Commissioner David Altmaier, Chair
Group Capital Calculation (E) Working Group
National Association of Insurance Commissioners

Via e-mail to Lou Felice: lfelice@naic.org

Re: Exposure of Proposed Group Capital Calculation Instructions and Template

Dear Commissioner Altmaier:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to comment on the changes that have been proposed by the NAIC’s Group Capital Calculation (E) Working Group to the Group Capital Calculation (GCC) Draft Instructions and Template, as well as the related FAQ Document, and PowerPoint.

AHIP appreciates the hard work of the GCCWG and of NAIC staff in developing the GCC under tight timeframes as well as in suboptimal working conditions that persist with the ongoing pandemic. In a separate letter submitted on July 15, we stated our appreciation to the working group for recognizing appropriate exemptions and expedited treatments for filing of the GCC. We have some comments below regarding the GCC Instructions that we hope will be seen as constructive. But we first want to call out what we see as clear “positives” in the revised draft GCC and acknowledge the efforts of you and your working group to bring these to bear:

- The overall approach maintains that the GCC is an analytical tool for use by the lead state that will not, in and of itself, dictate capital requirements.
- Appropriate exemptions and expedited treatments from filing all or part of the GCC template have been provided and which provide, in certain instances, for the Lead State Commissioner to use discretion to allow filing only of Schedule 1, i.e., as an analytical construct it could be a sufficient supervisory measure without aggregation to a single group-wide measure.
- Groups could exclude certain non-financial entities from the Scope of Application and large, decentralized groups could request up front a reduction in the scope.
• Determination of materiality of risk posed to the insurance group by non-insurance entities in the broader group will be a qualitative determination (the Financial Analysis Handbook Drafting Group is to consider appropriate criteria).
• Modified instructions for the GCC template are less onerous (than in field testing), i.e., with more grouping and less de-stacking.
• Senior and hybrid debt criteria and limits will accommodate a large majority of debt held by insurance groups to be recognized in group capital.

With that, AHIP would like to provide the following suggestions relative to the GCC Instructions.

I. Scope of Application

Determination of Material Risk

AHIP believes the GCC Instructions could improve the readability of the principle-based guidance for establishing the Scope of Application of the GCC. Currently, some of the principles are included in the section on “definitions” which follows other text where both an understanding of those definitions and the principles therein would be useful for the reader. As well, sections which would appear by the heading to be about principles are more focused on instructions for completing parts of the template.

The section of the GCC instructions on scope of application is intended to help the holding company and its lead state to reach an understanding as to whether a non-insurance entity within the Broader Group poses material risk to the Insurance Group. It should provide principles-based guidance for companies and their lead-state regulators to identify such entities that do not pose material risk and therefore can be excluded from the Scope of Application.

As a threshold matter, the GCC Instructions should provide a definition of “material risk” for purposes of the Scope of Application. In this context, we believe “material risk” should be defined as “risk emanating from a non-insurance entity that is of a magnitude that would adversely impact a group’s insurance operations and its ability to pay policyholder claims.” Likewise, the GCC Instructions should explicitly state that non-material entities within the Broader Group but outside the Insurance Group (as both terms are defined in the GCC instructions) should be excluded from the Scope of Application.

These points naturally follow from the fundamental reason for state insurance regulation and the stated objective of the GCC: policyholder protection. Indeed, paragraph 13 of the GCC Instructions already makes clear that “the overall purpose of this assessment is to better understand the risks that could adversely impact the ability…to pay policyholder claims”.

© 2020 National Association of Insurance Commissioners
This reasoning is also in accordance with international standards. For example, under ICP 23, the fact that a non-insurance entity poses risk is not, alone, determinative of whether that entity should be in or out of the scope of group supervision; rather, to be considered included in scope, there also must be some means by which the non-insurance entity could actually transmit that risk to the group’s insurance operations, as well as a lack of adequate safeguards that would mitigate that risk of transmission. We believe that the GCC instructions currently embrace those concepts. However, terms such as “cross support mechanisms,” and “safeguards” are not defined and it is unclear how they are intended to apply in the context of the scope of application.

For effectuating the materiality analysis for purposes of the Scope of Application, AHIP believes it is necessary for holding companies and lead states to consider the facts and circumstances of a particular entity within a group in a holistic manner. Given the diverse structures and business models of insurers, it would be impracticable to develop a one-size-fits-all checklist of guidelines that would be useful for materiality determinations across all groups. Strict or formulaic quantitative measures are likewise an insufficient proxy for materiality. Instead, the materiality analysis must be assessed in the manner it has been historically – by considering the unique circumstances of the relevant entity and group. We believe that to be the intent of what has evolved through field testing, i.e., an interactive process whereby the group brings forward its suggestions as to entities that should be excluded from the scope of application for a discussion with the lead state, ultimately culminating in an agreement on the scope.

We are not suggesting to somehow upset that interactive process or discussion between the group and its lead state. Rather, AHIP simply recommends facilitating it with definitions for “cross support mechanisms” as well as “safeguards” over the possible transmission of risk between the subject entities of that discussion.

We note that the Form B and D processes entail similar considerations and are already enshrined in the state regulatory process. For example, a detailed review is made of inter-company transactions and agreements that could, depending upon their terms and other pertinent information, fall into the category of “cross support mechanisms” as contemplated by the GCC instructions. Examples could (depending on the facts and circumstances) include certain loans, transactions not in the ordinary course of business; guarantees or other undertakings for the benefit of an affiliate, management agreements, service contracts, cost-sharing arrangements, reinsurance agreements; tax allocation agreements, and more. These agreements are already filed and approved with states. States can leverage these processes already in existence for visibility into cross support mechanisms that may be able to transfer material risk.

As well, Enterprise Risk Reports filed with the lead state already provide information as to the existence of “enterprise risk” defined as “any activity, circumstance, event or series of events involving one or more affiliates of an insurer that, if not remedied promptly, is likely to have a material adverse effect upon the financial condition or liquidity of the insurer or its insurance holding company system as a whole…”
Taken together, Forms B and D and Enterprise Risk Reports establish examples of “cross support mechanisms” as well as whether there is risk that could have a material impact to the insurers in the group (presumably via transfer through at least one such mechanism). It stands to reason that in the GCC, only such risks of non-insurance non-financial entities outside the insurance group that are already identified through those processes could therefore have a material impact and for which the subject entity(ies) that are the source of that risk would therefore be included in the scope of the GCC.

Finally, the GCC Instructions currently contemplate excluding only non-material, non-financial entities from the Scope of Application. However, the Working Group should also consider allowing non-material financial entities within the Broader Group (but outside the Insurance Group) to be excluded from the Scope of Application. We understand that the Working Group views financial entities, in general, to be of greater risk than other affiliates. Even so, all entities that meet the broad definition of “financial” in the GCC Instructions do not necessarily pose material risk (as defined above) under all circumstances. The fact that an entity would be classified as “financial” for purposes of the GCC should be weighed as a factor in the materiality analysis described above, but that alone should not be determinative of materiality.

II. Risk Charges for Material Non-Insurance Entities

Non-Financial Entities

AHIP’s view is that risk charges for non-financial entities should be equal or very similar to the current charge in the sectoral RBC formulas, i.e., 3% in the case of health insurers. The GCCWG has not provided data to suggest that a more substantial risk charge is needed to protect policyholders. In addition, existing regulatory processes, such as the Form B and D processes, are already in place to ensure that the regulated legal entity is protected from the non-regulated, non-insurance entity. Adding an additional risk charge is unwarranted in light of existing regulatory requirements.

Further, the GCCWG has not provided data indicating that policyholders are any more at risk in a diversified insurance holding company than in a non-diversified group. If that is a concern, and if it is desired to consider changes to underlying RBC levels, that should be handled through the appropriate (e.g., Health) RBC Working Group.

Financial Entities

On a related matter, AHIP is concerned with the breadth of the expanded definition of “financial entity” in the GCC Instructions. If the Working Group maintains this expanded definition of “financial entity”, we recommend using a capital charge that is roughly equivalent to an entity’s current post-covariance RBC charge. If it is desired to consider changes to underlying RBC levels, that should be handled through the appropriate (e.g., Health) RBC Working Group.
The exposed GCC Instructions provide that certain non-insurance affiliates of an insurer be
deemed as financial. We understand that the Working Group views such affiliates to be of
greater risk relative to other types of affiliates, and by deeming them to be financial, they would
be listed separately for analytical purposes as well as subjected to a higher capital charge.
Specifically, the exposed GCC Instructions add the following to the definition of “financial
entity”:

“Affiliates that are integral to the performance of the insurance contract or the provision
of insurance or financial products or services to policyholders, members or depositors
[Examples include: agents, reinsurance intermediaries, claims adjusters or processors,
third party administrators, pharmacy and other benefit managers, provider groups or
entities that provide more than X percent of the policy benefits under policies issued by
insurers within the group, and ] will be treated as financial entities.”

AHIP fundamentally disagrees with the notion that certain affiliates are inherently riskier than
others, as based on the language cited above which would effectively deem some affiliates to be
considered financial, including third-party administrators and pharmacy benefit managers,
provider groups, and pharmacy benefit managers. There is a wide array of types of non-affiliated
entities within insurance groups, and it is overly simplistic to conclude that all that are somehow
associated with assisting the insurer with contract performance or policyholder services are
inherently riskier than others. Indeed, the Form B and D processes recognize that transactions
with affiliates may have risks, and that a determination of such risk is very fact-specific to the
subject entities and underlying transactions or agreements.

Further, subjecting these entities to a capital charge for financial entities (12% of 3-year average
gross revenue – possibly to be increased to 15%) could result in a significant additional charge as
compared to current RBC for several reasons:

- The base of the entity’s charge would be changed from BACV to gross revenue.
- The factor applied to the base would increase from 7% BACV to 12% of gross revenue.
- Removing the charge from the insurer’s RBC—where it is subject to the covariance
  adjustment—to a separate line item for the affiliate itself, where the capital charge is
  aggregated without a similar covariance calculation or other recognition of risk
diversification.

In addition, AHIP has concerns about the reference to “entities that derive a majority of their gross
revenue from services that are integral to the performance of the insurance contracts within the
group or from the provision of other financial services to policyholders within the group will be
considered a Financial Entity without a regulatory capital requirement” in the definition of
“Financial Entity.” The GCCWG has not provided evidence to suggest that services performed
by such affiliates add risk to the group. In our view, because of greater regulatory oversight
through the Form B and D and other regulatory processes, these arrangements actually reduce the group’s risk.

Therefore, AHIP recommends using an equity-based capital charge that is roughly equivalent to the current post-covariance charge for such affiliates in RBC.

III. Treatment of Debt as Qualifying Capital

AHIP very much appreciates that the GCC will, in large measure, recognize certain senior and hybrid debt as capital. Debt is a critical capital resource for many of our members. The capital markets are well-established and have proven to be a reliable resource for the funding of debt instruments, even during the 2008-2009 financial crisis. Experience has shown time and again that the debt markets can be tapped quickly and utilized to enhance policyholder protection in a flexible and cost-efficient manner. Moreover, in periods of macroeconomic stress such as the financial crisis, the use of debt can be a more attractive alternative to the issuance of stock in depressed markets while also avoiding dilution of shareholder interests.

IV: Other Comments

In the attachment, AHIP has provided other comments and questions of a technical nature that were provided by our members.

* * * * * *

Again, AHIP appreciates the opportunity to offer comments on the GCC Instructions and Template.

Sincerely,

Bob Ridgeway
Senior Government Relations Counsel
Attachment to Comment Letter of AHIP on the GCC Instructions and Template

1. We note that there are many areas within the template that are labeled “further work needed” or “technical discussions needed.” For example, “Summary Group Alternative 4” is blank. Also, in Summary 2 – Top Level: No formulas appear in the sensitivity section. When will companies have a completed template to review and test, and what other opportunities will there be to provide input on the template based on their review?

2. “Summary Alternative 5 – Organizational Option” is missing from both the template and the instructions. This option is intended to allow the reporting entity to present a summary of the results to assist regulators with understanding the submission.

3. Schedule 1D – Reporting “net dividends paid/(received)” is more practical and meaningful, because many entities act as “pass-through” for moving dividends up the corporate structure. In that context, “dividends received and not retained” becomes unnecessary.

4. I.A.2 in the instructions suggests that another consequence of “subsidization” may be “upward pressure on premiums to the detriment of insurance policyholders.” This implies that the GCC might somehow be a factor in regulating insurance premium rates, which we believe to be an inappropriate use of the GCC based on our understanding of its objectives.

5. I.A.2 in the instructions states that the GCC “provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns in a manner that will ensure that policyholders will be protected” and will “allow them to make informed decisions on both the need for action, and the type of action to take.” As stated, this is an overly ambitious aspiration for the GCC. In particular, at least in early years of implementation, the GCC will produce a ratio that would require much reliance on other existing regulatory tools to interpret – not the other way around. We understand that the Financial Analysis Handbook Drafting Group is working on guidance for regulators as to how the GCC would be utilized as part of financial analysis and in developing the Group Profile Summary. We recommend deleting the cited phrases in the instructions and await to comment on the work of the Drafting Group in that regard.

6. II.E.20. of the instructions discusses an annual redetermination of scope. This raises concerns about the meaningfulness of year-to-year trends in the GCC should the scope change. And if companies automate processes to produce the GCC, revisions would have to made on an annual basis.
7. AHIP is unclear as to why the NAIC is proposing to collect data on intangible assets, which is not an element that is necessary to calculate the GCC.
July 20, 2020

Commissioner David Altmaier, Chair
Group Capital Calculation (E) Working Group
National Association of Insurance Commissioners

Re: Proposed Revisions to the Group Capital Calculation Instructions

Dear Commissioner Altmaier:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the Group Capital Calculation (E) Working Group’s revised draft Group Capital Calculation (GCC) Instructions. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

APCIA reiterates our appreciation that the NAIC is moving with the appropriate speed to develop the GCC and help incorporate it into state law. We likewise thank the Working Group and NAIC staff for their continued efforts to advance this important project. We offer these comments on the revised GCC Instructions for the following three topics: (1) Scope of Application, (2) risk charges for material non-insurance entities, and (3) treatment of capital instruments and debt.

I. Scope of Application

A. Determination of Material Risk

APCIA believes the GCC Instructions should include more detailed and principle-based guidance for establishing the Scope of Application of the GCC. In particular, guidance is needed for determining whether a non-insurance entity within the Broader Group poses material risk to the Insurance Group. This will allow companies and their lead-state regulators to identify such entities that do not pose material risk and therefore can be excluded from the Scope of Application, with as much consistency as possible across groups and states.

As a threshold matter, the GCC Instructions should provide a definition of “material risk” for purposes of the Scope of Application. In this context, we believe “material risk” should be defined as “risk emanating from a non-insurance entity that could adversely impact a group’s insurance operations and ability to pay policyholder claims.” Likewise, the GCC Instructions should explicitly state that non-material entities within the Broader Group (but outside the Insurance Group) should be excluded from the Scope of Application.
These points naturally follow from the fundamental reason for state insurance regulation and the stated objective of the GCC: policyholder protection. Indeed, paragraph 13 of the GCC Instructions already makes clear that “the overall purpose of this assessment is to better understand the risks that could adversely impact the ability…to pay policyholder claims”. This reasoning is also in accordance with international standards. For example, under ICP 23, the fact that a non-insurance entity poses risk is not, alone, determinative of whether that entity should be in or out of the scope of group supervision; rather, to be considered included in scope, there also must be some means by which the non-insurance entity could transmit that risk to the group’s insurance operations. In sum, there is more than sufficient justification for the GCC Instructions to make clear that the crux of the materiality analysis is whether an entity could adversely impact a group’s ability to pay policyholder claims, and that non-material entities (as determined using the definition of “material risk” in the preceding paragraph) should be excluded from the Scope of Application.

For effectuating the materiality analysis for purposes of the Scope of Application, APCIA believes it is necessary to consider the totality of the facts and circumstances of a particular entity within a group. Given the diverse structures and business models of insurers, it would be impracticable to develop a one-size-fits-all checklist of guidelines that would be useful for materiality determinations across all groups. Strict or formulaic quantitative measures are likewise an insufficient proxy for materiality. Instead, the materiality analysis must consider the unique circumstances of the relevant entity and group.

To that end, APCIA recommends developing a list of factors related to whether an entity could adversely impact a group’s ability to pay policyholder claims. Insurers and regulators could then use these factors to undertake a materiality analysis based on the totality of the facts and circumstances by considering the factors and how they apply to the group’s business. After this analysis, a determination can be made as to whether an entity is material. To be clear, no single factor is determinative of materiality of risk, nor should these factors be used as a scorecard or checklist. Below we offer examples of factors that should be considered when determining materiality of risk:

- The nature of the subject entity and specific activity(ies) that give rise to the risk.
- The means by which risk can be transmitted, or prevented from being transmitted, from the entity to the group’s insurance operations.
- The means applied for risk mitigation or transfer to third parties and the extent to which risk is reduced or transformed (e.g., to credit risk).
- Past experience (i.e., the extent to which risk from the entity has impacted the Insurance Group over prior years/cycles).
- The existence of cross-support mechanisms between the entity and the Insurance Group (e.g., guarantees).
- The location of the entity within the Broader Group and how direct or indirect the linkage may be.
- The existence and relative strength or effectiveness of structural safeguards that could minimize the transmission of risk to the Insurance Group (e.g., whether the corporate shell can be broken).
• The existence of sufficient capital within the entity itself to absorb losses under stress and/or if adequate capital is designated elsewhere in the Broader Group for that purpose.
• The extent to which there is risk diversification (e.g., where risks of one or more entities outside the Insurance Group are potentially offset (or exacerbated) by risks of other entities) and whether the corporate structure or agreements allow for the benefits of such diversification to protect the Insurance Group.
• The degree to which capital management across the Broader Group has historically relied on funding by the Insurance Group to cover losses of the subject entity.
• The degree of risk correlation between the subject entity and the Insurance Group.

The GCC Instructions currently contemplate excluding only non-material, non-financial entities from the Scope of Application. However, the Working Group should also consider allowing non-material financial entities within the Broader Group (but outside the Insurance Group) to be excluded from the Scope of Application. We understand that the Working Group views financial entities, in general, to be of greater risk than other affiliates. Even so, all entities that meet the broad definition of “financial” in the GCC Instructions do not necessarily pose material risk (as defined above) under all circumstances. The fact that an entity would be classified as “financial” for purposes of the GCC should be weighed as a factor in the materiality analysis described above, but that alone should not be determinative of materiality.

B. Scope of Application Starting Point

APCIA supports the new starting point proposed in the revised GCC Instructions that would allow large decentralized groups a reduction in Scope of Application up front in some cases. Likewise, we agree with NAIC staff’s suggestion that regulatory evaluation of an up-front reduction in Scope of Application should be based on established guidance that can be applied consistently across states. For this purpose, the GCC Instructions should provide guidance that is similar to the materiality test detailed in the preceding section. We believe utilizing similar guidance would be appropriate since the underlying purpose of excluding entities from the Scope of Application is the same, regardless of whether entities are first listed on Schedule 1 or excluded up front.

II. Risk Charges for Material Non-Insurance Entities

A. Non-Financial Entities

In the short term, risk charges for non-financial entities should be 3% of 3-year average revenue. By “short term” we mean during the first few years of the GCC’s implementation, a period during which experience will be gained that can then be analyzed in more detail and across more groups than was possible in field testing. In the meantime, APCIA recommends using average revenue over a 3-year period as the base for the risk charge in order to minimize volatility.

Once some experience is gained with the GCC, the Working Group should consider a variable risk charge that would be more risk-sensitive based on the industry or activity(ies) in which the subject non-financial entity participates. APCIA does not believe that the variable charge needs to be developed in an overall complex fashion, especially since the published field-test results show this charge had a fairly minor impact overall (e.g., as compared to the inclusion of debt as qualifying capital or the use of scalars). Rather, a future variable charge could be as simple as a
construct based on an assigned risk category (e.g., high/medium/low) with a differentiated charge for each.

B. Financial Entities

APCIA is concerned with the breadth of the expanded definition of “financial entity” in the GCC Instructions. If the Working Group maintains this expanded definition of “financial entity”, we recommend using, in the short term, a capital charge that is roughly equivalent to an entity’s current post-covariance RBC charge, while also developing a high/medium/low-risk construct with differentiated charges for the long term.

The exposed GCC Instructions provide that certain non-insurance affiliates of an insurer are deemed as financial. We understand the Working Group views such affiliates to be of greater risk relative to other types of affiliates, and by deeming them to be financial, they would be listed separately for analytical purposes as well as subjected to a higher capital charge. Specifically, the exposed GCC Instructions add the following to the definition of “financial entity”:

“Affiliates that are integral to the performance of the insurance contract or the provision of insurance or financial products or services to policyholders, members or depositors [Examples include: agents, reinsurance intermediaries, claims adjusters or processors, third party administrators, pharmacy and other benefit managers, provider groups or entities that provide more than X percent of the policy benefits under policies issued by insurers within the group, and ] will be treated as financial entities.”

We have some concerns about the language cited above, which would effectively deem some affiliates to be considered financial. There is a wide array of types of non-affiliated entities within insurance groups, and it seems overly simplistic to conclude that all that are somehow associated with assisting the insurer with contract performance or policyholder services are inherently riskier than others. Subjecting these entities to a capital charge for financial entities (12% of 3-year average gross revenue – possibly to be increased to 15%) could result in a significant additional charge as compared to current RBC, for several reasons:

- The base of the entity’s charge would be changed from BACV to gross revenue.
- The factor applied to the base would increase from 7% BACV to 12% of gross revenue.
- Removing the charge from the insurer’s RBC—where it is subject to the covariance adjustment—to a separate line item for the affiliate itself, where the capital charge is aggregated without a similar covariance calculation or other recognition of risk diversification.

Therefore, in the short term, APCIA recommends using a capital charge that is roughly equivalent to the current post-covariance charge for such affiliates in RBC. Over the first few years of the GCC’s implementation, data can be collected and used to derive a more risk-sensitive charge, but also one that is pragmatic to develop and implement (e.g., a differentiated charge for entities of high/medium/low risk as determined by specified criteria).
III. Treatment of Debt as Qualifying Capital

APCIA very much appreciates that the GCC will, in large measure, recognize certain senior and hybrid debt as capital. Debt is a critical capital resource for many of our members. The capital markets are well established and have proven to be a reliable resource for the funding of debt instruments, even during the 2008-2009 financial crisis. Experience has shown time and again that the debt markets can be tapped quickly and utilized to enhance policyholder protection in a flexible and cost-efficient manner. Moreover, in periods of macroeconomic stress such as the financial crisis, the use of debt can be a more attractive alternative to the issuance of stock in depressed markets while also avoiding dilution of shareholder interests.

There is, however, an overarching issue that is presented by the way debt is treated in the proposed GCC Instructions. The treatment of debt differs in some key aspects from that which was adopted by the International Association of Insurance Supervisors (IAIS) in the Insurance Capital Standard (ICS) in 2019—which was the culmination of a long and hard negotiation process with U.S. interests supported by the NAIC, Federal Reserve Board (FED), and Federal Insurance Office (“Team USA”). As a result, and given the nature of the differences, the GCC could be viewed as less credible by other jurisdictional supervisors including those who may be parties to a Covered Agreement. Comparability of the GCC with the ICS is a looming issue on the horizon, the resolution of which can impact the views of many IAIS member jurisdictions about the efficacy of state-based regulation over U.S.-based insurance groups.

At the same time, the FED is working to complete its Building Block Approach (BBA) applicable to insurance groups under its supervision (i.e., savings and loan holding companies). The currently proposed approach in the BBA is more closely aligned with the principles-based criteria in the ICS than with the approach taken in the exposed GCC Instructions. While the proposed BBA approach would disallow debt except for grandfathered surplus notes, in some respects that is due to the unique mandate of the FED. For example, a criterion in the proposed BBA is that financial instruments be “subordinated to depositors and general creditors of the building block parent”, thus reflecting the FED’s mandate to protect the depository institution within the group.

With those high-level comments as an introduction, the following comments are intended as constructive suggestions to address some technical points in the GCC Instructions and template regarding debt. In addition, we offer some thoughts that may be helpful in addressing international perceptions.

A. Qualifying Instruments

APCIA recommends using criteria, rather than defined terms, to identify qualifying capital instruments. The GCC takes the approach of testing whether certain types of debt qualify as capital—specifically, senior debt, hybrid debt, surplus notes and “similar” instruments, and “other debt”. This contrasts with the approach taken by the IAIS in its ICS V.2.0 for the Monitoring Period, and by the FED in its proposed BBA. Both the ICS and the FED focus on criteria (e.g., permanence, loss absorbency, etc.) that are agnostic as to the title or name of a particular instrument.
There are two implications that we see. First, should the GCC go forward as currently proposed, the Working Group may need to supplement the GCC Instructions with definitions for each type of instrument. For example, “hybrid debt” is not defined in the Instructions. We understand that rating agencies treat subordinated debt issued by a parent company as “hybrid debt” as long as it is long-dated and has provisions to defer interest payments for a period of time. This could give rise to variation in treatment of hybrid debt (e.g., it may be unclear to a group if it should classify it as “hybrid” or as “subordinated” debt). On another level, comparability with the ICS needs to be considered, and on this point it seems that the more important issue is not whether types of debt are called out by name or more generically by tier, but whether comparable criteria to the ICS are used.

B. Treatment of Senior and Hybrid Debt

Using the calculation described below, the Instructions provide for an “additional capital allowance”. We first note this terminology has a potential connotation of an amount that is granted, in this case, to qualify as capital. We do not believe that to be the true nature of the calculation. Rather, for instruments that qualify for capital treatment based on specified criteria, it is a calculation to determine whether the aggregate dollar value of those instruments is within supervisory limits, and if not, the excess amount that would then disqualify. APCIA believes that focusing the Instructions’ text on "limits", rather than "allowance", will help in some respects with perceptions about comparability.

For subordinated senior and hybrid debt instruments meeting specified criteria, the GCC Instructions are detailed and have certain options remaining for consideration by the Working Group. In brief, the amount that would qualify would be determined based on the following inputs:

1. Tracked down-streamed proceeds.
2. Total paid-in capital and surplus of U.S. insurers.
3. A proxy value, i.e., for senior debt, 30% of available group capital pre-debt plus outstanding senior and hybrid debt (15% in the case of hybrid debt).

The amount that would qualify for treatment as capital in the GCC would be the larger of (3) over the larger of (1) or (2), subject to two caps:

- The total amount of outstanding senior and hybrid debt.
- The amount of senior debt and hybrid instruments allowed in group capital cannot exceed 50% of group capital before such debt.

While APCIA is of course not privy to the confidential, company-specific results of GCC field testing, it appears based on the wording in the GCC Instructions alone that in the vast majority of cases the amount of paid-in capital and surplus will exceed tracked down-streamed proceeds and, possibly, the proxy values as well. (The NAIC reported that field-test results showed only a handful of groups that were impacted by the limit, and only half of those resulted in a “haircut” greater than 10% of reported debt). This, in part, is because the calculation includes the paid-in capital and surplus of all U.S. insurance entities in the group, regardless of the source of that capital (whether from debt proceeds or otherwise).
The GCC Must Test for Subordination to Policyholders. There are indications in the exposed GCC Instructions that consideration is being given to simplifying the process by eliminating the downstreaming criterion altogether such that qualified debt would be the greater of (3) over (2), above, subject to the caps. If so, there would in effect be no explicit test to support that the debt is structurally subordinated. Recognizing that U.S. senior debt is not contractually subordinated, this could raise issues about international perceptions about the GCC. Team USA argued long and hard to support structural subordination in the ICS, finally achieving victory in Abu Dhabi last November. While use of structural subordination in the ICS is termed by the IAIS as a “national discretion”, it is an option nonetheless in the ICS that is now recognized by the IAIS and its key member jurisdictions on the IAIS Executive Committee who voted to adopt ICS 2.0. Therefore, we have concerns with the notion of deleting the downstreaming criteria without any other criteria to support subordination, as explained in the following paragraphs.

At a time when comparability with the ICS is an issue that is quickly coming to the forefront, it is not clear why the GCC would now take a very different route with respect to the treatment of debt. While downstreaming has raised many questions about how debt proceeds can be tracked and verified, the ICS criteria are workable and rely in large measure on each group and its group-wide supervisor to make that determination in light of the unique facts and circumstances surrounding each respective group. The IAIS avoided prescribing detailed rules or criteria for tracking. APCIA believes the NAIC should do the same in the GCC, leaving the determination of the amount downstreamed to the lead state working in conjunction with the group.

APCIA believes a similar approach (to the ICS) can be just as workable in the GCC—focusing on criteria that are agnostic to the type or name of any particular financial instrument. This would include criteria to support that the qualifying amount of debt to be treated as capital is actually subordinated (either contractually by the terms of the instrument, or structurally), and other principle-based criteria, as in the ICS, to support permanence, loss absorbency, etc. Some refinement of the ICS criteria may be necessary to address U.S.-specific nuances for the GCC. Indeed, structural subordination is an example of such a nuance for which Team USA successfully negotiated before the IAIS to accommodate U.S. practices in the ICS. This would avoid a comparability issue with respect to which capital instruments qualify as capital resources. That said, one area where there could be explainable and appropriate differences with the ICS involves limits on the amount of those qualifying capital resources (such as described below with respect to surplus notes, which in our view, and as argued by Team USA before the IAIS in the case of the ICS, should have no limit) given some of the unique features of state-based regulation in the United States.

Therefore, to the questions posed by the exposed GCC Instructions as to whether the downstreaming/tracking test should be maintained and, if so, what criteria should be in place, APCIA recommends keeping the test and using the criteria (with any U.S.-specific refinements necessary) that have been approved in ICS 2.0 for the Monitoring Period. That is, structurally subordinated debt should increase available capital to the extent the group and its lead state have determined such amount supports the insurance operations and is insulated from recourse by the lender, through tracking of downstreamed proceeds of the instruments into insurance subsidiaries.
There is, however, one other criterion for down-streaming that the Working Group could consider as an option to tracking down-streaming. Fundamentally, jurisdictional supervisors who permit subordinated debt to be treated for regulatory purposes as capital do so because policyholders remain protected; whether structurally subordinated or by the terms of the instrument, legally enforced restrictions and safeguards prevent the lender from “pulling the rug out from under” policyholders such that the debt is considered sufficiently permanent and loss absorbing. The issue becomes, to what assets and how much of those assets would the lender nonetheless have recourse?

As a practical matter, the lender would have recourse only to the liquid assets that remain in the entity that issued the debt (i.e., the holding company in the case of senior debt). For many groups, the unconsolidated balance sheet of the holding company (for public companies, the separate financial statements of the registrant are publicly reported in Form 10-K filed annually with the SEC) reflects a very large, illiquid investment in insurance subsidiaries, control over which is subject to regulatory oversight and approval. The amount of other, liquid assets in the holding company is typically much smaller. So, another option to test structural subordination is to limit the amount of senior debt to qualify as capital to that which is in excess of the liquid assets in the holding company. This would be easier to determine and to verify and may produce a value that would satisfy the group. If not, the group could revert to the tracking of down-streaming criterion.

C. Other Debt

Debt other than senior and hybrid debt is not allowed as capital pursuant to the exposed GCC Instructions. However, we understand that data will be collected in the GCC template for purposes of facilitating a sensitivity test based on a 15% allowance (of available group capital pre-debt plus outstanding senior and hybrid debt). We understand that the Working Group may later consider allowing limited amounts of other debt as capital if criteria can be determined. APCIA is open to the possibility of some allowance for other debt in the future. However, we believe that consideration should also be given to comparability with the ICS and adherence to the principle of subordination.

D. Surplus Notes

APCIA agrees surplus notes should be treated as capital in the GCC and with no limit, as proposed in the Instructions. We understand that Team USA argued before the IAIS for a similar outcome in the ICS, especially for mutual insurance companies. The IAIS ultimately decided to make some accommodations for mutual-company surplus notes (included in Tier 2 instruments) but retained limits, albeit limits that are slightly higher than those applied to non-mutuals. Nonetheless, APCIA supports the GCC treatment with no limit, given the well-established supervisory requirements and safeguards that surround all aspects of the issuance, maintenance, and repayment of surplus notes in the U.S.

E. Foreign Debt

APCIA likewise supports the GCC’s treatment of foreign debt. For debt issued by foreign entities, the GCC respects the treatment afforded by the local supervisor while also holding to the principle of subordination, whether that be achieved structurally or through the terms of the
instrument. If subordination is in place and if approved by the local supervisor as capital, the debt would qualify as capital in the GCC, a position with which APCIA agrees.

**F. Overall Limitations on Debt as Capital**

The exposed GCC Instructions have an overall limit on the use of debt as capital (i.e., senior debt and hybrid instruments allowed in group capital cannot exceed 50% of group capital before such debt). It is unclear if “group capital” as used for this test would include full value for surplus notes and qualifying foreign debt. Given that there is a separate limit applied to senior and hybrid debt – no more than 100% of such debt can qualify – it would seem appropriate that the overall limitation should apply to all debt, including surplus notes and foreign debt. That said, and as noted above, APCIA supports no limit on surplus notes of mutual insurers. It is important that all insurers be able to include unlimited amounts of capital from at least one organic source and one external source. In the case of stock companies, those would be retained earnings and common stock, respectively. In the case of mutuals and similar companies that cannot issue common stock, those would be retained earnings and surplus notes.

We observe that there are members of NAIC staff who participate in the development of the GCC as well as field testing of the ICS through their role on the IAIS Capital and Solvency Field Testing Working Group. Only they would be in a position to assess how the impact of the proposed limits in the GCC compare to those in the ICS for groups that have participated in both the GCC and ICS field testing exercises. Because APCIA is not in the same position, we do not offer a view on the overall limit of 50%. However, we do recognize that the comparability issue is also an important part of navigating the way forward with the GCC and encourage the Working Group to give due consideration in the context of the overall limit.

We look forward to discussing our comments with you and the Working Group.

Sincerely,

Chair, NAIC Group Capital Calculation (E) Working Group
via e-mail to ddaveline@naic.org and lfelice@naic.org

Re: GCC Working Group Exposures

Dear Commissioner Altmaier:

A coalition of fourteen companies (Brighthouse Financial, CNO Financial, Genworth Financial, Global Atlantic Financial Group, Hannover Life Reassurance Company of America, Jackson National Life Insurance, Lincoln Financial Group, National Life Group, Principal Financial Group, Protective Life, Reinsurance Group of America, Sammons Financial Group, Standard Insurance Company/StanCorp Financial Group, and Transamerica) (collectively, the “Coalition”) appreciates the opportunity to comment on the exposure of the: a) Staff Group Capital Calculation (GCC) PowerPoint (the “PowerPoint”); b) revised draft instructions; c) revised GCC template; and d) FAQs relating to these documents.

The Coalition’s primary area of advocacy has been the need for the GCC to adhere fully to legal entity rules in support of the state-based legal entity solvency system. Accordingly, we welcome significant improvements within the exposed materials that eliminate several proposed “on top adjustments.” In this letter, we specifically want to indicate our support for the proposed treatment of XXX/AXXX captives.

In particular, we understand the revised instructions to include no “on top adjustments” for captives or permitted/prescribed practices. Furthermore, slide 11 of the PowerPoint indicates that a proposed sensitivity analysis for XXX/AXXX captives will be excluded from the GCC template “upon referral to an E Committee Group or Subgroup for Further Risk Assessment.” Once this occurs, we understand that further analysis would be separate from the GCC itself. Assuming our understanding is correct, the Coalition fully supports the proposed treatment and looks forward to working with the relevant group of regulators.

We thank you, the Working Group, and NAIC staff for your attention to this letter and prior Coalition correspondence. We look forward to continuing to work with you and your team as the NAIC moves towards finalization of the GCC.

Sincerely,

Brighthouse Financial
CNO Financial
Genworth Financial
Global Atlantic Financial Group
Hannover Life Reassurance Company of America
Jackson National Life Insurance
Lincoln Financial Group
National Life Group
Principal Financial Group
Protective Life
Reinsurance Group of America
Sammons Financial Group
Standard Insurance Company/StanCorp Financial Group
Transamerica
Dear Mr. Felice,

Global Atlantic appreciates the opportunity to comment on the exposure draft of the revised GCC instructions and the revised GCC template. Our comments address concerns with the following:

- Capital calibration
- Downstream tracking of debt
- Scalar methodology
- Scalar governance

We also seek guidance on whether GAAP equity values should include or exclude OCI when GAAP is used as the accounting method to determine the carrying value of an entity.

Capital Calibration

We have concerns with the current proposed approach of using the trend test level of 300% ACL as the capital calibration level. First of all, 300% ACL is inconsistent with the 200% ACL (= 100% CAL) calibration level widely used in the insurance industry for RBC. We believe this will lead to confusion and misunderstandings when comparing RBC to GCC, potentially undermining the current RBC standard. RBC ratios are typically in the 350% to 450% range, but the GCC ratio will be much lower. For example, if the underlying RBC ratios of the companies in the group average 450% RBC, the resulting group capital ratio will be ~300%.

In addition, we believe the insurance industry’s current reporting of two capital calibration levels, (100% ACL and 200% ACL) results in confusion and frequent misinterpretation of reported ratios; adding a third calibration level for the GCC of 300% ACL will compound the problem. We believe this will lead to additional confusion and misunderstanding by users of financial information, including the regulatory, rating agency, and banking communities.

We strongly request that the NAIC adopt a 200% ACL calibration level for the GCC.

Downstream Tracking of Debt

The current instructions rely on downstream tracking in order to count debt proceeds as part of available capital. In practice, our company borrows externally in order to downstream it to the insurance companies; however, we have not found it necessary to track downstream transactions and question whether a tracking system would simply introduce complexity without providing a benefit.
We are in favor of a proposal to eliminate downstream tracking logic and replace it with a simple comparison to paid-in capital and surplus, for the following reasons:

- Simpler, more efficient, and more reliable test
- Avoids complications that could result from debt that has been refinanced by the parent as there would be no contribution of the debt amount issued.
- Avoids complications of tracking upsize transactions where debt is borrowed at one date and then down streamed at a different date.
- Avoids complications of tracking the reverse: dividends which are up streamed. Are those upstream transactions to be netted against down streamed capital or not?
- Avoids complications and questions related to M&A transactions – if a company is acquired, does the new parent company automatically assume the historical relationship of down streamed debt, so long as its debt at least equals the debt of the old parent company?

If the downstream tracking approach is maintained, once layers of transactions of the type described above are introduced, a comprehensive downstream tracking system will need to be developed, communicated, applied and reported across the industry in a way which is comparable and reliable. Our view is that industry and regulator efforts to track down streaming will not add value. In our case, the resulting capital adjustment will be the same whether we develop a downstream tracking process or whether we run a simple test ensuring that paid in capital at least exceeds the capital adjustment amount.

Scalar Methodology

We support the Excess Relative Ratio Approach for scaling non-U.S. capital ratios to U.S. RBC. This method utilizes two anchor points for scaling:

1. The respective industry average capital ratio
2. The regulatory intervention level.

The alternative scaling approach, the Pure Relative Ratio, relies solely on the industry average capital ratio to translate a non-U.S. capital ratio to U.S. RBC. It does not take in to account the regulatory intervention level. Since the Pure Relative Ratio approach adjusts required capital only, available capital is not adjusted, resulting in excess capital being distorted. Since the Excess Relative Ratio approach adjusts both available capital and required capital, excess capital is not affected.

Thus, the Pure Relative Ratio lacks a mechanism to ensure that a non-U.S. firm at the regulatory intervention level within it’s respective country will be at the U.S. RBC intervention level once scaled. This is a material fault. Again, we support the Excess Relative Ratio Approach, and its ability to align regulatory intervention levels across jurisdictions.

Scalar Formulation

Transparency of how the scalars are calculated will be critical, regardless of which scaling methodology is selected. In order to appropriately manage capital under the group framework, firms must have a thorough understanding of how scalars behave. Many non-U.S. countries rely on market-
value based capital ratios, which have potential to behave differently than the book-value based RBC measure.

We believe the following themes should define the scalars:

Consistency – scalars should be calculated and applied consistently across all non-U.S. regimes.

Specificity – scalars should be discretely computed and applied amongst life, property casualty and health insurance companies.

Stability – the results of applying scalars to Non-U.S. capital ratios should not be volatile; for example, converting to U.S. RBC should not yield a significant headwind in one year, and a significant tailwind in the following year.

Additionally, we believe answers to the following questions are critical for firms to understand the impact of the scalars:

1. How is the country average computed? Is the concept of country average based on equal weighting each firm? Alternatively, is it size weighted, such that a large provider in Country Y may dominate the average of Country Y?

2. How frequently will the scalars be updated?

3. Will scalars derived from Year 20XX be applied to 20XX actual results, or will timing of filings and data availability create a lag?

4. Will scalars take in to consideration only a single year, or alternatively, will a rolling average mechanism be utilized?

GAAP Equity

The GCC instructions are silent on whether OCI should be included or excluded when GAAP equity is used as the carrying value of an entity. Companies typically report GAAP equity excluding OCI to lessen the amount of volatility that can arise when including market value adjustments of assets. Excluding OCI is also consistent with statutory accounting rules that generally do not reflect the market value of assets. We suggest that the GCC instructions include guidance on whether OCI should included or excluding when reporting GAAP equity. Otherwise there could be inconsistencies in how companies report GAAP equity amounts.

Again, thanks for allowing us to provide our comments on the revised GCC instructions.

Sincerely,

Lauren Scott

Re: The National Association of Insurance Commissioners (“NAIC’s”) Draft Group Capital Calculation (“GCC”) Instructions and Template

Dear Commissioner Altmaier:

Prudential Financial, Inc. (“we”) thank the Group Capital Calculation Working Group (“Working Group”) for continuing to seek input on key elements of the GCC. We support the development of supervisory tools, such as the GCC, that will enhance state regulators’ ability to protect policyholders and insurance markets. Further, we believe the GCC framework – through its employment of an inventory approach to obtain insight into all entities within the group and the location and sources of capital – can achieve the NAIC’s stated objective of providing state regulators a “panoramic, transparent view of the interconnectedness, business activities, and underlying capital support for an insurance group.”

While the foundation of the GCC framework is strong, we believe appropriate outcomes for a number of key design elements is essential to ensure the final version provides state regulators appropriate insight into risks while minimizing the potential for unintended consequences. In the pages that follow, we identify the approaches that we believe would best position the GCC to accomplish these objectives.

We again thank the Working Group for seeking stakeholder input on key elements of the GCC and would welcome the opportunity to discuss the information included in this response should the Working Group or NAIC staff engaged in the GCC project wish to do so.

Sincerely,

Ann Kappler
Senior Vice President, Deputy General Counsel and Head of External Affairs
Prudential Financial, Inc.
Overview

We strongly support the Working Group’s decision to employ an aggregation based approach in order to “build on existing legal entity capital requirements where they exist rather than developing replacement/ additional standards.” As the Working Group has rightfully noted, such an approach strikes an ideal balance of “satisfying regulatory needs while at the same time having the advantages of being less burdensome and costly to regulators and industry and respecting other jurisdictions’ existing capital regimes.”

As the Working Group takes steps to finalize the GCC, we encourage it to pursue approaches that are aligned with the objective of providing regulators transparency into risks while avoiding the creation of additional standards that are unnecessary and may be burdensome and costly. Further, we also encourage the Working Group to consider the impact the various design choices may have on the ability of the GCC to provide appropriate insight into risks (e.g., avoid false positives and negatives) and how they could affect the ability of supervisors and/or insurers to navigate periods of stress.

Limitations on the Recognition of Senior and Hybrid Debt Should be Removed

We believe the proposed limitations on the recognition of senior and hybrid debt are inconsistent with the NAIC’s stated intent for the GCC to serve as tool for obtaining insight into insurance groups rather than a binding constraint and further, could discourage the prudent use of debt instruments as an effective capital and liquidity management tool – particularly during times of stress. We therefore believe the Working Group should eliminate the proposed limits on the degree to which senior and hybrid debt qualify as available capital.

Insurers weigh a number of critical elements when establishing and managing their capital structures such as rating agency targets, cost, tax implications, etc. In practice, these considerations serve as effective guardrails against behavior that may be detrimental to the insurer or policyholders. Similar to the Working Group’s decision to leverage the strength of existing solvency regimes rather than developing replacement/additional standards, we believe the GCC should leverage existing market forces that promote sound capital management practices across the sector. The May 19 NAIC Group Capital Calculation Post Field Testing Staff Input presentation highlighted that under the current GCC proposal, 25% of the volunteer companies from the 2019 field test that reported senior and/or hybrid debt would not receive full credit for the capital instruments they have issued. We believe this percent could increase significantly during economic downturns as an insurer’s available capital declines and required capital increases, which would further limit the recognition of these resources and inappropriately discourage their use. Eliminating the proposed limits on the recognition of senior and hybrid debt would avoid the potential for the GCC to trigger such procyclicality.

Should the Working Group insist on maintaining limitations, we request the following changes to better acknowledge the presence of existing market guardrails and reduce the potential for the GCC to inhibit an insurer’s ability to manage its capital structure in a manner it feels is most appropriate and have procyclical effects during economic downturns. Further, the purpose of any imposed limitations that are retained should be explained in light of the stated intent for the GCC to serve as tool to obtain insight into risks as opposed to a binding constraint.
The cap of the allowance at 50% of total adjusted carrying value in Inventory B should be eliminated given that the underlying allowances, which are modeled largely after rating agency approaches, already have conservatism embedded in them.

- Specifically, the 30% factor for senior debt and 15% for hybrid debt are being applied to a more conservative base than rating agencies use for establishing limits – i.e., the GCC intends to apply the factors to the sum of total adjusted carrying value + outstanding senior and hybrid debt while rating agencies typically base their assessment on the group’s total consolidated U.S. GAAP equity.

- Adding a limit of 50% of total adjusted carrying value to the conservative 30% and 15% limits for senior and hybrid debt (relative to total adjusted carrying value + outstanding senior and hybrid debt) effectively lowers the 45% permitted (i.e., 30% + 15%) to approximately 33%.

- More broadly, the different objectives of the GCC versus rating agency frameworks must also be considered. For example, S&P’s capital model is calibrated to much higher confidence levels (e.g., 97.2% for “BBB”) and views 20% to 40% financial leverage, based on a group’s total consolidated U.S. GAAP equity, plus outstanding debt, as “neutral”.

- Requirements for tracking the down-streaming of debt issuance proceeds to regulated entities should be eliminated. Keeping funds at the holding company level is a prudent strategy that provides insurance groups flexibility to quickly and easily manage capital and liquidity needs across the group. We believe a tracking requirement could give rise to unintended consequences such as reducing the availability and fungibility of capital resources and forcing U.S. insurance groups to issue greater amounts of debt.

**The Base GCC Should Use the Excess Capital Ratio Scalar Approach**

Prudential disagrees with the suggested change to apply the Pure Relative Ratio option at 300% RBC Calibration in the Base GCC. We believe that a total balance sheet approach to scalars – as embodied in the Excess Capital Ratio Approach – is necessary to adequately account for key differences across insurance regimes, such as the level of conservatism embedded in reserves versus required capital, different valuation and asset admissibility standards, etc. and avoid distorting the measure of required, available, and excess capital. Further, we believe embedding a scalar methodology with shortcomings (i.e., the Pure Relative Ratio Approach) in the Base GCC could undermine the NAIC’s ongoing work at the global level to secure recognition of the Aggregation Method (“AM”). Therefore, while we believe the Excess Capital Ratio Approach is an appropriate method for including in the Base GCC we would also support using a scalar of 100% (i.e., not scaling foreign insurance regimes) until there is greater clarity on what scaling approach will ultimately be included in the AM.

Through its simplistic approach of only focusing on required capital, the Pure Relative Ratio Approach fails to adequately account for key differences in insurance regimes (e.g., level of conservatism embedded in reserves versus required capital, different valuation and asset admissibility standards, etc.). While the limited analysis to date may suggest the two approaches yield similar results, we believe they would diverge in cases where individual insurer or industry capitalization levels change and that the conceptual shortcomings of the Pure Relative Ratio Approach could result in false positives or negatives.
More broadly, we are concerned that adopting the Pure Relative Ratio Approach for purposes of the Base GCC would undermine the ongoing work at the NAIC’s work at the global level to secure recognition of the AM as comparable to the reference method version of the Risk-based Global Insurance Capital Standard (“ICS”). Specifically, we believe that the decision would prejudge the Pure Relative Ratio Approach as the methodology that should be adopted for the AM. Further, we believe it will be essential for the comparability assessment work to take a holistic approach to accounting for the different tools and methods supervisors employ to ensure insurers hold adequate loss absorbing resources to protect policyholders; of the two approaches the Working Group has considered, the Excess Capital Ratio Approach – with its total balance sheet approach – is the only one of the two that would accomplish this.

In the May 19 NAIC Group Capital Calculation Post Field Testing Staff Input presentation, NAIC staff noted the need to continue to explore the topic of scaling in conjunction with similar work for ICS – AM. We support this recommendation and believe it highlights the importance of keeping the GCC and AM in step with each other and taking time to consider the appropriateness of the methodology relative to a suite of criteria, including the reasonableness of the assumptions, ease of implementation, and stability of the parameterization. That said, while we strongly believe the Excess Capital Ratio Approach should be used in the Base GCC (and the Base AM), an alternative path that should be considered is to use a scalar of 100% for the Base GCC until there is greater clarity on what scaling approach will ultimately be included in the AM. Such an approach would avoid prejudging that the AM should employ the Pure Relative Ratio Approach and avoid the potential need to modify the Base GCC in the future if a different scaling methodology is embraced for the AM.

The Calibration of the Base GCC and Scalars for Foreign Insurance Regimes Should be 200% ACL RBC

Prudential disagrees with the suggestion to calibrate the Base GCC ratio or scalars for foreign insurance regimes at 300% authorized control level (“ACL”) RBC – i.e., the Trend Test level. Instead, we believe they should be calibrated to 200% ACL RBC – i.e., Company Action Level (“CAL”) as it has long been common practice for insurers to communicate and stakeholder to assess financial strength on this basis. We believe using 300% as the calibration would unnecessarily interrupt well-established market norms and introduce unwarranted confusion for insurers and stakeholders without any discernable benefit. Further, we believe calibrating to a 300% ACL RBC level could create confusion over, or trigger an unwarranted reset of, how the NAIC’s time tested ladders of intervention approach to the supervision of capital adequacy works in practice.

We recognize a relationship has been established between the 300% ACL RBC level and 100% Solvency Capital Requirement (“SCR”) for Solvency II in the U.S.-EU and U.S.-UK Covered Agreements and further, that the NAIC’s Evaluations of Reciprocal Jurisdictions have similarly established relationships between the 300% ACL RBC level and intervention points under the solvency regimes of Bermuda, Japan, and Switzerland. However, we do not believe these developments justify upending years of industry norms, and the likely confusion that would result from calibrating the Base GCC or scalars of foreign insurance regimes at a 300% ACL RBC level. While we speculate that international considerations may be contributing to the interest in using the 300% ACL RBC level for calibration purposes, we believe it is incumbent on the Working Group to confirm its rationale so a more informed debate could be held with interested parties before a final decision is made.
The Sensitivity Analysis Tab Should Be Removed from the GCC Template

Prudential believes the GCC template should be limited to reporting of the Base GCC (and the required inputs thereto) and that the Sensitivity Analysis tab should be deleted. Narrowing the design of the GCC will ensure insurers, supervisors (domestic and foreign) and other stakeholders have a clear vision and understanding of what the GCC is (e.g., it would eliminate the need to distinguish between a “Base” view and alternative measures). Notwithstanding the comments above regarding scalar methodology, we believe clarity in the design of the GCC is critical as insurers and supervisors move to introduce the GCC as an additional metric to monitor and manage and would provide a stronger foundation for the NAIC’s ongoing efforts to advance the AM at the global level.

To the extent broader information on the insurance group is of interest to a state regulator, we believe it should be obtained through discretionary powers as opposed to embedding it in the GCC template. We believe “Input 6 – Questions” should be transitioned to a Microsoft Word document as it is more user friendly format (note that the NAIC employs such an approach for its work on the AM at the global level). A word based file could serve as a more flexible vehicle for insurers and state regulators, including potential instances where the regulator wishes to receive information beyond that which is included in the GCC template (note a fillable PDF could also be used).

Grouping of Similar Non-insurance Entities and / or Relaxing De-stacking Requirements for Non-insurance Entities Should Be Permitted

Prudential appreciates the Working Group’s consideration of permitting grouping of similar non-insurance entities and / or relaxing the requirement for de-stacking as we believe such flexibility would reduce the burden of completing the GCC template. While we support such flexibility, we believe state regulators should retain the option of requesting more granular information should they feel it is needed to obtain a sufficient view of risks within the group.

Simple Approaches Should be Adopted for Financial Entities and Non-financial Entities Without Regulatory Capital Requirements

For simplicity, Prudential supports adopting a single approach for establishing a proxy capital measure for all financial entities that are not subject to a regulatory capital requirement. Further, we believe it would be beneficial for the Working Group to select the method it believes most aligns with how the AM will ultimately treat this item. Per our comments above, we support grouping of similar entities and thus support the netting of non-operating holding companies. We similarly support adopting a single approach for establishing a proxy capital measure for all non-financial entities that are not subject to a regulatory capital requirement.

We believe ensuring state regulators obtain adequate insight into the entities within the insurance group and risks associated with them is the key point of consideration for these entities and this is best accomplished through the inventory element of the GCC as opposed to an arbitrary proxy capital calculation. To the extent a state regulator believes a non-regulated entity poses material risk to the group, they have discretion to request additional information to understand the risks. Further, such situations would be better addressed through in-depth analysis on a case-by-case basis as a formula driven proxy capital calculation would likely fail to reflect the underlying risk exposures. That said, we believe further consideration of approaches is unwarranted and the Working Group should narrow the
GCC template to single approach for each respective category of entities rather than continuing to test multiple approaches.

**The Draft Financial Analysis Handbook Guidance Should Be Exposed for Comment**

Materials for the May 19 public meeting of the Working Group included an Attachment C – “Draft Regulatory Guidance on GCC”, which was not part of the materials recently exposed for comment. We request that the Working Group provide interested parties an opportunity to provide input on this material before it is finalized.

Below are some initial thoughts on the draft version that was included in the May 19 meeting materials.

- Establishing a minimum threshold that must be maintained to avoid triggering a more in depth supervisor review and/or the need to develop a plan to reduce risks would be inconsistent with the NAIC’s stated intent for the GCC to serve as a tool rather than a binding standard.
- The detailed nature of the guidance seems premature given the range of design elements that have yet to be finalized, which could have a material impact on GCC ratios, and ongoing consideration of which insurers will be exempt from having to file the GCC.

RE: Draft Instructions from the Chair of the Group Capital Calculation (E) Working Group
to the Chair of the Group Solvency Issues (E) Working Group

Commissioner Altmaier:

State Farm Mutual® Automobile Insurance Company and its affiliates ("State Farm"), appreciate
the opportunity to submit these comments concerning the Draft Instructions from the Group
Capital Calculation (E) Working Group (the “Working Group”). As you know State Farm
participated as a volunteer group and provided feedback as to the Group Capital Calculation
("GCC") and its supporting informational elements during its development. State Farm
understands that the GCC provides an evaluation tool for domestic regulators to consider along
with various other risk information already being provided by groups, such as the Own Risk
Solvency Assessment ("ORSA") Report filing.

State Farm urges the Working Group to consider the entirety of the regulatory structure when
evaluating whether to include additional measures through the Draft Instructions on insurers or
the holding company of those insurers that are not entirely exempted, especially when the group
structure is simplistic, focused on insurance operations and when such parent of the holding
company is a regulated insurer.

As a volunteer participant State Farm benefitted from the effort and transparency the Working
Group has utilized all along in developing the GCC and appreciates that the Draft Instructions
incorporates many of the industry’s clarifications and suggested additions. However, State Farm
suggests a few more amendments to the Draft Instructions to recognize today’s overall
financial regulatory scheme and limit duplication as much as possible for regulators and those
being regulated when such groups are not exempted from GCC and are substantially an
insurance group.
Scope

State Farm requests that the same isolation method of excluding non-financial entities be available for other entities in a group.

State Farm supports the Draft Instructions statement in paragraph 12 that recognizes there are groups that have material diverse non-financial activities that are isolated from the financial/insurance group and that could lead to a narrowing of the scope of the GCC in agreement with the Lead State Regulator. However, State Farm questions why the Draft Instructions do not similarly recognize financial or insurance entities that are also similarly isolated from the group. The purpose of the GCC is to evaluate a group’s solvency soundness through a numerical calculation to ensure the primary regulated insurance entities within the group remain sound. Acknowledging the isolation of financial and insurance entities fits within already existing regulatory arrangements as well as the GCC, and acknowledges that capital is not freely fungible for use by the group or entities within the group. Since the same mechanisms recognized by the Draft Instructions to isolate the non-financial entities can be and are being used to isolate financial or insurance entities, the Draft Instructions should recognize the isolation no matter the entity type.

The GCC should not ignore the other existing provisions of the Holding Company Act or solvency provisions applicable to the individual insurance member of the group, such as the Risk Based Capital (RBC) calculation that provides a similar numerical calculation of soundness, financial statements and other applicable regulatory requirements. These provisions, commonly referred to as the windows and walls regulatory scheme, protect the capital of that insurance entity such that capital is not freely available for the use by the group or any other entity within the group. Similar to the recognized ability of non-financial entities to be isolated from the rest of the group, the windows and walls approach isolates the insurance entities from material transaction with affiliates and in a sense isolates the entities. Expanding the acknowledgement of the ability to isolate financial and insurance entities is not radical and fits within the overall goal of the current windows and walls regulatory approach as well as the GCC, to protect the solvency of the insurance members of a group. Just as a non-financial entity may be isolated and pose no risk to an insurance entity in the group, if a financial entity is isolated from the group, it does not pose a solvency risk to the insurance entity. Finally, an argument could also be made that if the insurance entity is isolated from the group in a similar fashion, the group does not pose a risk to the isolated insurance entity. For these reasons, State Farm requests that groups be allowed to present a narrower scope for entities that are otherwise isolated to the Lead State Regulator who would have discretion to accept such narrowing of the scope for that group’s GCC.

State Farm requests that excluded entities not be required to be included on the Inventory Tab or discretion be provided to the Lead State Regulator to exclude, especially when the information is otherwise provided.

In paragraph 14, the third bullet provides that “All entities, whether to be included in or excluded from the Scope of Application are to be reported in the Inventory Tab of the template.” Presumably, this includes the non-financial entities that are isolated and excluded under paragraph 12 or paragraph 30 and financial/insurance entities that are excluded under paragraph 10 and 18. If this is accurate, preparers will be required to provide the required information on entities that are excluded from the scope of the GCC. While there may be certain situations when such information would not otherwise be provided to the Lead State Regulator, in an insurer parent lead group this information is already provided through other required regulatory submissions including but not limited to, financial statements and RBC calculations of the parent insurer or the insurance entities. Gathering information under the GCC from entities that are excluded from the GCC seems counterintuitive and duplicative in certain situations. State Farm requests that excluded entities not be required to be on the Inventory Tab or, at least, the Lead State Regulator have the discretion to not require excluded entities on the Inventory Tab if requested by the preparer.

State Farm requests a baseline materiality definition be provided while maintaining Lead State Regulator discretion to determine if a higher or lower material threshold is appropriate.

The Draft Instructions use the term “material” in discussion whether an entity can be excluded or is to be included in the GCC. State Farm believes discretion should remain with the Lead State Regulator, however, it is important to have a clear understanding of what is meant by “material” and to create some consistency in application. For paragraphs 10 and 18 there is no guidance, but for paragraph 30, which addresses determining what is an “affiliate” to be included in the GCC, it states in part:

For purposes of the GCC, affiliates will NOT include those affiliates reported on Schedule A or Schedule BA, EXCEPT in cases where there are financial entities reported as or owned indirectly through Schedule A or Schedule BA affiliates or where a non-financial, non-insurance Schedule A or Schedule BA affiliate represents greater than X percent of an insurance entity’s adjusted available capital.

The paragraph provides a Drafting Note providing guidance to regulators:

**DRAFTING NOTE:** Initial suggestion is to set “X” threshold for material non-financial entities no higher than 5%.

State Farm suggests adding to the Draft Instructions, additional Drafting Notes in the paragraphs using the term “material”, a baseline for materiality of 5% of the group’s net worth while still allowing the Lead State Regulator and the preparer to use a higher or lower threshold given the particular circumstances presented by the preparer.

State Farm believes that there should be some consistency in application under these provisions and that materiality should be based on the group’s net worth given the GCC is measuring risk of the group and not a particular entity in the group. RBC calculation along with other regulatory
requirements provides the Lead State Regulator the information necessary to evaluate the solvency risk of an individual insurance entity and the GCC should be focused on information that a Lead State Regulator doesn’t already receive and be focused on the impacts to the group. Including a Drafting Note provides guidance, allows the Lead State Regulator and the preparer to utilize a different value for unique situations, and allows the focus of the GCC on those matters that truly impact a particular group.

State Farm offers these comments on the Draft Instructions to help streamline the process for those groups required to conduct the GCC. The intent of the comments is to help the focus of the preparer and Lead State Regulator to be on the insurers of that group and the material impacts of other members of the group that may have on the solvency of the insurance members.

Thank you for your time and consideration in this project and to our comments. If there are any questions concerning the comments, please contact me.

Sincerely,

Chuck Feinen

Re: Comments on GCC Instructions and Template

Dear Commissioner Altmaier:

We write today on behalf of UnitedHealth Group, one of the nation’s largest managed care and healthcare services companies, which, through its UnitedHealthcare business platform, administers and provides healthcare benefits to more than 45 million individuals in all fifty states and the District of Columbia. UnitedHealth Group’s Optum business segments provide health services, including pharmacy services, health care delivery, population health management, collaborative care delivery, information technology, and health care financial services to 115 million individuals and more than 100,000 physicians, practices, and other health care facilities nationwide. We thank you for the opportunity to provide comments on the recently released draft Group Capital Calculation (“GCC”) template and instructions.

We appreciate the simultaneous disclosure of the template, instructions, confidentiality provisions and the handbook draft. This is helpful context for understanding the working group’s intent for this initiative.

**Comments on the Instructions**

The GCC Instructions address not only the mechanics of filling in the template, but also many considerations that regulators are supposed to apply when using the template. We have comments about both aspects of the Instructions. We have divided our comments on the instructions into two sections – our key concerns, and additional concerns that do not rise to the level of a key concern but nevertheless are important to consider as these instructions are finalized.

Our comments in both sections are labeled according to the paragraph labels in the GCC Instructions.
**Instructions Comments – Key Concerns**

**Key Concern #1: Calibration Level**

V.A.40: As we have explained previously, with supporting numerical examples, the method being used to produce the “scalars” [sic] for alien insurers is incorrect, as it takes into account only differences in the average capital being held, and not the relative conservatism of reserves. While there are other conceptual problems with the concept of scalers as being employed here, this particular error should be corrected; we had previously offered a suggestion as to how to make the correction.

VI.57 and VI.58: For entities that file an RBC report, the requirement is to report “entity required capital” at 150% of Company Action Level (CAL). There is no justification for this. Reference is made to the trend test in the RBC formula, which may result in an action level event for entities with Total Adjusted Capital below 150% of CAL; however, that can only occur if certain other, relatively unusual conditions exist, and those other conditions are not tested for in the GCC. Consider the illogical result this would produce for a group where the ultimate controlling person was an RBC filer with Total Adjusted Capital equal to 130% of CAL: the entity would be considered well capitalized from an RBC standpoint, and yet would fall below the 100% level in the GCC. This seems especially misguided given that early drafts of the Financial Analysis Handbook procedures suggest further scrutiny of a group when the GCC ratio is below 175%—i.e., is below 262.5% of CAL.

Furthermore, 100% of CAL may itself be excessive. Early in the development of the GCC, the question was raised as to how the diversification benefit of large, heterogeneous groups would be reflected. Clearly, such a group is less risky than its individual components standing alone would be. The NAIC’s decision at that time was not to have an explicit diversification adjustment (like the covariance adjustment in RBC) built into the GCC, but instead to take diversification into account when interpreting the results. Accordingly, a diversified group should have a capital benchmark that is less than the corresponding benchmark for an individual entity—which in the case of an RBC filer would be CAL. From that standpoint, calibrating the GCC even to 100% of CAL would be conservative; using 150% of CAL is unjustifiably conservative. The mere addition of legal entity capital and capital requirement, without any provision for diversification should is not be interpreted as group risk-based capital regulation.

These concerns about calibration are heightened by the language in paragraph I.A.2 (discussed above) indicating that the GCC will be a basis for regulators to take actions with respect to a group. Even if the GCC will be used solely as an analytical tool, the analysis should be based on an appropriate calibration, to avoid unnecessary follow-up questions and prolonged discussions. However, if the GCC will, in and of itself, be grounds for regulatory action (as suggested by some of the language in the instructions), it is absolutely critical that the calibration not misstate the riskiness of the group.

**Key Concern #2: Definition of “Financial Entity”**

IV.22: We believe that the definition of “Financial Entity” is far too broad, in that it sweeps in “Affiliates that are integral to the performance of the insurance contract or the provision of insurance or financial products or services to policyholders, members or depositors,” such as “claims adjusters or processors, third party administrators, pharmacy, medical provider groups, and other benefit managers,” etc., even when those entities are not material to the group or calculation as a whole. Affiliates that merely provide contracted services to a carrier should not be defined as “financial”: they do not create any more financial
risk to their affiliated insurers than do non-affiliates that provide the same services to other insurers. In fact, given that regulators have oversight over inter-affiliate service agreements, we suggest that affiliated service providers present less risk than do non-affiliates. In the case of health groups, some of the examples given actually diversify risk for the insurance entity in the group, facilitating more access to capital by the insurance entity. The aim of the working group should not be to promote smaller, less integrated or diversified groups.

VI.61: We again object to the notion that “entities that derive a majority of their gross revenue from services that are integral to the performance of the insurance contracts within the group or from the provision of other financial services to policyholders within the group will be considered a Financial Entity without a regulatory capital requirement” [emphasis added]. As noted in our comments on paragraph IV.22, the fact that those services are being performed by an affiliate does not add risk to the group, but in fact because of greater regulatory oversight should be considered to reduce the group’s risk. We also point out that the “Financial Entity” designation is being applied only to such entities that provide services primarily to affiliates; clearly, therefore, it is not the activities of those service entities that are considered risky, since if they provide those services primarily to non-affiliates they are not considered “Financial Entities.” Again, the working group should not want the GCC to limit the scale, diversification, integration or efficiency of groups, given historical evidence of the benefit of size, diversification, and efficiency to group credit standing, as evidenced in public credit ratings.

Key Concern #3: Intangible Assets

VI.83: We question the rationale for collecting information on intangible assets (such as deferred acquisition costs, provider contracts, customer lists, and goodwill). The focus on intangible assets, to the exclusion of other types of assets, seems unwarranted. While it may not always be possible to sell intangibles quickly for cash equal to their reported value, that is true of a wide variety of tangible assets (such as real estate, plant and equipment, and airplanes) that are not being singled out. Furthermore, regardless of their availability for sale, intangible assets do produce a stream of income to the group; otherwise, GAAP accounting would require that they be written down in value or written off entirely. As businesses rely more and more on digital assets and intellectual property as the basis for their operations, and less and less on fixed assets, there is more scrutiny of the value of those assets, and there should be less concern about whether the stated values are appropriate. We believe that any focus on intangible assets—which has not previously been discussed by the working group—is unwarranted, and there is no valid reason to collect information in the GCC or otherwise differentiate this specific category of assets.

We note that securities in a “tangible” investment portfolio are valued on the net present value of expected cash flows to the investor in the private and public markets—despite the tangible nature of the issuers’ assets or capital producing these cash flows. Just over one-third of the S&P 500, which is well represented in corporate debt and equity investment asset classes, have negative tangible net worth. The differential treatment of “tangible” financial investments and physical assets versus income-producing intangible assets is inconsistent.

We note also that the increasingly digital economy is based on software and information assets. Under GAAP, the capitalization of software assets is narrow, and amortization relatively short, compared to traditional fixed assets. Furthermore, changes made to GAAP in 2001 eliminated both the “pooling of interests” accounting in acquisitions and the amortization of goodwill. Accordingly, both business trends and accounting changes have made the differentiation of “intangible” assets increasingly less relevant.
Key concern #4: Use of the GCC

I.A.2.: We suggest several revisions to this paragraph.

One key area of concern is the statement that “insurance companies may be subsidizing the operations of non-insurance entities, potentially undermining the insurance company’s financial condition.” Whether or not all or any of the insurance companies in a group are “subsidizing” other operations within the group is not relevant to the insurance company’s financial condition. Insurance regulators are already empowered to monitor and restrict the flow of capital out of the insurance entities, by means of restrictions on dividends, oversight of transactions with affiliates, and application of the statutory provisions regarding hazardous financial condition, among other methods. If the outflows from insurers to other members of the group are endangering the solvency of the insurers, that points to a regulatory failure that cannot be solved by the GCC. The GCC was never, in our understanding, intended to be a tool for each legal entity regulator to use for legal entity solvency monitoring. That is a function of U.S. risk-based capital (RBC) and state-based insurance regulation, not group-level supervision.

That same sentence in paragraph I.A.2 suggests that another consequence of “subsidization” may be “upward pressure on premiums to the detriment of insurance policyholders.” The GCC was never intended to be a tool for the regulation of insurance premium rates, and we find it highly concerning that this consideration is being introduced in this fashion.

The idea that non-insurance operations within the group pose a proximate risk to the solvency of the group’s insurers has little historical evidence to support it. The real lessons of the financial crisis of 2008 proved that even when an insurer belonged to a group with significant financial risk in other areas of operations, its policyholders were not subjected to significant risk, because the legal entity structure in the United States effectively protected them, especially relative to other group-oriented insurance regulatory regimes. It is clearly not the case that risk within a complex, diversified holding company system necessarily translates to risk to the individually regulated insurance entities or to their policyholders. Each state is responsible for reviewing the financial condition of the legal entities within its jurisdiction, and for decades, including the financial crisis of 2008, that first line of review has proved to be the most effective system worldwide. The GCC may identify “risk” in the larger holding company system, but that will not necessarily translate to better identification of risks to any insurer within that system. We suggest that the Financial Analysis Handbook is the more appropriate location for commentary about how to interpret the risks identified by the GCC.

Another concern arises from the statements in paragraph I.A.2 that the GCC “provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns” and will “allow them to make informed decisions on both the need for action, and the type of action to take.” It seems inappropriate to suggest that the GCC, in and of itself, would be grounds for regulatory action to protect policyholders; that is the function of a regulatory standard, not an analytical tool. The ratio produced by the GCC as well as the additional information provided in the GCC template may provide grounds for a regulator to have discussions with a group about its risks, but they would not be grounds for inferring that policyholders must be “protected” so that the regulator must “take action” by requiring the group to “resolve concerns.”

We also have a concern that the instructions as written may not make clear that the GCC is intended to be used solely by the lead state regulator. In the statement that the GCC “provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns,” the use
of the word “company,” rather than “group,” could be taken to suggest that the GCC is intended to be a tool for any regulator responsible for any legal entity within a group. Likewise, the statement, “State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to ... allow them to make informed decisions on both the need for action, and the type of action to take,” suggests that the GCC will be used by the domiciliary regulator of each insurer. We do not believe that is intended to be the function of the GCC.

In accordance with the foregoing comments, we propose revising paragraph I.A.2 as follows.

2. More specifically, the GCC and related reporting provides more transparency to insurance regulators regarding the insurance group and make risks more identifiable and more easily quantified. In this regard, the tool assists regulators in holistically understanding the financial condition of non-insurance entities, how capital is distributed across an entire group, and whether and to what degree insurance companies may be subsidizing the operations of non-insurance entities, potentially undermining the insurance company’s financial condition and/or placing upward pressure on premiums to the detriment of insurance policyholders. This calculation provides an additional early warning signal to regulators so they can begin working with a company to resolve any concerns in a manner that will ensure that policyholders will be protected. The GCC is an additional reporting requirement but with important confidentiality protections built into the legal authority. State insurance regulators already have broad authority to take action when an insurer is financially distressed, and the GCC is designed to provide lead state regulators with further insights into the risks of the group as a whole, to allow them to reach make informed conclusions decisions about the financial condition of the group both the need for action, and the type of action to take.

I.A.3. This paragraph contains a statement indicating that the GCC could be used “in conjunction with group-specific risks and stresses identified in the Own Risk and Solvency Assessment (ORSA) Summary Report as well as risks identified in Form F filings that may not be captured in legal entity RBC filings.” While the GCC, the ORSA, and Form F are all intended to evaluate the risks of the group, we think it likely will be misleading to financial analysts to suggest that the GCC can be used together with the other two. They lack comparability to each other, for several reasons.

- The ORSA report and Form F reflect a company’s own internal risk analysis, whereas the GCC depends largely on rules prescribed by the regulators.
- The ORSA is forward-looking, and typically considers multiple future years. The GCC relies on historical data, mostly from the single most recent year.
- The “capital” that is considered for purposes of ORSA may be defined differently than the “capital” identified by the GCC.

The last sentence of the paragraph states, “Finally, it’s important to understand that regulators believed that a group capital calculation would be another valuable tool to complement the states’ legal entity focused solvency assessments.” Again, we are concerned that this statement could be construed to encourage use of the GCC by individual state regulators other than the lead state. The stated purpose of the GCC has always been to provide a tool to allow the lead state to better understand the risks to the group as a whole.

In light of those two concerns, we recommend that the paragraph be revised as follows.

3. State insurance regulators currently perform group analysis on all U.S. insurance groups, including assessing the risks and financial position of the insurance holding company system based on currently available information; however, they do not have the benefit of a consolidated statutory accounting system
and financial statements to assist them in these efforts. It was noted prior to development that a consistent
method of calculating group capital for typical group risks would provide a very useful tool for state financial
regulators to utilize in their group assessment work. It was also noted that a group capital calculation could
serve as a baseline quantitative measure to be used by regulators, to supplement in conjunction with the
view of group-specific risks and stresses provided by identified in the Own Risk and Solvency Assessment
(ORSA) Summary Report filings and as well as risks identified in Form F filings that may not be captured in
legal entity RBC filings. Finally, it’s important to understand that regulators believed that a group capital
calculation would be another valuable tool to complement the states’ legal entity focused solvency
assessments.

II.E.20.: We are concerned about the potential for an annual redetermination of scope. If the scope of
application were revised frequently, then year-over-year trends in the GCC would not be meaningful.
There should be a materiality standard developed to determine when and if a group’s scope is
reconsidered; e.g., something based on the cumulative increase in the amount of the group’s capital that
is out-of-scope. To reduce burden on the group, such redetermination should be based upon material
changes in the group, not changes in the reviewer.

V.A.33: This paragraph refers to “the lead state regulator and template reviewer.” We question whether
this is intended to suggest that the template reviewer can be someone other than the lead state regulator.
If not, we suggest removing the phrase “and template reviewer” as it appears to be redundant and
confusing. If there are intended to be multiple reviewers, we renew our concerns about the use of this
tool by any party other than the lead state regulator.

V.A.37: Given that the GCC analytical procedures in the Financial Analysis Handbook are still undergoing
development, it is not possible to speak in any but the broadest way about analytics. Probably, the
description should be limited to the statement, “This tab includes or draws from entity-category-level
inputs reported in the Tab or elsewhere in the GCC template to be used in GCC analytics.”

Instructions Comments – Additional Concerns

We provide the following as some additional considerations for revisions to the instructions.

I.A.7. In the third sentence of this paragraph, the phrase “similar such as” appears to be an editing error.
We suggest revising the sentence as follows.

The GCC instructions and template are intended to be modified, improved and maintained by the NAIC in
the future, similar such as are existing tools such as the Accounting Practices and Procedures Manual, the
Annual Statement Instructions and Risk-Based Capital formula and Instructions.

Also, we suggest deleting the final sentence of the paragraph. While “additional items, such as stress
testing” may still be considered open, they are not relevant to the instructions for the current version of
the GCC.

II.C.12: It is not clear exactly what is meant to be included in “cross support mechanisms.” We would ask
the work group to consider the following when working to define “cross support mechanisms”:

• Is this limited to formal, legally enforceable financial guarantees among members of the group?
• Does it matter whether such guarantees can only result in payment to insurers, not from
  insurers?
• Can the definition of “cross support mechanisms” ever result in the ultimate controlling person being out of scope?
• If the ultimate controlling person is always in scope, would all of its subsidiaries of material size automatically be in scope, since they could have a material impact on the ultimate controlling person?

II.C. 13.: The last sentence of this paragraph says, “Consistent with sound regulation, the benefits of the quantitative analysis facilitated by the GCC should exceed the cost of implementation.” We question why this is referenced as part of the instructions. We do not believe there has been an attempt to quantify the benefit of the GCC; and, in fact, the procedures for how the GCC will be used in practice are only now being developed. Until we know how the GCC will be employed, it seems to be premature to include an assertion about its benefits here. We also suggest that any attempt at determining the “cost of implementation” needs to take into consideration other tools regulators are mandating that carriers complete, such as the ORSA and Form F, and the legal entity grid, all of which were similarly described as tools to assist in group supervision.

II.E.17.: Early in the development of the GCC, the NAIC stated that one of the fundamental principles underlying the calculation was that it would ignore group structure; an entity would be treated essentially the same, regardless of where it was positioned in the group. That principle was relaxed somewhat for subsidiaries of insurers, to try to maintain consistency with RBC as much as possible. Now it seems to have been abandoned altogether, since a non-financial entity that is not part of the “Insurance Group” may be excluded from the scope of the GCC, whereas an otherwise identical entity that is part of the “Insurance Group” must be included. In the current draft, it appears that even the ultimate controlling entity may be excluded from group scope, despite clear influence in the group on corporate governance and capital allocation. Given the definition of “Insurance Group” (paragraph IV.23), this could lead to the inclusion of a non-financial subsidiary that has no connection to the insurance operations other than being owned by the same holding company as the insurers in the group. The rationale for this disparate treatment is not at all clear. Overall, the working group should not create a GCC that leads to preferential group organizational structure.

II.E.18.: This paragraph introduces the concept of exclusion being justified by the determination that the entities excluded “do not pose material risk to its [i.e., the group’s] insurance operations.” This seems eminently reasonable. It is not clear why that same concept should not be adopted to resolve the problem noted in the comment above on paragraph II.E.17.

Section III: There is no Section III. We assume this is merely a tabulation error and not an entire section that has been omitted.

IV.23: With regard to the definition of “Insurance Group,” please see our comment above on paragraph II.E.17. As currently defined, the “Insurance Group” is not limited to the insurers within a group and their own subsidiaries. Merely being owned by the same intermediate holding company that happens to own the insurers in the group is enough to make a non-financial entity part of the insurance group. This does not seem reasonable. The “Insurance Group” should be defined to exclude any non-financial entities that are not actually owned by the insurers.

IV.28: The “Ultimate Controlling Person” is defined to be, “As used in the NAIC’s Insurance Holding Company System Regulatory Act (Model #440).” Model #440 does indeed use the term, but while it defines “control” and “person,” “ultimate controlling person” itself is never defined—that is, there is no
explanation of what “ultimate” means. This seems an important concept that should be defined more precisely, especially since the “head of the Insurance Group” may be distinct from the “Ultimate Controlling Person.”

IV.30: The definition of “Affiliate” applies an inappropriate threshold for materiality to Schedule A and Schedule BA assets, based on the capital of the insurance entity that owns the asset. The GCC is intended to be a measure of the group’s capital, and any materiality threshold should be set relative to the entire group (insofar as it is in scope), and not relative to any individual entity within the group. Note, in fact, that paragraph VI.51 states a materiality criterion for Schedule A and Schedule BA assets based on the capital of the group, not the entity that owns them.

VI.54: The instructions call for the reporting of all dividends paid within the group. This is significant—and, in the context of a balance-sheet-oriented calculation, unnecessary—additional burden. We note that in many cases, a dividend may pass through one or more holding companies before it reaches its final destination (e.g., from insurer to intermediate holding company to ultimate controlling person). Seeing the same dividend being recorded multiple times is very likely to create confusion. We suggest it would be more useful to show, for each entity, only the net of dividends paid and dividends received. In that case, the columns for Dividends Paid and Dividends Received could be collapsed into a single column. Also, it is not clear that the Yes/No response in the Dividends Received and Not Retained column is useful, as it relies on what is “expected” rather than what is certain; a better approach might be to include dividends declared but unpaid in the column for dividends.

Also with regard to paragraph VI.54, we question how meaningful it is to designate some capital contributions as being funded from debt proceeds. There may be a lag between when debt proceeds are received by the debt issuer and when capital is contributed to a downstream entity; how long may the lag be before the capital contribution is no longer considered to be “from debt proceeds”? Also, if a parent makes a capital contribution when needed, and then subsequently replenishes its own capital through debt issuance, shouldn’t that be deemed to be essentially the same as receiving the debt proceeds and then infusing them into the subsidiary? Furthermore, debt-funded capital injections may well survive the maturity of the debt. Because cash is fungible, it does not seem to be a worthwhile effort to try to determine the particular source from which a capital contribution was funded. We recommend that if holding company debt is to be included in capital, then the limitation should be the insurance entities’ total paid-in capital.

VI.56: We point out that intra-group guarantees, solvency reinsurance, and capital maintenance agreements typically do not have notional values. Moreover, triggering of these arrangements has historically been very unlikely. In an earlier communication from the NAIC on this subject, the estimated notional value was weighted by expected utilization. This weighted approach should be used here.

**Comments on the Template**

Although we understand the need to have a tool that quantitatively calculates group results, we suggest it is inappropriate to use the tool as a way to simply gather information about unregulated entities that do not impact the results of the GCC calculation itself, especially as most of this information is available to regulators from other filings. The following are examples of the information being collected that does not impact the results of the calculation:
- a significant amount of information related to trend analytics, which on the legal entity basis are not meaningful to the calculation;
- Reinsurance Assumed from Affiliates and Reinsurance Ceded to Affiliates. We question the relevance of the information to the calculation and note that this information is readily available in the annual statements;
- the notional values of both Intercompany Guarantees and Capital Maintenance Agreements, because 1) most, like insolvency reinsurance, have no stated value or have values that are based upon a calculation and not a fixed amount; and 2) in practice, these have extremely low probability of triggering guarantor action (earlier versions of this analysis weighted any notional amount by currently expected use);
- the value of intangible assets;
- descriptions related to intragroup assets; the values of some intragroup assets are also asked for on the Questions tab;
- descriptions related to reported adjustments;
- dividends paid and received;
- how downstream debt proceeds are tracked; and
- a listing of Schedule A and BA assets, which can easily be found in the NAIC financial statements.

Thank you for the opportunity to provide our input. We believe that addressing the issues we raise above will lead to the GCC being a more useful tool for regulators.

Sincerely,

James R. Braue

Initial NAIC Staff Comments:

Some of the Introductory wording could be revised and/or moved to the Analysis Guidance being drafted & reviewed by the drafting subgroup, particularly with reference to cross subsidization. Comments on other thresholds applied in the analysis guidance can be addressed there. Staff notes that industry representatives are assisting in revising and reviewing the analysis guidance.

Although the GCC in totality can be viewed as an early warning vehicle, the GCC ratio itself is just one piece. This is similar to other analytical tools. Early warning is distinct from capital standard driving statutorily authorized regulator action. Although made clear throughout the GCC process that it will not be a capital standard, clarification of language to avoid any such inference will be considered.

As a group rather than entity-based tool, the submission itself is limited to the lead-State regulator (s/b addressed in Model Holding Company Act), it seems logical that post review regulatory concerns may be shared with other involved regulators in collaborative forums. Staff will look at the suggested language. Staff recommends that a 300% calibration be retained for a group-wide analytical tool that compliments entity-based RBC. The working group should consider whether using CAL or lower could imply that some specified regulatory action is imminent, especially within the context recommended by some commenters that risk charges mirror entity RBC. Staff believes that would add confusion between RBC as a standard and GCC as an analytical tool. Using a level above CAL RBC is consistent with a regulator analytical tool and consistent with an RBC reference point (Trend Test). Further it applies a reference point that is agnostic to the structure of the group.

A secondary issue is ability to be somewhat consistent with the AM – ICS being proposed by the NAIC in cooperation with other U.S. regulatory partners.

Staff believes that issues related to calibration are better addressed via the working group decisions on the definition of a financial entities, level of post covariance charges to be applied to non-financial entities, and definition of material risk for purposes of potential exclusion of entities from the calculation.

Staff agrees that there should be careful coordination between the GCC Template, and the analysis guidance as regards the level of the GCC ratio. Staff notes that industry representatives are assisting in revising and reviewing the analysis guidance.

<p>| Calibration Level | ACLI Global Atlantic Prudential | Adopt a 200% ACL calibration level for the GCC. In addition, calibrations of other factors and regimes should be based on 200% ACL level RBC as well. | Inconsistent with RBC reporting and industry’s current reporting of two capital calibration levels, (100% ACL and 200% ACL) results in confusion and frequent misinterpretation of reported ratios; adding a third calibration level for the GCC of 300% ACL will compound the problem. This will lead to additional confusion and misunderstanding by users of financial information, including the regulatory, rating agency, and banking communities. |
| United HealthCare | Lower 300% Calibration (consider lower than 200%) and/or add a diversification component | The calibration does not adequately consider the capital mitigation in diversified integrated holding company systems. |</p>

<th>Issue 3</th>
<th>Commenter</th>
<th>Essence of Comment</th>
<th>Primary Rationale</th>
</tr>
</thead>
</table>
| **Scope of Application** | AHIP, APCIA     | GCC Instructions should explicitly state that non-material entities (including financial) within the Broader Group (but outside the Insurance Group) should be excluded from the Scope of Application.          | All entities that meet the broad definition of “financial” in the GCC Instructions do not necessarily pose material risk (as defined above) under all circumstances.  
The fact that an entity would be classified as “financial” should be weighed as a factor in the materiality analysis. |
|          | State Farm     | Requests that excluded entities not be required to be on the Inventory Tab or, at least, the Lead State Regulator have the discretion to not require excluded entities on the Inventory Tab if requested by the preparer. | Gathering information under the GCC from entities that are excluded from the GCC seems counterintuitive and duplicative in certain situations.                                                                                     |
|          | State Farm     | State Farm questions why the Draft Instructions do not allow exclusion of immaterial financial or insurance entities that are isolated from the group as are non-financial entities. | Acknowledging the isolation of financial and insurance entities fits within already existing regulatory arrangements as well as the GCC and acknowledges that capital is not freely fungible for use by the group or entities within the group. |

**Initial NAIC Staff Comments:**

Staff believes that given prior problems (e.g. during the financial crisis) with financial entities, some that appeared immaterial at the time, all financial entities should initially be included in the calculation for both risk and consistency purposes. Staff does appreciate the comments on the breadth and targeting of defining certain affiliates as financial entities as that was one of several areas of the instructions where comments were specifically requested and agrees that revisions are appropriate. The prior and current versions of the instructions do identify some financial entities without regulatory capital requirements with closer reference to their activities, so the working group could consider revisions targeted more specificity related to activities of financial entities.

The instructions currently limit the amount of data that is required from entities that the lead-State regulator agrees should be excluded.

<th>Essence of Comment</th>
<th>Primary Rationale</th>
</tr>
</thead>
<tbody>
<tr>
<td>Excluded entities / Material Risk</td>
<td>ACLI, AHIP, APCIA</td>
<td>GCC Instructions should provide a definition of “material risk” for purposes of the Scope of Application as follows “risk emanating from a non-insurance entity that is of a magnitude that would adversely impact a group’s insurance operations and its ability to pay policyholder claims.” GCC Instructions should provide a principles-based definition of “material risk” for purposes of the Scope of Application. Suggest that “material risk” should be defined as “risk emanating from a non-insurance entity that could adversely impact a group’s insurance operations and ability to pay policyholder claims.” APCIA recommends developing a list of factors related to whether an entity could adversely impact a group’s ability to pay policyholder claims. (List included in letter – Page 2). No single factor is determinative of materiality of risk, nor should these factors be used as a scorecard or checklist.</td>
<td>• Follows the fundamental reason for state insurance regulation and the stated objective of the GCC: policyholder protection. • Is in accordance with international standards. For example, under ICP 23. • Given the diverse structures and business models of insurers, it would be impracticable to develop a one-size-fits-all checklist of guidelines that would be useful for materiality determinations across all groups. • Form B and D processes and Enterprise Risk Reports entail similar considerations and are already enshrined in the state regulatory process. Insurers and regulators could then use these factors to undertake a materiality analysis based on the totality of the facts and circumstances by considering the factors and how they apply to the group’s business.</td>
</tr>
<tr>
<td>State Farm</td>
<td>Requests a baseline materiality definition be provided while maintaining Lead State Regulator discretion to determine if a higher or lower material threshold is appropriate. Suggests a group equity threshold for materiality with a drafting note suggesting 5% threshold subject to regulator discretion</td>
<td>There should be some consistency in application under these provisions and that materiality should be based on the group’s net worth given the GCC is measuring risk of the group and not a particular entity in the group. Baseline for materiality while still allowing the Lead State Regulator and the preparer to use a higher or lower threshold given circumstances presented by the preparer.</td>
<td></td>
</tr>
</tbody>
</table>

Initial NAIC Staff Comments:
Staff agrees that materiality of risk is important in deciding whether to exclude non-financial entities. Staff supports a definition to promote consistency in completion of the GCC. We are supportive of principles-based criteria being included in the instructions. We are also supportive of quantitative Criteria if preferred by the working group but recognize that there has not up until now been coalescence around a single quantitative benchmark.

See staff comments above under Scope of Application (Issue #3) regarding financial entities.

<th>Commenter</th>
<th>Essence of Comment</th>
<th>Primary Rationale</th>
</tr>
</thead>
</table>
| Definition of Financial Entities | AHIP                   | Disagrees with the notion that certain affiliates are inherently riskier than others and more generally with the expanded definition of financial affiliates. Third-party administrators and pharmacy benefit managers, provider groups, and pharmacy benefit managers should not be considered financial entities. | • There is a wide array of types of non-affiliated entities within insurance groups, and it is overly simplistic to conclude that all that are somehow associated with assisting the insurer with contract performance or policyholder services are inherently riskier than others.  
• Form B and D processes recognize that transactions with affiliates may have risks. |
|        | APCIA                  | APCIA is concerned with the expanded definition of financial entity in the GCC.                                                                                                                                                                           |                                                                                                                                                                                                                                         |
|        | United HealthCare      | Base comments are similar to AHIP Comments.  
This is amplified by lack of diversification credit for the wide array of entities defined as “financial”                                                                                                                                 | • Affiliates that merely provide contracted services to a carrier should not be defined as “financial”: they do not create any more financial risk to their affiliated insurers than do non-affiliates that provide the same services to other insurers.  
• Some of the examples given diversify risk for the insurance entity in the group, facilitating more access to capital by the insurance entity. The aim of the working group should not be to promote smaller, less integrated or diversified groups.  
• Greater regulatory oversight to certain currently defined entities and regulatory review of intercompany agreements should be considered to reduce the group’s risk. |

Initial NAIC Staff Comments:
Staff appreciates the comments on the breadth and targeting of defining certain affiliates as financial entities as that was one of several areas of the instructions where comments were specifically requested. The issue of an appropriate definition of financial entities impacts other concerns identified in the comments including, calibration, scope of application, materiality of risk, and consistency across group structures. The instructions currently do identify some specific financial entities without regulatory capital requirements and some associated activities, so the working group could consider more specificity related to activities based on the activities of those identified entities. As intended, staff also believes that the quantitative aspects of the GCC in the context of a regulatory view, as well as the additional data supporting analytics does compliment rather than overlap the benefits of other regulatory filing requirements.

<tbody>
<tr>
<td>Treatment / Charges</td>
<td>ACLI</td>
<td>To the extent that there are differences in the GCC and legal RBC treatment for subsidiaries that have been de-stacked and reported separately from their legal entity parent, then it seems desirable for the GCC and RBC treatment to align. To the extent that there are differences between the two, we recommend the Working Group explain the rationale for the difference (e.g., achieving substantial consistency in charges regardless of corporate organizational structure) and, if appropriate, refer the issue to the appropriate RBC working for further dialogue.</td>
<td>ACLI believes that the GCC should be consistent with the legal entity rules applied to insurance legal entities – including the subsidiaries of insurance legal entities. In the long run, we believe this approach will benefit regulators and the industry by promoting a more consistent and up-to-date risk framework.</td>
</tr>
<tr>
<td>Financial Entities</td>
<td>AHIP</td>
<td>Recommends applying the equity-based capital charge that is recommended for non-financial affiliates to all affiliates that are not subject to a regulatory capital requirement.</td>
<td>Subjecting these entities to a capital charge for financial entities (12% of 3-year average gross revenue – possibly to be increased to 15%) could result in a significant additional charge as compared to current RBC.</td>
</tr>
<tr>
<td></td>
<td>APCIA</td>
<td>in the short term, use a capital charge that is roughly equivalent to the current post-covariance charge <em>(presumably equity charge)</em> for such affiliates in RBC.</td>
<td>Over the first few years of the GCC’s implementation, data can be collected and used to derive a more risk-sensitive charge that is pragmatic (e.g., a differentiated charge for entities of high/medium/low risk as determined by specified criteria).</td>
</tr>
</tbody>
</table>
|                            | Prudential| Supports adopting a single approach for establishing a proxy capital measure for all financial entities that are not subject to a regulatory capital requirement. Supports a method that most closely aligns with how the AM - ICS will ultimately treat this item.                                                                atoire | • Ensuring state regulators obtain adequate insight into the entities within the insurance group and risks associated with them is the key point of consideration for these entities and this is best accomplished through the inventory element of the GCC as opposed to an arbitrary proxy capital calculation.  
• To the extent a state regulator believes an entity poses material risk to the group, they have discretion to request additional information to understand the risks. |
Initial NAIC Staff Comments:
Staff notes that as a complimentary group analytical tool covering entities other than those owned by RBC filer, total consistency with RBC is not entirely relevant, particularly for financial entities. Staff does agree that the Capital Adequacy Task Force should determine whether the treatment of financial entities in the GCC is relevant for U.S. Insurer entity-based RBC. This can be tasked to the current Ad Hoc Affiliates Subgroup or directly to the RBC Working Groups.

Staff agrees that an overarching explanation of where differences exist is helpful.

Staff does not recommend using a post covariance charge for most financial entities that are not subject to a regulatory capital charge. Properly defined financial entities can pose additional non-diversifiable risk. Staff agrees that a narrower more activities focused definition of such financial entities will address many stated concerns.

Staff recommends continuing a revenue-based / enhanced operational risk type charge. Up until this point there seems to have been more agreement around a revenue-based charge for these entities.

Staff has no issue with treating all financial entities that are not subject to a regulatory capital charge the same at least initially. The only current difference is whether to use a 3-year average revenue (currently used for asset managers) or current year revenue only (currently used for other financial entities that are not subject to a regulatory capital charge) as the base used to apply the charge.

Staff supports the 15% charge as reflective of a 300% calibration and consistency whether where international standards are headed but understands that the working group may consider a scaled version as a starting point for the near-term. Staff supports the proposal to consider refinements over time for financial entities not subject to a regulatory capital requirement in order to be more risk sensitive along the lines of the low / medium / high approach suggested by APCIA (e.g. lower risk entities could go with the post covariance non-financial entity charge / medium risk entities, a scaled revenue-based charge / and high risk entities, the full revenue based charge).

<tr>
<td>Treatment / Charges - Non-Financial Entities (incl. material non-financial A / BA)</td>
<td>ACLI</td>
<td>ACLI was unable to discern how the proposed charges for “other non-insurance/non-financial entities” and “material Schedule A/BA entities” were created.</td>
<td>Further clarification on this issue is necessary, including an explanation of why the Working Group is recommending a novel approach that has not been subject to field testing.</td>
</tr>
</tbody>
</table>
| | AHIP | Risk charges for non-financial entities should be equal or very similar to the current charge in the sectoral RBC formulas, i.e., 3% post-covariance charge in the case of health insurers. | • The GCCWG has not provided data to suggest that a more substantial risk charge is needed to protect policyholders.  
• Form B and D processes are already in place to ensure that the regulated legal entity is protected from the non-regulated, non-insurance entity. |
| | APCIA | During the first few years of the GCC’s implementation use 3% of 3-year average revenue. Once some experience is gained with the GCC, the Working Group should consider a simple variable risk charge (low / medium / high risk charge) that is more risk-sensitive based on industry and activity. | A period during which experience will be gained that can then be analyzed in more detail and across more groups than was possible in field testing. |
| | Prudential | Supports adopting a single approach for establishing a proxy capital measure for all non-financial entities | See rational for financial entities. |
| | United HealthCare | Charge should be based on the group specific after covariance equity charge. | Using an average industry post covariance charge is not reflective of the proportion of insurance vs. non-insurance business within a group. |

**Initial NAIC Staff Comments:**

Once materiality of risk has been established, Staff supports a post covariance equivalent equity-based charge that is broadly consistent with RBC treatment for non-financial entities that are “included” in the GCC. The current template uses a single average post covariance factor across all industry types, but Staff believes that an industry specific charge has merit. A group specific charge was previously tested and could be considered by the working group, but unlikely to have a significant impact on the GCC. However, NAIC Staff would be interested in information to the contrary by a group that has run the numbers given that the NAIC will not be receiving the GCC filings.

Staff supports the suggestion to make future refinements based on continued collection of data but again notes that NAIC will not have access to the submissions.

<td>United HealthCare</td>
<td></td>
<td>• Interpretations related to how to support “tracking” will be difficult to verify and may lead to inconsistencies across groups.</td>
</tr>
<tr>
<td></td>
<td>ACLI</td>
<td>Remove the call option criteria, because the exercise of a call option is typically followed by refinance of the instrument which supports its permanence and structural subordination.</td>
<td>• Keeping funds at the holding company level is a prudent strategy that provides insurance groups flexibility to quickly and easily manage capital and liquidity needs across the group.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>• A tracking requirement could give rise to unintended consequences such as reducing the availability and fungibility of capital resources and forcing U.S. insurance groups to issue greater amounts of debt.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Relative to the 5-year term, the presence of call options should not prevent a capital instrument’s inclusion as a qualifying instrument. Call options are a common feature of U.S. issued capital instruments.</td>
</tr>
</tbody>
</table>
| Allowance for Debt | Global Atlantic | • Simpler, more efficient, and more reliable test  
• Avoids complications that could result from debt that has been refinanced by the parent as there would be no contribution of the debt amount issued.  
• Avoids complications of tracking upsize transactions where debt is borrowed at one date and then down streamed at a different date.  
• Avoids complications of tracking the reverse: dividends which are up streamed. Are those upstream transactions to be netted against down streamed capital or not?  
• Avoids complications and questions related to M&A transactions – if a company is acquired, does the new parent company automatically assume the historical relationship of down streamed debt, so long as its debt at least equals the debt of the old parent company? |
|---|---|---|
| APCIA | The treatment of debt differs in some key respects from that which was adopted by the International Association of Insurance Supervisors (IAIS) in the Insurance Capital Standard (ICS) in 2019.  
The GCC could be viewed as less credible by other jurisdictional supervisors including those who may be parties to a Covered Agreement. Comparability of the GCC with the ICS is a looming issue on the horizon, the resolution of which can impact the views of many IAIS member jurisdictions about the efficacy of state-based regulation over U.S.-based insurance groups. | |
| FED BBA | More closely aligned with the principles-based criteria in the ICS than with the approach taken in the exposed GCC Instructions | |
| Working Group | Working Group may need to supplement the GCC Instructions with definitions for each type of instrument. For example, “hybrid debt” is not defined in the Instructions | • Rating agencies treat subordinated debt issued by a parent company as “hybrid debt” if it is long-dated and has provisions to defer interest payments for a period of time. This could give rise to variation in treatment of hybrid debt (e.g., it may be unclear to a group if it should classify it as “hybrid” or as “subordinated” debt)  
• Comparability with the ICS needs to be considered, and on this point it seems that the more important issue is not whether types of debt are called out by name or more generically by tier, but whether comparable criteria to the ICS are used. |
<table>
<thead>
<tr>
<th>Allowance for Debt</th>
<th>APCIA</th>

<th>Focusing the Instructions’ text on “limits”, rather than ‘allowance’, will help in some respects with perceptions about comparability.</th>
</tr>
</thead>
</table>
|                   |       | Add criteria supporting structural subordination to “Tracked Down-streamed Debt” proceeds rather than eliminate that test. | • Team USA argued long and hard to support structural subordination in the ICS.  
• While down-streaming has raised many questions about how debt proceeds can be tracked and verified, the ICS criteria are workable and rely in large measure on each group and its group-wide supervisor to make that determination in light of the unique facts and circumstances.  
• The IAIS avoided prescribing detailed rules or criteria for tracking. APCIA believes the NAIC should do the same in the GCC, leaving the determination of the amount down streamed to the lead state working in conjunction with the group.  
• This would include criteria to support that the qualifying amount of debt to be treated as capital is actually subordinated (either contractually by the terms of the instrument, or structurally), and other principle-based criteria, as in the ICS, to support permanence, loss absorbency, etc. Some refinement of the ICS criteria may be necessary to address U.S.-specific nuances for the GCC. |
|                   |       | Another option to test structural subordination is to limit the amount of senior debt to qualify as capital to that which is in excess of the liquid assets in the holding company. | As a practical matter, the lender would have recourse only to the liquid assets that remain in the entity that issued the debt (i.e., the holding company in the case of senior debt). The unconsolidated balance sheet of the holding company (reflects a very large, illiquid investment in insurance subsidiaries, control over which is subject to regulatory oversight and approval. |
|                   | APCIA | APCIA is open to the possibility of some allowance for other debt in the future. | Self-Explanatory |
|                   |       | It would seem appropriate that the overall limitation should apply to all debt, including surplus notes and |  |
### Initial NAIC Staff Comments:

Staff is open to eliminating the tracked down-streamed option as suggested by some commenters. The arguments put forth by APCIA are relevant, however, structural subordination is strongly represented by insurer paid in capital and surplus which has the most rigorous regulatory control over distributions.

Staff is sympathetic to the point that the proxy allowance for Senior Debt is applied to regulatory available capital rather than GAAP available capital and the 50% limit of otherwise available capital could be adjusted upward if the working group concurs. Staff would initially suggest no more than 75% in order to balance the point raised with recognizing that there is no tiering of capital in reference to the ICS and that the GCC applies the limits to the larger base of available capital rather than required capital.

Staff understands the issue of including Foreign Debt in the limit. However, fully including contractually subordinated debt already recognized by a regulatory authority as capital and included in the carrying values in Inventory B (e.g. U.S. surplus notes and contractually subordinated foreign debt) seems consistent from a regulatory perspective. Staff agrees that foreign senior and hybrid debt that is not included in the value of an entity in Inventory B should be included within the limit.

Staff has some concerns about the APCIA alternative methodology as it may provide too much of an allowance since large groups may rely on illiquid assets at the holding company level and the method would seem to result in including the entire book value of insurers in the group.

Staff supports the suggestion to continue to collect data on “Other Debt” for purposes of future refinements but notes that NAIC will not have access to the filings.

Staff will review language for clarity considering edits provided and definitions of debt instrument types.

Staff will follow-up on the issue of terminology “additional capital allowance” vs. “within supervisory limits” but notes that there is currently no GAAP or SAP allowance for subordinated debt other than surplus notes (so the supervisory limit is essentially zero per accounting requirements). The GCC provides an on top allowance that reflects a supportable proxy alternative for structural subordination.

Allowance for Debt as additional capital is an area of potential divergence between the GCC and AM-ICS.

<th>Issue 10</th>
<th>Commenter</th>
<th>Essence of Comment</th>
<th>Primary Rationale</th>
</tr>
</thead>
</table>
| Scalars  | ACLI      | Use the Excess Approach over the Pure Approach. Use the Excess Relative Ratio Approach for scaling non-U.S. capital ratios to U.S. RBC. | • This method utilizes two anchor points for scaling.  
• The Pure Relative Ratio lacks a mechanism to ensure that a non-U.S. firm at the regulatory intervention level within its respective country will be at the U.S. RBC intervention level once scaled.  
• The Pure Relative Ratio Approach fails to adequately account for key differences in insurance regimes (e.g., level of conservatism embedded in reserves versus required capital, different valuation and asset admissibility standards, etc.).  
• The decision would prejudge the Pure Relative Ratio Approach as the methodology that should be adopted for the AM and could undermine the ongoing work at the NAIC’s work at the global level to secure recognition of the AM. |
|          | Global Atlantic | Transparency of how the scalars are calculated will be critical, regardless of which scaling methodology is selected | • Consistency – scalars should be calculated and applied consistently across all non-U.S. regimes.  
• Specificity – scalars should be discretely computed and applied amongst life, property casualty and health insurance companies.  
• Stability – the results of applying scalars to Non-U.S. capital ratios should not be volatile; for example, converting to U.S. RBC should not yield a significant headwind in one year, and a significant tailwind in the following year. |

Initial NAIC Staff Comments:  
Scalars remains an open issue. The use of the Pure Relative Ratio appeared to strike a good balance between precision, simplicity and ease of explanation.  
However, staff has no strong feelings between the two approaches and believes that the working group should be open additional approaches while maintaining a placeholder methodology.  
The working group should be aware of ongoing work on the AM-ICS as scalar methodology is an area of potential convergence between the GCC and AM-ICS.

</table>
| Sensitivity Analysis | ACLI Prudential | Eliminate Sensitivity Analysis Tab altogether | • Narrowing the design of the GCC will ensure insurers, supervisors (domestic and foreign) and other stakeholders have a clear vision and understanding of what the GCC is (e.g., it would eliminate the need to distinguish between a “Base” view and alternative measures).  
• To the extent broader information on the insurance group is of interest to a state regulator, we believe it should be obtained through discretionary powers as opposed to embedding it in the GCC template. |
| Coalition | Supports Eliminating the XXX/ AXXX analysis in favor of a referral. | • The need for the GCC to adhere fully to legal entity rules in support of the state-based legal entity solvency system |

Initial NAIC Staff Comments:

Staff recommends against deleting the sensitivity analysis tab in its entirety. The XXX/ AXXX sensitivity test is in process of removal. The information contained in most other analysis points informs future decisions on capital charges, and more generally the primary purpose of the template as an analytical tool and should be retained for a period of time for further assessment of its value.

Staff understands that some of the sensitivity analysis will fall away as more finalized decisions on treatment of financial entities not subject to regulatory capital requirement and for treatment of non-financial entities and possibly on scalars are incorporated into the GCC template.

Staff believes that the data is more readily accumulated in the Sensitivity Tab from other parts of the template. Separating it would require additional work particularly for non-insurance entities.

</table>
| Other Information Collected         | United HealthCare| Questions the rationale for collecting information on intangible assets (such as deferred acquisition costs, provider contracts, customer lists, and goodwill). | • The focus on intangible assets, to the exclusion of other types of assets, seems unwarranted.  
  • Regardless of their availability for sale, intangible assets do produce a stream of income to the group; otherwise, GAAP accounting would require that they be written down in value or written off entirely.  
  • As businesses rely more and more on digital assets and intellectual property as the basis for their operations, and less and less on fixed assets, there is more scrutiny of the value of those assets, and there should be less concern about whether the stated values are appropriate. We  
  • Both business trends and accounting changes have made the differentiation of “intangible” assets increasingly less relevant. |

**Initial NAIC Staff Comments:**
Staff notes that the GCC represents a regulatory view of group available capital. It is not intended that the value of intangibles allowed under GAAP, SAP or another accounting basis should be excluded. However, staff believes that there is some value in quantifying the extent that group capital is comprised of illiquid non-physical assets. This can provide good regulatory information in addition to the views of rating agencies or other group stakeholders.

Staff is comfortable with assessment of the value of the data collected in the Tab by the Analytics Guidance Drafting Group and making any adjustments accordingly.

| Issue 13                             | Commenter     | Other Technical Comments, Language Edits, Clarification requests and Second Tier Concerns | AHIP, APCIA, UHG |

**Initial NAIC Staff Comments:**
These items will be reviewed and accepted, adjusted or rejected after this meeting based on the direction taken in response to the comments discussed today.
The Group Solvency Issues (E) Working Group of the Financial Condition (E) Committee met via conference call July 29, 2020. The following Working Group members participated: Justin Schrader, Chair (NE); Jamie Walker, Vice Chair (TX); Susan Bernard and Kim Hudson (CA); Kathy Belfi (CT); Charles Santana (DE); Virginia Christy and Carolyn Morgan (FL); Kim Cross (IA); Cindy Andersen and Eric Moser (IL); Roy Eft (IN); John Turchi (MA); Judy Weaver (MI); Debbie Doggett and John Rehagen (MO); Diana Sherman (NJ); Dale Bruggeman (OH); Kimberly Rankin (PA); Doug Stolte (VA); and Steve Junior (WI).

1. **Adopted its 2019 Fall National Meeting Minutes**

Mr. Schrader stated that the Working Group last met at the 2019 Fall National Meeting, but also met Feb. 11, 2020, via conference call in regulator-to-regulator session, pursuant to paragraph 6 (consultations with staff on technical guidance) of the NAIC Policy Statement on Open Meetings.

Ms. Walker made a motion, seconded by Mr. Bruggeman, to adopt the Working Group’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Financial Condition (E) Committee, Attachment Seven). The motion passed.

2. **Heard an Update from the ORSA Implementation (E) Subgroup**

Ms. Belfi provided an update of recent activities of the ORSA Implementation (E) Subgroup, noting that the Subgroup met via conference call July 13 in joint session with the Risk-Focused Surveillance (E) Working Group. The meeting was held in regulator-to-regulator session, pursuant to paragraph 3 (discussions of specific companies, entities or individuals) of the NAIC Open Meetings Policy, to discuss takeaways from the 2019 Own Risk and Solvency Assessment (ORSA) Peer Review session and the development of potential changes to NAIC handbooks in response to those takeaways.

Ms. Belfi stated that as each of the NAIC handbooks containing ORSA review guidance are public documents, any revisions to such guidance will be discussed on public conference calls and subject to a public comment period. As such, the Subgroup plans to continue working in this area and schedule open calls to discuss the proposed revisions as necessary.

In addition, Ms. Belfi stated that the Subgroup has received inquiries from companies regarding regulator expectations for COVID-19 exposure and scenario analysis in ORSA filings. Ms. Belfi stated that the Subgroup intends to schedule a conference call to discuss regulator expectations and may develop some considerations for the industry in this area.

3. **Heard a Report on IAIS Activities**

Mr. Schrader provided a report on recent group-related activities of the International Association of Insurance Supervisors (IAIS), including the status of ongoing projects of the Insurance Groups Working Group (IGWG). While the efforts of the IGWG have been affected by COVID-19, virtual meetings continue to be held. As such, work continues to move forward on updates to the Application Paper on Supervisory Colleges to reflect revisions to Insurance Core Principle (ICP) 3 (Information Sharing and Confidentiality Requirements) and ICP 25 (Supervisory Cooperation and Coordination), which were adopted in November 2019.

The IGWG is also contemplating developing an application paper or training and educational materials on best practices supporting a supervisory assessment framework. The idea is to collect good supervisory practices from IAIS members supporting a group-wide supervisory assessment framework. These materials would be developed as a “members-only” document.
4. Discussed a Referral from the Group Capital Calculation (E) Working Group

Mr. Schrader stated that the Working Group received a referral from the Group Capital Calculation (E) Working Group requesting assistance in quantifying and evaluating the impact of XXX/AXXX reserves held by grandfathered captives on the group’s overall capital position. Mr. Schrader stated that a drafting group of several member states was formed to take up the request and will be reporting its results to the full Working Group.

5. Discussed Comments Received on ComFrame Gap Analysis

Mr. Schrader stated that the next agenda item relates to a new charge the Working Group received for 2020: “Assess the IAIS Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) and make recommendations on its implementation in a manner appropriate for the U.S.”

Mr. Schrader stated that the IAIS adopted ComFrame on Nov. 14, 2019, which establishes supervisory standards and guidance focusing on the effective group-wide supervision of internationally active insurance groups (IAIGs). The intent of ComFrame is to help supervisors address group-wide risks and avoid supervisory gaps by supporting coordination across jurisdictions. ComFrame builds on, and expands upon, the high-level standards and guidance currently set out in the ICPs of the IAIS, which generally apply on both an insurance legal entity and group-wide level. There are ComFrame elements included in 10 of the 25 ICPs, as well as the ICP Introduction and Assessment Methodology. Consistent with the application of the ICPs, the minimum requirements established by ComFrame are expected to be implemented and applied in a proportionate manner. However, supervisors have the flexibility to tailor implementation of supervisory requirements and application of insurance supervision to achieve the outcomes described in ComFrame standards.

Mr. Schrader stated that as the IAIS has now finalized and adopted ComFrame, it is time for state insurance regulators to review and assess their implementation domestically. Mr. Schrader stated that while certain elements of ComFrame were already incorporated into the 2014 revisions to the Insurance Holding Company System Regulatory Act (#440), there have been several additions and enhancements to ComFrame since that time. As such, following discussions on implementation considerations at the 2019 Fall National Meeting, the Working Group asked NAIC staff to proceed with performing a ComFrame gap analysis to highlight any elements that might need to be considered for implementation in the U.S. system of state-based insurance regulation.

Mr. Schrader stated that in conducting the analysis, NAIC staff noted that many of the key elements of ComFrame have already been incorporated into the U.S. system through amendments to the holding company models, the establishment of ORSA requirements and other ongoing regulatory practices. NAIC staff also noted that some of the more prescriptive elements of ComFrame do not appear appropriate for the U.S. system and are not being recommended for consideration. However, NAIC staff identified certain other elements of ComFrame that do not appear to be fully addressed and should be considered for implementation.

Mr. Schrader asked Bruce Jenson (NAIC) to provide an overview of the results of the gap analysis performed, focusing on the key recommendations for consideration. Mr. Jenson stated that the key recommendations include proposed additions to the NAIC’s Financial Analysis Handbook and Financial Condition Examiners Handbook, as well as potential updates to the ORSA Guidance Manual for ComFrame elements. Mr. Jenson also recommended that the Working Group consider whether it is appropriate to require a Corporate Governance Annual Disclosure (CGAD) filing and/or ORSA Summary Report filing at the Head of the IAIG level to implement ComFrame elements. Finally, Mr. Jenson noted that ongoing projects of other NAIC groups will assist in implementing ComFrame elements in the areas of group capital, recovery and resolution planning, and liquidity stress testing.

Mr. Schrader stated that after the gap analysis was completed and a summary was provided to the Working Group, it was exposed for a public comment period that ended March 18. Five comment letters were received, and Mr. Schrader invited each commenter to summarize the key points from their letter during the meeting.

Tom Finnell (America’s Health Insurance Plans—AHIP) stated that while much of the ComFrame wording tends to encourage a centralized approach to IAIG monitoring and oversight, the introductory guidance and assessment methodology in the ICPs allow for additional flexibility in applying oversight to different types of insurance groups. Mr. Finnell stated that the gap analysis performed by NAIC staff appears to overlook some of these overarching concepts and overemphasizes review and
assessment of groupwide governance and control functions. Mr. Finnell also stated that the recommendation to require a groupwide ORSA Summary Report should keep in mind guidance in ICP 23 (Group-wide Supervision), which states certain entities or activities of the full group can be omitted from group supervision if there is no linkage that would cause risks to be transferred to the insurance operations. As such, Mr. Finnell encouraged regulators to engage in additional dialogue with the industry in assessing any ComFrame gaps and to put more consideration into the overarching principles allowing for flexibility in approaches.

Wayne Mehlman (American Council of Life Insurers—ACLI) stated that the industry would like to see more detail supporting the ComFrame gap analysis, including whether the proposed implementation efforts are intended to address the IAIS’ Holistic Framework considerations.

Mr. Bruggeman asked whether the proposed recommendations in the gap analysis are geared more towards meeting IAIS expectations than fitting with the U.S.’ existing system of state-based insurance regulation. Mr. Schrader stated that NAIC staff were asked to do a comprehensive gap analysis to identify any potential gaps and recommend potential enhancements to address those gaps. Mr. Schrader stated that it will be up to the Working Group to determine whether the potential enhancements are appropriate for incorporation into the existing system of state-based insurance regulation. Mr. Jenson provided an example of ComFrame language requiring a groupwide investment policy and oversight practices at the Head of the IAIG and noted that investment policies and practices outside of the insurance entities may not currently be within the scope of state analysis and examination functions. Mr. Finnell recommended that as regulators conduct their work in relation to various ICPs, they keep the overarching concepts in mind to determine whether reviewing all control functions from a groupwide perspective is necessary.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) stated his support for additional discussion with the industry regarding the support for any gaps identified, as well as the importance of considering the overarching concepts in implementation activities. Throughout the ComFrame development process, interested parties expressed concerns to the IAIS regarding the language emphasizing a top-down approach to ComFrame, which may not be a good fit for the U.S. system given that groups are organized in so many different ways. As such, Mr. Broadie encouraged regulators to keep the overarching concepts and the existing U.S. system in mind in considering whether some of the more prescriptive elements of ComFrame should be implemented. For example, Mr. Broadie stated that the APCIA does not feel it is appropriate to require all IAIGs to file a CGAD and ORSA Summary Report at the Head of the IAIG level across the board. In addition, Mr. Broadie stated that interested parties would like to be involved in any detailed discussions around additions to NAIC handbooks to implement ComFrame elements.

Bill Schwegler (Transamerica) asked regulators how they intend to incorporate the IAIS’ Holistic Framework and whether that will be done in tandem with ComFrame implementation given how the guidance is comingled in the ICPs. Mr. Schrader stated that implementation of the Holistic Framework is charged to the Financial Stability (EX) Task Force, but the Working Group will need to coordinate efforts given that the two projects are so closely linked.

Mr. Jenson stated that the ongoing Financial Sector Assessment Program (FSAP) that state insurance regulators are participating in includes some review of ComFrame implementation. While the results of the FSAP have not yet been publicly released, the report is expected to be released in the coming weeks and will include comments and recommendations regarding ComFrame implementation. As such, regulators and interested parties should consider and evaluate those recommendations once they become available.
Mr. Shrader thanked interested parties for their comments and expressed a commitment towards working together to develop targeted enhancements to the U.S. system of stat-based insurance regulation to incorporate ComFrame elements, where appropriate. Mr. Schrader outlined a plan to form two drafting groups to develop proposed enhancements to NAIC handbooks for the Working Group to consider. In addition, Mr. Schrader recommended that the ORSA Implementation (E) Subgroup take on the project to consider ComFrame elements related to ORSA and risk management, as well as whether the CGAD and ORSA Summary Report should be received from the Head of the IAIG. Ms. Belfi stated her support for assigning this project to the ORSA Implementation (E) Subgroup.

Ms. Doggett asked whether the handbook drafting work should be referred over to the Risk-Focused Surveillance (E) Working Group. Mr. Schrader stated his preference for forming separate drafting groups as opposed to referring the work to another group and asked NAIC staff for their recommendation. Mr. Jenson stated that forming drafting groups under the Working Group would allow for states that act as group-wide supervisors of IAIGs to be more involved in the project.

Ms. Berry asked whether guidance related to the determination of the Head of the IAIG is intended to be addressed by one of the drafting groups. Mr. Schrader stated that he expects the analysis drafting group to review ICP 23 and incorporate guidance into the handbook in that area.

Having no further business, the Group Solvency Issues (E) Working Group adjourned.
Interpretation of the Statutory Accounting Principles Working Group

INT 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends

INT 20-08 Dates Discussed

Email Vote to Expose May 5, 2020; May 20, 2020; June 15, 2020, July 22, 2020

INT 20-08 References

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets
SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items
SSAP No. 53—Property Casualty Contracts—Premiums
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 65—Property and Casualty Contracts
SSAP No. 66—Retrospectively Rated Contracts

INT 20-08 Issue

COVID-19

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

Refunds, Rate Reductions and Policyholder Dividends

2. The federal, state or local government orders requiring non-essential workers to “stay home” caused a significant reduction in commercial and non-commercial activity, including automotive usage. Some consumer groups wrote letters and issued press releases calling for insurance premium refunds or pricing decreases, which included specific comments directed toward consumer automotive lines. The comments presumed that the decrease in activity would result in fewer losses.

3. Many insurers began issuing voluntary premium refunds, future rate reductions or policyholder dividends because of the decreased activity. The majority of the refunds were related to automotive lines of business however, some accident and health products also provided payments. Insurers have provided the reductions in a variety of ways. Some of the rate reductions were specific for in-force policies, whereas some of the rate reductions would apply to future policy renewals. Insurers provided unprecedentedly large payments to policyholders in an expedited fashion. These payments were viewed by regulators and insurers as being in the best interests of policyholders.

Voluntary

4. The majority of the refunds or rate reductions are being offered voluntarily and are not amounts required under the policy terms. The aggregate monetary amount of the return of funds is considered materially significant.
Jurisdiction Directed

5. In addition, a few jurisdictions have issued bulletins directing refunds and rate reductions on accident and health insurance and varying lines of property and casualty insurance, including but not limited to: private passenger automobile, commercial automobile, workers’ compensation, commercial multiple peril, commercial liability and medical professional liability. In addition, some jurisdictions have indicated support for refunds or rate reductions, but also directed that payment of such amounts require either premium rate filings or policy form amendments.

Accounting Issues

6. This intent of this interpretation is to address questions related to refunds, rate reductions and policyholder dividends in response to the decreased activity related to COVID-19. Because there are a variety of ways that reporting entities are accomplishing a similar objective of returning money or reducing premiums, this interpretation provides guidance on the following issues:

- Issue 1: How to account for refunds not required under the policy terms.
- Issue 2: How to account for refunds required under the policy terms.
- Issue 3: How to account for rate reductions on inforce and renewal business.
- Issue 4: How to account for policyholder dividends.
- Issue 5: Where to disclose refunds, rate reductions and policyholder dividends related to COVID-19 decreases in activity.

INT 20-08 Discussion

7. As an overall guiding principle, the accounting shall follow existing statutory accounting principles and annual statement reporting where feasible with more specific accounting applicable for the issues within this interpretation.

INT 20-08 Consensus

Issue 1: How to Account for Refunds Not Required Under the Policy Terms

7-8. The Working Group reached a consensus that voluntary refunds, because of decreased activity related to COVID-19 and jurisdiction-directed refunds which are not required by the policy terms, are fundamentally a return of premium. Absent meeting the criteria for the limited-time exception to report as an aggregate write in for other underwriting expense as discussed in paragraphs 12-13, such refunds shall be accounted for as immediate adjustments to premium. The refunds shall be recognized as a reduction to written or earned premium and the unearned premium reserve adjusted accordingly.

8-9. Refunds shall be recognized as a liability when the definition of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets is met. For example, the declaration of a voluntary dividend by the board of directors will trigger liability recognition. In cases where the refunds are directed by a jurisdiction, the SSAP No. 5R definition of a liability shall be used to determine timing of liability recognition.

9-10. Immediate adjustment to premium is consistent with the existing guidance in SSAP No. 53—Property Casualty Contracts—Premiums. SSAP No. 53 guidance requires adjustments to the premium charged for changes
in the level of exposure to insurance risk. It is also consistent with the treatment of loss sensitive premium adjustments in SSAP No. 66—Retrospectively Rated Contracts. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply.

11. Immediate adjustments to premium for voluntary accident and health premium refunds is also consistent with the guidance in SSAP No. 54R—Individual and Group Accident and Health Contracts on contracts subject to redetermination. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply. The liability for voluntary health premium refunds attributable to COVID-19 and which are not required under the policy terms shall be recognized in aggregate write-ins for other liabilities.

Limited-Time Exception – Expense Reporting

12. Reporting the voluntary or jurisdiction-directed refund as an expense is not consistent with statutory accounting guidance. However, due to the variety of ways that COVID-19 premium reductions were approved by the various jurisdictions, this interpretation grants a limited-time exception to the existing reporting guidance to allow underwriting expense reporting. This limited-time exception applies to property and casualty lines of business in which the reporting entity filed policy endorsements or manual rate filings prior to June 15, 2020 which allow for discretionary payments to policyholders due to the COVID-19 related issues. In these cases, the reporting entities disclosed to the jurisdictions where the policies are written their intention to report their payments to policyholders as expenses. These property and casualty lines of business are permitted to report such policyholder payments as other underwriting expenses. This interpretation intends to be clear that manual rate filings and policy endorsements are not a source of authoritative accounting and this limited-time exception should not be used as an analogy for application to other such filings.

13. Application of this limited-time exception shall also be subject to the additional disclosures provided in Issue 5 below. Reporting the COVID-19 premium reductions as an expense as provided for in this limited-time exception, shall be disclosed as if it were a permitted practice. The reporting entity shall complete the permitted practices disclosures required by SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures in annual statement Note 1 and any other disclosures pursuant to Issue 5 of this interpretation. This interpretation provides a limited-time exception for reporting premium refunds, and does not require domiciliary jurisdiction approval as a permitted practice if the requirements of this interpretation are met. However, disclosure in Note 1 in a manner consistent with permitted practices is required because of the impact on premium which is a key measurement metric for insurers. If a domestic jurisdiction disapproved reporting as an underwriting expense, the limited-time exception does not apply.

42. Reporting the voluntary or jurisdiction-directed refund as an expense is not consistent with statutory accounting guidance and would inappropriately present the expense ratios in the statutory accounting financial statements. Reporting the refund as an expense, or any other method besides a decrease to premium, would be considered a permitted or prescribed practice and shall be disclosed as required by SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures:

a. Reporting the refunded amounts as a miscellaneous underwriting expense is not consistent with the underwriting expense description. This reporting option is inconsistent with the characterization of the amount as a return of premium.

b. Reporting the refunds as premium balances charged off (e.g., bad debt expense) is inconsistent with guidance in SSAP No. 53, paragraph 14, on earned but uncollected premium. It is also inconsistent
with the annual statement instructions as the amount is not an uncollectible amount, but rather a voluntary choice by the reporting entity to reduce the amount charged.

Issue 2: How to Account for Refunds Required Under the Policy Terms

While most of the premium refunds are voluntary or jurisdiction-directed and not required under the policy terms, some policies have terms that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses. If the policy terms change the amount charged, existing guidance in SSAP No. 53, SSAP No. 54R or SSAP No. 66 continues to apply:

a. SSAP No. 53 provides guidance for policies in which the premium amount is adjusted for changes in the level of exposure to insurance risk. This is often seen in commercial lines of business such as workers’ compensation. The guidance notes that audits often occur after the policy term or mid-term in the policy. SSAP No. 53 refers to the adjustment to premium (either due to the customer or to the insurer) as earned but unbilled (EBUB) premium. SSAP No. 53 requires such adjustment to premium to be made immediately either through written premium or earned premium. SSAP No. 53 also requires recognition of the related liabilities and expenses such as commissions and premium taxes based on when the premium is earned.

b. SSAP No. 54R provides guidance for policies subject to redetermination in which the premium is subject to adjustments by contract terms. This is commonly seen in federal and state groups. The guidance notes that estimates are based on experience to date and premium adjustments are estimated for the portion of the policy that has expired. Accrued return premiums are recorded as a liability with a corresponding entry to written premium. Refunds required under the policy terms would continue to be reported as retrospective or redetermination premium liabilities if applicable.

c. SSAP No. 66 provides guidance for policies whose terms or legal formulas determine premium based on losses. SSAP No. 66 references other applicable statements based on contract type for the initial accrual of premium. Estimates of premium adjustments are accrued based on activity to date and result in immediate adjustments to premium. SSAP No. 66 guidance specifies the corresponding annual statement reporting lines for different entity types.

Issue 3: How to Account for Rate Reductions

Some reporting entities are offering rate reductions instead of premium refunds. Some of these rate reductions provide one-time price decreases to future payments on in-force policies. Other reporting entities have provided offers of rate reductions on future renewals. Some of the offers for future rate reductions are only applicable to in-force policyholders as of a specified date. Some reporting entities have offered one-time rate reductions for future renewals for both existing and new policyholders for 2020.

a. Rate reductions on in-force business, shall be recognized as immediate adjustments to premium.

b. Rate reductions on future renewals shall be reflected in the premium rate charged on renewal. This is because it is outside of the policy boundary to require the accrual before contract inception. While the amount of future rate reduction can be estimated, it is not a change to existing policy terms and policyholders are not obligated to renew at the reduced rate, therefore, payment of the amount is avoidable. Such amounts shall be disclosed as discussed in Issue No. 5.
Issue 4: How to Account for Policyholder Dividends

15.16. SSAP No. 65—Property and Casualty Contracts, paragraph 46 requires that dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability.

16.17. The Working Group noted that policyholder dividends are typically only provided on participating policies or policies issued by non-stock companies, such as mutual entities and other corporate entity types in which profits are shared with policyholders.

17.18. Research during the development of this item identified that a small number of jurisdictions have legal restrictions which only allow policyholder dividends to be provided after the expiration of the policy period for which the dividend was earned. This interpretation only addresses policyholder dividends which are permitted by the applicable jurisdiction.

18.19. The property and casualty annual statement blank provides specific reporting lines for policyholder dividends including, but not limited to a liability line and a line in the income statement and statement of cash flow. For those entities whose policies are participating or whose corporate shell type and/or membership structure allow for policyholder dividends, the accounting for policyholder dividends is unchanged by this interpretation.

19.20. This interpretation does not change the policyholder dividend disclosure or reporting but provides additional guidance that such policyholder dividends issued in response to COVID-19 decreases in activity shall also be disclosed as discussed in Issue 5.

Issue 5: Where to Disclose Refunds, Rate Reductions and Policyholder Dividends Related to COVID-19 Decreases in Activity

20.21. There are various places in the notes to the statutory annual statement where disclosures of various aspects of premium refunds, premium reductions or policyholder dividends are required. This interpretation does not recommend changes to those existing disclosures. This interpretation does, however, recommend providing a consistent annual statement disclosure for all such amounts to allow for comparable disclosures.

21.22. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items requires disclosure of the nature and financial effects of each unusual or infrequent event or transaction. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. This disclosure is currently required to be reported in annual statement Note 21A. (Reporting entities shall maintain jurisdiction-specific information to be made available upon request from department of insurance or revenue regulators.)

23. To allow for aggregate, consistent assessment, the Working Group came to a consensus that all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement Note 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments.

   a. For clarification, refunds required under policy terms in-force prior to the federal declaration of emergency for the COVID-19 pandemic as discussed in paragraph 13 (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends.
Policies whose terms were modified after the declaration of emergency in response to COVID-19 are required to disclose the COVID-19 inspired premium refunds, rate reductions and policyholder dividends.

24. All reporting entities shall provide the following information regarding their COVID-19 premium refunds, limited-time exception payments, rate reductions and policyholder dividends as unusual or infrequent items:
   b. The amount of COVID-19 “payments” to policyholders by major category (premium refunds, limited-time exception payments, rate reductions or policyholder dividends).

25. Reporting entities that utilize the limited-time exception expense reporting described in paragraphs 12 and 13 shall additionally provide the following to illustrate in annual statement Note 1 the impact of reporting the payments as an aggregate underwriting expense rather than a return of premium as if it were a permitted practice. As detailed in paragraph 13 domiciliary jurisdiction approval as a permitted practice is not required to apply the limited-time exception. Disclosure is required because of the impact on premium which is a key measurement metric for insurers:
   a. A statement that the accounting practice is a limited-time exception to recognize such amounts as an aggregate underwriting expense rather than an return of premium. This disclosure shall include the financial statement reporting line(s) predominantly impacted by the limited-time exception. (Although most practices impact net income or surplus, direct reference to those lines should be avoided. The intent is to capture the financial statement line(s) reflecting the practice which ultimately impacts net income or statutory surplus.) Additionally, a reference to Note 1 shall be included in the individual notes to financial statements impacted by the limited-time exception as applicable.
   b. The monetary effect on revenue and expense.
   c. If a reporting entity’s risk-based capital would have triggered a regulatory event had it not used the limited-time exception, that fact should be disclosed.
   d. The reasons the reporting entity elected to use the limited-time exception rather than as a return of premium.
   e. Note 1 shall also identify the impact of not reporting such amounts as a return of premium on the operating percentages and other percentages reported in the Five Year Historical Data Exhibit and disclose the percentages/ratios as reported and as adjusted to report payments to policyholders as a return of premium.
      i. The operating ratios to be reported include:
         1. Premium earned,
         2. Losses incurred,
         3. Loss expenses incurred,
         4. Other underwriting expenses incurred,
5. Net underwriting gain or loss.

ii. The other ratios to be reported include:

1. Other underwriting expenses to net premiums written,
2. Losses and loss expenses incurred to premiums earned, and
3. Net premiums written to policyholder’s surplus.

26. If a domiciliary jurisdiction’s prescribed or permitted practices allow voluntary COVID-19 payments which are either consistent with the limited-time exception or different from a reduction in premium, the reporting entity shall complete the disclosures in Note 1 which identify that a permitted or prescribed practice was applied and in paragraphs 24 and 25 of this Interpretation. The disclosure in paragraph 25 in such instances shall reflect the impact on the ratios in paragraph 25 compared to the default premium treatment.

INT 20-08 Consensus

22. The Working Group reached a consensus to prescribe statutory accounting guidance for insurance reporting entities providing refunds in response to COVID-19. Pursuant to this consensus:

a. Reporting entities that provide voluntary or jurisdiction-directed refunds which are not required under the policy terms shall follow the guidance in paragraphs 8-12 of this interpretation. This guidance stipulates that such refunds shall be recognized as a reduction of premium. Refunds that are recognized in a different manner (e.g., as an expense), shall be considered a permitted or prescribed practice pursuant to SSAP No. 1.

b. Reporting entities that provide refunds in accordance with insurance policy terms shall follow paragraph 13 of this interpretation. This guidance indicates that existing statutory accounting principles in SSAP No. 53, SSAP No. 54R or SSAP No. 66 shall be followed as applicable.

c. Reporting entities that provide rate reductions shall follow paragraph 14 of this interpretation. This guidance provides direction based on whether the rate reduction is for in-force or future policies.

d. Reporting entities that provide policyholder dividend shall follow the existing guidance for policyholder dividends which is summarized in paragraphs 15-19 and in addition, shall complete the disclosures described in paragraphs 20-22.

e. This interpretation, paragraphs 20-22 indicates that reporting entities shall continue to comply with all statutory accounting disclosure requirements, but also requires that all premium refunds, rate reductions and/or policyholder dividends provided because of the decreased activity due to COVID-19 shall be aggregated and reported in Note 21A as unusual or infrequent items.

Does Not Address Premium Taxation

27. The Working Group noted that premium taxation requirements vary by jurisdiction and this interpretation is not intended to address premium taxation in any jurisdiction. Taxation is determined by the jurisdiction where the premium is written/returned to the policyholder according to the laws, regulations and general administrative rules applicable to all insurance enterprises licensed in a of that jurisdiction. This interpretation defers to each jurisdiction’s premium tax requirements for purposes of determining taxable amounts.
Effective Date

23-28. The limited-time exception allowance for expense reporting for endorsements and rate filings prior to June 15, 2020, applies only to these specific issues arising from COVID-19, is effective for second quarter reporting and will sunset January 1, 2021. This interpretation will be automatically nullified on January 1, 2021 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-08 Status

24-29. This interpretation was amended on July 22, 2020 to include the limited-time exception and specific related disclosures by a two-thirds majority of the Accounting Practices and Procedures (E) Task Force membership. Further discussion is planned.

Blanks (E) Working Group Editorial Revisions to the Blanks and Instructions Presented at the May 28, 2020, Meeting (Attachment Four-A26)........................................................................................................... 10-1096
The Accounting Practices and Procedures (E) Task Force met via conference call Aug. 3, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Rylynn Brown (DE); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by N. Kevin Brown (DC); Dean L. Cameron represented by Nathan Faragher (ID); Stephen W. Robertson and Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither and Bill Clark (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Eric A. Cioppa represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Mike Causey represented by Monique Smith (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by Diana Sherman (NJ); Russell Toal represented by Robert Doucette (NM); Linda A. Lacewell represented by Robert Kasinow (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Jessica K. Altman represented by Kimberly Rankin (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Hodgen Mainda represented by Troy Hancock (TN); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and David Smith (VA); Michael S. Pieciak represented by Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Mark Afable represented by Amy Malm (WI); James A. Dodrill represented by Jamie Taylor (WV); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its July 22, June 22, and 2019 Fall National Meeting Minutes**

Ms. Walker directed the members to the Task Force’s July 22, June 22 and 2019 Fall National Meeting minutes. During the July 22 meeting, the Task Force adopted revisions to *Interpretation (INT) 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends.* These revisions were requested by the Financial Condition (E) Committee to add flexibility, which allows a limited-time exception to apply other underwriting expense treatment for certain policies.

During its June 22 meeting, the Task Force took the following action: 1) adopted the report of the Statutory Accounting Principles (E) Working Group for its actions on June 15, May 20, April 15 and March 18; 2) adopted INT 20-08 as adopted by the Statutory Accounting Principles (E) Working Group on June 15 by a separate vote of the Task Force; and 3) adopted the May 28 report of the Blanks (E) Working Group.

Mr. Doucette made a motion, seconded by Mr. Kasinow, to adopt the Task Force’s July 22 (Attachment Three), June 22 (Attachment Four), and Dec. 8, 2019, (see *NAIC Proceedings – Fall 2019, Accounting Practices and Procedures (E) Task Force*) minutes. The motion passed unanimously.

2. **Adopted its 2021 Proposed Charges**

Ms. Walker directed the Task Force to the Task Force’s 2021 proposed charges. Robin Marcotte (NAIC) stated that the Task Force oversees the activities of the Blanks (E) Working Group and the Statutory Accounting Principles (E) Working Group. She stated that the 2021 proposed charges of the working groups reflect the ongoing nature of their work, and they are the same as 2020 except for one revised charge for each working group.

Ms. Marcotte stated that for the Blanks (E) Working Group, the proposed revision is to update the charge to review requests to the investment schedules and instructions. She noted that the charge is the same, just the name of the referenced group is proposed to be updated from the Investment Risk Based Capital (E) Working Group to the Capital Adequacy (E) Task Force and its working groups. She stated that this is because all of the risk-based capital (RBC) working groups could potentially propose revisions.
Ms. Marcotte stated that for the Statutory Accounting Principles (E) Working Group, the charge related to updating the reinsurance Schedule F and related revisions to reflect the changes to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) has been addressed. She said the updates were initiated by the Statutory Accounting Principles (E) Working Group and adopted by the Blanks (E) Working Group, along with a few very minor edits to the statutory accounting. She noted that statutory accounting includes impairment guidance, so no revisions were drafted regarding doubtful accounts. She stated that the charge is proposed for deletion, as the revisions to address the model changes are complete.

Ms. Malm made a motion, seconded by Ms. Nickelson, to adopt the Task Force’s 2021 proposed charges (Attachment Two).

Mr. Bruggeman provided the July 30 report of the Statutory Accounting Principles (E) Working Group. He said the Working Group adopted its July 15, June 15, May 20, May 5, April 17, April 15, March 26 and March 18 minutes.

Mr. Bruggeman stated the Working Group adopted the following substantive revisions to statutory accounting guidance:

- **Statement of Statutory Accounting Principles (SSAP) No. 32R—Preferred Stock:** Adopted substantively revised SSAP No. 32R and corresponding Issue Paper No. 164—Preferred Stock, which updates the definitions, measurement and impairment guidance for preferred stock pursuant to the investment classification project. Revised SSAP No. 32R is effective Jan. 1, 2021. (Ref #2019-04)

- **SSAP No. 106—Affordable Care Act Section 9010 Assessment:** Revisions supersede SSAP No. 106 and nullify INT 18-02: ACA Section 9010 Assessment Moratoriums. With this adoption, a blanks proposal will be sponsored to incorporate reporting changes for 2021 reporting and recommend guidance for 2020 year-end reporting. (Ref #2020-05)

Mr. Bruggeman noted that the Working Group adopted the following nonsubstantive revisions to statutory accounting guidance:

- **SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments:** Revisions update the reporting line for qualifying cash pools and make clarifying edits. (Ref #2020-16EP)

- **SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock:** Revisions eliminate references to the NAIC Bond Fund List (Bond List) in SSAP No. 26R and add reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R. (Ref #2020-01)

- **SSAP No. 26R:** Revisions clarify that the accounting and reporting of investment income and capital gain/loss, due to the early liquidation either through a called bond or a tender offer, shall be similarly applied. This adoption has a Jan. 1, 2021, effective date with early adoption permitted. (Ref #2020-02)

- **SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 54R—Individual and Group Accident and Health Contracts:** Revisions specify that voluntary decisions to choose one allowable reserving methodology over another, which requires commissioner approval under the Valuation Manual, shall be reported as a change in valuation basis. (Ref #2020-04)

- **SSAP No. 68—Business Combinations and Goodwill:** Revisions add disclosure elements for reported goodwill. The additional disclosures will improve the validity and accuracy of the financial statements, and they will assist with state insurance regulators’ review of reported assets that are not readily available for policyholder claims. These disclosure revisions will be effective for the 2021 reporting year to correspond with blanks changes. (Ref #2020-03)

- **SSAP No. 86—Derivatives:** Revisions ensure reporting consistency in that derivatives are reported “gross”; i.e., without the inclusion of financing components. Additionally, amounts owed to/from the reporting entity from the acquisition or writing of derivatives shall be separately reflected. The concepts are consistent with existing statutory...
accounting guidelines, but the revisions clarify the guidance and improve uniform application. The revisions have an effective date of Jan. 1, 2021. (Ref #2019-38)

g. Appendix B—Interpretations of Statutory Accounting Principles: INT 20-09: Basis Swaps as a Result of the LIBOR Transition basis swaps are compulsory derivatives issued by central clearing parties (CCPs) in response to the market-wide transition away from the London Interbank Offered Rate (LIBOR). The interpretation directs that the basis swaps be reported as "hedging - other" and at fair value, thus qualifying for admittance. To be considered or reported as an "effective" hedging, the instrument must qualify as a highly effective hedge under SSAP No. 86.

Mr. Bruggeman said the Working Group exposed the following nonsubstantive revisions to statutory accounting guidance:

a. SSAP No. 2R: Revisions require the identification/disclosure of cash equivalents, or substantially similar investments, that remain on the same reporting schedule for more than one consecutive reporting period. This is an expansion of the current disclosure requirements that only referenced short-term investments and a clarification that the disclosure is satisfied through the use of the code on the investment schedules. (Ref #2020-20)

b. SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements and SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities: Revisions update the amortization guidance for leasehold improvements. The updated language will allow leasehold improvements to have lives that match the associated lease term, which agrees with U.S. Generally Accepted Accounting Principles (GAAP). (Ref #2020-23)

c. SSAP No. 25—Affiliates and Other Related Parties: Revisions clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation, a disclaimer of control does not eliminate the classification as a related party, and disclosure of material transactions are required under SSAP No. 25. The revisions also propose rejection of several U.S. GAAP standards addressing variable interest entities, and update the related party disclosures. (Ref #2019-34)

d. SSAP No. 26R: Revisions clarify that perpetual bonds shall be reported at fair value, not to exceed any currently effective call price, with a proposed effective date of Jan. 1, 2021, with early application permitted. (Ref #2020-22)

e. SSAP No. 37—Mortgage Loans: Revisions clarify that a participant’s financial rights in a mortgage participation agreement may include the right to take legal action against the borrower or participate in the determination of legal action, but they do not require that the participant has the right to solely initiate legal action; foreclosure; or under normal circumstances, require the ability to communicate directly with the borrower. (Ref #2020-19)

f. SSAP No. 43R—Loan-Backed and Structured Securities:

2. Exposed agenda item to solicit comments on two options for the accounting of credit tenant loans (CTLs). The Valuation of Securities (E) Task Force will be notified of this exposure with a request for further confirmation that a Securities Valuation Office (SVO)-Listing could be developed to capture the CTLs that meet the SVO’s structural and legal analysis and possess bond characteristics. (Ref #2020-24)

g. SSAP No. 53—Property and Casualty Contracts–Premiums, SSAP No. 54R, and SSAP No. 66—Retrospectively Rated Contracts: Exposed agenda item with a request for comments on the development of authoritative guidance for policyholder refunds and other premium adjustments for accident and health and property and casualty lines of business. Assistance from industry was requested in developing principles-based guidance, particularly for the varieties of data-telematics policies. (Ref #2020-30)

h. SSAP No. 71—Policy Acquisition Costs and Commissions: Exposed revisions clarify existing levelized commissions guidance, which requires full recognition of the funding liabilities incurred to date for commission expenses prepaid on behalf of an insurer. The revisions also clarify that the recognition of commission expense is based on experience.
to date. The exposed revisions are consistent with the 2019 Fall National Meeting exposure, with the inclusion of guidance to clarify that reporting entities that have not complied with the original intent shall reflect the change as a correction of an error, in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors, in the year-end 2020 financial statements. (Ref #2019-24)

i. SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities:

1. Revisions update the subsidiary, controlled and affiliated entities (SCA) review process descriptive language and the procedures for availability and delivery of completed SCA reviews for domestic regulators and financial statement filers. (Ref #2020-17)

2. Revisions remove the statement that guarantees or commitments from the insurance reporting entity to the SCA can result in a negative equity valuation of the SCA. (Ref #2020-18)

j. Appendix B—Interpretations of Statutory Accounting Principles: Exposed revisions to extend the following interpretations issued in response to COVID-19 to the third quarter 2020 financial statements. With these revisions, these interpretations will expire Dec. 30; therefore, they will not be applicable for year-end 2020. The exposure has a shortened comment period ending Aug. 14. Adoption of these extensions may be considered by an e-vote if there are no concerns with the extensions received during the exposure period:

2. INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19

3. INT 20-05: Investment Income Due and Accrued

k. Appendix D—Nonapplicable GAAP Pronouncements: The following U.S. GAAP standards were rejected as not applicable to statutory accounting:

1. ASU 2015-10, Technical Corrections and Improvements. (Ref #2020-26)

2. ASU 2019-09, Financial Services—Insurance (Topic 944): Effective Date. (Ref #2020-27)

3. ASU 2020-01, Investments—Equity Securities (Topic 321), Investments—Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815), Clarifying the Interactions between Topic 321, Topic 323, and Topic 815. (Ref #2020-28)

4. ASU 2020-05—Effective Dates for Certain Entities. (Ref #2020-29)

l. Exposed the following editorial revisions to statutory accounting: (Ref #2020-25EP)

1. SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets: Removed redundant paragraph references.

2. SSAP No. 62R—Property and Casualty Reinsurance: Added a table that lists the questions addressed in Exhibit A - Implementation Questions and Answers.

Mr. Bruggeman noted that the Working Group rejected agenda item 2020-13: Health Industry Request on 2020 Health Insurance Assessment without statutory revisions. (Note that the sponsor requested withdrawal). (Ref #2020-13)

Mr. Bruggeman stated that the Working Group received an update and determined that the following two interpretations, issued in response to COVID-19, are specifically tied to the timeframes described in the Coronavirus Aid, Relief, and Economic Security Act (CARES Act). As such, an extension was not deemed necessary at this time.

a. INT 20-03: Troubled Debt Restructuring Due to COVID-19
b. **INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19**

Mr. Bruggeman noted that the Working Group received an update that the issue paper to consider substantive revisions to SSAP No. 43R was exposed through July 31, and a subsequent conference call will be scheduled to consider comments and continue the discussion. It was also noted that NAIC staff have had ongoing conversations with industry representatives and investment providers to discuss differing structures during the exposure period. (Ref #2019-21)

Mr. Bruggeman stated that the Working Group deferred discussion of the following agenda items for a subsequent call or meeting:

a. Ref #2018-07: Surplus Note Accounting – Referral from the Reinsurance (E) Task Force

b. Ref #2019-12: *ASU 2014-17, Business Combinations, Pushdown Accounting*

c. Ref #2019-49: Retroactive Reinsurance Exception

Mr. Bruggeman stated that the Working Group received an update on two referrals:

a. Referral from the Valuation of Securities (E) Task Force regarding the accounting and reporting treatment of CTLs is being addressed in agenda item Ref #2020-24.

b. Referral from the Financial Condition (E) Committee regarding an American Council of Life Insurers’ (ACLI) request relative to the accounting treatment of certain “basis swaps” permitted under state law, as a result of the transition away from LIBOR. This referral was addressed with the adoption of INT 20-09.

Mr. Bruggeman stated that the Working Group received an update on current U.S. GAAP exposures/invitations to comment.

Mr. Bruggeman noted that, with the exception of INT 20-02, INT 20-04 and INT 20-05, which have a comment deadline of Aug. 14, the comment deadline for all exposed agenda items is Sept. 18.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the report of the Statutory Accounting Principles (E) Working Group (Attachment One). The motion passed unanimously.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call July 30, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair, and Kevin Clark (IA); Sheila Travis (AL); Kim Hudson (CA); Kathy Belfi and William Arfanis (CT); Rylynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Tom Dudek (NY); Joe DiMemmo (PA); Shawn Frederick (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI). Also participating was: Eli Snowbarger (OK).

1. **Adopted its July 15, June 15, May 20, May 5, April 17, April 15, March 26 and March 18 Minutes**

Ms. Malm made a motion, seconded by Mr. Moser, to adopt the Working Group’s July 15 (Attachment One-A), June 15 (Attachment One-B), May 20 (Attachment One-C), May 5 (Attachment One-D), April 17 (Attachment One-E), April 15 (Attachment One-F), March 26 (Attachment One-G) and March 18 (Attachment One-H) minutes. The motion passed unanimously.

2. **Adopted Non-Contested Statutory Accounting Revisions During its Public Hearing**

The Working Group held a public hearing to review comments (Attachment One-I and Attachment One-J) on previously exposed items.

Mr. Hudson made a motion, seconded by Ms. Mears, to adopt the statutory accounting revisions detailed below as non-contested statutory accounting revisions. This motion also included the rejection, without statutory revisions, of agenda item 2020-13. The motion passed unanimously.

a. **Agenda Item 2019-38**

Mr. Bruggeman directed the Working Group to agenda item 2019-38: Financing Derivatives (Attachment One-K). Julie Gann (NAIC) stated that this nonsubstantive agenda item requires the gross reporting of derivatives, without the impact of financing premiums. The agenda item also requires that premiums payable or premiums receivable be separately reported. The revisions to *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives* have corresponding annual statement revisions to capture derivative financing components in the calculation of net derivative exposure.

Ms. Gann stated that this inclusion will affect the risk-based capital (RBC) for life entities. The revisions have a Jan. 1, 2021, effective date to correspond with the annual financial statement revisions.

b. **Agenda Item 2020-01**

Mr. Bruggeman directed the Working Group to agenda item 2020-01: Update/Remove References to SVO Listings (Attachment One-L).

Jim Pinegar (NAIC) stated that this nonsubstantive agenda item reflects a Valuation of Securities (E) Task Force notice regarding two adopted revisions to the *Purpose and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)*. He stated that the Task Force renamed the “U.S. Direct Obligations/Full Faith and Credit Exempt List” to the “NAIC U.S. Government Money Market Fund List.” He noted that no revisions to the statutory accounting principles (SAP) would be required for this revision, as this list is not specifically identified in the *Accounting Practices and Procedures Manual (AP&P Manual)*. He stated that the second revision was to discontinue the “NAIC Bond Fund List.” He noted that items on this list would be eligible for consideration in the “NAIC Fixed Income-Like SEC Registered Funds List.” The discontinuance of the “NAIC Bond Fund List” required updates to eliminate references to it in *SSAP No. 26R—Bonds* while adding reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in *SSAP No. 30R—Unaffiliated Common Stock*. 
c. **Agenda Item 2020-04**

Mr. Bruggeman directed the Working Group to agenda item 2020-04: Commissioner Discretion in the *Valuation Manual* (Attachment One-M).

Robin Marcotte (NAIC) stated that this agenda item incorporates a disclosure on the use of commissioner discretion when choosing between acceptable methods permitted in the *Valuation Manual*. She stated that the nonsubstantive disclosure revisions are reflected in SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 54R—Individual and Group Accident and Health Contracts. Pursuant to commissioner approval, a reporting entity has the ability to choose one allowable reserving methodology over another; accordingly, the revisions require that any modifications be disclosed as a change in valuation basis.

d. **Agenda Item 2020-05**

Mr. Bruggeman directed the Working Group to agenda item 2020-05: Repeal of the Affordable Care Act Section 9010 Assessment (Attachment One–N).

Ms. Marcotte stated that the federal Affordable Care Act (ACA) Section 9010 assessment has had more than one deferral or moratorium, as addressed in *Interpretation (INT) 18-02: ACA Section 9010 Assessment Moratorium*. She stated that in December 2019, the U.S. House of Representatives (House) and U.S. Senate (Senate) passed bills repealing Section 9010 assessments for calendar years beginning Jan. 1, 2021. She stated that the agenda item addresses the substantive impacts of the Section 9010 assessment repeal for calendar years beginning on Jan. 1, 2021, by superseding SSAP No. 106—Affordable Care Act Section 9010 Assessment and nullifying INT 18-02. With these actions, both SSAP No. 106 and INT 18-02 would be moved to *Appendix H – Superseded Statements of Statutory Accounting Principles and Nullified Interpretations* for the 2021 publication of the AP&P Manual.

Ms. Marcotte stated that in response to interested parties’ comments, it is too late in the year to change the Section 9010 disclosures in the 2020 financial statements; however, instructional guidance for completing the disclosure will be developed and posted on the Blanks (E) Working Group webpage. The SSAP No. 106 disclosures will be eliminated from the 2021 financial statements.

e. **Agenda Item 2020-13**

Mr. Bruggeman directed the Working Group to agenda item 2020-13: Health Industry Request on 2020 Health Insurance Assessment (Attachment One-O).

Ms. Marcotte stated that the Working Group received a request from America’s Health Insurance Plans (AHIP) to consider altering the recognition of the “insurer provider fee” required in SSAP No. 106. She stated that an agenda item was exposed with a recommendation to reject the proposed AHIP revisions. She stated that subsequently, AHIP requested to withdraw this agenda item from further consideration.

Mr. Bruggeman stated that in accordance with the Working Group’s procedural process, despite the withdrawal request, this agenda item will be moved to the rejected listing, without statutory revisions.

f. **Agenda Item 2020-16EP**

Mr. Bruggeman directed the Working Group to agenda item 2020-06EP: Editorial Maintenance Update (Attachment One-P).

Mr. Pinegar stated that this item provides nonsubstantive editorial updates in accordance with the maintenance process, updates a reporting line reference for qualified cash pools, and corrects sentence structure for guidance in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments.
3. **Adopted Revisions to Statutory Accounting with Minimal Discussion**

The Working Group held a public hearing to review comments (Attachment One-I and Attachment One-J) on previously exposed items.

   a. **Agenda Item 2019-04**

Mr. Bruggeman directed the Working Group to agenda item 2019-04: SSAP No. 32 – Investment Classification Project. Mr. Pinegar stated that the intent of the agenda item was to substantively revise SSAP No. 32—Preferred Stock pursuant to the investment classification project. The revisions include updated definitions, measurement and impairment guidance for preferred stock held as an investment.

Mr. Pinegar stated that comments received during a prior exposure regarding the proposed definitions (e.g., whether redemption is within control of the holder) have been fully resolved, and the comments received during this most recent exposure are minor. He stated that NAIC staff recommend adoption of Issue Paper No. 164—Preferred Stock and the substantively revised SSAP No. 32R, with the proposed edits from interested parties with an effective date of Jan. 1, 2021.

   b. **Agenda Item 2020-02**

Mr. Bruggeman directed the Working Group to agenda item 2020-02: Accounting for Bond Tender Offers.

Mr. Pinegar stated that a bond tender offer is like a called bond, except a tender offer is contingent on acceptance of the offer by the holder. He stated that specific guidance for the reporting and allocation of investment income and/or capital gain/loss associated with callable bonds is noted in SSAP No. 26R; however, guidance is not reflected when a bond is retired early through a tender offer. He stated that the nonsubstantive revisions clarify that the accounting and reporting of investment income and capital gain/loss due to the early liquidation, either through a call or a tender offer, shall be similarly applied.

Mr. Pinegar stated that comments received indicated support for the accounting treatment however, requested a Jan. 1, 2021, effective date. He stated that NAIC staff are supportive of adding effective date guidance, noting that while the accounting guidance is effective immediately, reporting entities may wait until Jan. 1, 2021, if: 1) the reporting entity has not historically followed the accounting and reporting of investment income and capital gain/loss from a tender bond as proposed in this agenda item; and 2) the reporting entity requires internal financial accounting system updates.

Mr. Smith made a motion, seconded by Mr. Bartlett, to adopt the substantially revised SSAP No. 32R—Preferred Stock to include the proposed edits from interested parties, with an effective date of Jan. 1, 2021 (Attachment One-Q) and the issue paper (Attachment One-R). This motion also included adopting nonsubstantive revisions to SSAP No. 26R, with the effective date language as proposed by NAIC staff (Attachment One-S). The motion passed unanimously.

4. **Reviewed Previously Adopted Interpretations for Possible Extension**

Mr. Bruggeman directed the Working Group to receive an update and consider possible extensions on several accounting interpretations. Ms. Gann stated that the interpretations have been grouped to facilitate discussion based on periods in which they are effective.

Interpretations that are effective through the second quarter 2020 reporting include:

- **INT 20-02: Extension of Ninety-Day Rule for the Impact of COVID-19**: This interpretation provides an optional extension of the 90-day rule before nonadmitting premium receivables and receivables from non-government uninsured plans in response to COVID-19. (INT 20-02)

- **INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19**: This interpretation provides limited-time exceptions to defer the assessment of impairment for certain bank loans, mortgage loans and investments that predominantly hold underlying mortgage loans, which are affected by forbearance or modifications in response to COVID-19. (INT 20-04)
**INT 20-05: Investment Income Due and Accrued:** This interpretation provides limited-time collectibility assessments and admittance exceptions for SSAP No. 34—Investment Income Due and Accrued. This interpretation allows an exception to the collectibility assessment for investments that have had a forbearance or modifications in response to COVID-19 that were both current as of Dec. 31, 2019, and not experiencing financial difficulties at the time of the modification. For these items, further evaluation of collectibility would not be required for the first and second quarter financial statements unless other indicators of interest would not be collected were known. (INT 20-05)

Ms. Gann stated that as these interpretations are only effective through the second quarter, NAIC staff recommend a short exposure, seeking industry and state insurance regulator feedback on whether the interpretations should be extended to include third quarter reporting. If no objections are noted, the Working Group may consider adoption via an e-vote. If extended, INT 20-02, INT 20-04 and INT 20-05 would expire on Dec. 30, which would preclude their usage for year-end financial reporting.

Ms. Gann stated that informal inquiries have been received on possible year-end application for these interpretations. However, she stated that there are potential concerns with another extension, particularly for INT 20-04, that provides exceptions for certain impairment assessments if impairment is not shown in the year-end financial statements. She stated that the current consideration is only for the third-quarter financial statements, but she wanted to bring these inquiries and comments to the attention of the Working Group.

Mr. Bruggeman stated that subsequent consideration could occur for year-end reporting, but INT 20-04 would likely need to be modified, as an extension could further delay recognition of impairment.

Interpretations that are effective for 60 days after the termination of the national emergency, or Dec. 31, whichever occurs first, include:

- **INT 20-03: Troubled Debt Restructuring Due to COVID-19:** This interpretation clarifies that a modification of mortgage loan or bank loan terms, in response to COVID-19, shall follow the provisions detailed in the April 7 “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus,” and the provisions of the federal Coronavirus Aid, Relief, and Economic Security Act (CARES Act) in determining whether the modification shall be reported as a troubled debt restructuring. (INT 20-03)

- **INT 20-07: Troubled Debt Restructuring of Certain Debt Instruments Due to COVID-19.** This interpretation proposes limited-time practical expedients in determining whether a restructuring reflects a “concession” under paragraph 10 of SSAP No. 36—Troubled Debt Restructuring. Under existing statutory accounting guidance, a restructuring that is insignificant is not a concession; therefore, it is not a troubled debt restructuring. The interpretation provides practical expedients in determining what is an insignificant debt modification. (INT 20-07)

Ms. Gann stated that the effective dates for INT 20-03 and INT 20-07 are tied to the CARES Act, and unless the national emergency is declared over by Aug. 1, the interpretations will be in effect for third-quarter financial reporting; thus, an exposure to consider possible extension is not necessary at this time. Mr. Bruggeman agreed that with the current effective dates, INT 20-03 and INT 20-07 would not need to be considered for extension at this time.

John Waldeck (Pacific Life Insurance) requested clarification regarding the discussion on an e-vote for consideration of adoption.

Ms. Gann stated that while the Working Group has not previously held an e-vote to adopt statutory accounting revisions, this option would only occur if there were not any comments that were contrary to supporting extension. However, if the comments received indicate the need for a public meeting, a conference call will occur to facilitate the review and discussion.

Mr. Hudson made a motion, seconded by Ms. Malm, to expose INT 20-02, INT 20-04 and INT 20-05 for public comment regarding possible extension for third-quarter reporting. The motion passed unanimously.
5. Reviewed Comments and Considered Action on Exposed Items

The Working Group held a public hearing to review comments (Attachment One-I and Attachment One-J) on previously exposed items.

a. Agenda Item 2019-34

Mr. Bruggeman directed the Working Group to agenda item 2019-34: Related Parties, Disclaimer of Affiliation and Variable Interest Entities.

Jake Stultz (NAIC) stated that the intent of this nonsubstantive agenda item is to clarify identification of related parties and affiliates in SSAP No. 25—Affiliates and Other Related Parties to incorporate new disclosures to ensure that state insurance regulators have a full picture of complicated business structures. He stated that this agenda item has been drafted to clarify the identification of related parties and ensure that any related party identified under U.S. generally accepted accounting principles (GAAP) or within U.S. Securities and Exchange Commission (SEC) reporting requirements would be considered a related party for statutory accounting. Additionally, any non-controlling ownership over 10% would result in related party classification, regardless of any disclaimer of control or affiliation.

Mr. Stultz stated that this agenda item also proposes the rejection of several U.S. GAAP standards addressing variable interest entities. He stated that interested parties’ comment letters expressed concern regarding the reference to U.S. GAAP or SEC guidance as mutual filers do not prepare U.S. GAAP financials and do not file with the SEC. As such, inclusion by reference would result in overly complicated guidance. Mr. Stultz stated that as a result of these comments, direct references have been removed while certain descriptive language has been retained. Additionally, he stated that this agenda item does not change the reporting of related party transactions that currently occur in the financial statements.

Mr. Stultz stated that comments were received from the Group Solvency Issues (E) Working Group, requesting an additional disclosure that would provide information on minority ownership as well as other significant relationships between minority owners and other U.S. domestic insurers. He stated that NAIC staff recommend exposure of this agenda item, seeking industry and state insurance regulator feedback on the proposed modifications and inclusion of an additional related party disclosure.

Mr. Hudson made a motion, seconded by Ms. Travis, to expose agenda item 2019-34, which proposes nonsubstantive changes to SSAP No. 25, for a public comment period. The motion passed unanimously.

b. Agenda Item 2020-03

Mr. Bruggeman directed the Working Group to agenda item 2020-03: Enhanced Goodwill Disclosures.

Fatima Sediqzad (NAIC) stated that this agenda item proposes to capture additional goodwill information and clarify reporting on Schedule D, Part 6, Section 1—Valuation of Shares of Subsidiary, Controlled and Affiliated Companies. She stated that this agenda item adds the original amounts of goodwill to existing disclosure requirements, thus assisting in the review and validation of a subsidiary, controlled and affiliated entity’s (SCA) admitted goodwill.

Mr. Pinegar stated that this agenda item also updates this schedule to identify goodwill, instead of intangible assets, to reflect current reporting practices. He stated that the main focus of this agenda item is to add a new footnote disclosure, detailing the intangible subcomponents that are used to derive the admitted goodwill calculation. Additionally, goodwill as a percentage of capital/surplus will be disclosed, giving state insurance regulators a granular view of intangible assets. However, due to the required structural changes as a result of the new disclosure, the earliest that the new disclosures can take effect is year-end 2021.

Mr. Pinegar stated that interested parties requested the exclusion of “push down” goodwill from the disclosure requirements. He stated that NAIC staff recommend adoption of this agenda item in its current form, as the additional disclosures to not provide guidance on the determination, calculation or admissibility of goodwill; rather, they only enhance disclosure of existing goodwill. Additionally, omitting certain goodwill from the disclosures would greatly reduce the usefulness of the financial information.
Mr. Bruggeman clarified that due to the structural changes of the additional disclosure, capturing the intangible subcomponents of goodwill will not take effect until year-end 2021.

Richard Poniatowski (Travelers), representing interested parties, stated support for modifying the effective date of the disclosures to sync with the related annual statement blanks data captured proposal.

Mr. Hudson made a motion, seconded by Ms. Mears, to adopt agenda item 2020-03, incorporating additional goodwill disclosures in SSAP No. 68—Business Combinations and Goodwill, with an effective date of Dec. 31, 2021 (Attachment One-T). The motion passed unanimously.

c. Agenda Item 2019-24

Mr. Bruggeman directed the Working Group to agenda item 2019-24: Levelized and Persistency Commission.

Ms. Marcotte stated that this agenda item was originally exposed in August 2019 and exposed with revisions at the 2019 Fall National Meeting. She stated that the item was deferred on the March conference call. She stated that this agenda item proposes revisions to SSAP No. 71—Policy Acquisition Costs and Commissions, providing clarifications to the long standing levelized commissions guidance and providing guidance regarding commission that is based on policy persistency. She stated that the revisions clarify that a levelized commission arrangement, whether linked to traditional or nontraditional elements, requires the establishment of a liability for unpaid principal and accrued interest payable, regardless of the timing of payments made to a third party. Additionally, persistency commission shall be accrued proportionately over the policy period in which the commission relates, and it is not deferred until fully earned.

Ms. Marcotte stated that the exposed recommendations are intended to be consistent with the original intent of SSAP No. 71, which requires acquisition costs to be expensed as incurred. She noted that it is also intended to be consistent with the Statutory Statement of Concepts focusing on Recognition (noted in the Preamble, paragraphs 37 and 38), which states that liabilities require recognition as they are incurred, and accounting treatments, which tend to defer expense recognition, do not generally represent acceptable statutory accounting treatment. For instance, if a third party pays agent commission expense upfront, repayments to a third party need to be recognized as a liability for the funding agreement, even if repayment to the third party is not guaranteed. Even with the risk of non-repayment, SSAP No. 71 requires full recognition of the liability.

Ms. Marcotte stated that interested parties’ comments propose to delete most of the proposed revisions and propose new revisions redefining a funding agreement to only include instances in which repayment is guaranteed. She stated that this would conflict with the long-standing principles of SSAP No. 71, which require accrual of a liability even if repayment to the funding agent is not guaranteed.

Ms. Marcotte stated that comments received from Arcadia Capital Solutions focused on the potential negative impact of adopting the clarifying language, asserting that the proposed clarifying language is a substantive change to existing principles. She stated that in response to the comments concerning a substantive change, the proposed edits only clarify existing conceptual principles that have been in effect since before the 1998 codification of SAPs. She stated that it is believed that some reporting entities have intentionally ignored long standing statutory principles that require acquisition costs to be expensed when incurred, not deferred as is permitted under U.S. GAAP.

Ms. Marcotte stated that a third comment letter was received from Greenberg Traurig on behalf of DRB Insurance Solutions proposing guidance that upfront commissions that are prepaid by a third party should not be recognized as a liability when prepaid by a third party that was not under common control of the insurance reporting entity. This would presume that if an independent party paid commissions on behalf of the reporting entity, acquisition costs would be deferred. However due to the fact pattern being nearly identical, similar accounting treatment—i.e., expensing per SSAP No. 71—remains appropriate. Additionally, the third comment letter suggests that insurance brokers who fund the upfront commission expenses have assumed lapse risk; however, Ms. Marcotte noted that NAIC staff and state insurance regulators question the ability to transfer insurance risk to a noninsurance entity. She noted that insurance risks can only be transferred through a reinsurance agreement to another insurance entity.

Ms. Marcotte stated that because the revisions proposed by the commenters were inconsistent with the existing principles in SSAP No. 71, they are not viewed by NAIC staff as viable solutions. Accordingly, she stated that NAIC staff recommend adopting the exposed agenda item, which clarifies existing guidance that would not allow the use of a third-party agent

© 2020 National Association of Insurance Commissioners
agreement to delay recognition of a liability and expense from an in-force insurance contract. Additionally, a liability and expense are both incurred when the insurance contract is written, not when the payment is due. Ms. Marcotte stated that the accounting treatment necessary to reconcile current practice with the guidance as directed in SSAP No. 71 should be reflected as a correction of an error in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. She recommended that the Working Group provide direction on an effective date and review the additional proposed language regarding the correction of an error.

Mr. Bruggeman stated that the language proposed by NAIC staff only clarifies existing principles in SSAP No. 71, and he inquired of the Working Group if it had a similar understanding. He stated that the additional language regarding referencing SSAP No. 3 will likely warrant an additional exposure; however, it would be effective for year-end 2020. Mr. Hudson stated that California agrees that the language as proposed by NAIC staff represents a clarification to existing authoritative guidance. Ms. Mears indicated support for a year-end 2020 application.

Mr. Snowbarger stated that Oklahoma notes that the revisions will potentially affect some entities. He stated that Oklahoma is supportive of an additional exposure and supports the Working Group’s consideration of such.

Lynn Kelley (Delaware Life), representing interested parties, stated that companies would need adequate time to evaluate existing contracts and communicate with external regulators and auditors regarding the potential impact of such a clarification. Due to the extent of the measures required, she stated that interested parties request an effective date of Jan. 1, 2021, rather than year-end 2020, and they maintain that this clarification will be a significant change compared to how many reporting entities are applying the guidance.

Mr. Bruggeman stated that in terms of a Jan 1. 2021, effective date, additional considerations would likely be required, including disclosures, accruals, etc. However, with a Dec. 31, 2020, effective date, reporting entities should have adequate time to address concerns with their domestic regulators.

Danny Saenz (NTG Consultants) representing Arcadia Capital Solutions, stated that the changes proposed would have a significant impact on a number of its reporting entity clients, some incurring as much as a 30% reduction in RBC. He stated that while the proposed language may be insignificant to the SAPs, the financial impact would be significant to many insurance reporting entities. Additionally, this change may affect agents, through modified commission plans, and the public through possibly reduced insurance offerings. Mr. Saenz stated that the Working Group should also consider the broader economic environment—i.e., COVID-19’s financial impact on insurers—when determining an effective date. He stated that this business practice has been in place for years, and he requested that state insurance regulators provide an exception in an effort not to disrupt current business or marketplace practices. Additionally, he stated that the current practice does not negatively affect policyholders.

Mr. Bruggeman stated that he understands that this may have a significant impact on many reporting entities. Additionally, these nonsubstantive revisions may cease a current method utilized to ensure adequate capital to continue offering additional insurance products. Mr. Bruggeman stated that alternative methods, such as reinsurance, may need to be examined to preserve capital reserves or obtain capital relief.

Mr. Stolte stated that the guidance in SSAP No. 71 existed before the codification. He stated that the use of these finance agreements is a method to generate illusory surplus and circumvent the SAP of expensing acquisition costs as incurred. He noted that he finds this as problematic. He stated that Virginia would support adoption by Dec. 31. Policyholders are potentially affected by artificial surplus, and appropriate accounting is required for solvency regulation.

Mr. Saenz indicated that as a former regulator, this is not the first time regulators have seen insurance entities reporting transactions based on changes in how the market has developed or companies deviating from guidance based on marketplace interpretations. He said there are other regulatory tools to address this topic without causing some entities to face hazardous financial consequences. He noted that the reserves for policyholders are intact and unaffected by the commission agreements. Mr. Stolte noted that policyholders are affected by potentially illusory surplus.

Julie Mix McPeak (Greenberg Traurig), on behalf of DRB Insurance Solutions, stated that she understands the Working Group’s concern with deferring expense recognition; however, the proposed language captures all third-party financing arrangements, even those that are not affiliated. She stated that true independent, third-party financing should be excluded, as the reporting entity may not know the method or frequency in which the sub-agents are paid on behalf of the reporting entity.
She stated that there are many, varying commission arrangements, all of which would be affected by the modification to SSAP No. 71. She stated that levelized commission arrangements have existed since about 10 years prior to the 1998 codification, and they have continued after codification. Additionally, she stated that the proposed modifications will have a significant impact and should be considered substantive. She noted support for an additional exposure.

Mr. Bruggeman stated that his understanding is that the insurance reporting entity knows the individual agents who placed business on its behalf, as they are appointed by the insurance company. He requested clarification from Ms. McPeak on her comments regarding the insurer not knowing the agent’s compensation. She stated that it is the master agent/producer who is responsible for paying the sub-agents, and there are a number of ways the master agent has assumed the liability to compensate the sub-agents. She stated that the direct insurer may be unaware of the compensation agreement details between the master agent and the sub-agent. She stated that the payment examples include a bonus arrangement, immediate payment or trailing commission.

Mr. Bruggeman noted that there is a distinction between initial sales commission (acquisition cost) for a new policy and renewal commission, which is payable on the subsequent policy anniversary. He said requiring liability recognition of funding agreements, which attempt to delay the recognition of initial sales commission, is the intent of the clarifications. He noted that subsequent minor policy renewal commissions are not the focus of the agenda item. He stated that the naming conventions, which are being used in different ways, are clouding the issue. He noted that the principle is that the policy acquisition costs cannot be made the responsibility of a non-insurance entity. He noted that it is important that all parties are using terms consistently.

Ms. McPeak stated that the language defining levelized commission in paragraph 4 is so broad that it encompasses all types of commission arrangements between a master producer and a sub-agent; i.e., sales commission, trailing commission, heaped commission, partially heaped and trailing. She indicated that the obligation to pay the sub-agent has been transferred. She indicated that the current language is broad enough that it captures if the agents are paid in cash or “ham sandwiches.” She indicated that if the master agent is affiliated with the insurer, DRB Insurance Solutions agrees that the risk has not been transferred. She stated that only the contract and repayment terms between the master agent and the insurance reporting entity should be considered when referring to acquisition costs.

Mr. Bruggeman reiterated that the intent is that acquisition costs are expensed up front. He indicated that insurance companies should know and understand how their appointed agents are compensated in the marketplace. He stated that commenters should focus on specific paragraph and sentence references when relaying to the Working Group why certain practices are not within scope of the intent of SSAP No. 71, and those comments should be specific regarding the types of commission under discussion. Accordingly, first year commissions cannot be deferred or transferred, absent of a reinsurance contract. All first-year acquisition costs are to be expensed, not deferred or capitalized.

Brendan Bridgeland (Center for Insurance Research—CIR), NAIC consumer representative, stated that he shares the concerns expressed by a few state insurance regulators, including Mr. Stolte, with the deferral of certain acquisition costs thus creating illusory surplus. He stated his support for the clarifying language for SSAP No. 71.

Mr. Smith stated that per the AP&P Manual, substantive revisions introduce or modify accounting principles, while nonsubstantive revisions are characterized as language clarifications that do not modify the original intent of a SSAP. He stated that Virginia believes the clarifications proposed are nonsubstantive in nature, and the fact that this may have a material impact on a few insurers should not have bearing on being classified as nonsubstantive.

Martin Carus (Martin Carus Consulting) stated that as a consumer, he would be concerned if any accounting or solvency practice would have adverse policy pricing implications. He recommended that a cost benefit study be performed prior to implementing regulation or accounting action.

Mr. Stolte stated that consistency among insurers, so that state insurance regulators can ensure solvency, is the focus of statutory accounting. Mr. Bruggeman stated that the benefit to the consumer is solvency and financial statement comparability. He noted that nonsubstantive changes are clarifying the original guidance, and this is not introducing new principles.
Mr. Bruggeman stated a preference for a Dec. 31 effective date in the proposed revisions to expose the correction of an error in wording proposed by NAIC staff. He asked if any Working Group members preferred a different date, and no members indicated a preference for a different date.

Mr. Hudson made a motion, seconded by Mr. Stolte, to expose agenda item 2019-24, noting an anticipated effective date of Dec. 31, and the additional language regarding the correction of an error. The motion passed unanimously.

d. Tentative INT 20-09T

Mr. Bruggeman directed the Working Group to INT 20-09: Basis Swaps as a Result of the LIBOR Transition.

Mr. Pinegar stated that this interpretation is in response to a referral from the Financial Condition (E) Committee regarding an American Council of Life Insurers (ACLI) request relative to the accounting treatment of certain “basis swaps” issued as a result of the transition away from the London Interbank Offered Rate (LIBOR). INT 20-09T directs that basis swaps, received from central clearing parties (CCPs), shall be reflected as a “hedging other” transaction and shall be valued as a noneffective hedge (at fair value), unless the reporting entity can demonstrate and maintain appropriate documentation, evidencing that the basis swap derivative qualifies for effective hedge accounting per SSAP No. 86.

Mr. Hudson made a motion, seconded by Ms. Weaver, to adopt INT 20-09 for statutory accounting (Attachment One-U). The motion passed unanimously.

6. Considered Maintenance Agenda – Pending Listing – Exposures

Mr. Hudson made a motion, seconded by Ms. Malm, to move agenda items 2020-17 through 2020-30 to the active listing and expose all items for public comment. The motion passed unanimously.

a. Agenda Item 2020-17

Mr. Bruggeman directed the Working Group to agenda item 2020-17: Updating the SCA Review Process.

Ms. Sediqzad stated that this agenda proposes an update to the SCA filing review process required in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities. This process change would require financial statement filers to retrieve finalized SCA review information from VISION, which will eliminate the need for NAIC staff to manually insert this information into a template to be emailed to the filer.

Ms. Sediqzad stated that state insurance regulators would receive one monthly report with the details concerning all reviewed and approved SCA filings. As state insurance regulators currently receive a communication on every review, feedback is sought to ensure that going to a single, monthly email communication would not adversely affect operations.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

b. Agenda Item 2020-18

Mr. Bruggeman directed the Working Group to agenda item 2020-18: SSAP No. 97 Update.

Ms. Sediqzad stated that this agenda item provides a minor revision to corroborate previous revisions adopted in agenda item 2018-26, removing a remaining reference that guarantees or commitments can result in a negative equity value of an SCA.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

c. Agenda Item 2020-19

Mr. Bruggeman directed the Working Group to agenda item 2020-19: Clarifying Edits – Participating in Mortgages.
Mr. Pinegar stated that this agenda item proposes clarification edits to the statutory accounting guidance for participation in mortgage loans. He stated that the Working Group had previously adopted guidance detailing the requirements for a participating agreement and that the “financial rights” of the participant be on equal footing to that of the original lender. He stated that questions regarding the scope of the financial rights remain.

Mr. Pinegar stated that NAIC staff believe the scope was not intended to require the participant to have the sole ability to initiate legal action; foreclosure; or under normal circumstances, require the ability to communicate directly with the borrower. He stated that through collaboration with NAIC Securities Valuation Office (SVO) staff, state insurance regulators, and industry, it is believed that should these actions be a requirement, most participant agreements in the marketplace would no longer be in scope of SSAP No. 37—Mortgage Loans. He stated that this agenda item clarifies that the “financial rights” are to reflect cash flows, not necessarily other operational aspects that, under normal business circumstances, are reserved for the lead lender.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

d. **Agenda Item 2020-20**

Mr. Bruggeman directed the Working Group to agenda item 2020-20: Cash Equivalent Disclosures.

Mr. Pinegar stated that this agenda item adds an additional disclosure element that was intended in agenda item 2019-20: Rolling Short-Term Investments. He stated that agenda item 2019-20 adopted principle concepts restricting the classification of certain related party or affiliated investments as a cash equivalent or short-term investment. However, the agenda item only required disclosure of short-term investments, or substantially similar investments, that remain on the short-term schedule for more than one year.

Mr. Pinegar stated that this agenda item would require disclosure of both cash equivalents and short-term investments, or substantially similar investments, that remain on the same reporting schedule for more than one consecutive reporting period. Additionally, the revisions clarify that the disclosure is satisfied through the use of a reporting code in the investment schedules.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

e. **Agenda Item 2020-21**

Mr. Bruggeman directed the Working Group to agenda item 2020-21: SSAP No. 43R – Designation Categories for RMBS/CMBS Investments.

Mr. Pinegar stated that this agenda item reflects revisions recently adopted by the Valuation of Securities (E) Task Force concerning the accounting and reporting of residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) investments. He stated that the current financial modeling process remains unaffected; however, the NAIC designation produced by the financial model will now be mapped to an NAIC designation category. This final NAIC designation category will then be utilized for accounting and reporting purposes. This agenda item simply updates SSAP No. 43R—Loan-Backed and Structured Securities to reflect the updated practice of the NAIC Investment Analysis Office.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

f. **Agenda Item 2020-22**

Mr. Bruggeman directed the Working Group to agenda item 2020-22: Accounting for Perpetual Bonds.

Mr. Pinegar stated that this agenda item addresses the accounting treatment for perpetual bonds held as investments within the scope of SSAP No. 26R. A perpetual bond is a fixed income security, representing a creditor relationship, with a fixed schedule of future payments; however, it does not contain a maturity date. He stated that due to the numerous payment similarities between perpetual bonds and perpetual preferred stock, this agenda item proposes that similar accounting and reporting treatment be applied for these two instruments.
Mr. Pinegar stated that if adopted at the Fall National Meeting, NAIC staff would be supportive of a Jan. 1, 2021, effective date, which would correspond with the effective date of the substantially revised SSAP No. 32R, and it would require that perpetual bonds be reported at fair value, not to exceed any current effective call price.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

g. Agenda Item 2020-23

Mr. Bruggeman directed the Working Group to agenda item 2020-23: Leasehold Improvements.

Mr. Stultz stated that in response to the Working Group having previously adopted substantive revisions to SSAP No. 22R—Leases, this agenda item updates the guidance for the depreciable lives of leasehold improvements in SSAP No. 19—Furniture, Fixtures, Equipment and Leasehold Improvements and SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities to reflect adopted guidance regarding the definition of lease terms in SSAP No. 22R. The updated guidance will allow leasehold improvements to have lives that match the associated lease term, including optional renewal periods, if these periods are anticipated to be exercised.

Mr. Stultz stated that while this may increase the depreciable life of these nonadmitted assets, it is not expected to have an impact on a reporting entity’s capital and surplus.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

h. Agenda Item 2020-24

Mr. Bruggeman directed the Working Group to agenda item 2020-24: Accounting and Reporting of Credit Tenant Loans.

Ms. Gann stated that credit tenant loans (CTLs) that met certain structural requirements, as stated in the P&P Manual, have historically been captured in SSAP No. 43R. However, it was recently identified that some CTLs that do not meet the required structural analysis were reported on Schedule D, Part 1: Bonds as if they were in scope of SSAP No. 43R. One of the primary considerations for structural analysis is the concept of residual real-estate risk. Only CTLs that have little residual real-estate risk at the maturity of the loan are deemed to be “conforming.”

Ms. Gann stated the focus of this agenda item is to inquire about whether conforming CTLs should continue to be captured in the scope of SSAP No. 43R or whether these investments should be captured in SSAP No. 21R—Other Admitted Assets. If the Working Group determines that CTLs should remain in scope of SSAP No. 43R, statutory accounting revisions will be drafted to explicitly include CTLs that are on an SVO-identified listing in the scope section of SSAP No. 43R.

Ms. Gann stated that if this is the direction of the Working Group, further advisement will be necessary for the reporting of nonqualifying CTLs, such as in the scope of SSAP No. 37 and reported on Schedule B, or as an “other invested asset” under SSAP No. 21R and reported on Schedule BA.

Ms. Gann stated that an additional option is to move both conforming and nonconforming CTLs to the scope of SSAP No. 21R and report all CTLs on Schedule BA. With this approach, all CTLs would be reported on the same schedule, and revisions will be proposed to allow CTLs that are reviewed and approved by the NAIC SVO to be reported with an NAIC designation. This process will be similar to the existing approach for other non-bond items reported on Schedule BA that have underlying characteristics of fixed income instruments.

Ms. Gann stated that with this approach, there would not be a need for an SVO-Identified listing of qualifying CTLs. Pursuant to the P&P Manual, CTLs will not qualify as filing exempt (FE), and a CTL would need an SVO provided NAIC designation if there was a desire to obtain a more favorable RBC on Schedule BA.

Ms. Gann noted that the ability for a more favorable RBC on Schedule BA, based on NAIC designation, is only permitted for life entities; however, from information obtained, these investments are predominantly held by life entities. She stated that this agenda item does not make a recommendation, but it seeks feedback from state insurance regulators on the two proposed reporting options. Additionally, she stated that NAIC staff recommends notifying the Valuation of Securities (E) Task Force of this agenda item in response to its referral. With this notification, NAIC staff will request further confirmation that an
SVO listing could be developed to capture the CTLs that meet the SVO’s structural and legal analysis and possess bond characteristics.

John Garrison, representing an industry Lease-Backed Securities Working Group, stated that this agenda item overlaps with a referral received from the Valuation of Securities (E) Task Force. He noted that a third option is available, which would include reporting all conforming and nonconforming CTLs on Schedule D, Part 1, in the scope of SSAP No. 43R.

Mr. Bruggeman stated that the third option that was noted in comment letters to the Valuation of Securities (E) Task Force will not be included in the exposure item at this time. However, when the Working Group considers comments, letters issued to the Valuation of Securities (E) Task Force will be reviewed in conjunction with letters received by the Working Group.

Ms. Gann stated that the agenda item is in response to the referral received by the Task Force, and the reflection of the Task Force allowance to permit nonconforming CTLs to be reported on Schedule D, Part 1 for a limited time is addressed in the agenda item. She stated that comment letters received by the Task Force regarding this topic were included in the posted materials as requested by industry.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

i. **Agenda Item 2020-25EP**

Mr. Bruggeman directed the Working Group to agenda item 2020-25EP: Editorial and Maintenance Update.

Ms. Marcotte stated that this agenda item provides nonsubstantive editorial corrections in accordance with the maintenance process. She stated that the proposed revisions delete a redundant paragraph in SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets and add a table of contents for questions addressed in Exhibit A in SSAP No. 62R—Property and Casualty Reinsurance.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

j. **Agenda Item 2020-26**

Mr. Bruggeman directed the Working Group to agenda item 2020-26: ASU 2015-10, Technical Corrections & Improvements.

Ms. Sediqzad stated that the Financial Accounting Standards Board (FASB) issued ASU 2015-10 to update various FASB Accounting Standards for minor corrections or clarifications. She noted that the nonsubstantive revisions to Appendix D—Nonapplicable GAAP Pronouncements are to reject ASU 2015-10 as not applicable to statutory accounting.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

k. **Agenda Item 2020-27**

Mr. Bruggeman directed the Working Group to agenda item 2020-27: ASU 2019-09, Financial Services – Insurance; Effective Date.

Ms. Sediqzad stated that ASU 2019-09 defers the effective date of the amendments in ASU 2018-12, Targeted Improvements to the Accounting for Long-Duration Contracts; however, ASU 2018-12 was previously rejected for statutory accounting. She noted that the nonsubstantive revisions to Appendix D reject ASU 2019-09 as not applicable to statutory accounting.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.
l. Agenda Item 2020-28

Mr. Bruggeman directed the Working Group to agenda item 2020-28: ASU 2020-01, Investments—Equity Securities (Topic 321), Investments—Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815), Clarifying the Interactions between Topic 321, Topic 323, and Topic 815.

Ms. Sediqzad stated that in January 2016, the FASB issued ASU 2016-01, Financial Instruments, Recognition and Measurement of Financial Assets and Financial Liabilities, which allows an entity to measure certain equity securities without a readily determinable fair value at cost, less any impairments. This alternative measurement method and ASU 2016-01 were previously rejected in their entirety for statutory accounting.

Ms. Sediqzad noted that the nonsubstantive revisions reject ASU 2020-01, and they are proposed to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies, SSAP No. 86, and SSAP No. 97.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

m. Agenda Item 2020-29

Mr. Bruggeman directed the Working Group to agenda item 2020-29: ASU 2020-05—Effective Dates for Certain Entities. Mr. Stultz stated that ASU 2020-05 updates the effective dates for ASU 2014-19, Revenue from Contracts with Customers (Topic 606) and ASU 2016-02, Leases (Topic 842), both of which were previously rejected for statutory accounting. He noted that the nonsubstantive revisions to Appendix D reject ASU 2020-05 as not applicable to statutory accounting.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

n. Agenda Item 2020-30

Mr. Bruggeman directed the Working Group to agenda item 2020-30: Premium Refunds and Other Adjustments.

Ms. Marcotte stated that this agenda item provides more explicit guidance on the return of premium and other premium adjustments. The need for enhanced guidance was noted during the discussions of INT 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends. She stated that agenda item 2020-30 was to gather conceptual feedback on guidance to address premium refunds and other policy adjustments for both property/casualty and accident & health lines of business.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

7. Discussed Other Matters

a. Agenda Item 2019-21

Ms. Gann provided an update that the issue paper to review and consider substantive revisions to SSAP No. 43R has a comment deadline of July 31. A subsequent conference call will be scheduled to consider comments and continue discussion.

b. Deferred Items

Mr. Bruggeman stated that due to time constraints, the Working Group did not discuss the following items; however, discussions will continue on a subsequent conference call or national meeting:

- Ref #2018-07: Surplus Note Accounting – Referral from the Reinsurance (E) Task Force
- Ref #2019-12: ASU 2014-17, Business Combinations, Pushdown Accounting
- Ref #2019-49: Retroactive Reinsurance Exception
c. Referrals

Mr. Bruggeman noted that the referral received from the Valuation of Securities (E) Task Force regarding the accounting and reporting of CTLs (Attachment One-V) is addressed in agenda item 2020-24. Additionally, the referral received from the Financial Condition (E) Committee (Attachment One-W) has been addressed with the adoption of INT 20-09.

d. Review of U.S. GAAP Exposures

Mr. Pinegar stated that the FASB has issued an exposure draft concerning possible modifications to the U.S. GAAP concepts framework for financial reporting. He stated that concepts statements are not authoritative, and they do not override authoritative standards. However, if accounting for a transaction or event is not specified in authoritative guidance, an entity will then consider accounting principles or concepts for similar transactions or events. Regarding statutory accounting, U.S. GAAP concepts are mentioned in the preamble as a level 4 in the statutory hierarchy, coming in just above other non-authoritative accounting literature.

Mr. Pinegar stated that the exposure draft proposes modifications to the historical conceptual definitions of an asset and liability; however, the changes will only be used to further develop standards for financial accounting and reporting, and any changes in terms should not result in the movement of any financial item.

Mr. Pinegar stated that the FASB is considering two changes to the conceptual definition of an asset: 1) removal of the terminology ‘past transaction or event,’ as the FASB believed the phraseology to be redundant; and 2) elimination of the term control while maintaining the notion of control. He stated that in terms of control, an asset must give the entity rights to the economic benefit, not necessarily control of the asset itself.

Mr. Pinegar stated that the FASB is also considering two changes to the conceptual definition of a liability: 1) removal of the terminology ‘past transaction or event,’ as the FASB board believed the phraseology to be redundant; and 2) removal of the term ‘probable.’ He stated that the FASB has indicated that other concepts, such as “the notion of having little or no discretion to avoid future sacrifices” or “an obligation that requires the transfer of assets or providing services,” may be elevated in the replacement of the term ‘probable.’

Mr. Pinegar stated that SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R are the two SSAPs that may require consideration of definitional revisions, as these both directly reference FASB accounting concepts. He noted that any possible changes should not cause any financial statement impact, and a comment letter to the FASB is likely not required; however, NAIC staff are preparing a memorandum for the Working Group, detailing the exposure draft and any potential statutory accounting impact.

Mr. Bruggeman stated that with the exception of INT 20-02, INT 20-04 and INT 20-05, which have a comment deadline of Aug. 14, the comment deadline for all exposed agenda items is Sept. 18.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
Statutory Accounting Principles (E) Working Group
E-Vote
July 15, 2020

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded July 15, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Shelia Travis (AL); Kim Hudson (CA); William Arfanis (CT); Ryllynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Joe DiMemmo (PA); David Smith (VA); and Amy Malm (WI).

1. Exposed INT 20-09

The Working Group conducted an e-vote to consider exposure of Interpretation (INT) 20-09: Basis Swaps As a result of the LIBOR Transition for a seven-day public comment period ending July 22. A summary of the exposed interpretation is as follows:

- INT 20-09 - This guidance proposes provisions for the accounting and reporting of certain “basis swaps.” Basis swaps are defined as compulsory derivatives issued by Central Clearing Parties, for certain cleared derivatives issued solely in response to the market-wide transition away from the London Interbank Offered Rate (LIBOR) and toward the Secured Overnight Financing Rate (SOFR). The interpretation directs that the basis swaps shall be reported as “hedging – other” and reported at fair value, thus qualifying for admittance; however, the basis swaps cannot be considered or reported as “effective” hedging derivatives unless the instrument qualifies with the required documentation as a highly effective hedge as directed in Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives.

Ms. Mears made a motion, seconded by Mr. Moser, to expose INT 20-09. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call June 15, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); Kathy Belfi (CT); Rylynn Brown (DE); Eric Moser and Kevin Fry (IL); Stewart Guerin (LA); Steve Mayhew (MI); Doug Bartlett (NH); Tom Dudek (NY); Joe DiMemmo (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Reviewed Comments on Exposed Items and Adopted the Consensus in INT 20-08 With Modifications

The Working Group held a public hearing to review comments (Attachment One-B1) on previously exposed items. Julie Gann (NAIC) stated that prior to discussing any topics, the tentative interpretation (INT 20-08), per the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, must have 67% of the Working Group members voting with a super majority supporting adoption.

a. INT 20-08

Mr. Bruggeman directed the Working Group to INT 20-08: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends. Robin Marcotte (NAIC) stated that this interpretation was exposed to address questions related to refunds, rate reductions and policyholder dividends in response to decreased insured activity related to COVID-19 stay-at-home orders. She noted that the overall guiding principle is that the accounting shall follow existing statutory accounting principles and annual statement reporting, where feasible. The interpretation noted that accident and health (A&H) and multiple property/casualty (P/C) lines of business had offered refunds, rate reductions or policyholder dividends, all of which were performed in a variety of methods, warranting the numerous discussion issues in this interpretation.

Ms. Marcotte stated that several comment letters were received, noting that most commenters focused on Issue 1: How to account for refunds not required under policy terms.

Ms. Marcotte stated there seems to be general support for:
- Issue 2: How to account for refunds required under policy terms.
- Issue 3: How to account for rate reductions on in-force and renewal business.
- Issue 4: Requires policyholder dividends to follow existing guidance and complete the disclosures per Issue 5.
- Issue 5: Requires reporting entities to comply with statutory accounting disclosure requirements, and requires that all premium refunds, rate reductions or policyholder dividends provided because of the decreased activity due to COVID-19 be aggregated and reported in Note 21A as unusual and infrequent items. She noted that the P/C actuaries who perform rate reviews and analysis noted that transparency will assist them in evaluating 2020 activity.

Ms. Marcotte stated regarding issue 1, the refund will be an adjustment to written or earned premium with corresponding adjustments to unearned premium, as applicable. Liability recognition is required in accordance with Statement of Statutory Accounting Principles (SSAP) No. 5R—Liabilities, Contingencies and Impairments of Assets. It also states that refunds that are recognized in a different manner (e.g., as an expense) shall be considered a permitted or prescribed practice pursuant to SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures. She stated Issue 2 specified that refunds required under policy terms shall be recognized as an adjustment to premium. However, discounts on future business shall be recognized during the future policy period. Issue 3 addresses rate reductions on in-force and renewal business and requires rate reductions on in-force business to be recognized as immediate adjustments to income. Additionally, rate reductions on future business shall be reflected in premium upon renewal. Issue 4 requires policyholder dividends to continue following existing guidance and to complete the disclosures described in Issue 5. She stated that the interpretation notes that premium taxation requirements vary by jurisdiction and is determined by each jurisdiction as to whether premium taxation that occurs on premium is written or returned to the policyholder. Additionally, due to the short-term nature of the items included, this interpretation will be automatically nullified on Jan. 1, 2021.
Ms. Marcotte stated the Working Group received nine comment letters. She noted, however, that comments received were not regarding the modifications added to the May 20 exposure. She stated the primary issue for discussion is whether to allow reporting entities that filed policy endorsements, allowing the insurers to voluntarily provide a return of funds to policyholders, to report the payments as a return of premium or as an other underwriting expense. She stated that some of the current and prior comment letters were in support of treating voluntary payments or rate reductions to policyholders as an adjustment to premiums. Additionally, the comment letter provided by the Connecticut Department of Insurance (DOI) was also supportive of premium adjustments and further supported guidance in the interpretation, which also provides that if reported as an underwriting expense, it should be a prescribed or permitted practice. UnitedHealth was supportive of reporting as an adjustment to premium. Ms. Marcotte noted that UnitedHealth also provided comments specific to the health industry. UnitedHealth noted that the exposed guidance is consistent with current accounting guidance for other types of premium refunds that are required by either policy terms or regulations. She additionally stated that UnitedHealth indicated that any associated liability should be reported as an aggregate write-in since the premium refund was not required by policy terms, and therefore would not be accounted for as retrospective or redetermination premium liability.

Ms. Marcotte stated several comment letters expressed support for allowing the voluntary payments or return of funds to policyholders to be reported as an other underwriting expense, especially if the policy endorsement allows discretionary payments to the policyholder at the option of the insurer. This approach was supported by the Illinois DOI, Allstate, Cincinnati Insurance Companies, Co-operative Insurance, Grange, National Association of Mutual Insurance Companies (NAMIC) and Progressive.

Ms. Marcotte stated the Illinois DOI indicated support that if an insurer has filed and received approval for policy endorsements related to such payments, then those payments would be reported as an expense in their statement of operations. She stated that comments received from industry included that amounts returned to policyholders were not as a result of re-underwriting or analysis of loss data. However, the credits were determined on a percentage of premium, and the use of an underwriting expense classification was preferred in an effort to avoid having an impact on non-policyholder stakeholders such as agent commissions or state premium taxes; additionally rate plans were not refiled with state insurance departments. Ms. Marcotte stated that Co-operative, Grange and NAMIC provided mutual specific comments indicating that even though they were not able to provide dividends to isolated lines of business, they viewed these policyholder payments as an expense as they are akin to the treatment of a policyholder dividend. Additionally, NAMIC supported allowing the reporting entity to choose between recognizing the relief payment as an expense, a premium refund, policyholder dividend or an up-front bad debt expense. Further, NAMIC’s position supported the reporting of relief similar to a dividend, even if they were not technically policyholder dividends, so the payments are reflected in the combined ratio, not the pure loss ratio.

Ms. Marcotte stated that U.S. generally accepted accounting principles (GAAP) specific comments were received from Allstate and Progressive. Allstate indicated support for other underwriting expense treatment, although it acknowledged that expenses related to insurance contracts are those typically paid or incurred in connection with originating and servicing a contract. Allstate viewed that it is appropriate to classify the incremental amount paid to the customer as a policyholder expense for U.S. GAAP and as an other underwriting expense for statutory accounting. She stated that Progressive indicated it was not aware of a difference between statutory accounting and U.S. GAAP as it relates to the accounting for insurance premiums. However, similar to other several public company registrants, it recorded the policyholder credits and payments as an underwriting expense when filing its Form 8-K with the U.S. Securities and Exchange Commission (SEC). The GAAP accounting treatment was based on the underlying premise that the credits and payments are akin to a policyholder dividend and are in essence noncontractual discretionary returning of profits that resulted from a reduction in loss due to the shelter-in-place order. Additionally, the relief payments to policyholders was determined on an enterprise-wide level as opposed to a contract level.

Ms. Marcotte stated that NAIC staff recommended regulator discussion of the two various approaches discussed. She recommended adoption or re-exposure with two minor modifications that addressed minor health-specific comments received from UnitedHealth. She stated that the Working Group has the ability to adopt individual issues within the interpretation while continuing discussion on other topics (i.e., adopting Issues 2–5, while continuing discussions on Issue 1). She noted that NAIC staff are concerned with the comparability issues that would result from allowing different options for reporting discretionary payments to policyholders, such as reporting as reduced premium, an underwriting expense or an uncollectible bad-debt expense. She said that NAIC staff recommend that such reporting would be a prescribed or permitted practice because existing statutory accounting guidance requires the return of such monetary items to policyholders be recognized as an adjustment to premium. Ms. Marcotte stated that the principle of reversing premium in the same manner in which the premium was originally recognized continues to apply. She noted that this principle is critical to health insurers, which are subject to the medical loss ratio (MLR) calculations. She stated that while the state of domicile can provide a prescribed or permitted practice, other jurisdictions may choose not to accept the prescribed or permitted practice. The non-domiciliary state can provide other.
direction and require differing financial statement reporting as it deems appropriate. She stated underwriting expense recognition criteria related to insurance contracts are typically for those items paid or incurred in connection with originating and servicing the contract; these discretionary payments are not for that purpose. The payment is not consistent with any of the underwriting expense categories and is not a cost of servicing the policy, but rather a voluntary payment at the option of the insurer, generally returning previously billed premium.

Mr. Hudson and Ms. Belfi stated support for the amendments that NAIC staff proposed, incorporating minor modifications stating the liability for voluntary health premium refunds attributable to COVID-19 and that are not required under the policy terms shall be recognized in aggregate write-ins for other liabilities (while also adjusting premium).

Ms. Belfi stated an important aspect regarding statutory accounting is the concept of consistency and while states have been flexible in meeting many of the requests of industry due to COVID-19, consistent reporting would be supported by the Connecticut DOI. Ms. Belfi noted that additionally, if certain domestic states wish to grant additional reporting flexibility, the permitted practice procedures provide for such an avenue. Mr. Stolte stated agreement with Ms. Belfi and stated that Virginia will associate itself with the position of consistent reporting per the statement of concepts as developed during the codification of statutory accounting principles, unless a domestic regulator provides a permitted practice.

Mr. Moser stated that Illinois supported flexibility in reporting, noting that while consistency is important, consistent reporting would likely not occur due to the high number of permitted practices that will likely occur if the Working Group does not permit flexibility in the interpretation. He stated that comparability will be affected due to the wide range of insurers and wide range of methods in which proceeds were returned to policyholders. He stated that Illinois believes that if an insurer has filed and received approval for policy endorsements related to such payments, then those payments would be reported as an expense in their statement of operations, as the policy endorsement allows such policyholder payments.

Kevin Spataro (Allstate) stated support of the interpretation as it relates to premium refunds, rate reductions and policyholder dividends, but he stated the interpretation should be expanded to include accounting and reporting guidance for discretionary payments provided to policyholders pursuant to policy endorsements that were not designed to be and are not premium refunds, rate reductions or policyholder dividends. He stated that Allstate executed a policy endorsement because it was believed to be in the best interest of policyholders and did not want to negatively affect other parties, such as reduced commissions to agents or reduced premium taxes to states. Additionally, a rate filing was not elected due to the fact that at the time the funds were disbursed to policyholders, actuarial information such as differences in crash severity, distracted driving or other vehicle uses was not available; thus, an amended rate filing was not a viable option. Additional investment returns were also unknown, which is a critical component of a rate filing. Mr. Spataro stated that dictating an accounting method could potentially be penalizing to the organization, however, understanding that this is an unprecedented event requiring special attention. He stated that upon its review of the statutory accounting principles, Allstate believes the nature of its payments to policyholders would qualify as another underwriting expense and supports expanded comprehensive disclosures of the elective policyholder COVID-19 relief payments. Mr. Spataro stated that the discretionary payments did not affect any reinsurance agreements as Allstate’s agreements only cover excess losses.

Mr. Stolte asked Mr. Spataro for information on how reporting entities could be disadvantaged by a permitted or prescribed practice, should the Working Group direct consistent reporting among all filers. He stated that state analyst would then appropriately review footnote 1 in the statutory financial statements to assess the impact of any permitted practice. Mr. Spataro stated he believes the disadvantage would be that the financial statements would not reflect the nature and characteristics of the program and, thus, not reflect the substance of the transaction. That is, they would reflect a discretionary payment as an expense, not a reduction in premium.

Birny Birnbaum (Center for Economic Justice—CEJ) stated the CEJ began calling for premium relief payments at the early onset of COVID-19. He stated the relief was in correlation with the reduction in risk exposure of affected policies—i.e., a significant reduction in automobile usage. The aggregate risk exposures for current policies reflect an overnight reduction in risk, and the return of funds reflect the return of premium associated with the reduced insured risk. Additionally, premium relief was only provided on in-force policies, and in many cases, the relief was calculated as a percentage of premium for a certain number of affected months. The proposed accounting treatment is analogous to removing a vehicle off a policy, thus resulting in a refund due as the risk transferred to the insurance company was reduced. Similarly, due to a significant number of vehicles not driving, the risk transferred to the insurance company was greatly reduced. He stated support for the accounting treatment as a return of premium, which would assist in the comparability of financial statements.
Rachel Underwood (Cincinnati Insurance Companies) stated support for recognizing as an expense those relief payments made in relation to nonparticipating policies without premium refund terms in response to decreased activity due to COVID-19. She stated that per SSAP No. 53—Property Casualty Contracts—Premium, premiums are defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract, based on the expectation of risk, policy benefits and expenses associated with the coverage period provided by the terms of the insurance contract. Additionally, premium adjustments due to changes in the exposure level are generally determined based upon audits conducted after the policy terms. She stated her position is that the relief provided to policyholders was outside the scope of both of these statements. She noted that payments made to policyholders were made in the absence of loss data. Additionally, while the insured risk was reduced for a couple of months, premium charged for the policy covers the entire policy period, not just a short time frame, such as two months. Thus, the relief should not be solely affiliated with premium. However, the relief provided to policyholders is akin to a policyholder dividend, but that option was not available as the policies written by Cincinnati Insurance Companies are not participating policies and thus are not eligible for dividends. Ms. Underwood stated that voluntary payments were in an effort to help policyholders, similar to how a donation would be accounted for as an expense. Additionally, the impact of a premium reduction would negatively affect producers through reduced commissions and states through reduced premium taxes. She stated concerns with pursuing the permitted practice process because it is uncertain whether the state will approve the request, and for those states that do not approve the deviation, further inconsistent reporting will likely result. Additionally, if a holding company has two reporting entities in two different jurisdictions, depending upon the permitted practice granted (i.e., permitted in one state and not in another), a holding company may have to report the same transaction in differing methods (i.e., one as an expense, one as a reduction in revenue). Ms. Underwood stated that the company’s reinsurance agreements would likely be affected if the relief payments are reported as a reduction in premium.

Mr. Stolte stated that through the use of a permitted practice, and its disclosure in footnote 1 of the statutory financial statements, entities would be able to quickly identify and reconcile any differences from adopted statutory accounting guidance. He stated he would support this continued, traditional approach because allowing reporting entities with flexibility in reporting would negatively affect reporting consistency among the industry.

Ms. Belfi stated that during the financial crisis, multiple permitted practices were given to multiple companies covering a wide range of issues. However, despite this, there were not any issues with comparability due to the details that are required to be provided in footnote 1. In a similar manner, the financial crisis affected an entire industry and is analogous to the COVID-19 events of today.

Jonathan Rodgers (NAMIC) stated that this event is unprecedented and that there is great diversity of actions and preferences among NAMIC’s members. He stated that characterizing the return of funds to policyholders as a return of premium does not work for everyone. Due to the unprecedented nature of the return of funds to policyholders, without flexibility being granted by the Working Group, state regulators will see an unprecedented volume of permitted practice requests. Without flexibility, the process of obtaining a permitted practice will create an unnecessary hurdle as flexibility could be granted, thus not requiring the exercise, cost and uncertainty in requesting a permitted practice. The return of funds to policyholders was done in a sense of urgency and generally with ongoing communications with domestic regulators. Additionally, at the time the funds were given, loss data was not known and not a factor. Thus, relief payments should not be considered a return of premium. If treated as a reduction in premiums, the loss ratio, an important metric, would be improperly negatively affected. While not viewed as a return of premium, NAMIC was supportive of enhanced disclosures, detailing the impact of the COVID-19 relief payments. Mr. Rodgers stated if the Working Group elects to treat the relief payments as a reduction in revenues, the impact will be felt by agents through reduced commissions and by states through reduced premium taxes.

Mariann Marshall (Progressive) stated support for allowing reporting entities to classify the policyholder credit as an other underwriting expense. She stated Progressive filed a policy endorsement, not a rate filing, to authorize and facilitate discretionary credits and payments to policyholders in response to the COVID-19 pandemic. She stated that the process to obtain a permitted practice from every state would be problematic for insurers, especially in light of not knowing which states would permit the reporting exceptions. Additionally, if not granted by all states, holding companies would have inconsistent reporting among downstream reporting entities. She said that while Progressive is supportive of reporting flexibility, it is also supportive of enhanced disclosures so regulators could assess the impact of the COVID-19 relief payments. She stated the funds provided to policyholders were done solely in the interest of the policyholders. However, if required to be treated as a reduction of premium, agents would be negatively affected through reduced commissions, and states would be negatively impacted through reduced premium taxes. Ms. Marshall stated that if treated as a premium reduction, their reinsurance agreement would be negatively affected and would likely result in the reinsurer refunding reinsurance premiums paid by Progressive. She noted that no differentiation was made between policyholders in terms of the COVID-19 relief payments. Thus, all auto customers received some relief funds. Ms. Marshall stated that premiums received from policyholders were only...
used as a beginning basis for the determination of the amount of relief payment received. However, in the absence of loss data, Progressive viewed the payments as an expense, not a policyholder refund.

Mr. Birnbaum stated many of the comments received today reference the absence of loss data, thus the inability to amend a rate filing. However, insurers recognized the insured risk drastically dropped, and in the absence of a premium refund, the rates compared to the insured risk were excessive. He said due to this fact, these relief funds reflect a reduction in risk exposure and thus warrant accounting treatment as a reduction in premiums.

Ms. Underwood stated their belief was that a relief payment should be most appropriately reflected in an entity’s combined ratio, not the pure loss ratio, because the payments are akin to a policyholder dividend (returning excess profits). Additionally, while the insured risk was reduced for a short period of time, the insurance policy covers a significantly larger time frame, thus requiring a one-time relief payment, based on a temporary reduction of risk, to be accounted for as returned premium was not appropriate, in their view.

Mr. Spataro stated Allstate’s intention was to act in the best interest of the policyholder and did not have the actuarial data necessary to underwrite or rate the policy. Thus, the relief payments were not necessarily reflective of a reduction in risk that would be associated with a reduction in premium.

Mr. Birnbaum stated disagreement with the commenters in that the relief payment was not for the term of the policy period, but in fact was only for the short-term period, which reflects the reduced activity and lower insured risk. He stated insurance companies had real-time claims information and were aware of the significant reductions in claims. Without these premium relief payments, insurers would have experienced windfall profits. Thus, the accounting treatment as a reduction in premium is most appropriate.

Jim Braue (UnitedHealth Group—UHG) stated UHG agrees with the treatment of the relief payments as a reduction to written or earned premiums, in that this treatment reflects the substance of the transaction. He stated this treatment is consistent with the intent of the transaction (a return of premium to the policyholder) and is consistent with current accounting guidance for other types of premium refunds that are required by either policy terms or regulations. The timing of recognition of the premium refund also corresponds with the associated coverage period affected by the premium action. In the case of premium refunds issued for current or prior coverage periods, the recognition should be in the current reporting period. However, in situations where the premium rate is being reduced over the remaining policy period, the premium reduction may need to be recognized over the policy period affected. Additionally, with respect to any liability required to be recognized in accordance with in SSAP No. 5R, UHG believes the liability should be reported as an aggregate write-in since the premium refund was not required by policy terms, and therefore would not be accounted for as retrospective or redetermination premium liability. He stated if concerns continue regarding accounting for the relief payments as a reduction of premiums, bad debt expense may be the next logical choice. However, the reduction of premiums remains the most appropriate accounting treatment.

Steve Broadie (American Property Casualty Insurance Association—APCIA) stated the APCIA has had continuing discussions with its members and supports the position that if an insurer has filed an endorsement or an amended rate filing with the state, it communicated its intent to report the relief payments as a policyholder expense and should be allowed to do so while disclosing those payments per the requirements of this interpretation. This treatment would allow insurers that have taken such actions to be allowed to continue their earlier accounting treatment and not be disadvantaged by a subsequent accounting guideline as directed by the Working Group.

Keith Bell (Travelers) stated the evaluation process that Travelers used to arrive at the conclusion that these relief payments are in fact a reduction in premium may be helpful to the Working Group. First, Travelers eliminated categories of what the relief payments were not. He stated that the relief payments are not losses, as they are not a covered loss under the terms of the policy. Additionally, they do not reflect loss adjusting expenses as they are not payments to a third-party for cost containment, adjusting, etc. Mr. Bell noted that these clearly are not investment expenses, and they do not represent bad debt expense because in many cases, the relief was provided as a reduction of future premiums due. With regard to other underwriting expenses, a current category for discretionary policyholder payments does not exist, so that generally precludes its use. He stated that after eliminating the expense categories, the Statutory Hierarchy in the Preamble was reviewed for further guidance. Revenues are generally defined as cash inflows as a result of continuing business operations, while expenses are generally defined as cash outflows as a result of continuing business operations. While the types of expenses vary by industry type, they all share a common component in that they reflect cash outflows to a third party for the payment of goods or services. Thus, payments to customers that do not involve the purchase of goods or services should not qualify as an expense. He stated the relief payments reflect the reduced exposure of risk and most logically should be reflected as a premium reduction. Additionally, he noted that
other accounting issues may need to be considered if the policy has been modified to include a discretionary, noninsurance-related payment. If such a modification has occurred, he stated some of the inflows from premium should be reclassified because they may no longer reflect premium payments associated with the transfer of risk. He also stated concern that if the accounting treatment for transactions follows the label associated with a state filing, the accounting for transactions would vary greatly and likely no longer follow the essence of the transaction. He stated that across all legal entities, Travelers reported such transactions as a reduction in premium for both policyholders and intercompany reinsurance agreements. Mr. Bell stated that not withstanding the differences in opinion regarding accounting treatment, insurance companies did the right thing for policyholders in providing some type of relief as a result of the reduced activity resulting from COVID-19.

Mr. Bruggeman stated he is open to flexibility in reporting, noting that these payments are akin to a policyholder dividend. However, he stated he wants to consider an alternative approach, such as an aggregate write-in for miscellaneous income as a negative, used solely for the purpose of the COVID-19 relief payments. He stated he understood the relief provided was not necessarily specific to underwriting, was provided to all applicable policyholders, and was performed at an enterprise level rather than at an individual policy level. The challenge with maintaining comparability and consistency with this issue is that the formula used to determine relief payments varied greatly (i.e., a percentage of premium, a minimum payment, etc.) among all insurers. He stated he would be open to situational accounting of not necessarily requiring a reduction in premium. However, he stated he prefers an aggregate write-in for miscellaneous income as a negative, allowing for easier identification and analysis for use in future rate filings. Additionally, the aggregate write-in for miscellaneous income method would not affect many of the performance ratios used for analysis purposes. Mr. Bruggeman stated he agrees with earlier regulator comments regarding the usefulness of a permitted practice. However, he stated the diversity of acceptance could create additional comparability issues.

Mr. Hudson stated California is supportive of the comments received regarding accounting for the relief payments as a reduction of premium and appreciated comments received that detailed the many perspectives on this issue. Ms. Mears stated Iowa is also supportive of the position to account for these transactions as a reduction of premium, and any deviations should be a permitted or prescribed practice.

Mr. Hudson made a motion, seconded by Ms. Belfi, to adopt the consensus in INT 20-08, with the modification as proposed by NAIC staff, for statutory accounting (Attachment One-B2). The motion passed, with Delaware and Illinois dissenting and Alabama abstaining.

2. Considered Maintenance Agenda—Pending Listing—Exposures
   a. Agenda Item 2020-16EP

Mr. Bruggeman directed the Working Group to agenda item 2020-06EP: Editorial and Maintenance Update. Jim Pinegar (NAIC) stated that this item provides non-substantive editorial updates in accordance with the maintenance process and updates a reporting line reference and corrects sentence structure for guidance in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments.

Mr. Hudson made a motion, seconded by Mr. Guerin, to expose this agenda item for a 30-day public comment period ending July 15. The motion passed unanimously.

3. Discussed Other Matters
   a. ACA risk Corridors – Supreme Court

Ms. Marcotte stated that in April, the Supreme Court of the United States issued an opinion stating insurers were entitled to pursue more than $12 billion in unpaid federal Affordable Care Act (ACA) risk corridor payments from the 2014 to 2016 program. She noted that the recent Supreme Court decision, in favor of four insurers, only provides the ability to seek payment through a damages action via the Court of Federal Claims. As such, at this time, and until resolution is reached through the damages action process, reporting entities would not have any new accruals or admission of a previously nonadmitted accrual for a risk corridor receivable. This is consistent with INT 15-01: ACA Risk Corridors Collectability. In addition, SSAP No. 5R prevents the recognition of gain contingencies until the transaction is fully completed and determinable, so it would be improper to accrue amounts at this time. Ms. Marcotte asked the Working Group if additional guidance was needed because many accounting inquiries have been received.
Mr. Bruggeman stated he believes INT 15-01 appropriately addresses the inquiries and directed NAIC staff to refer inquirers to existing guidance, noting that updates will occur as the pursuit of recoveries progresses through the Court of Federal Claims.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

TO: Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles (E) Working Group

FROM: Kathy Belfi, Director of Financial Regulation for Connecticut

SUBJECT: INT 20-08T – COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

Thank you for the opportunity to comment on INT 20-08T.

Connecticut supports the "tentative consensus" points related to reduction of premium.

Due to COVID-19, there has been changes in insured exposures resulting in lowering of premiums (causing premium refund payments). Current statutory guidance requires upon return of premium to policyholders, earned premiums should be reduced.

We agree that if a company reports the refund as an expense it should be disclosed as a permitted or prescribed practice.

Thank you for your consideration.

Kathy Belfi

Re: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends.

Dear Mr. Bruggeman,

The Illinois Department of Insurance (“IDOI”) has reviewed this item and would like to provide comments.

The IDOI is the lead state regulator for several large insurance groups that write auto and other lines of business addressed by INT 20-08T. It is the IDOI’s position that there should be flexibility regarding the accounting treatment for monies given back to policyholders related to the current pandemic conditions. Particularly, if an insurer has filed and received approval for policy endorsements related to such payments, then the IDOI believes those payments would be reported as an expense in their Statement of Operations if the policy endorsement would allow as such. In our opinion, the most important reporting consideration for these payments is that adequate disclosure is provided in the financial statement, and that requirement appears to already be included in the INT as written.

Please let us know if there are further questions.

Sincerely,

Eric Moser, AIAF
Assistant Deputy Director, Financial Analysis
Illinois Department of Insurance
June 5, 2020

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners

Re: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The Allstate Corporation (Allstate) appreciates the opportunity to comment on the re-exposure of Statutory Accounting Principles Working Group (SAPWG) INT 20-08T, COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends (INT) which addresses the accounting for certain payments to policyholders due to reduced economic activity as a result of COVID-19.

While Allstate supports the content of the INT as it relates to premium refunds, rate reductions, and policyholder dividends we believe the scope of the INT is incomplete and should be expanded to include accounting and reporting guidance for discretionary payments provided to policyholders pursuant to policy endorsements that were not designed to be and are not premium refunds, rate reductions, or policyholder dividends. Moreover, because discretionary policyholder payments provided through policy endorsements were designed to meet the same objective (i.e., providing policyholder relief due to COVID-19 circumstances), albeit in a different manner, we believe the accounting and classification should be addressed in the same INT as opposed to a separate INT or through a separate regulatory process.

In response to the COVID-19 pandemic, insurers designed and implemented a variety of programs to provide payments to policyholders in recognition of decreased vehicle usage and claim experience due to the presence of shelter in place (SIP) orders that existed in many states throughout the country. In the case of Allstate, we designed a program to provide discretionary payments to policyholders in the most practically expedient manner and without impacting non-policyholder stakeholders; e.g., agents and states in which we conduct business.

While certain insurers designed and executed policyholder payment programs attributable to the impact of SIP orders in the form of premium refunds, rate reductions, and policyholder dividends, others, including Allstate, designed and executed programs in the form of discretionary payments to policyholders made pursuant to policy endorsements. After thoughtful consideration of the alternatives, Allstate utilized the filing of policy endorsements as opposed to a premium refund or rate reduction (policyholder dividends was not an available option) to expedite the payment process and because we did not have the ability to re-underwrite the underlying risks and re-determine the amount of premium we would have charged under SIP conditions. Specifically, we did not possess the actuarial data necessary to complete the full re-underwriting exercise we believe would have been necessary to support a premium refund or rate reduction. Moreover, while we had information about reduced miles driven, we did not possess reliable information to predict the future path of the pandemic or its impact on accident frequency which is influenced by driving habits (including speed, distracted driving, etc. for miles driven), incidence of loss, and loss severities.
Notwithstanding our inability to re-underwrite our policyholders and adjust premiums, we possessed enough information to provide relief to our policyholders in the form of discretionary payments. Our ultimate decision to make discretionary payments pursuant to policy endorsements considered both expediency of execution and our desire to not impact non-policyholder stakeholders.

By way of this letter, our intent is to clarify that while the scope of INT 20-08T is sufficient as it relates to policyholder relief programs executed in the form of policyholder refunds, rate reductions and policyholder dividends, it needs to be expanded to incorporate the accounting and reporting for policyholder relief programs executed in the form of discretionary policy payments provided pursuant to policy endorsements.

Following is a more complete description of Allstate’s policyholder benefit program followed by a description of how we believe our program should be incorporated into INT 20-08T.

I. DESCRIPTION OF ALLSTATE’S POLICYHOLDER RELIEF PROGRAM

   Basis of Payments

   In March 2020, Allstate recognized a decline in miles driven by policyholders and claim frequency as a result of SIP orders instituted across the country. At the same time, we observed the financial hardship experienced broadly by individuals subject to SIP orders. As a result, and despite not possessing sufficient actuarial information to re-underwrite our auto book of business and execute a premium refund or rate reduction, we relied on available anecdotal information about reduced miles driven and assumed that would result in lower realized accident frequencies in designing a program that allowed for discretionary payments to policyholders. Consistent with our underlying rationale that reduced miles would produce reduced accident frequency we moved forward with our program and began providing relief in the month of March 2020, the month in which most SIP orders began. In addition, relief was provided to auto policyholders of record in April and May of 2020 who met certain criteria. The program was further extended to policyholders of record for June of 2020. Allstate’s SIP payment program was not extended to commercial auto policyholders or motorcycle policies where a reduction in claim activity was not anticipated.

   Tool Used to Permit Policyholder Payments – Policy Endorsement

   Allstate considered a range of options to provide payments to policyholders and ultimately designed and executed a policy endorsement to provide for the discretionary payments to policyholders as it (a) was the most practically expedient alternative and (b) was the alternative that did not impact other key non-policyholder stakeholders (i.e., agents and the states in which we do business).

   Form of Allstate Policy Endorsement

   “Special Shelter-in-Place Payback Endorsement – AU14923

   This endorsement authorizes a payment to you. This payment is in response to the extraordinary circumstances surrounding the Covid-19 pandemic.

   Any payment is not guaranteed. We have sole discretion for determining the amount and frequency of payment, if any. We will determine the method of distributing any payment. Except as provided in this endorsement, all terms and conditions of the policy apply and remain unchanged.”
**External Communications to Policyholders**

“The purpose of the endorsement is to authorize and facilitate discretionary payments to policyholders. With insurance costs going down, Allstate is working to do what’s right for policyholders.

The payment recognizes the shelter orders are impacting miles driven and the number of auto accidents. Although customers are driving less and in fewer accidents, the full impact of the pandemic remains uncertain and this payment represents our best estimate of what we are seeing. We also are monitoring the impact on repair costs, premiums being received, customer retention, coverage levels and investment returns. It is too early to determine the full impact of all these factors on insurance rates. The payback is a way to get money back to consumers quickly before the full impact of the pandemic is sorted out.

The payback will equal 15% of a customer’s March and April auto premiums and will be calculated on a per policy basis, subject to a $10 minimum. We expect each monthly payment to average close to $30 per policy. There are no prorated calculations for purposes of this payback since the payback is a function of the total premium (calculated to be monthly) as of 3/31/2020 and 4/30/2020 regardless of the policy effective date or any endorsement activity. Customers with Allstate’s pay-per-mile product will be included.

Although much uncertainty remains over the full impact of the pandemic on all of our costs, we are filing the endorsement to remain in effect for 180 days to provide flexibility for future payments, if appropriate. The payments are being treated as an underwriting expense, so the company’s rating plan is not impacted and does not require modification as a result of this filing. Furthermore, this payment does not involve a projection of future premium.”

### II. ACCOUNTING FOR ENDORSEMENT-BASED DISCRETIONARY POLICYHOLDER PAYMENTS

In determining the accounting for SIP payments for both statutory and GAAP, Allstate assessed whether the payments constitute and should be classified as either (1) a loss/loss adjustment expense, (2) a reduction of premium under the associated contracts or (3) a policy expense.

1) **Classification as a loss/loss adjustment expense** – a loss under the contract would exist only to the extent there is an indemnifiable insured event. We do not believe SIP payments represent losses or loss adjustment expenses as the payments do not relate to a specific indemnifiable loss event under the contract nor do the payments relate to a change in the level of insurance risk. Additionally, the policy endorsements do not create an indemnifiable loss event but rather a different type of policy payment that is more akin to an expense.

2) **Classification as a premium adjustment** – Allstate considered and rejected classification of SIP payments as a premium adjustment primarily because no changes were made to filed rate plans in place throughout the U.S. Allstate considered, but rejected, the idea of filing new rate plans because (a) it would have required a lengthy process and would not have achieved our objective of getting economic relief to our policyholders in an expedient manner, and (b) as our policies cover six months we did not believe we possessed the required visibility to file modified rate plans as we lacked sufficient clarity on how the policies will perform beyond the next one to two months once the SIP orders are lifted and a “new normal” emerges. Allstate believes premium classification is only appropriate in situations where a premium refund is required under policy terms or a rating plan change is filed. In lieu of a required premium refund under policy terms or filing a new rating plan, the appropriate classification of the newly created contract benefit is as a policy expense.
3) **Classification as an expense** – expenses related to insurance contracts are those typically paid or incurred in connection with originating and servicing the contract. Notwithstanding the preceding, Allstate views payments under the endorsement, while made to the policyholder, are fundamentally different than loss/loss adjustment expenses attributable to “indemnifiable contract losses” and as such it is appropriate to classify the incremental amount paid to the customer as a policyholder expense for GAAP and an “other underwriting expense” for Statutory.

**GAAP** - Given the unique nature of the “expense” Allstate presented SIP payments on a separate line in the GAAP income statement to distinguish the payments from both losses and typical underwriting expenses. We believe that even if presented in a separate line item, SIP payments would be included in the determination of underwriting income and would be a component of the expense ratio.

**Statutory** – Given the unique nature of the “expense” for discretionary payments authorized under modified contract terms and which do not relate to a change in the level of insurance risk, Allstate relied on the underlying tenets of SSAP 70, Allocation of Expenses. Under SSAP 70, allocable expenses for property and casualty insurance companies shall be classified into one of three categories in the Underwriting and Investment Exhibit: loss adjustment expenses (classification assessed in 1) above), investment expenses (not applicable) or other underwriting expenses. Other underwriting expenses are defined as allocable expenses other than loss adjustment expenses and investment related expenses.

**Conclusion**

Allstate recommends that INT 20-08T be expanded to include a classification alternative for policyholder payments that are not premium refunds, rate reductions or policyholder dividends. The basis, form, and substance of Allstate’s policyholder payments related to the reduced personal lines auto frequency due primarily to SIP orders instituted as a result of COVID-19, were designed to facilitate expeditious state approval and implementation to provide relief to policyholders in the form of discretionary policyholder payments. When designing our policyholder relief program, we considered impacts on a range of stakeholders including our agents and the states in which we do business and determined that discretionary policyholder payments would not impact agent commissions or premium tax revenues that states rely on to meet the needs of their constituents.

Comment letters submitted by other insurers to the original exposure of INT 20-08T described policyholder payment programs similar to Allstate’s and requested the INT be expanded to include a classification for discretionary policyholder payments in the form of an underwriting expense. In addition, the comment letter from Interested Parties to the initial exposure of INT 20-08T included suggested revisions to the original INT to reflect the inclusion of new Issue 4 to describe the accounting for policyholder payments which are not premium refunds, rate reductions or policyholder dividends and which result from filing memorandums and policy endorsements as an underwriting expense. Allstate supports the suggested revisions to INT 20-08T related to new Issue 4.

The Allstate Corporation filed its Q1 2020 Form 10-Q which reflects as illustrated in the attached Appendix I, a new line item in the income statement for policyholder payments created for the material, non-recurring expense related to SIP orders. The importance of the GAAP treatment is that Statutory accounting is intended to follow GAAP except in those situations where a departure from GAAP is necessary; we do not believe this is one of those areas of necessary departure. We believe the Statutory treatment should be consistent with GAAP in terms of reporting as an expense; in the case of Statutory accounting as an “other underwriting expense”. The Allstate insurance companies that computed and accrued SIP payments for March 2020, classified those
expenses in their first quarter statutory filings in line 4, Other underwriting expenses incurred in the Statement of Income (corresponding classification at year-end in the Insurance Expense Exhibit is line 24, Aggregate write-ins for miscellaneous operating expenses, column 3 General Expenses under the heading of Other Underwriting Expenses) and disclosed the nature of the SIP payments and expense classification in Note 21A – Unusual or Infrequent Items. We believe the consistency in disclosure between all methods of providing policyholder relief will allow regulators to view the impact of these programs on a consistent basis regardless of how they were executed.

Please do not hesitate to contact me to discuss the contents of this letter.

First Quarter 2020 Form 10-Q 1
June 4, 2020

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Re: INT 20-08T – COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The Cincinnati Insurance Company (“Cincinnati”) appreciates the opportunity to provide comments for consideration on the Statutory Accounting Principles Working Group (“SAPWG”) re-exposed interpretation, INT #20-08T: COVID-19 Premium Refunds, Rate Reductions, and Policyholder Dividends (“the Tentative INT”). Cincinnati’s property casualty group is among the 25 largest groups in the United States, based upon net written premium.

Cincinnati provided comments during the original exposure period of May 5, 2020 through May 14, 2020. During this second exposure period of May 21, 2020 through June 5, 2020, our points remain relevant and we reiterate our support to modify the Tentative INT to allow relief payments to be accounted for and reported as expense where companies utilized rule filings or policy endorsements to allow these payments. Our position has also been communicated directly to the APCIA and interested parties.

Our support for recognizing as an expense, those relief payments made in relation to, at least, non-participating policies without premium refund terms, include the following points and premium refund contrasts:

- The payments were intended to provide immediate financial relief to policyholders, regardless of existing contractual obligations, on the premise of companies sharing their anticipated favorable loss experience with business segments of their policyholders.
- For participating policies, sharing favorable loss experience is accomplished through payment of policyholder dividends.
- Relief payment amounts were decided without having actual loss experience data, regarding the ultimate impact of federal and state shelter-in-place orders.
  - Cincinnati did not utilize rate filings to provide relief payments.
  - Premium adjustments, whether contractual refunds or by rate filings, include consideration of actual loss experience, which is not completely available in this situation.
  - Actual loss experience data, when available, may reveal an increase in accident severity from fast driving and an increase in distracted driving accident occurrences.
  - Additionally, extended auto coverage, or waiver of policy restrictions, to allow utilization of personal automobiles for deliveries has been called for in some states.
- Even if companies expressed the relief payment amount as a percentage of premium, that does not make it a premium refund. Premiums are commonly used in calculation methodologies such as assessments, surcharges, and allocation of expenses.
- Cincinnati revised the impacted policyholder contracts through rule filings to states, explicitly stating payments are being treated as an expense, and provided company letters to all impacted policyholders, allowing this payment benefit. No state denied Cincinnati’s rule filing.

The Cincinnati Insurance Company
The Cincinnati Indemnity Company
Cincinnati Casualty Company • The Cincinnati Specialty Underwriters Insurance Company
The Cincinnati Life Insurance Company
• Cincinnati’s relief payment plan, and the relief payment plan of other companies, are more characteristic of company expenses, such as policyholder dividends, policyholder benefits, assessments, surcharges, guaranty funds, and donations.

• As an expense, companies bear the majority of the financial burden for the payment.
  o As a reduction of premium, the financial burden of relief payments would be shared by further exacerbating revenue shortfalls
    ▪ For state governments through reduced premium taxes and commission related income taxes.
    ▪ For small businesses and individuals through commission claw-backs.
    ▪ If states intend to include relief payment amounts in premium tax calculations or companies intend to otherwise compensate their producers, these actions would further support relief payments are an expense.

• Reporting the relief payments as an expense brings an advantage to analyzing insurance company results as it will impact only the expense ratio component of the combined ratio, similar to policyholder dividends impacting only the policyholder dividend ratio component.
  o Reporting the payments as a premium refund would distort analysis of insurance company results as it will impact all components of the combined ratio: loss, dividend, and expense ratios.
  o It seems counterintuitive that the relief payments should impact, negatively, the loss ratio, given that the premise of the relief payment is for companies to share their anticipated favorable loss experience.

• These payments are the result of an unusual and infrequent event that would be disclosed in financial statements and excluded from future rate filing consideration.

• Cincinnati acted with a sense of urgency in light of the pandemic, notified states of the company’s relief payment plans, and then proceeded to act, in good faith, in accordance with those plans, absent any state objections.

• In addition to these payments to our policyholders for immediate financial relief, actual premium relief could come in the future through normal rate reviews and consideration of actual loss experience.

In conclusion, Cincinnati supports modifying the Tentative INT, either by expanding Issue 1 or adding a new Issue, to allow relief payments to be accounted for and reported as expense in situations where companies utilized rule filings or contract endorsements to allow for these relief payments. We do not propose that expense treatment is the only answer, but rather, it is appropriate depending on the relief payment program communicated by each company in their state filings. We respect that other companies may have utilized payment methods different from ours, leading to other accounting treatment decisions. Ultimately, each company would consistently provide accounting transparency through disclosure of their handling of this unusual and infrequent event.

Sincerely,

Michael J. Sewell

Re: Proposed INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Chairman Bruggeman,

Co-operative Insurance Companies appreciates the opportunity to comment on the items exposed by the Statutory Accounting Principles Working Group (“SAPWG”) on May 5, 2020. Co-operative Insurance Companies is a mutual co-operative that was established in 1915 and is writing personal and commercial business in Vermont and New Hampshire.

Like many insurance companies, we’ve seen some initial favorable loss development on our personal auto book of business as a result of the various stay at home orders issued by the states. And like many insurance companies, we made the decision to provide some financial reprieve for our personal auto policyholders and issued a one-time refund earlier this month. The Company views this refund like a policyholder dividend, with the difference being that it was not issued to all policyholders based on profits. As such, we have taken the view that the one-time refund should be treated as an expense for accounting purposes. To treat it as a reduction in premiums, as INT 20-08T suggests given our fact pattern, places an undue burden on our agents and the state as our intent was not to impact agent commissions or state premium tax liabilities.

Furthermore, in reading comment letters from other parties, Co-operative Insurance Companies agrees with the perspective that The Cincinnati Insurance Companies laid out in their letter dated May 20, 2020. Some states mandated refunds and most strongly encouraged it, so why wouldn’t companies account for this like a state assessment which would be recorded as an expense. As Andrew Schnell of The Cincinnati Insurance Companies stated, “If treated as premium, all aspects of the combined ratio, including the loss ratio, are impacted, which does not seem appropriate. Given that the premise of the payment request is for companies to share their anticipated favorable loss experience, it seems counterintuitive that loss experience ratios be negatively impacted by the payment.”

We hope that the SAPWG will take our perspective into account before adopting the proposed interpretation and revise it to allow for accounting of this unusual circumstance as an expense without individual companies having to seek approval for a permitted practice from their state of domicile.

Best Regards,

Tamaron Loger, CFE, CPA, MAFM

Re: INT 20-08T – COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

Grange Insurance Company ("Grange") appreciates the opportunity to provide comments for consideration on the exposure drafts released for comment by the Statutory Accounting Principles Working Group ("SAPWG") on interpretation exposure, INT #20-08T: COVID-19 Premium Refunds, Rate Reductions, and Policyholder Dividends ("the Tentative INT"). Grange’s property & casualty group is among the 75 largest insurance groups in the United States of America, based upon our approximately $1.3 billion in net written premium.

The Tentative INT contemplates classifying policyholder relief payments in reaction to the current COVID-19 pandemic either as a reduction to premiums written or as policyholder dividends and provides proposed statutory accounting and reporting guidance accordingly. Grange’s comments will primarily focus on rationale to revise the Tentative INT to allow reporting these payments as other underwriting expenses due to other fact patterns that were not contemplated by the original policy exposure. Grange’s position is based on the following logic:

- The payments were intended to provide immediate financial relief to our policyholders regardless of our contractual obligations.
- The payments were made voluntarily in our operating states.
- Grange revised the impacted policyholder contracts through filing policy endorsements with certain states and provided company letters to all impacted policyholders to provide the contractual language needed to allow such payments.
- Grange did not file for premium rate changes in any state as a result of issuing these payments to our policyholders. These payments are the result of an unusual and infrequent event that will be excluded from future rate filing considerations.
- Loss experience data was mostly unknown at the time of announcing and issuing the relief payments during the 2nd week of April, regarding the ultimate impact of federal and state shelter-in-place orders. Loss experience improvements were estimated for the personal auto book in total based on the expectation of lower miles being driven during April and May.
Formal policyholder dividends were not a viable option for Grange as dividends must be paid to all policyholders, not just the lines of business expected to be favorably impacted by the shelter-in-place orders. Also, due to required approvals, dividends would not be the most immediate payment option.

These payments are more in line with a one-time company expense, such as a policyholder dividend.

When we looked for relative consistency in reporting treatment for payments made outside of contractual premium refunds, categorizing these payments as an expense was the closest option to policyholder dividend reporting.

Classification as a premium refund will have unintended ancillary financial consequences, such as reducing premium taxes to state agencies. Like many of our competitors, we assured our independent agent partners, many of which are small businesses, that their commissions would not be impacted by these payments. Accordingly, commission ratios will be inflated for this calendar year if reporting as a premium refund is required.

Reporting the payments as an expense brings an advantage to analyzing insurance company results as it will impact only the expense ratio component of the combined ratio.

Reporting the payments as a premium refund would distort analysis of insurance company results as it will impact all components of the combined ratio: loss, dividend, and expense ratios.

Premium adjustments, whether contractual refunds or by rate filings, include consideration of actual loss experience, which was not completely available in this situation.

In addition to these payments to our policyholders for immediate financial relief, which we view as a one-time expense, actual premium relief could come in the future through normal rate reviews and consideration of actual loss experience.

Insurance companies acted with a sense of urgency in light of the unprecedented scale of the pandemic, notified states of company payment plans, and then proceeded to swiftly act, in good faith, in accordance with those plans, absent any state objections. To that point, Grange issued nearly 340,000 relief payments to our policyholders during the last week of April and first week of May.

In light of the COVID-19 pandemic, regulators from a majority of states issued a number of bulletins, orders, advisories, and other guidance (collectively “Bulletins”) urging property & casualty insurance carriers nationwide to provide some means of immediate financial relief to policyholders, at least in private passenger automotive lines. The principle was that insurers should provide immediate financial relief in anticipation of lower than expected loss experience arising from a decrease in driving activity due to federal and state shelter-in-place orders. Such payments needed to be applied reasonably and consistently in order to avoid being considered a rebate or unfair discrimination. Though payments by insurance carriers would be a voluntary action in most states, they were required in the State of California (Bulletin 2020-3). The issuance of Bulletins by each state, each with their own guideline nuances, created uncertainty across insurance carriers of how to accommodate making such payments within applicable compliance standards.
Grange considered the magnitude of the situation and guidance available at the time. A policyholder dividend was deemed inappropriate, at least in part, as it would take longer to enact given the required approval process. A premium refund would create unintended negative financial consequences to state agencies and our independent agent partners (absent the decision by Grange, like many carriers, to not impact agent compensation) by reducing premium amounts, thereby reducing premium taxes and commissions. Premium refunds also have the negative impact of altering comparability for all components of the combined ratio. Additionally, these policyholder relief payments were based on the expectation of profits from favorable loss experience, yet the data to determine such experience had not yet occurred. Therefore, Grange communicated to states that the payment program would be treated as an expense when policy endorsements were filed. Grange included that we intend to review the actual loss experience results and adjust premiums on a forward looking basis as part of regularly planned future rate reviews. These one-time payments would be excluded from future rate calculations and filings. No state rejected Grange’s payment program.

In the absence of any state objections, Grange acted in accordance with the relief payment program and contends that reporting these pandemic related payments as an expense would fall within the guidance of SSAP 70 – Allocation of Expenses and be disclosed in accordance with SSAP 24 – Discontinued Operations and Unusual or Infrequent Items. INT 20-08T already includes disclosure guidance under SSAP 24. SSAP 70 – Allocation of Expenses, paragraph 3 states:

3. Allocable expenses for property and casualty insurance companies shall be classified into one of three categories in the Underwriting and Investment Exhibit as follows:

And then goes on to list the three expense categories as a) Loss adjustment expenses, b) Investment expenses, or c) Other underwriting expenses. Other underwriting expenses are defined as allocable expenses other than loss adjustment expenses and investment related expenses. Grange would report the one-time relief payments as a write-in item under other underwriting expenses.

In conclusion, Grange believes it is reasonable and appropriate for INT 20-08T to provide guidance to companies to report the relief payments as an expense. The payments achieved immediate financial relief for policyholders without unintended negative consequences for state agencies and our independent agent partners. Policyholders would see premium relief, when experience supports it, in future rates. We also believe that comparability of insurance company results is least impacted if these payments are recorded as other underwriting expenses.

Sincerely,
Brian Poling

RE: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The following comments are submitted on behalf of the member companies of the National Association of Mutual Insurance Companies1 regarding the interpretive reporting guidance issued to account for premium refunds, rate reductions, and policyholder dividends. We previously submitted a comment letter on this topic to the working group on May 14, 2020 and continue to support the points raised in that letter.

The purpose of this follow-up letter is to emphasize the point that insurance company statutory financial statements should reflect the actions and approaches taken by management that best reflects company experience; therefore, in regards to accounting for premium relief measures, statutory accounting should be flexible to accommodate the various approaches taken by insurers. The COVID-19 ongoing crisis prompted many insurance companies to respond to policyholders experiencing economic hardship in various ways. While different approaches were taken, one common theme among insurers who provided premium relief to policyholders was evident, that is there was a sense of urgency to get money back to impacted policyholders.

That urgency and drive to get money back to policyholders created some obstacles for companies. Traditional methods of returning premium to policyholders was not a viable option for some carriers. For example, issuing a policyholder dividend presented challenges around timing and restrictions on issuing dividends for only single line of business contracts. Companies unable to issue a dividend but were able to provide premium relief to policyholders did so without having complete loss experience data. As part of normal business operations, a full review of actual loss experience results is conducted leading to a potential adjustment to future premiums. Without that complete analysis, some insurers view treating these payments as an “other underwriting expense” to be the cleanest method of accounting. Treating these payments as an “other underwriting expense” avoids certain unintended consequences for those insurers that were unable to issue a dividend or were not able to file for new rates in an expeditious fashion. If regulators agree to allow for flexibility, insurers that treat these payments as expenses will avoid impacting both the combined ratio and loss ratio. Instead it would only impact the expense ratio. Critical to understanding the

---

1 NAMIC is the largest property/casualty insurance trade association in the country, with more than 1,400-member companies representing 39 percent of the total market. NAMIC supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies serve more than 170 million policyholders and write more than $230 billion in annual premiums. Our members account for 54 percent of homeowners, 43 percent of automobile, and 32 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
the profitability of a line of business, or more importantly, determining the adequacy of rates for certain lines is an analysis of the loss ratio. When you treat these payments as a return of premium, that automatically increases the loss ratio. Given the importance of rate adequacy, classifying these payments as an expense will help in determining future rates as these unusual and infrequent expenses would be excluded from future rate filings.

In addition to these unintended consequences to the financial statements, other challenges should be considered by the working group. For example, if expense treatment is not allowed for any insurer, that has the impact of reducing the amount of premium taxes paid to the state. While many insurers will treat these relief measures as a return of premium, reducing their premium tax bill, those who classify as an “other underwriting expense” will not have their premium tax bill reduced.

Finally, the statutory financial statements assist state insurance regulators with regulating the solvency of insurance companies, and the proposed INT includes a new disclosure that requires insurers to disclose all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends as unusual or infrequent items in annual statement note 21A. This disclosure will help regulators understand the approaches taken by various insurance companies around providing policyholder relief, regardless of whether they classified it as a return of premium or an “other underwriting expense”. If the working group doesn’t allow for “other underwriting expense” treatment, companies will be forced to seek alternative options, such as state permitted or prescribed practices leading to additional and unnecessary disclosures. In this case, a duplicative disclosure to the new note 21A.

Thank you for your consideration of these comments. This issue is critically important to NAMIC members and their policyholders. If there are any questions, please feel free to contact me at 317-876-4206.

Sincerely,

Jonathan Rodgers

RE: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The Progressive Group of Insurance Companies, on behalf of its property & casualty insurance companies, (“Progressive”) appreciates the opportunity to provide comments for consideration on the exposure draft released for comment by the Statutory Accounting Principles Working Group (“SAPWG”) on interpretation exposure, INT #20-08T: COVID-19 Premium Refunds, Rate Reductions, and Policyholder Dividends (“the Tentative INT”). Progressive is the third largest private passenger auto insurance company in the United States of America, based upon our approximately $31 billion in direct premiums written for 2019.

In response to the Tentative INT, Progressive agrees in principle with the comments previously submitted to SAPWG by The Cincinnati Insurance Company and Grange Insurance and agrees with the draft edits to the Tentative INT by the interested parties, particularly the addition of Issue 4.

Progressive’s position is based on the following:

• Where required, we filed a policy endorsement and/or rule, not a rate filing, to authorize and facilitate discretionary credits and payments to policyholders in response to the COVID-19 pandemic and was a one-time action to provide immediate relief
• The credits and payments are available to all customers with an active personal automobile policy on April 30 and/or May 31 and there was no differentiation among customers
• To ensure consistency, the credit was calculated based on 20% of the amount of premium earned by each policyholder during the months of April and/or May (for New York policyholders, the credit will be calculated based on 20% of May and/or June premiums earned, instead of April and/or May)
• To accommodate the urgency of the situation, the amount of the credits and payments was determined without specific known loss experience but was based on changes in: average miles travelled per vehicle, as derived from our usage-based insurance (UBI) program; weekly incoming claim features; and total personal auto frequency pre and post the COVID-19 restrictions period. We did not determine the credit for policyholders enrolled in our UBI program based on their individual miles driven.
• Reducing premiums in conjunction with the policyholder credits and payments would conflict with the rate filings that are currently in place and would reduce the amount of premium taxes, independent agents’ commissions, and various assessments that would be due based on these
filed rates; we have never had any intention of receiving a return of premium taxes, assessments, or commissions paid

- We are not aware that there has ever been a difference between statutory accounting and generally accepted accounting principles in the United States of America ("GAAP") as it relates to accounting for premiums. Similar to several other public company registrants, we recorded the policyholder credits and payments as an underwriting expense when we filed our April results via a Current Report on Form 8-K with the Securities and Exchange Commission (SEC) on May 20, 2020; the GAAP accounting treatment was based on the underlying premise that the credits and payments are akin to a policyholder dividend in the sense that we are, at our noncontractual discretion, returning profits that resulted from a reduction in loss costs due to the shelter-in-place orders with policyholders based on a program that was derived at the enterprise-wide level as opposed to the contract level.

- Given that our rating plans were not impacted as a result of the policy endorsement and/or rule that was filed, it would seem appropriate that the statutory accounting treatment would follow the GAAP accounting treatment.

- The intent to treat the policyholder credits and payments as an underwriting expense has been clearly disclosed in the filing memorandum issued to the states’ departments of insurance and as a separate financial statement line item in our April GAAP-basis financial statements released and filed with the SEC on May 20, 2020. We intend to show the credits as a write-in line item in our statutory financial statements. The transparency of these credits enables the users of the financial statements to understand the financial impact resulting from this issue.

The current draft of the Tentative INT only provides for the classification of policyholder relief payments in reaction to the current COVID-19 pandemic as either premium refunds, rate reductions, or policyholder dividends, and provides proposed statutory accounting and reporting guidance based on these classifications. Progressive instead supports the addition of Issue 4 as proposed in the comment letter submitted by the interested parties to allow the flexibility of accounting for these policyholder relief payments based on the underlying methodology used by the insurance companies.

Regards,

/s/ John P. Sauerland

    Robin Marcotte, SAP Working Group, NAIC, via: rmarcotte@naic.org
UnitedHealthcare appreciates the opportunity to comment on INT 20-08T, COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends. UnitedHealthcare is a diversified health care company dedicated to helping people live healthier lives and helping to make the health system work better for everyone. Over the last several months, the emergence of the COVID-19 virus has caused well-documented challenges to people, businesses and institutions across national and global health care systems. Among them is the disruption to traditional patterns of delivering health care causing related economic disruption and imbalances to the nation’s health care coverage systems.

In response to this challenge, UnitedHealthcare and many other insurers are taking actions in a variety of ways to help provide financial relief to insured members. Since the form of the financial relief varies among insurers, the accounting treatment may need to be tailored to the specific form of the relief program. Our comments are focused on the voluntary issuance of premium refunds or credits to in-force policyholders which are not outlined in the policy terms.

We agree with and support the current proposal to treat these types of premium refunds as a reduction to written and earned premium. We believe this treatment is consistent with the intent of the transaction (a return of premium to the policyholder) and is consistent with current accounting guidance for other types of premium refunds that are required by either policy terms or regulations. The timing of recognition of the premium refund should correspond with the associated coverage period impacted by the premium action. In the case of premium refunds issued for current or prior coverage periods, the recognition should be immediate. There may be situations where the premium rate is being reduced over the remaining policy period, in which case, the premium reduction may need to be recognized over the policy period impacted.

With respect to any liability required to be recognized in accordance with in SSAP No. 5R - Liabilities, Contingencies and Impairments of Assets, we believe the liability should be reported as an aggregate write-in since the premium refund was not required by policy terms, and therefore would not be accounted for as retrospective or redetermination premium liability.

While we believe the above-described reduction to premium approach is the appropriate accounting treatment, we understand other interested parties and some regulators have expressed concerns with the
distortion of reported loss or operating ratios resulting from this classification. As an alternative acceptable option to address these concerns, we feel there could be some justification for treatment as bad debt expense. The election to not collect premium could result in the premiums being written off as bad debts when it is determined to be uncollectable.

We appreciate the consideration of our comments. We would be happy to discuss further and address any questions you may have.

Sincerely,

Sherry Gillespie

INT 20-08: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

INT 20-08 Dates Discussed

Email Vote to Expose May 5, 2020; May 20, 2020; June 15, 2020

INT 20-08 References

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets
SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items
SSAP No. 53—Property Casualty Contracts—Premiums
SSAP No. 54R—Individual and Group Accident and Health Contracts
SSAP No. 65—Property and Casualty Contracts
SSAP No. 66—Retrospectively Rated Contracts

INT 20-08 Issue

COVID-19

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

Refunds, Rate Reductions and Policyholder Dividends

2. The federal, state or local government orders requiring non-essential workers to “stay home” caused a significant reduction in commercial and non-commercial activity, including automotive usage. Some consumer groups wrote letters and issued press releases calling for insurance premium refunds or pricing decreases, which included specific comments directed toward consumer automotive lines. The comments presumed that the decrease in activity would result in fewer losses.

3. Many insurers began issuing voluntary premium refunds, future rate reductions or policyholder dividends because of the decreased activity. The majority of the refunds were related to automotive lines of business. Insurers have provided the reductions in a variety of ways. Some of the rate reductions were specific for in-force policies, whereas some of the rate reductions would apply to future policy renewals.

Voluntary

4. The majority of the refunds or rate reductions are being offered voluntarily and are not amounts required under the policy terms. The aggregate monetary amount of the return of funds is considered materially significant.
Jurisdiction Directed

5. In addition, a few jurisdictions have issued bulletins directing refunds and rate reductions on accident and health insurance and varying lines of property and casualty insurance, including but not limited to: private passenger automobile, commercial automobile, workers’ compensation, commercial multiple peril, commercial liability and medical professional liability. In addition, some jurisdictions have indicated support for refunds or rate reductions, but also directed that payment of such amounts require either premium rate filings or policy form amendments.

Accounting Issues

6. This intent of this interpretation is to address questions related to refunds, rate reductions and policyholder dividends in response to the decreased activity related to COVID-19. Because there are a variety of ways that reporting entities are accomplishing a similar objective of returning money or reducing premiums, this interpretation provides guidance on the following issues:

   • Issue 1: How to account for refunds not required under the policy terms.
   • Issue 2: How to account for refunds required under the policy terms.
   • Issue 3: How to account for rate reductions on inforce and renewal business.
   • Issue 4: How to account for policyholder dividends.
   • Issue 5: Where to disclose refunds, rate reductions and policyholder dividends related to COVID-19 decreases in activity.

INT 20-08 Discussion

7. As an overall guiding principle, the accounting shall follow existing statutory accounting principles and annual statement reporting where feasible.

Issue 1: How to Account for Refunds Not Required Under the Policy Terms

8. The Working Group reached a consensus that voluntary refunds because of decreased activity related to COVID-19 and jurisdiction-directed refunds which are not required by the policy terms, are fundamentally a return of premium. Such refunds shall be accounted for as immediate adjustments to premium. The refunds shall be recognized as a reduction to written or earned premium and the unearned premium reserve adjusted accordingly.

9. Refunds shall be recognized as a liability when the definition of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets is met. For example, the declaration of a voluntary dividend by the board of directors will trigger liability recognition. In cases where the refunds are directed by a jurisdiction, the SSAP No. 5R definition of a liability shall be used to determine timing of liability recognition.

10. Immediate adjustment to premium is consistent with the existing guidance in SSAP No. 53—Property Casualty Contracts—Premiums. SSAP No. 53 guidance requires adjustments to the premium charged for changes in the level of exposure to insurance risk. It is also consistent with the treatment of loss sensitive premium adjustments in SSAP No. 66—Retrospectively Rated Contracts. While some of the
voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply.

11. Immediate adjustments to premium for voluntary accident and health premium refunds is also consistent with the guidance in SSAP No. 54R—Individual and Group Accident and Health Contracts on contracts subject to redetermination. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply. The liability for voluntary health premium refunds attributable to COVID-19 and which are not required under the policy terms shall be recognized in aggregate write-ins for other liabilities.

12. Reporting the voluntary or jurisdiction-directed refund as an expense is not consistent with statutory accounting guidance and would improperly present the expense ratios in the statutory accounting financial statements. Reporting the refund as an expense, or any other method besides a decrease to premium, would be considered a permitted or prescribed practice and shall be disclosed as required by SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures:

   a. Reporting the refunded amounts as a miscellaneous underwriting expense is not consistent with the underwriting expense description. This reporting option is inconsistent with the characterization of the amount as a return of premium.

   b. Reporting the refunds as premium balances charged off (e.g., bad debt expense) is inconsistent with guidance in SSAP No. 53, paragraph 14, on earned but uncollected premium. It is also inconsistent with the annual statement instructions as the amount is not an uncollectible amount, but rather a voluntary choice by the reporting entity to reduce the amount charged.

**Issue 2: How to Account for Refunds Required Under the Policy Terms**

13. While most of the premium refunds are voluntary or jurisdiction-directed and not required under the policy terms, some policies have terms that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses. If the policy terms change the amount charged, existing guidance in SSAP No. 53, SSAP No. 54R or SSAP No. 66 continues to apply:

   a. SSAP No. 53 provides guidance for policies in which the premium amount is adjusted for changes in the level of exposure to insurance risk. This is often seen in commercial lines of business such as workers’ compensation. The guidance notes that audits often occur after the policy term or mid-term in the policy. SSAP No. 53 refers to the adjustment to premium (either due to the customer or to the insurer) as earned but unbilled (EBUB) premium. SSAP No. 53 requires such adjustment to premium to be made immediately either through written premium or earned premium. SSAP No. 53 also requires recognition of the related liabilities and expenses such as commissions and premium taxes based on when the premium is earned.

   b. SSAP No. 54R provides guidance for policies subject to redetermination in which the premium is subject to adjustments by contract terms. This is commonly seen in federal and state groups. The guidance notes that estimates are based on experience to date and premium adjustments are estimated for the portion of the policy that has expired. Accrued return premiums are recorded as a liability with a corresponding entry to written premium. Refunds required under the policy terms would continue to be reported as retrospective or redetermination premium liabilities if applicable.
c. SSAP No. 66 provides guidance for policies whose terms or legal formulas determine premium based on losses. SSAP No. 66 references other applicable statements based on contract type for the initial accrual of premium. Estimates of premium adjustments are accrued based on activity to date and result in immediate adjustments to premium. SSAP No. 66 guidance specifies the corresponding annual statement reporting lines for different entity types.

Issue 3: How to Account for Rate Reductions

14. Some reporting entities are offering rate reductions instead of premium refunds. Some of these rate reductions provide one-time price decreases to future payments on in-force policies. Other reporting entities have provided offers of rate reductions on future renewals. Some of the offers for future rate reductions are only applicable to in-force policyholders as of a specified date. Some reporting entities have offered one-time rate reductions for future renewals for both existing and new policyholders for 2020.

   a. Rate reductions on in-force business, shall be recognized as immediate adjustments to premium.

   b. Rate reductions on future renewals shall be reflected in the premium rate charged on renewal. This is because it is outside of the policy boundary to require the accrual before contract inception. While the amount of future rate reduction can be estimated, it is not a change to existing policy terms and policyholders are not obligated to renew at the reduced rate, therefore, payment of the amount is avoidable. Such amounts shall be disclosed as discussed in Issue No. 5.

Issue 4: How to Account for Policyholder Dividends

15. SSAP No. 65—Property and Casualty Contracts, paragraph 46 requires that dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability.

16. The Working Group noted that policyholder dividends are typically only provided on participating policies or policies issued by non-stock companies, such as mutual entities and other corporate entity types in which profits are shared with policyholders.

17. Research during the development of this item identified that a small number of jurisdictions have legal restrictions which only allow policyholder dividends to be provided after the expiration of the policy period for which the dividend was earned. This interpretation only addresses policyholder dividends which are permitted by the applicable jurisdiction.

18. The property and casualty annual statement blank provides specific reporting lines for policyholder dividends including, but not limited to a liability line and a line in the income statement and statement of cash flow. For those entities whose policies are participating or whose corporate shell type and/or membership structure allow for policyholder dividends, the accounting for policyholder dividends is unchanged by this interpretation.

19. This interpretation does not change the policyholder dividend disclosure or reporting but provides additional guidance that such policyholder dividends issued in response to COVID-19 decreases in activity shall also be disclosed as discussed in Issue 5.
Issue 5: Where to Disclose Refunds, Rate Reductions and Policyholder Dividends Related to COVID-19 Decreases in Activity

20. There are various places in the notes to the statutory annual statement where disclosures of various aspects of premium refunds, premium reductions or policyholder dividends are required. This interpretation does not recommend changes to those existing disclosures. This interpretation does, however, recommend a consistent annual statement disclosure for all such amounts to allow for comparable disclosures.

21. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items requires disclosure of the nature and financial effects of each unusual or infrequent event or transaction. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. This disclosure is currently required to be reported in annual statement Note 21A. (Reporting entities shall maintain jurisdiction-specific information to be made available upon request from department of insurance or revenue regulators.)

22. To allow for aggregate, consistent assessment, the Working Group came to a consensus that all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments. For clarification, refunds required under policy terms in-force prior to the federal declaration of emergency for the COVID-19 pandemic as discussed in paragraph 13 (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends. Policies whose terms were modified after the declaration of emergency in response to COVID-19 are required to disclose the COVID-19 inspired premium refunds, rate reductions and policyholder dividends.

INT 20-08 Consensus

23. The Working Group reached a consensus to prescribe statutory accounting guidance for insurance reporting entities providing refunds in response to COVID-19. Pursuant to this consensus:

   a. Reporting entities that provide voluntary or jurisdiction-directed refunds which are not required under the policy terms shall follow the guidance in paragraphs 8-12 of this interpretation. This guidance stipulates that such refunds shall be recognized as a reduction of premium. Refunds that are recognized in a different manner (e.g., as an expense), shall be considered a permitted or prescribed practice pursuant to SSAP No. 1.

   b. Reporting entities that provide refunds in accordance with insurance policy terms shall follow paragraph 13 of this interpretation. This guidance indicates that existing statutory accounting principles in SSAP No. 53, SSAP No. 54R or SSAP No. 66 shall be followed as applicable.

   c. Reporting entities that provide rate reductions shall follow paragraph 14 of this interpretation. This guidance provides direction based on whether the rate reduction is for in-force or future policies.
d. Reporting entities that provide policyholder dividend shall follow the existing guidance for policyholder dividends which is summarized in paragraphs 15-19 and in addition, shall complete the disclosures described in paragraphs 20-22.

e. This interpretation, paragraphs 20-22 indicates that reporting entities shall continue to comply with all statutory accounting disclosure requirements, but also requires that all premium refunds, rate reductions and/or policyholder dividends provided because of the decreased activity due to COVID-19 shall be aggregated and reported in Note 21A as unusual or infrequent items.

24. The Working Group noted that premium taxation requirements vary by jurisdiction. Taxation is determined by the jurisdiction where the premium is written/returned to the policyholder according to the laws of that jurisdiction.

25. This interpretation will be automatically nullified on January 1, 2021 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-08 Status

26. Further discussion is planned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call May 20, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); Kathy Belfi (CT); Rylynn Brown (DE); Eric Moser and Kevin Fry (IL); Stewart Guerin (LA); Judy Weaver (MI); Tom Dudek (NY); Joe DiMemmo (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Adopted Non-Contested Statutory Accounting Revisions During its Public Hearing

The Working Group held a public hearing to review comments (Attachment One-C1 and One-C2) on previously exposed items. Ms. Malm made a motion, seconded by Mr. Hudson, to adopt the statutory accounting revisions detailed below as non-contested statutory accounting revisions. This motion also included the disposal of agenda item 2019-41. The motion passed unanimously.

a. Agenda Item 2019-37

Mr. Bruggeman directed the Working Group to agenda item 2019-37: Surplus Notes – Enhanced Disclosures (Attachment One-C3). Jim Pinegar (NAIC) stated that this nonsubstantive agenda item was drafted from the Working Group’s request that additional disclosures be captured in Statement of Statutory Accounting Principle (SSAP) No. 41R—Surplus Notes. He stated that the proposed disclosures materially reflected certain key details from the 2019 surplus note data call. These disclosures were intended to give state insurance regulators further insight into the issuances of surplus notes that do not contain the cash flows typically associated with surplus notes while providing adequate pricing confidentiality sought by interested parties.

b. Agenda Item 2019-41

Mr. Bruggeman directed the Working Group to agenda item 2019-41: Eliminating Financial Modeling Process (Attachment One-C4). Mr. Pinegar stated that this nonsubstantive agenda item was in response to an earlier referral received from the Valuation of Securities (E) Task Force. The agenda item originally was drafted so the Accounting Practice and Procedures Manual (AP&P Manual) would reflect a revision that was under consideration by the Task Force regarding financial modeling of residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) securities. However, the Task Force has since elected to retain the financial modeling approach and will now map the designation derived from the model to a new NAIC designation category. Mr. Pinegar stated that considering this change, the proposed update in this agenda item was no longer applicable and recommended disposal of this agenda item without statutory revisions.

c. Agenda Item 2019-47

Mr. Bruggeman directed the Working Group to agenda item 2019-47: VM 21 Grading (Attachment One-C5). Robin Marcotte (NAIC) noted that the agenda item addresses VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and grade-in requirements for reporting changes in valuation basis for years beginning Jan. 1, 2020. She stated that the revisions to the Valuation Manual allowed different optional phase-in requirements. The exposure includes nonsubstantive revisions to SSAP No. 51R—Life Contracts and SSAP No. 3—Accounting Changes and Corrections of Errors for reporting years beginning Jan. 1, 2020. Ms. Marcotte stated the exposure incorporated many of the previous edits recommended by interested parties and would expand the disclosure for changes in valuation basis, which are reported as a change in accounting principle under SSAP No. 3. The additional disclosure would identify specific details regarding phase-in of changes in valuation basis.

d. Agenda Item 2020-06EP

Mr. Bruggeman directed the Working Group to agenda item 2020-06EP: Editorial and Maintenance Update (Attachment One-C6). Ms. Marcotte stated that this item provides nonsubstantive editorial corrections in accordance with the maintenance process, deleting an unnecessary excerpt and updating various paragraph references in SSAP No. 21R—Other Admitted Assets and SSAP No. 51R.
c. **Agenda Item 2020-07**

Mr. Bruggeman directed the Working Group to agenda item 2020-07: Change to the Summary Investment Schedule (Attachment One-C7). Jake Stultz (NAIC) stated that SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures requires disclosures as detailed in Appendix A-001: Investments of Reporting Entities (A-001). He stated that Section 3 of A-001 requires the Summary Investment Schedule in the statutory annual statements and the notes of the annual audited financial statements. This agenda item arose because NAIC support staff for the Blanks (E) Working Group were notified of a cross-check error where total mortgage loans reported on the Summary Investment Schedule do not tie to the amounts reported in Schedule B, Mortgages – Part 1. Mr. Stultz noted that the nonsubstantive revisions will add the total valuation allowance to the Summary Investment Schedule to ensure these schedules appropriately tie together.

d. **Agenda Item 2020-08**

Mr. Bruggeman directed the Working Group to agenda item 2020-08: Accounting Standard Update (ASU) 2016-20, Technical Corrections & Improvements – Topic 606 (Attachment One-C8). Mr. Stultz stated that ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers was issued to clarify narrow aspects of the guidance issued in ASU 2014-09, Revenue from Contracts with Customers. He stated that in 2018, the Working Group previously rejected the guidance in ASU 2014-09 and several other ASUs related to revenue recognition in SSAP No. 47—Uninsured Plans. He stated that this agenda item proposes to reject ASU 2016-20 in SSAP No. 47, and the proposed action is consistent with how the prior ASUs related to Topic 606 have been treated.

e. **Agenda Item 2020-09**

Mr. Bruggeman directed the Working Group to agenda item 2020-09: ASU 2018-18, Collaborative Arrangements – Topic 808 (Attachment One-C9). Mr. Stultz stated that this ASU clarifies and aligns revenue recognition under the new Topic 606 for collaborative arrangements. He stated that a collaborative arrangement is defined as a contractual arrangement that involves a joint operating activity involving two or more parties that are active participants in the activity and are exposed to significant risks and rewards dependent on the commercial success of the activity. He stated that this agenda item proposes to reject ASU 2018-18 in SSAP No. 47, and the proposed action is consistent with how the prior ASUs related to Topic 606 have been treated.

f. **Agenda Item 2020-10**

Mr. Bruggeman directed the Working Group to agenda item 2020-10: ASU 2017-14, Amendments to SEC Paragraphs in Topic 220, Topic 605 and Topic 606 (Attachment One-C10). Mr. Stultz stated that this ASU only affects U.S. Securities and Exchange Commission (SEC) paragraphs in Topic 220, Topic 605 and Topic 606. He noted that the nonsubstantive revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2017-14, Income Statement—Reporting Comprehensive Income (Topic 220), Revenue Recognition (Topic 605), and Revenue from Contracts with Customers (Topic 606), Amendments to SEC Paragraphs Pursuant to Staff Accounting Bulletin No. 116 and SEC Release No. 33-10403 as not applicable to statutory accounting.

g. **Agenda Item 2020-11**

Mr. Bruggeman directed the Working Group to agenda item 2020-11: ASU 2020-02, Amendments to SEC Paragraphs in Credit Losses and Lease (Attachment One-C11). Mr. Stultz stated that this ASU only affects the SEC section in Topic 326, which clarifies reporting for SEC registrants and updates the effective date for these provisions and the updates to Topic 842. He noted that the nonsubstantive revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-02, Financial Instruments—Credit Losses (Topic 326) and Leases (Topic 842), Amendments to SEC Paragraphs Pursuant to SEC Staff Accounting Bulletin No. 119 and Update to SEC Section on Effective Date Related to Accounting Standards Update No. 2016-02, Leases (Topic 842) as not applicable to statutory accounting.

2. **Reviewed Comments on Exposed Items**

The Working Group held a public hearing to review comments (Attachments One-C1 and One-C2) on previously exposed items.
a. **Agenda Item 2019-25**

Mr. Bruggeman directed the Working Group to agenda item 2019-25: Working Capital Finance Investments. Ms. Marcotte noted that the materials contain substantive revisions, incorporating the industry proposed language for the six specific items directed by the Working Group at the 2019 Summer National Meeting to **SSAP No. 105—Working Capital Finance Investments**. She stated that NAIC staff recommended adoption of the substantively revised SSAP No. 105 and **Issue Paper No. 163—Working Capital Finance Investment Updates**, noting a proposed effective date of June 30.

Ms. Belfi stated she requested that the Working Group consider removing the last sentence in paragraph 16, which states, “Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.” She stated that since Connecticut does not currently possess the resources to adequately evaluate such an investment program, they would rely upon the NAIC Securities Valuation Office (SVO) for input. Ms. Belfi stated that as the SVO must already preapprove these transactions, that control regarding these investments was sufficient and thus not requiring a secondary preapproval by the domiciliary commissioner. Additionally, the statement could result in regulator misinterpretation in that domiciliary commissioners may feel compelled to review transactions in which they do not possess the resources to adequately evaluate. She stated that regulators already can review any transaction or investment deemed appropriate and the statement in paragraph 16 was unnecessary. Ms. Belfi proposed a friendly amendment to remove this single sentence from paragraph 16.

Mr. Fry stated agreement with Ms. Belfi’s comments and noted that no other investment SSAPs contain such language, adding that the language confuses the substance of the SSAP. He stated that with the current requirements such as the SVO preapproval, investments being restricted to investment grade and state investments laws, these investments should remain short-term and of relatively low risk. Ms. Marcotte stated that NAIC staff did not object to the friendly amendment, noting that in addition to the single sentence removal to paragraph 16 of SSAP No. 105, minor edits would also be required in Issue Paper No. 163 documenting the revision. Michael Monahan (American Council of Life Insurers—ACLI) stated that interested parties support the friendly amendment that Ms. Belfi proposed.

Ms. Belfi made a motion, seconded by Mr. Fry, to adopt the substantially revised SSAP No. 105 and Issue Paper No. 163 incorporating the additional revisions discussed (Attachments One-C12, One-C13 and One-C14). The motion passed unanimously.

b. **Agenda Item 2019-42**

Mr. Bruggeman directed the Working Group to agenda item 2019-42: Cash Equivalent – Cash & Liquidity Pools. Mr. Pinegar stated that this nonsubstantive agenda item was drafted to scope certain cash and liquidity pools into **SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments**. He stated that cash pools that met specific criteria would be permitted to be captured in SSAP No. 2R, but the intent of the agenda item was not to permit reporting entries to move short-term investments into the pool or conduct activities that would not be permitted under statutory accounting, such as circumventing reporting or disclosures. Mr. Pinegar stated that interested parties requested consideration for reporting based on a determination, based on managements’ judgment at the time the pool is formed, as to the expected characteristics of the pool assets. He stated that NAIC staff supported single line reporting in Schedule E – Part 2. Single line reporting will ensure unilateral, uniform reporting among all pool participants and all reporting entities who participate in various, qualified cash pools. Additionally, a unique reporting line specifically for qualified cash pools is expected to be available in 2021. Mr. Pinegar stated that interested parties also requested an effective date of Jan. 1, 2021. However, NAIC staff were supportive of an immediate effective date to ensure that cash pools that do not meet the qualifying parameters, absent permission from a reporting entity’s domestic regulator, would not be allowed to be reported as a cash equivalent or short-term investment. However, for qualifying cash pools that would require a reclassification to Schedule E, the agenda item would allow current schedule reporting until Jan. 1, 2021.

Diane Bellas (Allstate), representing interested parties, noted the importance of single line reporting and agreed with the proposed Jan. 1, 2021, effective date as entities may need to analyze their qualified pools for potential schedule changes. She requested clarification regarding the requirement for a permitted or prescribed practice in terms of entities that hold pools that do not qualify upon adoption of this agenda item.

Julie Gann (NAIC) stated that there are currently no provisions in SSAP No. 2R that permit the admittance of cash pools. She stated that if an entity were to continue to hold a cash pool that does not meet the qualifying parameters, for continued reporting as a cash equivalent or a short-term investment, a permitted or prescribed practice would be required. In terms of the Jan 1,
2021, effective date, this was simply a reclassification deadline for qualifying cash pools that meet the parameters in this agenda item.

Mr. Bruggeman stated that state investment laws may prescribe reporting of cash pool participation. However, reporting entities should work with their domestic regulators for cash pools not within scope. This agenda item effectively proposes guidance for valuation and reporting of cash pools, which were not previously in scope of SSAP No. 2R. He stated that the intent of cash pools is to effectively use the idle cash of several affiliated entities. Regulators do not want to find nonqualifying investments in these pools, and the principles of this agenda item should not be violated.

Mr. Hudson made a motion, seconded by Ms. Mears, to incorporate the modifications as proposed by NAIC staff and adopt nonsubstantive revisions to SSAP No. 2R (Attachment One-C15). The motion passed unanimously.

c. Agenda Item 2019-20

Mr. Bruggeman directed the Working Group to agenda item 2019-20: Rolling Short-Term Investments. Mr. Pinegar stated that this nonsubstantive agenda item was originally exposed to address certain investments that were structured as short-term investments, with those investments being rolled or renewed and remaining on a short-term schedule for multiple consecutive years. This agenda item proposes specific revisions that would restrict related party or affiliated investments in scope of SSAP No. 26R—Bonds, SSAP No 43R—Loan-Backed and Structured Securities or that would be reported as other invested asset investments from being continually classified as a cash equivalent or short-term investment. He stated that additional provisions are included to recognize the independent operational nature of some affiliated or related party reporting entities, and the agenda item provides special carveouts from the short-term rolling restrictions. Mr. Pinegar stated that if a reporting entity re-underwrites the investments, maintains appropriate re-underwriting documentation and each party had the ability to independently review the terms and can terminate the transaction prior to renewal, the short-term rolling restrictions would not apply. He stated that interested parties proposed a few minor, corrective edits, all of which were supported by NAIC staff. Additionally, interested parties proposed to remove the term “substantially similar” from the disclosure requirement that requires identical or substantially similar investments in which remain on the short-term schedule for more than one year be identified. NAIC staff believe that removing the substantially similar verbiage could allow for minor, insignificant modifications to be made to an investment that would then preclude disclosure and remove the substance of the agenda item.

Josh Bean (Transamerica), on behalf of interested parties, suggested one additional minor editorial change (removing an extra period within a sentence) for clarification purposes. Ms. Gann stated agreement with a minor editorial suggestion and noted that any other modifications would occur in the normal process of using an editorial update agenda item.

Angelica Tamayo-Sanchez (New York Life) requested clarification regarding the term “substantially similar” and if disclosure requirements would apply to both short-term and cash equivalent investments. She stated that parameters or expanded guidance would be needed to adequately define “substantially similar,” noting that for liquidity purposes, many nonaffiliated investments continually roll.

Mr. Bruggeman stated that currently the disclosure only specifically identifies short-term investments. However, he stated the intent was to also include cash equivalent investments. Ms. Gann stated the intent of the agenda item was to capture both short-term and cash equivalents due to potential risk-based capital (RBC) arbitrage. However, she stated the edit to explicitly add cash equivalents to the disclosure requirements can be added in a subsequent agenda item, but numerous references regarding identification of cash equivalents are already in the agenda item. Mr. Bruggeman stated that in an effort to have the desired reporting in place for year-end 2020, adoption of the rolled short-term investments could occur, with a future update to clarify the inclusion of cash equivalent investments in the disclosure requirements. Mr. Bean stated agreement with this approach and stated he does not oppose adopting the agenda item in its current form, with the expectation of a future update to clarify the inclusion of cash equivalent investments in the disclosure requirements.
Mr. Hudson made a motion, seconded by Mr. DiMemmo, to incorporate the modifications as proposed by NAIC staff and adopt nonsubstantive revisions to SSAP No. 2R (Attachment One-C16). The motion passed unanimously. The Working Group also directed NAIC staff to draft an editorial agenda item to clarify that cash equivalent investments shall be included in the disclosure requirements.

d. **Agenda Item 2019-36**

Mr. Bruggeeman directed the Working Group to agenda item 2019-36: Expand MGA and TPA Disclosures. Ms. Marcotte stated that this nonsubstantive agenda item was drafted pursuant to a request from two states to expand the existing annual statement disclosure regarding managing general agents (MGAs) or third-party administrators (TPAs) to include additional information. She noted that in agreement with interested parties’ comments, additional work needs to be completed on the definitional terms of TPAs. She stated that the previously referenced NAIC guideline only applies to a few specified lines of business and that the sponsors of the agenda item would like the disclosure to be applied broadly to all lines of business. She stated that NAIC staff are supportive of trying to find reasonable metrics for the disclosure but noted that finding one definition that works for all state laws to define TPA will not be practical or feasible. She recommended that this agenda item be deferred and NAIC staff be directed to coordinate with regulators, industry and the sponsors to develop recommendations including a functional definition. She stated that NAIC staff do not recommend the formation of a study group. She stated that the Working Group should also notify the Blanks (E) Working Group of the decision to withdraw the concurrently exposed annual statement blanks proposal.

The Working Group did not object to the recommendation to defer the agenda item and directed NAIC staff to coordinate with the sponsors and industry to refine the definition of TPA used in the disclosure to one that is inclusive of more lines of business and more functional. The Working Group also directed the notification of the Blanks (E) Working Group of the decision to withdraw the concurrently exposed annual statement blanks proposal.

e. **Agenda Item 2020-14**

Mr. Bruggeeman directed the Working Group to agenda item 2020-14: Assessment of OTTI Based on Original Contract Terms. Ms. Gann stated this nonsubstantive agenda item was drafted to clarify the other-than-temporary impairment (OTTI) guidance in SSAP No. 26R. She stated it has been identified that there is a disconnect between SSAP No. 26R, SSAP No. 36R—Troubled Debt Restructuring and SSAP No. 103R with how modifications to debt instruments are considered for OTTI. Existing guidance in SSAP No. 26R identifies that OTTI assessments are based on the contractual terms of a debt security in effect at the date of acquisition. However, if a debt instrument has been modified pursuant to SSAP No. 36R or SSAP No. 103 (nontroubled situations), subsequent assessments of OTTI shall be based on the modified contractual terms of the debt instrument, and not refer to the original acquisition terms. Ms. Gann stated that NAIC staff agree with the minor edit as proposed by interested parties, clarifying that the OTTI shall be assessed on the modified contract terms.

Mr. Hudson made a motion, seconded by Ms. Malm, to incorporate the modification as proposed by interested parties and adopt nonsubstantive revisions to SSAP No. 26R (Attachment One-C17). The motion passed unanimously.

f. **Tentative INT 20-05**

Mr. Bruggeeman directed the Working Group to Interpretation (INT) 20-05T: Investment Income Due and Accrued. Ms. Gann stated that the upcoming proposed interpretations provide an exception to statutory accounting standards and require a two-thirds vote for adoption. She stated this interpretation provides limited-time collectibility assessments and admittance exceptions for SSAP No. 34—Investment Income Due and Accrued. This interpretation allows an exception to the collectibility assessment for investments that have had a forbearance or modifications, in response to COVID-19, that were both current as of Dec. 31, 2019, were not experiencing financial difficulties at the time of the modification. For these items, further evaluation of collectibility would not be required for the first- and second-quarter financial statements unless other indicators that interest would not be collected were known. Ms. Gann stated the second exception is related to the admittance of recorded investment income due and accrued that is deemed collectible and is more than 90 days past due. With this exception, reported investment income that becomes more than 90 days past due in the first or second quarters may be admitted in the second-quarter financial statements. She stated comments received from interested parties requested clarification regarding impairment for mortgage loans. This interpretation does not provide an exception for accrued interest on mortgage loans in default, as existing guidance in SSAP No. 37—Mortgage Loans already states impairment shall be based on the modified contractual terms. Ms. Gann stated that in response, NAIC staff have proposed minor edits clarifying that accrued interest on mortgage loans that were in default are not in scope of this interpretation.
Ms. Weaver made a motion, seconded by Ms. Mears, to adopt the consensus in INT 20-05, with the modification as proposed by NAIC staff, for statutory accounting (Attachment One-C18). The motion passed unanimously.

g. Tentative INT 20-06

Mr. Bruggeman directed the Working Group to INT 20-06T: Participation in the 2020 TALF Program. Ms. Gann stated this interpretation proposes guidance for reporting entities participating in the federal Term Asset-Backed Securities Lending Facility (TALF) program. The guidance addresses both direct borrowers and reporting entities that participate as an investor to a direct borrower. She stated INT 20-06T differs from the TALF interpretation issued in 2009 as the earlier interpretation only provided accounting and reporting guidance for reporting entities who were direct participants in the program. However, from a public records search, it appears as though most reporting entities were not direct participants but rather were material investors to the direct participant. Ms. Gann stated that for direct participants, this interpretation follows existing statutory accounting guidance with the exception of allowing direct borrowers who pledge assets to the TALF program to continue admittance of those pledged assets. This exception was required as the TALF program does not permit substitutions of collateral. For investors, the interpretation proposes to follow existing statutory accounting guidance in that the investment shall follow the appropriate SSAP. She stated that NAIC staff agreed with interested parties’ proposed edits, which eliminated minor redundant verbiage.

Mr. Hudson made a motion, seconded by Mr. Moser, to adopt the consensus in INT 2020-06, with the modifications as proposed by interested parties, for statutory accounting (Attachment One-C19). The motion passed unanimously.

h. Tentative INT 20-07T

Mr. Bruggeman directed the Working Group to INT 20-07T: Troubled Debt Restructurings of Certain Debt Instruments Due to COVID-19. Ms. Gann stated this interpretation was drafted after receiving comments in response to INT 20-03: Troubled Debt Restructuring Due to COVID-19 and INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19, which requested consideration of similar accounting exceptions for private placement investments. She stated that interested parties had proposed broad exceptions for all debt securities in an effort not to spend resources on obtaining a collaborative agreement regarding the definition of private placement investments. Ms. Gann stated this guidance proposes limited-time practical expedients in determining whether a restructuring reflects a “concession” under paragraph 10 of SSAP No. 36. Under existing statutory accounting guidance, a restructuring that is insignificant is not a concession; therefore, it is not a troubled debt restructuring. The interpretation originally proposed two practical expedients in determining what is an insignificant debt modification. The original expedients proposed were a 10% shortfall threshold in the contractual amount due and a repayment duration delay no greater than six months. Had both occurred, the modification was deemed to be insignificant. However, in response to comments received from interested parties, NAIC staff have proposed a three-year time duration for the modification in place of the original six-month duration as most debt modifications would likely extend well beyond a six-month time horizon. As proposed by NAIC staff, a modification that does not extend the original contract duration by more than three years and does not change the contractual cash flows by more than 10% would be considered an insignificant change and thus, by definition, not a troubled debt restructuring. Ms. Gann stated that debt covenant changes also do not rise to the level of a troubled debt restructuring and if a modification is not automatically deemed insignificant by the provisions of this interpretation, a reporting entity still has the ability to independently assess, or assess with the assistance of its domestic regulator, if the concession was insignificant. Additionally, if a modification was deemed insignificant under SSAP No. 36, even if the modification does not fall within scope of this interpretation, the investment does not need to be derecognized as an exchange of debt instruments under SSAP No. 103R. She stated the guidance in INT 20-07T does not affect the guidance in INT 20-03 and investments, such as commercial mortgage loans would first follow applicable guidance in INT 20-03. If INT 20-03 does not provide applicable guidance, a reporting entity would then follow the temporary expedience in INT 20-07T.

Mr. Bruggeman stated the intent of this interpretation was to provide a practical expedient for determining what was an insignificant modification under SSAP No. 36. However, if a modification does not fall within scope of this interpretation, it does not necessarily mean the modification is not insignificant and thus requiring troubled debt accounting.

Mr. Hudson made a motion, seconded by Mr. Moser, to adopt the consensus in INT 20-07, with the modification as proposed by NAIC staff, for statutory accounting (Attachment One-C20). The motion passed unanimously.
i. Tentative INT 20-08

Mr. Bruggeman directed the Working Group to INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends. Ms. Marcotte stated that this interpretation was exposed to address questions related to refunds, rate reductions and policyholder dividends in response to decreased insured activity related to COVID-19 stay home orders. She noted that the overall guiding principle is that the accounting shall follow existing statutory accounting principles and annual statement reporting where feasible. She stated that the interpretation noted that several property/casualty (P/C) lines of business had offered refunds, rate reductions or policyholder dividends. She said after the exposure, a large health insurance carrier also announced refunds or rate reductions and that the draft in the materials also recommends adding a reference to SSAP No. 54R—Individual and Group Accident and Health Contracts.

Ms. Marcotte stated that seven comment letters were received, including comments from: the group of interested parties representing several companies, America’s Health Insurance Plans (AHIP), American Property Casualty Insurance Association (APCIA), the Cincinnati Insurance Companies, Grange Insurance Company, National Association of Mutual Insurance Companies (NAMIC) and Travelers Insurance Companies. She stated that most of the comments focus on Issue 1: How to account for refunds not required under the policy terms and on clarifying the scope of the proposed disclosure in Issue 5.

Ms. Marcotte stated there seems to be general support for:
- Issue 2: How to account for refunds required under the policy terms.
- Issue 3: How to account for rate reductions on in-force and renewal business.
- Issue 4: Requires policyholder dividends to follow existing guidance and complete the disclosures per Issue 5.

Ms. Marcotte stated that Issue 5 regarding disclosures requires that reporting entities continue to comply with all statutory accounting disclosure requirements and also requires that all premium refunds, rate reductions or policyholder dividends provided because of the decreased activity due to COVID-19 be aggregated and reported in Note 21A as unusual and infrequent items. She noted that the P/C actuaries who perform rate review and analysis noted that transparency will assist them in evaluating 2020 activities.

Ms. Marcotte provided an overview of comments received. She noted that there was primarily support for the exposure by APCIA and Travelers Insurance on Issues 1–4, and interested parties on Issues 2–4.

Ms. Marcotte noted that there was the most diversity in the comments regarding premium refunds in Issue 1. She stated that some of the interested parties, APCIA and Travelers all supported the exposure requirements of reporting as an adjustment to premium. She said that the interested parties group recommended adding more guidance regarding adjustments to unearned premium. She stated that Grange Insurance Company, Cincinnati Insurance Companies and some of the interested parties group recommended adding a new issue that allows payments under modified policy terms to be recognized as an "other underwriting expense" referencing SSAP No. 70—Allocation of Expenses as an alternative to recognizing adjustments to premium. She stated that Grange Insurance Company noted it was not able to provide dividends to isolated lines of business and viewed the payment as akin to the treatment of a policyholder dividend. She stated that the comment letter from interested parties included a proposed draft supported by some of the interested parties, which illustrated industry-proposed revisions. She stated that NAMIC supports allowing the reporting entity to choose between multiple different methods of recognition, including premium refunds, policyholder dividends and also bad debt expense. She noted that NAMIC’s comment letter prefers the flexibility of reporting payments similar to dividends even if they were not technically policyholder dividends so that the payments are reflected in the combined ratio.

Ms. Marcotte stated that AHIP noted its written comments as preliminary and that it prefers more health-specific guidance. She stated that AHIP also noted that immediate adjustments to premium may be too quick as some entities amortize the rate adjustments.

Ms. Marcotte stated that comments regarding Issue 5 were directed at refining the scope of the disclosures. She stated that AHIP, interested parties and APCIA recommended adding a sentence clarifying that other refunds required under policy terms are not required to be aggregated with the COVID-19 refunds. She stated that Travelers Insurance commented that for commercial rate adjusted policies, it will not be practical to separately identify refunds and rate reductions from changes in premium due to loss experience and as such, policies should be excluded from the disclosure. She stated that NAMIC recommended an editorial deletion of a reference to disclosure of stockholder dividends required under SSAP No. 72—Surplus and Quasi Reorganizations to be clearer that the focus of this interpretation is policyholder dividends.
Ms. Marcotte stated that APCIA recommended putting more permanent guidance in the SSAPs on an expedited basis. Ms. Marcotte stated that NAIC staff have proposed a limited number of revisions to reflect a few of the comments. She stated the first proposed revision is to Issue 1 on refunds, adding a reference to unearned premium as suggested by interested parties to note, “The refund shall be recognized as a reduction to written or earned premium and the unearned premium reserve adjusted accordingly.” She stated that the next proposed revision in Issue 1 is to add a new paragraph and a new subparagraph to reference SSAP No. 54 regarding individual accident and health to address refunds and rebates announced on health business subsequent to the exposure. She stated that overall, the recommendations for Issue 1 are consistent with the exposed guidance with minor health specific references.

Ms. Marcotte stated that NAIC staff have proposed modified revisions to Issue 4 – Policyholder Dividends to incorporate the NAMIC comments that provide editorial deletions to remove references to stockholder dividend disclosures as not needed and maintain the focus on policyholder dividends.

Ms. Marcotte stated for Issue 5 on disclosures, NAIC staff recommend a modification to the clarification suggested by AHIP, the interested parties’ group and APCIA. The industry-proposed language would exclude all policies whose terms require an adjustment to premium. The NAIC staff proposed modification is to include policies whose terms were modified in response to COVID-19. She noted that Travelers Insurance made a similar comment in that it noted, “For commercial rate adjusted policies, it will not be practical to separate refunds and rate reductions from changes in premium due to loss experience and therefore, such policies should be excluded.” She stated that the NAIC staff recommendation is to include policies whose terms were modified after the declaration of emergency in the disclosure of the COVID-19 inspired premium refunds, rate reductions and policyholder dividends.

Ms. Marcotte stated the exposed interpretation is also not proposed to be modified to allow reporting the refunds or rate reductions on in-force policies as premium balances charged off (e.g., bad debt expense). She noted this industry recommendation is inconsistent with guidance in SSAP No. 53—Property Casualty Contracts—Premiums, paragraph 14, on earned but uncollected premium. She also noted that it is inconsistent with the annual statement instructions as the amount is not an uncollectible amount, but rather a voluntary choice by the reporting entity to reduce the amount charged.

Mr. Bruggeman stated that it appears there is consensus regarding Issue 2, Issue 3 and Issue 4. He noted that a good example of the scoping problem identified by industry for Issue 5 on disclosure is that for a workers’ compensation policy in which the policyholder would normally have 100 active employees and now has 10 employees, a refund would normally be required under the policy terms because of the decrease in covered risks. Ms. Marcotte noted that the NAIC staff recommendation was, “For clarification, refunds required under policy terms in-force prior to the federal declaration of emergency for the COVID-19 pandemic as discussed in paragraph 13 (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends. Policies whose terms were modified after the declaration of emergency in response to COVID-19 are required to disclose the COVID-19 inspired premium refunds, rate reductions and policyholder dividends.” Mr. Bruggeman said that the NAIC staff recommendation on Issue 5 adequately addressed the issue.

Mr. Bruggeman stated that at this point, he is not certain that he has all of the information regarding the variety of ways and reasons that funds were returned to policyholders. He noted that the comment letter attachments included the illustration proposed by some of the interested parties and that he would like to understand some of the different situations better. Additionally, he noted that most of the payments were made after April 1. Therefore, he said this is predominately a second-quarter reporting issue. He stated that while there is some time to address this issue, there was also a need for consistent guidance to be finalized expeditiously. Mr. Hudson stated California’s support for reflecting Issue 1 as an adjustment to premium but noted he is also mindful of the amount of comments. He asked if Mr. Bruggeman was suggesting exposing the issue again to allow for further discussion, particularly on Issue 1. Mr. Bruggeman responded that he wants to explore the exposure options of either all of the interpretation or finalizing aspects of the interpretation and allowing for further discussion on Issue 1. Mr. Smith said he is not opposed to another exposure, but he supports the initial recommendation to reflect as an adjustment to premium. Mr. Smith said even with different situations provided in the comments, after review of various company actions—including premium credits, premium refund or return, and rate reductions—in his view, all reflect an adjustment to premium.

Mr. Bruggeman said that some entities’ comments noted that they have returned money even though the risk has not been reduced. Mr. Moser noted that Illinois is willing to explore the accounting as an expense if it makes sense. Ms. Marcotte
suggested exposure with the NAIC staff edits to narrow the scope of future comments. Mr. Bruggeman asked for commenters to focus their comments regarding Issue 1.

Keith Bell (Travelers Insurance), representing interested parties, noted that for reporting entities that reflected the payments as an adjustment to premium, they viewed the issue as a distinction of form over substance. If the reason the payment is being made to the insured is because the risk or exposure went down, then it was appropriate to reflect as a reduction of premium. He noted that premium is an important metric that measures the amount of risk that an insurer takes on as part of the contract and that is how they reached that conclusion.

Kevin Spataro (Allstate) noted that Allstate was early to announce a policyholder relief program. He noted its objective was to get relief into the hands of policyholders quickly with the least disruptions to other stakeholders. He noted that it considered reflecting the amounts as a premium refund but ultimately rejected the treatment, principally because Allstate lacked loss data to be able to reliably reassess the underwriting risk related to the policies in the current conditions. He noted that reporting as a premium refund would also affect other key stakeholders, including agents, whose commissions are based on premiums, and also the states in which they do business, who rely on premium taxes to fund their operations. He stated that as a result, Allstate ultimately decided to amend its policy forms to provide an endorsement to provide a new type of policy benefit that it classified as an other underwriting expense pursuant to SSAP No. 70. He said that Allstate believes that due to the unique nature of the payment, it fits well as an other underwriting expense in a write in line. He noted that Allstate also supported disclosure to provide transparency. He noted that Allstate has no issue with other insurers reporting as a return of premium or as a dividend based on program design. He noted that they believe that Allstate and others who designed and executed their programs around a policyholder benefit should be permitted to classify their payments as an expense. Mr. Spataro stated that while Allstate understands that there is not a specific expense category to allow this treatment, for a COVID-19 relief payment, it believes the interpretation is an appropriate vehicle to codify its proposed accounting treatment. Mr. Spataro further noted that Allstate also does not believe that another agenda item or a permitted practice designation is either necessary or appropriate at this time.

Mr. Bruggeman summarized that it appears that Allstate’s recommendation is that the statutory accounting should follow the policy form, which was filed, i.e. a policy benefit. Mr. Spataro confirmed the comment from Mr. Bruggeman. Mr. Bruggeman noted that the subject companies actually filed amendments to their policy forms; they did not base the refund amount on data telematics from policyholders (such as decreased driving miles.) Mr. Spataro stated that Allstate does not have the data to re-underwrite the policies.

Mr. Bell stated that he is not suggesting the reduced prices were because of telematics, but rather the decrease in losses. He stated that again, the argument is form over substance. If you put aside the labels applied to the payments, the amounts were paid back to the policyholder. He stated that if the payment was because there was less exposure or less losses, then the view is that is a reduction in premium and that premium is the most important measure of an insurer’s exposure to loss.

Mr. Spataro said Allstate looks at this issue differently because it did not reassess the exposure to loss. He noted that the stay-at-home orders have resulted in some policyholders that seem to be driving faster. He stated that Allstate believed the payments were important to get into the hands of its policyholders, but it did not have the ability to re-underwrite those policies, and Allstate still believes this is a policy benefit as opposed to a return of premium. Mr. Bruggeman noted that some policyholders were driving less, and others, such as essential workers, were driving the same or sometimes more.

Thomas Finnell (AHIP) noted that AHIP did not have much time to react to the health specific change. However, he said other than a large insurer making an announcement, there is not a lot of activity on the health side regarding the same types of refunds. He said that the example may be restrictive to other insurers if they decide to take action later in the reporting year. Mr. Finnell stated that the interpretation provided more P/C examples and that additional health examples would be helpful. He said one jurisdiction has put out an announcement that such payments would require a rate filing. He noted that a few members have provided premium holidays in prior years that were reported as a reduction of premium which was amortized over the policy year. Mr. Finnell stated that such amortization is not covered by the text in the interpretation. He stated that AHIP would like to have further clarification regarding what is meant by immediate reduction in premium (written, earned or unearned). He stated that AHIP would like to bring the idea of premium holidays into the interpretation. He stated that AHIP shared the concern of interested parties regarding the scoping of the disclosure. It seems that there are retrospective premium assessments because of the totality of activity on the policy not just as a result of COVID-19 payments. Mr. Bruggeman noted that the very large company announcement prompted inclusion of the health contracts in case other entities decided to go down that path.
Steve Broadie (APCIA) noted that APCIA’s financial management regulation committee considered all of the issues and voted to support the conclusions reached in the interpretation as an appropriate application of the existing accounting guidance. He stated that APCIA supports adoption of the INT with respect to Issue 1. Mr. Broadie stated that the diversity of comments received also indicated the need for additional permanent substantive guidance in the statements. He said that APCIA would be happy to support and work with NAIC staff on developing revisions that it believes are necessary on an expedited basis.

Rachel Underwood (Cincinnati Insurance Companies) noted support for the position of reporting the payment in Issue 1 in other underwriting expense as Mr. Spataro presented. She noted that Cincinnati Insurance Companies presented additional reasoning for its position in its comment letter.

Jonathon Rodgers (NAMIC) noted that this is unprecedented and that there is great diversity of actions and preferences among NAMIC’s members. He stated that characterizing the return of funds to policyholders as a return of premium does not work for everyone. He noted some mutual entities wanted to provide policyholder dividends, but their systems were not set up to provide the expedited payments. He noted that often a policyholder dividend is issued to share favorable loss experience. Mr. Rodgers said it is too early to substantiate the impact of the loss experience, but the losses being reported are lower. He noted that the company systems could not accommodate the accelerated payments. He stated that although the payments were not policyholder dividends, NAMIC’s members supported similar treatment. He noted another instance in which premium previously collected and earned was returned. He stated that some members supported reporting these returned amounts as premium and agents balances charged off similar to bad debt expense. He noted that the accounting guidance in SSAP No. 53 and SSAP No. 70 was not a good fit for all of the actions. He stated that this extraordinary event calls for flexibility in reporting.

Mr. Bruggeman said that at this time, he thinks that another exposure that includes the NAIC staff proposed revisions is appropriate. He asked if the Working Group had any issues with another exposure, and no objections were stated.

Mr. Hudson made a motion, seconded by Mr. Moser, to expose INT 20-08T with the modifications recommended by NAIC staff for a 16-day public comment period ending June 5. The motion passed unanimously.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman  
Statutory Accounting Principles Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

RE: Items Exposed for Comment During the NAIC Spring National Meeting Conference call with Comments due May 1

Dear Mr. Bruggeman:

Interested parties thank the NAIC Statutory Accounting Principles (E) Working Group (the “Working Group”) for your continuing effort to address the various statutory accounting issues during the ongoing pandemic. We appreciate the opportunity to comment on the exposure drafts released for comment the Working Group during the recent NAIC Spring National Meeting via conference call. We offer the following comments:

Ref# 2019-20, Rolling Short-Term Investments

The Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, with modifications from the prior exposure.

The revisions incorporate additional principle concepts, if certain criteria are not met, that will restrict the classification of related party or affiliated investments as a cash equivalent or short-term investment in the scope of SSAP No. 26R—Bonds, SSAP No. 43R—Loan-backed and Structured Securities, or that would be reported as “Other Invested Assets.”

An additional disclosure has also been proposed to identify short-term investments (or substantially similar investments) which remain on the short-term schedule for more than one consecutive year (i.e. a re-underwritten investment that is renewed). A concurrent blanks proposal will recommend a reporting code for renewed short-term investments as well as a new general interrogatory to certify that re-underwriting has occurred. (This code will also apply to nonaffiliated non-related party transactions for identification purposes.)

Interested parties appreciate the Working Group’s engagement with us on this proposal. We believe the current proposal is well suited to addressing the issues identified in the Form A. We offer the following
suggested changes which we believe will improve the current proposal as well as clarify certain
provisions that may cause confusion on the part of preparers and result in inconsistent application by
insurers.

The proposed new Footnote 1 to both paragraphs 7 and 13 of SSAP No. 2R- Cash, Cash Equivalents and
Short Term Investments (“SSAP No. 2R”) explicitly excludes specific short term investment vehicles
qualifying under the scope of SSAP No. 103R- Transfers and Servicing of Financial Assets and
Extinguishments of Liabilities (“SSAP No. 103R”) from the scope of the proposed long term
reclassification requirements. However, the proposed footnote makes reference to both “reverse
repurchase” transactions, which are defined as collateralized lendings to be reported as short term
investments under SSAP No. 103R and therefore relevant for inclusion in the proposed new Footnote 1
for paragraph 13 of SSAP No. 2R, as well as “repurchase” transactions, which are defined as
collateralized borrowings to be reported as liabilities under SSAP No. 103R and are not relevant to the
proposed SSAP No. 2R footnote. As reverse repurchase agreements are to be reported as short-term
investments, not cash equivalents, there is no reason to mention them in the proposed new Footnote 1
for paragraph 7.

In addition, the proposed new footnote 1 to both paragraphs 7 and 13 of SSAP No. 2R contains two
distinct and separate instructions: one for excluding reverse repurchase agreements (or cash pooling
arrangements in the case of the paragraph 7 footnote) from the scope of the new long term
reclassification guidance; and another regarding subsequent reporting for cash equivalents and short-
term investments that are subject to the new long term reclassification guidance. We recommend
breaking the proposed footnote 1 into two separate footnotes.

Therefore, we recommend the following edits to SSAP No. 2R:

Proposed new footnote 1 to paragraph 7: Cash pooling arrangements permitted under paragraph
8 are excluded from these provisions.

Proposed new footnote 2 to paragraph 7: Cash equivalents subject to the provisions of paragraph
7 are not permitted to be subsequently reported as short-term investments, even if the updated /
reacquired maturity date is within 1 year. These investments shall be reported as long-term
investments. To avoid changes in reporting schedules, reporting entities are permitted to report
securities as long-term investments at initial acquisition regardless of the initial maturity date.

Paragraph 12: “Short-term investments are investments that do not qualify as cash equivalents
with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year
or less at the time of acquisition shall be considered short-term investments. Short-term
investments can include, but are not limited to, bonds, commercial paper, reverse repurchase
agreements, and collateral and mortgage loans. which meet the noted criteria. Short-term
investments shall not include certificates of deposit. Regardless of maturity date, derivative
instruments shall not be reported as short-term investments and shall be reported as derivatives
on Schedule DB.”

Proposed new footnote 1 to paragraph 13: Reverse repurchase transactions are excluded from
these provisions if admitted in accordance with collateral requirements pursuant to SSAP No.
103R- Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.
Proposed new footnote 2 to Paragraph 13: Short term investments subject to the provisions of paragraph 13 are not permitted to be subsequently reported as cash equivalents, even if the updated/reacquired maturity date is within 90 days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

Finally, interested parties recommend the deletion of the term “or substantially similar investments” in the new proposed disclosure of paragraph 16e of SSAP No. 2R. Unless defined, this terminology is vague and will likely result in inconsistent application by preparers.

Ref# 2019-25, Working Capital Finance Notes

Interested parties agree the changes reflected in the modified version of SSAP No. 105 are appropriate, necessary, and we support their adoption. Nevertheless, interested parties maintain that absent changes reflecting industry input on the four items not supported by the Working Group that adoption of SSAP 105 will remain muted and that the asset class will remain under invested. We respectfully request consideration of regulators to direct staff to revise its proposal and adopt industry-requested changes governing these four requests.

Ref# 2019-36: Expand MGA and TPA Disclosures

In December 2019, the Working Group exposed revisions to SSAP No. 51R—Life Contracts, paragraph 50, SSAP No. 53—Property Casualty Contracts—Premiums, paragraph 19, SSAP No. 54R—Individual and Group Accident and Health Contracts, paragraph 33 and SSAP No. 59—Credit Life and Accident and Health Insurance Contracts, paragraph 19, to expand the MGA/TPA footnote as follows:

- Aggregate direct written premium and total premium written by MGA/TPA;
- Aggregate dollar amount of claims process / total claims processed by MGA/TPA; and
- Information on related party / affiliate status and if the MGA/TPA is independently audited and / or bonded.

Based on responses received on the original exposure, a re-exposure was made in March 2020 with the following attributes:

- A TPA was defined to be consistent with the NAIC Model Guideline, VI-1090 Registration and Regulation of Third-Party Administrators (“TPAs”).
- A claims measure was maintained for determining which TPAs to be disclosed, instead of a written premium measure suggested by interested parties. However, to address the interested parties’ operational concerns the language has been revised from “claims adjusting services are
Interested parties appreciate the incorporation of our previous comments in the re-exposed draft by including a definition of third-party administrators through referencing Version 1 of the Third Party Administrator Act. However, upon further analysis and as noted in the Registration and Regulation of Third-Party Administrators (NAIC Guideline), there are two versions of the model law of the Third-Party Administrator Act, and states have adopted either version, if any. Therefore, a consistent and widely accepted definition of a TPA is not available and needs to be developed to ensure uniform disclosure amongst companies.

Additionally, the reporting threshold and basis remains unclear. Is total count of claims processed by the TPA/MGA measured at a line of business or company level? Would claims paid within insureds’ deductibles be included? We believe it will be quite burdensome for insurers to monitor this metric as there is no reasonable basis for measurement that can be utilized from the Annual Statement.

As we are concerned that the exposure draft includes a definition of a TPA that is inconsistent with state law which will most likely lead to preparer confusion and misapplication of the proposed guidance once adopted, we recommend that a state regulator/industry study group be formed to develop a uniform definition taking into consideration commonalities in existing state law. In addition to developing a uniform definition, the study group could also recommend the best way, and the proper mechanism, to develop the information requested.

**Ref# 2019-37: Surplus Notes – Enhanced Disclosures**

During the 2018 Spring National Meeting, the Working Group exposed revisions to *SSAP No. 41R – Surplus Notes* (“*SSAP No. 41R*”) to indicate that surplus notes, where the proceeds from the issuance of the surplus note were used to purchase an asset directly or indirectly from the holder of the surplus note, are not subordinate and do not qualify for reporting as surplus and should be classified as debt. Furthermore, the exposure draft stated that these assets were not considered available for policyholder claims and should be non-admitted. The exposure was the result of a referral from a Subgroup of the Reinsurance Task Force that was more narrowly focused on whether specific securities could be considered Primary Securities.

At the 2019 Fall National Meeting, the Working Group exposed additional disclosures that should be captured in *SSAP No. 41R*. Interested parties responded to that exposure in early 2020, and more recently in discussions with NAIC staff, with suggestions to enhance the disclosure as summarized below:

**Summary of Proposed Revisions**

- Expand the disclosure requirement to the financial statements of the ceding company as well as the surplus note issuer.
- Retain the current disclosure of total interest paid (gross of any administrative or other netting)
- Replace quantitative disclosure of “interest remitted” and “cost of liquidity” with three Y/N disclosure columns, which correspond to the criteria used in the data call scoping.

- Add information on the percentage of interest payments offset through ‘administrative offsetting’ (not inclusive of amounts paid to a 3rd party liquidity provider).

- Add requirement for narrative disclosure of any related guarantees or support agreements.

On March 18, 2020, the Working Group re-exposed the disclosure and the re-exposure substantially incorporated interested parties’ comments and suggestions. Interested parties appreciate the engagement and collaborative effort we’ve had with the Working Group and NAIC staff over the past six months to arrive at a mutually beneficial robust disclosure, and support adoption of the proposed revisions.

We are aware that the Working Group does intend, later in 2020, to continue discussions on how to treat surplus notes where an associated asset is received by the surplus note issuer. We believe that the disclosure, once adopted, and further analysis of the 2019 data call should allow regulators to focus on areas for further analysis with specific companies on their financing transactions (utilizing surplus notes) as opposed to any restrictions on the usage of surplus notes as currently allowed in statutory guidance.

**Ref# 2019-42: Inclusion of Cash / Liquidity Pools - Cash Equivalents as defined in SSAP No. 2R**

The Working Group exposed this agenda item, with revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, with revisions from the prior exposure marked, to reflect that certain cash / liquidity pools, meeting defined criteria, may be reported as cash, cash equivalents, or short-term investments.

Interested parties appreciate the Working Group addressing the considerations raised in our previous comment letter for Ref #2019-42, Inclusion of Cash/Liquidity Pools-Cash Equivalents as defined in SSAP No. 2R. Cash/Liquidity pools are very important to insurers as they have been used throughout the years for efficient management of cash, cash equivalents, and short-term investments.

After reviewing the modifications proposed by the Working Group, we request one additional change to the proposal. As mentioned in our previous comment letter:

“Given the varied characteristic discussed above, we recommend paragraph 8 be modified to state that, if the requirements of paragraph 8 are met, the reporting entity may look through the ownership structure and report the assets as either cash equivalents or short-term assets based on the predominant characteristic of the underlying assets. This would allow companies the flexibility to report their investments in the pools in the Statutory statement schedule that is more reflective of the type of underlying investments in their pool and prevent the need for companies to reclassify/change their existing reporting to Schedule E2 from DA if they currently report the pools in DA due to the underlying assets.”

In response to our comment noted above, the Working Group proposed the following addition to SSAP No. 2R:

“The reporting entity shall report their total balances in the cash pool on the schedule which represents a majority of the held assets (For example, a qualifying cash pool that contains 20%
cash, 70% cash equivalents, and 10% short-term investments, the reporting entity would report their entire balance invested as a cash equivalent.)”

We note that the Working Group proposal for SSAP No. 2R requires reporting in either Schedule E2 or DA based on the “majority” of the underlying assets held in the Cash/Liquidity pool. After further considering the verbiage, we propose SSAP No. 2R be modified to state that the classification of Cash/Liquidity pools in either Schedule E2 or DA be based on “a determination, based on management’s judgment at the time the pool is formed, as to the expected characteristics of the majority of the underlying assets in the pool”. That is, if based on management’s judgment at the time the pool is formed, the expectation is that the majority of assets in the pool will be invested in short-term investments, the pool would be classified on Schedule DA.

This change in verbiage would allow insurers who have already been using such pools to continue to classify them in either Schedule E2 or DA, consistent with the reporting since forming their pools. It also would prevent the need for insurers to unnecessarily transfer their pools between Schedule E2 and DA, which would cause operational inefficiencies counterproductive to the use of a pool, should the mix of the underlying assets change from period to period. It also would eliminate the need to continue to track the mix of assets in the underlying pool on an on-going basis. We do not believe this approach would be a concern to regulators because, as mentioned in the Working Group’s March 21, 2020 Public Hearing Agenda “…cash, cash equivalent, and short-term investments are aggregated together for solvency and analysis reviews”.

We request an adoption date of January 1, 2021 for the changes to SSAP No. 2R so that insurers can have time to fully evaluate their short-term pools to ensure they meet the requirements in the proposal and determine the appropriate reporting. Additionally, time may be needed to modify pool operating agreements and audit procedures to meet the new requirements.

Ref# 2019-47: Grade in of Variable Annuity Reserves

The Working Group exposed this agenda item, with revisions marked with the heading “Spring National Meeting Discussion.” A referral was also be sent to the Life Actuarial (A) Task Force for notification of this exposure.

Interested parties agree with the conclusion on this item.

Ref# 2020-01: Update / Remove References to SVO Listings

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock, to eliminate references to the NAIC Bond Fund List. The revisions also add reference to the “NAIC Fixed-Income Like SEC Registered Funds List” in SSAP No. 30R.

Interested parties agree with the conclusion on this item.

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the editorial maintenance revisions to SSAP No. 21R—Other Admitted Assets and SSAP No. 51R—Life Contracts.

Interested parties have no comment on this item.

Ref# 2020-07: Change to the Summary Investment Schedule

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix A-001, Section 3, Summary Investment Schedule to add a line for Total Valuation Allowance. These revisions mirror those that the Blanks (E) Working Group concurrently exposed.

Interested parties agree with the conclusion on this item.

Ref# 2020-08: ASU 2016-20, Technical Corrections and Improvements to Topic 606

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 47—Uninsured Plans to reject ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers.

Interested parties agree with the Working Group’s conclusion on this item.

Ref# 2020-09: ASU 2018-18, Collaborative Arrangements (Topic 808)

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 47—Uninsured Plans to reject ASU 2018-18, Collaborative Arrangements (Topic 808), Clarifying the Interaction between Topic 808 and Topic 606.

Interested parties have no comment on this item.

Ref# 2020-10: ASU 2017-14—Amendments to SEC Paragraphs in Topic 220, Topic 605 and Topic 606

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2017-14, Amendments to SEC Paragraphs in Topic 220, Topics 605 and Topic 606 for statutory accounting.

Interested parties have no comment on this item.

Ref# 2020-11: ASU 2020-02—Amendments to SEC Paragraphs in Credit Losses (Topic 326) and Leases (Topic 842)

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed
revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-02—Amendments to SEC Paragraphs in Credit Losses (Topic 326) and Leases (Topics 842) as not applicable for statutory accounting.

Interested parties have no comment on this item.

Re: Proposed INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Chairman Bruggeman:

America’s Health Insurance Plans (AHIP) and its members appreciate the continuing dedication and diligence that you and your colleagues show in your work to address the pandemic crisis while balancing the regulatory goals of consumer protection and company solvency. It is beyond doubt that these are extraordinary times, and they require extraordinary effort by both the regulatory community and industry.

The Statutory Accounting Principles (E) Working Group (SAPWG) recently exposed five new proposed Interpretations that address various impacts of the pandemic. AHIP is providing the following comments which pertain to one of those five exposures, specifically, INT 20-08T, COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends.

AHIP often signs on to comment letters submitted by a broader group of interested parties (IP), however we have chosen not to do so in this instance. That is not because of any fundamental disagreement per se with the draft of the IP letter that we reviewed. Rather, it is because, as drafted, the IP letter proposes to amend INT 20-08T to address the accounting and reporting for premium refunds, rate reductions, policyholder benefit payments and policyholder dividends attributable to COVID-19 impacts on the private passenger and commercial auto insurance business only. In light of the message we received from NAIC staff yesterday which included staff’s recommended changes to INT 20-08T to specifically scope in health insurance, we believe it is best for AHIP to submit its own comments and focus directly on impacts on health plans.

Also, and given that we have had barely more than one day to review the health-specific amendments provided by NAIC staff, we have had extremely limited time to study those amendments and solicit input from our members. Accordingly, please accept the following comments as preliminary. We hope you will afford us the opportunity to expand upon them if needed in oral comments to SAPWG when it convenes by phone on May 20. With that, we offer the following comments:

1. With regards to paragraphs 1-5, some additional context that is more specific to the health insurance sector may be appropriate. For example, and to the extent known, it would be helpful to include information as to the various ways in which such premium reductions have been made in the health sector.
2. As drafted with the health-related amendments, INT 20-08T calls for “immediate adjustments to premium for voluntary accident and health premium refunds.” It is not clear to us that “immediate” is necessarily appropriate depending, for example, as to whether the subject is written or earned premium. Many health plans are established as 12-month contracts. In some cases the insurer records premiums on a monthly basis as billed, and on others it records written premium for the 12-month period with corresponding unearned premium which are then reduced as premium payments are received and as premiums are earned over the coverage period, respectively. Depending on management’s intent with respect to the premium reduction, it may have an intended immediate impact on earned premium, or be amortized over the remaining term of the contract.
   a. For example, it may depend if the premium reduction is in the context of past business with the insurer (expired portion of the contract or prior contracts) or in the context of continued business (unexpired portion of the contract or future contracts).
   b. Such alternatives are conceptually like the FASB guidance cited by the IPs with respect to INT 20-05T: Investment Income Due and Accrued, and the treatment of an “interest holiday.”
   c. We are aware of one member which has in the past given premium holidays, usually in the first month of the policy period which is then amortized ratably over the policy period.

3. In short, we can see such health premium reductions happening in various ways, and more time is needed to assure that the INT text accommodates those variances and thus maximizing opportunities for such reductions, while at the same time providing sufficient uniformity in reporting across reporting entities in order to meet your objectives.

4. AHIP also has concerns about some aspects of the proposed disclosures proposed by INT 20-08T and references therein to SSAP 66 and experience rated contracts (which includes experience rated health contracts). It provides that “all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends shall be disclosed as unusual or infrequent items.” For experience-based refunds, the amount is based on the group's total experience over the contract period, and it is not practical to parse through claim details to say how much is necessarily related to Covid-19. Moreover, to the extent that claims have not been made (e.g., elective procedures have been deferred) and premiums reduced, a health plan could only surmise the cause of that impact, although certainly a good portion would be related to the pandemic - it just can't be quantified with any precision. We thus suggest the following change:

21. To allow for aggregate, consistent assessment, the Working Group came to a tentative consensus that all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments. For the avoidance of doubt, refunds required under the policy terms as discussed in paragraph 12 (i.e., policies that require an adjustment to premium based on either...
the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends.

Re: SAPWG Proposals Exposed on May 5, 2020

Dear Chairman Bruggeman:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the items exposed by the Statutory Accounting Principles (E) Working Group on May 5, 2020. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

APCIA supports the comment letter from industry interested parties with respect to all issues except for INT 20-08T, which we address below.

INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

The COVID-19 pandemic has introduced unprecedented challenges for the insurance industry and regulators as it has for the entire nation. While changing many aspects of their operations, insurers are undertaking substantial and extraordinary efforts to help policyholders at this challenging time. For example, companies are providing flexible payment options, waiving late fees, and pausing cancellation of coverage due to non-payment of premiums. Most significantly, property casualty insurers are returning billions of dollars to policyholders through a variety of mechanisms—including refunds, discounts, dividends, and credits.

Given the unprecedented nature and scope of this extraordinary industry action, there is understandably limited statutory accounting guidance for reporting the various methods that insurers are implementing to support policyholders. INT 20-08T proposes tentative guidance on how to account for policyholder relief issued in response to COVID-19. The proposed INT concludes that voluntary refunds and rate reductions should be accounted for as an adjustment to premium revenue, and different treatment (e.g., as an expense) must be considered a permitted or prescribed practice.

APCIA’s Financial Management and Regulation Committee voted to support the conclusions reached in the INT. We agree that, under existing accounting guidance, voluntary refunds and rate reductions should be accounted for as an adjustment to premium revenue, and differing
treatment should be considered a permitted or prescribed practice. Consequently, APCIA urges the Working Group to adopt INT 20-08T in order to provide temporary guidance.

While we agree with the proposal’s interpretation of existing statutory accounting principles, APCIA believes that current accounting guidance may not adequately address the wide variety of methods companies are using to deliver policyholder relief. For example, it may be appropriate to amend statutory accounting principles to allow certain types of policyholder relief to be treated as an expense, depending on the circumstances that call for such relief. Some insurers have amended their policies through manual rate filings and endorsements to provide payments or credits to policyholders; however, companies would be unable to report these amounts as an expense unless statutory accounting is amended. Because of the extraordinary circumstances in which we find ourselves as a result of COVID-19, we believe that additional substantive guidance is needed by the end of this year. Therefore, APCIA asks the Working Group to consider—an expedited basis—a Form A containing substantive amendments to statutory accounting regarding the treatment of policyholder relief measures.

Furthermore, accounting and financial reporting issues associated with policyholder relief should be addressed holistically. Although we are experiencing a highly unusual and unexpected situation that has required extraordinary industry and regulatory action, we should not assume new unusual and unexpected situations will not occur in the future. Statutory accounting guidance must be able to adapt to sudden changes in the regulated environment, so we believe the Working Group should consider changes to statutory accounting that would be applicable to future situations where policyholder relief may be a suitable reaction to a future event. This approach would build flexibility into statutory accounting to allow timely development of necessary guidance to suit the exigent and unpredictable needs of a future crisis.

Finally, we note that APCIA agrees with interested parties’ recommendation to add the following sentence to paragraph 21 of the proposed INT: “For the avoidance of doubt, refunds required under the policy terms as discussed in paragraph 12 (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends.”

Thank you for considering the points addressed in this letter, and please do not hesitate to contact us if you have any questions.

Sincerely,

Stephen W. Broadie
Vice President, Financial & Counsel

Re: INT 20-08T- COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The Cincinnati Insurance Company ("Cincinnati") appreciates the opportunity to provide comments for consideration on the Statutory Accounting Principles Working Group ("SAPWG") interpretation exposure, INT #20-08T: COVID-19 Premium Refunds, Rate Reductions, and Policyholder Dividends ("the Tentative INT"). Cincinnati's property casualty group is among the 25 largest groups in the United States, based upon net written premium.

The Tentative INT contemplates interpretation of policyholder relief payments in reaction to the current COVID-19 pandemic as either premium refunds, rate reductions, or policyholder dividends, and provides statutory accounting and reporting framework as such. Cincinnati supports the comment letter submitted by interested parties in adding a new Issue 4 to the Tentative INT. Cincinnati's position is based on the following:

• This was a one-time action intended to provide immediate relief to policyholders in response to the unusual and unprecedented COVID-19 pandemic.
• Payment amount was determined without specific known loss experience in order to accommodate urgency of the situation.
• Cincinnati revised the impacted policyholder contracts through rule filings to states and company letters to impacted policyholders, allowing this one-time payment benefit with the intent to treat it as a company expense.
• Companies acted with a sense of urgency, notified states of the company payment plan, and proceeded to act, in good faith, in accordance with those plans, absent any state objections.
• The INT as originally drafted does not address the situation where companies utilized rule filings to allow this one-time policyholder relief payment.

In conclusion, Cincinnati supports the comment letter submitted by interested parties, which suggests adding an Issue to the INT where companies utilized rule filings to allow this one-time payment and allow this situation to be reported as an expense following the guidance provided under SSAP 70 - Allocation of Expenses.

Sincerely,

[Signature]

Re: INT 20-08T – COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

Grange Insurance Company (“Grange”) appreciates the opportunity to provide comments for consideration on the exposure drafts released for comment by the Statutory Accounting Principles Working Group (“SAPWG”) on interpretation exposure, INT #20-08T: COVID-19 Premium Refunds, Rate Reductions, and Policyholder Dividends (“the Tentative INT”). Grange’s property & casualty group is among the 75 largest insurance groups in the United States of America, based upon our approximately $1.3 billion in net written premium.

The Tentative INT contemplates classifying policyholder relief payments in reaction to the current COVID-19 pandemic as either premium refunds or policyholder dividends and provides proposed statutory accounting and reporting guidance as such. Grange’s comments will primarily focus on rationale to revise the Tentative INT to allow reporting these payments as other underwriting expenses due to other fact patterns that were not contemplated by the original policy exposure. Grange’s position is based on the following logic:

- The payments were intended to provide immediate financial relief to our policyholders regardless of contractual obligations.
- The payments were made voluntarily in our operating states.
- Loss experience data was mostly unknown at the time of announcing and issuing relief payments, regarding the ultimate impact of federal and state shelter-in-place orders.
- These payments are more in line with a company expense, such as a policyholder dividend.
- Grange revised the impacted policyholder contracts through filing endorsements with certain states and provided company letters to all impacted policyholders to provide the contractual language needed to allow such payments.
- Formal policyholder dividends were not a viable option, as dividends must be paid to all policyholders not just the lines of business expected to be favorably impacted by the shelter-in-place orders. Also, due to required approvals, dividends would not be the most immediate payment option.
- When we looked for relative consistency in reporting treatment for payments made outside of contractual premium refunds, categorizing these payments as an expense was the closest option to policyholder dividend reporting.
Classification as a premium refund will have unintended ancillary financial consequences, such as reducing premium taxes to state agencies. Like many of our competitors, we assured our independent agent partners, many of which are small businesses, that their commissions would not be impacted by these payments. Accordingly, commission ratios will be impacted (elevated) if reporting as a premium refund is required.

- Reporting the payments as an expense brings an advantage to analyzing insurance company results as it will impact only the expense ratio component of the combined ratio.
- Reporting the payments as a premium refund would distort analysis of insurance company results as it will impact all components of the combined ratio: loss, dividend, and expense ratios.
- Premium adjustments, whether contractual refunds or by rate filings, include consideration of actual loss experience, which is not completely available in this situation.
- These payments are the result of an unusual and infrequent event that would be excluded from future rate filing consideration.
- Insurance companies acted with a sense of urgency in light of the pandemic, notified states of the company’s payment plans, and then proceeded to act, in good faith, in accordance with those plans, absent any state objections.
- In addition to these payments to our policyholders for immediate financial relief, actual premium relief could come in the future through normal rate reviews and consideration of actual loss experience.

In light of the COVID-19 pandemic, regulators from a majority of states issued a number of bulletins, orders, advisories, and other guidance (collectively “Bulletins”) urging property & casualty insurance carriers nationwide to provide some means of immediate financial relief to policyholders, at least in private passenger automotive lines. The principle was that insurers should provide immediate financial relief in anticipation of lower than expected loss experience arising from a decrease in driving activity due to federal and state shelter-in-place orders. Such payments needed to be applied reasonably and consistently in order to avoid being considered a rebate or unfair discrimination. Though payments by insurance carriers would be a voluntary action in most states, they were required in the State of California (Bulletin 2020-3). The issuance of Bulletins by each state, each with their own guideline nuances, created uncertainty across insurance carriers of how to accommodate making such payments within applicable compliance standards.

Grange considered the magnitude of the situation and guidance available at the time. A policyholder dividend was deemed inappropriate, at least in part, as it would take longer to enact given the required approval process. A premium refund would create unintended negative financial consequences to state agencies and agents (absent the decision by Grange, like many carriers, to not impact agent compensation) by reducing premium amounts, therefore reducing premium taxes and commissions. Premium refunds also have the negative impact of altering comparability for all components of the combined ratio. Additionally, these policyholder payments were based on the expectation of profits from favorable loss experience, yet the data to determine such experience has not yet occurred. Therefore, Grange communicated to states that the payment program would be treated as an expense when policy endorsements were filed. Grange included that it intends to review the actual loss experience results and adjust premiums as part of regularly planned future rate reviews. These one-time payments would be excluded from future rate calculations and filings. No state rejected Grange’s payment program.

In the absence of any state objections, Grange acted in accordance with the payment program and contends that reporting these pandemic related payments as an expense would fall within the guidance of SSAP 70 – Allocation of Expenses and be disclosed in accordance with SSAP 24 – Discontinued Operations and Unusual or Infrequent
Items. INT 20-08T already includes disclosure guidance under SSAP 24. SSAP 70 – Allocation of Expenses, paragraph 3 states:

3. Allocable expenses for property and casualty insurance companies shall be classified into one of three categories in the Underwriting and Investment Exhibit as follows:

And then goes on to list the three expense categories as a) Loss adjustment expenses, b) Investment expenses, or c) Other underwriting expenses. Other underwriting expenses are defined as allocable expenses other than loss adjustment expenses and investment related expenses. Grange would report the relief payments as a write-in item under other underwriting expenses.

In conclusion, Grange believes that INT 20-08T should provide guidance for companies to report the relief payment as an expense. The payments achieved immediate financial relief for policyholders without unintended negative consequences for state agencies and company agents. Policyholders would see premium relief, as applicable, in future rates. We believe that comparability of insurance company results is least impacted if these payments are recorded as other underwriting expenses.

Sincerely,
Brian Poling
VP - Finance

RE: Items Exposed for Comment by the Statutory Accounting Principles Working Group on May 5 with Comments due May 14

Dear Mr. Bruggeman:

Interested parties thank the NAIC Statutory Accounting Principles (E) Working Group (the “Working Group”) for your continuing effort to address the various statutory accounting issues arising from the ongoing pandemic caused by the novel coronavirus, COVID-19. We appreciate the opportunity to comment on the exposure drafts released for comment the Working Group. We offer the following comments:

**INT 20-05T: Investment Income Due and Accrued**

In response to COVID-19, temporary interpretations have been considered to provide exceptions to existing statutory accounting guidance with regards to the 90-day rule for various receivables, as well as guidance on the assessment of impairment and trouble debt restructurings. In response to these interpretations, a request to provide a temporary exception to SSAP No. 34—Investment Income Due and Accrued was made.

This interpretation is intended to assess the requirements to review investment income due and accrued and consider whether temporary exceptions could be granted in response to COVID-19. Issues addressed in the interpretation include:

a. Recognition and admittance of investment income under SSAP No. 34.

b. Review of FASB staff technical inquiries and responses on investment income.

The Working Group considered limited time collectability assessments and admittance exceptions for investment income due and accrued and reached the following tentative consensus:

a. Continue with existing guidance in SSAP No. 34 that investment income shall be recorded when due (earned and legally due) or accrued (earned but not legally due until after the reporting date). If investments have been impacted by forbearance or other modification provisions, a reporting entity shall assess whether the investment income has been earned in accordance with the modified terms. Investment income shall only be recognized when earned.

b. Continue with existing guidance in SSAP No. 34 to require an assessment of whether recorded investment income due and accrued is uncollectible.
For mortgage loans, bank loans and investment products with underlying mortgage loans impacted by forbearance or modification provisions, reporting entities may presume that borrowers and investments that were current as of Dec. 31, 2019, were not experiencing financial difficulties at the time of the forbearance or modification for purposes of determining collectability. For these investments, further evaluation of collectability is not required for the 1st and 2nd quarter 2020 financial statements unless other indicators that interest would not be collected are known (e.g., the entity has filed for bankruptcy).

For investments not impacted by forbearance or modification provisions, this interpretation does not provide an assumption of collectability and the provisions of SSAP No. 34 shall be followed in evaluating collectability and assessing whether an impairment exists.

c. Provide an exception for the nonadmittance of recorded investment income due and accrued that is deemed collectible and over 90-days past due. With this exception, reported investment income interest due and accrued that becomes over 90-days past due in the 1st or 2nd quarter may continue to be admitted in the June 30th, 2020 (1st and 2nd quarter) financial statements. This exception does not encompass mortgage loans in default. Mortgage loans in default shall continue to follow the SSAP No. 34 guidance.

The Working Group considered the FASB technical guidance and reached a tentative consensus consistent with the FASB staff on how interest should be recognized when a payment holiday is given and interest is not accrued. With this guidance, either of the following methods could be applied:

a. A new effective interest rate is determined that equates the revised remaining cash flows to the carrying amount of the original debt and is applied prospectively for the remaining term. With this approach, interest income is recognized during the payment period holiday.

b. The reporting entity recognizes interest income on the loan in accordance with the contractual terms. Under this view, the reporting entity would recognize no interest income during the payment holiday and would resume recognizing interest income when the payment holiday ends.

The exceptions and provisions detailed in the interpretation are applicable for the June 30th, 2020 (2nd quarter) financial statements. The exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements as the interpretation will automatically expire as of September 29, 2020.

Interested parties note that paragraph 10C of the INT states the following: “Provide an exception for the nonadmittance of recorded investment income due and accrued that is deemed collectible and over 90-days past due. With this exception, reported investment income interest due and accrued that becomes over 90-days past due in the 1st or 2nd quarter may continue to be admitted in the June 30th, 2020 (1st and 2nd quarter) financial statements. This exception does not encompass mortgage loans in default. Mortgage loans in default shall continue to follow the SSAP No. 34 guidance.” (emphasis added by italics)

Interested parties also note that, under certain circumstances, a modified loan (in scope of SSAP No. 34) where the modification is in the scope of INT 20-03, could have an amount due and accrued (deemed collectible) that is 180 days or more past due if the number of days past due is measured in terms of the original contractual terms (prior to the modification). We recommend that INT 20-05T be clarified to state that the determination of whether a loan is in default should be done based on the terms of the modified contractual terms of the loan and not the original contractual terms of the loan (prior to the modification).
INT 20-06T: Participation in the 2020 TALF Program

The Working Group reached a tentative consensus to prescribe statutory accounting guidance for insurance reporting entity involvement in the 2020 TALF Program. Pursuant to this consensus:

a. Reporting entities borrowers who directly receive the TALF loan shall follow guidance in paragraphs 8-14 of this interpretation for the statutory accounting and reporting. As detailed in paragraph 11 of the INT, this interpretation provides an exception to allow admitted asset reporting for the pledged securities although the TALF program does not permit the pledged assets to be generally substitutable.

b. Reporting entities that do not directly receive the TALF loan but are investors to borrowers that receive the TALF loan, shall follow the provisions in paragraphs 15-16 for the statutory accounting and reporting.

The provisions detailed in this interpretation are applicable for the duration of the 2020 TALF loan program.

Interested parties propose the following clarifying edit to paragraph 13 in order to avoid unnecessary confusion for reporting entities and unintended inconsistencies in reporting:

13. Although the transaction is similar to a repurchase agreement accounted for as a secured borrowing, the TALF transaction is not a repurchase transaction. As such, the provisions and disclosures for repurchase agreements are not applicable. Particularly, as each TALF loan will have a three-year maturity, the loan will not be impacted by the statutory accounting provisions that require short-term (less than one year) repurchase agreements for admittance purposes.

Clarification that a TALF transaction is not a repurchase agreement and that, therefore, the repurchase agreement provisions and disclosures are not applicable is sufficient for purposes of providing guidance to financial statement preparers. The sentence we suggest be stricken would not provide additional clarity, and could only serve to create extraneous ambiguities pertaining to requirements that have already been clearly established as non-applicable for the subject of this INT.

INT 20-07T: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19

The Working Group reached a tentative consensus in response to requests to consider exceptions to statutory accounting guidance for troubled debt restructurings and impairment for all debt instruments. Pursuant to this consensus:

a. This interpretation does not provide exceptions to the recognition of a troubled debt restructuring for debt securities with modifications that result in non-insignificant concessions to a debtor that is experiencing financial difficulties.

b. This interpretation does not provide exceptions to the assessment or recognition of impairment for debt instruments. Pursuant to the guidance in SSAP No. 26R, after a modification for a debt instrument, assessment of OTTI shall be based on the current terms of the debt instrument.

(Exposure Staff Note – This statement corresponds with Agenda Item 2020-14.)

c. This interpretation does not provide exceptions for trouble debt restructuring determination and impairment assessments for situations in which the reporting entity is a direct, active participant in negotiating debt instrument modifications.
In response to assessments on the application of existing SSAP No. 36 provisions, particularly in determining whether a modification is a concession (insignificant), this consensus provides the following limited-time practical expedients in determining whether a modification is a concession under SSAP No. 36:

a. Paragraph 10.a. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay is insignificant to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results with a change that reflects a 10% or less shortfall amount in the contractual amount due.

b. Paragraph 10.b. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay in timing of the restructured payment period is insignificant to the frequency of payments due under the debt, debt’s original contractual maturity or the debt’s original expected duration. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results in a one-time 6-month or less delay in payment receipts. (This timeframe is consistent with the provisions in the interagency statements for loans.)

c. For the duration of this interpretation, debt security restructurings in response to COVID-19 that solely impact covenant requirements are not considered troubled debt restructurings.

In response to assessments on the application of existing SSAP No. 103R provisions, particularly in determining whether a modification that is not a troubled debt restructuring needs to be assessed as an exchange, this consensus provides the following exceptions to SSAP No. 103R:

a. Modifications that reflect a 10% or less change in contractual cash flows considered insignificant under this interpretation do not need to be further evaluated to determine whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification. As such, these investments shall not be reported as an extinguishment and a new debt instrument.

The Working Group highlighted that modifications that would be considered troubled debt restructurings, particularly as they provide a non-insignificant concession, may be presented to the domiciliary state regulatory for a permitted practice exception to prevent troubled debt restructuring recognition and disclosure. However, the Working Group concluded that the need for reliable and accurate financial information does not permit exceptions that would allow wide-spread non-insignificant restructurings to occur and not be recognized on the statutory financial statements.

This interpretation is effective for the specific purpose to provide practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36 and in assessing whether a change is substantive under SSAP No. 103R. This interpretation will only be applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

Interested parties appreciate your responsiveness by providing accounting relief associated with COVID-19 related modifications we make to borrowers in both our loan and debt security investment portfolios. As significant investors in the capital markets, and as economic conditions have changed rapidly, we believe it is imperative that we respond as quickly as possible to help position our borrowers for financial success post-COVID-19.
For all the reasons conveyed in our April 2nd letter, we believe the same accounting relief provided to mortgage loans and bank loans in INT 20-03 and INT 20-04 should be provided to private placement debt securities. Although the exposed INT 20-07T provides some relief in assessing Troubled-Debt-Restructurings (“TDR”) for private placement debt securities, when applied in practice, we do not expect it to provide sufficient relief (i.e., relief from assessing TDRs) based on the types of modifications we expect. The exposed INT includes a 6-month modification constraint, which is very restrictive since private placement debt modifications may potentially involve periods longer than 6 months and still be considered insignificant relative to the entire debt instrument. Modifications that insurers make for debt securities are intended to provide the borrowers relief due to temporary operational and financial issues because of COVID-19. Providing such relief now will benefit the borrowers and ultimately our policyholders as it reduces the likelihood that the borrowers will have immediate liquidity concerns resulting in longer-term financial issues and ultimately could result in insurers suffering impairments.

The remainder of these comments relate to the proposed INT and recommends some changes we believe will better align with the types of modifications expected in our private placement portfolios, while retaining the integrity and usefulness of our financial statements.

**Clarifications Related to the Proposed INT**

In reviewing the INT, we noted several areas of the INT for which we would like to confirm our interpretation as to how the INT would be applied. The key areas are as follows:

1) Scope- We interpret the INT to be applicable for all debt securities and not to introduce additional restrictions for loans that are in the scope of INT 20-03.

2) How the practical expedients are to be applied- After studying the practical expedients in paragraphs 15 a, b, c and 16 a, we interpret them as follows:

   - An insurer may conclude a modification for a debt security is insignificant if the modification meets the criteria in both 15a and 15b.
   - Paragraph 15a provides that to be considered insignificant, the total modified cash flows, over the remaining life of the asset, may not be more than 10% less than the then current contractual cash flows (prior to the modification) over the remaining life of the asset.
   - Paragraph 15b is simply stating the modification must not result in a delay in payments (either principal or interest) that is more than 6 months.
   - Paragraph 15c provides relief in that all covenant modifications are assumed to not be significant.
   - If either the criteria in paragraph 15 a and 15b are not met, the practical expedients may not be employed, and the modification must be assessed for a TDR based on current practices consistent with SSAP No. 36. That is, it is still possible, based on the application of SSAP No. 36 (not using the practical expedients), that the modification does not meet the conditions to be considered a TDR.
   - If the investor has concluded that the modification is not a TDR and the criteria in paragraph 15a has not been met, it is assumed that the modification would not be considered a new asset via SSAP No. 103R (i.e., not considered more than minor both quantitatively and qualitatively). That is, no additional analysis is required to determine if the modified terms result in a new asset, with a related realized capital gain/loss recorded.

**Recommended Changes to the Proposed INT:**

Assuming our interpretation of the INT as detailed above is accurate, we have the following recommendations:
Criteria for Paragraph 15

In discussing modifications with our private placement investment managers, we expect modifications that provide borrowers delayed payments of principal and/or interest, will likely be for a longer period than 6-months; however, the modification would still be considered insignificant when considering the remaining life of the debt security. As a result, as opposed to focusing the use of the practical expedient on insignificant modifications (determined by ensuring both criteria 15a and 15 b are met), we recommend a form of the “financial difficulty” criteria in paragraph 9 of SSAP No. 36 be introduced into the criteria that must be met for the practical expedients to be used (see recommendation below). Using such an approach introduces a higher standard in ensuring the modifications are only driven by COVID-19 temporary conditions.

We recommend removing paragraph 15b criteria so that the paragraph 15a criteria (i.e., the 10%) would be leveraged to determine if a modification was insignificant. This would allow modifications that are still considered temporary in nature, but longer than 6-months and insignificant to a specific debt security, to be considered insignificant. To introduce the “financial difficulty” criteria into the use of the practical expedient, like INT 20-03 for loans, we recommend a criterion be added (to replace paragraph 15b) to require that the debt security must have not been more than 30 days past due at December 31, 2019. The December 31, 2019 date is important because borrowers likely began to experience temporary operational and financial issues in the 1st Q of 2020. Thus, if the borrower was not more than 30 days past due at December 31, 2019, it is presumed that they are only experiencing temporary issues due to COVID-19. The modifications are intended to help them through those temporary situations.

We also recommend moving item 15c to its own paragraph and not including it with paragraphs 15a and 15b. We believe the intent is that both paragraph 15a and 15b must be met for the practical expedients to be applied. Paragraph 15c criterion is stand-alone and not related to 15a and 15b. That is, all financial covenants are considered insignificant regardless of paragraphs 15a and 15b.

Paragraph 14c:
Paragraph 14c of the INT states “This interpretation does not provide exceptions for troubled debt restructuring determination and impairment assessments for situations in which the reporting entity is a direct, active participant in negotiating debt instrument modifications.” We recommend this paragraph be struck from the final INT as it implies that the practical expedients outlined in the INT do not apply to private placement debt securities, which we believe is not your intent. We believe paragraphs 14a and 14b are enough for what is intended to be conveyed in the INT.

Example 3:
Example 3 discusses a modification related to a SSAP No. 43R investment. In paragraph 3 of the “Example 3-Application of INT 20-07T” section of the document, the example notes that “…assuming there is no collateral, a realized loss shall be recognized for the difference between fair value and amortized cost”. We find the SSAP No. 43R examples to be somewhat complex in terms of conveying the message related to the criteria. We believe the objective of the example is to illustrate the need for both criteria in 15a and 15b to be met to apply the practical expedients. Should a similar example be retained in the final INT, we recommend it be simplified to use a SSAP No. 26R security rather than a SSAP No. 43R security.

Period during which INT 20-07T is effective:
Paragraph 18 of the INT notes that the interpretation would be applicable from March 1, 2020 until the earlier of 12/31/2019 or 60 days after the national emergency expires. Similar to INT 20-03 for loans, we recommend the INT be applied to a modification for the term of the modification.
We appreciate you considering our recommendations summarized above to ensure we may contribute to economic recovery post COVID-19 for the various private placement borrowers in our debt security portfolios.

**INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends**

The Working Group reached a tentative consensus to prescribe statutory accounting guidance for insurance reporting entities providing refunds in response to COVID-19. Pursuant to this consensus:

**Issue 1:** Reporting entities that provide voluntary or jurisdiction-directed refunds which are not required under the policy terms shall follow the guidance in paragraphs 8-11 of this interpretation. This guidance stipulates that such refunds shall be recognized as a reduction of premium. Refunds that are recognized in a different manner (e.g., as an expense), shall be considered a permitted or prescribed practice pursuant to SSAP No. 1.

**Issue 2:** Reporting entities that provide refunds in accordance with insurance policy terms shall follow paragraph 12 of this interpretation. This guidance indicates that existing statutory accounting principles in SSAP No. 53 or SSAP No. 66 shall be followed as applicable.

**Issue 3:** Reporting entities that provide rate reductions shall follow paragraph 13 of this interpretation. This guidance provides direction based on whether the rate reduction is for in-force or future policies.

**Issue 4:** Reporting entities that provide policyholder dividend shall follow the existing guidance for policyholder dividends which is summarized in paragraphs 14-18 and in addition, shall complete the disclosures described in paragraphs 19-21.

**Issue 5:** This interpretation, paragraphs 19-22 indicates that reporting entities shall continue to comply with all statutory accounting disclosure requirements, but also requires that all premium refunds, rate reductions and/or policyholder dividends provided because of the decreased activity due to COVID-19 shall be aggregated and reported in Note 21A.

The Working Group noted that premium taxation requirements vary by jurisdiction. Taxation is determined by the jurisdiction where the premium is written/returned to the policyholder according to the laws of that jurisdiction.

This interpretation will be automatically nullified on January 1, 2021 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

Interested parties offer the following comments on the tentative consensus noted above:

**Issue 1:** Those insurers that provided voluntary or jurisdiction-directed refunds which are not required under the policy terms concluded that guidance similar to that described in paragraphs 8-11 of this interpretation is appropriate and accounted for those amounts accordingly. However, it is noted that the consensus for Issue 1 should be amended to address the effect on the unearned premium reserve by stating: . . . refunds shall be recognized as a reduction of premium and the unearned premium reserve adjusted accordingly.

Other insurers chose to provide funds or credits to policyholders by amending the terms of their policies through manual rate fillings or policy endorsements and reported the amounts provided to policyholders as an expense as part of Other Underwriting Expense based on SSAP No. 70, *Allocation of Expenses*. To address the accounting treatment for policies that were amended to allow for a policy payment in circumstances related to COVID-19, those companies recommend that Issue 1 be modified, and a new issue added to the INT as marked in the attachment.
Issue 2: Interested parties agree with the tentative consensus.

Issue 3: Interested parties agree with the tentative consensus.

Issue 4: Interested parties agree with the tentative consensus.

Issue 5: Interested parties believe it would be cumbersome (and may not be possible) to aggregate workers' compensation audit premium adjustments attributable to COVID-19 with premium adjustments based on either the level of exposure to insurance risk or the level of losses. To address this, we recommend that the tentative consensus be amended as follows:

21. To allow for aggregate, consistent assessment, the Working Group came to a tentative consensus that all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments. For the avoidance of doubt, refunds required under the policy terms as discussed in paragraph 12 (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions and policyholder dividends.

Ref# 2020-14: Assessment of OTTI Based on Original Contract Terms

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and consider revisions to add a new footnote to SSAP No. 26R—Bonds to clarify the interrelationship between SSAP No. 26R, SSAP No. 36 and SSAP No. 103 when there is a modification to a debt instrument.

SSAP No. 26R—Bonds

Impairment

13. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition FN. A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond’s carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

New Footnote: If a bond has been modified from original acquisition, the guidance in SSAP No. 36—Troubled Debt Restructuring and paragraph 22 of SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the current contractual terms of the debt instrument.
Interested parties recommend that the new footnote be modified to clarify that after modification of original terms, future assessments to determine other-than-temporary impairment should be based on the modified contractual terms of the debt instrument. Use of the term “current” may not be clear to preparers and auditors.

INT 20-08T Issue

COVID 19

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

Premium Refunds, Rate Reductions, Policyholder Benefits and Policyholder Dividends

2. The federal, state or local government orders requiring non-essential workers to “stay home” caused a significant reduction in commercial and non-commercial activity, including automotive usage. Some consumer groups wrote letters and issued press releases calling for insurance premium refunds or pricing decreases, which included specific comments directed toward consumer automotive lines. The comments presumed that the decrease in activity would result in fewer losses.

3. Many Recognizing the extraordinary economic hardship experienced by their policyholders together with the reduction in auto accident frequency resulting from the decline in economic activity, insurers began issuing designed various programs to provide a portion of the favorable experience realized from reduced accident frequency to policyholders. The underlying objective of the programs is to provide temporary relief to customers during the period that various government-based shelter in place orders remain in effect resulting in a significant decline in general economic activity accident frequency levels remaining significantly below historic levels. The methods utilized to deliver temporary relief to policyholders include voluntary premium refunds, future rate reductions, policyholder benefit payments (in certain instances, based on manual rule filings or policy endorsements) and policyholder dividends because of the decreased activity. The majority of the refunds were related. Most of the relief payments (or programs) relate to automotive lines of business. Insurers have provided the reductions policyholder relief in a variety of ways. Some of the rate reductions were specific including direct relief...
payments for in-force policies, whereas some of the as well as relief payments/programs designed as rate reductions would apply to be applied to future policy renewals.

Voluntary

4. The majority of the refunds or rate reductions company actions taken are being offered voluntarily and are not amounts required under the existing policy terms. The aggregate monetary amount of the return of funds payments and adjustments is considered materially significant.

Jurisdiction Directed

5. In addition, a few jurisdictions have issued bulletins directing refunds and rate reductions on varying lines of property and casualty insurance, including but not limited to: private passenger automobile, commercial automobile, workers’ compensation, commercial multiple peril, commercial liability and medical professional liability. In addition, some jurisdictions have indicated support for refunds, rate reductions, and policyholder benefits but also directed that payment of such amounts require either premium rate filings or policy form amendments.

Accounting Issues

6. The intent of this interpretation is to address questions related to the accounting and reporting for premium refunds, rate reductions, policyholder benefit payments and policyholder dividends in response to the decreased activity related attributable to COVID-19. Because there are a variety of impacts on the private passenger and commercial auto insurance business. Due to the severity of the event and the speed at which it emerged, different insurers designed and implemented policyholder relief programs that reporting entities are accomplishing are fundamentally different even if designed to achieve a similar objective. The intent of returning money or reducing premiums, this guidance is to ensure that for accounting purposes, the programs are accounted for in accordance with their design and execution. Separately, to provide policyholders and other stakeholders with information about the size and scope of the programs, required comprehensive disclosures should be utilized. This interpretation provides guidance on the following issues:

- Issue 1: How to account for premium refunds not required under the existing policy terms.
- Issue 2: How to account for refunds required under the existing policy terms.
- Issue 3: How to account for rate reductions on inforce and renewal business.
- Issue 4: How to account for policyholder benefit payments under modified policy terms (e.g., manual rule filings or certain policy endorsements).
- Issue 5: How to account for policyholder dividends.
- Issue 56: Where to disclose premium refunds, rate reductions, policyholder benefit payments and policyholder dividends related to covid-19 decreases in activity.

INT 20-08T Discussion

7. As an overall guiding principle, the accounting shall follow existing statutory accounting principles and annual statement reporting where feasible consistent with the design and execution of the program.
Issue 1: How to Account for Premium Refunds Not Required Under the Policy Terms

8. The Working Group reached a tentative consensus that company actions whose intent is a voluntary refunds because of premium refund based on reduced auto accident frequency attributed to decreased activity related to COVID-19 and other jurisdiction-directed premium refunds which are not required by the policy terms, are fundamentally a return of premium. Such refunds shall be accounted for as immediate adjustments to premium. The premium refund will be an adjustment to written or earned premium.

9. Premium refunds shall be recognized as a liability when the definition of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets is met. For example, the declaration of a voluntary dividend by the board of directors will trigger liability recognition. In cases where the refunds are directed by a jurisdiction, the SSAP No. 5 definition of a liability shall be used to determine timing of liability recognition.

10. Immediate adjustment to premium is consistent with the existing guidance in SSAP No. 53—Property Casualty Contracts—Premiums. SSAP No. 53 guidance requires adjustments to the premium charged for changes in the level of exposure to insurance risk. It is also consistent with the treatment of loss sensitive premium adjustments in SSAP No. 66—Retrospectively Rated Contracts. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply.

11. Reporting the refunded amounts as a miscellaneous underwriting expense is not consistent with the underwriting expense description. This reporting option is inconsistent with the characterization of the amount as a return of premium.

b. Reporting the refunds as premium balances charged off (e.g., bad debt expense) is inconsistent with guidance in 53, paragraph 14, on earned but uncollected premium. It is also inconsistent with the annual statement instructions as the amount is not an uncollectible amount, but rather a voluntary choice by the reporting entity to reduce the amount charged.

Issue 2: How to Account for Premium Refunds Required Under the Policy Terms

12. While most of the premium refunds are voluntary or jurisdiction-directed and not required under the policy terms, some policies have terms that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses. If the policy terms change the amount charged, existing guidance in SSAP No. 53 or SSAP No. 66 continues to apply:

a. SSAP No. 53 provides guidance for policies in which the premium amount is adjusted for changes in the level of exposure to insurance risk. This is often seen in commercial lines of business such as workers’ compensation. The guidance notes that audits often occur after the policy term or mid-term in the policy. SSAP No. 53 refers to the adjustment to premium (either due to the customer or to the insurer) as earned but unbilled (EBUB) premium. SSAP No. 53 requires such adjustment to premium to be made immediately either through written premium or earned premium. SSAP No. 53 also requires recognition of the related liabilities and expenses such as commissions and premium taxes based on when the premium is earned.
b. SSAP No. 66 provides guidance for policies whose terms or legal formulas determine premium based on losses. SSAP No. 66 references other applicable statements based on contract type for the initial accrual of premium. Estimates of premium adjustments are accrued based on activity to date and result in immediate adjustments to premium. SSAP No. 66 guidance specifies the corresponding annual statement reporting lines for different entity types.

**Issue 3: How to Account for Rate Reductions**

13. Some reporting entities are offering rate reductions instead of premium refunds. Some of these rate reductions provide one-time price decreases to future payments on in-force policies. Other reporting entities have provided offers of rate reductions on future renewals. Some of the offers for future rate reductions are only applicable to in-force policyholders as of a specified date. Some reporting entities have offered one-time rate reductions for future renewals for both existing and new policyholders for 2020.

a. Rate reductions on in-force business, shall be recognized as immediate adjustments to premium.

b. Rate reductions on future renewals shall be reflected in the premium rate charged on renewal. This is because it is outside of the policy boundary to require the accrual before contract inception. While the amount of future rate reduction can be estimated, it is not a change to existing policy terms and policyholders are not obligated to renew at the reduced rate, therefore, payment of the amount is avoidable. Such amounts shall be disclosed as discussed in Issue No. 5.

**Issue 4: How to Account for Policyholder Benefit Payments Under Modified Policy Terms (e.g. Manual Rule Filings or Policy Endorsements)**

14. In an effort to expedite relief to policyholders, certain insurers filed manual rule filings or policy endorsements to modify the terms of their insurance contracts to allow for the payment of discretionary policy benefits. In these instances, policy endorsements or manual rule filings were determined to be the most efficient method to provide relief to policyholders.

15. The manual rules filings or policy endorsements in paragraph 14 allowed for discretionary benefit payments to policyholders that were not otherwise provided under the contract (e.g. the payments did not result from an indemnifiable loss or a premium adjustment based on changes in insurance risk attributable to a policy change or cancellation) and were stated to be in response to circumstances surrounding COVID-19. The manual rule filings or policy endorsement was utilized to expedite providing relief to policyholders. As the manual rule filings or policy endorsements would not impact written premium and would, therefore, not result in adjustments to either premium tax returns or agent commissions. The following was considered in determining the appropriate accounting and presentation of discretionary policy benefit payments provided through the manual rule filings or policy endorsements:

a. Accounting for discretionary policy benefits paid in accordance with contract terms modified through a manual rule filing or endorsement authorizing payments to policyholders that are not directly related to a change in the level of insurance risk is not specifically addressed in existing statutory accounting literature.

b. SSAP 70, *Allocation of Expenses*, does however state that allocable expenses for property and casualty insurance companies shall be classified into one of three categories in the Underwriting and Investment Exhibit as follows; loss adjustment expenses, investment expenses, other underwriting
expenses. Other underwriting expenses are defined as allocable expenses other than loss adjustment expenses and investment related expenses.

c. In those circumstances when an insurer modifies the terms of its insurance contracts to allow for discretionary payments that are not directly related to the level of insurance risk under the contract and not designed as a premium refund, the payment shall be accounted for consistent with its nature and design; as an underwriting expense. These payments affect the results of the underwriting activities of the insurer since they are related to the policy and are not precluded in the literature from being classified as underwriting expenses.

16. Policyholder payments shall be recognized as a liability when the definition of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets is met.

Issue 5: How to Account for Policyholder Dividends

17. SSAP No. 65—Property and Casualty Contracts, paragraph 46 requires that dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability.

18. The Working Group noted that policyholder dividends are typically only provided on participating policies or policies issued by non-stock companies, such as mutual entities and other corporate entity types in which profits are shared with policyholders.

19. Research during the development of this item identified that a small number of jurisdictions have legal restrictions which only allow policyholder dividends to be provided after the expiration of the policy period for which the dividend was earned. This interpretation only addresses policyholder dividends which are permitted by the applicable jurisdiction.

20. The property and casualty annual statement blank provides specific reporting lines for policyholder dividends including, but not limited to a liability line and a line in the income statement and statement of cash flow. For those entities whose policies are participating or whose corporate shell type and/or membership structure allow for policyholder dividends, the accounting for policyholder dividends is unchanged by this interpretation.

21. SSAP No. 72—Surplus and Quasi-Reorganizations, paragraph 22 requires disclosure of dividend amounts and dates. In addition, SSAP No. 65, paragraph 47 also requires disclosure of dividend restrictions. The disclosures from both statements are in annual statement Note 13 Capital and Surplus, Dividend Restrictions and Quasi-Reorganizations. This interpretation does not change the dividend disclosure but provides additional guidance that such policyholder dividends issued in response to COVID-19 decreases in activity shall also be disclosed as discussed in Issue 5.

Issue 56: Where to Disclose Premium Refunds, Rate Reductions, Policyholder Benefit Payments and Policyholder Dividends Related to COVID-19 Decreases in Activity

22. There are various places in the notes to the statutory annual statement where disclosures of various aspects of premium refunds, premium reductions or policyholder dividends are required. This interpretation does not recommend changes to those existing disclosures. This interpretation does, however, recommend a consistent annual statement disclosure for all such amounts to allow for comparable disclosures.

23. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items requires disclosure of the nature and financial effects of each unusual or infrequent event or transaction. Gains or losses of a similar nature that are
not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. This disclosure is currently required to be reported in annual statement Note 21A. (Reporting entities shall maintain jurisdiction-specific information to be made available upon request from department of insurance or revenue regulators.)

24. To allow for aggregate, consistent assessment, the Working Group came to a tentative consensus that all COVID-19 inspired premium refunds, rate reductions, policyholder benefit payments and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments. For the avoidance of doubt, refunds required under the policy terms as discussed in paragraph 12, (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions, policyholder benefit payments and policyholder dividends.

INT 20-08T Tentative Consensus

25. The Working Group reached a tentative consensus to prescribe statutory accounting guidance for insurance reporting entities providing refunds and discretionary policyholder benefits in response to COVID-19. Pursuant to this consensus:

a. Reporting entities that provide voluntary or jurisdiction-directed premium refunds which are not required under the policy terms shall follow the guidance in paragraphs 8-11 of this interpretation. This guidance stipulates that such premium refunds shall be recognized as a reduction of premium. Premium refunds described in paragraphs 8-11 that are recognized in a different manner (e.g., other than as an expense), a decrease to premium, shall be considered a permitted or prescribed practice pursuant to SSAP No. 1.

b. Reporting entities that provide premium refunds in accordance with insurance policy terms shall follow paragraph 12 of this interpretation. This guidance indicates that existing statutory accounting principles in SSAP No. 53 or SSAP No. 66 shall be followed as applicable.

c. Reporting entities that provide rate reductions shall follow paragraph 13 of this interpretation. This guidance provides direction based on whether the rate reduction is for in-force or future policies.

d. Reporting entities that provide for the payment of discretionary policy benefits through a manual rule filing or policy endorsement that authorizes payments to policyholders not otherwise provided under the contract (e.g., not a payment resulting from an indemnifiable loss or a return of premium based on changes in insurance risk related to the policy or not related to a policy change or cancellation) shall account for the payment in accordance with the guidance in paragraphs 14-16. This INT addresses and is limited to the accounting for the particular circumstance when policyholder payments as specified in the modified policy terms are related to conditions resulting from COVID 19 for manual rule filings or policy endorsements filed in response to COVID 19 activity.

e. Reporting entities that provide policyholder dividend shall follow the existing guidance for policyholder dividends which is summarized in paragraphs 14-18/17-21 and in addition, shall complete the disclosures described in paragraphs 19-24/22-24.
This interpretation, paragraphs 19-22-24 indicates that reporting entities shall continue to comply with all statutory accounting disclosure requirements, but also requires that all premium refunds and payments, rate reductions and/or policyholder dividends provided because of the decreased activity due to COVID-19 shall be aggregated and reported in Note 21A.

26. The Working Group noted that premium taxation requirements vary by jurisdiction. Taxation is determined by the jurisdiction where the premium is written/returned to the policyholder according to the laws of that jurisdiction.

27. This interpretation will be automatically nullified on January 1, 2021 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-08T Status

28. Further discussion is planned.
May 14, 2020

RE: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

The following comments are submitted on behalf of the member companies of the National Association of Mutual Insurance Companies1 regarding the interpretive reporting guidance issued to account for premium refunds, rate reductions, and policyholder dividends.

As the COVID-19 global pandemic continues to disrupt our national and state economies, insurers are hard at work continuing to adapt and innovate to best serve policyholders in their time of need. Like every other business in America, our members are navigating the new challenges and demands that come from remote work arrangements, implementing business continuity plans, making best efforts to educate and communicate updates to staff, and much more. These complications notwithstanding, our members continue to remain focused on providing regular service to policyholders in addition to taking proactive steps to alleviate the financial hardships facing many consumers, including cancellation suspensions, fee waivers, and premium relief. NAMIC members remain committed to working with all policyholders to provide flexibility where possible for the duration of this crisis.

Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close leading to a significant increase in unemployment and the potential permanent closure of many businesses. The federal, state or local government orders requiring non-essential workers to “stay home” caused a significant reduction in commercial and non-commercial activity, including automotive usage. Many NAMIC members responded proactively and implemented various programs in response to the reduction in auto accident frequency due to the decline in economic activity. These programs were designed to provide relief to policyholders experiencing economic hardship and to recognize the improvement in loss experience due to less miles driven on the roads.

NAMIC members view this issue from many different perspectives, and for some, treating these refunds/credits as a reduction in premium makes the most sense for how the company manages its’ operations and ultimately

---

1 NAMIC is the largest property/casualty insurance trade association in the country, with more than 1,400-member companies representing 39 percent of the total market. NAMIC supports regional and local mutual insurance companies on main streets across America and many of the country’s largest national insurers. NAMIC member companies serve more than 170 million policyholders and write more than $230 billion in annual premiums. Our members account for 54 percent of homeowners, 43 percent of automobile, and 32 percent of the business insurance markets. Through our advocacy programs we promote public policy solutions that benefit NAMIC member companies and the policyholders they serve and foster greater understanding and recognition of the unique alignment of interests between management and policyholders of mutual companies.
how it reports it in the annual statement. For others, treating these refunds as a policyholder dividend or an expenditure similar to a policyholder dividend is in line with the types of policies they issue. Still others prefer to treat the funds distributed to policyholders as a premium charge-off, as that makes the most sense for the insurer based on their unique circumstances.

The reasons for an accounting interpretation of this nature is to respond to various approaches taken by insurers during these unprecedented times; therefore, NAMIC believes the accounting treatment for these transactions needs to recognize the unusual nature and the infrequency of an event of this scale. The proposed interpretive guidance does not fully consider the nuances of a mutual insurance company’s participating structure, contract form, and financial reporting considerations. NAMIC members respectfully request the working group consider more flexibility in their guidance; this would allow companies to continue classifying funds returned to policyholders in the same consistent manner with how they have done so historically in the financial statements.

**Participating Insurance Contracts**

The payment of a dividend is considered a component of an insurer’s combined ratio and for mutual insurance companies that offer participating policies, a dividend is typically paid to policyholders when favorable operating profits are realized. The proposed interpretation does not consider insurers returning funds to policyholders (other than dividends) for a period of favorable underwriting experience as a similar situation, and therefore the proposal treats all refunds/credits/rate reductions as a return of premium. NAMIC members do not believe that treating funds returned to policyholders as a premium credit is the only way to account for these distributions of funds. Depending on the design of the program, insurers should be afforded the flexibility to account for these refunds similar to a policyholder dividend.

Paragraph 10 of INT 20-08T states that the guidance in SSAP No. 53 – Property Casualty Contracts – Premiums “requires adjustments to the premiums charged for changes in the level of exposure to insurance risk.” Paragraph 7 of SSAP No. 53 also states, “the exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period.” Mutual insurance companies that provide participating insurance contracts designed to return operating profits resulting from favorable loss experience to policyholders didn’t experience any change in loss exposure, rather it is their loss experience that improved. Because the level of exposure to insurance risk is unchanged and loss experience has improved, many mutual insurers returning money to policyholders do not view these payments as a premium credit, rather they view them very similarly to a dividend payment.

The INT makes reference to certain types of policies that require premium refunds under the policy terms; however, the guidance is nonapplicable to participating insurance contracts. The reference to paragraph 12.b of INT 20-08T is appropriate for retrospectively rated contracts, such as workers compensation polices – these policies are designed to include a return mechanism. For these policies, the INT states that SSAP No. 66 – Retrospective Rated Contracts, “provides guidance for policies whose terms or legal formulas determine premium based on losses” and that “estimates of premium adjustments are accrued based on activity to date and result in immediate adjustments to premium.” For participating insurance contracts, the return mechanism is designed to return shared operating profits to policyholders as a separate payment (usually a dividend), not as a return of premium. Our view is these payments are funds returned to policyholders related to the accelerated recognition of favorable loss experience and are similar to making a dividend payment; therefore, insurers should not be forced to treat these as premium credits.

**Material Unusual and Infrequent Item**

Many mutual insurance companies offering participating policies view the amounts already returned to policyholders as a shared benefit of favorable loss experience and were planning to include them as a component of the combined ratio and treat as an expenditure similar to a policyholder dividend. In this case and
in response to the uniqueness of the COVID-19 situation, the expenditure should be considered a material unusual and infrequent item. The abrupt nature of this refund was unique in circumstance and the sense of urgency to return these funds in an expedient manner was not readily possible within most mutual insurer’s administrative systems. Although in substance these policyholder payments were consistent with the intent of a dividend payment, they were not remitted in the form of a dividend. For these reasons, we believe insurers that offer participating policyholder payments should be afforded the option to account for these policyholder payments similarly to a dividend, so as not to force all insurers to net them within premiums in the annual statement.

The rationale for optionality is supported by paragraph 9 of SSAP No. 24 – Discontinued Operations and Unusual or Infrequent Items, which states, “a material event or transaction that an entity considers to be of an unusual nature or of a type that indicates infrequency of occurrence or both shall be reported consistently with the reporting entity’s reporting of continued operations.”

Premium Balance Charge-Off

Other insurers are looking at this from an entirely different perspective and have made the decision to pay for a percentage of auto premiums for their policyholders for policies in force. This approach has no impact on agents or the insured only that the insurer is helping to pay the policyholder’s bill. These companies were planning to record the total amount in billing assistance as a premium charge-off in their financial statements. These companies are looking to avoid impacting the combined ratio, as these amounts are significant in size and certainly qualify as unusual and infrequent. Availing flexibility for insurers in this situation recognizes the need to call out these unique and unusual transactions in the financial statements, so as not to distort the core operations, assisting regulators in their examination and analysis of the financial results of an impacted company.

Paragraph 11.b of INT 20-08T states that reporting refunds as premium balances charged off is “inconsistent with guidance in SSAP No. 53, paragraph 14, on earned but uncollected premiums.” However, in certain cases the premium was earned and collected. Instead of issuing a refund, some insurers paid off a portion of the policyholders billed premium. Thus, it was collected and the premium was then earned by the company. It makes more sense for companies in this situation to treat the reduction in loss experience as a one-time premium charge-off instead of telling the policyholder to not pay their bill only to then write it off.

Disclosing Premium Refunds, Rate Reductions, and Policyholder Dividends Related to COVID-19

The disclosure of dividend amounts and dates required by SSAP No. 72, paragraph 22, as referenced by paragraph 18 of INT 20-08T, applies to stockholder dividends only, and not policyholder dividends. Therefore, this reference should be removed from INT 20-08T as a requirement for disclosure of policyholder dividends. Note 13 Capital and Surplus, Dividend Restrictions and Quasi-Reorganizations only requires disclosure of policyholder dividend restrictions as required by SSAP 65, paragraph 47.

NAMIC members recommend paragraph 18 of INT 20-08 be reworded as follows to clarify the required disclosure of policyholder dividends:

18. SSAP No. 65, paragraph 47 requires disclosure of dividend restrictions. This disclosure is in annual statement Note 13 Capital and Surplus, Dividend Restrictions and Quasi-Reorganizations. This interpretation does not change the dividend disclosure but provides additional guidance that such policyholder dividends issued in response to COVID-19 decreases in activity shall also be disclosed as discussed in Issue 5.

2 Premium Balances Charge Off – Page 4, Line 12 of the P/C Annual Statement
Thank you for your consideration of these comments on this matter of importance to NAMIC, its member companies and their policyholders. If there are any questions, please feel free to contact me at 317-876-4206.

Sincerely,

Jonathan Rodgers

RE: INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

Thank you, the Working Group and NAIC staff for responding quickly to the issues that are arising as a result of the rapid spread of the Coronavirus Disease 2019 (COVID-19). Travelers appreciates the opportunity to comment on INT 20-08T: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends (INT 20-08T) of the NAIC Statutory Accounting Principles Working Group (the Working Group), which was exposed for comment with comments due May 14.

During the past couple of months, state and/or local government orders requiring non-essential workers to “stay home” caused a significant reduction in economic activity, including automotive usage. As a result, many insurers, including Travelers, began issuing voluntary premium refunds, future rate reductions, or policyholder dividends. As stated in the INT, insurers provided the reductions in a variety of ways. Some of the rate reductions were specific to in-force policies, whereas some of the rate reductions apply to future policy renewals. In most cases, the refunds or rate reductions were not amounts required under the policy terms.

Travelers agrees with the conclusions reached for Issues 1 through 4 of INT 20-08T that adjustments to premium is consistent with the statutory accounting guidance in SSAP No. 53, Property Casualty Contracts – Premiums, SSAP No. 65, Property and Casualty Contracts and SSAP No. 66, Retrospectively Rated Contracts. We also believe that there should be consistent reporting by property and casualty insurers of voluntary premium refunds, temporary future rate reductions, and policyholder dividends resulting from COVID-19.

Other than the treatment of policyholder dividends specifically referenced in Issue 4 of INT-20-08T, we do not believe that payments to policyholders that are based on past or current premiums and are the result of reduced insured exposure due to COVID-19 should be characterized as an expense. SSAP No. 70, Allocation of Expenses, provides for three types of reportable expense classifications for property and casualty insurers: loss adjustment expenses, investment expenses and other underwriting expenses. Premium refunds and temporary future rate reductions to policyholders are clearly not loss adjustment or investment expenses, nor are such payments other underwriting expenses, the latter of which is meant to capture the allocable underwriting expenses of the insurer. Rather, these refunds, payments and credits are the result of changes in insured exposures (such as lower miles driven related to auto policies due to federal, state or local government orders requiring non-essential workers to “stay home”). Additionally, we agree that if such premium refund payments or credits to policyholders are reported as expenses, such treatment should be disclosed as a permitted practice.
Regarding Issue 5 ("Where to Disclose Refunds, Rate Reductions and Policyholder Dividends Related to COVID-19 Decreases in Activity"), Travelers has concerns regarding the proposed disclosure requirement in paragraph 21 that all COVID-19 inspired premium refunds, rate reductions, and policyholder dividends be disclosed as unusual or infrequent items. We believe that this proposed disclosure is not practicable as it concerns certain commercial policies, especially loss sensitive policies and policies subject to retrospective rating or audit adjustment. For such policies, it will not be practical to separate refunds and rate reductions from changes in premium due to loss experience.

Thank you for the opportunity to comment on INT 20-08T. If you have any questions or would like to discuss our comments, please feel free to call me at (860) 277-0537.

Best regards,

D. Keith Bell

Re: Addendum to original comments regarding INT 20-08T - COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends

Dear Mr. Bruggeman:

Thank you for this opportunity to share additional comments on INT 20-08T for your consideration. And thank you again to the Working Group for your effort in this endeavor during such extraordinary times. We value and appreciate your partnership and guidance.

The Cincinnati Insurance Company offers the following additional comments:

When a state mandates that companies make a payment, this is typically accounted for as some sort of an expense to the company, such as assessments, surcharges, guaranty funds, fines, taxes.

For purpose of context, I would like to use a general example for comparison:

A state enacts a fee whereby companies are required to pay an amount equal to 5% of premiums for a specific product line. Companies have the option to collect all, or part, of this fee from impacted policyholders. If the company chooses to NOT collect the fee from policyholders, the amount incurred by the company is an expense.

Now, substitute this example with the nature of the current relief payment:

States have strongly encouraged, and in some cases mandated, that companies pay a civic donation to policyholders for, at least, a specific product line. This request, or order, is based on the premise that companies will experience favorable loss experience, but not based on actual loss experience.

Assuming contracts are non-participating and premium refunds are not required under the policy terms, this relief payment should also be an expense.

- Companies are essentially incurring an expense, in place of a loss.
- As an expense, companies bear the majority of the financial burden for the payment. As opposed to the financial burden being shared by further exacerbating revenue shortfalls
  - for state governments through reduced premium taxes and
  - for small businesses through commission clawbacks.
- States allowed payments to be made directly to policyholders, rather than sending payments to the states and the state making payments directly to impacted policyholders.

Whether viewed as most aligned with an assessment, surcharge, donation, or marketing, we propose these payments are appropriately reported as expense. In accounting treatment, reporting payments as an expense limits the combined ratio impact to the expense ratio. Given the fact that some companies have the option of making these payments under normal policyholder dividend guidelines, limiting the impact to dividend and expense ratios provides a level of industry consistency. If treated as premium, all aspects of the combined ratio, including the loss ratio, are impacted, which does not seem appropriate. Given that the premise of the payment request is for companies to share their anticipated favorable loss experience, it seems counterintuitive that loss experience ratios be negatively impacted by the payment.

For these reasons, The Cincinnati Insurance Company respectfully proposes that relief payments made on non-participating contracts, and outside of policy terms that existed at the time of state orders, are fundamentally an expense and should be accounted for as such.
Sincerely,

Andrew Schnell

Description of Issue:
Surplus notes are unique statutory accounting items which have the characteristics of both debt and equity addressed in SSAP No. 41R—Surplus Notes. Surplus notes are debt instruments that are required to be subordinated to policyholders, claimants and all other creditors; with interest and principal repayments requiring approval by the domiciliary commissioner. As such, surplus notes are reported as equity for statutory accounting purposes. (This treatment is specific to statutory accounting. Surplus notes are reported as debt under U.S. GAAP.) Pursuant to the requirements of SSAP No. 41R, proceeds received by the issuer of a surplus note must be in the form of cash or other admitted assets meeting both value and liquidity requirements of the state of domicile's commissioner.

In conjunction with agenda item 2018-07, originally a referral from the Reinsurance (E) Task Force, the Statutory Accounting Principles (E) Working Group has been discussing surplus notes where an “associated” asset is received by the surplus note issuer. These discussions have questions whether a surplus note that does not result with an exchange of cash flows (as the cash flows of offset with an associated asset), shall be considered surplus notes under SSAP No. 41R. Although the discussion on how to treat these surplus notes will occur in agenda item 2018-07, the Working Group has directed that additional disclosures shall be captured in SSAP No. 41R. The intent of this agenda item is to consider new disclosures involving surplus notes to better identify these situations in the statutory financial statements.

Existing Authoritative Literature:
Authoritative guidance is detailed in SSAP No. 41R—Surplus Notes. Current guidance does not require disclosure if a surplus note has been issued with the structure as described where little or no actual cashflows are exchanged.

Current Surplus Note Disclosures under SSAP No 41R:

Disclosures
18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:
   a. Date issued;
   b. Description of the assets received;
   c. Holder of the note or if public the names of the underwriter and trustee;
   d. Amount of note;
   e. Carrying value of note;
   f. The rate at which interest accrues;
   g. Maturity dates or repayment schedules, if stated;
   h. Unapproved interest and/or principal;
i. Interest and/or principal paid in the current year;
j. Total interest and/or principal paid on surplus notes;
k. Subordination terms;
l. Liquidation preference to the reporting entity’s common and preferred shareholders;
m. The repayment conditions and restrictions.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Discussions on linked surplus notes is occurring within agenda item 2018-07. The Working Group directed NAIC staff to collect information via a data-call on “linked” surplus notes as of Sept. 30, 2019. This information is requested by Dec. 31, 2019. Improved disclosures on surplus notes in SSAP No. 41R will reduce the need for subsequent data-call collection.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 41R to provide enhanced disclosures to identify when a surplus note has been issued in which anticipated or typical cashflows have been partially or fully offset through the terms of the asset provided by the note holder.

Disclosures
18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:
a. Date issued;
b. Description and fair value of the assets received;
c. Holder of the note or if public, the names of the underwriter and trustee, with identification on whether the holder of the surplus note is a related party per SSAP No. 25;
d. Original issue amount of note;
e. Carrying value of note;
f. The rate at which interest accrues;
g. Maturity dates or repayment schedules, if stated;
h. Unapproved interest and/or principal;
i. Life-to-date and current year approved interest and/or principal recognized as “paid” with identification of the amount of approved interest and/or principal remitted to the holder of the surplus note (actual transfer of cash / assets) and the amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash / assets);
j. Information regarding a 3rd party liquidity source including name, identification if a related party, cost of the liquidity guarantee, and maximum amount available should a triggering event occur.
k. Subordination terms;
l. Liquidation preference to the reporting entity’s common and preferred shareholders;
The repayment conditions and restrictions.

19. If a reporting entity is not remitting actual cash or assets to the holder of the surplus note for approved interest or principal (as reported under paragraph 18.h), because the reporting entity is offsetting the amount owed under the surplus note with an amount receivable from a reported asset, the following information shall be disclosed regarding the offsetting asset:

a. Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation.

b. Book/adjusted carrying value of asset and interest income recognized in the current year.

c. Amount of principle return and interest income from the asset not received by the reporting entity as the amounts were offset with approved amounts owed by the reporting entity’s issued surplus note.

20. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

Updates to the Blanks are proposed as a result of the SSAP No. 41R revisions. For readability and due to the amount of proposed changes, both the current and proposed Blanks revisions are detailed below.

Staff Review Completed by: Jim Pinegar, October 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 41—Surplus Notes to provide enhanced disclosures to identify when an issued surplus note’s anticipated or typical cash flows have been partially or fully offset through an asset held by the surplus note issuer.

Spring 2020 National Meeting discussion

Interested Parties submitted comments and suggested edits on the prior exposure; NAIC staff agree that the proposed edits, as they in essence, require disclosure of the desired items as detailed in the original agenda item. Additionally, in some cases, suggested proposed edits expanded surplus note structure disclosures requirements.

NAIC staff added one disclosure item to be data captured in the Blanks

**NAIC staff recommends that the Working Group expose this agenda item, with revisions as proposed by interested parties, and as further modified by NAIC staff. These revisions will require additional disclosures regarding the issuance of Surplus Notes – specifically those that are structured in a manner in which typical cashflows have been reduced or eliminated**

Changes from the original exposure are highlighted in grey below.

Disclosures

18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;

b. Description and fair value of the assets received;

c. Holder of the note or if public, the names of the underwriter and trustee, with identification on whether the holder of the surplus note is a related party per SSAP No. 25;

d. Original issue amount of note;

e. Carrying value of note;

f. The rate at which interest accrues;

g. Maturity dates or repayment schedules, if stated;

h. Unapproved interest and/or principal;

i. Life-to-date and current year approved interest recognized and/or principal paid recognized

   i. Percentage interest payments offset through “administrative offsetting” (not inclusive of amounts paid to a 3rd party liquidity provider). I.E. if $100 in interest was recognized through...
the year, $10 of which was remitted to a 3rd party liquidity provider and the reminder $90 was offset, the reporting entity shall report 100% as offset.

j. Disclosure of whether the surplus note was issued as "paid part of a transaction with identification any of the following attributes:
   i. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus note and amounts receivable under other agreements contractually linked (For example, the asset provides amount of approved interest and/or principal remitted payments only when the surplus note provides interest payments).
   ii. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity, of the agreement (This may be referred to as administrative offsetting.)
   iii. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note. (actual transfer of cash / assets) and the amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash / assets).

h. Information regarding a 3rd party liquidity source including name, identification if a related party, cost of the liquidity guarantee, and maximum amount available should a triggering event occur.

k. Principal amount of assets received upon Surplus Note issuance, if applicable.
   i. Subordination terms;
   j. Liquidation preference to the reporting entity’s common and preferred shareholders;
   n. The repayment conditions and restrictions.
   k. Information about any guarantees, support agreements, or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements.

19. If a reporting entity has ceded business to a surplus note issuer that is not remitting actual cash or assets to a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria in 18. j above, the ceding entity shall provide a description of the transaction, including whether the criteria in 18. j above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force. The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

19.20. If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note for approved interest or principal (as reported under paragraph 18.h), because the reporting entity is offsetting the amount owed under the surplus note with an amount receivable from a reported asset, the following information shall be disclosed regarding the offsetting asset/assets received:
   a. Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation.
   b. Book/adjusted carrying value of asset and interest income recognized in as of the current year/reporting date.
   c. Amount of principle return and interest income from the asset not received by the reporting entity as the amounts were offset with approved amounts owed by the reporting entity’s issued surplus note. A description of terms under which liquidity would be provided should a triggering event occur.
20.21. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

© 2020 National Association of Insurance Commissioners
On March 18, 2020, the Statutory Accounting Principles (E) Working Group exposed proposed revisions to SSAP No. 41R—Surplus Notes, as illustrated below, with modifications highlighted in gray. A referral will also be sent to the Blanks (E) Working Group for notification of the proposed modifications for its concurrent exposure. This item has a shortened comment period deadline ending May 1, 2020.

Spring 2020 NM Proposed Revisions:

Disclosures
18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;
b. Description and fair value of the assets received;
c. Holder of the note or if public, the names of the underwriter and trustee, with identification on whether the holder of the surplus note is a related party per SSAP No. 25;
d. Original issue amount of note;
e. Carrying value of note;
f. The rate at which interest accrues;
g. Maturity dates or repayment schedules, if stated;
h. Unapproved interest and/or principal;
i. Disclosure of whether the surplus note was issued as "paid part of a transaction with identification any of the following attributes:
   i. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus note and amounts receivable under other agreements contractually linked (For example, the asset provides amount of approved interest and/or principal remitted payments only when the surplus note provides interest payments).
   ii. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity, of the agreement (This may be referred to as administrative offsetting.)
   iii. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note, (actual transfer of cash / assets) and the amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash / assets).
   h. Information regarding a 3rd party liquidity source including name, identification if a related party, cost of the liquidity guarantee, and maximum amount available should a triggering event occur.
   k. Principal amount and fair value of assets received upon Surplus Note issuance, if applicable.
   l. Subordination terms;
   m. Liquidation preference to the reporting entity’s common and preferred shareholders;
   n. The repayment conditions and restrictions.
k-o. Information about any guarantees, support agreements, or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements.

19. If a reporting entity has ceded business to a surplus note issuer that is not remitting actual cash or assets to a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria in 18. j above, the ceding entity shall provide a description of the transaction, including whether the criteria in 18. j. above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force. The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

20. If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note for approved interest or principal (as reported under paragraph 18.h), because the reporting entity is offsetting the amount owed under the surplus note with an amount receivable from a reported asset, the following information shall be disclosed regarding the offsetting asset:

   a. Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation.
   b. Book/adjusted carrying value of asset and interest income recognized as of the current year reporting date.
   c. Amount of principle return and interest income from the asset not received by the reporting entity as the amounts were offset with approved amounts owed by the reporting entity's issued surplus note. A description of terms under which liquidity would be provided should a triggering event occur.

21. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 41R—Surplus Notes, as illustrated above, to require additional disclosures regarding the issuance of surplus notes, specifically those that are structured in a manner in which typical cash flows have been reduced or eliminated.

**Description of Issue:** In coordination with a Valuation of Securities (E) Task Force and the Blanks (E) Working Group, this agenda item proposes elimination of the multi-step modeling process (i.e. incorporating breakpoints) to determine final NAIC designations on RMBS and CMBS securities.

Current guidance allows the amortized cost basis to be used in determining the “final” NAIC designation for statutory accounting and reporting - including the assessment of AVR and for risk-based capital (RBC) purposes. By design, this practice allows for reporting diversity as identical securities, purchased at different price points (thus having different amortized/carrying values) may have differing reported NAIC designations. Thus, two identical reporting entities possessing the same security, may have differing NAIC designations.

The current RMBS/CMBS multi-step modeling practice is the only remaining approach that utilizes breakpoints to determine final NAIC designations. In March 2019, agenda item 2018-19 removed the multi-step modeling approach for modified filing exempt (MFE) securities. This change removed the carrying value from the designation determination analysis and accordingly now utilizes the original NAIC designation, without adjustment, to determine the measurement method under SSAP No. 43R and corresponding RBC charges. With this change, identical securities have an identical NAIC designation.

The implemented change for MFE securities is being proposed for expansion to RMBS and CMBS securities for several reasons. In conjunction with the upcoming designation granularity expansion, the cost, complexity and technical issues to maintain the multi-step modeling process will be substantial for reporting entities. Each individual security will be required to develop an additional 19 price breakpoints to correspond with designation granularity reporting; insurance companies will need to substantially modify their investment accounting software to determine designations and designation categories. It is important to note that the current multi-step modeling approach has the potential to increase/improve a security’s NAIC designation – thus reducing RBC and AVR charges, however, could also work in an opposite manner decreasing NAIC designation. Despite the proposal to cease the multi-step model usage, industry appears supportive of the change as the cost and usage in both today’s environment and with the upcoming granularization reporting, does not adequately justify any potential benefit. A RMBS/CMBS security can be appropriately modeled, regardless of the amortized carrying value and will provide a single, nonadjustable NAIC designation. This will provide regulators with increased efficiency of oversight and improved comparability between various reporting entities carrying identical investments.

**Existing Authoritative Literature:**

**SSAP No. 43R—Loan-backed and Structured Securities**

**Reporting Guidance for All Loan-Backed and Structured Securities**

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the
designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

**Designation Guidance**

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides detailed guidance. A general description of the processes is as follows:

a. Financial Modeling: The NAIC identifies securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:

i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. Step 3: Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. All Other Loan-Backed and Structured Securities: For loan-backed and structured securities not subject to paragraphs 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26.
these securities include, but are not limited to, mortgage-referenced securities, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), and loan-backed and structured securities with SVO assigned NAIC designations.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In accordance with a Valuation of Securities (E) Task Force referral, agenda item 2018-19 eliminated the multi-step designation guidance, utilizing amortized cost basis and breakpoints for the determination of final NAIC designations of MFE securities. The revisions were adopted with an effective date of March 31, 2019, with early adoption permitted for year-end 2018.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 43R—Loan-backed and Structured Securities to eliminate the multi-step financial modeling designation guidance in determining final NAIC designations for RMBS/CMBS securities.

Although the Working Group is recommended to proceed with exposure on this agenda item and solicit comments for consideration, final action will not occur on this item until revisions eliminating the RMBS/CMBS multi-step modeling approach has been adopted by the Valuation of Securities (E) Task Force. NAIC SAPWG staff will coordinate with the VOSTF staff to stay current on their discussion and action on this item.

Proposed Revisions to SSAP No. 43R—Loan-backed and Structured Securities

Reporting Guidance for All Loan-Backed and Structured Securities

26. Loan-backed and structured securities shall be valued and reported in accordance with this statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product prepared by the NAIC Securities Valuation Office or equivalent specified procedure. The carrying value method shall be determined as follows:

a. For reporting entities that maintain an Asset Valuation Reserve (AVR), loan-backed and structured securities shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value.

10 Securities within scope of this statement shall be reported with NAIC designations. The process to determine the NAIC designation may vary based on type of underlying investment and is directed in accordance with the Purposes and Procedures Manual of the NAIC Investment Analysis Office. For example, certain investments may use CRP ratings in determining the equivalent NAIC designation, whereas other investments, including, but not limited to, mortgage-referenced securities, equipment trust certificates, credit tenant loans (CTL), and interest only (IO) securities, may be required to obtain the NAIC designation directly from the NAIC Valuation of Securities product. For interim reporting instructions, refer to the Purposes and Procedures Manual of the NAIC Investment Analysis Office.
b. For reporting entities that do not maintain an AVR, loan-backed and structured securities designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; loan-backed and structured securities that are designated medium quality, low quality, lowest quality and in or near default (NAIC designations 3 to 6, respectively) shall be reported at the lower of amortized cost or fair value.

**Designation Guidance**

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides detailed guidance. A general description of the processes is as follows:

a. **Financial Modeling:** The NAIC identifies securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers’ carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP-specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:

i. **Step 1: Determine Initial Designation** – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.

ii. **Step 2: Determine Carrying Value Method** – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.

iii. **Step 3: Determine Final Designation** – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

b. **All Other Loan-Backed and Structured Securities:** For loan-backed and structured securities not subject to paragraphs 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to, mortgage-referenced securities, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), and loan-backed and structured securities with SVO assigned NAIC designations.

**Specific Interim Reporting Guidance for RMBS/CMBS Securities**

28. The guidance in this paragraph shall be applied in determining the reporting method for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported...
under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for those securities acquired subsequent to year-end.

c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b, as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.

d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b, as appropriate).

For brevity, the remaining SSAP has been omitted, however remaining paragraphs will be renumbered accordingly.

**EXHIBIT A – Question and Answer Implementation Guide**

This exhibit addresses common questions regarding the valuation and impairment guidance detailed in SSAP No. 43R.

**Index to Questions**

<table>
<thead>
<tr>
<th>No.</th>
<th>Question</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Are reporting entities permitted to establish an accounting policy to write down a SSAP No. 43R other-than-temporarily impaired security, for which a “non-interest” related decline exists, to fair-value regardless of whether the reporting entity intends to sell, or has the intent and ability to hold?</td>
</tr>
<tr>
<td>2</td>
<td>Can a reporting entity avoid completing a cash-flow assessment or testing for a specific other-than-temporarily impaired security when the entity believes there is a clear cash-flow shortage (i.e., non-interest related impairment) and elect to recognize a full impairment for the SSAP No. 43R security (no impairment bifurcation), with fair value becoming the new amortized cost basis, and recognition of the full other-than-temporary impairment as a realized loss?</td>
</tr>
<tr>
<td>3</td>
<td>Can reporting entities change their “intend to sell” or “unable to hold” assertions and recover previously recognized other-than-temporary impairments?</td>
</tr>
<tr>
<td>4</td>
<td>How do the regulators intend the phrase “intent and ability to hold” as used within SSAP No. 43R to be interpreted?</td>
</tr>
<tr>
<td>5</td>
<td>How do contractual prepayments affect the determination of credit losses?</td>
</tr>
<tr>
<td>No.</td>
<td>Question</td>
</tr>
<tr>
<td>-----</td>
<td>----------</td>
</tr>
<tr>
<td>6</td>
<td>Are the disclosure requirements within paragraphs 51.f. and 51.g. of SSAP No. 43R required to be completed for the current reporting quarter only, or as a year-to-date cumulative disclosures?</td>
</tr>
<tr>
<td>7</td>
<td>If an impairment loss is recognized based on the &quot;present value of projected cash flows&quot; in one period is the entity required to get new cash flows every reporting period subsequent or just in the periods where there has been a significant change in the actual cash flows from projected cash flows?</td>
</tr>
</tbody>
</table>

Questions 8-10 are specific to securities subject to the financial modeling process. (This process is limited to qualifying RMBS/CMBS securities reviewed by the NAIC Structured Securities Group.) The guidance in questions 8-10 shall not be inferred to other securities in scope of SSAP No. 43R.

8. **Question** — Do LBSS purchased in different lots result in a different NAIC designation for the same CUSIP? Can reporting entities use a weighted average method determined on a legal entity basis?

8.1 Under the financial modeling process (applicable to qualifying RMBS/CMBS reviewed by the NAIC Structured Securities Group), the amortized cost of the security impacts the “final” NAIC designation used for reporting and RBC purposes. As such, securities subject to the financial modeling process acquired in different lots can result in a different NAIC designation for the same CUSIP. In accordance with the current instructions for calculating AVR and IMR, reporting entities are required to keep track of the different lots separately, which means reporting the different designations. For reporting purposes, if a SSAP No. 43R security (by CUSIP) has different NAIC designations by lot, the reporting entity shall either 1) report the aggregate investment with the lowest applicable NAIC designation, or 2) report the investment separately by purchase lot on the investment schedule. If reporting separately, the investment may be aggregated by NAIC designation. (For example, all acquisitions of the identical CUSIP resulting with an NAIC 1 designation may be aggregated, and all acquisitions of the identical CUSIP resulting with an NAIC 3 designation may be aggregated.)

9. **Question** — The NAIC Designation process for LBSS subject to the financial modeling process may incorporate loss expectations that differ from the reporting entity’s expectations related to OTTI conclusions. Should the reporting entities be required to incorporate recovery values obtained from data provided by the service provider used for the NAIC Designation process for impairment analysis as required by SSAP No. 43R?

9.1 In accordance with INT 06-07: Definition of Phrase “Other Than Temporary,” reporting entities are expected to “consider all available evidence” at their disposal, including the information that can be derived from the NAIC designation.
10. **Question**: For companies that have separate accounts, can the NAIC designation be assigned based upon the total legal entity or whether it needs to be calculated separately for the general account and the total separate account?

10.1 The financial modeling process for qualifying RMBS/CMBS securities is required for applicable securities held in either the general or separate account.

**Staff Review Completed by:** Jim Pinegar, NAIC Staff – September 2019

**Status:**
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 43R—Loan-backed and Structured Securities*, as illustrated above, to eliminate the multi-step financial modeling designation guidance in determining final NAIC designations for residential mortgage-backed securities (RMBS) / commercial mortgage-backed securities (CMBS) securities. Exposure was contingent upon the Valuation of Securities (E) Task Force’s concurrent exposure, which occurred on December 8, 2019. The Working Group noted that final action on this would not be taken until the Valuation of Securities (E) Task Force takes action on their related item.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group deferred discussion of this agenda item for a subsequent call or meeting.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group disposed of this agenda item, without statutory revisions.
Issue: Grade in of Variable Annuity Reserves

Check (applicable entity):

- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

P/C | Life | Health
---|---|---

Description of Issue:
At the 2019 Summer National Meeting, the NAIC Executive and Plenary adopted revisions drafted by the Life Actuarial (A) Task Force to Section 21 of the *Valuation Manual Requirements for Principle-Based Reserves for Variable Annuities (VM-21)* which provides comprehensive updates to the Commissioners Annuity Reserve Valuation Method of reserving for variable annuities. The revisions adopted to VM-21 represent an accounting change that must be recognized as a change in valuation basis under *SSAP No. 51R—Life Contracts*. Updates to SSAP No. 51R are needed to coordinate with the recent revisions to the variable annuity reserving methodology. In addition, the proposed revisions recommend deferring to VM-21 regarding future variable annuity reserving methodology phase-ins along with disclosure on phase in details.

The enhancements to the variable annuity framework resulting in revisions to AG 43 and VM-21 centered around the following:

- Reforming the standard scenario to enhance regulatory oversight of companies’ actuarial assumptions
- Mitigating asset-liability accounting mismatch between hedge instruments and statutory liabilities
- Improving interpretability of framework results and simplicity of calculations
- Facilitating greater harmonization across insurers and products for greater comparability

To achieve this focus the determination of the Conditional Tail Expectation (CTE) amount, Standard Scenario and the Standard Scenario amount has changed significantly resulting in the revised variable annuity reserves methodology.

The revisions to VM-21 in combination with the revisions to Actuarial Guideline XLIII CARVM For Variable Annuities (AG 43) applies retroactively to contracts issued between 1981 and Dec. 31, 2019 as follows:

- VM-21 changes affect reserving for contracts issued Jan. 1, 2017 through Dec. 31, 2019
- AG 43 changes affect reserving for contracts issued to 1981 through Dec. 31, 2016

These changes to the variable annuity reserving framework updated the principles and methodology and apply retroactively (see Authoritative Literature). Under SSAP No. 55 a change in valuation basis is recognized as a change in surplus rather than an increase in reserves recognized through income.

The VM-21 allows the following choices for phasing in the change in reserving valuation basis necessitated by variable annuity reserving methodology changes. Early adoption, beginning Dec. 31, 2019

- Adoption in full beginning Jan.1, 2020
- A reporting entity election to grade in over 3 years.
- An election to grade in over 7 years, subject to commissioner discretion.
In addition, it provides the following acceleration provisions:

- Early termination and full recognition,
- If there is a material decrease in the book of business by sale or reinsurance ceded, the company shall adjust the amount of the grade-in provision. The grade-in amount \( C = R_1 R_2 \), as described below) must be scaled down in proportion to the reduction in the excess reserve, measured on the effective transaction date as the reserve amount in excess of cash surrender value before and after the impact of the transaction.
- The company must obtain approval for any other modification of the remaining grade-in amount.

**Existing Authoritative Literature:**

**Valuation Manual – Section 21**

Effective Date and Phase-In These requirements apply for valuation dates on or after Jan. 1, 2020. A company may elect to phase in these requirements over a 36-month period beginning Jan. 1, 2020. A company may elect a longer phase-in period, up to seven years, with approval of the domiciliary commissioner. The election of whether to phase in and the period of phase-in must be made prior to the Dec. 31, 2020, valuation. At the company’s option, a phase-in may be terminated prior to the originally elected end of the phase-in period; the reserve would then be equal to the unadjusted reserve calculated according to the requirements of VM-21 applicable for valuation dates on or after Jan. 1, 2020. If there is a material decrease in the book of business by sale or reinsurance ceded, the company shall adjust the amount of the phase-in provision. The phase-in amount \( C = R_1 - R_2 \), as described below) must be scaled down in proportion to the reduction in the excess reserve, measured on the effective transaction date as the reserve amount in excess of cash surrender value before and after the impact of the transaction. The company must obtain approval for any other modification of the remaining phase-in amount. The method to be used for the phase-in calculation is as follows:

**SSAP No. 51R—Life Contracts**

**Change In Valuation Basis**

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

   a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.
b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement prescribes a new method and a specific transition that allows for grading. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. The Valuation Manual is effective prospectively for policies written on or after the operative date. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

SSAP No. 3—Accounting Changes and Corrections of Errors

Disclosures

13. Disclosure of material changes in accounting and correction of errors shall include:

   a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

   b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

   c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material; and

   d. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.

14. Refer to the Preamble for further discussion regarding disclosure requirements.
Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not applicable

Staff Review Completed by:
Robin Marcotte, NAIC Staff - November 2019

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose the revisions described and illustrated below to SSAP No. 51R—Life Contracts, and adding reference to the additional grade-in disclosure requirements in SSAP No. 3—Accounting Changes and Corrections of Errors for reporting years beginning Jan. 1, 2020. In addition, NAIC staff plans a future agenda item regarding exercise of Commissioner Discretion in the VM. Proposed revisions detailed in the current agenda item:

1. Revises the existing guidance, which prohibits grading-in changes in valuation basis unless provided for in the statement, to allow a grade-in for changes in valuation basis if permitted by the statement or the Valuation Manual in section VM-21 Requirements for Principle-Based Reserves for Variable Annuities (VM-21). Historically choosing effective dates for major reserving changes for the Accounting Practices and Procedures Manual has been determined by Working Group, for example the 2001 CSO table (adopted in 2002) was effective for policies January 1, 2004 in Appendix A-820. This has been to promote consistent implementation and reporting. By deferring to the VM-21 on grade-in options with many varied features, there will be less comparability in reporting, because there is more optionality in reserve reporting. Therefore, additional disclosure regarding grade-in has been proposed.

2. A change in valuation basis under SSAP No. 51R is recognized through surplus. As the unrecognized graded-in reserve represents an unrecognized adjustment to surplus, the revisions require the unrecognized grade-in amount from a change in valuation basis, if resulting with an increase in reserves (decrease from surplus), to be reported as an allocation from unassigned funds to special surplus until the amount has been fully graded into unassigned funds. The reclassification from unassigned funds to special surplus does not reduce total surplus. This is to provide transparency regarding the increased reserve amount that has not been reflected into surplus. As amounts are graded-in to reduce surplus, the amount in special surplus is reclassified to unassigned funds.

3. The proposed revisions to SSAP No. 51R expand the disclosure for changes in valuation basis as a change in accounting principle under SSAP No. 3 to also include details regarding grade-ins of changes in valuation basis, including the grade-in period applied, the remaining amount to be graded-in, remaining time for the grade-in period and the initial grade-in amount and any adjustments to the original amount.

4. Adds a reference in SSAP No. 3 regarding additional disclosures of grade-in features.

NAIC staff plans to propose a new agenda item to address commissioner discretion in the VM. The exercise of commissioner discretion has been typically removed from Appendix A – Excerpts of Model Laws so that if it is exercised, it is disclosed as a permitted or prescribed difference in Note 1 to provide transparency and comparability. As the Valuation Manual incorporates Commissioner discretion that might not be reported as a prescribed or permitted practice, NAIC staff also recommends a future agenda item, regarding how to provide transparency on the use of commissioner discretion.
SSAP No. 51R:

Change In Valuation Basis

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

   a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.

   b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed, or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement or the Valuation Manual in section VM-21 Requirements for Principle-Based Reserves for Variable Annuities (VM-21) prescribes a new method and a specific transition that allows for grading. If the grading permitted by this statement or Valuation Manual section VM-21 represents an increase in the reserve liabilities, the unrecognized change in valuation basis reserve increase shall initially be reflected as an allocation from unassigned funds to special surplus until fully recognized in reserving and unassigned funds. The reclassification from unassigned funds to special surplus does not reduce total surplus, but highlights the ungraded in amount for transparency as it represents an unrecognized adjustment (decrease) to total surplus. The allocation to special surplus is reversed to unassigned funds as the grading of the increase in reserving is recognized as a decrease to total surplus. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. Effective January 1, 2020, if the Valuation Manual section VM-21 (on variable annuities) or this statement prescribes
or permits a grading in period or provides the option of multiple grading periods, reporting entities shall also include in the change in accounting disclosures required by SSAP No. 3, disclosure of the following:

a. the grade in period being applied, and the remaining time period of the grade in
b. any adjustments to the grade in period.
c. amount of change in valuation basis grade in, which has been recognized in unassigned funds and
d. the remaining amount to be graded-in (reflected in special surplus if the ungraded in amount represents an increase in reserving).

40. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The Valuation Manual is effective prospectively for policies written on or after the operative date, however, as the CARVM methodology was already principles based, some changes to the CARVM methodology in section VM-21 (on variable annuities) and to the related AG 43 may result in retroactive application to the reserving for existing contracts. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

SSAP No. 3—Accounting Changes and Corrections of Errors

Disclosures

13. Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material;

d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have grade in or other optional application features, shall also include in the change in accounting disclosures information regarding the application of any grade in as provided for in SSAP No. 51R, and

e. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.
Ref #2019-47

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 51R—Life Contracts and SSAP No. 3—Accounting Changes and Corrections of Errors as illustrated above. The revisions add reference, disclosures and accounting for Section 21 of the Valuation Manual, Requirements for Principle-Based Reserves for Variable Annuities, and grade-in requirements for reporting changes in the valuation basis for years beginning January 1, 2020.

For 2020 Spring National Meeting Discussion

NAIC Staff recommends that the Working Group adopt the exposed revisions, incorporating interested parties proposed edits of removing the reclassification to special surplus as summarized and illustrated in the agenda item and below. The proposed text for adoption does not incorporate all of the interested parties’ revisions. If preferred, the Working Group could have a short re-exposure, but such a deferral may raise first quarter reporting concerns.

NAIC Staff does not propose to incorporate the following revisions requested by Interested Parties:

- SSAP No. 51, paragraph 39, 40 and SSAP No. 3 - Keep the exposed grade in guidance as which defers only to the VM 21 CARVM grade in guidance and requires coordination on future VM grade in proposals.
- SSAP No. 51, paragraph 40 – did not add industry proposed language on retroactivity.

NAIC Staff illustration incorporates the following revisions requested by Interested Parties:

- SSAP No. 51, paragraph 39 and subparagraphs c and d – Delete the exposed reclassification to special surplus until the grade in for reserving amount is fully recognized. Most entities will have a short-term impact (three years) and disclosure should be adequate.
- SSAP No. 51, paragraph 39/40 – Maintain the existing language on changes in accounting in paragraph 39 instead of moving it paragraph 40 as proposed in the exposure.
- SSAP No. 51, paragraph subparagraphs and SSAP No. 3 – editorial - Change “grade-in” to “phase in” as suggested by interested parties to maintain consistency with SSAP No. 51 and the Valuation Manual.

Note that Shaded revisions are edits to prior exposure

SSAP No. 51R

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be grade phased in over time unless this statement or the Valuation Manual in section VM-21 Requirements for Principle-Based Reserves for Variable Annuities (VM-21) prescribes a new method and a specific transition that allows for grading. If the grading permitted by this statement or Valuation Manual section VM-21 represents an increase in the reserve liabilities, the unrecognized change in valuation basis reserve increase shall initially be reflected as an allocation from unassigned funds to special surplus until fully recognized in reserving and unassigned funds. The reclassification from unassigned funds to special surplus does not reduce total surplus, but highlights the ungraded in amount for transparency as it represents an unrecognized adjustment (decrease) to total surplus. The allocation to special surplus is reversed to unassigned funds as the grading of the increase in reserving is recognized as a decrease to total surplus. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3...
and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. Effective January 1, 2020, if the Valuation Manual section VM-21 (on variable annuities) or this statement prescribes or permits a phase in period or provides the option of multiple phase in periods, reporting entities shall also include in the change in accounting disclosures required by SSAP No. 3, disclosure of the following:

a. the phase in period being applied, and the remaining time period of the phase in
b. any adjustments to the phase in period.

c. amount of change in valuation basis phase in, which has been recognized in unassigned funds and

d. the remaining amount to be phased-in (reflected in special surplus if the ungraded in amount represents an increase in reserving).

40. The Valuation Manual is effective prospectively for policies written on or after the operative date, however, as the CARVM methodology was already principles based, some changes to the CARVM methodology in section VM-21 (on variable annuities) and to the related AG 43 may result in retroactive application to the reserving for existing contracts. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus for most entities will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

SSAP No. 3—Accounting Changes and Corrections of Errors

13d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected phase in provided for in the Valuation Manual Section VM 21 or other optional application features, shall also include in the change in accounting disclosures information regarding the application of any phase in as provided for in SSAP No. 51R. and

“Clean version” of revisions tracked only to SSAP 51R and SSAP No. 3 with shading new wording

SSAP No. 51R

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded phased in over time unless this statement or the Valuation Manual in section VM-21 Requirements for Principle-Based Reserves for Variable Annuities (VM-21) prescribes a new method and a specific transition that allows for grading. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. Effective January 1, 2020, if the Valuation Manual section VM-21 (on variable annuities) or this statement prescribes or permits a phase in period or provides the option of multiple phase-in periods, reporting entities shall also include in the change in accounting disclosures required by SSAP No. 3, disclosure of the following:

a. the phase in period being applied, and the remaining time period of the phase in
b. any adjustments to the phase in period.

c. amount of change in valuation basis phase in, and

d. the remaining amount to be phased-in.

The Valuation Manual is effective prospectively for policies written on or after the operative date, however, as the CARVM methodology was already principles based, some changes to the CARVM methodology in section VM-21 (on variable annuities) and to the related AG 43 may result in retroactive application to the reserving for existing contracts. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus for most entities will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

SSAP No. 3—Accounting Changes and Corrections of Errors

Disclosures

13. Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material;

d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected phase in provided for in the Valuation Manual Section VM 21, shall also include in the change in accounting disclosures information regarding the application of any phase in as provided for in SSAP No. 51R, and

e. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with revisions as illustrated above under “Spring National Meeting Discussion.” A referral will also be sent to the Life Actuarial (A) Task Force for notification of this exposure. This item has a shortened comment period deadline ending May 1, 2020.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 3—Accounting Changes and Corrections of Errors and SSAP No. 51R—Life Contracts, as illustrated above.
Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual*, such as editorial corrections, reference changes and formatting.

</table>

**Recommendation:**
NAIC staff recommends that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorized as nonsubstantive, and expose editorial revisions, as illustrated below.

**SSAP No. 21R**

1. *SSAP No. 21R—Other Admitted Assets* in paragraph 2, remove the excerpts from SSAP No. 4 regarding the definition and accounting treatment for admitted assets.

**SUMMARY CONCLUSION**

2. The definition and accounting treatment for admitted assets is outlined in paragraphs 2 and 3 of *SSAP No. 4—Assets and Nonadmitted Assets* as follows:

   2. For purposes of statutory accounting, an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others’ access to it, and (c) the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

   3. As stated in the Statement of Concepts, “The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet,” and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:
      a. Specifically identified within the Accounting Practices and Procedures Manual as a nonadmitted asset; or

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the Accounting Practices and Procedures Manual. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, can be expensed when purchased.

3. Consistent with paragraph 2, the following assets shall be considered admitted and shall be reported in accordance with SSAP No. 4. These admitted assets are not addressed in other statements.

SSAP No. 51R

SSAP No. 51R—Life Contracts - Update paragraph references in SSAP No. 51R, paragraph 36.

Update paragraph references in paragraph 36 related to changes in valuation basis to be consistent with the originally adopted language in the related issue paper. Paragraph 36 refers to “a change in valuation basis for reserves determined under paragraphs 18-21 and the reference should be updated to be paragraphs 17-21. This edit is consistent with Issue Paper No. 154–Implementation of Principle Based Reserving, Exhibit A, which documents changes to SSAP No. 51, paragraph 36 and includes a reference to paragraphs 17-21.

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors.

Status:

On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the editorial maintenance revisions to SSAP No. 21R—Other Admitted Assets and SSAP No. 51R—Life Contracts as detailed above. This item has a shortened comment period deadline ending May 1, 2020.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted the exposed editorial revisions to SSAP No. 21R—Other Admitted Assets and SSAP No. 51R—Life Contracts, as final.

Description of Issue:
SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures requires disclosures as detailed in Appendix A-001: Investments of Reporting Entities (A-001). Section 3 of A-001 requires the Summary Investment Schedule in the statutory annual statements and in the notes to the annual audited financial statements.

NAIC staff support for the Blanks (E) Working Group were notified of a crosscheck error within the Annual Reporting Blanks where total mortgage loans reported on the Summary Investment Schedule do not tie to the amounts reported in Schedule B, Part 1. After research, it was found that this is due to Valuation Allowance not being included on the Summary Investment Schedule. This agenda item will add in Valuation Allowance to ensure that these schedules will tie together.

The purpose of the referral was to allow coordination to update the Appendix A-001 requirements for the Summary Investment Schedule and the related financial statement notes. This agenda item is intended to be exposed concurrently with a Blanks (E) Working Group proposal.

Existing Authoritative Literature:

SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures

Supplemental Investment Disclosure

26. For the current year, reporting entities shall disclose the information required by Appendix A-001, Investments of Reporting Entities. A Summary Investment Schedule and Investment Risk Interrogatories shall be filed with the audited statutory financial statements. The Summary Investment Schedule shall be filed with the Annual Statement whereas the interrogatories shall be filed as a supplement to the Annual Statement by April 1 for the applicable reporting period.

Appendix A-001

The annual statement must include:

- Supplement to Annual Statement filed by April 1 Investment Risk Interrogatories (as specified in A-001, Section 2) and
- Summary Investment Schedule (as specified in A-001, Section 3)

The audited statutory financial statements must include:

- Investment Risk Interrogatories (as specified in A-001, Section 2) and
- Summary Investment Schedule (as specified in A-001, Section 3)
SSAP No. 83—Mezzanine Real Estate Loans

Disclosures

6. The financial statements shall disclose, as applicable, the requirements of SSAP No. 37, paragraphs 25-27. The MREL lender shall report in Appendix A-001 to its annual statement the amount and percentages of its total admitted assets held in MREL and the largest three investments held in MREL except that such detail shall not be required for assets held in MREL totaling less than 2.5% of its total admitted assets.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this agenda item to the active listing, categorized as nonsubstantive, and expose revisions to Appendix A-001, Section 3, Summary Investment Schedule to add a line for Total Valuation Allowance as illustrated below. The updates below match those that will be concurrently exposed by the Blanks (E) Working Group at the Spring National Meeting.

Section 3. Summary Investment Schedule (Revised for reporting periods effective January 1, 2019)

Staff Review Completed by: Jake Stultz, February 2020

Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix A-001, Section 3, Summary Investment Schedule, as detailed above, to add a line for Total Valuation Allowance. These revisions mirror those that the Blanks (E) Working Group concurrently exposed. This item has a shortened comment period deadline ending May 1, 2020.
On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to Appendix A-001, Section 3, Summary Investment Schedule, as detailed above, to add a line for Total Valuation Allowance.

Issue: ASU 2016-20, Technical Corrections and Improvements to Topic 606

Check (applicable entity):
- Modification of Existing SSAP: P/C
- Life
- Health
- New Issue or SSAP: P/C
- Life
- Health
- Interpretation: P/C

Description of Issue:
In December 2016, the Financial Accounting Standards Board (FASB) issued ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers, to clarify narrow aspects of the guidance issued in ASU 2014-09, Revenue from Contracts with Customers, which was the result of a joint project between FASB and the International Accounting Standards Board (IASB). This project clarified the principles for recognizing revenue and develop a common revenue standard for U.S. GAAP and IFRS (the IASB issued IFRS 15 – Revenue from Contracts with Customers) and created ASC Topic 606 – Revenue from Contracts with Customers.

In 2018, the Working Group rejected the guidance in ASU 2014-09 and several other ASUs related to Revenue Recognition in SSAP No. 47—Uninsured Plans. The guidance in ASU 2016-20 provides updates and clarifications based on issues that were found during the initial implementation of ASU 2014-09 and ASC Topic 606.

Existing Authoritative Literature:
Premium revenue recognition is detailed throughout the SSAPs, including the following: SSAP No. 51—Life Contracts; SSAP No. 53—Property Casualty Contracts – Premiums; SSAP No. 54—Individual and Group Accident and Health Contracts and SSAP No. 57—Title Insurance. The ASUs related to ASC Topic 606 have been rejected in SSAP No. 47.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Agenda item 2016-19 and 2017-37 address the previous ASUs related to ASC Topic 606.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): ASC Topic 606 and IFRS 15 are the result of the joint project between the FASB and IASB to improve financial reporting by creating common revenue recognition guidance.

Staff Recommendation:
NAIC Staff recommends the Working Group move this agenda item to the active listing, categorized as nonsubstantive and expose revisions to reject ASU 2016-20 in SSAP No. 47—Uninsured Plans. This recommendation is consistent with how the prior ASUs related to Topic 606 have been treated.

Staff Review Completed by: Jake Stultz, February 2020
Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 47—Uninsured Plans, as illustrated below, to reject ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers. This item has a shortened comment period deadline ending May 1, 2020.

Proposed Revisions to SSAP No. 47:

15. This statement rejects ASU 2014-09, Revenue from Contracts with Customers; ASU 2015-14, Revenue From Contracts With Customers; ASU 2016-08, Revenue From Contracts with Customers: Principal versus Agent Considerations (Reporting Revenue Gross versus Net); ASU 2016-10, Revenue from Contracts with Customers: Identifying Performance Obligations and Licensing; and ASU 2016-12, Revenue from Contracts with Customers: Narrow-Scope Improvements and Practical Expedients; and ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted the exposed revisions to SSAP No. 47—Uninsured Plans, as illustrated above, as final, to reject ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers for statutory accounting.

</tbody>
</table>

Description of Issue:
FASB issued **ASU 2018-18, Collaborative Arrangements (Topic 808), Clarifying the Interaction between Topic 808 and Topic 606**, which clarifies and aligns revenue recognition under the new Topic 606 for collaborative arrangements. A collaborative arrangement is defined as a contractual arrangement that involves a joint operating activity, involving two (or more) parties that are both: 1) active participants in the activity and 2) are exposed to significant risks and rewards dependent on the commercial success of the activity. The intent of this guidance is to ensure that revenue recognized within a collaborative arrangement is consistent with revenue recognition in Topic 606.

Existing Authoritative Literature:
Collaborative arrangements in Topic 808 are similar in nature to voluntary pooling arrangements that are discussed in **SSAP No. 63—Underwriting Pools**. **ASU 2014-09, Revenue from Contracts with Customers** established ASC Topic 606 with the new revenue recognition guidance and was rejected for statutory accounting in **SSAP No. 47—Uninsured Plans**.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): **ASU 2014-09**, which created ASC Topic 606, and IFRS 15 are the result of the joint project between the FASB and IASB to improve financial reporting by creating common revenue recognition guidance.

Staff Recommendation:
Staff recommends the Working Group move this agenda item to the active listing, categorized as nonsubstantive and expose revisions to reject **ASU 2018-18** in **SSAP No. 47—Uninsured Plans**. This recommendation is consistent with the treatment of prior ASUs related to Topic 606.

Description of Issue:
FASB issued *ASU 2017-14, Income Statement—Reporting Comprehensive Income (Topic 220), Revenue Recognition (Topic 605), and Revenue from Contracts with Customers (Topic 606), Amendments to SEC Paragraphs Pursuant to Staff Accounting Bulletin No. 116 and SEC Release No. 33-10403*, which effects only SEC paragraphs in Topic 220, Topic 605 and Topic 606.

The revisions to Topic 220 update references from “income statement” to “statement of comprehensive income” and add a reference to revenue recognition in Topic 606. The revisions to Topic 605 remove guidance from and references to *SEC Staff Accounting Bulletin 13, Revenue Recognition*. The updates to Topic 606 add in guidance from *SEC Release No. 33-10403*, which is guidance for revenue recognition for sales of vaccines and bioterror countermeasures to the federal government for strategic national stockpiles, specifically for SEC registrants.

Existing Authoritative Literature:
Generally, all SEC guidance from ASUs is rejected as not applicable for statutory accounting in Appendix D. The ASUs related to ASC Topic 606 have been rejected in *SSAP No. 47—Uninsured Plans*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Agenda item 2016-19 and 2017-37 address the previous ASUs related to ASC Topic 606.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): ASC Topic 606 and IFRS 15 are the result of the joint project between the FASB and IASB to improve financial reporting by creating common revenue recognition guidance.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject *ASU 2017-14, Income Statement—Reporting Comprehensive Income (Topic 220), Revenue Recognition (Topic 605), and Revenue from Contracts with Customers (Topic 606), Amendments to SEC Paragraphs Pursuant to Staff Accounting Bulletin No. 116 and SEC Release No. 33-10403* as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as ASU 2017-14 is specific to deletion and modification of SEC paragraphs, which are not applicable for statutory accounting purposes.

Issue: ASU 2020-02, Amendments to SEC Paragraphs in Credit Losses (Topic 326) and Leases (Topic 842)

Check (applicable entity):

Modification of Existing SSAP  P/C  Life  Health
New Issue or SSAP
Interpretation

Description of Issue:
FASB issued ASU 2020-02, Financial Instruments—Credit Losses (Topic 326) and Leases (Topic 842), Amendments to SEC Paragraphs Pursuant to SEC Staff Accounting Bulletin No. 119 and Update to SEC Section on Effective Date Related to Accounting Standards Update No. 2016-02, Leases (Topic 842), which effects the codification in Credit Losses (Topic 326) and Leases (Topic 842). The update provides a new SEC section in Topic 326 that clarifies reporting for SEC registrants and updates the effective date for these provisions, and the updates to Topic 842 update the effective dates for the new lease guidance for SEC reporting companies.

Existing Authoritative Literature:
Credit Losses (Topic 326) while not yet addressed, is being actively monitored by the Working Group.

Leases are covered in SSAP No. 22R—Leases. Basic discussion of the nature of assets, and specifically admitted assets, is covered in SSAP No. 4—Assets and Nonadmitted Assets.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): The Working Group adopted substantive revisions to create SSAP No. 22R, which brings in language from Topic 842 but retains the operating lease treatment for statutory accounting.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS):
The leases project began as a joint project with the IASB and many of the requirements in Topic 842 are the same as the requirements in IFRS 16.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-02, Financial Instruments—Credit Losses (Topic 326) and Leases (Topic 842), Amendments to SEC Paragraphs Pursuant to SEC Staff Accounting Bulletin No. 119 and Update to SEC Section on Effective Date Related to Accounting Standards Update No. 2016-02, Leases (Topic 842) as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as ASU 2020-02 is specific to deletion of SEC paragraphs, which are not applicable for statutory accounting purposes.

Description of Issue:
The Valuation of Securities (E) Task Force has referred to the Working Group industry-prepared tracked revisions to SSAP No. 105—Working Capital Finance Investments and materials produced by the Securities Valuation Office (SVO) staff on the issues raised. The Task Force recommends that the Working Group consider the amendments, which the Task Force has previously exposed. This agenda item has been drafted to address the referral.

The industry-proposed revisions to SSAP No. 105 detailed in the referral can be grouped into the following categories:
1. Changes to program and/or obligor credit quality requirements
2. Changes to program administration and/or documentation
3. Changes to regulatory compliance requirements
4. Changes to statutory reporting requirements.

Existing Authoritative Literature:
SSAP No. 105—Working Capital Finance Investments was originally effective on January 1, 2014.

Purposes and Procedures Manual of the NAIC Investment Analysis Office provides the following on NAIC Designations

NAIC 1 is assigned to obligations exhibiting the highest quality. Credit risk is at its lowest and the issuer’s credit profile is stable. This means that interest, principal or both will be paid in accordance with the contractual agreement and that repayment of principal is well protected. An NAIC 1 obligation should be eligible for the most favorable treatment provided under the NAIC Financial Regulation Standards and Accreditation Program.

NAIC 2 is assigned to obligations of high quality. Credit risk is low but may increase in the intermediate future and the issuer’s credit profile is reasonably stable. This means that for the present, the obligation’s protective elements suggest a high likelihood that interest, principal or both will be paid in accordance with the contractual agreement, but there are suggestions that an adverse change in circumstances or economic, financial or business conditions will affect the degree of protection and lead to a weakened capacity to pay. An NAIC 2 obligation should be eligible for relatively favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

NAIC 3 is assigned to obligations of medium quality. Credit risk is intermediate and the issuer’s credit profile has elements of instability. These obligations exhibit speculative elements. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is reasonable for the present, but an exposure to an adverse change in circumstances or economic, financial or business conditions would create an uncertainty about the issuer’s capacity to make timely payments.
payments. An NAIC 3 obligation should be eligible for less favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

NAIC 4 is assigned to obligations of low quality. Credit risk is high and the issuer's credit profile is volatile. These obligations are highly speculative, but currently the issuer has the capacity to meet its obligations. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is low and that an adverse change in circumstances or business, financial or economic conditions would accelerate credit risk, leading to a significant impairment in the issuer's capacity to make timely payments. An NAIC 4 obligation should be accorded stringent treatment under the NAIC Financial Regulation Standards and Accreditation Program.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

SSAP No. 105 permits admittance of Securities Valuation Office (SVO) designated WCFI programs that meet specific requirements. SSAP No. 105 was originally effective in 2014 and was controversial as it was developed at the request of a single life entity. At that time, some Working Group members objected to the development of a new statement of statutory accounting principles (SSAP), reporting changes and specific asset class risk-based capital (RBC) charges at the behest of a single company. The discussion at that time noted that the permitted practice concept was intended to address such situations.

In 2018, the single reporting entity that participates in these programs requested modifications to the adopted program and submitted a proposal for consideration. The Valuation of Securities (E) Task Force held discussion on the industry proposal in the third quarter of 2018, which was exposed for comment. The Task Force approved the referral at the 2019 Spring National Meeting.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group:

Working Capital Finance Investments (WCFI) reported in the annual statement Schedule BA - Other Invested Assets continues to be limited to investments by the same single life entity that requested the development of SSAP No. 105. This company reported a total of $258 million in a total of seven WCFI programs for 2017 and $224 million in a total of six WCFI programs for 2018. The total of these amounts is immaterial to the reporting entity. No reporting entities disclosed any prescribed or permitted practices varying from SSAP No. 105 in annual statement Note 1 for 2017 or 2018.

Staff Review Completed by:
Robin Marcotte
NAIC Staff

Staff Recommendation:
Staff recommends that the Working Group receive the referral and provide initial direction on the referral, as it is still perceived as primarily impacting a single entity. If consideration of the referral, and revisions to SSAP No. 105 are supported, NAIC staff recommends that the Working Group direct NAIC staff to proceed with drafting revisions to SSAP No. 105, pursuant to the staff recommendations below which include a review of the industry proposed revisions. NAIC staff does support limited revisions to SSAP No. 105, but a few key elements requested by industry are not supported by NAIC staff.
The key industry proposed revisions included in the referral are under the heading “Details for Working Group Discussion.” If consideration of staff recommendations for the revisions to SSAP No. 105 are supported, NAIC staff will prepare updates to the industry proposal for future discussion based on the Working Group direction. Alternatively, the Working Group could choose to hold a separate call on this topic. The industry proposed revisions are substantive, but categorization could change based on the extent of the revisions.

The following is a summary of the NAIC Staff recommendations on the topics for Working Group discussion:

1. NAIC Staff **does not recommend** lowering the credit quality of the acceptable obligors from NAIC 1 (highest quality) and NAIC 2 (high quality) to allow NAIC designations of 3 (medium quality) and NAIC 4 (low quality) in the WCFI programs. The descriptions of NAIC designations in the *Purposes and Procedures Manual of the Investment Analysis Office note* that both NAIC designations of 3 and 4 have speculative elements (see Authoritative Literature and points for consideration). (paragraphs 6 & 7)

2. NAIC Staff **does not recommend** the proposed credit substitution methodology for unrated subsidiaries as it is overly complex, broad and difficult to apply. SVO staff memos also highlighted the difficulty in applying the industry proposed credit substitution methodology. (paragraph 7)

3. NAIC Staff **recommends the Working Group consider** removing the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the US. Regulator. (paragraph 10.a)

4. NAIC Staff **recommends the Working Group consider** if removing the commingling requirements provide the desired degree of protection. In addition, the Working Group should discuss with the Task Force if the program revisions are functional for analysis purposes. The Working Group should also consider the potential impact of other proposed revisions including lower rated key participants and obligors (points for consideration are in the discussion below). (paragraph 10.b)

5. NAIC Staff **recommends the Working Group consider modifying** the finance agent independent review requirements as requested by industry. The industry proposal still provides independent review of the finance agent either by audit or through an internal control report. (paragraph 16)

6. NAIC SAPWG Staff **recommends the Working Group direct staff to prepare minor rewording** to paragraph 11b to improve readability and eliminate redundancy. (paragraph 11.b)

7. NAIC Staff **does not recommend** removing the statement that the reporting entity may need to seek approval from the domestic regulator as this is a statement rather than an explicit requirement and these investments may not fit into the normal investment law categories (points for consideration are in the discussion below). (paragraph 18)

8. NAIC Staff **recommends the Working Group consider modifying** the filing certification requirements and allowing the SVO to determine if a first priority perfected interest has been obtained. (paragraphs 14 & 15)

9. NAIC Staff **recommends the Working Group consider modifying** the default provisions from 15-30 days as it is more practical to have the default date and the cure period be consistent (points for consideration are in the discussion below). (paragraph 28)
10. NAIC Staff **does not recommend** the Working Group change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA Short term Investments (points for consideration are in the discussion below). (paragraph 22)

**Details for Working Group Discussion**

**A. Changes to program and or obligor credit quality requirements**

**SSAP No. 105** – Current provisions:

- Allow admitted asset treatment to receivables from WCFI programs that have high quality NAIC designations from the SVO (NAIC 1 or 2).
- Require the direct obligor to have a designation equivalent of NAIC 1 or 2.
- Nonadmits WCFNs if the program or the obligor falls below either credit threshold.

1. **Admit Obligors and Program with Lower Credit Ratings** – (Reference -SSAP No. 105, paragraph 7)

**Industry proposal** – Expand admitted asset treatment to include receivables from WCFI programs with NAIC SVO designations 3 and 4; and direct obligors with designation equivalents of NAIC 3 and 4.

1. NAIC Staff **does not recommend** lowering the credit quality of the acceptable obligors from NAIC 1 (highest quality) and NAIC 2 (high quality) to allow NAIC designations of 3 (medium quality) and NAIC 4 (low quality) in the WCFI programs. The descriptions of NAIC designations in the *Purposes and Procedures Manual of the Investment Analysis Office* note both NAIC designations of 3 and 4 have speculative elements (see Authoritative Literature).

- Assets that reflect “factored receivables” are nonadmitted in statutory accounting. The SAPWG created SSAP No. 105 to allow admission for only high-quality programs, from high quality obligors. Allowing obligors with lower credit assessments would be a fundamental change in program requirements.

- As noted in the P&P Manual:
  - NAIC 3 is assigned to obligations of medium quality. Credit risk is intermediate and the issuer's credit profile has elements of instability. These obligations exhibit speculative elements. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is reasonable for the present, but an exposure to an adverse change in circumstances or economic, financial or business conditions would create an uncertainty about the issuer's capacity to make timely payments. An NAIC 3 obligation should be eligible for less favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

- NAIC 4 is assigned to obligations of low quality. Credit risk is high and the issuer’s credit profile is volatile. These obligations are highly speculative, but currently the issuer has the capacity to meet its obligations. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is low and that an adverse change in circumstances or business, financial or economic conditions would accelerate credit risk, leading to a significant impairment in the issuer’s capacity to make timely payments. An NAIC 4 obligation should be accorded stringent treatment under the NAIC Financial Regulation Standards and Accreditation Program.
2. **Unrated subsidiaries** – (Reference - SSAP No. 105, paragraph 7)

**Industry proposal has two aspects:**

1. An unrated subsidiary obligor of a rated obligor - Proposes to attribute the credit strength of the rated parent to the unrated subsidiary obligor without the rated parent being a guarantor of the unrated subsidiary’s WCFI obligations. This proposal envisions the rated entity having some of its own obligations in the program.

2. A rated obligor and its unrated subsidiaries which are key transaction participants, but not obligors. The industry proposal is to create criteria to allow the “program” to obtain an acceptable NAIC designation by evaluating if the unrated “key transaction participant” is able to perform its functions.

Industry proposes several different ways to attribute the rated entity’s credit rating to the unrated entity including:

- Documented operational control of unrated obligor, or
- An important inter-relationship with unrated obligor, or
- If the unrated key transaction participants are reasonably expected to perform their functions.

➤ **NAIC Staff does not recommend the proposed credit substitution methodology for unrated subsidiaries** as it is overly complex, broad and difficult to apply. SVO staff memos excerpted below also highlighted the difficulty in applying the industry proposed credit substitution methodology.

**SVO P&P Requirements** – Note that it is possible for the program and the obligor to have different designations. SVO staff, noted that in their analysis key transaction participants could not have a lower designation than the entire program. Essentially their evaluation of a program is downgraded by the “weakest” link.

- Excerpts VOSTF October 2018 memo to the SAPWG:

  SVO evaluated whether analytical discretion would enable it to designate WCFI programs with unrated obligors of a rated or designated parent. SVO evaluated whether operational and strategic linkages between a rated parent and unrated obligor can provide a basis to attribute the credit rating of one entity to the other. It concluded that no principle exists to permit an assumption that a legal entity can be held responsible for the debt of another without having contractually agreed to do so. While WCFI arrangements may be inherently different than the credit situations SVO assesses SVO lacks the experiential basis to opine on the idea that the difference permits attribution.

  The SVO believes that it should be possible to develop performance criteria to evaluate the ability of the unrated entity to perform the functions expected of it. The goal would be to identify performance factors that could be evaluated in the exercise of analytical discretion to determine that the unrated entity could reliably perform the role expected of it.

**B. Changes to Program Administration/ Documentation Requirements**

**SSAP No. 105** – Current provisions:

- Requires the finance agent (bank, financial institution, financial intermediary or service provider) to fall under the jurisdiction of a financial regulator or that the investor be paid directly (No Commingling).
- If the finance agent is domiciled in another country that is on the SVO list of jurisdictions eligible for netting, it can be regulated by an agency that the SVO determines has a functional equivalent to the Board
of Governors of the Federal Reserve System; 2) the Office of the Comptroller of the Currency; or 3) the Federal Deposit Insurance Corporation.

- As an alternative to having a regulated finance agent, SSAP No. 105 allows for the investor to be paid directly without funds flowing through the finance agent. The SSAP program requirements for admission excludes programs which commingle funds of the obligor, supplier, servicers or other investors.

**Industry proposal** – Remove the requirement for the SVO to determine functionally equivalent regulators of finance agents in other countries.

**Excerpts from VOSTF October 2018 memo to the SAPWG:**

The SVO either determines that an international finance agent’s regulator is the functional equivalent of specified US federal bank regulators or verifies that payments due to the investor are not commingled. Determining functional equivalence is not an analytical issue. Therefore, programs are evaluated on the commingling standard. However, the prohibition of commingling is a requirement so the SVO verifies that commingling can never occur or fails the program.

- **NAIC Staff recommends** the Working Group consider removing the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the US. Regulator.

4. Remove finance agent commingling requirements – (Reference SSAP No. 105, paragraph 10.b.)

**Industry proposal** – As an alternative to having a regulated finance agent, allow the payments to be paid directly to the investor or paid into an account maintained by a regulated financial institution for the benefit of investors without the agent being the beneficiary of the payments. This would require removal of the commingling prohibition.

- **NAIC Staff recommends** Working Group consider if removing the commingling requirements provide the desired degree of protection. In addition, the Working Group should discuss with the Task Force if the program revisions are functional for analysis purposes. The Working Group should also consider the potential impact of other proposed revisions including lower rated key participants and obligors. Points for consideration:

  - SVO staff noted in their October 2018 memo that some programs fail the commingling requirement. SVO staff noted if commingling were not a requirement it would consider commingling risk, when present, as a structural deficiency and balance it against the requirement that the Finance Agent be NAIC 1 or NAIC 2.

  - Discussions with SVO staff indicated that although the Finance Agent is not required by SSAP No. 105 to be an NAIC 1 or NAIC 2, that as a key participant, the SVO analysis would require it to have an NAIC 1 or NAIC 2 in order for the program to meet the credit quality requirements. Note that if the program requirements were lowered, presumably the key participants could also have lower designations.

5. Finance agent validation requirements – (Reference SSAP No. 105, paragraph 16)
SSAP No. 105 – Requires that the annual program filing to the SVO include an annual audit which is unqualified related to servicing. In addition, it requires either an independent report on the controls of the finance agent related to the administration of the investment (SSAE 16 report) or an annual audit of the internal controls. Consolidated reports which include the finance agent are acceptable. SSAP No. 105 allows for materiality judgment of the SVO relative to the report findings.

**Industry proposal** – Make the annual audit requirement one of two options, with either a SSAE 16 report (or its functional equivalent), or an annual audit of the financial statements which includes internal controls. Retain the requirement to only permit reports which do not contain qualifications related to servicing of WCFI.

- NAIC Staff recommends the Working Group consider modifying the finance agent independent review requirements as requested by industry. The industry proposal still provides independent review of the finance agent either by audit or through an internal control report.

6. **Confirmed Supplier Receivable** – (Reference SSAP No. 105, paragraph 11b)

SSAP No. 105 – Requires that the ability of the investor to exercise its creditor rights not be subject to the discretion of the finance agent, other lenders or investors. A separate sentence notes the same requirements but allows an exception that a cure period not to exceed 30 days is permissible.

**Industry proposal** – Remove the sentence “shall not be subject to the discretion of the finance agent other lenders or investors” but keep the subsequent sentence.

- NAIC SAPWG Staff recommends that the Working Group direct staff to prepare minor rewording to paragraph 11b to improve readability and eliminate redundancy.

C. **Regulatory Compliance Requirements**

SSAP No. 105 – paragraph 18 provides the following:

18. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.

7. **Domestic Regulator Approval** – (Reference SSAP No. 105, paragraph 18)

**Industry proposal** – Remove reference to the possibility for the need of insurers to seek prior approval from their domestic regulator.

- NAIC Staff does not recommend removing the statement that the reporting entity may need to seek approval from the domestic regulator as this is a statement rather than an explicit requirement. NAIC Staff provides the following points for consideration:
  - Issue Paper No. 147 documents that requiring domestic regulator approval was an intentional decision because of concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis.
• The current guidance in SSAP No. 105 is not an explicit requirement, but only identifies that a domiciliary commissioner may require a company to receive initial permission before investing in WCFI.
• These investments may not fit into the normal investment law categories.
• The Industry proposal agrees that the asset class is not for most insurers as it requires relationships with finance agents beyond the traditional dealer insurer.
• The Industry proposal notes that the investor needs specialized knowledge, asset management operations and the ability to book and supervise the assets.
• The Industry proposal notes that the filing fees require sizable commitments to justify the costs, which would make it cost prohibitive for smaller players.

8. Filing certification – (Reference SSAP No. 105, paragraphs 14 and 15)

SSAP No. 105 – Program requirements for a confirmed supplier receivable require the investor to certify that they have the commercially reasonable belief that their participation in the WCFI program results in a first priority perfected interest and required meeting Uniform Commercial Code (UCC) requirements in a legalistic manner. Annual filings require the investor to certify that they have a commercially reasonable belief that they have met the standard for creating a first priority security interest. There is also a requirement that the SVO deems the investor’s belief reasonable.

Industry proposal – Remove requirement for legal officer to certify compliance in obtaining a first priority perfected interest in accordance with UCC requirements for each annual submission and related SVO requirements.

• SVO staff has indicated that the criteria in paragraphs 14 and 15 are typically determined when contracting a program and similar objectives can be accomplished in more ways than the UCC lien process. Requiring the UCC lien process is overly prescriptive.
• The definition in SSAP No. 105 of a confirmed supplier receivable requires a first priority perfected interest and, SVO analytical staff should be able to determine if first priority interest has been achieved.

➢ NAIC Staff recommends the Working Group consider modifying the filing certification requirements and allowing the SVO to determine if a first priority perfected interest has been obtained.

9. Default date – (Reference SSAP No. 105, paragraph 28)

SSAP No. 105 – A WCFI program is in default and nonadmitted when payments are uncollected within 15 days.

Industry proposal – Extend default and nonadmission date to 30 days.

➢ NAIC Staff recommends that the Working Group consider modifying the default provisions from 15-30 days as it is more practical to have the default date and the cure period be consistent. Key discussion points are:

• Waiting 30 days for a short-term asset can be material in relation to the life of the asset.
Fifteen (15) days was previously chosen to be consistent with settlement guidance in SSAP No. 21—Other Admitted Assets, which nonadmits and reclassifies receivables for securities not settled within 15 days.

The “cure period” noted in paragraph 11.b on confirmed supplier receivables is not to exceed 30 days so it may make sense for the default date and the end of the cure period to be consistent.

D. Change to Statutory Reporting

10. Change Reporting Category – (Reference SSAP No. 105 – paragraph 22)

SSAP No. 105 – Requires WCFI receivables to be on annual statement Schedule BA- Other Long-term Assets on specifically created reporting lines. Capital Adequacy (E) Task Force reviewed the asset class and requires specific (relatively low) RBC charges based on the NAIC SVO WCFI program designation.

Industry proposal – Move the statutory reporting of Working Capital Finance Investments from Schedule BA-Other Long-term Assets to Schedule DA, Short Term Investments because the receivables within the rated WCFI programs are required to be less than one year.

NAIC Staff does not recommend the Working Group change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA Short term Investments (points for consideration are in discussion below). Key reasons include:

- This is an unique class. Issue Paper No. 147, documents the VOSTF recommendation for Schedule BA reporting. The Task Force discussed the relative benefits between Schedule BA and DA and concluded that WCFIs should be reported as Other Invested Assets and therefore Schedule BA provides an enhanced disclosure framework deemed more appropriate for the investment.
- This reporting was intentional because the long-term programs are designated, even though the different investments are short term.
- Annual statement lines and RBC charges have already been established and the current RBC charges based on program designation would not be functional if the reporting was on Schedule DA, because that schedule does not include designations.

Status:
On August 3, 2019, the Statutory Accounting Principles (E) Working Group received a referral from the Valuation of Securities (E) Task Force and directed staff to proceed with drafting revisions for subsequent exposure using the staff Summer 2019 recommendations. During this discussion additional industry proposed revisions were presented, but not captured in the direction for initial revisions to SSAP No. 105.

For Fall 2019 National Meeting Discussion:

NAIC staff recommends exposing the substantive revisions to SSAP No. 105—Working Capital Finance Investments incorporating the industry proposed language for the specific items directed by the Working Group and illustrated in the attached. The revisions in response to the industry request are summarized below. NAIC staff recommends directing Staff to prepare an issue paper for discussion at the 2020 Spring National Meeting.
1. **Functionally Equivalent Foreign Regulators** - Removed the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the U.S. Regulator. (paragraph 10.a)

2. **Commingling Prohibitions** - Removed the finance agent prohibitions on commingling. (paragraph 10.b)

3. **Investor Rights Edit** - Removed duplicative text regarding exercise of investor rights. (paragraph 11.b)

4. **Requirements for filer to Certify Perfected Interest** – Removed requirements, with revisions allowing the SVO to determine if a first priority perfected interest has been obtained. (paragraphs 14 & 15)

5. **Finance Agent Validation Requirements** – The independent review requirements were broadened to allow independent review of the finance agent by either audit or through an internal control report. (paragraph 16)

6. **Default Date** - Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent. This has the effect of changing the date of nonadmission for an investment in default for a period up to 30 days instead of up to 15 days. (paragraph 28)

**In accordance with the Working Group direction, the following industry requested revisions were not incorporated:**

1. **Possible Domestic Regulator Approval** - The statement that the reporting entity may need to seek approval from the domestic regulator was maintained (paragraph 18). **Points for consideration:**
   - Issue Paper No. 147 documents that requiring domestic regulator approval was an intentional decision because of concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis.
   - The current guidance in SSAP No. 105 is not an explicit requirement, but only identifies that a domiciliary commissioner may require a company to receive initial permission.
   - These investments may not fit into the normal investment law categories.
   - The industry proposal notes:
     - the asset class is not for most insurers as it requires relationships with finance agents beyond the traditional dealer insurer.
     - the investor needs specialized knowledge, asset management operations and the ability to book and supervise the assets.
     - the filing fees require sizable commitments to justify the costs, which would make it cost prohibitive for smaller players.
   - Fall 2019 industry comments noted that state approval is not a practical risk mitigant. In addition, the speaker commented that he questioned the evaluation criteria that would be used by a state.

2. **Only High-Quality Obligors** – The current requirement which restricts designations of programs and obligors to being of high quality was maintained. NAIC Staff continues to not recommend lowering the credit quality of the acceptable obligors from NAIC 1 (highest quality) and NAIC 2 (high quality) to allow NAIC designations of 3 (medium quality) and NAIC 4 (low quality). **Points for consideration:**
   - The descriptions of NAIC designations in the *Purposes and Procedures Manual of the Investment Analysis Office* note that both NAIC designations of 3 and 4 have speculative elements (see Authoritative Literature).
   - Assets that reflect “factored receivables” are nonadmitted in statutory accounting. This program is the sole exception to the factored receivable rule. By lowering the allowable credit standards,
an expanded class of factored receivables would be admitted, further deviating from statutory accounting concepts.

- The SAPWG created SSAP No. 105 to allow admission for only high-quality programs, from high quality obligors. Allowing obligors with lower credit assessments would be a fundamental change in program requirements. (paragraphs 6 & 7)

3. **Unrated subsidiaries / Credit substitution** - NAIC Staff does not recommend the proposed credit substitution methodology for unrated subsidiaries as it is overly complex, broad and difficult to apply. Further, credit substitution does not adequately address credit risk for an unrated affiliate. SVO staff memos also highlighted the difficulty in applying the industry proposed credit substitution methodology (paragraph 7). Excerpts VOSTF October 2018 memo to the SAPWG:

SVO evaluated whether analytical discretion would enable it to designate WCFI programs with unrated obligors of a rated or designated parent. SVO evaluated whether operational and strategic linkages between a rated parent and unrated obligor can provide a basis to attribute the credit rating of one entity to the other. **It concluded that no principle exists to permit an assumption that a legal entity can be held responsible for the debt of another without having contractually agreed to do so.** While WCFI arrangements may be inherently different than the credit situations SVO assesses SVO lacks the experiential basis to opine on the idea that the difference permits attribution.

**Industry proposal for credit substitution has two aspects:**

a. **Credit substitution for unrated subsidiary obligors of a rated obligor** – Industry proposes to attribute the credit strength of the rated parent to the unrated subsidiary obligor without the rated parent being a guarantor of the unrated subsidiary’s WCFI obligations. This aspect envisions the rated entity having some of its own obligations in the program

b. **Credit Substitution of rated obligor for its unrated subsidiaries which are key transaction participants, but not obligors.** The industry proposal is to create criteria to allow the “program” to obtain an acceptable NAIC designation by evaluating if the unrated “key transaction participant” is able to perform its functions. Industry proposes several different ways to attribute the rated entity’s credit rating to the unrated entity including:

- Documented operational control of unrated obligor, or
- An important inter-relationship with unrated obligor, or
- If the unrated key transaction participants are reasonably expected to perform their functions.

**NAIC Staff Credit Substitution Recommendation – Reference SVO P&P Requirements** – The Practices and Procedures Manual of the Investment Analysis Office (P&P) contains existing credit substitution methodology, however the industry is proposing to diverge from the existing methodology for this asset class. **NAIC staff recommends referencing the existing credit substitution methodology in the P&P.**

4. **Change Reporting Schedule** - NAIC Staff does not recommend the Working Group change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA – Short term Investments (paragraph 22). Points for consideration:

- This reporting was intentional because the long-term programs are designated, even though the different investments are short term. Issue Paper No. 147, documents the VOSTF recommendation for Schedule BA reporting. The Task Force discussed the relative benefits between Schedule BA and
DA and concluded that WCFIs should be reported as Other Invested Assets and that Schedule BA provides an enhanced disclosure framework deemed more appropriate for the investment.

- Annual statement lines and RBC charges have already been established on Schedule BA.

- Capital Adequacy (E) Task Force reviewed the asset class and requires specific designations (relatively low - just slightly higher than a bond of similar credit risk). RBC charges are based on the NAIC SVO WCFI program designation. The current RBC charges based on program designation would not be functional if the reporting was moved to Schedule DA, because that schedule does not include designations.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed substantive revisions to SSAP No. 105—Working Capital Finance Investments to incorporate industry revisions to program requirements, as previously directed by the Working Group during the Summer National Meeting. The Working Group directed NAIC staff to prepare an issue paper.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group re-exposed SSAP No. 105—Working Capital Finance Investments with a proposed/anticipated effective date of June 30, 2020 and exposed Issue Paper 16X: Working Capital Finance Investment Updates for comment. This item was exposed with a May 1, 2020 comment period deadline.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 105—Working Capital Finance Investments and Issue Paper 163: Working Capital Finance Investment Updates with an additional modification discussed on the call. The modification removed this sentence from SSAP No. 105R, paragraph 16, “Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.” Accordingly, the related discussion in Issue Paper No. 163 was also updated.

This modification was part of the original request from industry and was recommended by a regulator member of the Working Group who noted that it may be confusing to regulators and cause extra work which would be duplicative since these programs are also subject to SVO office review. Therefore, the Working Group adopted 7 of the 10 industry modifications with a June 30, 2020 effective date.

The Working Group also directed notification of the revisions to the Valuation of Securities (E) Task Force.

Statutory Issue Paper No. 163

Working Capital Finance Investment Updates

STATUS
Finalized May 20, 2020

Original SSAP: 105; Current Authoritative Guidance: SSAP No. 105R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. This issue paper introduces substantive revisions to SSAP No. 105—Working Capital Finance Investments to change some of the existing accounting and program requirements. This item is specific for Working Capital Finance investments (WCFI) which comply with the program requirements and have been designated by the NAIC Securities Valuation Office (SVO).

SUMMARY CONCLUSION

2. The substantive revisions to SSAP No. 105 (illustrated in Exhibit A), reflect the following elements:
   a. Functionally Equivalent Foreign Regulators – Removed the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the U.S. Regulator.
   b. Commingling Prohibitions – Removed the finance agent prohibitions on commingling.
   c. Requirements for Filer to Certify First Priority Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if first priority perfected interest has been obtained.
   d. Finance Agent Validation Requirements – The independent review requirements were broadened to allow independent review of the finance agent by either audit or through an internal control report.
   e. Default Date – Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent. This has the effect of changing the date of nonadmission for an investment in default for a period up to 30 days instead of up to 15 days.
   f. Investor Rights Edit – Removed duplicative text regarding exercise of investor rights.

3. This issue paper provides historical information on the consideration of revisions for working capital finance program issuances acquired as investments, as well as some of the initially adopted guidance. SSAP No. 105 permits admittance of NAIC Securities Valuation Office designated WCFI programs that meet specific requirements.

Working Capital Finance Investments Overview

4. Bills receivable, in general, are an asset class that has been historically nonadmitted by statutory accounting. They were nonadmitted prior to codification and explicitly nonadmitted in SSAP No. 20—Nonadmitted Assets.
5. When SSAP No. 105 was developed, SSAP No. 20 was amended to allow working capital finance investments as admitted assets to the extent they conform to the requirements of SSAP No. 105 (see Relevant Statutory Accounting). Some of the WCFI program requirements are to provide protections that help to distinguish these programs from factoring, forfaiting, invoice discounting and other similar programs which have been historically nonadmitted in SSAP No. 20. SSAP No. 105 details that eligible confirmed supplier receivables must not: include insurance or insurance related assets; be impaired or in default at the time of purchase; or have a maturity longer than one year from the date of invoice. In addition, there are restrictions that preclude admission of affiliated WCFI investments.

6. SSAP No. 105 provides that working capital finance investments represent a confirmed short-term obligation\(^1\) to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office (SVO). Pursuant to the long-term working capital finance investment program, a short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third-party investor.

7. Working capital finance investments held by a reporting entity represent a right for the reporting entity to receive future payments. This issue paper provides details on the updates to the SSAP No. 105 accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

**Background**

8. SSAP No. 105 requires an SVO program designation of NAIC 1 or NAIC 2 (See definitions in relevant statutory accounting) in order to admit working capital finance investments. This was an intentional choice by the Working Group and the Valuation of Securities (E) Task Force during the initial development of guidance in 2012 to limit the admissibility to high quality programs and obligors. High quality programs in existence at the time of the original development of SSAP No. 105 and the some of the requirements of these programs which were administered by larger banks were reviewed.

9. During the original development of SSAP No. 105, the single group reporting entities that had been successfully investing in these types of assets for a number of years, agreed that a high level of investor sophistication to enter and monitor the transactions is required. Also, during the original development of SSAP No. 105, some regulators expressed concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis. That concern was the basis of the recommendation reflected in the original Issue Paper No. 147 presented to the Working Group to note that such investments which do not fit into traditional categories, may require department of insurance approval.

10. When SSAP No. 105 was developed, the Capital Adequacy (E) Task Force also determined a capital charge for the receivables which varied based on the NAIC designations on the new Schedule BA reporting lines which were developed for these investments.

11. The subsequent industry 2019 proposal developed under discussion by the Working Group proposed to move the investments to Schedule DA — Short-term Investments. During the subsequent review, the Working Group indicated a preference to maintain the long-term programs on annual statement BA where lines and columns would allow proper reporting of the risk-based capital charge. While the program issuances are limited to short-term investments, the long-term program which continually has new balances is what receives the designation.

\(^1\) All references to short-term obligations in this issue paper refer to obligations not exceeding one year.

DISCUSSION

Development of Statutory Accounting Guidance

12. SSAP No. 105 was originally effective in 2014 and was controversial as it was developed at the request of a single life entity. At that time, some Working Group members objected to the development of a new SSAP, reporting changes and specific asset class risk-based capital (RBC) charges at the behest of a single company. The discussion at that time noted that the permitted practice concept was intended to address such situations.

13. In 2018, the reporting entity that participates in these programs requested modifications to the adopted program and submitted a proposal for consideration.

14. As of year-end 2018, WCFI reported in the annual statement Schedule BA - Other Invested Assets was limited to the same life entity that originally requested the development of SSAP No. 105. This company reported a total of $258 million in a total of seven WCFI programs for 2017 and $224 million in a total of six WCFI programs for 2018. The total of these amounts is immaterial to the reporting entity. No reporting entities disclosed any prescribed or permitted practices varying from SSAP No. 105 in annual statement Note 1 for 2017 or 2018.

15. The Valuation of Securities (E) Task Force exposed the industry proposal and held discussion on in the third quarter of 2018. The Task Force approved referral to the Statutory Accounting Principles (E) Working Group, which was also supported by the life industry at the 2019 Spring National Meeting. The referral was also forwarded to the Working Group with Valuation of Securities (E) Task Force Memos.

16. The industry proposed ten revisions to SSAP No. 105 affecting the following key aspects:
   a. Changes to program and or obligor credit quality requirements
   b. Changes to program administration and/or documentation
   c. Changes to regulatory compliance requirements
   d. Changes to statutory reporting requirements.

17. On August 3, 2019, the Working Group received the referral from the Task Force and directed NAIC staff to proceed with drafting revisions for subsequent exposure using six of the ten industry recommendations.

Review of Items Not Supported by the Working Group:

18. During the August 2019 discussion the following four industry proposed revisions were presented, but not captured in the direction for revisions to SSAP No. 105.
   a. Possible Domestic Regulator Approval – The statement that the reporting entity may need to seek approval from the domestic regulator was maintained.
   b. Only High-Quality Obligors – The current requirement which restricts designations of programs and obligors to being of high quality (NAIC 1 or NAIC 2) was maintained.
   c. Unrated subsidiaries / Credit substitution - The industry proposed credit substitution methodology for unrated subsidiaries was not incorporated in the exposed revisions. The industry proposal had two aspects:
Ref #2019-25
IP No. 163

i. Credit substitution for unrated subsidiary obligors of a rated obligor – Industry proposed to attribute the credit strength of the rated parent to the unrated subsidiary obligor without the rated parent being a guarantor of the unrated subsidiary’s WCFI obligations. This aspect envisions the rated entity having some of its own obligations in the program.

ii. Credit Substitution of rated obligor for its unrated subsidiaries which are key transaction participants, but not obligors. The industry proposal was to create criteria to allow the “program” to obtain an acceptable NAIC designation by evaluating if the unrated “key transaction participant” is able to perform its functions. Industry proposed several different ways to attribute the rated entity’s credit rating to the unrated entity including:

(a) Documented operational control of unrated obligor, or
(b) An important inter-relationship with unrated obligor, or
(c) If the unrated key transaction participants are reasonably expected to perform their functions.

d. Change Reporting Schedule - The Working Group did not change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA – Short term Investments.

19. Some of the discussion points that were discussed which resulted in the Working Group not directing the inclusion of four of the industry proposed revisions were as follows:

a. Possible Domestic Regulator Approval – The statement that the reporting entity may need to seek approval from the domestic regulator was maintained as previously noted in Issue Paper No. 147. The Issue Paper documents the possible requirement for domestic regulator approval was an intentional decision because of concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis.

i. It was also noted that the current guidance in SSAP No. 105 is not an explicit requirement, but only identifies that a domiciliary commissioner may require a company to receive initial permission (see final action in paragraph 23).

ii. The agenda item noted that the industry proposal noted:

(a) that these investments may not fit into the normal investment law categories.
(b) the asset class is not for most insurers as it requires relationships with finance agents beyond the traditional dealer insurer.
(c) the investor needs specialized knowledge, asset management operations and the ability to book and supervise the assets.
(d) the filing fees require sizable commitments to justify the costs, which would make it cost prohibitive for smaller players.

iii. As a counterpoint to the decision not to change the guidance in the SSAP No. 105, the Fall 2019 industry comments noted that state approval is not a practical risk mitigant. In
addition, the speaker present at the meeting commented that he questioned the evaluation criteria that would be used by a state.

b. Only High-Quality Obligors – The current requirement which restricts designations of programs and obligors to being of high quality was maintained. The Working Group was not in favor of lowering the credit quality of the acceptable obligors from NAIC 1 (highest quality) and NAIC 2 (high quality) to allow NAIC designations of 3 (medium quality) and NAIC 4 (low quality) (See definitions in relevant statutory accounting).

i. The descriptions of NAIC designations in the *Purposes and Procedures Manual of the Investment Analysis Office* note that both NAIC designations of 3 and 4 have speculative elements.

ii. Assets that reflect “factored receivables” are nonadmitted in statutory accounting. This program is the sole exception to the factored receivable rule. By lowering the allowable credit standards, an expanded class of factored receivables would be admitted, further deviating from statutory accounting concepts.

iii. The SAPWG created SSAP No. 105 to allow admission for only high-quality programs, from high quality obligors. Allowing obligors with lower credit assessments would be a fundamental change in program requirements.

c. Unrated subsidiaries / Credit substitution – The industry proposed credit substitution methodology for unrated subsidiaries was not incorporated in the exposed revisions. The industry proposal was noted in the discussion as complex, broad and difficult to apply. Further, credit substitution does not adequately address credit risk for an unrated affiliate. SVO staff memos also highlighted the difficulty in applying the industry proposed credit substitution methodology. Excerpts from the Valuation of Securities (E) Task Force October 2018 memo to the Working Group note the following:

SVO evaluated whether analytical discretion would enable it to designate WCFI programs with unrated obligors of a rated or designated parent. SVO evaluated whether operational and strategic linkages between a rated parent and unrated obligor can provide a basis to attribute the credit rating of one entity to the other. *It concluded that no principle exists to permit an assumption that a legal entity can be held responsible for the debt of another without having contractually agreed to do so. While WCFI arrangements may be inherently different than the credit situations SVO assesses SVO lacks the experiential basis to opine on the idea that the difference permits attribution.*

d. Change Reporting Schedule – The Working Group did not change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA – Short term Investments. Key points noted were:

i. Reporting on Schedule BA was intentional because the long-term programs are designated, even though the different investments are short-term. Issue Paper No. 147, documents the VOSTF recommendation for Schedule BA reporting. The Task Force discussed the relative benefits between Schedule BA and DA and concluded that WCFIs should be reported as Other Invested Assets and that Schedule BA provides an enhanced disclosure framework deemed more appropriate for the investment.

ii. Annual statement lines and RBC charges have already been established on Schedule BA.
iii. Capital Adequacy (E) Task Force reviewed the asset class and requires specific designations (relatively low - just slightly higher than a bond of similar credit risk). RBC charges are based on the NAIC SVO WCFI program designation. The current RBC charges based on program designation would not be functional if the reporting was moved to Schedule DA, because that schedule does not include designations which are needed for RBC.

Review of Items Proposed for Inclusion in SSAP No. 105:

20. On December 7, 2019, the Working Group exposed substantive revisions to SSAP No. 105 to incorporate industry revisions to program requirements, as previously directed by the Working Group during the 2019 Summer National Meeting.

21. The substantive revisions to SSAP No. 105 that were exposed for comment reflected the following elements:

a. Functionally Equivalent Foreign Regulators - Removed the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the U.S. Regulator. Removing this element was supported by the SVO, which noted that determining functional equivalence is not an analytical issue.

b. Commingling Prohibitions - Removed the finance agent prohibitions on commingling. Removal of this requirement was supported by the SVO. SVO staff noted if commingling were not a requirement it would consider commingling risk, when present, as a structural deficiency and balance it against the requirement that the Finance Agent be NAIC 1 or NAIC 2.

c. Investor Rights Edit - Removed duplicative text regarding exercise of investor rights. This revision was to improve readability and eliminate redundancy.

d. Requirements for filer to Certify Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if a first priority perfected interest in accordance with uniform commercial code (UCC) requirements for each annual submission has been obtained. In deciding to make this revision the following key points were deemed relevant:

i. It was noted that the SVO staff has indicated that UCC first priority perfected interest criteria are typically determined when contracting a program and similar objectives can be accomplished in more ways than the UCC lien process. Requiring the UCC lien process was viewed as overly prescriptive.

ii. The definition in SSAP No. 105 of a confirmed supplier receivable requires a first priority perfected interest and, SVO analytical staff should be able to determine if first priority interest has been achieved

e. Finance Agent Validation Requirements – The independent review requirements were broadened to allow independent review of the finance agent by either audit or through one of two types of internal control report. This is a lower threshold, than the existing requirements, but one that still provides some type of independent program review.
f. Default Date - Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent. This has the effect of changing the date of nonadmission for an investment in default for a period up to 30 days instead of up to 15 days. Key discussion points are:

i. Waiting 30 days for a short-term asset can be material in relation to the life of the asset.

ii. Fifteen (15) days was previously chosen to be consistent with settlement guidance in SSAP No. 21—Other Admitted Assets, which nonadmits and reclassifies receivables for securities not settled within 15 days.

iii. The “cure period” on confirmed supplier receivables is not to exceed 30 days, therefore, the Working Group agreed that it may make sense for the default date and the end of the cure period to be consistent.

22. At the 2020 Spring National Meeting, the Working Group reviewed the issue paper and the January 2020 comments on the exposed item. Comments received from industry advocated for inclusion of the four items that the Working Group opted to exclude from the additional revisions to the revised Statement. Key elements noted in the industry comments included the following:

a. Absent all 10 of the industry proposed revisions, investments in working capital finance programs will remain low.

b. Industry advocated that its proposed credit substitution mechanism to allow unrated subsidiaries was suitable for NAIC implementation to allow not only lower rated subsidiaries but also un-rated subsidiaries. The commenters maintained that the absence of mention of non-rated subsidiaries as acceptable obligors, did not preclude them from allowing unrated obligors. However, the current SSAP No. 105 program requirements explicitly require obligors to be of high credit quality.

c. The industry comments advocated that lower rated investments should be allowed as the statutory risk-based capital requirements reflect investment quality decisions in capital calculations.

d. The industry comments advocated that domiciliary regulator prior approval for investment is a transfer of transaction review from staff to state insurance departments. The commenters noted that when, if regulators are concerned about the asset class, they can uniformly limit investment as a whole. Given the high costs to a small industry investor, coupled with the fact that dealers would unlikely choose to document such investments bilaterally with small industry investors, already limits access to the assets to large industry investors (see final action in paragraph 23).

e. The industry commented that Schedule BA reporting is both cumbersome and expensive and in the view of the industry commenters, the more appropriate schedule would be Schedule DA.

23. During the 2020 Spring National Meeting, after considering the interested parties’ comments, the Working Group identified the revisions as a substantive change, re-exposed revisions to SSAP No. 105, and exposed this Issue Paper. On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 105—Working Capital Finance Investments and Issue Paper 163: Working Capital Finance Investment Updates with an additional modification discussed on the call. As part of the May 20, 2020 adoption action, the Working Group and designated an effective date for the revisions of June 30, 2020.
a. The modification removed this sentence from SSAP No. 105R, paragraph 16, “Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.” Accordingly, the related discussion in Issue Paper No. 163 was also updated.

b. This modification was part of the original request from industry and was recommended by a regulator member of the Working Group who noted that it may be confusing to regulators and cause extra work which would be duplicative since these programs are also subject to SVO office review. Therefore, the Working Group adopted 7 of the 10 industry modifications.

c. The Working Group also directed notification of the revisions to the Valuation of Securities (E) Task Force.

RELEVANT STATUTORY ACCOUNTING

25. SSAP No. 20—Nonadmitted Assets was amended by SSAP No. 105 to allow working capital finance investments as admitted assets to the extent they conform to the requirements of SSAP No. 105.

4. Consistent with paragraph 2, the following assets shall be nonadmitted:

   a. Deposits in Suspended Depositories—Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R). Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders;

   b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in SSAP No. 105;

   (Rest of paragraph omitted for brevity)

26. Purposes and Procedures Manual of the NAIC Investment Analysis Office provides the following on NAIC Designations:

   a. NAIC 1 is assigned to obligations exhibiting the highest quality. Credit risk is at its lowest and the issuer’s credit profile is stable. This means that interest, principal or both will be paid in accordance with the contractual agreement and that repayment of principal is well protected. An NAIC 1 obligation should be eligible for the most favorable treatment provided under the NAIC Financial Regulation Standards and Accreditation Program.

   b. NAIC 2 is assigned to obligations of high quality. Credit risk is low but may increase in the intermediate future and the issuer’s credit profile is reasonably stable. This means that for the present, the obligation’s protective elements suggest a high likelihood that interest, principal or both will be paid in accordance with the contractual agreement, but there are suggestions that an adverse change in circumstances or economic, financial or business conditions will affect the degree of protection and lead to a weakened capacity to pay. An NAIC 2 obligation should be
eligible for relatively favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

c. NAIC 3 is assigned to obligations of medium quality. Credit risk is intermediate and the issuer’s credit profile has elements of instability. These obligations exhibit speculative elements. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is reasonable for the present, but an exposure to an adverse change in circumstances or economic, financial or business conditions would create an uncertainty about the issuer’s capacity to make timely payments. An NAIC 3 obligation should be eligible for less favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

d. NAIC 4 is assigned to obligations of low quality. Credit risk is high and the issuer’s credit profile is volatile. These obligations are highly speculative, but currently the issuer has the capacity to meet its obligations. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is low and that an adverse change in circumstances or business, financial or economic conditions would accelerate credit risk, leading to a significant impairment in the issuer’s capacity to make timely payments. An NAIC 4 obligation should be accorded stringent treatment under the NAIC Financial Regulation Standards and Accreditation Program.

Effective Date

27. As issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble), the subsequent consideration and adoption of this issue paper will not have any impact of the effective date of the substantive revisions adopted to SSAP No. 105 by the Working Group on May 20, 2020.

Statement of Statutory Accounting Principles No. 105

Working Capital Finance Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends SSAP No. 20—Nonadmitted Assets (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation\(^1\) to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third-party investor.

3. Working capital finance investments held by a reporting entity represent a right of the reporting entity to receive future payment. This Statement provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A “working capital finance program” is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short term obligation and arises from transactions among:
   a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,
   b. the supplier(s) of those goods or services,
   c. a finance agent, and
   d. an investor.

6. A “working capital finance investment” is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from

\(^1\) All references to short-term obligations in this statement to refer to obligations not exceeding one year.
the date of invoice from the supplier to the obligor. This investment is created when the investor purchases from a working capital finance program that is currently designated as NAIC “1” or “2” by the NAIC Securities Valuation Office, any of the following:

a. One or more confirmed supplier receivables;

b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or

c. a certificate, note or other interest manifestation, documented in a way that is verifiable by regulators, representing a legally enforceable interest in a right to payment either directly to the investor or from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. “Obligor” is the party that purchases the goods or services that generates the original supplier receivable (and which is the payable for the Obligor). The obligor must be a single entity, which has an NAIC designation of “1” or “2” or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12-13.

8. “Supplier” is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivable in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. “Investor” is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

10. The “finance agent” is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the Purposes and Procedures Manual of the NAIC Investment Analysis Office List of Jurisdictions Eligible for Netting and that the Securities Valuation Office determines that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation; or

b. Payments from the obligor must be paid directly to the reporting entity (investor) or into an account maintained by a regulated financial institution for the benefit of investors in the working capital finance program and, in either case, cannot flow through the finance agent and cannot be the beneficiary of such payment. There can be no commingling of payments or assets with those of the obligor, supplier, servicer or trust administrator or other investors.

11. A “confirmed supplier receivable” is a first priority perfected security interest or right to payment of a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability, existence, performance or non-performance of the underlying commercial trade transaction or any related contract or undertaking nor that it will
not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.

b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. The reporting entity investor’s ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to the discretion of the finance agent or other lenders or investors. The reporting entity investor’s ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers’ specified dates and has waived all defenses to payment. In the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice reference numbers’ specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of that Confirmed Supplier Receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts or claims that might be raised in defense arising from any transaction financed in connection with the WCFPWCFI program, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

14. In the case of participation, the investor must certify that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code’s standards for creating and preserving first priority security interests in the payments due and in the confirmed supplier receivables. Commercially reasonable belief shall mean the SVO deems the investor’s belief reasonable in light of the systems, policies, or practices commonly recognized in the field of investing in participations. The investor must be able to demonstrate to a regulator or to the SVO, upon either’s request, the basis for its commercially reasonable belief that the WCFP creates and preserves the investor’s ability to enforce a first priority perfected security interest in the confirmed supplier receivables.

15. In the case of a certificate, note, or other manifestation, capable of verification, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, the investor must certify that it has a commercially reasonable belief that the documents establishing and governing the working capital finance program create and preserve interests in the confirmed supplier receivables capable of being enforced by the trustee or other entity holding confirmed supplier receivables as first priority perfected security interests under the Uniform Commercial Code. The investor must be able to demonstrate the basis for such belief to a regulator or to the SVO upon either’s request. Commercially reasonable belief shall mean the SVO
Program Requirements

46.14. The working capital finance program investor must provide in its annual filing with the Securities Valuation Office an annual audit of the consolidated financial statements of which the finance agent is part, which does not report any qualifications related to servicing, and one of the following:

   a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment; or

   b. An annual audit of the financial statements and internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing working capital financial investments.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

47.15. If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation “1” or “2”), the reporting entity shall nonadmit, the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

48.16. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.

49.17. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

20.18. A working capital finance investment excludes any receivables financed through:

   a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;
b. Forfaiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or

c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity’s eligible and outstanding receivables.

21.19. Eligible Confirmed Supplier Receivables must not:

   a. Include insurance or insurance related assets;

   b. Be impaired or in default at the time of purchase;

   c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor

   d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

Accounting and Reporting

22.20. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets, and is an admitted asset to the extent the investment conforms to the requirements set forth in this Statement and the Purposes and Procedures Manual of the NAIC Investment Analysis Office. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this Statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements set forth in this Statement, or the provisions set forth in the Purposes and Procedures Manual of the NAIC Investment Analysis Office are nonadmitted. Working capital finance investments are reported as other invested assets in the financial statements.

23.21. A working capital finance investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

24.22. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.
25.23. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (SSAP No. 7). For reporting entities not required to maintain an IMR, realized gains and losses from working capital finance investments shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

26.24. A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

27.25. SSAP No. 34—Investment Income Due and Accrued shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with SSAP No. 34—Investment Income Due and Accrued, investment income shall be reduced for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

28.26. A working capital finance investment payment that is uncollected by the reporting entity within fifteen thirty days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

29.27. An other-than-temporary impairment (INT 06-07) shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment’s carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with SSAP No. 100R—Fair Value (SSAP No. 100R), and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

30.28. For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than-temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

31.29. Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must re-evaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.
Disclosures

32.30. The financial statements shall include the following disclosures:

a. Fair value in accordance with SSAP No. 100R.

b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures (SSAP No. 27) in the annual audited statutory financial reports only.

c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends SSAP No. 20—Nonadmitted Assets (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation\(^1\) to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third party investor.

3. Working capital finance investments held by a reporting entity represent a right of the reporting entity to receive future payment. This Statement provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A “working capital finance program” is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short term obligation and arises from transactions among:
   a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,
   b. the supplier(s) of those goods or services,
   c. a finance agent, and
   d. an investor.

6. A “working capital finance investment” is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from the date of invoice from the supplier to the obligor. This investment is created when the investor purchases from a working capital finance program that is currently designated as NAIC “1” or “2” by the NAIC Securities Valuation Office, any of the following:
   a. One or more confirmed supplier receivables;
   b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or

\(^1\) All references to short-term obligations in this statement to refer to obligations not exceeding one year.
c. a certificate, note or other interest manifestation, documented in a way that is verifiable by regulators, representing a legally enforceable interest in a right to payment either directly to the investor or from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. “Obligor” is the party that purchases the goods or services that generates the original supplier receivable (and which is the payable for that Obligor). The obligor must be a single entity, which has an NAIC designation of “1” or “2” or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12-13.

8. “Supplier” is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivable in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. “Investor” is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

10. The “finance agent” is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the Purposes and Procedures Manual of the NAIC Investment Analysis Office List of Jurisdictions Eligible for Netting and that the Securities Valuation Office determines that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation; or

b. Payments from the obligor must be paid directly to the reporting entity (investor) or into an account maintained by a regulated financial institution for the benefit of investors in the working capital finance program and, in either case, cannot flow through the finance agent cannot be the beneficiary of such payment and 2) there can be no commingling of payments or assets with those of the obligor, supplier, servicer or trust administrator or other investors.

11. A “confirmed supplier receivable” is a first priority perfected security interest or right to payment of a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability, existence, performance or non-performance of the underlying commercial trade transaction or any related contract or undertaking nor that it will not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.
b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. The reporting entity investor’s ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to the discretion of the finance agent or other lenders or investors. The reporting entity investor’s ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers’ specified dates and has waived all defenses to payment. In the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice reference numbers’ specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of that Confirmed Supplier Receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts or claims that might be raised in defense arising from any transaction financed in connection with the WCFP/WCFI program, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

14. In the case of participation, the investor must certify that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code’s standards for creating and preserving first priority security interests in the payments due and in the confirmed supplier receivables. Commercially reasonable belief shall mean the SVO deems the investor’s belief reasonable in light of the systems, policies, or practices commonly recognized in the field of investing in participations. The investor must be able to demonstrate to a regulator or to the SVO, upon either’s request, the basis for its commercially reasonable belief that the WCFP creates and preserves the investor’s ability to enforce a first priority perfected security interest in the confirmed supplier receivables.

15. In the case of a certificate, note, or other manifestation, capable of verification, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, the investor must certify that it has a commercially reasonable belief that the documents establishing and governing the working capital finance program create and preserve interests in the confirmed supplier receivables capable of being enforced by the trustee or other entity holding confirmed supplier receivables as first priority perfected security interests under the Uniform Commercial Code. The investor must be able to demonstrate the basis for such belief to a regulator or to the SVO upon either’s request. Commercially reasonable belief shall mean the SVO deems the investor’s belief reasonable in light of the systems, policies, and practices commonly recognized in the field of investing in securitizations, loan-backed, structured, or trust-issued securities.
Program Requirements

46.14. The working capital finance program investor must provide in its annual filing with the Securities Valuation Office an annual audit of the consolidated financial statements of which the finance agent is part, which does not report any qualifications related to servicing, and one of the following:

   a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment; or

   b. An annual audit of the financial statements and internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing working capital financial investments.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

47.15. If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation “1” or “2”), the reporting entity shall nonadmit, the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

48.16. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.

49.17. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

20.18. A working capital finance investment excludes any receivables financed through:

   a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;

   b. Forfaiting: the purchase of one or a series of receivables from exporters by a forfaire to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no
relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or

c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity’s eligible and outstanding receivables.

21. Eligible Confirmed Supplier Receivables must not:

a. Include insurance or insurance related assets;

b. Be impaired or in default at the time of purchase;

c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor

d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

Accounting and Reporting

22. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in SSAP No. 4—Assets and Nonadmitted Assets, and is an admitted asset to the extent the investment conforms to the requirements set forth in this Statement and the Purposes and Procedures Manual of the NAIC Investment Analysis Office. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this Statement, the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements set forth in this Statement, or the provisions set forth in the Purposes and Procedures Manual of the NAIC Investment Analysis Office are nonadmitted. Working capital finance investments are reported as other invested assets in the financial statements.

23. A working capital finance investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

24. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.

25. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (SSAP No. 7). For reporting entities not required to
maintain an IMR, realized gains and losses from working capital finance investments shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

26.24. A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

27.25. SSAP No. 34—Investment Income Due and Accrued shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with SSAP No. 34—Investment Income Due and Accrued, investment income shall be reduced for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

28.26. A working capital finance investment payment that is uncollected by the reporting entity within fifteen thirty days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

29.27. An other-than-temporary impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment’s carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with SSAP No. 100R—Fair Value (SSAP No. 100R), and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

30.28. For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than-temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

31.29. Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must reevaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.

Disclosures

32.30. The financial statements shall include the following disclosures:
a. Fair value in accordance with SSAP No. 100R.

b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures (SSAP No. 27) in the annual audited statutory financial reports only.

c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

d. Annual and quarterly information regarding the aggregate book/adjusted carrying value maturity distribution on the underlying working capital finance investments by the categories of maturities up to 180 days and 181 to 365 days.

e. Any events of default of working capital finance investments during the reporting period.

33.31. Refer to the Preamble for further discussion regarding disclosure requirements.

**Effective Date and Transition**

34.32. This statement is effective for years on or after January 1, 2014. Substantive revisions documented in Issue Paper No. 163—Working Capital Finance Investments Updates are effective for financial reporting periods on or after June 30, 2020. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

Issue: Inclusion of Cash / Liquidity Pools - Cash Equivalents as Defined in SSAP No. 2R.

Check (applicable entity):

| Description of Issue: Cash pooling, also known as liquidity bundling or liquidity pools, is a special form of liquidity management in which groups combine resources in order to make a more efficient use of idle cash. A cash pool is typically a structure in which several entities’ cash accounts are aggregated for numerous purposes, including optimizing earned interest, accessing additional short-term investments markets, and improving liquidity management. The investment goal is to optimize financial results by increasing investment access and lower transaction costs that would be incurred by each individual pool participant.

Contributed cash is typically placed in short-term investments, which may not have been previously available to a single affiliated reporting entity that possesses a lower cash balance. Affiliates with lower cash balances can leverage the financial strength of other related affiliates in order to access certain markets that contain significant initial investment requirements. Additionally, by pooling resources and making fewer (and larger) investments, transaction costs are reduced, thus giving the participants a more efficient use of cash resources.

In general, pooling is restricted to groups in which several companies are organized under the management of a single corporate entity. Individual participating companies may be legally independent, however the group acts as a strategic unit, for the purposes of cash management.

Cash pooling structures are not a new market development; however, their potential uses and organizational structures can vary significantly. Under certain pool structures, positive cash balances of one member could cover the deficit cash balance of another member. In this type of structure, surplus funds are physically concentrated into a single account in order to maximize investment return while deficit accounts are covered by transfers from the cash pool. Within these structures, individual participants lose economic independence as the cash is managed centrally and may not be available to the extent desired by the participating entity. Pooling structures have also been formed for internal financing purposes as “sharing of cash” can be used to reduce reliance on external borrowing for short-term working capital needs, again potentially reducing the cash available by certain participants.

This agenda item recommends revisions to allow specific structures that strictly hold cash, cash equivalents and short-term investments and other certain criteria, but do not meet the current requirements for cash equivalent reporting, to be reported as cash equivalents under SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments.

Existing Authoritative Literature:

SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments

Cash Equivalents

Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in
value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 7. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting. Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): A question regarding cash pools was raised under the proposed short-term rolling provisions captured in agenda item 2019-20. With this question, it was noted that cash pools are not specifically addressed in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments. This agenda item proposes to incorporate specific guidance for these instruments. If revisions are adopted to clarify cash pools in scope of SSAP No. 2R, it is anticipated that revisions will also be proposed to exclude cash pools from the short-term rolling provisions, allowing qualifying cash pools to be continually reported as cash equivalents.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to specify the types of cash pooling organization structures and the investments they are required to maintain in order to qualify as cash equivalents.

NAIC staff is aware a circumstance where a Limited Liability Company was used as the primary structure for a Cash / Liquidity Pool. However, NAIC staff is not proposing changes to SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies as the legal structure of such pools will vary. Comments are requested regarding the need for a Cash / Liquidity Pool reference in SSAP No. 48.

1 Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.
Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition, with the exception of cash pools that meet the requirements of paragraph 8 and money market mutual funds described in paragraph 7. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting. Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

8. Cash pooling is a technique, utilized by some companies under common control by which several entities’ cash accounts are aggregated for numerous purposes, including liquidity management, optimizing interest or investment returns and reducing investment or banking transaction fees. Cash pools can have numerous functions and structures, however only those that have obtained domiciliary regulator approval and meet the requirements may look through the ownership structure to report the assets held as cash equivalents.

   a. Members or participants in the pool are limited to affiliated entities as defined in SSAP No. 25.

   b. Investments held by the pool are limited to non-affiliated investments.

   c. The pool must permit each participant to withdraw, at any time, cash up to the amount it has contributed to the pool. Each participant must own an undivided interest in the underlying assets of the pool in proportion to the aggregate amount of cash contributed. All affiliates’ interests in the pool shall be of the same class, with equal rights, preferences and privileges. All membership interests shall be fully paid and non-assessable and shall have no preemptive, conversion or exchange rights. The liability of a participant’s debts and obligations of the pool shall be limited to the amount of its contributions and no participant shall be obligated to contribute money to the pool for any reason other than to participate in the pool’s investments. Additionally, participants shall not cover the debits or credits of another participant (commonly referred to as notional cash pooling).

   a-d. An audited U.S. GAAP annual report of the cash pool and schedules showing each affiliate’s prorated share of investments shall be provided annually to each participant as of December 31. The reporting entity shall determine if the investments would have qualified as cash, cash equivalents or short-term investments had the entity independently acquired the investments. To the extent the pool holds investments that do not meet the...
Disclosures
15. The following disclosures shall be made for short-term investments in the financial statements:

   a. Fair values in accordance with SSAP No. 100R—Fair Value;
   b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures;
   c. Basis at which the short-term investments are stated.
   d. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraph 30.f.

16. The financial statements shall disclose the reporting entity's share of the cash pool by asset type (cash, cash equivalents, or short-term investments).

For brevity, the remaining paragraphs of SSAP No. 2R have been omitted but will be renumbered accordingly.

Staff Review Completed by:
NAIC Staff – Jim Pinegar, September 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions, as illustrated above, to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to specify that cash pooling structures that meet specified criteria qualify as cash equivalents.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, as illustrated below, with revisions from the prior exposure shaded in gray, to reflect that certain cash / liquidity pools, meeting defined criteria, may be reported as cash, cash equivalents, or short-term investments. This item has a shortened comment period deadline ending May 1, 2020.

Cash Equivalents

7.9. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition, with the exception of cash pools that meet the requirements of paragraph 8 and money market mutual funds described in paragraph 7. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

10. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting.
Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

11. Cash pooling is a technique, utilized by some companies under common control by which several entities’ cash accounts are aggregated for numerous purposes, including liquidity management, optimizing interest or investment returns and reducing investment or banking transaction fees. Cash pools can have numerous functions and structures, however only those that have obtained domiciliary regulator approval and meet the requirements may look through the ownership structure to report the assets held as cash, cash equivalents, or short-term investments:

   a. Members or participants in the pool are limited to affiliated entities as defined in SSAP No. 25.
   b. Investments held by the pool are limited to non-affiliated investments.
   c. The pool must permit each participant to withdraw, at any time, cash up to the amount it has contributed to the pool. Each participant must own an undivided interest in the underlying assets of the pool in proportion to the aggregate amount of cash contributed. All affiliates’ interests in the pool shall be of the same class, with equal rights, preferences and privileges. All membership interests shall be fully paid and non-assessable and shall have no preemptive, conversion or exchange rights. The liability of a participant’s debts and obligations of the pool shall be limited to the amount of its contributions and no participant shall be obligated to contribute money to the pool for any reason other than to participate in the pool’s investments. Additionally, participants shall not cover the debits or credits of another participant (commonly referred to as notional cash pooling).
   d. A reporting entity shall receive an annual report from the pool manager, which identifies the participant’s investment (share) in the cash pool and the dollar value of its share of cash, cash equivalents and short-term investments. The reporting entity shall report their total balances in the cash pool on the schedule which represents a majority of the held assets. An audited U.S.-GAAP annual report of the cash pool and schedules showing each affiliate’s prorated share of investments shall be provided annually to each participant as of December 31. The reporting entity shall independently determine if the investments would have qualified as cash, cash equivalents or short-term investments had the entity independently acquired the investments. To the extent the pool holds investments that do not meet the definition of cash, cash equivalents, short-term investments, or if the cash pool is not supported by an audited statement, the pool does not qualify within scope of this statement.
   e. Valuation of the assets in the pool shall remain consistent with the valuations required by reported asset type as stipulated in SSAP No. 2R.

Disclosures

16. The following disclosures shall be made for short-term investments in the financial statements:

   a. Fair values in accordance with SSAP No. 100R—Fair Value;
Ref #2019-42

b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures;

c. Basis at which the short-term investments are stated.

d. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraph 30.f.

**17.18.** The financial statements shall disclose the reporting entity’s share of the cash pool by asset type (cash, cash equivalents, or short-term investments).

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, as illustrated below, with revisions from the prior exposure shaded in gray, to reflect that certain cash / liquidity pools, meeting defined criteria, may be reported as cash equivalents.

### Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 7, and cash pooling, as detailed in paragraph 9 [the verbiage highlighted in italics and underlined, reference guidance expected to be adopted in agenda item 2019-20: Rolling Short-Term Investments] and. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

8. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting. Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve. For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

9. Cash pooling is a technique, utilized by some companies under common control by which several entities’ cash accounts are aggregated for numerous purposes, including liquidity management, optimizing interest or investment returns and reducing investment or banking transaction fees. Cash pools can have numerous functions and structures, however only those that have obtained domiciliary regulator approval and meet the following requirements are in scope of this statement, may look through the ownership structure to report the assets held as cash, cash equivalents, or short-term investments.

a. Members or participants in the pool are limited to affiliated entities as defined in SSAP No. 25.

b. Investments held by the pool are limited to non-affiliated investments [non-affiliated to the insurance reporting entity].
c. The pool must permit each participant to withdraw, at any time, cash up to the amount it has contributed to the pool. Each participant must own an undivided interest in the underlying assets of the pool in proportion to the aggregate amount of cash contributed. All affiliates’ interests in the pool shall be of the same class, with equal rights, preferences and privileges. All membership interests shall be fully paid and non-assessable and shall have no preemptive, conversion or exchange rights. The liability of a participant’s debts and obligations of the pool shall be limited to the amount of its contributions and no participant shall be obligated to contribute money to the pool for any reason other than to participate in the pool’s investments. Additionally, participants shall not cover the debits or credits of another participant (commonly referred to as notional cash pooling).

d. A reporting entity shall receive an annual monthly reports from the pool manager, which identifies the participant’s investment (share) in the cash pool and the dollar value of its share of cash, cash equivalents and short-term investments. The reporting entity shall report their total balances in the cash pool on the Schedule E – Part 2, utilizing the line number specified for “Other Cash Equivalents,” as a which represents a majority of the held assets (For example, a qualifying cash pool that contains 20% cash, 70% cash equivalents, and 10% short-term investments, the reporting entity would report their entire balance invested as a cash equivalent). The reporting entity shall independently determine if the investments would have qualified as cash, cash equivalents or short-term investments had the entity independently acquired the investments. To the extent the pool holds investments that do not meet the definition of cash, cash equivalents, short-term investments, the pool does not qualify within scope of this statement.

a-e. Valuation of the assets in the pool shall remain consistent with the valuations required by reported asset type as stipulated in SSAP No. 2R.

Disclosures

17. The following disclosures shall be made for short-term investments in the financial statements:

e. Fair values in accordance with SSAP No. 100R—Fair Value;

f. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures;

g. Basis at which the short-term investments are stated.

h. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraph 30.f.

18. The financial statements shall disclose the reporting entity’s share of the cash pool by asset type (cash, cash equivalents, or short-term investments).

Effective Date and Transition

19. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance in paragraph 6 of this statement related to terms reset at predefined dates was previously included within INT 08-10: Contractual Terms of Investments and Investor Intent and was effective for periods beginning December 5, 2008. This substantively revised statement, as detailed in Issue Paper No. 155 regarding treatment of money market mutual funds as cash equivalents, is effective on a prospective basis beginning December 31, 2017.
49.20. Revisions permitting cash liquidity pools that meet the specific criteria are effective May 20, 2020 for reporting entities with qualifying cash pools. Reporting entities with cash liquidity pools that do not meet the requirements for reporting within scope of this standard are not permitted to be reported as cash equivalents or short-term investments and shall be reported as a prescribed or permitted practice. (Prior to this adoption date, there was no guidance permitting cash liquidity pools to be captured in scope of this standard.) For reporting entities that will have to reclassify qualifying cash liquidity pools to a cash equivalent from a different investment schedule, the reporting entity may elect to complete these reclassifications effective January 1, 2021, with early adoption permitted.

Description of Issue:
This agenda item has been drafted to consider statutory accounting guidance for short-term investment structures that are being purposely designed to mature at or around 364 days (often with affiliates), with the full expectation that the investment structure would be renewed (rolled) continuously for subsequent years. This agenda item also addresses investments reported as cash equivalents, with the same dynamic, but structured to comply with the cash equivalent timeframes. It is believed these structures occur because reporting as short-term investments (or cash equivalents) results with the following benefits:

1) More-desirable risk-based capital (RBC) charge.
2) To avoid filing with either the SVO or to avoid obtaining a rating from a credit rating provider.
3) Limited affiliate reporting.

Although there are investments (e.g., repurchase and reverse repurchase) transactions that are often expected to renew, it is not appropriate to purposely structure investments to qualify for short-term or cash equivalent reporting, with an anticipation that the investment will continuously roll forward, potentially for many years and avoid filing the security for an NAIC designation and/or reporting on the schedule with more appropriate RBC charges as a long-term investment. In order to avoid unintended consequences for desirable short-term investments, the provisions of this agenda item have been structured to specifically apply to the following:

- All affiliated SSAP No. 26R investments.
- All SSAP No. 43R investments.
- All investments that would be reported on Schedule BA if they did not qualify for cash equivalent or short-term reporting. (This includes both affiliated and non-affiliated investments.)

With these restrictions, any non-affiliated investment that would qualify within *SSAP No. 26R—Bonds* as a long-term investment would be exempt from the proposed new concepts in determining cash equivalent / short-term investment reporting. This scope of the revisions intend to prevent inadvertent application to Treasury-bills, commercial paper, certificates of deposit, etc., where a reporting entity may continuously reacquire the same, or substantially similar short-term investment immediately after maturity of a prior short-term investment. However, any affiliated SSAP No. 26R and any investment (affiliated or non-affiliated) that would be in scope of *SSAP No. 43R—Loan-Backed and Structured Securities*, or that would be reported as an “other invested asset” on Schedule BA is proposed to be subject to the additional concepts for reporting as a cash equivalent / short-term investment. (Repurchase and reverse repurchase transactions are also specifically excluded if they are admitted in accordance with SSAP No. 103R collateral requirements.)
Proposed additional concepts for Cash Equivalents and Short-Term Investments Captured in Scope:

- An overall principle that investments are permitted for short-term and cash equivalent reporting only if the reporting entity reasonably expects the investment duration to be realized (e.g., terminate / mature) on the designated maturity date. If the reporting entity does not expect that the investment will terminate or mature on the designated date but will be renewed / rolled beyond the cash equivalent / short-term maturity deadlines, then the investment shall not be classified within scope of SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments. Such investments shall be reported as long-term investments on the applicable reporting schedule and shall follow the provisions (including NAIC designations and RBC calculations) for a long-term investment. (Although SAP and U.S. GAAP have different definitions for “short-term” / “current asset” reporting, the concept that the duration is “reasonably expected to be realized” is consistent with the “current asset” definition under U.S. GAAP.)

- Provisions that a cash equivalent / short-term investment (unless specifically exempted) is only permitted to be reported within those classifications for one applicable reporting period. As such, if an investment is reported as a short-term investment as of Dec. 31, 2018, and the investment does not mature on the original scheduled maturity date, the reporting entity shall not be permitted to report the investment as a short-term investment on Dec. 31, 2019. (A cash equivalent would only be permitted to be reported with that distinction for one quarter, before moving to a long-term investment schedule.) For these situations, if a security is held after the initial maturity timeframes have passed, the reporting entity shall report the investment as a long-term investment on the applicable schedule and follow all provisions (including NAIC designations and RBC calculations as required) for a long-term investment. (By default, this provision incorporates a quarter (90-day) grace period, because if the security is sold in the quarter following the initial reporting date, it will not subsequently be reported as an invested asset.)

- The sale or maturity of an investment, with a reacquisition of the same or substantially similar security within a 1-year timeframe shall preclude the reporting entity from reporting the currently held security as a cash equivalent or short-term investment regardless of the maturity date. (This one-year timeframe prevents reporting of recurring “re-acquisitions” as cash equivalents or short-term investments.)

- Although wash sales, which are sales and reacquisitions within a 30-day timeframe, of cash-equivalents and short-term investments with credit assessments of NAIC 1-2 are currently excluded from the wash-sale disclosure, modifications have been proposed to require disclosure of all wash sales, regardless of NAIC designation, if the investment or transaction involves an affiliate.

RBC Assessment of Proposed Revisions:

Life Reporting Entities: For life reporting entities, if the investment is a bond, RBC is similar between all reporting schedules in accordance with NAIC designations. If the investment is not a bond, and does not have an NAIC 1 designation, and/or is not permitted to be reported as an “underlying fixed income security” pursuant to the requirements of Schedule BA, a reporting entity receives an RBC benefit by reporting the investment as a cash equivalent or short-term investment rather than as a BA investment. Also, if a reporting entity reports a “credit assessment” for short-term or cash equivalent bonds that is a better assessment than would be received if they had received an NAIC designation, a reporting entity would receive an RBC benefit by reporting the investment as a cash equivalent or short-term investment.
Bonds that are reported as cash equivalents or short-term investments receive RBC charges based on the “credit assessment” in accordance with how the company reports the investment in the Asset Valuation Reserve calculation. Although NAIC designations are not required for these investments, reporting entities are required to report them based on their own credit assessment. If a bond was reported with a higher credit assessment than what it would receive based on NAIC designation (which is required for long-term investments), then a movement from cash equivalent / short-term reporting to a long-term schedule (Schedule D-1 or Schedule BA) would have an RBC impact.

Property / Casualty and Health Reporting Entities: For property/casualty and health reporting entities, if the investment is a bond, RBC is similar between all reporting schedules in accordance with NAIC designations. If the investment is not a bond, a reporting entity receives an RBC benefit by reporting the investment as a cash equivalent or short-term investment rather than a BA investment. (P/C entities do not have the ability to report NAIC designations on Schedule BA investments for RBC purposes.) Also, if a reporting entity reports a “credit assessment” for short-term or cash equivalent bonds that is a better assessment than would be received if they had reported an NAIC designation, a reporting entity would receive an RBC benefit by reporting the investment as a cash equivalent or short-term investment.
Bonds that are reported as cash equivalents or short-term investments receive RBC charges based on the “credit assessment” assigned in Schedule D-Part 1A. Although NAIC designations are not required for these investments, reporting entities are required to report them based on their own credit assessment. If a bond was reported with a higher credit assessment than what it would receive based on NAIC designation (which is required for long-term investments), then a movement from cash equivalent / short-term reporting to a long-term schedule (Schedule D-1 or Schedule BA) would have an RBC impact.

Existing Authoritative Literature:

**SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments**

**Cash Equivalents**

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 7. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Money market mutual funds registered under the Investment Company Act of 1940 and regulated under rule 2a-7 of the Act shall be accounted for and reported as cash equivalents for statutory accounting. Investments in money market mutual funds shall be valued at fair value or net asset value (NAV) as a practical expedient. For reporting entities required to maintain an asset valuation reserve (AVR), the accounting for unrealized capital gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized capital gains and losses shall be recorded as a direct credit or charge to surplus. Sales/reinvestments in money market mutual funds are excluded from the wash sale disclosure in SSAP No. 103R.

**Footnote 1:** Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.

**Short-Term Investments**

12. All investments with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding derivatives and those investments classified as cash equivalents) are required to be reported as short-term investments. If a bond was reported with a higher credit assessment than what it would receive based on NAIC designation, then a movement from short-term reporting to a long-term schedule (Schedule D-1 or Schedule BA) would have an RBC impact.
equivalents as defined in this statement) shall be considered short-term investments. Short-term investments include, but are not limited to, bonds, commercial paper, repurchase agreements, and collateral and mortgage loans which meet the noted criteria. Short-term investments shall not include certificates of deposit. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

13. All short-term investments shall be accounted for in the same manner as similar long-term investments.

14. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (bolding and underlining added for emphasis)

28.I. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, involving transactions for securities with an NAIC designation of 3 or below, or that do not have an NAIC designation (excluding all cash equivalents, derivative instruments as well as short-term investments with credit assessments equivalent to an NAIC 1-2 designation). This disclosure shall be included in the financial statements for when the investment was initially sold. For example, if the investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements:

i. A description of the reporting entity’s objectives regarding these transactions;

ii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

U.S. GAAP – FASB Codification

Master Glossary of “Current Assets”

Current assets is used to designate cash and other assets or resources commonly identified as those that are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

Activity to Date (issues previously addressed by the Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS) and U.S. GAAP:
Not Applicable – NAIC staff highlights that the distinction of “short-term” under SAP is distinctly different from U.S. GAAP. Under U.S. GAAP, a “current asset” is one that is reasonably expected to be realized in case or sold...
or consumed during the normal operating cycle of a business. As such, under U.S. GAAP investments move from a non-current (long-term) to current (short-term) classification. This does not occur under SAP, as the distinction of short-term is based on the maturity timeframe at the time of acquisition.

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments.

As detailed within this agenda item, the proposed revisions will restrict classification as a cash equivalent or short-term investment for all affiliated SSAP No. 26R—Bond investments, all affiliated and nonaffiliated investments in scope of SSAP No. 43R—Loan-Backed and Structured Securities and all affiliated and nonaffiliated investments that would be reported on Schedule BA in accordance with the following provisions:

- The reporting entity does not reasonably expect that the investment will actually terminate or mature within the timeframe permitted for cash equivalent or short-term investment classification.

- The investment was previously reported as a cash equivalent / short-term investment and the initial maturity timeframes have passed. For example, if an investment was reported as a short-term investment as of Dec. 31, 2018, and the investment was rolled / renewed, the reporting entity will not be permitted to report the investment as a short-term investment on Dec. 31, 2019. (A cash equivalent would only be permitted to be reported for one quarter, before moving to a long-term investment schedule.) For these situations, if a security is held after the initial maturity timeframes have passed, the reporting entity shall report the investment as a long-term investment on the applicable schedule and follow all provisions (including NAIC designations and RBC calculations as required) for a long-term investment.

- The sale or maturity of an investment, with a reacquisition of the same or substantially similar security within a 1-year timeframe would preclude the reporting entity from reporting the currently held security as a cash equivalent or short-term investment regardless of the maturity date. (This one-year timeframe prevents reporting of recurring “re-acquisitions” as cash equivalents or short-term investments.) (This provision is similar to the one regarding “rolled” securities but clarifies that the “settlement” of a security with a reacquisition does not prevent application of the new concepts in determining cash equivalent or short-term reporting. (NAIC staff highlights that this restriction is necessary particularly with the use of “net settlement” structures with affiliates in which no cash is exchanged.)

- Wash sales, regardless of NAIC designation, that involve affiliated investments shall be disclosed.

The proposed revisions in this agenda item have been drafted to focus on affiliated bond investments (SSAP No. 26R), all loan-backed and structured security investments (SSAP No. 43R) and all investments that would be captured on Schedule BA. This approach has been used to exclude a variety of cash equivalent / short-term investments that are often purposely rolled / reacquired to ensure a continuous balance of available short-term liquidity (e.g., Treasury-bills, commercial paper, certificates of deposit, etc.) By excluding all non-affiliated “bonds” from the new guidance, the “normal” recurring short-term / cash equivalent investments are not expected to be impacted. The revisions capture both affiliated and nonaffiliated Schedule BA items, as the short-term structuring is more of an RBC focus. (NAIC staff does not believe there are many SSAP No. 43R securities that qualify as cash equivalents or short-term investments, but they have been specifically identified to prevent such classifications if the noted conditions are met.)
As a key item to note, the proposed revisions permit reporting entities that acquire short-term investments (based on maturity date) that are captured in scope and that they expect to roll (such as an affiliated short-term bond), to report the security as a long-term investment at acquisition. (With this approach, the investment would not have to change reporting schedules once it is rolled after initial acquisition.)

**Proposed Revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments:**

**Cash Equivalents**

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities\(^1\) of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 75. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Regardless of maturity date, affiliated investments that would be in scope of SSAP No. 26R—Bonds and all investments that would be in scope of SSAP No. 43R—Loan-Backed and Structured Securities or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply:\(^2\):

   a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

   b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

   c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments regardless of the maturity date of the reacquired investment.)

**New Footnote 1:** Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments.

---

\(^1\) Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.
investments, even if the updated / reacquired maturity date is within 1 year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

**Short-Term Investments**

12. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition. (excluding derivatives and those investments classified as cash equivalents as defined in this statement) shall be considered short-term investments. Short-term investments can include, but are not limited to, bonds, commercial paper, repurchase agreements, and collateral and mortgage loans. which meet the noted criteria. Short-term investments shall not include certificates of deposit. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

13. Regardless of maturity date, affiliated investments in scope of SSAP No. 26R—Bonds and all investments that would be in scope of SSAP No. 43R—Loan-Backed and Structured Securities or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply:

   a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial “less than one year” timeframe.

   b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

   c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Short-term investments subject to the provisions of paragraph 13 are not permitted to be subsequently reported as cash equivalents, even if the updated / reacquired maturity date is within 90-days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

42. All short-term investments shall be accounted for in the same manner as similar long-term investments.

43. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.
Proposed Revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities:

28.l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, for all affiliated investment transactions (including items originally classified as cash equivalents and short-term investments) and for non-affiliated involving investment transactions for securities with an NAIC designation of 3 or below, or that do not have an NAIC designation. (For non-affiliated investments, excluding all cash equivalents, derivative instruments as well as short-term investments with credit assessments equivalent to an NAIC 1-2 designation are excluded from this disclosure.) This disclosure shall be included in the financial statements for when the investment was initially sold. For example, if the investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements:

i. A description of the reporting entity’s objectives regarding these transactions;

ii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

Staff Review Completed by: Julie Gann – May 2019

Status:
On August 3, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 2R—Cash, Drafts and Short-term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as illustrated above, to incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments.

NAIC staff recommends exposure of proposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, which incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments. Items from the original August 3, 2019 exposure are highlighted below and exclude certain qualified cash pooling arrangements (as proposed in agenda item 2019-42) from the restricted cash equivalent reporting detailed in this agenda item. Note: both agenda items (2019-20 and 2019-42) are concurrently exposed and if adopted in their current form, must be adopted simultaneously. Additionally, paragraph 8 as referenced below for cash pooling reflects the modifications proposed in agenda item 2019-42.

Proposed Revisions for Fall 2019 Discussion: to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments:

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in
value because of changes in interest rates. Only investments with original maturities\(^2\) of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 78.\(^2\) and cash pooling, as detailed in paragraph 8.\(^2\) Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Regardless of maturity date, affiliated investments that would be in scope of SSAP No. 26R—Bonds and all investments that would be in scope of SSAP No. 43R—Loan-Backed and Structured Securities or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply:\(^N\):

   a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

   b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

   c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Additional exclusions include cash pooling arrangements permitted under paragraph 8. Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated / reacquired maturity date is within 1 year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

Short-Term Investments

12. **Short-term** investments are investments that do not qualify as cash equivalents, with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition. (excluding derivatives and those investments classified as cash equivalents as defined in this statement) shall be considered short-term investments. Short-term investments can include, but are

---

\(^2\) Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.
not limited to, bonds, commercial paper, repurchase agreements, and collateral and mortgage loans. which meet the noted criteria. Short-term investments shall not include certificates of deposit. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

13. Regardless of maturity date, affiliated investments in scope of SSAP No. 26R—Bonds and all investments that would be in scope of SSAP No. 43R—Loan-Backed and Structured Securities or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions applyFN:

   a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial “less than one year” timeframe.

   b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

   c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Short-term investments subject to the provisions of paragraph 13 are not permitted to be subsequently reported as cash equivalents, even if the updated / reacquired maturity date is within 90-days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

42.14. All short-term investments shall be accounted for in the same manner as similar long-term investments.

43.15. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

Proposed Revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities:

28.l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, for all affiliated investment transactions (including items originally classified as cash equivalents and short-term investments) and for non-affiliated involving investment transactions for securities with a NAIC designation of 3 or below, or that do not have a NAIC designation. (For non-affiliated investments, excluding all cash equivalents, derivative instruments as well as short-term investments with credit assessments equivalent to an NAIC 1-2 designation, are excluded from this disclosure.) This disclosure shall be included in the financial statements for when the investment was initially sold. For example, if the
investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements:

i. A description of the reporting entity’s objectives regarding these transactions;

ii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as shown above in the “Proposed Revisions for Fall 2019 Discussion” to incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments to prevent the “rolling” of certain investments. Fall revisions to the prior Summer National Meeting exposure incorporate guidance to exclude qualifying cash pools from the short-term rolling provisions.

With the Fall exposure, comments were requested from regulators and industry representatives on whether other investments should be included / excluded from the short-term rolling provisions. In particular, comments are requested on whether short-term lending (both collateral loans and affiliated loans) should be permitted to be continuously rolled/renewed as short-term, whether non-affiliated SSAP No. 26R investments should be subject to the short-term rolling restrictions, and whether an assessment of “re-underwriting” could be used as support to allow the rolling of short-term investments.

Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, as illustrated below, with modifications from the prior exposure shown as gray shading. This item has a shortened comment period deadline ending May 1, 2020.

The revisions incorporate additional principle concepts, if certain criteria are not met, that will restrict the classification of related party or affiliated investments as a cash equivalent or short-term investment in the scope of SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities, or that would be reported as “Other Invested Assets.”

An additional disclosure has also been proposed to identify short-term investments (or substantially similar investments) which remain on the short-term schedule for more than one consecutive year (i.e. a re-underwritten investment that is renewed). A concurrent blanks proposal will recommend a reporting code for renewed short-term investments as well as a new general interrogatory to certify that re-underwriting has occurred. (This code will also apply to nonaffiliated non-related party transactions for identification purposes.)
Proposed Revisions for Spring 2020 Discussion: to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments:

Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 787, and cash pooling, as detailed in paragraph 8. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Regardless of maturity date, related party or affiliated investments that would be in scope of SSAP No. 26R—Bonds, and all investments that would be in the scope of SSAP No. 43R—Loan-Backed and Structured Securities, or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply, unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities permitted under Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated / reacquired maturity date is within 1 year. These

3 Original maturity means original maturity to the entity holding the investment. For example, both a three-month U.S. Treasury bill and a three-year Treasury note purchased three months from maturity qualify as cash equivalents. However, a Treasury note purchased three years ago does not become a cash equivalent when its remaining maturity is three months.
investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

Short-Term Investments

12. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under repurchase agreements) of one year or less at the time of acquisition (excluding derivatives and those investments classified as cash equivalents as defined in this statement) shall be considered short-term investments. Short-term investments can include, but are not limited to, bonds, commercial paper, repurchase agreements, and collateral and mortgage loans. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

13. Regardless of maturity date, related party or affiliated investments in scope of SSAP No. 26R—Bonds, and all investments that would be in scope of SSAP No. 43R—Loan-Backed and Structured Securities, or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply, unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial “less than one year” timeframe.

b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. Short-term investments subject to the provisions of paragraph 13 are not permitted to be subsequently reported as cash equivalents, even if the updated / reacquired maturity date is within 90-days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

14. All short-term investments shall be accounted for in the same manner as similar long-term investments.

15. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.
Disclosures

14.16. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with SSAP No. 100R—Fair Value;

b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures;

c. Basis at which the short-term investments are stated.

d. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraph 30.f.

d-e. Identification of short-term investments or substantially similar investments in which remain on the short-term schedule for more than one year

Proposed Revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities: (No changes to prior exposure.)

28.l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, for all affiliated investment transactions (including items originally classified as cash equivalents and short-term investments) and for non-affiliated involving-investment transactions for securities with an NAIC designation of 3 or below, or that do not have an NAIC designation. (For non-affiliated investments, excluding all cash equivalents, derivative instruments as well as short-term investments with credit assessments equivalent to an NAIC 1-2 designation are excluded from this disclosure.) This disclosure shall be included in the financial statements for when the investment was initially sold. For example, if the investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements:

vii. A description of the reporting entity’s objectives regarding these transactions;

viii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

ix. The number of transactions involved during the reporting period;

x. The book value of securities sold;

xi. The cost of securities repurchased; and

xii. The realized gains/losses associated with the securities involved.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as illustrated below, with modifications from the prior exposure shown as gray shading, to incorporate additional principle concepts, that if certain criteria are not met, that will restrict the classification of related party or affiliated investments as a cash equivalent or short-term investment in the scope of SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities, or that would be reported as “Other Invested Assets.” An additional disclosure identifies short-term investments (or substantially similar investments) which remain on the short-term schedule for more than one consecutive year (i.e. a re-underwritten investment that is renewed).
Cash Equivalents

6. Cash equivalents are short-term, highly liquid investments that are both (a) readily convertible to known amounts of cash, and (b) so near their maturity that they present insignificant risk of changes in value because of changes in interest rates. Only investments with original maturities of three months or less can qualify under this definition, with the exception of money market mutual funds, as detailed in paragraph 79, and cash pooling, as detailed in paragraph 80. Regardless of maturity date, derivative instruments shall not be reported as cash equivalents and shall be reported as derivatives on Schedule DB. Securities with terms that are reset at predefined dates (e.g., an auction-rate security that has a long-term maturity and an interest rate that is regularly reset through a Dutch auction) or have other features an investor may believe results in a different term than the related contractual maturity shall be accounted for based on the contractual maturity at the date of acquisition, except where other specific rules within the statutory accounting framework currently exist.

7. Regardless of maturity date, related party or affiliated investments that would be in scope of SSAP No. 26R—Bonds of SSAP No. 43R—Loan-backed and Structured Securities, or that would be reported as "Other Invested Assets" shall be reported as long-term investments if any of the following conditions apply, FN, unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial 90-day timeframe.

b. The investment was previously reported as a cash equivalent investment and the initial maturity timeframe has passed. If an investment is reported as a cash equivalent and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a cash equivalent regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a cash equivalent for one quarter reporting period. Meaning, if an investment was reported as a cash equivalent in the first quarter, it is not permitted to be reported as a cash equivalent in the second quarter.

c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as short-term investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities permitted under Cash equivalents subject to the provisions of paragraph 7 are not permitted to be subsequently reported as short-term investments, even if the updated / reacquired maturity date is within 1 year. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

Short-Term Investments

12. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition (excluding derivatives and those investments classified as cash equivalents as defined in this statement) shall be considered short-term investments. Short-term investments can include, but are not limited to, bonds, commercial paper, reverse repurchase agreements, and
collateral and mortgage loans, which meet the noted criteria. Short-term investments shall not include certificates of deposit. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

13. Regardless of maturity date, related party or affiliated investments in scope of SSAP No. 26R—Bonds, SSAP No. 43R—Loan-backed and Structured Securities, or that would be reported as “Other Invested Assets” shall be reported as long-term investments if any of the following conditions apply unless the reporting entity has re-underwritten the investment, maintained appropriate re-underwriting documentation, and each participating party had the ability to independently review the terms and can terminate the transaction prior to renewal.

a. The reporting entity does not reasonably expect the investment to terminate on the maturity date. This provision includes investments that are expected to be renewed (or rolled) with a maturity date that ends subsequent to the initial “less than one year” timeframe.

b. The investment was previously reported as a short-term investment and the initial maturity timeframe has passed. If an investment is reported as a short-term investment and it is unexpectedly renewed / rolled, the reporting entity is not permitted to continue to report the held security as a short-term investment (or as a cash equivalent) regardless of the updated maturity date and shall report the security as a long-term investment. An investment is only permitted to be reported as a short-term investment for one annual reporting period. Meaning, if an investment was reported as a short-term investment as of December 31, 2018, it is not permitted to be reported as short-term investment as of December 31, 2019.

c. The reporting entity reacquired the investment (or a substantially similar investment) within 1 year after the original security matured or was terminated. These reacquired securities shall be reported as long-term investments. (These securities are also not permitted to be reported as cash equivalent investments regardless of the maturity date of the reacquired investment.)

New Footnote 1: Repurchase and reverse repurchase transactions are excluded from these provisions if admitted in accordance with collateral requirements pursuant to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities.

New Footnote 2: Short-term investments subject to the provisions of paragraph 13 are not permitted to be subsequently reported as cash equivalents, even if the updated / reacquired maturity date is within 90-days. These investments shall be reported as long-term investments. To avoid changes in reporting schedules, reporting entities are permitted to report securities as long-term investments at initial acquisition regardless of the initial maturity date.

42. All short-term investments shall be accounted for in the same manner as similar long-term investments.

43. Short-term investments meet the definition of assets as defined in SSAP No. 4 and are admitted assets to the extent they conform to the requirements of this statement.

Disclosures

44. The following disclosures shall be made for short-term investments in the financial statements:

a. Fair values in accordance with SSAP No. 100R—Fair Value;
b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures;

c. Basis at which the short-term investments are stated.

d. The items in the scope of this statement are also subject to the annual audited disclosures in SSAP No. 26R—Bonds, paragraph 30.f.

d.e. Identification of short-term investments or substantially similar investments in which remain on the short-term schedule for more than one year.

Proposed Revisions to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities: (No changes to prior exposure.)

28.l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, for all affiliated investment transactions (including items originally classified as cash equivalents and short-term investments) and for non-affiliated involving investment transactions for securities with an NAIC designation of 3 or below, or that do not have an NAIC designation. (For non-affiliated investments, excluding all cash equivalents, derivative instruments and short-term investments with credit assessments equivalent to an NAIC 1-2 designation are excluded from this disclosure.) This disclosure shall be included in the financial statements for when the investment was initially sold. For example, if the investment was sold December 20, 2017, and reacquired on January 10, 2018, the transaction shall be captured in the wash sale disclosure included in the year-end 2017 financial statements:

xiii. A description of the reporting entity’s objectives regarding these transactions;

xiv. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

xv. The number of transactions involved during the reporting period;

xvi. The book value of securities sold;

xvii. The cost of securities repurchased; and

xviii. The realized gains/losses associated with the securities involved.

Form A

Issue: Assessment of OTTI Based on Original Contract Terms

Check (applicable entity):

- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

P/C Life Health

Description of Issue:
This agenda item intends to clarify the assessment of other than temporary impairment (OTTI) guidance in SSAP No. 26R—Bonds. It has been identified that there is a disconnect between SSAP No. 26R, SSAP No. 36R—Troubled Debt Restructuring and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities with how modifications to debt instruments are considered for OTTI. It has been noted that this is a long-standing disconnect that has recently been identified as a result of the number of debt restructurings that have occurred in response to COVID-19.

In short summary, existing guidance in SSAP No. 26R identifies that OTTI assessments are based on the contractual terms of a debt security in effect at the date of acquisition. However, if a debt instrument has been modified pursuant to SSAP No. 36 or SSAP No. 103 (nontroubled situations), subsequent assessments of OTTI shall be based on the modified contractual terms of the debt instrument, and not revert back to the original acquisition terms.

This agenda item intends to correct this disconnect between SSAP No. 26R, SSAP No. 36 and SSAP No. 103R.

Existing Authoritative Literature:

**SSAP No. 26R—Bonds**

**Impairment**

13. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond’s carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None
Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and consider revisions to SSAP No. 26R—Bonds to clarify the interrelationship between SSAP No. 26R, SSAP No. 36 and SSAP No. 103 when there is a modification to a debt instrument.

SSAP No. 26R—Bonds

Impairment
13. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a debt security in effect at the date of acquisition. A decline in fair value which is other-than-temporary includes situations where a reporting entity has made a decision to sell a security prior to its maturity at an amount below its carrying value. If it is determined that a decline in the fair value of a bond is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the bond’s carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR/IMR, the accounting for the entire amount of the realized capital loss shall be in accordance with SSAP No. 7. The other-than-temporary impairment loss shall be recorded entirely to either AVR or IMR (and not bifurcated between credit and non-credit components) in accordance with the annual statement instructions.

New Footnote: If a bond has been modified from original acquisition, the guidance in SSAP No. 36—Troubled Debt Restructuring and paragraph 22 of SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the current contractual terms of the debt instrument.

Proposed edit for discussion on the May 20, 2020 conference call:

New Footnote: If a bond has been modified from original acquisition, the guidance in SSAP No. 36—Troubled Debt Restructuring and paragraph 22 of SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities shall be followed, as applicable. After modification of original terms, future assessments to determine other-than-temporary impairment shall be based on the modified current contractual terms of the debt instrument.

Staff Review Completed by:
Julie Gann - NAIC Staff, May 2020

Status:
On May 5, 2020, the Statutory Accounting Principles (E) Working Group exposed nonsubstantive revisions to incorporate a new footnote to SSAP No. 26R to clarify that if a debt instrument has been modified in accordance with SSAP No. 36—Troubled Debt Restructuring or SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, the assessment of other-than-temporary impairment shall be based on current contractual terms of the debt instrument.

On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted nonsubstantive revisions, as final, to incorporate a new footnote to SSAP No. 26R—Bonds, clarifying that if a debt instrument has been modified in accordance with SSAP No. 36—Troubled Debt Restructuring or SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, the assessment of other-than-temporary impairment shall be
based on modified contractual terms of the debt instrument. (The adopted language is shown above with a noted edit to replace the word “current” with “modified” as discussed on the May 20, 2020 conference call.)
Interpretation of the Statutory Accounting Principles Working Group

INT 20-05: Investment Income Due and Accrued

INT 20-05 Dates Discussed

Email Vote to Expose May 5, 2020; May 20, 2020

INT 20-05 References

- SSAP No. 34—Investment Income Due and Accrued

INT 20-05 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, temporary interpretations have been considered to provide exceptions to existing statutory accounting guidance with regards to the 90-day rule for various receivables, as well as guidance on the assessment of impairment and trouble debt restructurings. In response to these interpretations, a request to provide a temporary exception to SSAP No. 34—Investment Income Due and Accrued has been requested.

3. This interpretation intends to assess the requirements to review investment income due and accrued and consider whether temporary exceptions could be granted in response to COVID-19. Issues addressed within this interpretation include:

   a. Recognition and admittance of investment income under SSAP No. 34.
   b. Review of FASB staff technical inquiries and responses on investment income.

INT 20-05 Discussion

SSAP No. 34 Provisions

4. Investment income due is defined in SSAP No. 34 as the investment income earned and legally due to be paid to the reporting entity as of the reporting date. Investment income accrued is defined as investment income earned as of the reported date but not legally due to be paid to the reporting entity until subsequent to the reporting date.

5. Pursuant to SSAP No. 34, investment income due and accrued shall be recorded as an asset and assessed for impairment in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. Amounts determined to be uncollectible shall be written off, and then an assessment shall be made of the remaining balance to determine nonadmitted amounts. SSAP No. 34 identifies this as a two-step process as follows:

   a. Investment income due and accrued is assessed for collectibility. If in accordance with SSAP No. 5R, it is probable the investment income due and accrued balance is uncollectible, the amount
shall be written off and shall be charged against investment income in the period the determination was made.

b. Any remaining investment income due and accrued (amounts considered probable for collection) representing either 1) amounts that are over 90-days past due (generated by any assets except mortgage loans in default) or 2) amounts designated elsewhere in the *NAIC Accounting Practices and Procedures Manual* as nonadmitted shall be considered nonadmitted. These items shall be subject to continuing assessments of collectibility and, if determined to be uncollectible, a write-off shall be recorded in the period such determination is made.

6. Pursuant to SSAP No. 34, accrued interest on mortgage loans in default shall only be recorded if deemed collectible. If uncollectible, accrued interest shall not be recorded and any previously accrued amounts shall be written off. If a mortgage loan in default has interest 180-days past due, which is assessed as collectible, all interest shall be recorded as a nonadmitted asset.

**FASB Staff Technical Inquiry**

7. The FASB staff received a technical inquiry regarding the recognition of interest income in response to COVID-19 when a “loan payment holiday” is provided that allows the borrowers to temporarily stop payments. The FASB Staff technical inquiry on interest income recognition was discussed April 17, 2020. In the scenario considered by the FASB staff:

   a. Interest is not accrued when the loan payment holiday is in effect.

   b. The loan modification did not represent a troubled debt restructuring.

   c. The loan modification would be accounted for as a continuation of the original lending arrangement (not as an extinguishment with a new loan recognized).

8. With this inquiry two views were presented in how interest should be recognized when a payment holiday is given and interest is not accrued:

   a. View 1 – Upon modification, a new effective interest rate is determined that equates to the revised remaining cash flows to the carrying amount of the original debt and is applied prospectively for the remaining term. That is, interest income is recognized during the payment period holiday.

   b. View 2 – Upon modification, the institution should recognize interest income on the loan in accordance with the contractual terms. Under this view, the institution would not recognize interest income during the payment holiday and would resume recognizing interest income when the payment holiday.

9. The FASB staff reviewed the submission and concluded both views to be appropriate.

**INT 20-05 Consensus**

10. The Working Group considered limited time collectibility assessments and admittance exceptions for investment income due and accrued and reached the following consensus:
INT 20-05

a. Continue with existing guidance in SSAP No. 34 that investment income shall be recorded when due (earned and legally due) or accrued (earned but not legally due until after the reporting date). If investments have been impacted by forbearance or other modification provisions, a reporting entity shall assess whether the investment income has been earned in accordance with the modified terms. Investment income shall only be recognized when earned.

b. Continue with existing guidance in SSAP No. 34 to require an assessment of whether recorded investment income due and accrued is uncollectible.

i. For mortgage loans, bank loans and investment products with underlying mortgage loans impacted by forbearance or modification provisions, reporting entities may presume that borrowers and investments that were current as of Dec. 31, 2019, were not experiencing financial difficulties at the time of the forbearance or modification for purposes of determining collectibility. For these investments, further evaluation of collectibility is not required for the 1st and 2nd quarter 2020 financial statements unless other indicators that interest would not be collected are known (e.g., the entity has filed for bankruptcy).

ii. For investments not impacted by forbearance or modification provisions, this interpretation does not provide an assumption of collectibility and the provisions of SSAP No. 34 shall be followed in evaluating collectibility and assessing whether an impairment exists.

c. Provide an exception for the nonadmittance of recorded investment income due and accrued that is deemed collectible and over 90-days past due. With this exception, reported investment income interest due and accrued that becomes over 90-days past due in the 1st or 2nd quarter may continue to be admitted in the June 30th, 2020 (1st and 2nd quarter) financial statements. This exception does not encompass accrued interest on mortgage loans that are in default. Mortgage loans in default shall continue to follow the SSAP No. 34 guidance. SSAP No. 37—Mortgage Loans identifies that determining that a loan is in default is per the contractual terms of the loan. For mortgage loans modified, determination of default shall be based on the modified contractual terms.

11. The Working Group considered the FASB technical guidance and reached a consensus consistent with the FASB staff on how interest should be recognized when a payment holiday is given and interest is not accrued. With this guidance, either of the following methods could be applied:

a. A new effective interest rate is determined that equates the revised remaining cash flows to the carrying amount of the original debt and is applied prospectively for the remaining term. With this approach, interest income is recognized during the payment period holiday.

b. The reporting entity should recognize interest income on the loan in accordance with the contractual terms. Under this view, the reporting entity would recognize no interest income during the payment holiday and would resume recognizing interest income when the payment holiday ends.

12. The exceptions and provisions detailed in this interpretation are applicable for the June 30th, 2020 (2nd quarter) financial statements. As the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements, as this interpretation will automatically expire as of September 29, 2020. This interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group’s website. This interpretation will be automatically nullified on September 29, 2020 and will be included as a

INT 20-05 Status

13. The Statutory Accounting Principles (E) Working Group will subsequently review this interpretation to determine if an extension is needed to the effective date.
Interpretation of the Statutory Accounting Principles Working Group  

INT 20-06: Participation in the 2020 TALF Program  

INT 20-06 Dates Discussed  
Email Vote to Expose May 5, 2020; May 20, 2020  

INT 20-06 References  
SSAP No. 64—Offsetting and Netting of Liabilities  
SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities  
INT 01-31: Assets Pledged as Collateral  

INT 20-06 Issue  

1. The Federal Reserve reestablished the Term Asset-Backed Securities Loan Facility (TALF) on March 23, 2020, to support the flow of credit to consumers and businesses. The TALF program will enable the issuance of asset-backed securities (ABS) backed by student loans, auto loans, credit card loans, loans guaranteed by the Small Business Administration (SBA), and certain other assets.  

2. Under the TALF program, the Federal Reserve will lend on a non-recourse basis to holders of certain AAA-rated ABS backed by newly and recently originated consumer and small business loans. The Federal Reserve will lend an amount equal to the market value of the ABS less a haircut and will be secured at all times by the ABS. Treasury, using the Exchange Stabilization Fund (ESF), will also make an equity investment in the special purpose vehicle (SPV) established by the Federal Reserve for this facility.  

3. The TALF is established by the Federal Reserve under the authority of Section 13(3) of the Federal Reserve Act, with approval of the Treasury Secretary.  

4. Per review of public data available from the prior 2009 TALF program, there were a limited number of insurance reporting entities that were the actual borrower (entity that directly received the loan) under the TALF program. Rather, in most instances, insurance reporting entities were a material investor to the actual borrower. Per the TALF data, a material investor reflects the entity or individual with 10 percent or greater beneficial ownership interest in any class of securities of a borrower. Such ownership interest may be a direct, intermediate or ultimate interest. Due to the different methods of participating in the TALF program, this interpretation focuses on both reporting entity borrowers and reporting entity investors.  

5. For reporting entity borrowers (entity that directly received the loan), the accounting issues addressed in this interpretation include:  

a. How the loan received, and collateral provided shall be reported within the statutory financial statements.  

b. Whether the pledged assets shall be reported as admitted assets as the collateral pledged to the TALF program is not permitted to be substituted.
6. For reporting entities that are not the direct borrowers, but represent investors to the direct borrower, the accounting issues addressed in this interpretation include:

   a. How the reporting entity shall report their investment to a TALF borrower.
   b. Whether the reporting entity investor is permitted to pledge assets under the TALF program, and retain admittance, when the reporting entity is not the direct borrower under the TALF program.

7. The April 9, 2020 term sheet for the 2020 TALF program:

   Term Asset-Backed Securities Loan Facility

   Effective April 9, 2020
   (The Board of Governors of the Federal Reserve System (“Board”) and Secretary of the Treasury may make adjustments to the terms and conditions described in this term sheet. Any changes will be announced on the Board’s website.)

   Facility:
   The TALF is a credit facility authorized under section 13(3) of the Federal Reserve Act intended to help meet the credit needs of consumers and businesses by facilitating the issuance of asset-backed securities (“ABS”) and improving the market conditions for ABS more generally.

   The TALF will serve as a funding backstop to facilitate the issuance of eligible ABS on or after March 23, 2020. Under the TALF, the Federal Reserve Bank of New York (“Reserve Bank”) will commit to lend to a special purpose vehicle (“SPV”) on a recourse basis. The Department of the Treasury will make an equity investment of $10 billion in the SPV, as described below.

   The TALF SPV initially will make up to $100 billion of loans available. The loans will have a term of three years; will be nonrecourse to the borrower; and will be fully secured by eligible ABS.

   Eligible Borrowers:
   All U.S. companies that own eligible collateral and maintain an account relationship with a primary dealer are eligible to borrow under the TALF. For the purpose of this document, a U.S. company is defined as a business that is created or organized in the United States or under the laws of the United States and that has significant operations in and a majority of its employees based in the United States.

   Eligible Collateral:
   Eligible collateral includes U.S. dollar denominated cash (that is, not synthetic) ABS that have a credit rating in the highest long-term or, in the case of non-mortgage backed ABS, the highest short-term investment-grade rating category from at least two eligible nationally recognized statistical rating organizations (“NRSROs”) and do not have a credit rating below the highest investment-grade rating category from an eligible NRSRO. All or substantially all of the credit exposures underlying eligible ABS must have been originated by a U.S. company, and the issuer of eligible collateral must be a U.S. company. With the exception of commercial mortgage-backed securities (“CMBS”), eligible ABS must be issued on or after March 23, 2020. CMBS issued on or after March 23, 2020, will not be eligible. For CMBS, the underlying credit exposures must be to real property located in the United States or one of its territories. Eligible collateral must be ABS where the underlying credit exposures are one of the following:

   1) Auto loans and leases;
   2) Student loans;
   3) Credit card receivables (both consumer and corporate);
   4) Equipment loans and leases;
5) Floorplan loans;
6) Insurance premium finance loans;
7) Certain small business loans that are guaranteed by the Small Business Administration;
8) Leveraged loans; or
9) Commercial mortgages.

Eligible collateral will not include ABS that bear interest payments that step up or step down to predetermined levels on specific dates. In addition, the underlying credit exposures of eligible collateral must not include exposures that are themselves cash ABS or synthetic ABS.

To be eligible collateral, all or substantially all of the underlying credit exposures must be newly issued, except for legacy CMBS.

The feasibility of adding other asset classes to the facility or expanding the scope of existing asset classes will be considered in the future.

Conflicts of interest: Eligible borrowers and issuers of eligible collateral will be subject to the conflicts of interest requirements of section 4019 of the CARES Act.

Restriction on single-asset single-borrower (“SASB”) CMBS and commercial real estate collateralized loan obligations (“CRE CLOs”): SASB CMBS and CRE CLOs will not be eligible collateral.

Restrictions on CLO loan substitution: Only static CLOs will be eligible collateral.

Collateral Valuation: Haircut schedule is below. The haircut schedule is consistent with the haircut schedule used for the TALF established in 2008.

Pricing: For CLOs, the interest rate will be 150 basis points over the 30-day average secured overnight financing rate (“SOFR”). For SBA Pool Certificates (7(a) loans), the interest rate will be the top of the federal funds target range plus 75 basis points. For SBA Development Company Participation Certificates (504 loans), the interest rate will be 75 basis points over the 3-year fed funds overnight index swap (“OIS”) rate. For all other eligible ABS with underlying credit exposures that do not have a government guarantee, the interest rate will be 125 basis points over the 2-year OIS rate for securities with a weighted average life less than two years, or 125 basis points over the 3-year OIS rate for securities with a weighted average life of two years or greater. The pricing for other eligible ABS will be set forth in the detailed terms and conditions. Fees: The SPV will assess an administrative fee equal to 10 basis points of the loan amount on the settlement date for collateral.

Maturity: Each loan provided under this facility will have a maturity of three years.

Investment by the Department of the Treasury: The Department of the Treasury, using the Exchange Stabilization Fund, will make an equity investment of $10 billion in the SPV.

Non-Recourse: Loans made under the TALF are made without recourse to the borrower, provided the requirements of the TALF are met.

Prepayment: Loans made under the TALF will be pre-payable in whole or in part at the option of the borrower, but substitution of collateral during the term of the loan generally will not be allowed.

Program Termination: No new credit extensions will be made after September 30, 2020, unless the TALF is extended by the Board of Governors of the Federal Reserve System and the Department of the Treasury.

Other Terms and Conditions: More detailed terms and conditions will be provided at a later date, primarily based off of the terms and conditions used for the 2008 TALF. In addition, the Federal Reserve reserves
the right to review and make adjustments to these terms and conditions – including size of program, pricing, loan maturity, collateral haircuts, and asset and borrower eligibility requirements – consistent with the policy objectives of the TALF.

INT 20-06 Discussion

For Reporting Entity Borrowers - Insurance Reporting Entity Received the Loan

8. Reporting entity borrowers shall report the cash received under the TALF program with a corresponding liability. The liability shall be captured in scope of SSAP No. 15—Debt and Holding Company Obligations and reported as “borrowed money.” The disclosures in SSAP No. 15 shall be completed. Once the cash received has been reinvested, the reporting entity shall report the acquired asset in accordance with the applicable statement of statutory accounting principle.

9. Reporting entity borrowers shall report asset-backed securities pledged to the TALF program as restricted assets with the appropriate code in the investment schedules and disclosed in accordance with SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures, and in General Interrogatory, Part 1: 25.30 – Pledged as Collateral. Assets pledged to the TALF program are subject to the underlying asset risk-based capital charge but are excluded from an additional “restricted asset” risk-based capital charge. (As a carryover from the 2009 TALF Program, existing provisions in the risk-based capital instructions instruct the removal of assets pledged to the TALF program reported as restricted assets in the General Interrogatories.)

10. Reporting entity borrowers are permitted to continue reporting pledged asset-backed securities as admitted assets in the statutory financial statements if the following two conditions are met:
   a. Asset qualified as an admitted asset before it was pledged to the TALF program.
   b. The reporting entity has not committed an uncured contract default.

11. As the TALF program specifically identifies that substitution of pledged collateral during the term of the loan will generally not be allowed, this interpretation provides an exception to existing statutory accounting requirements. Pursuant to INT 01-31: Assets Pledged as Collateral, a pledged asset shall be readily substitutable in order to be admitted in the statutory financial statements. With the exception in this interpretation, assets held by the insurance reporting entity (borrower) that are pledged to the TALF program can be admitted even though they are not generally substitutable.

12. Reporting entity borrowers shall not net the obligation to return the liability and the pledged collateral in the statutory financial statements. The criteria for a valid right of offset in SSAP No. 64—Offsetting and Netting of Assets and Liabilities has not been met for these transactions. Specifically, the reporting entity does not have the right to offset the amount owed under the TALF program and the reporting entity does not intend to setoff the amount owed. Although the collateral pledged could be claimed under the TALF program in the event that the insurer reporting entity commits a loan repayment default, the ability to claim pledged collateral does not represent a “right of setoff” with the counterparty.

13. Although the transaction is similar to a repurchase agreement accounted for as a secured borrowing, the TALF transaction is not a repurchase transaction. As such, the provisions and disclosures for repurchase agreements are not applicable.
14. In the event that a reporting entity commits a contract default, and the pledged collateral is retained under the TALF program, the reporting entity shall follow the guidance in SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, paragraph 20, in removing the pledged assets and liability from the statutory financial statements.

For Reporting Entity Investors - Insurance Reporting Entity Does Not Receive the Loan but is an “Investor” to an Entity that was the Direct TALF Borrower

15. Reporting entity investors shall report the investment in the borrower in accordance with the underlying nature of the investment and the relationship with the borrower. The underlying investments will be subject to the reporting and RBC requirements for the applicable SSAP and reporting schedule:

a. If the borrower is a limited liability company (LLC), the investment shall be reported in accordance with SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.

b. If the borrower is a private equity fund (e.g., joint venture), the investment shall be reported in accordance with SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.

c. If the borrower is an affiliate, the investment shall be reported in accordance with SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

16. Reporting entity investors are not permitted to admit assets pledged to the TALF program if they are not the direct borrower. This is because the return of the assets would be contingent on the action of the actual borrower to the TALF program and not the reporting entity. This provision is consistent with SSAP No. 4—Assets and Nonadmitted Assets, footnote 2:

If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to SSAP No. 4, paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

INT 20-06 Consensus

17. The Working Group reached a consensus to prescribe statutory accounting guidance for insurance reporting entity involvement in the 2020 TALF Program. Pursuant to this consensus:

a. Reporting entities borrowers who directly receive the TALF loan shall follow guidance in paragraphs 8-14 of this interpretation for the statutory accounting and reporting. As detailed in paragraph 11, this interpretation provides an exception to allow admitted asset reporting for the pledged securities although the TALF program does not permit the pledged assets to be generally substitutable.

b. Reporting entities that do not directly receive the TALF loan, but are investors to borrowers that receive the TALF loan, shall follow the provisions in paragraphs 15-16 for the statutory accounting and reporting.
18. The provisions detailed in this interpretation are applicable for the duration of the 2020 TALF loan program.

**INT 20-06 Status**

19. No further discussion planned.
Interpretation of the Statutory Accounting Principles Working Group

INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19

INT 20-07 Dates Discussed

Email: Vote to Expose May 5, 2020; May 20, 2020

INT 20-07 References

SSAP No. 26R—Bonds
SSAP No. 36—Troubled Debt Restructuring
SSAP No. 43R—Loan-Backed and Structured Securities
SSAP No. 103R—Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

INT 20-07 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay at home” orders and forced non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, Congress and federal and state prudential banking regulators issued provisions pertaining to loan modifications as a result of the effects of COVID-19. These provisions are intended to be applicable for the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, interest rate modification, repayment plan, or other similar arrangements that defers or delays the repayment of principal and/or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

3. On April 15, the Statutory Accounting Principles (E) Working Group issued INT 20-03T: Troubled Debt Restructuring Due to COVID-19. This interpretation provides guidance for mortgage loans and bank loans, consistent with the CARES Act and an April 7 interagency statement in recognizing troubled debt restructurings in response to COVID-19. Although the original comment letter received from interested parties proposed an expansion to all SSAP No. 26R and SSAP No. 43R debt securities, during the April 15 discussion, the comments presented from interested parties clarified their request to expand the interpretation was primarily related to private placement debt securities. The Working Group requested that interested parties provide more detail on this request.

4. On April 23, the interested parties submitted a comment letter requesting expansion consideration to all debt instruments in scope of SSAP No. 26R and SSAP No. 43R. In making these expanded requests, the interested parties’ comment letter stated that from a practical standpoint, actual relief will almost exclusively apply to private placement debt securities. However, by referencing “all debt securities,” it will not be necessary to provide a precise definition of a private placement debt security. In addition to considering edits for troubled debt restructuring, the comment letter also requested exceptions to impairment recognition for these securities.

5. The issues addressed in this interpretation include:

a. Should exceptions be provided to the determination of troubled debt restructurings and impairment for all debt securities in response to COVID-19?
b. Should exceptions be considered in the determination of troubled debt restructurings for non-public debt instruments in which the reporting entity is a direct, active, participant in the modification negotiations?

c. Should exceptions be considered to assist with the determination of insignificant modifications in accordance with SSAP No. 36, paragraph 10?

INT 20-07 Discussion

Consideration of Exceptions for All Debt Securities

6. After evaluating the April 23 interested parties’ comment letter, this interpretation considers statutory accounting exceptions to minimize documentation and assessment requirements for specific debt securities. However, due to the importance of state regulators having accurate and reliable financial statement information, this interpretation does not propose the following:

a. Exceptions to the recognition of a troubled debt restructuring for debt securities with modifications that result in non-insignificant concessions to a debtor that is experiencing financial difficulties.

b. Exceptions to the assessment or recognition of impairment for debt instruments.

7. With the conclusion in paragraph 6, this interpretation does not eliminate a reporting entity’s responsibility to recognize modifications in debt instruments that to a debtor that is experiencing financial difficulties that qualify as concessions under SSAP No. 36. Furthermore, this interpretation does not delay the assessment and recognition of impairment for debt instruments that are not captured in scope of INT 20-04. As detailed above, these exceptions are not granted due to the importance of state regulators having timely, accurate and reliable financial information.

Consideration of Exceptions if the Reporting Entity is a Direct, Active Participant in Negotiating Modifications

8. Consideration was given as to whether exceptions should be provided for troubled debt restructuring and impairment assessments for situations in which the reporting entity is a direct, active participant in negotiating debt instrument modifications. However, due to the vast nature of non-public instruments that are currently classified as debt instruments that are designed in response to specific insurance reporting entity needs (such as collateralized fund obligations, principal protected notes, and other non-traditional securitizations), using direct, active participation as the sole threshold in determining whether exceptions should be granted was viewed as too expansive to ensure appropriate recognition of non-insignificant concessions and/or known impairments in the statutory financial statements.

Consideration of Provisions to Assist with Existing Troubled Debt Restructuring Guidance

9. Pursuant to existing guidance in SSAP No. 36, not all modifications are considered a troubled debt restructuring. In order to be troubled debt restructuring, a creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise. As such, in order to be considered a troubled debt restructuring, the debtor must be having financial difficulties and the modification must be considered a concession. Pursuant to paragraph 10 of SSAP No. 36, a restructuring that results in only a delay in payment that is insignificant is not a concession. The guidance also indicates that the following factors, when considered together, may indicate that a restructuring results in a delay in payment that is insignificant:
a. The amount of the restructured payments subject to the delay is insignificant relative to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due.

b. The delay in timing of the restructured payment period is insignificant to any one of the following:
   i. frequency of payments due under the debt
   ii. debt’s original contractual maturity,
   iii. debt’s original expected duration.

10. Although this interpretation does not support exceptions that would result with “significant” modifications (concessions) not being recognized, from information received, differing assessments of what could be considered insignificant, and the required documentation, may be prohibitive in providing modifications. Particularly, it has been noted that the assessments are subject to auditor assessment and there are concerns that a modification considered insignificant by a reporting entity may be subsequently assessed as a significant modification by the reporting entity’s auditor.

Practical Expedients to Assessing Concessions

11. This interpretation, as a means of assisting with troubled debt restructuring assessments, provides limited-time practical-expedient determinants that can be used in accordance with existing SSAP No. 36 provisions in determining whether a modification shall be considered a troubled debt restructuring. These provisions are intended to assist reporting entities and auditors when considering whether a modification is insignificant. If a modification is considered insignificant, then the modification is not a concession, and recognition of a troubled debt restructuring, and disclosure is not required. If a modification does not meet the practical expedient provisions provided within this interpretation, the modification shall not automatically be considered a “non-insignificant” modification (concession). Rather, the reporting entity can continue to apply the existing guidance in SSAP No. 36 in assessing whether the modification is insignificant and is therefore not a concession. Modifications that qualify as concessions (do not qualify as insignificant) are required to follow the existing guidance in SSAP No. 36 as a troubled debt restructuring.

12. Specifically, this interpretation provides the following limited-time practical expedients:

   a. Paragraph 10.a. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay is insignificant to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results with a change that reflects a 10% or less shortfall amount in the contractual amount due.

   b. Paragraph 10.b. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay in timing of the restructured payment period is insignificant to the frequency of payments due under the debt, debt’s original contractual maturity or the debt’s original expected duration. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring does not result in an extension of the maturity of the debt by more than three years.
13. For the duration of this interpretation, debt security restructurings in response to COVID-19 that solely impact covenant requirements are not considered troubled debt restructurings.

**Practical Expedients on Debt Extinguishments and Exchanges**

14. In addition to the limited-time practical expedients to SSAP No. 36, this interpretation provides an exception to assess modifications as an exchange of debt instruments under paragraph 22 of SSAP No. 103R—Transfer and Servicing of Financial Assets and Extinguishments of Liabilities. Pursuant to the guidance in SSAP No. 103, debt instruments that are exchanged with substantially different terms are reported as an extinguishment and a new debt instrument. Pursuant to the provisions in this interpretation:

a. Modifications that reflect a 10% or less change in contractual cash flows considered insignificant pursuant to paragraph 12.a. do not need to be further evaluated to determine whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification. As such, these investments shall not be reported as an extinguishment and a new debt instrument.

**INT 20-07 Consensus**

15. The Working Group reached a consensus in response to requests to consider exceptions to statutory accounting guidance for troubled debt restructurings and impairment for all debt instruments. Pursuant to this consensus:

a. This interpretation does not provide exceptions to the recognition of a troubled debt restructuring for debt securities with modifications that result in non-insignificant concessions to a debtor that is experiencing financial difficulties.

b. This interpretation does not provide exceptions to the assessment or recognition of impairment for debt instruments. Pursuant to the guidance in SSAP No. 26R, after a modification for a debt instrument, assessment of OTTI shall be based on the current terms of the debt instrument.

16. In response to assessments on the application of existing SSAP No. 36 provisions, particularly in determining whether a modification is a concession (insignificant), this consensus provides the following limited-time practical expedients in determining whether a modification is a concession under SSAP No. 36:

a. Paragraph 10.a. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay is insignificant to the unpaid principal or collateral value of the debt and will result in an insignificant shortfall in the contractual amount due. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring results with a change that reflects a 10% or less shortfall amount in the contractual amount due.

b. Paragraph 10.b. of SSAP No. 36 identifies that restructured payments are considered insignificant if the delay in timing of the restructured payment period is insignificant to the frequency of payments due under the debt, debt’s original contractual maturity or the debt’s original expected duration. For the duration of this interpretation, debt security restructurings in response to COVID-19 are considered to be insignificant if the restructuring does not result in an extension of the maturity of the debt by more than three years.
17. For the duration of this interpretation, debt security restructurings in response to COVID-19 that solely impact covenant requirements are not considered troubled debt restructurings.

18. In response to assessments on the application of existing SSAP No. 103R provisions, particularly in determining whether a modification that is not a troubled debt restructuring needs to be assessed as an exchange, this consensus provides the following exceptions to SSAP No. 103R:

   a. Modifications that reflect a 10% or less change in contractual cash flows considered insignificant under this interpretation do not need to be further evaluated to determine whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification. As such, these investments shall not be reported as an extinguishment and a new debt instrument.

   b. Modifications in response to COVID-19 that exceed the practical expedient of a 10% shortfall in contractual cash flows permitted in this interpretation that were assessed and deemed insignificant under paragraph 10 of SSAP No. 36 shall not be considered an exchange of debt instruments with substantially different terms under SSAP No. 103, paragraph 22. (Under SSAP No. 103, an exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of cash flows under the terms of the new instruments is at least 10% different from the present value of the remaining cash flows under the terms of the original instrument.) Reporting entities shall work with auditors and regulators with the application of paragraph 10 of SSAP No. 36 to confirm that a change in contractual cash flows in excess of 10% qualifies as insignificant.

19. The Working Group highlights that modifications that would be considered troubled debt restructurings, particularly as they provide a non-insignificant concession, may be presented to the domiciliary state regulatory for a permitted practice exception to prevent troubled debt restructuring recognition and disclosure. However, the Working Group concluded that the need for reliable and accurate financial information does not permit exceptions that would allow widespread non-insignificant restructurings to occur and not be recognized on the statutory financial statements.

20. This interpretation is effective for the specific purpose to provide practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36 and in assessing whether a change is substantive under SSAP No. 103R. This interpretation will only be applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates. For clarity, this effective timeframe specifies when modifications in response to COVID-19 can be incorporated using the provisions of this interpretation. Once incorporated, the provisions of this interpretation will continue for the duration of the modification.

**INT 20-07 Status**

21. The Statutory Accounting Principles (E) Working Group will subsequently review this interpretation to determine if an extension is needed to the effective date.
Application of the INT 20-07 Consensus

Example 1: Payment Holiday with Extension of Payment Term for SSAP No. 26R Instrument

A. Insurer modifies a debt instrument captured in scope of SSAP No. 26R to provide a payment holiday for 6-months in response to COVID-19. For the duration of the payment holiday, no payments are due, however the original maturity of the debt instrument has been extended from 10 years to 10 years and 6 months, with all terms and conditions remaining the same except for the payment holiday.

B. The amount of restructuring is considered insignificant as it results in a less than 10% shortfall in the contractual amount due.

C. At the time of the restructuring, fair value has dropped below amortized cost.

D. At the time of the restructuring, the reporting entity believes it is probable that the reporting entity will collect all amounts due in accordance with the modified terms of the debt instrument. Furthermore, the reporting entity does not intend to sell the instrument.

Example 1 - Application of INT 20-07

1. As this modification only extends the duration 6-months and results in a less than 10% shortfall in the contractual amount due, pursuant to the practical expedients in INT 20-07, the modification is considered insignificant and not a concession under SSAP No. 36. As this modification is not a concession, accounting and reporting as a troubled debt restructuring is not required.

2. As this modification is less than 10% of the contractual cash flows, pursuant to the practical expedients in INT 20-07, further assessment is not required to determine whether the modification is more than minor under SSAP No. 103R. As such, the modification shall not be reported as an extinguishment and a new debt instrument.

3. As the reporting entity believes it is probable that they will collect all amounts due in accordance with the modified terms of the debt instrument, no other-than-temporary impairment recognition is required under SSAP No. 26R. Future assessments of impairment will be based on the modified terms of the debt instrument.

Example 2: Reduction of Covenant Terms for SSAP No. 43R Instrument

A. Insurer modifies a debt instrument captured in scope of SSAP No. 43R to eliminate covenant terms in response to COVID-19. For the remainder of the maturity of the debt instrument, the covenant terms will reflect the modification incorporated in response to COVID-19. There has been no changes to the debt instrument with the exception of the covenant requirements.

B. At the time of the restructuring, fair value has dropped below amortized cost.

C. At the time of the restructuring, the reporting entity has the intent and ability to hold debt instrument to recover the amortized cost basis. Additionally, the reporting entity has not identified that a non-interest related decline exists.
Example 2 - Application of INT 20-07

1. As this modification only pertains to covenant components (and not the amount or timing of payments), pursuant to the practical expedients in INT 20-07, the modification is considered insignificant and not a concession under SSAP No. 36. As this modification is not a concession, accounting and reporting as a troubled debt restructuring is not required.

2. As this modification does not change the contractual cash flows, pursuant to the practical expedients INT 20-07, further assessment is not required to determine whether the modification is more than minor under SSAP No. 103R. As such, the modification shall not be reported as an extinguishment and a new debt instrument.

3. As the reporting entity has the intent and ability to hold the debt security to recover the amortized cost basis, and they have not identified a non-interest related decline, an other-than-temporary impairment is not required under SSAP No. 43R.

Example 3: Reduction in Interest Rate and Covenants for SSAP No. 26R Debt Security

A. Insurer modifies a debt instrument captured in scope of SSAP No. 26R in response to COVID-19 to eliminate interest payments for a 12-month timeframe, and to eliminate covenant requirements for the same 12-month timeframe. This change will represent an 11% shortfall of the contractual amount due.

B. At the time of the restructuring, fair value has dropped below amortized cost.

C. At the time of the restructuring, the reporting entity believes it is probable that the reporting entity will collect all amounts due in accordance with the modified terms of the debt instrument. Furthermore, the reporting entity does not intend to sell the instrument.

Example 3 - Application of INT 20-07

1. As this modification results with a 11% shortfall in the contractual amount due, the reporting entity cannot assume the change is insignificant, and therefore not a concession, under the practical expedients provided within this interpretation.

2. The reporting entity may continue to assess whether this modification is an insignificant change under paragraph 10 of SSAP No. 36. (If the reporting entity elects not to further assess for insignificance, then would proceed with considering the change as a concession.) If the reporting entity concludes that the change is insignificant, and therefore not a concession, then recognition as a troubled debt restructuring is not required. If the change is assessed as insignificant, although the change in cash flows exceeds 10%, the instrument does not need to be assessed as an exchange of debt instruments pursuant to SSAP No. 103R, paragraph 22. An OTTI is not required at the time of the modification if the reporting entity has the intent and ability to hold to recover the modified amortized cost basis and if the reporting entity has not identified that a non-interest related decline exists. Future assessments of impairment will be based on the modified terms of the debt instrument.

3. If the reporting entity concludes that the change is not insignificant under paragraph 10 of SSAP No. 36, then the modification is a concession and further assessment as a troubled debt restructuring is required. Assuming there is no collateral, a realized loss shall be recognized for the difference between fair value and amortized cost. Subsequent to this realized loss recognition, future assessments of impairment will be based on the modified terms of the debt security.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded May 5, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Stewart Guerin (LA); Judy Weaver (MI); Doug Bartlett (NH); Tom Dudek (NY); Joe DiMemmo (PA); Jamie Walker (TX); and Amy Malm (WI).

1. Exposed Agenda Item 2020-14, INT 20-05, INT 20-06, INT 20-07 and INT 20-08

The Working Group conducted an e-vote to consider exposure of agenda item 2020-14: Assessment of OTTI Based on Original Contract Terms; Interpretation (INT) 20-05: Investment Income Due and Accrued; INT 20-06: Participation in the 2020 TALF Program; INT 20-07: Troubled Debt Restructuring for Certain Debt Instruments Due to COVID-19; and INT 20-08: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends for a one-week public comment period ending May 14. A summary of the exposed interpretations is as follows:

1) Agenda Item 2020-14 – This agenda item proposes nonsubstantive revisions to address a long-standing disconnect in the assessment of other-than-temporary impairment (OTTI) after there has been a modification to a debt security captured in scope of SSAP No. 26R—Bonds. The current guidance requires OTTI assessment based on contract terms at the date of acquisition. This agenda item incorporates minor revisions to clarify that subsequent to modification under SSAP No. 36—Troubled Debt Restructuring or SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, future assessments of OTTI shall be based on the current contractual terms of the debt instrument.

2) INT 20-05 – This guidance proposes limited-time exceptions to the collectability and nonadmittance guidance in SSAP No. 34—Investment Income Due and Accrued, and it also considers technical guidance for the recognition of investment income issued by the Financial Accounting Standards Board (FASB) when there is a payment holiday and interest is not accrued. The proposed exceptions provide a collectability assessment exception for certain items modified in response to COVID-19, and it proposes an exception to the nonadmittance provisions for all items that are deemed collectable and are over 90 days past due.

3) INT 20-06 – This guidance proposes provisions for reporting entities participating in the federal Term Asset-Backed Securities Lending Facility (TALF) program. The guidance addresses both direct borrowers and reporting entities that participate as an investor to a direct borrower. The guidance proposes a statutory accounting exception for direct borrowers who pledge assets to the TALF program to allow admittance of the pledged assets, as the TALF program does not permit substitutions to the collateral.

4) INT 20-07 – This guidance proposes limited-time practical expedients in determining whether a restructuring reflects a “concession” under paragraph 10 of SSAP No. 36. Under existing statutory accounting guidance, a restructuring that is insignificant is not a concession; therefore, it is not a troubled debt restructuring. The guidance proposes a 10% threshold for the shortfall in the contractual amount due and a 6-month delay in payments as practical expedients for the existing guidance. Under the proposed provisions, if a modification falls within these parameters, it would be considered insignificant and not a concession. The guidance also proposes to clarify that if a modification is below 10%, then further analysis would not be needed under SSAP No. 103R to determine if the modification is substantive and does not require extinguishment with recognition of a new security.

5) INT 20-08 – This guidance proposes provisions on how to account for premium refunds in response to COVID-19. Due to the different ways in which these refunds can be provided, the proposed guidance addresses a variety of methods. For premium refunds that are outside policy terms, the proposed guidance identifies that these shall be reported as a reduction of premium and not as an expense. The proposed guidance also directs an aggregate disclosure of all refunds in response to COVID-19 to allow for easy identification of the full impact in the statutory financial statements.
Ms. Walker made a motion, seconded by Ms. Mears, to expose agenda item 2020-14, INT 20-05, INT 20-06, INT 20-07 and INT 20-08. The motion passed without opposition, with 12 members voting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded April 17, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Kim Hudson (CA); William Arfanis (CT); Rylynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Doug Bartlett (NH); Joe DiMemmo (PA); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. Exposed Agenda Item 2020-13

The Working Group conducted an e-vote to consider exposure of agenda item 2020-13: Health Industry Request on 2020 Health Insurance Assessment, for a one-week public comment period ending April 24. Agenda item 2020-13 addresses an April 2020 request from America's Health Insurance Plans (AHIP) (Attachment One-E1) to the Working Group regarding SSAP No. 106—Affordable Care Act Section 9010 Assessment. The federal Affordable Care Act (ACA) Section 9010 fee is also known as the health insurance tax (HIT). The payable amount is assessed on applicable 2019 premium, and it is due once the reporting entity provides health insurance in January 2020. The amount due is then remitted in September 2020 to the U.S. Department of the Treasury.

The exposed recommendation is to reject the request to defer liability recognition of the ACA fee due in September 2020 and move the agenda item to the rejected listing. The rejection would not result in any statutory accounting revisions.

The agenda item notes, “This request has the potential to materially distort the financial statements, as a known liability would not be fully recognized. In times of financial stress, it is important to be able to accurately assess the financial solvency of reporting entities. With the potential impact of the financial statements, any consideration for such a request warrants domiciliary state regulator review. Any state specific considerations would be either permitted practices (individual requests) or prescribed practices (state bulletins, etc.). If granted by the domestic state, such practices would be disclosed in the financial statements.”

Ms. Mears made a motion, seconded by Ms. Walker, to expose agenda item 2020-13. The motion passed unanimously, with 11 members voting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
SSAP 106 – Affordable Care Act Section 9010 Assessment
AHIP Request to Amend due to Covid-19

• SSAP 106 relates to what has been known as the health insurance tax (HIT); with changes in law, the tax was paid in 2014-2016, 2018, and is to be paid for the last time in 2020; it will be repealed in 2021 and, as a result, SAPWG has a pending proposal to supersede SSAP 2016 effective in 2021

• In the meantime, for amounts to be paid in 2020 based on data collected in 2019, SSAP 106 requires the following:
  - In 2019, insurers reflect the estimate to be paid in 2020 by a monthly reclassification from unassigned surplus to special surplus (i.e., total surplus is not reduced)
  - At the beginning of 2020, the entire balance in the special surplus is reclassified back to unassigned surplus with no effect on total surplus; that amount is then accrued as a liability and a corresponding expense, which reduces unassigned (and total) surplus
  - After items 1. and 2. above have been accomplished, the special surplus account has a zero balance; unassigned surplus is reduced by the full amount of the tax, which will remain as a liability on the balance sheet until it is paid to the government in September 2020

• The concern: AHIP members anticipate surplus strain due to the pandemic and its work with providers and subscribers to support their efforts to alleviate its impacts, which will be exacerbated by the mismatch in the timing of revenue and expense for 2020 interim reporting:
  - Insurers will show the full expense and resulting surplus hit of the tax at the beginning of 2020
  - But they will not realize the revenues and profits from the business that is subject of the tax until they are earned pro rata throughout the year (the HIT is priced into rates)
  - Magnitude: for some members, can be 10% of group-wide surplus during early 2020; would gradually diminish over the year

• Proposal:
  - Amend SSAP 106 to permit insurers to accrue the tax liability on a monthly or quarterly basis; during interim months of 2020, the portion of the estimated tax that has not yet been accrued would remain in special surplus to clearly document its designated purpose
  - Alternatively, to defer the expense until payment is made

• Additional considerations:
  - Impacts interim results for 2020 only; no impact on year-end reporting or RBC
  - Sets no precedent for SSAP 106; the tax is (and the SSAP will be) repealed effective 2021
  - Urgency in that the current filing deadline for 1Q 2020 is May 15, and next SAPWG call is currently scheduled for May 20
1. Reviewed Comments and Considered Adoption of Temporary Exceptions to Statutory Accounting

Julie Gann (NAIC) stated that the intention of this call is to consider four interpretations that provide exceptions to current statutory accounting guidance and require a super majority vote for adoption.

The Working Group held a public hearing to review comments on previously exposed items (Attachment One-F1).

a. Agenda Item 2020-12 and INT 2020-01T

Mr. Bruggeman directed the Working Group to agenda item 2020-12 and Interpretation (INT) 2020-01T: Reference Rate Reform. Jim Pinegar (NAIC) stated that this non-substantive agenda item is a result of Accounting Standards Update (ASU) 2020-04, Reference Rate Reform, which provides optional expedient guidance, allowing for the continuation of certain contracts that are modified in response to reference rate reform. Additionally, it provides waivers from derecognizing hedging transactions, and it provides some exceptions for assessing hedge effectiveness as a result of transitioning away from certain interbank offering rates. Mr. Pinegar stated that interested parties commented on two items. Interested parties wanted to ensure that ASU 2020-04 was broadly adopted, and they expressed concerns regarding the sunset date of Dec. 31, 2022. Mr. Pinegar stated that additional language was proposed affirming that all contracts within the scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract, shall apply to all Statements of Statutory Accounting Principles (SSAPs). He stated that the sunset date matched the date in ASU 2020-04; however, the Financial Accounting Standards Board (FASB) continues to monitor the transition, and it may modify its guidance, if needed. If the FASB takes such action, it is anticipated that the Working Group will consider a similar response.

Angelica Tamayo-Sanchez (New York Life Insurance Company), representing interested parties, stated appreciation for ensuring that INT 2020-01T was consistent with ASU 2020-04, as the potential contract modifications are broad and may encompass all SSAPs. She stated that in terms of the sunset date, the FASB indicates that it will review for possible modifications, and it appreciates that the Working Group will review if a similar action is necessary.

Mr. Hudson made a motion, seconded by Ms. Weaver, to adopt agenda item 2020-12 and INT 2020-01T, with the modification as proposed by NAIC staff, for statutory accounting (Attachment One-F2 and Attachment One-F3). The motion passed unanimously.

b. INT 2020-02T

Mr. Bruggeman directed the Working Group to INT 2020-02T: Extension of Ninety-Day Rule for the Impact of COVID-19. Jake Stultz (NAIC) stated in response to COVID-19 that this nonsubstantive interpretation provides exceptions to the 90-day rule for uncollected premium balances, bills receivable and amounts due from agents under SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers, and high deductible policies under SSAP No. 65—Property and Casualty Contracts. He stated that previous extensions to SSAP No. 6 in response to catastrophes have generally been for an additional 60 days, resulting in a total of 150 days before nonadmission. However, due to the fact that COVID-19 is a longer lasting and broader catastrophe, the recommendation proposed allows a total of approximately 200 days before requiring nonadmission. The 200-day allowance would apply to the first and second quarters of 2020, as the interpretation would expire prior to third quarter financial reporting.
Robin Marcotte (NAIC) stated that interested parties requested the scope of INT 2020-02T be expanded to include SSAP No. 51R—Life Contracts regarding life deferred and uncollected premiums, SSAP No. 47—Uninsured Plans for uninsured plan receivables, such as administrative services contracts, and SSAP No. 84—Health Care and Government Insured Plan Receivables regarding pharmaceutical rebate receivables and risk sharing receivables. She stated that additional interested party requests included: 1) extending the exception to the 90-day rule from the end of the second quarter to the end of the third quarter; 2) including policies written or renewed after the declaration of emergency, and not only to the policies that were current as of the date of emergency; and 3) allowing the extension of the 90-day rule to apply to polices in effect prior to the expiration of the state of emergency that later become past due for 180 days before non-admission. She stated that NAIC staff did not recommend extending INT 2020-02T through the third quarter, but they recommend that the Working Group retain the existing first and second quarter timeframe with an assurance to consider whether an extension is necessary in August 2020. She stated that NAIC staff also did not recommend that the interpretation provide provisions allowing the admittance of a receivable that was previously nonadmitted because it was 90 days past due prior to the COVID-19 pandemic. Additionally, if the Working Group supports consideration of exceptions for SSAP No. 84, specifically risk sharing and pharmacy rebates, it is recommended that a separate discussion occur, as the admittance process and calculation of those items is significantly different than receivables from policyholders, and the admissibility criteria for these items is more complex.

Mr. Stultz stated that upon review of the feedback from interested parties, NAIC staff support including SSAP No. 47 and SSAP No. 51R in the interpretative accounting guidance. Clarifying language was also suggested to include policies written or renewed on or after March 13 in paragraphs 3.a. and 3.c. Additional modified language was proposed to ensure that INT 2020-02T would have consistent expiration language with INT 2020-04T: Mortgage Loan Impairment Assessment due to COVID-19. Mr. Stultz stated that while the interpretation is written to expire prior to the third quarter, it is anticipated that future discussions will occur regarding possible extensions.

D. Keith Bell (Travelers Insurance), representing interested parties, stated their appreciation for the quick issuance of this interpretation and the Working Group’s commitment to review in August for a possible extension. He stated that other areas, including paragraphs 3.b. and 3.d., within the interpretation should have similar language to include other policies written or renewed on or after March 13. Mr. Bruggeman stated that the phrase, “on or after March 13, 2020,” would be included in paragraphs 3.a through 3.d. Mr. Stultz and Ms. Marcotte concurred with adding the language to ensure consistency throughout the guidance.

Albert Thomas Finnell (Finnell & Company), representing America’s Health Insurance Plans (AHIP), stated that due to the COVID-19 pandemic, health insurers are facing financial strain through waiving copays, deductibles, and covering COVID-19 testing. These issues affect the timeliness and ultimate collectability of certain receivables. Mr. Finnell stated that while health insurers are requesting relief regarding pharmaceutical rebate and risk sharing receivables covered in SSAP No. 84, addressing those issues in a separate agenda item would be more appropriate. He stated that additional data will be gathered, and relief will likely be requested in terms of loans and advances to providers, which is also addressed in SSAP No. 84. He stated that a letter has been submitted requesting relief on SSAP No. 106—Affordable Care Act Section 9010 Assessment, and he noted that interested parties are prepared to discuss those proposed edits with the Working Group once it has considered the request.

Ms. Malm made a motion, seconded by Ms. Belfi, to adopt INT 2020-02T, with the modifications to add certain receivables from SSAP No. 47 and SSAP No. 51R to the scope of the standard and include language confirming that policies written or renewed on or after March 13 are in scope of the interpretation (Attachment One-F4). The motion passed unanimously. Additionally, direction was given to NAIC staff to collaborate with industry on an agenda item covering SSAP No. 84.

c. INT 2020-03T

Mr. Bruggeman directed the Working Group to INT 2020-03T: Troubled Debt Restructuring Due to COVID-19. Julie Gann (NAIC) stated that this interpretation clarified that modifying mortgage loan terms in response to COVID-19 shall follow the provisions detailed in the March 22, “Joint Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus,” in determining whether the modification shall be reported as a troubled debt restructuring within SSAP No. 36—Troubled Debt Restructuring. Subsequent to the initial exposure, the proposed interpretation was revised to include the provisions from Section 4013 of the March 27 Coronavirus Aid, Relief, and Economic Security (CARES) Act, which affirmed that the interpretation is only applicable for the term of the loan modification. Additionally, the exposed interpretation was revised to reflect the updated interagency statement issued after the CARES Act on April 7. Ms. Gann stated that the CARES Act and proposed interpretation provide guidance for modifications that include a forbearance arrangement, interest rate modification, a repayment plan, and other similar arrangements that defer or delay the
payment of principal or interest. She stated that under existing U.S. generally accepted accounting principles (GAAP) and SSAP No. 36, a restructuring of a mortgage loan does not automatically result in the classification of a troubled debt restructuring. SSAP No. 36 defines the criteria for troubled debt restructuring, which generally includes the requirement of the borrower experiencing financial difficulties and the loan modification resulting in a significant change in terms. Ms. Gann stated that the proposed interpretation was initially exposed to only include mortgage loans. She stated that interested parties requested the expansion of the scope to include all debt instruments in SSAP No. 26R—Bonds and SSAP No. 43R—Loan-Backed and Structured Securities. She, in response to these comments, stated that proposed revisions include bank loans as defined in SSAP No. 26R; however, NAIC staff did not recommend including all debt instruments within scope of the interpretation. She stated that the CARES Act and the interagency statement is specific in that the loans addressed within their guidance are from financial institutions, and they are specific to loans from borrowers. She stated that the CARES Act and interagency statements reference banking agencies in collecting data on modified loans for regulatory purposes. She stated, in response to additional industry comments, that additional edits were proposed to clarify that the troubled debt restructuring relief is only applicable for the term of the modification. Additionally, in response to comments by interested parties regarding SSAP No. 34—Investment Income Due and Accrued, NAIC staff are awaiting additional technical guidance from the FASB; as such, NAIC staff have not yet proposed interpretative guidance to SSAP No. 34. Ms. Gann stated that the proposed effective date is consistent with the CARES Act, and it would be applicable for the period beginning on March 1 and ending on either Dec. 31 or the date that is 60 days after the date on which the national emergency concerning COVID-19 has terminated.

Bob Ridgeway (AHIP) inquired as to whether an extension would be possible in the event that COVID-19 loan modification occurred after Dec. 31. Ms. Gann stated that regardless if the CARES act is extended, the Working Group has the option to review this interpretation for possible extension. Mr. Bruggeman stated that due to the unknown end date of COVID-19, all related interpretations will be continually reviewed for possible extension.

Diane Bellas (Allstate), representing interested parties, stated that while insurance companies can assist with the economic recovery, additional accounting and reporting obstacles remain. She stated that the relief provided in the interpretations do provide some capital relief necessary to assist with the long-term economic recovery. She stated that while the revised interpretations were helpful, additional barriers within the regulatory framework should be reviewed. She stated that interested parties wish to review risk-based capital (RBC) and the asset valuation reserve (AVR) with the Capital Adequacy (E) Task Force. She stated that interested parties wish to discuss admissibility of investments with a going concern with the Working Group.

Daniel P. Allen (MassMutual), representing interested parties, expressed agreement with the recent modifications to the interpretation, which incorporate the revised April 7 joint interagency statement as a result of the CARES Act. He stated that while the scope of the interpretation covered mortgage loans, additional consideration should be considered to include all debt instruments covered in SSAP No. 26R and SSAP No. 43R, as these investments will likely require modifications as a result of COVID-19. He stated that interested parties were pleased to see that bank loans were included in the revised interpretation; however, due to insurers having significant private placement debt portfolios, temporary relief should be extended to include these investment classes, as these items will likely require similar loan modifications. He stated that the effective date of INT 2020-03T does match the CARES Act, but he requested clarification as to whether the exceptions for loan modifications would extend beyond the projected scheduled termination date. Mr. Bruggeman inquired as to whether there was any specific language or request regarding the expansion of scope or timing of the interpretation. Mr. Allen stated that private placement loans were a significant concern, but he requested clarification regarding whether a modification would remain exempt from SSAP No. 36 in the event that it was extended beyond the effective date of the interpretation. Mr. Bruggeman stated that the scope of this interpretation was to clarify mortgage loans modified as a result of COVID-19, and they were not to be considered a troubled debt restructuring. Ms. Gann stated that the effective dates match the CARES Act; however, the modification must occur in the defined time frame.

Bruce Oliver (Mortgage Bankers Association) stated that the interpretation adopts the CARES Act’s effective date; however, the joint interagency statement does not have an effective date. He stated that clarification should be added since the interpretation references both items. Mr. Bruggeman stated that this interpretation is in response to the national emergency, and should any modifications be required 60 days after the termination of national emergency, an insurer should consult with his/her domestic regulator for possible exception allowance.

Brian Keating (Guardian Life Insurance), representing interested parties, stated that private placement loans represent a significant portion of an insurance company’s portfolio, at times up to 15–20% of invested assets. Due to the COVID-19 pandemic, several requests for loan relief or modifications have been received, especially those from the hospitality industry. Mr. Keating stated that in an effort to be equitable, the bank loan relief provided in the interpretation should be extended to
insurance lenders despite the joint interagency statement not specifically referencing private placement loans. The interagency statement covers loan modifications as a result of the COVID-19 pandemic, and it would presumably allow insurance companies to apply such guidance for investments covered in SSAP No. 26R and SSAP No. 43R. Mr. Keating stated that modification requests include covenant waivers, delayed payment schedules, and that insurers have a direct relationship with the borrowers, which is similar to a typical financial institution.

Ms. Gann stated that, consistent with the interagency statement, several loan modifications are anticipated in response to the COVID-19 pandemic, and they would likely not fall into the scope of troubled debt restructuring as defined in SSAP No. 36. This is because a loan modification that is insignificant, or if the borrower is not experiencing financial difficulty, is not considered as troubled debt restructuring under existing guidance. Ms. Gann stated that the interpretation removes the analysis requirement to determine if a troubled debt restructuring has occurred. She stated that if private placement loans were to be considered for exception guidance, information would be requested from interested parties regarding the scope of loan modifications being requested and granted. Particularly, she inquired as to whether the private placement modifications would likely be considered troubled debt restructurings because they would be significant to the original loan terms. Mr. Bruggeman stated that the interpretation does not prohibit loan modification from being granted, and since insurance companies are typically issuing long-term debt, it is possible that a modification would likely not be significant enough to be determined a restructured troubled debt.

Ms. Sanchez stated that the U.S. GAAP troubled debt restructuring guidance covers both mortgage loans and debt instruments, and the joint interagency statement would presumably apply to both asset classes. However, the interpretation only applies to mortgage and bank loans. Ms. Gann stated that the troubled debt restructuring guidance in SSAP No. 36 is consistent with U.S. GAAP; however, the focus of INT 2020-03T, which provides exceptions to the requirements of SSAP No. 36, is specific to mortgage and bank loans. However, if requested by industry or the Working Group, a separate agenda item could be prepared to review other types of asset classes, specifically private placement debt. Ms. Gann stated that if a private placement modification was to occur, without the interpretation exception, the lender would follow the provisions of SSAP No. 36 to determine whether the modification should be considered a troubled debt restructuring. As noted, the guidance in SSAP No. 36 does not automatically result in a troubled debt restructuring, but assessment has to occur regarding whether the borrower is experiencing financial difficulties and whether the modification is considered insignificant.

Mr. Hudson made a motion, seconded by Ms. Mears, to adopt INT 2020-03T with the modifications to: 1) include the CARES Act, the April 7 updated joint interagency statement, and a reference to bank loans; and 2) clarify that the effective date of the interpretation mirrors the timeframe of the CARES Act (Attachment One-F5). In addition, direction was given to NAIC staff to collaborate with interested parties to evaluate potential temporary troubled debt restructuring relief guidance for private placement loans and other similar debt products. The motion passed unanimously.

d. INT 2020-04T

Mr. Bruggeman directed the Working Group to INT 2020-04T. Ms. Gann stated that INT 2020-04T addresses the impact of mortgage loan forbearance or prudent modifications on the statutory accounting and reporting requirements for mortgage loans, as well as investments with underlying mortgage loans. INT 2020-04T allows for a temporary, limited-time statutory exception for the assessment of impairment due to loan modifications being granted for mortgage loans and investment products with underlying mortgage loans. This exception would only defer the assessment of impairment due to situations caused by the forbearance or modification of mortgage loan payments, and it would not delay the recognition of other-than-temporary impairments if the entity decided to sell the investment and/or if provisions other than the limited-time forbearance or modifications of mortgage loans payments caused the entity to identify that they would not recover the reported carrying value of the investment. Ms. Gann stated that in response to industry comments, revisions have been proposed to include bank loans in scope of INT 2020-04T; however, all other debt instruments covered in SSAP No. 26R and SSAP No. 43R were not added. She stated that additional comments were received regarding the applicability to SSAP No. 34, but NAIC staff proposed waiting on expected FASB technical guidance on the topic. Similar to INT 2020-02T, INT 2020-04T is effective for the first and second quarters of 2020. However, the Working Group will assess in August 2020 to determine if an extension if necessary. She stated, in response to industry questions, that an edit has been proposed to clarify that impairment assessments after the effective date of INT 2020-04T would be based on the contractual terms of the mortgage loan or investment after reflecting any modification. Mr. Bruggeman confirmed that while INT 2020-02T and INT 2020-04T cover the first and second quarters of 2020, it is the intent of the Working Group to review both for possible extensions.

Ms. Sanchez stated that additional consideration is requested on all debt instruments, especially private placement loans. She stated that insurance companies could be giving forbearances to debt holders due to the COVID-19 pandemic which, without
temporary relief, could require impairment assessments. She inquired as to why the effective date of INT 2020-04T did not match INT 2020-03T, which allows modifications 60 days after the end of the national emergency. Mr. Bruggeman stated that impairment assessments are performed at a certain point in time, and rather than extending the temporary relief granted in INT 2020-04T at this time, the Working Group will review for possible extension in August. The effective dates in INT 2020-04T are more in line with the evaluations required for financial statement reporting. Ms. Gann stated that INT 2020-03T was in direct response to the CARES Act, and the effective dates of INT 2020-02T and INT 2020-04T are flexible, allowing for earlier or later termination depending on the timing of the national emergency. Ms. Sanchez stated interested parties stand ready to work with NAIC staff and the Working Group on an agenda item regarding SSAP No. 34, concerning interest due and accrued. She stated that every investment class will likely be affected by variations in cash flow due to the COVID-19 pandemic and interpretative guidance would be beneficial.

Mr. Lathrop stated that Oregon is supportive of extending the effective dates of INT 2020-02T and INT 2020-04T to include the third and fourth quarters of 2020. He stated that several states have issued moratoriums on tenant evictions, and they may issue moratoriums on foreclosures. He stated Oregon’s Insurance Division believes there will be an extended economic recovery, likely warranting extension of the temporary exceptions provided in these interpretations.

Ms. Belfi made a motion, seconded by Ms. Weaver, to adopt INT 2020-04T, with the modifications to include bank loans as proposed by NAIC staff, for statutory accounting (Attachment One-F6). The motion passed unanimously.

2. Discussed Other Matters
   a. Premium Refunds

Ms. Marcotte stated that in response to questions from industry and state insurance regulators, NAIC staff are planning an agenda item to discuss the accounting and reporting of premium refunds due to the COVID-19 pandemic. Birny Birnbaum (Center for Economic Justice [CEJ] and the Consumer Federation of America [CFA]) stated that insurance companies are utilizing a variety of techniques to issue refunds, ranging from a premium credit to a cash refund. Due to these variations, uniform reporting is encouraged.

   b. SSAP No. 106

Mr. Bruggeman stated that NAIC staff have prepared an agenda item in response to a request received from industry regarding the insurer provider fee captured in SSAP No. 106. A subsequent e-vote to expose the agenda item is anticipated.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Interpretations (INTs) of the NAIC Statutory Accounting Principles Working Group (the Working Group) Exposed for Comment with Comments due April 2

Dear Mr. Bruggeman:

Interested parties thank you, the Working Group and NAIC staff for responding quickly to the issues that are arising as a result of the rapid spread of the Coronavirus Disease 2019 (COVID-19). As several states and cities have issued “stay at home” orders and forced all non-essential businesses to temporarily close, there has been a significant increase in unemployment and the potential permanent closure of many businesses. We appreciate the Working Group’s efforts to head-off problems resulting from the impact of COVID-19 on economic conditions and for the opportunity to comment on the draft INTs that were exposed for comment to address these issues via email vote on March 26, 2020.

INT 20-01T: ASU 2020-04 - Reference Rate Reform

This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of ASU 2020-04 – Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued ASU 2020-04 in March 2020 as optional, transitional and expedient guidance as a result of reference rate reform.

The accounting issues are:

Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?

Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?

Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?
Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?

For Issue 1, the Working Group came to the tentative consensus that ASU 2020-04 shall be adopted for statutory accounting with only minor modifications noted below. The Working Group tentatively agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:

a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.
b. Allows hedging relationships to continue without de-designation upon a change in certain critical terms.
c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.
d. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.
e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.
f. The only SAP modification to this ASU is related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

For Issue 2, the Working Group came to the tentative consensus that debt and service agreement modifications, as a result of reference rate reform, should not typically rise to the level of requiring a reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized if extinguished. A reference rate modification should not generally require de-recognition and re-recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to the tentative consensus that should an eligible contract be affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

For Issue 3, the Working Group came to the tentative consensus that lease modifications, solely caused by reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states that only modifications which grant the lessee additional rights shall be accounted for as a new lease. These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, the Working Group came to a tentative consensus that if an eligible lease is affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

For Issue 4, the Working Group came to the tentative consensus that ASU 2020-04 shall be applied to derivative transactions as the following considerations provided in the ASU are appropriate for statutory accounting:
a. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than de-designate the hedging relationship.

b. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.

c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.

d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.

Additionally, for GAAP purposes, if an entity has not adopted the amendments in ASU 2017-12, Derivatives and Hedging, it is precluded from being able to utilize certain expedients for hedge accounting. For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 2017-12, while the remainder of the items are pending statutory accounting review. The Working Group tentatively concluded that all allowed expedient methods are permitted as elections for all reporting entities under statutory accounting. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.

Interested parties agree with the concepts proposed in item 2020-04 on Reference Rate Reform (the “exposure draft”) and we believe that it will provide significant relief to all companies that have entered into contracts that reference LIBOR (or another reference rate expected to be discontinued due to reference rate reform).

We recommend that Issues 2 and 3 be combined into a single broad consensus that applies to all contract modifications due to reference rate reform and allows the optional expedient to be accounted for as continuations of existing contracts without requiring remeasurement of the contracts. ASU 2020-04 did this with examples at ASC 848-20-35-3 and then broadly at ASC 848-20-35-4:

848-20-35-3 This Subtopic provides optional expedients for accounting for modifications of contracts accounted for in accordance with the following Topics that meet the scope of paragraphs 848-20-15-2 through 15-3:

   a. Topic 310 on receivables
   b. Topic 470 on debt
   c. Topic 840 or 842 on leases.

848-20-35-4 If a contract is not within the scope of the Topics referenced in paragraph 848-20-35-3, an entity shall have the option to account for and present a modification that meets the scope of paragraphs 848-20-15-2 through 15-3 as an event that does not require contract remeasurement at the modification date or reassessment of a previous accounting determination required under the relevant Topic or Industry Subtopic. Paragraph 848-20-55-2 includes examples that illustrate the application of that guidance.
Adopting the ASU broadly for contract modifications will prevent unintentionally omitting optional expedients. For example, interested parties noted SSAP 26R Bonds, paragraph 22 addresses exchanges and conversions and requires the fair value of a bond surrendered be the cost basis of the new contract. SSAP 103R Transfers and Extinguishments, paragraph 130 notes that “exchanges of debt instruments or...modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor.” Modifications of bonds' contractual interest rates due to rate reform should not result in remeasurement. This is one example of an unintentional omission that can result without a broad provision for contract modifications.

A specific area of concern for all insurers, which was expressed to the FASB as well, is related to the sunset provision in the exposure draft, which terminates the relief outlined in the exposure draft after December 31, 2022. We are concerned that including a hard termination date after which the relief outlined in the exposure draft would not be available would put significant pressure on the markets unnecessarily. We do not believe that the December 31, 2022 deadline for all market participants to complete the modification of all contracts that reference LIBOR (or another reference rate expected to be discontinued due to reference rate reform) is realistic, or necessary. Although the FASB did not change the date of the sunset provision, they did state in the Basis for Conclusion that the FASB will monitor the market-wide IBOR transitions and will consider whether future developments warrant any changes, including changes to the end date of the application of the amendments in the ASU.

Interested parties request the NAIC to consider extending the date or allowing for future changes to the end date due to the uncertainty regarding when LIBOR will cease.

**INT 20-02T: Extension of Ninety-Day Rule for the Impact of COVID-19**

The emergence of a previously unknown virus began spreading among humans between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay at home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

In response to the sudden impact to the economy and its effect on the timeliness of payments by policyholders, the Working Group considered whether a temporary extension of the 90-day rule, extending the nonadmission guidance for premium receivables due from policyholders or agents and for amounts due from policyholders for high deductible policies to September 28, 2020, for policies in U.S. jurisdictions that have been impacted by COVID-19 should be granted.

The Working Group reached a tentative consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders and for amounts due from policyholders for high deductible policies, as follows:

a. For policies in effect and current prior to the date as of the declaration of a state of emergency by the U.S. federal government on March 13, 2020, insurers may wait until September 28, 2020 before nonadmitting premiums receivable from policyholders or
agents as required per SSAP No. 6, paragraph 9.

b. For high deductible policies in effect and current prior to the date as of the declaration of a state of emergency by the U.S. federal government on March 13, 2020, insurers may wait until September 28, 2020 before nonadmitting amounts due from policyholders for high deductible policies as required per SSAP No. 65, paragraph 37.

c. Existing impairment analysis remains in effect for these affected policies.

Due to the short-term nature of the applicability of this extension, which expires September 28, 2020, this interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group’s website. This interpretation will be automatically nullified on September 29, 2020 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

In discussing the draft wording of INT 20-02, interested parties focused on two areas of concern: scope of the items covered by the INT and timing of the extension of the 90-day rule. We discuss each separately below.

Scope of Items Covered by the INT

We note that the proposed INT 20-02 “scopes-in” certain types of receivables subject to the 90-day rule to which the extension will apply by reference to SSAPs, specifically, SSAP No. 6, Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers, and SSAP No. 65, Property and Casualty Contracts. However, there are other receivables which are only covered in other SSAPs which are relevant and significant to health plans and which are also subject to the 90-day rule:

a. SSAP No. 47, Uninsured Plans. For Administrative Services Contract (ASC) business, health carriers have separate contracts with providers and customers and are obligated to pay providers out of their own funds before receiving reimbursement from the group. The provider contracts specifically state that health carriers will reimburse providers for services rendered regardless if the subscriber is covered by a self-funded or underwritten plan. Many health care providers have already received requests from their large ASC customers to allow them to delay payment to the carrier for claim reimbursements for up to 90 days.

b. SSAP No. 84, Health Care and Government Insured Plan Receivables. This SSAP provides accounting guidance relative to a number of types of receivables that are relevant and significant for health plans, of which three types are subject to the 90-day rule for purposes of determining if the asset will be treated as an admitted asset in statutory reporting. Interested parties request that two of those types of receivables, Pharmaceutical Rebate Receivables and Risk-Sharing Receivables, be “scoped-in” to INT 20-02. Anticipated changes in subscriber needs and utilization, combined with sub-optimal working environments at home for many health carriers’ staff who are involved with accounting and billing matters, presages difficulties in assuring that these receivables will hew to normal levels seen in non-crisis times.

c. SSAP No.6 paragraph 2 states that “This statement does not address uncollected and deferred premiums for Life considerations”. Interested parties request that life premiums be included in the scope.
Bringing the items specified in each of paragraphs a, b and c above in scope would then subject them to the same 90-day extension as other premium receivables currently described in the proposed INT 2020-02, and for which the same edits suggested by interested parties in the section below, *Timing of the Extension of the 90-Day Rule*, would apply.

**Timing of the Extension of the 90-Day Rule**

Interested parties spent some time discussing the wording that addresses how the extension of the 90-day rule is to be applied. Some interpreted the wording to only allow an extension of the rule for contracts that are issued between the date of the declaration of a state of emergency (March 13, 2020) and March 30, 2020, approximately 180 days before the final date of September 28, 2020 allowed for the extension in the draft INT.

To clarify the intent of allowing an extension of the 90-day rule for receivables that become over 90 days past due during the state of emergency, we recommend the following edits as marked below:

As a result of the declaration of a state of emergency by the U.S. federal government on March 13, 2020, the Working Group reached a tentative consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders and for amounts due from policyholders for high deductible policies, as follows:

a. For policies in effect and current prior to the expiration date as of the declaration of a state of emergency declared by the U.S. federal government on March 13, 2020 and that later become past due, insurers may wait until September 28, 2020 an additional 90 days over and above the 90 days before nonadmitting premiums receivable from policyholders or agents as required per SSAP No. 6, paragraph 9 before nonadmitting premiums receivable from policyholders or agents.

b. For high deductible policies in effect and current prior to the expiration date as of the declaration of a state of emergency declared by the U.S. federal government on March 13, 2020 and that later become past due, insurers may wait until September 28, 2020 an additional 90 days over and above the 90 days before nonadmitting as amounts due from policyholders for high deductible policies required per SSAP No. 65, paragraph 37 before nonadmitting amounts due from policyholders for high deductible policies.

c. Existing impairment analysis remains in effect for these affected policies.

Interested parties recommend similar wording be added to include SSAP Nos. 47 and 84 in the scope of the INT 20-02 as well as life premiums.

Given the complexity of describing how the extension of the 90-day rule is to be applied and companies’ ability to apply an overly prescriptive extension, we ask the Working Group to consider a more practical approach that would suspend the 90-day rule for the identified SSAPs for 2nd and 3rd quarter 2020 reporting, or longer depending on the impact of COVID-19. This approach would be easier for all to understand and companies to apply.
INT 20-03T: Troubled Debt Restructuring Due to COVID-19

The Working Group reached a tentative consensus to clarify that a modification of mortgage loan terms in response to COVID-19 shall follow the provisions detailed in the March 22, 2020 “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” (detailed in paragraph 6) in determining whether the modification shall be reported as a troubled debt restructuring within SSAP No. 36.

This interpretation is effective for the specific purpose to address loan modifications in response to COVID-19. This interpretation will be considered for nullification when no longer applicable.

INT 20-04T: Mortgage Loan Impairment Assessment Due to COVID-19

In response to COVID-19, Congress and Federal and state prudential banking regulators have considered provisions pertaining to mortgage loans as a result of the effects of the COVID-19. These provisions are intended to be applicable for the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

The Working Group reached a tentative consensus for limited time exceptions to defer assessments of impairment for mortgage loans and investments which predominantly hold underlying mortgage loans which are impacted by forbearance or modifications in response to COVID-19. These exceptions are applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements and only in response to mortgage loan forbearance or modifications granted in response to COVID-19. As such, the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements.

For modification programs designed to provide temporary relief for borrowers current as of December 31, 2019, the reporting entities may presume that borrowers are current on payments are not experiencing financial difficulties at the time of the modification for purposes of determining impairment status and thus no further impairment analysis is required for each loan modification in the program. The exceptions granted in this interpretation are detailed as follows:

a. **SSAP No. 37—Mortgage Loans**: Provide a limited-time exception for assessing impairment under SSAP No. 37, paragraph 16, for mortgage loans with payments (either principal or interest) that have short-term deferrals or modifications in response to COVID-19. This interpretation shall not delay impairment assessments for reasons other than the short-term deferral or modification of interest or principal payments in response to COVID-19 and shall not delay recognition of realized losses if a reporting entity believes a mortgage loan is OTTI.

b. **SSAP No. 30—Common Stock**: Provide a limited-time exception for assessing OTTI under SSAP No. 30, paragraph 10, and INT 06-07 due to fair value declines for SEC registered
funds that have underlying mortgage loans that have been deferred or modified in response to COVID-19 unless the reporting entity intends to sell the security. If the entity has made a decision to sell the security, recognition of the OTTI shall continue to be required. As these investments are reported at fair value, declines in fair value would continue to be reported as unrealized losses.

c. **SSAP No. 43R—Loan-backed and Structured Securities:** Provide a limited-time exception for assessing OTTI under SSAP No. 43R, paragraphs 30-36, due to fair value declines in investments that have underlying mortgage loans deferred or modified in response to COVID-19 unless the reporting entity intends to sell the security. If the entity has made a decision to sell the security, then recognition of an OTTI shall continue to be required.

d. **SSAP No. 48—Joint Ventures, Partnerships and Limited Liabilities Companies:** Provide a limited-time exception for assessing OTTI under SSAP No. 48 due to fair value declines in investments that have underlying mortgage loans deferred or modified in response to COVID-19 unless the entity intends to sell the security. Additionally, an OTTI shall be assessed if factors other than the mortgage loan forbearance or modification have resulted with a decline that is considered other than temporary, or the reporting entity does not believe it is probable they will collect the carrying amount of the investment.

As detailed in paragraph 10, the exceptions granted in this interpretation are applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements and only in response to mortgage loan forbearance or modifications granted in response to COVID-19. As the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements, this interpretation will automatically expire as of September 29, 2020. This interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group’s website. This interpretation will be automatically nullified on September 29, 2020 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

Interested parties appreciate the opportunity to comment on INT 20-03T, *Troubled Debt Restructuring Due to Covid-19*, and INT 02-04T, *Mortgage Loan Impairment Assessment Due to COVID-19*. We also appreciate the NAIC addressing these important topics so quickly given the effects COVID-19 has had on the economy and your consideration of how insurers may modify investments in their portfolios to mitigate adverse effects on borrowers. Given that insurers are large investors in the capital markets, we believe it is imperative that we be provided similar accounting relief for our investment portfolios as banks have been afforded in order to contribute to the ultimate economic recovery after COVID-19.

We agree that the relief provided by the various Banking regulators, and affirmed by the FASB, in their “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” (“Interagency Statement”) should be applicable to insurers for statutory reporting. Since U.S. GAAP accounting rules on troubled debt restructurings apply to debt investments as well, industry’s interpretation is that the Interagency Statement applies to debt investments and not just loans.
We note that Section 4013 of the “Coronavirus Aid, Relief, and Economic Security Act” or “CARES Act” seems to provide relief from the requirements of U.S. GAAP with respect to modifications which goes beyond the relief provided in the Interagency Statement. Additional clarity is needed with respect to the scope and application of the provisions in Section 4013 of the CARES Act. To the extent the provisions of this Federal Law change or supersede the guidance provided in the Interagency Statement, we believe the NAIC should amend or replace the guidance in INT 20-03T and 20-04T to align with such enacted law.

Because we view INT 20-03T and INT 20-04T to be interrelated, we offer the following comments for both INTs:

**Scope of the INTs:**

Interested parties believe the scope of both INT’s should be expanded to include debt investments (i.e., all those investments in the scope of SSAP No. 26R and SSAP 43R). Debt investments are a significant portion of insurers’ investment portfolios and we believe including them in the scope of the INTs will afford companies more of an opportunity to contribute to economic recovery after COVID-19.

The intent of the Interagency Statement was to encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because they are experiencing short-term financial or operational problems due to the effects of COVID-19. Industry’s interpretation is that the scope of the Interagency Statement applied to debt investments, not just loans, since debt instruments, such as bonds, are also within the scope of ASC Subtopic 310-40, Receivables – Troubled Debt Restructurings by Creditors. As currently drafted, INT 20-03T is limited to mortgage loans, which is inconsistent with the scope of SSAP No. 36, Troubled Debt Restructuring. When insurers apply SSAP No. 36 today they apply it not only to loans, but also to debt investments. Interested parties request that the scope of INT 20-03T be broadened to include all lending activity in the scope of SSAP No. 36, which for insurers include debt investments (SSAP No. 26R and SSAP 43R) that are a significant portion of insurers’ investment portfolios, as long as a borrower was current on amounts due at the time of the modifications, relief provided by a lender was temporary and directly related to COVID-19, and the relief provided was insignificant. This is also consistent with U.S. GAAP, which requires FASB Topic 310-40 (Troubled Debt Restructurings for Creditors) to be applied to loans and debt. In summary, broadening the scope of INT 20-03T would be consistent with how insurers apply SSAP 36 and with the requirements of U.S. GAAP.

In addition, INT 20-04T, as currently written, is limited to mortgage loans or investments that are predominantly impacted by underlying mortgage loans. Insurers may provide the same type of temporary relief to various borrowers in other areas of their investment portfolios (i.e., non-mortgage loan related), including bank loans and debt investments. The intent of such modifications or relief is to mitigate adverse effects on borrowers due to COVID-19. As a result, we believe the scope of INT 20-04T also should be expanded to all investments in the scope of SSAP No. 26R and SSAP 43R.

Including SSAP No. 26R and SSAP 43R investments in the scope of both INTs would result in insignificant modifications for borrowers that are current at the time of the modification and that provide relief due to COVID-19 not being considered TDRs. Additionally, such modifications should not
trigger impairments; however, impairment assessments should not be delayed if relief/modifications provided by lenders are not directly related to COVID-19.

We would also like to confirm that any COVID-19 related modifications entered into while the Interpretation is in effect (at least until December 31, 2020) will not be considered TDRs or impairments for as long as the modification is in force.

Non-admitting Accrued Interest:

The Interagency Statement also discusses “past due” amounts and notes that amounts should not be reported as past due if the lender has granted a deferral or forbearance due to COVID-19 modifications discussed above. We believe that the relief in the Interagency Statement should be applicable to insurers for statutory reporting. Interested parties believe INT 20-04T should be expanded to address accrued interest income. That is, interest amounts accrued for mortgage loans that are deemed collectible, however are 180 days past due (based on the past due definition in SSAP No. 37) because of modifications discussed in this letter, should continue to be admitted assets. Additionally, accrued interest related to SSAP No. 26R and SSAP 43R investments where relief was provided due to COVID-19 also would continue to be admitted if more than 90 days past due (as defined in SSAP No. 34).

As the Interpretation is effective until nullified by the NAIC, interested parties seek to clarify that loans granted a short-term payment deferral that ends after the nullification would be admitted during the entire term of the short-term payment deferral, even if the deferral period ends after the Interpretation is nullified.

Limited Exception: 1st and 2nd Quarter- INT 20-04T

INT 20-04T provides for a limited exception for considering whether it is “probable” an investor would receive its contractual principal and interest payments when the investor provides temporary relief related to COVID-19. The limited exception is for only 1st and 2nd quarter statutory reporting. As insurers are a key lender to many businesses through commercial mortgage loans, bank loans, other SSAP No. 26R investments, SSAP 43R, and the many other types of investments discussed in INT 20-04T, to mitigate adverse effects to borrowers and help future recovery in the economy after COVID-19, interested parties believe relief should be provided beyond the 1st and 2nd quarters. As no one is able to predict the length of economic recovery, we believe providing an exception until at least 12/31/2020 would match the expected timeframe that insurers believe they will be addressing issues.”. At the very least, we believe the limited exception period should be revisited and re-assessed with industry prior to the date expiring.

In addition, interested parties interpreted INT 20-04T to mean that, if a modification were made in the 1st or 2nd quarter, and, the modified terms are insignificant and extend beyond the 2nd quarter, the 9/30/2020 expiration date in the INT would not be relevant. That is, IPs seek to clarify that loans granted a temporary modification during the exception period, but such modification period extends beyond the exception would continue to have the INT applied. We suggest clarification be provided in the INT to this point.

Dale Bruggeman
Chair, Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

By e-mail to Julie Gann, Robin Marcotte, Jim Pinegar, Fatima Sediqzad and Jake Stultz

Dear Chairman Bruggeman:

America’s Health Insurance Plans (AHIP) is pleased to comment on the above referenced proposed Interpretation of the NAIC’s Statutory Accounting Principles Working Group (SAPWG).

First, we would like to take the opportunity to commend the NAIC and SAPWG on their swift action in dealing with the COVID-19 pandemic. We thank you for recognizing the difficulties with which consumers and insurance carriers are grappling, as well as the critical need for regulatory flexibility in these uncertain times. State regulators are being stretched to the limit, as are our members. We wanted to express our appreciation for your continued recognition of these difficulties and efforts to streamline and coordinate, even as you deal with the same inordinate time and resource challenges in the regulatory community.

We also want to thank you and NAIC staff for your time in conferring with us by phone on March 30. As we indicated on that call, and while AHIP is responding to INT 20-02 herein, we do not plan to respond to the other proposed SAPWG interpretations currently out for exposure which pertain to COVID-19, i.e., INT 20-01, INT 20-03 and INT 20-04. Also to follow-up on our call, AHIP will be providing you with separate letters in the near term with respect to concerns presented to health insurance plans from COVID-19 and the related impact of certain provisions of SSAP No. 84, Health Care and Government Insured Plan Receivables, and SSAP No. 106, Affordable Care Act Section 9010 Assessment.

With that, we have the following comments regarding the proposed extension of the Ninety-Day Rule:

- Given the pervasive economic impacts the crisis is having on firms and individuals, we expect temporary but potentially significant increases in past due receivables of health plans. Thus, AHIP strongly supports the concept of an extension of the Ninety-Day Rule due to COVID-19.
While AHIP desires an extension that will remain in place longer than the proposed September 28 expiration of INT 20-02 as a “just-in-case measure”, we understand that SAPWG anticipates gauging the necessity for further extension as the expiration date nears and, if necessary, will consider at that time. We believe that such monitoring and willingness to consider a further extension in light of circumstances seen on the ground at that time to be imperative.

We note that the proposed INT 20-02 “scopes-in” certain types of receivables subject to the Ninety-Day Rule to which the extension will apply by reference to SSAPs, specifically, SSAP No. 6, Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers, and SSAP No. 65, Property and Casualty Contracts. However, there are other receivables which are only covered in other SSAPs which are relevant and significant to health plans and which are also subject to the Ninety-Day Rule:

i. SSAP No. 47, Uninsured Plans: For Administrative Services Contract (ASC) business, health carriers have separate contracts with providers and customers and are obligated to pay providers out of their own funds before receiving reimbursement from the group. The provider contracts specifically state that health carriers will reimburse providers for services rendered regardless of whether the subscriber is covered by a self-funded or underwritten plan. Some AHIP members have already received requests from their large ASC customers to allow them to delay payment to the carrier for claim reimbursements for up to 90 days.

ii. SSAP No. 84, Health Care and Government Insured Plan Receivables: This SSAP provides accounting guidance relative to a number of types of receivables that are relevant and significant for health plans, of which three types are subject to the Ninety-Day Rule for purposes of determining if the asset will be treated as an admitted asset in statutory reporting. AHIP requests that two of those types of receivables, Pharmaceutical Rebate Receivables and Risk-Sharing Receivables, be “scoped-in” to INT 20-02.1

Anticipated changes in subscriber needs and utilization, combined with sub-optimal working environments at home for many of our members’ staff who are involved with accounting and billing matters, presage difficulties in assuring that these receivables will hew to normal levels seen in non-crisis times. With these receivables scoped-in to INT 20-02, they would be subject to the same proposed extension provisions as for other receivables applicable to the Ninety-Day Rule.

1 The third type of receivable covered by SSAP No. 84 which is also subject to the Ninety-Day Rule is Loans and Advances to Providers. AHIP is not requesting that such balances be scoped-in to the proposed INT 20-02 at this time. However, AHIP has other comments unrelated to the application of the Ninety-Day Rule to Loans and Advances to Providers which we will forward in a separate letter.
Finally, AHIP has concerns with the Staff-drafted language in paragraphs 3a and 3b of INT 20-02. AHIP supports the substance of the Industry Interested Parties group’s suggested language, and would propose language consistent with theirs, such as the following:

For policies in effect and current prior to the expiration date as of the declaration of a state of emergency declared by the U.S. federal government on March 13, 2020 and that later become past due, insurers may wait until September 28, 2020 an additional 90 days over and above the 90 days before nonadmitting premiums receivable from policyholders or agents as required per SSAP No. 6, paragraph 9 before nonadmitting premiums receivable from policyholders or agents.

* * * * * * *

AHIP appreciates this opportunity to comment and would be glad to address any questions you or other SAPWG members may have at your convenience.

Sincerely,

America’s Health Insurance Plans

Mr. Dale Bruggeman  
Chairman, Statutory Accounting Principles (E) Working Group  
Sent via e-mail: jgann@naic.org, jpinegar@naic.org, fseiqzad@naic.org, jstultz@naic.org

Dear Chairman Bruggeman:

On behalf of the undersigned companies, thank you for your leadership in exposing INT 20-02, which extends the 90-day rule for admitted assets. As you are aware, dozens of states have issued guidance designed to give premium relief for their customers during the COVID-19 pandemic. Consequently, health insurers will experience delays in securing payment from our customers. We hope that this working group can give us the support we need to adequately plan for late premium payments.

While our companies are doing everything it can ease the financial impact of the pandemic to our clients and customers, we should not be penalized for receivables paid in excess of 90-days. While relief through the end of second quarter could be helpful, we believe that date will not give us sufficient time to admit expected assets. Therefore, we request that SAPWG extend the time frame contemplated in INT 20-02 from the end of the second quarter to the end of the third quarter. We believe this is the most likely scenario based on current estimates and will give our companies the certainty and direction it needs to plan during this pandemic. We hope you will agree this is a reasonable solution to unprecedented circumstances, and we strongly encourage the adoption of INT 20-02 with the amendment suggested by the undersigned insurers.

Thank you for considering our comments, as well as the comments of America’s Health Insurance Plans with which we are aligned. If you need additional information, please feel free to contact us.

Sincerely,

Statutory Accounting Principles (E) Working Group
Attn: Dale Bruggeman, Chair of the Statutory Accounting Principles (E) Working Group

Re: Response to Exposure Draft INT 20-04T

Dear Mr. Bruggeman:

I am reaching out in response to the SAPWG’s Exposure Draft INT 20-4: Mortgage Loan Impairment Assessment Due to COVID-19. Specifically, I have a clarifying question and observation.

The Exposure Draft states the exceptions granted are applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements. Further, it states the exceptions are not applicable in the September 30, 2020 (3rd quarter) financial statements and the interpretation will automatically expire as of September 29, 2020.

As such, as impairment is a ‘point-in-time’ assessment as of the balance sheet date, it is my understanding that loan modifications meeting the conditions set out in this Exposure Draft can therefore be modified up to September 29, 2020 in order for these exceptions to apply (i.e., not cut-off post June 30, 2020).

Further, we expect that certain of our impacted borrowers may not proactively request relief (modification) in the next few months. As such, if we believe it is possible that a borrower would not ask for relief until after the cut-off date above (e.g., during Q4 2020), it would seem this would encourage companies to proactively modify a larger number of loans now to avoid a more problematic accounting implication later. Any guidance or clarification on this observation would be appreciated. In addition, we would ask that you consider extending the guidance until the later of the cut-off date above or until COVID-19 is no longer considered a national emergency.

Thanks for your attention and consideration to these observations.

Sincerely,

Bud Graessle
VP, Controller, Treasurer, and Senior Accounting Officer

**Description of Issue:**

The Financial Accounting Standards Board (FASB) issued ASU 2020-04 *Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting* as a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or redesignation if certain criteria are met.

Reference rate reform typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it would no longer require banks to continue rate submissions after 2021 – thus, likely sunsetting both the use and publication of LIBOR. An important item to note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform. For simplicity, LIBOR will be the sole IBOR referenced throughout this agenda item.

With a significant number of financial contracts referencing LIBOR, its discontinuance will require organizations to reevaluate and modify any contract which does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a redesignation of the transaction.

The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-wide initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB determined that the traditional financial reporting requirements of discontinuing such contracts and treating the modified contract as an entirely new contract or hedging relationship would 1) not provide decision-useful information to financial statement users and 2) require a reporting entity to incur significant costs in the financial statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

Stakeholders indicated that due to the significant volume of affected contracts and other arrangements, together with a compressed time frame for making contract modifications, the application of existing accounting standards...
on assessing modifications versus extinguishments could be costly and burdensome and financial reporting results should reflect the intended continuation and true economics of such arrangements. It is important to note this as the optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04 are applicable for all entities, however, are only effective as of March 12, 2020 through December 31, 2022.

Finally, while numerous alternative reference rates are available, the Federal Reserve has identified the Secured Overnight Financing Rate (SOFR) as its preferred alternative to LIBOR. SOFR is calculated using actual transactions and is considered a broad measure of the cost of borrowing cash overnight, fully collateralized by risk-free treasury securities. LIBOR, on the other hand, is set by a panel of banks submitting estimates of what they think their borrowing costs are and represents a benchmark rate that leading global banks charge each other for short-term loans, thus incorporating a degree of credit risk into the reference rate. Unlike SOFR, LIBOR is determined by the equilibrium between supply and demand in the funds market.

**General Principles:**

For contract modifications, hedging relationships, and other transactions affected by reference rate reform, the amendments provide temporary guidance that achieves the following:

1. Simplifies accounting analyses under current GAAP for contract modifications.
2. Allows hedging relationships to continue without redesignation upon a change in certain critical terms.
3. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.
4. Suspends the assessment of certain qualifying conditions for fair value hedging relationships for which the shortcut method for assuming perfect hedge effectiveness is applied.
5. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow hedging relationships.

The overall scope is that for the modification of a contract (hedging or other) to be eligible for the accounting exceptions provided in ASU 2020-04, the contract must reference LIBOR, or a reference rate that is expected to be discontinued as a result of reference rate reform.

In relation to hedge accounting, without this accounting exception, a change in a contract’s reference rate could disallow the application of certain hedge accounting guidance, and certain hedging relationships may not qualify as highly effective during the period of the market-wide transition to a replacement rate. The inability to apply hedge accounting solely because of reference rate reform would result in financial reporting outcomes that do not reflect entities’ intended hedging strategies when those strategies continue to operate as effective hedges. ASU 2020-04 provides optional expedients that enable reporting entities to continue to apply hedge accounting for hedging relationships in which the critical terms change, but due to reference rate reform may no longer indicate the hedge is effective. The relief is temporary and cannot be applied to contract modifications that occur after December 31, 2022, or hedging relationships initiated or evaluated after that date. This is because the amendments in ASU 2020-04 are intended to provide relief related to the accounting requirements in GAAP due to the effects of the market-wide transition away from IBORs, the relief provided by the amendments is temporary in its application in alignment with the expected market transition period.

**Contract Modifications:**

First, the scope of ASU 2020-04 is intended to distinguish contract modifications that occur solely because of reference rate reform from other contract modifications that occur in the ordinary course of business, or for reasons unrelated to reference rate reform. Again, the scope of contract modifications that are eligible for the optional expedience (and not required to be remeasured) shall only include changes that are being made to the terms that
include the direct replacement of a reference rate or the potential to replace a reference rate from one variable rate to another variable rate. Other contemporaneously modified terms must also be related to the replacement of a reference rate because of reference rate reform. Solely modifying a term or a reference rate not affected by reference rate reform does not qualify for the expedience or the accounting exceptions provided in this update. For qualifying contract modifications, the guidance generally allows a reporting entity to account for and report such modifications as an event that does not require the contract termination and remeasurement – **thus the modifications are to be reported as a continuation of the existing contract.** For the purpose of the amendments in ASU 2020-04, the terms that are permitted to be modified could be those in which affect or have the potential to affect the amount or timing of future cash flows or may include modifications of terms such as fallback provisions in a contract that are triggered upon a contingent event (such as the discontinuance of a reference rate). However, accounting for these changes as a continuation of the existing contract is only allowed if the modifications were required as a result of reference rate reform. Finally, minor contemporaneous changes to terms that do not affect or have the potential to affect the amount or timing of future cash flows are also permitted by ASU 2020-04.

**For Receivable or Debt Contracts** – A reporting entity shall account for the qualified contract modifications as a minor change, resulting in the modification being **accounted for prospectively** as a continuation of the exiting contract, while using the new reference rate/terms in the agreement.

**For Leases** – A reporting entity shall not reassess the lease classification, remeasure lease payments, or make other assessment, but rather the lease is **accounted for prospectively** as a continuation of the existing contract.

**Overall Hedge Accounting:**

The amendments in ASU 2020-04 provide several exceptions and optional expedients for applying hedge accounting guidance. If certain criteria are met, for hedging relationships, the guidance in ASU 2020-04 allows an entity to change the reference rate and certain other critical terms related to reference rate reform without having to redesiginate the relationship and hedging transaction.

Summarized below are the four primary considerations for hedge accounting. Note, the exceptions noted below only relate to critical term changes as a result of reference rate reform. Thus, a contemporaneous change in other terms, not as a result of reference rate reform, does not qualify for the exception and optional expedient guidance herein.

1. For any hedging relationship, upon a change to the critical terms of the hedging relationship, allow a reporting entity to continue hedge accounting rather than redesignate the hedging relationship.
2. For any hedging relationship, upon a change to the terms of the designated hedging instrument, allow an entity to change its systematic and rational method used to recognize the excluded component into earnings and adjust the fair value of the excluded component through earnings.
3. For fair value hedges, allow a reporting entity to change the designated hedged benchmark interest rate and continue fair value hedge accounting.
4. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow an entity to continue to apply cash flow hedge accounting.

The temporary guidance in ASU 2020-04 only applies to eligible hedging relationships that currently exist or are entered into prior to December 31, 2022.

**Fair Value Hedges**

For fair value hedges, in which the designated benchmark interest rate is LIBOR, a reporting entity may change the hedged risk to another permitted benchmark interest rate without redesiginating the relationship, as long as the
hedge is expected to remain highly effective in offsetting changes in fair value attributed to the revised hedged risk. The amendments in ASU 2020-04 require that an entity recognize in current earnings any change in fair value attributable to a change in an eligible benchmark interest rate.

Current GAAP allows an entity to apply the shortcut method for assessing hedge effectiveness of fair value hedges if certain conditions are met. For fair value hedges applying the shortcut method, the amendments in ASU 2020-04 provide an optional expedient to allow an entity to continue to use the shortcut method if the reference rate in the hedging instrument is replaced by another eligible benchmark interest rate. For an entity that qualifies for and elects to use the optional expedient, the entity would continue to use the shortcut method and recognize the changes in fair value of the hedging instrument as a fair value hedge basis adjustment of the hedged asset or hedged liability.

**Cash Flow Hedges**

For a cash flow hedge to qualify for hedge accounting, an entity must assert that the hedged forecasted transaction is probable of occurring. A change in the probability of the forecasted transaction may require that an entity discontinue hedge accounting and may affect the timing of recognizing in current earnings amounts previously deferred in accumulated other comprehensive income.

The amendments in ASU 2020-04 clarify that if the designated hedged risk in a hedged forecasted transaction references LIBOR or another rate that is expected to be discontinued because of reference rate reform, an entity may assert that the hedged forecasted transaction remains probable of occurring if the reference rate is replaced with another rate. However, the amendments require that an entity assess whether the underlying hedged forecasted transaction remains probable of occurring. A change to the designated hedged interest rate risk does not require a redesignation of a cash flow hedge of a forecasted transaction if the hedge is remains highly effective – that is if the entity can assert that the underlying cash flows remain probable, regardless of how the hedged risk and hedged forecasted transaction are documented.

Additionally, there may be periods of time during the transition to replacement rates in which a cash flow hedge would not be considered highly effective because of the basis differences between the reference rates in the hedging instrument and the reference rates in the hedged forecasted transaction. In these cases, if a hedging relationship qualifies for cash flow hedge accounting, all changes in the fair value of the derivative designated as the hedging instrument shall be deferred into accumulated other comprehensive income and recognized in earnings when the hedged forecasted transaction affects earnings. Despite the potential of a hedge not being considered highly effective (solely as a result of reference rate reform), the ASU designates that the reporting entity shall not discontinue hedge accounting and redesignate the hedging transaction. Again, the temporary relief provided cannot be applied to contract modifications after December 31, 2022, or with hedging relationships entered into or evaluated after that date.

NAIC Staff Final Hedge Comments:
For GAAP purposes, if an entity has not adopted the amendments in *ASU 2017-12, Derivatives and Hedging*, it is precluded from being able to utilize certain expedients for hedge accounting. Only the hedge documentation requirements were adopted for statutory accounting purposes, while the remainder of the items are still outstanding. **For statutory accounting, NAIC staff support allowing all available expedient methods permitted if an entity has elected ASU 2017-12 for GAAP purposes.**

**Other Items:**

ASU 2020-04 also allows an entity to make a one-time election to sell, transfer, or both sell and transfer debt securities classified as held-to-maturity that reference a rate affected by reference rate reform and that are classified as held to maturity before January 1, 2020.
Note that, debt classification such as held-to-maturity, available-for-sale, or trading are not concepts employed by statutory accounting and thus are not applicable.

Existing Authoritative Literature:
ASU 2020-04 has affects related to several different Statements of Statutory Accounting Principles, each will be individually addressed.

SSAP No. 15—Debt and Holding Company Obligations

NAIC Staff comment – Debt and service agreement modifications as a result of reference rate reform should not rise to the level requiring a reversal and rebooking of the liability. SSAP No. 15, states such liabilities should only be derecognized if extinguished. A reference rate modification should not be interpreted as necessarily requiring re-recognition. Nonetheless, for clarity and consistency with ASU 2020-04, NAIC staff recommend the Working Group adopt this temporary guidance as appropriate for SSAP No. 15.

11. A reporting entity shall derecognize a liability if, and only if, it has been extinguished. A liability has been extinguished if either of the following conditions is met:
   a. The reporting entity pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods or services, or reacquisition by the debtor of its outstanding debt securities; or
   b. The reporting entity is legally released from being the primary obligor under the liability, either judicially or by the creditor.

15. Modifications to or exchanges of line-of-credit or revolving-debt arrangements, including the accounting for unamortized costs at the time of the change, fees paid to or received from the creditor and third-party costs incurred shall be expensed when incurred.

SSAP No. 22R—Leases

NAIC Staff comment – lease modifications, solely caused by reference rate reform and ones eligible for optional expedience (modifications only being made to the terms that include the direct replacement of a reference rate or the potential to replace a reference rate from one variable rate to another variable rate) likely do not rise to the level of a modification requiring recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease. These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for clarity and consistency with ASU 2020-04, NAIC staff recommend the Working Group adopt this temporary guidance as appropriate for SSAP No. 22R.

Modification
17. An entity shall account for a modification to a contract as a separate contract (that is, separate from the original contract) when both of the following conditions are present:
   a. The modification grants the lessee an additional right of use not included in the original lease (for example, the right to use an additional asset).
   b. The lease payments increase commensurate with the standalone price for the additional right of use, adjusted for the circumstances of the particular contract. For example, the standalone price for the lease of one floor of an office building in which the lessee already leases other floors in that building may be different from the standalone price of a similar floor.
18. An entity shall account for initial direct costs, lease incentives and any other payments made to or by the entity in connection with a modification to a lease in the same manner as those items would be accounted for in connection with a new lease.

Accounting and Reporting by Lessees

19. All leases shall be considered operating leases, which means that rental expense is recognized over the lease term, without recognition of a right-to-use asset or lease liability. Rent on operating leases, reflecting all lease considerations in paragraph 20, shall be charged to expense on a straight-line basis over the lease term. Statutory accounting rejects the recognition of a right-to-use lease asset and the associated lease liabilities.

20. The consideration in the contract for a lessee includes all of the following payments that will be made during the lease term:

   a. Any fixed payments (for example, monthly service charges) or in substance fixed payments, less any incentives paid or payable to the lessee.

   b. Any other variable payments that depend on an index or a rate, initially measured using the index or rate at the commencement date.

SSAP No. 86—Derivatives

NAIC Staff comment – The modifications in ASU 2020-04 most primarily address hedge accounting and the allowance for a reporting entity to change the reference rate and other critical terms related to reference rate reform without having it redesignate the hedging relationship. While alternative benchmark interest rates were previously addressed in agenda item 2018-46 – Benchmark Interest Rate, the accounting for hedged transactions is noted below, with applicable areas bolded for emphasis.

Relevant/Applicable of Overview of existing SAP Accounting – SSAP No. 86

12. “Benchmark Interest Rate” is a widely recognized and quoted rate in an active financial market that is broadly indicative of the overall level of interest rates attributable to high-credit-quality obligors in that market. It is a rate that is widely used in a given financial market as an underlying basis for determining the interest rates of individual financial instruments and commonly referenced in interest-rate-related transactions. In theory, the benchmark interest rate should be a risk-free rate (that is, has no risk of default). In some markets, government borrowing rates may serve as a benchmark. In other markets, the benchmark interest rate may be an interbank offered rate. In the United States, the interest rates on direct Treasury obligations of the U.S. government, the London Interbank Offered Rate (LIBOR) swap rate, the Fed Funds Effective Rate Overnight Index Swap Rate, the Securities Industry and Financial Markets Association (SIFMA) Municipal Swap Rate, and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap Rate are considered to be benchmark interest rates.

Derivatives Used in Hedging Transactions

20. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet
the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

21. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. A change in the counterparty to a derivative instrument that has been designated as the hedging instrument in an existing hedging relationship would not, in and of itself, be considered a termination of the derivative instrument. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

- Any criterion in paragraphs 24-36 is no longer met;
- The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 22);
- The entity removes the designation of the hedge; or
- The derivative is deemed to be impaired in accordance with paragraph 17. A permanent decline in a counterparty’s credit quality/rating is one example of impairment required by paragraph 17, for derivatives used in hedging transactions.

22. For those derivatives which qualify for hedge accounting, the change in the carrying value or cash flow of the derivative shall be recorded consistently with how the changes in the carrying value or cash flow of the hedged asset, liability, firm commitment or forecasted transaction are recorded. Upon termination of a derivative that qualified for hedge accounting, the gain or loss shall adjust the basis of the hedged item and be recognized in income in a manner that is consistent with the hedged item (alternatively, if the item being hedged is subject to IMR, the gain or loss on the hedging derivative may be realized and shall be subject to IMR upon termination.) Entities who choose the alternative method shall apply it consistently thereafter.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Agenda item 2018-46 – Benchmark Interest Rate, incorporated revisions to SSAP No. 86, adding the Securities Industry and Financial Markets (SIFMA) Municipal Swap Rate and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap (OIS) Rate as acceptable benchmark interest rates for hedge accounting. Prior to this change, only LIBOR and the Fed Funds Effective Swap Rate (also referred to as the Overnight Index Swap Rate) were considered acceptable benchmark interest rates.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: N/A

Convergence with International Financial Reporting Standards (IFRS): IFRS has taken a similar approach when considering Reference Rate Reform’s impact on IFRS 9 (Financial Instruments), IAS 39 (Recognition and Measurement), and IFRS 7 (Financial Instruments – Disclosures).

Staff Recommendation: Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose temporary (optional) expedient and exception interpretative guidance, with a sunset date of December 31, 2022. These optional expedients would allow entities (under certain circumstances) to avoid having to remeasure contracts or reassess a previous accounting
**determination for hedged items.** With this guidance, reporting entities would be allowed to make specific contract modifications and account for them on a prospective basis. Further, entities would be allowed to continue applying hedge accounting for hedging relationships affected by reference rate reform. Note: NAIC staff support adoption of this ASU, with the only modification related to the option to sell debt currently classified held-to-maturity. This concept is not employed by statutory accounting and thus is not applicable.

The proposed extension temporarily overrides guidance in SSAP No. 15, SSAP No. 22R and SSAP No. 86 for affected policies, therefore the policy statement in Appendix F requires 2/3rd (two-thirds) of the Working Group members to be present and voting and a supermajority of the Working Group members present to vote in support of the interpretation before it can be finalized.

Feedback is requested from regulators if a disclosure of the volume of contracts affected by LIBOR would be beneficial. While ASU 2020-04 did not contain significant disclosure requirements, the results of any SAP disclosure would not be able to ascertain the magnitude of the contract value affected by electing the optional expedient and exception guidance, however, could contain the items such as contact count and notional value.

**Staff Review Completed by:** Jim Pinegar, NAIC Staff – March 2020

**Status:**
On March 26, 2020, the Statutory Accounting Principles (E) Working Group conducted an email vote to expose INT 20-01T: *ASU 2020-04 - Reference Rate Reform*.

On April 15, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, Interpretation 20-01: *ASU 2020-04 – Reference Rate Reform* allowing temporary (optional) expedient and exception interpretative guidance, with a sunset date of December 31, 2022. These optional expedients would allow entities (under certain circumstances) to avoid having to remeasure contracts or reassess a previous accounting determination for hedged items.
Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-01: ASU 2020-04 - Reference Rate Reform

INT 20-01 Dates Discussed

Email Vote to Expose March 26, 2020; April 15, 2020

INT 20-01 References

Current:
- SSAP No. 15—Debt and Holding Company Obligations
- SSAP No. 22R—Leases
- SSAP No. 86—Derivatives

This INT applies to all SSAPs with contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.

INT 20-01 Issue

1. This interpretation has been issued to provide statutory accounting and reporting guidance for the adoption with modification of ASU 2020-04 – Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting for applicable statutory accounting principles. The Financial Accounting Standards Board (FASB) issued ASU 2020-04 in March 2020 as optional, transitional and expedient guidance as a result of reference rate reform.

2. Reference rate reform typically refers to the transition away from referencing the London Interbank Offered Rate (LIBOR), and other interbank offered rates (IBORs), and moving toward alternative reference rates that are more observable or transaction based. In July 2017, the governing body responsible for regulating LIBOR announced it will no longer require banks to continue LIBOR submissions after 2021 – likely sunsetting both the use and publication of LIBOR. An important note is that while LIBOR is the primary interbank offering rate, other similar rates are potentially affected by reference rate reform.

3. With a significant number of financial contracts solely referencing IBORs, their discontinuance will require organizations to reevaluate and modify any contract that does not contain a substitute reference rate. A large volume of contracts and other arrangements, such as debt agreements, lease agreements, and derivative instruments, will likely need to be modified to replace all references of interbank offering rates that are expected to be discontinued. While operational, logistical, and legal challenges exist due to the sheer volume of contracts that will require modification, accounting challenges were presented as contract modifications typically require an evaluation to determine whether the modifications result in the establishment of a new contract or the continuation of an existing contract. As is often the case, a change to the critical terms (including reference rate modifications) typically requires remeasurement of the contract, or in the case of a hedging relationship, a dedesignation of the transaction.

4. The overall guidance in ASU 2020-04 is that a qualifying modification (as a result of reference rate reform) should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination. FASB concluded that as reference rate changes are a market-wide initiative, one that is required primarily due to the discontinuance of LIBOR, it is outside the control of an entity and is the sole reason compelling an entity to make modifications to contracts or hedging strategies. As such, FASB determined that the traditional financial reporting requirements of discontinuing such contracts and treating the modified contract as an entirely new contract or hedging relationship would
1) not provide decision-useful information to financial statement users and 2) require a reporting entity to incur significant costs in the financial statement preparation and potentially reflect an adverse financial statement impact, one of which may not accurately reflect the intent or economics of a modification to a contract or hedging transaction.

5. Guidance in ASU 2020-04 allows a method to ensure that the financial reporting results would continue to reflect the intended continuation of contracts and hedging relationships during the period of the market-wide transition to alternative reference rates – thus, generally not requiring remeasurement or redesignation if certain criteria are met.

6. The optional, expedient and exceptions guidance provided by the amendments in ASU 2020-04 are applicable for all entities. However, they are only effective as of March 12, 2020 through December 31, 2022. This is because the amendments in ASU 2020-04 are intended to provide relief related to the accounting requirements in generally accepted accounting principles (GAAP) due to the effects of the market-wide transition away from IBORs. The relief provided by the amendments is temporary in its application in alignment with the expected market transition period. However, the FASB will monitor the market-wide IBOR transition to determine whether future developments warrant any changes, including changes to the end date of the application of the amendments in this ASU. If such an update occurs, the Working Group may also consider similar action. It is not expected that the Working Group will take action prior to or in the absence of a FASB amendment.

7. The accounting issues are:
   a. Issue 1: Should a reporting entity interpret the guidance in ASU 2020-04 as broadly accepted for statutory accounting?
   b. Issue 2: Should the optional, expedient and exception guidance in ASU 2020-04 apply to debt and other service agreements addressed in SSAP No. 15?
   c. Issue 3: Should the optional, expedient and exception guidance in ASU 2020-04 apply to lease transactions addressed in SSAP No. 22R?
   d. Issue 4: Should the optional, expedient and exception guidance in ASU 2020-04 apply to derivative transactions addressed in SSAP No. 86?

INT 20-01 Discussion

8. For Issue 1, the Working Group came to the consensus that ASU 2020-04 shall be adopted, to include the same scope of applicable contracts or transactions for statutory accounting with the only modification related to a concept not utilized by statutory accounting, as noted below. The Working Group agreed the amendments provide appropriate temporary guidance that alleviate the following concerns due to reference rate reform:
   a. Simplifies accounting analyses under current GAAP and statutory accounting principles (SAP) for contract modifications.
      i. All contracts within scope of ASU 2020-04, which allows for modifications due to reference rate reform and provides for the optional expedient to be accounted for as a continuation of the existing contract.
   b. Allows hedging relationships to continue without redesignation upon a change in certain critical terms.
   c. Allows a change in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship.
d. Suspends the assessment of certain qualifying conditions for fair value hedging 
relationships for which the shortcut method for assuming perfect hedge effectiveness is 
applied.

e. Simplifies or temporarily suspends the assessment of hedge effectiveness for cash flow 
hedging relationships.

f. The only SAP modification to this ASU is related to the option to sell debt currently 
classified held-to-maturity. This concept is not employed by statutory accounting and thus 
is not applicable.

9. For Issue 2, the Working Group came to the consensus that debt and service agreement 
modifications, as a result of reference rate reform, should not typically rise to the level of requiring a 
reversal and rebooking of the liability, as SSAP No. 15 states such liabilities should only be derecognized 
if extinguished. A reference rate modification should not generally require de-recognition and re-
recognition under statutory accounting. Nonetheless, for clarity and consistency with ASU 2020-04, the 
Working Group came to the consensus that should an eligible contract be affected by reference rate reform, 
then the temporary guidance in ASU 2020-04 shall apply.

10. For Issue 3, the Working Group came to the consensus that lease modifications, solely caused by 
reference rate reform and ones eligible for optional expedience, likely do not rise to the level of a 
modification requiring re-recognition as a new lease under statutory accounting. SSAP No. 22R, paragraph 
17 states only modifications in which grant the lessee additional rights shall be accounted for as a new lease.
These changes are outside the scope allowed for optional expedience in ASU 2020-04. Nonetheless, for 
clarity and consistency with ASU 2020-04, the Working Group came to a consensus that if an eligible lease 
affected by reference rate reform, then the temporary guidance in ASU 2020-04 shall apply.

11. For Issue 4, the Working Group came to the consensus that ASU 2020-04 shall be applied to 
derivative transactions as the following considerations provided in the ASU are appropriate for statutory 
accounting:

a. For any hedging relationship, upon a change to the critical terms of the hedging 
relationship, allow a reporting entity to continue hedge accounting rather than dedesignate 
the hedging relationship.

b. For any hedging relationship, upon a change to the terms of the designated hedging 
instrument, allow an entity to change its systematic and rational method used to recognize 
the excluded component into earnings and adjust the fair value of the excluded component 
through earnings.

c. For fair value hedges, allow a reporting entity to change the designated hedged benchmark 
interest rate and continue fair value hedge accounting.

d. For cash flow hedges, adjust the guidance for assessment of hedge effectiveness to allow 
an entity to continue to apply cash flow hedge accounting.

12. Additionally, for GAAP purposes, if an entity has not adopted the amendments in ASU 2017-12, 
Derivatives and Hedging, it is precluded from being able to utilize certain expedients for hedge accounting. 
For statutory accounting purposes, only the hedge documentation requirements were adopted from ASU 
2017-12, while the remainder of the items are pending statutory accounting review. The Working Group 
concluded that all allowed expedient methods are permitted as elections for all reporting entities under 
statutory accounting. However, if a reporting entity is a U.S. GAAP filer, the reporting entity may only 
make elections under ASU 2017-12 if such elections were also made for their U.S. GAAP financials.
INT 20-01 Status

13. No further discussion is planned.
Interpretation of the Statutory Accounting Principles Working Group

INT 20-02 Dates Discussed

Email Vote to Expose March 26, 2020; April 15, 2020

INT 20-02 References

SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers (SSAP No. 6)
SSAP No. 47—Uninsured Plans (SSAP No. 47)
SSAP No. 51—Life Contracts (SSAP No. 51)
SSAP No. 65—Property and Casualty Contracts (SSAP No. 65)

INT 20-02 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This has led to a significant increase in unemployment and, in certain states, mandatory closure of many businesses. Total economic damage is still being assessed however, the total impact is likely to exceed $1 trillion in the U.S. alone. This interpretation is intended to cover policies impacted by COVID-19.

2. Should a temporary extension of the 90-day rule, extending the nonadmission guidance for premium receivables due from policyholders or agents and for amounts due from policyholders for high deductible policies, and for uncollected uninsured plan receivables (excluding Medicare and similar government plans) be granted for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements, for policies in U.S. jurisdictions that have been impacted by COVID-19?

INT 20-02 Discussion

3. The Working Group reached a consensus for a one-time optional extension of the ninety-day rule for uncollected premium balances, bills receivable for premiums and amounts due from agents and policyholders and for amounts due from policyholders for high deductible policies and amounts due from non-government uninsured plans, as follows:

   a. For policies in effect and current prior to the date as of the declaration of a state of emergency by the U.S. federal government on March 13, 2020 and policies written or renewed on or after March 13, insurers may follow the timeline described in paragraph 5 before nonadmitting premiums receivable from policyholders or agents as required per SSAP No. 6, paragraph 9.

   b. For uncollected uninsured plan receivables (excluding Medicare and similar government plans) which were current prior to the date of the declaration of a state of emergency by the U.S. federal government on March 13, 2020 and policies written or renewed on or after March 13, insurers may follow the timeline described in paragraph 5 before nonadmitting these balances as required per SSAP No. 47, paragraph 10.a.
c. For life premium due and uncollected which were current prior to the date of the declaration of a state of emergency by the U.S. federal government on March 13, 2020, and policies written or renewed on or after March 13, insurers may follow the timeline described in paragraph 5 before nonadmitting these balances as required per SSAP No. 51R, paragraph 12.

d. For high deductible policies in effect and current prior to the date as of the declaration of a state of emergency by the U.S. federal government on March 13, 2020 and policies written or renewed on or after March 13, insurers may follow the timeline described in paragraph 5 before nonadmitting amounts due from policyholders for high deductible policies as required per SSAP No. 65, paragraph 37.

e. Existing impairment analysis remains in effect for these affected policies.

4. The Working Group noted that a 60-day extension had been granted previously for regionally significant catastrophes, including INT 13-01: Extension of Ninety-Day Rule for the Impact of Hurricane/Superstorm Sandy; and INT 05-04: Extension of Ninety-day Rule for the Impact of Hurricane Katrina, Hurricane Rita and Hurricane Wilma, INT 17-01: Extension of Ninety-Day Rule for the Impact of Hurricane Harvey, Hurricane Irma and Hurricane Maria, and INT 18-04: Extension of Ninety-Day Rule for the Impact of Hurricane Florence and Hurricane Michael. This recommendation is for a longer period than the extensions that have been granted in the past as COVID-19 is a nationally significant event due to the expected overall impact to the U.S. economy.

5. Due to the short-term nature of this extension, which is only applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements and only for the categories of assets listed in paragraph 3, this interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group’s website. This INT will allow assets that meet the definition of paragraph 3 to be admitted assets even if they are greater than 90 days past due. As the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements, this interpretation will automatically expire as of September 29, 2020. This interpretation will be automatically nullified on September 29, 2020 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-02 Status

6. The Statutory Accounting Principles (E) Working Group will subsequently review this interpretation to determine if an extension is needed to the effective date.
Interpretation of the Statutory Accounting Principles Working Group

INT 20-03: Troubled Debt Restructuring Due to COVID-19

INT 20-03 Dates Discussed
Email Vote to Expose March 26, 2020; April 15, 2020

INT 20-03 References
SSAP No. 36—Troubled Debt Restructuring

INT 20-03 Issue

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, Congress and Federal and state prudential banking regulators have considered provisions pertaining to mortgage loans as a result of the effects of the COVID-19. These provisions are intended to be applicable for the term of the loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

3. Furthermore, guidance has been issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable to, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. As detailed in that guidance, the Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-19.

4. This interpretation considers the interagency guidance issued by Federal and state prudential banking regulators on March 22, 2020 addressing whether the modification of mortgage loan or bank loan terms in response to COVID-19 shall be considered a troubled debt restructuring.

INT 20-03 Discussion

5. SSAP No. 36—Troubled Debt Restructuring provides guidance, predominantly adopted from U.S. GAAP, in determining whether a debt restructuring is considered a troubled debt restructuring. Additionally, SSAP No. 36 provides accounting and disclosure guidance when a troubled debt restructuring has been deemed to occur. Pursuant to existing guidance in SSAP No. 36, a debt restructuring is not necessarily considered a troubled debt restructuring and a creditor must assess whether the debtor is experiencing financial difficulties. The guidance also indicates that a delay in payment that is insignificant is not a concession.

6. On March 22, 2020, the Federal and state prudential banking regulators issued a joint statement that included guidance on their approach to the accounting for loan modifications in light of the economic impact of the...
The guidance was developed in consultation with the staff of the FASB who concur with the approach and indicated that they stand ready to assist stakeholders with any questions. This interagency statement is provided below and is accessible through the FASB response via the following link:

https://fasb.org/cs/Satellite?c=FASBContent_C&cid=1176174374016&pagename=FASB%2FFASBContent_C%2FNewsPage

Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), the Office of the Comptroller of the Currency (OCC), the Consumer Financial Protection Bureau (CFPB), and the State Banking Regulators (hereafter, the agencies), are issuing this interagency statement to provide additional information to financial institutions who are working with borrowers affected by the Coronavirus Disease 2019 (also referred to as COVID-19). The United States has been operating under a presidentially declared emergency since March 13, 2020, and financial institutions and their customers are affected by COVID-19. The agencies understand that this unique and evolving situation could pose temporary business disruptions and challenges that affect banks, credit unions, businesses, borrowers, and the economy. The agencies will continue to communicate with the industry as this situation unfolds, including through additional statements, webinars, frequently asked questions, and other means, as appropriate.

Working with Customers

The agencies encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because of the effects of COVID-19. The agencies view loan modification programs as positive actions that can mitigate adverse affects on borrowers due to COVID-19. The agencies will not criticize institutions for working with borrowers and will not direct supervised institutions to automatically categorize all COVID-19 related loan modifications as troubled debt restructurings (TDRs). The agencies will not criticize financial institutions that mitigate credit risk through prudent actions consistent with safe and sound practices. The agencies consider such proactive actions to be in the best interest of institutions, their borrowers, and the economy. This approach is consistent with the agencies’ longstanding practice of encouraging financial institutions to assist borrowers in times of natural disaster and other extreme events. The agencies also will not criticize institutions that work with borrowers as part of a risk mitigation strategy intended to improve an existing non-pass loan.

Accounting for Loan Modifications

Modifications of loan terms do not automatically result in TDRs. According to U.S. GAAP, a restructuring of a debt constitutes a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider. The agencies have confirmed with staff of the Financial Accounting Standards Board (FASB) that short-term modifications made on a good faith basis in response to COVID-19 to borrowers who were current prior to any relief, are not TDRs. This includes short-term (e.g., six months) modifications such as payment deferrals, fee waivers, extensions of repayment terms, or other delays in payment that are insignificant. Borrowers considered current are those that are less than 30 days past due on their contractual payments at the time a modification program is implemented.

Working with borrowers that are current on existing loans, either individually or as part of a program for creditworthy borrowers who are experiencing short-term financial or operational problems as a result of COVID-19, generally would not be considered TDRs. For modification programs designed to provide temporary relief for current borrowers affected by COVID-19, financial institutions may presume that borrowers that are current on payments are not experiencing financial difficulties at the time of the modification for purposes of determining TDR status, and thus no further TDR analysis is required for each loan modification in the program.
Modification or deferral programs mandated by the federal or a state government related to COVID-19 would not be in the scope of ASC 310-40, e.g., a state program that requires all institutions within that state to suspend mortgage payments for a specified period.

The agencies’ examiners will exercise judgment in reviewing loan modifications, including TDRs, and will not automatically adversely risk rate credits that are affected by COVID-19, including those considered TDRs. Regardless of whether modifications result in loans that are considered TDRs or are adversely classified, agency examiners will not criticize prudent efforts to modify the terms on existing loans to affected customers.

In addition, the FRB, the FDIC, and the OCC note that efforts to work with borrowers of one-to four family residential mortgages as described in the modification section of this document, where the loans are prudently underwritten, and not past due or carried in nonaccrual status, will not result in the loans being considered restructured or modified for the purposes of their respective risk-based capital rules.

Past Due Reporting

With regard to loans not otherwise reportable as past due, financial institutions are not expected to designate loans with deferrals granted due to COVID-19 as past due because of the deferral. A loan’s payment date is governed by the due date stipulated in the legal loan documents. If a financial institution agrees to a payment deferral, this may result in no contractual payments being past due, and these loans are not considered past due during the period of the deferral.

Nonaccrual Status and Charge-offs

Each financial institution should refer to the applicable regulatory reporting instructions, as well as its internal accounting policies, to determine if loans to stressed borrowers should be reported as nonaccrual assets in regulatory reports. However, during the short-term arrangements discussed in this statement, these loans generally should not be reported as nonaccrual. As more information becomes available indicating a specific loan will not be repaid, institutions should refer to the charge-off guidance in the instructions for the Consolidated Reports of Condition and Income.

Discount Window Eligibility

Institutions are reminded that loans that have been restructured as described under this statement will continue to be eligible as collateral at the FRB’s discount window based on the usual criteria.

On March 27, 2020, President Trump signed into law the Coronavirus Aid, Relief and Economic Security Act (CARES Act). The provisions in Section 4013 specifically address temporary relief from troubled debt restructurings:

SEC. 4013. TEMPORARY RELIEF FROM TROUBLED DEBT RESTRUCTURINGS.

(a) DEFINITIONS.—In this section:

(1) APPLICABLE PERIOD.—The term “applicable period” means the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID–19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.

(2) APPROPRIATE FEDERAL BANKING AGENCY.—The term “appropriate Federal banking agency”—(A) has the meaning given the term in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813); and (B) includes the National Credit Union Administration.
(b) SUSPENSION.—

(1) IN GENERAL.—During the applicable period, a financial institution may elect to— (A) suspend the requirements under United States generally accepted accounting principles for loan modifications related to the coronavirus disease 2019 (COVID–19) pandemic that would otherwise be categorized as a troubled debt restructuring; and (B) suspend any determination of a loan modified as a result of the effects of the coronavirus disease 2019 (COVID–19) pandemic as being a troubled debt restructuring, including impairment for accounting purposes.

(2) APPLICABILITY.—Any suspension under paragraph (1)—

(A) shall be applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019; and

(B) shall not apply to any adverse impact on the credit of a borrower that is not related to the coronavirus disease 2019 (COVID–19) pandemic.

(c) DEFERENCE.—The appropriate Federal banking agency of the financial institution shall defer to the determination of the financial institution to make a suspension under this section.

(d) RECORDS.—For modified loans for which suspensions under subsection (a) apply—

(1) financial institutions should continue to maintain records of the volume of loans involved; and

(2) the appropriate Federal banking agencies may collect data about such loans for supervisory purposes.

8. On April 7, 2020, the Federal and state prudential banking regulators issued a revised joint statement to reflect the issuance of the CARES Act:

Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus (Revised)

The Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), the National Credit Union Administration (NCUA), the Office of the Comptroller of the Currency (OCC), and the Consumer Financial Protection Bureau (CFPB) (hereafter, the agencies), in consultation with the state financial regulators, are issuing this revised interagency statement to provide additional information to financial institutions that are working with borrowers affected by the Coronavirus Disease 2019 (also referred to as COVID19). The United States has been operating under a presidentially declared emergency since March 13, 2020 (National Emergency). The agencies understand that this unique and evolving situation could pose temporary business disruptions and challenges that affect banks, credit unions, businesses, borrowers, and the economy.

On March 27, 2020, the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) was signed into law. As discussed in more detail below, the CARES Act creates a forbearance program for federally backed mortgage loans, protects borrowers from negative credit reporting due to loan accommodations related to the National Emergency, and provides financial institutions the option to temporarily suspend certain requirements under U.S. generally accepted accounting principles (GAAP) related to troubled debt restructurings (TDR) for a limited period of time to account for the effects of COVID-19.
The agencies originally issued a statement on March 22, 2020, to encourage financial institutions to work prudently with borrowers and to describe the agencies’ interpretation of how current accounting rules under U.S. GAAP apply to certain COVID-19-related modifications. This revised interagency statement clarifies the interaction between the March 22, 2020, interagency statement and section 4013 of the CARES Act, Temporary Relief from Troubled Debt Restructurings (section 4013), as well as the agencies’ views on consumer protection considerations. The agencies will continue to communicate with the industry as this situation unfolds, including through additional statements, webinars, frequently asked questions, and other means, as appropriate.

Working with Customers: General Safety and Soundness Considerations

The agencies encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because of the effects of COVID-19. The agencies view loan modification programs as positive actions that can mitigate adverse effects on borrowers due to COVID-19. The agencies will not criticize institutions for working with borrowers in a safe and sound manner. As described below, institutions generally do not need to categorize COVID-19-related modifications as TDRs, and the agencies will not direct supervised institutions to automatically categorize all COVID-19 related loan modifications as TDRs.

The agencies will not criticize financial institutions that mitigate credit risk through prudent actions consistent with safe and sound practices. The agencies consider such proactive measures to be in the best interest of institutions, their borrowers, and the economy. This approach is consistent with the agencies’ longstanding practice of encouraging financial institutions to assist borrowers in times of natural disaster and other extreme events although the agencies recognize that the effects of this event are particularly extreme and broad-based. The agencies also will not criticize institutions that work with borrowers as part of a risk mitigation strategy intended to improve an existing non-pass loan.

Financial institutions have broad discretion to implement prudent modification programs consistent with the framework included in this statement.

Accounting and Reporting Considerations

As provided for under the CARES Act, a financial institution may account for an eligible loan modification either under section 4013 or in accordance with ASC Subtopic 310-40. If a loan modification is not eligible under section 4013, or if the institution elects not to account for the loan modification under section 4013, the financial institution should evaluate whether the modified loan is a TDR.

Accounting for Loan Modifications under Section 4013

To be an eligible loan under section 4013 (section 4013 loan), a loan modification must be (1) related to COVID-19; (2) executed on a loan that was not more than 30 days past due as of December 31, 2019; and (3) executed between March 1, 2020, and the earlier of (A) 60 days after the date of termination of the National Emergency or (B) December 31, 2020 (applicable period).

Financial institutions accounting for eligible loans under section 4013 are not required to apply ASC Subtopic 310-40 to the section 4013 loans for the term of the loan modification. Financial institutions do not have to report section 4013 loans as TDRs in regulatory reports. However, consistent with section 4013, financial institutions should maintain records of the volume of section 4013 loans. Data about section 4013 loans may be collected for supervisory purposes. Institutions do not need to determine impairment associated with certain loan concessions that would otherwise have been required for TDRs (e.g., interest rate concessions, payment deferrals, or loan extensions). For the most recent information on reporting requirements for section 4013 loans, refer to the Federal Financial Institutions Examination Council Instructions.
Accounting for other Loan Modifications Not under Section 4013

There are circumstances in which a loan modification may not be eligible under Section 4013 or in which an institution elects not to apply Section 4013. For example, a loan that is modified after the end of the applicable period would not be eligible under Section 4013. For such loans, the guidance below applies.

Modifications of loan terms do not automatically result in TDRs. According to ASC Subtopic 310-40, a restructuring of a debt constitutes a TDR if the creditor, for economic or legal reasons related to the debtor’s financial difficulties, grants a concession to the debtor that it would not otherwise consider. The agencies have confirmed with staff of the Financial Accounting Standards Board (FASB) that short-term modifications made on a good faith basis in response to COVID-19 to borrowers who were current prior to any relief are not TDRs under ASC Subtopic 310-40. This includes short-term (e.g., six months) modifications such as payment deferrals, fee waivers, extensions of repayment terms, or delays in payment that are insignificant. Borrowers considered current are those that are less than 30 days past due on their contractual payments at the time a modification program is implemented.

Accordingly, working with borrowers who are current on existing loans, either individually or as part of a program for creditworthy borrowers who are experiencing short-term financial or operational problems as a result of COVID-19 generally would not be considered TDRs. More specifically, financial institutions may presume that borrowers are not experiencing financial difficulties at the time of the modification for purposes of determining TDR status, and thus no further TDR analysis is required for each loan modification in the program, if:

- The modification is in response to the National Emergency;
- The borrower was current on payments at the time the modification program is implemented; and
- The modification is short-term (e.g., six months).

Government-mandated modification or deferral programs related to COVID-19 would not be in the scope of ASC Subtopic 310-40, for example, a state program that requires institutions to suspend mortgage payments within that state for a specified period.

Credit Risk

The agencies’ examiners will exercise judgment in reviewing loan modifications and will not automatically adversely risk rate credits that are affected by COVID-19. All loan modifications should comply with applicable laws and regulations and be consistent with safe and sound practices (including maintenance of appropriate allowances for loan and lease losses or allowances for credit losses, as applicable). Regardless of whether modifications result in loans that are considered TDRs, section 4013 loans, or are adversely classified, agency examiners will not criticize prudent efforts to modify the terms on existing loans to affected customers.

Regulatory Capital

The FRB, the FDIC, and the OCC note that efforts to work with borrowers of one-to-four family residential mortgages as described above, where the loans are prudently underwritten, and not 90 days or more past due or carried in nonaccrual status, will not result in the loans being considered restructured or modified for the purposes of their respective risk-based capital rules.

Past Due Reporting

With regard to loans not otherwise reportable as past due, financial institutions are not expected to designate loans with deferrals granted due to COVID-19 as past due because of the deferral. A loan’s payment date is governed by the due date stipulated in the legal agreement. If a financial institution agrees to a payment deferral, this may result in no contractual payments being past due, and these loans are not considered past due during the period of the deferral.
Nonaccrual Status and Charge-offs

Each financial institution should refer to the applicable regulatory reporting instructions, as well as its internal accounting policies, to determine if loans to stressed borrowers should be reported as nonaccrual assets in regulatory reports. However, during the short-term arrangements discussed in this statement, these loans generally should not be reported as nonaccrual. As more information becomes available indicating a specific loan will not be repaid, institutions should refer to the charge-off guidance in the instructions for the Consolidated Reports of Condition and Income.

Discount Window Eligibility

Institutions are reminded that loans that have been restructured as described under this statement will generally continue to be eligible as collateral at the FRB’s discount window based on the usual criteria.

Working with Customers: Consumer Protection Considerations

The agencies encourage financial institutions to consider prudent arrangements that can ease cash flow pressures on affected borrowers, improve their capacity to service debt, increase the potential for financially stressed residential borrowers to keep their homes, and facilitate the financial institution’s ability to collect on its loans. Additionally, such prudent arrangements may mitigate the long-term impact of this emergency on consumers by avoiding delinquencies and other adverse consequences.

When working with borrowers, lenders and servicers should adhere to consumer protection requirements, including fair lending laws, to provide the opportunity for all borrowers to benefit from these arrangements. When exercising supervisory and enforcement responsibilities, the agencies will take into account the unique circumstances impacting borrowers and institutions resulting from the National Emergency. The agencies will take into account an institution's good-faith efforts demonstrably designed to support consumers and comply with consumer protection laws. The agencies expect that supervisory feedback for institutions will be focused on identifying issues, correcting deficiencies, and ensuring appropriate remediation to consumers. The agencies do not expect to take a consumer compliance public enforcement action against an institution, provided that the circumstances were related to the National Emergency and that the institution made good faith efforts to support borrowers and comply with the consumer protection requirements, as well as responded to any needed corrective action.

INT 20-03 Consensus

9. The Working Group reached a consensus to clarify that a modification of mortgage loan or bank loan terms in response to COVID-19 shall follow the provisions detailed in the April 7, 2020 “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” (detailed in paragraph 8) and the provisions of the CARES Act (detailed in paragraph 7) in determining whether the modification shall be reported as a troubled debt restructuring within SSAP No. 36.

10. This interpretation is effective for the specific purpose to address loan modifications in response to COVID-19. Consistent with the CARES act, this interpretation is only applicable for the term of the loan modification, but solely with respect to any modification, including a forbearance arrangement, interest rate modification, a repayment plan and other similar arrangement that defer or delays the payment of principal or interest for a loan that was not more than 30 days past due as of December 31, 2019. As determined in the CARES Act, this interpretation will only be applicable for the period beginning on March 1, 2020 and ending on the earlier of December 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the novel coronavirus disease (COVID-19) outbreak declared by the President on March 13, 2020 under the National Emergencies Act (50 U.S.C. 1601 et seq.) terminates.
INT 20-03 Status

11. The Statutory Accounting Principles (E) Working Group will subsequently review this interpretation to determine if an extension is needed to the effective date.
**Interpretation of the Statutory Accounting Principles Working Group**

**INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19**

**INT 20-04 Dates Discussed**

Email Vote to Expose March 26, 2020; April 15, 2020

**INT 20-04 References**

SSAP No. 26R—Bonds  
SSAP No. 30—Common Stock  
SSAP No. 37—Mortgage Loans  
SSAP No. 43R—Loan-backed and Structured Securities  
SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies

**INT 20-04 Issue**

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

2. In response to COVID-19, Congress and Federal and state prudential banking regulators have considered provisions pertaining to loans as a result of the effects of the COVID-19. While primarily related to mortgage loans, these provisions are intended to be applicable for the term of a loan modification, but solely with respect to a modification, including a forbearance arrangement, an interest rate modification, a repayment plan, and any other similar arrangement that defers or delays the payment of principal or interest, that occurs during the applicable period for a loan that was not more than 30 days past due as of December 31, 2019.

3. Furthermore, guidance has been issued by the Financial Condition (E) Committee to all U.S. insurers filing with the NAIC in an effort to encourage insurers to work with borrowers who are unable to, or may become unable to meet their contractual payment obligations because of the effects of COVID-19. As detailed in that guidance, the Committee, which is the NAIC parent committee of all the solvency policy making task forces and working groups of the NAIC, supports the use of prudent loan modifications that can mitigate the impact of COVID-19.

4. This interpretation intends to address the impact of loan forbearance or prudent modifications on the statutory accounting and reporting requirements for bank loans, mortgage loans, as well as investments with underlying mortgage loans. Particularly, this interpretation considers whether a temporary, limited-time statutory exception for the assessment of impairment shall be granted for bank loans, mortgage loans and investment products with underlying mortgage loans. This exception would only defer the assessment of impairment due to situations caused by the forbearance or modification of mortgage loan payments and would not delay the recognition of other than temporary impairments if the entity made a decision to sell the investment and/or if provisions other than the limited-time forbearance or modifications of mortgage loans payments caused the entity to identify that they would not recover the reported carrying value of the investment.
INT 20-04 Discussion

5. Although a variety of structures have the potential to be impacted by the economic stimulus provisions, this interpretation is limited to investments specifically identified. Except for the specific inclusion of bank loans, this interpretation does not include investments captured in scope of SSAP No. 26R—Bonds or investments captured in the identified standards that are not predominantly impacted by underlying mortgage loans with forbearance or modification provisions in response to COVID-19. Investments in scope of this interpretation include:

   a. SSAP No. 26R—Bonds: Bank loans in scope of SSAP No. 26R

   b. SSAP No. 37—Mortgage Loans: All mortgage loans in scope of SSAP No. 37.

   c. SSAP No. 30—Common Stock: SEC registered investments with underlying mortgage loans (e.g., mortgage-backed mutual funds).

   d. SSAP No. 43R—Loan-backed and Structured Securities: Securities in scope of SSAP No. 43R with underlying mortgage loans. This includes residential and commercial mortgage backed securities (RMBS & CMBS), and credit risk transfers (CRTs) issued through government sponsored enterprises (GSEs). Other investments in scope of SSAP No. 43R are also captured within this interpretation if the underlying investments predominantly reflect mortgage loan products.

   e. SSAP No. 48—Joint Ventures, Partnerships and Limited Liabilities Companies: Investments in scope of SSAP No. 48 that have underlying characteristics of mortgage loans. These investments could include private equity mortgage loan funds.

Bank Loans

6. Bank loans, if meeting certain parameters, are in scope of SSAP No. 26R—Bonds. Bank loans per SSAP No. 26R, are defined as fixed-income instruments, representing indebtedness of a borrower, made by a financial institution. Bank loans can be issued directly by a reporting entity or acquired through an assignment, participation or syndication. The guidance in SSAP No. 26R states an other-than-temporary impairment shall be considered to have occurred if it is probable the reporting entity will be unable to collect amounts due according to the contract terms of a debt security in effect at the date of issue/acquisition. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. The impairment guidance applicable to bank loans states that if it is probable or if repayment does not occur according to the terms of the original contract (i.e. payment timing and amounts), an impairment shall be considered to have occurred.

Mortgage Loans

7. Mortgage loans are in scope of SSAP No. 37—Mortgage Loans and reported on Schedule B: Mortgage Loans. The guidance in SSAP No. 37, paragraph 16 identifies that a mortgage loan shall be considered impaired when mortgage loan payments are not received in accordance with the contractual terms of the mortgage agreement. As such, a deferral or modification of mortgage loan payments (whether interest or principal) would ordinarily trigger an impaired classification and require impairment assessment under SSAP No. 37. The guidance in SSAP No. 37 utilizes a valuation allowance to recognize unrealized losses from impairment assessments and permits subsequent reversals of unrealized losses reflected in the valuation allowance based on subsequent assessments. If an impairment is deemed other than temporary, the unrealized loss is realized without the potential for subsequent recoveries.
SEC Registered Funds with Underlying Mortgage Loans

8. The scope of *SSAP No. 30—Common Stock* includes SEC registered open-end investment companies (mutual funds), closed-end funds and unit investment trusts, regardless of the types or mix of securities owned by the fund. Investments in scope of this statement include mortgage-backed mutual funds and other such investments. Items in scope of SSAP No. 30 are reported on Schedule D-2-2: Common Stock. These investments are reported at fair value, with changes in fair value recognized as unrealized gains or losses. The guidance in SSAP No. 30 requires recognition of an other than temporary impairment (OTTI) (realized loss) if a reporting entity decision has decided to sell the security at an amount below its carrying value or if the decline in fair value is determined to be other than temporary pursuant to *INT 06-07: Definition of Phrase “Other Than Temporary.”* As investments in scope of SSAP No. 30 are reported at fair value, subsequent recoveries (or losses) in fair value, after recognition of an OTTI, are recognized as unrealized gains or losses until sold or additional OTTI recognition.

Loan-Backed and Structured Securities with Underlying Mortgage Loans

9. The scope of *SSAP No. 43R—Loan-backed and Structured Securities* includes residential mortgage backed securities (RMBS), commercial mortgage backed securities (CMBS) and credit risk transfers (CRTs) issued through government sponsored enterprises (GSEs). (These are commonly referred as Structured Agency Credit Risk Securities (STACRs), which are issued by Freddie Mac, and Connecticut Avenue Securities (CAS), which are issued by Fannie Mae.) Other mortgage loan products that meet the structural requirements as a LBSS can also be captured in scope of SSAP No. 43R. Investments in scope of this statement securities are reported on Schedule D-1: Long-Term Bonds. Pursuant to the guidance in SSAP No. 43R, paragraphs 30-36, if a fair value of a LBSS is less than its amortized cost basis at the balance sheet date, an entity shall assess whether the impairment is other than temporary. Recognition of an OTTI is then contingent on the reporting entity intentions:

a. If the entity intends to sell the security, an OTTI shall be considered to have occurred. In these situations, the entity shall recognize a realized loss for the difference between the amortized cost basis and fair value. These realizes losses are not permitted to be reversed.

b. If the entity does not intend to sell the security, the entity shall assess whether it has the intent and ability to retain the investment in the security for a period of time sufficient to recover the amortized cost basis. If the entity does not have the intent and ability to retain the investment for the time sufficient to recover the amortized cost basis, an OTTI shall be considered to have occurred. In these situations, the entity shall recognize a realized loss for the difference between the amortized cost basis and fair value. These realizes losses are not permitted to be reversed.

c. Regardless if the entity does not have the intent to sell or has the intent and ability to hold, if the entity does not expect to recover the entire amortized cost basis of the security, an OTTI shall be considered to have occurred. In these situations, the entity shall recognize a realized loss for the difference between the amortized cost basis and the present value of cash flows expected to be collected.

Other Invested Assets with Underlying Mortgage Loans

10. The scope of *SSAP No. 48—Joint Ventures, Partnerships and Limited Liabilities Companies* includes investments that may have underlying characteristics of mortgage loans. These items are reported on Schedule BA: Other Long-Term Invested Assets. These investments could include private equity mortgage loan funds as well mortgage or hybrid real estate investment trusts (REITs). The guidance in SSAP No. 48, paragraph 19 requires recognition of an OTTI if it is probable that the reporting entity will be unable to recover the carrying amount of the investment or sustain earnings to justify the carrying amount of the investment. The existing
guidance already indicates that a depressed fair value below the carrying amount or the existence of operating losses are not necessarily indicators of a loss that is other than temporary.

INT 20-04 Consensus

11. The Working Group reached a consensus for limited time exceptions to defer assessments of impairment for bank loans, mortgage loans and investments which predominantly hold underlying mortgage loans, which are impacted by forbearance or modifications in response to COVID-19. These exceptions are applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements and only in response to mortgage loan forbearance or modifications granted in response to COVID-19. As such, the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements.

12. For modification programs designed to provide temporary relief for borrowers current as of December 31, 2019, the reporting entities may presume that borrowers are current on payments are not experiencing financial difficulties at the time of the modification for purposes of determining impairment status and thus no further impairment analysis is required for each loan modification in the program. The exceptions granted in this interpretation are detailed as follows:

a. **SSAP No. 26R—Bonds:** Provide a limited-time exception for assessing impairment under SSAP No. 26, paragraph 13, for bank loans with payments (either principal or interest) that have short-term deferrals or modifications in response to COVID-19. This interpretation shall not delay impairment assessments for reasons other than the short-term deferral or modification of interest or principal payments in response to COVID-19 and shall not delay recognition of realized losses if a reporting entity believes a bank loan is OTTI.

b. **SSAP No. 37—Mortgage Loans:** Provide a limited-time exception for assessing impairment under SSAP No. 37, paragraph 16, for mortgage loans with payments (either principal or interest) that have short-term deferrals or modifications in response to COVID-19. This interpretation shall not delay impairment assessments for reasons other than the short-term deferral or modification of interest or principal payments in response to COVID-19 and shall not delay recognition of realized losses if a reporting entity believes a mortgage loan is OTTI.

c. **SSAP No. 30R—Common Stock:** Provide a limited-time exception for assessing OTTI under SSAP No. 30, paragraph 10, and INT 06-07 due to fair value declines for SEC registered funds that have underlying mortgage loans that have been deferred or modified in response to COVID-19 unless the reporting entity intends to sell the security. If the entity has made a decision to sell the security, recognition of the OTTI shall continue to be required. As these investments are reported at fair value, declines in fair value would continue to be reported as unrealized losses.

d. **SSAP No. 43R—Loan-backed and Structured Securities:** Provide a limited-time exception for assessing OTTI under SSAP No. 43R, paragraphs 30-36, due to fair value declines in investments that have underlying mortgage loans deferred or modified in response to COVID-19 unless the reporting entity intends to sell the security. If the entity has made a decision to sell the security, then recognition of an OTTI shall continue to be required.

e. **SSAP No. 48—Joint Ventures, Partnerships and Limited Liabilities Companies:** Provide a limited-time exception for assessing OTTI under SSAP No. 48 due to fair value declines in investments that have underlying mortgage loans deferred or modified in response to COVID-19 unless the entity intends to sell the security. Additionally, an OTTI shall be assessed if factors other than the mortgage loan forbearance or modification have resulted with a decline that is
considered other than temporary, or the reporting entity does not believe it is probable they will collect the carrying amount of the investment.

13. Subsequent to modifications or restructurings that impact original contractual terms of items in scope of this interpretation, future assessments of impairment shall be based on the modified terms.

14. As detailed in paragraph 11, the exceptions granted in this interpretation are applicable for the March 31st and June 30th, 2020 (1st and 2nd quarter) financial statements and only in response to bank and mortgage loan forbearance or modifications granted in response to COVID-19. As the exceptions provided in this interpretation are not applicable in the September 30, 2020 (3rd quarter) financial statements, this interpretation will automatically expire as of September 29, 2020. This interpretation will be publicly posted on the Statutory Accounting Principles (E) Working Group’s website. This interpretation will be automatically nullified on September 29, 2020 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-04 Status

15. The Statutory Accounting Principles (E) Working Group will subsequently review this interpretation to determine if an extension is needed to the effective date.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded March 26, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); Kathy Belfi (CT); Ryllynn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Tom Dudek (NY); Jamie Walker (TX); David Smith (VA); and Amy Malm (WI).

1. Exposed Agenda Item 2020-12, INT 20-01, INT 20-02, INT 20-03 and INT 20-04

The Working Group conducted an e-vote to consider exposure of agenda item 2020-12: Reference Rate Reform, Interpretation (INT) 20-01: ASU 2020-04 - Reference Rate Reform, INT 20-02: Extension of Ninety-Day Rule for the Impact of COVID-19, INT 20-03: Troubled Debt Restructuring Due to COVID-19, and INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19 for a one-week public comment period ending April 2. A summary of the exposed interpretations are as follows:

1) Agenda Item 2020-12 and INT 20-01: Reference Rate Reform – This guidance proposes to adopt ASU 2020-04: Reference Rate Reform (Topic 848) Facilitation of the Effects of Reference Rate Reform on Financial Reporting, for statutory accounting. This guidance provides optional transition and expedient provisions to assist with the conversion from referencing the London Interbank Offered Rate (LIBOR) and other interbank offered rates (IBORs) and moving toward alternative reference rates that are more observable or transaction based. The guidance proposed to be adopted from ASU 2020-04 is that a qualifying modification as a result of reference rate reform should not be considered an event that requires contract remeasurement at the modification date or reassessment of a previous accounting determination.

2) INT 20-02: Extension of Ninety-Day Rule for the Impact of COVID-19 – This guidance proposes a limited-time exception to the 90-day rule for nonadmittance required in Statement of Statutory Accounting Principles (SSAP) No. 6—Uncollectible Premium Balance, Bills Receivable for Premiums, and Amounts Due from Agents and Brokers and SSAP No. 65—Property and Casualty Contracts for high deductible policies.

3) INT 20-03: Troubled Debt Restructuring Due to COVID – This guidance proposes to clarify that a modification of mortgage loan terms in response to COVID-19 shall follow the provisions detailed in the March 22, “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus” in determining whether the modification shall be reported in accordance with SSAP No. 36—Troubled Debt Restructuring.

4) INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19 – This guidance proposes limited-time exceptions for impairment assessments due to situations caused by the forbearance or modification of mortgage loan payments related to COVID-19 for the following SSAPs: SSAP No. 30R—Unaffiliated Common Stocks, SSAP No. 37—Mortgage Loans, SSAP No. 43R—Loan-Backed and Structured Securities, and SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies.

Mr. Smith made a motion, seconded by Ms. Malm, to expose agenda item 2020-12, INT 20-01, INT 20-02, INT 20-03 and INT 20-04. The motion passed without opposition, with 13 members voting.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.
The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call March 18, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Sheila Travis (AL); Kim Hudson (CA); Kathy Belfi and William Arfanis (CT); Rylednn Brown (DE); Eric Moser (IL); Stewart Guerin (LA); Judy Weaver (MI); Tom Dudek (NY); Joe DiMemmo and Kimberly Rankin (PA); Jamie Walker (TX); Doug Stolte and David Smith (VA); and Amy Malm (WI).

1. Adopted its Jan. 8 and 2019 Fall National Meeting Minutes

Ms. Walker made a motion, seconded by Ms. Malm, to adopt the Working Group’s Jan. 8 (Attachment One-H1) and Dec. 7, 2019, (see NAIC Proceedings – Fall 2019, Accounting Practices and Procedures (E) Task Force, Attachment One) minutes. The motion passed unanimously.

2. Adopted Non-Contested Statutory Accounting Revisions During its Public Hearing

The Working Group held a public hearing to review comments (Attachment One-H2) on previously exposed items.

Mr. Hudson made a motion, seconded by Mr. Dudek, to adopt the statutory accounting revisions detailed below as non-contested statutory accounting revisions. The motion passed unanimously.

   a. Agenda Item 2018-26

Mr. Bruggeman directed the Working Group to agenda item 2018-26: SCA Loss Tracking – Accounting Guidance (Attachment One-H3). Fatima Sediqzad (NAIC) stated that this non-substantive agenda item adopts language that reported equity losses of a subsidiary, controlled and affiliated entity (SCA) would not go negative, thus stopping at zero; however, any guaranteed liabilities would be reported to the extent that there is a financial guarantee or commitment.

   b. Agenda Item 2018-38

Mr. Bruggeman directed the Working Group to agenda item 2018-38: Prepayment to Service and Claims Adjusting Providers (Attachment One-H4). Robin Marcotte (NAIC) stated that this non-substantive agenda item expands language emphasizing that loss and loss adjusting expense liabilities shall be established regardless of payments to third parties, except for capitated health claim payments. Furthermore, prepayments to third-party administrators (TPAs) that are not for claims or loss adjusting expenses are miscellaneous underwriting expenses.

   c. Agenda Item 2019-32

Mr. Bruggeman directed the Working Group to agenda item 2019-32: Look-Through with Multiple Holding Companies (Attachment One-H5). Ms. Sediqzad stated that this non-substantive agenda item emphasized existing guidance stating that a look-through is permitted through more than one downstream holding company if each entity complies with the look-through requirements of Statement of Statutory Accounting Principles (SSAP) No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

   d. Agenda Item 2019-35

Mr. Bruggeman directed the Working Group to agenda item 2019-35: Update Withdrawal Disclosures (Attachment One-H6). Ms. Marcotte stated that this non-substantive agenda item updates withdrawal disclosures that were previously developed by the Financial Stability (EX) Task Force. This agenda item made minor consistency and cross-reference edits in various SSAPs.
e. **Agenda Item 2019-43**

Mr. Bruggeman directed the Working Group to agenda item 2019-43: *ASU 2017-11, Earning Per Share, Distinguishing Liabilities from Equity, Derivatives & Hedging* (Attachment One-H7). Jim Pinegar (NAIC) stated that this non-substantive agenda item addressed the complexity of accounting for certain financial instruments that are not prevalent in the insurance industry. However, it provided the opportunity to address principle concepts regarding the accounting for instruments with characteristics of both liability and equity. This agenda item requires that issued, free-standing financial instruments with characteristics of both a liability and equity shall be reported as a liability, to the extent that they represent an unconditional obligation to the issuer.

f. **Agenda Item 2019-45**

Mr. Bruggeman directed the Working Group to agenda item 2019-45: *ASU 2013-11, Income Taxes – Presentation of an Unrecognized Tax Benefit* (Attachment One-H8). Mr. Pinegar stated that this non-substantive agenda item addressed the financial statement presentation of an unrecognized tax benefit. However, as an unrecognized tax benefit does not meet the more-likely-than-not recognition threshold, current statutory accounting guidance requires immediate expensing of the item. Mr. Pinegar stated that interested parties proposed one minor clarification change, and NAIC staff supported adoption with the edits proposed.

g. **Agenda Item 2019-48**

Mr. Bruggeman directed the Working Group to agenda item 2019-48: Disclosure Update for Reciprocal Jurisdiction Reinsurers (Attachment One-H9). Jake Stultz (NAIC) stated that this non-substantive agenda item adds reference of reciprocal jurisdictions as a result of the Executive (EX) Committee and Plenary adoption revisions to the *Credit for Reinsurance Model Law* (#785) and the *Credit for Reinsurance Model Regulation* (#786).

h. **Agenda Item 2019-46**

Mr. Bruggeman directed the Working Group to agenda item 2019-46: *ASU 2016-14, Presentation of Financial Statements for Not-for-Profit Entities* (Attachment One-H10). Mr. Pinegar stated that Accounting Standards Update (ASU) 2016-14, *Presentation of Financial Statements for Not-for-Profit Entities* detailed the financial statement presentation required for non-for-profit entities. He stated that requirements included the presentation of two classes of net assets. He stated that the non-substantive revisions to *Appendix D—Nonapplicable GAAP Pronouncements* are to reject ASU 2016-14.

3. **Adopted Revisions to Statutory Accounting with Minimal Discussion**

The Working Group held a public hearing to review comments (Attachment One-H2) on previously exposed items.

a. **Agenda Item 2019-08**

Mr. Bruggeman directed the Working Group to agenda item 2019-08: Reporting Deposit-Type Contracts. Mr. Pinegar stated that this non-substantive agenda item originated to gather information on deposit-type contracts that were reported in the annual statement Exhibit 5 – Aggregate Reserves for Life Contracts or Exhibit 6 – Aggregate Reserves for Accident and Health Contracts. He stated that the long-standing industry practice is to classify and report contracts in the appropriate schedule at policy inception and not move reporting schedules throughout the policy lifecycle. Accordingly, the exposed footnote for Exhibit 5 would capture contracts that no longer contain a mortality risk. Mr. Pinegar stated that the agenda item also sought feedback regarding the instructions for classifying deposit-type contracts in Exhibit 7 – Deposit-Type Contracts; however, if warranted, that may be addressed in a separate agenda item.

John Bauer (Prudential), representing interested parties, stated that they recommend adoption of this agenda item.

Ms. Belfi made a motion, seconded by Ms. Weaver, to adopt the recommendation to add a footnote for annual statement Exhibit 5, noting that no updates were required for statutory accounting (Attachment One-H11). The motion passed unanimously.
b. **Agenda Item 2019-40**

Mr. Bruggeman directed the Working Group to agenda item 2019-40: Reporting of Installment Fees and Expenses. Ms. Marcotte stated that exposed non-substantive edits address potential diversity in the application of the *SSAP No. 53—Property Casualty Contracts—Premiums* installment fee guidance. She stated that the recommendation in the agenda item was to clarify that the installment fee and service charges guidance should be applied narrowly to the specific situation described and not analogized to exclude other fees from premium. Furthermore, diversity in reporting was noted regarding installment fee expenses, even though the annual statement provides for reporting these items in underwriting expenses. This agenda requested input regarding the reporting of installment fee expenses. Mr. Marcotte stated that interested parties suggested a one-word edit, and NAIC staff were supportive of the suggested edit.

Ms. Marcotte stated that notifications of the exposure were sent to the Casualty Actuarial and Statistical (C) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group. However, comments were not expected to be received until after the Summer National Meeting. She noted that, if warranted, comments can be addressed in a separate agenda item as they are received regarding installment fee expenses.

Richard Poniatowski (Travelers), representing interested parties, stated that they agreed with the language proposed for SSAP No. 53.

Mr. Hudson made a motion, seconded by Ms. Mears, to adopt the exposed agenda item with minor changes from interested parties, clarifying language in SSAP No. 53 stating that the existing installment fee revenue guidance should be narrowly applied (Attachment One-H12). The motion passed unanimously.

c. **Agenda Item 2019-33**

Mr. Bruggeman directed the Working Group to agenda item 2019-33: SSAP No. 25 – Disclosures. Julie Gann (NAIC) stated that this non-substantive agenda item was drafted to data-capture disclosures from *SSAP No. 25—Affiliates and Other Related Parties*. She noted that disclosures from SSAP No. 25 are currently completed in a narrative format. With the proposal to data-capture disclosures, the state insurance regulators can aggregate and query various related party relationships. She noted that interested parties proposed minor modifications, one of which was supported by NAIC staff. The Blanks (E) Working Group has a concurrent exposure to ensure reporting for year-end 2020.

Mr. Smith made a motion, seconded by Mr. Dudek, to adopt the exposed agenda item with minor changes from interested parties, detailing the data-capture of certain SSAP No. 25 disclosures, which are currently completed in narrative form (Attachment One-H13). The motion passed unanimously.

d. **Agenda Item 2019-39**

Mr. Bruggeman directed the Working Group to agenda item 2019-39: Acceptable Collateral for Derivatives. Mr. Pinegar stated that the intent of this agenda item was to facilitate a discussion to determine if a reporting entity should receive credit for initial margin pledged to them in central clearinghouse transactions. However, discussions with interested parties found that utilization of initial margin is not only a rare event, but additional compensating controls are in place to ensure variation margin compliance. Furthermore, non-cash collateral is often utilized for posting the initial margin and, as such, that collateral should remain on the books of the provider as they maintain the full rights of ownership. Mr. Pinegar stated that due to these facts, NAIC staff believe that the third-party derivative exposure is appropriately captured in existing reporting, and he recommended disposal of this agenda item.

Josh Bean (Transamerica), on behalf of interested parties, stated support for disposal of the agenda item, as they believe the derivative activity in central clearinghouse activities is appropriately captured in existing reporting framework.

Mr. Moser made a motion, seconded by Mr. Hudson, to dispose of this agenda item without statutory revision (Attachment One-H14). The motion passed unanimously.

4. **Reviewed Comments and Considered Exposure of Agenda Items with Minimal Discussion**

The Working Group held a public hearing to review comments (Attachment One-H2) on previously exposed items.
Mr. Smith made a motion, seconded by Mr. Hudson, to expose all items for comment with a distinction of the differing exposure periods for each item. The motion passed unanimously.

a. **Agenda Item 2019-04**

Mr. Bruggeman directed the Working Group to agenda item 2019-04: SSAP No. 32 – Investment Classification Project. Mr. Pinegar stated that the intent of the agenda item was to revise SSAP No. 32—Preferred Stock pursuant to the investment classification project. The revisions include definitions, measurement and impairment guidance. Mr. Pinegar stated that with this and prior exposures, comments were received regarding the proposed definitions (e.g., whether redemption is within control of the holder). He stated that while the original terminology proposed by NAIC staff reflects the common terminology used by industry and U.S. Generally Accepted Accounting Principles (GAAP), a potential reclassification of certain preferred stock could occur if adopted, which was not the intent of the project. He stated that NAIC staff agreed to the terminology and phraseology suggested by interested parties. The addition of a footnote was also added to cover certain joint venture or partnership entities in which issue instruments were identical to preferred stock but used differing legal naming conventions. He stated that NAIC staff support for the exposure of the issue paper and the revised SSAP No. 32R—Preferred Stock to reflect the proposed edits of all interested parties. This agenda item has a comment deadline of May 29.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

b. **Agenda Item 2019-38**

Mr. Bruggeman directed the Working Group to agenda item 2019-38: Financing Derivatives. Ms. Gann stated that this non-substantive agenda item addresses the reporting of financing derivatives, which represents situations where the premium due, as a result of acquiring or writing a derivative, is paid throughout the derivative term or at maturity. She stated that the agenda item proposes the elimination of the allowance of net reporting, with a requirement for gross reporting for derivatives purchased or sold. She stated that the proposed revisions to SSAP No. 86—Derivatives would require gross reporting of derivatives without the effect of financing premiums due or payable, and they would present the true financial asset and liability position associated with the use of derivatives. She noted that proposed concepts included in the agenda item suggest revisions to a Blanks proposal to capture additional information regarding any derivative financing components. She stated that the interested parties’ comments requested an effective date of Jan. 1, 2021, and other editorial changes. NAIC staff were supportive of the effective date and edits proposed, and they recommended exposure of the agenda item. Finally, with exposure, a referral would be sent to the Capital Adequacy (E) Task Force for consideration of these risk-based capital (RBC) changes.

Mr. Bruggeman stated that he appreciated staff and interested parties’ continual, collaborative effort on this agenda item to ensure that the appropriate reporting occurs without incurring any unintended consequences from this reporting change, and they confirmed that the exposure deadline for this item was May 29.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

c. **Agenda Item 2019-14**

Mr. Bruggeman directed the Working Group to agenda item 2019-14: Attribution of Goodwill. Ms. Gann stated that this non-substantive agenda item is a disclosure item for when a reporting entity purchases a holding company and said company owns multiple entities. The goodwill from the acquisition of the holding company shall be allocated to each entity at the time of purchase. She stated that comments received from interested parties on this item were combined with comments received for agenda item 2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting regarding pushdown accounting. She stated that this agenda item does not necessarily pertain to pushdown accounting and, it is only intended to require disclosure of the goodwill attributed to the underlying holding companies in which pushdown accounting has not been applied. For clarification, an edit was proposed to ensure that pushdown is omitted from the disclosure requirements; however, she stated that once pushdown has been addressed the applicability of the attributed goodwill disclosure may be reassessed. This agenda item has a comment deadline of May 29.

D. Keith Bell (Travelers), representing interested parties, stated that they did not understand the intent nor the proposal, and they requested a conference with NAIC staff for further discussion. He stated that if an entity is sold, the associated goodwill should be removed. Ms. Gann stated that the intent of this agenda item was to assist NAIC staff and state insurance regulators with the identification of the amount of goodwill that should be removed upon the sale of an SCA, as that information is not currently available.
Mr. Bruggeman declared his understanding that U.S. GAAP allows instances where goodwill is associated with a business unit and perhaps not with a legal entity, and he encouraged the NAIC staff and interested parties’ continued collaboration on this agenda item.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

d. **Agenda Item 2019-20**

Mr. Bruggeman directed the Working Group to agenda item 2019-20: Rolling Short-Term Investments. Mr. Pinegar stated that this non-substantive agenda item was originally exposed to address certain investments that were structured as short-term investments, with those investments being rolled or renewed and remaining on a short-term schedule for multiple years. As the original agenda item captured both affiliated and unaffiliated investments, he stated that interested parties requested separating the discussion of both types of investments. NAIC staff agreed with the separation, as unaffiliated investments do occur in an arm’s length transaction, indicating that each party can independently review and elect not to renew an investment. With this independence, renewal or rolling of the investments and subsequent reporting as a short-term investment was likely appropriate. Additionally, certain affiliated transactions could, under certain circumstances, also operate independently as if both parties were unaffiliated. Mr. Pinegar stated that related operating units may have various review mechanisms to allow arm’s length review. He stated that this agenda item proposed additional guidance allowing certain affiliated or related party investments to be rolled or renewed if certain criteria are met. He stated that the criteria required the investment to be appropriately re-underwritten with adequate documentation, and each party must have the ability to independently review the terms and terminate the transaction prior to renewal. Additionally, a concurrent Blanks exposure includes a reporting code to identify short-term investments that remain on the short-term schedule for more than one year, and a general interrogatory has been proposed requiring certification that, if related party transactions have been renewed, appropriate re-underwriting has occurred. Mr. Pinegar stated that if adopted in current form, a referral will be sent to the Financial Analysis (E) Working Group and the Financial Analysis Solvency Tools (E) Working Group notifying them of the new reporting code, which captures renewed affiliated investments, and urging assistance to analysts and examiners on how to use the new data. This agenda item has a comment deadline of May 1.

Mr. Bruggeman confirmed that for efficiency in reporting, the code used to identify renewed short-term investment would apply to all investments and not solely affiliated investments. He stated that this code would allow state insurance regulators to identify such investments, at which time additional underwriting documentation could be requested.

Stephanie Rengstorf (Nationwide), on behalf of interested parties, appreciated NAIC staff’s collaboration on this agenda item, as liquidity management, through the efficient use of capital, is a critical function in terms of servicing policyholders. She stated that the proposed edits and disclosures were a welcome change, and she will provide feedback on subsequent exposure.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

e. **Agenda Item 2019-42**

Mr. Bruggeman directed the Working Group to agenda item 2019-42: Cash Equivalent – Cash & Liquidity Pools. Mr. Pinegar stated that this non-substantive agenda item arose as a result of the short-term rolling agenda item (Ref #2019-20), in which interested parties commented that cash pools were not appropriately scoped out of the proposed short-term restriction guidance. He stated that cash pools are techniques in which affiliates combine excess cash in order to earn additional interest, access additional short-term investment markets, and improve liquidity management. He stated that this agenda item originally proposed to allow cash pools that meet certain requirements to be reported as cash equivalents. He stated that interested parties provided responses that requested consideration on three items. First, interested parties requested that the reporting of cash pool assets be allowed on the schedule that most closely reflects the assets held by the pool (i.e., cash, cash equivalents, or short-term investments). Mr. Pinegar stated that NAIC staff originally proposed reporting as a cash equivalent for simplicity, but they were supportive of the request, noting that RBC and other analysis techniques combine these assets and that reporting on one schedule versus another should not cause any adverse effects. Second, NAIC staff were supportive of interested parties’ request to remove the U.S. GAAP audit of the liquidity pool, noting that the footnote disclosure, which details the assets held by investment type, would be subject to an independent audit under statutory accounting principles (SAP). Mr. Pinegar stated that NAIC staff did not concur with the third request of allowing for optionality in reporting asset valuations. He noted that current guidance requires that all short-term investments be accounted for in the same manner as similar long-term investments,
and NAIC staff believe assets should not be accounted for differently simply because they are in a liquidity pool. This agenda item has a comment deadline of May 1.

Diane Bellas (Allstate), representing interested parties, expressed appreciation to the Working Group for separating this agenda item, noting that cash and liquidity pools are an important function of many insurance entities, and support for the shortened exposure period.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

f. Agenda Item 2019-25

Mr. Bruggeman directed the Working Group to agenda item 2019-25: Working Capital Finance Investments. Ms. Marcotte noted that the materials contain the proposed substantive revisions, incorporating the industry proposed language for the six specific items directed by the Working Group at the 2019 Summer National Meeting to SSAP No. 105—Working Capital Finance Investments. She stated that NAIC staff recommended exposure of the SSAP and related Issue Paper No. 16x—Working Capital Finance Investment Updates. An effective date of June 30 was proposed for discussion, which, if preferred, would require comment from the Working Group by May 1.

Michael M. Monahan (American Council of Life Insurers—ACLI) stated that interested parties had no preference in the effective date; since all their requests were not granted, this will remain an un-investable asset class.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure with a proposed effective date of June 30.

g. Agenda Item 2019-36

Mr. Bruggeman directed the Working Group to agenda item 2019-36: Expand MGA and TPA Disclosures. Ms. Marcotte stated that this non-substantive agenda item was drafted pursuant to a request from two states that the existing annual statement disclosure regarding managing general agents (MGA) or TPAs be expanded to include additional information. She stated that state insurance regulators and policyholders should be able to fully understand the level and extent to which core services and binding authority are provided by MGAs or TPAs. Interested parties commented that a TPA should be consistently defined. Ms. Marcotte stated that the proposed modification is to add references to Registration and Regulation of Third-Party Administrators (TPAs) (GDL-1090). She stated that interested parties also commented on the proposed TPA claims reporting threshold, and she recommended using a premium threshold. The recommendation from the sponsors of the agenda is to use a claim count threshold. This agenda item has a comment deadline of May 1.

Mr. Bell, representing interested parties, stated that they appreciated the exposure; however, they would need to reassess any operational concerns with the proposed TPA reporting thresholds.

Albert Thomas Finnell (America’s Health Insurance Plans—AHIP) requested clarification regarding the shortened comment period. Ms. Marcotte stated that due to a concurrent Blanks exposure, a shortened comment period is required if the Working Group requests adoption for 2020.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

h. Agenda Item 2019-37

Mr. Bruggeman directed the Working Group to agenda item 2019-37: Surplus Notes – Enhanced Disclosures. Mr. Pinegar stated that this non-substantive agenda item was drafted from the Working Group’s request that additional disclosures be captured in SSAP No. 41R—Surplus Notes. He stated that the originally proposed disclosures materially reflected certain key details in the surplus note data call from 2019. These disclosures were intended to give state insurance regulators further insight into the issuances of surplus notes that do not contain cash flows typically associated with surplus notes. Mr. Pinegar stated that interested parties commented that the disclosures, as originally proposed, would not accurately reflect the disclosure of items sought by state insurance regulators and would disclose confidential pricing information. He stated that in conjunction with their comments, interested parties provided several suggested disclosure edits, of which NAIC staff note would achieve the same level of disclosure as requested by the Working Group. He stated that regarding the potential disclosure of confidential information, NAIC staff have proposed a modified disclosure element that disregards cashflows to the independent source of liquidity, thus maintaining pricing confidentiality. This agenda item has a comment deadline of May 1.
Mr. Bauer, representing interested parties, stated appreciation of NAIC staff’s efforts in integrating proposed interested party comments and how the proposed agenda item provides robust disclosure of surplus note activity.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

i. Agenda Item 2019-47

Mr. Bruggeman directed the Working Group to agenda item 2019-47: VM 21 Grading. Ms. Marcotte noted that the agenda item is addressing VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and grade-in requirements for reporting changes in valuation basis for years beginning Jan. 1. She stated that the revisions to the Valuation Manual allowed different optional phase-in requirements. She stated that the exposure includes non-substantive revisions to SSAP No. 51R—Life Contracts and SSAP No. 3—Accounting Changes and Corrections of Errors for reporting years beginning Jan. 1.

Ms. Marcotte stated that what was exposed would expand the disclosure for changes in valuation basis as a change in accounting principle under SSAP No. 3 to provide details regarding grade-in of changes in valuation basis. This includes the grade-in period applied, the remaining amount to be graded-in, the remaining time for the grade-in period, and any adjustments. The exposure also provided accounting for unrecognized graded-in reserve, which represents an unrecognized adjustment to surplus. The exposed revisions would have required the unrecognized grade-in amount due to a change in valuation basis, if resulting in an increase in reserves (decrease to surplus), to be reported as an allocation from unassigned funds to special surplus until the amount has been fully graded into unassigned funds.

Ms. Marcotte stated that the interested parties provided comments were opposed to requiring the segregation in special surplus of the unrecognized phase-in amounts. She noted that NAIC staff had some concern regarding the timing of re-exposure; however, discussion with ACLI representatives noted that the Valuation Manual allows the phase-in election to occur as late as Dec. 31. NAIC staff proposed revisions recommended for a short exposure by the Working Group, incorporating the major interested parties’ proposed edit of removing the reclassification to special surplus. Ms. Marcotte noted that “grade-in” was changed to “phase-in” that paragraph 39 of the illustration has two additional edits that change “grading” to “phase-in.” She stated that the revisions for exposure did not incorporate all the interested parties’ proposed revisions, language on retroactivity was not incorporated, and coordination on future Valuation Manual grade-in proposals will be required. She noted that the proposal will provide disclosure of the change in valuation basis from the VM-21 changes and add new disclosures regarding the phase-in process being applied. She noted that consistent with the prior exposure, notice of the exposure should also be sent to the Life Actuarial (A) Task Force as part of the Valuation Manual and Accounting Practices and Procedures Manual (AP&P Manual) coordination process. Mr. Monahan noted appreciation for a re-exposure and coordination with NAIC staff.

5. Considered Maintenance Agenda—Pending Listing—Exposures

Mr. Dudek made a motion, seconded by Ms. Weaver, to move agenda items 2020-01 through 2020-11 to the active listing and expose all items for comment with distinction of each item as either substantive or non-substantive and with corresponding referrals and comment periods as recommended by NAIC staff. The motion passed unanimously.

a. Agenda Item 2020-01

Mr. Bruggeman directed the Working Group to agenda item 2020-01: Update/Remove References to SVO Listings. Mr. Pinegar stated that this agenda item reflects a Valuation of Securities (E) Task Force notice regarding two pending revisions to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). He stated that the Task Force is renaming the “U.S. Direct Obligations/Full Faith and Credit Exempt List” the “NAIC U.S. Government Money Market Fund List.” He noted that no revisions to the AP&P Manual would be required for this revision, as this list is not specifically identified. He stated that revisions would, however, likely be needed in the Blanks and RBC filings/instructions. He stated that the second revision was to discontinue the “NAIC Bond Fund List.” He noted that items that were on this list would be eligible for consideration in the “NAIC Fixed Income-Like SEC Registered Funds List.” The discontinuance will require an update in the AP&P Manual in SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock to eliminate references to the “NAIC Bond Fund List” and add reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.
b. **Agenda Item 2020-02**

Mr. Bruggeman directed the Working Group to agenda item 2020-02: Accounting for Bond Tender Offers. Mr. Pinegar stated that a bond tender offer is like a called bond, except a tender offer is contingent on acceptance of the offer by the holder. He stated that specific guidance for the reporting and allocation of investment income and/or capital gain/loss associated with callable bonds is noted in SSAP No. 26R; however, guidance is not reflected when a bond is retired early through a tender offer. He stated that the non-substantive revisions in this proposal clarify that the accounting and reporting of investment income and capital gain/loss due to the early liquidation, either through a call or a tender offer, shall be similarly applied. The existing guidance would include all dynamics in which an issuer provides a penalty/fee to the holder to retire the bond prior to maturity.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

c. **Agenda Item 2020-03**

Mr. Bruggeman directed the Working Group to agenda item 2020-03: Enhanced Goodwill Disclosures. Ms. Sediqzad stated that this agenda item was drafted to request additional goodwill information and clarify reporting on Schedule D, Part 6, Section 1 – Valuation of Shares of Subsidiary, Controlled and Affiliated Companies. She stated that with the adoption of agenda item 2017-18: Goodwill Limitations, the information reported regarding goodwill, as provided in annual statement Footnote 3 – Business Combinations and Goodwill, has improved. She said the agenda item proposes additional disclosures to enhance the reporting of an SCA’s book adjusted carrying value (BACV). She noted that as goodwill is a significant component of many SCA’s BACV, this agenda item will assist in facilitating the review and disclosure of each balance.

Ms. Sediqzad stated that during a review of SCA Sub 2 filings, it is noted that many companies do not calculate the amortization of goodwill correctly, which sometimes overstates the value of the SCA. She stated that many companies also do not provide additional information to verify beginning goodwill and purchase price; as such, NAIC staff rely on a review of Footnote 3 for these details. She stated that if the goodwill amount is not verifiable, it is not be allowed to be admitted as part of the SCA’s value.

Ms. Sediqzad stated that the goodwill limitation of 10% of the insurance reporting entity’s goodwill is a calculation that all reporting entities who have goodwill must perform. She noted that while the admitted result is in the annual statement, the details of the calculation are not easily identifiable, and this agenda item proposes the disclosure of the calculation components to ensure transparency in the admission of goodwill.

Ms. Sediqzad noted that feedback is requested in terms of the proposed edits to Schedule D – Part 6 – Sections 1 and 2. She stated that, as detailed in the proposal, two column headings and related Blanks instructions refer to “Intangible Assets”; however, NAIC staff believe the original intent of these disclosures was to capture goodwill. She noted that the Financial Accounting Standards Board (FASB) defines intangible assets as assets (not including financial assets) that lack physical substance and refer to assets other than goodwill. She stated that feedback is requested from state insurance regulators and interested parties regarding what has historically been included in this disclosure and if changing the definition to articulate goodwill is warranted. She noted that per a review by NAIC staff, it appears as though goodwill is the sole number currently being reported in these applicable columns. This agenda item has a comment deadline of May 29.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

d. **Agenda Item 2020-04**

Mr. Bruggeman directed the Working Group to agenda item 2020-04: Commissioner Discretion in the Valuation Manual. Ms. Marcotte stated that this agenda item has been drafted to maintain comparability by providing disclosures regarding the use of commissioner discretion pursuant to the Valuation Manual, which became operative on Jan. 1, 2017. She stated that after reviewing the instances that require commissioner approval in the Valuation Manual, the items involve making a voluntary choice between various acceptable methods, which is subject to commissioner approval. She stated that the identified instances in the Valuation Manual are consistent with a change in valuation basis. As these changes are voluntary and not required to change by the methodology, this agenda item recommends disclosing the use of commissioner discretion required for choosing between acceptable methods, consistent with a change in valuation basis.
Ms. Marcotte noted that the non-substantive revisions to SSAP No. 51R, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 54R—Individual and Group Accident and Health Contracts are illustrated in the agenda item. She noted that the proposed guidance points to an existing change in valuation basis disclosures for voluntary decisions, which require commissioner approval and the ability to choose one allowable reserving methodology over another. She also stated that as part of the coordination process with the Valuation Manual, the Life Actuarial (A) Task Force should be notified of the exposure. This agenda item has a comment deadline of May 29.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

e. **Agenda Item 2020-05**

Mr. Bruggeman directed the Working Group to agenda item 2020-05: Repeal of the Affordable Care Act Section 9010 Assessment. Ms. Marcotte stated that the federal Affordable Care Act (ACA) Section 9010 assessment has had more than one deferral or moratorium, as addressed in INT 16-01: ACA Section 9010 Assessment 2017 Moratorium. She stated that in December 2019, the U.S. House of Representatives (House) and U.S. Senate (Senate) passed bills repealing Section 9010 assessments for calendar years beginning Jan. 1, 2021. She stated that this bill was subsequently signed into law. She noted that the assessment is required to be paid for calendar year 2020. She stated that the agenda item addresses the substantive impacts of the Section 9010 assessment repeal for calendar years beginning on Jan. 1, 2021, by recommending that SSAP No. 106—Affordable Care Act Section 9010 Assessment be superseded and INT 16-01 be nullified. She noted that both actions are proposed to be effective Jan. 1, 2021, and with these actions, both SSAP No. 106 and INT 16-01 would be moved to Appendix H - Superseded Statements of Statutory Accounting Principles and Nullified Interpretations for the 2021 publication of the AP&P Manual. She stated referrals to coordinate the related impacts with the Blanks (E) Working Group to ensure that the annual statement disclosures related to SSAP No. 106 currently reported in Note 22 are removed beginning in reporting years 2021 and to the Health Risk-Based Capital (E) Working Group to address the RBC implications related to the 2021 removal of the federal ACA adjustment sensitivity test, which uses data from the SSAP No. 106 disclosures. This agenda item has a comment deadline of May 29.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

f. **Agenda Item 2020-06EP**

Mr. Bruggeman directed the Working Group to agenda item 2020-06EP: Editorial and Maintenance Update. Ms. Marcotte stated that this item provides non-substantive editorial corrections in accordance with the maintenance process, deleting an unnecessary excerpt and updating various paragraphical references in SSAP No. 21R—Other Admitted Assets and SSAP No. 51R. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

g. **Agenda Item 2020-07**

Mr. Bruggeman directed the Working Group to agenda item 2020-07: Change to the Summary Investment Schedule. Mr. Stultz stated that SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures requires disclosures as detailed in Appendix A-001: Investments of Reporting Entities (A-001). He stated that Section 3 of A-001 requires the Summary Investment Schedule in the statutory annual statements and the notes of the annual audited financial statements. This agenda item arose because NAIC staff support for the Blanks (E) Working Group were notified of a cross-check error where total mortgage loans reported on the Summary Investment Schedule do not tie to the amounts reported in Schedule B, Mortgages Part 1. Mr. Stultz noted that the non-substantive revisions will add the total valuation allowance to the Summary Investment Schedule to ensure that these schedules tie together. He stated that the agenda item is intended to be exposed concurrently with a Blanks (E) Working Group proposal. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

h. **Agenda Item 2020-08**

Mr. Bruggeman directed the Working Group to agenda item 2020-08: ASU 2016-20, Technical Corrections & Improvements – Topic 606. Mr. Stultz stated that ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers was issued to clarify narrow aspects of the guidance issued in ASU 2014-09, Revenue from Contracts
with Customers. He stated that in 2018, the Working Group rejected the guidance in ASU 2014-09 and several other ASUs related to revenue recognition in SSAP No. 47—Uninsured Plans. He stated that the guidance in ASU 2016-20 provides updates and clarifications based on issues that were found during the initial U.S. GAAP implementation of ASU 2014-09 and Administrative Services Contract (ASC) Topic 606. He noted that the agenda item proposes to reject ASU 2016-20 in SSAP No. 47 as the revisions were consistent with how the prior ASUs related to Topic 606 have been treated. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

i. Agenda Item 2020-09

Mr. Bruggeman directed the Working Group to agenda item 2020-09: ASU 2018-18, Collaborative Arrangements – Topic 808. Mr. Stultz stated that this ASU clarifies and aligns revenue recognition under the new Topic 606 for collaborative arrangements. He stated that a collaborative arrangement is defined as a contractual arrangement that involves a joint operating activity involving two or more parties that are active participants in the activity and are exposed to significant risks and rewards dependent on the commercial success of the activity. He noted that the intent of this guidance is to ensure that revenue recognized within a collaborative arrangement is consistent with revenue recognition in Topic 606. He noted that this agenda item proposes to reject ASU 2018-18, Collaborative Arrangements – Topic 808 in SSAP No. 47 as the revisions were consistent with how the prior ASUs related to Topic 606 have been treated. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

j. Agenda Item 2020-10

Mr. Bruggeman directed the Working Group to agenda item 2020-10: ASU 2017-14, Amendments to SEC Paragraphs in Topic 220, Topic 605 and Topic 606. Mr. Stultz stated that this ASU only affects U.S. Securities and Exchange Commission (SEC) paragraphs in Topic 220, Topic 605 and Topic 606. He stated that the revisions to Topic 220 update references from “income statement” to “statement of comprehensive income” and add a reference to revenue recognition in Topic 606. He noted that the revisions to Topic 605 remove guidance from and references to SEC Staff Accounting Bulletin 13, Revenue Recognition. He noted that the non-substantive revisions to Appendix D—Nonapplicable GAAP Pronouncements are to reject ASU 2017-14, Income Statement—Reporting Comprehensive Income (Topic 220), Revenue Recognition (Topic 605), and Revenue from Contracts with Customers (Topic 606), Amendments to SEC Paragraphs Pursuant to Staff Accounting Bulletin No. 116 and SEC Release No. 33-10403 as not applicable to statutory accounting. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

k. Agenda Item 2020-11

Mr. Bruggeman directed the Working Group to agenda item 2020-11: ASU 2020-02, Amendments to SEC Paragraphs in Credit Losses and Lease. Mr. Stultz stated that this ASU only affects the SEC section in Topic 326, which clarifies reporting for SEC registrants and updates the effective date for these provisions and the updates to Topic 842, which updates the effective dates for the new lease guidance for SEC reporting companies.

He noted that the non-substantive revisions to Appendix D—Nonapplicable GAAP Pronouncements are to reject ASU 2020-02, Financial Instruments—Credit Losses (Topic 326) and Leases (Topic 842), Amendments to SEC Paragraphs Pursuant to SEC Staff Accounting Bulletin No. 119 and Update to SEC Section on Effective Date Related to Accounting Standards Update No. 2016-02, Leases (Topic 842) as not applicable to statutory accounting. This agenda item has a comment deadline of May 1.

In response to an inquiry from Mr. Bruggeman, there was no objection to exposure.

6. Considered Maintenance Agenda—Active Listing

a. Agenda Item 2019-21

Mr. Bruggeman directed the Working Group to agenda item 2019-21: SSAP No. 43R. Ms. Gann stated that as the result of a conference call that occurred on Jan. 8, the Working Group directed NAIC staff to work with interested parties in the creation of an issue paper which would review SSAP No. 43R—Loan-Backed and Structured Securities for a possible substantial
revision. She stated that many collaborative meetings with interested parties have produced the first draft of the issue paper; however, the draft was not a complete issue paper and only reflects the work product to-date, which is intended to continue the discussion process, not make final recommendations regarding accounting and reporting of various applicable SSAP No. 43R investments. She stated that the issue paper incorporates primary concepts used to determine if an investment is within scope of SSAP No. 43R and proposes various buckets or classifications of investments with similar characteristics. Upon agreement with the buckets, the next step would be to determine applicable accounting and reporting. She stated that while the comment period is June 26, input from interested parties through the comment period is requested as NAIC staff will continue work on this project throughout the comment period.

Mr. Bruggeman stated that the investment bucketing approach was to capture investments along a continuum of varying structures, assisting both state insurance regulators and interested parties throughout the discussion process.

Michael Reis (Northwestern Mutual), representing interested parties and the ACLI, stated that due to the magnitude of this project, the extended exposure period was appreciated. He stated that with the review of investments in scope of SSAP No. 43R, current investment portfolios would need to be analyzed for potential adverse accounting treatment or potential negative RBC implications. Under ideal circumstances, each affected company would independently review their applicable SSAP No. 43R investments; however, due to the current market and economic environment, an unprecedented amount of attention is being utilized elsewhere, which could cause issues if a substantial revision is effective in 2020. Mr. Reis stated that the issue paper may be capturing a broader set of securities known as collateralized fund obligations (CFOs); and in some instances, the bonds issued by CFOs are not dependent upon equity performance. He requested that state insurance regulators provide written comments on their concerns regarding such investment types so that they can be responded to directly as opposed through an issue paper.

Ms. Gann stated that operational procedures for substantially revised items typically require the exposure of the issue paper and the proposed substantively revised SAP. This exposure is only a partial issue paper; and while any effective date would be at the Working Group’s discretion, it would be unlikely that substantial revisions to SSAP No. 43R would occur in 2020. Additionally, a regulator-only call is anticipated to discuss equity types of investments that are categorized and reported as bonds.

Mr. Bruggeman concurred with Mr. Gann’s statement, adding that the review of these products is occurring because these are relatively new investment structures. Additionally, other known instances where certain assets were placed into a trust and repackaged as bonds may be occurring under SSAP No. 43R.

Mr. Dudek made a motion, seconded by Mr. Hudson, to expose the agenda item and direct continual collaborative effort with interested parties throughout the exposure period. The motion passed unanimously.

7. Deferred Discussion for a Subsequent Call or Meeting

Due to time constraints, the Working Group did not discuss the following agenda items. Discussion will occur later at a venue to be determined.

   e. Agenda Item 2019-49: Retroactive Reinsurance Exception.

8. Discussed Other Matters

a. Reference Rate Reform - LIBOR

Mr. Pinegar stated that the FASB issued an ASU regarding reference rate reform, and a subsequent agenda item is forthcoming, which is anticipated for interim exposure.

Due to time constraints, the Working Group did not discuss the following items; however, information was provided in conjunction with the meeting material:
a. Ref #2016-20: Credit Losses
b. Risk Corridors – Supreme Court
c. Working Group Referrals from the Valuation of Securities (E) Task Force
d. Process Update for SCA Filing Reviews
e. Review of U.S. GAAP Exposures
f. Health Test Update Notice

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

W:\National Meetings\2020\Summer\TF\App\SAP\Minutes\Att One-H_03_18_2020_StatAcctWGmin.docx
Statutory Accounting Principles (E) Working Group
Conference Call
January 8, 2020

The Statutory Accounting Principles (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted a conference call on Jan. 8, 2020. The following Working Group members participated: Dale Bruggeman, Chair (OH); Carrie Mears, Vice Chair (IA); Richard Ford (AL); Kim Hudson (CA); William Arfanis (CT); Danielle Hopp (DE); Eric Moser and Kevin Fry (IL); Stewart Guerin (LA); Judy A. Weaver (MI); Doug Bartlett (NH); Joe DiMemmo (PA); Doug Stolte (VA); Jamie Walker (TX); and Elena Vetrina and Randy Milquet (WI).

1. **Adopted Editorial Revisions from Agenda Item 2019-44EP**

Mr. Bruggeman directed the Working Group to agenda item 2019-44EP: Editorial Updates. Robin Marcotte (NAIC) stated that during the 2019 Fall National Meeting, the Working Group exposed editorial revisions to SSAP No. 62—Property and Casualty Reinsurance and throughout the *NAIC Accounting Practices and Procedures Manual* (Manual) to update references to the Annual Statement Instructions. Ms. Marcotte stated that the editorial revisions were exposed with a shortened comment period to allow for the edits to be reflected in the “As of March 2020” Manual. She stated that no comments were received.

Mr. Hudson made a motion, seconded by Ms. Walker, to adopt the exposed editorial revisions (Attachment One-H1a). The motion passed unanimously.

2. **Reviewed Comments on Agenda Item 2019-21: SSAP No. 43R – Equity Instruments**

The Working Group held a public hearing to review comments (Attachment One-H1b) on Agenda Item 2019-21.

Mr. Bruggeman directed the Working Group to agenda item 2019-21: SSAP No. 43R – Equity Instruments. Julie Gann (NAIC) stated that during the 2019 Summer National Meeting, the Working Group exposed revisions to SSAP No. 43R—Loan-Backed and Structured Securities to exclude collateralized fund obligations (CFOs), and similar structures that reflect underlying equity interests, from the scope of the Statement, as well as prevent existing equity assets from being repackaged as securitizations and reported as long-term bonds. Ms. Gann stated that comments were received from interested parties as well as Global Atlantic. After review of the comments, NAIC staff is recommending that the Working Group direct NAIC staff to undertake a substantive project to review and consider revisions to SSAP No. 43R. In making this recommendation, Ms. Gann stated that there have been regulator concerns with the current application of SSAP No. 43R. These concerns have included structures that mask affiliated transactions, structures that have utilized the “trust” component in SSAP No. 43R to classify investments that primarily determine repayment based on market returns that have been reflected as “debt instruments,” and situations in which insurer-owned assets may be repackaged (self-securitized) to obtain different accounting and reporting treatment.

Ms. Gann stated that NAIC staff proposes to proceed with an issue paper to address SSAP No. 43R holistically and clarify the securities intended to be in scope of the statement. Ms. Gann stated that the recommendation included potential initial concepts to be considered in the issue paper, but highlighted that all aspects would be discussed throughout the issue paper process. Additionally, Ms. Gann stated that a key aspect of the recommendation is for NAIC staff to work directly with key members of industry throughout the drafting of the issue paper and preparing an initial draft for exposure at the Spring National Meeting.

Ms. Gann summarized the initial concepts to be considered in the issue paper as follows:

- Division of guidance between items considered “asset-backed securities” as defined under the Code of Federal Regulations (CFR) and items that do not meet this definition. Ms. Gann stated that initial guidance is anticipated to retain historical SSAP No. 43R accounting and reporting guidance for items that meet the CFR definition. An assessment of whether different accounting and reporting treatment, including potential use of lower of amortized cost or fair value or the elimination of filing exempt (FE), will occur for investments that do not meet the ABS definition.

- Removal from SSAP No. 43R, investments in the form of a debt instrument where the investment provides that the amount of principal or interest to be earned or returned to the holder is calculated solely with reference to an external market indicator.

© 2020 National Association of Insurance Commissioners
• Inclusion of guidance, investment reporting provisions and disclosures to clearly identify and assess insurer sponsored securitizations. Disclosures are anticipated to capture the conditions from SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities and how an insurer concluded that the conditions were met to attain “sale” accounting treatment.

• Separate review and reference for equipment trust certificates, credit tenant loans and lease-backed securities. This review will coordinate work with the SVO staff on provisions reflected in the Purposes and Procedures Manual of the NAIC Investment Analysis Office and discussions occurring the Valuation of Securities (E) Task Force.

Mr. Bruggeman stated that the proposed issue paper approach is a logical step to properly review SSAP No. 43R using principle concepts. Ms. Mears stated support for the approach, agreeing with the use of principle concepts within SSAP No. 43R.

Mike Reis (Northwestern Mutual), stated that a small group of industry representatives worked together to develop the interested parties’ comment letter. He stated that this group is interested in the actual concerns that regulators are trying to address. He stated that they want to be supportive and assist NAIC staff, as well as regulators in addressing concerns, but they would like more detail and direct regulator comments on what those concerns are so they can be as helpful as possible. Mr. Reis stated that the proposed issue paper is intended to address concerns, but the review of these investments is also in response to the Working Group’s ongoing Investment Classification Project. He stated that if the Working Group proceeds with the direction to holistically review and possibly revise SSAP No. 43R, industry would like to make the following comments or requests:

1. Industry does not believe the concerns on CFOs were fully or clearly articulated in the recent exposure and the potential solution went beyond addressing the potential abuses noted. As a result, some CFO securities were indicted without specific regulator concerns being attributed to them, causing the applicable market to freeze and become very inactive. He stated that companies hold these securities and industry believes there are perfectly accepted CFO debt-type securities. Industry believes that if regulators understood these securities, they would agree that they are in the best interest of holders. Such as, industry requests that CFOs be addressed concurrently with the project in order to unfreeze the CFO market.

2. Industry identified that the proposal seems to indict any security that does not meet the CFR ABS definition, as the agenda proposes to possibly consider use of lower or amortized cost or fair value and removal of eligibility for a filing exempt (FE) status for NAIC designations. Although he stated that the recommendation includes qualifiers that these could be the possible treatment, it is requested that the direction just be to consider the appropriate accounting and reporting for securities that do not meet the CFR ABS definition.

3. The American Council of Life Insurers—ACLI, North American Securities Valuation Association—NASVA, and the Private Placement Investors Association—PPIA are all willing to work with NAIC staff, but the emphasis should be on getting the guidance right and not getting the guidance done quickly. Although industry would prefer for the project to be done timely, it needs to be done correctly. He stated that an exposure for the Spring National Meeting may be aggressive if it is to properly identify the population of securities that do not meet the CFR ABS definition. He stated that interested parties request NAIC staff work with the SVO as part of this project. He stated that the SVO has also been working on CFOs, principal-protected notes (PPNs) and combo notes and the NAIC staff for the Working Group could leverage off those discussions.

Mr. Hudson noted that the reference to possible exposure at the Spring National Meeting is simply a marker to work towards, but the focus would be getting the project done correctly. Mr. Bruggeman agreed with these comments noting that NAIC staff is aiming for a Spring exposure and will be working with industry in the interim to develop the document.

Mr. Bruggeman responded to the comments from Mr. Reis, initially stating that the exposure reference to “CFO” investments was not necessarily intended to solely identify CFO’s, but was intended to capture investments that include components of both debt and equity. He stated that these structures seemingly takes an investment that would be on the bond schedule and an investment that would be on the Other Invested Asset Schedule (Schedule BA) and with combining, the entire investment is reported as a bond on the bond schedule. He stated that the reference for “equity interest” was intended to be a generic reference that went beyond CFOs to encompass these combined structures. Mr. Bruggeman stated that regulators understand that industry is predominantly trying to do the right thing, and the regulators understand that there is a drive for yield in this low-interest rate environment, but industry needs to be sensitive that regulators have noted concerning investments and cannot disclose company
specifics. Mr. Reis stated that his company has investments in debt from closed-end funds and CFOs and it is difficult to address questions on whether additional securities can be acquired since the future accounting and reporting is uncertain.

Mr. Bruggeman stated that the proposal from NAIC staff is attempting to use overarching principles and use of the CFR ABS definition is a good starting point as it provides an overall principle basis to begin discussions. He stated that the assessment for non-ABS securities will be whether the securities are truly debt, or debt tranches, with NRSRO rated principal and interest, maturity dates, scheduled payments, additional structural protections, diversification, ratings triggers and/or other protections that safeguard the debt instrument. Mr. Bruggeman stated that even if insurers acquire investments that are allowed in accordance with the state investment code, the insurer should be cognizant of the impact the investment will have on the balance sheet and overall statutory financial statements.

Mr. Hudson stated that it would be productive for industry and the NAIC SVO to work with NAIC staff for the Working Group on this project. Charles Theriault (NAIC) stated agreement with the overall proposal from Ms. Gann and noted that they have seen concerning investments in both SSAP No. 43R and SSAP No. 26R—Bonds. He stated that they agree with the use of the SVO to review these transactions, noting that they have seen some structures that are debt instruments that have the noted protections and others that do not appear to be an actual debt instrument. He stated that the SVO is willing to assist the NAIC staff throughout the process. Steve Broadie (American Property Casualty Insurance Association—APCI) stated that the property casualty industry has the same investments as the life companies and would like to be included in the industry group working with NAIC staff.

Brian Keating (Guardian Life), representing the interested parties’ comment letter drafting group, stated that about half of their securities reported on Schedule D-1 as “Other Loan-Backed and Structured Securities” would meet the ABS definition. He stated there are definitely large categories of securities that do not meet the ABS definition that are perfectly fine debt investments that should be retained within SSAP No. 43R, and they believe the regulators will agree with these assessments. Mr. Bruggeman stated that NAIC staff has done a good job in taking into account the comment letter in determining the initial focus of the issue paper discussion.

Mr. Reis asked whether the proposed direction would be clarified to not specify that the possible options for non-ABS securities could include lower of amortized cost or fair value or elimination of filing exempt reporting provisions. Ms. Gann stated that the direction proposed is to review the non-ABS for accounting and reporting treatment. Mr. Bruggeman stated that the agenda item reference to lower of amortized cost or fair value and/or elimination of FE are possible options, and potentially the worst-case options, and do not reflect the only possibilities that could result from the review of the securities. Mr. Bruggeman stated that if the guidance was to be restated, it would be to indicate that the review could result with any treatment permitted in accordance with Manual, pursuant to the statutory accounting principles and consistency concepts. Mr. Hudson agreed that the review could result with a range of varying accounting and reporting treatments.

Mr. Bruggeman stated that since the Working Group is simply providing direction a formal vote is not needed, but in response to his inquiry, no Working Group members objected to providing direction to NAIC staff as recommended for development of an issue paper to review and revise SSAP No. 43R. He stated agreement with following the general approach of the Working Group and focusing on a detailed issue paper in determining the proper statutory treatment rather than aiming to resolve the issue quickly. Ms. Gann clarified that the intent of NAIC Staff is to have consistent forward progress on the issue, so although it will be the goal to have a document prepared for the Spring National Meeting, it is not anticipated that the issue will be presented for resolution. Rather, it is anticipated that staff will present aspects for discussion, along with comments and questions that will assist NAIC staff in developing the appropriate statutory accounting guidance.

3. Discussed Other Matters

Mr. Bruggeman reminded that the comment deadline for items currently exposed is Jan. 31. He also stated that the Valuation of Securities (E) Task Force had provided four referrals to the Working Group on Jan. 7. Mr. Bruggeman advised that NAIC staff is currently reviewing the referrals. He directed NAIC staff to post the referrals on the Working Group’s website so they could be reviewed during the interim.

Having no further business, the Statutory Accounting Principles (E) Working Group adjourned.

| Various SSAPs | Revise all references to the annual statement instructions for consistency and combine the life and fraternal references.  
  - Generic references: annual statement instructions  
  - Specific Names:  
    - Property/Casualty Annual Statement Instructions  
    - Life, Accident and Health/Fraternal Annual Statement Instructions  
    - Title Annual Statement Instructions  
    - Health Annual Statement Instructions  
  Note: Only the changes to combine the Fraternal and Life references will be tracked as edits to the AP&P Manual. Since the other changes are just consistency changes to existing title references, those changes will not be tracked in the AP&P Manual. |

**(Since there are several instances, they are not individually shown in this Form A.)**

**Recommendation:**
NAIC staff recommends that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorized as nonsubstantive, and expose editorial revisions, as illustrated below.

**Status:**
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 62R—Property and Casualty Reinsurance* and various other SSAPs, as illustrated herein.

On January 8, 2020, the Statutory Accounting Principles (E) Working Group adopted the exposed editorial revisions to *SSAP No. 62R—Property and Casualty Reinsurance*, and various other SSAPs, as illustrated herein, as final.

1. Update references in Exhibit A – Implementation Questions and Answers, question 31, which provides a retroactive reinsurance illustration. The revisions do not revise the illustrated journal entries. The revisions are to the update the referenced “item numbers” to the appropriate related SSAP No. 62R, paragraph 34 references. For example, journal entry #1 includes a references retroactive reinsurance reserves with an explanatory note of “see
item #3” becomes “see paragraph 34.c.” which discusses the accounting for retroactive reinsurance reserves. The item numbers are being updated to the related subparagraph of paragraph 34; “see item #4” becomes “see paragraph 34.d.” NAIC staff has verified that the referenced paragraph 34 subparagraphs are relevant to the journal entry explanatory note and illustrated SSAP No. 62R, paragraph 34 for ease of review below the changes.

SSAP No. 62R Property and Casualty Reinsurance - Tracked revisions

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

31. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

</tr>
<tr>
<td>Retroactive Reinsurance Gain (I/S)</td>
<td>3,000</td>
</tr>
</tbody>
</table>

To record subsequent revision of the initial reserves ceded per item #10 paragraph 34.j. The segregated surplus account is increased to $5,000 as a result of this upward development.
Entry 3A
Retro. Reinsurance Gain 3,000
Profit/Loss Account 3,000

To close profit from retroactive reinsurance.

Entry 3B
Profit/Loss (I/S) 3,000
Special Surplus from Retro. Reins. 3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retroactive reinsurance balance equals $5,000.)

Entry 4
Cash 4,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10 paragraph 34.j.

Entry 5
Cash 3,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 paragraph 34.f. and #10 paragraph 34.j.

Entry 5A
Special Surplus—Retro. Reins. 1,000
Unassigned Funds 1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6
Retroactive Reinsurance Loss (I/S) 1,000
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 1,000

To record subsequent revision of the initial reserves ceded per item #10 paragraph 34.j. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 paragraph 34.f. and #10 paragraph 34.j.

Entry 6A
Profit/Loss Account 1,000
Retro. Reins. Loss 1,000

To close loss to profit and loss account.

Entry 6B
Special Surplus from Retro. Reins. 1,000
Profit/Loss Account 1,000
To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

**Entry 7**

Cash 2,500  
Retroactive Reinsurance Gain (l/S) 500  
Retroactive Reinsurance Reserves Ceded or Assumed (B/S) 3,000

**Entry 7A**

Profit and Loss Account 500  
Retro. Reins. Gain 500

To close other income to profit and loss account.

**Entry 7B**

Special Surplus from Retro. Reins. 500  
Profit/Loss Account 500

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

**Entry 7C**

Special Surplus from Retro. Reins. 2,500  
Unassigned Funds 2,500

To close remaining special surplus account to unassigned surplus.

For ease of review, the referenced SSAP No. 62R, paragraphs 33 and 34 are illustrated below (No revisions are proposed to these paragraphs):

**Accounting for Retroactive Reinsurance Agreements**

33. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

34. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

   a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

   b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

   c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve...
ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;

f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in paragraph 34.j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding paragraph 34.g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding paragraphs 34.h. and 34.i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see question 31 in Exhibit A.)
2. Update reference in SSAP No. 62R, paragraph 85 to match the current format of property casualty annual statement Schedule F - Reinsurance.

Provision for Reinsurance

85. The NAIC Property/Casualty Annual Statement Instructions for Property and Casualty Companies for Schedule F, Part 3 - Ceded Reinsurance, references the Provision-provision for Overdue Reinsurance, which provides for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity’s experience indicates that a higher amount should be provided. The minimum reserve for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

RE: Exposure Draft Ref #2019-21: SSAP No. 43R – Equity Instruments Released for Comment During NAIC National Meeting with Comments due October 11

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on Exposure Draft Ref #2019-21: SSAP No. 43R – Equity Instruments released for comment by the Statutory Accounting Principles (E) Working Group (the “Working Group”), during the NAIC Summer National Meeting in New York. We are responding to this exposure in a letter separate from our responses to the other exposures, per request of NAIC Staff. We offer the following comments.

Ref #2019-21: SSAP No. 43R – Equity Instruments

NAIC Staff Description of Issue:
This agenda item has been drafted to consider clarifications to the scope of SSAP No. 43R—Loan-backed and Structured Securities, particularly with regards to collateralized fund obligations (CFOs) and similar structures that reflect underlying equity interests but are issued in the form of bonds / debt instruments.

Overview: A collateralized fund obligation (CFO) is a form of securitization involving private equity fund or hedge fund assets, similar to collateralized debt obligations (CDOs). A CDO uses loans as the collateral backing the security, whereas a CFO is backed by interests in funds, often private equity or hedge funds. (A CFO can also be backed by other equity interests, such as a limited liability partnership.) Although the CFO appears to have a “debt instrument” cash flow and may receive a credit rating from an NRSRO, the backing of the issued security is based on the equity performance of the underlying funds or equity interest. From a Bloomberg article from Oct. 2018, it was noted that CFOs have been noted as allowing an opportunity for “regulatory capital relief.” This article cited a statement that entities “can exchange their equity interests into CFOs, maintain the same level of exposure, without having to hold as much capital against the...
investments because regulators treat CFOs as bonds, not the private equity-linked investments that they are.”

NAIC staff was contacted by a rating provider with a request for information on how CFOs are considered for statutory accounting. The rating provider noted that this information would assist them in determining their methodology for reviewing CFOs under their credit policy and providing credit ratings. As part of that discussion, the rating provider provided the following information regarding their knowledge of CFOs:

- CFOs were first issued prior to the financial crisis in the early 2000’s.
- The early CFOs were packages of hedge funds assets, not private equity funds.
- CFOs did not perform well in the financial crisis and the development / issuance was halted.
- CFOs have now returned to the market, with the majority of holders identified as insurance companies.
- Although CFOs have returned, it was noted they have not seen many issuances.
- CFOs have been formed through repackaging of existing owned assets. (For example, if an insurance company held private equity on Schedule BA, they can package these assets in a CFO and report on Schedule D under SSAP No. 43R.) The rating agency noted that they do not formally receive information on the source of the CFO assets, but they receive source information informally through company inquiries.
- CFOs can be acquired individually (not through the repackaging of existing assets).
- CFOs can include both debt and equity components. Per the rating agency, in the situations seen, the insurance company either keeps the entire structure (both debt and equity pieces), or they sell the debt component and retain the equity component. They identified that in the situations they have seen, insurance companies have always retained the equity portion.

As identified in SSAP No. 26R—Bonds, loan-backed and structured securities (LBSS), although they may meet the definition of a bond, are excluded from SSAP No. 26R and follow the accounting and reporting guidance within SSAP No. 43R. The accounting and reporting of LBSS is similar to the reporting of bonds, with the measurement method (amortized cost or the lower of amortized cost or fair value) determined in accordance with the credit risk of the security (NAIC designation). Securities in scope of SSAP No. 43R are reported on Schedule D-1 as long-term bonds consistent with securities captured in scope of SSAP No. 26R.

Pursuant to the NAIC Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) NAIC designations are used to determine the category of credit risk and are security specific based on the position of a specific security in the issuer’s capital structure.

**NAIC Staff Recommendation from the 8/3/2019 SAPWG Meeting Agenda**

Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 43R – Loan-backed and Structured Securities to clarify that CFOs (or similarly structured instruments), and other structures with underlying equity exposures, are excluded from the scope of SSAP No. 43R. Additionally, the revisions prevent existing assets from
being repackaged as “securitizations” for reporting in scope of SSAP No. 43R. Key elements noted in the revisions include:

- The intent for SSAP No. 43R securities to have “bond-like cash flows.”
- Exclusion of equity instruments, investments with underlying assets that include equity instruments, or structures representing an equity interest (e.g., joint venture, LLCs, partnerships).
- Exclusion of assets that were previously reported as standalone assets by the reporting entity to change the investment schedule / reporting value / RBC charge.
- Clarification that lease-backed securities and equipment trust certificates are in the scope when eligible per the P&P Manual of the NAIC Investment Analysis Office.

**Interested Party Comments**

The proposed changes are categorized as non-substantive and the impetus behind the exposure seems to be concerns surrounding collateralized fund obligations (CFOs); but more specifically 1) repackaging of private equity held on Schedule BA (whereby the CFO vehicle issues structured securities through tranches) so the tranches can qualify for reporting on Schedule D, Part 1 and 2) repackaging of private equity held on Schedule BA with only the residual equity interest retained by the insurance company and 3) insurers investing in various tranches of a securitization or other debt securities where the underlying investments in the structure are equity. While we are supportive of eliminating perceived potential abuses, we believe the proposed changes go well beyond the perceived abuses and possibly affect billions of dollars of other insurer invested assets which we believe are appropriately accounted for under existing NAIC SSAPs and RBC rules. Further, the proposed changes do not address how some of these investments, currently clearly allowed for under SSAP No. 43R, would be reported are eliminated from scope of SSAP No. 43R.

The proposed changes to paragraph 2 of SSAP No. 43R provides an illustration of a CFO where:

“insurers gain exposure to a collection of funds (or equity interests) with the established interest and principal based on the issuers’ expected performance of the underlying funds”

When considering the proposed change noted above, we evaluated a hypothetical investment in the form of a debt instrument, where the instrument provides that the amount of principal or interest to be returned to the holder is to be calculated solely with reference to the movement of the S & P 500, up or down. We agree that such an instrument is in essence an equity and should be excluded from the scope of SSAP No. 43R; and we further agree that the existence of a rating letter for the instrument should have no bearing on the proper classification of the instrument. However, it is not clear to interested parties, whether the current proposal is limited to investments resembling this hypothetical. The key statement that appears to be redefining the scope of SSAP No. 43R seeks to exclude:

“…investments with underlying assets that include equity instruments … in which the cash flow payments (return of principal or interest) are partially or fully contingent on the equity performance of an underlying asset”.

This reference is hard to interpret and could be read to include a wide array of debt investments that have been issued in the capital markets for decades. At times, some of the commentary seems to suggest that if
the issuer of a debt instrument owns assets “that include equity instruments”, then the debt itself should be viewed as equity. This appears to be saying that, if a commercial mortgage loan is “backed by” equity in real estate investments (i.e., amount invested in the real estate property), and dependent in a general sense on the “performance” of such real estate investment, the investment in the commercial mortgage loan could be deemed a real estate equity investment. We do not believe anyone would advance such an extreme proposition, but some of the commentary accompanying this proposal comes close to stating a parallel proposition.

Lastly, the exposure also addresses equipment trust certificates (ETCs) and leased back securities (LBSs), with no background information or rationale to support those specific proposed changes. Given the preceding, the potential scope, the sophisticated nature of investments within SSAP No. 43R, and its interaction with the P&P Manual, we believe the proposed changes are substantial.

We therefore recommend that, for the CFO component, these issues be documented, in detail, in a separate issue paper that addresses the rationale for all investments covered by the proposed changes, the rationale for removing them from the scope of SSAP No. 43R, and the alternate reporting if they are ultimately removed from scope. We believe this is would be an appropriate first step prior to developing a proposed amendment to SSAP No. 43R. This will facilitate full transparency, to both industry and regulators, on the nature of these investments, the magnitude for which it will impact insurers, and the full rationale for each investment type impacted.

The remainder of our letter addresses some of our more specific concerns surrounding those asset classes or types of transactions we believe would be impacted. It is in two parts; 1) Proposed Changes Related to ETCs and LBSs and 2) Proposed Changes Related to “CFO-Type Transactions” and Other Debt Securities.

Proposed Changes Related to Equipment Trust Certificates and Leased Back Securities

As mentioned previously, no background information is provided in the exposure supporting why these proposed changes are being made other than a bullet in the Staff Recommendation as follows:

- Clarification that lease-backed securities and equipment trust certificates are in scope when eligible per the P&P Manual of the NAIC Investment Analysis Office.

We did a search of the 2019 reconfigured P&P Manual and found no reference to equipment trust certificates. Prior to this reconfiguration, certain interested parties, including ACLI, PPIA and NASVA, raised concerns about the deletion of the definitions of “Bond” and “Obligation” from the P&P Manual. Specifically, these definitions enumerated a number of securities, including equipment trust certificates, that were then referenced in the filing exemption rule of the P&P Manual. Interested parties were concerned that deletion of these definitions would potentially call into question the filing exempt nature of such securities and were assured by the NAIC Securities Valuation Office (SVO) and certain members of the Valuation of Securities Task Force (VOSTF) that this was not the intent.

Insurers have widely invested in equipment trust certificates (and related securities known as enhanced equipment trust certificates) for decades. These securities are specifically mentioned in SSAP No. 43R and have historically been recognized as Schedule D, filing exempt-eligible securities by both the SVO and by VOSTF and were specifically listed in the supplementary flow charts presented to and approved
by VOSTF for filing exemption, when the new rules for private ratings letter filing requirements were adopted.

These securities enjoy both the benefit of a claim to a corporation via a mortgage or lease agreement with a special purpose vehicle (“SPV”), and the benefit of a security interest in SPV’s owned equipment collateral (such as railroad equipment, locomotives, or aircraft). As such, they have lower credit risk than traditional unsecured corporate debt issued by the same corporations under SSAP No. 26R. The proposed changes would make it unclear whether equipment trust certificates would remain filing exempt or would continue to be viewed as an acceptable asset class.

Similarly, we believe the only reference to leased-backed securities in the P&P Manual relates to conforming credit tenant loans (CTLs). There are other classes of similarly structured leased-back securities, in addition to CTLs, that we believe are appropriately included within the scope of SSAP No. 43R as it references leased-backed securities in much broader context than just CTLs. Specifically, paragraph 2 of SSAP No. 43R states that loan-backed and structured securities include but are not limited to “pass-through securities, lease-backed securities, and equipment trust certificates.” Insurers invest in many different types of securitizations that are backed by lease payments on a variety of different types of underlying assets. These securities have historically proven to be safe, well secured investments with fixed income cash flows, which enhance insurers’ investment portfolios. Any changes to the types of lease-backed securitizations that are currently allowed under SSAP No. 43R could be very impactful to industry, since under the current guidance, securitizations whose cash flows are based on lease payments are currently reported as SSAP No. 43R securities.

ACLI, PPIA and NASVA representatives have had recent (post-exposure) discussions with Charles Therriault of the SVO regarding this component. We understand the SVO would like to define the term Equipment Trust Certificate within the P&P Manual and is willing to work with industry to do so. Similarly, we understand similar work is anticipated for certain types of leaseback securities.

As such, we believe this concept within the proposal, should be deferred until the SVO completes any such work (under the direction of the VOSTF) mentioned above. We are concerned about the potential confusion and unintended consequences that could result from maintaining the proposed changes related to this topic.

**Proposed Changes Related to “CFO-Type Transactions” and other Debt Securities**

As noted above, we understand concerns with certain CFO transactions and we are supportive of helping eliminate perceived potential abuses; however, we believe the proposed changes go well beyond the perceived potential abuses and possibly affect billions of dollars of other insurer assets which we believe are appropriately accounted for under the NAIC SSAPs and RBC rules. We address what we perceive to have unintended consequences in two broad groups:

1) Debt Securities Supported by Equity Interests, and
2) Insurer Sponsored Securitizations.

**Debt Securities Supported by Equity Interests**

The proposed changes related to debt securities issued by CFOs are indistinct, but the exposure indicates that the debt would no longer be expected to be captured by SSAP No. 43R. Interested parties would like...
to better understand the proposed accounting and capital treatment of these debt securities going forward. This could have implications for existing investments, but also for future issuances.

If the concept of debt being backed by equity interests is the core of the issue, we note that debt of this type is quite common in the capital markets and universally viewed as having bond-like characteristics. Other examples of debt issued by CFO-like structures (or equity-reliant) include debt issued by Holding Companies (e.g. Utilities, Berkshire Hathaway), Business Development Corporations, Closed-end Funds, Master Limited Partnerships and Real Estate Investment Trusts.

Interested parties would like the opportunity to have an open dialogue about the nature of debt issued by CFO and CFO-like structures, with the intent of creating a framework for distinguishing between instruments that have bond-like cash flows and those that do not.

**Background:**

Securities issued by CFOs represent a diversified opportunity set of investments with varying degrees of risk. The securities issued can be Senior Secured Debt, Unsecured Debt, Subordinated Debt, Preferred Stock and Common Stock. As it pertains to the debt securities issued by CFOs, the expected loss rate is not uniform, but when structured properly, the expected performance is bond-like in nature. Fundamentally, the debt holder is a creditor to the CFO structure and has a priority claim over the equity first loss tranche and any other subordinated tranches that provides appropriate subordination to support the debt’s credit ratings. In addition, the structural protections in these securities work towards preserving the contractual bond-like cashflows and risk profiles during periods of elevated volatility.

The diversified pool of assets and cashflows supporting CFO securities is similar to the assets and cash flows supporting many common asset-backed transactions. In addition, CFO securities include many of the structural features and protections often found in asset-backed securities, such as payment priority and cash trap events, excess collateral and collateral coverage covenants.

Interested parties respectfully present the following potential framework for debt issued by CFOs to demonstrate how the likelihood of debt repayment can be underwritten for such securities.

**Primary Risks:**

When analyzing CFO debt securities, there are two primary attributes to focus on:

1) The portfolio risk or volatility and nature of the underlying assets. Industry participants and Rating Agencies have developed frameworks to assess portfolio risk based on the fund type, expected price volatility, price integrity, liquidity risk, income attributes and correlation. Rating Agencies also perform stress tests and simulations to quantify portfolio performance in a variety of expected market conditions when determining the appropriate subordination and liquidity features necessary to support the credit ratings.

2) The amount of debt issued by the CFO, or inversely, the amount of subordination supporting the debt.

To obtain an investment grade rating on debt issued by a CFO, a CFO must balance the level of volatility of the underlying assets with the amount of leverage debt issued by the CFO. The assigned rating on the debt and expected loss rate should be comparable to other similarly rated debt securities in the market (i.e. debt not issued by CFOs).
Secondary Risks:

CFOs also possess operational, counterparty, and audit related risks that need to be considered, but these are unlikely to be the main driver of an assigned rating. These risks are not dissimilar from the operational and counterparty risks associated with a corporate credit or an asset-backed transaction and certainly do not disqualify CFOs from being treated as debt instruments.

Structural Protections:

Most CFO debt securities benefit from substantial structural protections, including reserve requirements, that work to minimize credit migration risk and maintain certainty of bond-like cashflows during periods of heightened volatility or uncertainty. They fundamentally ensure that equity holders of the CFO assume most of the performance risk instead of the debt holders. They also generally work to ensure that the servicing and repayment of the debt securities is not contingent upon appreciation of the underlying assets.

To support an investment grade rating on the debt issued by a CFO, the size of the equity tranche is typically set at a level so that it can absorb the expected gross losses in the underlying assets along with a margin for uncertainty. The equity tranche sizing also differs based on the variance of the expected losses, form of income generation and desired rating on the issued debt security.

See below for a sample of structural protections that support bond-like treatment for securities issued by CFOs:

Loan-to-value limitations or overcollateralization requirements: Restricts the amount of leverage that can be placed on the CFO. May also force rapid amortization with cashflows from assets prioritized to the debt tranches or to the reserve accounts before the equity investors have access to cash generated by the CFO.

Diversification or performance requirements: General requirements that work towards minimizing the volatility of the underlying assets. These may also act in conjunction with the loan to value limitations or overcollateralization requirements so that as the underlying portfolio becomes more volatile, the level of leverage allowed is reduced. These protections may also include requirements limiting concentration in any single asset or class of assets and requirements relating to overall portfolio diversity.

Debt service coverage ratio requirements: Ensures that CFO debt servicing needs can be met with current cashflows from the portfolio of investments. This works to maintain predictability and periodicity of the coupon payments on the CFO issued debt.

“First in/first out” structures: May require senior tranches to fund first, but then restrict any return of capital to the subordinated tranches until the senior tranche has received its contractual interest and principal payments.

Funded reserve accounts: Accounts are typically set up to prefund interest, capital calls or principal repayments. The size of the accounts can also vary based on the performance of the underlying portfolio or leverage on the vehicle.

Keep well provisions: Sponsors of CFOs may be contractually required to contribute additional assets or equity to cure a breach if covenants within the CFO level are violated.
Rating based triggers: A change in the credit rating could require any of the above structural protections to be triggered or have the thresholds increased to mitigate the increase in risk.

Not only do interested parties support developed underwriting frameworks used to assess risks associated with repayment of CFO debt, interested parties also have concerns about the possibility of scope creep into non-CFO assets, should the SAPWG proposal be adopted as drafted. The following are examples of debt securities held by insurers. The first example (Debt issued by Private Equity CFOs) falls into the scope of the proposed SAPWG recommendation. The remaining examples are not within scope of the recommended changes, yet they share some similar characteristics to Debt Issued by Private Equity CFOs. Interested parties believe that each of these debt classes can be structured in a way, such that the underlying equity investments provide, with high likelihood, cash flows sufficient to cover scheduled debt service payments. The key is to appropriately design the structural protections provided within these securities, assessing whether such protections are sufficient to offset the possibility of declining valuations or cashflows of the underlying equity investments, so that the debt obligations can still be fulfilled.

Debt Issued by Private Equity CFOs (PE CFOs): Invest in private equity funds and may also invest in debt securities. The PE CFOs that have recently been issued include seasoned pools of underlying private equity funds that are well diversified by type and vintage, and as a result, generate relatively consistent cash flows to pay principal and interest. In general, capabilities of the asset manager and counterparty exposure are strong. Debt securities issued by PE CFOs pre-crisis and post-crisis have been rated between B and AAA by an NRSRO, with senior tranches rated between A and AAA and typically sized at between 21% and 56% of the value of the underlying asset portfolio. The features of PE CFO debt are fundamentally different from those of private equity interests themselves; they typically bear interest at a fixed rate, come with no commitment to fund additional capital calls, have significant overcollateralization and benefit from the diversified pool of underlying investments at various investment and liquidity stages. In certain situations, sponsors are also required to provide incremental support. Debt securities are structured to apply cash flow to pay interest and repay principal on the debt as cash flow is realized with a liquidity facility or reserve to cover capital calls and interest shortfalls due to timing mismatches. Cash flows from underlying investments have been adequate to meet interest and principal obligations in both pre-crisis and post-crisis PE CFOs that have been broadly distributed. All rated notes issued by pre-crisis PE CFOs have paid off in full according to their terms. One post-crisis PE CFO has completely paid off rated notes and another has paid off the most senior debt tranche.\(^1\)

Debt Issued by Closed-end Funds: Listed 1940 Act vehicles that invest in equity or debt securities. These funds are required from a regulatory perspective to maintain Asset to Debt ratios of 300% and Asset to [Debt+Preferred Stock] ratios of 200% (typical debt covenants in these funds are slightly higher). These vehicles have been cycle-tested through several volatile periods with modest credit migration and no credit losses (for both Debt and Preferred Stock issuance by Closed-end Funds). For example, multiple closed-end fund debt transactions, collateralized by publicly traded energy-related Master Limited Partnership (“MLPs”) units, were issued in the private placement market over the last decade. When oil prices fell from more than $100/barrel to below $40 in less than one year, the structures proved robust. As energy MLP prices fell, and the funds approached their required minimum overcollateralization thresholds, Closed-end Fund managers sold MLP units in the open market and used the proceeds to repay debt and

---

\(^1\) Information relative to the structure and performance of PE CFOs and their underlying investments obtained from Fitch Ratings Report, PE CFOs: Securitizing Private Equity Fund Interests, issued 10 October 2019.
preferred securities. All of these structures made the mandatory debt and preferred stock repayments at par plus accrued interest, or higher, and all honored remaining debt service payments. Debt securities issued by Closed-end Funds are typically rated AA to AAA by CRPs.

**Debt issued by Business Development Corporations (BDC’s):** Corporations with preferential tax status established to invest in the debt and equity of predominately US companies (public and private). Covenants can vary significantly, but most do have a core Asset Coverage ratio. While some BDC’s did experience distress during the global financial crisis, private placement debt issued by BDCs came with structural protections to enable noteholders to recover all principal invested, plus accrued interest, and in some cases, full make whole payments. Debt ratings are typically BB to BBB+.

**Debt Issued by Corporate Holding Companies: **Insurance companies have significant investments in debt issued by holding companies (HOLDCOs). The HOLDCOs typically have no hard assets and only own the equity in operating subsidiaries (OPCOs). Oftentimes, the OPCOs do not guarantee the HOLDCO debt and many OPCOs have direct or indirect restrictions on the amount of cashflows they can dividend up to the HOLDCO (e.g. Utilities). The debt issued by these HOLDCOs is only supported by the equity interests they hold and ratings vary significantly based the issuer’s inherent financial and business risk.

*See below for a summary of hypothetical capital structures and ratings for various CFO or equity-reliant transactions:*

![Diagram of capital structures and ratings]

**Summary:**
At the start of evaluating any CFO debt security, the relevant questions should be:

- Does the fact that the underlying risk is held in a CFO structure change the expected performance of the debt and equity securities issued by that structure?
- Is the proportion of risk borne by the first loss tranche or subordinated capital enough such that the debt security will exhibit debt like attributes?
- Are the loss expectations comparable to other rated debt securities in the capital markets?
• Do the structural protections ensure the transfer of risk to the equity tranche and stability of expected debt cashflows are preserved in a variety of market conditions?

Rating agencies have developed frameworks for evaluating CFOs and CFO-like structures. They have concluded that if the CFO has the right balance of underlying portfolio volatility and leverage, along with appropriate structural protections, they are bond-like in nature and can be rated investment grade. This is also the view of interested parties. We look forward to having further dialogue to ensure this asset class remains an opportunity for investment.

Insurer Sponsored Securitizations

Interested parties’ interpretation of the proposed changes (i.e., the phrase in the exposure that states “Exclusion of assets that were previously reported as standalone assets by the reporting entity to change the investment schedule / reporting value / RBC charge”) would be that they would likely deter insurers from securitizing already owned assets (insurer sponsored securitizations), where some interest was retained after securitization, and such a transaction would be deemed inappropriate pursuant to the exposure document. The below expands on these concepts and describes why we believe insurer sponsored securitizations of owned assets should not be discouraged and have been executed over time for valid business purposes.

Insurers have used insurer sponsored securitizations throughout the years for many important business reasons highlighted below. Interested parties believe, as long as the SSAPs are applied appropriately, insurers should be able to derecognize already owned assets from their balance sheets, and if the insurer sponsor purchases various tranches from the securitization vehicle, they should be afforded the ability to recognize, account for, and report the tranches the same as if they were purchased from an unrelated third party. Insurer sponsored securitizations, where either the insurer sponsor purchases various tranches from the securitization, or its affiliates purchase the various tranches, have been used for some of the following legitimate reasons throughout the years. Interested parties strongly believe they should continue to be afforded the ability to securitize in this way because:

• It provides insurers an important ability to change the risk profile, economics, and cash flows in its insurance and non-insurance companies
  o Improves risk transparency of underlying investments through debt ratings and purchase by independent third parties, when applicable
• It prevents the need for the insurer to sell assets to unrelated third parties in an inefficient private market
• Enhances liquidity in that the beneficial interests issued by the securitization are rated by NRSROs and may be sold externally to raise cash and provide the insurer sponsor the ability to invest in other investment types for their investment portfolio (i.e., diversification)
• Provides the insurer sponsor the ability to earn management fees from unrelated third-party purchases of the various tranches of the securitization
• Affords insurers the ability to manage asset allocation and duration of its asset portfolios for an optimal asset liability management match

SSAP No. 103R, Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, provides insurers the ability to securitize owned assets. The owned assets may be derecognized from an insurer’s

© 2020 National Association of Insurance Commissioners  10
balance sheet only when the three “sale” conditions in paragraph 8 are met. The conditions in paragraph 8 are consistent with the conditions applied on a U.S. GAAP basis when determining if “sale” accounting may be applied. An insurer would evaluate the three conditions in paragraph 8 very carefully, based on their own set of facts and circumstances, to ensure the conditions are met and “sale” treatment is achieved. The newly issued tranches by the securitization vehicle may be purchased by the insurer sponsor, purchased by affiliates of the insurer sponsor, sold to unrelated third parties, or any combination of the above. If affiliates of the insurer or the insurer itself purchase various tranches issued by the securitization, SSAP No. 25, Affiliates and Other Related Parties, would be applied to ensure there is permanence to the transaction, any gains from the transaction would not result in an inflation of surplus, and the transaction is arm’s-length.

Interested parties believe that the guidance in SSAP No. 103R and No. SSAP 25, if applied appropriately, should result in a valid business transaction where the currently owned assets would be derecognized from the insurer sponsor balance sheet because the insurer sponsor would no longer possess all of the risks associated with the assets. Based on the guidance in paragraph 8, that means the assets would have been isolated from the insurer sponsor beyond the reach of creditors (condition a); if removed for purposes of a securitization, the third party holder of its beneficial interests must have the right to pledge or exchange its beneficial interests and no condition would both constrain the beneficial interest holder from taking advantage of its right to pledge or exchange the beneficial interest and provide more than a trivial benefit to the transferor (insurer sponsor) (condition b); and the transferor does not maintain effective control over the transferred assets (condition c).

Insurers generally evaluate the three conditions in paragraph 8 as follows. Again, these evaluations are consistent with those performed for U.S. GAAP purposes:

- In order to meet conditions a and b, insurers assess various facts and circumstances in their own individual transactions to ensure the conditions are met. Although not individually determinative, insurers rely on a “true-sale/non-consolidation” opinion from external legal counsel. The “true-sale/non-consolidation” opinion is a lengthy and robust evaluation performed by external counsel, based on the facts and circumstances in the transaction, to provide an opinion, in their best judgment, that the transferred assets would be isolated in bankruptcy proceedings of the transferor. It is important to note that external counsel does not issue a “true-sale/non-consolidation” opinion unless a significant enough percentage of the tranches issued by the securitization vehicle are sold to either unrelated third parties of the insurer sponsor or to affiliates outside the ownership stack of the insurer sponsor (e.g., not a parent or subsidiary of the insurer sponsor). Additionally, the insurer would consider factors such as the non-recourse nature of the transaction to the sponsor and the separateness of the SVP that is formed. The SPV that is formed is a distinct separate partnership (or LLC) and all partnership formalities are followed with respect to their organization and operation; the assets of the SPVs are not commingled with the assets of any member of the sponsor; proper books and records of the SPVs are maintained at all times; all transactions between the SPVs and the sponsor will be fair and reasonable and reflect arm’s-length terms; the general partner for each SPV has at least one independent director experienced in securitizations.

- To ensure condition c is met, the insurer would assess facts and circumstances, such as what party controls decisions associated with the transferred assets, including future decisions to sell the assets after transfer, to ensure that the insurer sponsor does not directly or indirectly control the decisions associated with the transferred assets. It is important to note that condition c is assessed
at the insurance company legal entity level (i.e., the insurer sponsor itself does not retain control of the assets).

To illustrate the application of the conditions in SSAP No. 103R, interested parties offer the following examples of facts and circumstances that do NOT meet the conditions of SSAP No. 103R, where already owned assets should not be derecognized from the insurer sponsor balance sheet. The SSAP No. 103R analysis is summarized below and is not indicative of the extensive analysis performed by insurers to ensure SSAP No. 103R “sale” conditions are met. Although the example is for a private equity securitization, the same SSAP No. 103R and SSAP No. 25 analysis is performed for any securitization of owned assets (e.g., CLOs):

All examples (examples 1-4) below have the following in common:

- Insurer sponsor transfers private equity funds reported on its Schedule BA into a special purpose vehicle (SPV)
- The SPV securitizes the private equity funds and various debt tranches are issued; the remaining equity in the SPV is considered residual equity (i.e., LLC/LP equity interest)

Example 1:

- Investors in securitization: The insurer sponsor purchases substantially all or all of the tranches issued by the SPV and substantially all or all of the residual equity
- SSAP No. 103R assessment:
  - Insurer sponsor retains all or substantially all of the risks associated with the private equity funds
  - A “true-sale/non-consolidation” opinion would not be received from external legal counsel because not a significant enough amount of the tranches was purchased by either unrelated third parties or affiliates outside the sponsor’s ownership stack
  - This transaction does NOT meet the conditions in paragraph 8 (neither condition a nor b are met) SSAP No. 103R to attain “sale” accounting; the private equity funds should not be derecognized from the insurer sponsor balance sheet

Example 2:

- Investors in securitization: The insurer sponsor sells a significant amount of the tranches to unrelated third parties or affiliates outside the ownership stack
- Unique provision of the securitization: The insurer sponsor can call the securitization beneficial interests at any time at a pre-determined price that was set at below market price
- SSAP No. 103R assessment:
  - The transaction does not meet condition b of SSAP No. 103R because the insurer sponsor has the ability to both constrain the beneficial interest holder from taking advantage of its right to pledge or exchange the beneficial interest and provides more than a trivial benefit to the transferor (paragraph 53 of SSAP No. 103R)
  - This transaction does NOT meet the conditions in paragraph 8, SSAP No. 103R to attain “sale” accounting; the private equity funds should not be derecognized from the insurer sponsor balance sheet
To further illustrate the conditions of SSAP No. 103R, interested parties offer the following examples of facts and circumstances that DO meet the conditions of SSAP No. 103R, where owned assets should be derecognized from the insurer sponsor balance sheet:

Example 3:

- Investors in securitization: The insurer sponsor sells a significant amount of the tranches to unrelated third parties or affiliates outside the ownership stack; insurer sponsor purchases either all of the residual equity of the securitization or all of the residual equity and some allocation of other tranches in the securitization
- SSAP No. 103R assessment:
  - The transaction meets the conditions a and b of SSAP No. 103R because the insurer sponsor would receive a “true-sale/non-consolidation” opinion from outside legal counsel as a significant enough portion of the tranches was sold to unrelated third parties or affiliates outside the ownership stack
  - The transaction meets condition c of SSAP No. 103R because the insurer sponsor does not maintain effective control of the transferred assets or the beneficial interests issued by the securitization (e.g., no sponsor call provision)
  - This transaction DOES meet the conditions in paragraph 8, SSAP No. 103R to attain “sale” accounting; the private equity funds should be derecognized from the insurer sponsor balance sheet
  - The transaction also meets the requirements in SSAP No. 25, including permanence of the transaction

Example 4:

- Investors in securitization: The insurer sponsor sells almost 100% of the tranches to unrelated third parties or affiliates outside the ownership stack; insurer sponsor retains less than 10% of the residual equity. This example is included in the letter because for securitizations of CLOs, for example, the sponsor must retain a certain percentage of the residual due to U.S. Risk Retention rules.
- SSAP No. 103R assessment:
  - The transaction meets the conditions a and b of SSAP No. 103R because the insurer sponsor would receive a “true-sale/non-consolidation” opinion from outside legal counsel as a significant enough amount of the securitization was sold to unrelated third parties or affiliates outside the ownership stack
  - The transaction meets condition c of SSAP No. 103R because the insurer sponsor does not maintain effective control of the transferred assets or the beneficial interests issued by the securitization (e.g., no sponsor call provision)
  - This transaction DOES meet the conditions in paragraph 8, SSAP No. 103R to attain “sale” accounting; the private equity funds should be derecognized from the insurer sponsor balance sheet
  - The transaction also meets the requirements in SSAP No. 25, including permanence of the transaction
Assuming a transaction meets the conditions in SSAP No. 103R and SSAP No. 25 is applied appropriately, assets the insurer sponsor purchases from the securitization should be treated as if the insurer sponsor purchased the tranches from an unrelated third party. This is aligned with the U.S. GAAP treatment of such transactions. The section of our letter related to debt securities supported by equity interests provides interested parties thoughts as to why the beneficial interests issued in an insurer sponsored CFO should be reported as SSAP No. 43R investments.

Consistent with SSAP No. 48 (or SSAP No. 97 if relevant) the residual LP/LLC equity from a private equity securitization would be reported on Schedule BA and equity method of accounting would be applied, because the investor owns LP/LLC equity interest. For other securitizations, such as CLOs, a residual security (i.e., residual tranche) is usually issued, which meets the definition of an SSAP No. 43R security, is reported on Schedule D as debt, debt accounting is applied, and the investment would receive a low NAIC designation. Schedule D debt treatment is consistent with U.S. GAAP as the residual tranche is considered to have fixed income-like cash flows, because the securitization involves financial assets with contractual cash flows.

Interested parties believe proposal 2019-21 is concerned about the perceived abuse associated with the application of SSAP No. 103R and SSAP No. 25 to insurer sponsored securitizations. Interested parties recommend disclosures be expanded to require disclosure of the conditions in SSAP No. 103R paragraph 8 and how an insurer sponsor concluded that the conditions were met to attain “sale” accounting upon securitization.

**Summary Conclusion**

While we believe the proposed exposure is attempting to address some valid regulatory concerns, we do have significant concerns about the broad-brush approach to the proposed changes and the likely unintended consequences:

- The exposure does not propose alternative reporting for investments that would no longer be allowed under the exposure.
- As it relates to both Equipment Trust Certificates and Lease Backed Securities, the exposure has little, if any, analytical support for the proposed changes and has insufficient clarity surrounding the types of securities that we believe would impact billions of dollars of industry assets. This is a substantial change and more work needs to be done before changes, if any, are incorporated into SSAP No. 43R.
- As it relates to “CFOs”, this is a very complicated area and the exposure goes well beyond the perceived regulatory concerns stated. The proposed changes would also potentially impact billions of dollars of industry assets as well as significantly reduce the ability of insurance companies to securitize owned assets for valid business purposes. A thoughtful and well-articulated issue paper is needed to facilitate full transparency, to both industry and regulators, on the magnitude for which the changes will impact insurers as well as the full rationale for each investment type impacted, prior to any changes being incorporated into SSAP No. 43R.

We stand ready to assist NAIC staff, and regulators, to provide clarifying answers to any questions on the content of this letter as well as to provide additional education on the various types of transactions that we
believe are inappropriately captured by the scope of this exposure. We appreciate the opportunity to provide comment and engage in future dialogue.

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the Statutory Accounting Principles (E) Working Group (the “Working Group”), during the NAIC Fall National Meeting in Austin. We offer the following comments:

**Ref #2018-26: SCA Loss Tracking – Accounting Guidance**

The Working Group exposed revisions, with modifications suggested by interested parties to *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* to expand guidance regarding financial guarantees and the use of the equity method for when losses exceed the equity value of an SCA investment. With the revisions, the equity value of an SCA would not go negative, and guaranteed liabilities would be reported to the extent that there is a financial guarantee or commitment. The “Illustration of the Application of INT 00-24” will also be inserted into *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*.

Interested parties have no comment on this item.

**Ref #2018-38: Prepayments to Service and Claims Adjusting Providers**

NAIC Staff recommended that the Working Group expose revisions incorporating the majority of interested parties’ comments to *SSAP No. 55 (rather than the changes reflected in the draft for the Summer 2019 exposure)*. Interested parties’ comments primarily delete the exposed guidance and move the same or similar concepts into the broad product guidance for property and casualty, life and health or health in SSAP No. 55. These revisions are to reinstate annual statement references by entity type and to adjust scoping language and make the SSAP No. 29 prepaid guidance consistent. (Staff proposed variations in wording are shaded to differentiate from the interested parties proposed wording that accomplishes a similar intent.)
The exposed revisions to *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* incorporate interested parties’ previous recommendations to separate the guidance by product type and emphasize guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). The revisions emphasize existing guidance that claims related liabilities are not recognized as paid until the losses are paid to claimants or claims are adjusted.

Interested parties have no comment on this item.

**Ref #2019-04: SSAP No. 32 – Investment Classification Project**

The Working Group exposed a revised *Issue Paper No. IX—Preferred Stock* and a substantively-revised draft *SSAP No. 32—Preferred Stock* as part of the Investment Classification Project.

Interested parties substantially agree with the objectives of the proposal and appreciate Staff’s inclusion of revisions for previously communicated comments. We have the following additional comments related to the issue paper:

**Scope**

Interested parties note that the scope retains, albeit edited, the guidance that preferred stock of subsidiary, controlled and affiliated entities is included and therefore accounted for under the guidance for preferred stock regardless of their SCA character. We acknowledge the current exposure added the requirement to file investments in response to our request. The existing wording in SSAP No. 32 and the exposed language for SSAP No. 32 is below with interested parties suggested clarifying sentence and additional wording (underlined).

Existing language in SSAP No. 32:

**SCOPE OF STATEMENT**

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of subsidiaries, controlled or affiliated entities, including preferred stock interests of certified capital companies (CAPCO) per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement.

Exposed language in SSAP No. 32 and interested parties suggested additional sentence (underlined):

**SCOPE OF STATEMENT**

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of entities captured in SSAP No. 97—*Investments in Subsidiaries, Controlled or Affiliated Entities* or SSAP No. 48—*Joint Ventures, Partnerships and Limited...*
Liability Companies, as well as preferred stock interests of certified capital companies per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement.

Definitions

We are opposed to the proposed edits to the definitions of redeemable and perpetual preferred stock for the following reasons:

a. The change would create a divergence from GAAP that does not exist under the current definitions. Both the definition and accounting for redeemable securities under the current definition aligns with the GAAP definition and accounting for debt securities. Preferred stock accounted for as debt securities under GAAP are those where ability for the holder to collect repayment is assured by the contract terms. We have not identified any benefit to diverging from this view for statutory reporting. The NAIC guidance is different from the GAAP ASC 480 guidance for issuers in multiple ways:

- Preferred stock redeemable at the option of the holder for GAAP is classified as equity (mezzanine equity for SEC filers) but under statutory reporting currently (and proposed) is classified as debt-like in valuation. This conflicts with GAAP ASC 480 guidance for issuers and so it is more straightforward to use the GAAP ASC guidance for holders.
- Alignment of statutory accounting with the ASC 320 guidance for holders results in more equity-like classification in the valuation of preferred stock which is generally more conservative than debt-like classification in valuation.
- Preferred stock redeemable for other reasons outside of issuer’s control is equity (mezzanine equity for SEC filers) for GAAP but equity-like in valuation under current statutory reporting and debt-like in valuation under the proposed statutory reporting.

b. The definition that the NAIC staff has proposed to align to is used in GAAP only for compliance with SEC Regulation S-X, Rule 5-02, which is relevant only to the issuer of preferred stock and does not apply to nonpublic companies. Further, the definitions under Rule 5-02 were designed to include preferred stock with redemption features outside of the control of the issuer in order to provide investors information regarding potential future cash obligations. This is not a relevant consideration for the holder of preferred stock, which is why GAAP does not consider this from the holder’s perspective. From the holder’s perspective, the only relevant consideration is whether the holder is able to redeem its investment, either through a fixed and determinable date, or through a redemption option that the holder can control.

c. Evaluation of whether there are any features that are outside the control of the issuer is a very complex and cumbersome analysis, even on an infrequent basis as is the case under GAAP (as it only applies to issuers). This is because there are a vast number of potential features that could be outside the control of the issuer (i.e., change in control, lapse in SEC registration, failure to pay dividend, etc.). Insurance companies frequently invest in preferred
stock and often purchase many such securities each reporting period. Evaluating every preferred stock investment at this level of detail would be operationally burdensome and would provide no additional benefit as the investor is often economically indifferent to many of these low-probability redemption features that are outside of the control of both the issuer and investor.

As a result, we propose the following edits to the proposed definitions:

a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is outside the control at the option of the issuer. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders; or 3) has conditions for redemption which are not solely within the control of the issuer, such as stock which must be redeemed out of future earnings. Preferred stock which meet one or more of these three criteria would be classified as redeemable preferred stock regardless of other attributes such as voting rights or dividend rights;

b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder are redeemable solely at the option of the issuer (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock pursuant to paragraph 3.a.

Balance Sheet Amount

The issue paper discusses carrying perpetual preferred at fair value capped by any stated call price. However, it did not provide guidance on timing for application of the cap. Because the call may not be effective for a period of time, and to ensure that purchases of perpetual preferred stock could still be carried at values greater than par (assuming market values remain above par), we recommend the following revisions to paragraph 10.a.ii, 10.b.ii and the correspondingly to paragraph 11 (underlined):

Paragraphs 10.a.ii and 10.b.ii:

i. Perpetual preferred stocks shall be valued at fair value, not to exceed *any currently effective call price*.

Paragraph 11:

11. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the preferred stock in effect at the date of acquisition. An assessment of other-than-temporary impairment shall occur whenever mandatory redemption rights or sinking fund requirements do not occur. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell the
preferred stock prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock’s carrying value and its fair value, not to exceed any currently effective call price, at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.

Income

The issue paper clarifies the guidance on dividends on preferred stock. Specifically, paragraph 14 states:

“14. Dividends on preferred stock shall be recorded as investment income for qualifying preferred stock on the ex-dividend date with a corresponding receivable to be extinguished upon dividend settlement.”

Interested parties request clarification on the use of the term “qualifying” preferred stock as the term is not defined within the issue paper or within the new glossary of terms. If the inclusion of the word “qualifying” was unintentional, interested parties recommend deleting the word from paragraph 14 to avoid confusion.

Ref #2019-08: Update Reporting Deposit-Type Contracts

The Working Group exposed this agenda item to: 1) request feedback on the inclusion of a footnote excerpt for Exhibit 5 to disclose cases when a mortality risk is no longer present or a significant factor – i.e., due to a policyholder electing a payout benefit, 2) request feedback on circumstances where a morbidity risk is no longer present or a significant factor for Exhibit 6 items and whether a similar footnote disclosure would be appropriate, and 3) requested industry and regulator input for instruction clarifications regarding the classifications of deposit-type contracts captured in Exhibit 7. With this exposure, there are no proposed edits for statutory accounting. The Working Group directed NAIC staff to notify the Financial Stability (Ex) Task Force of this exposure.

Interested parties support the proposed Exhibit 5 footnote which, among other things, would provide clarification on contracts where a mortality risk is no longer present or a significant factor.

With respect to the implementation of additional disclosures for Exhibit 6, interested parties believe that the current product disaggregation in Exhibit 6 is sufficient to analyze the risks present in the subject contracts, and would suggest no changes.

Interested parties have no additional clarifications for Exhibit 7 instructions – we believe the current instructions are sufficiently clear for deposit type contracts.
Ref #2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting, a Consensus of the FASB Emerging Issues Task Force

The Working Group adopted, as final, a clarification edit to SSAP No. 68—Business Combinations and Goodwill to clarify that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation. (With adoption of this edit, paragraph 9 was split into two separate paragraphs with the additional wording shown below.) The remainder of this agenda item was re-exposed to allow additional time for specific examples of pushdown accounting to be provided by interested parties, as well as consider comments received on pushdown.

9. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance and goodwill resulting from the acquisition of an SCA by the insurance reporting entity that is reported on the SCA’s financial statements (resulting from the application of pushdown accounting), is limited in the aggregate to 10% of the acquiring entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. Additionally, all positive goodwill shall be nonadmitted when the underlying investment in the SCA or partnership, joint venture and limited liability company is nonadmitted. When negative goodwill exists, it shall be recorded as a contra-asset.

Interested parties is working on developing examples to illustrate the various ways in which goodwill can be generated and suggested approaches to how the statutory limitations could be applied. As a result of these efforts, we request an extension for this and the following item.

Ref #2019-14: Attribution of Goodwill

The Working Group re-exposed this agenda item to clarify that the “assignment” of goodwill is a disclosure element. The Working Group directed NAIC staff to prepare revisions to the Sub 1 Acquisition Overview template to capture this information for new SCA acquisitions.

Please see the comments on the preceding item.

Ref #2019-20: Rolling Short-Term Investments

The Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as shown in the “Proposed Revisions for Fall 2019 Discussion” to incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments to prevent the “rolling” of certain investments. Fall revisions to the prior Summer National
Meeting exposure incorporate guidance to exclude qualifying cash pools from the short-term rolling provisions.

With the Fall exposure, comments were requested from regulators and industry representatives on whether other investments should be included / excluded from the short-term rolling provisions. In particular, comments are requested on whether short-term lending (both collateral loans and affiliated loans) should be permitted to be continuously rolled/renewed as short-term, whether non-affiliated SSAP No. 26R investments should be subject to the short-term rolling restrictions, and whether an assessment of “re-underwriting” could be used as support to allow the rolling of short-term investments.

Interested parties appreciate the staff’s exclusion of qualifying cash pools from the provisions of the short-term rolling re-exposure. There remain two types of short-term lending arrangements within the scope of the re-exposure that should be addressed separately. We respectfully request that the Working Group give consideration to the broader implications discussed below prior to moving forward with this proposal. Specifically, it might be advantageous to split the exposure into two work streams – one for affiliated investments and another for unaffiliated investments.

**Non-affiliate Short-Term Lending**

In the case of non-affiliated loans (i.e., Schedule BA Other Invested Assets), in order to provide appropriate flexibility to both the lender and the borrower, a loan facility may be structured as a short-term obligation. Such short-term obligations permit an insurer to more efficiently deploy its capital and streamline its underwriting process. Specifically, short term, non-affiliated loans: (a) provide the insurer with the ability to review and consider credit and collateral on a regular basis, (b) allow the insurer to reevaluate each investment at maturity and make new investments based on current market conditions if desired, and (c) allow the insurer to consider a renewal with an existing base of knowledge about the borrower and collateral, making the underwriting process more streamlined and allowing for better informed credit decisions. As with any investment, diligent underwriting of the borrower and the collateral, and structuring of the investment with appropriate safeguards is critical and should not deviate from standards used for longer-term investments. These facilities fill a market need for borrowers that require short-term or warehouse-type financings on assets prior to reaching the window for securitization and provide the insurer with attractive risk-adjusted returns relative to other short-term investments.

In this context, interested parties propose that all non-affiliated short-term obligations, obligations in scope of either SSAP No. 26 or SSAP No. 43R, where the counterparty is not an affiliate or related party of the reporting entity, including collateral loans, which meet certain objective criteria should be defined, reported, and monitored in the existing Schedule DA as a non-affiliated short-term investment. In order for a non-affiliated transaction to qualify as short term for reporting purposes, such investment must include the following features:

1) The loan includes a maturity date less than one year from closing at which the borrower has an unconditional repayment obligation and on which the lender has a reasonable expectation that the investment can be terminated and repaid if so desired by the insurer; and
2) Any subsequent renewal is only completed in the sole discretion of BOTH the borrower and the lender.

Given that the transaction is between unaffiliated counterparties, interested parties believe the terms of these transactions, including the interest rate and advance rate, are on arms’ length terms.

Finally, with no obligation at any time to renew a transaction, the reporting entity is required to re-evaluate and re-underwrite the transaction at maturity. If any of the relevant underwriting criteria have changed, the insurer can require repayment or can request adjustments to the terms and conditions to conform to market conditions. If, but only if, both the borrower and lender agree to renew the transaction on the same or adjusted terms, the transaction may be renewed. This process, however, requires an independent credit decision and results in a new transaction.

Interested parties acknowledges the NAIC staff’s concern about the ability of auditors and regulators to discern between renewals that have been re-underwritten and those that have not; however, without an appreciation for the nuanced economic differences of these transactions, interested parties have concerns about unintended consequences of the re-exposure. Consider a transaction in which an entity purchases a GNMA with less than a one-year maturity, which was classified as a short-term investment or cash equivalent and matures/is settled as expected. Shortly after, that entity decides to purchase another GNMA with less than a one-year maturity. As proposed, the guidance precludes short-term investment or cash equivalent reporting for reacquired investments (or substantially similar investments) when purchased within one year from the initial investment. Without further clarification regarding substantially similar investments, or alternative objective criteria like those proposed above, we anticipate that diversity in practice could result. Additionally, regarding the example described, operationally burdensome tracking requirements would be required for entities to ensure appropriate reporting.

Therefore, we believe that unaffiliated SSAP No. 26 investments should be excluded from the scope of this exposure for the reasons discussed above. The scope of this exposure should also continue to exclude other unaffiliated SSAP No. 26 investments such as treasury bills, commercial paper, certificates of deposits and other similar short-term investments since such investments are used for short-term liquidity and do not have long-term investment risk.

**Affiliate Short-Term Lending**

Interested parties believe that the same principles discussed above and in our previous letter apply to affiliated short-term investments to merit continued classification as short term in nature, even when a subsequent short-term investment is re-underwritten to the same borrower within a year. We believe there is already sufficient regulatory oversight on the fundamental objectives, usage and risks of material affiliated transactions to validate the alignment of these vehicles with the fundamental characteristics implied by the statutory short-term investment classification. In this case, prudently managed, governed and executed liquidity optimization across an insurance holding company system can be observed with the current regulatory oversight mechanisms. While re-underwriting may be warranted based on liquidity needs, the risk profile continues to be commensurate with that of short-term investments.
NAIC Guidance should not supersede regulatory oversight. The domiciliary commissioners already have authority to disapprove of material affiliated transactions as deemed necessary. The NAIC Model Holding Company Act (the “Act”), which has been broadly incorporated into state laws, requires filing and domiciliary commissioner approval of affiliated transactions over certain materiality thresholds. As the Act was promulgated by the NAIC, interested parties believe that through use of the Act, commissioners put in place filing and approval requirements they deemed satisfactory to address their regulatory needs. Through these filings, state regulators have oversight over both the risk elements considered and the methodology utilized by companies in underwriting each material extension of credit within the holding company system. It would run counter to state authority to implement requirements resulting in NAIC guidance that would effectively supersede the authority of domiciliary commissioners or cast doubt, even implicitly, upon states’ ability to appropriately regulate the domiciled insurers with which they are intimately familiar. Principally, the Act allows regulators to verify the appropriateness of the short-term classification of material affiliated investments, providing oversight to ensure consistency in classification between affiliated and unaffiliated short-term investments.

Prudent and appropriately governed liquidity management within a holding company structure enhances insurance company solvency. Appropriately managed, governed and regulator-approved affiliate lending programs create opportunities for liquidity optimization across a holding company system, essentially sharing objectives similar to that of affiliated liquidity pools. This management is necessary due to diversification of product offerings as timing of cash receipts and disbursements will vary across such products and different entities within a holding company system. The ability to prudently draw upon excess liquidity surplus within one entity at a time when another entity has a short-term need for liquidity serves as an immediate buffer against uneconomic alternatives such as forced asset sales or relatively costly external short-term financing. If adopted as written, the exposed guidance could result in entities foregoing this powerful in-house liquidity tool, which enables companies within a holding company system to more effectively manage inherent cash flow timing mismatches, and instead resort to alternatives that would result in an unnecessary drain on capital available to support policyholder obligations.

SSAP 43R—Loan-backed and Structured Securities

Investments in the scope of SSAP 43R, Loan-backed and Structured Securities, have payments that are driven by underlying collateral with modifications that are driven by the performance of the underlying assets and typically overseen by a collateral manager or otherwise laid out in deal documents. In many cases, these instruments also have clean-up call provisions that would remove the investment from the market while the remaining underlying collateral may be repackaged into a re-securitization. The concept of rolling a short-term investment that would be in the scope of SSAP 43R is often-times outside the control of investors in these instruments and possibly part of the normal life cycle of a small portion of the underlying collateral. Because of these characteristics, the interested parties propose that any non-affiliated investment that would qualify within SSAP 43R—Loan-backed and Structured Securities be exempt from the proposed new concepts like what is proposed for non-affiliated investment that would qualify within SSAP 26R—Bonds. Further consideration of affiliated investments that fall within SSAP 43R is recommended, given the underlying assets drive these investments and the other considerations for affiliate short-term lending outlined previously in this response.
Interested parties respectfully requests that the Working Group give consideration to these broader implications prior to moving forward with this proposal. If the Working Group has lingering concerns or appetite for additional elaboration as to the character and traditional efficacy of existing regulatory oversight mechanisms, interested parties would request that staff work with industry to draft materials for future dialogue and examination of this topic.

**Ref #2019-24: Levelized and Persistency Commission**

The Working Group exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, to include additional NAIC staff modifications regarding persistency commission and levelized commission arrangements to address certain comments received and to allow for further discussion. With this exposure, the Working Group directed a notification of the exposure to be sent to the Life Actuarial (A) Task Force.

Interested parties appreciate staff’s availability to discuss the proposed revisions. Based on that discussion and the discussion at the Fall Meeting, interested parties propose suggested edits that we believe achieve the goal of a nonsubstantive change and clarify the original intent of SSAP 71. (Note: the *NAIC Accounting Practices and Procedures Manual-Life* which was in force prior to the effective date of current SAP includes the same wording as current SSAP No. 71). The suggested edits add a clear definition of a funding agreement. This will clarify the distinction between funding agreements and persistency-based commissions, without unintentionally changing the existing accounting. We welcome the opportunity to discuss the suggested edits further with the Working Group.

The Working Group exposed substantive revisions to *SSAP No. 105—Working Capital Finance Investments* (SSAP No. 105) to incorporate industry revisions to program requirements, as previously directed by the Working Group during the Summer National Meeting. The Working Group directed NAIC staff to prepare an issue paper.

In 2016, the American Council of Life Insurers (ACLI) advised the NAIC that the implementation of SSAP No. 105 was not successful and that adoption had been low. ACLI began a dialogue with staff and regulators about both the shortcomings of the 2013 adopted rules and outlined required changes to make the rules suitable. As part of that process, ACLI marked up both the SSAP and NAIC SVO Purposes and Procedures Manual (P&P Manual) with the suggested changes which have subsequently been characterized as "10 required items", which staff have in turn opined on, and noted that four of the items are not supported by staff. Absent all 10 required items, WCFI adoption will remain low. Staff have noted an immaterial number of programs have been filed with only a subset of those approved, resulting in limited investments made. The existing Exposure provided to staff and regulators by ACLI and was utilized by staff to produce the current proposal, without addressing the proposed language by ACLI on the four required items not supported by staff.

Objections to the four required changes are:

1) evaluating non-rated subsidiaries of obligors (even though the existing SSAP already provides guidance to do).
2) expanding covered investment credit quality to include NAIC 3 and 4 investments, 
3) requiring domiciliary regulator authorization for investment, and 
4) requiring reporting on Schedule BA even though the asset class qualifies for look through RBC treatment.

In the ACLI draft provided to the NAIC, ACLI proposed an evaluation mechanism that is suitable for NAIC implementation on un-rated subsidiaries. With regard to NAIC objection on lower rated investments, such position is inexplicable as statutory RBC requirements reflect investment quality decisions in capital calculations limiting Industry investments to compliant assets. Domiciliary regulator prior approval for investment is a transfer of transaction review from staff to state insurance departments when, if regulators are concerned about the asset class, they can uniformly limit investment as a whole. Finally, Schedule BA reporting is both cumbersome and expensive for industry further exacerbating adoption without useful purpose. Regulators can track any specific asset class or investment by requiring the use of a specific investment code on the appropriate accounting schedule, which in the case of WCFI is Schedule DA).

Interested parties note that private placements, as opposed to public investments, are typically available only to large industry participants and that the economic impact of a $10,000 industry filing fee per issue per filing entity has an operating impact on a $1,000,000 investment in WCFI, which for the avoidance of doubt would be sizable for most industry investors, of 1% of the investment income in year 1 of that investment. Current investment yields for NAIC 1 and 2 investments in WCFI offer gross returns of 2 – 2.5%. Such a high cost to a small industry investor, coupled with the fact that dealers would unlikely choose to document such investments bilaterally with small industry investors, limits access to the assets to large industry investors. In summary, interested parties request that regulators re-consider ACLI markup with the additional four requirements as originally submitted by ACLI and ultimately, after appropriate exposure and review, to direct staff to implement these changes.

Ref #2019-32: Look-Through with Multiple Holding Companies

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, to clarify that a more-than-one holding company structure is permitted as a look-through if each of the holding companies within the structure complies with the requirements in SSAP No. 97.

Interested parties have no comment on this item.

Ref #2019-33: SSAP No. 25 – Disclosures

The Working Group moved this agenda item to the active listing and exposed the proposed data-capture templates. This exposure does not propose revisions to SSAP No. 25.

Interested parties believe that clarifications to paragraph 20 of SSAP No. 25 are necessary. We believe that the aggregation of similar transactions may result in immaterial transactions becoming material, meeting the threshold of 1/2 of 1% of the total admitted assets of the reporting entity. Therefore, we propose the edits highlighted below to ensure that aggregation occurs subsequent to the application of the criteria in paragraph 20.b. for materially identified transactions.
Proposed Edits to the exposure

Disclosures

20. The financial statements shall include disclosures of all material related-party transactions. In some cases, aggregation of similar transactions, that on a stand-alone basis are not material, may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm’s-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. **The nature of the relationships involved:**
b. **A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements.** Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

Ref #2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities

The Working Group Staff exposed revisions to SSAP No. 25—Affiliates and Other Related Parties. Key elements for discussion in the exposure draft are to:

- Clarify the identification of related parties and ensure that any related party identified under U.S. generally accepted accounting principles (GAAP) or Securities Exchange Commission (SEC) reporting requirements would be considered a related party under statutory accounting principles (SAP).

- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.

- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.

- Incorporate a new disclosure of known non-arm’s-length transactions with any entity not identified as a related party.

- Propose rejection of several U.S. GAAP standards addressing variable interest entities.

Interested parties understand and agree with the need for transparency in disclosures of related party transactions. However, we have significant concerns with the proposal as it is not very clear based on
the proposed changes to SSAP No. 25 what it is that will be required going forward based on the expansion of the definition of a related party. We include some of our observations below.

Interested parties would like clarity around the new proposed wording that states that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. One of our concerns in this area relates to limited partnership/joint ventures/limited liability company (LPs/JVs/LLCs) investments where the insurer owns more than 10% of the equity of the investee but has no affiliation to the investee’s general partner/asset manager. SSAP No. 97 currently includes a possible scope exception in paragraph 6 for these types of investments so that they are not considered affiliated or controlled investees of the insurer. It is not clear from the proposal what the expected impact is from now having to consider all investments in unaffiliated LPs/JVs/LLCs where the insurer owns more than 10% of the equity but has no other affiliation, as related parties. If the intent is just to have insurers disclose material transactions with these entities other than the equity investment held in each entity, we believe that this needs to be more clearly stated in the proposal so that there is no misrepresentation of what needs to be disclosed or whether these investments need to be reported in a different section of Schedule BA (i.e., affiliated vs. non-affiliated).

Another, but similar concern relates to certain entities consolidated under U.S. GAAP based on the Variable Interest Entity (VIEs) guidance. For some of these consolidated VIEs, the insurer has no control or affiliation with the VIE other than its debt investment in the entity. The insurer is simply a passive investor in the structure. However, under the VIE rules, the insurer must consolidate the entity as the insurer may be able to make decisions for the VIE if there is ever an event of default of the assets at some point in the future. These rights are given to certain classes of bonds issued by the securitization as a protection to the investors, but do not give the investors any type of power or control over the VIE at inception or on a day-to-day basis. It is important to note that consolidation rules under FASB Codification Topic 810 are very complex with some insurers concluding consolidation is required under a set of facts and circumstances and others concluding consolidation is not required under the same set of facts and circumstances. In the example just shared, some insurers have concluded consolidation is required because when no day-to-day decisions are being made for the VIE, decisions upon the occurrence of a certain event which may be unlikely to occur, rise to the point where they are the decisions that have the most significant impact on the economic results of the VIE. We believe that even though insurers have to consolidate these entities, there is no true related party affiliation. The proposal requires that any entity identified as a related party under U.S. GAAP will also be considered a related party for statutory reporting. Since these entities are consolidated for GAAP, the presumption would be that they are a related party of the insurer. If these entities will be considered related parties on a statutory basis going forward, the exposure needs to clarify that the inclusion of these types of entities only impacts related party disclosures for any material transactions held with these entities other than the debt investment held by the insurer in the VIE and that the debt instrument is still reported on Schedule D as unaffiliated.

Interested parties also have concerns with SSAP No. 25 including references to U.S. GAAP and SEC reporting for mutual insurers that do not prepare U.S. GAAP financial statements and do not file with the SEC. Therefore, interested parties recommend that the specific guidance from the GAAP and SEC be stated in SSAP No. 25 (rather than incorporated by reference) so that any future changes in GAAP and SEC guidance are subject to NAIC review prior to being applicable. Also, it is important to note that even when an entity is considered a related party under U.S. GAAP, disclosure of that relationship is
only required when there are material transactions with that party. U.S. GAAP allows reporting entities to evaluate the significance of a relationship and determine when disclosure of that relationship is material/significant enough for disclosure to a user of the financial statements. As a result, we suggest this be clarified in the exposure as well so that it is clear that the reference to related parties under GAAP and SEC rules is only relevant if the insurer has material transactions with such parties outside of the insurer’s investment in the entity.

Ref #2019-35: Update Withdrawal Disclosures

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance, as illustrated in the staff recommendation, to:

- Add a consistency revision to SSAP No. 51R to ensure separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures;
- Correct an identified inconsistency in one of the new disclosures that was added regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%. A clarification is being recommended to ensure consistency in annual statement reporting; and
- Add a cross-reference from SSAP No. 56 to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R as the disclosure include separate account products.

Interested parties have no comment on this item.

Ref #2019-36: Expand MGA and TPA Disclosures

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—Life Contracts, paragraph 50, SSAP No. 53—Property Casualty Contracts—Premiums, paragraph 19, SSAP No. 54R—Individual and Group Accident and Health Contracts, paragraph 33 and SSAP No. 59—Credit Life and Accident and Health Insurance Contracts, paragraph 19, as illustrated in the staff recommendation above, to expand the MGA/TPA note as follows:

- Aggregate direct written premium and total premium written by MGA/TPA;
- Aggregate dollar amount of claims process / total claims processed by MGA/TPA; and
- Information on related party / affiliate status and if the MGA/TPA is independently audited and / or bonded.

Interested parties note that the proposal does not define a TPA. It just states that TPAs “that write direct policies or provide claims adjusting or other services”. That is overly broad and could include a variety of entities that provide services. The NAIC model (NAIC Third Party Administrator Act, or NAIC model) guidelines define TPAs as it relates to life/health and workers compensation. Also, the NAIC model definition has a long list of activities that are excluded from the definition, such as self-insured employers administering its own workers’ compensation, insurers administering coverage, producers
engaged in selling insurance, attorneys handling claims, MGAs, etc. We recommend that the proposed disclosure reference the NAIC model so that there is consistency in the definition used in applying the guidance.

Additionally, it is unclear how the reporting threshold should be applied. The reporting applies to TPAs if “the claims adjusting services are greater than 5% of annual average claims volume”. Is that threshold based on the amount of claim dollars paid or the number of claims handled? Is that measured across all lines of business for the company? Would claims paid within insureds’ deductibles/SIRs be included? Depending on how this is defined, it could be quite burdensome for insurers to monitor. We recommend that the threshold be based on written premium, consistent with how other thresholds have been applied.

**Ref #2019-37: Surplus Notes – Enhanced Disclosures**

During the 2018 Spring National Meeting, the Working Group exposed revisions to *SSAP No. 41R – Surplus Notes* (“SSAP No. 41R”) to indicate that surplus notes, where the proceeds from the issuance of the surplus note were used to purchase an asset directly or indirectly from the holder of the surplus note, are not subordinate and do not qualify for reporting as surplus and should be classified as debt. Furthermore, the exposure draft stated that these assets were not considered available for policyholder claims and should be non-admitted. The exposure was the result of a referral from a Subgroup of the Reinsurance Task Force that was more narrowly focused on whether specific securities could be considered Primary Securities.

At the 2019 Summer National Meeting, the Working Group agreed to have an industry data call, due by December 31, 2019, to determine what financing structures existed that utilized the types of surplus notes described above.

At the 2019 Fall National Meeting, the Working Group exposed additional disclosures that should be captured in *SSAP No. 41R*. The Working Group does intend, later in 2020, to continue discussions on how to treat surplus notes where an associated asset is received by the surplus note issuer. This discussion will occur after a review and analysis of the data call.

**General Comments**

Interested parties understand regulators’ concerns that the details of certain transactions involving surplus notes may not be transparent to regulators who were not involved in the initial approval or ongoing review of such transactions. However, these transactions and the related pricing represent confidential information that we believe is inappropriate for public disclosure and may be misleading if presented in the proposed format.

Our concerns with the proposed disclosures are outlined in detail below, followed by our suggested revisions.

*The proposed disclosures may not provide the desired transparency or consistency*
Throughout the discussion on any potential revisions to SSAP No. 41R over the past twenty-two months, interested parties have agreed that robust disclosures should be added to SSAP No. 41R to fully reflect situations where a reporting entity receiving proceeds from the issuance of surplus notes used those proceeds to purchase an asset directly or indirectly from the holder of the surplus note. However, we also believe that these disclosures should be included in the financial statements of a ceding company, which would provide a much greater level of transparency and consistency in disclosure. We believe that in most situations where a surplus note issuer uses proceeds from the issuance to purchase an asset directly or indirectly from the holder of the surplus note, the surplus note issuer is an affiliated captive reinsurer. As some captive financial statements are not provided to the NAIC, we believe disclosure in the financial statements of the ceding company would provide a much greater level of transparency and consistency in disclosure for these transactions. Our proposed revisions include suggested language for this disclosure requirement.

The proposed disclosure goes beyond the stated regulatory concern and requires additional information that may be incorrectly interpreted.

We believe that the proposed disclosure departs from the original regulatory concern expressed in the public meetings of the Working Group, namely that a reporting entity should not be permitted to circumvent regulatory authority as it relates to the preservation of capital at a regulated entity by contractually linking the cash outflows associated with a surplus note to cash inflows from another financial instrument held by the surplus note issuer. However, rather than identify such transactions, the proposed disclosure would require detailed information about surplus note interest regardless of whether cash flows are contractually linked. We are concerned that the operational burden of compiling this information for all surplus notes with netting provisions exceeds the benefit to regulators of providing information on the few transactions of concern.

Interested parties note that the scope of the proposed disclosure is substantially identical to that of the recent surplus note data call issued by the NAIC. The stated intent of this data call was to obtain information on surplus note transactions without regard to whether offsetting of cash flows was due to: a) contractual linkage or b) administrative offset provisions. While we agree that this scope was appropriate to assess the universe of affected transactions, we do not believe it is the appropriate scope for an Annual Statement disclosure and could be misleading in certain cases as outlined below.

The proposed disclosure includes confidential information that is not appropriate for public filings.

The proposal would require the disclosure of surplus note interest paid, net of any payments made by the surplus note holder. As a practical matter, for many captive structures, this amount often corresponds to the fees paid to the financing provider(s) to provide liquidity in the event of adverse experience or other conditions with respect to the subject policies, as defined in the applicable agreement.

The pricing and terms of the subject transactions were heavily vetted, negotiated, and submitted to state regulators for approval with the reasonable understanding that this information was subject to robust confidentiality protections. We do not object to this information being made available to regulators in the context of a confidential data call or regulator communication. However, we are concerned with its
inclusion in public filings. The primary focus should be on whether the surplus note issuer is statutorily solvent rather than its surplus note pricing terms.

The net presentation of interest paid could be misleading for some transactions

We also believe that the change to the current disclosure to replace surplus note interest paid with interest paid net of amounts offset is problematic. We believe this disclosure could be misleading for many of the transactions in the scope of the disclosure, given that the full amount of surplus note interest paid was/would be due regardless of whether a portion is offset pursuant to an administrative netting arrangement.

Proposed Revisions

Interested parties recommend revisions to the proposed disclosures which would provide regulators who are not involved in the approval and ongoing review of a surplus note transaction with information to assess the nature of the transaction and to determine whether more detailed review is needed. Specifically, our revisions would require disclosure of whether cash flows are offset but would differentiate between administrative offsetting and the contractual “linkage” that is of concern to regulators. These revisions would also remove information that we believe is confidential in nature and would not be appropriate for public disclosure. Finally, we have proposed several additions to the required disclosures, which we believe would provide useful information about transactions involving surplus notes.

Our suggested revisions to the disclosures are included in Exhibit A and summarized below. For ease of review, revisions proposed by NAIC staff have been accepted, and interested parties’ comments are presented as tracked changes.

Summary of Proposed Revisions

- Expand the disclosure requirement to the financial statements of the ceding company as well as the surplus note issuer.
- Retain the current disclosure of total interest paid (gross of any administrative or other netting)
- Replace quantitative disclosure of “interest remitted” and “cost of liquidity” with three Y/N disclosure columns which correspond to the criteria used in the data call scoping:
  1. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus notes and amounts receivable under other agreements contractually linked? (For example, the asset provides interest payments only when the surplus note provides interest payments.)
  2. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity, of the agreement. (This may be referred to as administrative offsetting.)?
3. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note?
   
   - Replace confidential information about 3rd party liquidity (e.g. maximum liquidity amount and cost of liquidity source) with a description of terms under which liquidity would be provided should a triggering event occur.
   - Add requirement for narrative disclosure of any related guarantees or support agreements.

Ref #2019-38: Financing Derivatives

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives, to clarify the reporting of derivatives with financing premiums. The reporting revisions propose allowing the present value of the derivative premium receivable (and payable) for financed derivatives to be factored into the counterparty risk assessment for life RBC. (If supported, RBC changes would be subsequently referred to the Capital Adequacy (E) Task Force for consideration.) Comments are also requested as to whether derivatives and related financing provisions that would generally not meet the SSAP No. 64—Offsetting and Netting of Assets and Liabilities right to offset criteria and if explicit guidance allowing offset should be considered.

Interested parties request the exposure be given an effective date of at least January 1, 2021. The exposure represents a significant change to how certain companies account for derivatives and must be implemented in our investment systems prior to adoption. Interested parties do not believe the assets and liabilities under this exposure meet the right to offset criteria in SSAP No. 64—Offsetting and Netting of Assets and Liabilities, because they originate within the same contract. Additionally, we believe the netting guidance outlined in paragraph 19c would be difficult to implement and recommend it be removed.

Ref #2019-39: Acceptable Collateral - Counterparty Exposure for Derivative Instruments

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives, to clarify that the fair value of collateral received or held, for derivative disclosure purposes, shall be reported net of collateral paid/pledged, in the event a counterparty has the legal right to offset against, as defined in SSAP No. 64—Offsetting and Netting of Assets and Liabilities. Minor updates to the applicable annual statement instructions were also proposed to be concurrently exposed.

Interested parties fully support the appropriate depiction within the statutory financial statements and schedules of the availability of insurance company assets to fulfill policyholder obligations, including consideration of a reporting entity’s access to and control over the assets and any contingencies pertaining to the attendant rights & benefits of ownership. We appreciate the opportunity to dialogue further on this matter and ensure the regulatory objective is achieved regarding both financial statement presentation and the risk-based assessment of capital.

The ability to make efficient use of derivative instruments as part of hedging transactions, income generation transactions and replication (synthetic asset) transactions, in accordance with SSAP No. 86 – Derivatives (“SSAP No. 86”), is a crucial component of insurers’ ability to effectively manage risk and prudently maintain yields in support of our ability to deliver on promises to our policy and contract holders.
holders. With broader federal regulation now driving a migration for many of the interest rate and credit derivatives insurers use to these ends towards the central clearinghouse or “cleared” space, the significance of appropriately depicting the specific economic substance and attendant risks associated with each of the various forms of collateral posted to central clearinghouses has never been greater.

Given this backdrop, our concerns with exposure 2019-39 are as follows:

1) The language in the proposal does not provide clear, consistent definition of scope or objective(s);
2) The exchange of initial margin on cleared trades represents a contingency distinct from that associated with the exchange of variation margin; and
3) The existing statutory accounting, reporting and risk-based capital models already appropriately depict the economic substance and inherent risk associated with the exchange of initial margin, and the proposed changes would result in inappropriate duplication of risk-based capital charges.

In terms of intended scope, the narrative commentary and proposed updates to existing guidance make it unclear as to whether the proposal aims to refine accounting & reporting guidance for:

- initial margin, variation margin, or both;
- bilateral (over-the-counter, “OTC”) trades, trades executed with central clearinghouses, or both;
- exchanges of cash collateral, non-cash collateral (e.g. securities) or both.

The summary introduction to the proposal appears to target a perceived issue with the Schedule DB-D, Section 1 reporting of initial margin exchanged with central clearinghouses. The narrative commentary provided does not identify specific concerns pertaining to the reporting of collateral associated with bilateral OTC trades or variation margin. However, the attendant proposed edits to SSAP No. 86 and the Blank Instructions for Schedule DB-D, Section 1 encompass collateral exchanges with both bilateral OTC counterparties and central clearinghouses…inherently scoping in both OTC and cleared trades as well as all forms of collateral (variation margin, initial margin and traditional margin on legacy bilateral OTC trades). In addition, the proposal makes no clear distinction between proposed updates regarding exchanges of cash collateral vs exchanges of non-cash collateral, often using the terms collectively and interchangeably, whereas the guidance within the AP&P Manual makes clear distinctions regarding their respective accounting and reporting - as they have distinct implications for users of statutory financial statements. The guidance for cash collateral exchanges under SSAP No. 103R – Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (“SSAP 103R”) paragraphs 19 & 20 is distinct from that of non-cash collateral exchanges, which is also further detailed in INT 01-31 – Assets Pledged as Collateral (“INT 01-31”). Anecdotally, though the SSAP No. 86 Appendix C guidance for the initial carrying value on futures paraphrased in the 2019-39 exposure commentary applies to exchange traded derivatives (which do not appear to be within the scope of this current exposure), it maintains conceptual symmetry with the distinct cash collateral guidance from SSAP No. 103R; classifying only cash postings of initial margin as a form of basis deposit necessitating distinct accounting and financial statement presentation. Additional clarification regarding both the perceived issue(s) and the objective(s) underlying the proposed updates is requested in order to ensure industry can assist in fully and appropriately addressing each underlying concern in light of the applicable regulatory objective(s).
The exchange of initial margin with central clearinghouses is clearly distinct in function from the exchange of variation margin. As referenced in the proposal, initial margin is a minimum amount of equity that must be provided to a clearinghouse to initiate a position. It effectively represents the deposit of chips required to play at the table (“table stakes”), and is required from both respective parties entering into the derivative transaction as protection for the clearinghouse against the potential that either respective party will not make good on its respective commitments (i.e., initial and continuing participation in the transaction and the associated exchanges of variation margin driven by the derivative price movements until expiry or novation) – leaving the clearinghouse exposed, as intermediary, to the remaining party. Once such a trade expires or is novated, assuming the respective party has made good on all its variation margin payments during the course of the trade being open, the asset(s) posted to the clearinghouse as initial margin is returned to that exiting party. In the instance that a party exiting the derivative transaction has not stayed current with its respective variation margin obligations, the clearinghouse will return the remaining value of the initial margin after settling up the unpaid variation margin obligations. As such, the contingencies associated with maintenance of exclusive control over the rights and benefits of asset ownership for an entity posting initial margin are primarily a function of the entity’s continuing involvement in the trade with the clearinghouse, which is distinct from the derivative price movement contingencies directly associated with variation margin.

Reporting entities often utilize non-cash collateral (e.g., US Treasuries) for posting as initial margin to clearinghouses, as the required initial margin value can be comparatively high (driven by risk adjusted trailing price volatility of the underlying derivative and overcollateralization conventions) but the reporting entity maintains the full rights & benefits of ownership over an already held yield generating asset – in many instances preferable to locking up a chunk of otherwise investible cash. The ability to maintain full control over the rights and benefits of ownership on this yield generating non-cash collateral posted (e.g., avoiding forced sales of the non-cash collateral to satisfy unfulfilled variation margin obligations) also incentivizes a reporting entity to remain current on variation margin obligations while the trade remains open.

Existing statutory accounting guidance (e.g., the previously referenced SSAP No. 103R and INT 01-31) already provides for appropriate classification, measurement and presentation of collateral posted as initial margin. In the much more likely instance that non-cash collateral has been posted to a clearinghouse as initial margin, the pledging insurer continues to record the pledged collateral as an admitted asset until they have committed a contract default that has not been cured. In the unlikely instance that the non-cash collateral has to be liquidated in order to satisfy unmet variation margin payment obligations associated with a trade being exited, any associated realized loss would be recognized and the reclassification of the remaining initial margin value due back from the clearing house will be recorded – likely as either cash or a receivable - in accordance with applicable statutory guidance. The Blanks instructions require that any such non-cash or cash collateral posted as initial margin be marked as such on the attendant investment schedule, identified at the specific asset level on Schedule DB-D Section 2 (complete with an identifier indicating that the posting represents initial margin) and summarized within Note 5 (Restricted Assets). As such, the availability of the assets to fulfill policyholder obligations, as well as identification at the specific asset level of the unique and specific contingencies associated with initial margin posting are already presented appropriately for the consideration of financial statement users. Altering the presentation of initial margin postings on the summary Schedule DB-D Section 1 would not augment a financial statement user’s understanding of the reporting entity’s solvency or financial condition, as the “net realizable margin” associated with the open derivative contracts is already appropriately presented – initial margin posted is not directly or
typically subject to the derivate price movement contingencies inherent in arriving at an appropriate “Exposure Net of Collateral” total on Schedule DB-D Section 1.

Equally as important, incorporation of initial margin posted into the “Exposure Net of Collateral” total on Schedule DB-D Section 1 would lead to inappropriate and misleading downstream consequences for a reporting entity’s Risk Based Capital calculation. Any collateral (whether non-cash or cash) posted as initial margin is already captured in the Life RBC formula on LR017 (Off Balance Sheet and Other Items), where all collateral postings are pulled directly from Schedule DB-D Section 2 and assessed RBC charges associated with the specific contingency of pledging of the assets to an external counterparty. Thus, netting initial margin postings into the “Exposure Net of Collateral” total on Schedule DB-D Section 1 would make the total derivative exposure (net of collateral) that flows through to LR012 in the Life RBC formula too high – inappropriately double counting the RBC charges associated with the posting of initial margin to a clearinghouse. In addition, the understatement of net realizable collateral (Fair Value of Acceptable Collateral) on Schedule DB-D Section 1 would also, in many instances, mechanically carry through to overstate the “Off Balance Sheet Exposure” reported on the same schedule – which would result in even further overstatement of RBC charges as this “Off Balance Sheet Exposure” flows through the Life RBC formula to be assessed charges on LR017. Doubling, and possibly tripling the RBC charges associated with the posting of initial margin to a central clearinghouse is not an appropriate depiction of true risk for such margin.

Given the ambiguities in the exposure language, the appropriate depiction of economic substance and inherent risk associated with exchanging initial margin within the existing statutory accounting, reporting and RBC frameworks, and the importance of maintaining insurers’ ability to utilize cleared derivatives to effectively manage risk and prudently support yields, we respectfully request that the Working Group withdraw the current proposal and direct NAIC Staff to collaborate with industry to specify and appropriately address any remaining concerns. We stand ready to work through any lingering misgivings the Working Group may have with regard to financial statement presentation but request that such endeavors be empirically grounded in specific observed instances of incomplete or inappropriate reporting.

Ref #2019–40: Reporting of Installment Fees and Expenses

The Working Group proposed revisions to SSAP No. 53 – Property and Casualty Contracts (SSAP No. 53) to clarify that the installment fee reporting guidance should be narrowly applied. Comments are also requested on whether guidance should be developed to allow expenses associated with installment fees to be reported as a contra revenue in “aggregate write-ins for miscellaneous income” and whether diversity should be permitted in reporting installment fee expenses. Additionally, the Casualty Actuarial (C) Task Force and Property and Casualty Risk Based (E) Working Group will be notified of this exposure.

With regard to the proposed change to emphasize that current guidance in SSAP No. 53 should be interpreted narrowly, interested parties recommend the following revision to the last sentence of the proposed wording in the footnote to SSAP No. 53 paragraph 6:
Clarification: Reporting of installment fees as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

Although interested parties did not survey companies, we believe the assertion by NAIC staff that expenses associated with installment fees are often immaterial is reasonable. We also believe that current reporting of the related installment fee expenses in other underwriting expenses is appropriate. For practical purposes, we do not see the benefit of isolating the expense related to processing the relatively small fee component of a premium billing for separate expense reporting purposes. We believe the reporting of expenses should be consistent and would not support the reporting of the related expenses as an “aggregate write-ins for miscellaneous income” or as a contra revenue to “finance and service charges not included in premiums.”

Ref #2019-41: Eliminating Financial Modeling Process

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 43R—Loan-backed and Structured Securities, to eliminate the multi-step financial modeling designation guidance in determining final NAIC designations for residential mortgage-backed securities (RMBS) / commercial mortgage-backed securities (CMBS) securities. Exposure was contingent upon the Valuation of Securities (E) Task Force’s concurrent exposure, which occurred on December 8, 2019. The Working Group noted that final action on this would not be taken until the Valuation of Securities (E) Task Force takes action on their related item.

Interested parties have no comment on this item at this time.

Ref #2019-42: Inclusion of Cash / Liquidity Pools - Cash Equivalents as defined in SSAP No. 2R

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to specify that cash pooling structures that meet specified criteria qualify as cash equivalents.

Interested parties appreciate that a separate Form A (Ref #2019-42) was written related to Cash/Liquidity Pools (“pools”) to clarify the accounting associated with them. We agree with the addition of a paragraph, similar to paragraph 8, to SSAP No. 2R to provide guidance related to pools; however, given that the characteristics of pools differ by company, we propose some modifications to paragraph 8 in order to address those varied characteristics.

Interested parties’ comments related to the proposed paragraph 8 are as follows:

1) Regarding the proposal to look through the ownership structure to report the assets held as cash equivalents, we agree that look through is appropriate. Some pools, as approved by regulators, consist of assets that meet the Statutory definition of cash equivalents and thus the interest held in the pools are reported as cash equivalents on Schedule E2. However, other pools, also approved by regulators, include assets that meet the definition of short-term investments in SSAP No. 2 and thus the interest held in the pools are reported as short-term investments on Schedule DA. Some pools may include both short-term investments and cash equivalents.
Given the varied characteristic discussed above, we recommend paragraph 8 be modified to state that, if the requirements of paragraph 8 are met, the reporting entity may look through the ownership structure and report the assets as either cash equivalents or short-term assets based on the predominant characteristic of the underlying assets. This would allow companies the flexibility to report their investments in the pools in the Statutory statement schedule that is more reflective of the type of underlying investments in their pool and prevent the need for companies to reclassify/change their existing reporting to Schedule E2 from DA if they currently report the pools in DA due to the underlying assets.

2) Regarding paragraph 8d (i.e., the requirement to produce annual U.S. GAAP audited report of the pools including schedules showing each affiliate’s prorata share of the investments), insurance companies already receive an independent audit under Statutory Accounting Principles (“SAP”), which would include the insurance company’s investment in a pool. Requiring cash pools to be separately audited under U.S. GAAP would come at a cost, in time and resources, to insurers with pools. In addition, some insurers have pools which are not in the form of legal entities.

An alternative to the U.S. GAAP audit requirement of paragraph 8d is to require a footnote disclosure at the reporting date for each insurer that participates in a pool, which identifies that the insurer is invested in a cash pool, provides the reporting entity’s share of the pool, and the insurers dollar share of cash equivalents and short-term investments in the pool. This disclosure would be subject to audit on an SAP basis of accounting. IPs believe the audit of the disclosure along with the audit of the insurance company would be adequate to meet the objectives of ensuring that the pool allocation process is accurate. Other alternatives include targeted financial examination procedures for pools, which could include procedures to confirm the balance of the pool and verify the individual legal entities’ balances for participating in the pool.

3) We note that the addition of the proposed pool language in SSAP No. 2 does not specifically address the reporting and accounting for the interests held in the pool. We recommend, if the pool is managed on a fair value basis (i.e., interest in the pool are bought and sold at fair value), that the book/adjusted carrying value for the interest held in the pool would be reported at fair value with changes in fair value reported in unrealized gains and losses. If the pool is not managed on a fair value basis, the interest held in the pool would be reported at amortized cost. It is important to note that pools managed on a fair value basis may use amortized cost as the best estimate of fair value, depending on the characteristics of the underlying assets.

Finally, in the issue paper, NAIC staff questioned whether changes to SSAP No. 48, Joint Ventures, Partnerships and Limited Liability Companies are needed, since many pools are held in a Limited Liability Company (“LLC”). Interested parties do not believe such changes are needed to SSAP No. 48; however, it would be helpful to users of the SSAPs to add a footnote to paragraph 8 of proposed SSAP No. 2R stating that pools may be held in LLCs, for example, and if so, SSAP No. 2 is to be applied and not SSAP No. 48.
Ref #2019-43: **ASU 2017-11 - Financial Instruments with Down Round Features**

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives to reject ASU 2017-11, *Earning Per Share, Distinguishing Liabilities from Equity, Derivatives & Hedging* and incorporate guidance into SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets and SSAP No. 72—Surplus and Quasi-Reorganizations for when certain freestanding instruments shall be recognized as liabilities and not equity.

Interested parties have no comment on this item.

Ref #2019-45: **ASU 2013-11, Presentation of an Unrecognized Tax Benefit**

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 101—*Income Taxes* to reject ASU 2013-11, *Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists* for statutory accounting.

Interested parties support adoption of this item but note that the following statement should be removed from the document as it is incorrect (see IFRC 23, *Uncertainty over Income Tax Treatments*):

**Convergence with International Financial Reporting Standards (IFRS):**

IFRS does not include specific guidance on the presentation of unrecognized tax benefits.

Ref #2019-46: **ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities**

The Working Group moved this agenda item to the active listing and exposed revisions to *Appendix D—Nonapplicable GAAP Pronouncements* to reject ASU 2016-14, *Presentation of Financial Statements of Not-for-Profit Entities* as not applicable to statutory accounting.

Interested parties have no comment on this item.

Ref #2019-47: **Grade in of Variable Annuity Reserves**

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—*Life Contracts* and SSAP No. 3—*Accounting Changes and Corrections of Errors*. The revisions add reference, disclosures and accounting for Section 21 of the *Valuation Manual*, Requirements for Principle-Based Reserves for Variable Annuities, and grade-in requirements for reporting changes in the valuation basis for years beginning January 1, 2020.

This exposure consists of several parts, some of which we agree with and others we find both confusing and unnecessary. We agree that documentation of the choices made among the options for phase-in in VM-21 and the impact of those choices is important. The exposed edits focus on the adoption of the new reserve requirements for variable annuities (revised VM-21 and AG-43). Information on those choices and impacts will be provided to regulators through the PBR Actuarial Memorandum required by VM-31. This includes highlighting the elements of any Phase-in in the executive summary of the PBR.
Actuarial Memorandum. Given the current requirements of SSAP3 and SSAP51, documentation in the notes to the Annual Statement is also appropriate.

In Recommendation #2, the proposal would require the amounts from the Phase-in to be designated as “special surplus”. We disagree with this recommendation for the following reasons:

- This is a new requirement whose need has not been established. Disclosure of the amounts will provide information necessary for users of the financial statements to understand the basis of the reported financials.
- SSAP72 defines Special Surplus as amounts designated for specific contingencies. Recommendation #2 would be a change to the definition and purpose of special surplus that is inappropriate and would create an undesirable precedent.

Finally, the proposed language is unnecessary, and possibly confusing. VM-21 defines the minimum reserve requirement. Within that requirement, the company has the option to compute the reserves using the Phase-in provision of Section 2.B. Whichever option is elected, VM-21 defines the reserve. SSAP51 defines the amount of the “Change in Basis” as the difference between the amount under the prior VM-21 and the amount required by the current VM-21 as of 1/1/2020. If the Phase-in has been elected, that difference will generally be zero. The change in basis amount as defined in SSAP51 paragraph 39 is not being graded in – it is what it is following the VM-21 reserve requirements as stated. As such, SSAP51 does not need to make provision for a grade in. We propose the attached language as being clearer in defining the amounts to be disclosed, to use language consistent with VM-21, and to recognize the role of VM-21 to define the reserve requirement.

Ref #2019-48: Disclosure Update for Reciprocal Jurisdiction Reinsurers

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 62R—Property and Casualty Reinsurance, to incorporate disclosure updates for reinsurers from Reciprocal Jurisdictions.

Interested parties have no comment on this item.

Ref #2019-49: Retroactive Reinsurance Exception

The Working Group moved this agenda item to the active listing with a request for comments on the preferred approaches to reporting and the advantages and disadvantages to each approach being used, including impacts on the Schedule P (and related loss analysis) and risk-based capital. Industry and state insurance regulator volunteers are requested to assist with developing guidance to clarify both the accounting and reporting for retroactive contracts which are accounted for prospectively. The Working Group directed NAIC staff to notify the Casualty Actuarial and Statistical (C) Task Force of the request for comments.

With regard to retroactive portfolio transfer deals within the same group that qualify for prospective treatment, interested parties identified the following issues related to reporting transactions in Schedule P.
Main Issues

- Should there be a requirement to have offsetting entries for the ceding and assuming entity within the group, such that the group Schedule P is not impacted (and industry Schedule P is not impacted)? (If so, then the ceding entity can’t record ceded amounts for prior AYs while the assuming company records assumed amounts all in the current CY/AY.)

- Should retroactive changes in previous premium amounts be allowed? (If no, and there is a desire to have both entities record the ceded/assumed in the affected older AYs, then the reinsurance premium would need to be treated as a paid loss – positive paid for the ceding entity and negative paid for the assuming entity.)

- Should the reporting prevent “cliffs” in the historic development reported in Schedule P. (If the cede transaction is reported as a premium and spreading to prior CYs, effectively changing prior values retroactively, then the prior incurred loss amounts in Schedule P, Part 2 would need to be adjusted to avoid a “cliff”.) Note that cliffs in Schedule P, Part 2 can have a material RBC impact with regard to the company experience adjustment.

Two Alternative Approaches

Interested parties identified two alternative approaches to recording intercompany, retroactive reinsurance:

- Record the reinsurance premium as a paid loss (positive paid for the cedant, negative for the assuming company), spreading the “premium” to the same AYs as the ceded losses. This avoids cliffs and avoids restating past CY Earned Premium, although it produces unusual results for the assuming company’s Schedule P.

- Record the reinsurance premium as premium, restating prior CY Earned Premium. Spread losses to the impacted AYs. This would create cliffs in Schedule P unless prior AYs are restated for the impact by AY of the reinsurance contract at inception.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell            Rose Albrizio
Disclosures

18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;
b. Description and fair value of the assets received;
c. Holder of the note or if public, the names of the underwriter and trustee, with identification on whether the holder of the surplus note is a related party per SSAP No. 25;
d. Original issue amount of note;
e. Carrying value of note;
f. The rate at which interest accrues;
g. Maturity dates or repayment schedules, if stated;
h. Unapproved interest and/or principal;
i. Life-to-date and current year approved interest and/or principal recognized;

j. Disclosure of whether the surplus note was issued as “paid” part of a transaction with identification any of the amount of approved following attributes:

i. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus notes and amounts receivable under other agreements contractually linked (For example, the asset provides interest and/or principal remitted payments only when the surplus note provides interest payments)?

ii. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity, of the agreement. (This may be referred to as administrative offsetting)?

iii. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note (actual transfer of cash / assets) and the amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash / assets)? If so, was the asset issuer a related party per SSAP 25?

k. Information regarding a 3rd party liquidity source including name, identification if a related party, cost of the liquidity guarantee, and maximum amount available should a triggering event occur.

l. Principal amount and fair value of assets received upon Surplus Note issuance, if applicable;

m. Subordination terms;

k. Liquidation preference to the reporting entity’s common and preferred shareholders;

n. The repayment conditions and restrictions;

o. Information about any guarantees, support agreements, or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements.

1 Interest and principal reported pursuant to 18.i include amounts offset by amounts receivable under other agreements, unless the reporting entity has a legal right of offset. Such offsetting arrangements shall be disclosed pursuant to paragraph 18.j.i through 18.j.iii
19. If a reporting entity has ceded business to a surplus note issuer that is not remitting actual cash or assets to a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria in 18. j above, the ceding entity shall provide a description of the transaction, including whether the criteria in 18. j. above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force. The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

20. If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note for approved interest or principal (as reported under paragraph 18.h), because the reporting entity is offsetting the amount owed under the surplus note with an amount receivable from a reported asset, the following information shall be disclosed regarding the offsetting asset received:

a. Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation.

b. Book/ adjusted carrying value of asset and interest income recognized in as of the current year.

c. Amount of principle return and interest income from the asset not received by the reporting entity as the amounts were offset with approved amounts owed by the reporting entity’s issued surplus note date.

d. A description of terms under which liquidity would be provided should a triggering event occur.

20.21. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

SSAP No. 51R:

Change In Valuation Basis

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

   a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.

   b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed, or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement or the Valuation Manual in section VM-21 Requirements for Principle Based Reserves for Variable Annuities (VM-21) prescribes a new method and a specific transition that allows for grading. If the grading permitted by this statement or Valuation Manual section VM-21 represents an increase in the reserve liabilities, the unrecognized change in valuation basis reserve increase shall initially be reflected as an allocation from unassigned funds to special surplus until fully recognized in reserving and unassigned funds. The reclassification from unassigned funds to special surplus does not reduce total surplus, but highlights the ungraded in amount for transparency as it represents an unrecognized adjustment (decrease) to total surplus. The allocation to special surplus is
reversed to unassigned funds as the grading of the increase in reserving is recognized as a decrease to total surplus. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements as of 1/1.[JB1] The changes remain subject to the disclosures prescribed in SSAP No. 3. Effective January 1, 2020, if the phase-in provision of the Valuation Manual section VM-21 (on variable annuities) is elected or this statement prescribes or permits a grading in period or provides the option of multiple grading periods, reporting entities shall also include in the change in accounting disclosures required by SSAP No. 3, disclosure of the following:

a. ______ the grade phase-in period being applied, and the remaining time period of the grade phase-in

b. ______ any adjustments to the grade phase-in period.

c. ______ The phase-in amount as defined in VM-21 of change in valuation basis grade in, which has been recognized in unassigned funds and

d. ______ the remaining amount to be graded phase-in amount (reflected in special surplus if the ungraded in amount represents an increase in reserving).

40. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. While the Valuation Manual is effective prospectively for policies written on or after the operative date, subsequent changes may be applied retroactively to all business issued since that operative date however, as the CARVM methodology was already principles based, some changes to the CARVM methodology in section VM-21 (on variable annuities) and to the related AG 43, which may result in retroactive application to the reserving for existing contracts. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.
Disclosures

Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material;

d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected grade phase-in or other optional application features defined in the Valuation Manual, shall also include in the change in accounting disclosures information regarding the application of any grade phase-in as provided for in SSAP No. 51R, and

e. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.

SSAP No. 3—Accounting Changes and Corrections of Errors

Disclosures

Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material;

d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected grade phase-in or other optional application features defined in the Valuation Manual, shall also include in the change in accounting disclosures information regarding the application of any grade phase-in as provided for in SSAP No. 51R, and

e. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment During the NAIC Winter National Meeting with Comments due January 31 Regarding Goodwill

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts regarding the recognition of goodwill for statutory accounting that was released for comment by the Statutory Accounting Principles (E) Working Group (the “Working Group”), during the NAIC Fall National Meeting in Austin.

Interested parties note that in October 2018, the FASB decided to add to its technical agenda a broad project to revisit the subsequent accounting for goodwill. In 2019, the FASB issued an Invitation to Comment, *Identifiable Intangible Assets and Subsequent Accounting for Goodwill*, and held public roundtable meetings to discuss the topics included in the Invitation to Comment. The FASB is still in the initial deliberations phase of this project. Given the broad scope of the FASB project and the potential for changes to the current GAAP goodwill accounting model, interested parties recommend that any changes to statutory accounting that impact the accounting for goodwill be limited in their nature in recognition that the Working Group will need to consider the applicability of the changes to GAAP accounting for goodwill once the FASB completes the project.

We offer the following comments to the exposure drafts released for comment by the Working Group:

**Ref #2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting, a Consensus of the FASB Emerging Issues Task Force**

The Working Group adopted, as final, a clarification edit to *SSAP No. 68—Business Combinations and Goodwill* to clarify that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation. (With adoption of this edit, paragraph 9 was split into two separate paragraphs.) The remainder of this agenda item was re-exposed to allow additional time for specific examples of pushdown accounting to be...
provided by interested parties, as well as consider comments received on pushdown accounting.

Interested parties recommend that paragraph 5 of SSAP No. 68 be revised further as marked below to clarify the appropriate valuation that should be used for an acquired entity:

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity's share of the GAAP net book value of the acquired entity, adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. The GAAP net book value of the acquired entity used in this determination shall reflect the acquisition-date fair values of identifiable assets acquired and liabilities assumed, and goodwill, as recognized in the post pushdown GAAP financial statements of the acquired entity, if applicable. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer's share of the statutory book value of the acquired entity.

**Pushdown Accounting**

Interested parties note that the GAAP guidance in ASU 2014-17, which was adopted by the SEC in Staff Accounting Bulletin (SAB) 115, provides clear guidance that an acquired entity has the option to apply pushdown accounting in its separate financial statements upon the occurrence of an event in which an acquirer obtains control of the acquired entity. Under applicable GAAP guidance, control generally results when one entity obtains, either directly or indirectly, more than 50 percent of the outstanding voting shares of another entity. This differs from the definition of control under statutory guidance which uses a threshold of 10 percent or more of voting control. As such, under GAAP, there would not be a scenario where an entity would be controlled by multiple owners with 10% or more ownership of outstanding shares.

Whether a company chooses to apply pushdown accounting depends on the facts and circumstances of a particular transaction. In certain situations, pushdown is preferable to eliminate the basis difference between an acquirer and the acquired entity. In other situations, a company may prefer pushdown accounting to better reflect the actual values of the acquired assets and assumed liabilities based on the purchase price of the entity.

When the SEC required pushdown for SEC registrants, there was limited guidance for non-registrants under GAAP which resulted in some non-registrants also applying the SEC pushdown guidance. We believe retaining the optionality for statutory reporting allows for consistency and comparability across both SEC registrants and non-registrants and provides operational efficiency.

The option of not allowing subsequent elections for pushdown accounting is not practicable for SEC registrants that previously elected to use pushdown accounting. In order for such companies to discontinue use of pushdown accounting, a preferability letter would be required for a change in accounting policy to discontinue the use of pushdown accounting. Given that an election to discontinue
use of pushdown accounting is not likely preferable, the insurer would be in the position of having to continue using pushdown accounting in order to receive a clean audit opinion on the GAAP financial statements of the SCA. Additionally, while ASC 805, *Business Combinations*, allows the election to be made for each change in control event, acquirers that report consolidated results may as a practical matter choose pushdown accounting at the subsidiary level to avoid separately tracking assets, and liabilities at two different values in two different ledgers.

As noted in the examples below, and in accordance with the guidance adopted during the December 7, 2019 Working Group meeting, interested parties understand the guidance clarified that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation. Interested parties have summarized the interpretation of this clarification for an insurance entity’s acquisition of an 8.b.i (example 1), 8.b.ii (example 2a and 2b), 8.b.iii (example 3a and 3b) or 8.b.vi (example 2a and 2b) entity as follows:

<table>

</tbody>
</table>

* See further discussion below related to amortization

After evaluating the accounting for goodwill from the various entities described in paragraph 8.b, we concluded that the NAIC should continue to allow insurers to elect pushdown accounting for acquisitions of non-insurance entities (Option 2) for the following reasons:

1. Statutory goodwill, created when the insurer is the acquirer, is subject to an existing 10% admittance limitation as clarified in the changes adopted by the Working Group during the Fall National Meeting and demonstrated above; therefore, the resulting goodwill from pushdown accounting is subject to the statutory thresholds.

2. Pushdown accounting is consistent with GAAP, prior to ASU 2014-17, for SEC registrants and non-registrants that used pushdown accounting. As noted above, it is not practical to discontinue use of pushdown accounting as an insurer would need to continue the use of pushdown
accounting in order to obtain a clean audit opinion on the GAAP financial statements of the SCA.

3. It is important to maintain consistency with current GAAP. Under ASU 2014-17, pushdown accounting may be elected in a later reporting period, after the initial acquisition date. We understand that there may be concerns with electing pushdown at a later reporting period after goodwill was originally determined and reported at initial acquisition date. However, rather than disallowing a later election to apply pushdown accounting, which creates a variance to GAAP, we suggest this could be addressed through changes to SSAP No. 97 to ensure that goodwill is not subsequently increased for statutory reporting, in the event pushdown accounting is elected after the initial acquisition date.

4. The recommendations above would allow the continued use of audited GAAP equity as the statutory carrying value for all non-insurance entities for insurers that previously elected pushdown accounting (both SEC registrants and non-registrants). Additionally, the ability to elect pushdown accounting for future acquisitions retains GAAP equity as the statutory valuation basis for SCAs and avoids restrictions that can impact insurers’ ability to obtain an unqualified opinion on the stand-alone financial statements of SCAs.

If a restriction were placed on the use of pushdown accounting at a future date, those entities that have previously elected pushdown will be forced to separately track assets, and liabilities at two different values in two different ledgers as well as address the issue of making a change in accounting policy that may not have preferability.

As a separate point, we suggest changing the heading for Option 2 from “Permission to use pushdown for all non-insurance entities” to “Use of pushdown for all non-insurance entities”, as the term “permission” implies that use of pushdown accounting is a permitted practice under the statutory accounting framework.

**Amortization**

Interested parties reiterate the concern that the revisions from the adopted language (new SSAP No. 68 paragraph 10) would inadvertently require amortization of pushdown goodwill. While staff has noted that amortization may be the proper approach, interested parties believes as it relates to paragraph 8.b.iii entities acquired by an insurance entity where pushdown is applied, there has been diversity in practice.

Interested parties concur with the NAIC’s staff’s position described in the December 2019 Public Hearing Agenda materials:

“(As detailed in the earlier discussion, the minor edit being discussed only focuses on nonadmittance for insurer entity acquired SCAs that have been pushdown. The edit would not mandate amortization for those pushdown situations. The discussion on whether amortization should be required for those situations is proposed to occur after the next exposure.)”
Ref #2019-14: Attribution of Goodwill

The Working Group re-exposed this agenda item to clarify that the “assignment” of goodwill is a disclosure element. The Working Group directed NAIC staff to prepare revisions to the Sub 1 Acquisition Overview template to capture this information for new SCA acquisitions.

Recommended Action:

NAIC staff identifies that the comments received on the proposed disclosure enhancement under this agenda item are limited, but generally request additional time before adoption. NAIC staff believes the disclosure information requested under this agenda item will be necessary regardless of the decision involving pushdown accounting. As a reminder, the proposed disclosure only details the amount of goodwill recognized from the acquisition of a downstream holding company and the assignment of the goodwill to the entities owned by the holding company. This information is necessary in determining the amount of goodwill that would need to be nonadmitted, or derecognized, if an underlying company in the downstream holding company was nonadmitted or sold.

Interested parties note that the December 2019 Public Hearing Agenda materials state:

“It is important to highlight that the clarification edit proposed for adoption consideration is specific to insurance entity acquisitions of SCAs. As such, if an acquisition occurred downstream from the insurance company (by a non-insurance holding company), and the holding company applied pushdown accounting, so that the goodwill was reported at the holding company’s acquired SCA, the proposed edit would not require that push down goodwill to be brought up to the insurance entity’s level and included in the 10% limit.”

Requiring attribution would be onerous and misleading to the users of the financial statements, particularly if the disclosure included detailing GAAP goodwill that is not subject to the 10% limit. Interested parties do not believe it is necessary to “attribute” goodwill to downstream SCAs of downstream holding companies. We believe that any concerns about the carrying value of the downstream holding company being overstated because it did not push down GAAP goodwill to a downstream SCA that was subsequently sold is mitigated by the fact that GAAP already requires the attribution and derecognition of goodwill associated with the business or SCA that is sold. To layer in a statutory attribution of goodwill is not necessary, overly complex, and may distort the accounting impact of a sale of a downstream SCA.

Therefore, we recommend that the disclosure of GAAP goodwill attributed to downstream SCAs of downstream holding companies focus on actual GAAP goodwill that was pushed down to the

---

1 ASC 350-20-40, Intangibles – Goodwill and Other - Goodwill – Derecognition, paragraphs 1 and 2:

40-1: When a reporting unit is to be disposed of in its entirety, goodwill of that reporting unit shall be included in the carrying amount of the reporting unit in determining the gain or loss on disposal.

40-2: When a portion of a reporting unit that constitutes a business (see Section 805-10-55) or nonprofit activity is to be disposed of, goodwill associated with that business or nonprofit activity shall be included in the carrying amount of the business or nonprofit activity in determining the gain or loss on disposal.
downstream SCAs and any statutory goodwill that occurred when the insurer is the acquirer, subject to the existing 10% admittance limitation as illustrated and discussed in the examples above.

Dale Bruggeman, Chair
Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Re: Ref #2019-20, Rolling Short-Term Investments

Dear Mr. Bruggeman:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the Statutory Accounting Principles (E) Working Group’s exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities relating to rolling short-term investments. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

APCIA writes to highlight our support for the recommendations on this proposal provided in the comment letter of the “Interested Parties” coalition. APCIA and our members regularly participate in the Interested Parties’ discussions and drafting process.

SSAP No. 2R generally requires debt obligations with a maturity date of less than one year to be reported on Schedule DA. However, the proposed revisions to SSAP No. 2R would specify that any investment reported as a short-term obligation which was renewed or extended past its original maturity date would need to be reported as a long-term obligation, and a reporting entity would not be permitted to acquire the same or a substantially similar security within a 1-year time frame unless such security is reported as a long-term obligation. APCIA believes appropriate safeguards already exist, or could be put in place, to address the concerns underlying this proposal.

We support the recommendations of the Interested Parties in the context of both unaffiliated and affiliated short-term loans.

Unaffiliated short-term loans provide important flexibility and efficiencies for insurers. So long as the lender has a reasonable expectation that the investment can terminate and be repaid on the maturity date, and both the borrower and lender have the ability to reevaluate and renew the loan at maturity, we believe unaffiliated short-term loans are properly reported on Schedule DA as a short-term risk asset. As such, APCIA supports the objective criteria proposed by the Interested Parties for determining when an unaffiliated loan qualifies as short term:

1) The loan includes a maturity date less than one year from closing at which the borrower has an unconditional repayment obligation and on which the lender has a reasonable expectation that the investment can be terminated and repaid if so desired by the insurer; and
2) Any subsequent renewal is only completed in the sole discretion of both the borrower and the lender.

In the context of short-term loans between affiliates, the Model Holding Company Act already requires regulatory filing and approval of loans exceeding a materiality threshold. Further, as the Interested Parties’ letter also points out, loans between affiliates are an important mechanism for meeting short-term liquidity needs for an entity within a broader group. Given the importance of insurers being able to utilize loans from affiliates to meet short-term needs and the regulatory oversight of these transactions that already exists, APCIA agrees with Interested Parties that short-term loans between affiliates should continue to be classified as short term.
Thank you for considering our comments. If you have any questions or would like to discuss this further, please contact Steve Broadie at steve.broadie@apci.org or 847.553.3606.

Sincerely,

Stephen W. Broadie
Vice President, Financial & Counsel
Dale Bruggeman  
Chair of Statutory Accounting Principles (E) Working Group

We have reviewed the proposed changes to SSAP No. 71 – Policy Acquisition Costs and Commissions as outlined in Ref. #2019-24 as revised on December 7, 2019.

The most effective way to appreciate the unintended consequences of the proposal is to start with a basic understanding of a typical distribution structure. Reporting entities execute distribution agreements, including compensation structure, with distribution partners (IMO, BGA, TPM, MGA, BD, for example). These distribution partners recruit, contract, train, supervise, and compensate smaller organizations (agencies, selling groups, brokerages, etc.) and individual producers (agents, brokers, etc.).

SSAP No. 71 proscribes statutory accounting treatment for reporting entity compensation agreements entered for the sale, distribution, and servicing of policies. The revisions proposed in Exposure Draft 2019-24 (as revised December 7, 2019) focus on two areas: (1) levelized commissions or “trail” payments paid directly to distribution partners or individual producers by a reporting entity and (2) levelized commissions or other installment payments paid to “third parties” by the reporting entity solely in exchange for the third party making non-levelized payments to the distribution partners or individual producers in place of the reporting entity (sometimes called “funding agreements”).

The proposed Exposure Draft relating to the first are in Paragraph 2 and call for “…commission shall be accrued based on experience to date for the policy period that the commission relates.” This specifically relates to the required timing or obligating event of a reporting entity’s liability for the cost of a commission payment specifically linked to persistency or policy renewal upon the anniversary of a policy issue date or some other future date or event.

The proposed Exposure Draft revisions relating to the second are (a) in paragraph 4, “...regardless of how the payment to the third party is characterized.”, (b) in paragraph 5, “…paid by a third party to the agents...by the reporting entity.”, and (c) in a footnote to paragraph 5, “The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.”

The proposed revisions have different implications for different constituencies. We have endeavored to capture the essence of the concern from each party below. The proposed revisions have substantive
implications for each of the noted constituencies, contrary to the non-substantive assertion in the revised exposure draft 2019-24. As a direct result of the inequity of the proposed changes upon various constituencies and the potential for substantial financial and economic harm incurred by the adoption of these changes to a variety of constituencies, we strongly recommend and request that the proposal not go forward.

Reporting Entity/Carrier perspective:

1. Levelized commission programs are economic equivalents to “normal (non-level) commissions.” Levelized commission programs are preferable as they create a virtuous cycle linking the interests of consumers, agents, distribution partners and carriers to maintain ongoing servicing relationships, improving consumer support and policy persistency. Distribution relationships are multi-faceted, including agent recruitment and oversight, sales, sales support, underwriting support, premium collection, policy delivery and agent payment. Characterizing distribution partners as a ‘third party’ under the proposed footnote to paragraph 5 of SSAP No. 71 discounts the complexity of these relationships and the value of these vital roles dramatically altering carrier dynamics with distribution partners.

2. Reporting entities or carriers will be unduly penalized for economic transactions negotiated under existing accounting principles as a direct result of this proposal. The value of those transactions is retroactively altered by the introduction of a modified accounting principle which neither party initially anticipated, negotiated or priced.

3. Higher required capital and lower returns resulting from an arbitrary modification to an existing accounting practice will drive product design reviews and likely product redesigns modifying or eliminating levelized commission options or reducing value to the consumer through higher premiums and/or lower benefits.

4. The proposal to require reserves for future persistency based levelized commissions creates a disconnect with GAAP accounting where there is no reserve requirement. Moreover, the proposal creates new uncertainty around which other, long standing accounting treatment will be changed next.

Distributor/Agent perspective

1. The trail compensation approach incentivizes all parties to maintain a long-term relationship based upon ongoing agent support of consumer needs. Reducing or removing recurring compensation in the form of persistency based levelized commissions, shifts distributor economic motivation to new product sales, further degrading product level returns for the carrier. Reducing benefit levels or increasing premiums for the same benefit levels will lower the value proposition for effected products very likely reducing sales and consumer protection delivered by the products.
Consumer perspective:

1. The fallout from the changes will diminish value of insurance products through higher premiums and/or lower benefits enacted by carriers seeking to make up lost economic value and from lower service levels provided by brokers or agents as their incentives shift from ongoing consumer service relating to in-force policies to selling new policies (whether to the individual policyholder or other prospective clients).

Re: SSAP No. 71—Policy Acquisition Costs and Commissions

Dear Mr. Bruggeman:

Thank you for the opportunity to provide comments on Proposal 2019-24 from the Statutory Accounting Principles Working Group regarding Policy Acquisition Costs and Commissions. The Working Group voted to re-expose revisions to SSAP 71 – Policy Acquisition Costs and Commissions - for comment at the NAIC Fall Meeting on December 7, 2019, continued to categorize the revisions as non-substantive, and further clarified levelized commission guidance and direction regarding certain commission obligations. I offer comments on behalf of our client, DRB Insurance Solutions, LLC, a licensed insurance producer (“DRB”).

SSAP No. 71 provides that levelized commissions occur in situations in which a third party, such as a funding agent, pays agents non-levelized commissions and the reporting entity pays the third party by levelized payments. The Working Group notes that it is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third-party would ultimately be repaid to the third-party from the reporting entity. SSAP No. 71 identifies such arrangements as “funding agreements” between the reporting entity and the third-party. SSAP No. 71 further provides that the use of a commission arrangement where commission payments are not linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third-party related to levelized commissions.

While revisions were made to several paragraphs and footnote 1 in the initial proposal at the Working Group’s meeting in December, the current exposure language remains overly broad to address the issue identified and intended to be clarified by the Working Group. Regulators have identified levelized commissions as funding arrangements to bypass recognition of acquisition costs by insurers and believe recognizing the full acquisition expense at the time of policy issuance is appropriate accounting treatment pursuant to SSAP No. 5R and the Statement of Concepts focusing on Recognition. Notably, the Working Group intended to restrict intercompany and affiliated transfers of trailing commission structures as pure
accounting transactions solely for the purpose of deferring expense recognition of commission obligations, which is a laudable goal.

However, the language exposed to classify trailing commission transactions as funding arrangements is so broad, it encompasses practically every broker contract with an insurer that allows for any alternative payment arrangement between the broker and the issuing agent. DRB Insurance Solutions is an independent third-party master producer which uses various contracts between DRBIS and its sub-agents for commission payment, including trailing, heaped, partially heaped and trailing commissions, etc. The agreements between DRBIS and reporting entities are arms-length transactions, include the transfer of lapse risk, mortality risk and the commission expense obligation. The proposal requiring all insurers to accrue the full commission expense under these circumstances is illogical when the insurer no longer has the legal obligation to pay the expense and therefore, no longer has legally incurred the expense.

While regulators have opined that affiliated transactions shrouded as commission arrangements appear to circumvent accrual of commission expense at policy issuance, the goal to affect those transactions may continue to be addressed while narrowing the language to clarify that non-affiliated third-party contracts are not included. Accordingly, DRBIS offers the following amendment to the exposure draft to narrow the applicability to those affiliated transactions. Suggested language for Paragraph 4 and the footnote to Paragraph 5 is shown as shaded text as follows:

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and the third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent to the agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent related to levelized commissions.

New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents does not imply that levelized commissions that are linked to traditional elements do not require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date. Rather, such levelized commission obligations should be accrued for as set forth in paragraph 3.
The proposed language requires recognition of commission expense in situations where affiliated companies trade lapse and mortality risk amongst and between affiliated reporting entities using a commonly owned master producer while excepting unaffiliated third-party transactions from similar treatment. In these unaffiliated contractual arrangements, where risk and liability is transferred, the reporting entity may not even be aware of the payment schedule between the master producer and its sub-agents and certainly should not be required to accrue the full amount of the commission expense at policy issuance when the insurer is no longer legally required to pay that expense.

**Non-Substantive Change**

Finally, DRBIS would like to restate its opposition to consideration of the exposure draft as a non-substantive change. As previously stated, levelized commission programs began over thirty years ago, before the 1998 publication of Statutory Issue Paper No. 71 and the January 1, 2001 codification of Statutory Accounting Principles. The primary objectives of a levelized commission structure include aligning the interests of the customer, the agent, and the company and improved persistency from providing ongoing customer service. There is a duty to act in the best interests of the policyholder, as well as a compensation incentive, to make sure policies are well serviced so they stay in-force.

The proposed revisions to SSAP No. 71 are designated as non-substantive and deemed to be a clarification of intent of the codified statutory guidance. However, levelized commission programs were implemented more than a decade before the codification in 2001. Therefore, this is a material change to historical accounting practices and not a clarification of original intent. Even after codification, levelized commission programs continued for years and were not identified as applying statutory accounting incorrectly.

In conclusion, the current exposure draft of SSAP 71 is clearly not “non-substantive” and would have substantial unintended consequences without the amendments proposed above. Additionally, the expansive effect of this policy decision should be subject to open deliberation and public comment as the Working Group considers adoption. Thank you for the opportunity to comment.

Very truly yours

GREENBERG TRAURIG, P.A.

RE: REPORTING OF INSTALLMENT FEES AND EXPENSES – REQUESTS FOR COMMENTS

Dear Mr. Dale Bruggeman,

At the December 2019 meeting, the NAIC exposed and requested comments on the “Reporting of Installment Fees and Expenses” in the financial statements. This guidance allows for installment fees that meet specified criteria to be excluded from premium income, if it is an avoidance amount by the policyholder and the policy would not be cancelled for nonpayment of the installment fees. The guidance is consistent with the footnote in SSAP No.53 (“Property Casualty Contracts – Premiums”) and in line with our current industrywide reporting of this item in the financial statements.

With respect to the reporting of the corresponding “Installment fees related Expenses”, we believe that these associated Expenses should be reported as part of the Other Underwriting Expenses Incurred (“OUE”) on Line 4 of the Statement of Income and as an ancillary to the normal underwriting activities primarily due to immateriality. Such a presentation will allow insurers to report and reconcile the gross Installment fees amount to the corresponding balance reflected in Schedule T, Column 8 as well as in the Write-ins amount on the Statutory Page 14, along with premium tax payments. Currently, there is inconsistency in reporting in the industry, with some companies reflecting these associated Expenses as part of the Other Underwriting Expenses Incurred on Line 4 of the Statement of Income while others reflect such Expenses as part of the Aggregate write-ins for miscellaneous income on Line 14 of the Statement of Income.

However, as we believe others have also pointed out, this guidance specifically addresses fees charged on Installment premiums, but there are other equally nonrefundable “Other fees” charged by many companies, as part of the billing and collection process, but that are not specifically mentioned in this guidance. That is to say, there are “Other Fees” charged by insurers as part of the collection process, all of which, like Installment fees, are not only non-refundable, but are also avoidance amount by the policyholder and would not be cancelled for non-payment of the installment fees, similar to Installment fees.

These nonrefundable “Other fees”, include, but are not limited to:

1. Late fees - fees and expenses charged on flexible/installment plans that are received after a specified cut-off period e.g. 30 days
2. Non-sufficient funds (“NSF”) fees - fees and expenses collected on returned payments due to non-sufficient funds

3. Reinstatement fees - fees and expenses received on policies that expired and are subsequently reinstated, among others etc.

Currently, there is divergence in reporting in this area of this relatively immaterial amounts for nonstandard and standard writers and therefore need for clarification for consistency in reporting going in.

The reporting issue here then is, where and how to report all of these “Other fees”, excluding Installment fees. Should all these “Other fees” be reported as part of:

a) Other underwriting expense incurred on Line 4 of the Statement of Income
b) Finance and service charges on Line 13 of the Statement of income, akin to installment fees
c) Aggregate write-ins for miscellaneous income on Line 14 of the Statement of income

Typically, most companies report these nonrefundable “Other fees” as “Other income” on Line 14 of the Statement of Income

Consistent with current practice, we also believe all these “Other fees”, net of applicable expenses, if any, should be reported as part of the Aggregate-write-ins for miscellaneous income on Line 14 of the Statement of Income. However, if for some reason this first preference is determined to be untenable, then we believe the next viable alternative could be the “Other underwriting expenses incurred” on Line 4 of the Statement of Income, under the assumption that all these other fees are ancillary to the normal underwriting activities, but defer ultimately decision to the NAIC staff for review and consideration.

We appreciate the opportunity to comment on this and related issues. Thank you.

Sincerely,

Joseph Hammond, CPA, FLMI

Dale Bruggeman, Chair
Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Via email

Dear Mr. Bruggeman:

I am writing on behalf of the American Academy of Actuaries1 Committee on Property and Liability Financial Reporting (COPLFR). We are following up on previous correspondence regarding Schedule P Instructions for Retroactive Reinsurance between Affiliates and Non-Affiliates.

COPLFR appreciates that the Statutory Accounting Principles Working Group (SAPWG) is looking into certain inconsistencies that were identified in our May 21, 2019, letter to you. In July, Julie Lederer, acting in her capacity as a member of the Casualty Actuarial and Statistical (C) Task Force, posed several questions about specific details in our initial comment letter. Her comments and COPLFR’s replies are presented here.

**Julie Lederer’s Comment**

1. I’m not sure what Allianz/Allianz Re agreement the letter is referring to. The letter suggests that this agreement was enacted in 2015 and that the accounting changed between year-ends 2015 and 2016, but Allianz Re’s 2018 MD&A (which is said to be included as an attachment to COPLFR’s letter but is not) suggests that the agreements between Allianz and Allianz Re weren’t enacted until 2016. Allianz Re did assume retroactive business from a different entity, Fireman’s Fund, in 2015:

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
There’s hardly any workers comp data in Allianz’s 2015 Schedule P. There’s a lot of WC data at year-end 2016, which appears to be due to the addition of Firemen’s Fund to the pooling agreement.

When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. There is significant assumed premium reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior. I think this is related to Allianz Re’s transaction with FFIC (as mentioned in the MD&A above), not with Allianz.

COPLFR’s Response

The May 21, 2019, COPLFR letter is referring to the July 1, 2015, reinsurance agreement between FFIC and Allianz Reinsurance America (“Allianz Re”), where Allianz Re agreed to reinsure certain workers’ compensation (WC) and construction defect liabilities. The 2015 Schedule P, Part 1 of Allianz Re (page 4 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year direct and assumed WC earned premium, presumably this Loss Portfolio Transfer. The 2016 Schedule P of Allianz Global Risk US Ins Co. (“Allianz or FFIC”) (page 7 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year WC ceded earned premium, about equal to the assumptions of the Allianz Re premium discussed in the prior sentence. Allianz Global Risk US is synonymous with FFIC, as we understand it.

In our May 21, 2019, letter, we did state that “Initially, as of December 31, 2015, Allianz included all of the ceded losses in accident year (‘AY’) 2015.” We did only include the 2016 Allianz Schedule P; it would have been clearer to include the 2015 Allianz Schedule P as well, which we have attached as page 15 of the May 21 letter PDF (Attachment A). We agree with the comment in a. above that the additional data is due to the addition of Fireman’s Fund in the pooling agreement. Similarly, for b., we only show Allianz Re’s 2015 Schedule P.; we should additionally obtain Allianz Re’s 2016 Schedule P. We would not expect much change from the 2015 to 2016 Schedule P. Finally, our comments were not intended to suggest that the agreement between Allianz and Allianz Re was not enacted until 2016. We did, however, want to point out that as of Dec. 31, 2015, Allianz included all of the ceded losses in AY 2015, and in the following year, as of Dec. 31, 2016, Allianz recorded the ceded losses across the subject AYs 2012 and prior, as shown in Schedule P, Part 2 of Allianz (see page 8 of the PDF).

Julie Lederer’s Comment

2. I believe some of the attachments noted in the letter are missing:

© 2020 National Association of Insurance Commissioners
a. The letter includes Allianz Re’s 2015 Schedule P and Allianz’s 2016 Schedule P, but the text of the letter suggests that Allianz’s 2015 and 2016 Schedule Ps are included.
   i. Regardless, it’s pretty hard to compare Allianz’s 2015 and 2016 Schedule Ps anyway, since Fireman’s Fund was added to the intercompany pool in 2016 and the historical AYs in Allianz’s 2016 Schedule P were adjusted accordingly.
   ii. When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. The assumed premium is reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior.

b. Attachment A1SAO (Allianz Re’s 2018 SAO) is missing. I looked up the SAO myself and found this passage, which is rather vague, doesn’t name the counterparties, and doesn’t discuss the accounting for the agreements:

   "The Company entered into several significant reinsurance arrangements during calendar years 2015 – 2018, some of which serve to mitigate the risk factors discussed above.
   1. Effective January 1, 2015, the Company entered into a reinsurance agreement whereby the Company assumed and agreed to reinsure certain A&E reserves. Effective July 1, 2015, the Company further assumed and agreed to reinsure certain WC and CD reserves.
   2. Effective January 1, 2016, the Company entered into a reinsurance agreement by which the Company ceded 50% of the Company’s carried A&E, WC, and CD liabilities acquired in 2015.
   Additionally, effective January 1, 2016, the Company entered into reinsurance agreements whereby the Company assumed and agreed to reinsure certain Professional Healthcare liabilities and certain A&E, GL/Excess and WC liabilities. Effective July 1, 2016, the Company entered into another reinsurance agreement by which the Company assumed and agreed to reinsure certain GL/Excess exposure."

c. Attachment A2MDA (Allianz Re’s 2018 MD&A) is missing. I looked this up myself and included a relevant passage above in item #1.

COPLFR’s Response

The attachments were in the Academy’s submission to the CASTF and were in the CASTF materials for a call in June, but apparently were omitted by NAIC staff in materials provided for subsequent calls and referrals.

We too consider the excerpt you provided to be vague. To help clarify the issue, we are attaching MD&As from 2015 and 2016 that include Fireman’s Fund Insurance Company in their scope (attachments B and C). One of the difficulties in tracking this issue is the series of actions taken by Allianz since 2015.

Julie Lederer’s Comment

3. GEICO’s Note 21, included as an attachment, is useful, but it’s not clear what we should take away from GEICO’s 2014 Schedule P alone. It might have been useful to attach the 2013 Schedule P as well. By comparing the 2013 and 2014 Schedule Ps, it’s clear that GEICO made significant cessions in 2014 and that these were spread among older AYs.
COPLFR’s Response

Our takeaway from GEICO’s 2014 Schedule P alone is that Schedule P, Part 2 (page 13 of the PDF) shows $3.3 billion of decreased development. This is a distortion as we understand it and is supported by the 2013 and 2014 comparison noted above. That distortion would carry over to the RBC filings of the respective entities (based on our understanding of the RBC formula and related instructions). Industry Schedule P data can also be distorted based on what is and is not included in industry totals based on the data scrubbing performed.

We believe that this additional information clarifies our original comments and will help SAPWG to move forward with its own analysis. If you have additional questions, contact Marc Rosenberg, the Academy’s senior casualty policy analyst, at 202-785-7865 or rosenberg@actuary.org.

Sincerely,

Kathy Odomirok, MAAA, FCAS
Chairperson, COPLFR
American Academy of Actuaries

Description of Issue:
This agenda item has been drafted to clarify the accounting guidance for SCA losses that result in zero or negative equity in an SCA. Agenda item 2018-09 - SCA Loss Tracking clarified the reporting guidance for SCA losses that result in zero, or negative, equity in an SCA. When reviewing that agenda item, it was identified that there could be uncertainty on the existing provisions that require a negative SCA reporting amount (rather than a zero reporting value). The intent of this agenda item is to clarify the instances that require a negative SCA value and ensure the accounting guidance in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities for these instances is clear.

Existing Authoritative Literature:

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets

Guarantees

16. A guarantee contract is a contract that contingently requires the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on changes in the underlying that is related to an asset, a liability, or an equity security of the guaranteed party. Commercial letters of credit and loan commitments, by definition, are not considered guarantee contracts. Also excluded from the definition are indemnifications or guarantees of an entity’s own performance, subordination arrangements or a noncontingent forward contract. This definition could include contingent forward contracts if the characteristics of this paragraph are met.

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f. and “unlimited” guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered “unlimited,” guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

b. A parent’s guarantee of its subsidiary’s debt to a third party; and

c. A subsidiary’s guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.
20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value\(^1\) of the guarantee at its inception.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

**SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

   e. For entities subject to 8.b.i., 8.b.iii. and 8.b.iv. a reporting entity's share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero\(^2\) and shall not provide for additional losses unless the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in **SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets** shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

**Disclosures**

34. All SCA investments within the scope of this statement (except paragraph 8.b.i. entities) shall include disclosure of the SCA balance sheet value (admitted and nonadmitted) as well as information received from the NAIC in response to the SCA filing (e.g., date and type of filing, NAIC valuation amount, whether resubmission of filing is required). This disclosure shall include an aggregate total of all SCAs (except paragraph 8.b.i. entities) with detail of the aggregate gross value under this statement with the admitted and nonadmitted amounts reflected on

---

\(^1\) As practical expedients, when a guarantee is issued in a standalone arm’s-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee’s fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm’s-length transaction.

\(^2\) Refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses.
the balance sheet. (As noted in paragraph 4, joint ventures, partnerships and limited liability companies are accounted for under the guidance in SSAP No. 48. As such, those entities are not subject to this disclosure.)

a. For all periods presented, a reporting entity whose shares of losses in an SCA exceeds its investment in the SCA shall disclose its share of losses. (This is required regardless of a guarantee or commitment of future financial support to the SCA.) This disclosure shall include the following:

i. The reporting entity’s accumulated share of the SCA losses not recognized during the period that the equity method was suspended;

ii. The reporting entity’s share of the SCA’s equity, including negative equity;

iii. Whether a guaranteed obligation or commitment for financial support exists; and

iv. The SCA’s reported value.

This disclosure shall apply beginning in the period the SCA’s equity initially falls below zero and shall continue to be disclosed as long as the SCA investment is in a deficit position. Additionally, the reporting entity shall detail in a narrative disclosure whether losses in the SCA have impacted other investments as required by INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses.

NOTE: FN1 - This disclosure is only required for SCAs in which the reporting entity’s share of losses exceed the investment in an SCA, (the SCA investment is in a negative equity position). This disclosure shall apply beginning in the period the investment in the SCA equity initially falls below zero and shall continue to be disclosed as long as the SCA investment is in a negative equity position. The disclosure is required whenever an investment in an SCA entity is in a negative equity position, and in the first year subsequent to the negative equity position in which a positive equity position has been attained.
FN2 - For Column 6, as detailed in SSAP No. 97, (unless the entity is subject to statutory adjustments under paragraph 9), once the reporting entity’s share of losses equals or exceeds the investment in the SCA, the SCA shall be reported at zero, with discontinuation of the equity method, unless there is a guaranteed obligation or a commitment for future financial support. If there is a guaranteed obligation or a commitment for future financial support, the guarantee requirement shall be recognized pursuant to SSAP No. 5R, and the reporting entity shall report the investment in the SCA reflecting their share of losses as a contra-asset. *(Disclosure of the guarantee or commitment would be captured in Note 14 and is not duplicated in this disclosure.)*

**SSAP No. 97, Exhibit C – Implementation Questions and Answers**

7. **Q - Is it possible for an SCA investment valued using an equity method to be reported as a negative value?**

7.1 **A - Yes, the equity method noninsurance SCA could have a negative equity. SSAP No. 97 paragraph 8.b.ii. relating to noninsurance SCA entities requires some assets to be reported as a negative value (nonadmitted) in paragraph 9. For example an 8.b.ii. SCA subsidiary that is only holding furniture, which is nonadmitted, would be reflected with negative equity to the extent the value of the nonadmitted asset(s) exceed(s) reported equity. It should be noted that although SSAP No. 97, paragraph 13.e. discusses some situations in which the equity method should be discontinued, this does not apply to SCA entities, which meet the requirements of paragraph 8.b.ii. In addition, SSAP No. 97, paragraph 13.e. lists some situations where the equity method would result in a valuation that is less than zero; examples are if reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, in these cases, the valuation of the investment in subsidiary could be a negative value.**

8. **Q - Paragraph 13.e. of SSAP No. 97, lists some situations where the equity method should be discontinued. If the equity method is discontinued, does the reporting entity cease tracking equity losses?**

8.1 **A - No, the reporting entity does not cease tracking losses related to the investment in the SCA if an equity method is discontinued. If the equity method is discontinued, follow the guidance in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses (INT 00-24).**

8.2 **INT 00-24 lists situations that might require the reporting entity to write down other investments in the SCA subsidiary, such as loans, because of continuing losses in the SCA investment. Paragraphs 15-17 provides guidance to assist in determining whether prior losses are being funded if the reporting entity purchases additional stock, etc. after suspending the equity method. Paragraphs 15-17 in INT 00-24 note that even if the equity method is not being applied, the investment should be tracked to determine if additional losses have to be applied to other items and to determine if the investment in the SCA has a future recovery.**

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):**
The Statutory Accounting Principles (E) Working Group previously adopted agenda item 2018-09 – SCA Loss Tracking, which incorporated an additional disclosure to track an SCA’s losses.

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:**
None

**Convergence with International Financial Reporting Standards (IFRS): N/A**

**Staff Recommendation:**
Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 97—*Investments in Subsidiary, Controlled and Affiliated Entities*, as detailed
below, to clarify the existing reporting requirements for an SCA in a loss position. Staff would also request comments from regulators and interested parties regarding additional situations that require negative reporting.

**Proposed Revisions:**

**SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

   e. For entities subject to 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv. a reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero\(^3\) and shall not provide for additional losses unless the situations in paragraph 13.e.i. or paragraph 13.e.ii. exist. Reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee (guaranteed obligations meeting the definition of liabilities in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R) shall be recorded as liabilities). If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended. In situations in which negative equity is reported (paragraph 13.e.i. and paragraph 13.e.ii.), the book adjusted carrying value for the investment in the SCA shall reflect the reporting entity’s negative equity value (reflecting the reporting entity’s share of the SCA losses). (This would be reported as a contra-asset.)

   i. In all instances in which the limited statutory adjustments required by paragraph 9 results in a negative equity valuation of the investment. (This would apply to 8.b.ii and 8.b.iv entities.)

   ii. When the reporting entity has guaranteed obligations or committed further financial support to an SCA. Recognition of the negative equity in the SCA is in addition to the guarantee liability required under SSAP No. 5R. (This applies to all SCA entities.)

Staff Review Completed by:
Fatima Sediqzad - NAIC Staff
July 2018

**Status:**
On August 4, 2018, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, as shown above, to clarify the existing reporting requirements for when the reporting entity has a negative equity valuation in an SCA investment.

On November 15, 2018, the Statutory Accounting Principles (E) Working Group re-exposed this agenda item and directed NAIC staff to work with interested parties and research applicable U.S. GAAP guidance to consider

---

\(^3\) Refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses.
revisions to existing guidance that requires negative subsidiary, controlled and affiliated (SCA) entity reporting when there is a guarantee or commitment to provide financial support.

On April 6, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, as detailed below, to revise the existing reporting requirements for when a reporting entity has a negative value in an SCA investment when the reporting entity has provided a financial commitment or guarantee. The illustration from the existing INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses has also been moved to SSAP No. 97, in its entirety, as a new exhibit. This INT provides examples of how losses in an SCA shall be applied to other investments once the SCA equity investment has been halted at zero.

**Spring 2019 National Meeting Exposure:**

**SSAP No. 97—Subsidiary, Controlled and Affiliated Entities:**

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

   e. For entities subject to 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv. a reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero\(^4\) and shall not provide for additional losses, while still continuing to track the amount of unreported equity method losses, until any future equity method income can be reported. If the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, such as (guaranteed obligations meeting the definition of liabilities in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R), they shall be recorded as liabilities). If the entire loss is recognized under SSAP No. 5R, it does not also need to be recognized under SSAP No. 97. However, if there is a guarantee or commitment, and the entire loss is not recognized under SSAP No. 5R, the reporting entity shall not stop at zero, and shall recognize a negative value of the SCA. If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

Footnote 2: Refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses. As detailed in INT 00-24, a reporting entity’s share of losses in an SCA shall be applied to other investments held in the SCA once the SCA (common stock) investment has been reduced to zero.
EXHIBIT F – ILLUSTRATION OF THE APPLICATION OF INT 00-24

XYZ Investment in ABC Company

1. ABC Company is a life insurance company, formed January 2, 20X1 to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

3. At 1/2/20X1, XYZ recorded the following entry to record its investment in ABC:

Investment in ABC Common stock | $ 100,000 |
Investment in ABC Preferred stock | $ 400,000 |
Cash | $ 500,000 |

To record initial investment in ABC Insurance Company.
4. During the year ended 12/31/20X1, ABC had statutory net income before dividends of $200,000. At 12/31/20X1, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.10 per share. XYZ recorded the following entries:

<table>
<thead>
<tr>
<th>Cash</th>
<th>Dividend Income</th>
<th>$ 20,000</th>
<th>$ 20,000</th>
</tr>
</thead>
</table>

To record preferred dividend income from ABC Insurance Company for 20X1.

<table>

</tbody>
</table>

To record 20X1 dividend on ABC Common. (100,000 shares * $.10)

5. During the year ended 12/31/20X2, ABC issued an 8% surplus note of $500,000. XYZ purchased 100% of the surplus note. During that same year, ABC incurred a statutory net loss before dividends of $250,000. At 12/31/20X2, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.05 per share. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

<table>
<thead>
<tr>
<th>Investment in ABC Surplus Notes</th>
<th>Cash</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ 500,000</td>
<td>$ 500,000</td>

</table>

To record 20X2 dividend on ABC Common. (100,000 shares * $.05)

6. During the year ended 12/31/20X3, ABC Insurance Company incurred a statutory net loss before dividends of $400,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:
Dividends Receivable $ 20,000
  Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X3.

Unrealized Gain/Loss $ 182,000
  Investment in ABC Preferred stock $ 172,000
  Investment in ABC Common stock $ 10,000

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).
  Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)
    Total net loss and preferred dividend (-$400,000 - $50,000) $450,000
    Less amount used to reduce common stock investment to $0 20,000
    Amount remaining to be allocated to investment in preferred 430,000
    XYZ ownership % of preferred 40%
      i. XYZ reduction in investment in preferred $172,000

7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable $ 20,000
  Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X4.

Unrealized Gain/Loss $ 458,000
  Investment in ABC Preferred stock $ 228,000
  Investment in ABC Surplus note $ 230,000

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

Total net loss and preferred stock dividend ($800,000).
  Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)
  Preferred stock component calculated as:
    Total net loss and preferred dividend (-$750,000 - $50,000) $800,000
    Less amount used to reduce preferred stock investment to $0 570,000
    Amount remaining to be allocated to investment in surplus note 230,000
    XYZ ownership % of surplus note 100%
      iii. XYZ reduction in investment in ABC Surplus Notes $230,000

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:
Dividends Receivable $ 20,000
Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

Unrealized Gain/Loss $ 270,000
Investment in ABC Surplus note $ 270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

Total ABC net loss and preferred stock dividend (-$500,000 - $50,000), Surplus Note component calculated as:

Total net loss and preferred dividend (-$500,000 - $50,000) $550,000
XYZ ownership % of ABC Surplus Note 100%
Amount of unrealized loss recognized in 20X5 $270,000
iv. Amount of unrealized loss suspended $280,000

9. Since XYZ has not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.

10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock, but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

Cash $ 80,000
Dividends Receivable $ 60,000
Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes, ABC Preferred or ABC Common, since ABCs’ net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

12. The following amounts were tracked:

Total ABC net income and preferred stock dividend ($200,000 - $50,000), Surplus Note component calculated as:

Total net income and preferred dividend ($200,000 - $50,000) $150,000
XYZ ownership % of ABC Surplus Note 50%
Amount of unrealized loss suspended in 20X5 $ 75,000
Remaining amount of unrealized loss suspended $280,000 $205,000
13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

- **Cash**  
  Dividend Income  
  $20,000

  To record preferred dividend income from ABC Insurance Company for 20X7.

- **Investment in ABC Surplus Notes**  
  Unrealized Gain/Loss  
  $70,000

  To record 20X7 unrealized gain on investment in ABC Surplus Notes.

**Total ABC net income and preferred stock dividend ($600,000 - $50,000):**

- **Surplus Note component calculated as:**

  - Total net income and preferred dividend ($600,000 - $50,000)  
    $550,000
  - XYZ ownership % of ABC Surplus Note  
    50%  
    $275,000
  - Remaining amount of unrealized loss suspended in 20X5  
    $205,000
  - 20X7 amount of unrealized gain on investment in ABC Surplus Note  
    $70,000

14. During the year ended 12/31/20X8, ABC Insurance Company had statutory net income before dividends of $900,000. At 12/31/20X8, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

- **Cash**  
  Dividend Income  
  $20,000

  To record preferred dividend income from ABC Insurance Company for 20X8.

**Total ABC net income and preferred stock dividend ($900,000 - $50,000):**

- **Surplus Note component calculated as:**

  - Total net income and preferred dividend ($900,000 - $50,000)  
    $850,000
  - XYZ ownership % of ABC Surplus Note  
    50%  
    $425,000
  - 20X8 amount of unrealized gain on investment in ABC Surplus Note  
    $425,000

15. During the year ended 12/31/20X9, ABC Insurance Company had statutory net income, before interest on surplus notes and dividends, of $1,400,000. The Commissioner approved one year’s interest payment on the surplus notes. At 12/31/20X9, ABC declared and paid a 5% preferred dividend, and a $.10 dividend per share on Common stock. XYZ recorded the following entries:

- **Cash**  
  Dividend Income  
  $20,000

  To record preferred dividend income from ABC Insurance Company for 20X9.
Cash  $ 40,000
Interest Income $ 40,000

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)

Investment in ABC Surplus Notes $ 5,000
Investment in ABC Preferred Stock $ 400,000
Investment in ABC Common Stock $ 130,000

Unrealized Gain/Loss $ 535,000
To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes.
Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes $ 1,270,000
($1,400,000 - $50,000 - $80,000)
Less amount needed to restore investment in surplus notes ($ 10,000)
Amount available for preferred stock and common stock investment restoration $ 1,260,000
Amount needed to restore preferred stock component ($1,000,000)
Amount available to restore common stock component $ 260,000

Surplus Notes component ($10,000 * 50%) $ 5,000
Preferred Stock component ($1,000,000 * 40%) $ 400,000
vii. Common stock component ($260,000 * 50%) $ 130,000

Cash $ 10,000
Unrealized Gain/Loss $ 10,000
Dividend Income $ 10,000
Investment in ABC Common stock $ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

On August 3, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, as illustrated below, to require a financial commitment or guarantee for a subsidiary, controlled, or affiliated entity to be recognized as a non-contingent guarantee liability. These proposed revisions differ from the prior exposure as they would capture the entire financial guaranty or commitment for an SCA within scope of SSAP No. 5R and report a zero value for SCAs with a negative equity value.

**SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets**

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32. For the guarantees addressed in paragraphs 18f and 18g, recognition of a contingent guarantee may be required subsequent to initial recognition in accordance with paragraph 24a:
a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor’s obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligor;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries; and

g. Intercompany and related party guarantees that are considered “unlimited” (e.g., typically in response to a rating agency’s requirement to provide a commitment to support).

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f. and “unlimited” guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered “unlimited,” guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

d. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

e. A parent’s guarantee of its subsidiary’s debt to a third party; and

f. A subsidiary’s guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value of the guarantee at its inception.

Footnote: As practical expediency, when a guarantee is issued in a standalone arm’s-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee’s fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm’s-length transaction.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the

---

5 The exclusion for wholly-owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly-owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly-owned insurance or non-insurance subsidiary. The “wholly-owned” exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly-owned (directly or indirectly) by a parent company.
specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

23. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

   a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

   b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

   c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would be nonadmitted under SSAP No. 29.

   d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, and the provisions for SCAs detailed in paragraph 24a, this standard does not describe in detail how the guarantor’s liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor’s release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

   a. In situations in which a reporting entity has provided a financial guarantee or commitment to support a subsidiary, controlled or affiliated entity (SCA), and the reporting entity’s share of losses in the SCA exceed the equity method carrying amount of the SCA (resulting in a negative equity value in the SCA), the reporting entity shall adjust the initially recognized guarantee obligation to reflect the greater of the then-current fair value of the guarantee or the negative equity position. (For guarantees captured in paragraphs 18f and 18g, this guidance requires recognition of a contingent guaranty when negative equity exists in an SCA.) The recognized guarantee liability shall not exceed the maximum amount of the
financial guarantee or commitment provided by the reporting entity. The guidance in paragraphs 24 and 25 shall be followed for recognizing a contingent liability and subsequent re-recognition of a noncontingent liability as applicable.

25. After recognition and settlement of a contingent guarantee liability in accordance with paragraph 8, a guarantor shall assess whether remaining potential obligations exist under the guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 24.

**SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**

13. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

e. For entities subject to 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv. a reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses, while still continuing to track the amount of unreported equity method losses, until any future equity method income can be reported. If the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, the provisions of such as (guaranteed obligations meeting the definition of liabilities in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets) shall be followed (SSAP No. 5R). In such cases, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

Footnote 2: Although the SCA is reported at zero in the investment schedule, a guarantee liability (either contingent or noncontingent) may be required to be reported under SSAP No. 5R. Additionally, refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses. As detailed in INT 00-24, a reporting entity’s share of losses in an SCA shall be applied to other investments held in the SCA once the SCA (common stock) investment has been reduced to zero.

35. All SCA investments within the scope of this statement (except paragraph 8.b.i. entities) shall include disclosure of the SCA balance sheet value (admitted and nonadmitted) as well as information received from the NAIC in response to the SCA filing (e.g., date and type of filing, NAIC valuation amount, whether resubmission of filing is required). This disclosure shall include an aggregate total of all SCAs (except paragraph 8.b.i. entities) with detail of the aggregate gross value under this statement with the admitted and nonadmitted amounts reflected on the balance sheet. (As noted in paragraph 4, joint ventures, partnerships and limited liability companies are accounted for under the guidance in SSAP No. 48. As such, those entities are not subject to the disclosures in this statement, unless specifically directed by SSAP No. 48.)
a. For all periods presented, a reporting entity whose shares of losses in an SCA exceeds its investment in the SCA shall disclose its share of losses. (This is required regardless of a guarantee or commitment of future financial support to the SCA.) This disclosure shall include the following:

i. The reporting entity’s accumulated share of the SCA losses not recognized during the period that the equity method was suspended;

ii. The reporting entity’s share of the SCA’s equity, including negative equity;

iii. Whether a guaranteed obligation or commitment for financial support exists; and

iv. The SCA’s reported value.

2019 Fall National Meeting Exposure

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets - (Industry edits are shaded.)

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32. For the guarantees addressed in paragraphs 18f and 18g, recognition of a contingent guarantee may be required subsequent to initial recognition in accordance with paragraph 24a:

a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor’s obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries; and

---

8 The exclusion for wholly-owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly-owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly-owned insurance or non-insurance
g. Intercompany and related party guarantees that are considered “unlimited” (e.g., typically in response to a rating agency’s requirement to provide a commitment to support).

The exemptions for items f and g above do not apply in situations in which a reporting entity has provided a financial guarantee or commitment to support a subsidiary, controlled or affiliated entity (SCA), and the SCA’s equity is negative (see paragraph 24).

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f and “unlimited” guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered “unlimited,” guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

   a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

   b. A parent’s guarantee of its subsidiary’s debt to a third party; and

   c. A subsidiary’s guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value of the guarantee at its inception. Footnote: As practical expedients, when a guarantee is issued in a standalone arm’s-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee’s fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm’s-length transaction.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at subsidiary. The “wholly-owned” exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly-owned (directly or indirectly) by a parent company.
inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

23. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would be nonadmitted under SSAP No. 29.

d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, and the provisions for SCAs detailed in paragraph 24a, this standard does not describe in detail how the guarantor’s liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor’s release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

25. In situations in which a reporting entity has provided a financial guarantee or commitment to support a subsidiary, controlled or affiliated entity (SCA), and the reporting entity’s share of losses in the SCA exceed the equity method carrying amount of the SCA (resulting in a negative equity value in the SCA), the reporting entity shall adjust the initially recognized guarantee obligation to reflect the greater impact of (i) the then-current fair value liability for of the guarantee or (ii) the negative equity position, limited to the maximum amount of the financial guarantee or commitment provided by the reporting entity. (ForThis guidance requires the recognition of a guarantee liability for guarantees captured in paragraphs 18f and 18q, when negative equity exists in an SCA, this guidance requires recognition of a contingent guaranty.) The recognized guarantee liability shall not exceed the maximum amount of the financial guarantee or commitment provided by the reporting entity. The guidance in paragraphs 24 and 2520 through 26 shall be followed for the recognition of recognizing a contingent liability and subsequent re-recognition of a noncontingent liability, as applicable.

25.26 After recognition and settlement of a contingent guarantee liability in accordance with paragraph 8, a guarantor shall assess whether remaining potential obligations exist under the
guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 24.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities – No industry edits to this section

12. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

   e. For entities subject to 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv. a reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses, while still continuing to track the amount of unreported equity method losses, until any future equity method income can be reported. If the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, the provisions of such as (guaranteed obligations meeting the definition of liabilities in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets shall be followed. (SSAP No. 5R), they shall be recorded as liabilities). If the entire equity method loss (subject to the financial guarantee / commitment) shall be recognized under SSAP No. 5R, it does not also need to be recognized under SSAP No. 97. If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

Footnote 2: Although the SCA is reported at zero in the investment schedule, a guarantee liability (either contingent or noncontingent) may be required to be reported under SSAP No. 5R. Additionally, Refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses. As detailed in INT 00-24, a reporting entity’s share of losses in an SCA shall be applied to other investments held in the SCA once the SCA (common stock) investment has been reduced to zero.

35. All SCA investments within the scope of this statement (except paragraph 8.b.i. entities) shall include disclosure of the SCA balance sheet value (admitted and nonadmitted) as well as information received from the NAIC in response to the SCA filing (e.g., date and type of filing, NAIC valuation amount, whether resubmission of filing is required). This disclosure shall include an aggregate total of all SCAs (except paragraph 8.b.i. entities) with detail of the aggregate gross value under this statement with the admitted and nonadmitted amounts reflected on the balance sheet. (As noted in paragraph 4, joint ventures, partnerships and limited liability companies are accounted for under the guidance in SSAP No. 48. As such, those entities are not subject to the disclosures in this statement, unless specifically directed by SSAP No. 48.)

   a. For all periods presented, a reporting entity whose shares of losses in an SCA exceeds its investment in the SCA shall disclose its share of losses. (This is required regardless of a
guarantee or commitment of future financial support to the SCA.) This disclosure shall include the following:

i. The reporting entity’s accumulated share of the SCA losses not recognized during the period that the equity method was suspended;

ii. The reporting entity’s share of the SCA’s equity, including negative equity;

iii. Whether a guaranteed obligation or commitment for financial support exists; and

iv. The SCA’s reported value. The amount of the recognized guarantee under SSAP No. 5R.

Proposed New Exhibit F – This is not new guidance, it pulls in prior guidance from INT 00-24

EXHIBIT F – ILLUSTRATION OF THE APPLICATION OF INT 00-24

**XYZ Investment in ABC Company**

1. ABC Company is a life insurance company, formed January 2, 20X1 to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

<table>
<thead>
<tr>
<th>Capital and Surplus:</th>
<th>20X1 – 20X4</th>
<th>20X5 – 20X9</th>
</tr>
</thead>
<tbody>
<tr>
<td>Common stock, $1 par, 200,000 shares issued and outstanding</td>
<td>1/2/20X1 $200,000 12/31/20X1 $200,000 12/31/20X2 $200,000 12/31/20X3 $200,000 12/31/20X4 $200,000</td>
<td>12/31/20X5 $200,000 12/31/20X6 $200,000 12/31/20X7 $200,000 12/31/20X8 $200,000 12/31/20X9 $200,000</td>

<tr>
<td>Investment in ABC Common stock</td>
<td>$ 10,000</td>
</tr>
</tbody>
</table>

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).
Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)

| Total net loss and preferred dividend (-$400,000 - $50,000) | $450,000 |
| Less amount used to reduce common stock investment to $0 | $20,000 |
| Amount remaining to be allocated to investment in preferred | $430,000 |
| XYZ ownership % of preferred | 40% |
| XYZ reduction in investment in preferred | $172,000 |

7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

<table>
<thead>
<tr>
<th>Dividends Receivable</th>
<th>$ 20,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dividend Income</td>
<td>$ 20,000</td>
</tr>
</tbody>
</table>

To record preferred dividend income from ABC Insurance Company for 20X4.

<table>
<thead>
<tr>
<th>Unrealized Gain/Loss</th>
<th>$ 458,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Investment in ABC Preferred stock</td>
<td>$ 228,000</td>
</tr>
<tr>
<td>Investment in ABC Surplus note</td>
<td>$ 230,000</td>
</tr>
</tbody>
</table>

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

Total net loss and preferred stock dividend ($800,000).
Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)
Preferred stock component calculated as:

| Total net loss and preferred dividend (-$750,000 - $50,000) | $800,000 |
| Less amount used to reduce preferred stock investment to $0 | $570,000 |
| Amount remaining to be allocated to investment in surplus note | $230,000 |
| XYZ ownership % of surplus note | 100% |
| XYZ reduction in investment in ABC Surplus Notes | $230,000 |

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:
Dividends Receivable $ 20,000
Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

Unrealized Gain/Loss $ 270,000
Investment in ABC Surplus note $ 270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

Total ABC net loss and preferred stock dividend (-$500,000 - $50,000).
Surplus Note component calculated as:
Total net loss and preferred dividend (-$500,000 - $50,000) $550,000
XYZ ownership % of ABC Surplus Note 100%
Amount of unrealized loss recognized in 20X5 $270,000
Amount of unrealized loss suspended $280,000

9. Since XYZ has not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.

10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

Cash $ 80,000
  Dividends Receivable $ 60,000
  Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes. ABC Preferred or ABC Common, since ABCs’ net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

12. The following amounts were tracked:

Total ABC net income and preferred stock dividend ($200,000 - $50,000).
Surplus Note component calculated as:
Total net income and preferred dividend ($200,000 - $50,000) $150,000
XYZ ownership % of ABC Surplus Note 50%
Amount of unrealized loss suspended in 20X5 $75,000
Remaining amount of unrealized loss suspended $280,000
$205,000

13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash $ 20,000
Dividend Income $ 20,000
To record preferred dividend income from ABC Insurance Company for 20X7.

<table>
<thead>
<tr>
<th>Investment in ABC Surplus Notes</th>
<th>$ 70,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unrealized Gain/Loss</td>
<td>$ 70,000</td>
</tr>
</tbody>
</table>

To record 20X7 unrealized gain on investment in ABC Surplus Notes.

Total ABC net income and preferred stock dividend ($600,000 - $50,000).

<table>
<thead>
<tr>
<th>Surplus Note component calculated as:</th>
<th></th>

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)
Investment in ABC Surplus Notes $ 5,000
Investment in ABC Preferred Stock $ 400,000
Investment in ABC Common Stock $ 130,000
Unrealized Gain/Loss $ 535,000

To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes. Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes $ 1,270,000
($1,400,000 - $50,000 - $80,000)
Less amount needed to restore investment in surplus notes ($ 10,000)
Amount available for preferred stock and common stock investment restoration $ 1,260,000
Amount needed to restore preferred stock component ($1,000,000)
Amount available to restore common stock component $ 260,000

Surplus Notes component ($10,000 * 50%) $ 5,000
Preferred Stock component ($1,000,000 * 40%) $ 400,000
Common stock component ($260,000 * 50%) $ 130,000

Cash $ 10,000
Unrealized Gain/Loss $ 10,000
Dividend Income $ 10,000
Investment in ABC Common stock $ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions, with modifications suggested by interested parties, as illustrated above, to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets to expand guidance regarding financial guarantees and the use of the equity method for when losses exceed the equity value of an SCA investment. With the revisions, the equity value of an SCA would not go negative, and guaranteed liabilities would be reported to the extent that there is a financial guarantee or commitment. The “Illustration of the Application of INT 00-24” will also be inserted into SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, as illustrated below, so that equity losses of an SCA would not go negative (thus stopping at zero), however the guaranteed liabilities would be reported to the extent there is a financial guarantee or commitment.

**Adopted Revisions:**

**SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets - (Industry edits from the previous exposure are shaded.)**

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32.

   a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

   b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;
c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor’s obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries\(^{11}\); and

g. Intercompany and related party guarantees that are considered “unlimited” (e.g., typically in response to a rating agency’s requirement to provide a commitment to support).

The exemptions for items f and g above do not apply in situations in which a reporting entity has provided a financial guarantee or commitment to support a subsidiary, controlled or affiliated entity (SCA), and the SCA’s equity is negative (see paragraph 24).

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, and the provisions for SCAs detailed in paragraph 24a, this standard does not describe in detail how the guarantor’s liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor’s release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

25. In situations in which a reporting entity has provided a financial guarantee or commitment to support a subsidiary, controlled or affiliated entity (SCA), and the reporting entity’s share of losses in the SCA exceed the equity method carrying amount of the SCA (resulting in a negative equity value in the SCA), the reporting entity shall recognize the greater impact of (i) the then-current fair value liability for of the guarantee or (ii) the negative equity position, limited to the maximum amount of the financial guarantee or commitment provided by the reporting entity. (This guidance requires the recognition of a guarantee liability for guarantees captured in paragraphs 18f and 18g, when negative equity exists in an SCA. The guidance in paragraphs 20 through 26 shall be followed for the recognition of: a contingent liability and a noncontingent liability, as applicable.

SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities

4314. On at least a quarterly basis, the procedures set forth below shall be followed by a reporting entity in applying an equity method of accounting (as described in paragraphs 8.b.i. through 8.b.iv.), as applicable, to investments in SCA entities:

e. For entities subject to 8.b.i., 8.b.ii., 8.b.iii. and 8.b.iv. a reporting entity’s share of losses of an investee may equal or exceed the carrying amount of an investment accounted for by an equity method plus advances made by the investor. The reporting entity shall discontinue applying an

---

\(^{11}\) The exclusion for wholly owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly owned insurance or non-insurance subsidiary. The “wholly-owned” exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly owned (directly or indirectly) by a parent company.
equity method when the investment (including advances) is reduced to zero and shall not provide for additional losses, while still continuing to track the amount of unreported equity method losses, until any future equity method income can be reported. If the reporting entity has guaranteed obligations of the investee or is otherwise committed to provide further financial support for the investee, the provisions of such as (guaranteed obligations meeting the definition of liabilities in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets) shall be followed (SSAP No. 5R), they shall be recorded as liabilities. If as the entire equity method loss (subject to the financial guarantee / commitment) shall be recognized under SSAP No. 5R, it does not also need to be recognized under SSAP No. 97. If the investee subsequently reports net income, the reporting entity shall resume applying an equity method only after its share of that net income equals the share of net losses not recognized during the period that an equity method was suspended;

Footnote 2: Although the SCA is reported at zero in the investment schedule, a guarantee liability (either contingent or noncontingent) may be required to be reported under SSAP No. 5R. Additionally, refer to the additional guidance related to discontinuance of an equity method in paragraphs 15-17 and INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses. As detailed in INT 00-24, a reporting entity’s share of losses in an SCA shall be applied to other investments held in the SCA once the SCA (common stock) investment has been reduced to zero.

35. All SCA investments within the scope of this statement (except paragraph 8.b.i. entities) shall include disclosure of the SCA balance sheet value (admitted and nonadmitted) as well as information received from the NAIC in response to the SCA filing (e.g., date and type of filing, NAIC valuation amount, whether resubmission of filing is required). This disclosure shall include an aggregate total of all SCAs (except paragraph 8.b.i. entities) with detail of the aggregate gross value under this statement with the admitted and nonadmitted amounts reflected on the balance sheet. (As noted in paragraph 4, joint ventures, partnerships and limited liability companies are accounted for under the guidance in SSAP No. 48. As such, those entities are not subject to the disclosures in this statement, unless specifically directed by SSAP No. 48.)

a. For all periods presented, a reporting entity whose shares of losses in an SCA exceeds its investment in the SCA shall disclose its share of losses. (This is required regardless of a guarantee or commitment of future financial support to the SCA.) This disclosure shall include the following:

i. The reporting entity’s accumulated share of the SCA losses not recognized during the period that the equity method was suspended;

ii. The reporting entity’s share of the SCA’s equity, including negative equity;

iii. Whether a guaranteed obligation or commitment for financial support exists; and

iv. The SCA’s reported value. The amount of the recognized guarantee under SSAP No. 5R.

EXHIBIT F – ILLUSTRATION OF THE APPLICATION OF INT 00-24

XYZ Investment in ABC Company

1. ABC Company is a life insurance company, formed January 2, 20X1 to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

© 2020 National Association of Insurance Commissioners  27
2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

3. At 1/2/20X1, XYZ recorded the following entry to record its investment in ABC:

Investment in ABC Common stock | $ 100,000 |
Investment in ABC Preferred stock | $ 400,000 |
Cash | $ 500,000 |

To record initial investment in ABC Insurance Company.

4. During the year ended 12/31/20X1, ABC had statutory net income before dividends of $200,000. At 12/31/20X1, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.10 per share. XYZ recorded the following entries:

Cash | $ 20,000 |
Dividend Income | $ 20,000 |

To record preferred dividend income from ABC Insurance Company for 20X1.

Investment in ABC Common stock | $ 75,000 |
Unrealized Gain/Loss | $ 75,000 |

To record 20X1 unrealized gain on investment in ABC Common. (($200,000 - $50,000) * 50%)
To record 20X1 dividend on ABC Common. (100,000 shares * $.10)

5. During the year ended 12/31/20X2, ABC issued an 8% surplus note of $500,000. XYZ purchased 100% of the surplus note. During that same year, ABC incurred a statutory net loss before dividends of $250,000. At 12/31/20X2, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.05 per share. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Investment in ABC Surplus Notes $ 500,000
Cash $ 500,000

To record investment in ABC Insurance Company surplus notes.

Cash $ 20,000
Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X2.

Unrealized Gain/Loss $ 150,000
Investment in ABC Common stock $ 150,000

To record 20X2 unrealized loss on investment in ABC Common. ((-$250,000 - $50,000) * 50%)

Cash $ 5,000
Unrealized Gain/Loss $ 5,000
Dividend Income $ 5,000
Investment in ABC Common stock $ 5,000

To record 20X2 dividend on ABC Common. (100,000 shares * $.05)

6. During the year ended 12/31/20X3, ABC Insurance Company incurred a statutory net loss before dividends of $400,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable $ 20,000
Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X3.

Unrealized Gain/Loss $ 182,000
Investment in ABC Preferred stock $ 172,000
Investment in ABC Common stock $ 10,000

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).
Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)
Total net loss and preferred dividend (-$400,000 - $50,000) $450,000
Less amount used to reduce common stock investment to $0 $20,000
Amount remaining to be allocated to investment in preferred $430,000
7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

**Dividends Receivable**
- $20,000

**Dividend Income**
- $20,000

To record preferred dividend income from ABC Insurance Company for 20X4.

**Unrealized Gain/Loss**
- $458,000

- **Investment in ABC Preferred stock**
  - $228,000

- **Investment in ABC Surplus note**
  - $230,000

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

**Total net loss and preferred stock dividend ($800,000),**
Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)

**Preferred stock component calculated as:**
- **Total net loss and preferred dividend (-$750,000 - $50,000)**
  - $800,000
- **Less amount used to reduce preferred stock investment to $0**
  - $570,000
- **Amount remaining to be allocated to investment in surplus note**
  - $230,000
- **XYZ ownership % of surplus note**
  - 100%
- **XYZ reduction in investment in ABC Surplus Notes**
  - $230,000

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

**Dividends Receivable**
- $20,000

**Dividend Income**
- $20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

**Unrealized Gain/Loss**
- $270,000

**Investment in ABC Surplus note**
- $270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

**Total ABC net loss and preferred stock dividend (-$500,000 - $50,000),**
**Surplus Note component calculated as:**
- **Total net loss and preferred dividend (-$500,000 - $50,000)**
  - $550,000
- **XYZ ownership % of ABC Surplus Note**
  - 100%
  - $550,000
- **Amount of unrealized loss recognized in 20X5**
  - $270,000
- **Amount of unrealized loss suspended**
  - $280,000

9. Since XYZ has not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.
10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

<table>
<thead>
<tr>
<th>Cash</th>
<th>Dividends Receivable</th>
<th>Dividend Income</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ 80,000</td>
<td>$ 60,000</td>
<td>$ 20,000</td>
</tr>
</tbody>
</table>

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes, ABC Preferred or ABC Common, since ABCs’ net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

13. The following amounts were tracked:

- Total ABC net income and preferred stock dividend ($200,000 - $50,000).
- Surplus Note component calculated as:
  - Total net income and preferred dividend ($200,000 - $50,000) $150,000
  - XYZ ownership % of ABC Surplus Note 50%
  - Amount of unrealized loss suspended in 20X5 $75,000
  - Remaining amount of unrealized loss suspended $280,000
  - $205,000

13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

<table>
<thead>
<tr>
<th>Cash</th>
<th>Dividend Income</th>
</tr>
</thead>
<tbody>
<tr>
<td>$ 20,000</td>
<td>$ 20,000</td>
</tr>
</tbody>
</table>

To record preferred dividend income from ABC Insurance Company for 20X7.

- Investment in ABC Surplus Notes $70,000
- Unrealized Gain/Loss $70,000

To record 20X7 unrealized gain on investment in ABC Surplus Notes.

- Total ABC net income and preferred stock dividend ($600,000 - $50,000).
- Surplus Note component calculated as:
  - Total net income and preferred dividend ($600,000 - $50,000) $550,000
  - XYZ ownership % of ABC Surplus Note 50% $275,000
  - Remaining amount of unrealized loss suspended in 20X5 $205,000
  - 20X7 amount of unrealized gain on investment in ABC Surplus Note $70,000

14. During the year ended 12/31/20X8, ABC Insurance Company had statutory net income before dividends of $900,000. At 12/31/20X8, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:
Cash $ 20,000

Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X8.

Total ABC net income and preferred stock dividend ($900,000 - $50,000).

Surplus Note component calculated as:

Total net income and preferred dividend ($900,000 - $50,000) $850,000
XYZ ownership % of ABC Surplus Note 50%

20X8 amount of unrealized gain on investment in ABC Surplus Note $425,000

Investment in ABC Surplus Notes $ 425,000

Unrealized Gain/Loss $ 425,000

To record 20X8 unrealized gain on investment in ABC Surplus Notes.

15. During the year ended 12/31/20X9, ABC Insurance Company had statutory net income, before interest on surplus notes and dividends, of $1,400,000. The Commissioner approved one year’s interest payment on the surplus notes. At 12/31/20X9, ABC declared and paid a 5% preferred dividend, and a $.10 dividend per share on Common stock. XYZ recorded the following entries:

Cash $ 20,000

Dividend Income $ 20,000

To record preferred dividend income from ABC Insurance Company for 20X9.

Cash $ 40,000

Interest Income $ 40,000

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)

Investment in ABC Surplus Notes $ 5,000
Investment in ABC Preferred Stock $ 400,000
Investment in ABC Common Stock $ 130,000

Unrealized Gain/Loss $ 535,000

To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes.

Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes $ 1,270,000
($1,400,000 - $50,000 - $80,000)

Less amount needed to restore investment in surplus notes ($ 10,000)

Amount available for preferred stock and common stock investment restoration $ 1,260,000

Amount needed to restore preferred stock component ($1,000,000)

Amount available to restore common stock component $ 260,000

Surplus Notes component ($10,000 * 50%) $ 5,000
Preferred Stock component ($1,000,000 * 40%) $ 400,000

Common stock component ($260,000 * 50%) $ 130,000

Cash $ 10,000
Unrealized Gain/Loss $ 10,000

Dividend Income $ 10,000
Investment in ABC Common stock $ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

Description of Issue:

This agenda item seeks to address a regulator inquiry regarding prepayments to providers of claims and adjusting services in which the service provider is prepaid by the insurer. While the initial inquiry for this agenda item was a prepaid roadside assistance provider, the accounting issues are relevant to other providers of claims and adjusting services as well.

The prepayments can take a variety of forms and the provider can take on a variety of duties, but in the example provided, the roadside assistance provider was being prepaid a flat fee for a minimum number of vehicles/policies regardless of claims incurred or sales. The provider additionally received a flat fee per vehicle if actual sales exceed the negotiated minimum number of vehicles. The provider, who is not an insurer, was contracted to provide roadside assistance and administer and settle claims using only the prepaid amounts. So, to use a health care analogy, the provider accepts a “capitated” payment to administer and settle claims.

Roadside assistance is a common feature or rider to many automobile insurance policies that has been available for several years. Roadside assistance provides towing and other services such as jumpstarting car batteries, unlocking doors and gas refills for the insured. Discussions with industry representatives indicate that in most cases, roadside assistance providers may have rates that are negotiated, but providers are not typically prepaid. Rather, when the insured calls for assistance negotiated rate providers are dispatched and subsequently paid at negotiated rates as the claims for assistance are incurred. This agenda item is focused on prepayments to providers.

To provide a fictional numeric example, the minimum annual payment to the provider was for 50,000 vehicles at $10 per vehicle, with additional payments per vehicle required if sales exceed the initial fees. The provider in this example, was also responsible for administering claims and dispatching service in exchange for the “capitated” fee. Therefore, the roadside assistance provider would not bill the insurer further when claims are incurred.

The guidance in SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, paragraphs 4 and 5 (excerpted in the Authoritative Literature section) are relevant to the timing of claims recognition and payment of loss adjustment expenses. The guidance provides that claims are recognized when incurred. The existing guidance indicates that paying a third party in advance to adjust claims in the future does not decrease the claims adjustment liability. The claim adjustment liability is only reduced when the claim has been adjusted, not when it is prepaid. In accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities, prepayments to a third party do not meet the right of offset requirements.

The statutory accounting and reporting questions at issue are how the direct writer accounts for and reports the prepaid claims and adjusting expenses initially and subsequently. The existing guidance notes that claim adjusting expenses are not reduced for payments to third parties. The guidance in SSAP No. 55 indicates liabilities shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the
exception that the liability is established net of capitated payments to managed care providers. The prepaid expenses under consideration may include a prepayment for claims administration and or a prepayment for the claims.

In reviewing the annual statement instructions for the Underwriting and Expense Exhibit, Part 3, and the related instructions for property and casualty expenses, the initial prepayment to the provider seems be consistent with miscellaneous underwriting expense.

For policies that purchase the coverage and incurred a claim, it seems appropriate to reclassify a proportionate percentage of the initial prepayment to claims incurred and loss adjustment expenses as losses are incurred and adjusted. However, it would be inappropriate to allocate claims expense and claims adjusting expenses to policies that did not purchase the coverage and inappropriate to allocate the costs of the provider to claims or claims adjusting expenses prior to incurring the claims. Therefore, in the event of prepayment to a third-party provider, some of the costs may remain in miscellaneous adjusting expense.

Existing Authoritative Literature:

- SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, paragraphs 4 and 5 includes the following:

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

General

10. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54R and SSAP No. 65—Property and Casualty Contracts.
The guidance in SSAP No. 55, paragraph 5 was incorporated from INT 02-21: Accounting for Prepaid Loss Adjustment Expenses and Claim Adjustment Expenses, which was nullified when the guidance was moved to SSAP No. 55.

- **SSAP No. 64—Offsetting and Netting of Assets and Liabilities** provides the following:
  
  2. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 3 and 4. A right of setoff is a reporting entity's legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying an amount that the other party owes to the reporting entity against the debt[INT 09-08]. A valid right of setoff exists only when all the following conditions are met:
    
    a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;
    
    b. The reporting party has the right to set off the amount owed with the amount owed by the other party;
    
    c. The reporting party intends to setoff; and
    
    d. The right of setoff is enforceable at law.

- **Property and Casualty Annual Statement Instructions Underwriting and Investment Exhibit Part 3 – Expenses** provides the following:

  A company that pays any affiliated entity (including a managing general agent) for the management, administration, or service of all or part of its business or operations shall allocate these costs to the appropriate expense classification items (salaries, rent, postage, etc.) as if these costs had been borne directly by the company. Management, administration, or similar fees should not be reported as a one-line expense. The company may estimate these expense allocations based on a formula or other reasonable basis.

  A company that pays any non-affiliated entity (including a managing general agent) for the management, administration, or service of all or part of its business or operations shall allocate these costs to the appropriate expense classification item as follows:

  a. Payments for claims handling or adjustment services are allocated to Loss Adjustment Expenses (Column 1) in the Underwriting and Investment Exhibit, Part 3. If the total of such expenses incurred equals or exceeds 10% of the total incurred Loss Adjustment Expenses (Line 25, Column 1), the company shall allocate these costs to the appropriate expense classification items as if these costs had been borne directly by the company. If such expenses are less than 10% of the total, they may be reported on Line 1 of Column 1.

  b. Payments for services other than claims handling or adjustment services are allocated to the appropriate expense classification items as if these costs had been borne directly by the company, if the total of such fees paid equals or exceeds 10% of the total incurred Other Underwriting Expenses (Line 25, Column 2). If the total is less than 10%, the payments may be reported on Line 2 if the fees are calculated as a percentage of premiums, or on Line 3 if the fees are not calculated as a percentage of premiums.

  The total management and service fees incurred attributable to affiliates and non-affiliates is reported in the footnote to the Underwriting and Investment Exhibit, Part 3 of the annual statement, and the
method(s) used for allocation shall be disclosed in the Notes to the Financial Statements. The company shall use the same allocation method(s) on a consistent basis. Refer to SSAP No. 70—Allocation of Expenses for accounting guidance.

Exclude from investment expenses brokerage and other related fees, to the extent they are included in the actual cost of a bond upon acquisition. Refer to SSAP No. 26R—Bonds for accounting guidance.

Include all other internal costs or costs paid to an affiliated company related to origination, purchase or commitment to purchase bonds.

For the purpose of establishing uniformity in classifications of expenses in reporting entities’ statements and reports filed with the Insurance Departments, the company shall observe the instructions contained in the Appendix of these instructions for the Uniform Classification of Expenses.

Activity to Details of Write-ins Aggregated at Line 24 for Miscellaneous Expenses

List separately each category of miscellaneous expenses for which there is no pre-printed line on Underwriting and Investment Exhibit, Part 3.

- **Property and Casualty Annual Statement Instructions Underwriting Appendix Instructions for Uniform Classifications of Expenses of Property and Casualty Insurers** provides the following:

  1.1 **Direct**

  Include: The Following Expenses When in Connection with the Investigation and Adjustment of Policy Claims:

  **Independent Adjusters**: Fees and expenses of independent adjusters or settling agents

  **Legal**: Fees and expenses of lawyers for legal services in the defense, trial, or appeal of suits, or for other legal services

  **Bonds**: Premium costs of bonds

  **Appeal Costs and Expenses**: Appeal bond premiums, charges for printing records, charges for printing briefs, court fees and incidental to appeals

  **General Court Costs and Fees**: Entry fees and other court costs, and other fees not includible in Losses (Note: Interest and costs assessed as part of or subsequent to judgment are includible in Losses.)

  **Medical Testimony**: Fees and expenses of medical witnesses of attendance or testimony at trials or hearings ("Medical" includes physicians, surgeons, chiropractors, chiropodists, dentists, osteopaths, veterinarians, and hospital representatives.)

  **Expert Witnesses**: Fees and expenses of expert witnesses for attendance or testimony at trials or hearings

  **Lay Witnesses**: Fees and expenses of lay witnesses for attendance or testimony at trials or hearings

  **Services of Process**: Constables, sheriffs, and other fees and expenses for service of process, including subpoenas

  **Transcripts of Testimony**: Stenographers’ fees and fees for transcripts of testimony
**Medical Examinations:** Fees for medical examinations, fees for performing autopsies, fees for impartial examination, x-rays, etc., for the purpose of trial and determining questions of liability (This does not include fees for medical examinations, x-rays, etc., made to determine necessary treatment, or made solely to determine the extent or continuation of disability, or first aid charges, as such fees and charges are includible in Losses.)

**Miscellaneous:** Costs of appraisals, expert examinations, surveys, plans, estimates, photographs, maps, weather reports, detective reports, audits, credit or character reports, watchmen (Charges for hospital records and records of other kinds, notary fees, certified copies of certificates and legal documents, charges for Claim Adjustment Services by underwriting syndicates, pools, and associations)

Exclude: Compensation to employees (see Salaries)

Expenses of salaried employees (see Travel and Travel Items)

Items includible in Allowances to Managers and Agents

Payments to State Industrial Commissions (see Taxes, Licenses, and Fees)

Payments to claim adjusting organizations except where the expense is billed specifically to individual companies (see Boards, Bureaus, and Associations)

Cost of services of medical examiners for underwriting purposes (see Surveys and Underwriting Reports)

Salvage and subrogation recovery expense, rewards, lost and found advertising, expenses for disposal of salvage (Such expenses shall be deducted from salvage.)

Any expenses which by these instructions are includible elsewhere

Separation of Claim Adjustment Services:

The Statistical Plans filed by certain rating bureaus contain definitions of “Allocated Loss Adjustment Expenses” which exclude for rating purposes certain types of claim adjustment services as defined herein. For the lines of business thus affected, companies that are members of such rating bureaus shall maintain records necessary to the reporting of Claim Adjustment Services—Direct, as follows:

a. As defined in Statistical Plans

b. Other than as defined in Statistical Plans

**Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None.

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** June 2017 updates to the AICPA Revenue Recognition Guide noted in Issue #9- 1: Considerations for applying the scope exception in FASB ASC 606-10-15-2 and 606-10-15-4 to Contracts within the Scope of ASC 944 contains some discussion on roadside assistance that is tangential but does not address the prepayments under discussion. The updates were issued in response to questions regarding Accounting Standards Update (ASU) 2016-20: Technical Corrections and Improvements to Topic 606, Revenue from Contracts from Customers.

At issue was whether to bifurcate insurance contracts within the scope of Topic 944, Financial Services—Insurance that contain noninsurance elements and account for them within the scope of Topic 606, Revenue from Contracts from Customers. Roadside assistance provided with an automobile insurance policy was listed as an
example of activities performed by an insurance entity, included in contracts within the scope of FASB Topic 944, that Financial Reporting Executive Committee (FinREC) believes generally should be considered fulfillment activities (that either mitigate risks to the insurer or contain costs related to services to fulfill the insurer’s obligation) that are not within the scope of FASB Topic 606, but should be considered part of the insurance contract within the scope of FASB Topic 944. Roadside assistance was noted as mitigating the risk of a further accident or damage to the insured automobile.

**Convergence with International Financial Reporting Standards (IFRS):** During the development of *IFRS 17, Insurance Contracts*, the International Accounting Standards Board (IASB) had discussions regarding classification for the revenue which are not on point to roadside assistance prepayments. Similar to the AICPA issue noted above, the issue was whether roadside assistance sold as part of an insurance policy should be included within the scope of insurance contracts or whether it should be accounted for separately as fee for service. The IFRS 17 issued in May 2017 notes that some fixed-fee service contracts meet the definition of an insurance contract (for example, automobile roadside assistance) and IFRS 17 provides an option to use *IFRS 15, Revenue from Contracts with Customers* to account for as fee for service.

**Staff Review Completed by:**
Robin Marcotte, NAIC Staff - September 2018

**Staff Recommendation:**

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 55 to provide guidance as follows:

1. The initial prepayment for providers of claims adjusting expense and claim payment is recognized as a miscellaneous underwriting expense.

2. Subsequently, for direct policies that purchased the related insurance coverage which used the claims or adjusting services incur losses which are paid, a proportionate percentage of the initial provider prepayment amounts are reclassified from miscellaneous underwriting expense to claims adjustment expense and or claims expense, as applicable.

3. To the extent that additional amounts are prepaid for direct policies that did not purchase services, the prepaid expenses shall remain in miscellaneous underwriting expenses.

Note that NAIC staff envisions that additional annual statement instruction clarifications may be indicated after the Working Group finalizes guidance.

Proposed revisions to SSAP No. 55 recommended for November 2018 exposure:

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income.
a. Prepays to third party administrators, management companies or other entities for unpaid losses/claims, except for capitated payments for manage care contracts, shall not reduce losses/claims and shall be initially reported as miscellaneous underwriting expenses. When incurred losses/claims are paid, claims prepays to third party administrators, management companies or other entities (except for capitated payments for manage care contracts) are reclassified proportionately based on the losses/claims cost from miscellaneous underwriting expenses to loss/claim expenses paid. Flat fee minimum prepays to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as miscellaneous underwriting expenses and not reclassified to loss/claim adjusting expenses.

b. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

a. Prepays to third party administrators, management companies or other entities, except for capitated payments for manage care contracts, for unpaid losses/ claims adjusting expenses shall be initially reported as miscellaneous underwriting expenses.

b. When incurred losses/claims adjusting expenses are paid, prepays to third party administrators, management companies or other entities (except for capitated payments for manage care contracts) are reclassified proportionately based on the adjusting expenses from miscellaneous underwriting expenses to paid loss /claim adjusting expenses. Flat fee minimum prepays to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as miscellaneous underwriting expenses and not reclassified to loss/claim adjusting expenses.

Status:
On November 15, 2018, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as shown above, to provide guidance clarifying that prepays to providers of claims and adjusting services shall be recognized as miscellaneous underwriting expenses, with guidance for reclassification as claims adjustment expense or claims expense, as applicable, as claims are paid. During the November 2018 Working Group discussion, it was highlighted that the proposed treatment is different than recognizing a nonadmitted prepaid asset, as the amounts are not expected to be material. Comments were requested on this difference and if the amounts are expected to be material.

Spring 2019 National Meeting discussion:

NAIC staff recommends re-exposure of modified proposed language which was developed with interested parties input as illustrated below and in the agenda item. The interested parties responded to the request for comments and noted a preference to “nonadmit a prepaid asset” for prepaid loss and LAE, which is consistent
with existing guidance, instead of the to the previously exposed “expense and reclassify as amounts are paid” approach. NAIC staff has proposed a modification to the interested parties’ proposed language to exclude the reference to SSAP No. 84—Health Care and Government Insured Plan Receivables which is not currently referenced in SSAP No. 55. In addition, NAIC staff has recommended guidance regarding flat fee bundled payments which indicates nonadmission of prepaid amounts and allocation to expense categories as benefits or services are rendered.

On April 6, 2019, the Statutory Accounting Principles (E) Working Group exposed modified language, developed with interested parties’ input as described above, which requires nonadmittance for prepaid loss and LAE. This guidance is consistent with existing statutory accounting principles and was revised from the previously exposed “expense and reclassify as amounts are paid” approach. In addition, guidance was exposed regarding flat fee bundled payments which indicates nonadmission of prepaid amounts and allocation to expense categories as benefits or services are rendered. The exposed language is illustrated below.

2019 Spring National Meeting exposure:

SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses:

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income.

   a. All prepayments (i.e., variable, fixed or bundled amounts) to third party administrators, management companies or other entities for unpaid claims, losses and losses/claims adjustment expenses, except for capitated payments for managed care contracts, shall not reduce losses/claims and shall be initially reported as a prepaid asset and nonadmitted in accordance with SSAP No. 29—Prepaid Expenses. When the benefit has been provided to the policyholder or claimant, the claims prepayments to third party administrators, management companies or other entities (except for capitated payments for managed care contracts), are reclassified proportionately from the prepaid nonadmitted asset to claims, losses or loss/claim expenses paid based on the amount of losses/claims cost incurred to provide the benefit.

   b. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as miscellaneous underwriting expenses.

   c. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on
capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

a. When the prepaid benefit as described in paragraph 4 has been provided to the policyholder or the claimant, the associated prepayments to third party administrators, management companies or other entities (except for capitated payments for managed care contracts) are reclassified proportionately from the prepaid nonadmitted asset to paid loss/claim adjusting expenses based on the amount of losses/claims cost incurred to provide the benefit. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as miscellaneous underwriting expenses.

On August 3, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 55, as illustrated below, that emphasize existing guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). The liabilities are not recognized as paid until the losses are paid to claimants or claims are adjusted. Prepayments to third party administrators, which are not for claims or loss adjusting expense, are “miscellaneous underwriting expenses.” The revisions also add a reference to SSAP No. 84—Health Care and Government Insured Plan Receivables regarding prepayments to providers.

2019 Summer National Meeting exposure:

SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses:

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income.

a. The liability for unpaid losses and claims shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims on non-capitated payments under managed care contracts shall be established in an amount necessary to pay the losses/claims irrespective of payments made to third-party administrators, etc. The liability for claims on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers. As loss or claims payments occur, from the third-party administrators, management companies or other entities, to the policyholder or claimant (except for capitated payments for managed care contracts) paid claims, losses or paid loss/paid claim adjusting liabilities are reduced. Note that guidance regarding the admissibility of loans and advances to providers which apply to health insurance and managed care contracts are addressed in SSAP No. 84—Health Care and Government Insured Plan Receivables.

b. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are
reported as 1) Aggregate write ins for miscellaneous expenses - Property and Casualty (Underwriting and Investment Exhibit Part 3); 2) Aggregate write ins for expenses - Life/Health (Exhibit 2 – General expenses) or 3) aggregate write ins for expenses (General Administrative Expenses)- health (Underwriting and Investment Exhibit Part 3)

c. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

a. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as 1) Aggregate write ins for miscellaneous expenses - Property and Casualty (Underwriting and Investment Exhibit Part 3); 2) Aggregate write ins for expenses - Life/Health (Exhibit 2 – General expenses) or 3) aggregate write ins for expenses (General Administrative Expenses) - health (Underwriting and Investment Exhibit Part 3).

For Fall 2019 National Meeting Discussion:

NAIC Staff recommends that the Working Group expose revisions incorporating the majority of interested parties’ comments as reflected below as tracked changes to SSAP No. 55 (rather than as reflected as changes to the Summer 2019 exposure). Interested parties’ comments primarily delete the exposed guidance and move the same or similar concepts into the broad product guidance for property and casualty, life and health or health in SSAP No. 55. These revisions are to reinstate annual statement references by entity type and to adjust scoping language and make the SSAP No. 29 prepaid guidance consistent. Note that shading reflects staff proposed variations in wording from the interested parties proposed wording that accomplishes a similar intent.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as illustrated below, that incorporate interested parties’ recommendations to separate the guidance by product type and emphasize guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). The revisions emphasize existing guidance that claims that related liabilities are not recognized as paid until the losses are paid to claimants or claims are adjusted. Note that shading reflects staff proposed variations in wording from the interested parties’ proposed wording that accomplishes a similar intent.

2019 Fall Exposure:

Unpaid Claims, Losses and Loss Adjustment Expenses SSAP No. 55

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a
claim. Until claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts for which ... The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

Property/Casualty

6. The following are types of future costs relating to property and casualty contracts, as defined in SSAP No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:

   a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the reporting entity as of the statement date;

   b. Incurred But Not Reported Losses (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the reporting entity as of the statement date. As a practical matter, IBNR may include losses that have been reported to the reporting entity but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;

   c. Loss Adjustment Expenses: Expected payments for costs to be incurred in connection with the adjustment and recording of losses defined in paragraphs 6.a. and 6.b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

      i. DCC include defense

         (a) Surveillance expenses;

         (b) Fixed amounts for medical cost containment expenses;

         (c) Litigation management expenses;
(d) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;

(c) Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;

(f) Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and

(g) The cost of engaging experts;

ii. AO are those expenses other than DCC as defined in (i) above assigned to the expense group "Loss Adjustment Expense." AO include, but are not limited to, the following items:

(a) Fees and expenses of adjusters and settling agents;

(b) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;

(c) Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder;

Legal defense costs incurred under the definition of covered damages or losses as the only insured peril would be accounted for as losses, while legal defense costs incurred under a duty to defend would be accounted for as Defense and Cost Containment (DCC). For policies where legal costs are the only insured peril, the insurer would record the legal costs that reimburse the policyholder as loss and, to the extent the insurer participated in the defense, would record its legal costs as DCC. This is not intended to change the classifications of legal expenses for existing long tailed lines of liability coverage, such as medical malpractice and workers' compensation insurance.

(d) Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster; and

(c) Adjustment expenses arising from claims related lawsuits such as extra contractual obligations and bad faith lawsuits.

d. The contractual terms for arrangements (i.e., variable, fixed or bundled amounts) to third party administrators, management companies, or other entities for unpaid claims, losses and losses/claims adjustment expenses, shall be evaluated to determine if the arrangement meets the criteria to be reported as a prepaid asset and nonadmitted in accordance with SSAP No. 29—Prepaid Expenses. These payments shall not be offset against any amounts required to be reported in accordance with paragraphs 4 or 5 within this guidance. Only when loss/claim and related adjusting expense payments which are made by the third-party administrators, management companies or other entities, to the policyholder or claimant, shall the insurer’s liability (loss/claim or loss/claim adjustment expense reserves) be reduced.
c. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as aggregate write-in for miscellaneous underwriting benefits in the Underwriting and Investment exhibit Part 3.

Life, Accident and Health

7. The following future costs relating to life and accident and health indemnity contracts, as defined in SSAP No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in SSAP No. 54R.

b. Claim Liabilities for Life/Accident and Health Contracts:
   
i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;
   
ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity’s past experience with similar resisted claims;
   
iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;
   
iv. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as death, accident, or illness) but has not been reported to the reporting entity as of the statement date.

c. Claim Adjustment Expenses for Accident and Health Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in paragraphs 7.a. and 7.b. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

d. Claim Adjustment Expenses for Life Reporting Entities: Costs expected to be incurred (including legal and investigation) in connection with the adjustment and recording of life claims defined in paragraph 7.b. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

e. In cases where insurers advance funds to third-party administrators, management companies or other entities prior to the occurrence of the claim who then, on behalf of
the insurer, adjudicate the claim and make payments to insureds or other claimants, the guidance in paragraph 9 applies.

Managed Care

8. The following costs relating to managed care contracts as defined in SSAP No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:

a. Claims unpaid for Managed Care Reporting Entities:
   i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;

   ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;

   iii. Additional unpaid medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;

b. Claim Adjustment Expenses for Managed Care Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of managed care claims defined in paragraph 8.a. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

c. Liabilities for percentage withholds (“withholds”) from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk-sharing arrangements whereby the health entity agrees to share savings with contracted providers.

e. In cases where insurers advance funds to third-party administrators, management companies or other entities prior to the occurrence of the claim who then, on behalf of the insurer, adjudicate the claim and make payments to insureds or other claimants, the guidance in paragraph 9 applies.

Managed Care and Accident and Health

*Drafting Note: New guidance is issued within par. 9, which is underlined. Existing par 9 is renumbered to par. 10, and all other pars within existing guidance (i.e., pars. 10 – 23, will be renumbered to 11 – 24, respectively.*

9. In some instances, insurers advance funds to third-party administrators, management companies or other entities prior to the occurrence of the claim who then, on behalf of the insurer, adjudicate the claim and make payments to insureds or other claimants. In such cases the following guidance applies:

a. For capitated payments under managed care contracts, the liability for claims and claim adjusting expenses shall be established in an amount necessary to adjudicate and pay all
unpaid claims irrespective of payments to third-party administrators, management companies or other entities, and is reported net of capitated payments to providers.

b. For non-capitated advance payments, the liability for unpaid losses/claims and related adjustment expenses shall be established regardless of any payments made to third-party administrators, management companies or other entities, and such payments shall be reported by the insurer as prepayments. All prepayments (i.e., variable, fixed or bundled amounts) to third party administrators, management companies, or other entities for unpaid claims, losses and losses/claims adjustment expenses, shall be initially reported as a prepaid asset and nonadmitted in accordance with SSAP No. 29—Prepaid Expenses. These payments shall not be offset against any amounts required to be reported in accordance with paragraphs 4 or 5 within this guidance. Only when loss/claim and related adjusting expense payments which are made by the third-party administrators, management companies or other entities, to the policyholder or claimant, shall the insurer’s liability (loss/claim or loss/claim adjustment expense reserves) be reduced.

c. Prepayments to third party administrators or management companies or other entities that do not relate to services or adjusting for the underlying direct policy benefits are reported as (1) Aggregate write ins for expenses - Life/Health (Exhibit 2 – General expenses) or (2) Aggregate write ins for expenses (General Administrative Expenses) - Health (Underwriting and Investment Exhibit Part 3).

Note that this guidance in paragraph 9 does not alter existing guidance regarding the admissibility of loans and advances to providers which apply to health insurance and managed care contracts which is addressed in SSAP No. 84—Health Care and Government Insured Plan Receivables.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses, as illustrated above under “2019 Fall Exposures,” that emphasize guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). The revisions also emphasize existing guidance that claims and related liabilities are not recognized as paid until the losses are paid to claimants or claims are adjusted.

<th>Life</th>
<th>Health</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Issue or SSAP Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Description of Issue:
This agenda item was drafted in response to Working Group direction from the 2019 Summer National Meeting. A clarification question arose while discussing agenda item 2019-13, Clarification of a Look-Through Approach. The Working Group verbalized the conclusion that a look-through is permitted through more than one downstream company so as long as each look-through entity complies with SSAP No. 97—Investment in Subsidiary, Controlled and Affiliated Entities. In response to interested party request for formal clarification, the Working Group directed a separate agenda item to provide this guidance in SSAP No. 97. This agenda item formally documents this guidance within statutory accounting.

Existing Authoritative Literature:

SSAP No. 97:

27. The process of admitting audited investments in entities owned by an unaudited downstream noninsurance holding company SCA entity will be known as a “look through.” In order to admit the investments in audited SCAs or the audited non SCA SSAP No. 48 entities owned by an unaudited downstream noninsurance holding company, a reporting entity may apply the look through approach, provided all of the following conditions are met:

a. Downstream holding company is an 8.b.iii entity.

b. The downstream holding company does not own any other assets which are material to the downstream holding company other than the audited SCA entities and/or audited non SCA SSAP No. 48 entities, and

c. The downstream noninsurance holding company is not subject to liabilities, commitments, contingencies, guarantees or obligations which are material to the downstream noninsurance holding company.

If an investment in a downstream noninsurance holding company meets the requirements set forth above, the reporting entity can admit the individual audited SCA entities and/or audited non SCA SSAP No. 48 entities; however, unaudited immaterial assets of the downstream noninsurance holding company are to be carried at the lesser of the paragraph 8 valuation or nonadmitted (e.g. some equity method investments are required to be carried at a negative value due to either statutory adjustments or to parental obligations to keep funding the subsidiary).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Agenda item 2019-13, Clarification of a Look-Through Approach was disposed at the Summer 2019 National Meeting. As part of the disposal action, the Statutory Accounting Principles (E) Working Group directed NAIC staff to draft a new
agenda item clarifying that a more-than-one holding company structure is permitted if each of the holding companies complies with SSAP No. 97.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS):
Not applicable.

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, to clarify that a more-than-one holding company structure is permitted as a look-through if each of the holding companies within the structure complies with the requirements in SSAP No. 97.

Proposed Revisions:

27. The process of admitting audited investments in entities owned by an unaudited downstream noninsurance holding company SCA entity will be known as a “look through.” In order to admit the investments in audited SCAs or the audited non SCA SSAP No. 48 entities owned by an unaudited downstream noninsurance holding company, a reporting entity may apply the look through approach, provided all of the following conditions are met:

a. The downstream noninsurance holding company is an 8.b.iii entity, and

b. The downstream noninsurance holding company does not own any other assets which are material to the downstream holding company other than the audited SCA entities and/or audited non SCA SSAP No. 48 entities, and

c. The downstream noninsurance holding company is not subject to liabilities, commitments, contingencies, guarantees or obligations which are material to the downstream noninsurance holding company.

If an investment in a downstream noninsurance holding company meets the requirements set forth above, the reporting entity can admit the individual audited SCA entities and/or audited non SCA SSAP No. 48 entities; however, unaudited immaterial assets of the downstream noninsurance holding company are to be carried at the lesser of the paragraph 8 valuation or nonadmitted (e.g. some equity method investments are required to be carried at a negative value due to either statutory adjustments or to parental obligations to keep funding the subsidiary). If a holding company structure has more than one downstream noninsurance holding company, each downstream non-insurance holding company may be looked through, provided each downstream non-insurance holding company meets all of the conditions in paragraph 27.

Issue: Update Withdrawal Disclosures

Check (applicable entity):

<table>
<thead>
<tr>
<th>Modification of existing SSAP</th>
<th>P/C</th>
<th>Life</th>
<th>Health</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Issue or SSAP Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Description of Issue:
In November 2018, the Working Group updated the life, health and separate account liquidity disclosures to provide more granularity of the withdrawal characteristics by product type. These updates were developed by the Financial Stability (Ex) Task Force and were adopted in agenda item 2018-28: Updates to Liquidity Disclosures. Agenda item 2018-28 updated the liquidity disclosures in SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance with an effective date of year-end 2019.

This agenda item proposes minor clarifying edits to the disclosures identified subsequent to the adoption of the related 2019 annual statement blanks proposal. These items include:

- Addition of separate account guaranteed products in one of the illustrations to remedy its omission. As quoted in the authoritative literature section below, SSAP No. 51R, SSAP No. 52 and SSAP No. 61R currently reference both guaranteed and nonguaranteed separate account products. This adds a consistency revision to SSAP No. 51R to ensure separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures.

- Correct an identified inconsistency in one of the new disclosures that was added regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%. A clarification is being recommended to ensure consistency in annual statement reporting.

- Add a cross-reference from SSAP No. 56—Separate Accounts to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R as the disclosures include separate account products.

Existing Authoritative Literature:
The below includes excerpts of text that was updated in agenda item 2018-28.

SSAP No. 51R—Life Contracts (Bolding added for emphasis):

45. For the disclosures noted below, disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed as well as the total and percentage of the total, include a separate section for individual Annuities, Group Annuities, and Deposit-Type Contracts (with no life contingencies). Supplementary contracts with life contingencies are reported in the appropriate Annuities section (Individual or Group).

NOTE: Subparagraphs a-f omitted for brevity.
46. Disclose the amounts of account value, cash value and reserve for the breakouts of life insurance by withdrawal characteristics, separately for General Account products and **Separate Account Nonguaranteed** products, as follows:

   a. Subject to discretionary withdrawal, surrender values, or policy loans:
      
      i. Term Policies with Cash Value
      
      ii. Universal Life
      
      iii. Universal Life with Secondary Guarantees
      
      iv. Indexed Universal Life
      
      v. Indexed Universal Life with Secondary Guarantees
      
      vi. Indexed Life
      
      vii. Other Permanent Cash Value Life Insurance
      
      viii. Variable Life
      
      ix. Variable Universal Life
      
      x. Miscellaneous Reserves

   b. Not subject to discretionary withdrawal or no cash value:
      
      i. Term Policies without Cash Value
      
      ii. Accidental Death Benefits
      
      iii. Disability – Active Lives
      
      iv. Disability – Disabled Lives
      
      v. Miscellaneous Reserves

   c. Total gross (Direct + Assumed)

   d. Reinsurance ceded

   e. Total net (Net: Total gross (paragraph 46.c.) less Reinsurance ceded (paragraph 46.d.))

The difference between the account value and the cash value is the surrender charge, if any. After the surrender period is over, there is no difference. Some contract types have no account value such as traditional whole life, term, etc. So, if there is no account value, leave it blank. UL typically has an account value and a cash surrender value. Just as account values are not reduced for policy loans taken and outstanding, the cash value amount reported in this disclosure should not be reduced for policy loans taken and outstanding. This will ensure the difference between account value and cash value is the actual surrender charge.

47. Reconcile total life insurance reserves amount disclosed to the appropriate sections of the Aggregate Reserves for Life Policies and Contracts Exhibit (Exhibit 5) of the Life, Accident and Health Annual Statement and the corresponding lines in the Separate Accounts Statement. The reconciliation is
SSAP No. 52—Deposit-Type Contracts (Bolding added for emphasis):

19. For the disclosures noted below, disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed as well as the total and percentage of the total, include a separate section for Individual Annuities, Group Annuities, and Deposit-Type Contracts (with no life contingencies). Supplementary contracts with life contingencies are reported in the appropriate Annuities section (Individual or Group).

NOTE: Subparagraphs omitted for brevity.

SSAP No. 61R (Bolding added for emphasis):

69. For the disclosures noted below, disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed as well as the total and percentage of the total, include a separate section for Individual Annuities, Group Annuities, and Deposit-Type Contracts (with no life contingencies). Supplementary contracts with life contingencies are reported in the appropriate Annuities section (Individual or Group).

NOTE: Subparagraphs omitted for brevity.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): This agenda item proposes consistency edits related to the disclosures developed by the Financial Stability (Ex) Task Force, which were adopted in November 2018 in agenda item 2018-28: Updates to Liquidity Disclosures.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: The Blanks (E) Working Group addressed this issue for 2019 reporting in an editorial change in June 2019 and is proposing separate tables for the guaranteed and nonguaranteed separate account products for 2020 reporting in agenda item 2019-21BWG.

Convergence with International Financial Reporting Standards (IFRS): Not applicable

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 51R, SSAP No. 56 and SSAP No. 61R as described and illustrated below:

1. Add a consistency revision to SSAP No. 51R, to ensure separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures.

2. Correct an identified inconsistency in one of the new disclosures that was added regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%. A clarification is being recommended to ensure consistency in annual statement reporting.
3. Add a cross reference from *SSAP No. 56—Separate Accounts* to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R as the disclosures include separate account products.

**Proposed Revisions:**

**SSAP No. 51R—Life Contracts**

45. For the disclosures noted below, disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed as well as the total and percentage of the total, include a separate section for individual Annuities, Group Annuities, and Deposit-Type Contracts (with no life contingencies). Supplementary contracts with life contingencies are reported in the appropriate Annuities section (Individual or Group).

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

   (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the insurer;

   (b) In installments over five years or more, with or without a reduction in the interest rate during the installment period;

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in paragraph 45.a.v.(d);

iii. At fair value, where the withdrawal of funds is payable at current fair value of the assets supporting the liabilities, the assets are stated at current fair value, and the liabilities are stated at the current fair value or per unit value of the assets supporting the liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at fair value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

   (a) In a lump sum without adjustment;

   (b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

   (c) In a lump sum subject to a fixed surrender charge of less than 5%;

   (d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues;
b. Not subject to discretionary withdrawal;

c. Total gross;

d. Reinsurance ceded;

e. Total net.

f. Amount with current surrender charge of 5% or more included in the current year in paragraph 45.a.ii. that will have less than a 5% surrender charge (and thus be reported with the amounts at book value with minimal or no charge or adjustment noted in paragraph 45.a.v.) for the first time within the year subsequent to the balance sheet year. (Note that percentage of total is not required for this item.)

46. Disclose the amounts of account value, cash value and reserve for the breakouts of life insurance by withdrawal characteristics, separately for General Account products, Separate Account Guaranteed products and Separate Account Nonguaranteed products, as follows:

a. Subject to discretionary withdrawal, surrender values, or policy loans:

i. Term Policies with Cash Value

ii. Universal Life

iii. Universal Life with Secondary Guarantees

iv. Indexed Universal Life

v. Indexed Universal Life with Secondary Guarantees

vi. Indexed Life

vii. Other Permanent Cash Value Life Insurance

viii. Variable Life

ix. Variable Universal Life

x. Miscellaneous Reserves

b. Not subject to discretionary withdrawal or no cash value:

i. Term Policies without Cash Value

ii. Accidental Death Benefits

iii. Disability – Active Lives

iv. Disability – Disabled Lives

v. Miscellaneous Reserves

c. Total gross (Direct + Assumed)

d. Reinsurance ceded
e. Total net (Net: Total gross (paragraph 46.c.) less Reinsurance ceded (paragraph 46.d.))

The difference between the account value and the cash value is the surrender charge, if any. After the surrender period is over, there is no difference. Some contract types have no account value such as traditional whole life, term, etc. So, if there is no account value, leave it blank. UL typically has an account value and a cash surrender value. Just as account values are not reduced for policy loans taken and outstanding, the cash value amount reported in this disclosure should not be reduced for policy loans taken and outstanding. This will ensure the difference between account value and cash value is the actual surrender charge.

**SSAP No. 56—Separate Accounts** (Note -this revision adds a reference to the other withdrawal characteristics disclosures which included separate account products.)

Disclosures

30. Paragraphs 31-34 detail the separate account disclosure requirements that shall be included within the Life, Accident and Health Annual Statement Blank. Paragraphs 3536-38 detail the separate account disclosure requirements that shall be included within the Separate Account Annual Statement Blank.

**NOTE: paragraphs 31-34 omitted for brevity.**

35. The disclosures in **SSAP No. 51R—Life Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance** related to the withdrawal characteristics of products include separate account products and shall be completed in the general account disclosures.

**SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance**

69. For the disclosures noted below, disclose the amount of annuity actuarial reserves and deposit liabilities by withdrawal characteristics for the categories of general account, separate account with guarantees, separate account nonguaranteed as well as the total and percentage of the total, include a separate section for Individual Annuities, Group Annuities, and Deposit-Type Contracts (with no life contingencies). Supplementary contracts with life contingencies are reported in the appropriate Annuities section (Individual or Group).

a. Subject to discretionary withdrawal:

i. With market value adjustment, where withdrawal of funds is payable at all times, or prior to specified maturity dates where such dates are more than one year after the statement date and;

   (a) In a lump sum with adjustments to reflect general changes in interest rates, or asset values since receipt of funds by the entity;

   (b) In installments over five years or more, with or without a reduction in the interest rate during the installment period.

ii. At book value less current surrender charge, where the withdrawal of funds is payable at all times, or at any time within one year from the statement date in a lump sum subject to a current fixed surrender charge of 5% or more and it does not contain a meaningful bail out rate as described in paragraph 69.a.v.(d) below;

iii. At fair value, where the withdrawal of funds is payable at current market value of the assets supporting the liabilities, the assets are stated at current fair value, and the liabilities are stated at the current fair value or per unit value of the assets supporting the
liabilities. These liabilities are for contracts where the customer bears the entire investment risk;

iv. Total with adjustment or at fair value;

v. At book value without adjustment (minimal or no charge or adjustment), where the withdrawal of funds is either payable at all times, or at any time (including a withdrawal on a scheduled payment date) within one year from the statement date and:

(a) In a lump sum without adjustment;

(b) In installments over less than five years, with or without a reduction in interest rate during the installment period;

(c) In a lump sum subject to a fixed surrender charge of less than 5%;

(d) In a lump sum subject to surrender charge, but such charge is waived if the credited rate falls below a specified “bail out” rate and the “bail out” rate is more than the maximum statutory valuation rate for life insurance policies for more than 20 years for new issues.

b. Not subject to discretionary withdrawal;

c. Total gross (Direct + Assumed);

d. Reinsurance ceded;

e. Total net (Net: Total gross (paragraph 69.c.) less Reinsurance ceded (paragraph 69.d.)); and

f. Amount with current surrender charge of 5% or more included in the current year in paragraph 69.a.ii. that will have less than a 5% surrender charge (and thus be reported with the amounts at book value with minimal or no charge or adjustment noted in paragraph 69.a.v.) for the first time within the year subsequent to the balance sheet year. (Note that percentage of total is not required for this item.)

Staff Review Completed by: Robin Marcotte – August 2019 - NAIC Staff

Status: On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance, as illustrated in the staff recommendation, to:

- Add a consistency revision to SSAP No. 51R to ensure separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures;

- Correct an identified inconsistency in one of the new disclosures that was added regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%. A clarification is being recommended to ensure consistency in annual statement reporting; and

- Add a cross-reference from SSAP No. 56 to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R as the disclosure include separate account products.
On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance, as detailed above under “proposed revisions.”

Description of Issue: ASU 2017-11, Accounting for Certain Financial Instruments with Down Round Features; Replacement of the Indefinite Deferral for Mandatorily Redeemable Financial Instruments of Certain Noncontrolling Interests with a Scope Exception to address issues identified with applying U.S. GAAP for certain financial instruments with characteristics of liabilities and equity. The purpose of this agenda item is to review ASU 2017-11 and to consider statutory accounting guidance on distinguishing liabilities from equity.

This ASU addresses the complexity of accounting for certain freestanding financial instruments (or embedded features such as a conversion option) with down round features. A down round feature is a provision in certain financial instruments (most often warrants or convertible instruments) that allows for the reduction in the strike price of the financial instrument if the issuer sells additional shares of common stock for an amount less than the financial instrument’s stated strike price, or if the issuer issues another equity-linked instrument with a strike price below the current strike price of the original financial instrument. Down (financing) rounds typically occur when additional capital is required, but the company’s valuation is now lower than it was in an earlier stock offering. Financial instruments with down round features help protect the holder from declines in the issuer’s share price because if a company issues additional equity shares at a lower price than had been previously sold, the holder is allowed to exercise its purchase option at a lower strike price than was originally stated on the financial instrument.

Existing U.S. GAAP for financial instruments with down round features requires fair value measurement of the entire instrument or conversion option. Stakeholders asserted that accounting for freestanding and embedded instruments with down round features as liabilities, subject to fair value measurement, created a reporting burden and associated income statement volatility due to changes in an entity’s share price. Stakeholders also suggested that this accounting may not reflect the economics of the down round feature, which exist to protect certain investors from declines in the issuer’s share price. With the current accounting guidance, changes in fair value of an instrument with a down round feature are recognized in earnings for both increases and decreases in share price. However, down round features are only likely to be exercised in the event the share price decreases and the issuer engages in a subsequent equity offering.

Prior to this ASU’s issuance under U.S. GAAP, a free-standing financial instrument or embedded feature was not considered indexed to the issuer’s stock if it has a down round feature. Thus, the instrument was classified as a liability and if it meets the definition of a derivative, it must be measured at fair value with changes recorded through current period earnings. ASU 2017-11 changes the guidance in that a down round feature shall no longer be considered when determining whether the instrument is indexed to a company’s stock. As a result of the ASU, if the instrument is now deemed to be indexed and settled in company stock, a free-standing or embedded equity-linked financial instrument will be classified as equity and the embedded feature that was originally bifurcated and accounted for as a derivative may qualify for scope exception to also be treated as equity.
Revisions in ASU 2017-11 also include earning per share (EPS) guidance detailing that the effect of exercising a
down round feature shall be treated as a dividend to reduce the income available to common shareholders for
computing and reporting basic EPS. Recognition of the value of the down round feature is calculated when triggered
and is measured as the difference between the fair value of the instrument (without regarding the down round
feature) of the pre-trigger exercise price and the fair value of the instrument (again, without regarding the down
round feature) using the reduced and executed exercise price.

Existing Authoritative Literature:

1. Earnings per share – Rejected as Not Applicable for Statutory Accounting:

   The concept of earnings per share (Topic 260) has previously been reviewed with the following U.S. GAAP
   standards rejected as not applicable in Appendix D—Nonapplicable GAAP Pronouncements:

   • FASB Statement No. 128, Earnings per Share (FAS 128)
   • EITF 07-04, Application of the Two-Class Method under FASB Statement No. 128 to Master
     Limited Partnerships

2. Distinguishing Liabilities from Equity / Derivatives and Hedging:

   With ASU 2017-11, entities will no longer consider a down round feature when determining whether a freestanding
   financial instrument is indexed to an entity’s stock. Consequently, upon adoption, these instruments which are
   currently being reported as a liability may be reclassified as equity. Additionally, fewer embedded features will
   likely have to be bifurcated and accounted for as a derivative and may qualify for scope exemption to be treated as
   equity.

   NAIC staff believes the spirit of freestanding down round features represents a quantifiable liability of the issuing
   company and should remain accounted for as a liability and not as equity. Down round features embedded in
derivatives would not be separated from the host contract pursuant to SSAP No. 86—Derivatives.

   As detailed below, the down round feature satisfies the definition of a liability and recognition as a liability would
   be consistent with existing guidance for share-based payments.

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, defines a liability with excerpts below:

2. A liability is defined as certain or probable future sacrifices of economic benefits arising from
   present obligations of a particular entity to transfer assets or to provide services to other entities in the
   future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one
   or more other entities that entails settlement by probable future transfer or use of assets at a specified or
determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility
   obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the
   transaction or other event obligating the entity has already happened. This includes, but is not limited
to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves
for incurred but not reported claims). Liabilities shall be recorded on a reporting entity’s financial statements
when incurred.
SSAP No. 104R—Share-Based Payments, Exhibit A – Classification Criteria: Liability or Equity, details circumstances under which certain financial instruments are to be identified as liabilities. While this guidance is limited to share-based payments, the overall accounting concepts are applicable in these situations. Specifically, Exhibit A, paragraph 7, supports recognition as a liability as the company is obligated to sell additional common stock for an amount less than the originally stated strike price as both circumstances require a unilateral outflow of assets or equity. The liability associated with a down round feature, although settled with the issuance of additional shares (without the receipt of assets), will adversely affect the economic interests of current equity shareholders by diluting ownership. Additionally, paragraph 10 broadly indicates instruments that obligate the issuer to transfer assets are to be reported as liabilities.

Excerpts from SSAP No. 104R, Exhibit A:

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:
   a. A term extension option
   b. A provision that defers redemption until a specified liquidity level is reached
   c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer’s Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:
   a. It embodies an obligation to repurchase the issuer’s equity shares, or is indexed to such an obligation, and
   b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, “indexed to” is used interchangeably with “based on variations in the fair value of.” The phrase “requires or may require” encompasses instruments that either conditionally or unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.
9. Examples of financial instruments that meet the criteria in paragraph 7 of this Exhibit include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

As noted in SSAP No. 86, paragraph 16, down round features embedded in derivative contracts (such as a warrant) would not be separated from the host contract. Such features would impact the fair value accounting for derivatives (assuming fair value accounting is followed) in recognizing the derivative asset or derivative liability. Recognizing freestanding down round features as a liability (and not as equity) would be consistent with the impact of such features embedded in a derivative contract.

**SSAP No. 86—Derivatives**

16. Contracts that do not in their entirety meet the definition of a derivative instrument, such as bonds, insurance policies, and leases, may contain “embedded” derivative instruments—implicit or explicit terms that affect some or all of the cash flows or the value of other exchanges required by the contract in a manner similar to a derivative instrument. The effect of embedding a derivative instrument in another type of contract (“the host contract”) is that some or all of the cash flows or other exchanges that otherwise would be required by the contract, whether unconditional or contingent upon the occurrence of a specified event, will be modified based on one or more underlyings. An embedded derivative instrument shall not be separated from the host contract and accounted for separately as a derivative instrument.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None**

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None**

**Convergence with International Financial Reporting Standards (IFRS):** *IAS 32 – Financial Instruments* outlines the accounting requirements for the presentation of certain financial instruments, particularly as to the classifications into assets, liabilities, or equity. The fundamental principle of IAS 32 is that a financial instrument should be classified as either a financial liability or as an equity instrument according to the substance of the contract, not its legal form. IAS 32.20 states a contractual right or obligation to receive or deliver a number of its own shares or other equity instruments that varies so that the fair value of the entity’s own equity instruments to be received or delivered equals the fixed monetary amount of the contractual right or obligation is a financial liability.

**Staff Recommendation:** NAIC staff recommends the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 86 to reject ASU 2017-11 (Topics 480 & 815) and expose revisions to SSAP No. 5R and SSAP No. 72 to incorporate guidance on when certain freestanding instruments shall be recognized as liabilities and not equity.

1) **Proposed Revisions to SSAP No. 86—Derivatives:**

63. This statement adopts with modification revisions to ASC 815 as reflected within ASU 2016-05, *Effect of Derivative Contract Novations on Existing Hedge Accounting Relationships*. This guidance is modified to require prospective application, as such it is only applicable to future counterparty changes in derivative instruments, and this guidance cannot be used to adjust derivative transactions previously terminated. This statement adopts revisions to ASC 815-20-25-15 as reflected within ASU 2010-08, *Technical Corrections to Various Topics*. This statement adopts revisions to ASC 815-10-50-4K as reflected within ASU 2010-11, *Derivatives and Hedging (Topic 815), Scope Exception Related to Embedded Credit Derivatives*. 

© 2020 National Association of Insurance Commissioners
This statement, but rejects all other GAAP revisions from ASU 2010-11 and ASU 2014-16, Derivatives and Hedging, Determining Whether the Host Contract in a Hybrid Financial Instrument Issued in the Form of a Share is More Akin to Debt or to Equity and ASU 2016-06, Derivatives and Hedging, Contingent Put and Call Options in Debt Instruments. These GAAP revisions are rejected as embedded derivatives are not separated from the host contract and recognized as derivatives under SSAP No. 86. Revisions are also incorporated to SSAP No. 86 to require disclosures on embedded credit derivatives that expose the holder of a financial instrument to the possibility of being required to make future payments. This disclosure is a modification to the GAAP disclosures specific to statutory accounting as embedded credit derivatives are not separately recognized under statutory accounting.

b. This statement rejects ASU 2017-11, Accounting for Certain Financial Instruments with Down Round Features; Replacement of the Indefinite Deferral for Mandatorily Redeemable Financial Instruments of Certain Noncontrolling Interests with a Scope Exception.

64. It should be noted that the conclusions reached in this statement are not intended to usurp the rules and regulations put forth by states in their respective investment laws. The contents of this statement are intended to provide accounting guidance on the use of derivatives as allowed by an insurer’s state of domicile. It is not intended to imply that insurers may use derivatives or cash instruments that the insurer’s state of domicile does not allow under the state’s insurance regulatory requirements, e.g., in replication transactions.

2) Proposed Revisions to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets:

Although NAIC previously believed that instruments with both characteristics of debt and equity were not commonly issued by insurance entities, NAIC Staff has recently received a state query focused on this issue. NAIC staff recommends introducing key concepts from ASC Topic 480, Distinguishing Liabilities from Equity, Subsection 25, (which are materially identified in SSAP No. 104R—Share-Based Payments) into SSAP No. 5R.

SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.

Financial Instruments with Characteristics of both Liabilities and Equity

26. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent the instruments embodies an unconditional obligation of the issuer. (Pursuant to SSAP No. 86, embedded features in derivative contracts shall not be separated from the host contract for separate recognition.) Free-standing financial instruments that meet any of the criteria below meet the definition of a liability:

a. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the issuing reporting entity.

b. A financial instrument, other than an outstanding share, that at inception both 1) embodies an obligation to repurchase the issuer’s equity shares or is indexed to such an obligation and 2) requires or may require the issuer to settle the obligation by transferring assets.

c. Obligations that permit the holder to require the issuer to transfer assets.

d. A financial instrument is a liability if the issuer must settle the obligation by issuing a variable number of its equity shares and the obligation’s monetary value is based solely or predominantly on: 1) a fixed monetary amount, 2) variation in something other than the fair
value of the issuer’s equity shares, or 3) variations inversely related to changes in the fair value of the issuer’s equity shares.

e. Instruments in which the counterparty (holder) is not exposed to the risks and benefits that are similar to those of a holder of an outstanding share of the entity’s equity shall be classified as a liability.

27. If a free-standing financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument. However, that financial instrument shall be assessed each reporting period to determine whether circumstances have changed such that the instrument meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument shall be reclassified as a liability.

28. The classification of a free-standing financial instrument as a liability or equity shall only apply to the instrument issuer. Holders or purchasers of such instruments shall refer to the appropriate investment statement for valuation and reporting.

For brevity, the remaining paragraphs for SSAP No. 5R have been omitted but will be renumbered accordingly.

3) Proposed Revisions to SSAP No. 72—Surplus and Quasi-Reorganizations:

While proposed key concepts from ASC Topic 480 are detailed in SSAP No. 5R, additional reference language for the statutory accounting of capital stock is detailed below.

SSAP No. 72—Surplus and Quasi-Reorganizations

Capital Stock

3. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a “stated value” and record such amount in the capital stock account. Changes in the par value of a reporting entity’s capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent described in SSAP No. 5R.

Staff Review Completed by: Jim Pinegar – October 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions, as illustrated above, to SSAP No. 86—Derivatives to reject ASU 2017-11, Earning Per Share, Distinguishing Liabilities from Equity, Derivatives & Hedging and incorporate guidance into SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets and SSAP No. 72—Surplus and Quasi-Reorganizations for when certain freestanding instruments shall be recognized as liabilities and not as equity.
On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions, as illustrated above, to SSAP No. 86—Derivatives to reject ASU 2017-11, Earning Per Share, Distinguishing Liabilities from Equity, Derivatives & Hedging and incorporate guidance into SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets and SSAP No. 72—Surplus and Quasi-Reorganizations for when certain freestanding instruments shall be recognized as liabilities and not as equity.

<tr>
<td>Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Description of Issue:**

Topic 740, *Income Taxes* did not include explicit guidance for the financial statement presentation of an “unrecognized tax benefit” when a net operating loss carryforward, a similar tax loss, or a tax credit carryforward exists. An unrecognized tax benefit generally reflects a tax position that does not meet the ASC 740 more-likely-than-not recognition threshold, but to a certain extent owes its existence to an uncertain tax position. A more-likely-than-not threshold requires a recognized benefit of having a greater than 50 percent likelihood of being realized upon settlement. Prior to ASU 2013-11, *Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists*, there was diversity in the U.S. GAAP presentation of unrecognized tax benefits. Some entities reported unrecognized tax benefits as a liability in certain circumstances, while others presented unrecognized tax benefits as a reduction of a deferred tax asset for net operating loss or tax credit carryforwards.

The objective of ASU 2013-11 is to eliminate the reporting diversity to better reflect the manner in which an entity would settle additional income taxes that would result from the disallowance of a tax position when a net operating loss carryforward, similar tax loss, or tax credit carryforward exists.

ASU 2013-11 states that unrecognized tax benefits should generally be presented in the financial statements as a reduction to a deferred tax asset when a net operating loss carryforward, a similar tax loss, or a tax credit carryforward exists. This presentation should be followed except in circumstances in which a net operating loss / tax credit carryforward is not available as of the reporting date to settle any additional income taxes that would result from the disallowance of a tax position, or the entity does not intend to use the deferred tax asset for such purpose. In these cases, the unrecognized tax benefit should be presented in the financial statements as a liability and not combined with deferred tax assets.

The assessment of whether a deferred tax asset is available is based on the unrecognized tax benefit and deferred tax asset that exists at the reporting date and should be made presuming disallowance of the tax position at that reporting date.

The FASB definition of an Unrecognized Tax Benefit (per the FASB Codification Glossary) is as follows:

**Unrecognized Tax Benefit** - The difference between a tax position taken or expected to be taken in a tax return and the benefit recognized and measured pursuant to Subtopic 740-10.

**Existing Authoritative Literature:**

By definition, unrecognized tax benefits have a lower than 50 percent likelihood of being realized upon final settlement. As required in *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* and again referenced in *SSAP No. 101—Income Taxes*, for the purposes of determining a tax contingency, it shall be presumed that the reporting entity will be examined by a relevant taxing authority. Further, as there is a lower than 50 percent
likelihood of these items being sustained, they should be recognized in current income taxes as covered in SSAP No. 101.

**SSAP No. 101, paragraph 3 excerpts:**

3. "Income taxes incurred" shall include current income taxes, the amount of federal and foreign income taxes paid (recovered) or payable (recoverable) for the current year. Current income taxes are defined as:

a. Current year estimates (including quarterly estimates) of federal and foreign income taxes payable or refundable, based on tax returns for the current and prior years, except as addressed in paragraph 3.b., and tax loss contingencies (including related interest and penalties) for current and all prior years, computed in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets with the following modifications:

i. The term "probable" as used in SSAP No. 5R shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

ii. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

iii. If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized.

b. Amounts incurred or received during the current year relating to prior periods, to the extent not previously provided, as such amounts are deemed to be changes in accounting estimates as defined in SSAP No. 3—Accounting Changes and Corrections of Errors.

c. In determining when tax loss contingencies associated with temporary differences should be included in current income taxes under paragraph 3.a., and therefore included in deferred taxes under paragraph 7, a reporting entity is not required to "gross-up" its current and deferred taxes until such time as an event has occurred that would cause a re-evaluation of the contingency and its probability of assessment, e.g., the IRS has identified the item as one which may be adjusted upon audit. Such an event could be the reporting entity's (or its affiliate or parent in a consolidated income tax return) receipt of a Form 5701, Proposed Audit Adjustment, or could occur earlier upon receipt of an Information Document Request. At such time, the company must reassess the probability of an adjustment, reasonably re-estimate the amount of tax contingency as determined in accordance with paragraph 3.a., make any necessary adjustment to deferred taxes, and re-determine the admissibility of any adjusted gross deferred tax asset as provided in paragraph 11.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** N/A

IFRS does not include specific guidance on the presentation of unrecognized tax benefits.
Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 101 to reject ASU 2013-11 for statutory accounting.

By definition, unrecognized tax benefits have a lower than 50 percent likelihood of being utilized (resulting in future tax savings), and as such, should be recognized in current income taxes as required by SSAP No. 101, paragraph 3. This ASU allows, as an election of the reporting entity, reporting of unrecognized tax benefits on the balance sheet (as a reduction to deferred tax assets) while statutory accounting requires immediate recognition through current income tax expense. As these unrecognized tax benefits are not deferred tax items and NAIC SAP tries to limit optionality in the financial statements, NAIC staff proposes to reject the ASU and retain existing statutory accounting guidance.

Proposed Revisions to SSAP No. 101:

Staff Review Completed by Jim Pinegar – August 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 101—Income Taxes, illustrated above, to reject ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists for statutory accounting.

Consideration for the 2020 Spring National Meeting:
While not affecting statutory guidance, NAIC staff support the removal of the IFRS convergence statement as proposed by interested parties, in the agenda item. (This is shown as a tracked change in the agenda item and does not impact the proposed statutory accounting resolution.)

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 101—Income Taxes, as illustrated above, to reject ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists for statutory accounting.
Issue: Disclosure Update for Reciprocal Jurisdiction Reinsurers

Check (applicable entity):

- Modification of Existing SSAP: X
- New Issue or SSAP: 
- Interpretation: 

P/C | Life | Health
---|---|---
X | | X

Description of Issue:
On June 25, 2019, NAIC Executive Committee and Plenary adopted revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) to incorporate relevant provisions from the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” and the “Bilateral Agreement Between the United States of America and the United Kingdom Regarding Insurance and Reinsurance” (collectively referred to as the Covered Agreement). The purpose of this agenda item is to revise one disclosure in SSAP No. 62R—Property and Casualty Reinsurance to reference “reciprocal jurisdictions.”

Existing Authoritative Literature:
The Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786), as they are adopted by the states are the primary legal guidance for credit for reinsurance.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Revisions to Appendix A-785 were exposed at the Summer National Meeting, and a Blanks proposal will be exposed at the Reinsurance (E) Task Force at the Fall National Meeting and by the Blanks (E) Working Group after the Fall National Meeting.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None.

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions SSAP No. 62R to incorporate disclosure updates for reinsurers from Reciprocal Jurisdictions. The proposed revisions are illustrated below:

106. Unsecured Reinsurance Recoverables:

a. If the entity has with any individual reinsurers, authorized, reciprocal jurisdiction, unauthorized, or certified an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and

</thead>
<tbody>
<tr>
<td>New Issue or SSAP</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Interpretation</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Description of Issue: The FASB issued ASU 2016-14 to provide more useful information to donors, grantors, creditors, and other financial statements users of not-for-profit (NFP) entities. This update is to improve the current net asset classification requirements and the information presented in financial statements regarding liquidity, financial performance, and cash flows. While several changes were implemented within this ASU, the main provisions include:

- The presentation of two classes of net assets – with donor restrictions and without donor restrictions. Due to complexities regarding the appropriate use of the previous three classes of net assets (unrestricted, temporarily restricted, and permanently restricted) that focused on the absence or presence of donor-imposed restrictions and whether those restrictions were temporary or permanent, this ASU designates presentation of two classes of net assets. Changes in these two classes of net assets are to be reported on the statement of activities.

- The presentation of operating cash flows may continue to use the direct or indirect method of reporting, but no longer require the presentation or disclosure of the indirect method (reconciliation) if using the direct method.

Additionally, numerous disclosures enhancements were included this update, several are highlighted below:

- The composition of net assets with donor restrictions and how the restrictions affect the use of such resources.
- For resources without donor-imposed restrictions, the applicable amounts and designated purposes, appropriations, and similar actions that result in self-imposed limits on the use of such resources.
- Information that communicates how the NFP manages liquid resources to meet its cash needs for general expenditures for one year following the balance sheet date.
- Regarding ‘underwater endowment funds’ (a fund in which its fair value is less than the original gift amount or the amount required to be maintained by donor restrictions); disclosures concerning the NFP’s policy, and any actions taken during the period concerning appropriation from underwater endowment funds and the fair value of such funds. Additionally, disclosures regarding the original gift amounts (or level required by donor or law) to be maintained and amount by which the funds are deficient.
- Use, in the absence of donor restrictions, the placed-in-service approach for reporting expirations of restrictions on gifts of cash or other assets to be used to acquire or construct a long-lived asset, thus reclassifying amounts from “net assets with donor restrictions” to “net assets without donor restrictions” as long-lived assets that have been placed in service as of the beginning of the period of adoption (eliminating
the previous option to release the donor-imposed restriction over the estimated useful life of the acquired asset).

**Existing Authoritative Literature:** While there is SAP guidance for the financial statement presentation of assets, the concept of separating assets based on imposed donor restrictions and the inclusion of other similar related disclosures is not a presentation format that is applicable for statutory accounting purposes.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** None

**Information or issues (included in Description of Issue) not previously contemplated by the Working Group:** None

**Convergence with International Financial Reporting Standards (IFRS):** None - There are no specific NFP accounting and reporting standards in IFRS.

**Staff Recommendation:** NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject *ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities* as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as statutory accounting guidance does not separately present assets based on donor restrictions. If assets are restricted, they must be identified as restricted in the investment schedules and captured in the restricted note disclosure. Furthermore, the concept of donor-restrictions for insurance reporting entities is not identified to be a prevalent concept.

**Staff Review Completed by: Jim Pinegar – August 2019**

**Status:**
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject *ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities* as not applicable to statutory accounting.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject *ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities* as not applicable to statutory accounting.

Description of Issue: This agenda item has been drafted in response to questions identified by the Financial Stability (EX) Task Force in developing liquidity disclosure changes to the 2019 life blank, and the noted inability to fully identify and assess deposit-type contracts - (particularly guaranteed investment contracts) - within the statutory financial statements. From information received, it appears that in some instances deposit-type contracts are being reported along with life contracts in Exhibit 5 – Aggregate Reserves for Life Contracts or in Exhibit 6 – Aggregate Reserves for Accident and Health Contracts, rather than in Exhibit 7 – Deposit-Type Contracts.

This issue has been raised as payout requests for deposit-type contracts are significantly different than payouts generated by an insured event (mortality or morbidity). The Task Force identified that information on liabilities, particularly those that can be called with little or no surrender penalty, must be known to properly complete liquidity assessments.

After various discussions, it is anticipated that guaranteed investment contracts (GICs) are reported as a life contract or accident and health contract (and not a deposit-type contract) for one of the following reasons:

- The GIC was a “supplemental” contract formed from the proceeds of a life / A&H insurance contract.
- The GIC, although absent mortality or morbidity risk, was written on a life / A&H insurance “paper.”
- The state insurance department has approved the GIC to be classified as a life / A&H insurance contract.
- Contracts may be designed as GICs, but could potentially have mortality / morbidity components, which qualifies the contract to be reported as a life or A/H insurance contract.

The purpose of this agenda item is to solicit information regarding the reporting of GICs (and other deposit-type contracts) as life or A/H contracts in the reporting exhibits, and consider revisions to statutory accounting and reporting instructions to ensure that information regarding all GICs can be separately identifiable and aggregated from the financial statements.

Existing Authoritative Literature:

SSAP No. 50—Classifications of Insurance or Managed Care Contracts

5. Insurance contracts providing any protection against death, disability, accident or illness in which the reporting entity assumes mortality or morbidity risk shall be classified as life or accident and health contracts, as applicable. Managed care contracts provide defined health care services to subscribers, members or policyholders, collectively referred to hereafter as subscribers, in return for fixed, periodic premiums (usually paid monthly) that are generally due at or before the beginning of the coverage period and shall be classified as health contracts. Contracts which insure against damage to property by an insured peril or damage or injury to the insured or third parties, generally over a fixed/limited period of time, shall be classified as property and casualty contracts.
Contracts in which the reporting entity does not assume any mortality, morbidity, health benefit costs incurred, or casualty risk and which act exclusively as investment vehicles shall be classified as deposit-type contracts. Such classification shall be made at the inception of the contract and shall not change.

14. Supplementary contracts with life contingencies are a type of agreement between the insurance company and either the insured or the beneficiary, usually to provide for full or partial settlement of the amount payable upon the termination of an original contract. Generally, the proceeds are paid over the lifetime of one or more beneficiaries. This differs from a supplementary contract without life contingencies under which the proceeds are paid over a definite period without regard to the life of the beneficiary.

Deposit-Type Contracts

43. Deposit-type contracts do not incorporate insurance risk. Contracts issued by insurers that do not incorporate risk from the death or disability of policyholders (mortality or morbidity risk) are more comparable to financial or investment instruments issued by other financial institutions than to insurance contracts.

44. Deposit-type contracts shall include contracts without any life or disability contingencies, including, but not limited to, certain types of the following policy categories:

a. Supplemental contracts
b. Lottery payouts
c. Structured settlements
d. Guaranteed interest contracts
e. Income settlement options
f. Dividend and coupon accumulations
g. Annuities certain
h. Premium and other deposit funds
i. Funding Agreements without well-defined class-based (e.g. age, gender) annuity purchase rates defining either specific or maximum purchase rate guarantees (see SSAP No. 15, paragraph 19, paragraph 20 of this statement and SSAP No. 52—Deposit-Type Contracts, paragraph 21.)

45. Under deposit-type contracts, the policyholder may assume all, some, or none of the investment risk, depending on the contract terms. Amounts can be deposited in lump sum, or periodically as allowed by the policy contract. Deposit-type contracts would include annuities certain, whose income payments have no reference to life contingencies and benefits are paid over a specified period (i.e., 10 years, 20 years, etc.).

SSAP No. 51R—Life Contracts

Policy Reserves

15. Statutory policy reserves shall be established for all unmatured contractual obligations of the reporting entity arising out of the provisions of the insurance contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A.
These statutory policy reserves have historically been calculated as the excess of the present value of future benefits to be paid to or on behalf of policyholders less the present value of future net premiums. For policies issued on or after the operative date of the Valuation Manual, these formulaic calculations will be supplemented for some policies with more advanced deterministic and stochastic reserve methodologies to better reflect company experience, possible economic conditions and inherent policy risks. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R). The actuarial methodologies referred to in paragraph 16 meet the criteria required for reasonable estimates in SSAP No. 5R.

The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822. Policies written prior to the operative of the Valuation Manual shall additionally follow the actuarial guidelines found in Appendix C of this Manual. Policies written on or after operative of the Valuation Manual shall additionally follow the Valuation Manual and be subject to the actuarial guidelines referenced therein. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Supplemental Benefits

40. In addition to the basic policy benefit, the insurance contract may provide supplemental benefits. Supplemental benefits include, but are not limited to, accidental death benefits and waiver of premium benefits. If the terms of the contract provide for these benefits, appropriate reserves shall be established in accordance with the applicable standards within the Accounting Practices and Procedures Manual.

SSAP No. 52—Deposit-Type Contracts

2. As discussed in SSAP No. 50, deposit-type contracts are those contracts that do not subject the reporting entity to any risks arising from policyholder mortality or morbidity. A mortality or morbidity risk is present if, under the terms of the contract, the reporting entity is required to make payments or forego required premiums contingent upon the death or disability (in the case of life and disability insurance contracts) or the continued survival (in the case of annuity contracts) of a specific individual or group of individuals.

3. Deposit-type contracts frequently grant policyholders significant discretion over the amount and timing of deposits and withdrawals. Reporting entities are frequently granted significant discretion over amounts that accrue to or that are assessed against policyholders.

4. Due to the absence of mortality and/or morbidity risk and the discretionary characteristics noted in paragraph 3, the accounting principles for income recognition and policy reserves for deposit-type contracts differ from the accounting for life contracts set forth in SSAP No. 51R—Life Contracts, accident and health contracts established in SSAP No. 54R—Individual and Group Accident and Health Contracts, and credit insurance contracts as discussed in SSAP No. 59—Credit Life and Accident and Health Insurance Contracts.

5. Categories of contracts that may not subject the reporting entity to risks arising from policyholder mortality or morbidity include, but are not limited to, certain types of the following policy categories:

   a. Supplemental contracts
   b. Lottery payouts
   c. Structured settlements
   d. Guaranteed interest contracts
   e. Income settlement options
f. Dividend and coupon accumulations

g. Annuities certain

h. Premium and other deposit funds

**Income Recognition**

6. Contracts issued by a reporting entity that do not incorporate mortality or morbidity risk shall not be accounted for as insurance contracts. Amounts received as payments for such contracts shall not be reported as revenues but shall be recorded directly to an appropriate policy reserve account.

**Policy Reserves**

7. Statutory policy reserves shall be established for all contractual obligations of the reporting entity arising out of the provisions of the contract. Where separate benefits are included in a contract, a reserve for each benefit shall be established as required in Appendix A-820. Statutory policy reserves meet the definition of liabilities as defined in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R). The actuarial methodologies referred to in paragraph 8 meet the criteria required for reasonable estimates in SSAP No. 5R.

8. The reserving methodologies and assumptions used in computation of policy reserves shall meet the provisions of Appendices A-820 and A-822, and the actuarial guidelines found in Appendix C of this Manual. Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

9. The policy reserve for contracts without life contingencies where the future benefits are fixed and guaranteed (e.g., certain supplemental contracts, lottery payouts, structured settlements, guaranteed interest contracts, income settlement options, annuities certain, and unmatured coupon accumulations) shall be based on the present value of the future guaranteed benefits discounted at the valuation interest rate. The policy reserve for all other contracts (e.g., certain premium and other deposit funds, and dividend and matured coupon accumulations) shall be based on the accumulated amounts paid plus an income accumulation based on the contract provisions, less any withdrawals and applicable surrender charges.

10. Statutory policy reserves for those group annuity contracts or other contracts that, in whole or in part, establish the insurer’s obligations by reference to a segregated portfolio of assets not owned by the insurer shall be established in accordance with the guidance in Appendix A-695. Statutory policy reserves for those contracts with nonlevel premiums or benefits, or contracts with secondary guarantees shall be established in accordance with the guidance in Appendix A-830. Statutory policy reserves for those group life contracts utilizing a separate account that meet the requirements outlined in paragraph 1 of Appendix A-200 shall be computed in accordance with the guidance in that appendix.

11. Policy reserves shall be increased for reinsurance assumed and decreased for reinsurance ceded as further described in SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance.

**Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):** Agenda Item 2018-28: Updates to Liquidity Disclosures, and proposed revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance, were adopted by the SAPWG during the Fall 2018 National Meeting. This agenda item was developed in response to Financial Stability (Ex) Task Force recommendations to enhance existing disclosures on annuity actuarial reserves and deposit-type liabilities.
Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose this agenda item with a request for comments on why GICs, or other deposit-type contracts, are reported in Exhibit 5 – Life Contracts or Exhibit 6 – Accident and Health Contract, instead of Exhibit 7 – Deposit Type Contracts. With exposure, a referral will be sent to the Life Actuarial Task Force to inform them of the inquiry and request their comments. Although NAIC staff recommends delaying revisions to statutory accounting or reporting instructions until better knowing why these classifications occur, it is anticipated that clarification may be considered to ensure that separate reserve recognition, which is already required in SSAP No. 51R, requires separate reporting on the appropriate exhibit.

Staff Review Completed by:
Julie Gann, NAIC Staff – January 2019

Status:
On April 6, 2019, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed this agenda item with a request for comments on why guaranteed investment contracts (GICs), or other deposit-type contracts, are reported in Exhibit 5 – Life Contracts or Exhibit 6 – Accident and Health Contract, instead of Exhibit 7 – Deposit Type Contracts. With exposure, the Working Group directed a referral to the Life Actuarial (A) Task Force to inform them of the exposure and request comments.

On August 3, 2019, the Statutory Accounting Principles (E) Working Group exposed this agenda item with the inclusion of the items and questions noted below, with a request for additional comments from industry and state insurance regulators, and directed notifications of the exposure with a request for comments to the Financial Stability (EX) Task Force and the Life Actuarial (A) Task Force on the reporting of insurance contracts that do not have a mortality or morbidity risk.

1. **Classification at Issuance** – The interested parties noted that because a contract was life-contingent at issue, it is reported in Exhibit 5, and then it remains in Exhibit 5 after the death of the annuitant.

   **Question** – Is it appropriate to classify products based on original issuance when the original risks are no longer present in the contract? Is this simply past industry practice, or is there direction that prevents reclassification to the category that most appropriately reflects the risk? Preliminary information received from the Financial Stability (EX) Task Force (FSTF) staff has noted that this practice will make it more difficult to properly aggregate and assess deposit-type contracts, and that this assessment is important as the payouts for deposit-type contracts are significantly different than payouts generated by an insured event. The Task Force has identified that information on liabilities, particularly those that can be called quickly with little or no surrender penalty, is of critical importance to liquidity assessments.

2. **State Approval** – The interested parties noted that state insurance departments have the discretion to approve or require a contract to be classified as a life or A/H insurance contract.

   **Question** – If a state directs reporting differently than what is stipulated in the AP&P Manual, is that being captured as a permitted or prescribed practice? (The provisions in SSAP No. 1 require permitted /
prescribed practice reporting when it results in different statutory reporting. Examples included in SSAP No. 1 include gross or net presentation, financial statement reporting lines, etc.)

3. **Annuity Guidance** – The interested parties cited existing annuity guidance in paragraph 20 of *SSAP No. 50—Classifications of Insurance or Managed Care Contracts*. Per this guidance, contracts containing well-defined class-based (e.g., age / gender) annuity purchase rates used in defining either a specific or maximum purchase rate guarantee would constitute an annuity contract containing a life contingency that would require it to be classified as a life contract.

**Question** – NAIC staff agrees with the citation from interested parties on annuities in paragraph 20 of *SSAP No. 50—Classifications of Insurance or Managed Care Contracts*. However, with the intent to have more explicit product breakouts to allow for better assessment, is it time to clarify / revise this guidance to result with the appropriate breakouts created by FSTF? It was noted that the current concepts were established a long time ago and there is a focus on non-traditional insurance liabilities (which includes funding agreements) for liquidity risk assessment as they can have higher run risk.

4. **Materiality of Issue** – Although the interested parties cite a “common” scenario, without information in the financial statements, there is no current ability to identify the extent contracts with no remaining mortality or morbidity risk are reflected as life contracts.

**Question** – To what extent are deposit-type contracts captured in an exhibit other than Exhibit 7? Is it possible to receive information from companies regarding this population for assessment purposes?

*Excerpt from SSAP No. 50, paragraph 20:*

1. An annuity contract is an arrangement whereby an annuitant is guaranteed to receive a series of stipulated amounts commencing either immediately or at some future date. The contract shall be issued to or for the benefit of an identifiable individual or group of individuals. **Such a contract containing well-defined class-based (e.g., age, gender) annuity purchase rates used in defining either a specific or maximum purchase rate guarantee would constitute an annuity contract containing a life contingency that would require it to be classified as a life contract.** Some examples of contracts issued for the benefit of a group of individuals include pension plan sponsors purchasing contracts for the benefit of their plan participants, employers or associations purchasing contracts for the benefit of their employees or members, and collective trusts purchasing contracts for the benefit of participating pension plans and their plan participants. **The main types of annuity contracts with life contingencies are discussed below.**

   a. A deferred annuity provides for the accumulation of funds to be applied at some future period designated by the policyholder. Premium payments can be made in a lump sum amount (single premium deferred annuity), or periodically (flexible or fixed premium deferred annuity) as allowed by the policy contract. At the end of the accumulation period, the policyholder may elect to receive a lump sum distribution or may elect to receive periodic payments for life, or over a specific period, or some combination thereof;

   b. A variable annuity is an annuity which includes a provision for benefit payments which vary in accordance with the rate of return of the underlying investment portfolio selected by the policyholder. The considerations for a variable annuity are usually invested in a separate account in which the value of the contract share varies according to the performance of the separate account before the commencement of annuity payments as well as after. Premium payments can be made in lump sum amounts or periodically as allowed by the policy contract. A minimum death benefit is often guaranteed during the annuity consideration accumulation period and these contracts are, therefore, classified as life contracts;
c. A straight-life annuity provides for periodic payments to the annuitant as long as the annuitant lives. Death of the annuitant constitutes completion of the contract and no further payments are made by the insurance company;

d. A life annuity with a period certain works essentially the same way as the straight-life annuity as the annuitant receives periodic payments for as long as the annuitant lives. However, if the annuitant dies before the end of the specified “certain” period, payments are continued to a beneficiary until the specified number of “certain” payments (i.e., the specified period in the contract) is completed;

e. A refund annuity is similar to the life annuity with a period certain in which the annuitant receives periodic payments for as long as the annuitant lives. There are two variants of this type of annuity. Under the cash refund annuity, a lump-sum payment is made at the death of the annuitant equal to the excess, if any, of the purchase price of the annuity over the sum of the annuity payments made to date of death. The installment refund annuity provides that annuity payments are to continue to a beneficiary after the death of the annuitant until the sum of all payments made equals the purchase price;

f. A joint and survivorship annuity provides for the continuation of payments after the death of one of the annuitants during the lifetime of the surviving annuitant.

Updates for 2019 Fall National Meeting:

NAIC staff recommend exposing agenda item 2019-08 to: 1) request feedback on the inclusion of a footnote excerpt for Exhibit 5 to disclose cases when a mortality risk is no longer present or a significant factor – i.e. due to a policyholder electing a payout benefit, 2) request feedback on circumstances where a morbidity risk is no longer present or a significant factor for Exhibit 6 items and whether a similar footnote disclosure would be appropriate, and 3) industry input for instruction clarifications regarding the classifications of deposit-type contracts captured in Exhibit 7.

Proposed Exhibit 5 Footnote Disclosure:

(a) Included in the above table are amounts that originally contained a mortality risk. Amounts that no longer contain a mortality risk are $_______ in Column 2 (Life Insurance), $_______ in Column 2 (Annuities), $_______ (Supplementary Contracts with Life Contingencies), $_______ (Accidental
Exhibit 7 Classification Instructions:

Instructions for Exhibit 7 (Deposit-Type Contracts) are detailed below. NAIC staff believes ambiguity exists in reporting categories and definition improvements would benefit financial statement preparers and users. NAIC staff request industry input on the definitional terms and suggestions for improvement/clarification to ensure items are appropriately captured and reported without the risk of category (column) crossover.

This exhibit is intended to capture information about the activity, before and after any reinsurance, for deposit-type contracts. Include supplementary contracts without life contingencies, annuities certain, income settlements options, premium and deposit funds, and other contracts as defined in SSAP No. 52—Deposit-Type Contracts.

- Column 2: Guaranteed Interest Contracts – contracts that do not subject the reporting entity to any mortality or morbidity risk
- Column 3: Annuities Certain – amounts settled under contracts without any mortality or morbidity risk, e.g., certain immediate annuity contracts amounts associated with lottery payouts, structured settlements, income settlement options or other amounts where payments are for a fixed period or amount. To exclude amounts reported in Column 2 or 4.
- Column 4: Supplemental Contracts (without life contingencies) - amounts resulting from proceeds settled under a settlement option provision of a life or annuity contract without any mortality or morbidity risk.
- Column 5: Dividend Accumulations or Refunds - amounts held on account related to contracts without any mortality or morbidity risk.
- Column 6: Premium and Other Deposit Funds - amounts not reported elsewhere in this exhibit for contracts that do not incorporate any mortality or morbidity risk.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed this agenda item to: 1) request feedback on the inclusion of a footnote excerpt for Exhibit 5 (as shown above) to disclose cases when a mortality risk is no longer present or a significant factor - i.e. due to a policyholder electing a payout benefit, 2) request feedback on circumstances where a morbidity risk is no longer present or a significant factor for Exhibit 6 items and whether a similar footnote disclosure would be appropriate, and 3) requested industry and regulator input for instruction clarifications regarding the classifications of deposit-type contracts captured in Exhibit 7. With this exposure, there are no proposed edits for statutory accounting. The Working Group directed NAIC staff to notify the Financial Stability (Ex) Task Force of this exposure.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted a recommendation for annual statement revisions to Exhibit 5, Life Contracts, including minor edits from the exposure which are illustrated below. This adopted Exhibit 5 footnote recommendation will disclose when mortality risk is no longer present. The proposal will also be forwarded to the Blanks (E) Working Group. There are no statutory accounting revisions from this agenda item.

The previously exposed Exhibit 5 Footnote, with shaded revisions highlighting the changes from the original exposure, are shown below:

Included in the above table are amounts that originally contained a mortality risk. Amounts in Column 2, that no longer contain a mortality risk are $_________ in Column 2 (Life Insurance), $_________ in
The following Exhibit 5 Footnote, as adopted is as follows:

Included in the above table are amounts that originally contained a mortality risk. Amounts in Column 2, that no longer contain a mortality risk are $ ________ (Life Insurance), $ ________ (Annuities), $ ________ (Supplementary Contracts with Life Contingencies), $ ________ (Accidental Death Benefits), $ ________ (Disability – Active Lives), $ ________ (Disability – Disabled Lives), $ ________ (Miscellaneous Reserves).

Description of Issue:
NAIC staff has recently received questions regarding whether certain fees shall be reported as policy premium. SSAP No. 53—Property Casualty Contracts—Premiums, paragraph 6, provides specific guidance that allows for installment fees that meet specified criteria to be excluded from premium and reported as other income. An installment fee is the amount the policyholder pays if they make the choice to pay their premium on an installment basis. This fee is allowed to be excluded from premium income if it is an avoidable amount by the policyholder and the policy would not be cancelled for nonpayment of the installment fee.

NAIC staff has received regulator requested clarifications regarding potential diversity in the application of the SSAP No. 53 installment fee guidance on the following issues:

1. The first issue recommends additional language to ensure that the installment fee guidance continues to be narrowly applied, because the regulator became aware of some reporting entities seeking to analogize the application of the installment fee guidance to exclude other fees from premium income. Given the historical discussion on this paragraph, NAIC staff notes that the installment fee guidance is intended to be applied narrowly to a specific instance described in SSAP No. 53, footnote 1 and it should not be used to exclude other fees from being reported as premium.

2. The second issue pertains to the reporting of expenses related to the installment fee (other revenue). The regulator noted that while reporting entities were reporting the installment fees in other income, there was diversity in practice for the related installment fee expenses. Most entities were reporting the installment fee expenses in underwriting expenses where there are clear reporting lines for such expenses in the underwriting exhibits. Other entities were reporting the installment fee expenses either as a contra amount to finance and service charges not included in premium or as a contra amount to “aggregate write-ins for miscellaneous income.” The amounts are being reported as “contra” to other income because there is not an explicit reporting line in the property and casualty statement of income for expenses not related to underwriting (See Authoritative Literature). This agenda item requests feedback to address potential diversity in reporting.

Note that SSAP No. 35R—Guaranty Fund and Other Assessments also provides guidance regarding when a reporting entity is acting as an agent on behalf of a state or federal agency. This guidance is different than the installment fee guidance under discussion.

Existing Authoritative Literature:

SSAP No. 53—Property Casualty Contracts—Premiums (bolding added for emphasis)

3. Except as provided for in paragraph 4, written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the
coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the reporting entity and the amount of premium charged is subject to adjustment based on the actual exposure. Premium adjustments are discussed in paragraphs 10-13 of this statement.

4. For workers' compensation contracts, which have a premium that may periodically vary based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract, and written premium is recorded on the basis of that frequency.

5. Premiums for prepaid legal expense plans shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers (SSAP No. 6), to determine the admissibility of premiums and related receivables.

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums1 (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

Footnote: 1 If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Clarification of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

**SSAP No. 35R—Guaranty Fund and Other Assessments**

Acting as an Agent for Collection and Remittance of Fees and Assessments

15. In certain circumstances, a reporting entity acts as an agent for certain state or federal agencies in the collection and remittance of fees or assessments. In these circumstances, the liability for the fees and assessments rests with the policyholder rather than with the reporting entity. The reporting entity’s obligation is to collect and subsequently remit the fee or assessment. (INT 02-22) When both the following conditions are met, an assessment shall not be reported in the statement of operations of a reporting entity:
a. The assessment is reflected as a separately identifiable item on the billing to the policyholder; and

b. Remittance of the assessment by the reporting entity to the state or federal agency is contingent upon collection from the insured.

16. The impact to the statement of operations depends on the nature of the charge:

a. For charges which are the ultimate responsibility of the policyholder, follow existing guidance in paragraph 15, and pass these charges and recoveries through the balance sheet with no impact to the statement of operations

b. For charges which are the ultimate responsibility of the reporting entity and may be recovered all or in part, apply gross or net reporting in the statement of operations as appropriate based on the nature of the charge and recovery. For example, charges which are considered in rate development or for which the recovery is classified as premium should be reported gross, charges for which recovery is considered a reduction of the expense should be reported net.

c. For collection or administrative fees, report such fees as revenue in the statement of operations as “Finance and Service Charges Not Included in Premiums” or “Aggregate Write-Ins for Miscellaneous Income”.

**SSAP No. 71—Policy Acquisition Costs**

2. Acquisition costs are those costs that are incurred in the **acquisition of new and renewal insurance contracts** and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). **Acquisition costs and commissions shall be expensed as incurred.** Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

**Property/Casualty Annual Statement Instructions**

**Statement of Income**

Line 13 – Finance and Service Charges Not Included in Premiums

Report finances and service charges pursuant to the recognition guidance in **SSAP No. 53—Property Casualty Contracts—Premiums**. If a company cedes 100% of its business to an affiliate or utilizes an intercompany pooling arrangement and pools finance and service charges, include intercompany assumed and ceded amounts (i.e., report such income net of intercompany pooling). Charges should also be reported on Schedule T by jurisdiction.

**Schedule T EXHIBIT OF PREMIUMS WRITTEN ALLOCATED BY STATES & TERRITORIES**

Column 8 – Finance and Service Charges Not Included in Premiums

Report finance and service charges on direct business pursuant to the recognition guidance in SSAP No. 53—Property Casualty Contracts-Premiums. If a company cedes 100% of its business to an pooling arrangement and pools such charges, exclude the intercompany assumed and ceded amount incorporated in Page 4, Line 13.
APPENDIX

PROPERTY AND CASUALTY LINES OF BUSINESS

These definitions should be applied when reporting all applicable amounts for the following schedules: Underwriting and Investment Exhibit Parts 1, 1A, 1B, 2, and 2A; Exhibit of Premiums and Losses (Statutory Page 14); and the Insurance Expense Exhibit. Policy fees, service charges or membership charges are to be included with the line of business or in Other Income, as determined by SSAP No. 53—Property Casualty Contracts—Premiums.

Property and Casualty Annual Statement Blank

STATEMENT OF INCOME

UNDERWRITING INCOME

1. Premiums earned (Part 1, Line 35, Column 4) .................................................................
2. Deductions:
   2a. Losses incurred (Part 2, Line 35, Column 7) .............................................................
   2b. Loss adjustment expenses incurred (Part 3, Line 25, Column 1) ..............................
   2c. Other underwriting expenses incurred (Part 3, Line 25, Column 2) .......................
   2d. Write-ins for underwriting deductions .................................................................
3. Total underwriting deductions (Lines 2 through 5) .....................................................
4. Net income of protected cells ...................................................................................
5. Net underwriting gain (loss) (Line 1 minus Line 6 plus Line 7) .................................

INVESTMENT INCOME

6. Net investment income earned (Exhibit of Net Investment Income, Line 17) ...........
7. Net realized capital gains (losses) less capital gains tax of $ (Exhibit of Capital Gains (Losses)) .................................................................
8. Net investment gain (loss) (Lines 9 + 10) ..............................................................

OTHER INCOME

9. Net gain (loss) from agents' or premium balances charged off
   (amount recovered $ .......................................................... amount charged off $ ...........)
10. Finance and service charges not included in premiums ...........................................
11. Aggregate write-ins for miscellaneous income .......................................................
12. Total other income (Lines 12 through 14) ..............................................................
13. Net income before dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes (Lines 8 + 11 + 15) .................................................................
14. Dividends to policyholders ....................................................................................
15. Net income, after dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes (Line 16 minus Line 17) .................................................................
16. Federal and foreign income taxes incurred ..........................................................
17. Net income (Line 18 minus Line 19) (to Line 22) .......................................................

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): The footnote to SSAP No. 53, paragraph 6 was previously updated by agenda item 2001-34: SSAP No. 53 and reporting of installment fees which was adopted in June 2002.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None.

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose proposed revisions to SSAP No. 53 and request comments as detailed below. In addition, it is recommended that the Working Group request comments on reporting installment fee expenses as detailed below.

1. Installment fee and services charges guidance should be applied narrowly to the specific situation described and not analogized to exclude other fees from written premium.
2. Request comments on incurred installment fee expenses and notify the Casualty Actuarial (C) Task Force and the Property and Casualty Risk Based Capital (E) Working Group of the exposure, particularly regarding installment fee expenses.

**Detailed Recommendations:**

Issue 1 – The installment fee and services charges guidance in *SSAP No. 53—Property Casualty Contracts—Premiums*, paragraph 6, footnote 1, for evaluating flat fee service charges on installment premiums, should be applied narrowly to the specific situation described and not analogized to exclude other fees from written premium.

Prior Working Group revisions (in agenda item 2001-34) to footnote 1 in SSAP No. 53 illustrate that the installment premium processing fee guidance is meant to be interpreted narrowly and that the payment in full or by installment is a choice by the policyholder and represents an avoidable amount. The criteria is intentionally narrow and specific to installment fees. It is incorrect to apply this guidance to other fees. **Key underlying points to this response are:**

**Reporting** - All insurance reporting entities bear the cost of issuing a policy, issuing endorsements, and cancelling or reinstating policies whether that is accomplished directly or indirectly through an outside party. SSAP No. 71 provides that policy acquisition costs are expensed as incurred. Costs of issuing and servicing a policy are part of underwriting expenses therefore most “fees” are not intended to be excluded from premium.

**Premium tax** - NAIC staff notes that classifying amounts collected from policyholders by agents / managing general agents or third-party administrators as fees, which are excluded from written or earned premium, is an issue that many jurisdictions are familiar with as an attempt to avoid paying premium taxes. In addition, SSAP No. 53, paragraph 6, footnote 1 provides that “Clarification of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.”

**Risk Based Capital** - The classification of amounts out of premium revenue and into other income and other expense instead of underwriting expenses changes the risk-based capital charges for insurance risk. The RBC charge on insurance risk is based on the loss / loss adjustment expense ratio and the combined ratio which includes underwriting expenses.

**Issue 2 – Should incurred installment fee expenses be reported in other expenses?**

- SSAP No. 53 allows for installment fee income that meets specified criteria to be excluded from premium and reported as other income with finance and service charges, however it does not separately address the related installment fee expenses incurred by the reporting entity.
- The annual statement instructions provide that the expenses that are most commonly associated with installment expense such as postage printing and stationery are reported in underwriting expenses. These expenses and their related revenue are typically immaterial for most property and casualty products but are material for some nonstandard product writers. Having a mismatch between underwriting revenue / underwriting expenses and other revenue / other expenses can affect a reporting entity’s combined ratio as the combined ratio considers the losses, loss adjusting expenses and underwriting expenses.
- From a purely conceptual basis, it might be more consistent if the installment fee expenses are reported in other expenses. This is because it is a theoretical mismatch in the annual statement to report the installment fees in other revenue and have the related expenses in underwriting expenses. While this might be better theoretical match to have both the revenue and expense in the same category, NAIC staff notes that not
having “other expenses” in the property and casualty income statement seems to be an intentional choice as there are no “other expense” reporting lines. Therefore an “other expense” would have to be reported as a contra revenue.

- If incurred installment fee expenses were to be reported in other expenses, a reporting location would need to be determined as there is not an annual statement line to accommodate such reporting. If it was reported, it would most likely have to be report as a contra amount in “Aggregate Write-Ins for Miscellaneous Income” (not in underwriting expenses) as netting it in Finance and service charges would not provide transparency. Further, if reported, limitations would need to be determined – i.e. expenses not to exceed installment fee revenue.

Questions for exposure:

a. Should the Working Group develop guidance to allow installment fee expenses associated with fees that are reported in other income according to the criteria in SSAP No. 53 be permitted reported in or as an expense in “Other Income?”

b. If included in Other Income, should the expense be classified as a contra revenue in or “Aggregate Write-Ins for Miscellaneous Income”?

c. Installment fees and expenses are often immaterial for property and casualty except for nonstandard writers. Comments are also requested on allowing diversity in reporting installment fee expenses (that is optional to report as other expense category of contra other revenue Aggregate Write-Ins for Miscellaneous Income”, particularly for immaterial amounts.

Ultimately adoption of any such guidance would also require updates to the existing annual statement instructions.

NAIC staff recommends that the Working Group expose the following revisions to the existing footnote in SSAP No. 53:

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums1 (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

1 If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Note that this footnote on flat fee service charges on installment premium is intentionally narrow and specific and this guidance should not be applied to other fees or service charges. Clarification reporting of installment fees in of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.
Staff Review Completed by:
Robin Marcotte - October 2019

Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 53—Property Casualty Contracts—Premiums, as illustrated above. Comments are also requested on the reporting of installment fee expenses, as noted above. Additionally, the Casualty Actuarial (C) Task Force and Property and Casualty Risk Based (E) Working Group will be notified of this exposure.

For 2020 Spring National Meeting Discussion:

Because the items under discussion can impact loss ratios and information reported in Schedule P, during the 2019 Fall National Meeting exposure, the Working Group directed notice of the exposure and the request for comments to the Casualty Actuarial and Statistical (C) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group. Both groups have indicated that they do not expect to have a response on the installment fee expense comments until after the Spring National Meeting. NAIC staff has forwarded the 2020 comments received to both groups.

NAIC staff recommends that the Working Group take the following actions:

1. Adopt the exposed revision with the minor edit from interested parties. This revision clarifies that existing installment fee revenue guidance should be narrowly applied.

2. When comments on the installment fee expense are received from the Casualty Actuarial and Statistical (C) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group it is recommended that those comments be discussed as a separate agenda item (if needed).

Proposed Revisions:

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums1 (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

1 If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Note that this footnote on flat fee service charges on installment premium is intentionally narrow and specific and this guidance...
should not be applied to other fees or service charges. **Clarification** reporting of installment fees in **of** finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

On March 18, 2020, The Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 53—*Property and Casualty Contracts—Premiums*, as illustrated below, with the minor edit of deleting the word “clarification” in the exposed footnote. The adopted revisions specify that existing installment fee revenue guidance should be narrowly applied. When comments on the installment fee expense are received from the Casualty Actuarial and Statistical (C) Force and the Property and Casualty Risk-Based Capital (E) Working Group, they will be discussed in a separate agenda item.

**Adopted Revisions:**

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums1 (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in **footnote 1** (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

1 If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Note that this footnote on flat fee service charges on installment premium is intentionally narrow and specific and this guidance should not be applied to other fees or service charges. Reporting of installment fees in finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

Description of Issue:
This agenda item has been drafted to data-capture disclosures from SSAP No. 25—Affiliates and Other Related Parties. Currently, all disclosures from SSAP No. 25 are completed in a narrative (pdf) format. With the proposal to data-capture disclosures, the regulators can aggregate and query related party relationships.

This item is separate from an agenda item (Ref #2019-34) that is considering revisions to SSAP No. 25 to clarify the identification of related parties and consider enhanced disclosures for when there is a disclaimer of control approved by a domiciliary state and when a company outside of the holding company group owns more than 10% of the insurance reporting entity. This agenda item will follow a separate work stream to allow for year-end 2020 data capturing. If the revisions being considered under the separate agenda item are adopted by June 2020 (blanks deadline), then those disclosures may modify or expand the data templates proposed in this agenda item.

Existing Authoritative Literature:
(Note: The entire SSAP No. 25 has been included for ease of reference of existing guidance.)

SSAP No. 25—Affiliates and Other Related Parties

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

2. This statement shall be followed for all related party transactions, even if the transaction is also governed by other statutory accounting principles. Furthermore, this statement shall be followed in all transactions which involve unrelated parties as intermediaries between related parties. In determining whether a transaction is a related party transaction, consideration shall be given to the substance of the agreement and the parties whose actions or performance materially impact the insurance reporting entity under the transaction. For example, an investment acquired from a non-related intermediary in which the investment return is predominantly contingent on the performance of a related party shall be considered a related party investment. As a general principle, it is erroneous to conclude that the mere inclusion of a non-related intermediary eliminates the requirement to assess and properly identify the related party transaction in accordance with the provisions of this statement. It is also erroneous to conclude that the presence of non-related assets in a structure predominantly comprised of related party investments eliminates the requirement to assess and identify the investment transaction as a related party arrangement.

3. If a company receives the stock of an affiliated company as a capital contribution rather than through a purchase, the transaction shall be accounted for according to SSAP No. 25—Affiliates and Other Related Parties, SSAP No. 95—Nonmonetary Transactions, or SSAP No. 97—Investments in
Subsidiary, Controlled and Affiliated Entities, based on the details of each transaction. The statutory purchase method within SSAP No. 68—Business Combinations is not applicable for stock received as a capital contribution.

SUMMARY CONCLUSION

4. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:

a. Affiliates of the reporting entity, as defined in paragraph 5;

b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;

c. The principal owners of the reporting entity;

d. The management of the reporting entity, its parent or affiliates (including directors);

e. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;

f. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;

g. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

h. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

i. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies. Those entities are accounted for under the guidance provided in SSAP No. 48, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and
its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.

b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.

c. An entity where the insurer has given up participation rights¹ as a shareholder to the investee.

8. Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted, except to the extent this is specifically addressed by other statements of statutory accounting principles (SSAPs). If the due date is not addressed by the written agreement, any uncollected receivable is nonadmitted.

Related Party Loans

9. Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner’s independent payment ability. An affiliate’s ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Pursuant to SSAP No. 72—Surplus and Quasi-Reorganization, forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholder shall be accounted for as a dividend.

10. Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm’s-length transactions as defined in paragraph 13. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner)

¹ The term “participating rights” refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as “protective rights”. Refer to the sections entitled: “Protective Rights” and “Substantive Participating Rights” in EITF 96-16, Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights. The term “participating rights” shall be used consistent with the discussion of substantive participating rights in this EITF.
that are economic transactions as defined in paragraph 13 shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with SSAP No. 5R, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

11. Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month’s payment shall be nonadmitted assets.

12. Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph 9. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraph 10 and paragraph 11.

Transactions Involving the Exchange of Assets or Liabilities

13. An arm’s-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm’s-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., “permanence.” The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in SSAP No. 9—Subsequent Events. An economic transaction must represent a bona fide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

14. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

   a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;

   b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;

   c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;

   d. Whether limitations or restrictions exist on the buyer’s use of the financial interest transferred or on the profits arising from it;
e. Whether there is retention of effective control of the financial interest by the seller.

15. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at fair value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (fair value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

16. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph 15, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

17. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph 15);

b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;

c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or it’s affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;

d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

18. Transactions involving services between related parties can take a variety of different forms. One of the significant factors as to whether these transactions will be deemed to be arm’s length is the amount charged for such services. In general, amounts charged for services are based either on current market rates or on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party’s books and expense on the second party’s books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements are generally subject to regulatory approval.
19. Transactions involving services provided between related parties shall be recorded at the amount charged. Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See SSAP No 70—Allocation of Expenses for additional discussion regarding the allocation of expenses.

Disclosures

20. The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

i. Date of transaction;

ii. Explanation of transaction;

iii. Name of reporting entity;

iv. Name of affiliate;

v. Description of assets received by reporting entity;

vi. Statement value of assets received by reporting entity;

vii. Description of assets transferred by reporting entity; and

viii. Statement value of assets transferred by reporting entity.

c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period:

---

2 The amount charged shall be reviewed when there are any modifications or waivers subsequent to the establishment of the contract terms. If waivers or modifications to amounts charged occur, the related party transaction shall be reassessed to determine whether the contract continues to reflect fair and reasonable standards. If the transaction was with a parent or other stockholder and the charge for services has been fully waived, then the guidance in SSAP No. 72 for recognition as contributed capital (forgiveness of reporting entity obligation) or as a dividend (forgiveness of amount owed to the reporting entity) shall apply.

© 2020 National Association of Insurance Commissioners 6
d. **Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement:**

e. Any guarantees or undertakings, written or otherwise, shall be disclosed in accordance with the requirements of SSAP No. 5R. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed;

f. **A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party.** This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity's financial statements;

g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and

h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the *Purposes and Procedure Manual of the NAIC Investment Analysis Office*, “Procedures for Valuing Common Stocks and Stock Warrants.”

**Current Annual Statement Illustrations for Completing Disclosures:**

**Illustration:**

A. The Company paid common stock dividends to the Parent Company, The ABC Insurance Company, on July 15, 20____, totaling $__________.

B. At December 31, 20____, the Company reported $_______ as amounts due to the Parent Company, The ABC Insurance Company. The terms of the settlement require that these amounts be settled within 30 days.

C. The Company has given XYZ Inc., an affiliated company, a standing commitment until January 1, 20____, in the form of guarantees in the event of a default of XYZ on various of its debt issues as disclosed in Note 14.

D. The Company has agreed to provide the Parent Company, The ABC Insurance Company, certain actuarial investment services with respect to the administration of certain large group insurance contracts that are subject to group experience rating procedures.

E. The Parent Company has agreed to provide collection services for certain contracts for the Company.

F. All outstanding shares of The Company are owned by the Parent Company, The ABC Insurance Company, an insurance holding company domiciled in the State of ________________.

G. The Company owns shares of the stock of its ultimate parent, The ABC Insurance Company. A wholly owned subsidiary of the Company, The XYZ Insurance Company, owns shares of The ABC Insurance Company. In accordance with Securities Valuation Office guidelines, the asset value of
The ABC Insurance Company has been reduced by $__________, and the asset value of the XYZ Insurance Company has been reduced by $__________.

1. The Company owns a ______ % interest in ABC Non-Insurance Company, whose carrying value is equal to or exceeds 10% of the admitted assets of The Company. The Company carries ABC Non-Insurance Company at GAAP equity plus the remaining Goodwill balance of $ ________. Goodwill is amortized on a straight-line basis over a ten-year period.

At 12/31/20___, The Company’s interest in ABC Non-Insurance Company per the New York Stock Exchange quoted price was valued at $__________, that was $ ________ in excess of the carrying value.

Based on The Company’s ownership percentage of ABC Non-Insurance Company, the statement value of ABC Non-Insurance Company assets and liabilities as of 12/31/20__ were $ ________ and $_______, respectively.

The Company’s share of net income of ABC Non-Insurance Company was $________ for the year ended 12/31/20__.

The Company has a 25% limited partnership interest in XYC Real Estate Partners. The partnership investment in office properties in the NE United States has been adversely affected by corporate restructuring. This has affected the value of the properties that resulted in the write-down of the Company’s investment in XYC Real Estate Partners of $__________ for the year ended 12/31/20__.

The amount of the impairment was determined using appraisals from third parties.

Activity to Date (issues previously addressed by the Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): On August 3, 2019, the Working Group adopted revisions to SSAP No. 25—Affiliates and Other Related Parties, SSAP No. 26R—Bonds, SSAP No. 32—Preferred Stock, SSAP No. 43R—Loan-backed and Structured Securities, and SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies to clarify the application of SSAP No. 25, as well as an “affiliated” classification, when a transaction is in substance a related party transaction. The revisions to SSAP No. 25 clarified that when determining a related party transaction, consideration shall be given to the substantive of the agreements, and the parties whose actions or performance materially impact the insurance reporting entity under the transaction. From these revisions, the following guidance was added as a new paragraph 2 to SSAP No. 25:

2. This statement shall be followed for all related party transactions even if the transaction is also governed by other statutory accounting principles. Furthermore, this statement shall be followed in all transactions which involve unrelated parties as intermediaries between related parties. In determining whether a transaction is a related party transaction, consideration shall be given to the substance of the agreement, and the parties whose actions or performance materially impact the insurance reporting entity under the transaction. For example, an investment acquired from a non-related intermediary, in which the investment return is predominantly contingent on the performance of a related party, shall be considered a related party investment. As a general principle, it is erroneous to conclude that the mere inclusion of a non-related intermediary eliminates the requirement to assess and properly identify the related party transaction in accordance with the provisions of this statement. It is also erroneous to conclude that the presence of non-related assets in a structure predominantly comprised of related party investments, eliminates the requirement to assess and identify the investment transaction as a related party arrangement.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS) and U.S. GAAP: None
Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose the proposed data-capture templates. A blanks proposal to expose is anticipated to occur concurrently with the Working Group exposure. With inclusion of the data templates, narrative (pdf) reporting shall still occur to provide additional information regarding the related party transactions. NAIC staff notes that the current narrative illustrations are fairly simple. NAIC staff requests comments on whether more robust illustrations are necessary, or whether the disclosures that historically have been provided in the financial statements have included the extent of information necessary and more detailed illustrations are not necessary in the annual statement instructions. **Note: Transactions with affiliates detailed in Schedule Y – Part 2, Summary of Insurer’s Transactions with Any Affiliates would not need to be duplicated in these data-captured charts. Narrative disclosure information regarding the transactions captured in Schedule Y-2 shall continue to be reported consistently with past reporting.**

Proposed Data Capture Templates:

1) **Detail of Material Related Party Transactions**

This data-template includes aspects from paragraphs 20, 20.b.i, 20.b.ii, 20.b.iii, 20.b.iv and 20.c.

Note – The information regarding the written agreement and due date are not specifically named in the SSAP No. 25 disclosure listing but are addressed in paragraph 7 of SSAP No. 25. Since paragraph 7 requires a written agreement with an established due date for admittance, these components are anticipated elements that would be disclosed in the 20.b provisions that require “description of the transactions for each of the periods in which financial statements are presented, and other such information considered necessary to obtaining an understanding of the effect of the transactions on the financial statements.”

Material related party transactions shall be captured in this template each year until the agreement / transaction has termination. (For example, if the agreement is a material service contract, it shall be disclosed in this template each year after origination of the contract until the contract is terminated.)

**Proposed Data-Capturing Templates:**

Each Material Related Party Transaction Listed Separately:

*(Related parties may be listed more than once if more than one material related party transaction.)*

**Note: Transactions involving affiliates captured on Schedule Y-2 do not need to be duplicated in these charts.**

- Exchange of Assets or Liabilities (e.g., buys, sells and secured borrowing transactions)
- Management Services
- Cost-Sharing Agreement
2) **Detail of Material Related Party Transactions Involving Services**

This data-template includes aspects from paragraphs 20, 20.b.ii, 20.c and 20.f. (This chart provides additional information on service arrangements captured in chart 1.)

Note – The information regarding the amount charged, and whether the amount charged was based on an allocation of costs or market rates are not specifically named in the SSAP No. 25 disclosure listing but are addressed in paragraph 17 of SSAP No. 25. These components are anticipated elements that would be addressed in disclosure 20f with the “description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party.”

**Transactions Involving Services:**
*Include transactions involving management services, cost-sharing agreements and other transactions involving services.*

<table>

4) **Detail of Amounts Owed To/From a Related Party**

This data-template includes aspects from paragraph 20d. This data template shall include each related party that is identified with material transactions in chart 1 but shall include the total amount due from / to from that
related party. If there are transactions with the related party that were not captured in Chart 1 (perhaps as they were not material), they should be captured in the overall amount due from / to the related party.

This chart shall include related parties with immaterial transactions (not captured in Chart 1), if the aggregation of all transactions with the related party would be material to the reporting entity. (It is not required to include related parties in this chart if the transactions with the related party were individually immaterial and immaterial in the aggregate.)

Note: Pursuant to SSAP No. 64, paragraph 5 amounts due to or from affiliates shall be offset and reported net only when the provisions of paragraph 2 (valid right of setoff exists).

**Aggregate Reporting by Related Party**

<table>
<thead>
<tr>
<th>Name of Related Party</th>
<th>Aggregate Reporting Period Amount Due From</th>

</tbody>
</table>

- Each related party shall be included only once.

**Staff Review Completed by: Julie Gann – October 2019**

**Status:**

On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed the proposed data-capture templates, as illustrated above. This exposure does not propose revisions to SSAP No. 25.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to **SSAP No. 25—Affiliates and Other Related Parties**, as illustrated below.

1. The exposed data-capture templates, as illustrated above, to data-capture disclosures from **SSAP No. 25—Affiliates and Other Related Parties**, which are currently in narrative format. A referral will be sent to the Blanks (E) Working Group to consider this for 2020 annual reporting.

2. Added an additional phrase to the existing disclosure in SSAP No. 25, paragraph 20, recommended by interested parties and illustrated below.

**Disclosures**

19. The financial statements shall include disclosures of all material related-party transactions. In some cases, aggregation of similar transactions, that on a stand-alone basis are not material, may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:
a. The nature of the relationships involved;

b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

Summary of Issue:
Potential misinterpretation for Blank instructions on Schedule DB-D, section 1, column 4 (Fair Value of Acceptable Collateral) exist as collateral is reported as 1) the fair value of collateral pledged by a counterparty, or 2) for central clearinghouses as the net positive variation margin received by the reporting entity.

NAIC staff believes the intent of net positive variation margin was originally meant to reflect net realizable margin. For example, if a reporting entity originally paid $5k as collateral to initiate a position, then subsequently received $15k in variation margin true-up, the reporting entity should report $10k in the fair value of acceptable collateral (assuming the counterparty has the legal right to offset the original $5k received). With the legal right to offset, in this example the holder can only realize a net $10k in collateral if liquidation were to occur. As the instructions indicate “net positive variation margin,” the variation collateral of $15k could be reported, disregarding the $5k initial margin.

Conversely, had the reporting entity received $5k in initial margin, and a subsequent $20k in variation margin, a total of $25k should be reported as collateral, thus giving credit for the initial margin received. NAIC staff believe this intent is articulated in SSAP No. 86, as collateral is defined in the disclosures as “net assets held.”

This agenda item included proposed clarification language that states collateral shall be determined by the summation of any assets held less any collateral paid/pledged from collateral received, if the counterparty has a legal right to offset as defined in SSAP No. 64.

Further Background:
Schedule DB – Part D, Section 1 of the Blanks facilitates reporting of counterparty exposure from open derivative instruments. As described in the Blanks instructions, counterparty exposure is credit risk associated with certain types of transactions; in relation to schedule DB, it is the credit risk associated with the use of derivative instruments. Schedule DB-D, Section 1 displays the book/adjusted carrying value and the fair value of counterparty exposure, net of acceptable collateral held by or pledged to the reporting entity. Due to the nature of risk being calculated and displayed net of collateral, this Form A is to facilitate a discussion regarding the technical definition regarding determination of value as it relates to collateral.

In 2012, the Blanks (E) Working Group adopted modifications to numerous derivative statements and related instructions. These updates were driven by differing clearing and collateral requirements for certain types of derivative investments as well as the need to ensure consistent and accurate reporting of derivative investment activity of insurers.

Various concepts were introduced including Schedule DB – Part D, Section 2, which captures detailed collateral information for open derivative instruments. Collateral held or received through a pledge typically covers some or all of the credit risk the holder possesses due to transactions exchanged with a counterparty. In terms of derivative
contracts, **collateral may be pledged** to exchanges, counterparties, clearing brokers or central clearinghouses **by the reporting entity or** pledged from these organizations **to the reporting entity**. While the specific items that are considered acceptable collateral are detailed herein, a common term for collateral is “margin.” There are typically three types of margin that apply to these financial instruments, broadly defined as:

- **Initial Margin** - the minimum amount of equity that must be held/pledged to **initiate** a position.
- **Maintenance Margin** - the minimum amount of equity that must be **maintained** in order to not have the position forcibly liquidated. Also defined as the net sum of initial and variation margin.
- **Variation Margin** - payments generally made based on adverse price movements, often paid by clearing members to reduce exposures created by open derivative positions. Variation margin could also be as a result of changes in maintenance margin requirements. The term **Variation Margin** for statutory purposes is defined below.

In the normal course of business, all applicable cashflows are typically utilized in the reporting of an activity. In the instance of margin, initial margin plus/minus variation margin equals total margin. Remaining within **SSAP No. 86—Derivatives**, there are many instances that demonstrate this principal. As described for the initial carrying value of a futures contact (reported as an asset), paraphrased guidance states that positions should be valued at the initial amount of cash deposits plus/minus any subsequent cash flows. Additionally, options, warrants, caps, and floors are initially valued at total premium paid or received. While subsequent valuations may differ (amortized cost or fair value depending on the reporting of the item being hedged), all associated cash flows were utilized for reporting.

**Existing Authoritative Literature:**
While described in general terms above, statutory accounting guidance for variation margin is as follows:

**SSAP No. 86 – Derivatives**
15. “Variation Margin” reflects the daily change in market value of derivative contracts (e.g., daily gain/loss on a derivative contract due to market movements). Amounts received/paid to adjust variation margin on derivative contracts that are both cleared and settled on an exchange shall be recognized as an adjustment to the carrying value of the derivative contract (e.g., futures). Amounts received/paid to adjust variation margin on all other derivative contracts shall be recognized on the balance sheet as an asset or liability separate from the carrying value of the derivative instrument. This treatment shall occur under statutory accounting regardless if the counterparty/exchange considers amounts exchanged for variation margin to be legal settlement or collateral. Changes in variation margin shall not be treated as realized gains or adjustments to the basis of the hedged item until the derivative contract has been sold, matured or expired.

Blanks instructions regarding the reporting of acceptable collateral, as it relates to counterparty exposures from open derivative investments, is as follows:

**Schedule DB – Part D – Section 1, Column 4 (Fair Value of Acceptable Collateral)**
- Fair Value of Acceptable Collateral
- Leave blank for the aggregate reporting of Exchange-Traded Derivatives (Line 0199999999).
- For OTC counterparties, show the Fair Value of acceptable collateral pledged by the counterparty.
- For central clearinghouses, this amount would be the **net positive variation margin received** by the reporting entity.

"**Acceptable collateral**" means cash, cash equivalents, securities issued or guaranteed by the United States or Canadian governments or their government-sponsored enterprises, letters of credit, publicly
traded obligations designated 1 by the SVO, government money market mutual funds, and such other items as may be defined as acceptable collateral in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. For purposes of this definition, the term “letter of credit” means a clean, irrevocable and unconditional letter of credit issued or confirmed by, and payable and presentable at, a financial institution on the list of financial institutions meeting the standards for issuing such letter of credit pursuant to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The letter of credit must have an expiration date beyond the term of the subject transaction.

SSAP No. 86 defines several disclosure items related to collateral. The primary intent of such disclosures is to reflect amounts available to cover exposure in the event the liquidation of collateral assets occurs. Key areas are highlighted herein.

**Disclosure Requirements**

59. Reporting entities shall disclose the following for all derivative contracts used:

   e. A seller of credit derivatives shall disclose information about its credit derivatives and hybrid instruments that have embedded credit derivatives to enable users of financial statements to assess their potential effect on its financial position, income and cash flows. The seller of a credit derivative shall disclose the following information for each credit derivative, or each group of credit derivatives, even if the likelihood of the seller’s having to make any payments under the credit derivative is remote. With respect to hybrid instruments that have embedded credit derivatives, the seller of the embedded credit derivative shall disclose the required information for the entire hybrid instrument, not just the embedded credit derivative.

      i. The nature of the credit derivative, including the approximate term of the credit derivative, the reason(s) for entering into the credit derivative, the events or circumstances that would require the seller to perform under the credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the credit derivative. For example, the current status of the payment/performance risk of a credit derivative could be based on either recently issued external credit ratings or current internal groupings used by the seller to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

      ii. The maximum potential amount of future payments (undiscounted) the seller could be required to make under the credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the credit derivative (which are addressed under paragraph 59.e.iv.). If the terms of the credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the seller is unable to develop an estimate of the maximum potential amount of future payments under the credit derivative, the seller shall disclose the reasons why it cannot estimate the maximum potential amount.

      iii. The fair value of the credit derivative as of the date of the statement of financial position.

      iv. The nature of (1) any recourse provisions that would enable the seller to recover from third parties any of the amounts paid under the credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the credit derivative, the seller can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The seller shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the credit derivative. In its estimate of potential recoveries, the seller of credit
A holder of a financial instrument with an embedded credit derivative that exposes the holder to the possibility (however remote) of being required to make future payments (not merely receive reduced cash inflows) because the possibility of those future payments is not caused by subordination (such as the subordination of one beneficial interest to another tranche of a securitization, thereby redistributing credit risk) shall provide the following disclosures for the entire hybrid instrument, not just the embedded credit derivative:

i. The nature of the embedded credit derivative, including the approximate term of the embedded credit derivative, the events or circumstances that would require the holder to perform under the embedded credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the embedded credit derivative.

ii. The maximum potential amount of future payments (undiscounted) the holder could be required to make under the embedded credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the embedded credit derivative (which are addressed under paragraph 59.f.iv.). If the terms of the embedded credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the holder is unable to develop an estimate of the maximum potential amount of future payments under the embedded credit derivative, the holder shall disclose the reasons why it cannot estimate the maximum potential amount.

iii. The fair value of the hybrid instrument containing the embedded credit derivative as of the date of the statement of financial position.

iv. The nature of (1) any recourse provisions that would enable the holder to recover from third parties any of the amounts paid under the embedded credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the embedded credit derivative, the holder can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The holder shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the embedded credit derivative. In its estimate of potential recoveries, the holder of credit protection shall consider the effect of any purchased credit protection with identical underlying(s).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 86 to clarify that the fair value of collateral received or held, for derivative disclosure purposes, shall be reported net of collateral paid/pledged, in the event a counterparty
has the legal right to offset against as defined in SSAP No. 64. Further, minor updates to applicable annual statement instructions are proposed to be concurrently exposed.

Disclosure Requirements

60. Reporting entities shall disclose the following for all derivative contracts used:

e. A seller of credit derivatives shall disclose information about its credit derivatives and hybrid instruments that have embedded credit derivatives to enable users of financial statements to assess their potential effect on its financial position, income and cash flows.

A seller of credit derivatives shall disclose information about its credit derivatives and hybrid instruments that have embedded credit derivatives to enable users of financial statements to assess their potential effect on its financial position, income and cash flows. The seller of a credit derivative shall disclose the following information for each credit derivative, or each group of credit derivatives, even if the likelihood of the seller’s having to make any payments under the credit derivative is remote. With respect to hybrid instruments that have embedded credit derivatives, the seller of the embedded credit derivative shall disclose the required information for the entire hybrid instrument, not just the embedded credit derivative.

i. The nature of the credit derivative, including the approximate term of the credit derivative, the reason(s) for entering into the credit derivative, the events or circumstances that would require the seller to perform under the credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the credit derivative. For example, the current status of the payment/performance risk of a credit derivative could be based on either recently issued external credit ratings or current internal groupings used by the seller to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

ii. The maximum potential amount of future payments (undiscounted) the seller could be required to make under the credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the credit derivative (which are addressed under paragraph 59.e.iv.). If the terms of the credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the seller is unable to develop an estimate of the maximum potential amount of future payments under the credit derivative, the seller shall disclose the reasons why it cannot estimate the maximum potential amount.

iii. The fair value of the credit derivative as of the date of the statement of financial position.

iv. The nature of (1) any recourse provisions that would enable the seller to recover from third parties any of the amounts paid under the credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the credit derivative, the seller can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The seller shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the credit derivative. In its estimate of potential recoveries, the seller of credit protection shall consider the effect of any purchased credit protection with identical underlying(s).

1 Collateral, as calculated on an individual derivative instrument basis, shall be determined by deducting collateral paid/pledged from collateral received if the counterparty has a legal right to offset as defined in SSAP No. 64.
f. A holder of a financial instrument with an embedded credit derivative that exposes the holder to the possibility (however remote) of being required to make future payments (not merely receive reduced cash inflows) because the possibility of those future payments is not caused by subordination (such as the subordination of one beneficial interest to another tranche of a securitization, thereby redistributing credit risk) shall provide the following disclosures for the entire hybrid instrument, not just the embedded credit derivative:

i. The nature of the embedded credit derivative, including the approximate term of the embedded credit derivative, the events or circumstances that would require the holder to perform under the embedded credit derivative, and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the embedded credit derivative.

ii. The maximum potential amount of future payments (undiscounted) the holder could be required to make under the embedded credit derivative. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the embedded credit derivative (which are addressed under paragraph 59.f.iv.). If the terms of the embedded credit derivative provide for no limitation to the maximum potential future payments under the contract, that fact shall be disclosed. If the holder is unable to develop an estimate of the maximum potential amount of future payments under the embedded credit derivative, the holder shall disclose the reasons why it cannot estimate the maximum potential amount.

iii. The fair value of the hybrid instrument containing the embedded credit derivative as of the date of the statement of financial position.

iv. The nature of (1) any recourse provisions that would enable the holder to recover from third parties any of the amounts paid under the embedded credit derivative and (2) any assets held either as collateral or by third parties that, upon the occurrence of any specified triggering event or condition under the embedded credit derivative, the holder can obtain and liquidate to recover all or a portion of the amounts paid under the credit derivative. The holder shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the embedded credit derivative. In its estimate of potential recoveries, the holder of credit protection shall consider the effect of any purchased credit protection with identical underlying(s).

Proposed Blank Instructions Updates – Schedule DB-B, Section 1, Column 4

Fair Value of Acceptable Collateral

Leave blank for the aggregate reporting of Exchange-Traded Derivatives (Line 0199999999).

For OTC counterparties, show the Fair Value of acceptable net collateral pledged by the counterparty.

For central clearinghouses, this amount would be the total net positive variation margin received by the reporting entity.

Staff Review Completed by: Jim Pinegar, October 2019

---

2 See footnote 1.
**Status:**
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 86—Derivatives, as illustrated above, to clarify that the fair value of collateral received or held, for derivative disclosure purposes, shall be reported net of collateral paid/pledged, in the event a counterparty has the legal right to offset against, as defined in SSAP No. 64—Offsetting and Netting of Assets and Liabilities. Minor updates to the applicable annual statement instructions were also proposed to be concurrently exposed.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group disposed this agenda item without statutory revisions. The original intent was to facilitate a discussion regarding whether a reporting entity should report or potentially receive ‘credit’ for initial margin pledged from a counterparty in central clearinghouse transactions, but it is noted that third-party derivative exposure is appropriately captured in the existing disclosure requirements and in the annual statements.

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment During the NAIC Spring National Meeting Conference call with Comments due May 29

Dear Mr. Bruggeman:

Interested parties thank the NAIC Statutory Accounting Principles (E) Working Group (the “Working Group”) for your continuing effort to address the various statutory accounting issues arising from the ongoing pandemic caused by the novel coronavirus, COVID-19. We appreciate the opportunity to comment on the exposure drafts released for comment by the Working Group during its discussion on March 18, 2020. We offer the following comments:

Ref #2019-04: SSAP No. 32 – Investment Classification Project

The Working Group exposed the Issue Paper No. 1XX—Preferred Stock and substantively-revised draft SSAP No. 32—Preferred Stock with edits to reflect comments received from interested parties as well as a January 1, 2021 effective date.

Interested parties agree with the revisions made in response to our comments and the January 1, 2021 effective date.

Interested parties acknowledge the proposed footnote regarding preferred units issued by SSAP 48 entities. However, we suggest the wording changes in underline below so not to introduce a change in accounting or diversity in practice since the issuance of preferred units that are similar to preferred stock of a corporation generally occur in LLCs that are more corporate-like.

“Certain legal entities captured in SSAP No. 48 such as LLCs that are corporate-like do not issue preferred stock in legal form, but instead issue identical instruments labeled preferred units, interests, or shares. These instruments shall be captured in this statement...
provided they meet the structural characteristics as defined in paragraph 3. Additionally, these instruments shall not be in-substance common stock in which the holder has risk and reward characteristics that are substantially similar to common stock.”

Ref #2019-14: Attribution of Goodwill

The Working Group exposed this agenda item, with a revision from the prior exposure to exclude “pushdown” goodwill until the decision from the Working Group on that issue has been addressed. Additionally, the proposed disclosure included in the last exposure has been slightly modified to detail the downstream holding company application and the attribution of goodwill.

Interested parties thank the NAIC staff for meeting with a group of us to discuss this proposal and the circumstances it is intended to address. After discussing the proposal further with additional companies, we believe the draft guidance is complex and should be supplemented with illustrative guidance, i.e., a decision tree and an expansion of the examples in the proposal, to fully illustrate how the guidance is to be applied and improve consistency of application. To that end, we request a three-week extension during which we can develop the illustrative guidance and bring it back to the Working Group for consideration.

Ref #2019-38: Financing Derivatives

The Working Group exposed this agenda item with slight revisions from the prior exposure to delete the proposed new paragraph 19.c., as recommended by interested parties. The exposed revisions are intended to ensure consistency in the gross reporting of derivatives, without inclusion of financing components, and in reporting amounts owned to/from the reporting entity from the acquisition or writing of derivatives. With this exposure, a blanks proposal will be sponsored and notice of the proposed edits will be provided to the Capital Adequacy (E) Task Force.

Interested parties have no comments on this item.

Ref #2020-02: Accounting for Bond Tender Offers

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds, to clarify that the accounting and reporting of investment income and capital gain/loss, due to the early liquidation either through a call or a tender offer, shall be similarly applied. The current guidance refers to “prepayment penalties or acceleration fees in the event the bond is liquidated prior to its schedule termination date,” and includes all dynamics in which an issuer provides a penalty/fee to the holder to terminate the bond.

Interested parties request that the effective date for the updated guidance be set at January 1, 2021, so that insurers have sufficient time to make necessary systems changes to treat the excess compensation over market as a prepayment penalty as described in the updated guidance.
Ref #2020-03: Enhanced Goodwill Disclosures

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 68—*Business Combinations and Goodwill*, as illustrated above, to add additional goodwill disclosures. The proposed disclosures will improve the validity and accuracy of numbers currently being reported and will assist with the regulators’ review of reported assets not readily available for the payment of policyholder claims. Revisions to Schedule D, Part 6, Section 1 - Valuation of Shares of Subsidiary, Controlled and Affiliated Companies and Schedule D, Part 6, Section 2 - Valuation of Shares of Subsidiary, Controlled and Affiliated Companies primarily focus on the current reference to intangible assets.

Interested parties request that the proposal be revised (similar to Ref #2019-14) to exclude “pushdown” goodwill until the Working Group concludes on that issue. We also note that item 3 of the Description of the Issue on page 1 should be corrected as follows:

The goodwill limitation of 10% of the insurance reporting entity’s goodwill capital and surplus is a calculation. . .

Ref #2020-04: Commissioner Discretion in the Valuation Manual

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 51R—*Life Contracts*, SSAP No. 52—*Deposit-Type Contracts* and SSAP No. 54R—*Individual and Group Accident and Health Contracts* to note that voluntary decisions to choose one allowable reserving methodology over another, which requires commissioner approval under the *Valuation Manual*, shall be reported as a change in valuation basis. A notification of this exposure will be sent to the Life Actuarial (A) Task Force.

Interested parties have no comment on this item.

Ref #2020-05: Repeal of the Affordable Care Act Section 9010 Assessment

The Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the intent to supersede SSAP No. 106—*Affordable Care Act Section 9010 Assessment* and nullify *INT 18-02: ACA Section 9010 Assessment Moratoriums* which would move both SSAP No. 106 and INT 18-02 to Appendix H—Superseded Statements of Statutory Accounting Principles and Nullified Interpretations, effective Jan. 1, 2021. .

Referrals will be sent to the Blanks (E) Working Group, to ensure the annual statement disclosures related to SSAP No. 106 in Note 22 are removed from the annual statement instructions and annual statement blank beginning in reporting year 2021, and to the Health Risk Based Capital (E) Working Group for RBC implications related to the 2021 removal of the federal ACA adjustment sensitivity test which uses data from the SSAP No. 106 disclosures.
Interested parties support the conclusion reached for this item. We note, however, that annual statement disclosures in the 2020 blanks would apparently still be required and recommend that the disclosures be simplified considering the repeal of the Assessment. Specifically, the disclosures should be moved to note 21.C as Other Disclosures for year-end 2020 (since not a subsequent event) and then removed entirely for year-end 2021 as proposed; the disclosures should be limited to the amount of the assessment paid in the current and prior year, the amount of premium written for the prior year that is the basis for the determination of the section 9010 fee assessment paid in the current year (net assessable premium), and the estimated amount of the assessment that was payable in the current year as of the end of the prior year.

Ref: 2020-13 – Request on 2020 Health Insurance Assessment

Dear Chairman Bruggeman:

To confirm our recent email transmission, after discussion with members and review of the referenced exposure and the NAIC staff’s recommendation that SAPWG reject our request, please consider this letter as AHIP’s withdrawal of that request.

We appreciate NAIC Staff’s view (as expressed in SAPWG exposure 2020-13) that the subject of SSAP No. 106 interim reporting relief is a matter that could warrant domiciliary state regulator review for consideration as either a permitted or prescribed practice. We would be grateful if you would share with SAPWG members our concerns that the dynamic nature of the pandemic might make such action appropriate in some states, and that other issues may yet arise that would require involvement by SAPWG at the NAIC level.

As always, we appreciate the courtesies, accessibility, and candor extended to AHIP by you, Ms. Marcotte, and Ms. Gann.

Sincerely,

America’s Health Insurance Plans

Bob Ridgeway

RE: INT 20-09T – Basis Swaps – LIBOR Transition

Dear Mr. Bruggeman:

Thank you for the opportunity to comment and provide suggested edits to INT 20-09, Basis Swaps – LIBOR Transition. We appreciate the ongoing collaboration with NAIC staff, in particular their efforts to bring this matter to the forefront so quickly.

Interested parties support the staff’s recommendation.

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment During the NAIC Winter National Meeting with Comments due January 31

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts released for comment by the Statutory Accounting Principles (E) Working Group (the “Working Group”), during the NAIC Fall National Meeting in Austin. We offer the following comments:

Ref #2018-26: SCA Loss Tracking – Accounting Guidance

The Working Group exposed revisions, with modifications suggested by interested parties to SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets to expand guidance regarding financial guarantees and the use of the equity method for when losses exceed the equity value of an SCA investment. With the revisions, the equity value of an SCA would not go negative, and guaranteed liabilities would be reported to the extent that there is a financial guarantee or commitment. The “Illustration of the Application of INT 00-24” will also be inserted into SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

Interested parties have no comment on this item.

Ref #2018-38: Prepayments to Service and Claims Adjusting Providers

NAIC Staff recommended that the Working Group expose revisions incorporating the majority of interested parties’ comments to SSAP No. 55 (rather than the changes reflected in the draft for the Summer 2019 exposure). Interested parties’ comments primarily delete the exposed guidance and move the same or similar concepts into the broad product guidance for property and casualty, life and health or health in SSAP No. 55. These revisions are to reinstate annual statement references by entity type and to adjust scoping language and make the SSAP No. 29...
prepaid guidance consistent. (Staff proposed variations in wording are shaded to differentiate from the interested parties proposed wording that accomplishes a similar intent.)

The exposed revisions to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses incorporate interested parties’ previous recommendations to separate the guidance by product type and emphasize guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). The revisions emphasize existing guidance that claims related liabilities are not recognized as paid until the losses are paid to claimants or claims are adjusted.

Interested parties have no comment on this item.

Ref #2019-04: SSAP No. 32 – Investment Classification Project

The Working Group exposed a revised Issue Paper No. 1XX—Preferred Stock and a substantively-revised draft SSAP No. 32—Preferred Stock as part of the Investment Classification Project.

Interested parties substantially agree with the objectives of the proposal and appreciate Staff’s inclusion of revisions for previously communicated comments. We have the following additional comments related to the issue paper:

Scope

Interested parties note that the scope retains, albeit edited, the guidance that preferred stock of subsidiary, controlled and affiliated entities is included and therefore accounted for under the guidance for preferred stock regardless of their SCA character. We acknowledge the current exposure added the requirement to file investments in response to our request. The existing wording in SSAP No. 32 and the exposed language for SSAP No. 32 is below with interested parties suggested clarifying sentence and additional wording (underlined).

Existing language in SSAP No. 32:

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of subsidiaries, controlled or affiliated entities, including preferred stock interests of certified capital companies (CAPCO) per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement.

Exposed language in SSAP No. 32 and interested parties suggested additional sentence (underlined):
SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of entities captured in SSAP No. 97—*Investments in Subsidiaries, Controlled or Affiliated Entities* or SSAP No. 48—*Joint Ventures, Partnerships and Limited Liability Companies*, as well as preferred stock interests of certified capital companies per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement.

Definitions

We are opposed to the proposed edits to the definitions of redeemable and perpetual preferred stock for the following reasons:

a. The change would create a divergence from GAAP that does not exist under the current definitions. Both the definition and accounting for redeemable securities under the current definition aligns with the GAAP definition and accounting for debt securities. Preferred stock accounted for as debt securities under GAAP are those where ability for the holder to collect repayment is assured by the contract terms. We have not identified any benefit to diverging from this view for statutory reporting. The NAIC guidance is different from the GAAP ASC 480 guidance for issuers in multiple ways:

   • Preferred stock redeemable at the option of the holder for GAAP is classified as equity (mezzanine equity for SEC filers) but under statutory reporting currently (and proposed) is classified as debt-like in valuation. This conflicts with GAAP ASC 480 guidance for issuers and so it is more straight forward to use the GAAP ASC guidance for holders.
   • Alignment of statutory accounting with the ASC 320 guidance for holders results in more equity-like classification in the valuation of preferred stock which is generally more conservative than debt-like classification in valuation.
   • Preferred stock redeemable for other reasons outside of issuer’s control is equity (mezzanine equity for SEC filers) for GAAP but equity-like in valuation under current statutory reporting and debt-like in valuation under the proposed statutory reporting.

b. The definition that the NAIC staff has proposed to align to is used in GAAP only for compliance with SEC Regulation S-X, Rule 5-02, which is relevant only to the issuer of preferred stock and does not apply to nonpublic companies. Further, the definitions under Rule 5-02 were designed to include preferred stock with redemption features outside of the control of the issuer in order to provide investors information regarding
potential future cash obligations. This is not a relevant consideration for the holder of preferred stock, which is why GAAP does not consider this from the holder’s perspective. From the holder’s perspective, the only relevant consideration is whether the holder is able to redeem its investment, either through a fixed and determinable date, or through a redemption option that the holder can control.

c. Evaluation of whether there are any features that are outside the control of the issuer is a very complex and cumbersome analysis, even on an infrequent basis as is the case under GAAP (as it only applies to issuers). This is because there are a vast number of potential features that could be outside the control of the issuer (i.e., change in control, lapse in SEC registration, failure to pay dividend, etc.). Insurance companies frequently invest in preferred stock and often purchase many such securities each reporting period. Evaluating every preferred stock investment at this level of detail would be operationally burdensome and would provide no additional benefit as the investor is often economically indifferent to many of these low-probability redemption features that are outside of the control of both the issuer and investor.

As a result, we propose the following edits to the proposed definitions:

a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is outside the control of the issuer holders. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders; or 3) has conditions for redemption which are not solely within the control of the issuer, such as stock which must be redeemed out of future earnings. Preferred stock which meet one or more of these three criteria would be classified as redeemable preferred stock regardless of other attributes such as voting rights or dividend rights;

b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder are redeemable solely at the option of the issuer (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock pursuant to paragraph 3.a.

Balance Sheet Amount

The issue paper discusses carrying perpetual preferred at fair value capped by any stated call price. However, it did not provide guidance on timing for application of the cap. Because the call may not be effective for a period of time, and to ensure that purchases of perpetual preferred stock could still be carried at values greater than par (assuming market values remain above par), we recommend the following revisions to paragraph 10.a.ii, 10.b.ii and the correspondingly to paragraph 11 (underlined):

Paragraphs 10.a.ii and 10.b.ii:
i. Perpetual preferred stocks shall be valued at fair value, not to exceed any currently effective call price.

Paragraph 11:

11. An other-than-temporary (INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the preferred stock in effect at the date of acquisition. An assessment of other-than-temporary impairment shall occur whenever mandatory redemption rights or sinking fund requirements do not occur. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell the preferred stock prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock’s carrying value and its fair value, not to exceed any currently effective call price, at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.

Income

The issue paper clarifies the guidance on dividends on preferred stock. Specifically, paragraph 14 states:

“14. Dividends on preferred stock shall be recorded as investment income for qualifying preferred stock on the ex-dividend date with a corresponding receivable to be extinguished upon dividend settlement.”

Interested parties request clarification on the use of the term “qualifying” preferred stock as the term is not defined within the issue paper or within the new glossary of terms. If the inclusion of the word “qualifying” was unintentional, interested parties recommend deleting the word from paragraph 14 to avoid confusion.

Ref #2019-08: Update Reporting Deposit-Type Contracts

The Working Group exposed this agenda item to: 1) request feedback on the inclusion of a footnote excerpt for Exhibit 5 to disclose cases when a mortality risk is no longer present or a significant factor – i.e., due to a policyholder electing a payout benefit, 2) request feedback on circumstances where a morbidity risk is no longer present or a significant factor for Exhibit 6 items and whether a similar footnote disclosure would be appropriate, and 3) requested industry and regulator input for instruction clarifications regarding the classifications of deposit-type...
contracts captured in Exhibit 7. With this exposure, there are no proposed edits for statutory accounting. The Working Group directed NAIC staff to notify the Financial Stability (Ex) Task Force of this exposure.

Interested parties support the proposed Exhibit 5 footnote which, among other things, would provide clarification on contracts where a mortality risk is no longer present or a significant factor.

With respect to the implementation of additional disclosures for Exhibit 6, interested parties believe that the current product disaggregation in Exhibit 6 is sufficient to analyze the risks present in the subject contracts, and would suggest no changes.

Interested parties have no additional clarifications for Exhibit 7 instructions – we believe the current instructions are sufficiently clear for deposit type contracts

Ref #2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting, a Consensus of the FASB Emerging Issues Task Force

The Working Group adopted, as final, a clarification edit to SSAP No. 68—Business Combinations and Goodwill to clarify that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation. (With adoption of this edit, paragraph 9 was split into two separate paragraphs with the additional wording shown below.) The remainder of this agenda item was re-exposed to allow additional time for specific examples of pushdown accounting to be provided by interested parties, as well as consider comments received on pushdown.

9. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance and goodwill resulting from the acquisition of an SCA by the insurance reporting entity that is reported on the SCA’s financial statements (resulting from the application of pushdown accounting), is limited in the aggregate to 10% of the acquiring entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. Additionally, all positive goodwill shall be nonadmitted when the underlying investment in the SCA or partnership, joint venture and limited liability company is nonadmitted. When negative goodwill exists, it shall be recorded as a contra-asset.

Interested parties is working on developing examples to illustrate the various ways in which goodwill can be generated and suggested approaches to how the statutory limitations could be applied. As a result of these efforts, we request an extension for this and the following item.
Ref #2019-14: Attribution of Goodwill

The Working Group re-exposed this agenda item to clarify that the “assignment” of goodwill is a disclosure element. The Working Group directed NAIC staff to prepare revisions to the Sub 1 Acquisition Overview template to capture this information for new SCA acquisitions.

Please see the comments on the preceding item.

Ref #2019-20: Rolling Short-Term Investments

The Working Group exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, as shown in the “Proposed Revisions for Fall 2019 Discussion” to incorporate additional principle concepts in classifying investments as cash equivalents or short-term investments to prevent the “rolling” of certain investments. Fall revisions to the prior Summer National Meeting exposure incorporate guidance to exclude qualifying cash pools from the short-term rolling provisions.

With the Fall exposure, comments were requested from regulators and industry representatives on whether other investments should be included / excluded from the short-term rolling provisions. In particular, comments are requested on whether short-term lending (both collateral loans and affiliated loans) should be permitted to be continuously rolled/renewed as short-term, whether non-affiliated SSAP No. 26R investments should be subject to the short-term rolling restrictions, and whether an assessment of “re-underwriting” could be used as support to allow the rolling of short-term investments.

Interested parties appreciate the staff’s exclusion of qualifying cash pools from the provisions of the short-term rolling re-exposure. There remain two types of short-term lending arrangements within the scope of the re-exposure that should be addressed separately. We respectfully request that the Working Group give consideration to the broader implications discussed below prior to moving forward with this proposal. Specifically, it might be advantageous to split the exposure into two work streams – one for affiliated investments and another for unaffiliated investments

Non-affiliate Short-Term Lending

In the case of non-affiliated loans (i.e., Schedule BA Other Invested Assets), in order to provide appropriate flexibility to both the lender and the borrower, a loan facility may be structured as a short-term obligation. Such short-term obligations permit an insurer to more efficiently deploy its capital and streamline its underwriting process. Specifically, short term, non-affiliated loans: (a) provide the insurer with the ability to review and consider credit and collateral on a regular basis, (b) allow the insurer to reevaluate each investment at maturity and make new investments based on current market conditions if desired, and (c) allow the insurer to consider a renewal with an existing base of knowledge about the borrower and collateral, making the underwriting
process more streamlined and allowing for better informed credit decisions. As with any investment, diligent underwriting of the borrower and the collateral, and structuring of the investment with appropriate safeguards is critical and should not deviate from standards used for longer-term investments. These facilities fill a market need for borrowers that require short-term or warehouse-type financings on assets prior to reaching the window for securitization and provide the insurer with attractive risk-adjusted returns relative to other short-term investments.

In this context, interested parties propose that all non-affiliated short-term obligations, obligations in scope of either SSAP No. 26 or SSAP No. 43R, where the counterparty is not an affiliate or related party of the reporting entity, including collateral loans, which meet certain objective criteria should be defined, reported, and monitored in the existing Schedule DA as a non-affiliated short-term investment. In order for a non-affiliated transaction to qualify as short term for reporting purposes, such investment must include the following features:

1) The loan includes a maturity date less than one year from closing at which the borrower has an unconditional repayment obligation and on which the lender has a reasonable expectation that the investment can be terminated and repaid if so desired by the insurer; and
2) Any subsequent renewal is only completed in the sole discretion of BOTH the borrower and the lender.

Given that the transaction is between unaffiliated counterparties, interested parties believe the terms of these transactions, including the interest rate and advance rate, are on arms’ length terms.

Finally, with no obligation at any time to renew a transaction, the reporting entity is required to re-evaluate and re-underwrite the transaction at maturity. If any of the relevant underwriting criteria have changed, the insurer can require repayment or can request adjustments to the terms and conditions to conform to market conditions. If, but only if, both the borrower and lender agree to renew the transaction on the same or adjusted terms, the transaction may be renewed. This process, however, requires an independent credit decision and results in a new transaction.

Interested parties acknowledges the NAIC staff’s concern about the ability of auditors and regulators to discern between renewals that have been re-underwritten and those that have not; however, without an appreciation for the nuanced economic differences of these transactions, interested parties have concerns about unintended consequences of the re-exposure. Consider a transaction in which an entity purchases a GNMA with less than a one-year maturity, which was classified as a short-term investment or cash equivalent and matures/is settled as expected. Shortly after, that entity decides to purchase another GNMA with less than a one-year maturity. As proposed, the guidance precludes short-term investment or cash equivalent reporting for reacquired investments (or substantially similar investments) when purchased within one year from the initial investment. Without further clarification regarding substantially similar investments, or alternative objective criteria like those proposed above, we anticipate that diversity in practice could result. Additionally, regarding the example described, operationally burdensome tracking requirements would be required for entities to ensure appropriate reporting.
Therefore, we believe that unaffiliated SSAP No. 26 investments should be excluded from the scope of this exposure for the reasons discussed above. The scope of this exposure should also continue to exclude other unaffiliated SSAP No. 26 investments such as treasury bills, commercial paper, certificates of deposits and other similar short-term investments since such investments are used for short-term liquidity and do not have long-term investment risk.

Affiliate Short-Term Lending

Interested parties believe that the same principles discussed above and in our previous letter apply to affiliated short-term investments to merit continued classification as short term in nature, even when a subsequent short-term investment is re-underwritten to the same borrower within a year. We believe there is already sufficient regulatory oversight on the fundamental objectives, usage and risks of material affiliated transactions to validate the alignment of these vehicles with the fundamental characteristics implied by the statutory short-term investment classification. In this case, prudently managed, governed and executed liquidity optimization across an insurance holding company system can be observed with the current regulatory oversight mechanisms. While re-underwriting may be warranted based on liquidity needs, the risk profile continues to be commensurate with that of short-term investments.

NAIC Guidance should not supersede regulatory oversight. The domiciliary commissioners already have authority to disapprove of material affiliated transactions as deemed necessary. The NAIC Model Holding Company Act (the “Act”), which has been broadly incorporated into state laws, requires filing and domiciliary commissioner approval of affiliated transactions over certain materiality thresholds. As the Act was promulgated by the NAIC, interested parties believe that through use of the Act, commissioners put in place filing and approval requirements they deemed satisfactory to address their regulatory needs. Through these filings, state regulators have oversight over both the risk elements considered and the methodology utilized by companies in underwriting each material extension of credit within the holding company system. It would run counter to state authority to implement requirements resulting in NAIC guidance that would effectively supersede the authority of domiciliary commissioners or cast doubt, even implicitly, upon states’ ability to appropriately regulate the domiciled insurers with which they are intimately familiar. Principally, the Act allows regulators to verify the appropriateness of the short-term classification of material affiliated investments, providing oversight to ensure consistency in classification between affiliated and unaffiliated short-term investments.

Prudent and appropriately governed liquidity management within a holding company structure enhances insurance company solvency. Appropriately managed, governed and regulator-approved affiliate lending programs create opportunities for liquidity optimization across a holding company system, essentially sharing objectives similar to that of affiliated liquidity pools. This management is necessary due to diversification of product offerings as timing of cash receipts and disbursements will vary across such products and different entities within a holding company system. The ability to prudently draw upon excess liquidity surplus within one entity at a time when another entity has a short-term need for liquidity serves as an immediate buffer against uneconomic alternatives such as forced asset sales or relatively costly external short-term
financing. If adopted as written, the exposed guidance could result in entities foregoing this powerful in-house liquidity tool, which enables companies within a holding company system to more effectively manage inherent cash flow timing mismatches, and instead resort to alternatives that would result in an unnecessary drain on capital available to support policyholder obligations.

SSAP 43R—Loan-backed and Structured Securities

Investments in the scope of SSAP 43R, *Loan-backed and Structured Securities*, have payments that are driven by underlying collateral with modifications that are driven by the performance of the underlying assets and typically overseen by a collateral manager or otherwise laid out in deal documents. In many cases, these instruments also have clean-up call provisions that would remove the investment from the market while the remaining underlying collateral may be repackaged into a re-securitization. The concept of rolling a short-term investment that would be in the scope of SSAP 43R is often-times outside the control of investors in these instruments and possibly part of the normal life cycle of a small portion of the underlying collateral. Because of these characteristics, the interested parties propose that any non-affiliated investment that would qualify within SSAP 43R—Loan-backed and Structured Securities be exempt from the proposed new concepts like what is proposed for non-affiliated investment that would qualify within SSAP 26R—Bonds. Further consideration of affiliated investments that fall within SSAP 43R is recommended, given the underlying assets drive these investments and the other considerations for affiliate short-term lending outlined previously in this response.

Interested parties respectfully requests that the Working Group give consideration to these broader implications prior to moving forward with this proposal. If the Working Group has lingering concerns or appetite for additional elaboration as to the character and traditional efficacy of existing regulatory oversight mechanisms, interested parties would request that staff work with industry to draft materials for future dialogue and examination of this topic.

Ref #2019-24: Levelized and Persistency Commission

The Working Group exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, to include additional NAIC staff modifications regarding persistency commission and levelized commission arrangements to address certain comments received and to allow for further discussion. With this exposure, the Working Group directed a notification of the exposure to be sent to the Life Actuarial (A) Task Force.

Interested parties appreciate staff’s availability to discuss the proposed revisions. Based on that discussion and the discussion at the Fall Meeting, interested parties propose suggested edits that we believe achieve the goal of a nonsubstantive change and clarify the original intent of SSAP 71. (Note: the NAIC Accounting Practices and Procedures Manual-Life which was in force prior to the effective date of current SAP includes the same wording as current SSAP No. 71). The suggested edits add a clear definition of a funding agreement. This will clarify the distinction between funding agreements and persistency-based commissions, without unintentionally changing the existing accounting. We welcome the opportunity to discuss the suggested edits further with the Working Group.
Ref #2019-25: Working Capital Finance Notes (WCFN)

The Working Group exposed substantive revisions to SSAP No. 105—*Working Capital Finance Investments* (SSAP No. 105) to incorporate industry revisions to program requirements, as previously directed by the Working Group during the Summer National Meeting. The Working Group directed NAIC staff to prepare an issue paper.

In 2016, the American Council of Life Insurers (ACLI) advised the NAIC that the implementation of SSAP No. 105 was not successful and that adoption had been low. ACLI began a dialogue with staff and regulators about both the shortcomings of the 2013 adopted rules and outlined required changes to make the rules suitable. As part of that process, ACLI marked up both the SSAP and NAIC SVO Purposes and Procedures Manual (P&P Manual) with the suggested changes which have subsequently been characterized as "10 required items", which staff have in turn opined on, and noted that four of the items are not supported by staff. Absent all 10 required items, WCFI adoption will remain low. Staff have noted an immaterial number of programs have been filed with only a subset of those approved, resulting in limited investments made. The existing Exposure provided to staff and regulators by ACLI and was utilized by staff to produce the current proposal, without addressing the proposed language by ACLI on the four required items not supported by staff.

Objections to the four required changes are:

1) evaluating non-rated subsidiaries of obligors (even though the existing SSAP already provides guidance to do).
2) expanding covered investment credit quality to include NAIC 3 and 4 investments,
3) requiring domiciliary regulator authorization for investment, and
4) requiring reporting on Schedule BA even though the asset class qualifies for look through RBC treatment.

In the ACLI draft provided to the NAIC, ACLI proposed an evaluation mechanism that is suitable for NAIC implementation on un-rated subsidiaries. With regard to NAIC objection on lower rated investments, such position is inexplicable as statutory RBC requirements reflect investment quality decisions in capital calculations limiting Industry investments to compliant assets. Domiciliary regulator prior approval for investment is a transfer of transaction review from staff to state insurance departments when, if regulators are concerned about the asset class, they can uniformly limit investment as a whole. Finally, Schedule BA reporting is both cumbersome and expensive for industry further exacerbating adoption without useful purpose. Regulators can track any specific asset class or investment by requiring the use of a specific investment code on the appropriate accounting schedule, which in the case of WCFI is Schedule DA).

Interested parties note that private placements, as opposed to public investments, are typically available only to large industry participants and that the economic impact of a $10,000 industry filing fee per issue per filing entity has an operating impact on a $1,000,000 investment in
WCFI, which for the avoidance of doubt would be sizable for most industry investors, of 1% of
the investment income in year 1 of that investment. Current investment yields for NAIC 1 and 2
investments in WCFI offer gross returns of 2 – 2.5%. Such a high cost to a small industry
investor, coupled with the fact that dealers would unlikely choose to document such investments
bilaterally with small industry investors, limits access to the assets to large industry investors. In
summary, interested parties request that regulators re-consider ACLI markup with the additional
four requirements as originally submitted by ACLI and ultimately, after appropriate exposure
and review, to direct staff to implement these changes.

Ref #2019-32: Look-Through with Multiple Holding Companies

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP
No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, to clarify that a more-than-
one holding company structure is permitted as a look-through if each of the holding companies
within the structure complies with the requirements in SSAP No. 97.

Interested parties have no comment on this item.

Ref #2019-33: SSAP No. 25 – Disclosures

The Working Group moved this agenda item to the active listing and exposed the proposed data-
capture templates. This exposure does not propose revisions to SSAP No. 25.

Interested parties believe that clarifications to paragraph 20 of SSAP No. 25 are necessary. We
believe that the aggregation of similar transactions may result in immaterial transactions
becoming material, meeting the threshold of 1/2 of 1% of the total admitted assets of the
reporting entity. Therefore, we propose the edits highlighted below to ensure that aggregation
occurs subsequent to the application of the criteria in paragraph 20.b. for materially identified
transactions.

**Proposed Edits to the exposure**

Disclosures

20. The financial statements shall include disclosures of all material related-party
transactions. In some cases, aggregation of similar transactions, that on a stand-alone basis
are not material, may be appropriate. Sometimes, the effect of the relationship between the
parties may be so pervasive that disclosure of the relationship alone will be sufficient. If
necessary to the understanding of the relationship, the name of the related party should be
disclosed. Transactions shall not be purported to be arm’s-length transactions unless there
is demonstrable evidence to support such statement. The disclosures shall include:

a. **The nature of the relationships involved;**

b. **A description of the transactions for each of the periods for which
financial statements are presented, and such other information
considered necessary to obtain an understanding of the effects of the**
transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

Ref #2019-34: Related Parties, Disclaimers of Affiliation and Variable Interest Entities

The Working Group Staff exposed revisions to SSAP No. 25—Affiliates and Other Related Parties. Key elements for discussion in the exposure draft are to:

- Clarify the identification of related parties and ensure that any related party identified under U.S. generally accepted accounting principles (GAAP) or Securities Exchange Commission (SEC) reporting requirements would be considered a related party under statutory accounting principles (SAP).

- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.

- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.

- Incorporate a new disclosure of known non-arm’s-length transactions with any entity not identified as a related party.

- Propose rejection of several U.S. GAAP standards addressing variable interest entities.

Interested parties understand and agree with the need for transparency in disclosures of related party transactions. However, we have significant concerns with the proposal as it is not very clear based on the proposed changes to SSAP No. 25 what it is that will be required going forward based on the expansion of the definition of a related party. We include some of our observations below.

Interested parties would like clarity around the new proposed wording that states that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. One of our concerns in this area relates to limited partnership/joint ventures/limited liability company (LPs/JVs/LLCs) investments where the insurer owns more than 10% of the equity of the investee but has no affiliation to the investee’s general partner/asset manager. SSAP No. 97 currently includes a possible scope exception in paragraph 6 for these types of investments so that they are not considered affiliated or controlled investees of the insurer. It is not clear from the proposal what the expected impact is from now having to consider all investments in unaffiliated LPs/JVs/LLCs where the insurer owns more than 10% of the equity but has no other affiliation, as related parties. If the intent is just to have insurers disclose material transactions with these entities other than the equity
investment held in each entity, we believe that this needs to be more clearly stated in the proposal so that there is no misrepresentation of what needs to be disclosed or whether these investments need to be reported in a different section of Schedule BA (i.e., affiliated vs. non-affiliated).

Another, but similar concern relates to certain entities consolidated under U.S. GAAP based on the Variable Interest Entity (VIEs) guidance. For some of these consolidated VIEs, the insurer has no control or affiliation with the VIE other than its debt investment in the entity. The insurer is simply a passive investor in the structure. However, under the VIE rules, the insurer must consolidate the entity as the insurer may be able to make decisions for the VIE if there is ever an event of default of the assets at some point in the future. These rights are given to certain classes of bonds issued by the securitization as a protection to the investors, but do not give the investors any type of power or control over the VIE at inception or on a day-to-day basis. It is important to note that consolidation rules under FASB Codification Topic 810 are very complex with some insurers concluding consolidation is required under a set of fact and circumstances and others concluding consolidation is not required under the same set of facts and circumstances. In the example just shared, some insurers have concluded consolidation is required because when no day-to-day decisions are being made for the VIE, decisions upon the occurrence of a certain event which may be unlikely to occur, rise to the point where they are the decisions that have the most significant impact on the economic results of the VIE. We believe that even though insurers have to consolidate these entities, there is no true related party affiliation. The proposal requires that any entity identified as a related party under U.S. GAAP will also be considered a related party for statutory reporting. Since these entities are consolidated for GAAP, the presumption would be that they are a related party of the insurer. If these entities will be considered related parties on a statutory basis going forward, the exposure needs to clarify that the inclusion of these types of entities only impacts related party disclosures for any material transactions held with these entities other than the debt investment held by the insurer in the VIE and that the debt instrument is still reported on Schedule D as unaffiliated.

Interested parties also have concerns with SSAP No. 25 including references to U.S. GAAP and SEC reporting for mutual insurers that do not prepare U.S. GAAP financial statements and do not file with the SEC. Therefore, interested parties recommend that the specific guidance from the GAAP and SEC be stated in SSAP No. 25 (rather than incorporated by reference) so that any future changes in GAAP and SEC guidance are subject to NAIC review prior to being applicable. Also, it is important to note that even when an entity is considered a related party under U.S. GAAP, disclosure of that relationship is only required when there are material transactions with that party. U.S. GAAP allows reporting entities to evaluate the significance of a relationship and determine when disclosure of that relationship is material/significant enough for disclosure to a user of the financial statements. As a result, we suggest this be clarified in the exposure as well so that it is clear that the reference to related parties under GAAP and SEC rules is only relevant if the insurer has material transactions with such parties outside of the insurer’s investment in the entity.
Ref #2019-35: Update Withdrawal Disclosures

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance, as illustrated in the staff recommendation, to:

- Add a consistency revision to SSAP No. 51R to ensure separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures;

- Correct an identified inconsistency in one of the new disclosures that was added regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%. A clarification is being recommended to ensure consistency in annual statement reporting; and

- Add a cross-reference from SSAP No. 56 to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R as the disclosure include separate account products.

Interested parties have no comment on this item.

Ref #2019-36: Expand MGA and TPA Disclosures

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—Life Contracts, paragraph 50, SSAP No. 53—Property Casualty Contracts—Premiums, paragraph 19, SSAP No. 54R—Individual and Group Accident and Health Contracts, paragraph 33 and SSAP No. 59—Credit Life and Accident and Health Insurance Contracts, paragraph 19, as illustrated in the staff recommendation above, to expand the MGA/TPA note as follows:

- Aggregate direct written premium and total premium written by MGA/TPA;
- Aggregate dollar amount of claims process / total claims processed by MGA/TPA; and
- Information on related party / affiliate status and if the MGA/TPA is independently audited and / or bonded.

Interested parties note that the proposal does not define a TPA. It just states that TPAs “that write direct policies or provide claims adjusting or other services”. That is overly broad and could include a variety of entities that provide services. The NAIC model (NAIC Third Party Administrator Act, or NAIC model) guidelines define TPAs as it relates to life/health and workers compensation. Also, the NAIC model definition has a long list of activities that are excluded from the definition, such as self-insured employers administering its own workers’ compensation, insurers administering coverage, producers engaged in selling insurance, attorneys handling claims, MGAs, etc. We recommend that the proposed disclosure reference the NAIC model so that there is consistency in the definition used in applying the guidance.
Additionally, it is unclear how the reporting threshold should be applied. The reporting applies to TPAs if “the claims adjusting services are greater than 5% of annual average claims volume”. Is that threshold based on the amount of claim dollars paid or the number of claims handled? Is that measured across all lines of business for the company? Would claims paid within insureds’ deductibles/SIRs be included? Depending on how this is defined, it could be quite burdensome for insurers to monitor. We recommend that the threshold be based on written premium, consistent with how other thresholds have been applied.

Ref #2019-37: Surplus Notes – Enhanced Disclosures

During the 2018 Spring National Meeting, the Working Group exposed revisions to SSAP No. 41R – Surplus Notes (“SSAP No. 41R”) to indicate that surplus notes, where the proceeds from the issuance of the surplus note were used to purchase an asset directly or indirectly from the holder of the surplus note, are not subordinate and do not qualify for reporting as surplus and should be classified as debt. Furthermore, the exposure draft stated that these assets were not considered available for policyholder claims and should be non-admitted. The exposure was the result of a referral from a Subgroup of the Reinsurance Task Force that was more narrowly focused on whether specific securities could be considered Primary Securities.

At the 2019 Summer National Meeting, the Working Group agreed to have an industry data call, due by December 31, 2019, to determine what financing structures existed that utilized the types of surplus notes described above.

At the 2019 Fall National Meeting, the Working Group exposed additional disclosures that should be captured in SSAP No. 41R. The Working Group does intend, later in 2020, to continue discussions on how to treat surplus notes where an associated asset is received by the surplus note issuer. This discussion will occur after a review and analysis of the data call.

General Comments

Interested parties understand regulators’ concerns that the details of certain transactions involving surplus notes may not be transparent to regulators who were not involved in the initial approval or ongoing review of such transactions. However, these transactions and the related pricing represent confidential information that we believe is inappropriate for public disclosure and may be misleading if presented in the proposed format.

Our concerns with the proposed disclosures are outlined in detail below, followed by our suggested revisions.

The proposed disclosures may not provide the desired transparency or consistency

Throughout the discussion on any potential revisions to SSAP No. 41R over the past twenty-two months, interested parties have agreed that robust disclosures should be added to SSAP No. 41R to fully reflect situations where a reporting entity receiving proceeds from the issuance of surplus notes used those proceeds to purchase an asset directly or indirectly from the holder of the
surplus note. However, we also believe that these disclosures should be included in the financial statements of a ceding company, which would provide a much greater level of transparency and consistency in disclosure. We believe that in most situations where a surplus note issuer uses proceeds from the issuance to purchase an asset directly or indirectly from the holder of the surplus note, the surplus note issuer is an affiliated captive reinsurer. As some captive financial statements are not provided to the NAIC, we believe disclosure in the financial statements of the ceding company would provide a much greater level of transparency and consistency in disclosure for these transactions. Our proposed revisions include suggested language for this disclosure requirement.

The proposed disclosure goes beyond the stated regulatory concern and requires additional information that may be incorrectly interpreted.

We believe that the proposed disclosure departs from the original regulatory concern expressed in the public meetings of the Working Group, namely that a reporting entity should not be permitted to circumvent regulatory authority as it relates to the preservation of capital at a regulated entity by contractually linking the cash outflows associated with a surplus note to cash inflows from another financial instrument held by the surplus note issuer. However, rather than identify such transactions, the proposed disclosure would require detailed information about surplus note interest regardless of whether cash flows are contractually linked. We are concerned that the operational burden of compiling this information for all surplus notes with netting provisions exceeds the benefit to regulators of providing information on the few transactions of concern.

Interested parties note that the scope of the proposed disclosure is substantially identical to that of the recent surplus note data call issued by the NAIC. The stated intent of this data call was to obtain information on surplus note transactions without regard to whether offsetting of cash flows was due to: a) contractual linkage or b) administrative offset provisions. While we agree that this scope was appropriate to assess the universe of affected transactions, we do not believe it is the appropriate scope for an Annual Statement disclosure and could be misleading in certain cases as outlined below.

The proposed disclosure includes confidential information that is not appropriate for public filings.

The proposal would require the disclosure of surplus note interest paid, net of any payments made by the surplus note holder. As a practical matter, for many captive structures, this amount often corresponds to the fees paid to the financing provider(s) to provide liquidity in the event of adverse experience or other conditions with respect to the subject policies, as defined in the applicable agreement.

The pricing and terms of the subject transactions were heavily vetted, negotiated, and submitted to state regulators for approval with the reasonable understanding that this information was subject to robust confidentiality protections. We do not object to this information being made available to regulators in the context of a confidential data call or regulator communication.
However, we are concerned with its inclusion in public filings. The primary focus should be on whether the surplus note issuer is statutorily solvent rather than its surplus note pricing terms.

**The net presentation of interest paid could be misleading for some transactions**

We also believe that the change to the current disclosure to replace surplus note interest paid with interest paid net of amounts offset is problematic. We believe this disclosure could be misleading for many of the transactions in the scope of the disclosure, given that the full amount of surplus note interest paid was/would be due regardless of whether a portion is offset pursuant to an administrative netting arrangement.

**Proposed Revisions**

Interested parties recommend revisions to the proposed disclosures which would provide regulators who are not involved in the approval and ongoing review of a surplus note transaction with information to assess the nature of the transaction and to determine whether more detailed review is needed. Specifically, our revisions would require disclosure of whether cash flows are offset but would differentiate between administrative offsetting and the contractual “linkage” that is of concern to regulators. These revisions would also remove information that we believe is confidential in nature and would not be appropriate for public disclosure. Finally, we have proposed several additions to the required disclosures, which we believe would provide useful information about transactions involving surplus notes.

Our suggested revisions to the disclosures are included in Exhibit A and summarized below. For ease of review, revisions proposed by NAIC staff have been accepted, and interested parties’ comments are presented as tracked changes.

**Summary of Proposed Revisions**

- Expand the disclosure requirement to the financial statements of the ceding company as well as the surplus note issuer.
- Retain the current disclosure of total interest paid (gross of any administrative or other netting)
- Replace quantitative disclosure of “interest remitted” and “cost of liquidity” with three Y/N disclosure columns which correspond to the criteria used in the data call scoping:
  1. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus notes and amounts receivable under other agreements contractually linked? (For example, the asset provides interest payments only when the surplus note provides interest payments.)
  2. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets
that would normally occur throughout the duration, or at maturity, of the agreement. (This may be referred to as administrative offsetting.)?

3. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note?

- Replace confidential information about 3rd party liquidity (e.g. maximum liquidity amount and cost of liquidity source) with a description of terms under which liquidity would be provided should a triggering event occur.
- Add requirement for narrative disclosure of any related guarantees or support agreements.

Ref #2019-38: Financing Derivatives

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives, to clarify the reporting of derivatives with financing premiums. The reporting revisions propose allowing the present value of the derivative premium receivable (and payable) for financed derivatives to be factored into the counterparty risk assessment for life RBC. (If supported, RBC changes would be subsequently referred to the Capital Adequacy (E) Task Force for consideration.) Comments are also requested as to whether derivatives and related financing provisions that would generally not meet the SSAP No. 64—Offsetting and Netting of Assets and Liabilities right to offset criteria and if explicit guidance allowing offset should be considered.

Interested parties request the exposure be given an effective date of at least January 1, 2021. The exposure represents a significant change to how certain companies account for derivatives and must be implemented in our investment systems prior to adoption. Interested parties do not believe the assets and liabilities under this exposure meet the right to offset criteria in SSAP No. 64—Offsetting and Netting of Assets and Liabilities, because they originate within the same contract. Additionally, we believe the netting guidance outlined in paragraph 19c would be difficult to implement and recommend it be removed.

Ref #2019-39: Acceptable Collateral - Counterparty Exposure for Derivative Instruments

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives, to clarify that the fair value of collateral received or held, for derivative disclosure purposes, shall be reported net of collateral paid/pledged, in the event a counterparty has the legal right to offset against, as defined in SSAP No. 64—Offsetting and Netting of Assets and Liabilities. Minor updates to the applicable annual statement instructions were also proposed to be concurrently exposed.

Interested parties fully support the appropriate depiction within the statutory financial statements and schedules of the availability of insurance company assets to fulfill policyholder obligations, including consideration of a reporting entity’s access to and control over the assets and any contingencies pertaining to the attendant rights & benefits of ownership. We appreciate the opportunity to dialogue further on this matter and ensure the regulatory objective is achieved.
regarding both financial statement presentation and the risk-based assessment of capital. The ability to make efficient use of derivative instruments as part of hedging transactions, income generation transactions and replication (synthetic asset) transactions, in accordance with SSAP No. 86 – Derivatives (“SSAP No. 86”), is a crucial component of insurers’ ability to effectively manage risk and prudently maintain yields in support of our ability to deliver on promises to our policy and contract holders. With broader federal regulation now driving a migration for many of the interest rate and credit derivatives insurers use to these ends towards the central clearinghouse or “cleared” space, the significance of appropriately depicting the specific economic substance and attendant risks associated with each of the various forms of collateral posted to central clearinghouses has never been greater.

Given this backdrop, our concerns with exposure 2019-39 are as follows:

1) The language in the proposal does not provide clear, consistent definition of scope or objective(s);
2) The exchange of initial margin on cleared trades represents a contingency distinct from that associated with the exchange of variation margin; and
3) The existing statutory accounting, reporting and risk-based capital models already appropriately depict the economic substance and inherent risk associated with the exchange of initial margin, and the proposed changes would result in inappropriate duplication of risk-based capital charges.

In terms of intended scope, the narrative commentary and proposed updates to existing guidance make it unclear as to whether the proposal aims to refine accounting & reporting guidance for:

- initial margin, variation margin, or both;
- bilateral (over-the-counter, “OTC”) trades, trades executed with central clearinghouses, or both;
- exchanges of cash collateral, non-cash collateral (e.g. securities) or both.

The summary introduction to the proposal appears to target a perceived issue with the Schedule DB-D, Section 1 reporting of initial margin exchanged with central clearinghouses. The narrative commentary provided does not identify specific concerns pertaining to the reporting of collateral associated with bilateral OTC trades or variation margin. However, the attendant proposed edits to SSAP No. 86 and the Blank Instructions for Schedule DB-D, Section 1 encompass collateral exchanges with both bilateral OTC counterparties and central clearinghouses...inherently scoping in both OTC and cleared trades as well as all forms of collateral (variation margin, initial margin and traditional margin on legacy bilateral OTC trades). In addition, the proposal makes no clear distinction between proposed updates regarding exchanges of cash collateral vs exchanges of non-cash collateral, often using the terms collectively and interchangeably, whereas the guidance within the AP&P Manual makes clear distinctions regarding their respective accounting and reporting - as they have distinct implications for users of statutory financial statements. The guidance for cash collateral exchanges under SSAP No. 103R – Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (“SSAP 103R”) paragraphs 19 & 20 is distinct from that of non-
cash collateral exchanges, which is also further detailed in INT 01-31 – *Assets Pledged as Collateral* (“INT 01-31”). Anecdotally, though the SSAP No. 86 Appendix C guidance for the initial carrying value on futures paraphrased in the 2019-39 exposure commentary applies to exchange traded derivatives (which do not appear to be within the scope of this current exposure), it maintains conceptual symmetry with the distinct cash collateral guidance from SSAP No. 103R; classifying only cash postings of initial margin as a form of basis deposit necessitating distinct accounting and financial statement presentation. Additional clarification regarding both the perceived issue(s) and the objective(s) underlying the proposed updates is requested in order to ensure industry can assist in fully and appropriately addressing each underlying concern in light of the applicable regulatory objective(s).

The exchange of initial margin with central clearinghouses is clearly distinct in function from the exchange of variation margin. As referenced in the proposal, initial margin is a minimum amount of equity that must be provided to a clearinghouse to initiate a position. It effectively represents the deposit of chips required to play at the table (“table stakes”), and is required from both respective parties entering into the derivative transaction as protection for the clearinghouse against the potential that either respective party will not make good on its respective commitments (i.e., initial and continuing participation in the transaction and the associated exchanges of variation margin driven by the derivative price movements until expiry or novation) – leaving the clearinghouse exposed, as intermediary, to the remaining party. Once such a trade expires or is novated, assuming the respective party has made good on all its variation margin payments during the course of the trade being open, the asset(s) posted to the clearinghouse as initial margin is returned to that exiting party. In the instance that a party exiting the derivative transaction has not stayed current with its respective variation margin obligations, the clearinghouse will return the remaining value of the initial margin after settling up the unpaid variation margin obligations. As such, the contingencies associated with maintenance of exclusive control over the rights and benefits of asset ownership for an entity posting initial margin are primarily a function of the entity’s continuing involvement in the trade with the clearinghouse, which is distinct from the derivative price movement contingencies directly associated with variation margin.

Reporting entities often utilize non-cash collateral (e.g., US Treasuries) for posting as initial margin to clearinghouses, as the required initial margin value can be comparatively high (driven by risk adjusted trailing price volatility of the underlying derivative and overcollateralization conventions) but the reporting entity maintains the full rights & benefits of ownership over an already held yield generating asset – in many instances preferable to locking up a chunk of otherwise investible cash. The ability to maintain full control over the rights and benefits of ownership on this yield generating non-cash collateral posted (e.g., avoiding forced sales of the non-cash collateral to satisfy unfulfilled variation margin obligations) also incentivizes a reporting entity to remain current on variation margin obligations while the trade remains open. Existing statutory accounting guidance (e.g., the previously referenced SSAP No. 103R and INT 01-31) already provides for appropriate classification, measurement and presentation of collateral posted as initial margin. In the much more likely instance that non-cash collateral has been posted to a clearinghouse as initial margin, the pledging insurer continues to record the pledged collateral as an admitted asset until they have committed a contract default that has not
been cured. In the unlikely instance that the non-cash collateral has to be liquidated in order to
satisfy unmet variation margin payment obligations associated with a trade being exited, any
associated realized loss would be recognized and the reclassification of the remaining initial
margin value due back from the clearing house will be recorded – likely as either cash or a
receivable - in accordance with applicable statutory guidance. The Blanks instructions require
that any such non-cash or cash collateral posted as initial margin be marked as such on the
attendant investment schedule, identified at the specific asset level on Schedule DB-D Section 2
(complete with an identifier indicating that the posting represents initial margin) and summarized
within Note 5 (Restricted Assets). As such, the availability of the assets to fulfill policyholder
obligations, as well as identification at the specific asset level of the unique and specific
contingencies associated with initial margin posting are already presented appropriately for the
consideration of financial statement users. Altering the presentation of initial margin postings on
the summary Schedule DB-D Section 1 would not augment a financial statement user’s
understanding of the reporting entity’s solvency or financial condition, as the “net realizable
margin” associated with the open derivative contracts is already appropriately presented – initial
margin posted is not directly or typically subject to the derivate price movement contingencies
inherent in arriving at an appropriate “Exposure Net of Collateral” total on Schedule DB-D
Section 1.

Equally as important, incorporation of initial margin posted into the “Exposure Net of Collateral”
total on Schedule DB-D Section 1 would lead to inappropriate and misleading downstream
consequences for a reporting entity’s Risk Based Capital calculation. Any collateral (whether
non-cash or cash) posted as initial margin is already captured in the Life RBC formula on LR017
(Off Balance Sheet and Other Items), where all collateral postings are pulled directly from
Schedule DB-D Section 2 and assessed RBC charges associated with the specific contingency of
pledging of the assets to an external counterparty. Thus, netting initial margin postings into the
“Exposure Net of Collateral” total on Schedule DB-D Section 1 would make the total derivative
exposure (net of collateral) that flows through to LR012 in the Life RBC formula too high –
inappropriately double counting the RBC charges associated with the posting of initial margin to
a clearinghouse. In addition, the understatement of net realizable collateral (Fair Value of
Acceptable Collateral) on Schedule DB-D Section 1 would also, in many instances, mechanically
carry through to overstate the “Off Balance Sheet Exposure” reported on the same schedule –
which would result in even further overstatement of RBC charges as this “Off Balance Sheet
Exposure” flows through the Life RBC formula to be assessed charges on LR017. Doubling,
and possibly tripling the RBC charges associated with the posting of initial margin to a central
clearinghouse is not an appropriate depiction of true risk for such margin.

Given the ambiguities in the exposure language, the appropriate depiction of economic substance
and inherent risk associated with exchanging initial margin within the existing statutory
accounting, reporting and RBC frameworks, and the importance of maintaining insurers’ ability
to utilize cleared derivatives to effectively manage risk and prudently support yields, we
respectfully request that the Working Group withdraw the current proposal and direct NAIC
Staff to collaborate with industry to specify and appropriately address any remaining concerns.
We stand ready to work through any lingering misgivings the Working Group may have with
regard to financial statement presentation but request that such endeavors be empirically
grounded in specific observed instances of incomplete or inappropriate reporting.

**Ref #2019-40: Reporting of Installment Fees and Expenses**

The Working Group proposed revisions to SSAP No. 53 – *Property and Casualty Contracts* (SSAP No. 53) to clarify that the installment fee reporting guidance should be narrowly applied. Comments are also requested on whether guidance should be developed to allow expenses associated with installment fees to be reported as a contra revenue in “aggregate write-ins for miscellaneous income” and whether diversity should be permitted in reporting installment fee expenses. Additionally, the Casualty Actuarial (C) Task Force and Property and Casualty Risk Based (E) Working Group will be notified of this exposure.

With regard to the proposed change to emphasize that current guidance in SSAP No. 53 should be interpreted narrowly, interested parties recommend the following revision to the last sentence of the proposed wording in the footnote to SSAP No. 53 paragraph 6:

> Clarification reporting of installment fees in finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

Although interested parties did not survey companies, we believe the assertion by NAIC staff that expenses associated with installment fees are often immaterial is reasonable. We also believe that current reporting of the related installment fee expenses in other underwriting expenses is appropriate. For practical purposes, we do not see the benefit of isolating the expense related to processing the relatively small fee component of a premium billing for separate expense reporting purposes. We believe the reporting of expenses should be consistent and would not support the reporting of the related expenses as an “aggregate write-ins for miscellaneous income” or as a contra revenue to “finance and service charges not included in premiums.”

**Ref #2019-41: Eliminating Financial Modeling Process**

The Working Group moved this agenda item to the active listing and exposed revisions to *SSAP No. 43R—Loan-backed and Structured Securities*, to eliminate the multi-step financial modeling designation guidance in determining final NAIC designations for residential mortgage-backed securities (RMBS) / commercial mortgage-backed securities (CMBS) securities. Exposure was contingent upon the Valuation of Securities (E) Task Force’s concurrent exposure, which occurred on December 8, 2019. The Working Group noted that final action on this would not be taken until the Valuation of Securities (E) Task Force takes action on their related item.

Interested parties have no comment on this item at this time.
Ref #2019-42: Inclusion of Cash / Liquidity Pools - Cash Equivalents as defined in SSAP No. 2R

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments to specify that cash pooling structures that meet specified criteria qualify as cash equivalents.

Interested parties appreciate that a separate Form A (Ref #2019-42) was written related to Cash/Liquidity Pools (“pools”) to clarify the accounting associated with them. We agree with the addition of a paragraph, similar to paragraph 8, to SSAP No. 2R to provide guidance related to pools; however, given that the characteristics of pools differ by company, we propose some modifications to paragraph 8 in order to address those varied characteristics.

Interested parties’ comments related to the proposed paragraph 8 are as follows:

1) Regarding the proposal to look through the ownership structure to report the assets held as cash equivalents, we agree that look through is appropriate. Some pools, as approved by regulators, consist of assets that meet the Statutory definition of cash equivalents and thus the interest held in the pools are reported as cash equivalents on Schedule E2. However, other pools, also approved by regulators, include assets that meet the definition of short-term investments in SSAP No. 2 and thus the interest held in the pools are reported as short-term investments on Schedule DA. Some pools may include both short-term investments and cash equivalents.

Given the varied characteristic discussed above, we recommend paragraph 8 be modified to state that, if the requirements of paragraph 8 are met, the reporting entity may look through the ownership structure and report the assets as either cash equivalents or short-term assets based on the predominant characteristic of the underlying assets. This would allow companies the flexibility to report their investments in the pools in the Statutory statement schedule that is more reflective of the type of underlying investments in their pool and prevent the need for companies to reclassify/change their existing reporting to Schedule E2 from DA if they currently report the pools in DA due to the underlying assets.

2) Regarding paragraph 8d (i.e., the requirement to produce annual U.S. GAAP audited report of the pools including schedules showing each affiliate’s prorata share of the investments), insurance companies already receive an independent audit under Statutory Accounting Principles (“SAP”), which would include the insurance company’s investment in a pool. Requiring cash pools to be separately audited under U.S. GAAP would come at a cost, in time and resources, to insurers with pools. In addition, some insurers have pools which are not in the form of legal entities.

An alternative to the U.S. GAAP audit requirement of paragraph 8d. is to require a footnote disclosure at the reporting date for each insurer that participates in a pool, which identifies that the insurer is invested in a cash pool, provides the reporting entity’s share
of the pool, and the insurers dollar share of cash equivalents and short-term investments in the pool. This disclosure would be subject to audit on an SAP basis of accounting. IPs believe the audit of the disclosure along with the audit of the insurance company would be adequate to meet the objectives of ensuring that the pool allocation process is accurate. Other alternatives include targeted financial examination procedures for pools, which could include procedures to confirm the balance of the pool and verify the individual legal entities’ balances for participating in the pool.

3) We note that the addition of the proposed pool language in SSAP No. 2 does not specifically address the reporting and accounting for the interests held in the pool. We recommend, if the pool is managed on a fair value basis (i.e., interest in the pool are bought and sold at fair value), that the book/adjusted carrying value for the interest held in the pool would be reported at fair value with changes in fair value reported in unrealized gains and losses. If the pool is not managed on a fair value basis, the interest held in the pool would be reported at amortized cost. It is important to note that pools managed on a fair value basis may use amortized cost as the best estimate of fair value, depending on the characteristics of the underlying assets.

Finally, in the issue paper, NAIC staff questioned whether changes to SSAP No. 48, Joint Ventures, Partnerships and Limited Liability Companies are needed, since many pools are held in a Limited Liability Company (“LLC”). Interested parties do not believe such changes are needed to SSAP No. 48; however, it would be helpful to users of the SSAPs to add a footnote to paragraph 8 of proposed SSAP No. 2R stating that pools may be held in LLCs, for example, and if so, SSAP No. 2 is to be applied and not SSAP No. 48.

Ref #2019-43: ASU 2017-11 - Financial Instruments with Down Round Features

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 86—Derivatives to reject ASU 2017-11, Earning Per Share, Distinguishing Liabilities from Equity, Derivatives & Hedging and incorporate guidance into SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets and SSAP No. 72—Surplus and Quasi-Reorganizations for when certain freestanding instruments shall be recognized as liabilities and not equity.

Interested parties have no comment on this item.

Ref #2019-45: ASU 2013-11, Presentation of an Unrecognized Tax Benefit

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 101—Income Taxes to reject ASU 2013-11, Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists for statutory accounting.

Interested parties support adoption of this item but note that the following statement should be removed from the document as it is incorrect (see IFRC 23, Uncertainty over Income Tax Treatments):
Convergence with International Financial Reporting Standards (IFRS):
IFRS does not include specific guidance on the presentation of unrecognized tax benefits.

Ref #2019-46: ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities

The Working Group moved this agenda item to the active listing and exposed revisions to Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities as not applicable to statutory accounting.

Interested parties have no comment on this item.

Ref #2019-47: Grade in of Variable Annuity Reserves

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 51R—Life Contracts and SSAP No. 3—Accounting Changes and Corrections of Errors. The revisions add reference, disclosures and accounting for Section 21 of the Valuation Manual, Requirements for Principle-Based Reserves for Variable Annuities, and grade-in requirements for reporting changes in the valuation basis for years beginning January 1, 2020.

This exposure consists of several parts, some of which we agree with and others we find both confusing and unnecessary. We agree that documentation of the choices made among the options for phase-in in VM-21 and the impact of those choices is important. The exposed edits focus on the adoption of the new reserve requirements for variable annuities (revised VM-21 and AG-43). Information on those choices and impacts will be provided to regulators through the PBR Actuarial Memorandum required by VM-31. This includes highlighting the elements of any Phase-in in the executive summary of the PBR Actuarial Memorandum. Given the current requirements of SSAP3 and SSAP51, documentation in the notes to the Annual Statement is also appropriate.

In Recommendation #2, the proposal would require the amounts from the Phase-in to be designated as “special surplus”. We disagree with this recommendation for the following reasons:

- This is a new requirement whose need has not been established. Disclosure of the amounts will provide information necessary for users of the financial statements to understand the basis of the reported financials.
- SSAP72 defines Special Surplus as amounts designated for specific contingencies. Recommendation #2 would be a change to the definition and purpose of special surplus that is inappropriate and would create an undesirable precedent.

Finally, the proposed language is unnecessary, and possibly confusing. VM-21 defines the minimum reserve requirement. Within that requirement, the company has the option to compute the reserves using the Phase-in provision of Section 2.B. Whichever option is elected, VM-21 defines the reserve. SSAP51 defines the amount of the “Change in Basis” as the difference
between the amount under the prior VM-21 and the amount required by the current VM-21 as of 1/1/2020. If the Phase-in has been elected, that difference will generally be zero. The change in basis amount as defined in SSAP51 paragraph 39 is not being graded in – it is what it is following the VM-21 reserve requirements as stated. As such, SSAP51 does not need to make provision for a grade in. We propose the attached language as being clearer in defining the amounts to be disclosed, to use language consistent with VM-21, and to recognize the role of VM-21 to define the reserve requirement.

Ref #2019-48: Disclosure Update for Reciprocal Jurisdiction Reinsurers

The Working Group moved this agenda item to the active listing and exposed revisions to SSAP No. 62R—Property and Casualty Reinsurance, to incorporate disclosure updates for reinsurers from Reciprocal Jurisdictions.

Interested parties have no comment on this item.

Ref #2019-49: Retroactive Reinsurance Exception

The Working Group moved this agenda item to the active listing with a request for comments on the preferred approaches to reporting and the advantages and disadvantages to each approach being used, including impacts on the Schedule P (and related loss analysis) and risk-based capital. Industry and state insurance regulator volunteers are requested to assist with developing guidance to clarify both the accounting and reporting for retroactive contracts which are accounted for prospectively. The Working Group directed NAIC staff to notify the Casualty Actuarial and Statistical (C) Task Force of the request for comments.

With regard to retroactive portfolio transfer deals within the same group that qualify for prospective treatment, interested parties identified the following issues related to reporting transactions in Schedule P.

Main Issues

- Should there be a requirement to have offsetting entries for the ceding and assuming entity within the group, such that the group Schedule P is not impacted (and industry Schedule P is not impacted)? (If so, then the ceding entity can’t record ceded amounts for prior AYs while the assuming company records assumed amounts all in the current CY/AY.)

- Should retroactive changes in previous premium amounts be allowed? (If no, and there is a desire to have both entities record the ceded/assumed in the affected older AYs, then the reinsurance premium would need to be treated as a paid loss – positive paid for the ceding entity and negative paid for the assuming entity.)

- Should the reporting prevent “cliffs” in the historic development reported in Schedule P. (If the cede transaction is reported as a premium and spreading to prior CYs, effectively changing prior values retroactively, then the prior incurred loss amounts in
Schedule P, Part 2 would need to be adjusted to avoid a “cliff”.) Note that cliffs in Schedule P, Part 2 can have a material RBC impact with regard to the company experience adjustment.

Two Alternative Approaches

Interested parties identified two alternative approaches to recording intercompany, retroactive reinsurance:

- Record the reinsurance premium as a paid loss (positive paid for the cedant, negative for the assuming company), spreading the “premium” to the same AYs as the ceded losses. This avoids cliffs and avoids restating past CY Earned Premium, although it produces unusual results for the assuming company’s Schedule P.

- Record the reinsurance premium as premium, restating prior CY Earned Premium. Spread losses to the impacted AYs. This would create cliffs in Schedule P unless prior AYs are restated for the impact by AY of the reinsurance contract at inception.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell

Rose Albrizio
Disclosures

18. The notes to the financial statements of a reporting entity that issues surplus notes shall disclose the following as long as the surplus notes are outstanding:

a. Date issued;
b. Description and fair value of the assets received;
c. Holder of the note or if public, the names of the underwriter and trustee, with identification on whether the holder of the surplus note is a related party per SSAP No. 25;
d. Original issue amount of note;
e. Carrying value of note;
f. The rate at which interest accrues;
g. Maturity dates or repayment schedules, if stated;
h. Unapproved interest and/or principal;
i. Life-to-date and current year approved interest and/or principal recognized;
j. Disclosure of whether the surplus note was issued as "paid part of a transaction with identification of any of the amount of approved following attributes:
   i. Do surplus note / associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus notes and amounts receivable under other agreements contractually linked (For example, the asset provides interest and/or principal remitted payments only when the surplus note provides interest payments)?
   ii. Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity of the agreement. (This may be referred to as administrative offsetting)?
   iii. Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note (actual transfer of cash / assets) and the amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash / assets)? If so, was the asset issuer a related party per SSAP 25?
   iv. Information regarding a third party liquidity source including name, identification if a related party, cost of the liquidity guarantee, and maximum amount available should a triggering event occur.

1 Interest and principal reported pursuant to 18.i include amounts offset by amounts receivable under other agreements, unless the reporting entity has a legal right of offset. Such offsetting arrangements shall be disclosed pursuant to paragraph 18.j.i through 18.j.iii
Exhibit A: DRAFT – Markup of Disclosure and Table

k. ______ Principal amount and fair value of assets received upon Surplus Note issuance, if applicable;

l. ______ Subordination terms;

m. ______ Liquidation preference to the reporting entity’s common and preferred shareholders;

n. ______ The repayment conditions and restrictions;

o. ______ Information about any guarantees, support agreements, or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements.

19. ______ If a reporting entity has ceded business to a surplus note issuer that is not remitting actual cash or assets to a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria in 18.1 above, the ceding entity shall provide a description of the transaction, including whether the criteria in 18.1 above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force. The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

49-20. If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note for approved interest or principal (as reported under paragraph 18.h), because the reporting entity is offsetting the amount owed under the surplus note with an amount receivable from a reported asset, the following information shall be disclosed regarding the offsetting asset/assets received:

a. Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation;

b. ______ Book/ adjusted carrying value of asset and interest income recognized in as of the current year,

c. ______ Amount of principle return and interest income from the asset not received by the reporting entity as the amounts were offset with approved amounts owed by the reporting entity’s issued surplus note’s date.

d. ______ A description of terms under which liquidity would be provided should a triggering event occur.

20-21. In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

NAIC Proceedings – Summer 2020

Attachment One (E) Task Force 8320

10-709
SSAP No. 51R:

Change In Valuation Basis

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.

b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed, or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement or the Valuation Manual in section VM-21 Requirements for Principle Based Reserves for Variable Annuities (VM-21) prescribes a new method and a specific transition that allows for grading. If the grading permitted by this statement or Valuation Manual section VM-21 represents an increase in the reserve liabilities, the unrecognized change in valuation basis reserve increase shall initially be reflected as an allocation from unassigned funds to special surplus until fully recognized in reserving and unassigned funds. The reclassification from unassigned funds to special surplus does not reduce total surplus, but
highlights the ungraded in amount for transparency as it represents an unrecognized adjustment (decrease) to total surplus. The allocation to special surplus is reversed to unassigned funds as the grading of the increase in reserving is recognized as a decrease to total surplus. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements.

Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements.

Effective January 1, 2020, if the phase-in provision of the Valuation Manual section VM-21 (on variable annuities) is elected or this statement prescribes or permits a grading-in period or provides the option of multiple grading periods, reporting entities shall also include in the change in accounting disclosures required by SSAP No. 3, disclosure of the following:

a. the grade-phase-in period being applied, and the remaining time period of the grade phase-in

b. any adjustments to the grade-phase-in period.

c. The phase-in amount as defined in VM-21 of change in valuation basis grade-in, which has been recognized in unassigned funds and

d. the remaining amount to be graded phase-in amount (reflected in special surplus if the ungraded in amount represents an increase in reserving).

40. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. While the Valuation Manual is effective prospectively for policies written on or after the operative date, subsequent changes may be applied retroactively to all business issued since that operative date however, as the CARVM methodology was already principles based, some changes to the CARVM methodology in section VM-21 (on variable annuities) and to the related AG 42, which may result in retroactive application to the reserving for existing contracts. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.
SSAP No. 3—Accounting Changes and Corrections of Errors

Disclosures

Disclosure of material changes in accounting and correction of errors shall include:

a. A brief description of the change, encompassing a general disclosure of the reason and justification for change or correction;

b. The impact of the change or correction on net income, surplus, total assets, and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income and operations); and

c. The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actuarial assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounting for items such as uncollectible accounts; however, disclosure is recommended if the effect of a change in the estimate is material;

d. Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected grade phase-in or other optional application features defined in the Valuation Manual, shall also include in the change in accounting disclosures information regarding the application of any grade phase-in as provided for in SSAP No. 51R, and

e. When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.
February 18, 2020

Mr. Dale Bruggeman, Chairman
Statutory Accounting Principles Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

RE: Items Exposed for Comment During the NAIC Winter National Meeting with Comments due January 31 Regarding Goodwill

Dear Mr. Bruggeman:

Interested parties appreciate the opportunity to comment on the exposure drafts regarding the recognition of goodwill for statutory accounting that was released for comment by the Statutory Accounting Principles (E) Working Group (the “Working Group”), during the NAIC Fall National Meeting in Austin.

Interested parties note that in October 2018, the FASB decided to add to its technical agenda a broad project to revisit the subsequent accounting for goodwill. In 2019, the FASB issued an Invitation to Comment, Identifiable Intangible Assets and Subsequent Accounting for Goodwill, and held public roundtable meetings to discuss the topics included in the Invitation to Comment. The FASB is still in the initial deliberations phase of this project. Given the broad scope of the FASB project and the potential for changes to the current GAAP goodwill accounting model, interested parties recommend that any changes to statutory accounting that impact the accounting for goodwill be limited in their nature in recognition that the Working Group will need to consider the applicability of the changes to GAAP accounting for goodwill once the FASB completes the project.

We offer the following comments to the exposure drafts released for comment by the Working Group:

Ref #2019-12: ASU 2014-17, Business Combinations – Pushdown Accounting, a Consensus of the FASB Emerging Issues Task Force

The Working Group adopted, as final, a clarification edit to SSAP No. 68—Business Combinations and Goodwill to clarify that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation.
Interested parties recommend that paragraph 5 of SSAP No. 68 be revised further as marked below to clarify the appropriate valuation that should be used for an acquired entity:

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity's share of the GAAP net book value of the acquired entity, adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. The GAAP net book value of the acquired entity used in this determination shall reflect the acquisition-date fair values of identifiable assets acquired and liabilities assumed, and goodwill, as recognized in the post pushdown GAAP financial statements of the acquired entity, if applicable. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer's share of the statutory book value of the acquired entity.

**Pushdown Accounting**

Interested parties note that the GAAP guidance in ASU 2014-17, which was adopted by the SEC in Staff Accounting Bulletin (SAB) 115, provides clear guidance that an acquired entity has the option to apply pushdown accounting in its separate financial statements upon the occurrence of an event in which an acquirer obtains control of the acquired entity. Under applicable GAAP guidance, control generally results when one entity obtains, either directly or indirectly, more than 50 percent of the outstanding voting shares of another entity. This differs from the definition of control under statutory guidance which uses a threshold of 10 percent or more of voting control. As such, under GAAP, there would not be a scenario where an entity would be controlled by multiple owners with 10% or more ownership of outstanding shares.

Whether a company chooses to apply pushdown accounting depends on the facts and circumstances of a particular transaction. In certain situations, pushdown is preferable to eliminate the basis difference between an acquirer and the acquired entity. In other situations, a company may prefer pushdown accounting to better reflect the actual values of the acquired assets and assumed liabilities based on the purchase price of the entity.

When the SEC required pushdown for SEC registrants, there was limited guidance for non-registrants under GAAP which resulted in some non-registrants also applying the SEC pushdown guidance. We believe retaining the optionality for statutory reporting allows for consistency and comparability across both SEC registrants and non-registrants and provides operational efficiency.

The option of not allowing subsequent elections for pushdown accounting is not practicable for SEC registrants that previously elected to use pushdown accounting. In order for such companies to
discontinue use of pushdown accounting, a preferable letter would be required for a change in accounting policy to discontinue the use of pushdown accounting. Given that an election to discontinue use of pushdown accounting is not likely preferable, the insurer would be in the position of having to continue using pushdown accounting in order to receive a clean audit opinion on the GAAP financial statements of the SCA. Additionally, while ASC 805, *Business Combinations*, allows the election to be made for each change in control event, acquirers that report consolidated results may as a practical matter choose pushdown accounting at the subsidiary level to avoid separately tracking assets, and liabilities at two different values in two different ledgers.

As noted in the examples below, and in accordance with the guidance adopted during the December 7, 2019 Working Group meeting, interested parties understand the guidance clarified that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation. Interested parties have summarized the interpretation of this clarification for an insurance entity’s acquisition of an 8.b.i (example 1), 8.b.ii (example 2a and 2b), 8.b.iii (example 3a and 3b) or 8.b.vi (example 2a and 2b) entity as follows:

<table>

</tbody>
</table>

* See further discussion below related to amortization

After evaluating the accounting for goodwill from the various entities described in paragraph 8.b, we concluded that the NAIC should continue to allow insurers to elect pushdown accounting for acquisitions of non-insurance entities (Option 2) for the following reasons:

1. Statutory goodwill, created when the insurer is the acquirer, is subject to an existing 10% admittance limitation as clarified in the changes adopted by the Working Group during the Fall National Meeting and demonstrated above; therefore, the resulting goodwill from pushdown accounting is subject to the statutory thresholds.
2. Pushdown accounting is consistent with GAAP, prior to ASU 2014-17, for SEC registrants and non-registrants that used pushdown accounting. As noted above, it is not practical to discontinue use of pushdown accounting as an insurer would need to continue the use of pushdown accounting in order to obtain a clean audit opinion on the GAAP financial statements of the SCA.

3. It is important to maintain consistency with current GAAP. Under ASU 2014-17, pushdown accounting may be elected in a later reporting period, after the initial acquisition date. We understand that there may be concerns with electing pushdown at a later reporting period after goodwill was originally determined and reported at initial acquisition date. However, rather than disallowing a later election to apply pushdown accounting, which creates a variance to GAAP, we suggest this could be addressed through changes to SSAP No. 97 to ensure that goodwill is not subsequently increased for statutory reporting, in the event pushdown accounting is elected after the initial acquisition date.

4. The recommendations above would allow the continued use of audited GAAP equity as the statutory carrying value for all non-insurance entities for insurers that previously elected pushdown accounting (both SEC registrants and non-registrants). Additionally, the ability to elect pushdown accounting for future acquisitions retains GAAP equity as the statutory valuation basis for SCAs and avoids restrictions that can impact insurers’ ability to obtain an unqualified opinion on the stand-alone financial statements of SCAs.

If a restriction were placed on the use of pushdown accounting at a future date, those entities that have previously elected pushdown will be forced to separately track assets, and liabilities at two different values in two different ledgers as well as address the issue of making a change in accounting policy that may not have preferability.

As a separate point, we suggest changing the heading for Option 2 from “Permission to use pushdown for all non-insurance entities” to “Use of pushdown for all non-insurance entities”, as the term “permission” implies that use of pushdown accounting is a permitted practice under the statutory accounting framework.

**Amortization**

Interested parties reiterate the concern that the revisions from the adopted language (new SSAP No. 68 paragraph 10) would inadvertently require amortization of pushdown goodwill. While staff has noted that amortization may be the proper approach, interested parties believes as it relates to paragraph 8.b.iii entities acquired by an insurance entity where pushdown is applied, there has been diversity in practice.

Interested parties concur with the NAIC’s staff’s position described in the December 2019 Public Hearing Agenda materials:

“(As detailed in the earlier discussion, the minor edit being discussed only focuses on nonadmittance for insurer entity acquired SCAs that have been pushdown. The edit would not mandate amortization for those pushdown situations. The discussion on whether amortization should be required for those situations is proposed to occur after the next exposure.)”
Ref #2019-14: Attribution of Goodwill

The Working Group re-exposed this agenda item to clarify that the “assignment” of goodwill is a disclosure element. The Working Group directed NAIC staff to prepare revisions to the Sub 1 Acquisition Overview template to capture this information for new SCA acquisitions.

Recommended Action:

NAIC staff identifies that the comments received on the proposed disclosure enhancement under this agenda item are limited, but generally request additional time before adoption. NAIC staff believes the disclosure information requested under this agenda item will be necessary regardless of the decision involving pushdown accounting. As a reminder, the proposed disclosure only details the amount of goodwill recognized from the acquisition of a downstream holding company and the assignment of the goodwill to the entities owned by the holding company. This information is necessary in determining the amount of goodwill that would need to be nonadmitted, or derecognized, if an underlying company in the downstream holding company was nonadmitted or sold.

Interested parties note that the December 2019 Public Hearing Agenda materials state:

“It is important to highlight that the clarification edit proposed for adoption consideration is specific to insurance entity acquisitions of SCAs. As such, if an acquisition occurred downstream from the insurance company (by a non-insurance holding company), and the holding company applied pushdown accounting, so that the goodwill was reported at the holding company’s acquired SCA, the proposed edit would not require that push down goodwill to be brought up to the insurance entity’s level and included in the 10% limit.”

Requiring attribution would be onerous and misleading to the users of the financial statements, particularly if the disclosure included detailing GAAP goodwill that is not subject to the 10% limit. Interested parties do not believe it is necessary to “attribute” goodwill to downstream SCAs of downstream holding companies. We believe that any concerns about the carrying value of the downstream holding company being overstated because it did not push down GAAP goodwill to a downstream SCA that was subsequently sold is mitigated by the fact that GAAP already requires the attribution and derecognition of goodwill associated with the business or SCA that is sold. To layer in a statutory attribution of goodwill is not necessary, overly complex, and may distort the accounting impact of a sale of a downstream SCA.

Therefore, we recommend that the disclosure of GAAP goodwill attributed to downstream SCAs of downstream holding companies focus on actual GAAP goodwill that was pushed down to the

ASC 350-20-40, Intangibles – Goodwill and Other - Goodwill – Derecognition, paragraphs 1 and 2:

40-1: When a reporting unit is to be disposed of in its entirety, goodwill of that reporting unit shall be included in the carrying amount of the reporting unit in determining the gain or loss on disposal.

40-2: When a portion of a reporting unit that constitutes a business (see Section 805-10-55) or nonprofit activity is to be disposed of, goodwill associated with that business or nonprofit activity shall be included in the carrying amount of the business or nonprofit activity in determining the gain or loss on disposal.
downstream SCAs and any statutory goodwill that occurred when the insurer is the acquirer, subject to the existing 10% admittance limitation as illustrated and discussed in the examples above.

* * *

Thank you for considering interested parties’ comments. If you have any questions in the interim, please do not hesitate to contact us.

Sincerely,

D. Keith Bell                          Rose Albrizio

Dale Bruggeman, Chair
Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Re: Ref #2019-20, Rolling Short-Term Investments

Dear Mr. Bruggeman:

The American Property Casualty Insurance Association (APCIA) appreciates the opportunity to comment on the Statutory Accounting Principles (E) Working Group’s exposed revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities relating to rolling short-term investments. APCIA is the primary national trade association for home, auto, and business insurers. APCIA promotes and protects the viability of private competition for the benefit of consumers and insurers, with a legacy dating back 150 years. APCIA members represent all sizes, structures, and regions—protecting families, communities, and businesses in the U.S. and across the globe.

APCIA writes to highlight our support for the recommendations on this proposal provided in the comment letter of the “Interested Parties” coalition. APCIA and our members regularly participate in the Interested Parties’ discussions and drafting process.

SSAP No. 2R generally requires debt obligations with a maturity date of less than one year to be reported on Schedule DA. However, the proposed revisions to SSAP No. 2R would specify that any investment reported as a short-term obligation which was renewed or extended past its original maturity date would need to be reported as a long-term obligation, and a reporting entity would not be permitted to acquire the same or a substantially similar security within a 1-year time frame unless such security is reported as a long-term obligation. APCIA believes appropriate safeguards already exist, or could be put in place, to address the concerns underlying this proposal. We support the recommendations of the Interested Parties in the context of both unaffiliated and affiliated short-term loans.

Unaffiliated short-term loans provide important flexibility and efficiencies for insurers. So long as the lender has a reasonable expectation that the investment can terminate and be repaid on the maturity date, and both the borrower and lender have the ability to reevaluate and renew the loan at maturity, we believe unaffiliated short-term loans are properly reported on Schedule DA as a short-term risk asset. As such, APCIA supports the objective criteria proposed by the Interested Parties for determining when an unaffiliated loan qualifies as short term:

1) The loan includes a maturity date less than one year from closing at which the borrower has an unconditional repayment obligation and on which the lender has a reasonable expectation that the investment can be terminated and repaid if so desired by the insurer; and
2) Any subsequent renewal is only completed in the sole discretion of both the borrower and the lender.

In the context of short-term loans between affiliates, the Model Holding Company Act already requires regulatory filing and approval of loans exceeding a materiality threshold. Further, as the Interested Parties’ letter also points out, loans between affiliates are an important mechanism for meeting short-term liquidity needs for an entity within a broader group. Given the importance of insurers being able to utilize loans from affiliates to meet short-term needs and the regulatory oversight of these transactions that already exists, APCIA agrees with Interested Parties that short-term loans between affiliates should continue to be classified as short term.
Thank you for considering our comments. If you have any questions or would like to discuss this further, please contact Steve Broadie at steve.broadie@apci.org or 847.553.3606.

Sincerely,

Stephen W. Broadie
Vice President, Financial & Counsel
Dale Bruggeman  
Chair of Statutory Accounting Principles (E) Working Group  

We have reviewed the proposed changes to SSAP No. 71 – Policy Acquisition Costs and Commissions as outlined in Ref. #2019-24 as revised on December 7, 2019.

The most effective way to appreciate the unintended consequences of the proposal is to start with a basic understanding of a typical distribution structure. Reporting entities execute distribution agreements, including compensation structure, with distribution partners (IMO, BGA, TPM, MGA, BD, for example). These distribution partners recruit, contract, train, supervise, and compensate smaller organizations (agencies, selling groups, brokerages, etc.) and individual producers (agents, brokers, etc.).

SSAP No. 71 proscribes statutory accounting treatment for reporting entity compensation agreements entered for the sale, distribution, and servicing of policies. The revisions proposed in Exposure Draft 2019-24 (as revised December 7, 2019) focus on two areas: (1) levelized commissions or “trail” payments paid directly to distribution partners or individual producers by a reporting entity and (2) levelized commissions or other installment payments paid to “third parties” by the reporting entity solely in exchange for the third party making non-levelized payments to the distribution partners or individual producers in place of the reporting entity (sometimes called “funding agreements”).

The proposed Exposure Draft relating to the first are in Paragraph 2 and call for “…commission shall be accrued based on experience to date for the policy period that the commission relates.” This specifically relates to the required timing or obligating event of a reporting entity’s liability for the cost of a commission payment specifically linked to persistency or policy renewal upon the anniversary of a policy issue date or some other future date or event.

The proposed Exposure Draft revisions relating to the second are (a) in paragraph 4, “...regardless of how the payment to the third party is characterized.”, (b) in paragraph 5, “...paid by a third party to the agents...by the reporting entity.”, and (c) in a footnote to paragraph 5, “The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.”

The proposed revisions have different implications for different constituencies. We have endeavored to capture the essence of the concern from each party below. The proposed revisions have substantive implications for each of the noted constituencies, contrary to the non-substantive assertion in the revised exposure draft 2019-24. As a direct result of the inequity of the proposed changes upon various constituencies and the potential for substantial
financial and economic harm incurred by the adoption of these changes to a variety of constituencies, we strongly recommend and request that the proposal not go forward.

Reporting Entity/Carrier perspective:

1. Levelized commission programs are economic equivalents to “normal (non-level) commissions.” Levelized commission programs are preferable as they create a virtuous cycle linking the interests of consumers, agents, distribution partners and carriers to maintain ongoing servicing relationships, improving consumer support and policy persistency. Distribution relationships are multi-faceted, including agent recruitment and oversight, sales, sales support, underwriting support, premium collection, policy delivery and agent payment. Characterizing distribution partners as a ‘third party’ under the proposed footnote to paragraph 5 of SSAP No. 71 discounts the complexity of these relationships and the value of these vital roles dramatically altering carrier dynamics with distribution partners.

2. Reporting entities or carriers will be unduly penalized for economic transactions negotiated under existing accounting principles as a direct result of this proposal. The value of those transactions is retroactively altered by the introduction of a modified accounting principle which neither party initially anticipated, negotiated or priced.

3. Higher required capital and lower returns resulting from an arbitrary modification to an existing accounting practice will drive product design reviews and likely product redesigns modifying or eliminating levelized commission options or reducing value to the consumer through higher premiums and/or lower benefits.

4. The proposal to require reserves for future persistency based levelized commissions creates a disconnect with GAAP accounting where there is no reserve requirement. Moreover, the proposal creates new uncertainty around which other long standing accounting treatment will be changed next

Distributor/Agent perspective

1. The trail compensation approach incentivizes all parties to maintain a long-term relationship based upon ongoing agent support of consumer needs. Reducing or removing recurring compensation in the form of persistency based levelized commissions, shifts distributor economic motivation to new product sales, further degrading product level returns for the carrier. Reducing benefit levels or increasing premiums for the same benefit levels will lower the value proposition for effected products very likely reducing sales and consumer protection delivered by the products.

Consumer perspective:

1. The fallout from the changes will diminish value of insurance products through higher premiums and/or lower benefits enacted by carriers seeking to make up lost economic value and from lower service levels provided by brokers or agents as their incentives shift from ongoing consumer service relating to in-force policies to selling new policies (whether to the individual policyholder or other prospective clients).

Re: SSAP No. 71—Policy Acquisition Costs and Commissions

Dear Mr. Bruggeman:

Thank you for the opportunity to provide comments on Proposal 2019-24 from the Statutory Accounting Principles Working Group regarding Policy Acquisition Costs and Commissions. The Working Group voted to re-expose revisions to SSAP 71 – Policy Acquisition Costs and Commissions - for comment at the NAIC Fall Meeting on December 7, 2019, continued to categorize the revisions as non-substantive, and further clarified levelized commission guidance and direction regarding certain commission obligations. I offer comments on behalf of our client, DRB Insurance Solutions, LLC, a licensed insurance producer (“DRB”).

SSAP No. 71 provides that levelized commissions occur in situations in which a third party, such as a funding agent, pays agents non-levelized commissions and the reporting entity pays the third party by levelized payments. The Working Group notes that it is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third-party would ultimately be repaid to the third-party from the reporting entity. SSAP No. 71 identifies such arrangements as “funding agreements” between the reporting entity and the third-party. SSAP No. 71 further provides that the use of a commission arrangement where commission payments are not linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third-party related to levelized commissions.

While revisions were made to several paragraphs and footnote 1 in the initial proposal at the Working Group’s meeting in December, the current exposure language remains overly broad to address the issue identified and intended to be clarified by the Working Group. Regulators have identified levelized commissions as funding arrangements to bypass recognition of acquisition costs by insurers and believe recognizing the full acquisition expense at the time of policy issuance is appropriate accounting treatment pursuant to SSAP No. 5R and the Statement of Concepts.
focusing on Recognition. Notably, the Working Group intended to restrict intercompany and affiliated transfers of trailing commission structures as pure accounting transactions solely for the purpose of deferring expense recognition of commission obligations, which is a laudable goal.

However, the language exposed to classify trailing commission transactions as funding arrangements is so broad, it encompasses practically every broker contract with an insurer that allows for any alternative payment arrangement between the broker and the issuing agent. DRB Insurance Solutions is an independent third-party master producer which uses various contracts between DRBIS and its sub-agents for commission payment, including trailing, heaped, partially heaped and trailing commissions, etc. The agreements between DRBIS and reporting entities are arms-length transactions, include the transfer of lapse risk, mortality risk and the commission expense obligation. The proposal requiring all insurers to accrue the full commission expense under these circumstances is illogical when the insurer no longer has the legal obligation to pay the expense and therefore, no longer has legally incurred the expense.

While regulators have opined that affiliated transactions shrouded as commission arrangements appear to circumvent accrual of commission expense at policy issuance, the goal to affect those transactions may continue to be addressed while narrowing the language to clarify that non-affiliated third-party contracts are not included. Accordingly, DRBIS offers the following amendment to the exposure draft to narrow the applicability to those affiliated transactions. Suggested language for Paragraph 4 and the footnote to Paragraph 5 is shown as shaded text as follows:

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent’s license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent to the agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party under the control of the reporting entity, its parent, and/or any subsidiary or affiliate of the reporting entity or its parent related to levelized commissionsFN.

New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents does not imply that levelized commissions that are linked to traditional
The proposed language requires recognition of commission expense in situations where affiliated companies trade lapse and mortality risk amongst and between affiliated reporting entities using a commonly owned master producer while excepting unaffiliated third-party transactions from similar treatment. In these unaffiliated contractual arrangements, where risk and liability is transferred, the reporting entity may not even be aware of the payment schedule between the master producer and its sub-agents and certainly should not be required to accrue the full amount of the commission expense at policy issuance when the insurer is no longer legally required to pay that expense.

**Non-Substantive Change**

Finally, DRBIS would like to restate its opposition to consideration of the exposure draft as a non-substantive change. As previously stated, levelized commission programs began over thirty years ago, before the 1998 publication of Statutory Issue Paper No. 71 and the January 1, 2001 codification of Statutory Accounting Principles. The primary objectives of a levelized commission structure include aligning the interests of the customer, the agent, and the company and improved persistency from providing ongoing customer service. There is a duty to act in the best interests of the policyholder, as well as a compensation incentive, to make sure policies are well serviced so they stay in-force.

The proposed revisions to SSAP No. 71 are designated as non-substantive and deemed to be a clarification of intent of the codified statutory guidance. However, levelized commission programs were implemented more than a decade before the codification in 2001. Therefore, this is a material change to historical accounting practices and not a clarification of original intent. Even after codification, levelized commission programs continued for years and were not identified as applying statutory accounting incorrectly.

In conclusion, the current exposure draft of SSAP 71 is clearly not “non-substantive” and would have substantial unintended consequences without the amendments proposed above. Additionally, the expansive effect of this policy decision should be subject to open deliberation and public comment as the Working Group considers adoption. Thank you for the opportunity to comment.

Very truly yours

GREENBERG TRAURIG, P.A.

RE: REPORTING OF INSTALLMENT FEES AND EXPENSES – REQUESTS FOR COMMENTS

Dear Mr. Dale Bruggeman,

At the December 2019 meeting, the NAIC exposed and requested comments on the “Reporting of Installment Fees and Expenses” in the financial statements. This guidance allows for installment fees that meet specified criteria to be excluded from premium income, if it is an avoidance amount by the policyholder and the policy would not be cancelled for nonpayment of the installment fees. The guidance is consistent with the footnote in SSAP No.53 (“Property Casualty Contracts – Premiums”) and in line with our current industrywide reporting of this item in the financial statements.

With respect to the reporting of the corresponding “Installment fees related Expenses”, we believe that these associated Expenses should be reported as part of the Other Underwriting Expenses Incurred (“OUE”) on Line 4 of the Statement of Income and as an ancillary to the normal underwriting activities primarily due to immateriality. Such a presentation will allow insurers to report and reconcile the gross Installment fees amount to the corresponding balance reflected in Schedule T, Column 8 as well as in the Write-ins amount on the Statutory Page 14, along with premium tax payments. Currently, there is inconsistency in reporting in the industry, with some companies reflecting these associated Expenses as part of the Other Underwriting Expenses Incurred on Line 4 of the Statement of Income while others reflect such Expenses as part of the Aggregate write-ins for miscellaneous income on Line 14 of the Statement of Income.

However, as we believe others have also pointed out, this guidance specifically addresses fees charged on Installment premiums, but there are other equally nonrefundable “Other fees” charged by many companies, as part of the billing and collection process, but that are not specifically mentioned in this guidance. That is to say, there are “Other Fees” charged by insurers as part of the collection process, all of which, like Installment fees, are not only non-refundable, but are also avoidance amount by the policyholder and would not be cancelled for non-payment of the installment fees, similar to Installment fees.

These nonrefundable “Other fees”, include, but are not limited to:

1. Late fees - fees and expenses charged on flexible/installment plans that are received after a specified cut-off period e.g. 30 days
2. Non-sufficient funds ("NSF") fees - fees and expenses collected on returned payments due to non-sufficient funds

3. Reinstatement fees - fees and expenses received on policies that expired and are subsequently reinstated, among others etc.

Currently, there is divergence in reporting in this area of this relatively immaterial amounts for nonstandard and standard writers and therefore need for clarification for consistency in reporting going in.

The reporting issue here then is, where and how to report all of these “Other fees”, excluding Installment fees. Should all these “Other fees” be reported as part of:

   a) Other underwriting expense incurred on Line 4 of the Statement of Income
   b) Finance and service charges on Line 13 of the Statement of income, akin to installment fees
   c) Aggregate write-ins for miscellaneous income on Line 14 of the Statement of income

Typically, most companies report these nonrefundable “Other fees” as “Other income” on Line 14 of the Statement of Income

Consistent with current practice, we also believe all these “Other fees”, net of applicable expenses, if any, should be reported as part of the Aggregate-write-ins for miscellaneous income on Line 14 of the Statement of Income. However, if for some reason this first preference is determined to be untenable, then we believe the next viable alternative could be the “Other underwriting expenses incurred” on Line 4 of the Statement of Income, under the assumption that all these other fees are ancillary to the normal underwriting activities, but defer ultimately decision to the NAIC staff for review and consideration.

We appreciate the opportunity to comment on this and related issues. Thank you.

Sincerely,

Joseph Hammond, CPA, FLMI

Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Via email

Dear Mr. Bruggeman:

I am writing on behalf of the American Academy of Actuaries\(^1\) Committee on Property and Liability Financial Reporting (COPLFR). We are following up on previous correspondence regarding Schedule P Instructions for Retroactive Reinsurance between Affiliates and Non-Affiliates.

COPLFR appreciates that the Statutory Accounting Principles Working Group (SAPWG) is looking into certain inconsistencies that were identified in our May 21, 2019, letter to you. In July, Julie Lederer, acting in her capacity as a member of the Casualty Actuarial and Statistical (C) Task Force, posed several questions about specific details in our initial comment letter. Her comments and COPLFR’s replies are presented here.

**Julie Lederer’s Comment**

1. I’m not sure what Allianz/Allianz Re agreement the letter is referring to. The letter suggests that this agreement was enacted in 2015 and that the accounting changed between year-ends 2015 and 2016, but Allianz Re’s 2018 MD&A (which is said to be included as an attachment to COPLFR’s letter but is not) suggests that the agreements between Allianz and Allianz Re weren’t enacted until 2016. Allianz Re did assume retroactive business from a different entity, Fireman’s Fund, in 2015:

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
There’s hardly any workers comp data in Allianz’s 2015 Schedule P. There’s a lot of WC data at year-end 2016, which appears to be due to the addition of Firemen’s Fund to the pooling agreement.

When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. There is significant assumed premium reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior. I think this is related to Allianz Re’s transaction with FFIC (as mentioned in the MD&A above), not with Allianz.

COPLFR’s Response

The May 21, 2019, COPLFR letter is referring to the July 1, 2015, reinsurance agreement between FFIC and Allianz Reinsurance America (“Allianz Re”), where Allianz Re agreed to reinsure certain workers’ compensation (WC) and construction defect liabilities. The 2015 Schedule P, Part 1 of Allianz Re (page 4 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year direct and assumed WC earned premium, presumably this Loss Portfolio Transfer. The 2016 Schedule P of Allianz Global Risk US Ins Co. (“Allianz or FFIC”) (page 7 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year WC ceded earned premium, about equal to the assumptions of the Allianz Re premium discussed in the prior sentence. Allianz Global Risk US is synonymous with FFIC, as we understand it.

In our May 21, 2019, letter, we did state that “Initially, as of December 31, 2015, Allianz included all of the ceded losses in accident year (‘AY’) 2015.” We did only include the 2016 Allianz Schedule P; it would have been clearer to include the 2015 Allianz Schedule P as well, which we have attached as page 15 of the May 21 letter PDF (Attachment A). We agree with the comment in a. above that the additional data is due to the addition of Fireman’s Fund in the pooling agreement. Similarly, for b., we only show Allianz Re’s 2015 Schedule P.; we should additionally obtain Allianz Re’s 2016 Schedule P. We would not expect much change from the 2015 to 2016 Schedule P. Finally, our comments were not intended to suggest that the agreement between Allianz and Allianz Re was not enacted until 2016. We did, however, want to point out that as of Dec. 31, 2015, Allianz included all of the ceded losses in AY 2015, and in the following year, as of Dec. 31, 2016, Allianz recorded the ceded losses across the subject AY’s 2012 and prior, as shown in Schedule P, Part 2 of Allianz (see page 8 of the PDF).

Julie Lederer’s Comment

2. I believe some of the attachments noted in the letter are missing:
   a. The letter includes Allianz Re’s 2015 Schedule P and Allianz’s 2016 Schedule P, but the text of the letter suggests that Allianz’s 2015 and 2016 Schedule Ps are included.
Regardless, it’s pretty hard to compare Allianz’s 2015 and 2016 Schedule Ps anyway, since Fireman’s Fund was added to the intercompany pool in 2016 and the historical AYs in Allianz’s 2016 Schedule P were adjusted accordingly.

When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. The assumed premium is reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior.

b. Attachment A1SAO (Allianz Re’s 2018 SAO) is missing. I looked up the SAO myself and found this passage, which is rather vague, doesn’t name the counterparties, and doesn’t discuss the accounting for the agreements:

The Company entered into several significant reinsurance arrangements during calendar years 2015 – 2018, some of which serve to mitigate the risk factors discussed above.

1. Effective January 1, 2015, the Company entered into a reinsurance agreement whereby the Company assumed and agreed to reimburse certain A&E reserves. Effective July 1, 2015, the Company further assumed and agreed to reimburse certain WC and CD reserves.

2. Effective January 1, 2016, the Company entered into a reinsurance agreement whereby the Company ceded 50% of the Company’s carried A&E, WC, and CD liabilities acquired in 2015.

Additionally, effective January 1, 2016, the Company entered into reinsurance agreements whereby the Company assumed and agreed to reimburse certain Professional Healthcare liabilities and certain A&E, GL/Excess and WC liabilities. Effective July 1, 2016, the Company entered into another reinsurance agreement by which the Company assumed and agreed to reimburse certain GL/Excess exposure.

c. Attachment A2MDA (Allianz Re’s 2018 MD&A) is missing. I looked this up myself and included a relevant passage above in item #1.

COPLFR’s Response

The attachments were in the Academy’s submission to the CASTF and were in the CASTF materials for a call in June, but apparently were omitted by NAIC staff in materials provided for subsequent calls and referrals.

We too consider the excerpt you provided to be vague. To help clarify the issue, we are attaching MD&As from 2015 and 2016 that include Fireman’s Fund Insurance Company in their scope (attachments B and C). One of the difficulties in tracking this issue is the series of actions taken by Allianz since 2015.

Julie Lederer’s Comment

3. GEICO’s Note 21, included as an attachment, is useful, but it’s not clear what we should take away from GEICO’s 2014 Schedule P alone. It might have been useful to attach the 2013 Schedule P as well. By comparing the 2013 and 2014 Schedule Ps, it’s clear that GEICO made significant cessions in 2014 and that these were spread among older AYs.

COPLFR’s Response

Our takeaway from GEICO’s 2014 Schedule P alone is that Schedule P, Part 2 (page 13 of the PDF) shows $3.3 billion of decreased development. This is a distortion as we understand it and is supported
by the 2013 and 2014 comparison noted above. That distortion would carry over to the RBC filings of the respective entities (based on our understanding of the RBC formula and related instructions). Industry Schedule P data can also be distorted based on what is and is not included in industry totals based on the data scrubbing performed.

We believe that this additional information clarifies our original comments and will help SAPWG to move forward with its own analysis. If you have additional questions, contact Marc Rosenberg, the Academy’s senior casualty policy analyst, at 202-785-7865 or rosenberg@actuary.org.

Sincerely,

Kathy Odomirok, MAAA, FCAS
Chairperson, COPLFR

Issue: Financing Derivatives

Check (applicable entity):

- Modification of existing SSAP
- New Issue or SSAP
- Interpretation

G

P/C   Life   Health

Description of Issue:
This agenda item has been prepared to reconsider the accounting and reporting of financing derivative transactions pursuant to a review of information from the 2018 year-end statutory financial statements.

Note: Although the proposed revisions in this agenda item would impact common SSAPs, from the year-end 2018 detail, there are no P/C or health entities acquiring or writing derivatives with financing arrangements. As such, the changes proposed may not impact P/C and health entities and should only impact a limited number of life insurers (16 as of year-end 2018) that engage in derivative financing arrangements.

A financing derivative transaction is one in which the premium to acquire the derivative is paid throughout the derivative term or at maturity of the derivative. With the accounting and reporting that has been utilized by some companies, the “cash flows” (the derivative obtained and the premium liability owed) are netted, generally resulting with zero-value reporting at inception. Over the course of the derivative term, an unrealized loss is recognized for changes in the present value of the premium liability (increase), which may be offset by any value change in the underlying derivative (increase or decrease). (With derivative financing, a gain would only ever be recognized if the fair value change of the derivative exceeded the cost of the derivative.) When the derivative matures, the calculation of realized gains and losses reflects the deferred cost (amount owned), adjusted for any actual fair value change.

For example, if paying $5,000 at the end of a 5-year derivative, a 1,000 unrealized loss would be recognized each year for the present value of premium due, and at maturity, the reporting entity would recognize the 5,000 as a realized loss. If the derivative had a $500 fair value gain, this would decrease the extent of the premium owed recognized as a realized loss. The financial statement presentation of a derivative with financing premiums is significantly different from traditional recognition in which the reporting entity would recognize the $5,000 derivative at acquisition and ultimately recognize a realized gain for the $500 change in fair value.

Several key concerns are noted in the agenda item; however, a few are highlighted as follows:

- Reporting is inconsistent, as not all insurers utilizing financing derivatives report using the net approach. Additionally, insurers acquiring (or writing) similar derivatives would represent the financial statement impact in substantially different ways based solely on when the cost to acquire the derivative is due.

- The amounts reported when derivative assets and liabilities are netted with financing components do not reflect actual derivative assets or liabilities, and the corresponding unrealized gains / losses do not solely reflect changes in derivative value. The amounts reported are impacted by both changes in fair value and the present value change in the premium cost for the derivative. (This approach, particularly with the
The impact of financing derivatives can have a significant impact on the reported derivative amounts, which impacts the assessment of derivatives and the activity reported in regulator tools (e.g., profile reports / financial analysis assessments). For example, in one instance where financing derivatives were reflected, if the derivative had been reported without the financing components, the reported derivatives assets would have increased 50%, and the derivative liabilities would have decreased 60%. These two changes would have doubled the amount of overall net derivatives used in the company’s profile report. With a net presentation, the use of financing derivatives may artificially mask derivative activity, causing difficulty in regulator review to ensure derivative limitations have not been exceeded.

After reviewing the information reported in the 2018 year-end financial statements, it was noted that some entities both acquire and write derivatives using financing derivative components. For entities that are writing these derivatives, the entity has a receivable for the amount due, but the receivable is not subject to nonadmission requirements as it is being commingled with the derivative. Under standard reporting (with premium provided at origination), the premium received would have been reported as a derivative liability (showcasing the obligation to perform under the derivative), but with financing derivatives, the written derivative is reported as a net asset as the receivable owed to the reporting entity is combined with the issued derivative. In the prior discussion of this topic, it was unknown that reporting entities were writing derivatives without collecting premium upon issuance or requiring collateral. This information was only identified with review of the new Schedule DB electronic columns.

From discussions with other NAIC staff, “financing” premiums are non-standard derivative components. Derivatives with these components are generally not marketable (without the entity providing payment of any remaining deferred or financing premium), as any new party would essentially be acquiring the initial company’s debt (liability) to pay the cost of the derivative.

**Proposed Accounting and Reporting Concepts:**
This agenda item intends to incorporate specific direction for the accounting and reporting of derivatives with financing components that are acquired and/or written. The proposed revisions reflect the following:

- **The BACV and fair value columns of derivatives acquired and/or written in Schedule DB-A or Schedule DB-B shall reflect the value without inclusion of any impact from financing provisions.**
  
  With this change, the Schedule DB column that currently captures “fair value of derivative, excluding impact of financing premiums” will be revised to reflect the “fair value of the derivative, including impact of financing premiums.”

Note: This proposal will result in a change from U.S. GAAP, however, derivatives reported under SAP already vary from U.S. GAAP as statutory accounting does not currently allow offsetting in accordance with master netting agreements. Under U.S. GAAP, the cash inflows / outflows (derivative and financing components) are netted to arrive at the fair value of the derivative.

This practice is not appropriate for statutory accounting because: The netting of derivatives with financing components 1) hinders the ability to assess whether derivative activity is within state investment limitations; 2) hinders the ability to utilize financial analysis tools in assessing activity or fair value changes; 3) impacts RBC and IMR calculations and 4) does not adequately present component items for admissibility.
• **Recognition of interest-related unrealized gains/losses (and then realized gains/losses at termination),** shall reflect the fair value fluctuation changes in the derivative and shall not be impacted by the present value change of premium owed or premium receivable from the derivative. This will impact past practice in which present value change of the premium owed / receivable has impacted gains / losses, resulting with impacts to AVR (unrealized) and IMR (realized).

• **The resulting balance sheet derivative assets and liabilities shall reflect the fair value of the derivatives without inclusion of the impact from** financing derivatives unless the amount owed or the amount due from a derivative with financing elements meets the requirements for a valid right to setoff under SSAP No. 64. If this valid right of setoff exists, the amount shall be captured in Schedule DB-D with disclosures captured pursuant to SSAP No. 64.

• **Amounts owed to / from the reporting entity for derivatives written or acquired shall be separately captured in the balance sheet, unless the amounts qualify under the legal right to offset.** To the extent amounts owed by the reporting entity for derivatives acquired do not meet the legal right to offset, the amount shall be recognized separately from the acquired derivative as a payable for security. To the extent amounts owed to the reporting entity for derivatives written do not meet the legal right to offset, the amount shall be recognized separately from the written derivative as a receivable for security and subject to admissibility requirements in SSAP No. 5R and SSAP No. 21R.

  > **Note:** Under SSAP No. 21R, receivables for securities are not admitted if not received within 15 days from the settlement date. If the valid right to offset provisions are not met, consideration could be given to incorporate specific guidance for these derivative premium receivables.

**Proposed RBC and AVR Concepts:**
In addition to the changes in the Schedule DB reporting for BACV and FV and the separate reporting of the amounts due to / from, the proposed concepts in this agenda item will result with key changes to AVR and RBC:

1. **Acquired Derivatives with Amount Owed to Derivative Counterparty**

   With separate reporting of the derivative asset and amount owed from the acquisition of the derivative, the BACV for the derivative asset and “net exposure” (Schedule DB-D) by counterparty will increase. (As the AVR reserve does not factor in the impact if there is legal right to offset, this AVR impact will occur regardless of offsetting provisions.) From the 2018 year-end detail reviewed, in most instances, reporting entities with financing derivatives will no longer report these derivatives as liabilities and will report the derivatives as assets.

   - The AVR reserve and the RBC impact for derivatives is based on derivative counterparty “net exposure.” As such, unless other adjustments are made, the reporting entity will either need to obtain additional collateral or engage in another offsetting derivative with the counterparty to eliminate the reported increased exposure (increased RBC charge). **To address concerns with RBC, since exposure is not actually increasing, this agenda item proposes adjustments to Schedule DB-D to incorporate the amount owed by the reporting entity to the counterparty in determining net exposure.** This adjustment would eliminate the need to obtain additional collateral or engage in another offsetting derivative to reduce counterparty exposure.

   (There is an RBC charge for off-balance sheet collateral (.0039) and collateral on-balance sheet is assessed the corresponding asset charge. As such, by using financing derivatives instead of acquiring collateral, the reporting entity mitigates these collateral charges.)
With the proposed changes, the present value change of the premium owed will not be recognized as an unrealized loss in AVR (and impact the determination of realized interest-related capital losses/gains at termination in the IMR). These changes will result in a greater AVR reserve as the liability owed for the derivative recognized over time (present value over term of derivative) will no longer reduce the AVR as an unrealized loss. **The present value change of the premium owed for acquiring a derivative should not be considered an unrealized loss or impact AVR, therefore this change is appropriate.**

2. **Written Derivatives with Amount Owed to Reporting Entity**

With separate reporting of a derivative written by the reporting entity and the premium amount owed to the reporting entity, the BACV for the derivative asset and “net exposure” (Schedule DB-D) by counterparty will decrease. (This will likely result in a currently-reported derivative asset reversing to reflect a derivative liability.) Furthermore, the present value change of the premium due to the reporting entity will not be recognized as an unrealized gain and will no longer impact AVR (or IMR). The amount due for the written derivative will likely be considered a “receivable for security” within scope of SSAP No. 21R—Other Admitted Asset. Current guidance requires nonadmittance for these items not received within 15 days from the settlement date.

- In this situation, the derivative is currently being reported as an asset, because the amount due to the reporting entity (receivable) is increasing the derivative value. Without the amount due to the reporting entity, the derivative would be in a liability position. This approach does not seem to provide derivative RBC relief (as the RBC charge is focused on derivative assets) but the current netting approach could prevent potential nonadmittance for receivables owed to the reporting entity. In reviewing examples from the year-end 2018 reporting, premium owed to the reporting entity may not be received for a few years (until derivative maturity), which is beyond the time allotted for admittance under SSAP No. 21R. There is an RBC charge for “receivable for securities” (.014 life and 0.25 p/c & health), but this would only apply if the receivable was admitted. (This charge would be less than the charge for the derivative asset.)

- If the right to offset provisions in SSAP No. 64 are met, there would be no net impact to the financial statements by reporting the written derivative asset without the financing provisions. In these situations, the BACV and fair value on Schedule DB-A would detail the derivative without the financing components, and on Schedule DB-D, the reported amount that ties to the balance sheet would be adjusted for the offsetting receivable. With the offset, the receivable for security would be eliminated from the balance sheet. With the offset / balance sheet elimination, the receivable is essentially given “admitted asset” status (as it reduces a liability) and is not assessed for RBC. (Under SSAP No. 64, this offset would be disclosed in the financial statements.) If the right to offset provisions are not met, then the “receivable for security” would be nonadmitted after 15 days under SSAP No. 21R. This would cause a financial statement impact for any nonadmitted asset. If the asset was admitted, there would be an RBC charge for the admitted receivable.

**NAIC staff is interested in whether the premium due to the reporting entity from a written derivative would generally meet the “valid right to setoff” provisions from SSAP No. 64. If the conditions would not generally be met, consideration could occur to allow offsetting presentation in Schedule DB-D for these specific situations. This would allow the amount owed to the reporting entity to decrease the derivative obligation regardless of when the amount due would be received. **If this was supported, provisions may be warranted that allow the derivative liability to be reduced to zero, but not permit the derivative to reverse into an asset position without being nonadmitted.**
Illustration of RBC Charges to Derivative Assets / Liabilities:

**RBC Impact – P/C and Health Entities**

As detailed below for property/casualty and health entities, the RBC charge is solely driven by the amount of derivative assets reported on the balance sheet. (This is a distinctly different from life reporting entities.) For these entities, the charge does not vary if the derivative is in a liability position or if the entity has received collateral from the counterparty. (The amount reported on balance sheet is impacted by offsetting provisions, but only if there is a valid right to offset.)

If these entities were to engage in financing derivatives, and the impact was to reverse the presentation of the derivative from an asset to a liability, this would have a direct change to the RBC calculation.

**RBC Impact – Life Insurance Entities**

As detailed below for life entities, the RBC charge is not driven by the amount of derivative assets reported on the balance sheet. Instead, the RBC charge is driven by the “net exposure” after considering collateral. In both situations (asset exposure and off-balance sheet exposure), if the derivative is in a liability position, there is no RBC charge. Since the removal of financing components will generally result with previously reported derivative liabilities flipping to represent derivative assets, this could have an RBC impact unless the premium owed to the reporting entity is considered as part of the RBC calculation. The proposal in this agenda item would consider amounts owed from the counterparty for the derivative in determining net exposure.

Existing Authoritative Literature:

- SSAP No. 64—Offsetting and Netting of Assets and Liabilities
- SSAP No. 86—Derivatives
- SSAP No. 100—Fair Value

Key aspects from the standards cited above:

**SSAP No. 64—Offsetting and Netting of Assets and Liabilities**

2. Assets and liabilities shall be offset and reported net only when a valid right of setoff exists except as provided for in paragraphs 3 and 4. A right of setoff is a reporting entity’s legal right, by contract or otherwise, to discharge all or a portion of the debt owed to another party by applying an amount that the other party owes to the reporting entity against the debt. A valid right of setoff exists only when all the following conditions are met:
   a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;
   b. The reporting party has the right to set off the amount owed with the amount owed by the other party;
   c. The reporting party intends to setoff; and
   d. The right of setoff is enforceable at law.

3. Assets and liabilities that meet the criteria for offset shall not be netted when prohibited by specific statements of statutory accounting principles. An example of such is in the case of reinsurance recoverables on paid losses and ceded premiums payable as provided for in SSAP No. 62R—Property and Casualty Reinsurance.

4. Netting of assets and liabilities for reporting purposes when no valid right of setoff exists shall be allowed only when provided for by specific statements of statutory accounting principles. An example of such is in the case of real estate investments required to be shown net of encumbrances as provided for in SSAP No. 40R—Real Estate Investments.

5. Amounts due to or from affiliates shall be offset and reported net only when the provisions of paragraph 2 are met.

**Disclosures**

6. The following quantitative information shall be disclosed (separately for assets and liabilities) at the end of each reporting period (interim and annual) when derivative, repurchase and reverse repurchase, and securities borrowing and securities lending assets and liabilities are offset and reported net in accordance with paragraph 2 (valid right to offset):
   a. The gross amounts of recognized assets and recognized liabilities
   b. The amounts offset in accordance with paragraph 2 (valid right to offset)
c. The net amounts presented in the statement of financial positions.

7. Assets and liabilities that have a valid right to offset under paragraph 2, but are not netted as they are prohibited under paragraph 3, are not required to be captured in the disclosures in paragraph 6.

**Relevant Literature**

8. This statement adopts paragraphs 1, 7 and 13 of APB Opinion No. 10, Omnibus Opinion—1966 and FASB Interpretation No. 39, Offsetting of Amounts Related to Certain Contracts with modifications (1) to prohibit offsetting as provided in specific statements and require netting when provided in specific statements, and (2) to reject guidance in paragraphs 10, 10A, and 10B of FIN 39, as amended by FSP FIN 39-1, that permits a reporting entity election to offset fair value amounts recognized for derivative instruments and fair value amounts recognized for the right to reclaim cash collateral or the obligation to return cash collateral arising from the derivative instruments with the same counterparty under a master netting agreement. Offsetting for statutory accounting purposes is limited to situations meeting the conditions in paragraph 2 and 4 of this SSAP. This statement adopts FASB Emerging Issues Task Force No. 86-25, Offsetting Foreign Currency Swaps.

9. This statement rejects FSP FIN 39-1, Amendment of FASB Interpretation 39. This statement rejects FASB Interpretation No. 41, Offsetting of Amounts Related to Certain Repurchase and Reverse Repurchase Agreements. FIN 41 has an offsetting exception for repurchase and reverse repurchase agreements and permits offsetting when the reporting parties do not intend to set off. This guidance is rejected for statutory accounting, and payables under repurchase agreements may only be offset against amounts recognized as receivables under reverse repurchase agreements if there is a valid right to offset meeting all the conditions, including the intent to offset, detailed in paragraph 2. This statement rejects ASU 2011-11, Disclosures about Offsetting Assets and Liabilities and ASU 2013-01, Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities. Statutory disclosure requirements for assets and liabilities reported net under a valid right to offset are detailed in paragraph 6.

**SSAP No. 86—Derivatives**

11. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

**Disclosure Requirements**

12. Reporting entities shall disclose the following for all derivative contracts used:

   a. For derivative contracts with financing premiums:

      i. Disclose the aggregate, non-discounted total premium cost for these contracts and the premium cost due in each of the following four years, and thereafter. Include the aggregate fair value of derivative instruments with financing premiums excluding the impact of the deferred or financing premiums.
For each derivative contract with financing premiums:

(a) Whether premium cost is paid throughout the contract, or at derivative maturity;
(b) Next premium cost payment date;
(c) Total premium cost;
(d) Premium cost paid in prior years;
(e) Current year premium cost paid;
(f) Future unpaid premium cost;
(g) Fair value of derivative, excluding impact of financing premiums; and
(h) Unrealized gain/loss, excluding impact of financing premiums.

b. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)

c. The disclosure requirements of paragraphs 59.a., 59.b., and 59.g. shall be included in the annual statement. Refer to the Preamble for further discussion regarding interim disclosure requirements. The disclosure requirements of paragraphs 59.a. through 59.g. shall be included in the annual audited statutory financial reports. The disclosure requirements in paragraph 59.h. shall be included in statutory financial statements (annual and quarterly). Paragraph 62 of the Preamble states that disclosures made within specific schedules or exhibits to the annual statement need not be duplicated in a separate note.

SSAP No. 100—Fair Value

Definition of Fair Value

4. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

5. Asset/Liability – A fair value measurement is for a particular asset or liability. Therefore, the measurement should consider attributes specific to the asset or liability, for example, the condition and/or location of the asset or liability and restrictions, if any, on the sale or use of the asset at the measurement date. The asset or liability might be a standalone asset or liability (for example, a financial instrument or an operating asset) or a group of assets and/or liabilities (for example, an asset group, a reporting unit, or a business).

6. Price – A fair value measurement assumes that the asset or liability is exchanged in an orderly transaction between market participants to sell the asset or transfer the liability at the measurement date. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities; it is not a forced transaction (for example, a forced liquidation or distress sale).
The transaction to sell the asset or transfer the liability is a hypothetical transaction at the measurement date, considered from the perspective of a market participant that holds the asset or owes the liability. Therefore, the objective of a fair value measurement is to determine the price that would be received to sell the asset or paid to transfer the liability at the measurement date (an exit price).

11. Application to Assets – A fair value measurement assumes the highest and best use of the asset by market participants, considering the use of the asset that is physically possible, legally permissible, and financially feasible at the measurement date. In broad terms, highest and best use refers to the use of an asset by market participants that would maximize the value of the asset or the group of assets within which the asset would be used. Highest and best use is determined based on the use of the asset by market participants, even if the intended use of the asset by the reporting entity is different.

14. Application to Liabilities – Consideration of non-performance risk (own credit-risk) should not be reflected in the fair value calculation for liabilities (including derivative liabilities) at subsequent measurement. At initial recognition, it is perceived that the consideration of own-credit risk may be inherent in the contractual negotiations resulting in the liability. The consideration of non-performance risk for subsequent measurement is inconsistent with the conservatism and recognition concepts as well as the assessment of financial solvency for insurers, as a decrease in credit standing would effectively decrease reported liabilities and thus seemingly increase the appearance of solvency. Furthermore, liabilities reported or disclosed at “fair value” shall not reflect any third-party credit guarantee of debt.

**Fair Value at Initial Recognition**

15. When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price represents the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability represents the price that would be received to sell the asset or paid to transfer the liability (an exit price). Conceptually, entry prices and exit prices are different. Entities do not necessarily sell assets at the prices paid to acquire them. Similarly, entities do not necessarily transfer liabilities at the prices received to assume them.

16. In many cases, the transaction price will equal the exit price and, therefore, represent the fair value of the asset or liability at initial recognition. In determining whether a transaction price represents the fair value of the asset or liability at initial recognition, the reporting entity shall consider factors specific to the transaction and the asset or liability. For example, a transaction price might not represent the fair value of an asset or liability at initial recognition if:

a. The transaction is between related parties.

b. The transaction occurs under duress or the seller is forced to accept the price in the transaction. For example, that might be the case if the seller is experiencing financial difficulty.

c. The market in which the transaction occurs is different from the market in which the reporting entity would sell the asset or transfer the liability, that is, the principal or most advantageous market. For example, those markets might be different if the reporting entity is a securities dealer that transacts in different markets, depending on whether the counterparty is a retail customer (retail market) or another securities dealer (inter-dealer market).

d. For liabilities, differences may exist as non-performance risk (own credit risk) is not reflected in the fair value (i.e., exit price) determination of all liabilities (including derivatives).

**Disclosures about Fair Value of Financial Instruments**

54. A reporting entity shall disclose in the notes to the financial statements, as of each date for which a statement of financial position is presented in the quarterly or annual financial statements, the
aggregate fair value or NAV for all financial instruments and the level within the fair value hierarchy in which the fair value measurements in their entirety fall. This disclosure shall be summarized by type of financial instrument, for which it is practicable to estimate fair value, except for certain financial instruments identified in paragraph 55. Fair value disclosed in the notes shall be presented together with the related admitted values in a form that makes it clear whether the fair values and admitted values represent assets or liabilities and to which line items in the Statement of Assets, Liabilities, Surplus and Other Funds they relate. Unless specified otherwise in another SSAP, the disclosures may be made net of encumbrances, if the asset or liability is so reported. A reporting entity shall also disclose the method(s) and significant assumptions used to estimate the fair value of financial instruments. If it is not practicable for an entity to estimate the fair value of the financial instrument or a class of financial instruments, and the investment does not qualify for the NAV practical expedient, the aggregate carrying amount for those items shall be reported as "not practicable" with additional disclosure as required in paragraph 48.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

Agenda item 2016-48 considered accounting and reporting revisions for derivatives with financing premiums. Although discussion occurred proposing a gross accounting and reporting approach, the revisions adopted within that agenda item incorporated aggregate disclosures and new electronic columns in Schedule DB to capture the impact of financing premiums in derivative reporting. With the disclosure adoptions, the Working Group directed NAIC staff to reassess this issue once the impact identified from the data-captured disclosures would be available for review, noting that the earliest for this re-assessment would be Summer 2019.

Agenda item 2013-07, which considered ASU 2013-01: Clarifying the Scope of Disclosures About Offsetting Assets and Liabilities, was finalized on August 24, 2013. This ASU was issued to clarify that the scope of ASU 2011-11 applies to derivatives (including embedded derivatives), repurchase and reverse repurchase agreements, and securities borrowing and securities lending transactions that are either netted as they meet the right of setoff under ASC 210-20-45 or ASC 815-10-45, or are subject to a master netting agreement or similar agreement. The SAP adopted revisions allowed reporting entities to continue offsetting derivatives, repurchase and reverse repurchase agreements, and securities borrowing and securities lending transactions with a valid right of offset, but incorporated disclosures to illustrate the netting impact. This adoption action included a referral to the Blanks (E) Working Group for annual statement instruction revisions and to recommend development of additional schedules to reconcile the amount reported gross on DB to the amount reported net on the balance sheet.

Agenda item 2012-17, which considered ASU 2011-22, Disclosures about Offsetting Assets and Liabilities, was finalized by the Working Group on November 29, 2012. This agenda item adopted revisions to SSAPs No. 64, 86 and 103. The adopted revisions, effective January 1, 2013, 1) revise and clarify that offsetting is only allowed in accordance with SSAP No. 64, paragraphs 2-4; 2) modify the adoption of FIN 39 rejecting the ability to offset in accordance with master netting agreements and rejecting FSP FIN 39-1 and FIN 41; and 3) rejecting ASU 2011-11 for statutory accounting. The Working Group deferred adoption of the disclosures proposed to paragraphs 6-8 of SSAP No. 64 in the exposure as the FASB has recently exposed guidance to narrow the scope GAAP disclosures.

Overview of ASU 2011-11:
ASU 2011-11 was issued in December 2011 to require entities to disclose both gross information and net information about both instruments and transactions eligible for offset in the statement of financial position and instruments and transactions subject to an agreement similar to a master netting agreement. This ASU was issued as the differences in the offsetting requirements between U.S. GAAP and IFRS accounted for a significant difference in the amounts presented under those standards. These differences reduce the comparability of between U.S. GAAP and IFRS, and the users of financial statements requested that these differences be addressed expeditiously. The objective of the ASU 2011-11
amendments is to facilitate comparison between entities that prepare financial statements under U.S. GAAP and those prepared under IFRS. Reporting entities are required to apply the ASU 2011-11 amendments for annual reporting periods beginning on or after Jan. 1, 2013, and interim periods within those annual periods. Entities are required to provide the disclosures required by those amendments retrospectively for all comparative periods presented.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC staff recommends that statutory accounting revisions be considered to ensure consistency in the gross reporting of derivatives - without inclusion of financing components - and consistency in reporting amounts owed to / from the reporting entity from the acquisition or writing of derivatives. NAIC staff highlights that the concepts are consistent with existing statutory accounting guidelines but require clarification changes to ensure uniform application across the industry. **NAIC staff recommends that the Working Group move this item to the active listing, classified as nonsubstantive, and expose revisions to SSAP No. 86 to clarify the reporting of derivatives with financing premiums.** With the proposed revisions, NAIC staff is suggesting reporting revisions that would allow the present value of the derivative premium receivable (and payable) for financed derivatives to be factored into the counterparty risk assessment for life RBC.

In addition to the proposed revisions, comments are requested as to whether derivatives and related financing provisions would generally not meet the SSAP No. 64 right to offset criteria and if explicit guidance allowing offset should be considered. (Allowing offset only impacts the amount reported on balance sheet and does not impact the gross amount reported on Schedule DB-A or DB-B. The offset provision would impact RBC for p/c and health companies but would not impact the RBC for life reporting entities.)

(Regulator Inquiry) - Derivative profile reports are only provided for life reporting entities. These reports provide assessments on the overall net derivative position (assets less liabilities). **Would it be beneficial to regulators if derivative profile reports were available for p/c and health entities and if the reports completed assessments based on derivative assets and derivative liabilities separately?** (For example, a life company with $2.1 billion in derivative assets and $2.0 billion in derivative liabilities would currently have a derivative profile report for the $100 million net derivative asset. This report would detail changes in the net asset, but if derivative assets increased to $3.1 assets and derivative liabilities increased to $3.0, the profile report would not detail the change as the net asset would still reflect $100 million) It is staff’s interpretation that the limits on derivative activity per NAIC Model 280 are anticipated to be “absolute value” of derivative assets and derivative liabilities (and not the net between assets and liabilities). The language in the Model is consistent with the Supplemental Investment Risk Interrogatory that requests “aggregate” amounts with a percentage of admitted assets, with identification that the amount should agree to Schedule DB. **NAIC staff requests regulator comment on the interpretation of the word “aggregate” (and whether it is intended to be “absolute value” and whether the information in the statutory financials or ISITE tools (profile reports) provide the information needed for regulator assessments of derivative activity.**

Excerpt from Model 280, Investments of Insurers Model Act (Defined Limits Version):

**B. Limitations on Hedging Transactions**

An insurer may enter into hedging transactions under this section if, as a result of and after giving effect to the transaction:
(1) The aggregate statement value of options, caps, floors and warrants not attached to another financial instrument purchased and used in hedging transactions does not exceed seven and one half percent (7.5%) of its admitted assets;

(2) The aggregate statement value of options, caps and floors written in hedging transactions does not exceed three percent (3%) of its admitted assets; and

(3) The aggregate potential exposure of collars, swaps, forwards and futures used in hedging transactions does not exceed six and one-half percent (6.5%) of its admitted assets.

As noted in the recommendation, the revisions are in line with existing SAP concepts. These concepts and excerpts are specifically detailed below:

1. Gross Reporting – SSAP No. 86, and the reporting instructions for Schedule DB, is explicit that derivatives are required to be shown gross on Schedule DB. Net reporting is permitted on the balance sheet when a valid right to offset exists, but derivatives offset under SSAP No. 64 are required to follow the disclosure requirements in SSAP No. 64:

   54.h. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities (SSAP No. 64) when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)

2. Accounting at Date of Acquisition – SSAP No. 86, and the reporting instructions for Schedule DB, is explicit that the premium paid or received for writing a derivative shall either be recorded as an asset (purchase) or liability (written) on the derivative line on the assets or liability page:

   Exhibit C:

   1. Call and Put Options, Warrants, Caps, and Floors:

      a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, warrant, cap or floor shall either be (i) recorded as an asset (purchase) or liability (written) on the Derivative line on the Assets (or) Liabilities pages or (ii) combined with the hedged item(s) individually or in the aggregate;

3. Liability Recognition - The deferred premium (or financing premium) is a cost to acquire / enter into the derivative contract and is not impacted by an underlying interest of the derivative agreement (the cost to acquire is not impacted by derivative instrument performance). Upon entering the derivative contract the financing premium owed by the reporting entity meets the definition of a liability under SSAP No. 5R:

   10. A liability is defined as certain or probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

   11. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified
event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity’s financial statements when incurred.

NOTE: The deferred premium is a contractual element of the derivative contract and does not fluctuate or change as a result of the underlying derivative.

Recognizing the liability is also consistent with the Statutory Accounting Statement of Concept of Recognition detailed in the Preamble (paragraph 37):

Recognition

35. The principal focus of solvency measurement is determination of financial condition through analysis of the balance sheet. However, protection of the policyholders can only be maintained through continued monitoring of the financial condition of the insurance enterprise. Operating performance is another indicator of an enterprise’s ability to maintain itself as a going concern. Accordingly, the income statement is a secondary focus of statutory accounting and should not be diminished in importance to the extent contemplated by a liquidation basis of accounting.

36. The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third party interests should not be recognized on the balance sheet but rather should be charged against surplus when acquired or when availability otherwise becomes questionable.

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

4. Derivative Instrument - The deferred premium (or financing premium) is the cost to acquire a derivative and is not a “derivative instrument” per the definition in SSAP No. 86:

4. “Derivative instrument” means an agreement, option, instrument or a series or combination thereof:

a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or

b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

13. An “underlying” is a specified interest rate, security price, commodity price, foreign exchange rate, index of prices or rates, or other variable (including the occurrence or nonoccurrence of a specified event such as a scheduled payment under contract). An underlying may be a price or rate of an asset or liability but is not the asset or liability itself.
5. **Offsetting Disclosures:** Guidance exists in SSAP No. 64 for the offsetting when there is a valid right to offset, and this guidance specifically references derivative transactions. This disclosure was added to ensure effective comparability across reporting entities, and ensure that the gross information reported on Schedule DB could be agreed to the information reported on the balance sheet:

6. The following quantitative information shall be disclosed (separately for assets and liabilities) at the end of each reporting period (interim and annual) when derivative, repurchase and reverse repurchase, and securities borrowing and securities lending assets and liabilities are offset and reported net in accordance with paragraph 2 (valid right to offset):
   
   d. The gross amounts of recognized assets and recognized liabilities
   
   e. The amounts offset in accordance with paragraph 2 (valid right to offset)
   
   f. The net amounts presented in the statement of financial positions.

**Staff Review Completed by:**
Julie Gann – NAIC Staff – October 2019

**October 2019 - Proposed Revisions to SSAP No. 86:**

4. “Derivative instrument” means an agreement, option, instrument or a series or combination thereof:
   
   a. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or
   
   b. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.

   a. “Caps” are option contracts in which the cap writer (seller), in return for a premium, agrees to limit, or cap, the cap holder’s (purchaser) risk associated with an increase in a reference rate or index. For example, in an interest rate cap, if rates go above a specified interest rate level (the strike price or the cap rate), the cap holder is entitled to receive cash payments equal to the excess of the market rate over the strike price multiplied by the notional principal amount. Because a cap is an option-based contract, the cap holder has the right but not the obligation to exercise the option. If rates move down, the cap holder has lost only the premium paid. A cap writer has virtually unlimited risk resulting from increases in interest rates above the cap rate.

   b. “Collar” means an agreement to receive payments as the buyer of an option, cap or floor and to make payments as the seller of a different option, cap or floor.

   c. “Floors” are option contracts in which the floor writer (seller), in return for a premium, agrees to limit the risk associated with a decline in a reference rate or index. For example, in an interest rate floor, if rates fall below an agreed rate, the floor holder (purchaser) will receive cash payments from the floor writer equal to the difference between the market rate and an agreed rate multiplied by the notional principal amount.
d. “Forwards” are agreements (other than futures) between two parties that commit one party to purchase and the other to sell the instrument or commodity underlying the contract at a specified future date. Forward contracts fix the price, quantity, quality, and date of the purchase and sale. Some forward contracts involve the initial payment of cash and may be settled in cash instead of by physical delivery of the underlying instrument.

e. “Futures” are standardized forward contracts traded on organized exchanges. Each exchange specifies the standard terms of futures contracts it sponsors. Futures contracts are available for a wide variety of underlying instruments, including insurance, agricultural commodities, minerals, debt instruments (such as U.S. Treasury bonds and bills), composite stock indices, and foreign currencies.

f. “Options” are contracts that give the option holder (purchaser of the option rights) the right, but not the obligation, to enter into a transaction with the option writer (seller of the option rights) on terms specified in the contract. A call option allows the holder to buy the underlying instrument, while a put option allows the holder to sell the underlying instrument. Options are traded on exchanges and over the counter.

g. “Structured Notes” in scope of this statement are instruments (often in the form of debt instruments), in which the amount of principal repayment or return of original investment is contingent on an underlying variable/interest. Structured notes that are “mortgage-referenced securities” are captured in SSAP No. 43R—Loan-backed and Structured Securities.

h. “Swaps” are contracts to exchange, for a period of time, the investment performance of one underlying instrument for the investment performance of another underlying instrument, typically, but not always, without exchanging the instruments themselves. Swaps can be viewed as a series of forward contracts that settle in cash and, in some instances, physical delivery. Swaps generally are negotiated over-the-counter directly between the dealer and the end user. Interest rate swaps are the most common form of swap contract. However, foreign currency, commodity, and credit default swaps also are common.

i. “Swaptions” are contracts granting the owner the right, but not the obligation, to enter into an underlying swap. Although options can be traded on a variety of swaps, the term “swaption” typically refers to options on interest rate swaps. A swaption hedges the buyer against downside risk, as well as lets the buyer take advantage of any upside benefits. That is, it gives the buyer the benefit of the agreed-upon rate if it is more favorable than the current market rate, with the flexibility of being able to enter into the current market swap rate if it is preferable. Conversely, the seller of swaptions assumes the downside risk, but benefits from the amount paid for the swaption, regardless if it is exercised by the buyer and the swap is entered into.

j. “Warrants” are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the

---

1 The “structured notes” captured within scope of this statement is specific to instruments in which the terms of the agreement make it possible that the reporting entity could lose all or a portion of its original investment amount (for other than failure of the issuer to pay the contractual amounts due). These instruments incorporate both the credit risk of the issuer, as well as the risk of an underlying variable/interest (such as the performance of an equity index or the performance of an unrelated security). Securities that are labeled “principal-protected notes” are captured within scope of this statement if the “principal protection” involves only a portion of the principal and/or if the principal protection requires the reporting entity to meet qualifying conditions in order to be safeguarded from the risk of loss from the underlying linked variable. Securities that may have changing positive interest rates in response to a linked underlying variable or the passage of time, or that have the potential for increased principal repayments in response to a linked variable (such as U.S. Treasury Inflation-Indexed Securities) that do not incorporate risk of original investment /principal loss (outside of default risk) are not captured as structured notes in scope of this statement.
securities of another business entity. Publicly traded stock warrants are captured in scope of SSAP No. 30R—Unaffiliated Common Stock. All other warrants, including non-publicly traded stock warrants, shall be captured in scope of SSAP No. 86.

6. "Derivative Premium" is the cost to acquire or write a derivative contract. Derivative premium is not an "underlying" in a derivative contract and is not impacted by changes in an underlying interest of the derivative agreement. A derivative with contract terms that finance the derivative premium, so that the cost is paid or received throughout the derivative term or at derivative maturity, does not result with an "embedded derivative" addressed in paragraph 16.

6.7. "Firm commitment" is an agreement with an unrelated party, binding on both parties and expected to be legally enforceable, with the following characteristics:

a. The agreement specifies all significant terms, including the quantity to be exchanged, the fixed price, and the timing of the transaction. The fixed price may be expressed as a specified amount of an entity’s functional currency or of a foreign currency. It may also be expressed as a specified interest rate or specified effective yield;

b. The agreement includes a disincentive for nonperformance that is sufficiently large to make performance probable; and

c. For investments in subsidiary, controlled, and affiliated entities (as defined by SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities (SSAP No. 97)) and investments in limited liability companies (as defined by SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies) it must be probable that acquisition will occur within a reasonable period of time.

7.8. A hedging transaction is defined as a derivative(s) transaction which is entered into and maintained to reduce:

a. The risk of a change in the fair value or cash flow of assets and liabilities which the reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence; or

b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which a reporting entity has acquired or incurred or has a firm commitment to acquire or incur or for which the entity has forecasted acquisition or incurrence.

8.9. "Income generation transaction" is defined as derivatives written or sold to generate additional income or return to the reporting entity. They include covered options, caps, and floors (e.g., a reporting entity writes an equity call option on stock that it already owns).

9.10. "Replication (Synthetic Asset) transaction" is a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments. A derivative transaction entered into by an insurer as a hedging or income generation transaction shall not be considered a replication (synthetic asset) transaction.

40.11. "Forecasted transaction" is a transaction that is expected to occur for which there is no firm commitment. Because no transaction or event has yet occurred and the transaction or event when it occurs will be at the prevailing market price, a forecasted transaction does not give an entity any present rights to future benefits or a present obligation for future sacrifices.

41.12. An "underlying" is a specified interest rate, security price, commodity price, foreign exchange rate, index of prices or rates, or other variable (including the occurrence or nonoccurrence of a
specified event such as a scheduled payment under contract). An underlying may be a price or rate of an asset or liability but is not the asset or liability itself.

12.13. “Benchmark Interest Rate” is a widely recognized and quoted rate in an active financial market that is broadly indicative of the overall level of interest rates attributable to high-credit-quality obligors in that market. It is a rate that is widely used in a given financial market as an underlying basis for determining the interest rates of individual financial instruments and commonly referenced in interest-rate-related transactions. In theory, the benchmark interest rate should be a risk-free rate (that is, has no risk of default). In some markets, government borrowing rates may serve as a benchmark. In other markets, the benchmark interest rate may be an interbank offered rate. In the United States, the interest rates on direct Treasury obligations of the U.S. government, the London Interbank Offered Rate (LIBOR) swap rate, the Fed Funds Effective Rate, the Securities Industry and Financial Markets Association (SIFMA) Municipal Swap Rate, and the Secured Overnight Financing Rate (SOFR) Overnight Index Swap Rate are considered to be benchmark interest rates.

13.14. “Weather derivatives” are defined as a forward-based or option-based contract for which settlement is based on a climatic or geological variable. One example of such a variable is the occurrence or nonoccurrence of a specified amount of snow at a specified location within a specified period of time.

14.15. “Notional amount” is defined as the face value of a financial instrument in a derivatives transaction as of a reporting date which is used to calculate future payments in the reporting currency. Notional amount may also be referred to as notional value or notional principal amount. The notional amount reported should remain static over the life of a trade unless the instrument is partially unwound or has a contractually amortizing notional. The notional amount shall apply to derivative transactions as follows:

a. For derivative instruments other than futures contracts (e.g., options, swaps, forwards), the notional amount is either the amount to which interest rates are applied in order to calculate periodic payment obligations or the amount of the contract value used to determine the cash obligations. Non-U.S. dollar contracts must be multiplied or divided by the appropriate inception foreign currency rate.

b. For futures contracts, with a U.S. dollar-denominated contract size (e.g., Treasury note and bond contracts, Eurodollar futures) or underlying, the notional amount is the number of contracts at the reporting date multiplied by the contract size (value of one point multiplied by par value).

c. For equity index and similar futures, the number of contracts at the reporting date is multiplied by the value of one point multiplied by the transaction price. Non-U.S. dollar contract prices must be multiplied or divided by the appropriate inception foreign currency rate.

15.16. “Variation Margin” reflects the daily change in market value of derivative contracts (e.g., daily gain/loss on a derivative contract due to market movements). Amounts received/paid to adjust variation margin on derivative contracts that are both cleared and settled on an exchange shall be recognized as an adjustment to the carrying value of the derivative contract (e.g., futures). Amounts received/paid to adjust variation margin on all other derivative contracts shall be recognized on the balance sheet as an asset or liability separate from the carrying value of the derivative contract.

---

2 The definition in paragraph 14 is intended to be a principle for determining notional for all derivative instruments. To the extent a derivative type is not explicitly addressed in paragraph 14.a. through paragraph 14.c., notional should be reported in a manner consistent with this principle.
derivative instrument. This treatment shall occur under statutory accounting regardless if the counterparty/exchange considers amounts exchanged for variation margin to be legal settlement or collateral. Changes in variation margin shall not be treated as realized gains or adjustments to the basis of the hedged item until the derivative contract has been sold, matured or expired.

**Embedded Derivative Instruments**

46.17. Contracts that do not in their entirety meet the definition of a derivative instrument, such as bonds, insurance policies, and leases, may contain “embedded” derivative instruments—implicit or explicit terms that affect some or all of the cash flows or the value of other exchanges required by the contract in a manner similar to a derivative instrument. The effect of embedding a derivative instrument in another type of contract (“the host contract”) is that some or all of the cash flows or other exchanges that otherwise would be required by the contract, whether unconditional or contingent upon the occurrence of a specified event, will be modified based on one or more underlyings. An embedded derivative instrument shall not be separated from the host contract and accounted for separately as a derivative instrument.

**Impairment**

47.18. This statement adopts the impairment guidelines established by SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R) for the underlying financial assets or liabilities.

**Derivative Premium (New Section – All Other Sections Renumbered Accordingly)**

19. Derivative premium is the amount paid (acquired derivative) or received (written derivative) to enter into a derivative contract. At inception, the premium generally represents the fair value of the derivative. Derivative premium that is not paid or received at inception represents a liability or receivable for the reporting entity. Derivatives with premiums not remitted at acquisition are considered “financed derivatives.” Financed derivatives shall be reported in accordance with the following provisions:

a. At acquisition and subsequently, the gross reported fair value of the derivative shall exclude the impact of financing premiums. Only market changes in the actual fair value of the derivative shall be reflected as unrealized gains or losses.

b. At acquisition and subsequently, premiums payable (acquired derivative) and premiums receivable (written derivatives) shall be separately reported as “payable for securities” and “receivables for securities.”

c. If premium payable or receivable meet the requirement for a valid right of setoff with the derivative in accordance with SSAP No. 64, the derivative asset can be reduced by a premium payable, and a derivative liability can be reduced by a premium receivable for overall reporting on the balance sheet. This offset provision does not permit a derivative asset to be reported as a derivative liability (or vice versa) due to premium payable or receivable. Rather, once a derivative asset (or liability) is fully reduced by a premium liability (or receivable), any remaining premium liability (or receivable) shall be reported as a “payable for security” or “receivable for security” pursuant to paragraph 19.b. This net balance sheet reporting does not impact the gross presentation of open derivatives on Schedule DB-A or Schedule DB-B. If reported net on the balance sheet due to a valid right to offset, the offsetting adjustment shall be shown on schedule DB-D and the SSAP No. 64 disclosures are required.

---

1 This paragraph does not include derivative premium financing arrangements. Derivatives and financed premiums are subject to separate reporting as detailed in paragraph 19.
Recognition and Measurement of Derivatives Used in Hedging Transactions

48.20. Derivative instruments represent rights or obligations that meet the definitions of assets (SSAP No. 4—Assets and Nonadmitted Assets) or liabilities (SSAP No. 5R) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures (SSAP No. 27). Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 44-47 of SSAP No. 100—Fair Value (SSAP No. 100). Derivative instruments are admitted assets to the extent they conform to the requirements of this statement.

49.21. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting).

Staff Note: Paragraphs 22-38 not duplicated.

Documentation Guidance

39. At inception of the hedge, documentation must include:

a. A formal documentation of the hedging relationship and the entity’s risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument’s effectiveness in offsetting the exposure to changes in the hedged item’s fair value or variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument’s effectiveness;

b. An entity’s defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative’s change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 38 and Exhibit B;

c. Signature of approval, for each instrument, by person(s) authorized, either by the entity’s board of directors or a committee authorized by the board, to approve such transactions; and

d. A description of the reporting entity’s methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

Staff Note: Paragraphs 40-58 not duplicated.

---

\[\text{Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.}\]
Disclosure Requirements

59. Reporting entities shall disclose the following for all derivative contracts used:

h. For derivative contracts with financing premiums:

i. Disclose the aggregate, non-discounted total premium cost for these contracts and the premium cost due in each of the following four years, and thereafter. Also disclose include the aggregate fair value of derivative instruments with financing premiums excluding the impact of the deferred or financing premiums.

ii. For each derivative contract with financing premiums:

(a) Whether premium cost is paid throughout the contract, or at derivative maturity;
(b) Next premium cost payment date;
(c) Total premium cost;
(d) Premium cost paid in prior years;
(e) Current year premium cost paid;
(f) Future unpaid premium cost;
(g) Fair value of derivative, excluding impact of financing premiums; and
(h) Unrealized gain/loss, excluding impact of financing premiums.

Staff Note: With the proposed revisions to clarify gross reporting without financing premiums, these disclosures will not be considered necessary. Comments are requested whether it would be beneficial to retain these columns and capture the fair value of the derivative with the impact of financing premiums.

i. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)
Proposed Revisions to Schedule DB-D – Counterparty Exposure

As detailed in this agenda item, NAIC staff suggests consideration on whether premiums due to / from a counterparty should be used in determining the net derivative exposure. This approach would allow the clarifications for gross reporting (excluding financing derivatives) to not impact a life insurer’s RBC calculation for derivative activity as the financing premiums owed by the reporting entity would be considered similar to collateral received.

Below is a simplified version of Schedule DB-D with the potential column.

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
<th>4</th>
<th>New Column</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>

If this column was added, and the derivatives reported in column 5 and 6 were gross of financing premiums, the amount reported in column 7 would be determined as follows:

Column 7 – Exposure Net of Collateral (Book/Adjusted Carrying Value)

For the aggregate reporting of Exchange-Traded Derivatives (Line 0199999999), show the amount in Column 5.

For OTC counterparties, if no master agreement is in place, show the sum of the Book/Adjusted Carrying Values of all derivative instruments with the counterparty that has a positive Book/Adjusted Carrying Value, less any Acceptable Collateral and the Present Value of Financing Premiums (Column 5 – Column 4 – New Column).

For OTC counterparties with a master agreement in place and central clearinghouses, show the net sum of the Book/Adjusted Carrying Values of all derivative instruments, less any acceptable collateral and the present value of financing premiums (Column 5 + Column 6 – Column 4 – New Column).

This amount should not be less than zero.

For life insurance entities, the positive amount reported in column 7 is then accessed RBC based on the NAIC designation of the counterparty. When reporting the gross fair value of derivatives with capturing the financing premiums, the premiums due from or owed to the counterparty is factored into the calculation to reflect net counterparty exposure. This reporting will not impact P/C or Health entities (regardless if they engage in financing derivatives), as their RBC is based on derivative assets as reported on the balance sheet.
Status:
On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 86—Derivatives, as illustrated above, to clarify the reporting of derivatives with financing premiums. The reporting revisions propose allowing the present value of the derivative premium receivable (and payable) for financed derivatives to be factored into the counterparty risk assessment for life RBC. (If supported, RBC changes would be subsequently referred to the Capital Adequacy (E) Task Force for consideration.) Comments are also requested as to whether derivatives and related financing provisions that would generally not meet the SSAP No. 64—Offsetting and Netting of Assets and Liabilities right to offset criteria and if explicit guidance allowing offset should be considered.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item with slight revisions from the prior exposure (shaded) to delete the proposed new paragraph 19.c., as recommended by interested parties. The exposed revisions, as illustrated below, ensure consistency in the gross reporting of derivatives, without inclusion of financing components, and in reporting amounts owned to/from the reporting entity from the acquisition or writing of derivatives. With this exposure, a blanks proposal will be sponsored and notice of the proposed edits will be provided to the Capital Adequacy (E) Task Force. This item has a comment period deadline ending May 29, 2020.

Proposed Revisions to SSAP No. 86:

6. “Derivative Premium” is the cost to acquire or write a derivative contract. Derivative premium is not an “underlying” in a derivative contract and is not impacted by changes in an underlying interest of the derivative agreement. A derivative with contract terms that finance the derivative premium, so that the cost is paid or received throughout the derivative term or at derivative maturity, does not result with an “embedded derivative” addressed in paragraph 16.

Impairment

18. This statement adopts the impairment guidelines established by SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R) for the underlying financial assets or liabilities.

Derivative Premium (New Section – All Other Sections Renumbered Accordingly)

19. Derivative premium is the amount paid (acquired derivative) or received (written derivative) to enter into a derivative contract. At inception, the premium generally represents the fair value of the derivative. Derivative premium that is not paid or received at inception represents a liability or receivable for the reporting entity. Derivatives with premiums not remitted at acquisition are considered “financed derivatives.” Financed derivatives shall be reported in accordance with the following provisions:

a. At acquisition and subsequently, the gross reported fair value of the derivative shall exclude the impact of financing premiums. Only market changes in the actual fair value of the derivative shall be reflected as unrealized gains or losses.

b. At acquisition and subsequently, premiums payable (acquired derivative) and premiums receivable (written derivatives) shall be separately reported as “payable for securities” and “receivables for securities.”

c. If premium payable or receivable meet the requirement for a valid right of setoff with the derivative in accordance with SSAP No. 64, the derivative asset can be reduced by a premium payable, and a derivative liability can be reduced by a premium receivable for overall reporting on the balance sheet. This offset provision does not permit a derivative asset to be reported as a derivative liability (or vice versa) due to premium payable or receivable. Rather, once a derivative asset (or liability) is fully reduced by a premium...
liability (or receivable), any remaining premium liability (or receivable) shall be reported as a “payable for security” or “receivable for security” pursuant to paragraph 19.b. This net balance sheet reporting does not impact the gross presentation of open derivatives on Schedule DB-A or Schedule DB-B. If reported net on the balance sheet due to a valid right to offset, the offsetting adjustment shall be shown on schedule DB-D and the SSAP No. 64 disclosures are required.

Recognition and Measurement of Derivatives Used in Hedging Transactions

49.20. Derivative instruments represent rights or obligations that meet the definitions of assets (SSAP No. 4—Assets and Nonadmitted Assets) or liabilities (SSAP No. 5R) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures (SSAP No. 27). Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 44-47 of SSAP No. 100—Fair Value (SSAP No. 100). Derivative instruments are admitted assets to the extent they conform to the requirements of this statement.

20.21. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting)5.

Staff Note: Paragraphs 22-38 not duplicated.

Documentation Guidance

39. At inception of the hedge, documentation must include:

a. A formal documentation of the hedging relationship and the entity’s risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument’s effectiveness in offsetting the exposure to changes in the hedged item’s fair value or variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument’s effectiveness;

b. An entity’s defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative’s change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 38 and Exhibit B;

5 Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.
c. Signature of approval, for each instrument, by person(s) authorized, either by the entity's board of directors or a committee authorized by the board, to approve such transactions; and

d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

Staff Note: Paragraphs 40-58 not duplicated.

Disclosure Requirements

59. Reporting entities shall disclose the following for all derivative contracts used:

h. For derivative contracts with financing premiums:

i. Disclose the aggregate, non-discounted total premium cost for these contracts and the premium cost due in each of the following four years, and thereafter. Also disclose the aggregate fair value of derivative instruments with financing premiums excluding the impact of the deferred or financing premiums.

ii. For each derivative contract with financing premiums:

(a) Whether premium cost is paid throughout the contract, or at derivative maturity;
(b) Next premium cost payment date;
(c) Total premium cost;
(d) Premium cost paid in prior years;
(e) Current year premium cost paid;
(f) Future unpaid premium cost;

(g) Fair value of derivative, excluding impact of financing premiums; and

(h) Unrealized gain/loss, excluding impact of financing premiums.

Staff Note: With the proposed revisions to clarify gross reporting without financing premiums, these disclosures will not be considered necessary. Comments are requested whether it would be beneficial to retain these columns and capture the fair value of the derivative with the impact of financing premiums.

i. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with SSAP No. 64—Offsetting and Netting of Assets and Liabilities when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)

Proposed Revisions to Schedule DB-D – Counterparty Exposure

As detailed in this agenda item, NAIC staff suggests consideration on whether premiums due to / from a counterparty should be used in determining the net derivative exposure. This approach would allow the clarifications for gross reporting (excluding financing derivatives) to not impact a life insurer’s RBC calculation.
for derivative activity as the financing premiums owed by the reporting entity would be considered similar to collateral received.

Below is a simplified version of Schedule DB-D with the potential column.

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>

If this column was added, and the derivatives reported in column 5 and 6 were gross of financing premiums, the amount reported in column 7 would be determined as follows:

Column 7 – Exposure Net of Collateral (Book/Adjusted Carrying Value)
For the aggregate reporting of Exchange-Traded Derivatives (Line 0199999999), show the amount in Column 5.

For OTC counterparties, if no master agreement is in place, show the sum of the Book/Adjusted Carrying Values of all derivative instruments with the counterparty that has a positive Book/Adjusted Carrying Value, less any Acceptable Collateral and the Present Value of Financing Premiums (Column 5 – Column 4 – New Column).

For OTC counterparties with a master agreement in place and central clearinghouses, show the net sum of the Book/Adjusted Carrying Values of all derivative instruments, less any acceptable collateral and the present value of financing premiums (Column 5 + Column 6 – Column 4 – New Column).

This amount should not be less than zero.

For life insurance entities, the positive amount reported in column 7 is then accessed RBC based on the NAIC designation of the counterparty. When reporting the gross fair value of derivatives with capturing the financing premiums, the premiums due from or owed to the counterparty is factored into the calculation to reflect net counterparty exposure. This reporting will not impact P/C or Health entities (regardless if they engage in financing derivatives), as their RBC is based on derivative assets as reported on the balance sheet.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 86—Derivatives, as illustrated below, to ensure consistency in the gross reporting of derivatives without inclusion of financing components and in reporting amounts owed to/from the reporting entity from the acquisition or writing of derivatives. The adopted nonsubstantive revisions are effective Jan. 1, 2021 to allow for corresponding blanks changes. (Note – Changes in paragraphs from the prior exposure just showcase the adopted revisions in accordance with the current SSAP No. 86 paragraphs to reflect changes from other agenda items that revised SSAP No. 86.)
Adopted Revisions to SSAP No. 86:

6. "Derivative Premium" is the cost to acquire or write a derivative contract. Derivative premium is not an "underlying" in a derivative contract and is not impacted by changes in an underlying interest of the derivative agreement. A derivative with contract terms that finance the derivative premium, so that the cost is paid or received throughout the derivative term or at derivative maturity, does not result with an "embedded derivative" addressed in paragraph 16.

Impairment

17. This statement adopts the impairment guidelines established by SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R) for the underlying financial assets or liabilities.

Derivative Premium (New Section – All Other Sections Renumbered Accordingly)

18. Derivative premium is the amount paid (acquired derivative) or received (written derivative) to enter into a derivative contract. At inception, the premium generally represents the fair value of the derivative. Derivative premium that is not paid or received at inception represents a liability or receivable for the reporting entity. Derivatives with premiums not remitted at acquisition are considered "financed derivatives." Financed derivatives shall be reported in accordance with the following provisions:

a. At acquisition and subsequently, the gross reported fair value of the derivative shall exclude the impact of financing premiums. Only market changes in the actual fair value of the derivative shall be reflected as unrealized gains or losses.

b. At acquisition and subsequently, premiums payable (acquired derivative) and premiums receivable (written derivatives) shall be separately reported as "payable for securities" and "receivables for securities."

Recognition of Derivatives

48-19. Derivative instruments represent rights or obligations that meet the definitions of assets (SSAP No. 4—Assets and Nonadmitted Assets) or liabilities (SSAP No. 5R) and shall be reported in financial statements. In addition, derivative instruments also meet the definition of financial instruments as defined in SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures. Should the cost basis of the derivative instrument be undefined (i.e., no premium is paid), the instrument shall be disclosed in accordance with paragraphs 44-48 of SSAP No. 100R—Fair Value. Derivative instruments used in hedging, income generation or replication (synthetic asset) transactions shall be recognized and measured in accordance with the specific provisions within this statement and are admitted assets to the extent they conform to the requirements of this statement.

49-20. Derivative instruments that are not used in hedging, income generation or replication (synthetic asset) transactions shall be considered “Other” derivatives. These derivatives shall be accounted for at fair value and the changes in fair value shall be recorded as unrealized gains or losses. These derivatives do not qualify as admitted assets.

Derivatives Used in Hedging Transactions

20-21. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge
accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting) §.

Staff Note: Paragraphs 22-38 not duplicated.

Documentation Guidance

39. At inception of the hedge, documentation must include:

   a. A formal documentation of the hedging relationship and the entity’s risk management objective and strategy for undertaking the hedge, including identification of the hedging instrument, the hedged item, the nature of the risk being hedged, and how the hedging instrument’s effectiveness in offsetting the exposure to changes in the hedged item’s fair value or variability in cash flows attributable to the hedged risk will be assessed. There must be a reasonable basis for how the entity plans to assess the hedging instrument’s effectiveness;

   b. An entity’s defined risk management strategy for a particular hedging relationship may exclude certain components of a specific hedging derivative’s change in fair value, such as time value, from the assessment of hedge effectiveness, as discussed in paragraph 38 and Exhibit B;

   c. Signature of approval, for each instrument, by person(s) authorized, either by the entity’s board of directors or a committee authorized by the board, to approve such transactions; and

   d. A description of the reporting entity's methodology used to verify that opening transactions do not exceed limitations promulgated by the state of domicile.

Staff Note: Paragraphs 40-58 not duplicated.

Disclosure Requirements

60. Reporting entities shall disclose the following for all derivative contracts used:

   h. For derivative contracts with financing premiums:

      i. Disclose the aggregate, non-discounted total premium cost for these contracts and the premium cost due in each of the following four years, and thereafter. Also disclose include the aggregate fair value of derivative instruments with financing premiums excluding the impact of the deferred or financing premiums.

      ii. For each derivative contract with financing premiums:

         (a) Whether premium cost is paid throughout the contract, or at derivative maturity;

         (b) Next premium cost payment date;

         (c) Total premium cost;

§ Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.
(d) Premium cost paid in prior years;
(e) Current year premium cost paid;
(f) Future unpaid premium cost;
(g) Fair value of derivative, excluding impact of financing premiums; and
(h) Unrealized gain/loss, excluding impact of financing premiums.

i. All derivatives are required to be shown gross on Schedule DB. However, derivatives may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with SSAP No. 64—**Offsetting and Netting of Assets and Liabilities** when a valid right to offset exists. Derivatives offset in accordance with SSAP No. 64 and reported net in the financial statement shall follow the disclosure requirements in SSAP No. 64, paragraph 6. (Derivative Assets and Derivative Liabilities reported on the balance sheet shall agree to columns 5 and 6, respectively, after netting, on Schedule DB – Part D – Section 1.)

**Effective Date and Transition**

71. This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used. Revisions adopted to paragraph 62 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.) Revisions adopted in paragraph 15 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.) Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 63) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define “derivative premium,” require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2020.

1. The first proposal was to rename the “U.S. Direct Obligations/Full Faith and Credit Exempt List” to the “NAIC U.S. Government Money Market Fund List.” No revisions to the NAIC Accounting Practices and Procedures (AP&P) Manual would be required, as this list is not specifically identified. (Revisions would likely be needed in the Blanks and RBC filings / instructions.)

2. The second proposal was to discontinue the “NAIC Bond Fund List.” Items which were on this list would be eligible for consideration for the “NAIC Fixed Income-Like SEC Registered Funds List.” The discontinuance of usage of the NAIC Bond Fund List will require an update in the AP&P Manual. (Although the “bond list,” this listing requires 100% government securities in the fund.)

Edited excerpt from the VOSTF referral:
The NAIC Bond Fund List (Bond List), published monthly by the SVO, is a list limited to funds that maintain the highest credit quality rating, maintain the highest market risk rating, and invests 100% of its total assets in U.S. Government securities along with several other restrictive criteria. Only four funds qualify for this list and only four insurers invest in any of the funds. According to the SVO, a combined exposure of $11.8 million BACV was noted in any of the four qualifying funds as of December 31, 2018. Given the limited number of insurers investing in these specific funds, the SVO proposed eliminating this list when the four funds come up for renewal in 2020. Upon renewal, the funds on the NAIC Bond Fund List would be eligible for the “NAIC Fixed Income-Like SEC Registered Funds List.” Elimination of the “bond fund list” would result in migrating these funds over to the NAIC Fixed Income-Like SEC Registered Funds List, which will be reported on Schedule D, Part 2 under SSAP No. 30R – Unaffiliated Common Stock.

Existing Authoritative Literature:
The Bond List is specifically noted in two SSAP’s as detailed below:

SSAP No. 26R—Bonds

3. Bonds shall be defined as any securities representing a creditor relationship, whereby there is a fixed schedule for one or more future payments. This definition includes:

   a. U.S. Treasury securities;
   b. U.S. government agency securities;
c. Municipal securities;

d. Corporate bonds, including Yankee bonds and zero-coupon bonds;

e. Convertible bonds, including mandatory convertible bonds as defined in paragraph 11.b;

f. Fixed-income instruments specifically identified:
   i. Certifications of deposit that have a fixed schedule of payments and a maturity date in excess of one year from the date of acquisition;
   ii. Bank loans issued directly by a reporting entity or acquired through a participation, syndication or assignment;
   iii. Hybrid securities, excluding: surplus notes, subordinated debt issues which have no coupon deferral features, and traditional preferred stocks.
   iv. Debt instruments in a certified capital company (CAPCO)

4. The definition of a bond, per paragraph 3, does not include equity/fund investments, such as mutual funds or exchange-traded funds. However, the following types of SVO-identified investments are provided special statutory accounting treatment and are included within the scope of this statement. These investments shall follow the guidance within this statement, as if they were bonds, unless different treatment is specifically identified in paragraphs 23-29.

   a. Exchange traded funds (ETFs), which qualify for bond treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org. (SVO-identified ETFs are reported on Schedule D – Part 1.)

   b. Bond mutual funds which qualify for the Bond List, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org. (SVO-identified bond mutual funds are reported on Schedule D – Part 1.)

**SSAP No. 30R—Unaffiliated Common Stock**

3. Common stocks (excluding investments in affiliates) are securities which represent a residual/subordinate ownership in a corporation. This definition includes:

   a. Publicly traded common stocks;

   b. Common stocks that are not publicly traded; and

   c. Common stocks restricted as to transfer of ownership

4. In addition, the following equity investments are captured within scope of this statement:

   a. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York or NASDAQ exchange;

   b. Publicly traded common stock warrants;

   c. Shares of SEC registered Investment Companies captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit
investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks), except for Bond Mutual Funds which qualify for bond treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org;

d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org; and

e. Foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction. Other foreign funds are excluded from the scope of this statement.

f. Equity interests in certified capital companies in accordance with INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to 1) SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock to eliminate references to the NAIC Bond Fund List (Bond List) and 2) add reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R.

Although the Working Group is recommended to proceed with exposure on this agenda item and solicit comments for consideration, final action and determination of an effective date will not occur until revisions have first been adopted by the Valuation of Securities (E) Task Force. NAIC SAPWG staff will coordinate with the VOSTF staff to stay current on their discussion and action on this item. NAIC staff also notes that referrals to the Blanks (E) Working Group and the Capital Adequacy (E) Task Force will be needed to reflect the title change in Blanks and RBC.

NAIC staff also highlights that the reference to the SVO “bond fund list” often causes confusion as this listing only includes funds with 100% of their investments in U.S. Government Securities. If the action to delete the listing does not occur at the Task Force, NAIC staff would recommend that the listing name be revised to reflect the “U.S. Government Fund” to eliminate confusion through reference as a “bond fund” listing.

Proposed Revisions to SSAP No. 26R—Bonds

4. The definition of a bond, per paragraph 3, does not include equity/fund investments, such as mutual funds or exchange-traded funds. However, the following types of SVO-identified investments are provided special statutory accounting treatment and are included within the scope of this statement. These investments shall follow the guidance within this statement, as if they were bonds, unless different treatment is specifically identified in paragraphs 23-29.
Proposed Revisions to SSAP No. 30R—Unaffiliated Common Stock

4. In addition, the following equity investments are captured within scope of this statement:

a. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York or NASDAQ exchange;

b. Publicly traded common stock warrants;

c. Shares of SEC registered Investment Companies captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks), including shares of funds referenced in the “NAIC Fixed Income-Like SEC Registered Funds List” as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org; except for Bond Mutual Funds which qualify for bond treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org;

d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in Part Three of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page of www.NAIC.org; and

e. Foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction. Other foreign funds are excluded from the scope of this statement.

f. Equity interests in certified capital companies in accordance with INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO).

Staff Review Completed by: Jim Pinegar, NAIC Staff – January 2020

Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock, as detailed above, to eliminate references to the NAIC Bond Fund List. The revisions also add reference to the “NAIC Fixed-Income Like SEC Registered Funds List” in SSAP No. 30R. This item has a shortened comment period deadline ending May 1, 2020.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, nonsubstantive revisions to SSAP No. 26R—Bonds and SSAP No. 30R—Unaffiliated Common Stock, as illustrated above under proposed revisions, to eliminate references to the NAIC Bond Fund List (Bond List) in SSAP No. 26R—Bonds and add reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R—Unaffiliated Common Stock.

Issue: Commissioner Discretion in the Valuation Manual

Check (applicable entity):

- Modification of Existing SSAP
- New Issue or SSAP
- Interpretation

P/C  | Life  | Health
---|-------|-------
| X    |       | X     |

Description of Issue:
The Valuation Manual became operative on January 1, 2017 and is required to be used for all applicable products effective January 1, 2020. This agenda item has been drafted to maintain comparability by providing disclosures regarding the use of commissioner discretion pursuant to the Valuation Manual.

The Authoritative Literature section in the agenda item has examples of items that require commissioner approval in the Valuation Manual. The items involve making a voluntary choice between various acceptable methods, which is subject to commissioner approval. The identified instances in the Valuation Manual are consistent with a change in valuation basis. Examples identified may include characteristics similar to the following:

1. Voluntarily moving between different commonly accepted methods of determining an amount;
2. The change of method is generally infrequent;
3. Changing methods is a voluntary choice, not an automatic change required by the methodology;
4. Change in valuation which must be typically justified to the commissioner prior to approval.

Because these changes are voluntary and not required to change by the methodology, this agenda item recommends disclosing the use of commissioner discretion required for choosing between acceptable methods, consistent with a change in valuation basis.

Existing Authoritative Literature:

SSAP No. 3—Accounting Changes and Corrections of Errors

Change in Accounting Principle

3. A change in accounting principle results from the adoption of an accepted accounting principle, or method of applying the principle, which differs from the principles or methods previously used for reporting purposes. A change in the method of applying an accounting principle shall be considered a change in accounting principle.

4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more statutory accounting principles. However, a change in accounting principle is neither (a) the initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or previously immaterial in their effect, nor (b) the adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring.
5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

1 If additional changes are identified in subsequent quarters of a fiscal year related to a change in accounting principles recognized initially during the first quarter, such changes shall be considered part of the cumulative effect of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods. For example, adjustments to an amount recorded as of January 1, 2001, would be recorded as changes in accounting principle rather than corrections of an error through the period of 2001.

**SSAP No. 51R—Life Contracts**

22. For life and annuity policies issued on or after the operative date of the *Valuation Manual*, reserves shall use the requirements of the *Valuation Manual*. As required by Appendix A-820, reserves are required to be determined using the methodologies and processes described in the *Valuation Manual*. For policies unable to meet the *Valuation Manual* criteria for exemption from deterministic or stochastic reserves, the *Valuation Manual* supplants formulaic life insurance policy reserve methodologies with more advanced deterministic and stochastic reserve methodologies to produce reserves that better reflect company experience, possible economic conditions and inherent policy risks.

**Change In Valuation Basis**

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLI—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

   a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.

   b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus
(under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement prescribes a new method and a specific transition that allows for grading. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. The Valuation Manual is effective prospectively for policies written on or after the operative date. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

SSAP No. 52—Deposit-Type Contracts

Change In Valuation Basis

14. A change in valuation basis shall be defined as a change in the interest rate assumption or other factor affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a specific transition that allows for grading.

SSAP No. 54R—Individual and Group Accident and Health Contracts

12. The reserving methodologies and assumptions used in calculating individual and group accident and health reserves shall meet the provisions of Appendices A-010, A-641, A-820, A-822 (as applicable), the Valuation Manual and the actuarial guidelines found in Appendix C of this Manual (as applicable). Further, policy reserves shall be in compliance with those Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

Change In Valuation Basis

22. A change in valuation basis shall be defined as a change in the interest rate, mortality and morbidity assumptions, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3). Changing morbidity assumptions regarding the length of claim continuance based on regularly updated credible experience as required for products subject to Actuarial Guideline XLVII—The Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table (AG 47) and Actuarial Guideline L—2013 Individual Disability Income Valuation Table (AG 50) are not considered a change in valuation basis. Other uses of regularly updated credible experience required to be used for morbidity assumptions by Appendix A-010 regarding continuing claim payments are generally not considered a change in valuation basis. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.
line for life, accident and health, and health reporting entities) rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in this paragraph, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. This difference shall not be graded in over time unless this statement prescribes a new method and a specific transition that allows for grading.

The *Valuation Manual* is referenced in the following places in the *Accounting Practices and Procedures Manual*:

- SSAP No. 51R—Life Contracts
- SSAP No. 54R—Individual and Group Accident and Health Contracts
- SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees
- Appendix A-010: Minimum Reserve Standards for Individual and Group Health Insurance Contracts
- Appendix A-820: Minimum Life and Annuity Reserve Standards
- Appendix C- Actuarial Guidelines-- Multiple Places

The *Valuation Manual* provides the following instances of commissioner discretion:

**VM-20**

Section 9C3d(iii)

iii. In taking into account factors that are not recognized in the Relative Risk Tool, a company may, to the extent it can justify, adjust the industry basic tables up or down two Relative Risk Tables from that determined by application of the Relative Risk Tool. Further adjustments to reflect risk characteristics not captured within the Relative Risk Tool may be allowed upon approval by the insurance commissioner.

Section 9C5a

For valuations in which the industry basic mortality table is the 2015 VBT, determine an aggregate level of credibility following either the Limited Fluctuation Method by amount, such that the minimum probability is at least 95% with an error margin of no more than 5% or Bühlmann Empirical Bayesian Method by amount. Once chosen, the credibility method must be applied to all business subject to VM20 and requiring credibility percentages. A company seeking to change credibility methods must request and subsequently receive the approval of the insurance commissioner. The request must include the justification for the change and a demonstration of the rationale supporting the change.

**VM-21 (Note that agenda item 2019-47 addresses this exercise of discretion).**

Section 2B

These requirements apply for valuation dates on or after Jan. 1, 2020. A company may elect to phase in these requirements over a 36-month period beginning Jan. 1, 2020. A company may elect a longer phase-in period, up to seven years, with approval of the domiciliary commissioner. The election of whether to phase in and the period of phase-in must be made prior to the Dec. 31, 2020, valuation. At the company's option, a phase-in may be terminated prior to the originally elected end of the phase-in period; the reserve would then be equal to the unadjusted reserve calculated according to the requirements of VM-21 applicable for valuation dates on or after Jan. 1, 2020. If there is a material decrease in the book of business by sale or reinsurance ceded, the company shall adjust the amount of the phase-in provision. The phase-in...
in amount \((C = R1 - R2, \text{ as described below})\) must be scaled down in proportion to the reduction in the excess reserve, measured on the effective transaction date as the reserve amount in excess of cash surrender value before and after the impact of the transaction. The company must obtain approval for any other modification of the remaining phase-in amount. The method to be used for the phase-in calculation is as follows.

Section 2C - The Additional Standard Projection Amount

The additional standard projection amount is determined by applying one of the two standard projection methods defined in Section 6. The same method must be used for all contracts within a group of contracts that are aggregated together to determine the reserve, and the additional standard projection amount excluding any contracts whose reserve is determined using the Alternative Methodology. The company shall elect which method they will use to determine the additional standard projection amount. The company may not change that election for a future valuation without the approval of the domiciliary commissioner.

Section 3E - Alternative Methodology

For a group of variable deferred annuity contracts that contain either no guaranteed benefits or only GMDBs—i.e., no VAGLBs—the reserve may be determined using the Alternative Methodology described in Section 7 rather than using the approach described in Section 3.C and Section 3.D. However, in the event that the approach described in Section 3.C and Section 3.D has been used in prior valuations for that group of contracts, the Alternative Methodology may not be used without approval from the domiciliary commissioner.

Section 4A4a(ii)b - Modeling of Hedges

a. For a company that does not have a CDHS:

i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling.

ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets. The hedge assets may then be considered in one of two ways:

a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or

b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy. A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

Section 6B2

The company shall determine the Prescribed Projections Amount by following either the CSMP Method or the CTEPA Method below. A company may not change the method used from one valuation to the next without the approval of the domiciliary commissioner.
Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Several updates to the Accounting Practices and Procedures Manual were adopted to address the operative date of the Valuation Manual.

- 2015-47: PBR SSAP
- 2016-10: Changes to A-820 Standard Valuation Law for Principle-based Reserving
- 2016-15: Change in Valuation Basis for Life Contracts
- 2016-34: Health Valuation Manual Updates
- 2016-17: A-010 Minimum Reserve Standards for Individual and Group Health Insurance Contracts

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts and SSAP No. 54R—Individual and Group Accident and Health Contracts as illustrated below. The proposed disclosure notes that voluntary decisions to choose one allowable reserving methodology over another, which require commissioner approval under the Valuation Manual shall be reported as a change in valuation basis. As part of the coordination process with the Valuation Manual, the Life Actuarial (A) Task Force should also be notified of the exposure.

Proposed revisions for Spring 2020 Discussion:

SSAP No. 51R—Life Contracts:

Change In Valuation Basis

36. A change in valuation basis for reserves determined under paragraphs 18-21, except for reserves defined under Actuarial Guideline XLIII—CARVM: For Variable Annuities (AG 43), as detailed in Appendix C of this Manual, shall be defined as a change in the interest rate, mortality assumption, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—Accounting Changes and Corrections of Errors (SSAP No. 3).

37. Changes in reserves developed under paragraph 22 or AG 43 shall be reviewed to determine whether the change represents a change in valuation basis and if it meets the definition of a change in accounting as defined in SSAP No. 3.

a. Changes in principle-based reserving assumptions are often the result of updating assumptions and other factors required by the existing reserving methodology. Reserve changes resulting from the application of principle-based reserving methodology including, but not limited to, updating assumptions based on reporting entity, industry or other experience, and having the reported reserve transition between net premium reserve, deterministic reserve or stochastic reserve, as required under existing guidance, shall not be considered a change in valuation basis. These types of changes also include, but are not limited to, periodic updates in Valuation Manual tables, such as industry valuation basic tables, asset spread tables and default cost tables.
b. A change in valuation basis for principle-based reserves shall include cases where the required reserve methodology has changed or the insurer makes a voluntary decision to choose one allowable reserving method over another. These types of changes include, but are not limited to, new standardized mortality tables such as Commissioners Standard Ordinary tables and regulatory changes in methodology. Voluntary decisions to choose one allowable reserving methodology over another, which require commissioner approval under the *Valuation Manual* shall be reported as a change in valuation basis.

38. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line) rather than as a part of the reserve change recognized in the summary of operations.

39. The impact of a change in valuation basis on surplus is based on the difference between the reported reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless this statement prescribes a new method and a specific transition that allows for grading. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in paragraphs 36-38 of this statement, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies inforce for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. The Valuation Manual is effective prospectively for policies written on or after the operative date. Therefore, upon the initial prospective adoption of principle-based reserving, the change in valuation basis reflected as an adjustment to surplus will be zero. After initial adoption of the Valuation Manual, changes in valuation basis will need to be evaluated to determine the amount of any surplus adjustments.

**SSAP No. 52—Deposit-Type Contracts:**

**Change In Valuation Basis**

14. A change in valuation basis shall be defined as a change in the interest rate assumption or other factor affecting the reserve computation of policies inforce and meets the definition of an accounting change as defined in SSAP No. 3—*Accounting Changes and Corrections of Errors*. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. This difference shall not be graded in over time unless an actuarial guideline adopted by the NAIC prescribes a specific transition that allows for grading. Voluntary decisions to choose one allowable reserving methodology over another, which require commissioner approval under the *Valuation Manual* shall be reported as a change in valuation basis.

**SSAP No. 54R—Individual and Group Accident and Health Contracts:**

**Change In Valuation Basis**

22. A change in valuation basis shall be defined as a change in the interest rate, mortality and morbidity assumptions, or reserving method (e.g., net level, preliminary term, etc.) or other factors affecting the reserve computation of policies in force and meets the definition of an accounting change as defined in SSAP No. 3—*Accounting Changes and Corrections of Errors* (SSAP No. 3). Changing morbidity assumptions regarding the length of claim continuance based on regularly updated credible experience as required for products subject to Actuarial Guideline XLVII—The Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table (AG 47) and
Actuarial Guideline L—2013 Individual Disability Income Valuation Table (AG 50) are not considered a change in valuation basis. Other uses of regularly updated credible experience required to be used for morbidity assumptions by Appendix A-010 regarding continuing claim payments are generally not considered a change in valuation basis. Voluntary decisions to choose one allowable reserving methodology over another, which require commissioner approval under the *Valuation Manual* shall be reported as a change in valuation basis. Consistent with SSAP No. 3, any increase (strengthening) or decrease (destrengthening) in actuarial reserves resulting from such a change in valuation basis shall be recorded directly to surplus (under changes to surplus in the change in valuation basis annual statement line for life, accident and health, and health reporting entities) rather than as a part of the reserve change recognized in the summary of operations. The impact on surplus is based on the difference between the reserve under the old and new methods as of the beginning of the year. Some changes will meet the definition of a change in accounting as defined in SSAP No. 3 and a change in valuation basis as described in this paragraph, but the adjustment to surplus will be zero. This can happen when the change in valuation basis is prospective and only applies to new policies and reserves meaning that policies in force for the prior year-end are not affected, or situations in which the change in reserving methodology did not change the reserves reported in the financial statements. The changes remain subject to the disclosures prescribed in SSAP No. 3. This difference shall not be graded in over time unless this statement prescribes a new method and a specific transition that allows for grading.

Robin Marcotte - NAIC Staff
February 2020

**Status:**
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts* and *SSAP No. 54R—Individual and Group Accident and Health Contracts*, as illustrated above, to note that voluntary decisions to choose one allowable reserving methodology over another, which requires commissioner approval under the *Valuation Manual*, shall be reported as a change in valuation basis. A notification of this exposure will be sent to the Life Actuarial (A) Task Force. This item has a comment period deadline ending May 29, 2020.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, nonsubstantive revisions to *SSAP No. 51R—Life Contracts, SSAP No. 52—Deposit-Type Contracts* and *SSAP No. 54R—Individual and Group Accident and Health Contracts*, as illustrated above, to specify that voluntary decisions to choose one allowable reserving methodology over another, which require commissioner approval under the *Valuation Manual*, shall be reported and disclosed as a change in valuation basis. This revision is effective immediately.
