual through regulation or otherwise.

Section 6. The Actuarial Method

A. Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 5B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 5B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations.

(2) For Covered Policies described in Section 5B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;

(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be
(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this Regulation, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this Regulation;

(7) If a reinsurance treaty subject to this Regulation cedes risk on both Covered and Non-Covered Policies, credit for the ceded reserves shall be determined as follows:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies, and Section 7 shall be used to determine the reinsurance credit for the Covered Policy reserves; and

(b) Credit for the Non-Covered Policy reserves shall be granted only to the extent that security, in addition to the security held to satisfy the requirements of Subparagraph (a), is held by or on behalf of the ceding insurer in accordance with [cite the state’s version of Sections 2 and 3 of the Credit for Reinsurance Model Law]. Any Primary Security used to meet the requirements of this Subparagraph may not be used to satisfy the Required Level of Primary Security for the Covered Policies.

B. Valuation used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

(1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

(2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the
Section 7. Requirements Applicable to Covered Policies to Obtain Credit for Reinsurance; Opportunity for Remediation

A. Requirements

Subject to the exemptions described in Section 4 and the provisions of Section 7B, credit for reinsurance shall be allowed with respect to ceded liabilities pertaining to Covered Policies pursuant to [insert provisions of state law equivalent to Sections 2 or 3 of the Credit for Reinsurance Model Law] if, and only if, in addition to all other requirements imposed by law or regulation, the following requirements are met on a treaty-by-treaty basis:

1. The ceding insurer’s statutory policy reserves with respect to the Covered Policies are established in full and in accordance with the applicable requirements of [insert provisions of state law equivalent to the Standard Valuation Law] and related regulations and actuarial guidelines, and credit claimed for any reinsurance treaty subject to this regulation does not exceed the proportionate share of those reserves ceded under the contract; and

2. The ceding insurer determines the Required Level of Primary Security with respect to each reinsurance treaty subject to this regulation and provides support for its calculation as determined to be acceptable to the commissioner; and

3. Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law], on a funds withheld, trust, or modified coinsurance basis; and

4. Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (3) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law]; and

5. Any trust used to satisfy the requirements of this Section 7 shall comply with all of the conditions and qualifications of [insert provision of state law equivalent to Section 124 of the Credit for Reinsurance Model Regulation], except that:

a. Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 6B, be valued according to the valuation rules set forth in Section 6B, as applicable; and

b. There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 7A(3); and

c. The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 7A(3)) below 102% of the level required by Section 7A(3) at the time of the withdrawal or substitution; and

(d) The determination of reserve credit under [insert provision of state law equivalent to Section 124E of the Credit for Reinsurance Model Regulation] shall be determined according to the valuation rules set forth in Section 6B, as applicable; and

NAIC’s Life Actuarial (A) Task Force no later than the Dec. 31st on or immediately preceding the valuation date for which the Required Level of Primary Security is being calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.
The reinsurance treaty has been approved by the commissioner.

B. Requirements at Inception Date and on an On-going Basis; Remediation

1. The requirements of Section 7A must be satisfied as of the date that risks under Covered Policies are ceded (if such date is on or after the effective date of this regulation) and on an ongoing basis thereafter. Under no circumstances shall a ceding insurer take or consent to any action or series of actions that would result in a deficiency under Section 7A(3) or 7A(4) with respect to any reinsurance treaty under which Covered Policies have been ceded, and in the event that a ceding insurer becomes aware at any time that such a deficiency exists, it shall use its best efforts to arrange for the deficiency to be eliminated as expeditiously as possible.

2. Prior to the due date of each Quarterly or Annual Statement, each life insurance company that has ceded reinsurance within the scope of Section 3 shall perform an analysis, on a treaty-by-treaty basis, to determine, as to each reinsurance treaty under which Covered Policies have been ceded, whether as of the end of the immediately preceding calendar quarter (the valuation date) the requirements of Sections 7A(3) and 7A(4) were satisfied. The ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 7A(3), unless either:

   a. The requirements of Section 7A(3) and 7A(4) were fully satisfied as of the valuation date as to such reinsurance treaty; or

   b. Any deficiency has been eliminated before the due date of the Quarterly or Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 7A(3) and 7A(4) to be fully satisfied as of the valuation date.

3. Nothing in Section 7B(2) shall be construed to allow a ceding company to maintain any deficiency under Section 7A(3) or 7A(4) for any period of time longer than is reasonably necessary to eliminate it.

Section 8.   Severability

If any provision of this regulation is held invalid, the remainder shall not be affected.

Section 9.   Prohibition against Avoidance

No insurer that has Covered Policies as to which this regulation applies (as set forth in Section 3) shall take any action or series of actions, or enter into any transaction or arrangement or series of transactions or arrangements if the purpose of such action, transaction or arrangement or series thereof is to avoid the requirements of this regulation, or to circumvent its purpose and intent, as set forth in Section 2.

Section 10.   Effective Date

This regulation shall become effective [insert date] and shall pertain to all Covered Policies in force as of and after that date.
Commissioner White reminded the Committee of a May 15 educational session on the topic of the London Interbank Offered Rate (LIBOR) in which the Committee took no action on a proposal from the American Council of Life Insurers (ACLI).

Commissioner White said the ACLI proposal requests two things: 1) a safe harbor to address the fact that all state laws essentially limit the type of derivatives insurers can engage in; and 2) deem these types of derivatives as effective hedges. He said the proposal was received, but action was deferred because it was an educational-focused conference call. He said that under the LIBOR transition, insurance companies will be receiving certain swaps that do not easily fit into those allowable categories. He noted that the only way an insurance company would not be forced to sell these swaps the day they were received, and potentially incur losses, would be to receive a clarification issued by the insurance commissioner that allows these as permissible investments.

Commissioner White said he believes that issuance of such a clarification is appropriate because the issue is not something the insurers have any control over and when coupled with the potential for an insurer losing what he would consider policyholder money from this LIBOR transition, it is the correct position to take in his state. He stated for that reason, and because he did not hear any pushback from the Committee members during the May 15 conference call, he prepared a memorandum that summarizes his views on this issue.

Mr. Smith recommended that the word “forbearance” in the subject line of the memorandum be replaced with the word “clarification.” Commissioner White agreed, and so did the other Committee members.

Commissioner White said issuing a clarification on state law is an issue each individual commissioner would have to decide. He stated that the accounting issue embedded in the original request from the ACLI should be referred to the Statutory Accounting Principles (E) Working Group.

Michael Lovendusky (ACLI) stated the ACLI appreciates the action from the Committee and supports the clarification that these should be permissible. However, he said the ACLI questioned the referral. He stated the ACLI did discuss the issue briefly and did not believe the issue needed to be addressed by the Statutory Accounting Principles (E) Working Group.

Commissioner White reiterated his previous views regarding the accounting issue and said it is appropriate to break out the accounting issue separately.

Commissioner Toal made a motion, seconded by Superintendent Cioppa, to adopt the draft memorandum and refer the accounting issue to the Statutory Accounting Principles (E) Working Group (Attachment Two-A). The motion passed unanimously.

2. **Adopted an Extension on Mortgage Forbearance**

Commissioner White directed the Committee to the previously issued March 27 guidance from the Committee on this issue, and the question was whether this guidance should be extended.

Bruce Oliver (Mortgage Bankers Association—MBA) said there were several moving parts, including the MBA’s most recent letter to the Committee, being considered at this time. He referenced the previously issued guidance that lasts until the end of June and referenced subsequent clarifications. He said the MBA has since sent a letter to the Life Risk-Based Capital (E)
Working Group requesting specific changes to the guidance for year-end, including addressing various issues it identified in a previous letter. Mr. Oliver then introduced John Waldeck (Pacific Life Insurance Company), speaking on behalf of the ACLI.

Mr. Waldeck stated that members of the ACLI have been working with borrowers regarding possible loan modifications without knowing how long things would last and when things may begin to reopen. He said that many decisions have been made by insurance companies on this forbearance issue in a prudent manner. He said some insurers may decide that such agreements should be extended. Therefore, working with guidance in the federal Coronavirus Aid, Relief and Economic Security (CARES) Act or to the banks, they still need time to work with borrowers since reopening is just beginning to occur. He said the request to the Life Risk-Based Capital (E) Working Group had been until the end of the year and for year-end and, therefore, the request is for an extension until such time, or at least until September.

Mr. Waldeck said the request to the Life Risk-Based Capital (E) Working Group issues are broader, but the extension issue before the Committee is the most pressing issue at this time. He said the intent of this request was not to forestall impairments but rather prudently work with borrows, and he noted that the ACLI believes the extension is appropriate.

Commissioner White noted the Committee believes the original guidance is appropriate to help in addressing this broader issue for borrowers throughout the country when done so prudently. He stated that he supports the Life Risk-Based Capital (E) Working Group discussing the broader guidance before the Committee takes any further action after today, but that extending this guidance until the end of September seems appropriate.

Commissioner Robertson made a motion, seconded by Commissioner Dodrill, to extend the original forbearance guidance until Sept. 30 and update the guidance posted to the NAIC website (Attachment Two-B and Attachment Two-C). The motion passed unanimously.

Having no further business, the Financial Condition (E) Committee adjourned.
MEMORANDUM

TO: Commissioners, Directors and Superintendents

FROM: Commissioner Scott A. White (VA)
Chair of the Financial Condition (E) Committee

DATE: June 12, 2020

RE: Support for Commissioner Clarification Regarding State Law on Derivatives

Background Information
The London Interbank Offered Rate (LIBOR) is a set of reference rates based on average rates for short-term interbank unsecured loans quoted by London banks, and it is not expected to be available as a financial reference rate after 2021. As part of a market-wide transition away from LIBOR and toward the Secured Overnight Financing Rate (SOFR), U.S. central clearing counterparties (CCPs) will shift their discounting rate from the Effective Federal Funds Rate (EFFR) to the SOFR using a one-time special valuation cycle. This is expected to occur once on Oct. 16. As part of this unique market event, the CCPs will revalue existing cleared swaps and issue basis swaps on a mandatory basis to all parties that clear swaps on the CCPs to restore a counterparty’s original risk profile. Insurance companies use derivatives, such as interest rate swaps and credit default swaps, primarily for hedging purposes, including to manage risks associated with matching an insurer’s projected liabilities with large bond portfolios and protect an insurer’s exposure to various cash instruments and market conditions.

When using derivatives, insurance companies are required to abide by investment guidelines and legal and regulatory constraints established by the commissioner for their general account assets in a state. Most state laws limit insurers’ derivative use to activities such as hedging, replication, and certain income-generation activities. Life insurance companies have asked for clarification that the basis swaps they will receive as part of CCP’s transition to the SOFR discounting and certain transactions entered into in connection with receipt of those basis swaps will be deemed effective hedges under the uses of derivatives allowed by regulation in a state and under any derivative use plan required to be submitted under state insurance law.

Support for Commissioner Clarification
Due to the above circumstances and the fact that insurers have no control over the distribution of such basis swaps to them, and recognizing that insurers may be disadvantaged if required to dispose of such basis swaps upon receipt or a time thereafter, the Financial Condition (E) Committee is issuing this memorandum to make commissioners, directors and superintendents aware of this issue and offering support for those who issue bulletins on this issue.
The Committee, however, has not concluded that the basis swaps should be deemed effective hedges, but rather, they should be deemed “permissible derivative investments.” Therefore, the Committee supports that for the purposes of applicable state law, any basis swap (or group thereof) incurred by an insurer in connection with a clearinghouse’s shift in discounting from the EFFR to the SOFR (CCP Cutover) shall be deemed a permissible derivative investment for up to one year past the date of the CCP Cutover. We recognize that a commissioner’s decision to provide clarification on a state law set forth by state legislatures is an individual one, and we would respect that some commissioners may wish to perform further due diligence with their own domestic insurers before issuing a bulletin offering such clarification.
To: All Insurers  
RE: June 12 Question & Answer on Guidance for Mortgages for March 31 - September 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings

**Background Information**

On March 27 and June 12, the Financial Condition (E) Committee issued guidance to encourage insurers to work with borrowers who are unable to, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. Nothing in that guidance supersedes the requirement or authority of any state, particularly any state that has separately issued COVID-19 orders, directives or other guidance the impact of which may lead to debt becoming troubled and/or needing to be restructured.

**Original Questions**

**Q1** Is the June 12 guidance also intended to apply to insurers that are not required to report risk-based capital calculations to their domestic regulator or the NAIC for March 31, June 30 and September 30?

A1 - Yes. The guidance applies to all U.S. insurers filing and is not specific only to insurers that are required to report quarterly risk-based capital calculations. The reference to risk-based capital calculations prepared by insurers for March 31, June 30 and September 30 is intended to provide guidance for periodic internal reporting and reporting to policyholders, the public, and rating agencies that is not otherwise a prohibited announcement under state law.

**Q2** Is this guidance intended to apply to all COVID-19 loan modifications that occur through September 30, 2020, so that an insurer that modifies a loan in accordance with the parameters of the guidance within that period is not required to adjust the origination date, valued date, or property value as of the modification date (as required under current RBC rules for loan restructures) for current or future RBC reporting periods?

A2 - Yes. The intent of the guidance is to encourage insurers to make prudent loan modifications for borrowers who are temporarily unable to meet their contractual payment obligations because of the effects of COVID-19 and is not intended to have long-term negative impacts under current RBC rules. Consistent with this intent, if an insurer modifies a loan in accordance with the parameters of the guidance, the insurer is not required to adjust the origination date, valued date, or property value for current or future RBC reporting periods. In addition, an insurer is not required to reclassify to a different RBC category (such as within CM categories (e.g., CM1 to CM2) or within standing categories (e.g., In Good Standing, Overdue, Not in Process, In Process of Foreclosure)) for March 31, June 30 and September 30. The expectation is that further, more deliberative discussion is expected to occur in the future through the Life Risk-Based Capital (E) Working Group, regarding these loans for future reporting periods.

**Q3** Some construction projects are not allowed to operate because of government imposed stay-at-home orders. Current RBC rules specify that a loan with “construction loan issues” (e.g., abandoned) is required to have a CM5 rating. Is the guidance that loans are not required to be reclassified to a different RBC category as a result of government-mandated delays in any required principal and interest payments in the first and second quarters of 2020 also intended not to require reclassification of construction loans in cases of government-mandated delays in construction?

A3 - Yes. No RBC category change is required to be changed for March 31, June 30 and September 30 as a result of government-mandated construction delays in the first, second and third quarters of 2020. The expectation is that
further, more deliberative discussion is expected to occur in the future through the Life Risk-Based Capital (E) Working Group, regarding these loans for future reporting periods.

**Q4**—Many properties for which borrowers are not requesting relief may be impacted by valuation and NOI changes resulting from the COVID-19 pandemic. What will be the risk-based capital treatment of these loans?

**A4**—The expectation is that further, more deliberative discussion on valuation, NOI impacts and other impacts COVID-19 may cause will occur in the future through the Life Risk-Based Capital (E) Working Group.

**Additional Questions**

**Q1**—The guidance indicates support for loan modifications as a result of COVID-19 but seems to restrict to only those loans that are troubled debt restructures, was this intentional?

**A1**—No, the guidance was intending to apply to all loan modifications made as a result of COVID-19 before September 30 even if they would otherwise be categorized a troubled debt restructure; setting forth a safe harbor for all such changes made as a result of COVID-19 during that time period with the intent of the Life RBC Working Group developing more explicit and detailed RBC guidance for both 4Q and beyond, as well as how loan modifications made subsequent to the September 30 date would be treated. While such a safe harbor was intending to encourage loan modifications that are prudent so that there was no long-term impact on policyholders asset values, the view was that guidance on things such as operating income or other considerations within the RBC formula that attempt to measure the future risk of loans would be better addressed by the Life RBC Working Group. (Modifications of loan terms do not automatically result in TDRs. According to U.S. GAAP, a restructuring of a debt constitutes a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider. Short-term modifications made on a good faith basis in response to COVID-19 to borrowers who were current prior to any relief, are not TDRs. This includes short-term (e.g., six months) modifications such as payment deferrals, fee waivers, extensions of repayment terms, or other delays in payment that are insignificant. Borrowers considered current are those that are less than 30 days past due on their contractual payments at the time a modification program is implemented. Working with borrowers that are current on existing loans, either individually or as part of a program for creditworthy borrowers who are experiencing short-term financial or operational problems as a result of COVID-19, generally would not be considered TDRs.)

**Additional Questions**

**Q1**—Is the guidance expected to be updated in the future for 4Q financial statements and if so how?

**A1**—The June 12 guidance developed was intended issued to provide immediate guidance and the expectation is that further, more deliberative discussion is expected to occur in the future through the Life Risk-Based Capital (E) Working Group.

**Q2**—The guidance indicates that delays in any required principal and interest payments in accordance with the defined parameters are not required to be reclassified to a different RBC category, does this include reclassification either within CM categories (e.g. CM1 to CM2) or within other categories (e.g. In Good Standing, Overdue, Not in Process, In Process of Foreclosure, or both?)

**A2**—The guidance is meant to apply to both situations, the CM categories and the standing categories.

From: Financial Condition (E) Committee  
Date: June 12, 2020  
RE: Guidance for Troubled Debt Restructurings for March 31 - September 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings (where required)

**Background Information**
This guidance is being issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable to, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. The Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-19.

**Parameters of Guidance**
This guidance applies to a troubled debt restructuring issued as a result of COVID-19 and is applicable to the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, which occurs during the applicable reporting period for a loan that was not more than 30 days past due as of December 31, 2019. Nothing in this guidance supersedes the requirement or authority of any state, particularly any state that has separately issued COVID-19 orders, directives or other guidance the impact of which may lead to debt becoming troubled and/or needing to be restructured.

**Direct Mortgage Loans & Schedule BA Mortgages**
For purposes of any risk-based capital calculations prepared by insurers for March 31, June 30 and September 30, all direct mortgages and Schedule BA mortgages for which the insurer chooses, or is government mandated, to allow delays in any required principal and interest payments in accordance with the above parameters are not required to be reclassified to a different RBC category (e.g. will not affect the origination date, valued date, and net operating income or be treated as delinquent) than was utilized during the December 31, 2019 RBC filing and which may have otherwise required a higher capital charge for such a mortgage.

**RMBS and CMBS Securities**
For purposes of the reporting of NAIC designations in the financial statements prepared for March 31, June 30, and September 30 or any risk-based capital calculations prepared by insurers for March 31, June 30 and September 30, all RMBS and CMBS securities which were modeled by the NAIC for year-end 2019 and for which any required principal and interest payments have been deferred in accordance with the above parameters are not required to receive an updated NAIC designation despite the fact that payments may have been deferred as previously described.

**Related Accounting Guidance & Updates**
Please see the following for both related accounting guidance and updates to this guidance via Q&A.

(Please see related documents tab)

**Questions**
Any questions on this guidance should be directed to Dan Daveline by e-mail at ddaveline@naic.org
The Financial Condition (E) Committee met via conference call May 15, 2020. The following Committee members participated: Scott A. White, Chair, and Doug Stolte and David Smith (VA); Eric A. Cioppa, Vice Chair (ME); Michael Conway represented by Rolf Kaumann (CO); David Altmaier, Carolyn Morgan and Virginia Christy (FL); Robert H. Muriel represented by Kevin Fry, Shannon Whalen and Susan Berry (IL); Stephen W. Robertson represented by Roy Eft (IN); Steve Kelley represented by Constance Peterson (MN); Mike Chaney represented by David Browning (MS); Marlene Caride and John Sirovetz (NJ); Russell Toal represented by Mark Jordon (NM); Raymond G. Farmer and Daniel Morris (SC); Kent Sullivan represented by Jamie Walker (TX); and Jeff Rude represented by Linda Johnson (WY).

1. **Heard an Educational Session on LIBOR**

Commissioner White described that the purpose of the conference call is educational on the topic of the London Interbank Offered Rate (LIBOR), which will no longer be supported past 2021. He described how insurance companies would be affected as early as October 2020 and the reason for a proposal from the industry to alleviate the potential adverse impact away from LIBOR. He described how the core issue is ultimately how some of the derivatives that are delivered to insurers may not be in conformance with state law since derivatives are usually only allowed to be one of one of three types—hedging, income generation and replication—and that those derivatives that derived from the LIBOR exchange may not fit into one of those three buckets.

Michael Lovendusky (American Council of Life Insurers—ACLI) introduced member companies that would collectively facilitate the educational session. The presenters included Kathleen O'Neill, Associate General Counsel at New York Life Insurance Company and Vice Chairwoman of the ACLI Derivatives Policy Working Group; Joseph J. Demetrick, Managing Director, Derivatives & Liquid Markets at MetLife Investment Management and Chairman of the ACLI Derivatives Policy Working Group; and Chris McAlister, Managing Director at Prudential Financial. Ms. O'Neill presented most of the information in the written presentation (Attachment Three-A). During the presentation, she emphasized how as the clearinghouse, which is a large financial player, changes its valuation rate, it is expected to generate a lot of liquidity across the Secured Overnight Financing Rate (SOFR) term structure, which is expected to facilitate the transition of new transactions away from LIBOR. She describes this as a technical move that had a large impact, and she referenced how the mechanics were described in the appendix of the written presentation. Essentially, the clearinghouses will make a one-time move to change their valuation process on a single day on Oct. 16. Ms. O'Neill described how there are two steps involved in this process. First, the clearinghouses will conduct a standard end-of-day valuation cycle using federal funds, just like any other day, and the clearinghouses will run a special valuation cycle on the same positions using the SOFR. The two sets of data will be compared, and they will make a one-time adjustment that includes a cash component that adjusts each account that offsets the value transfer as a result of these discounting changes. Second, the clearinghouses book mandatory federal funds SOFR basis swaps that have one leg in federal funds and then one leg in the SOFR. This will restore the accounts’ original risk profile. These accounts will have the same risk profile at the end of the day as the beginning of the day by having these derivatives distributed to them on a mandatory basis. This is where the tension with state insurance law occurs since in many states, insurers can only enter for hedging, replication or income generation, and it is not clear where these would fit into those categories. Ms. O'Neill pointed out that the clearinghouses are planning to put in an auction process for those that do not want to hold the basis swaps, but those processes have not been finalized; therefore, it creates further issues. She also noted that it is not possible for insurers to move away from clearinghouses since under the federal Dodd Frank Wall Street Reform and Consumer Protection Act, many of these are mandated to be cleared under these clearinghouses.

Ms. Berry asked about the duration of these swaps. Mr. McAlister responded how the proposals from the clearinghouses are to give swaps across several durations—two, five, seven, 10, 20 and 30-year swaps—so that it is across a wide number of durations. Commissioner White asked why the clearinghouses used 2020 given that LIBOR does not go away until 2021. Mr. Demetrick stated that part of this is designed to create additional SOFR liquidity and activate transition portfolios. He stated that this will help liquidity to build in the SOFR. Commissioner White asked if state law was considered in determining this approach. Mr. McAlister indicated that he was not sure that it was considered, but he noted that banks used federal funds across their franchise and manage it holistically. This is just part of their federal funds risk, and they are concerned that what is at these clearinghouses will offset something else they have in their franchise, and banks requested that these basis swaps be granted. Mr. McAlister indicated that Prudential voiced that this is not something they preferred, but he implied that the banks...
are more influential in the clearinghouses. Mr. Demetrick added that it is important to know that the clearinghouses have to remain in a balanced risk position; therefore, if they are going to offer basis swaps to one party, they automatically have to deliver them to the people on the other side of the transaction. Otherwise, they would be taken on market risk by the clearinghouse itself. Commissioner White asked hypothetically if insurers were not allowed a full year to dispose of these basis swaps what would occur. Mr. Demetrick described how this was a one-off event and that the differential between the LIBOR and SOFR rates are close, but if insurers are required to unwind early, that could drive a technical widening and therefore disadvantage life insurers. Dan Daveline (NAIC) requested information on the rationale behind the derivatives being effective hedges and whether they could be classified as something else. Ms. O'Neill stated that while state laws differ, her understanding is that under New York state law, the insurer is required to show that the hedge is effective; therefore, it is hard to understand how the effectiveness testing would operate. Consequently, the ACLI is looking for clarification on whether it is both a hedge and an effective hedge so that insurers would not have to make that determination. Ms. O'Neill stated that she would like to think through this more, but she noted that having a hedge would be helpful, but the effective hedge aspect of this could be worked around.

Having no further business, the Financial Condition (E) Committee adjourned.
Executive Summary

- Availability of LIBOR is not assured past 2021
- As part of the transition to SOFR, Central Clearing Parties (CCP) for cleared swaps plan to switch their discounting rate from Fed Funds to SOFR in October 2020
- As part of this switch, parties that trade on the CCP will be compelled to receive basis swaps
- We request that state regulators clarify that derivatives entered into directly in connection with the CCP discounting change are categorized as hedging transactions

LIBOR Transition and Insurance Companies – General Considerations

- Insurance companies experience LIBOR exposure across a wide array of markets, requiring a flexible approach across asset classes that may be coalescing around different approaches, such as for floating rate notes, CLIs, securitized products, private placements, real estate and derivatives
- Within derivatives, there are different issues posed by over-the-counter derivatives and cleared derivatives
- The specific issue we will discuss today arises from a planned change at CCPs, who will shift their discounting rate on uncleared swaps from Fed Funds to SOFR, affecting life insurers’ cleared derivatives
CCP Transition to SOFR

- The cleared derivatives market in the US is expected to shift to SOFR via a staged approach, in line with the ARRC’s Paced Transition Plan.
- This will entail both a shift in discounting (planned for October 2020) and ultimately a shift in reference index (from LIBOR to SOFR).
- The first step is a migration of the calculation of discounting and price alignment interest for cleared USD interest rate swap products from the daily Effective Federal Funds Rate (EFFR) to SOFR.
- This move at the CCPs is seen as a key step in generating liquidity across the SOFR term structure. This will facilitate transitioning new transactions away from LIBOR.

CCP Transition to SOFR – mechanics

- The switch from EFFR discounting to SOFR discounting will be undertaken in two steps, occurring on October 16, 2020:
  - **Step 1 – Valuation**: the CCP will conduct a standard end-of-day valuation cycle based on EFFR and then it will run a “special valuation cycle” on the same positions, using SOFR as the discounting rate.
  - **Step 2 – Adjustment**: the CCP will (1) make a cash adjustment to each account to offset the value transfer arising from the discounting change and (2) book mandatory EFFR/SOFR basis swaps to each account to restore the account’s original risk profile.

- As a result, all CCP participants, including life insurers, will be allocated basis swaps on a mandatory basis.
- CCPs are contemplating an “auction” process for participants that do not want to hold the basis swaps, but the feasibility of these auctions and their mechanics have not been finalized.

Proposed Relief

- **Proposal**: we are requesting a bulletin/circular letter from state insurance regulators providing a safe harbor for derivatives entered into in connection with the CCPs’ transition from EFFR to SOFR discounting.
- "For the purposes of [applicable state law], any basis swap (or group thereof) incurred by a life insurer with the purpose of mitigating risk in connection with a clearinghouse’s shift in discounting from the federal funds effective rate to the secured overnight financing rate (a “CCP Cutover”) shall be deemed an effective hedging transaction notwithstanding any other provision of [applicable state law] or such life insurer’s derivatives use plan, so long as the life insurer has documented the fact that it has engaged in such basis swap (or group thereof) with the express purpose of mitigating risk in connection with a CCP Cutover. This would apply for a period up to 1 year past the date of the CCP Cutover.”

Key Dates in LIBOR Phase Out

- 2014: International Organization of Securities Commissions (“IOSCO”) establishes Principles for Financial Benchmarks by Administrators of EURIBOR, LIBOR and TIBOR.
  - Principles indicate that reference rates should be transitioned to “rates that are anchored in observable transactions.”
- 2014: International Regulators begin work on establishing alternative reference rates.
- US Fed establishes the Alternate Reference Rates Committee (“ARRC”) to identify alternative, transaction-based reference rate to replace LIBOR.
- June 2017: ARRC identifies Secured Overnight Financing Rate (“SOFR”) - a broad overnight rate based on Reps financing rates – as alternative to USD LIBOR.
- July 2017: UK Financial Conduct Authority (“FCA”) announces that it will no longer compel or persuade banks to submit to LIBOR panels after the end of 2021.
- October 2017: ARRC adopts its Paced Transition Plan, including a switch to SOFR discounting/PAI at CCPs.
- November 2017: FCA announces voluntary agreement with all IBOR panel banks to sustain LIBOR until the end of 2021.

IOSCO Summary of Principles

- Governance - intended to ensure that Administrators have appropriate governance arrangements in place to protect the integrity of the Benchmark determination process and to address conflicts of interest.
- Benchmark quality - intended to promote the quality and integrity of Benchmark determinations through the application of design features that result in a Benchmark that reflects a credible market for the interest rate measured by that Benchmark.
- Data sufficiency - intended to promote the quality and integrity of Methodologies by setting out minimum information that should be addressed within a Methodology. The Principles require that information be Published or Made Available so that Stakeholders may understand and make their own judgments concerning the overall credibility of a Benchmark. They also require that the Methodology address the need for procedures that control when material changes are planned, as a means of alerting Stakeholders to these changes that might affect their positions, financial instruments or contracts.
- Accountability - require that Administrators establish complaints processes, documentation standards and audit reviews intended to provide evidence of compliance by the Administrator with its quality standards, as defined by the Principles and its own policies. The Principles also addressed making this information available to relevant Market Authorities.

What is SOFR?

- Secured Overnight Financing Rate (“SOFR”)
- Overnight, nearly “risk free” rate that is correlated with other money market rates
- Fully transaction based, reflecting broad measure of overnight US Treasury repos (“Repos”) financing transactions
- Encompasses robust underlying market with over $500 billion in daily transactions
- FRBNY proposes to use an adjusted volume weighted median as the measure for SOFR
- FRBNY began publishing SOFR and its summary statistics in April of 2018

LIBOR Cessation—Documentation Issues for Life Insurers

- Across asset classes (securitizations, floating rate notes, derivatives, repo, etc.), no consistency regarding mechanics to replace LIBOR
- The “missing mechanics” are known as “fallback triggers” and “fallback rates”
- “Fallback Triggers” are events that cause a switch from one floating rate to another (trigger can be general (e.g., “LIBOR ceases to be published” or “LIBOR is no longer representative”) or bespoke (e.g., “50% or more of collateral assets in a securitization switch from LIBOR”)
- “Fallback Rates” replace LIBOR following a Fallback Trigger; either hardwired into a document (e.g., “term SOFR”) or left to negotiation (e.g., “as reasonably determined by the Calculation Agent”)
- The market has not converged on a single mechanism and asset classes will diverge (e.g., derivatives versus cash products); these differences can give rise to basis risk both within deals (e.g., securitizations) and across deals (hedges vs. hedged positions)

LIBOR Cessation—Derivatives Issues for Life Insurers (cleared swaps)

- Cleared OTC derivatives incorporate by reference ISDA definitions that do not provide Fallback Rates to replace LIBOR
- US cleared market will shift to SOFR via a staged approach that entails first a shift in discounting (planned for Fall 2020) and ultimately a shift in reference index (from LIBOR to SOFR)
- Basis swaps will be allocated to insurance companies during the cleared swap discounting shift on a mandatory basis
- Regulators (e.g., CFTC, Fed, OCC, etc.) and standard-setting bodies (e.g., FASB, IASB) have been releasing rules and guidance providing “flexibility” so that changes to terms of existing transactions relating to LIBOR cessation do not trigger undesirable accounting, tax and regulatory consequences
- State insurance regulators should follow suit to assure life insurers’ compliance with their regulatory schema

LIBOR Cessation—Derivatives Issues for Life Insurers (uncleared swaps)

- Over-the-counter (“OTC”) uncleared derivatives typically incorporate ISDA definitions that do not provide a Fallback Rate to replace LIBOR
- US uncleared market will adopt compounded-in-arrears SOFR; for new trades via updated ISDA definitions (currently being finalized) and for existing trades via an optional “protocol” to retroactively apply the new ISDA definitions to existing transactions
- Some insurers and their counterparties may negotiate bilateral terms for swap transactions as needed
- Regulators (e.g., CFTC, Fed, OCC, etc.) and standard-setting bodies (e.g., FASB, IASB) have issued rules and guidance providing “flexibility” so that changes to terms of existing transactions relating to LIBOR cessation do not trigger undesirable accounting, tax and regulatory consequences
Financial Condition (E) Committee
E-Vote
March 26, 2020

The Financial Condition (E) Committee conducted an e-vote that concluded March 26, 2020. The following Committee members participated: Scott A. White, Chair (VA); Eric A. Cioppa, Vice Chair, (ME); Michael Conway represented by Rolf Kaumann (CO); David Altmaier (FL); Robert H. Muriel represented by Kevin Fry and Kevin Baldwin (IL); Stephen W. Robertson and Roy Eft (IN); Steve Kelley represented by Fred Andersen (MN); Mike Chaney represented by David Browning (MS); Raymond G. Farmer (SC); Kent Sullivan represented by Doug Slape and Jamie Walker (TX); and Jeff Rude (WY).

The Financial Condition (E) Committee conducted an e-vote to consider adoption of the guidance. A majority of the members voted in favor of adopting the guidance (Attachment Four-A). The motion passed.

Having no further business, the Financial Condition (E) Committee adjourned.
To: All Insurers  
From: Financial Condition (E) Committee  
Date: March 27, 2020  
RE: Guidance for Troubled Debt Restructurings for March 31-June 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings (where required)

Background Information  
This guidance is being issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable to, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. The Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-19.

Parameters of Guidance  
This guidance applies to a troubled debt restructuring issued as a result of COVID-19 and is applicable to the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, which occurs during the applicable reporting period for a loan that was not more than 30 days past due as of December 31, 2019. Nothing in this guidance supersedes the requirement or authority of any state, particularly any state that has separately issued COVID-19 orders, directives or other guidance the impact of which may lead to debt becoming troubled and/or needing to be restructured.

Direct Mortgage Loans & Schedule BA Mortgages  
For purposes of any risk-based capital calculations prepared by insurers for March 31 and June 30, all direct mortgages and Schedule BA mortgages for which the insurer chooses, or is government mandated, to allow delays in any required principal and interest payments in accordance with the above parameters are not required to be reclassified to a different RBC category (e.g. will not affect the origination date, valued date, and net operating income or be treated as delinquent) than was utilized during the December 31, 2019 RBC filing and which may have otherwise required a higher capital charge for such a mortgage.

RMBS and CMBS Securities  
For purposes of the reporting of NAIC designations in the financial statements prepared for March 31 and June 30 or any risk-based capital calculations prepared by insurers for March 31 and June 30, all RMBS and CMBS securities which were modeled by the NAIC for year-end 2019 and for which any required principal and interest payments have been deferred in accordance with the above parameters may be reported with the same NAIC designation as used for year-end 2019 and are not required to receive an updated NAIC designation despite the fact that payments may have been deferred as previously described.

Related Accounting Guidance & Updates

Questions  
Any questions on this guidance should be directed to Dan Daveline by e-mail at ddaveline@naic.org
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met via conference call July 29, 2020. The following Working Group members participated: David Altmaier, Chair (FL); Kathy Belfi, Vice Chair, (CT); Susan Bernard (CA); Philip Barlow (DC); Carrie Mears and Mike Yanacheak (IA); Kevin Fry (IL); Roy Eft (IN); John Turchi (MA); Judy Weaver (MI); Kathleen Orth (MN); John Rehagen (MO); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf and Diana Sherman (NJ); Victor Agbu (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Joe DiMemmo (PA); Trey Hancock (TN); Doug Slape (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Adopted its July 21, June 2 and May 19 Minutes**

Commissioner Altmaier said the Working Group met July 21, June 2 and May 19. During its July 21 and June 2 meetings, the Working Group discussed proposed changes to the *Insurance Holding Company System Regulatory Act* (Model #440). During its May 19 meeting, the Working Group discussed the results of the Group Capital Calculation (GCC) field testing.

Ms. Belfi made a motion, seconded by Mr. Wolf, to adopt the Working Group’s July 21 (Attachment Five-A), June 2 (Attachment Five-B) and May 19 (Attachment Five-C) minutes. The motion passed unanimously.

2. **Considered Comments Received on Exposed Revised Template and Instructions**

Commissioner Altmaier expressed his appreciation for the comments received (Attachment Five-D) on the previously exposed template and instructions, noting that they were extensive and thoughtful. He described how NAIC staff had divided the comments into 12 core issues (Attachment Five-E) and developed a recommended course of action, and the purpose of the meeting was for the Working Group to determine if it supported such a recommendation or preferred a different approach.

   a. **Use of the GCC**

Mr. Felice described how this issue was related to some of the wording of how the analyst would use the GCC in a draft of the analyst guidance included in the June 2 conference call materials. He stated that the wording in that document is consistent with other tools with which you are trying to direct some action from the analyst under certain conditions, and he suggested that it was best that those issues be dealt with separately. Mariana Gomez-Vock (American Council of Life Insurers—ACLI) stated that the ACLI appreciated the inclusion of the interested parties developing the draft *Financial Analysis Handbook* guidance, and it seemed important and should be exposed for comment, particularly considering that it includes a threshold within it. Ms. Weaver stated that as chair of the NAIC group overseeing the *Financial Analysis Handbook*, if the guidance is exposed at this Working Group and any changes are made, we would have a shorter exposure at the group she chairs, but ultimately it will be exposed for comment.

Mr. Felice said the second part of this issue deals with the filing of the GCC. He stated that NAIC staff believed this was already being handled and the GCC would be filed in the changes to Model #440, where currently there will be strong confidentiality geared towards filing with the lead state regulator and sharing of some of the information in regulatory communication. Jim Braue (UnitedHealth Group—UHG) stated that it had two main points: 1) the GCC should be a tool for the lead state and can certainly share information with other domestic regulators within the group, but not more broadly; 2) emphasis on a tool, not a standard, and could take action using the GCC. Ms. Belfi stated that as they go through developing guidance for the *Financial Analysis Handbook*, they will make sure to sync that up with the instructions.

   b. **Calibration Level**

Mr. Felice described how the calibration level determines the strength the GCC is set at, with it currently being set at 300% of Authorized Control Level (ACL) risk-based capital (RBC). Comments suggested that it be lowered to 200% ACL, and another suggested that it could go even lower. Mr. Felice noted that a number of other issues should be addressed first, such as how financials entities are defined and the definition of material risk for non-financial entities. However, he stated that NAIC staff
supported the current proposed level from an analytical level as opposed to a lower threshold where action at the individual company level may be imminent. He stated that other comments suggested that the use of trend test terminology was an issue, for which staff does not oppose modifying. Ms. Gomez-Vock stated that the ACLI’s concern was causing confusion since 200% ACL is what is referred to publicly, and she also noted its concern with unintended potential market perceptions. David Neve (Global Atlantic) stated that Global Atlantic is concerned about the confusion, and it prefers it to be consistent with the widely held use of 200% ACL. Mr. Braue stated that UHG had a few points, one of which is that the 300% calibration is in congruence with a group with its ultimate controlling person (UCP) an insurer; the filer would look fine for RBC, but yet fall below the threshold for the GCC, unless the suggestion is that RBC is not set at the appropriate level. He stated that from an analysis standpoint, looking at some level above that is reasonable; and he said such a level had already been developed for the Financial Analysis Handbook for the calibration of the ratio. The other point, discussed early on, is that a ratio equivalent to Company Action Level RBC is appropriate for a legal entity, and there is a lot of diversification benefit within a group; therefore, this should be taken into account, which has not been done. Ian Adamczyk (Prudential Financial) added that Prudential Financial’s key point is the linkage that Ms. Belfi discussed. Mr. Bruggeman noted that he does not have a problem with a calibration different than 300%, but he thought the reason this was utilized was that was the first point when regulatory action could be triggered that puts the company in a situation where they have to do specified items. He emphasized that this does not mean any action would be taken; this is a tool, and for that reason, it is not a major deal. Therefore, he stated that he was confused by the interested parties’ comments that it was not an action level when it is, along with other items. Ms. Belfi agreed with Mr. Bruggeman, but some of the comments seem to be suggesting that it is more punitive than if one was looking at an individual company. She stated that she was not sure if it was a potential something, but rather that it was a chance for the state insurance regulator to look at the risks of the group to cause the calibration level to hit that level. She stated that it was more of an awareness, and what risks are causing the drops needs to be determined. Mr. Rehagen stated that the Reinsurance (E) Task Force did a great deal of work with this, where 300% is utilized for comparison to other countries. He said for him, it is less confusing to use 300% RBC and not more confusing. Mr. Felice described what would happen if 300% was retained, which assists in a number of ways and can be messaged clearly, and an additional threshold above the 300% level might not be necessary in the Financial Analysis Handbook threshold.

c. Scope of Application

Mr. Felice described how some of the comments were focused on the ability to potentially exclude financial entities. He stated that NAIC staff believe that once financial entities are more clearly defined and agreeable to all, those entities should not be excluded, as they tend to have a little bit more risk. He stated that the original definition of financial entities was a bit more activities focused, and he would recommend improving the definition. He stated that other comments deal with the information required for entities from the calculation. Bob Ridgeway (America’s Health Insurance Plans—AHIP) stated that the instructions should specifically exclude nonmaterial entities, regardless of being financial, noting that financial entities generally do not pose a risk. He stated that the staff recommendation to focus on activities was a good suggestion, and AHIP would be happy to work with staff to accomplish this. Stephen Broadie (American Property Casualty Insurance Association—APCIA) agreed with AHIP that changes to the definition of financial would be helpful, but he suggested the removal of nonmaterial entities. Chuck Finer (State Farm) suggested the elimination of information already provided to the lead state insurance regulator from the inventory tab, specifically noting how Schedule Y already contains information on all entities, and inclusion of information on each entity is duplicative. He questioned why the exclusion of non-financial entities should not apply to financial entities, including insurance companies.

Mr. Felice described how he was hearing a number of related comments from issues four, six and seven, and he noted that he would discuss them together. The definition of material risk was an area in which NAIC staff was supportive of either principle-based or quantitative-based; although, the group has not been able to agree to such. Therefore, they would determine if the principle-based ideas could be considered in detail. Mr. Felice noted that there is also room for improvement on the definition of financial entities. Therefore, inclusion of some of the affiliates that are more related to the performance of the policy should be reconsidered in favor of a more activities-based definition. Mr. Felice stated that once an agreeable definition is developed, NAIC staff are not in favor of applying a diversification benefit or excluding it. Rather, past financial crisis suggests that a properly defined financial entity is subject to risks that are independent of the insurance company. Mr. Felice stated that NAIC staff also believe that quantitative data in the GCC is complimentary to other filings to state insurance regulators. He described comments on the charge for financial entities, and he said all financial entities should be treated the same. Currently, an
operational risk type charge is applied to revenue. Mr. Felice state that the approaches considered now generally are consistent; although, one considers three years average revenue, while another considers just one year.

Mr. Felice described how the Working Group could make a referral back to the Capital Adequacy (E) Task Force in cases where the treatment of an entity type is different from RBC, but this should not be a prerequisite to finalizing the GCC. He described how if the Working Group sticks to the original 300% calibration, a 15% factor should be considered since that is what is considered internationally. Mr. Ridgeway stated that AHIP looked forward to working with NAIC staff, but it continues to consider how these are considered together, since the process should consider existing things already considered by state insurance regulators to determine materiality. He discussed how a number of issues being contemplated are already subject to regulatory review (affiliated transactions). He emphasized the need to look at the activity itself, and he hopes AHIP can work through this issue with state insurance regulators. Mr. Broadie agreed with working with staff on a better definition of financial entity, and he also noted the need for a high-level principle definition of materiality; he had made recommendations in this area. The APCIA has also proposed a list of criteria that a lead state and a company should look at, but it is happy to work with NAIC staff. Mr. Finer stated that he too looks forward to working on a definition. Mr. Braue stated that if financial entity is redefined to be more like banks and securities traders, it would eliminate UHG’s concerns, noting that affiliates that provide services to the insurer are less risky and already subject to review by the state insurance regulator. Mr. Adamczyk stated that Prudential Financial was the party that recommended that a simple approach be taken, as it views the key goal of providing insight into the nonregulated entity, but it does not believe different factors will make a material difference. The APCIA believes that ultimately, the inventory approach will facilitate the conversation and serve as a point for further discussion by the state insurance regulator, as well as other tools beyond the GCC.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

W:\National Meetings\2020\Summer\Cmte\E\GCCWG\Attachment A-July 29 GCC min.docx
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met via conference call July 21, 2020. The following Working Group members participated: David Altmaier, Chair (FL); Kathy Belfi, Vice Chair (CT); Kim Hudson (CA); Philip Barlow (DC); Carrie Mears, Mike Yanacheak and Kim Cross (IA); Shannon Whalen (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Fred Anderson (MN); John Rehagen (MO); Jackie Obusek (NC); Justin Schrader and Lindsay Crawford (NE); Dave Wolf (NJ); Edward Kiffel and Bob Kasinow (NY); Dale Bruggeman (OH); Joe DiMemmo (PA); Trey Hancock (TN); Doug Slape and Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. **Discussed Further Modifications to Exposed Exemptions**

Commissioner Altmaier stated his appreciation for the comments received (Attachment Five-A1) on the Working Group’s previously exposed proposed changes to the Insurance Holding Company System Regulatory Act (#440). He said that NAIC staff had developed a revised Model #440, which incorporates changes to address many of the comments, and that this conference call will be specifically focused on those comments that either did not have specific language or would represent a change from the Working Group’s previously developed intent. He stated those comments for which the Working Group believed further changes should be made would be incorporated in the revised Model #440 and re-exposed. He asked Dan Daveline (NAIC) to summarize each of the comments along with a recommendation disposition, and then allow the Working Group to decide on each.

   a. **Specificity of Exemptions**

Mr. Daveline said that Texas recommended in its comment that the Working Group consider giving the insurance commissioner the authority to provide exemptions by rule and moving some of the more detailed exemptions that may be adjusted in the future into a regulation. He said the exemption criteria, and in particular those where commissioner discretion is allowed, is very detailed and that moving such to a model regulation seemed reasonable. Ms. Walker said how the request would be particularly helpful in this time of regulatory fatigue, particularly knowing that some of these changes would require quick adoption, especially in her state where the legislature does not meet annually. Commissioner Altmaier stated he does not oppose the movement of some of the items highlighted and shared some of the concerns of Texas. Mr. Hudson noted how this was consistent with other models and said that California is not opposed to the change. No Working Group members disagreed with the change.

   b. **Additional Discretion to Waive Schedule 1**

Mr. Daveline said that this comment relates to a request for the insurance commissioner to be able to waive the Schedule 1 filing if he or she does not believe it provided value. Mr. Daveline noted that NAIC staff appreciated that with some small groups, the Schedule 1 may not provide the state insurance regulator the value desired, and for that reason proposed language that could be used in the revised Model #440 to provide this discretion. Commissioner Altmaier asked Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) if the proposed resolution addressed their issue. Mr. Rodgers stated the language seemed reasonable but added that he would like to consider the language more closely during the comment period. However, he said he believes it was positive toward addressing their comment. No Working Group members disagreed with the change.

   c. **Development of a Process for Recognizing and Accepting the GCC by Another Jurisdiction**

Mr. Daveline said that the comments on this issue were extensive. He noted that NAIC staff agreed with the concept of the comment and more specifically the need to develop a process and an NAIC Working Group responsible for maintaining a list of jurisdictions deemed to have recognized and accepted the group capital calculation (GCC), although there was no specific action that needed to be taken at this time. Mariana Gomez-Vock (American Council of Life Insurers—ACLI) emphasized the need for a transparent process in terms of how decisions are made and asked if this issue would be fleshed out in the regulation. Commissioner Altmaier stated he appreciates the need for such a process and referenced the work done on reinsurance as a possible blueprint to follow for consistency sake. No Working Group members disagreed.
d. **Initial Filing of the GCC**

Mr. Daveline said that the comment seemed to question the need for an initial filing of the GCC before the insurance commissioner has the discretion to exempt a group going forward. He noted that he believes the Working Group’s rational for the initial filing to suggest obtaining one filing would enable the state insurance regulator to better assess on an individual company basis whether the calculation would provide information that was of value, thus making it more easy for the state insurance regulator to more confidently exempt the group going forward. Tom Finnell (America’s Health Insurance Plans—AHIP) stated he was seeking clarity and having received that, AHIP has no further comments. No Working Group members were opposed to not making any further changes for this issue.

e. **Exemption for Non-U.S. Groups**

Mr. Daveline said he believes one of the comments was addressed through incorporation of proposed language from another commenter that was incorporated into the revised Model #440. Jeff Johnson (John Hancock) stated the language incorporated into a revised Model #440 aligns with the concepts John Hancock was attempting to address and at this point, they have no further comments. No Working Group members were opposed to not making any further changes for this issue.

f. **Broad Definition of Financial Entity**

Mr. Daveline said this comment was focused on the broad definition of a financial entity within the GCC instructions. He noted, however, that the exemption limitation is very narrow and only applies to financial entities that are subject to a specified regulatory capital framework. He stated NAIC staff did not suggest incorporating further specificity and did not believe any further changes were needed. Mr. Finnell stated the concern was that the broad definition may somehow prevent a group from availing themselves of an exemption, but after looking at the language further along with the description, he said AHIP had no further comments at this time. No Working Group members were opposed to not making any further changes for this issue.

g. **Limit Sharing of the GCC Information**

Mr. Daveline said this was an informal comment made during the course of communicating with various parties on the confidentiality language. He said the comment suggested the GCC could only be shared with members of a supervisory college. Mr. Daveline said that while he is not certain the GCC itself will actually be shared by the lead state with other domestic states, information from the GCC definition will through the Group Profile Summary. As a result, the suggestion to limit the sharing seems problematic, and he noted that NAIC staff believe existing state confidentiality language around the examination and analysis process should be sufficient for such sharing. Commissioner Altmaier reinforced that while the Working Group is very supportive of confidentiality protections, this does seem to be too limiting. Michael Gugig (Transamerica), representing the Coalition, stated the Coalition appreciates the points and have no further comments on this issue. No Working Group members were opposed to not making any further changes for this issue.

h. **Expand Exemptions**

Mr. Daveline said this comment suggested adding an additional exemption for companies with premium thresholds of $100 million. He said the current exemptions already allow groups of this size to be exempted if further conditions are met, and also noted NAIC staff had some concern with further modifications that could create a conflict with the covered agreement. Mr. Rodgers stated that given the previous additional flexibility added, he has no further comments given that seemed to address the very small mutual insurance companies that this comment was also directed at. No Working Group members were opposed to not making any further changes for this issue.

i. **Confidentiality Language**

Mr. Daveline said this issue was related to a very small part of the confidentiality language at the end originally developed by the Coalition. He said he believes the existing language that described the GCC as a regulatory tool for assessing group risk is accurate, even though he appreciated the fact that the tool is then used to evaluate the impact on the insurer. Mr. Rodgers noted NAMIC believed it was another tool to be used for evaluating solvency on the insurers’ risk given legal entity regulation is what drives the GCC but stated he had no further points. No Working Group members were opposed to not making any further changes for this issue.
j. Commissioner Authority for Further Exemptions

Stephen Broadie (American Property Casualty Insurance Association—APCIA) said the APCIA recommends the Working Group incorporate more broad discretion for unique circumstances similar to language in the Risk Management and Own Risk and Solvency Assessment Model Act (#505). He mentioned an example where there was one insurer above the $1 billion premium threshold, but only had one other affiliate that had de minimis business. Mr. Daveline noted NAIC staff were concerned about a potential conflict with the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement). Mr. Finnell noted AHIP’s position is different from ACPLA’s but could be used as regulatory guidance in further considering exemptions under the specific thresholds. No Working Group members expressed an interest in considering incorporation of the language from Model #505. However, Commissioner Altmaier stated he is willing to further consider the comments and, to the extent agreeable, consider further changes to the revised proposed Model #440.

k. Deleting Language from Section 8 That Applies to Rest of Model #440

Mr. Daveline said that during the course of communicating with various interested parties in the interim on the confidentiality language, it was noted that some parties recommended deletion of language that already pertains to other aspects of Model #440 and how NAIC staff had always sought out not making any changes to the existing confidentiality protections. Therefore, NAIC staff recommended no further changes as suggested by some that may remove such protections. He noted that this did not mean some of the language could not be applied specifically to the GCC and that perhaps such consideration could be given by parties in the forthcoming re-exposure of Model #440. Mr. Ridgeway agreed with Mr. Daveline’s characterization of the process under which NAIC staff worked with various parties to try to simplify the confidentiality language where “less is more” when it comes to state legislatures that would be asked to consider the model. He described how Model #505 had become the gold standard in terms of confidentiality protections and that the NAIC would be wise to consider some of those same provisions for other sections. He stated during the re-exposure, he would continue to review the language and work with NAIC staff to continue to improve. No Working Group members disagreed with making no changes.

l. Reciprocity Issue

Mr. Daveline directed the Working Group to language proposed by Reinsurance Group of America (RGA), which was exposed since it incorporates the aspect of reciprocity as discussed during the Working Group’s June 2 conference call. He said that the proposed language modifies the language dealing with exemptions for non-U.S. groups by specifying those exemptions shall not apply if the non-U.S. groupwide supervisor requires subgroup reporting. He indicated the Working Group has discussed subgroup reporting in the past and that it was not intended for the GCC in that it would not provide value. However, this language indicates subgroup reporting only comes into play if the non-U.S. group reporting requires subgroup reporting.

Michael Demuth (Allianz) stated Allianz is supportive of efforts to reduce regulatory burden. However, he said the proposal has a series of practical issues that Allianz believes should be taken into consideration before making a final decision since it could create practical and legal challenges, which could create problems both for Allianz and the entire industry.

Mr. Broadie stated the APCIA had two goals: 1) It strongly believes each insurance group should be subject to only one GCC and that should be a parent level and none should be applied at the subgroup level; and 2) it strongly supports reciprocity and the concept of mutual recognition and a level playing field. He stated the APCIA does not support the language and if it was included in the model, language would have to be developed for clarity. He stated the NAIC can develop a transparent process for determination if reciprocity does not exist at the subgroup level and should include coordination with international colleagues with the intent of supporting mutual recognition to get to a place that each group is only submitting one GCC, whether a U.S. group or non-U.S. group.

Matthew Wulf (Swiss Reinsurance Group) stated Swiss Reinsurance Group believes these questions of reciprocity should be asked and discussed with state insurance regulators. He said they understand the goal of the GCC and the insurance capital standard (ICS) and that there are broader goals. He noted there is a great deal more that needs to be laid out and determined but should not be included due to the legislative fatigue. He said he is not sure what the current proposed language means. He said this does not apply to troubled companies and that there are so many reasons why this is not practical and is too cumbersome.

Joseph Sieverling (Reinsurance Association of America—RAA) agreed with the previous commenters on the practical concerns. He said the RAA supports one group capital at the group level, but one thing that is unclear are the facts on the ground—whether many, or some or lot, or one jurisdiction actually report subgroup reporting for U.S. groups. Ultimately, he
said it comes down to the supervisory purpose, and there really is no supervisory purpose of subgroup reporting. He said putting subgroup reporting into the model to try to get reciprocity is just the wrong way to approach this issue.

Ms. Gomez-Vock said the ACLI worked very hard with its members to try to reach an agreement that was actually unanimously agreed upon. She said this includes one group capital at the group level and that subgroup regulation is undesirable. However, the ACLI ultimately came back with supporting the reciprocity provision as long as it is supported by a transparent process and equitable to insurers in all jurisdictions. She said this issue went all the way up to the chief executive officers (CEOs), where it was still unanimously supported.

Ian Adamczyk (Prudential Financial) said Prudential Financial fully supports the concept of mutual recognition across supervisory regimes, but as internationally active insurance groups (IAIGs), that should include recognition and accepting the GCC as part of that support. He stated this should be included in the model act because: 1) it would further the objective of mutual recognition; 2) it is an overarching concept that sets an expectation; and 3) it would help promote consistency across the states. He stated Prudential Financial acknowledges there are some practical considerations, but there are solutions that could be implemented for all parties. Commissioner Altmaier stated the language was included in the draft as a means to generate discussion. He stated he expects further discussion but that timing would be dependent upon other factors.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.
Comments on Exposure

This document is intended to serve as a detail agenda for considering the comments received.

The following does NOT attempt to address all of the specific comments related to each of the issues, but rather a summary, and points the reader to the specific comments for further review.

<tbody>
<tr>
<td>Issue 1-Specificity of Exemptions</td>
<td>We recommend Model 440 give authority for the commissioner to provide exemptions by rule and moving some of the more detailed exemptions that may be adjusted in the future to Model Regulation 450.</td>
<td>Texas</td>
<td>7</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
During the June 2 call, direction was given to draft exemptions for 1) small county mutual insurers; 2) a group filing the BBA with the Federal Reserve, provided the BBA has to be filed with the lead state; 3) a group whose group-wide supervisor is an located in a reciprocal jurisdiction; 4) non-US groups that provide sufficient information to the lead state and either accepts the GCC in their jurisdiction for US groups or accepts the GCC as an acceptable ICS and indicates as such to the IAIS.

In addition, the direction given was the commissioner should have discretion to exempt other groups that are under the $1 billion ORSA premium threshold; don’t have insurers in another country and don’t have a bank with a capital requirements within the group. However, this exemption can only be granted after the group has filed one GCC with the lead state and the state has determined the group has de minimis affiliated transactions and de minimis risky entities within its holding company. This criteria is intended to give specificity as requested by RAA and APCIA and at the same time make sure the commissioner can require the GCC on a group where the group has material affiliated transactions (for which the GCC would be helpful) or has other noninsurers in the group which could cause material risk (for which the GCC may be helpful). Finally, paragraph (g) allows all of these entities that meet the exemption criteria just noted to instead only have to complete an annual Schedule 1 (from the GCC and related trending of that information) and also grants this Schedule 1 allowance to other entities (mutual or other entities whose UCP is a US insurance company that files RBC).

**Recommended Action:**
NAIC Staff recommends the Working Group further discuss the Texas proposal. This may be a reasonable suggestion as it relates to some of the very detailed exemption requirements. More specifically, the language discussed in the preceding paragraph (or paragraphs (f) and (g) in the exposed model) which provide the additional “flexibility” might be reasonable for inclusion in a model regulation instead of the model act since its exceptionally detailed. A model regulation may also be helpful in addressing other more detailed items suggested by Met Life/Prudential/RGA, if the Working Group decides to include the subgroup reciprocity paragraphs.

<td>Issue #2- Combine Exemption Discretion and Schedule 1 Discretion</td>
<td>Our second section would be to combine and modify Section 4L(2)(f) and 4L(2)(g) to not require the Schedule 1 at the Commissioners discretion.</td>
<td>NAMIC</td>
<td>69</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
NAMIC notes that the purpose of this recommendation is so the lead state commissioner has the discretion to waive the GCC and Schedule 1 if the regulator does not feel it adds any value. We strongly feel if the ultimate controlling parent is an RBC filer, the GCC results would be substantially similar, therefore, we think the commissioner should have the authority to waive the GCC and other components.

**Recommended Action:**
NAIC Staff notes that while we are not opposed to combining these two sections, there are complications in doing so in that section 4L(2)(g) specifically allows mutuals to be exempt from the GCC and only file the Schedule 1 since RBC produces substantially the same results as the GCC. NAIC staff can appreciate the reason why the Schedule 1 may not provide value to a regulator for some small groups and would support the following modified language to allow such:

*The lead-state commissioner has the discretion to either require or exempt the ultimate controlling person from filing a limited group filing or report on an annual basis if either of the following are met:*

<tr>
<td>Issue #3- Development of Process for “Recognizes and Accepts the GCC”</td>
<td>“As 4L(2)(d) is written, the non-U.S. group wide supervisor must “recognize and accept” the U.S. GCC for non-U.S. groups to qualify for an exemption from the GCC.” “…the phrase “recognizes and accepts” will need to be clarified by establishing a transparent process in an accompanying regulation or regulator guidance.” “It could for example, be defined to allow supervisory regimes to demonstrate reciprocity through regulatory action.</td>
<td>ACLI</td>
<td>33</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
This comment letter provides greater detail on potential item to be addressed, although NAIC staff has already incorporated one of the identified items (recognizes and accepts if another jurisdiction does not require a US group to complete a GCC) including the NAIC acting as a central body to establish and maintain a record of jurisdictions that “recognize and accept” the GCC.
Comments on Exposure

Recommended Action:
NAIC agrees that it will be necessary to create a list of jurisdictions that recognize the GCC and to have an NAIC group responsible for developing such a process and possibly even codifying such a listing, unless other more streamlined processes can be recommended (e.g. inclusion on the listing may be dependent upon identification from a member of the industry operating in that jurisdiction and NAIC staff confirming with such jurisdiction).

<tr>
<td>Issue #4- Initial Filing Requirement</td>
<td>In some cases, for which exemption is apparently provided in the draft HCA text, the group must nonetheless make an initial filing of the GCC with the Lead State, and only subsequent to that could the commissioner grant the exemption. It is not clear why an initial filing would be required, and which would seem to contradict the notion of an exemption.</td>
<td>AHIP</td>
<td>48</td>
</tr>
</tbody>
</table>

Staff Summary of the Issue:
The comment is directed at the Working Group’s previous decision to require an initial filing to determine the benefits of the calculation for the applicable groups.

Recommended Action:
NAIC staff understood the Working Group’s rational for the initial filing to suggest that obtaining one filing would enable the regulator to better assess on an individual company basis whether the calculation would provide collective information or individual information that was of value; if not the regulator would more confidently be able to exempt the group going forward. Therefore rejection of this comment appears appropriate.

<tr>
<td>Issue #5- Exemption for non-US Groups</td>
<td>The draft Act does not include language similar to Section 6(D) of the ORSA Model Act, which allows regulators to grant an ORSA exemption “based upon unique circumstances.” APCIA recommends including similar language in Sections 4(L)(2)(f) and (g) of the draft Act.</td>
<td>John Hancock</td>
<td>25</td>
</tr>
</tbody>
</table>

Staff Summary of the Issue:
While the comment letter provides a great deal of backdrop, ultimately the comment recommends the following changes:

c. An insurance holding company:
   (i) That has provided information to the accredited lead state, either directly or indirectly through the group-wide supervisor, who has determined such
Comments on Exposure

information is satisfactory to allow the lead-state to comply with the NAIC principles of group supervision as detailed in the NAIC Financial Analysis Handbook, and the lead state has determined that because of this the group capital calculation is not required to be filed; and

(ii) Whose non-U.S. group-wide supervisor, as determined in accordance with the principles of section 7.1, meets either of the following requirements:

a. Where a non-U.S. jurisdiction does not apply its own group capital reporting requirements to U.S. groups or the parent of a U.S. subsidiary operating in that jurisdiction, then the U.S. would not require insurance groups or their parent company domiciled outside the U.S. to file the group capital calculation Recognizes and accepts the group capital calculation for U.S. insurance groups who operate in the jurisdiction of that group-wide supervisor; or

Drafting Note: The phase “Recognizes and accepts” does not require the non-U.S. group-wide supervisor to require the U.S. insurance groups to actually file the group capital calculation with the non-U.S. supervisor but rather does not require its own version of a group capital filing.

b. For jurisdictions where no U.S. insurance groups operate, recognizes the group capital calculation as an acceptable international capital standard by indicating such formally in writing to the lead state with a copy to the International Association of Insurance Supervisor. The requirement to file the group capital calculation is at the discretion of the U.S. designated group-wide supervisor for the internationally active insurance group.

Recommended Action:
As it relates to the recommended changes to (iv)(a), NAIC staff believes that the concept embedded in the recommended change to (iv)(a) was intended to be addressed in the drafting note. For that reason, NAIC staff has incorporated language from other comment letters that likely address this. As it relates to the recommended changes to (iv)(b), it’s not clear why the NAIC should not encourage, through other jurisdictions, the acceptance of the GCC where the result would be the same (such non-US group is exempt from the GCC). Meaning, if the discretion exists, it’s likely the state would do so. With existing language, the jurisdiction need only to make the recommendation to the IAIS as a means to support more mutual recognition through the use of different methodologies.

<tr>
<td>Issue #6- Broad Definition of Financial Entity</td>
<td>Affiliates that are integral to the performance of the insurance contract or provision of the insurance or financial products or services to policyholder, members or depositors will be treated as financial entities. AHIP suggests that the reference to “specified regulatory capital framework within is holding company structure be clarified to refer to the capital remine of the other sectoral regulators (e.g. federal or state banking agencies).</td>
<td>AHIP</td>
<td>48</td>
</tr>
</tbody>
</table>
Comments on Exposure

**Staff Summary of the Issue:**
The comment is referring to the following requirement that must be met in order for an exemption to be granted.

“The holding company includes no banking, depository or other financial entity that is subject to a specified regulatory capital framework.”

**Recommended Action:**
NAIC staff believes the language is clear that this criteria only exists for financial entities that have a capital requirement, we hesitate to add too much specificity which may undermine the concept of believing its reasonable of not allowing a group that has a non-insurer within its group that is subject to a capital requirements to be exempt given the state may receive some pressure of being able to share group information with that capital regulator.

<tr>
<td>Issue #7- Add Language limiting sharing through a supervisory college</td>
<td>Add language to limit sharing</td>
<td>Coalition</td>
<td>N/A-Informal comments</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
Some have recommended adding the following additional provision to 8(c)2:

Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported under Section 4L(2) with commissioners of states that are members of the subject insurer’s supervisory college, and whose states have statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.

**Recommended Action:**
NAIC staff find this language problematic as this would only permit the GCC to be shared with commissioners who are part of the supervisory college. Staff noted that lead states need to be able to share key figures of the information from the GCC with all domestic regulators of companies that are part of that group and have examination and/or analysis statutes that protect such information. We believe existing confidentiality requirements are sufficient to do so.

Comments on Exposure

Staff Summary of the Issue:
During 2019, the Working Group discussed the idea of “subgroup reporting” of the GCC, or more specifically whether the GCC should be required for the US operations (e.g. US insurers) of non-US groups and generally concluded they were not interested in this concept, noting that the GCC was not designed for this purpose. During the June 2 conference call of the Working Group, one of the commenters (RGA) discussed the concern that many companies have relative to Subgroup reporting, and more specifically that some jurisdictions could potentially require this for US groups with insurers in such jurisdictions, but that reciprocity was important to help prevent this from becoming a widespread practice that could eventually disadvantage US insurers. Responses from two regulators indicated a desire to discuss reciprocity more and as a result, language from RGA that incorporates the reciprocity was incorporated into the exposed draft to assist in such a discussion. More specifically, the language in (e) below was included to indicate that non-US groups otherwise exempt under either (c) or (d) below would NOT be exempt if the other jurisdiction required “subgroup reporting for a US group in that jurisdiction”, and would actually require the non-US group to file a “US subgroup GCC.” Note, subgroup reporting is ONLY required if done so first by another jurisdiction.

d. An insurance holding company whose non-U.S. group-wide supervisor, as determined in accordance with the principles of section 7.1, is located within a Reciprocal Jurisdiction [insert cross-reference to appropriate section of Credit for Reinsurance Law].

e. An insurance holding company:

(iii) That has provided information to the accredited lead state, either directly or indirectly through the group-wide supervisor, who has determined such information is satisfactory to allow the lead-state to comply with the NAIC principles of group supervision as detailed in the NAIC Financial Analysis Handbook, and the lead state has determined that because of this the group capital calculation is not required to be filed; and

(iv) Whose non-U.S. group-wide supervisor, as determined in accordance with the principles of section 7.1, meets either of the following requirements:

a. Recognizes and accepts the group capital calculation for U.S. insurance groups who operate in the jurisdiction of that group-wide supervisor; or

Drafting Note: The phrase “Recognizes and accepts” does not require the non-U.S. group-wide supervisor to require the U.S. insurance groups to actually file the group capital calculation with the non-U.S. supervisor but rather does not require its own version of a group capital filing.

b. For jurisdictions where no U.S. insurance groups operate, recognizes the group capital calculation as an acceptable international capital standard by indicating such formally in writing to the lead state with a copy to the International Association of Insurance Supervisor.

f. The exemptions in Sections 4L(2)(c) and 4L(2)(d) shall not apply to the U.S. operations of a non-U.S. insurance holding company if its group-wide supervisor does not recognize and accept the group capital calculation for any U.S. insurance group’s operations in that group-wide supervisor’s jurisdiction.

Recommended Action:
NAIC staff recommends the Working Group further discuss if they support the subgroup reporting/RGA reciprocity concept. Even if the Working Group decides against retaining the language, further guidance will still need to be developed around a process of listing jurisdictions the NAIC considers having shown reciprocity to the GCC. If the Working Group decides for reciprocity, the language proposed by Met Life/Prudential/could serve as a possible language to be included in a model language that describes such a process. Doing so may also limit the need for incorporation of the specific language in the model act, but rather including in the model regulation that defines reciprocity in more detail, although all other reciprocity language included in the revised proposed draft could be retained in the Model Act. In summary, the model regulation could house this detail on reciprocity as well as the commissioner’s discretion to grant exemptions for groups below the ORSA thresholds, which is very detailed.

<td>Issue #9- Expand Exemptions</td>
<td>Our suggestion is to expand the exemption criteria in Section 4L(2)(a) to include holding company groups with direction premiums less than $100,000,000.</td>
<td>NAMIC</td>
<td>68</td>
</tr>
</tbody>
</table>

Staff Summary of the Issue:
Some have recommended adding the following additional provision to 8(c):2:

Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported under Section 4L(2) with commissioners of states that are members of the subject insurer’s supervisory college, and whose states have statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.

Recommended Action:
NAIC staff notes that under the current exposure, all mutual insurance companies are exempt from filing the GCC since their ultimate controlling person is a U.S. regulated insurer that already completes an annual RBC filing and only need file the Schedule 1 and related analytics. NAIC staff further notes insurers with less than $1 billion in premium (which would include those with less than $100 million) can be exempted from the GCC if other limited requirements are met. Finally, NAIC staff notes that insurers that are not in a holding company structure (e.g. no other affiliates) would not be subject to the GCC as they are not subject to the Holding Company Act.

<td>Issue #10- Confidentiality Language</td>
<td>We would request on minor change to Section 8 to reflect the intent of the GCC but also acknowledge the GCC not a tool to assess group risk, but rather as an additional tool to assess and insurer’s risk.</td>
<td>NAMIC</td>
<td>72</td>
</tr>
</tbody>
</table>

Staff Summary of the Issue:
They recommend the following change:

It is the judgement of the legislature that the group capital calculation and resulting group capital ratio required under Section 4L(2) is a regulatory tool for assessing group insurer’s risks and capital adequacy, and is not intended as a means to rank insurers or insurance holding company systems generally.

Recommended Action:
NAIC staff disagrees, noting that the original language proposed from the Coalition accurately captures that the GCC is a tool for assessing group risk, even though we agree that the purpose of determining group risk is to evaluate its potential impact on the insurer. However, we believe the proposed language is inaccurate.

<tr>
<td>Issue #11- Commissioner Authority for Further Exemptions</td>
<td>The draft Act does not include language similar to Section 6(D) of the ORSA Model Act, which allows regulators to grant an ORSA exemption “based upon unique circumstances.” APCIA recommends including similar language in Sections 4(L)(2)(f) and (g) of the draft Act.</td>
<td>APCIA &amp; AHIP</td>
<td>12 &amp; 48</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
This comment recommends the following additional exception authority be added:

*An insurer that does not qualify for exemption pursuant to subsections (e) and (f) may apply to the commissioner for a waiver from the requirements of this Act based upon unique circumstances. In deciding whether to grant the insurer’s request for waiver, the commissioner may consider the type and volume of business written, ownership and organizational structure, and any other factor the commissioner considers relevant to the insurer or insurance group of which the insurer is a member. If the insurer is part of an insurance group with insurers domiciled in more than one state, the commissioner shall coordinate with the lead state commissioner and with the other domiciliary commissioners in considering whether to grant the insurer’s request for a waiver.*

**Recommended Action:**
This issue has not been discussed previously although NAIC staff has some concerns with this suggestion, specifically that a group that does business in a covered agreement jurisdiction could be exempted, creating an issue.

<tr>
<td>Issue #12- Deleting Language from Section 8A which applies to rest of Act</td>
<td>ORSA Model 505 does not contain this language</td>
<td>AHIP</td>
<td>57</td>
</tr>
</tbody>
</table>

**Staff Summary of the Issue:**
The language in reference is as follows but is currently part of the Form F and other existing HCA authorities for the Commissioner:

*The Commissioner shall not otherwise make the documents, materials or other information public without the prior written consent of the insurer to which it pertains unless the commissioner, after giving the insurer and its affiliates who would be affected thereby notice and opportunity to be heard, determines the that the interest of policyholder, shareholder or the public will be served by the publication thereof, in which event the commissioner may publish all or any part in such manner as may be deemed appropriate.*
Comments on Exposure

Recommended Action:
Some comments suggest deleting the language to mirror the Confidentiality of the Risk Management and Own Risk and Solvency Assessment Model Act (#505) with respect to ORSA Summary Report. However, this language is applicable to more than just the Group Capital Calculation, and consideration needs to be given to whether it is necessary to retain this authority for other aspects of this section. NAIC recommends this language not be deleted for this reason. NAIC staff is not opposed to AHIP proposing language that would specify this language is not applicable to the GCC.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met via conference call on June 2, 2020. The following Working Group members participated: David Altmaier, Chair (FL); Kathy Belfi, Vice Chair (CT); Kim Hudson (CA); Philip Barlow (DC); Carrie Mears, Mike Yanacheak and Kim Cross (IA); Susan Berry and Vincent Tsang (IL); Roy Eft (IN); John Turchi and Christopher Joyce (MA); Judy Weaver (MI); John Rehagen (MO); Jackie Obusek (NC); Justin Schrader and Lindsay Crawford (NE); Edward Kiffel (NV); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Kimberly Rankin (PA); Trey Hancock (TN); Mike Boerner and Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Discussed Further Modifications to Exposed Exemptions

Commissioner Altmaier stated that the purpose of this conference call is for the Working Group to consider whether further modifications are needed to the previously exposed exemptions on who would be required to file the group capital calculation (GCC). He described how the Working Group had received quite a bit of feedback on those exposed exemptions in the form of comments letters (Attachment Five-B1) and that the intent is to work through the comments based upon themes, where he will seek input from Working Group members on their views of each of the themes.

   a. Size Threshold

Commissioner Altmaier stated that the previously exposed exemptions did not include the concept of a size threshold, be that the comments overwhelming support the concept of a size threshold like that contained within the Risk Management and Own Risk and Solvency Assessment Model Act (#505). Commissioner Altmaier stated that he believes most of the state insurance regulators were of the opinion that the GCC would be a tool that would be helpful for analysts for any group regardless of its size or where it writes its business, but that the Working Group should think about its characteristics and when it would be most helpful. He noted that the Working Group may determine that it may not be most useful for all groups and that care should be taken with the approach. He stated he believes that groups that do not meet the size exemptions of the Own Risk and Solvency Assessment (ORSA) or have international business are the types where state insurance regulators would want the GCC to be completed. He stated, however, that beyond that, he would be open to a proposal that authorized state insurance regulator discretion for groups that did not meet such a threshold. He stated that while there are some individuals that may be concerned with that type of discretion without any guiding principles or criteria, it would be important for the Working Group to consider how best to effectuate.

Mr. Schrader stated he thinks this is an important issue and that regardless of what approach the Working Group takes, either all groups filing or some type of threshold, he believes it is important to have regulatory discretion to either include or exclude those that are outside of the normal given the unique groups that exist. He stated he thinks the ORSA threshold may be a bit high because there were many groups under that threshold that were fairly complex, but that he is in favor of getting for all groups since analysts are expected to perform holding company analysis on all groups. However, if the analyst or state insurance regulators feel there is no value for that company, then they should have the authority to waive them. He stated with commissioner discretion, there is a potential for either a lot of companies to be exempted or no companies exempted. Commissioner Altmaier stated that was a reasonable viewpoint, particularly in the early years, until a determination can be made on how helpful the GCC was.

Mr. Eft stated he is in support of an ORSA exemption, but authority to exempt others if deemed necessary, but not cast as wide of an approach as suggested by Nebraska. Ms. Berry stated that Illinois was of the view that they wanted a threshold closer to the ORSA along with making sure companies with international business would still be captured, but they also see value in an exception where smaller companies are allowed to just file a listing out the companies and some of the other related information, but not the actual GCC itself. Commissioner Altmaier stated that could be helpful in developing a compromise position. Ms. Belfi stated that after listening to Mr. Schrader and others, what she would really like to do as a regulator is eventually let her largest entities to be completing the GCC only and originally was in the camp of the ORSA threshold. However, after thinking about what Mr. Schrader said, she said she does not think it would be a bad idea to cast a wide net to take a one-time look at their group and learn about the risks of the group. Ms. Belfi stated the fact these groups do not complete an ORSA may be a reason to obtain the GCC at least once. Then going forward, if the GCC is not particularly helpful, they could be exempted.
Commissioner Altmaier stated there appears to be a consensus at least for those that provided their views, and while he expects discussions will need to continue, it would be helpful to first receive a written proposal. He requested NAIC staff to draft language where initially everyone should file the GCC, but lead states should have the discretion to exempt groups below the ORSA and international threshold, but for those that are exempted requiring a filing of the information from the inventory tab of the GCC. He stated ideally, information could be obtained on the number of groups affected, recognizing states’ resources are important. He stated future discussion on guardrails would be helpful as well. Stephen Broadie (American Property Casualty Insurance Association—APCIA) stated the APCIA supports an ORSA threshold and will continue to do so and listen with interest. He suggested the Working Group note that it would be difficult to revise the exemptions given the Working Group is considering putting the exemptions in the *Insurance Holding Company System Regulatory Act* (#440). Commissioner Altmaier agreed and noted they would be sensitive to that fact.

b. **Accept the RBC Ratio as the GCC for a Top-Tiered RBC Filer**

Commissioner Altmaier noted that for this issue, there was dovetail with the GCC Instructions. Therefore, he said he would like to postpone this discussion until after the exposure period on the GCC Instructions ends in the second half of July.

c. **Accept the RBC Ratio as the GCC for a Top-Tiered RBC Filer**

Commissioner Altmaier stated the Working Group has discussed this issue in the past and has generally stated it would not be in favor of any duplicative regulatory requirements and be open to not requiring the GCC for groups that are required to complete the building block approach (BAA) and file with the Federal Reserve. He stated that if states can obtain a copy of the BBA, he recalls this being the past position. Mr. Boerner agreed with the statements by Commissioner Altmaier. Mr. Schrader stated that until state insurance regulators see what the BBA looks like, there may still be some value of obtaining a listing of entities and related financial information for these groups like the recommendation made for smaller groups as previously made by Ms. Berry. Mariana Gomez-Vock (American Council of Life Insurers—ACLI) stated the ACLI strongly supports this recommendation. She stated the BBA has a similar schedule as the Inventory and other Federal Reserve forms and was quite extensive. Dale Berry (TIAA) indicated the TIAA supports the recommendation and stated he does not believe there is much daylight between the GCC and the BBA. Ms. Belfi stated that it might be helpful for NAIC staff to provide a comparison between the GCC and the BBA.

d. **Reciprocal or Qualified Jurisdictions**

Joseph Sieverling (Reinsurance Association of America—RAA) stated that the RAA supports this exemption because it supports the premise that groups should be subject to a single group capital measure per their group-wide supervisor. Andrew Vedder (Northwestern Mutual) stated that Northwestern Mutual, along with New York Life and Travelers, are generally supportive of this exemption but had some nuances—specifically, looking at the ORSA allowance to make available comparable information that is available to the insurance group to make sure the lead state has the relevant information, which is consistent with the approach being taken by the Working Group on the BBA. He stated under 4(L)2C, the definition of a reciprocal jurisdiction currently does not exempt U.S. groups, and this could be fixed by inserting non-U.S. before group-wide supervisor. Ian Adamczyk (Prudential Financial) stated Prudential Financial’s position is nuanced. He said while it supports the one group and one group standard, Prudential Financial views that from the perspective of applying that exemption at the worldwide level and does not believe the exemption should extend to U.S. subgroups of foreign-based insurers with U.S. subgroups. He summarized the points from Prudential Financial’s comment letter on this subgroup. Kim Welch (Reinsurance Group of America—RGA) stated RGA agrees with the principle of one group capital measure per one group-wide supervisor but that it disagrees with the concept of subgroup reporting. She stated that while the issue is hypothetical now, RGA sees it as a real possibility, and it is concerned that the current wording does not allow a determination of reciprocity. She discussed the need for U.S. regulators to have leverage to encourage reciprocity. She also stated RGA has concerns with the reciprocity in the qualified jurisdictions being limited to reinsurance and, therefore, the exemption should be limited to reciprocal jurisdictions. Matthew Wulf (Swiss Reinsurance Group) stated Swiss Reinsurance Group does not agree with Prudential and whether those concerns come into play, not to mention the difficulty of drawing a box around companies for U.S. subgroups.
Mr. Rehagen stated he believes reciprocity is a very important issue and thinks this is something the Working Group should consider.

e. **Unintended Exemptions**

Ms. Gomez-Vock stated she believes the conversation, as well as the current draft, may have addressed this issue. She did, however, describe how at some point in time it might be helpful to have a memorandum that describes each of the exemptions and the rationale for each.

f. **Commissioner Discretion Concern**

Commissioner Altmaier noted that this issue may have already been raised and asked if there were additional issues that required further discussion at this time. Mr. Sieverling stated he believes Commissioner Altmaier already covered this but noted that if the focus was on either scoping groups out of the calculation, that would make things easier but certainly being more specific on the criteria is what would be needed. Mr. Broadie agreed with Mr. Sieverling.

g. **Commissioner Discretion Concern**

Commissioner Altmaier discussed the importance of this issue and how it is a driving force behind embedding the GCC into a model law. He stated one comment suggested the need to address the confidentiality of the BBA if filed with the lead state, and he said he believes this is a fair comment. He asked Ms. Gomez-Vock if the ACLI could send language to NAIC staff for further consideration. He noted America’s Health Insurance Plans (AHIP) seemed to suggest the current language seems to allow the sharing of the GCC with the International Association of Insurance Supervisors (IAIS). It was noted this would be taken up on a future conference call. Commissioner Altmaier also noted Prudential made some comments. Mr. Adamczyk summarized some of Prudential’s concerns taken from its comment letter. There was no reaction from Working Group members on these comments.

2. **Discussed Other Matters**

Commissioner Altmaier indicated NAIC staff had drafted a Frequently Asked Questions (FAQ) document and for individuals to be aware it will be posted. He also indicated that NAIC staff was intending to hold a webinar to those wishing to participate in understanding how the GCC is intended to work; it would not be an official meeting of the Working Group.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.

RE: Draft Memorandum from the Chair of the Group Capital Calculation (E) Working Group to the Chair of the Group Solvency Issues (E) Working Group

Commissioner Altmaier:

State Farm Mutual® Automobile Insurance Company and its affiliates ("State Farm"), appreciate the opportunity to submit these comments concerning the Draft Memorandum ("Draft Memo") from the Group Capital Calculation (E) Working Group (the "Working Group") to the Chair of the Group Solvency Issues (E) Working Group ("GSI"), Mr. Justin Schrader (NE). The Working Group is charged with constructing a U.S. group capital calculation (the "GCC") using a risk-based capital ("RBC") aggregation approach.

The stated purpose of the Draft Memo is to seek assistance from the GSI in drafting changes to existing National Association of Insurance Commissioners ("NAIC") model laws. The noted needed changes are to create a requirement that the GCC be completed annually and that confidentiality be provided. To that end the Draft Memo makes the following suggested changes to two different sections of NAIC’s Holding Company Act, Model #440:

Section 4

- Require a new item “M” that requires submission of an annual GCC to the lead state regulator (like Item L Enterprise Risk Filing) through a new Form G filing required by the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450).

- Specify the following entities as being exempt from the GCC:
  - Small mutual insurance companies (similar to the exemption in the Annual Financial Reporting Model Regulation (#205)).
  - Groups required to file with the U.S. Federal Reserve, but separately require that such groups provide a copy of the filing with the Federal Reserve to file to the lead state.
  - Groups for which the group-wide supervisor is a reciprocal or qualified jurisdiction per the Credit for Reinsurance Model Law (#785).
• Group not considered a reciprocal or qualified jurisdiction but for which the group-wide supervisor: i) accepts the GCC for any U.S. insurance group; or ii) recognizes the GCC as an acceptable international capital standard to the International Association of Insurance Supervisors (IAIS); and iii) has been sponsored by an accredited lead-state.

• With respect to the exemptions, the model should provide the lead state commissioner the authority to require the GCC of any group otherwise determined to be exempt, like the language in the Own Risk and Solvency Assessment (ORSA). Also, with respect to a company previously exempt, the model should provide appropriate transition guidance.

Section 8.1
• Confidentiality language consistent with that recommended by a comment letter directed to the Working Group from the Coalition (see attached) which, among other things, prohibits the filing of the report with the NAIC unless supported by a confidentiality agreement (similar to the Risk Management and Own Risk and Solvency Assessment Model Act [#505]).

State Farm appreciates the effort and transparency the Working Group has utilized in developing the GCC. State Farm participated as a volunteer group and provided feedback as to the GCC calculation and its supporting informational elements during its development. State Farm understands that the GCC provides an evaluation tool for domestic regulators to consider along with various other risk information provided by groups such as the ORSA Report filing.

However, State Farm is concerned that the Draft Memo should include additional exemptions and recognitions. As noted above, State Farm participated as a volunteer company with the development of the GCC, but it also participated in the Qualitative Impact Study (“QIS”) on the U.S. Federal Reserve Notice of Proposed Rulemaking (“NPR”) concerning its development of group capital calculation and corresponding capital requirements. State Farm notes that the calculation of the NPR is very similar to the GCC and both generated very similar results for State Farm. This similarly was by design as noted by the NAIC President’s opening remarks at the Fall 2019 meeting.1

State Farm noted that the similarity in results is due to the basis of the calculations that start with an aggregation method based on the Risk Based Capital (“RBC”) calculation for insurers, the assets and liabilities being measured are predominately derived by the business of insurance and the parent of the holding company is itself a regulated insurance entity. In fact, the NPR, GCC, as well as the RBC, generate substantially the same ratio results. State Farm asserts if the

Working Group is suggesting that groups filing with the Federal Reserve or other equivalent regulatory schemes should be exempt, that a similar exemption should be included for groups when the expected results of the GCC are similar to the RBC for a regulated insurer parent of a group that predominately derives its assets and liabilities from the business of insurance as it is another equivalent regulatory framework used by regulators.

State Farm appreciates the Working Group recognizing the duplicative effort and willingness to utilize other equivalent regulatory processes and information. In the case of State Farm, and other similarly situated groups, it should be recognized that State Farm Mutual Automobile Insurance Company’s (“State Farm Mutual”) RBC provides equivalent regulatory information that should be accepted in lieu of the GCC. State Farm Mutual’s RBC rolls up the assets and liabilities of its affiliates and subsidiaries utilizing the same aggregate approach after which the GCC is modeled, with only those non-insurance entities receiving a slightly different scaled calculation in the GCC that makes up less than a few percentage points of State Farm’s overall assets and liabilities. As a result of the assets and liabilities being so heavily based on the business of insurance, the results of the GCC are not significantly different than the RBC. The result was expected by the Working Group and State Farm, and unsurprisingly, the Federal Reserve also expected the NPR, under the similar aggregation method, would produce near the same result as the RBC for State Farm Mutual.

The domestic regulator that manages the solvency of the entities that make up such a group, which receives an abundance of financial information such as receiving quarterly and annual financial statements, holding company filings, ORSA, Form F and individual legal entity RBC calculations, is in the best position to determine if such exemption is appropriate. This is especially true when the group is predominately conducting the business of insurance. Furthermore, as proposed in the Draft Memo, the domestic regulator will have the ability to require a group to complete the GCC regardless of the exemption. Groups should not be required to complete the GCC for the sake of uniformity especially when the proposal is already exempting groups for the various stated reasons and when completion of the GCC does not provide any additional insight to the domestic regulator who is charged with the responsibility to regulate solvency.

The GCC is requesting information that the domestic regulator already receives or has access to if the domestic regulator deems it necessary to evaluate the risk of the group. State Farm is not aware of any specific information contained in the GCC that is not already available to its domestic regulators and does not believe that the GCC needs to apply to State Farm, or any other group, for that purpose. The domestic regulator has information on financial institutions it does not regulate, such as State Farm Bank, as a result of Supervisory Colleges and through the provisions of the Holding Company Act.
Since the Working Group is willing to exempt a group on the basis of its filing with the Federal Reserve presumably being deemed equivalent to the GCC as well as the other stated exemptions, the Working Group should not argue against an exemption for a group, such as State Farm, for the reason that the GCC provides new information. There is no new information provided in the GCC that is not already provided to the domestic regulator and, if there is any information not already provided, it most likely pertains to an immaterial aspect of the group that is mainly an insurance business.

State Farm is concerned that the GCC may be needlessly applied to State Farm and other similarly situated insurers for the purported purpose of satisfying an international regulatory standard and Covered Agreement. State Farm does not believe that uniform application of the GCC is necessary when such groups are not internationally active and there is an equivalent regulatory tool. A group like State Farm should not have to pass along the costs to its policyholders as a result of a uniform application of the GCC so that internationally active groups are not confronted with dual regulation. The presumed driver of this is the Covered Agreement, however, State Farm is not aware that the Covered Agreement requires the uniform application and suggests that for those internationally active groups that desire to be regulated under a single regulator that those groups can opt into completing the GCC.

State Farm urges the Working Group to include a stated exemption for a group when that group’s parent is a regulated insurance company that files under the Risk Based Capital provisions with an accredited lead state by amending the Draft Memo to include the following language in the suggested changes to Section 4 of Model #440:

Specify the following entities as being exempt from the GCC:

Groups required to file with the U.S. Federal Reserve an equivalent group solvency calculation, but separately require that such groups provide a copy of the filing with the Federal Reserve to file to the lead state; or a group when that group’s parent is regulated insurance company that files under the Risk Based Capital provisions with an accredited lead state.

---

As an alternative to an explicit exemption as suggested above, State Farm requests that the Working Group amend the Draft Memo to include generic authority to exempt a group from filing the GCC similar to the ORSA provision of Model #505 which provides:

D. An insurer that does not qualify for exemption pursuant to subsection A may apply to the commissioner for a waiver from the requirements of this Act based upon unique circumstances. In deciding whether to grant the insurer's request for waiver, the commissioner may consider the type and volume of business written, ownership and organizational structure, and any other factor the commissioner considers relevant to the insurer or insurance group of which the insurer is a member. If the insurer is part of an insurance group with insurers domiciled in more than one state, the commissioner shall coordinate with the lead state commissioner and with the other domiciliary commissioners in considering whether to grant the insurer's request for a waiver.

This would allow the domestic regulator to determine the need for a group to complete the GCC on a case by case basis and for any number of reasons. Adding such a provision also is balanced in that the Working Group in the Draft Memo is already suggesting that Section 4 include the ORSA provision to require a group to complete the GCC regardless of whether that group otherwise is exempted.

Finally, State Farm would like to take this opportunity to comment on the GCC calculation process. State Farm urges the Working Group to limit the “destacking” of entities within the GCC when entities are subsidiaries of RBC filing insurance companies. This dramatically reduces the burden in completing the GCC, especially for more streamlined organizations. In addition, State Farm requests that the Working Group consider a materiality threshold in the requirements to reduce the burden of including entities that do not impact the overall GCC result.

If the GSI proposes amendments to the NAIC’s Holding Company Act, Model #440, State Farm will comment more fully on the language of that proposal.

Thank you for your time and consideration in this project and to our comments. If there are any questions concerning the comments, please contact me.

Sincerely,

Chuck Feinen

Re: Draft Letter to Chair of the Group Solvency Issues (E) Working Group  
Regarding Confidentiality of Group Capital Calculation

Dear Mr. Daveline:

Teachers Insurance and Annuity Association of America (“TIAA”) appreciates the opportunity to submit the following comments in response to the draft letter (the “Draft Letter”) from the Chair of the National Association of Insurance Commissioners’ (“NAIC”) Group Capital Calculation (E) Working Group (the “GCC Working Group”) to the Chair of the NAIC Group Solvency Issues (E) Working Group regarding the confidentiality of the proposed group capital calculation (“GCC”).¹ Below, we provide our thoughts in response to certain sections of the Draft Letter. We hope that our ideas and suggestions will assist the NAIC as it considers revising its Insurance Holding Company System Regulatory Act (#440) (“Model #440”).

About TIAA

Founded in 1918, TIAA is a life insurance company and the leading provider of retirement and financial services for those in academic, research, medical, and cultural fields. Over our century-long history, TIAA’s mission has always been to aid and strengthen the institutions and participants we serve and to provide life insurance and other financial products that meet their needs. To carry out this mission, we have evolved to include a range of financial services, including asset management and retail services. Today, TIAA manages over $1

trillion in assets, and our investment model and long-term approach aim to benefit the five million retirement plan participants we serve across more than 15,000 institutions. With our strong nonprofit heritage, we remain committed to the mission we embarked on in 1918 of serving the financial needs of those who serve the greater good.

**TIAA supports the proposed exemption for groups required to file with the Federal Reserve.**

The Draft Letter proposes that groups required to file with the Board of Governors of the Federal Reserve System (the “Federal Reserve”) be exempt from the requirement to file an annual GCC (as a prospective Form G or other filing), so long as they are separately required to provide a copy of their Federal Reserve capital requirement filings to their lead state regulator. TIAA strongly supports this proposed exemption. TIAA is subject to regulation and supervision by the Federal Reserve as a savings-and-loan holding company significantly engaged in the business of insurance (an “Insurance SLHC”). As the NAIC is aware, the Federal Reserve recently proposed capital requirements that are designed specifically for Insurance SLHCs, which we expect will be finalized later this year. The Federal Reserve’s proposed approach would construct “building blocks,” or groups of entities in the Insurance SLHC’s organization that are covered under the same capital framework, to calculate an entity’s combined, enterprise-level available capital and capital requirement. The Federal Reserve has also proposed a capital conservation buffer that Insurance SLHCs must meet to avoid certain restrictions in addition to the minimum capital requirement.

We believe the Federal Reserve’s proposed approach is not only appropriately tailored to the unique business model of insurers but also generally consistent with the approach and requirements of the GCC. As such, we think it is appropriate for Insurance SLHCs like TIAA and other groups required to file with the Federal Reserve to be exempt from the annual GCC filing requirement, so long as such entities provide a copy of their Federal Reserve capital requirement submission to their lead state regulator. This approach would ensure that Federal Reserve-supervised insurance companies are covered under a sufficiently stringent enterprise-wise capital framework (with sufficient line of sight for their state regulators), but are not subject to a needlessly duplicative regulatory regime under the GCC.

**TIAA supports the proposed addition of confidentiality language to Model #440.**

The Draft Letter proposes to include in Model #440 GCC-specific confidentiality language consistent with the NAIC’s Own Risk and Solvency Assessment (“ORSA”) confidentiality language, as set forth in the *Risk Management and Own Risk & Solvency Assessment*

---

2 Data are as of September 30, 2019.
Model Act ("Model #505"). This proposal echoes a recommendation made in a comment letter regarding GCC confidentiality directed to the GCC Working Group from a coalition of ten companies. TIAA supports the addition of the proposed confidentiality language. We believe entities’ GCC information, including any Federal Reserve capital requirement submissions to lead state regulators, should receive the highest level of confidential treatment, and should not be disclosed by the NAIC or any other entity for any non-regulatory purpose. For this reason, we believe that adding broad confidentiality provisions to Model #440, including provisions that would prevent public disclosure of any entity’s GCC filings, would be appropriate. We encourage the NAIC to adopt the approach recommended by the Coalition to ensure that sensitive GCC information is adequately protected.

Conclusion

TIAA commends the GCC Working Group for its focus on these issues, and we appreciate the opportunity to comment on the Draft Letter. We hope our suggestions above prove helpful as the NAIC continues working to formulate a robust GCC framework. We would welcome the opportunity to engage further on any aspects of this letter.

Sincerely,

Bret C. Hester

RE: Comments on Group Capital Calculation Referral Letter

Dear Messrs. Altmaier and Daveline:

The Reinsurance Association of America (RAA), headquartered in Washington, D.C., is the leading trade association of property and casualty reinsurers doing business in the United States. The RAA is committed to promoting a regulatory environment that ensures the industry remains globally competitive and financially robust. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross border basis.

The RAA appreciates the opportunity to comment on the draft Group Capital Calculation (GCC) referral letter to the Group Solvency Issues Working Group regarding the scope of application of the GCC, confidentiality protections and establishing the regulatory authority to require annual GCC filings. We agree that the insurance holding company act and regulation (NAIC Models 440 and 450) are the appropriate locations to incorporate the regulatory authority and guidance for annual GCC reporting.

Scope Exemptions:  
The RAA’s longstanding position on group capital measures is centered on the premise that insurance groups should only be subject to a single group capital measure and only be subject to group supervision administered by their global group-wide supervisor. An important corollary to this position is that insurance groups should not be subject to multiple group capital measures and related requirements applied extraterritorially, whether they involve U.S. based multinational insurance groups or Non-U.S. groups with operations in the United States. This position appears broadly held as it was a central theme in the coalition of U.S. insurance trades’ comments on the NAIC’s August 7, 2018 Scope of Group Testing Memorandum.
Viewed through this prism, the RAA supports the scope exemption proposals outlined in the draft referral letter, subject to the following suggestions or clarifications:

- We support an exemption for small groups but believe the $1M annual premium threshold referenced from NAIC model #205 is too low. While it is important that nearly all insurance entities have annual statutory audits, requiring a GCC for all these groups appears unnecessary and overly burdensome. The coalition of trades suggested in 2018 that a better exemption threshold would be the ORSA standard, which is $1B in annual premium. The RAA still supports an ORSA based threshold, but if the NAIC determines that this threshold is too high, we suggest it consider adopting a threshold such as the $500M threshold used in section 17 of model #205 regarding Management’s Report of Internal Control over Financial Reporting. The NAIC/AICPA working group annually monitors this threshold, which currently encompasses over 93% of U.S. gross premium.

- We support the proposed exemption for groups regulated by the Federal Reserve because it would avoid duplicative group capital filing requirements.

- We support the proposed exemptions for groups domiciled in a reciprocal or qualified jurisdiction under the Credit for Reinsurance Model Law and for groups supervised by jurisdictions that recognize the GCC as an acceptable international capital standard comparable with the ICS. This proposal is essentially identical to the industry position outlined in the August 2018 trade coalition letter on scope issues.

**Commissioner Discretion:**

The RAA is concerned that the proposal to grant commissioner discretion to require the GCC for insurance groups otherwise exempt could be too broad. The language in the referral letter refers to ORSA guidance, but that guidance is expansive. The ORSA guidance manual lists several very general factors as examples that could justify an otherwise exempt entity having to file an ORSA, but the judgment ultimately depends on “unique circumstances” that are undefined. The ORSA model #505, provides better and more specific examples such as triggering an RBC action level or being deemed to be in hazardous financial condition, but these are only examples used within a context of broad commissioner discretion.

The RAA believes that any provision for commissioner discretion to disregard the scope exceptions to the GCC described above should be both distinct and limited. The exercise of broad commissioner discretion in this regard could violate the terms of the US/EU Covered Agreement, which provides relatively narrow exceptions for Host supervisors to impose group solvency requirements on Home party insurance or reinsurance groups. Recognizing that the discretion granted in the covered agreement applies to both parties, it follows that states should prefer provisions that limit any potential application of multiple capital requirements to insurance groups, since they would affect U.S. based groups as well.

Except for narrow circumstances relating to identifiable solvency concerns, each insurance group should be subject to only one group capital requirement and only the single group-wide supervisor should require a group capital measurement. Foreign supervised insurance groups should generally be exempt from the GCC and U.S.-based insurance groups should be accorded reciprocal treatment in non-U.S. jurisdictions.
Confidentiality:
The RAA supports strong confidentiality protections to prevent disclosure of GCC results. Such protections should be both explicit and robust and should preclude disclosure of any group’s GCC outside the regulatory community, whether by regulators, their consultants or by insurance groups themselves. We reviewed the July 30, 2019 “confidentiality coalition” letter referenced in the referral memorandum and broadly agree with their recommended revisions to Section 8 of NAIC Model #440.

Thank you for the opportunity to provide these comments. We look forward to continued discussion of these issues at future working group meetings.

Sincerely,

[Signature]

Re: “Confidentiality of Group Capital Calculation” Memorandum

Dear Commissioner Altmaier:

A coalition of 16 companies (Athene Holding Ltd., Brighthouse Financial, CNO Financial, Genworth Financial, Global Atlantic Financial Group, Hannover Life Reassurance Company of America, Jackson National Life Insurance, Lincoln Financial Group, National Life Group, Ohio National, Principal Financial Group, Protective Life, Reinsurance Group of America, Sammons Financial Group, Standard Insurance Company/StanCorp Financial Group, and Transamerica; collectively, the “Coalition”) appreciates the opportunity to respond to the memorandum (the “Memorandum”) from the Chair of the Group Capital Calculation (GCC) Working Group (GCCWG) to the Chair of the Group Solvency Issues Working Group (GSIWG), regarding “Confidentiality of Group Capital Calculation.” The Coalition’s primary purpose is to advocate for the creation of a GCC that is faithful to domestic state legal entity rules.

In its Memorandum, the GCCWG states that it seeks assistance from the GSIWG to open the Insurance Holding Company System Regulatory Act (#440) (the “Holding Company Act”) so that “confidentiality protection and other legal authorities needed for the GCC” can be incorporated into the Holding Company Act. The Coalition agrees that statutory authority is necessary to govern the confidentiality and scope (and potentially other facets) of the GCC, and that the use of the Holding Company Act is appropriate for this purpose.

The Coalition does not have a collective view on issues relating to scope, but scope is of interest to many Coalition companies, and individual companies may separately provide comments on the topic. Regarding confidentiality, we appreciate that Commissioner Altmaier’s Memorandum suggests to the GSIWG that the starting point for GCC confidentiality-related Holding Company Act amendments be the Coalition letter of July 30, 2019. As set forth in that letter, the Coalition believes that individual group GCCs be subject to the most robust confidentiality protection allowed by law. This would include prohibiting companies from disclosing their own GCC results, because doing so will help alleviate some of the competitive playing field issues that the GCC could create. We refer the GCCWG to the Coalition letter of July 30 for a comprehensive discussion of why such a high level of confidentiality would be needed for GCC results and for suggested amendments to the Holding Company Act to cover the confidentiality issue.

We also note that the NAIC’s accreditation standards require states to adopt the Holding Company Act in substantially similar form to the Model itself. Thus, in amending the Holding Company Act, the Coalition urges the NAIC to ensure that all of the due process
protections surrounding the adoption of accreditation standards are applied to GCC-related Holding Company Act changes.

Finally, the Coalition would oppose any effort to amend the Holding Company Act such that the GCC would be permitted to deviate from state legal entity rules, particularly with respect to the issue of “on-top adjustments” to statutory capital where such capital is included in an insurance company’s RBC. It is the Coalition’s firm belief that it would be inappropriate for the GCC to deviate from legal entity rules, when such rules have been considered and passed by the NAIC with all necessary due process protections, and relied upon by many insurance companies in making now virtually irreversible capital deployment decisions. Our objection to permitting the GCC to deviate from legal entity rules includes not only to draft model law/model regulation language, but also to any guidance manual or similar NAIC document that would instruct groups as to how to complete the GCC.

The Coalition thanks the GCCWG for permitting us to comment on the Memorandum, and remains available to answer any questions that the GCCWG may have.

Re: GCC - Draft Memo on Confidentiality and Exemptions

Commissioner Altmaier:

We appreciate the opportunity to comment on your draft memo (the “Memo”) on behalf of the Group Capital Calculation (E) Working Group (“GCCWG”) addressed to the Chair of the Group Solvency Issues (E) Working Group regarding potential exemptions from the GCC requirement and confidentiality of GCC reporting.

We continue to support the NAIC’s development of a group capital calculation (“GCC”). We believe that the calculation, if designed appropriately, will provide a useful supervisory tool to assist lead states in analyzing the financial condition of insurance groups by complementing entity-based solvency requirements.

Our primary purpose in writing today is to address the Memo’s proposal on how to identify insurance groups that will be exempt from the GCC (i.e., those that will be outside the “scope of application” of the GCC). As we have observed in prior comments, the scope of application should be a function of the purpose that the GCC is expected to serve. The NAIC’s GCC proposal document as of December 7, 2019, references the need to provide a consistent and coherent analytical framework to better understand an insurance group’s financial risk profile for the purpose of enhancing protection of policyholders. The scope of application should be sufficiently broad such that this need is met, while at the same time avoiding unnecessary burdens for groups for which this perspective would not provide a supervisory benefit or would be duplicative of tools already available to state insurance regulators.

As we have previously commented, to the extent limits are placed on the scope of application, we believe these should align with other risk focused regulatory tools such as the Own Risk and Solvency Assessment (the “ORSA”). Doing so would ensure consistency across risk focused regulatory tools, provide enhanced insight into risk across a material portion of the U.S.
insurance market rather than a narrow subset of it, and maintain a level regulatory playing field for the industry.

With that background, we are generally supportive of the exemptions proposed in the Memo. We believe the exemptions could be improved, however, through better alignment with the concepts embodied in the Risk Management and Own Risk and Solvency Assessment Model Act (#505) and in the NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual. First, the ORSA exemption for small companies sets a higher size threshold than that proposed in the Memo. The ORSA threshold may strike a better baseline balance between cost and benefit for the use of available state insurance regulatory and insurer resources. Second, ORSA provides that an insurer may comply with the reporting requirement by submitting a report including comparable information that is submitted to a supervisor or regulator of a foreign jurisdiction. This concept may be implied within the third and fourth bullets of the GCC exemption mechanism, but it may be desirable to fully articulate this in order to ensure that state insurance regulators have access to relevant group capital results applicable to the insurers that they regulate. Lastly, we support the provision in the Memo that gives the lead state commissioner the authority to require the GCC reporting of any group otherwise determined to be exempt, the same as the provision in the ORSA requirement.

We also note that the definition of “Reciprocal Jurisdiction” per the Credit for Reinsurance Model Law (#785) includes a U.S. jurisdiction that meets NAIC accreditation standards. We believe this reference is unintentional and would not be the basis for an exemption from the GCC; however, if it was intended to be included, additional explanation is needed to better understand the intent.

On the secondary issue, i.e., confidentiality of GCC reporting, now that the mechanism for establishing the GCC requirement has been confirmed, we do not object to the confidentiality treatment proposed by the Memo. That said, if it is desirable from a regulatory perspective for the NAIC to align the GCC confidentiality language to better match the terms of existing confidentiality language, our first preference would be the language used within the ORSA requirement and secondarily, the Holding Company Model Law.

RE: NAMIC Comments on Draft Memorandum to the Group Solvency Issues (E) Working Group from the Group Capital Calculation (E) Working Group Requesting Assistance on Drafting and Adopting Changes to NAIC Models

Dear Mr. Altmaier:

The following comments are submitted on behalf of the member companies of the National Association of Mutual Insurance Companies regarding the draft memorandum to the Group Solvency Issues Working Group that was made public on January 8. The memorandum serves as a request for assistance from the GSIWG in drafting and adopting needed changes to the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation (#450). We appreciate the opportunity to provide comments and to participate in discussions that will ultimately lead to the development and adoption of an insurance group capital assessment tool.

The changes currently contemplated and communicated in the memorandum would be to both Model #440 and #450, including adding a new filing requirement - an annual GCC report – to be filed by the ultimate controlling parent with the lead state regulator. This change will involve a similar process to what the NAIC did in 2010 when they added the annual enterprise risk report; that required a change to both Models, including adding a new filing form to Model #450. In this case, the memorandum recommends the addition of a Form G to collect GCC information. Additional changes contemplated by the working group to Model #440 include adding exemption criteria to determine who is required to file the GCC and amending the confidentiality section so that it is similar to the language included in the Risk Management and Own Risk and Solvency Assessment Model Act (#505).

1 NAMIC is the largest property/casualty insurance trade association in the country, with more than 1,400-member companies representing 39 percent of the total market. NAMIC supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies serve more than 170 million policyholders and write more than $230 billion in annual premiums. Our members account for 54 percent of homeowners, 43 percent of automobile, and 32 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
NAMIC members are supportive of amending both Model #440 and #450 as a means to provide exemptions based on certain criteria and to include strong confidentiality protection for documents, communications, and workpapers (created or received by regulators) used for the production of the GCC. However, we have significant concerns with the exemption criteria recommendation and suggest amending the memorandum before it is sent to the GSIWG. While we appreciate the thought given to exempting companies that may have to comply with more than one capital aggregation approach and companies of the very smallest size, NAMIC would suggest, as we have from the beginning of this project, for the NAIC to take a more proportional and principled approach to exemption criteria, similar to how other NAIC solvency models have incorporated these concepts. In addition to a size-threshold exemption similar to ORSA and the Model Audit Rule, NAMIC recommends that the lead-state regulator be allowed to accept the RBC results of a top-tier insurance regulated entity domiciled in their state if those results are substantially similar to expected GCC results. The remainder of our letter will go into more detail regarding our rational for these recommendations and will also provide other suggestions for the working group to consider.

Size-Related Exemption from Group Capital Calculation Reports

NAMIC recommends that small insurers – including those with less than $500 million in direct written premium – should be exempted from the proposed Group Capital Calculation Report (Form G) filing requirement. There is precedent for exempting small companies from the provisions of other NAIC models:

- The Risk Management Own Risk and Solvency Assessment model act exempts small companies (i.e., premium threshold of $500 million for individual insurers or $1 billion for an insurance group).

- The Model Audit Rule exempts insurers with less than $500 million of annual direct written and assumed premium from the requirement that they file a Management Report of Internal Control over Financial Reporting.

Small insurers are being treated to one-size fits all regulatory requirements related to many different NAIC models. The ERR (Form F) is just one of the many requirements that does not balance the cost vs. the benefit for small insurers. Further, the Corporate Governance Annual Disclosure provides no distinction to the size of insurer and requires corporate governance information for companies of all sizes. Each new requirement, filing, or report adds to the expense of providing insurance products. This added expense impacts small companies disproportionately. Mutual insurers feel a particular responsibility to their customers to do everything they can to make policymakers aware of the expense impact of each new requirement. Both the ERR and CGAD, along with RBC, help regulators assess the risk within an organization. Adding a new GCC filing form on top of the existing Form F will be viewed as duplicative for these smaller groups and others, as the purpose of both tools is to help regulators assess the risks coming from other non-insurance organizations within a groups’ structure.

It is important to understand that while any new requirement presents potential concerns and uncertainty for all companies, larger companies employ full-time legal, internal audit, accounting, finance, and enterprise risk management staff. There will
still be a cost for these large companies as there is for any new form requirement, but without a doubt, the cost of compliance and accuracy is a higher percentage of annual revenue for small companies. NAMIC strongly feels that proportionality needs to be part of the discussion when deciding on exemption criteria. Given that, NAMIC recommends modifying the second bullet in the draft memorandum regarding Section 4 to read:

Small mutual insurance companies that have annual direct written and unaffiliated assumed premiums of less than $500,000,000 for individual insurers or $1 billion for an insurance group (excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program) (similar to the exemption in the Annual Financial Reporting Model Regulation (#505)).

Accept Ultimate Controlling Parent RBC if GCC Expected Results are Similar

The primary purpose of the GCC is to help regulators understand large and complex groups. NAMIC members have long held the view that where the ultimate controlling parent is an underwriting company that directly or indirectly owns or controls all of the other entities within the group, that the annual RBC report of the UCP should be an acceptable alternative to reporting a GCC. NAMIC members that have participated in field-testing exercises where the top-tier entity is an insurance underwriter that files RBC have concluded that annual RBC is substantially similar to the expected results of the GCC.

As we’ve stated in our comment letter to the Federal Reserve on their Building Block Approach to group capital, U.S. RBC for a top-tier insurance underwriting holding company is a proxy for consolidation. For a top-tier insurance underwriting holding company, all the activities and investments made, including in any subsidiary insurers are rolled up into the parent’s insurance RBC calculation. The existing insurance RBC formula already incorporates necessary adjustments for inter-affiliate transactions, such as capital invested in a subsidiary by the parent; thus, the top-tier insurance underwriting holding company RBC is, in effect a consolidated view of the group’s capital position. For these reasons, NAMIC believes the draft memorandum should be amended to include language that would exempt an UCP that is an RBC filer from having to file an annual GCC report. In lieu of requiring an annual GCC report, the lead-state regulator would accept the group’s annual RBC, as these results would be substantially similar to the expected results of a GCC.

In consideration of including language around exempting an UCP that is an RBC filer, NAMIC recommends that an additional bullet be added to the list of entities exempt from the GCC in the draft memorandum:

The model should provide flexibility to accept annual RBC where the ultimate controlling parent is an underwriting company, as the expected results of the GCC would be substantially similar to RBC in lieu of requiring an annual GCC report.
Confidentiality

NAMIC is supportive of modifying the confidentiality provisions within the HCA to mirror the language included in the ORSA model. Of particular importance is including language about documents, communications, and workpapers that have been created by or received by other regulators as part of the analysis of the GCC. Because the information that will be submitted to regulators will be used to analyze various stress scenarios and testing options, protecting any information that would be created by regulators and subsequently shared with other regulators in order to complete their analysis of the GCC is of utmost importance to NAMIC members.

Thank you for your consideration of these comments on this matter of importance to NAMIC, its member companies and their policyholders. If there are any questions, please feel free to contact me at 317-876-4206.

Sincerely,

Jonathan Rodgers

Commissioner David Altmaier, Chair
Group Capital Calculation (E) Working Group
National Association of Insurance Commissioners

Re: Referral Memorandum on Changes to the Insurance Holding Company Regulatory Act (#440)

Dear Commissioner Altmaier:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the Group Capital Calculation (E) Working Group’s referral memorandum regarding amendments to the Insurance Holding Company Regulatory Model Act (#440) to incorporate the Group Capital Calculation (GCC). APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

Exemption for Groups Subject to Another Group-Wide Capital Assessment

The referral memorandum specifies four classifications of groups to be exempt from the GCC. However, the memo also recommends that lead state commissioners have the authority to require the GCC of any group otherwise determined to be exempt. APCIA is concerned with the recommendation to grant commissioners the authority to require the GCC from exempt groups—particularly for groups that are already subject to a group-wide capital assessment. Insurers should not be required to comply with more than one group-wide capital measure. Groups subject to the Federal Reserve’s Building Block Approach (BBA), as well as insurers with a group-wide supervisor in a Reciprocal Jurisdiction outside the United States, should be, without exception, exempt from the GCC.

For groups required to file with the Federal Reserve, the exemption contemplated in the referral memorandum would require a copy to be filed with the lead state. Similarly, for insurers where the group-wide supervisor is a Reciprocal Jurisdiction under the Credit for Reinsurance Model Law, paragraph 10 of the August 2, 2019 GCC Field Testing Instructions specified conditions for a potential GCC exemption, including access to information for lead state regulators. Specifically, paragraph 10 of the field-test instructions provides the following:
After field testing a determination will be made as to whether a non-U.S. based group (a group with a non-U.S. group-wide supervisor) may be exempt from the GCC based on the following:

i. The non-U.S. based group is based in a Reciprocal Jurisdiction that recognizes the U.S. regulatory regime and accepts the GCC from U.S. based groups to satisfy the Reciprocal Jurisdiction’s group capital requirement;

ii. The non-U.S. Group-Wide Supervisor’s home jurisdiction requires a group capital calculation be applied at a level that includes the same (or substantially similar) Scope of Application as would otherwise be determined by the Lead State Regulator in the absence of this exemption; and

iii. The Lead State Regulator can obtain information from the foreign group’s Group-Wide Supervisor either through a Supervisory College or otherwise, that allows the Lead State Regulator to understand the financial condition of the group and complete the expectations of other states in its Group Profile Summary (GPS).

With the assurance that lead state regulators have access to group-wide information through the conditions provided above, or through BBA filings, an exception to the GCC exemptions is not necessary. Therefore, APCIA believes that groups subject to the BBA, as well as insurers with a group-wide supervisor in a Reciprocal Jurisdiction outside the United States, should be exempt from the GCC without exception.

**Exemption for Insurers Not Required to File an ORSA**

Furthermore, APCIA also recommends adding an exemption from the GCC for insurers that are not required to file an Own Risk and Solvency Assessment (ORSA). The referral memorandum only recommends an exemption for small mutual insurers, which is expected to be similar to the exemption for small insurers in the Annual Financial Reporting Model Regulation, with an annual threshold of $1 million in premium. However, we believe the exemption criteria set forth in the model law for the filing of an ORSA is more relevant in the context of the GCC, as the purpose of both the GCC and an ORSA is to provide a group-level perspective on insurers’ capital and risk. An exemption for insurers that do not file an ORSA would recognize proportionality in the application of supervisory measures, and it would allow regulators to focus resources on companies and the areas within companies that pose the most risk. Therefore, we recommend an exemption from the GCC for insurers that fall below the premium thresholds (i.e., less than $500 million of direct written premium by the insurer and less than $1 billion of direct written premium by the insurer’s group) in Section 6(A) of the Risk Management and Own Risk and Solvency Assessment Model Act as well as an exemption like that in Section 6(D), which can be granted by a commissioner “based upon unique circumstances.”

**Process for Considering GCC Design Decisions**

While the Working Group’s memorandum is in the form of a referral to the Group Solvency Issues (E) Working Group, it appears to contain some preliminary decisions on GCC design (such as the scope issues mentioned above). In September 2018, APCIA’s predecessor associations and four other industry associations (Joint Trades) filed a comment letter with the Working Group in which we discussed our recommendations on a number of open design issues. Other interested parties did the same. Rather than engage in public discussion and resolution of those comments at that time, the Working Group decided to leave them open during 2019 field testing. While we
understand the rationale for that decision, there has still been no public discussion of these issues, yet apparently some of them have been decided, at least on a tentative basis. We look forward to an opportunity to engage in more thorough discussion of these issues before further decisions are made about the final design of the GCC.

Thank you for considering the points addressed in this letter, and we continue to support NAIC staff and the Working Group in their successful development of the Group Capital Calculation.

Sincerely,

Stephen W. Broadie

Re: Group Capital Calculation (E) Working Group Exposure

Dear Commissioner Altmaier:

America’s Health Insurance Plans (AHIP) is pleased to comment on the Draft Memorandum that you propose to send in your capacity as Chair of the NAIC’s Group Capital Calculation (E) Working Group (GCCWG) to the chair of the NAIC’s Group Solvency Issues (E) Working Group. The Draft Memorandum concerns suggested amendments to the Insurance Holding Company Regulatory Model Act (#440) proposed by the GCCWG to implement the Group Capital Calculation (GCC).

AHIP’s comments pertain to several aspects of the suggestions in the Draft Memorandum, i.e., regarding confidentiality, exemptions, and process.

Confidentiality:

The Draft Memorandum suggests that “Confidentiality language consistent with that recommended by a comment letter directed to the Working Group from the Coalition which, among other things, prohibits the filing of the report with the NAIC unless supported by a confidentiality agreement (similar to the Risk Management and Own Risk and Solvency Assessment [ORSA] Model Act [#505]).” The Coalition’s letter of July 30, 2019 includes a redline of the confidentiality provisions in Section 8 of Model #440, and AHIP generally supports these redline changes. However, two additional adjustments are in order.

First, the language in Section 8.C(1) which appears to allow a group’s GCC to be shared with “international regulatory agencies” should be modified to prohibit sharing with the IAIS unless the group or insurer grants its consent.
Second, language should be added to the end of Section 8.C(4)(iii) as follows: “…and require the NAIC or third-party consultant to provide certification or other proof satisfactory to the insurer or group that all such materials are no longer stored and have been destroyed, deleted, returned, or otherwise rendered inaccessible.”

**Exemptions:**

The Draft Memorandum suggests several situations for which it is suggested that a group be exempt from filing the GCC with its lead state regulator. Some of those situations parallel recommendations made in the September 20, 2018 letter submitted to the GCCWG by AHIP together with the American Insurance Association and the Property Casualty Insurers Association of America (now merged as the American Property Casualty Insurance Association), Blue Cross Blue Shield Association, the National Association of Mutual Insurance Companies, and the Reinsurance Association of America (the “Joint Trade Letter”). However, there are some variances from the Joint Trade Letter as well. These similarities and differences are presented below, as they serve to frame AHIP’s current comments on the related text in the Draft Memorandum:

1. Group size exemption: The Joint Trade Letter supported exemption of a U.S.-based group from filing a GCC if the group is not required to file an ORSA with its Lead State Regulator, i.e., if the insurance group of which the insurer is a member has annual direct written and unaffiliated assumed premium including international direct and assumed premium, but excluding premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program, of less than $1 billion. The Draft Memorandum suggests an exemption only for small mutual insurance companies, citing the exemption in the Annual Financial Reporting Model Regulation (#205), which has a threshold of $1 million in such premiums.

AHIP is concerned about the apparent wide chasm between the views of many in industry as expressed in the Joint Trade Letter and of GCCWG members as to the apparent value to the regulatory process that could be gained by requiring a large number of small(er) insurance groups to file the GCC. AHIP again suggests that the GCCWG consider the ORSA-like threshold and, after gaining experience with the utility of the GCC from its experience with larger groups that are subject to ORSA, that the threshold might then be lowered to a level (but likely much greater than $1 million in annual premiums) to include more groups but nonetheless balances the cost and benefit/utility of the GCC to groups and regulators alike.

2. Mutual company exemption: The Joint Trade Letter proposed an exemption for U.S. groups where the Ultimate Controlling Party (UCP) is an underwriting company that directly or indirectly owns all of the other entities within the Broader Group. In such a situation the UCP could provide its Annual RBC report as an acceptable alternative to the GCC. This suggestion has apparently not been considered for inclusion in the Draft
Memorandum, and AHIP would like to understand the basis for that exclusion (see “Process”, below). AHIP notes that the suggested exemption, if permitted, would not only pertain to many mutual insurance companies, but also to other types of entities such as non-profit health plans, both of which are among AHIP’s membership.

3. Groups regulated by the Federal Reserve Board (FRB): The Draft Memorandum suggests that groups required to file with the FRB be exempt from filing the GCC with their lead state regulator, but that those groups be required to provide a copy of the filing with the FRB to the lead state. AHIP appreciates this suggestion, which is consistent with the Joint Trade Letter.

4. Foreign-based groups: The Draft Memorandum provides two situations for which it is suggested that a foreign-based group be exempt from filing the GCC:
   a. If it is a reciprocal or qualified jurisdiction per the Credit for Reinsurance Model Law (#785);
   b. Other groups for which the group-wide supervisor otherwise accepts the GCC for any U.S. insurance group or recognizes the GCC as an acceptable international capital standard to the International Association of Insurance Supervisors (IAIS), and has been sponsored by an accredited lead-state.

While this seems somewhat consistent with the Joint Trade Letter, there are some nuanced variances for which AHIP would appreciate a better understanding, e.g., the concept of being “sponsored by an accredited lead state” (see “Process”, below).

Process:

As mentioned previously, the Joint Trade Letter was submitted September 20, 2018, and was part of a series of exposures and comments from interested parties in 2018 leading up to the launch of GCC field testing in 2019. Despite the input sought by the GCCWG in 2018, and the numerous recommendations offered by Interested Parties, the GCCWG did not act to either adopt or reject many of those recommendations. Rather, the decision was made to leave those aspects open as options to be explored through field testing. With the 2019 field test exercise now completed, the open dialogue that might otherwise have occurred back in 2018 has still not occurred. However, the GCCWG Draft Memorandum appears to represent decisions (at least proposed decisions) that have since been made by the GCCWG in the absence of any related open dialogue with Interested Parties. In other written and oral submissions, recommendations were made on issues other than exemptions as well. This explains why AHIP looks forward to further policy-based discussions between regulators and Interested Parties before moving ahead with the memo to the GSIWG or other unresolved questions related to the GCC. We suggest those discussions could happen during the GCCWG meeting in Phoenix in March, and in subsequent conference calls as needed, but we would urge the Working Group to begin those discussions with an open exchange and inventory of pending issues, and an analysis of which can be answered now, and which must be further postponed due to lack of available information or other reasons.

* * * * *
AHIP appreciates this opportunity to comment and would be glad to address any questions you or other GCCWG members may have at your convenience.

Sincerely,

America’s Health Insurance Plans

Re: Exposure Memorandum addressing confidentiality and scope of the Group Capital Calculation

Dear Commissioner Altmaier,

The American Council of Life Insurers\(^1\) appreciates the opportunity to share our views on the NAIC Group Capital Calculation (E) Working Group’s exposed draft memorandum to the Group Solvency Issues (E) Working Group. The memo recommends updating the Insurance Holding Company System Regulatory Act (#440) to create the legal filing mechanism and confidentiality protections for the Group Capital Calculation (“GCC”).

i. Confidentiality

As noted in many of our past comments on the GCC, ACLI strongly supports robust confidentiality protections to guard against disclosure of GCC results. The NAIC has historically acknowledged and recognized the potential for the misuse of certain regulatory filings like non-public RBC reports or plans by limiting the ability of companies or state insurance regulators to disclose these reports. The GCC, as contemplated by the NAIC, will be a regulatory tool that helps state insurance regulators “better understand an insurance group’s financial risk profile for the purpose of enhancing policyholder protections.” A high degree of regulatory acumen will likely be necessary to ensure that the results, and the nuances contained within them, are understood in the appropriate context. As such, we appreciate the NAIC’s apparent commitment to strong confidentiality protections for GCC data and results.

One area that may require additional consideration is protecting the confidentiality of reports and results submitted by holding companies regulated by the Federal Reserve Board (the “Board”). Nonpublic information submitted to the Board must be subject to similar confidentiality protections as GCC data and results.

ii. “Small mutual holding company” exemption

ACLI supports an exemption for small companies and groups, but we believe the Working Group should increase the proposed threshold. The memo proposes an exemption for “small mutual insurance companies” with less than $1,000,000 in annual premium and fewer than 1,000 policy or contract holders. We believe that a GCC small-company/group exemption level that mirrors the thresholds used in the Own Risk and Solvency Assessment (“ORSA”) Act would be more appropriate.

---

\(^1\) The ACLI advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States.

**American Council of Life Insurers**
101 Constitution Avenue, NW, Washington, DC  20001-2133
(202) 624-2313 t  (866) 953-4096 f  marianagomez-vock@acli.com
[www.acli.com](http://www.acli.com)
and a better use of supervisory resources. Further, given that the NAIC plans to use the GCC as a tool, not a standard or requirement, to “complement existing group supervisory tools already available to state insurance supervisors” including the Own Risk and Solvency Assessment Summary Report, Form F and Form B filings, we think it makes sense to align the threshold with ORSA. ACLI believes that requiring these small groups to perform the calculation would burden them and their regulators without providing any additional insight into the group as their structures are typically less complex and not difficult to understand. As such, we recommend increasing the exemption threshold to a requirement that will allow states to focus their resources on groups where additional transparency into the group and non-insurance financial entities may provide the most benefit to regulators and policyholders.

iii. Groups regulated by the Federal Reserve Board

ACLI supports the proposed exemption for groups that are regulated by the Federal Reserve Board (“Board”) who provide a copy of their Board filings to their lead state regulator. We believe this is appropriate and avoids duplicative requirements of having to file two group capital assessments at the world-wide parent level for Board-regulated insurance holding companies. To the extent those filings include non-public information, they must be protected by express confidentiality protections in section 8.

iv. Placement of the GCC within section 4 of the Insurance Holding Company System Regulatory Act (#440)

The placement of the GCC within section 4 of the Insurance Holding Company System Regulatory Act (hereafter the “Holding Company Act”) appears to create an implicit exemption that was not expressly discussed in the memo. As noted in the memo, the NAIC Group Capital Calculation Working Group recommends placing the regulatory authority for the GCC in section 4 of the Holding Company Act, which governs registration and reporting requirements for insurance companies who are part of an insurance holding company system. With that in mind, it appears that companies who do not file registration reports under section 4 of the Holding Company Act, are also exempt from filing the GCC, regardless of whether they exceed the proposed exemption for “small mutual insurance companies” or any of the other proposed exemptions. Additional clarification on this issue, as well as more fulsome analysis and rationale for each exemption and the scope of application, would benefit all stakeholders and permit stakeholders to provide input on those issues.

Conclusion

We look forward to continuing these discussions and appreciate the Working Group’s attention to scope of application. We look forward to continuing to engage on these important topics as more information becomes available on these or other topics required to implement an effective GCC. We encourage the NAIC GCCWG to release a proposed mark-up of section 4 and 8, which would help our

---

2 With some exceptions, insurers are exempt from ORSA if the insurer’s annual premiums are less than $500 million and they belong to a group with fewer than $1 billion in annual written/assumed premiums. ORSA also preserves supervisory discretion to exempt or apply ORSA to firms.

3 NAIC GCCWG Request for Model Law Development (October 30, 2019).

4 Section 1 of the NAIC Insurance Holding Company System Regulatory Act (#440) defines an insurance holding company system as two (2) or more affiliated persons, one or more of which is an insurer. An affiliate is defined as “a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.”

Re: Comments on Group Capital Calculation Working Group Referral Memorandum

Dear Commissioner Altmaier:

Reinsurance Group of America, Incorporated (RGA) is a global life and health reinsurer headquartered in the United States. RGA appreciates the opportunity to comment on the NAIC Group Capital Calculation (E) Working Group’s exposed draft referral memorandum to the Group Solvency Issues (E) Working Group.

RGA supports amending the Insurance Holding Company System Regulatory Act (#440) to ensure confidentiality, appropriate scope, and legal authority for the Group Capital Calculation (GCC). We are writing specifically to request clarification with respect to the third and fourth proposed exemptions to the GCC to ensure that there is reciprocity for U.S. groups as intended:

- Groups for which the group-wide supervisor is a reciprocal or qualified jurisdiction per the Credit for Reinsurance Model Law (#785).

- Group not considered a reciprocal or qualified jurisdiction but for which the group-wide supervisor: i) accepts the GCC for any U.S. insurance group; or ii) recognizes the GCC as an acceptable international capital standard to the International Association of Insurance Supervisors (IAIS); and iii) has been sponsored by an accredited lead-state.

RGA supports the position that insurance and reinsurance groups should be subject to only one group capital calculation, standard or requirement (measure), which should be administered only by the group’s own group-wide supervisor. As such, we support excluding certain non-U.S. groups described in exemptions 3 and 4 from the Group Capital Calculation (GCC) requirement at the level of their worldwide group so long as those exemptions are conditioned on U.S. groups being accorded reciprocal treatment in those non-U.S. jurisdictions. We recommend that this reciprocity requirement be clearly stated in the exemptions.
We also request clarification on reciprocal treatment with respect to subgroup reporting, as opposed to reporting at the level of the worldwide group. As currently written, it appears that the GCC exemptions would apply to a group from a non-U.S. jurisdiction that imposes a group capital measure on a U.S. group’s subgroup located in that non-U.S. jurisdiction.

While we do not object to the NAIC exempting U.S. subgroups of non-U.S. groups from the GCC requirement, such exemption should be conditioned on that non-U.S. group’s home jurisdiction likewise abstaining from requiring a U.S. group to file a group capital measure at the subgroup level in that jurisdiction. Otherwise, the reciprocity principle as adopted in the U.S. will inadvertently disadvantage U.S. groups.

We note that the EU-U.S. and UK-U.S. Covered Agreements and the Credit for Reinsurance Model provisions on reciprocal or qualified jurisdictions do not appear to resolve the subgroup issue. While Article 4(b) of the EU-U.S. Covered Agreement generally prohibits a “Host” supervisory authority from exercising group supervision, including capital, at the worldwide group level, it does not prohibit the host supervisor from exercising group supervision over the “Home” group at the subgroup level, i.e., “at the level of the parent undertaking in the territory of the Host Party”. Article 4(b) further provides that “Host supervisory authorities do not otherwise exercise worldwide group supervision with regard to a Home Party insurance or reinsurance group, without prejudice to group supervision of the insurance or reinsurance group at the level of the parent undertaking in the territory of the Host Party.” (Emphasis added.)

Article 4(h) addresses group capital specifically and provides that with respect to a group capital assessment that fulfills certain criteria, “the Host supervisory authority does not impose a group capital assessment or requirement at the level of the worldwide parent undertaking of the insurance or reinsurance group according to the applicable law in its territory.” (Emphasis added.) Thus, the prohibition on the Host supervisor’s imposition of a group capital measure appears to be limited to the worldwide parent, and not the subgroup in that jurisdiction. Similarly, Sections 9(B)(1) and 9(B)(3) of the Credit for Reinsurance Model Regulation on reciprocal jurisdictions appear to address worldwide, but not subgroup, reporting.

RGA requests that the referral memorandum’s third and fourth exemptions be amended to clarify that reciprocity is required not only at the worldwide group level but at the subgroup level as well. Thank you for the opportunity to provide these comments. We would be happy to discuss this issue further.

Sincerely,

Michael L. Emerson

Re: The National Association of Insurance Commissioners ("NAIC's") Draft Confidentiality of Group Capital Calculation Memorandum ("the draft memorandum")

Dear Commissioner Altmaier:

Prudential Financial, Inc. ("we") thank the Group Capital Calculation Working Group ("Working Group") for continuing to seek input on key elements of the Group Capital Calculation ("GCC"). We support the development of supervisory tools that enhance state regulators’ ability to protect policyholders and insurance markets.

We believe determining the companies to which the GCC applies should be a function of its overarching objective. The May 29, 2019 NAIC Proposed GCC document provided the following context on why the NAIC is developing the GCC and the objective it is intended to achieve:

“The GCC is a natural extension of work state insurance regulators had begun, in part driven by lessons learned from the most recent financial crisis, to better understand an insurance group’s financial risk profile for the purpose of enhancing policyholder protections. State insurance regulators already exercise their legal powers to obtain any information regarding the capital positions of affiliated business entities. However, there has not been a consistent or coherent analytical framework for evaluating such information and monitoring trends. As such, the GCC is designed to meet this need, delivering financial solvency regulators a panoramic, transparent view of the interconnectedness, business activities, and underlying capital support for an insurance group.”

We support the stated objectives and to achieve them, we believe the GCC should broadly apply to insurers operating in the U.S. with limited exceptions. Such an approach would ensure that policyholders benefit equally from the insights the GCC may provide, and that the panoramic view of the U.S. insurance market state regulators and the NAIC are pursuing is not subject to significant gaps. That said, we recognize the importance of exercising proportionality to avoid instances where application of a regulatory tool would introduce an undue burden on an insurer/insurance group. With these considerations in mind, we believe the following exemptions from completing the GCC would be appropriate:

1. Small insurance companies/groups
Rationale – We believe it is appropriate to extend existing exemptions from various risk related reporting requirements to the GCC.

2. Groups required to file with the U.S. Federal Reserve System ("the Fed"), but separately require that such a group provide a copy of the Fed filing to its lead state regulator.

Rationale – We believe insurance groups – at the worldwide parent level – should be subject to only one group capital calculation or requirement. While the GCC is intended to serve as an analytical tool, the framework the Fed imposes will be a binding requirement. Given this difference as well as the concerted efforts of the NAIC and Fed to align their respective frameworks to enhance regulatory consistency in the U.S., we believe it would be appropriate for the lead state to accept a copy of the filing with the Fed in lieu of requiring completion of the GCC.

3. Foreign-based insurance groups that are subject to a group capital calculation or requirement provided:
   i) The group-wide supervisor accepts the GCC for any U.S. insurance group; and
   ii) The group-wide supervisor shares relevant information with the lead state upon request

Rationale – As noted above, we believe insurance groups – at the worldwide parent level – should be subject to only one group capital calculation or requirement. Thus, in the case of foreign-based insurance groups, we believe the lead state should respect the sovereignty of the insurance regulator in the jurisdiction of the worldwide parent and not require the completion of a second group capital calculation. Similar deference should be provided by the insurance regulator of the foreign jurisdiction for U.S. companies operating in their respective market. Such an approach would be consistent with Article 1, Objectives (c) of the Bilateral Agreement between the U.S. and the EU on Prudential Measures Regarding Insurance and Reinsurance (“the Covered Agreement”), which outlines expectations for Host and Home supervisory authorities:

   “the role of the Host and Home supervisory authorities with respect to prudential group supervision of an insurance or reinsurance group whose worldwide parent undertaking is in the Home Party, including, under specified conditions, (i) the elimination at the level of the worldwide parent undertaking of Host Party prudential insurance solvency and capital, governance, and reporting requirements, and (ii) establishing that the Home supervisory authority, and not the Host supervisory authority, will exercise worldwide prudential insurance group supervision, without prejudice to group supervision by the Host Party of the insurance or reinsurance group at the level of the parent undertaking in its territory;

While we support an exemption from the GCC for the worldwide parent of foreign-based insurance groups, we believe the lead state should require submission of the GCC for its U.S. operations ("U.S. sub-group"). Requiring U.S. sub-group compliance with the GCC is appropriate and important for several reasons, including:

- Making sure policyholders receive the benefit of equal prudential oversight from state regulators;
- Securing a sufficiently panoramic view of the U.S. insurance market, which would better enable lead states and the NAIC to identify trends and emerging risks and position the GCC as a complement to tools being developed under the Macroprudential Initiative ("MPI");
• Avoiding an unlevel playing field – although the GCC has been framed as a tool rather than a requirement, we believe supervisors would feel compelled to act if presented with a concerning GCC ratio; and

• Aligning with practices and/or requirements in foreign markets, which have already determined there is value in receiving such information

More broadly, we believe language in the Covered Agreement does not preclude application of prudential tools at the sub-group level; rather, section (ii) of objective (c) implicitly recognizes that supervisors may feel the need to apply tools that encompass all operations within their jurisdiction.

Finally, we are generally supportive of the suggested edits to the Insurance Holding Company System Regulatory Act (#440) text to address confidentiality protections for the GCC. However, we believe the text would be improved through the following changes:

Section 8.A. – “.... However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties, but notwithstanding the foregoing, the commissioner shall seek to maintain the confidentiality of the group capital calculation and Group Capital Ratio, including in such documents during the course of any such regulatory or legal action. With respect to all other documents, materials or other information covered by this paragraph, the commissioner ....”

Rationale – We believe the proposed edits would better align the text with the NAIC’ intention for the GCC to serve as additional tool for identifying potential risks within the group rather than a minimum standard or requirement that triggers regulatory or legal action if breached.

Section 8.G. – “It is the judgment of the legislature that the group capital calculation and resulting Group Capital Ratio is a regulatory tool for assessing group risks and capital adequacy, and is not intended as a means to rank insurers or insurer groups generally. Therefore, except as otherwise may be required under the provisions of this Act or as may be customary for engagement with investors, the making, publishing, disseminating, circulating or placing before the public, or causing, directly or indirectly to be made, published, disseminated, circulated or placed before the public, in a newspaper, magazine, website or other publication, or in the form of a notice, circular, pamphlet, letter or postcard, e-mail, or over any radio or television station, or in any other way, an advertisement, announcement or statement containing an assertion, representation or statement with regard to the group capital calculation or Group Capital Ratio of any insurer or any insurer group, or of any component derived in the calculation, by any insurer, agent, broker or other person engaged in any manner in the insurance business would be misleading and is therefore prohibited; provided, however, that if any materially false statement with respect to the group capital calculation or resulting Group Capital Ratio or an inappropriate comparison of any other amount to an insurer’s or insurance group’s group capital calculation or resulting Group Capital Ratio is published in any written or electronic publication and the insurer is able to demonstrate to the commissioner with substantial proof the falsity of such statement, or the inappropriateness, as the case may be, then the insurer may publish an announcement in a written or electronic publication if the sole purpose of the announcement is to rebut the materially false statement.”
Rationale – We believe the proposed edits would appropriately carve out the current market practice of sharing solvency related information with the investor community and modernize the disclosure to account for potential publication via electronic means.

We again thank the Working Group for seeking stakeholder input on key elements of the GCC and would welcome the opportunity to discuss the information included in this response should the Working Group or NAIC staff engaged in the GCC project wish to do so.

Sincerely,

Ann Kappler
Senior Vice President, Deputy General Counsel and Head of External Affairs
Prudential Financial, Inc.
The Group Capital Calculation (E) Working Group of the Financial Condition (E) Committee met via conference call on May 19, 2020. The following Working Group members participated: David Altmaier, Chair, and Ray Spudeck (FL); Kathy Belfi, Vice Chair (CT); Laura Clements (CA); Philip Barlow (DC); Carrie Mears, Mike Yanacheak and Kim Cross (IA); Susan Berry and Vincent Tsang (IL); Roy Eft (IN); Christopher Joyce (MA); Judy Weaver (MI); Constance Peterson and Barbara Carey (MN); John Rehagen and Karen Milster (MO); Jackie Obusek (NC); Justin Schrader (NE); Dave Wolf (NJ); Edward Kiffel and Mark McLeod (NY); Dale Bruggeman and Tim Biler (OH); Greg Lathrop (OR); Joe DiMemmo (PA); Trey Hancock and Hui Wattanaskolpant (TN); Mike Boerner and Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm and Levi Olson (WI).

1. Adopted of its 2019 Fall National Meeting Minutes

Ms. Belfi made a motion, seconded by Mr. Bruggeman, to adopt the Working Group’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment Three). The motion passed unanimously.

2. Exposed the NAIC Staff Post-Field Test Recap of the GCC and Initial Suggested GCC Revisions

Commissioner Altmaier stated that NAIC staff would be presenting a PowerPoint (Attachment Five-C1) summarizing preliminary input and revisions resulting in adjustments to the draft revised group capital calculation (GCC) instructions and a revised GCC template. He stated that the goal was to expose the documents for a 60-day public comment period, and the bulk of questions and comments should be handled via the comment period. He asked Lou Felice (NAIC) to begin the presentation.

Mr. Felice opened by saying that the bulk of the presentation would focus on the PowerPoint with some references to the instructions. He stated that the template will operationalize what is in the instructions, so the template was provided more for information and descriptive purposes. He pointed out that the materials were developed to be agnostic to pending decisions as to what groups would be required to submit a GCC template. He highlighted directional adjustments to the instructions and template, which include the following:

- Expanded language on possible entities that could be excluded from the GCC scope of application.
- Expanded opportunities for the grouping of non-financial entities and narrowing capital calculation options to two.
- An equity-based factor in the base capital calculation for non-financial entities and non-operating holding companies.
- Addition of a two-step approach to establishing an allowance for senior and hybrid debt as additional capital, including the reporting of paid-in and contributed capital.
- Selection of proxy allowance for senior debt (30%) and hybrid debt (15%).
- A potential course for removal of an informational sensitivity analysis for XXX/AXXX captives.
- Selection of a single scalar option for certain jurisdictions based on the Pure Relative Ratio Approach.
- Additional sensitivity analysis items and the retention of others.
- Expanded collection of “other information” useful for lead-state analysis or to inform future GCC enhancements.
- Added, deleted and relocated data entries on Schedule 1, the Inventory Tab, and in other areas of the instructions/template, including the addition of an attestation.

Commissioner Altmaier expanded on the XXX/AXXX slide, stating that those who wish to comment on this issue should bear in mind that once another group is identified and takes up a charge to conduct further review of XXX/AXXX captives, the informational sensitivity analysis for those captives will be removed from the template.

Mr. Felice also pointed out some areas where feedback is specifically requested. These include, but are not limited to:

- Adding principals and guidance criteria for excluding entities from the GCC scope of application.
- Clarifying modifying the definitions for what is a financial vs. non-financial entity.
- Including greater granularity in applying a capital calculation to non-financial entities.
• Adding criteria for “tracked down streamed’ debt and whether that category should be dropped from the template in favor of relying on “paid-in and contributed capital.”
• Limiting the allowance of additional capital from debt to 50% of total adjusted carrying value.
• Proposals for alternatives for scalars and for the treatment of jurisdictions with less developed capital requirements.
• Collecting information on the source of foreign currency conversion.

Commissioner Altmaier reinforced that there are several areas where the Working Group is actively seeking feedback on the materials. He asked state insurance regulators and interested parties if there are any initial questions.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) asked whether options presented are for Working Group discussion and decision or choices for the group filing the template to pick from when completing the template. Commissioner Altmaier agreed that there is some optionality on the scope of application based on lead-state interaction with the group, while other options are directional, presented with the goal of ultimately agreeing on a common treatment in the template. Mr. Felice agreed, stating that there are directional items and those in which specific feedback could influence the inputs or methodologies included in the GCC template.

Tom Finnell (America’s Health Insurance Plans—AHIP) noted that there is an opportunity for differences in the scope of application across groups based on the application of criteria by lead-states. Commissioner Altmaier stated that the Working Group is trying to balance useful information to the state insurance regulator with comparability between groups. He added that the lead-state has the last word on what is included in the template, and there are opportunities, such as the supervisory colleges, to provide information to other involved state insurance regulators.

Patrick C. Reeder (American Council of Life Insurers—ACLI) asked about the longer-term workplan for the rest of the year beyond the 60-day exposure. Commissioner Altmaier stated that the Working Group will be conducting parallel discussions on the analytics and the proposed revisions to the Insurance Holding Company System Regulatory Act (#440). He added that the agenda for the Working Group beyond the comment period would depend on the comments received during the comment period. The goal is to adopt the template and instructions at some point after the exposure period. Commissioner Altmaier offered the possibility of a mid-exposure webinar if interested parties felt it was useful to address initial technical questions or provide further information on the changes. The materials were exposed for a 60-day public comment period without objection.

3. Formed a Drafting Group to Review and Improve Staff Developed Guidance for How GCC Will Be Used

Commissioner Altmaier stated that as an analytical tool, enhancing group-wide analysis for state insurance regulators is the main purpose for the GCC. He noted that NAIC staff have developed an initial guidance and metrics document that could eventually be passed along for inclusion in the Financial Analysis Handbook or to the Group Solvency Issues (E) Working Group. He added that it was the intent to advance the development via a small drafting group made up of state insurance regulators and interested parties and bring the result of the drafting group’s work back to the Group Capital Calculation (E) Working Group. There were no objections to that course of action. Commissioner Altmaier asked those wishing to volunteer for the drafting group to contact Dan Daveline (NAIC).

Mr. Daveline said the document is laid out in a manner generally consistent with the way risk-based capital (RBC) is used in the Financial Analysis Handbook for looking at trends and thresholds and then drilling down into the root causes and underlying data behind the trends. He added that feedback from the drafting group is needed on whether the data elements collected in the GCC template are sufficient to support the analytics.

4. Discussed Other Matters

Commissioner Altmaier stated that one or two open Working Group calls would be scheduled in June to address comments and further discuss the proposed revisions to Model #440 related to adding the GCC and any updates on the analytics guidance.

Having no further business, the Group Capital Calculation (E) Working Group adjourned.
Key Decisions

- Scope of Application and Calibration
- Grouping and De-stacking of Financial and Non-financial Subsidiaries
- Treatment of Financial Entities without Regulatory Capital Requirements
- Treatment of Non-insurance / Non-financial Entities
  - Schedules A and BA
- Allowance for Capital Instruments as Additional Capital
- XXX / AXXX
- Choice of Scalars
- Applying Sensitivity Analysis

Scope of Application (Instructions pages 6-9, 15-16)

- Unchanged: Starting Point is the Ultimate Controlling Party and all Entities Within the Group (Schedule Y) in Alignment with the HCA
- Staff supports the following:
  - A consistent set of principles for establishing the scope of application of the GCC ratio based on evaluation of all entities within the group
- Working with the lead-state regulator, a reduction or limit on the scope of entities to be included may be accomplished in most instances via request by the Group to exclude certain non-financial entities that do not pose material risk
  - The lead-State may accept the request for all or some entities while rejecting it for others
  - In some cases of large decentralized groups, a reduction in scope of application upfront may be requested
- It is preferable that the regulatory evaluation of such requests is based on established guidance (Examples include materiality of risk, structural separation, no history of cross subsidies, or other criteria supporting regulatory judgment)
- Group requests for reducing the scope of application of the base GCC should be based on defined criteria documented and applied by the Group
- Rationale for lead-State acceptance of the request should be documented with information on excluded entities made available upon request of the regulator

Scope (cont.) and Calibration Level

- Scope – Cont.
  - Collecting information on criteria and rationale are important to support future improvements to the Base GCC
  - No single suggestion for a threshold for materiality had consensus from the field test volunteers
- Suggested Base Calibration Level:
  - All RBC filers capital calculations will be included in the Base GCC ratio at 300% x ACL RBC (Trend Test Level)
  - Capital calculations for all entities that are subject to scaling based on RBC levels will use the trend test RBC Level

© 2020 National Association of Insurance Commissioners 1
Grouping and De-Stacking (Instructions Pages 14-15)

- Unchanged: Continue to Allow Grouping of Financial Entities without a Regulatory Capital Requirement Using Current Criteria
  - Same business type
  - Same accounting basis
- Suggested Change: Allow grouping for Non-insurance / Non-financial Entities Not Owned by RBC Filers or Financial Entities with a Regulatory Capital Requirement for those Entities
- Suggested Change: Do Not Require De-Stacking of Non-insurance / Non-financial Entities Owned by Either RBC Filers or Financial Entities with a Regulatory Capital Requirement that Includes a Capital Charge
- Suggested Change: Use RBC of UCP Mutual Insurer at 300% x ACL RBC Calibration with Only Financial Affiliates De-stacked
  - If no financial entities in the group, then TAC and RBC of top mutual is all that is required in the Inventory Tab
  - Data for other schedules still required for each grouping or entity as applicable

Capital Calculation For Financial Entities (Instructions pages 8, 29-30)

- Staff Suggestion is That all Financial Entities within the Larger Group should be Included in the GCC
  - Subject to further discussion / discretion based on the breadth of definition of a financial entity
- Suggested Changes: Options for Financial Entities Without Regulatory Capital Requirements Reduced to 2
  - Retain Basel op risk type charge applied to 3 years average gross revenue
    - Current charge is 12% but Basel moving to 15%
  - Option: Scaled version of the charge based on Average RBC ratios
    - Currently 4%, but could increase to close to 5% based on 15% full Basel charge
- Suggested Change: Consider treating all financial entities without regulatory the same (incl. asset managers)
  - Decision on full vs. scaled charge may be dependent on the breadth of entity types that are classified as financial entities
  - Impact: Minor since field test Base Ratio used 12% and Tested scaled charge with scaled version also tested

Capital Calculation For Non-Financial Entities (Page 30)

- Suggested Change: Capital charges for Non-insurance / Non-financial Entities Reduced to 2 Approaches (one in Base GCC and another for information)
  - Consider applying a 7% equity charge (based on average post covariance charge on this entity type in RBC) or tailor the equity factor by insurer type
  - Alternate Option: Apply a 3 - 5% risk charge to reporting year gross revenue or tailor the factor by industry type
  - Note: The two alternatives above only apply to non-financial entities not owned by RBC filers or by financial entities with a regulatory capital requirement
  - Impact: The equity charge is lower than what was used in the field test base ratio and the revenue charge is not significantly different from what was tested
- Suggested Change: Consider treating all non-insurance / non-financial entities the same
  - Option: Apply either the equity or revenue charge based on the nature of the non-financial entity operating activities

- Non-operating Hold Cos:
  - Suggested Change: Apply same equity charge used for other non-insurance / non-financial entities (7% or tailored)
  - Discuss positive value only vs. netting (also consider for non-financial entities)
  - Impact: More than the zero-value used in field test base ratio, but less than alternative equity charge of 22.5% applied in field test. Netting decreases the impact further.

Capital Instruments (Instructions pages 35-37)

- Suggested Change: All Capital Instruments to be Reported in this Tab and Adjusted for GCC Allowance Purposes
  - No longer reported in Schedule 1
- Suggested Change: Include Allowance for Additional Capital in Base GCC Adjusted for any Double Counting
  - Exception: No allowance should be calculated where the lead-State accepts a GCC submission that excludes the UCP issuer of the debt
- Question: Should HC values reported be adjusted for debt allowance for purposes of a capital calculation?
  - Two Step Approach
    - Step 1 - Down-streamed comparison (Similar to what was used in field test)
      1. Tracked based on criteria (New - Criteria to be Suggested)
      2. Total paid-in and contributed capital and surplus from insurer annual statements (New item in Template)
      3. Largely of two items above is carried into step 1
Capital Instruments – Cont. (Instructions page 37)

- Two Step Approach
  - Step 2 - Proxy Allowance (Recommended selection from field test Options)
    1. Qualifying Senior Debt @ 30% x (Total Adjusted Carrying Value from Inventory B + Outstanding Senior and Hybrid Debt)
    2. Qualifying Hybrid Debt @15% x (Total Adjusted Carrying Value from Inventory B + Outstanding Senior and Hybrid Debt)
- Larger of Step 1 or Step 2 Becomes Additional Capital Allowance (Subject to Max = 100% of Outstanding Senior and Hybrid Debt – Same as field test)
- Suggested Limits on Allowance:
  - Overall additional allowance can be no more than 50% of total adjusted carrying value in Inventory B (field test applied limit of 100%)
- Impact: Of 24 Volunteers that Reported Senior and / or Hybrid Debt, 6 Could Not Include 100% of Their Qualifying Debt as Additional Capital. 3 of the 6 could not include more than 10% of their outstanding senior and hybrid debt (11% - 27%)

XXX / AXXX Assets and Liabilities

- Suggested Change: Provisionally Exclude Sensitivity Analysis for XXX / AXXX Captives from the GCC Template upon referral to an E Committee Group or Subgroup for Further Risk Assessment / Data Collection Associated with Implementation of Economic Reserves and Recognition of non-SAP assets as available capital
  - With particular focus on review of grandfathered XXX / AXXX captives
- Sensitivity Analysis (Based on Field Test Method 3) to be Removed from the GCC Template Once the Appropriate E Committee Group or Subgroup is Identified and an Agenda is Adopted

Scalars (Instructions pared to reflect the selected method)

- Suggested Change: Apply Pure Relative Ratio Option at 300% RBC Calibration in Base GCC for Jurisdictions Where Data is Available
  - Separated UK from EU and added new jurisdictions
- Other Jurisdictions
  - Use 100% of the capital requirement at PCR level in Base GCC
- Treatment for regimes without capital requirements
  - For discussion: Suggestions during field test made to set calc capital of between 50% and 100% of available capital in Base GCC
- Continue to Explore Other Potential Methods for Scaling (in conjunction with similar work for ICS – AM)
- Impact: Any Current Scalar (except Japan) Increases the GCC Ratio Compared to the Base Ratio in the Field Test which used 100% Values
  - Any new options would need to be evaluated as to impact on the GCC ratio
Suggested Change: Sensitivity Analysis Tab Added

Instructions pages 38-39

- Sensitivity Analysis is Available on an Informational Only Basis to Assess the Capital Impact of Various Adjustments
- The Analysis will Not Impact the Base GCC Ratio
- Main Sensitivity Analyses include:
  - XXX / AXXX adjustments
  - Permitted and prescribed practices
  - Foreign insurer capital requirements unscaled
  - Alternative calculated capital

Sensitivity Analysis – Cont.

Instructions pages 38, 39, 42

- Type 2: To evaluate Data to Inform Potential Future Criteria:
  - Excluded entities
  - Additional capital allowance for capital instruments classified as “Other”
  - Other regulator discretion

Other Information

Instructions Pages 43-44

- Material Risk Definition Applied by Lead-State to Approve Reduced Scope of Application
- Intangible Assets
- Currency Adjustments
- Methodology for Tracking Down-streamed Debt (if Down-streamed Debt Category is Retained)

Suggested Changes: Schedule 1

Instructions pages 17-21

- Instructions
- Data Removed
- Data Added

© 2020 National Association of Insurance Commissioners
Suggested Changes: Inventory Tab

- Instructions
  - Added charts to instructions regarding carrying values to be reported in Columns 1 and 2 of Inventory B and Inventory C (parent and local carrying values / capital calculations) [Pages 23 & 31]
  - Added examples for financial entities without a regulatory capital requirement and for non-financial entities
  - Added examples for financial vs. non-financial subsidiaries of insurance companies

- Template
  - Add column (+ instructions) for accounting adjustments (e.g. GAAP to SAP and or other regulatory adjustments)
  - Add columns for revenue-based options (moved from Schedule 1)
  - Remove permitted and prescribed practices columns (moved to Sensitivity Analysis Tab)

Suggested Other Changes

- Attestation Added [Instructions Page 11]
- Analytics and Guidance to be Added [Separate doc]
  - Addresses use of GCC
  - Uses data collected in the template
  - Guidance and instructions to be reviewed concurrently with revised template / instructions
- Potential Changes to Informational Grouping Alternative and Instructions (Working with some IPS)

Commissioner David Altmaier  
Chairman, NAIC Group Capital Calculation (E) Working Group  
Florida Office of Insurance Regulation  
[via-email to lfelice@naic.org]

Re: NAIC Group Capital Calculation ("GCC") Working Group’s exposure on the GCC template and instructions

Dear Commissioner David Altmaier,

ACLI is pleased to have the chance to provide an overview of our views on the exposed GCC template and instructions. We fully acknowledge the deadlines the NAIC is working against. However, the GCC instructions and template asked for feedback on a broad range of substantive issues, ranging from scalars, the definition and treatment of financial and non-financial entities, the treatment of senior and hybrid debt, plus others. The issues in the exposure are complex and the consequences for our members are potentially significant. In addition to the complexity inherent in this group level calculation, the ongoing, extraordinary circumstances related to the coronavirus make it even harder to properly analyze and assess the GCC without assessing its impact over time. ACLI members agree that more time is needed to analyze many of the GCC components. ACLI members expect other areas of concern, beyond those identified in this letter, to emerge as regulators and industry observe the GCC’s performance over time. Therefore, as indicated in several instances below, the ACLI urges the NAIC to continue to engage with stakeholders and to publicly consult again on these key elements, overall design and implementation of the GCC over the coming months.

To the greatest extent possible, our letter provides ACLI’s specific recommendations on the exposure. ACLI has also provided a set of general, overarching comments on the GCC, and highlights several process and governance related issues. In addition to those areas, our letter provides a preliminary issue-spotting list of other areas that are in need of additional analysis and work by the NAIC, including the treatment of capital instruments in the GCC, and the treatment of financial entities and non-financial entities.
PART I. OVERARCHING COMMENTS ON THE GCC AND EXPOSURE

This part of our letter provides general, overarching comments that are generally applicable to the entire exposure, instead of a single recommendation.

ACLI fully supports an aggregation-based approach that is consistent with the existing legal entity RBC framework. ACLI supports the development of an aggregation-based approach that is “intended to build on existing legal entity capital requirements where they exist, rather than developing replacement/additional standards.”¹ We fully support this objective and believe the GCC should leverage and adhere to the existing regulatory frameworks – including legal entity RBC rules – and industry practices and norms to the greatest extent possible.

ACLI encourages the Working Group to ensure that design choices enhance transparency into group risk and avoid introducing procyclicality into the GCC. ACLI believes the current proposal may include elements that could be procyclical and have the unintended consequence of disrupting the ability of regulators and insurance groups to navigate periods of stress. For example, the proposed debt limits, which are based on available capital could have procyclical effects in times of stress, when available capital tends to contract and capital requirements tend to increase. ACLI urges the Working Group to devote the appropriate resources and time to review these items to avoid introducing procyclical risks into the GCC.

ACLI believes GCC design choices should be consistent with the intent for the GCC to be a tool, rather than a standard or binding requirement. ACLI supports the NAIC’s development of a GCC as an additional “tool” that is intended to provide regulators with greater insight into insurance groups.² However, we are concerned some aspects of the instructions and the preliminary Draft Analysis Handbook give rise to a GCC that goes beyond this objective and would have the effect of turning the GCC into a binding standard or constraint.

All references to “Base GCC” should be eliminated. The references to “Base GCC” may be a holdover from previous versions of the instructions when formal on-top adjustments were contemplated. We are concerned that the use of the term “Base GCC” throughout the document insinuates that there are multiple GCC’s, and we believe this could cause unnecessary confusion around the GCC.

ACLI believes the process for developing and refining the GCC requires further consideration. Given the potential consequences the GCC may have on members, ACLI believes the Working Group should take time to consider further alternative approaches to certain elements and perform additional quantitative analysis. We also believe a clear process must be established for future revisions to the GCC, a rationale for decisions should be provided that is consistent with the stated

² See Attachment B-2, GCC Instructions, at p. 5, para. 2 (describing the GCC as a tool intended to provide regulators greater insight into insurance groups – e.g., a holistic understanding of the non-insurance entities in the group, insight into capital distribution across the group, etc.).
purpose of the GCC, and the Draft Analysis Handbook should be exposed for public review and
comment before it is finalized.

Decision points on items in the instructions should be guided by the purpose and objective of the
GCC, as described in the Instructions. ACLI believes the decision points should favor design
choices that provide more transparency to regulators and do not conflict existing standards or
introducing new standards.³ Although this is not directly addressed in the Instructions, we believe a
prudent group solvency regime should avoid imposing measures that impede the ability of
regulators and insurers to navigate periods of stress.

PART II. ACLI’S COMMENTS ON RELATED PROCESS AND GOVERNANCE ISSUES

This section identifies and issues recommendations on process and governance issues related to
the GCC and exposure.

ACLI believes alternative approaches should be considered and additional data collection,
quantitative analysis and monitoring should be performed prior to finalizing the design of the GCC.
ACLI strongly believes that this is critical to determine if the GCC components are fit for purpose
and would be consistent with the Working Groups message that getting the GCC right is more
important than getting it done soon.

ACLI believes a clear and transparent process for future revisions to the GCC framework must be
established. Paragraph 7 of the draft instructions notes that the GCC instructions are expected to
be “modified, improved, and maintained in the future.” We believe the process for making changes
to the GCC should require notice to stakeholders and include an opportunity for public
consultation. We recommend that the Working Group develop a GCC governance process like
Separately, we believe the process for updating scalars for design changes or to account for
evolution in supervisory regimes should also be transparent and subject to a clearly defined
governance process.

The Draft Analysis Handbook should be exposed. The Draft Analysis Handbook should be
exposed for public review and comment before it is finalized. While ACLI appreciates the
opportunity to serve as a participant in a drafting group composed of a limited number of
regulators and industry participants, we believe all interested parties should have an opportunity to
weigh in on the content given the significant impact it may have on the role the GCC plays in
practice. For example, the previously distributed version of the draft analysis included a proposed
175% intervention point, which appears to conflict with the description of the GCC as a tool meant
to enhance transparency into a group’s risks rather than a binding standard or constraint. Given
the high-profile nature of the GCC, public exposure of the Handbook and any potential intervention
points are necessary.

³ The avoidance of new standards is consistent with the description of the GCC in the Instructions and the
NAIC’s August 16, 2018 letter to Senators Scott and Rounds. In the August letter, the NAIC notes that the
“NAIC is not creating a new capital standard for insurers that will necessitate higher capital levels. Rather, the
GCC will be an additional reporting requirement built off existing legal authorities.” Available at
PART III. RECOMMENDED IMPROVEMENTS TO THE GCC INSTRUCTIONS AND TEMPLATE

This section of our comments addresses the issues where ACLI has provided specific recommendations for the instructions or template during our preliminary review. Some of these items, such as the treatment of senior debt, are also candidates for further work and analysis.

1. Scalars. ACLI members recommend the Excess Capital Ratio Approach.

The primary goal of a scalar is to ensure aggregated data and thereby ratios across jurisdictions are comparable. While the Pure Relative Ratio ("Pure") and Excess Capital Ratio ("Excess") Approaches are both relevant supervisory capital metrics, only the Excess Approach uses a total balance sheet approach and leads to an appropriate measure of excess capital.

As a result, ACLI recommends the Excess Approach over the Pure Approach. Unlike the Pure Approach, the Excess Approach keeps the total asset requirement (reserves plus required capital) constant before and after scaling. As a result, the Excess Approach places greater weight on differences in reserve requirements, which can vary significantly across the globe. We believe this creates a more level playing field regardless of an insurer’s subsidiary locations and will provide a comprehensive approach for aligning foreign regimes to the U.S. RBC framework.

The Pure Approach does not adjust for available capital and could result in a distortion of excess capital levels, depending on the entity’s capitalization levels and its jurisdiction. For example, by not taking into account the intervention levels of local regimes, the Pure Approach would allow entities that a jurisdiction deems to be undercapitalized to be considered adequately capitalized for group ratio purposes, simply due to scaling, which could ultimately detract from the credibility of the GCC.

Another benefit of the Excess Approach is that it maintains the actual levels of excess capital because it adjusts both available and required capital, which improves the accuracy of the GCC with respect to the actual amounts of excess capital held by a group. The management and maintenance of excess capital levels is a top priority for treasurers of insurance companies, and the GCC should accurately reflect the amount of excess capital levels that is held by a group.

Members also believe that the total balance sheet approach employed by the Excess Approach may better position the GCC, and Aggregation Method ("AM"), for the forthcoming efforts to secure recognition of the AM as comparable to the market-based version of the Insurance Capital Standard ("ICS"). The principles and criteria for the comparability assessment will take into account “analysis of individual elements of a group solvency approach, i.e. valuation, capital resources, and capital requirement.” Consequently, a scaling approach that effectively provides for a translation of reserve levels and capital requirements would be better suited for the comparability assessment than the Pure Approach. Further, the Excess Approach supports the goal of comparability by providing a more accurate comparison of the total assets (all loss absorbing resources within a

---

group) that are required when comparing regimes. We have attached a brief explanation of the differences between the Pure and Excess Approaches.

2. The calibration of the GCC and scalars for foreign insurance regimes should be 200% ACL RBC.

ACLI disagrees with the proposed calibration of the non-U.S. insurance scalars and the GCC ratio at the RBC trend test level (300% ACL RBC). We believe the GCC should be calibrated to the 200% ACL RBC, which is consistent with 100% Company Action Level (CAL) RBC. In addition, calibrations of other factors and regimes should be based on 200% ACL level RBC as well. Using 300% as the calibration for the GCC is likely to introduce confusion because the GCC calibration will depart from a well-established market-norms for legal entity insurers of assessing RBC based on a 100% CAL level, without offering any identifiable benefits. We are also concerned that establishing a different calibration point for the GCC could result in unintended consequences such as changes in market expectations for the capitalization of underlying insurance entities.

3. The GCC’s proposed treatment of capital instruments, in particular the qualifying criteria for senior and hybrid debt, should be subject to further study and analysis.

We believe that the current debt caps are too restrictive and could negatively impact a group’s ability to prudently manage capital and liquidity risks. Further, it is not clear how the inclusion of the proposed limits would enhance transparency into risks within an insurance group, which the NAIC has noted is the primary intent of the GCC.

There are times when companies may need to quickly raise capital, and issuing senior or hybrid debt is a reliable way to accomplish this, especially during times of economic stress. We do not believe it is appropriate for the GCC to introduce constraints that may inhibit the ability for insurers to prudently use these capital instruments. In addition, we believe that tying the constraint to a percentage of the group’s available capital embeds an undesirable element of procyclicality into the GCC, because a company’s available capital is likely to decrease in times of stress, especially if markets crash.\footnote{ACLI is aware that the analysis of field-testing results showed that approximately 25% of volunteers would not receive full credit for the capital instruments they issued because of the prescribed limits. We are concerned that the field testing captured a point-in-time point of view that may not demonstrate the impact these restrictions might have on groups during periods of economic decline. During periods of economic stress, an insurer’s available capital tends to constrict, and its capital requirement rises, which would further limit the recognition of these capital instruments and discourage their use.}

To the extent the Working Group believes some form of limit is necessary, we believe it must consider a suite of less restrictive options and would welcome the opportunity to work with you to conduct further analysis on the subject.

On a more granular level, the GCC instructions (p. 34, para. 65) require that the capital instrument has a fixed term of a minimum of 5 years at the date of issuance or refinance, including call options. The presence of call options should not prevent a capital instrument’s inclusion as a qualifying instrument. Call options are a common feature of U.S. issued capital instruments. This
criterion would shorten the term and prevent most instruments from qualifying as structurally subordinated. We recommend removing the call option criteria, because the exercise of a call option is typically followed by refinancing of the instrument which supports its permanence and structural subordination.

4. Capital Instruments. ACLI recommends eliminating the down-stream tracking requirement.

ACLI agrees with the NAIC staff’s recommendation to eliminate the down-stream tracking requirement for senior debt. There are a number of reasons why the downstream tracking requirement could prove difficult to implement, such as complications that could arise when the debt has been refinanced by the parent, or how to track upsize transactions where debt is borrowed at one date and then down-streamed on a different date. Downstream tracking also raises questions about how to treat up-streamed dividends (are they netted against down-streamed capital?), as well as how to treat M&A transactions. For example, if a company is acquired, does the new parent company assume the historical relationship to the down-streamed debt, so long as its debt at least equals the debt of the old parent company?

Some of our members have also expressed concern that groups with an operating holding company who utilize a more centralized capital and liquidity management strategy that prioritizes holding funds at the holding company level would be disadvantaged by this approach. If the proceeds must be down streamed for the company to get any credit, then a group would have to issue more debt at the legal entity insurance level if it wished to maintain the same debt-funding levels at the operating holding company level without hurting its capital ratio.

5. ACLI supports the Working Groups recommendation to remove parts of the Sensitivity Tab, and more broadly, believes the remaining elements of the tab should be removed from the template.

ACLI has long advocated that the GCC should be consistent with entity level RBC rules and we are concerned that the inclusion of approaches within the GCC that deviate from legal entity rules, such as the unwinding of permitted and prescribed practices should not be included in a sensitivity tab. Further, ACLI members ability to comment on the specifics of the sensitivity tab was also constrained by the lack of formulas inside the tabs. Therefore, further discussion of its purpose and use, as well as a discussion on the context of this information is warranted if the tab is retained. To the extent the information on the Sensitivity Analysis Tab is of interest to state regulators, ACLI believes they should use their discretionary powers to obtain it rather than embedding it in the GCC template.

Irrespective of the tabs continued existence (or not) in the template, we strongly believe that all references to “Base GCC” should be removed from the Instructions and replaced with “GCC”. Using the term “Base GCC” creates confusion and a potentially false narrative that there are multiple versions of the GCC. Eliminating this need to distinguish between a “Base GCC” and multiple alternative GCCs will provide a stronger foundation for the NAIC to advance an AM at the global level.

6. Grouping/De-stacking and Materiality
ACLI supports efforts to simplify and streamline the GCC by permitting companies to either group related entities, or to relax the requirements to “de-stack” an entity. ACLI also supports the grouping or netting of non-operating holding companies. To the extent there are concerns that these simplification efforts may obstruct a regulator’s ability to obtain adequate insight into the potential group risks, this is addressed by giving regulators the option to ask groups to submit more detailed information (i.e., supervisors may direct a company to de-stack certain entities or desegregate some groupings).

In general, ACLI believes that the GCC should be consistent with the legal entity rules applied to insurance legal entities – including the subsidiaries of insurance legal entities. The GCC de-stacks subsidiaries from insurance legal entities and in some cases, applies a GCC treatment to the subsidiary that differs from the legal entity treatment. To the extent that there are differences in the GCC and legal RBC treatment for subsidiaries that have been de-stacked and reported separately from their legal entity parent, then it seems desirable for the GCC and RBC treatment to align. To the extent that there are differences between the two, we recommend the Working Group explain the rationale for the difference (e.g., achieving substantial consistency in charges regardless of corporate organizational structure) and, if appropriate, refer the issue to the appropriate RBC working for further dialogue. In the long run, we believe this approach will benefit regulators and the industry by promoting a more consistent and up-to-date risk framework.

ACLI believes it would be helpful if the GCC Instructions employed a consistent definition and threshold of materiality for de-stacking and other GCC purposes where consistent with the purposes of the GCC. However, this is an area that clearly requires additional thought and consideration to establish an appropriate threshold for materiality.

PART IV. ACLI’S PRELIMINARY LIST OF ISSUES NEEDING FURTHER ANALYSIS

This section of our comments addresses issues that ACLI members have identified as significant concerns, but that require additional clarity from the Working Group and/or further member development and discussion, in order for ACLI to make a specific recommendation. These are areas where we suggest more time be allowed for NAIC staff and interested parties to work together to develop specific recommendations.

1. Financial entities and non-financial entities

   1.1. Additional clarity is needed for the definition of financial entity, non-financial entities, and material schedule A/BA affiliates.

   The definition of financial entity remains unclear and needs additional clarification. In general, we believe that financial entities should be limited to operating entities with meaningful obligations to third parties. Passive investment vehicles or subsidiaries that manage or hold investments predominantly on behalf of the insurer should not be considered financial entities. An operating entity may issue debt, create syndications, issue loans, accept deposits and/or generally act as a fiduciary. The activities of an operating entity require active management on behalf of third parties. In contrast, a passive investment vehicle, like an investment subsidiary, as defined by NAIC rules [Schedule D], or other subsidiary that holds investments on behalf of the insurer [e.g., Schedule BA entities], should not be considered a financial entity. This rubric of using active management on behalf of others versus simply holding or managing an
investment on behalf of the insurer works well to determine if an entity should be classified as a financial entity or non-financial entity, even when an entity, like a mutual fund, may have a mix of activities.\(^6\)

Based on the existing definition of “financial entity” in the Instructions, we believe that the Working Group intended to exclude passive investment vehicles and subsidiaries that manage or hold investments predominantly on behalf of the insurer, but we believe additional clarity is necessary to telegraph that intent.

As such, we recommend the following for your consideration:

“For purposes of this definition, a subsidiary of an insurance company whose predominant purpose is to manage or hold investments on behalf of the insurance company and its affiliated insurance (greater than 90% of the investment subsidiary’s assets are for these insurance affiliates) should NOT be considered a Financial Entity.”

If the interpretation of the definition of financial entity is correct, additional clarity is requested on how to record the various affiliates, including but not limited to non-US statutory investment entities and funds that roll-up to the ultimate financial entity and that may manage and hold investments on behalf of the insurer and third parties. Should such entities be split on the basis of US/non-US statutory status or simply included under the financial entity?

1.2 Additional clarity is also needed for the “exception to the exception” for “material” A/BA entities.

ACLI requests additional clarification on what the impacts are of building an exclusion for Schedule A/BA into the definition of “affiliate,” when it seems like the Schedule A/BA exclusion is an exclusion from de-stacking. We believe this may be better placed in the de-stacking instructions.

ACLI recommends that the exception to the exception for material A/BA items be limited to operating entities, and not apply to passive investment vehicles, which may be of significant size but would not provide a regulatory benefit by de-stacking from existing RBC treatment. If the Working Group adopts this exception it will also be necessary to adopt a threshold for materiality. (see comments above regarding desire for consistency in materiality thresholds). In addition, the Working Group will need to address the inconsistency between the “exception to the exception” and the direction in Paragraph 50 that values for non-insurance / non-financial U.S. RBC filers will not be de-stacked.

\(^6\) For example, a mutual fund may have a mix of activities such as taking deposits, holding investments on behalf of third parties, they collect fee income. However, even if a mutual fund has passive investment activity, a mutual fund will generally have liabilities in excess of 5%, which means the mutual fund cannot be classified as an investment subsidiary under NAIC rules.
1.3 Treatment or charge for non-financial entities without a capital requirement and
material Schedule A/BA entities

ACLI was unable to discern how the proposed charges for “other non-insurance/non-financial
entities” and “material Schedule A/BA entities” were created. The Working Group field tested
seven different potential charges for these entities, but staff is now recommending a new
charge that was not field tested. Additionally, despite NAIC staff’s attempt to explain how the
new 7% charge was created, our members are still unsure how the charge was derived, why it
was selected, and why it differs substantially from the corresponding RBC treatment. Further
clarification on this issue is necessary, including an explanation of why the Working Group is
recommending a novel approach that has not been subject to field testing.

2. GCC Instructions.

2.1 The Instructions should be reviewed to ensure consistency regarding regulatory
discretion and clarify expectations for certain elements.

For example, the Instructions provide several clear examples of lead-state supervisory discretion
that could impact how the lead-state supervisor and the insurance group define the scope of
the group (see e.g., para 18, para 20, and drafting note to para 61).

We recommend supplementing the Instruction’s definition of “ultimate controlling person” with a
reference to the discretion provided to the lead-state supervisor in the Instructions (see e.g.,
para 18, para 20, and drafting note to para 61). This clarification ensures that the definitions are
consistent with the discretionary language in the instructions, as provided in paragraphs 18, 20,
and the note accompanying paragraph 61:

“Ultimate Controlling Person: As used in the NAIC’s Insurance Holding Company
System Regulatory Act (Model #440) and as implemented by the lead state supervisor.”

2.2. We request that the Working Group revise the Instructions to provide clarity on the
following items:

In light of the instructions for when de-stacking is not required, there needs to be additional,
corresponding instructions about what should be included in “Schedule 1” and “Inventory” tabs,
in light of instructions for when de-stacking is not required. For example, if an entity is not to be
de-stacked, then presumably it should not be listed on Schedule 1/Inventory tabs. Otherwise,
this sets up a confusing “include/exclude” decision, which is a different issue (goes to “scope of
application”). We request that the instructions include language that clearly address this issue.

For Schedule Y entities that are not de-stacked, should they all be listed on the Questions tab,
like Schedule A/BA are currently?

Additional instruction on Inventory B, Column 5 (reported intra-group guarantees, LOCs and
other) would benefit from examples that demonstrate application. It appears that this column,
like those near it, is intended only to eliminate double counting of capital. If the presumption is
correct, then it would be helpful if this was noted in the instructions.

ACLI believes that scalars are an integral part of an aggregation method. We remain concerned that a significant number of countries lack a scalar. It is our understanding that the NAIC staff sought to develop scalars for the countries that had a material amount of business from U.S. parented groups within its borders. While it was understandable for the initial focus to be on countries with a material percentage of U.S. based insurers doing business there, the lack of scalars for certain jurisdictions has created material differences in their GCC ratio. If the NAIC lacks access to the appropriate dataset to create the scalars, we recommend allowing the lead state some flexibility with default assumptions.

In addition, there are formula errors in Column K. For example, K14 is supposed to be taking 12% of the average revenue, but instead it is taking 12% of Reported Calc Capital. Similar issues exist in cells K16, K18, K19, K21 and K22.

We believe the scaling factors for Non-Insurance Entities need a broad review. Specifically, the scaling factors for Asset Managers, financial entities with regulatory requirement, financial entities without a regulatory requirement, and other non-insurance/non-financial entities. The NAIC has selected some of the more conservative scaling factors from the 2019 field test and provided no explanation for their decisions. These factors require a larger discussion.

CONCLUSION

Thank you for the opportunity to provide these comments. ACLI welcomes the opportunity to discuss our comments with you in the future, and we would also welcome the opportunity to contribute to additional analysis and discussion regarding the issues raised in our letter.

Sincerely,

Mariana Gomez
Pure Relative Ratio vs. Excess Capital Ratio

- NAIC GCC proposals uses scalars to add capital regimes with the goal of comparability
- Pure Relative Ratio (PRR) approach adjusts required capital only
  - Available capital is not adjusted and results in excess capital being distorted
- Excess Capital Approach (ECA) adjusts both available and required capital (i.e., total asset requirements)
  - Excess capital is not affected

Implications

- The capital ratio and excess capital are both relevant supervisory capital metrics
- ECA better supports comparability by addressing both metrics
- Excess Capital Approach takes a whole balance sheet approach as it assesses total asset required and accounts for reserve differentials.
- Excess Capital Approach creates a more level playing field regardless of an insurers’ subsidiary locations
- Pure Relative Ratio will create an unlevel playing field depending on an insurer’s subsidiary locations
Pure Relative Ratio (PRR) Example

PRR preserves the relative capital position versus industry average however it distorts excess capital.
