SSAP No. 106—Affordable Care Act Section 9010 Assessment addresses the Affordable Care Act (ACA) Section 9010 assessment for entities that issue health insurance. This assessment was effective for calendar years beginning on January 1, 2014. This assessment is also known as the health insurer’s tax (HIT).

The Section 9010 assessment has had more than one moratorium, as addressed in INT 18-02: ACA Section 9010 Assessment Moratoriums. The following is a history of years in which the assessment was in effect and payable:

- 2014 – Paid
- 2015 – Paid
- 2016 – Paid
- 2017 – NOT Paid - Moratorium
- 2018 – Paid
- 2019 – NOT Paid - Moratorium
- 2020 – To Be Paid
- 2021 – Repealed

The assessment is required to be paid for calendar year 2020. In December 2019, the House of Representatives and Senate passed year-end spending bills which repealed the Section 9010 assessment for calendar years beginning January 1, 2021. This bill was subsequently signed into law. This agenda item addresses the impacts of the repeal for calendar years beginning on January 1, 2021 by recommending the following actions:

- Superseding SSAP No. 106—Affordable Care Act Section 9010 Assessment
- Nullifying INT 18-02: ACA Section 9010 Assessment Moratoriums

Existing Authoritative Literature:

- SSAP No. 106—Affordable Care Act Section 9010 Assessment
- INT 18-02: ACA Section 9010 Assessment Moratoriums

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Although prior one-year moratoriums have been discussed by the Working Group, this is the first discussion of a repeal.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Recommendation:
NAIC Staff recommends that the Working Group move this item to the active listing, categorized as substantive and expose the intent to supersede SSAP No. 106—Affordable Care Act Section 9010 Assessment and nullify INT 18-02: ACA Section 9010 Assessment Moratoriums. Both actions are proposed to be effective January 1, 2021. With these actions, both SSAP No. 106 and INT 18-02 would be moved to Appendix H - Superseded Statements of Statutory Accounting Principles and Nullified Interpretations for the 2021 publication of the NAIC Accounting Practices and Procedures Manual.

With these actions, NAIC staff should also be directed to coordinate the related impacts with the following NAIC Groups:

1. Blanks (E) Working Group – Ensure the annual statement disclosures related to SSAP No. 106 currently reported in Note 22 are removed from the annual statement instructions and annual statement blank beginning in reporting years 2021.

Staff Review Completed by:
Robin Marcotte - NAIC Staff
February 2020

Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the intent to supersede SSAP No. 106—Affordable Care Act Section 9010 Assessment and nullify INT 18-02: ACA Section 9010 Assessment Moratoriums which would move both SSAP No. 106 and INT 18-02 to Appendix H—Superseded Statements of Statutory Accounting Principles and Nullified Interpretations, effective Jan. 1, 2021. This item has a comment period deadline ending May 29, 2020.

Referrals will be sent to the Blanks (E) Working Group, to ensure the annual statement disclosures related to SSAP No. 106 in Note 22 are removed from the annual statement instructions and annual statement blank beginning in reporting year 2021, and to the Health Risk Based Capital (E) Working Group for RBC implications related to the 2021 removal of the federal ACA adjustment sensitivity test which uses data from the SSAP No. 106 disclosures.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, substantive revisions to supersede SSAP No. 106—Affordable Care Act Section 9010 Assessment and to nullify INT 18-02: ACA Section 9010 Assessment Moratoriums. This action will move this guidance to Appendix H—Superseded SSAPs and Nullified INTs of the Accounting Practices and Procedures Manual. A proposal will be sent to the Blanks (E) Working Group to incorporate reporting changes for 2021 reporting. NAIC staff will also draft additional instructions on how to complete the disclosure for year-end 2020 as there will not be an ACA fee assessment in 2021. This instruction will be posted as additional narrative guidance on the Blanks (E) Working Group webpage.

**Issue: Health Industry Request on 2020 Health Insurance Assessment**

**Check (applicable entity):**

- [ ] Modification of Existing SSAP
- [ ] New Issue or SSAP
- [X] Interpretation

**Description of Issue:**
This agenda item addresses an April 2020 request from America’s Health Insurance Plans (AHIP) to the Statutory Accounting Principles (E) Working Group regarding SSAP No. 106—Affordable Care Act Section 9010 Assessment. The ACA Section 9010 fee is also known as the health insurance tax (HIT). The payable amount is based on the volume of premium from 2019, and becomes due once the reporting entity provides health insurance in January 2020. Under SSAP No. 106, the amount payable which is based on prior year premium is disclosed in special surplus during the “data year” and reported as a liability during the “fee year.” The year 2020 is a fee year and the assessment based on 2019 premium is due to the U.S. Treasury in September 2020.

A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities have issued “stay home” orders and forced all non-essential businesses to temporarily close. This has led to a significant increase in unemployment and, in certain states, mandatory closure of many businesses. NAIC staff agrees that the COVID-19 crisis is placing stress on the insurance industry and is supportive of some temporary relaxation of conservatism in statutory accounting such as the proposed relaxation of the 90-day rule as currently exposed interpretation related to COVID-19, such as: INT 20-02T: Extension of Ninety-Day Rule for the Impact of COVID-19.

The SSAP No. 106 request is noted as temporary surplus relief, which was requested in conjunction with many concessions that health plans are being asked to make due to the anticipated impacts on operations and surplus. The AHIP request notes that, “For some members, the HIT liability to be reported as a liability and expense in the first quarterly interim reports is estimated to be 10% of group-wide surplus.”

The key accounting changes requested in the AHIP letter are as follows:

- Amend SSAP No. 106 to permit insurers to accrue the tax liability on a monthly or quarterly basis. However, to the extent that health plans have recognized in 2019 earned premium amounts attributable to inclusion of the HIT in determining premium rates, that amount will be accrued as a liability and a corresponding expense at the beginning of 2020; the difference between that amount and the total estimated HIT to be paid in 2020 would then be accrued on a monthly or quarterly basis through September 2020.
- For first and second quarterly interim reporting in 2020, the portion of the estimated tax that has not yet been accrued will remain in special surplus to clearly document its designated purpose.
- Because the full amount of the HIT will be accrued when paid in September 2020, there will be no impact on year-end 2020 reporting or RBC filings.
NAIC staff notes that the Section 9010 fee due in September 2020 meets the definition of a liability under SSAP No.5R—Liabilities, Contingencies and Impairments of Assets for the full amount on January 1, 2020. It is a present duty payable in September 2020; there is no discretion to avoid payment, and the obligating events (providing health insurance in 2020 and writing premium in 2019) have already occurred.

Existing Authoritative Literature:

- **SSAP No. 5 – Revised—Liabilities, Contingencies and Impairments of Assets**

  2. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable\(^1\) future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

\(^1\) FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

- **SSAP No. 106—Affordable Care Act Section 9010 Assessment**

Determining timing of the recognition of the Section 9010 liability was a matter of extensive debate at the Statutory Accounting Principles (E) Working Group. This issue was initially discussed in November 2011 through June 2014 when SSAP No. 106 was adopted. As noted in Issue Paper No. 148—Affordable Care Act Section 9010 Assessment, this topic was discussed at the Statutory Accounting Principles (E) Working Group with input from the Financial Condition (E) Committee. In addition, the Health Insurance and Managed Care (B) Committee and the Accounting Practices and Procedures (E) Task Force were invited to participate in a number of the discussions via conference call.

The issue debated was whether to recognize the amount payable in the data year, which is the year the premium volume used to calculate the assessment payable is written, or in the fee year when the assessment is paid. Because this amount seemed to function similar to premium tax which is accrued when the premium is written, one side was supportive of accruing the liability in the data year. However, because of how the law was written, in that it applied to health insurers’ data year premium but was due from issuers that provided subject health business in the fee year, the other side believed the liability should be recognized in the fee year.

SSAP No. 106 ultimately delayed full recognition of the expense and liability until the Jan. 1 of the fee year, with the additional transparency of having the amount reflected in special surplus during the data year. In addition, the impact on risk-based capital as of January 1 of the fee year was disclosed in the data year financial statements. This following excerpt from SSAP No. 106 was part of an extensive compromise process.

**Affordable Care Act Section 9010 Assessment**

3. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity’s portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity’s subject net health premiums written for any U.S. health
risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. The guidance in this statement applies to all reporting entities that are subject to the fee. The guidance in this statement applies to the unique facts and circumstances in the ACA; accordingly, an entity should apply judgment when evaluating the facts and circumstances of other assessments arrangements before analogizing the guidance for Section 9010 of the ACA.

4. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:
   a. The term “data year” means the calendar year immediately before the fee year. For example, 2014 is the data year for fee year 2015.
   b. The term “fee year” means the calendar year in which the assessment must be paid to the U.S. Treasury.

5. A reporting entity’s portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.

6. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees (INT 18-02)

7. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.

8. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in SSAP No. 71—Policy Acquisition Costs and Commissions.

Disclosures

9. For the Section 9010 ACA assessment:
   a. For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under SSAP No. 9—Subsequent Events (SSAP No. 9) for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.
   b. Additionally, for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 9.a. is expanded to include information on the amounts reflected in special surplus in the data year.
The reporting entity shall disclose the amount of premium written for the current year that is the basis for the determination of the section 9010 fee assessment to be paid in the subsequent year (net assessable premium). Prior year amounts shall also be included for comparative purposes;

Reporting entities shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable in the upcoming year (current and prior year) and the amount of assessment paid (current and prior year), and;

The disclosure shall also provide the Total Adjusted Capital (before and after adjustment as reported in its estimate of special surplus applicable to the 9010 fee) and Authorized Control Level (in dollars) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

The Section 9010 fee was repealed effective January 1, 2021. The Working Group currently has agenda item 2020-05: Repeal of Affordable Care Act Section 9010 Assessment exposed for comment, which would nullify SSAP No. 106 effective January 1, 2021.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Staff Review Completed by:
Robin Marcotte - NAIC Staff
April 7, 2020

Staff Recommendation:
AHIP requests an amendment to SSAP No. 106—Affordable Care Act Section 9010 Assessment to delay liability recognition of the Section 9010 fee payable in September 2020. The request would remove the requirement to recognize the full amount of liability on January 1, 2020 and instead recognize amounts not previously collected as a liability monthly or quarterly over 2020. NAIC staff has been proactive in drafting responses to requests to allow temporary relaxation of the statutory accounting conservative rules in response to COVID-19 including INT 20-02: Extension of Ninety-Day Rule for the Impact of COVID-19. However, NAIC staff is concerned with the material distortions to the financial statements that could occur by delaying liability recognition.

NAIC staff recommends that the Working Group reject the AHIP request to modify SSAP No. 106 for all reporting entities and move this item to the rejected listing for the following reasons:

1. The 2020 Section 9010 fee / HIT meets the definition of a liability requiring full recognition under SSAP No. 5R on January 1, 2020. It is a present duty payable in September 2020, there is no discretion to avoid
payment, and the obligating events (writing premium in 2019 and providing health insurance in 2020) have already occurred. In addition, the amount can be reasonably estimated.

2. It would, therefore, be distorting to the financial statements to not recognize a liability. In the comment letter provided, it was noted that for one group the Section 9010 fee payable represents over 10% of surplus. In this instance, it would be materially distorting to the financial statements to not recognize the liability.

3. The 2020 Section 9010 fee payable amount was also disclosed in the notes at year end 2019 along with the impact on surplus and risk-based capital (RBC). So, it is a known and previously disclosed amount.

4. Recording a monthly amount is inconsistent with the cash flows. Almost all of this assessment should have been collected in 2019 as it was included in the 2019 health rates. The vast majority of the obligation would have been collected as part of 2019 premium and even if there was a delay, amounts related to 2019 should have been collected prior to the declaration of emergency.

As noted above, this request has the potential to materially distort the financial statements, as a known liability would not be fully recognized. In times of financial stress, it is important to be able to accurately assess the financial solvency of reporting entities. With the potential impact of the financial statements, any consideration for such a request warrants domiciliary state regulator review. Any state specific considerations would be either permitted practices (individual requests) or prescribed practices (state bulletins, etc.). If granted by the domestic state, such practices would be disclosed in the financial statements.

Status:

On April 17, 2020, the Statutory Accounting Principles (E) Working Group conducted an e-vote to expose this agenda item for a one-week comment period ending on April 24, 2020. The exposed recommendation is to reject the request to defer liability recognition of the federal ACA fee due in September 2020 and move the agenda item to the rejected listing. The exposure would not result in any statutory accounting revisions.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group rejected this agenda item without statutory revisions.
Maintenance updates provide revisions to the *Accounting Practices and Procedures Manual*, such as editorial corrections, reference changes and formatting.

</tr>
</tbody>
</table>

**Recommendation:**
NAIC staff recommends that the Statutory Accounting Principles (E) Working Group move this agenda item to the active listing, categorized as nonsubstantive, and expose editorial revisions, as illustrated below.

**SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments**

Staff Note: A separate agenda item is being proposed to clarify that “disclosure” of cash equivalents that remain on schedule E2 for more than one consecutive reporting period. This item will also clarify that this disclosure is satisfied by a code on the investment schedule. (These revisions are in line with comments received during the May 20 conference call but go beyond editorial revisions.)

9. Cash pooling is a technique utilized by some companies under common control by which several entities’ cash accounts are aggregated for numerous purposes, including liquidity management, optimizing interest or investment returns and reducing investment or banking transaction fees. Cash pools can have numerous functions and structures; however, only those that have obtained domiciliary regulator approval and meet the following requirements are in scope of this statement.

   a. Members or participants in the pool are limited to affiliated entities as defined in SSAP No. 25—*Affiliates and Other Related Parties*.

   b. Investments held by the pool are limited to non-affiliated entities investments (non-affiliated to the insurance reporting entity).

   c. The pool must permit each participant to withdraw, at any time, cash up to the amount it has contributed to the pool. Each participant must own an undivided interest in the underlying assets of the pool in proportion to the aggregate amount of cash contributed. All affiliates’ interests in the pool shall be of the same class, with equal rights, preferences, and privileges. All membership interests shall be fully paid and non-assessable and shall have no preemptive, conversion or exchange rights. The liability of a participant’s debts and obligations of the pool shall be limited to the amount of its contributions and no participant shall be obligated to contribute money to the pool for any reason other than to participate in the pool’s investments. Additionally, participants shall not cover the debits or credits of another participant (commonly referred to as notional cash pooling).

   d. A reporting entity shall receive monthly reports from the pool manager, which identifies the participant’ investment (share) in the cash pool and the dollar value of its share of cash, cash equivalents and short-term investments. The reporting entity shall report their total balances in the cash pool on Schedule E – Part 2, utilizing the line number [as specified in the Annual Statement](#).
**Instructions for “Other Cash Equivalents.”** The reporting entity shall independently if the investments would have qualified as cash, cash equivalents or short-term investments had the entity independently acquired the investments. To the extent the pool holds investments that do not meet the definition of cash, cash equivalents, short-term investments, the pool does not qualify within scope of this statement.

14. Short-term investments are investments that do not qualify as cash equivalents with remaining maturities (or repurchase dates under reverse repurchase agreements) of one year or less at the time of acquisition, (excluding derivatives and those investments classified as cash equivalents as defined in this statement), shall be considered short-term investments. Short-term investments can include, but are not limited to, bonds, commercial paper, reverse repurchase agreements, and collateral and mortgage loans, which meet the noted criteria. Short-term investments shall not include investments specifically classified as cash equivalents as defined in this statement, certificates of deposit, or derivatives. Regardless of maturity date, derivative instruments shall not be reported as short-term investments and shall be reported as derivatives on Schedule DB.

**Status:**
On June 15, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed the editorial maintenance revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments as detailed above. This item has a shortened comment period deadline ending July 15, 2020.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, editorial revisions to SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments, as illustrated above.

Description of Issue: This agenda item has been drafted to consider SSAP No. 32—Preferred Stock, in accordance with the initiatives of the Investment Classification Project. This agenda item focuses on the following aspects:

1. Review existing definitions with market terms and assess whether terms should be retained or revised.
2. Consider clarifications to existing accounting and valuation guidance based on the type of preferred stock.
3. Assess guidance for dividends and the impact of dividends on impairment assessments.
4. Clarify application of SSAP No. 32 in conjunction with SSAP No. 48 and SSAP No. 97.

I – Definitions

SSAP No. 32 establishes statutory accounting principles for preferred stocks and includes preferred stocks that may or may not be publicly traded.

Preferred Stock:

SSAP No. 32, paragraph 3: Any class or shares of the holders of which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock issued by an entity.

FASB Definition: A security that has preferential rights compared to common stock.

NASDAQ Definition: A security that shows ownership in a corporation and gives the holder a claim, prior to the claim of common stockholders, on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. This stock does not usually carry voting rights. Preferred stock has characteristics of both common stock and debt.

The scope of SSAP No. 32, paragraph 3, identifies that the definition of preferred stock includes:

a. Redeemable preferred stock, including mandatory sinking fund preferred stock and preferred stock redeemable by the holder;

b. Perpetual preferred stock, including nonredeemable preferred stock and preferred stock redeemable at the option of the issuer; and

c. Exchange traded funds, which qualify for preferred stock treatment, as identified in Part Six, Section 2, of the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

SSAP No. 32 then includes definitions for redeemable preferred stock, perpetual preferred stock, mandatory sinking fund preferred stock, payment-in-kind preferred stock, step-up preferred stock and restricted stock.
Redeemable Preferred Stock:

**SSAP No. 32, paragraph 4:** Preferred Stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.

**FASB ASC 480-10-S99 - (This guidance comes from SEC CFRR 211: Redeemable Preferred Stock):** Preferred Stock Subject to Mandatory Redemption Requirements or Whose Redemption is Outside the Control of the Issuer (“Redeemable Preferred Stock”). The term means any stock which (i) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; (ii) is redeemable at the option of the holders, or (iii) has conditions for redemption which are not solely within the control of the issuer, such as stocks which must be redeemed out of future earnings. Under this definition, preferred stock which meet one or more of the above criteria would be classified as redeemable preferred stock regardless of their other attributes such as voting rights, dividend rights or conversion features.

Perpetual Preferred Stock:

**SSAP No. 32, paragraph 7:** Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.

**FASB ASC 480-10-S99 - (This guidance comes from SEC CFRR 211: Redeemable Preferred Stock):** Preferred Stocks Which Are Not Redeemable or Are Redeemable Solely at the Option of the Issuer (“Non-Redeemable Preferred Stock”). The term means any preferred stock which does not meet the criteria for classification as a "redeemable preferred stock."

**NAIC Staff Notes:**
From a review of preferred stock issuances, preferred stock may be labeled “redeemable perpetual preferred stock.” Generally, in these instances, it seems that the preferred stock is redeemable at the option of the issuer, perhaps after a certain timeframe, or when other conditions as stated in the prospectus are met. If the redemption is at the option of the issuer, these preferred stock issuances would be considered perpetual preferred stock. However, it does appear that in some instances, these issuances may be redeemable at the option of the holder after a certain timeframe. If the redemption is at the option of the holder, then it would be considered redeemable preferred stock. (Note – NAIC staff would like confirmation that preferred stock labeled as “redeemable perpetual” may meet the criteria as redeemable under FASB ASC 480-10-S99.)

Excerpts detailing a few identified instances are noted below:

**Prospectus excerpt:** We may offer and sell under this prospectus shares of our 9.375% Series A Cumulative Redeemable Perpetual Preferred Stock, $0.001 par value per share (the “Series A Preferred Stock”) having an aggregate offering price of up to $26,000,000 from time to time through the Agents. Our Series A Preferred Stock is traded on The Nasdaq Capital Market, or the Exchange, under the symbol “FBIOP.” The last reported sale price of our Series A Preferred Stock on April 4, 2018 was $22.89 per share. Dividends on our Series A Preferred Stock accrue daily and will be cumulative from, and including, the date of original issue and shall be payable quarterly every March 31, June 30, September 30, and December 31, at the rate of 9.375% per annum of its liquidation preference, which is equivalent to $2.34375 per annum per share. Generally, we may not redeem the Series A Preferred Stock until December 15, 2022. On and after December 15, 2022, we may, at our option, redeem the Series A Preferred Stock in whole, at any time, or in part, from time to time, for cash at a redemption price of $25.00 per share, plus any accrued and unpaid dividends to, but not including, the date of redemption.

(As redemption is at the option of the issuer, the above example reflects perpetual preferred stock.)
Prospectus excerpt: We are offering 204,000 shares of our 11% Series A Cumulative Redeemable Perpetual Preferred Stock, which we refer to as the Series A Preferred Stock. Dividends on the Series A Preferred Stock are cumulative from the date of original issue and will be payable on the fifteenth day of each calendar month commencing December, 2015 when, as and if declared by our board of directors. Dividends will be payable out of amounts legally available therefor at a rate equal to 11% per annum per $25.00 of stated liquidation preference per share, or $2.75 per share of Series A Preferred Stock per year. We will place proceeds equal to two years of dividends into a separate bank account to be used to pay Series A Preferred Stock dividends, however, after the first quarter in which our Adjusted EBIT DA is greater than the quarterly dividend, the proceeds then remaining in this account may be used for any corporate purpose. Commencing on November 4, 2020, we may redeem, at our option, the Series A Preferred Stock, in whole or in part, at a cash redemption price of $25.00 per share, plus all accrued and unpaid dividends to, but not including, the redemption date. The Series A Preferred Stock has no stated maturity, will not be subject to any sinking fund or other mandatory redemption, and will not be convertible into or exchangeable for any of our other securities. Holders of the Series A Preferred Stock generally will have no voting rights except for limited voting rights if dividends payable on the outstanding Series A Preferred Stock are in arrears for eighteen or more consecutive or non-consecutive monthly dividend periods.

(As redemption is at the option of the issuer, the above example reflects perpetual preferred stock.)

Prospectus excerpt: We are selling shares of our % Series B Cumulative Redeemable Perpetual Preferred Shares, par value $0.01 per share, liquidation preference $25.00 per share (the “Series B Preferred Shares”). Dividends on the Series B Preferred Shares will accrue and be cumulative from the date of original issue and will be payable quarterly in arrears on January 30, April 30, July 30 and October 30 of each year, commencing July 30, 2013, when, as and if declared by our board of directors. Dividends will be payable out of amounts legally available therefor at an initial rate equal to % per annum of the stated liquidation preference, subject to adjustment as described in this prospectus supplement. At any time on or after July 30, 2016, the Series B Preferred Shares may be redeemed, in whole or in part, out of amounts legally available therefor, at a redemption price of $25.00 per share plus an amount equal to all accumulated and unpaid dividends thereon to the date of redemption, whether or not declared. If (i) we fail to comply with certain covenants (a “Covenant Default”), (ii) we experience certain defaults under any of our credit facilities (a “Cross Default”), (iii) four quarterly dividends payable on the Series B Preferred Shares are in arrears (a “Dividend Payment Default”) or (iv) the Series B Preferred Shares are not redeemed in whole by July 30, 2018 (a “Failure to Redeem”), the dividend rate payable on the Series B Preferred Shares shall increase, subject to an aggregate maximum rate per annum of 25% prior to July 30, 2016 and 30% thereafter, to a rate that is 1.25 times the dividend rate payable on the Series B Preferred Shares as of the close of business on the day immediately preceding the Covenant Default, Cross Default, Dividend Payment Default or Failure to Redeem, as applicable, and on each subsequent Dividend Payment Date, the dividend rate payable shall increase to a rate that is 1.25 times the dividend rate payable on the Series B Preferred Shares as in effect as of the close of business on the day immediately preceding such Dividend Payment Date, until the Covenant Default, Cross Default or Dividend Payment Default is cured or the Series B Preferred Shares are no longer outstanding.

(As redemption is at the option of the holder, the above example reflects redeemable preferred stock.)

**Mandatory Sinking Fund:**

SSAP No. 32, paragraph 5: Mandatory sinking fund preferred stock is defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (a) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (b) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (c) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which does not, at date of issue or December 31, 1978, if outstanding at that...
time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise.

(NAIC staff highlights that the reference to 1978 in this paragraph is no longer applicable as all preferred stock outstanding as of that date would have had a maximum (40-year) redemption date in 2018. In reviewing the origin of this guidance, it was identified that it has been in place since original issuance of SSAP No. 32 and it came from the Purposes and Procedures Manual of the NAIC SVO. This guidance is no longer included in the P&P Manual.)

NASDAQ Definition “Sinking Fund”: A fund to which money is added on a regular basis that is used to ensure investor confidence that promised payments will be made and that is used to redeem debt securities or preferred stock issues.

U.S. GAAP Glossary – Mandatorily Redeemable Financial Instrument: Any of various financial instruments issued in the form of shares that embody an unconditional obligation requiring the issuer to redeem the instrument by transferring its assets at a specified or determinable date (or dates) or upon an event that is certain to occur.

NAIC Staff Notes:
NAIC staff is under the impression that the term “mandatory sinking fund preferred stock” is no longer prevalent. Rather, redeemable preferred stock with a mandatory redemption date is often referred to as “term preferred stock.” Although preferred stock may stipulate use of a sinking fund to provide assurance that preferred stock may be redeemed when due, failing to make deposits into a sinking fund as agreed by the company in the preferred stock’s provisions is not similar to an act of default on debt. Rather, such action would be subject to remedies specified in the preferred stock prospectus.

Even if preferred stock is considered to be “mandatory redeemable,” Section 160 of the Delaware General Corporation Law prohibits a corporation from redeeming its shares of capital stock when the capital of the corporation is impaired or when such redemption would cause any impairment of the capital. Under findings under this Law, it has been noted that the existence of a mandatory redemption right, even one that is ripened, does not convert the holder of preferred stock into a creditor. Specifically, a redemption right does not give the holder the absolute, unfettered ability to force the corporation to redeem its shares under any circumstances and recent case law establishes limitations on the ability of preferred stockholders to force redemption. It should be noted that preferred stock provides no guaranteed right of payment, and its redemption obligation is treated neither as debt nor as a current liability.

Under U.S. GAAP, issuers of “mandatorily redeemable financial instruments” may report the issuance as liability or as equity, depending on type of issuer. Public entities and SEC registrants are required to report mandatorily redeemable financial instruments as liabilities unless the redemption is required to occur only upon the liquidation or termination of the reporting entity (ASC 480-10-25-4). However, the guidance in ASC 480-10: Distinguishing Liabilities from Equities does not apply to instruments that are a) issued by nonpublic entities that are not SEC registrants and b) mandatorily redeemable, but not on fixed dates or not for amounts that either are fixed or are determined by reference to an interest rate index, currency index or another index (ASC 480-10-15-7A).

Payment-In-Kind (PIK) Preferred Stock:

SSAP No. 32, paragraph 6: PIK preferred stock is defined as redeemable preferred stock on which, at the option of the issuer, dividends can be paid in additional securities rather than cash.
General “in-kind” Definition: Payment-in-kind (PIK) is the use of a good or service as payment instead of cash. Payment in kind also refers to a financial instrument that pays interest or dividends to investors of bonds, notes or preferred stock with additional securities or equity instead of cash.

**NAIC Staff Notes:**

PIK stock dividends are not limited to redeemable preferred stock. Additionally, PIK provisions may not require PIK dividends to be provided in additional shares of the same preferred stock. Rather, the provisions of the preferred stock could specify that the PIK dividends are issued in other forms of preferred stock or in shares of common stock. Additionally, the preferred stock provisions can be designed to specify PIK dividends for a specific number of years, with subsequent conversion of cash dividends.

*(The existing SSAP No. 32 guidance for PIK preferred stock has been in place since original issuance of SSAP No. 32. Pursuant to Issue Paper No. 32, this information came from the “NAIC Technical Resource group Proposed Draft Life Codification.”)*

**Example Prospectus Excerpt 1:** Dividends on our perpetually convertible preferred stock will be payable on a cumulative basis when, as and if declared by our board of directors or an authorized committee of our board of directors, at an annual rate of 6.75% on the liquidation preference of $1,000 per share. We may pay declared dividends in cash or, subject to certain limitations, in shares of our common stock, par value $0.01 per share, or in any combination of cash and common stock on March 1, June 1, September 1 and December 1 of each year, commencing on December 1, 2015. Our perpetual convertible preferred stock has no maturity date, and we are not required to redeem our perpetual convertible preferred stock at any time. Accordingly, our perpetual convertible preferred stock will remain outstanding indefinitely unless a holder of shares of our perpetual convertible preferred stock converts it or we decide to convert or repurchase it as described herein.

**Example Prospectus Excerpt 2:** Each dividend shall be paid either in shares of Common Stock (“Payment-in-Kind”) or in cash, at the option of the Corporation on the respective Dividend Date; provided, however, that dividends may only be paid in cash following the fiscal year in which the Corporation has net income (as shown in its audited financial statements contained in its Annual Report on Form 10-K for such year) of at least $500,000, to the extent permitted under applicable law out of funds legally available therefor. For Payment-in-Kind dividends, each Holder on the record date for such divided will receive that number of shares of Common Stock equal to (i) the amount of the dividend payment due such stockholder divided by (ii) 90% of the average of the Per Share Market Values during the twenty (20) Trading Days immediately preceding a Dividend Date. No fractional shares shall be issued upon payment of such dividends pursuant to this Section 3.2 and the number of shares to be issued upon payment of such dividends will be rounded up to the nearest whole share; provided, that, in lieu of rounding up to the nearest whole share, the Corporation may, at its option, pay a cash adjustment in respect of such fractional interest equal to such fractional interest multiplied by the Per Share Market Value on the respective dividend date. Each dividend paid in cash shall be mailed to the Holders of record of the Corporation as their names appear on the share register of the Corporation or at the office of the Corporation’s transfer agent on the corresponding dividend payment date. Holders will receive written notification from the Corporation or the transfer agent if a dividend is paid in Common Stock, which notification will specify the number of shares of Common Stock paid as a dividend. Certificates representing the shares of Common Stock issuable upon payment of each Payment-In-Kind shall be delivered to each Holder entitled to receive such Payment-in-Kind (in appropriate denominations) as soon as reasonably practicable.

**Step-Up Preferred Stock:**

SSAP No. 32, paragraph 17: Step-up preferred stock (a security with the structure of a preferred stock, that has the cash flow characteristics of a debt instrument) is considered a security with characteristics of both debt and equity, and the accounting and valuation of such securities shall be consistent with SVO guidelines as stipulated in the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

General – A “step-up” feature is a component that increases over time or with stated provisions. For example, a “step-up divided” if a feature that increases the dividend rate. A “step-up call” is a feature that increases the call price for a security. A “step-up conversion” increases the conversion price in a convertible security. In review, no references were identified that limit “step-up” features to redeemable preferred stock.

The term Step-Up used with an income security means that the dividend or interest distributions will start at a lower level of income and then increase or Step-Up on a specified schedule. For example, a step-up security could start out paying a 5% dividend initially and then Step-Up to a 7% dividend after 5 years (assuming it is not called). The Step-Up or increase in the payout can occur on whatever schedule is specified in the IPO prospectus such as after 3 years, 5 years, 10 years, 15 years, etc. Currently there are only a handful of Step-Up securities on the markets.

Restricted Preferred Stock:

SSAP No. 32, paragraph 8: Restricted preferred stock is defined as a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause that requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.

NASDAQ Definition – Restricted Stock: Stock that must be traded in compliance with special SEC regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, M&A activity, and underwriting activity. Many firms are now using restricted stock as a reward for employees. The advantages to restricted stock are: employees get dividends, employees usually get voting rights, and employee gets something even if the stock price drops over the vesting period (whereas an option would be worthless).

SEC Definition – Restricted Securities: "Restricted" securities are securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that you may not resell them in the public marketplace unless the sale is exempt from the SEC’s registration requirements. Rule 144 under the Securities Act of 1933 provides the most commonly used exemption for holders to sell restricted securities. To take advantage of this rule, you must meet several conditions, including a six-month or one-year holding period.

NAIC Staff Notes: The definition of restricted preferred stock in SSAP No. 32 is identical to the definition of common stock in SSAP No. 30. NAIC staff is researching the origin of the SSAP No. 30 and SSAP No. 32 restricted stock definition and request information regarding the source of this definition. (There is limited information in the issue paper and the definition has been in place since adoption.)

Convertible Preferred Stock:

SSAP No. 32: Convertible preferred stock is not currently defined in SSAP No. 32.

NASDAQ: Preferred stock that can be converted into common stock at the option of the holder.

SEC – Convertible Security: A "convertible security" is a security—usually a bond or a preferred stock—that can be converted into a different security—typically shares of the company's common stock. In most cases, the holder of the convertible determines whether and when to convert. In other cases, the company has the right to determine when the conversion occurs.
FASB Glossary – Convertible Security: A security that is convertible into another security based on a conversion rate. For example, convertible preferred stock that is convertible into common stock on a two-for-one basis (two shares of common for each share of preferred).

NAIC Staff Notes:
The terms for converting preferred stock may be optional or mandatory depending on the terms of the issuance. Also, both redeemable and perpetual preferred stock can be issued with convertible features. Although there is no current guidance in SSAP No. 32, the guidance in SSAP No. 26R—Bonds requires specific accounting guidance for mandatory convertible bonds to prevent overstating the value of the investment prior to the mandatory conversion. NAIC staff often receives questions regarding the appropriate valuation for mandatory convertible preferred stock.

Example - Convertible Redeemable Preferred Stock: WHEREAS, subject to the terms and conditions set forth in this Agreement, the Company desires to issue and sell to the Purchaser and the Purchaser desires to acquire from the Company [ ] shares of the Company’s Series A Convertible Redeemable Preferred Stock, (the “Series A Preferred Stock”), with a Stated Value of one dollar ($1) per share, which is part of a sale of Series A Preferred Stock with an aggregate Stated Value of $750,000.

Example - Convertible Perpetual Preferred Stock: RESOLVED, that the Corporation is authorized to issue 14,375,000 shares of 6.50% Series I Cumulative Convertible Perpetual Preferred Stock, $1.00 par value per share, which shall have the following powers, designations, preferences and other special rights:

Statutory Accounting Definition Overview and Assessment
After reviewing the existing SSAP No. 32 definitions to market terms, NAIC staff recommends that the Working Group consider revisions to update SSAP No. 32 accordingly. Consideration should be given as to the extent detailed definitions of various components of preferred stock should be included, particularly if an element would not alter the accounting or reporting of a preferred stock investment. (NAIC staff highlights that other key terms of preferred stock are not currently defined in SSAP No. 32 and only the terms currently defined and/or identified as potential impacting valuation are included in the discussion.)

2 – Clarifications to Existing Accounting and Valuation Guidance
The valuation methods utilized for preferred stock in SSAP No. 32 depends on the type of preferred stock (redeemable or perpetual), type of insurance entity and the NAIC designation. (Although perpetual stock is more akin to equity, the NAIC designation provides a credit assessment on the dividends. For example, guidance in the P&P Manual prohibits assigning an NAIC designation of 1, 2 or 3 to any preferred stock in which dividends have not been paid or sinking fund requirements have not been met.) Pursuant to SSAP No. 32, paragraphs 19-22:

   Reporting Entities that Do Not Maintain an AVR
   • Redeemable with NAIC Designation 1-2: Cost or Amortized Cost
   • Redeemable with NAIC Designations 3-6: Lower of Cost, Amortized Cost or Fair Value
   • Perpetual with NAIC designations 1-2: Fair Value
   • Perpetual with NAIC designations 3-6: Lower of Cost or Fair Value

   Reporting Entities that Do Maintain and AVR
   • Redeemable with NAIC Designation 1-3: Cost or Amortized Cost
   • Redeemable with NAIC Designations 4-6: Lower of Cost, Amortized Cost or Fair Value
   • Perpetual with NAIC designations 1-3: Cost
NAIC staff identifies that the existing guidance in SSAP No. 32 does not differentiate when a reporting entity should utilize “cost” or “amortized cost” in determining the measurement method.

The accounting under U.S. GAAP depends on whether the preferred stock is considered a debt or equity security:

**FASB Glossary - Equity Security (First Definition)**
Any security representing an ownership interest in an entity (for example, common, preferred, or other capital stock) or the right to acquire (for example, warrants, rights, and call options) or dispose of (for example, put options) an ownership interest in an entity at fixed or determinable prices. The term equity security does not include any of the following:

a. Written equity options (because they represent obligations of the writer, not investments)

b. Cash-settled options on equity securities or options on equity-based indexes (because those instruments do not represent ownership interests in an entity)

c. Convertible debt or preferred stock that by its terms either must be redeemed by the issuing entity or is redeemable at the option of the investor.

**FASB Glossary - Equity Security (Second Definition)**
Any security representing an ownership interest in an entity (for example common, preferred or other capital stock) or the right to acquire (for example, warrants, rights, forward purchase contracts, and call options) or dispose of (for example, put options and forward sale contracts) an ownership interest in an entity at fixed or determinable prices. However, the term does not include convertible debt or preferred stock that by its terms either must be redeemed by the issuing entity or is redeemable at the option of the investor.

**ASC 321-10-55-2** - If convertible preferred stock is not redeemable, it is considered an equity security and, therefore, this Topic would apply.

**FASB Glossary - Debt Security**
Any security representing a creditor relationship with an entity. The term debt security also includes all of the following:

(a) Preferred stock that by its terms either must be redeemed by the issuing entity or is redeemable at the option of the investor

**Overview of U.S. GAAP Accounting:**
Under U.S. GAAP (ASC 320-10-35-1), investments in “debt securities” are reported at either fair value or amortized cost. (Debt instruments identified as “held-to-maturity” are reported at amortized cost, and debt instruments classified as “trading” or “available-for-sale” are reported at fair value.) Under U.S. GAAP, use of historical cost for investments is not generally considered an acceptable measurement method.

Under U.S. GAAP (321-10-35-1) investments in “equity securities” are reported at fair value. If an investment does not have a readily determinable fair value, the security may qualify to use net asset value as a practical expedient to fair value (820-10-35-59). If an investment does not have a “readily determinable” fair value, and does not qualify for the net asset value practical expedient, U.S. GAAP (ASC 321-10-35-2) provides guidance for determining the measurement value as follows:

- An entity may elect to measure an equity security at cost minus impairment, plus or minus changes resulting from observable price changes in orderly transactions for the identical or similar instrument of
the same issuer. An election to measure an equity security in accordance with these provisions shall be made for each investment separately. Once an entity elects to measure an equity security in accordance with this guidance, the entity shall continue to apply the measurement guidance until the investment does not qualify to be measured in accordance with this guidance (for example, if the investment has a readily determinable fair value or becomes eligible for the practical expedient to estimate fair value with 820-10-35-59). The entity shall reassess at each reporting period whether the equity investment without a readily determinable fair value qualifies to be measured with this guidance.

The U.S. GAAP fair value definition, as well as the definition for readily determinable fair value and the ability to use net asset value has been adopted for statutory accounting:

**U.S. GAAP Definition - Fair Value** *(Adopted in SSAP No. 100R, paragraph 4.)*: The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

**U.S. GAAP Definition - Readily Determinable Fair Value** *(Adopted in SSAP No. 100R, paragraph 41)*: An equity security has a readily determinable fair value if it meets any of the following conditions:

a. The fair value of an equity security is readily determinable if sales prices or bid-and-asked quotations are currently available on a securities exchange registered with the U.S. Securities and Exchange Commission (SEC) or in the over-the-counter market, provided that those prices or quotations for the over-the-counter market are publicly reported by the National Association of Securities Dealers Automated Quotations systems or by OTC Markets Group Inc. Restricted stock meets that definition if the restriction terminates within one year.

b. The fair value of an equity security traded only in a foreign market is readily determinable if that foreign market is of a breadth and scope comparable to one of the U.S. markets referred to above.

c. The fair value of an equity security that is an investment in a mutual fund or in a structure similar to a mutual fund (that is, a limited partnership or a venture capital entity) is readily determinable if the fair value per share (unit) is determined and published and is the basis for current transactions.

**U.S. GAAP Guidance permitting NAV** *(Adopted with modification in SSAP No. 101, paragraphs 39-46): Limited Excerpt*; A reporting entity is permitted, as a practical expedient, to estimate the fair value of an investment within the scope of paragraphs 820-10-15-4 through 15-5 using the net asset value per share (or its equivalent, such as member units or an ownership interest in partners’ capital to which a proportionate share of net assets is attributed) of the investment, if the net asset value per share of the investment (or its equivalent) is calculated in a manner consistent with the measurement principles of Topic 946 as of the reporting entity’s measurement date.

**Statutory Accounting Measurement Overview and Assessment**

After reviewing the measurement methods for preferred stock, and comparing those methods to U.S. GAAP, NAIC staff recommends revisions to the permitted measurement methods for preferred stock. NAIC staff recommends eliminating references to “cost” as a measurement option, and clarify use of amortized cost (or the lower of amortized cost and fair value) for redeemable preferred stock and the use of fair value for perpetual preferred stock.

If there are concerns that perpetual preferred stock could not be measured at fair value (either as not readily determinable or with a NAV exception), consideration could be given to incorporate the FASB process that allows “adjusted cost”. However, NAIC staff believes that in most instances, fair value of perpetual preferred stock can be determined pursuant to SSAP No. 100R, even if that determination reflects a level 3 fair value measurement. (Under level 3, the reporting entity determines fair value without observable inputs using their assumptions about the assumptions market participants would use in pricing the asset or liability.)
3 – Assess Dividend Guidance and the Impact of Dividends on Impairment Guidance

Existing guidance in SSAP No. 32, paragraph 27, identifies that dividends, other than mandatorily redeemable preferred stock, shall be recorded as investment income on the ex-dividend date. The guidance in paragraph 28 identifies that mandatorily preferred stock shall be accrued to the redemption price, even if not declared, under the interest method over the period ending on the redemption date. The guidance also identifies that cash dividends paid on payment-in-kind (PIK) dividends shall be accounted for as a reduction in the investment.

Impairment guidance in SSAP No. 32 differentiates between redeemable and perpetual preferred stock. The guidance for redeemable preferred stock is similar to guidance for bonds, in which other-than-temporary impairment (OTTI) is considered to have occurred if a reporting entity will be unable to collect all amounts due according to the contractual terms of the security at the date of acquisition. This determination includes situations when a decision has been made to sell a security below its carrying value. The guidance for perpetual preferred stock is similar to guidance for common stock, with determination of OTTI based on INT 06-07: Definition of Phrase “Other Than Temporary” and if the entity has made a decision to sell a security below its carrying value.

Although NAIC staff believes the guidance for perpetual preferred stock dividends is appropriate, recognizing that dividends for redeemable preferred stock may not trigger an element a default, or a liability from an issuing entity, NAIC staff recommends clarification on the amortization of redeemable preferred dividends, potentially to highlight that failure to receive dividends should result with an OTTI assessment and may impact continued accrual (or admittance) for future dividends.

With regards to guidance on PIK dividends, NAIC staff recommends revisions to address recognition and reporting of differing types of PIK dividends. As noted, stock issuances may provide for either cash or PIK dividends, and it is likely not appropriate to require all cash dividends for these issuances to be recorded as a reduction in the investment. (With these revisions, NAIC staff also recommends similar guidance for PIK interest received.)

4 – Clarify application of SSAP No. 32 conjunction with SSAP No. 48 and SSAP No. 97

The existing guidance in SSAP No. 32 is specific that investments in preferred stock of subsidiaries, controlled or affiliated entities (SCA) are included within scope. However, recent questions received have questioned whether preferred stock held from a SSAP No. 48 entity shall be captured within scope of SSAP No. 32. (A SSAP No. 48 entity may or may not qualify as an SCA.) To eliminate future questions, NAIC staff suggests further clarification that preferred stock held from a SSAP No. 48 entity (joint venture, partnership or limited liability company) is in scope of SSAP No. 32.

Additionally, as the reported value of preferred stock held from an SCA may be impacted by guidance in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities and INT 00-24: EITF 98-12: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses, NAIC staff suggests guidance in SSAP No. 32 that explicitly refers to those statutory provisions.

- Under SSAP No. 97, preferred stock in an SCA is measured and reported under SSAP No. 32. However, the reporting entity must reduce the total equity of the SCA by the SCA’s (issuer’s) value of the preferred stock to prevent double counting. For example, if an SCA issued preferred stock for $50,000, and the SCA value is $250,000 pursuant to SSAP No 97:
  - Reporting entity would report the SCA at $200,000. ($250,000 less $50,000)
  - Reporting entity would report the preferred stock under SSAP No. 32. (So, if perpetual preferred stock, issued at $50,000, has a current fair value was $75,000, the preferred stock would be reported at $75,000 on Schedule D-2-1.)
• Under INT 00-24, once an equity (common stock) investment in an SCA has been reduced to zero due to losses in the investee, the investor shall report its share of equity method losses as an adjustment to the other investments in the investee. Pursuant to this guidance, the reported investment in preferred stock (and other investments in an SCA) would be adjusted to reflect the statutory net loss. *(NAIC staff notes – This guidance is reflected in the FASB Codification in ASC 323-10-35 regarding equity method losses.)*

Existing Authoritative Literature:

SSAP No. 32—Preferred Stock provides the statutory accounting principles for preferred stock.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): A review of the investment SSAPs, including SSAP No. 32, was supported under the investment classification project detailed in agenda item 2013-36. Currently, the Working Group has reviewed and adopted revisions to SSAP No. 26R—Bonds and SSAP No. 30R—Common Stock.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None.

Staff Recommendation:
NAIC staff recommends that the Working Group move this item to the active listing, categorized as substantive, with a request to expose the agenda item for comments on suggested actions / proposals. With this exposure, NAIC staff recommends a referral to the Valuation of Securities (E) Task Force with a request for information on preferred stock and the suggested actions. After information is received and assessed, NAIC staff will proceed with drafting revisions to SSAP No. 32, along with a corresponding issue paper, for subsequent exposure.

NAIC staff recommended actions:

1) **Definitions:**

   A. Retain, with revisions to mirror FASB terminology, the definitions for redeemable and perpetual preferred stock. These definitions will be used to classify preferred stock for valuation and reporting purposes. With this action, the definition for restricted preferred stock is also proposed to be retained in the SSAP, with revisions to properly capture the intent of this definition with current market terms.

   B. Delete existing definitions for mandatory sinking fund preferred stock, payment-in-kind (PIK) preferred stock and step-up preferred stock. If preferred, revised terms to identify various elements of preferred stock may be considered for inclusion in a SSAP No. 32 glossary, but as these terms do not impact valuation or reporting, NAIC staff proposes to eliminate these terms from the SSAP. If terms are retained in a glossary, it is proposed that they be revised to reflect current market terminology. If terms will be retained, NAIC staff requests comments on additional terms that should be captured.

   C. Incorporate new guidance to define, and provide accounting guidance for mandatory convertible preferred stock. This guidance is proposed to mirror the mandatory convertible guidance in SSAP No. 26R—Bonds. With that approach, the reported value shall be equal to, or less than, the valuation that will be required upon mandatory conversion. *(For example, if redeemable preferred stock is mandatorily convertible to common stock, the value shall be the lower of amortized cost or fair value.)*
2) **Accounting and Valuation Guidance:**

   A. Delete all references to “cost” as a measurement method. Redeemable preferred stock shall be reported at amortized cost, or the lower of amortized cost or fair value depending on NAIC designation. (It is proposed that the existing NAIC designations allocations will be retained.) Perpetual preferred stock shall be reported at fair value.

   B. Incorporate new guidance to account for mandatory convertible redeemable preferred stock. Similar to the guidance for mandatory convertible bonds, this is proposed to reflect the lower of amortized cost or fair value without impact by an NAIC designation.

3) **Dividend Guidance and the Impact on Impairment Guidance**

   A. Incorporate revisions to clarify the reporting of PIK dividends and PIK interest. This guidance is proposed to direct recognition of dividends and interest pursuant to the nature of the item received. (For example, common stock dividends would be captured under SSAP No. 30.) A reduction of investment would only occur if consideration received was intended to reduce the preferred stock investment.

   B. Clarify OTTI assessment when dividends for redeemable preferred stock are not received, or when other redemption protections (e.g., sinking fund deposits) are not met by an issuer.

4) **Clarify application of SSAP No. 32 in conjunction with SSAP No. 48 and SSAP No. 97**

   A. Clarify that preferred stock held issued by a SSAP No. 48 entity is in scope of SSAP No. 32.

   B. Incorporate guidance / references to clarify the measurement and reporting of preferred stock held from an SCA pursuant to guidance in SSAP No. 97 and INT 00-24. As detailed, INT 00-24 requires a reduction in a preferred stock investment of an SCA once the equity basis of a common stock investment reaches zero.

**Staff Review Completed by: Julie Gann – February 2019**

**Status:**

On April 6, 2019, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as substantive, and directed NAIC staff to draft revisions to SSAP No. 32 for subsequent exposure. A referral to the Valuation of Securities (E) Task Force to review the proposed edits will occur when exposed.

On August 3, 2019, the Statutory Accounting Principles (E) Working Group exposed Issue Paper No. 1XX—Preferred Stock to revise the definitions, measurement guidance and impairment guidance for preferred stock pursuant to the investment classification project.

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed a revised Issue Paper No. 1XX—Preferred Stock and a substantively-revised draft SSAP No. 32—Preferred Stock as part of the Investment Classification Project.

On March 18, 2020, The Statutory Accounting Principles (E) Working Group exposed the Issue Paper No. 1XX—Preferred Stock and substantively-revised draft SSAP No. 32—Preferred Stock with edits to reflect comments received from interested parties as well as a January 1, 2021 effective date. This item was exposed with a May 29, 2020 comment period deadline.
Statutory Issue Paper No. 164

Preferred Stock

STATUS
Finalized July 30, 2020

Original SSAP: SSAP No. 32; Current Authoritative Guidance: SSAP No. 32R

Type of Issue:
Common Area

SUMMARY OF ISSUE

1. The guidance within this issue paper introduces substantive revisions to SSAP No. 32—Preferred Stock pursuant to the Statutory Accounting Principles (E) Working Group’s (Working Group) Investment Classification Project. The Investment Classification Project reflects a comprehensive review to address a variety of issues pertaining to definitions, measurement and overall scope of the investment statements of statutory accounting principles (SSAPs).

2. The substantive revisions to SSAP No. 32 (illustrated in Exhibit A) under the Investment Classification Project, detailed within this issue paper, reflect the following key elements:

   a. Improves preferred stock definitions, with inclusion of information from U.S. generally accepted accounting principles (GAAP) for classifying preferred stock as redeemable or perpetual. The revisions also incorporate a new exhibit to capture various terms prevalent in preferred stock.

   b. Revises the measurement guidance to ensure appropriate, consistent measurement based on the type of preferred stock held and the terms of the preferred stock. The revisions also incorporate guidance for mandatory convertible preferred stock.

   c. Incorporates revisions to clarify impairment guidance as well as guidance for dividend recognition and redemption of preferred stock with the issuer.

DISCUSSION

3. This issue paper intends to provide information on discussions that occurred when considering revisions to SSAP No. 32 under the Investment Classification Project, as well as the adopted revisions.

Preferred Stock Definitions

4. The historical definition of preferred stock within SSAP No. 32 is “any class or shares of the holders which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock issued by an entity.” This definition has been identified as generally consistent with market terms, including the following NASDAQ and Financial Accounting Standards Board (FASB) definitions for common stock:

   a. NASDAQ Definition: A security that shows ownership in a corporation and gives the holder a claim, prior to the claim of common shareholders, on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common

© 2020 National Association of Insurance Commissioners
stock dividend, stated in a dollar amount or as a percentage of par value. The stock does not usually carry voting rights. Preferred stock has characteristics of both equity and debt.

b. FASB Codification: A security that has preferential rights compared to common stock.

5. Comments received from interested parties in October 2019 indicated that the term “security” is not interchangeable as it pertains to preferred stock and requested all references be changed to “interest” or directly reference the type of stock under consideration. In review of the use of the term “security” in the issue paper, most instances represent existing references carried over from SSAP No. 32. NAIC staff recognizes that preferred stock is a “security,” as demonstrated by the definitions from both the NASDAQ and FASB, but NAIC staff has proposed some revisions to limit the generic use of the term. The use of the term “security” in paragraph 8, paragraphs 10-13 and in Exhibit A (as it pertains to defining specific types of preferred stock) has been revised to “preferred stock.” The use of the term “security” in paragraph 3 has been retained as this usage mirrors the FASB definition for preferred stock.

6. NAIC staff’s original intent was to align various investment definitions with common industry definitions or those specified by U.S. GAAP. As a part of the investment reclassification project, this practice began with unaffiliated common stock (SSAP No. 30R) and now has expanded into preferred stock (SSAP No. 32). The definition proposed by NAIC staff was made with the understanding that preferred stock is either redeemable or perpetual. While the issue paper does mention some stock labeled as “redeemable perpetual preferred stock,” distinctions are made in the prospectus as to its true underlying characteristics (thus being redeemable or perpetual). In general, NAIC staff continue to believe that for a majority of preferred stock issuances, a share which is redeemable at the option of the holder is by definition redeemable outside (or not solely within) the control of the issuer – thus the actions are mutually exclusive. However, interested parties cited guidance for additional circumstances in which, through legal technicalities, could cause shares to be reclassified to redeemable which were originally categorized as perpetual (reported at fair value). ASC 480-10 provides a few of these examples as: change in state law, the issuer fails to achieve certain project milestones, the issuer fails to pay specified dividends, the issuer experiences a change in credit rating, etc. As such, NAIC staff are supportive of the changes suggested by interested parties as they align with the original objective of preferred stock classification and reflect the expected economics of the investment.

7. Although the historical definition of preferred stock in SSAP No. 32 is comparable to current market terms, this issue paper recommends revisions to incorporate the NASDAQ definition as it is more encompassing of the characteristics of preferred stocks.

Definitions and Classification as Redeemable or Perpetual Preferred Stock

8. The accounting guidance of SSAP No. 32 varies based on whether preferred stock is considered to be “redeemable” or “perpetual.” The historical definitions of redeemable and perpetual within SSAP No. 32R reflected the following:

a. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.

b. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.
9. In comparing these terms to current U.S. GAAP, the guidance in the FASB Accounting Standards Codification (ASC), which is also consistent with Securities Exchange Commission (SEC) guidance, is more detailed in identifying the requirements for classification as redeemable preferred stock:

a. Preferred Stock Subject to Mandatory Redemption Requirements or Whose Redemption is Outside the Control of the Issuer (“Redeemable Preferred Stock”). The term means any stock which (i) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; (ii) is redeemable at the option of the holders, or (iii) has conditions for redemption which are not solely within the control of the issuer, such as stocks which must be redeemed out of future earnings. Under this definition, preferred stock which meet one or more of the above criteria would be classified as redeemable preferred stock regardless of their other attributes such as voting rights, dividend rights or conversion features. (FASB ASC 480-10-S99)

b. Preferred Stocks Which Are Not Redeemable or Are Redeemable Solely at the Option of the Issuer (“Non-Redeemable Preferred Stock”). The term means any preferred stock which does not meet the criteria for classification as a "redeemable preferred stock." (FASB ASC 480-10-S99)

10. In reviewing these definitions, and preferred stock components that permit payment of dividends in stock instead of cash (known as payment-in-kind (PIK) stock), it was identified that preferred stock that incorporates PIK dividends is not limited to redeemable preferred stock as implied in the prior SSAP No. 32 definition for redeemable preferred stock.

11. To ensure classification of redeemable and perpetual preferred stock consistently with U.S. GAAP, the definitions from the FASB ASC have been incorporated into the revised SSAP No. 32.

Definition of Restricted Stock:

12. The historical accounting guidance in SSAP No. 32 included a definition of restricted stock as “a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year.” This definition identified that “any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.”

13. In researching this restricted stock definition, it was identified that this guidance was included in the original codification of SSAP No. 32, however, there was no identification of the source of this definition from the issue paper. In reviewing current market terms for restricted stock or restricted securities, definitions and information was noted from both NASDAQ and the SEC:

a. Restricted Stock (NASDAQ): Stock that must be traded in compliance with special SEC regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, merger and acquisition (M&A) activity, and underwriting activity.

b. Restricted Securities (SEC): Securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that you may not resell them in the public marketplace unless the sale is exempt from the SEC’s registration requirements. Rule 144 under the Securities Act of 1933 provides the most commonly used exemption for holders to sell restricted securities. To take advantage of this rule, you must meet several conditions, including a six-month or one-year holding period.
14. Using the information from both NASDAQ and the SEC, a revised definition of restricted stock has been incorporated into the revised SSAP No. 32. Additionally, the revisions clarify that restricted stock is generally an admitted asset but highlights that nonadmittance could occur in accordance with SSAP No. 4—Assets and Nonadmitted Assets. Under SSAP No. 4, the restrictions limiting use of an asset can be determined to preclude the ability to consider the asset as available for policyholder claims. In such situations, the restricted asset would be considered nonadmitted.

Definitions or Preferred Stock Components / Characteristics

15. The historical guidance in SSAP No. 32 included definitions for a couple of preferred stock terms, including “mandatory sinking fund” and “step-up preferred stock,” but did not include definitions of other common preferred stock components or terms. Furthermore, in reviewing the previously included terms, it was identified that they were no longer current and should be revised or removed from SSAP No. 32. For example, the definition of “mandatory sinking fund” included references to preferred stock outstanding in 1978, and the definition of “step-up preferred stock” referred to the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and there is no current accounting or valuation guidance for step-up preferred stock in that Manual.

16. Rather that include a variety of terms in the body of the SSAP, particularly as components may not impact overall accounting and reporting of the preferred stock, a new exhibit has been included to include a glossary of key preferred stock terms. The definitions intend to capture current market-terms for the noted components.

Accounting and Reporting of Preferred Stock

17. The historical guidance in SSAP No. 32 captured different accounting and reporting provisions based on whether the preferred stock was classified as redeemable or perpetual, and whether the reporting entity maintained an Asset Valuation Reserve (AVR). Although these classifications are still considered appropriate, it has been noted that additional guidance is needed for mandatory convertible preferred stock, and that a review of the various measurement methods permitted (by classification) should occur to ensure appropriate measurement in the financial statements. Specifically, the prior guidance in SSAP No. 32 explicitly permitted “cost” as an applicable measurement method, even for perpetual preferred stock. Consistent with prior conclusions from U.S. GAAP, as well as the Statutory Accounting Principles (E) Working Group, “historical cost” is generally not an acceptable measurement method. Particularly, this measurement method is not acceptable when liquidation of an asset would generally occur at market prices, such as a non-redeemable (perpetual) preferred stock.

18. The changes reflected in the revised SSAP No. 32 continue to differentiate accounting and reporting guidance by whether a reporting entity maintains an AVR and on the type of preferred stock (redeemable or perpetual). However, revisions have been incorporated to clarify the accounting and reporting of mandatory convertible preferred stock and to update the measurement basis for each type of preferred stock:

a. For redeemable preferred stock, the revisions continue to use NAIC designations in determining the measurement method. There was no change proposed to the measurement basis per designation. However, the revisions clarify that the measurement basis shall be either amortized cost or fair value based on NAIC designation, eliminating reference to “cost” as an measurement method that could be used by a reporting entity. For the amortization of redeemable preferred stock, revisions have also been incorporated to clarify that amortization (or accretion) of any discount or premium is reported through investment income, instead of impacting dividends collected. Recognizing this amortization through investment income is consistent with U.S. GAAP.

b. For perpetual preferred stock, the revisions have eliminated use of NAIC designations in determining measurement method and the guidance requires use of fair value, not to exceed any stated call price from the prospectus of the preferred stock. As there are no requirements for an
issuer to redeem these securities, these securities can continue indefinitely until the issuing entity reacquires the preferred stock at current market rates or elects to buy-back the preferred stock in accordance with rates established in the preferred stock prospectus. In order to prevent overstatement of the securities in the financial statements, the measurement of these preferred stocks reflects fair value, not to exceed any currently effective\(^1\) buy-back rates (call prices) that the issuer can utilize to redeem the stock. This measurement guidance is not impacted by the type of reporting entity (AVR or non-AVR filer) and is not impacted by NAIC designation. Although not impacted by NAIC designation, this guidance does not change the requirement to report the NAIC designation as the NAIC designation impacts the risk-based capital (RBC) charge attributed to the preferred stock.

c. For mandatory convertible preferred stock, guidance has been incorporated to require measurement at fair value, not to exceed any stated call price, in the periods prior to conversion. This guidance is applicable regardless if the preferred stock would be classified as redeemable or perpetual and is applicable regardless of NAIC designation. This guidance requires the preferred stock to be measured at the same measurement basis that would be required once converted to common stock. This prevents overstatement in the financial statements at the time of conversion.

d. For exchange traded funds which qualify for preferred stock treatment from the NAIC SVO, the revisions clarify that these investments shall always be treated as perpetual preferred stock. This classification is appropriate as the fund would not qualify as a redeemable preferred stock with a stated term that allows for amortization.

Impairment of Preferred Stock

19. The prior guidance in SSAP No. 32 included different guidance for determining other-than-temporary impairment (OTTI) based on whether the preferred stock was redeemable or perpetual. Although this division has been retained, modifications have been reflected as follows:

a. For redeemable preferred stock, guidance has been captured to require assessment of OTTI whenever mandatory redemption rights or sinking fund requirements do not occur. Although preferred stock may indicate “required” elements, failing to provide dividends, or contribute to a sinking fund, may not be considered an act of default or require liability recognition from the issuer. Not receiving preferred stock provisions does not turn the holder of preferred stock into a creditor, and a redemption right cannot force a company to redeem shares. However, if an issuer fails to comply with “required” components, reporting entities should assess whether the preferred stock is other-than-temporarily impaired.

b. For perpetual preferred stock, the other-than-temporary impairment guidance has been revised to mirror guidance for other equity investments (e.g., common stock). As perpetual preferred stock will be reported at fair value, upon recognition of an OTTI, any unrealized losses will be realized, and the then-current fair value will become the new cost basis. Subsequent variations in fair value are treated as unrealized gains or losses.

c. Comments received from interested parties noted that proposed impairment guidance for perpetual preferred stock could be enhanced if written similar to existing impairment guidance in SSAP No.\(^1\)

---

\(^1\) Interested parties noted that call dates may not be effective for a period of time. As such, language regarding that only “currently effective” buy back rates (call prices) was added.
Preferred Stock Income / Redemption

20. The guidance in this issue paper incorporates revisions to clarify the reporting of dividend income from preferred stock. This guidance clarifies that dividends shall be recognized in the form received (cash, preferred stock, common stock), at fair value, with differences between fair value and the dividend receivable recognized as gains or losses. Subsequent to initial recognition, the asset received shall follow the applicable statutory accounting statement. For example, dividends received in the form of common stock shall be captured in SSAP No. 30—Unaffiliated Common Stock.

21. Additionally, this issue paper incorporates new guidance to clarify the reporting when preferred stock is reacquired or redeemed by the issuing entity. Pursuant to this guidance, regardless of how an issuer reacquires the stock (either at market value or pre-set call / redemption price), the reporting entity would recognize any difference between the book/adjusted carrying value and the consideration received as a realized gain or loss.

Disclosures

22. Although this issue paper incorporates various accounting and reporting changes for preferred stock, there have been no revisions incorporated to the existing disclosure requirements.

Effective Date

23. The adoption of this issue paper by the Statutory Accounting Principles (E) Working Group, and the substantively revised statement of statutory accounting principles (SSAP) occurred on July 30, 2020. The substantive revisions to SSAP No. 32R are detailed in Exhibit A of this issue paper and reflected in the substantively-revised SSAP No. 32R—Preferred Stock. The effective date of the guidance will be identified in the SSAP. Users of the Accounting Practices & Procedures Manual should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

- SSAP No. 32R—Preferred Stock
EXHIBIT A - REVISIONS TO SSAP No. 32—Preferred Stock

Preferred Stock

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for preferred stock.

2. Investments in preferred stock of entities captured in SSAP No. 97—Investments of in subsidiaries, controlled or affiliated entities or SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies, including as well as preferred stock interests of certified capital companies (CAPCO) per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement. In addition to the provisions of this statement, preferred stock investments in SCAs are also subject to the provisions of SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

SUMMARY CONCLUSION

3. Preferred stock, which may or may not be publicly traded, is a security that represents ownership of a corporation and gives the holder a claim, prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. Preferred stock does not usually carry voting rights. Preferred stock has characteristics of both common stock and debt, defined as any class or series of shares the holders of which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock (as defined in SSAP No. 30R—Unaffiliated Common Stock) issued by an entity. Preferred stock shall include but not be limited to:

a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is at the option of the holders. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders. Preferred stock which meet one or more of these criteria would be classified as redeemable preferred stock regardless of other attributes such as voting rights or dividend rights, including mandatory sinking fund preferred stock and preferred stock redeemable at the option of the holder;

b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred

---

1 Certain legal entities captured in SSAP No. 48, such as LLCs that are corporate-like, do not issue preferred stock in legal form, but instead issue identical instruments labeled preferred units, interests, or shares. These instruments shall be captured in this statement provided they meet the structural characteristics as defined in paragraph 3. Additionally, these instruments shall not be in-substance common stock in which the holder has risk and reward characteristics that are substantially similar to common stock.

2 Preferred stock shall be classified by its characteristics. For example, a preferred stock that is named “redeemable perpetual preferred stock” shall be reported as either “redeemable” or “perpetual” preferred stock based on whether the characteristics of paragraph 3a are met.
Ref #2019-04
Exhibit A

stock pursuant to paragraph 3.a including nonredeemable preferred stock and preferred stock redeemable at the option of the issuer; and

4. The definition of preferred stock, as defined in paragraph 3 does not include fund investments. However, the following types of SVO-identified investments are captured within scope of this statement.

   a. Exchange Traded Funds, which qualify for preferred stock treatment, as identified in Part Six, Section 2, of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and published on the SVO’s web page at www.naic.org. SVO-Identified Preferred Stock ETFs shall follow the accounting provisions for perpetual preferred stock.

5. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.

6. Mandatory sinking fund preferred stock is defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (a) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (b) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (c) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which does not, at date of issue or December 31, 1978, if outstanding at that time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise.

7. PIK preferred stock is defined as redeemable preferred stock on which, at the option of the issuer, dividends can be paid in additional securities rather than cash.

8. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.

9.5. Restricted preferred stock is defined3 as a security either redeemable or perpetual preferred stock that must be traded in compliance with special Securities Exchange Commission (SEC) regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, merger and acquisition (M&A) activity and underwriting activity. Pursuant to the SEC, restricted securities are securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that the holding may not resell the stock in the public marketplace unless the sale is exempt from the SEC’s registration requirements. Restricted preferred stock is generally considered an admitted asset; however, admittance may be limited based on the degree of restriction in accordance with SSAP No. 4—Assets and Nonadmitted Assets. Restricted preferred stock shall be coded as restricted in the investment schedule and disclosed pursuant to SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures, for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the

---

3 This definition of restricted stock does not preclude a “restricted asset” classification for any preferred stock that is restricted (e.g., not under the exclusive control of the entity) by actions of the reporting entity or others. For example, if a reporting entity has pledged preferred stock, or used preferred stock in securities lending/repo transactions, the preferred stock shall be coded and disclosed as restricted stock pursuant to SSAP No. 1.

© 2020 National Association of Insurance Commissioners 8
requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.

10.6. Preferred stocks meet the definition of assets as defined in SSAP No. 4—Assets and Nonadmitted Assets and are admitted assets to the extent they conform to the requirements of this statement.

**Acquisitions and Sales**

11.7. At acquisition, preferred stock shall be reported at cost, including brokerage and other related fees. Preferred PIK stock received as dividends shall be initially recorded at fair value. Acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

12.8. A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Preferred stock acquired under a subscription represents a conditional transaction in which a security—preferred stock is authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual security—preferred stock is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Preferred stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the security—preferred stock and the security—preferred stock is recorded in the name of the reporting entity or its nominee, (i.e., the accounting for such preferred stock acquisitions shall be on the settlement date).

**Amortization**

13. Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value (yield to worst). Redeemable preferred stock purchased at a discount shall be amortized accreted to increase the carrying value to par value the redemption price over the period to maturity or the latest redemption date.

14. PIK preferred stock shall be amortized to the lower of the call price or par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

15.9. Amortization (and accretion) of the premium and discount arising at acquisition shall be calculated using the interest method and shall be reported as increases or decreases in dividends collected during the year through investment income.

**Balance Sheet Amount**

16. The NAIC Securities Valuation Office assigns preferred stocks NAIC designations (NAIC designation 1 through 6) in accordance with the Purposes and Procedures Manual of the NAIC Investment Analysis Office, and that NAIC designation is published in accordance with the SVO compilation instructions in the Purposes and Procedures Manual.

10. Preferred stock shall be valued based on (a) the underlying characteristics of the security (redeemable, or perpetual or mandatory convertible), (b) the quality rating of the security expressed as an NAIC designation pursuant to paragraph 15, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:

   a. For reporting entities that do not maintain an AVR:
b. Step-up preferred stock (a security with the structure of a preferred stock, that has the cash flow characteristics of a debt instrument) is considered a security with characteristics of both debt and equity, and the accounting and valuation of such securities shall be consistent with SVO guidelines as stipulated in the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

17. For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve (SSAP No. 7). For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

a. Reporting Entities That Do Not Maintain An AVR

i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

ii. Highest-quality or high-quality perpetual preferred stocks (NAIC designations 1 and 2), which have characteristics of equity securities, shall be reported at fair value, not to exceed any currently effective call price. All other perpetual preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost or fair value.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.

iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

b. For reporting entities that maintain an AVR:

Reporting Entities That Do Maintain An AVR

i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost, amortized cost, or fair value.

ii. Highest-quality, high-quality or medium quality perpetual preferred stocks (NAIC designations 1 to 3), which have characteristics of equity securities, shall be valued at fair value, not to exceed any currently effective call price, cost. All other perpetual preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost or fair value.

iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Impairment of Redeemable Preferred Stock

For any decline in the fair value of perpetual preferred stock which is determined to be other-than-temporary (INT 06-07), an impairment loss shall be recognized as a realized loss equal to the entire difference between the perpetual preferred stock’s carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.
had been purchased on the measurement date of the other than temporary impairment, and in accordance with paragraph 20 or paragraph 22, as applicable. The fair value of the perpetual preferred stock on the measurement date shall become the new cost basis of the perpetual preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Future declines in fair value which are determined to be other-than-temporary, shall be recorded as realized losses.

Income

14. Dividends on preferred stock (whether cumulative or noncumulative), other than mandatorily redeemable preferred stock, shall be recorded as investment income for dividend eligible preferred stock on the ex-dividend date with a corresponding receivable to be extinguished upon receipt of cash dividend settlement (i.e., dividend income shall be recorded on preferred stock declared to be ex-dividend on or prior to the statement date). Dividends received shall be recognized in the form received (e.g., cash, preferred stock, common stock) at fair value with differences between fair value and the dividend receivable recognized as gains or losses. Subsequent treatment shall follow the statement that addresses the type of asset received. For example, dividends received in the form of common stock shall be accounted for and reported in accordance with SSAP No. 30R—Unaffiliated Common Stock.

Redemption of Preferred Stock

15. A reporting entity that sells or redeems preferred stock back to the issuer shall recognize consideration received in excess of the book/adjusted carrying value as a realized gain or loss. This recognition shall occur regardless of whether the issuer repurchases the preferred shares at market value, or if the shares are redeemed by the issuer at a predetermined set call price.

22. Dividends on mandatorily redeemable preferred stock shall be accrued to the redemption price, even if not declared, using the interest method over the period ending on the redemption date.

23. Cash dividends paid on PIK stock during the stock dividend period shall be accounted for as a reduction in the investment.

Exchanges and Conversions

24-16. If preferred stock is exchanged or converted into other securities, the fair value of the preferred stock surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the preferred stock surrendered, then it shall become the cost basis for the new securities.

Disclosures

25-17. The following disclosures regarding preferred stocks shall be made in the financial statements:

a. Fair values in accordance with SSAP No. 100R—Fair Value (SSAP No. 100R);

b. Concentrations of credit risk in accordance with SSAP No. 27;

c. Basis at which the preferred stocks are stated; and

d. A description, as well as the amount, of preferred stock that is restricted and the nature of the restriction.
For each balance sheet presented, all preferred stocks in an unrealized loss position for which other-than-temporary declines in value have not been recognized

i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and

ii. The aggregate related fair value of preferred stocks with unrealized losses.

The disclosures in (i) and (ii) above should be segregated by those preferred stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with SSAP No. 100R.

As of the date of the most recent balance sheet presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.

When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

iii. The aggregate carrying value of the investments not evaluated for impairment, and

iv. The circumstances that may have a significant adverse effect on the fair value.

Refer to the Preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs 3117.b., 3117.e., 3117.f., 3117.g. and 3117.h. shall be included in the annual audited statutory financial reports only.

This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors. The guidance in paragraphs 23-26 was previously included within SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment and was effective for reporting periods beginning on January 1, 2009, and thereafter, with early adoption permitted. In 2010, the guidance from SSAP No. 99 was incorporated within the impacted standards, with SSAP No. 99 superseded. The original impairment guidance included in this standard, and the substantive revisions reflected in SSAP No. 99 are retained for historical purposes within Issue Paper No. 131. The guidance in paragraphs 2 and 3 to SSAP No. 32 was originally superseded January 1, 2005, by guidance included in SSAP No. 88—Investments in Subsidiaries, Controlled and Affiliated Entities, A replacement of SSAP No. 46, and then subsequently reflected in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities. In 2011, the guidance related to preferred stock of
SCAs from SSAP No. 97 was incorporated into this statement and revised to reflect a definition of preferred stock. The original guidance included in this statement, and the substantive revisions reflected in SSAP No. 88 and SSAP No. 97 (including the title change already reflected in SSAP No. 32) are retained for historical purposes within Issue Paper Nos. 32 and 118. Guidance in paragraph 17 was originally contained in INT 99-29: Classification of Step-Up Preferred Stock and was effective December 6, 1999.

28.21. On July 30, 2020, substantive revisions, as detailed in Issue Paper No. 164—Preferred Stock were adopted. These revisions, effective January 1, 2021, update definitions of preferred stock and reporting values based on characteristics of the preferred stock.

EXHIBIT A – GLOSSARY

Callable Preferred Stock – A preferred stock in which the issuer has the right to call or redeem the stock at a preset price after a defined date. Callable preferred stock can be either redeemable preferred stock or perpetual preferred stock depending on other characteristics of the preferred stock. For example, callable preferred stock with a maturity or a specific buyback date would be redeemable preferred stock, whereas callable preferred stock electable at the discretion of the issuer is perpetual preferred stock.

Convertible Preferred Stock – A preferred stock that is convertible into another security based on a conversion rate. For example, convertible preferred stock that is convertible into common stock on a two-for-one basis (two shares of common for each share of preferred).

Cumulative Preferred Stock – A preferred stock with a provision that missed dividend payments must be paid to cumulative preferred shareholders before other classes of preferred stock shareholders and common shareholders can receive dividend payments. Cumulative preferred stock may have different levels, with a “first” or “senior” cumulative preferred, “regular” cumulative preferred and “subordinate” cumulative preferred that determines the priority in which accumulated unpaid dividends or asset liquidation occurs. (Under SSAP No. 32R, holders of cumulative preferred stock are not permitted to recognize a receivable for unpaid cumulative dividends until declared and the reporting entity is entitled to the divided.)

Dividend Declaration Date – The date a corporation declares a dividend payment to its shareholders.

Dividend Record Date – The date that identifies the shareholders that are entitled to a declared dividend.

Dividend Payment Date – The date the declared dividend will be paid.

Ex-Dividend Date – The cut-off date of holding stock to be captured as a shareholder on record entitled to the dividend. (A shareholder that sells their stock on the ex-dividend date would continue to be identified as a shareholder on record entitled to a declared dividend. Anyone who acquires a stock on the ex-dividend date would not be a shareholder on record entitled to a declared dividend.)

Mandatory Redeemable Preferred Stock – A preferred stock that embodies an unconditional obligation requiring the issuer to redeem the instrument by transferring its assets at a specified or determinable date (or dates) or upon an event that is certain to occur. (The existence of a mandatory redemption right does not convert the holder of a preferred stock into a creditor, and an issuer may be prohibited from redeeming shares when redemption would cause an impairment of capital.)

Noncumulative Preferred Stock – A preferred stock that does not entitle the stockholder to accumulated unpaid dividends. After missing dividend payments, a corporation only has to be make current dividend payments to preferred stock holders before providing dividends to common stock holders.

Participating Preferred Stock – A preferred stock that gives the holder participation in the additional earnings of a business or liquidation rights in addition to the normal preferred stock dividend. Pursuant to the terms of the preferred stock, the participation rights may only be activated when income or operations of the issuer exceeds a certain threshold level.

Payment-in-kind (PIK) – A term of the preferred stock prospectus that identifies that dividends may take the form of securities (e.g., common stock) rather than cash.
Perpetual Preferred Stock - Preferred stocks which are not redeemable or are redeemable solely at the option of the issuer. Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock.

Preferred stock - A security, which may or may not be publicly traded, that shows ownership of a corporation and gives the holder a claim, prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation.

Redeemable Preferred Stock - Preferred stock subject to mandatory redemption requirements or whose redemption is outside the control of the issuer. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; 2) is redeemable at the option of the holders; or 3) has conditions for redemption which are not solely within the control of the issuer, such as stock which must be redeemed out of future earnings. Preferred stock which meet one or more of these three criteria is redeemable preferred stock regardless of other attributes such as voting rights or dividend rights.

Restricted Preferred Stock - Redeemable or perpetual preferred stock that must be traded in compliance with special SEC regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, M&A activity and underwriting activity. Pursuant to the SEC, restricted securities are securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that the holding may not resell the stock in the public marketplace unless the sale is exempt from the SEC’s registration requirements.

Sinking Fund – A potential component of a preferred stock charter that requires the issuer to regularly set funds aside in a separate custodial account for the exclusive purpose of redeeming preferred stock shares. Failure of an issuer to provide to the sinking fund does not create an act of default. Rather, the stock charter may implement provisions for failing to provide to the sinking fund, which could include penalties, restrictions of providing common stock dividends or the repurchase of the preferred stock.

Step-Up Preferred Stock – A potential component of a preferred stock charter that identifies whether specific terms will increase over time or with stated provisions. For example, a “step-up dividend” is a feature that increases the dividend rate. A “step-up call” is a feature that increases the call price. A “step-up conversion” increases the conversion price.

Term Preferred Stock – Preferred stock with a mandatory redemption requirement (maturity date) captured in the definition of redeemable preferred stock.
Issue: Accounting for Bond Tender Offers

P/C: ☒
Life: ☒
Health: ☒

Description of Issue: Questions have arisen regarding the accounting treatment for when a held bond is retired early through the acceptance of a “bond tender offer.” A bond tender offer occurs when the bond issuer repurchases some, or all, of a particular bond issuance prior to its scheduled maturity date. These offers are generally an attempt to retire a substantial amount of outstanding debt by making a one-time, special offer to bond holders. Generally, the purpose of a tender offer is to retire bonds that were originally issued at higher interest rates; however, some tender offers have occurred as a mechanism for capital restructuring. As expected, these activities are most common in a decreasing or depressed interest rate environment.

Tender offers typically share similar characteristics in that the offer is: 1) for a predetermined (finite) number of bonds, 2) a specified, nonnegotiable price, 3) available to the market as a whole – generally advertised through a press release, 4) only available for a limited period of time, and 5) contingent upon acceptance by a substantial percentage of debt holders – generally accepted by at least 25% of those eligible for early buyout.

From a bond holder’s perspective, the only material difference between a called and tendered bond is that with the tender offer, the bond holder must elect to accept the repurchase offer. If the tender offer is not accepted, the bond’s terms (including scheduled maturity date) remain unchanged. Bond tender offers are generally offered at rates slightly above market value, as an economic enticement for the holder to “sell” the bond. This increased compensation is reflective of prepayment penalties and/or acceleration fees noted in called bonds. The reinvestment risk assumed by holding a bond with a call option is generally compensation through a higher yield or a known prepayment penalty. Similarly, through a bond tender offer, increased compensation comes in the form of additional termination payout as compared to current market value.

Specific guidance for the reporting and allocation of investment income and/or capital gain/loss associated with callable bonds (where the issuer, at its sole discretion, can redeem a bond before it scheduled maturity date) is noted in SSAP No. 26R—Bonds; however guidance is not reflected for when a bond is retired early through a tender offer. As previously discussed, called bonds and bond tender offers are similar in the fact that the issuer can retire a bond early, however with a bond tender offer, the holder must elect to accept the offer. If the offer is not accepted, the original terms of the bond are not modified.

Existing Authoritative Literature:

The reporting of prepayment penalties or acceleration fees in the event a bond is liquidated prior to its scheduled termination date are detailed in SSAP No. 26R—Bonds.

Income

15. Interest income for any period consists of interest collected during the period, the change in the due and accrued interest between the beginning and end of the period as well as reductions for premium
amortization and interest paid on acquisition of bonds, and the addition of discount accrual. In accordance with SSAP No. 34—Investment Income Due and Accrued, investment income shall be reduced for amounts which have been determined to be uncollectible. Contingent interest may be accrued if the applicable provisions of the underlying contract and the prerequisite conditions have been met.

16. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

17. The amount of prepayment penalty and/or acceleration fees to be reported as investment income or loss shall be calculated as follows:

a. For called bonds in which the total proceeds (consideration) received exceeds par:
   
i. The amount of investment income reported is equal to the consideration received less the par value of the investment; and
   
ii. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses, subject to the authoritative literature in SSAP No. 7.

b. For called bonds in which the consideration received is less than par:
   
i. To the extent an entity has in place a process to identify explicit prepayment penalty or acceleration fees, these should be reported as investment income. (An entity shall consistently apply their process. Once a process is in place, an entity is required to maintain a process to identify prepayment penalties for called bonds in which consideration received is less than par.)
   
ii. After determining any explicit prepayment penalty or acceleration fees, the reporting entity shall calculate the resulting realized gain as the difference between the remaining consideration and the BACV, which shall be reported as realized capital gain, subject to the authoritative literature in SSAP No. 7.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in Description of Issue) not previously contemplated by the Working Group:
While bond tenders were not specifically discussed, the accounting and reporting of revenues as a result of early termination, was addressed in agenda item 2018-32: SSAP No. 26R—Prepayment Penalties. In this agenda item, authoritative guidance was adopted detailing the breakout of revenues between investment income and capital gains when the called bond consideration was less than par.

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation: NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 26R—Bonds to clarify that the accounting and reporting of investment income and capital gain/loss, due to the early liquidation either through a call

---

1 This guidance applies to situations in which consideration received is less than par but greater than the book adjusted carrying value (BACV). Pursuant to the yield-to-worst concept, bonds shall be amortized to the call or maturity date that produces the lowest asset value. In the event a bond has not been amortized to the lowest value prior to the call (BACV is greater than the consideration received), the entire difference between consideration received and the BACV shall be reported to investment income.
or a tender offer, shall be similarly applied. NAIC staff believes this is in line with original intent as the initial SSAP No. 26 codification guidance (still reflected in paragraph 16 of SSAP No. 26R) is not specific to called bonds. Rather, the guidance refers to “prepayment penalties or acceleration fees in the event the bond is liquidated prior to its scheduled termination date.” This guidance would seemingly include all dynamics in which an issuer provides a penalty / fee to the holder to terminate the bond.

A bond retired early through either a call or tender offer are functionally equivalent to a bond holder. The only potential additional consideration for the bond holder is that the yield-to-worst concept was likely not applied in relation to the bond tender offer (as the tender offer amount and date were not known/expected at the time of acquisition). However, this concern is negated as bond tender offers are generally at or above market value and the holder must elect to participate. If a bond tender offer is not economically beneficial to the holder, the holder would simply not participate.

SSAP No. 26R – Proposed Updates

16. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

17. The amount of prepayment penalty and/or acceleration fees to be reported as investment income or loss shall be calculated as follows:

   a. For called or tendered bonds in which the total proceeds (consideration) received exceeds par:
      i. The amount of investment income reported is equal to the consideration received less the par value of the investment; and
      ii. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses, subject to the authoritative literature in SSAP No. 7.

   b. For called or tendered bonds in which the consideration received is less than par:
      iii. To the extent an entity has in place a process to identify explicit prepayment penalty or acceleration fees, these should be reported as investment income. (An entity shall consistently apply their process. Once a process is in place, an entity is required to maintain a process to identify prepayment penalties for called bonds in which consideration received is less than par.)
      iv. After determining any explicit prepayment penalty or acceleration fees, the reporting entity shall calculate the resulting realized gain as the difference between the remaining consideration and the BACV, which shall be reported as realized capital gain, subject to the authoritative literature in SSAP No. 7.

Staff Review Completed by: Jim Pinegar, NAIC Staff – January 2020

---

2 This guidance applies to situations in which consideration received is less than par but greater than the book adjusted carrying value (BACV). Pursuant to the yield-to-worst concept, bonds shall be amortized to the call or maturity date that produces the lowest asset value. In the event a bond has not been amortized to the lowest value prior to the call, or in cases of an accepted tender bond offer (BACV is greater than the consideration received), the entire difference between consideration received and the BACV shall be reported to investment income.
Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 26R—Bonds, to clarify that the accounting and reporting of investment income and capital gain/loss, due to the early liquidation either through a call or a tender offer, shall be similarly applied. The current guidance refers to “prepayment penalties or acceleration fees in the event the bond is liquidated prior to its schedule termination date,” and includes all dynamics in which an issuer provides a penalty/fee to the holder to terminate the bond. This item has a comment period deadline ending May 29, 2020.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 26R—Bonds, as illustrated below, to clarify that the accounting and reporting of investment income and capital gain/loss, due to early liquidation either through a call or a tender offer, shall be similarly applied. Additionally, an effective date of Jan 1, 2021 was permitted, however is only applicable to reporting entities in which had historically applied differing accounting methodology and require systems changes in order to capture tendered bonds in scope of this guidance.

SSAP No. 26R – Adopted Updates

16. A bond may provide for a prepayment penalty or acceleration fee in the event the bond is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

17. The amount of prepayment penalty and/or acceleration fees to be reported as investment income or loss shall be calculated as follows:

a. For called or tendered bonds in which the total proceeds (consideration) received exceeds par:

   i. The amount of investment income reported is equal to the consideration received less the par value of the investment; and

   ii. Any difference between the book adjusted carrying value (BACV) and the par value at the time of disposal shall be reported as realized capital gains and losses, subject to the authoritative literature in SSAP No. 7.

b. For called or tendered bonds in which the consideration received is less than par:

   v. To the extent an entity has in place a process to identify explicit prepayment penalty or acceleration fees, these should be reported as investment income. (An entity shall consistently apply their process. Once a process is in place, an entity is required to maintain a process to identify prepayment penalties for called bonds in which consideration received is less than par.)

   vi. After determining any explicit prepayment penalty or acceleration fees, the reporting entity shall calculate the resulting realized gain as the difference between the remaining consideration and the BACV, which shall be reported as realized capital gain, subject to the authoritative literature in SSAP No. 7.

---

3 This guidance applies to situations in which consideration received is less than par but greater than the book adjusted carrying value (BACV). Pursuant to the yield-to-worst concept, bonds shall be amortized to the call or maturity date that produces the lowest asset value. In the event a bond has not been amortized to the lowest value prior to the call, or in cases of an accepted tender bond offer (BACV is greater than the consideration received), the entire difference between consideration received and the BACV shall be reported to investment income.
Effective Date and Transition (New Paragraph)

37. On July 30, 2020, nonsubstantive revisions were adopted to clarify existing guidance that all prepayment penalty and acceleration fees for when a bond is liquidated prior to its scheduled maturity date, including those from tendered bonds, shall follow the guidance in SSAP No. 26R. Reporting entities that have historically applied this guidance shall not change historical practices, but an effective date of January 1, 2021, with early application permitted, is allowed for reporting entities to make systems changes to capture tendered bonds in scope of this guidance.

**Description of Issue:** This agenda item was drafted to request additional goodwill information and to clarify reporting on Schedule D, Part 6, Section 1 – Valuation of Shares of Subsidiary, Controlled and Affiliated Companies.

1) With the adoption of agenda item 2017-18: Goodwill Limitations in SSAP No. 68—*Business Combinations and Goodwill* and SSAP No. 97—*Investments in Subsidiary, Controlled and Affiliated Entities*, the information reported regarding goodwill, as provided in Annual Statement Footnote 3 – Business Combinations and Goodwill, has improved. This agenda item proposes additional disclosures to enhance the reporting of an SCA’s book adjusted carrying value (BACV). As goodwill is a significant component of many SCAs’ BACV, this agenda item will assist in facilitating review and disclosure of each balance.

2) During a review of SCA Sub 2 filings, it is noted that many companies do not calculate the amortization of goodwill correctly, which sometimes overstates the value of the SCA. Many companies also do not provide additional information to verify beginning goodwill and purchase price; as such NAIC staff rely on a review of Footnote 3 for these details. If the goodwill amount is not verifiable, it is not be allowed to be admitted as part of the SCA’s value.

3) The goodwill limitation of 10% of the insurance reporting entity’s goodwill—capital and surplus is a calculation that all reporting entities who have goodwill must perform. While the admitted result is in the Annual Statement, the details of the calculation are not easily identifiable This agenda item proposes the addition of a disclosure to capture the admissibility information, to ensure transparency in the admission of goodwill.

Additionally, feedback is requested in terms of the proposed edits to Schedule D – Part 6 – Sections 1 and 2. As detailed in the proposal below, two column headings and related Blanks instruction refer to “Intangible Assets,” however NAIC staff believe the original intent of these disclosures were to capture goodwill. FASB defines intangible assets as assets (not including financial assets) that lack physical substance and refer to assets other than goodwill. Feedback is requested from regulators and interested parties regarding what has historically been included in this disclosure and if changing the definition to articulate goodwill is warranted. Upon a sampled review by NAIC staff, it appears as though goodwill is the sole number currently being reported in these applicable columns.

**Existing Authoritative Literature:**

Goodwill calculation and admittance limitations are detailed in *SSAP No. 68—Business Combinations and Goodwill*. Relevant areas in relation to this agenda item have been bolded for emphasis.
Statutory Purchases of SCA Investments

3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. Contingent consideration issued in a purchase business combination that is embedded in a security or that is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

4. For those acquired SCA entities accounted for in accordance with paragraphs 8.b.i., 8.b.ii., 8.b.iii. or 8.b.iv. of SSAP No. 97, and joint venture, partnership or limited liability company entities accounted for in accordance with paragraph 8 of SSAP No. 48, goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity’s share of the book value of the acquired entity. When the cost of the acquired entity is greater than the reporting entity’s share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity’s share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other-than-invested assets. All other goodwill shall be reported in the carrying value of the investment.

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity’s share of the GAAP net book value of the acquired entity, adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer’s share of the statutory book value of the acquired entity.

6. For those acquired SCA entities accounted for in accordance with paragraph 8.b.i. of SSAP No. 97 under the statutory purchase method, the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements. Therefore, pushdown accounting is not permitted.

7. Positive goodwill recorded under the statutory purchase method of accounting shall be admitted subject to the following limitation: Positive goodwill from all sources, including life, accident and health, and deposit-type assumption reinsurance and goodwill resulting from the acquisition of an SCA by the insurance reporting entity that is reported on the SCA’s financial statements (resulting from the application of pushdown accounting), is limited in the aggregate to 10% of the acquiring entity’s capital and surplus as required to be shown on the statutory balance sheet of the reporting entity for its most recently filed statement with the domiciliary state commissioner adjusted to exclude any net positive goodwill, EDP equipment and operating system software, and net deferred tax assets. Additionally, all positive goodwill shall be nonadmitted when the underlying investment in the SCA or partnership, joint venture and limited liability company is nonadmitted. When negative goodwill exists, it shall be recorded as a contra-asset.

8. Positive or negative goodwill resulting from the purchase of an SCA, joint venture, partnership or limited liability company shall be amortized to unrealized capital gains and losses on investments over the period in which the acquiring entity benefits economically, not to exceed 10 years. Positive or negative goodwill resulting from life,

---

1 The “acquiring” entity is intended to reflect the insurance reporting entity that reports the investment resulting in goodwill. The goodwill limitation test shall be completed at the individual reporting company level.

2 This includes, but is not limited to, situations in which the investment is nonadmitted as the audited financial statements for the SCA, joint venture, partnership or limited liability company includes substantial doubt on the entity’s ability to continue as a going concern, or on the basis/contents of the audit opinion pursuant to paragraph 21 of SSAP No. 97.
accident and health, and deposit-type assumption reinsurance shall be amortized to operations as a component of general insurance expenses over the period in which the assuming entity benefits economically, not to exceed 10 years. Goodwill shall be evaluated separately for each transaction.\(^\text{INT 01-18}\)

**Disclosures:**

15. For business combinations accounted for under the statutory purchase method, the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

   a. The name and brief description of the acquired entity;
   
   b. Method of accounting, that is the statutory purchase method;
   
   c. Acquisition date, cost of the acquired entity and the original amount of admitted goodwill; and
   
   d. The amount of amortization of goodwill recorded for the period; the admitted goodwill as of the reporting date, and admitted goodwill as a percentage of the SCA’s book adjusted carrying value (gross of admitted goodwill).

16. For business combinations taking the form of a statutory merger, the financial statements shall disclose:

   a. The names and brief description of the combined entities;
   
   b. Method of accounting, that is the statutory merger method;
   
   c. Description of the shares of stock issued or cancelled in the transaction;
   
   d. Details of the results of operations of the previously separate entities for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and
   
   e. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

17. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:

   a. The name of the ceding entity;
   
   b. The type of business assumed;
   
   c. The cost of the acquired business and the amount of goodwill; and
   
   d. The amount of amortization of goodwill recorded for the period.

18. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

   a. A description of the impaired assets and the facts and circumstances leading to the impairment; and
   
   b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.
Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

In March 2018, the Working Group adopted agenda item 2017-18: Goodwill Limitations in SSAP Nos. 68 and 97, requiring additional goodwill disclosures in Footnote 3 – Business Combinations and Goodwill (shown below).

Additional goodwill items under consideration by the Working Group relate to the currently exposed, agenda items:

1) Agenda item 2019-14: Attribution of Goodwill. This agenda item proposes the expansion of statutory guidance regarding the attribution of purchase price and goodwill from an acquisition and to add explicit language regarding the accounting treatment for situations in which an insurance company acquires a holding company that owns multiple companies.

2) Agenda item 2019-17: Pushdown Accounting. This agenda item reviewed the guidance in ASU 2014-17, Business Combinations – Pushdown Accounting and its applicability for statutory accounting. Three options were suggested for consideration which included complete rejection, allowance of pushdown for non-insurance entities, or allowance of pushdown only if previously elected (for SEC Registrants).

Also, in December 2019, the Working Group adopted an edit to SSAP No. 68—Business Combinations and Goodwill to clarify that all goodwill from an insurance entity’s acquisition of SCAs, regardless of whether pushdown accounting is applied, is subject to the existing 10% admittance limitation.

Information or issues (included in Description of Issue) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:
Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose this agenda item with nonsubstantive revisions to SSAP No. 68—Business Combinations and Goodwill, as detailed below, to add additional goodwill disclosures. The proposed disclosures will improve the validity and accuracy of numbers currently being reported and will assist with the regulators’ review of reported assets not readily available for the payment of policyholder claims.

Proposed additional disclosures in SSAP No. 68—Business Combinations and Goodwill:

Disclosures
19. For business combinations accounted for under the statutory purchase method, the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

   a. The name and brief description of the acquired entity;

   b. Method of accounting, that is the statutory purchase method;

   c. Acquisition date, cost of the acquired entity, the original amount of goodwill and the original amount of admitted goodwill; and

   d. Each SCA’s book value, the amount of amortization of goodwill recorded for the period; the SCA’s admitted goodwill as of the reporting date;

   e. Total admitted goodwill as of the reporting date; and
Ref #2020-03

Admitted goodwill as a percentage of the SCA’s book adjusted carrying value (gross of admitted goodwill).

20. For business combinations taking the form of a statutory merger, the financial statements shall disclose:
   a. The names and brief description of the combined entities;
   b. Method of accounting, that is the statutory merger method;
   c. Description of the shares of stock issued or cancelled in the transaction;
   d. Details of the results of operations of the previously separate entities for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and
   e. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

21. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:
   a. The name of the ceding entity;
   b. The type of business assumed;
   c. The cost of the acquired business and the amount of goodwill; and
   d. The amount of amortization of goodwill recorded for the period.

22. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:
   a. A description of the impaired assets and the facts and circumstances leading to the impairment; and
   b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.

23. A reporting shall disclose the subcomponents and calculation of adjusted surplus and total admitted goodwill as a percentage of adjusted surplus:

Note 1 in Schedule D-Part 6-Section 1 (below), is proposed for removal due to the addition of footnote 3 (D). It is anticipated that if adopted as exposed, both changed would occur simultaneously.

1. Amount of insurer’s capital and surplus from the prior period’s statutory statement reduced by any admitted EDP, goodwill and net deferred tax assets included therein: $....................................

12. Total amount of intangible assets goodwill nonadmitted $ ...................................................................................

For brevity, only instructions for affected columns have been included. Remaining paragraph numbers will be renumbered accordingly.

Column 7——Do Insurer’s Assets Include Intangible Assets Connected with Holding of Such Company’s Stock?

State whether the assets shown by the reporting entity in this statement include, through the carrying value of stock of the SCA company valued under the SSAP No. 97—Subsidiary, Controlled and Affiliated Entities, intangible assets arising out of the purchase of such stock by the reporting entity or the purchase by the SCA Company of the stock of a lower-tier company controlled by the SCA Company. For purposes of this question, intangible assets at purchase shall be defined as the excess of the purchase price over the tangible net worth (total assets less intangible assets and total liabilities) represented by such shares as recorded, immediately prior to the date of purchase, on the books of the company whose stock was purchased.

Column 8——Total Amount of Such Intangible Assets Goodwill

If the answer in Column 7 is “Yes,” give Report the total amount of intangible goodwill assets involved whether admitted or nonadmitted. The intangible assets shown for the SCA Company should include any intangible assets that are included in the SCA Company’s carrying value of the stock of one or more lower-tier companies controlled by the SCA Company. In all cases, the goodwill current intangible assets equals the goodwill calculated intangible assets at purchase, as defined above in SSAP No. 68—Business Combinations and Goodwill, minus any
impairments/write-off thereof between the date of purchase and the statement date. If any portion of the total amount of intangible assets/goodwill is required to be nonadmitted for all SCA companies combined in accordance with SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities and SSAP No. 68—Business Combinations and Goodwill state the total amount nonadmitted in the footnote at the bottom of the this section of the schedule.

For brevity, only instructions for affected columns have been included.

Column 4 – Total Amount of Intangible Assets/Goodwill Included in Amount Shown in Column 8, Section 1

As explained in the instructions for Section 1, this amount is based on the intangible assets at goodwill purchase of the stock of the lower-tier company, reduced by any subsequent impairment/write-off. The reporting entity also bases the amount shown on the proportionate ownership of the lower-tier company.

Staff Review Completed by: Jim Pinegar & Fatima Sediqzad, NAIC Staff – January 2020

Status:
On March 18, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to SSAP No. 68—Business Combinations and Goodwill, as illustrated above, to add additional goodwill disclosures. The proposed disclosures will improve the validity and accuracy of numbers currently being reported and will assist with the regulators’ review of reported assets not readily available for the payment of policyholder claims. Revisions to Schedule D, Part 6, Section 1 - Valuation of Shares of Subsidiary, Controlled and Affiliated Companies and Schedule D, Part 6, Section 2 - Valuation of Shares of Subsidiary, Controlled and Affiliated Companies primarily focus on the current reference to intangible assets. This item has a comment period deadline ending May 29, 2020.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to SSAP No. 68—Business Combinations and Goodwill, as illustrated below, adding goodwill disclosures that will improve the validity and accuracy of intangible assets currently being reported in the financial statements. This disclosure will be effective for the year-end 2021 financial statements.
Adopted disclosures in SSAP No. 68—Business Combinations and Goodwill:

Disclosures

15. For business combinations accounted for under the statutory purchase method, the financial statements shall disclose the following for as long as unamortized goodwill is reported as a component of the investment:

   a. The name and brief description of the acquired entity;
   b. Method of accounting, that is the statutory purchase method;
   c. Acquisition date, cost of the acquired entity, the original amount of goodwill and the original amount of admitted goodwill; and
   d. Each The SCA’s book value, the amount of amortization of goodwill recorded for the period; the SCA’s admitted goodwill as of the reporting date;
   e. Total admitted goodwill as of the reporting date; and
   d. Admitted goodwill as a percentage of the SCA’s book adjusted carrying value (gross of admitted goodwill).

16. For business combinations taking the form of a statutory merger, the financial statements shall disclose:

   f. The names and brief description of the combined entities;
   g. Method of accounting, that is the statutory merger method;
   h. Description of the shares of stock issued or cancelled in the transaction;
   i. Details of the results of operations of the previously separate entities for the period before the combination is consummated that are included in the current combined net income, including revenue, net income, and other changes in surplus; and
   j. A description of any adjustments recorded directly to surplus for any entity that previously did not prepare statutory statements.

17. The financial statements shall disclose the following information regarding goodwill resulting from assumption reinsurance:

   e. The name of the ceding entity;
   f. The type of business assumed;
   g. The cost of the acquired business and the amount of goodwill; and
   h. The amount of amortization of goodwill recorded for the period.

18. A reporting entity that recognizes an impairment loss shall disclose the following in the financial statements that include the period of the impairment write-down:

   a. A description of the impaired assets and the facts and circumstances leading to the impairment; and
   b. The amount of the impairment charged to realized capital gains and losses and how fair value was determined.
19. A reporting shall disclose the subcomponents and calculation of adjusted surplus and total admitted goodwill as a percentage of adjusted surplus:

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. The provisions of this statement shall be applied to all business combinations entered into on or after January 1, 2001. Goodwill that had been written off prior to the effective date of this statement is prohibited from being restored for purposes of applying the provisions of this statement. The guidance in paragraphs 4-6 was previously included within SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities and was effective for reporting periods ending on and after December 31, 2007. In 2011, the guidance related to goodwill included in SSAP No. 97 was incorporated into this statement. The original guidance included in this standard, and the substantive revisions reflected in SSAP No. 97 are retained for historical purposes within Issue Paper No. 118. Guidance reflected in paragraph 1, incorporated from INT 03-16: Contribution of Stock, was effective December 7, 2003. Guidance reflected in paragraph 3 incorporated from INT 99-10: EITF No. 97-8: Accounting for Contingent Consideration Issued in a Purchase Business Combination was effective June 7, 1999. Disclosure modifications adopted in July 2020, reflected in agenda item 2020-03, are effective for the year-end 2021 financial statements.

Proposed Blank updates related to SSAP No. 68 include the following:

Note 1 in Schedule D-Part 6-Section 1 (below), is proposed for removal due to the addition of footnote 3 (D). It is anticipated that if adopted as exposed, both changes would occur simultaneously.

1. Amount of insurer’s capital and surplus from the prior period’s statutory statement reduced by any admitted EDP, goodwill and net deferred tax assets included therein: $....................................
12. Total amount of tangible assets, goodwill nonadmitted $ .............................................................

For brevity, only instructions for affected columns have been included. Remaining paragraph numbers will be renumbered accordingly.

Column 7 – Do Insurer’s Assets Include Intangible Assets Connected with Holding of Such Company’s Stock?

State whether the assets shown by the reporting entity in this statement include, through the carrying value of stock of the SCA company valued under the SSAP No. 97—Subsidiary, Controlled and Affiliated Entities, intangible assets arising out of the purchase of such stock by the reporting entity or the purchase by the SCA Company of the stock of a lower-tier company controlled by the SCA Company. For purposes of this question, intangible assets at purchase shall be defined as the excess of the purchase price over the tangible net worth (total assets less intangible assets and total liabilities) represented by such shares as recorded, immediately prior to the date of purchase, on the books of the company whose stock was purchased.

Column 8 – Total Amount of Such Intangible Assets Goodwill

If the answer in Column 7 is “Yes,” give Report the total amount of intangible goodwill assets involved whether admitted or nonadmitted. The intangible assets shown for the SCA Company should include any intangible assets that are included in the SCA Company’s carrying value of the stock of one or more lower-tier companies controlled by the SCA Company. In all cases, the goodwill current intangible assets equals the goodwill calculated intangible assets at purchase, as defined above in SSAP No. 68—Business Combinations and Goodwill, minus any impairments/write-off thereof between the date of purchase and the statement date. If any portion of the total amount of intangible assets goodwill is required to be nonadmitted for all SCA companies combined in accordance with SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities and SSAP No. 68—Business Combinations and Goodwill state the total amount nonadmitted in the footnote at the bottom of the this section of the schedule.

Schedule D – Part 6 – Section 2 – Valuation of Shares of Subsidiary, Controlled or Affiliated Companies

Stock in Lower-Tier Company Owned Indirectly by Insurer on Statement Date
For brevity, only instructions for affected columns have been included.

Column 4  —  Total Amount of Intangible Assets Goodwill Included in Amount Shown in Column 8, Section 1

As explained in the instructions for Section 1, this amount is based on the intangible assets at goodwill purchase of the stock of the lower-tier company, reduced by any subsequent impairment/write-off. The reporting entity also bases the amount shown on the proportionate ownership of the lower-tier company.
Interpretation of the Statutory Accounting Principles (E) Working Group

INT 20-09: Basis Swaps as a Result of the LIBOR Transition

INT 20-09 Dates Discussed

Email Vote to Expose July 15, 2020; July 30, 2020

INT 20-09 References

Current:
SSAP No. 86—Derivatives

INT 20-09 Issue

1. This interpretation is to provide statutory accounting and reporting guidance for “basis swaps.” Basis swaps within the scope of this interpretation are defined as compulsory derivatives issued by Central Clearing Parties (CCP), for certain cleared derivatives, issued solely in response to the market-wide transition away from the London Interbank Offered Rate (LIBOR) and toward the Secured Overnight Financing Rate (SOFR).

2. SOFR is a broad measure of the cost of borrowing cash overnight, generally collateralized by Treasury Securities. It represents nearly a risk-free rate that is correlated with other money market rates and is fully transaction based (thus ensuring full transparency), by reflecting a broad measure of overnight U.S. Treasury repurchase transactions. In conjunction with the transition from LIBOR, many alternative reference rates, such as the Effective Federal Funds Rate (EFFR), an interest rate typically utilized by banks representing a charge for overnight loans, used to meet regulatory reserve requirements, are also being transitioned to SOFR. Accordingly, under the general topic referred to as “Reference Rate Reform,” contracts which reference or utilize LIBOR or EFFR, are anticipated to be modified to reference SOFR.

3. The Working Group previously adopted INT 20-01: Reference Rate Reform, which substantially adopted ASU 2020-04 – Reference Rate Reform and applies to all SSAPs with contracts within scope of ASU 2020-04. INT 20-01 allows for contract modifications, due to reference rate reform, to be accounted for as a continuation of the existing contract and thus not requiring remeasurement. Among other things, INT 20-01 allows for 1) certain hedging relationships to continue without requiring redesignation upon a change in certain critical terms (i.e. changing reference rates), and 2) changes in the designated benchmark interest rate to a different eligible benchmark interest rate in a fair value hedging relationship. INT 20-01 recognized that many of these contracts, as part of the discontinuance of LIBOR, will transition to SOFR, an industry recognized preferred benchmark rate.

4. CCPs will make a similar transition, converting open derivative end-of-day valuation calculations from EFFR to SOFR. This transition will occur in two steps, both of which are anticipated to occur on October 16. First, the CCPs will conduct a standard end-of day valuation cycle based on EFFR. Then, the CCP will conduct a special valuation cycle on those same positions, however utilizing SOFR as the new, ongoing discounting rate. Based on the differences between EFFR and SOFR, the CCP will issue cash adjustments to each account to offset the value adjustments arising from the change in discount rates and additionally will issue mandatory EFFR/SOFR basis swaps, thus restoring the account holder’s original risk profile.

5. SSAP No. 86—Derivatives addresses the recognition and measurement of derivatives used for hedging, income generation, and replication transactions. Additionally, guidance is provided for derivatives not utilized for one of these broad categories (known as “other derivatives”). Derivatives that are classified as “other derivatives” are nonadmitted under SSAP No. 86, whereas derivatives in the other categories are admitted provided they conform to the requirements of the statement.
6. The accounting issues are:

   a. Issue 1: How should EFFR/SOFR basis swaps be classified and reported in the statutory financial statements?

   b. Issue 2: How should EFFR/SOFR basis swaps be valued in the statutory financial statements?

**INT 20-09 Discussion**

7. For Issue 1, the Working Group reached a consensus that mandatory basis swaps issued by CCPs, in response to reference rate reform, shall be classified as a derivative used for “hedging.” In collaboration with industry representatives, Working Group support staff has confirmed that a significant majority of the derivatives transacted through a CCP meet the definition of a hedging transaction. By using this “used for hedging” classification, instead of an “other derivative” classification, the basis swap derivative received will be admitted under SSAP No. 86.

8. For Issue 2, the Working Group reached a consensus that although the instrument shall be considered a hedging derivative, the instrument shall not be considered or reported as an “effective” hedging derivative (using the “hedge accounting” measurement approach permitted in SSAP No. 86), unless the instrument qualifies, with the required documentation, as a highly effective hedge under SSAP No. 86. Unless the effective hedge requirements are met, the instruments shall be reported on Schedule DB, utilizing the category of “Hedging Other.” Pursuant to the guidance in SSAP No. 86, if the basis swap derivative is not an effective hedge, the derivative shall be accounted for at fair value and the changes in fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting.)

**INT 20-09 Status**

8. No further discussion is planned.
MEMORANDUM

TO: Dale Bruggeman, Chair, Statutory Accounting Principles (E) Working Group

FROM: Kevin Fry, Chair, Valuation of Securities (E) Task Force

Cc: Charles Therriault, Director, NAIC Securities Valuation Office
Marc Perlman, Managing Investment Counsel, NAIC Securities Valuation Office (SVO)
Julie Gann, Assistant Director, NAIC Financial Regulatory Services
James Pinegar, Manager II, NAIC Financial Regulatory Services

DATE: May 29, 2020

RE: Referral to the Statutory Accounting Principles (E) Working Group Requesting Affirmation that Non-conforming Credit Tenant Loan (CTL) Transactions that Relied Upon Credit Ratings are included in SSAP No. 43R – Loan-Backed and Structured Securities and Have the Characteristics of a Bond if Assigned an NAIC Designation by the SVO Staff.

1. Summary – Early in 2019 the SVO became aware that certain insurance company filers were submitting through the Filing Exempt (FE) process credit tenant loan (CTL) transactions that contained variants or deviations from the Bond Lease Based and Credit Lease Based CTL legal and structural characteristics not otherwise contemplated or defined in the P&P Manual (Non-conforming CTLs) and transactions which were subsequently defined in the P&P Manuel as ground lease financing (GLF) transactions. For example, several CTLs were submitted to the SVO which contained balloon payments of greater than 5% without residual value insurance or another acceptable mitigant. In another instance, a security was submitted for which the Credit Rating Provider (CRP) analysis explained that its rating relied on the “dark value” of the property to cover payment of principal on the notes. The P&P Manual requires all CTL structures to be submitted to the SVO for review so it can determine if they reflect bond characteristics and, if so, assign an NAIC Designation. The SVO considers GLF transactions, which were previously referred to the Working Group, to be distinct from CTL transactions and their related guidance in the P&P Manual. The SVO studied GLF transactions in detail and ultimately recommended new guidance for them to the Valuation of Securities (E) Task Force (the Task Force) which was adopted on Dec. 8, 2019. The SVO is now making a recommendation to the Task Force on addressing what they are calling Non-conforming CTL transactions that were submitted through the Filing Exempt (FE) process in reliance on CRP ratings instead of being submitted to the SVO for review, and to prevent future incorrect filing procedures. To effect such changes, the SVO proposed P&P Manual amendments to the policy in Part One, “The Use of Credit Ratings of NRSROS In NAIC Processes,” and in Part Three, “Credit Tenant Loans.”

2. The Referral - The SVO staff recommendation to the Task Force includes additional guidance in the policy on the “The Use of Credit Ratings of NRSROS In NAIC Processes” clarifying that there should be no presumption of permanent eligibility to receive an NAIC Designation based upon an NAIC CRP rating. The policy currently states, “The sole NAIC objective in obtaining and using publicly available credit ratings is to conserve limited regulatory resources; e.g., the resources of the SVO.” Additionally, the policy clarifies that in its use of CRP ratings the NAIC is not, “endorsing the credit rating or analytical product of any CRP.” Therefore, nothing about the use of CRP ratings should be interpreted, as was seemingly the case with Non-conforming CTLs and certain other investments, that the Task Force has approved the use of CRP ratings for the determination of NAIC Designations or for any other purpose, other than conserving SVO staff resources. The new policy guidance further affirms the Task Force’s role in making all decisions on the use of CRP ratings.
and provides additional guidance to insurance company filers on what to do if they are uncertain about the filing procedure for a particular security or class of securities.

The SVO further recommends a "grandfathering" provision to permit an insurance company filer to file Non-conforming CTLs, which it owned prior to January 1, 2020 and which have CRP ratings, with the SVO for assessment and to authorize the SVO to use its own judgement in assessing eligibility for an NAIC Designation and, if appropriate, to assign an NAIC Designation which need not correspond to the CRP rating.

The Task Force is referring this memo and proposed amendment to the Statutory Accounting Principles (E) Working Group and requesting the Working Group affirm that they would consider these Non-conforming CTLs to have the characteristics of a bond if assigned an NAIC Designation by the SVO staff. Like the referral from earlier this year on GLFs, these Non-conforming Credit Tenant Loan (CTL) Transactions have historically been reported under the Accounting Practices & Procedures Manual’s SSAP No. 43R – Loan-Backed and Structured Securities under Paragraph 27, b as a type of CTL. The SVO staff recommends affirming that treatment only if the SVO staff can assign an NAIC Designation.

Attached is the memorandum and the exposed amendment prepared by the staff for this request. Please direct any questions to Charles Therriault of the SVO.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force  
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)  
        Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) with Updated Instructions for Non-conforming Credit Tenant Loan (CTL) Transactions that Relied Upon Credit Ratings

DATE: April 30, 2020

1. Summary – Early in 2019 the SVO became aware that certain insurance company filers were submitting through the Filing Exempt (FE) process credit tenant loan (CTL) transactions that contained variants or deviations from the Bond Lease Based and Credit Lease Based CTL legal and structural characteristics not otherwise contemplated or defined in the P&P Manual (Non-conforming CTLs) and transactions which were subsequently defined in the P&P Manual as ground lease financing (GLF) transactions. For example, several CTLs were submitted to the SVO which contained balloon payments of greater than 5% without residual value insurance or another acceptable mitigant. In another instance, a security was submitted for which the Credit Rating Provider (CRP) analysis explained that its rating relied on the “dark value” of the property to cover payment of principal on the notes. The P&P Manual requires all CTL structures to be submitted to the SVO for review so it can determine if they reflect bond characteristics and, if so, assign an NAIC Designation. The SVO considered the GLF transactions to be distinct from CTL transactions and their related guidance in the P&P Manual. The SVO studied GLF transactions in detail and ultimately recommended new guidance for them to the Valuation of Securities (E) Task Force (the Task Force) which was adopted on December 8, 2019. Now we recommend addressing those Non-conforming CTL transactions that have been submitted through the Filing Exempt (FE) process in reliance on CRP ratings instead of being submitted to the SVO for review, and to prevent future incorrect filing procedures. To effect such changes, the SVO proposes P&P Manual amendments to the policy in Part One, “The Use of Credit Ratings of NRSROS In NAIC Processes,” and in Part Three, “Credit Tenant Loans.”

2. Recommendation – The SVO staff recommends that the Task Force include additional guidance in the policy on the “The Use of Credit Ratings of NRSROS In NAIC Processes” clarifying that there should be no presumption of permanent eligibility to receive an NAIC Designation based upon an NAIC CRP rating. The policy currently states, “The sole NAIC objective in obtaining and using publicly available credit ratings is to conserve limited regulatory resources; e.g., the resources of the SVO.” Additionally, the policy clarifies that in its use of CRP ratings the NAIC is not, “endorsing the credit rating or analytical product of any CRP.” Therefore, nothing about the use of CRP ratings should be interpreted, as was seemingly the case with Non-conforming CTLs and certain other investments, that the Task Force has approved the use of CRP ratings for the determination of NAIC Designations or for any other purpose, other than conserving SVO staff resources. The new policy guidance further affirms the Task Force’s role in making all decisions on the use of CRP ratings and provides additional guidance to
insurance company filers on what to do if they are uncertain about the filing procedure for a particular security or class of securities.

The SVO further recommends a “grandfathering” provision to permit an insurance company filer to file Non-conforming CTLs, which it owned prior to January 1, 2020 and which have CRP ratings, with the SVO for assessment and to authorize the SVO to use its own judgement in assessing eligibility for an NAIC Designation and, if appropriate, to assign an NAIC Designation which need not correspond to the CRP rating. The SVO also recommends referring this memo and proposed amendment to the Statutory Accounting Principles (E) Working Group and requesting the Working Group affirm that they would consider these Non-conforming CTLs to have the characteristics of a bond if assigned an NAIC Designation by the SVO staff.

3. Proposed Amendment – The following text in red shows the proposed revisions in Part One and Part Three.

PART ONE

POLICIES OF THE NAIC
VALUATION OF SECURITIES (E) TASK FORCE

THE USE OF CREDIT RATINGS OF NRSROs IN NAIC PROCESSES

NOTE: See “Policies Applicable to the Filing Exemption (FE) Process” below; “NAIC Policy on the Use of Credit Ratings of NRSROs” (especially “Definition – Credit Ratings Eligible for Translation to NAIC Designations”) in Part Two (the definition of “Eligible NAIC CRP Credit Ratings” excludes the use of any credit rating assigned to a security type where the NAIC has determined that the security type is not eligible to be reported on Schedule D or that it is not appropriate for NRSRO credit ratings to be used to determine the regulatory treatment of the security or asset); and “Procedure Applicable to Filing Exempt (FE) Securities and Private Letter (PL) Rating Securities” in Part Three.

Providing Credit Rating Services to the NAIC

57. The NAIC uses credit ratings for a number of regulatory purposes, including, to administer the filing exempt rule. Any rating organization that has been designated a Nationally Recognized Statistical Rating Organization (NRSRO) by the U.S. Securities and Exchange Commission (SEC) and which continues to be subject to federal regulation, may apply to provide Credit Rating Services to the NAIC.

1 Credit Rating Services is defined as: (a) electronic data feed transmissions of credit ratings assigned by the NRSRO with their corresponding CUSIP number and other pertinent security specific information in English, updated as frequently as provided to other customers; (b) other analytical services or products, in English, provided to other customers; and (c) access to the NRSRO’s rating analysts by SVO staff.
Policy and Legal Disclosure Pertaining to the NAIC Credit Rating Provider (CRP) List

58. The NAIC uses publicly available credit ratings, when available, as one component of the services it provides to state insurance regulators concerned with financial solvency monitoring of insurance company investments.

59. In adopting or in implementing the procedure described in this section, the NAIC acts solely as a private consumer of publicly available credit ratings. The sole NAIC objective in obtaining and using publicly available credit ratings is to conserve limited regulatory resources; e.g., the resources of the SVO. The VOS/TF has established the procedure specified in this section solely to ensure that the NAIC can avail itself of publicly available credit rating opinions.

60. The NAIC is not selecting, approving or certifying NRSROs or other rating organizations or distinguishing among them for any public or policy purpose whatsoever. Nor is the NAIC endorsing the credit rating or analytical product of any CRP or rating organization or distinguishing between CRPs or rating organizations for any specific public purpose. The NAIC disclaims any authority to regulate CRPs or rating organizations.

No Waiver/Express Reservation of Authority

61. Nothing in this section should be interpreted or construed as a waiver of the authority of the VOS/TF, in its sole and absolute discretion, to modify or change, in any manner whatsoever, the NAIC Policy on the Use of Credit Ratings of NRSROs, including but not limited to:

- Directing the removal of one or more NRSROs from the NAIC Credit Rating Provider List (subject only to the adjustment of any existing contractual obligations);
- Directing the SVO to study any issue related to NRSRO operations in furtherance of state insurance regulatory policy;
- eliminating the NAIC Credit Rating Provider List; or
- Directing any other action or activity the VOS/TF may deem to be useful or necessary to the creation, maintenance or discharge of state-based regulatory policy.

No Presumption of Permanent Eligibility Based Upon a NAIC CRP Rating

62. Nothing in this Manual should be interpreted or construed as affirming that a security has been explicitly approved by the VOS/TF as being permanently eligible to receive an NAIC Designation solely because it was rated by an NAIC CRP. Investment Securities that have received NAIC Designations based on an Eligible NAIC CRP rating through the filing exempt process could, upon direction from the VOS/TF, become subject to SVO or SSG review or declared ineligible to be assigned an NAIC Designation.
63. Securities that meet the general legal and structural characteristics of any type of Investment Security described in this Manual should be presumed to be governed by the policies specific to that type of Investment Security, including Filing Exemption eligibility, or lack thereof. It is incumbent upon the insurer to seek clarification from the SVO when a classification or regulatory treatment of a security is in doubt. Additionally, the insurer or SVO Director may, together or independently, propose amendments to this Manual as they deem appropriate to further clarify the classification or regulatory treatment of Investment Securities identified in this Manual consistent with the Procedures to Amend This Manual.

64. Insurers or other parties wishing to know the probable regulatory treatment and eligibility of a security are encouraged to utilize the Regulatory Treatment Analysis Service – Emerging Investment Vehicle process in this Manual to initiate such a regulatory review and interpretation by the SVO or SSG.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS

CREDIT TENANT LOANS

FILING INSTRUCTIONS

NOTE: See “Policies Applicable to Specific Asset Classes” in Part One for policies governing this activity, as well as “Specific Populations of Securities Not Eligible for Filing Exemption” in “Procedure Applicable to Filing Exempt (FE) Securities and Private Letter (PL) Rating Securities” above.

Non-conforming Transactions

70. An insurer that acquired a CTL that contains a variant or deviation from the Bond Lease Based and Credit Lease Based CTL legal and structural characteristics not otherwise contemplated or defined herein (a “Non-conforming CTL”) prior to January 1, 2020, may file it with the SVO. Along with each Non-conforming CTL, the insurer shall submit for review an Audited Financial Statement of the lessee, Credit Lease Based CTL Evaluation Form (including the documents described in the Evaluation Form), a separate memorandum identifying and describing the variants or deviations which make the investment a Non-conforming CTL and all Eligible NAIC CRP Rating analyses of the transaction. Subsequent filings shall require the most recent Eligible NAIC CRP Rating analyses of the transaction, if available from the CRP, and the Audited Financial Statement of the lessee. Upon review of the submission, the SVO may assign an NAIC Designation if the risks posed by the Non-conforming CTL’s variants are, in the opinion of the SVO, adequately mitigated and the Non-conforming CTL would be consistent with an investment security that has characteristics of a bond.

The SVO has complete discretion to make the determination of whether the CTL has characteristics of a bond and the NAIC Designation, including rejecting the transaction as not reflecting bond characteristics, adjusting the NAIC Designation for the transaction downward and away from the Eligible NAIC CRP Rating as the SVO deems analytically appropriate, or requesting additional information the SVO deems necessary for its analysis. If the Non-conforming CTL transaction does not maintain an Eligible NAIC CRP Rating for subsequent filings, the SVO has complete discretion to determine if an NAIC Designation can continue to be assigned. Non-conforming CTL transactions acquired by the insurer after December 31, 2019, shall not be reported as a bond.
71. As directed by the No Presumption of Permanent Eligibility Based Upon a NAIC CRP Rating section of this Manual, the VOS/TF considers securities that generally meet the legal and structural characteristics of Bond Lease Based or Credit Lease Based CTLs, but which do not meet all the specified characteristics, to be CTLs, and therefore not eligible for Filing Exemption and otherwise ineligible for reporting as a bond on Schedule D, except as explained in the paragraph above.
MEMORANDUM

TO: Dale Bruggeman (OH)
Chair of the Statutory Accounting Principles (E) Working Group

FROM: Commissioner Scott A. White (VA)
Chair of the Financial Condition (E) Committee

DATE: June 12, 2020

RE: Referral Regarding Reporting of “Basis” Swaps

The Financial Condition (E) Committee recently received a request from the American Council of Life Insurers relative to the treatment of certain “basis swaps” under state law as a result of the transition away from the London Interbank Offered Rate (LIBOR)(See attached presentation which includes the request). The request recognized that insurance companies are required to abide by investment guidelines and legal and regulatory constraints established by the state insurance law where most state laws limit insurers’ derivative use to the explicit activities of hedging, replication, and income-generation activities. As discussed in the presentation, as part of a market-wide transition away from LIBOR and toward the Secured Overnight Financing Rate (SOFR), U.S. central clearing counterparties (CCPs) will shift their discounting rate from the Effective Federal Funds Rate (EFFR) to the SOFR using a one-time special valuation cycle. This is expected to occur later this year on Oct. 16. As part of this unique market event, the CCPs will revalue existing cleared swaps and issue basis swaps on a mandatory basis to all parties that clear swaps on the CCPs to restore a counterparty’s original risk profile. The issue is that these swaps may not fit into one of these categories of permissible derivatives under state insurance law and therefore may not be allowed.

On June 12, the Committee issued a memorandum to all commissioners, directors and superintendents to make them aware of the issue and more specifically to indicate the Committee’s support to issue state bulletins allowing insurers to hold such swaps as “permissible derivative investments” for up to one year. The Committee made this determination on the basis that insurers have no control over the distribution of such basis swaps to them, and recognizing that insurers may be disadvantaged if required to dispose of such basis swaps upon receipt.

The original request was that these swaps be treated specifically as effective hedges. However, the Committee did not make a determination on the type of permissible investment and while the Committee did not believe that such a determination was needed for most state laws, a determination will be needed for reporting in the statutory financial statements. The Committee requests the Working Group address that specific reporting issue. If you have any questions, please contact Dan Daveline (ddaveline@naic.org).
ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE

The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations; modify the Accounting Practices and Procedures Manual (AP&P Manual) to reflect changes necessitated by Task Force action; and study innovative insurer accounting practices that affect the ability of state insurance regulators to determine the true financial condition of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Accounting Practices and Procedures (E) Task Force will:

2. The Blanks (E) Working Group will:
   A. Consider improvements and revisions to the various annual/quarterly statement blanks to:
      1. Conform these blanks to changes made in other areas of the NAIC to promote uniformity in reporting of financial information by insurers.
      2. Develop reporting formats for other entities subject to the jurisdiction of state insurance departments.
      3. Conform the various NAIC blanks and instructions to adopted NAIC policy.
      4. Oversee the development of additional reporting formats within the existing annual financial statements as needs are identified.
   B. Continue to monitor state filing checklists to maintain current filing requirements.
   C. Continue to monitor and improve the quality of financial data filed by insurance companies by recommending improved or additional language for the Annual Statement Instructions.
   D. Continue to monitor and review all proposals necessary for the implementation of statutory accounting guidance to ensure proper implementation of any action taken by the Accounting Practices and Procedures (E) Task Force affecting annual financial statements and/or instructions.
   E. Continue to coordinate with other task forces of the NAIC to ensure proper implementation of reporting and instructions changes as proposed by these task forces.
   F. Coordinate with the Life Actuarial (A) Task Force to use any special reports developed and avoid duplication of reporting.
   G. Review requests for investment schedule blanks and instructions changes in connection with the work being performed by the Capital Adequacy (E) Task Force and its Investment Risk-Based Capital (E) Working Groups.
   H. Review changes requested by the Valuation of Securities (E) Task Force relating to its work on other invested assets reporting for technical consistency within the investment reporting schedules and instructions.
3. The Statutory Accounting Principles (E) Working Group will:

A. Maintain codified statutory accounting principles by providing periodic updates to the guidance that address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements. Provide authoritative responses to questions of application and clarifications for existing statutory accounting principles. Report all actions and provide updates to the Accounting Practices and Procedures (E) Task Force.

B. At the discretion of the Working Group chair, develop comments on exposed GAAP and International Financial Reporting Standards (IFRS) pronouncements affecting financial accounting and reporting. Any comments are subject to review and approval by the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee.

C. Coordinate with the Life Actuarial (A) Task Force on changes to the Accounting Practices and Procedures Manual (AP&P Manual) related to the Valuation Manual VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other Valuation Manual requirements. This process will include the receipt of periodic reports on changes to the Valuation Manual on items that require coordination.

D. Obtain, analyze and review information on permitted practices, prescribed practices or other accounting treatments suggesting that issues or trends occurring within the industry may compromise the consistency and uniformity of statutory accounting, including, but not limited to, activities conducted by insurers for which there is currently no statutory accounting guidance or where the states have prescribed statutory accounting that differs from the guidance issued by the NAIC. Use this information to consider possible changes to statutory accounting.

E. Review and possibly modify Schedule F and any corresponding annual financial statement pages to determine how best to reflect the expected changes to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786). Give due consideration to alternatives, including whether an allowance for doubtful accounts is appropriate. Complete by the 2020 Fall National Meeting.

NAIC Support Staff: Robin Marcotte
Accounting Practices and Procedures (E) Task Force
Conference Call
July 22, 2020

The Accounting Practices and Procedures (E) Task Force met via conference call July 22, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Rylynn Brown (DE); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Alan McClain represented by Mel Heaps (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by N. Kevin Brown (DC); David Altmaier represented by Virginia Christy (FL); Doug Ommen represented by Kevin Clark (IA); Dean L. Cameron represented by Nathan Faragher and Amber Re (ID); Stephen W. Robertson and Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Caroline Fletcher (LA); Gary Anderson represented by John Turchi (MA); Eric A. Cioppa represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Steve Kelley represented by Barbara Carey (MN); Chlorla Lindley-Myers represented by Debbie Doggett (MO); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride (NJ); Russell Toal (NM); Linda A. Lacewell represented by Robert Kasinow (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Jessica K. Altman represented by Joe DiMemno (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Hodgen Mainda represented by Trey Hancock (TN); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte and David Smith (VA); Michael S. Pieciak represented by Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Mark Afable represented by Amy Malm (WI); James A. Dodrill represented by Jamie Taylor (WV); and Jeff Rude represented by Linda Johnson (WY).

1. Adopted Revisions to INT 20-08

Ms. Walker stated that on the July 1 conference call, the Financial Condition (E) Committee received and adopted the Accounting Practices and Procedures (E) Task Force report of interim adoptions of the Blanks (E) Working Group and the Statutory Accounting Principles (E) Working Group, except for Interpretation (INT) 20-08: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends. She noted that INT 20-08 was returned to the Task Force with direction to revise the Interpretation in a way that is still supported by two-thirds of the Task Force members and with the request that the Task Force consider incorporating flexibility in reporting. She stated that during the July 1 call, the American Property Casualty Insurance Association (APCIA) and a few other reporting entities were seeking alternative treatment to allow underwriting expense treatment for reporting entities, which made either manual rate filing or policy endorsements that allow for voluntary payments to policyholders, in response to decreased activity for COVID-19. Ms. Walker said while the reporting entities seeking this treatment are in the minority, they wanted to be permitted to follow this reporting approach without having to seek a permitted practice in multiple states.

Robin Marcotte (NAIC) provided a summary of the prior votes regarding INT 20-08. She stated that on June 15, INT 20-08 was adopted by the Statutory Accounting Principles (E) Working Group with a two-thirds majority vote as required by the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (Policy Statement) for interpretations that provide new guidance or provide temporary overrides to existing guidance. She noted that the Policy Statement requires a minimum number of Working Group members to be present and voting (67%) and a super-majority supporting adoption for these interpretations to be adopted. She stated the voting requirements are in place to permit immediate adoption and application of statutory accounting guidance, most often in response to catastrophes or other situations that require a quick response. She noted that on June 22, INT 20-08 was adopted by a two-thirds majority of the Task Force with 28 members voting in favor, nine members dissenting, and one member abstaining. She stated that per the Policy Statement, these interpretations can be adopted, overturned, amended or deferred only by a two-thirds majority of the Task Force membership (e.g., 28 out of 42 members).

Ms. Marcotte stated that NAIC staff has drafted tracked updates to the proposed INT 20-08 for Task Force review based on input from Task Force members from California, Connecticut, Texas and Virginia. She stated that these representatives are also members of the Statutory Accounting Principles (E) Working Group. She noted that the proposed NAIC redraft included the following key revisions:
• Updated title as follows: INT 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends.
• Voluntary premium payments are an adjustment to premium unless the reporting entity is applying the limited-time exception described in the INT 20-08 or they have a different prescribed or permitted practice issued by their state of domicile.
• Limited-time exception to allow underwriting expense reporting is applicable only for property and casualty policies, which prior to June 15 filed manual rate filings or endorsements to allow for discretionary payments to policyholders due to COVID-19 related issues and disclosed the intent to apply expense treatment. This treatment does not require additional domestic regulator approval; however, if a domestic jurisdiction disapproved of this treatment, then the limited-time exception would not be permitted.
• Requires disclosure of all COVID-19 related payments in Note 21A as unusual or infrequent items by category (e.g., refunds, rate reductions, policyholder dividends, etc.).
• Requires disclosure of the application of the limited-time exception in the similar manner as a prescribed practice. This disclosure shall include the impact on operating ratios caused by use of the limited-time exception in Note 1.
• Strengthens the previously noted guidance that premium taxation is determined in accordance with the laws and administrative rules of the applicable jurisdiction. INT 20-08 defers to each jurisdiction’s premium tax requirements for the purposes of determining taxable amounts.
• INT 20-08 maintains the expiration date of Jan. 1, 2021.

Ms. Marcotte noted that there is a proposed edit to paragraph 24 for disclosures to ensure it includes all payments. She stated that the edit is to add the phrase “limited-time exception payments” in two places in the list of types of payments and to add quotes around the term “payments” in paragraph 24.b, as the disclosure includes payments and other methods, such as a lowered billing amount.

Ms. Belfi stated that the state insurance regulators who provided input to address the Financial Condition (E) Committee recommendations believe that the draft addresses the Committee’s direction to provide flexibility and preserves the statutory accounting standards. She noted that it addresses the perceived concern voiced by industry on prior calls that insurance groups with multiple domestic regulators may not all grant the same permitted practice for all members of the group. Ms. Belfi stated that while some of the state insurance regulators thought that the concern was unlikely, the limited-time exception addresses this possible issue. She stated that they continue to believe that the best disclosure of the limited-time exception is in annual statement footnote 1 as if it were a prescribed or permitted practice for a few different reasons. She stated that having premium reporting as the default and the limited-time exception disclosed fully allows state insurance regulators to demonstrate to federal and international regulators that we remain consistent in our core statutory accounting principles (SAPs). She noted that it also enables analysts to have information fully disclosed to identify the impacts on key ratios. She summarized that the redraft in the materials addresses the Financial Condition (E) Committee referral. Mr. Hudson stated that California supports the comments of Ms. Belfi and believes the redraft is a fair compromise.

Ms. Marcotte provided an overview of the comments received (Attachment Three-A). She noted that that prior to the public posting of the NAIC redraft of INT 20-08, the APCIA provided proposed draft revisions. She stated that the draft is very similar to a prior version discussed by the Working Group on May 20. She stated that instead of noting that underwriting expense treatment is an exception, the APCIA draft proposed to add a policyholder benefit issue as if underwriting expense treatment

Requires disclosure of all COVID-19 related payments in Note 21A as unusual or infrequent items by category (e.g., refunds, rate reductions, policyholder dividends, etc.).

Requires disclosure of the application of the limited-time exception in the similar manner as a prescribed practice. This disclosure shall include the impact on operating ratios caused by use of the limited-time exception in Note 1.

Strengthens the previously noted guidance that premium taxation is determined in accordance with the laws and administrative rules of the applicable jurisdiction. INT 20-08 defers to each jurisdiction’s premium tax requirements for the purposes of determining taxable amounts.

INT 20-08 maintains the expiration date of Jan. 1, 2021.

Ms. Marcotte noted that there is a proposed edit to paragraph 24 for disclosures to ensure it includes all payments. She stated that the edit is to add the phrase “limited-time exception payments” in two places in the list of types of payments and to add quotes around the term “payments” in paragraph 24.b, as the disclosure includes payments and other methods, such as a lowered billing amount.

Ms. Belfi stated that the state insurance regulators who provided input to address the Financial Condition (E) Committee recommendations believe that the draft addresses the Committee’s direction to provide flexibility and preserves the statutory accounting standards. She noted that it addresses the perceived concern voiced by industry on prior calls that insurance groups with multiple domestic regulating may not all grant the same permitted practice for all members of the group. Ms. Belfi stated that while some of the state insurance regulators thought that the concern was unlikely, the limited-time exception addresses this possible issue. She stated that they continue to believe that the best disclosure of the limited-time exception is in annual statement footnote 1 as if it were a prescribed or permitted practice for a few different reasons. She noted that it also enables analysts to have information fully disclosed to identify the impacts on key ratios. She summarized that the redraft in the materials addresses the Financial Condition (E) Committee referral. Mr. Hudson stated that California supports the comments of Ms. Belfi and believes the redraft is a fair compromise.

Ms. Marcotte provided an overview of the comments received (Attachment Three-A). She noted that that prior to the public posting of the NAIC redraft of INT 20-08, the APCIA provided proposed draft revisions. She stated that the draft is very similar to a prior version discussed by the Working Group on May 20. She stated that instead of noting that underwriting expense treatment is an exception, the APCIA draft proposed to add a policyholder benefit issue as if underwriting expense treatment were always an option under treatment is an exception, the APCIA draft proposed to add a policyholder benefit issue as if underwriting expense treatment...
Ms. Marcotte stated that America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA) provided comments after the posting of the NAIC redraft of INT 20-08 expressing support for the NAIC redraft, including that the limited-time exception for underwriting expense reporting should only be applicable to property and casualty lines because such reporting is problematic for health products.

Phillip L. Carson (APCIA) stated agreement and support for the NAIC redraft of INT 20-08. He stated that default reporting in INT 20-08 as an adjustment to premium was the position that the APCIA originally supported. He stated that the APCIA also later asked for an exception that allows underwriting expense reporting and the redraft to provide the limited-time exception. He said the APCIA encourages the Task Force to adopt the revisions to provide certainty for second quarter financial reporting.

Joseph E. Zolecki (BCBSA), representing the BCBSA and AHIP, stated support for the collaborative and expeditious revisions that provide reporting consistency and limited-time flexibility. He noted that as summarized by NAIC staff, their letter supports premium adjustment as the default treatment, and the limited-time exception applies only to property and casualty lines of business. He noted that limiting to the property and casualty lines of business will prevent any misapplication of the guidance for health carriers in the determination of federal or state MLR calculations.

Jim Braue (UHC) stated that the UHC and Anthem Inc. comment letter was submitted before the redraft was available. He noted support for the redraft, as it addresses the issues raised in their letter, and premium treatment is the appropriate accounting. He stated that scoping the limited-time exception to property and casualty lines helps to avoid any potentially serious issues related to the MLR rebate for health carriers and income taxes for policyholders. He stated that they believe the redraft addresses the issues noted in their letter, and he stated support for the redraft.

Mr. Bruggeman stated support for the work of the state insurance regulators that came together to draft a unique approach to the very unique circumstance. He stated that the use of the permitted and prescribed practice disclosure, which are already in place for exceptions, allows data capture for users of the financial statements. He noted that the strengthening of language regarding premium taxes was also beneficial. He encouraged industry members to be consistent in naming the COVID-19 relief payments for ease of identification in the financial statements and the notes.

Mr. Kasinow asked a question regarding the limited-time exception language that requires the reporting entities to have communicated to state insurance regulators their intention to report their payments to policyholders as expenses. He asked if such a disclosure is required to be with the rate filings and policy endorsements or if it could be a disclosure at some point in the process. Ms. Marcotte replied that because of the variety of ways this was accomplished, the format and timing of the discussion was not specified because different entities accomplished this in different ways; therefore, this is left to the judgement of the state of domicile.

Ms. Belfi made a motion, seconded by Mr. Hudson, to adopt the revised consensus in INT 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends, as redrafted with the minor edit to the disclosure described by NAIC staff (see NAIC Proceedings – Summer 2020, Financial Condition (E) Committee, Attachment Seven). The motion passed with Michigan dissenting. The motion met the two-thirds membership required by the NAIC Policy Statement on Maintenance of Statutory Accounting Principles. The revised INT 20-08 is effective for second quarter 2020 reporting.

Ms. Marcotte noted that the revised INT 20-08 will be posted on the Statutory Accounting Principles (E) Working Group web page. She stated the next call of the Task Force will be Aug. 3, and the revised INT 20-08 will be included in the minutes reviewed by the Task Force as part of the virtual NAIC Summer National Meeting. She stated that the revised INT 20-08 will be reported to the Financial Condition (E) Committee on Aug. 11.

Ms. Walker noted the next call of the Task Force is Aug. 3, and attendees need to register for the virtual NAIC Summer National Meeting in order to attend.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.

Interpretation of the Statutory Accounting Principles Working Group

INT 20-08: COVID-19 Premium Refunds, Rate Reductions, Policyholder Benefit Payments and Policyholder Dividends

INT 20-08 Dates Discussed

Email Vote to Expose May 5, 2020; May 20, 2020; June 15, 2020

INT 20-08 References

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets
SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items SSAP No. 53—Property Casualty Contracts—Premiums
SSAP No. 54R—Individual and Group Accident and Health Contracts SSAP No. 65—Property and Casualty Contracts
SSAP No. 66—Retrospectively Rated Contracts
SSAP No. 70—Allocation of Expenses

INT 20-08

Issue

COVID-19

1. A previously unknown virus began transmitting between October 2019 and March 2020, with the first deaths in the U.S. reported in early March 2020. The disease caused by the virus is known as Coronavirus Disease 2019 (COVID-19). Several states and cities issued “stay home” orders and forced all non-essential businesses to temporarily close. This led to a significant increase in unemployment and the potential permanent closure of many businesses. Total economic damage is still being assessed however the total impact is likely to exceed $1 trillion in the U.S. alone.

Premium Refunds, Rate Reductions, Policyholder Benefits and Policyholder Dividends

2. The federal, state or local government orders requiring non-essential workers to “stay home” caused a significant reduction in commercial and non-commercial activity, including automotive usage. Some consumer groups wrote letters and issued press releases calling for insurance premium refunds or pricing decreases, which included specific comments directed toward consumer automotive lines. The comments presumed that the decrease in activity would result in fewer losses.

3. Recognizing the extraordinary economic hardship experienced by their policyholders, the reduction in auto accident frequency, and the resulting decline in economic activity, many insurers designed various programs to provide a portion of the favorable experience realized from reduced accident frequency to policyholders. The underlying objective of the programs were to provide temporary relief to customers during the period that various government-imposed “stay home” orders remained in effect. Those government orders resulted in a significant decline in general economic activity and a significant reduction in accident frequency below historic levels. The methods utilized to deliver temporary relief to policyholders include voluntary premium refunds, future rate reductions, policyholder benefit payments (in certain instances, based on manual rule filings or policy endorsements) or policyholder dividends. Most of the relief programs relate to automotive lines of business.
Insurers have provided the policyholder relief in a variety of ways, including direct relief payments for in-force policies, as well as relief programs designed as rate reductions to be applied to future policy renewals.

Voluntary

4. The majority of the relief programs are being offered voluntarily and are not amounts required under existing policy terms. The aggregate monetary amount of the relief programs is considered materially significant.

Jurisdiction Directed

5. In addition, a few jurisdictions have issued bulletins directing refunds and rate reductions on accident and health insurance and varying lines of property and casualty insurance, including but not limited to: private passenger automobile, commercial automobile, workers’ compensation, commercial multiple peril, commercial liability and medical professional liability. In addition, some jurisdictions have indicated support for refunds or rate reductions, but also directed that payment of such amounts require either premium rate filings or policy form amendments.

Accounting Issues

6. The intent of this interpretation is to address the accounting and reporting for premium refunds, rate reductions, policyholder benefit payments and policyholder dividends attributable to COVID-19 impact on the private passenger and commercial auto insurance business. Due to the severity of the pandemic and the speed at which it emerged, different insurers designed and implemented policyholder relief programs that are fundamentally different, even if designed to achieve a similar objective. The intent of this guidance is to ensure that for accounting purposes, the programs are accounted for in accordance with their design and execution, and, separately, to provide policyholders and other stakeholders with information about the size and scope of the programs and the disclosures that should be required. This interpretation provides guidance on the following issues:

- Issue 1: How to account for refunds not required under the existing policy terms.
- Issue 2: How to account for refunds required under the existing policy terms.
- Issue 3: How to account for rate reductions on in-force and renewal business.
- Issue 4: How to account for policyholder benefit payments under modified policy terms.
- Issue 5: How to account for policyholder dividends.
- Issue 6: Where to disclose premium refunds, rate reductions, policyholder benefit payments and policyholder dividends related to COVID-19 decreases in activity.

INT 20-08 Discussion

7. As an overall guiding principle, the accounting shall follow existing statutory accounting principles and annual statement reporting where feasible, consistent with the design and execution of the programs. Insurers that filed policy endorsements or manual rule filings and disclosed with the relevant states their intention to report their payments to policyholders as expenses, before adoption of the INT, should treat those payments in accordance with Issue 4 below, while disclosing those payments as required in Issue 6 of the INT.

Issue 1: How to Account for Refunds Not Required Under the Policy Terms
8. The Working Group reached a consensus that voluntary premium refunds because of decreased activity related to COVID-19 and jurisdiction-directed premium refunds that are not required by the policy terms shall be accounted for as immediate adjustments to premium. The premium refunds shall be recognized as a reduction to written or earned premium and the unearned premium reserve adjusted accordingly.

9. Premium refunds shall be recognized as a liability when the definition of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets is met. For example, the declaration of a voluntary dividend by the board of directors will trigger liability recognition. In cases where the refunds are directed by a jurisdiction, the SSAP No. 5R definition of a liability shall be used to determine timing of liability recognition.

10. Immediate adjustment to premium is consistent with the existing guidance in SSAP No. 53—Property Casualty Contracts—Premiums. SSAP No. 53 guidance requires adjustments to the premium charged for changes in the level of exposure to insurance risk. It is also consistent with the treatment of loss sensitive premium adjustments in SSAP No. 66—Retrospectively Rated Contracts. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply.

11. Immediate adjustments to premium for voluntary accident and health premium refunds is also consistent with the guidance in SSAP No. 54R—Individual and Group Accident and Health Contracts on contracts subject to redetermination. While some of the voluntary or jurisdiction-directed refunds may not be required by the explicit policy terms, the principle of reversing premium in the same way that the premium was originally recognized continues to apply. The liability for voluntary health premium refunds attributable to COVID-19 and which are not required under the policy terms shall be recognized in aggregate write-ins for other liabilities.

**Issue 2: How to Account for Refunds Required Under the Policy Terms**

12. While most of the premium refunds are voluntary or jurisdiction-directed and not required under the policy terms, some policies have terms that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses. If the policy terms change the amount charged, existing guidance in SSAP No. 53, SSAP No. 54R or SSAP No. 66 continues to apply:

   a. SSAP No. 53 provides guidance for policies in which the premium amount is adjusted for changes in the level of exposure to insurance risk. This is often seen in commercial lines of business such as workers’ compensation. The guidance notes that audits often occur after the policy term or mid-term in the policy. SSAP No. 53 refers to the adjustment to premium (either due to the customer or to the insurer) as earned but unbilled (EBUB) premium. SSAP No. 53 requires such adjustment to premium to be made immediately either through written premium or earned premium. SSAP No. 53 also requires recognition of the related liabilities and expenses such as commissions and premium taxes based on when the premium is earned.

   b. SSAP No. 54R provides guidance for policies subject to redetermination in which the premium is subject to adjustments by contract terms. This is commonly seen in federal and state groups. The guidance notes that estimates are based on experience to date and premium adjustments are estimated for the portion of the policy that has expired. Accrued return premiums are recorded as a liability with a corresponding entry to written premium. Refunds required under the policy terms would continue to be reported as retrospective or redetermination premium liabilities if applicable.

   c. SSAP No. 66 provides guidance for policies whose terms or legal formulas determine premium
based on losses. SSAP No. 66 references other applicable statements based on contract type for the initial accrual of premium. Estimates of premium adjustments are accrued based on activity to date and result in immediate adjustments to premium. SSAP No. 66 guidance specifies the corresponding annual statement reporting lines for different entity types.

Issue 3: How to Account for Rate Reductions

13. Some reporting entities are offering rate reductions instead of premium refunds. Some of these rate reductions provide one-time price decreases to future payments on in-force policies. Other reporting entities have provided offers of rate reductions on future renewals. Some of the offers for future rate reductions are only applicable to in-force policyholders as of a specified date. Some reporting entities have offered one-time rate reductions for future renewals for both existing and new policyholders for 2020.

   a. Rate reductions on in-force business shall be recognized as immediate adjustments to premium.

   b. Rate reductions on future renewals shall be reflected in the premium rate charged on renewal. The renewal is outside of the policy boundary and cannot require accrual before contract inception. While the amount of a future rate reduction can be estimated, it is not a change to existing policy terms and policyholders are not obligated to renew at the reduced rate; therefore, payment of the amount is avoidable. Such amounts shall be disclosed as discussed in Issue No. 5.

Issue 4: How to Account for Policyholder Benefit Payments Under Modified Policy Terms (e.g., Manual Rule Filings or Policy Endorsements)

15. In an effort to expedite relief to policyholders, certain insurers filed manual rule filings or policy endorsements to modify the terms of their insurance contracts to allow for the payment of discretionary policy benefits. In these instances, policy endorsements or manual rule filings were determined to be the most efficient method to provide relief to policyholders.

16. The manual rule filings or policy endorsements in paragraph 14 allowed for discretionary benefit payments to policyholders that were not otherwise provided under the contract (e.g., the payment did not result from an indemnifiable loss or a premium adjustment based on changes in insurance risk attributable to a policy change or cancellation) and were stated to be in response to circumstances surrounding COVID-19. The manual rule filings or policy endorsement was utilized to expedite relief to policyholders. These insurers represented in their filings that they would treat these payments as expenses. The manual rule filings or policy endorsements would not impact written premium and, therefore, would not result in adjustments to agent commissions. In determining the appropriate accounting and presentation of discretionary policy benefit payments provided through the manual rule filings or policy endorsements, the following factors should be considered:

   a. Accounting for discretionary policy benefits paid in accordance with contract terms modified through a manual rule filing or endorsement authorizing payment to policyholders that are not directly related to a change in the level of insurance risk is not specifically addressed in existing statutory accounting literature.

   b. SSAP 70, Allocation of Expenses, does, however, state that allocable expenses for property and casualty insurance companies shall be classified into one of three categories in the Underwriting and Investment Exhibit, as follows: loss adjustment expenses, investment expenses, other underwriting expenses. Other underwriting expense is defined as allocable expenses other than loss adjustment expenses and investment relate expenses.
Given the absence of existing definitive guidance, the need for insurers to expedite relief to policyholders, insurer representations in their state filings as to how these payments would be reported, and the fact that those filings were not disapproved by those states, it would be appropriate to allow those insurers to follow their conveyed relief programs and related accounting.

d. In those circumstances when an insurer modifies the terms of its insurance contracts to allow for discretionary payments that are not directly related to the level of insurance risk under the contract, the payments are not designed as a premium refund, and the insurer has represented in those manual rule filings or policy endorsements that the payment would be reported as an expense, the payment shall be accounted for as an “other underwriting expense”.

17. Policyholder payments shall be recognized as a liability when the definition of a liability in SSAP No. 5R – Liabilities, Contingencies and Impairments of Assets is met.

Issue 5: How to Account for Policyholder Dividends

18. SSAP No. 65—Property and Casualty Contracts, paragraph 46 requires that dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability.

19. The Working Group noted that policyholder dividends are typically only provided on participating policies or policies issued by non-stock companies, such as mutual entities and other corporate entity types in which profits are shared with policyholders.

20. Research during the development of this item identified that a small number of jurisdictions have legal restrictions which only allow policyholder dividends to be provided after the expiration of the policy period for which the dividend was earned. This interpretation only addresses policyholder dividends which are permitted by the applicable jurisdiction.

21. The property and casualty annual statement blank provides specific reporting lines for policyholder dividends including, but not limited to, a liability line and a line in the income statement and statement of cash flow. For those entities whose policies are participating or whose corporate shell type and/or membership structure allow for policyholder dividends, the accounting for policyholder dividends is unchanged by this interpretation.

22. This interpretation does not change the policyholder dividend disclosure or reporting, but provides additional guidance that such policyholder dividends issued in response to COVID-19 decreases in activity shall also be disclosed as discussed in Issue 6.

Issue 6: Where to Disclose Premium Refunds, Rate Reductions, Policyholder Benefit Payments and Policyholder Dividends Related to COVID-19 Decreases in Activity

23. There are various places in the notes to the statutory annual statement where disclosures of various aspects of premium refunds, premium reductions or policyholder dividends are required. This interpretation does not recommend changes to those existing disclosures. This interpretation does, however, recommend a consistent annual statement disclosure for all such amounts to allow for comparable disclosures.

24. SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items requires disclosure of the nature and financial effects of each unusual or infrequent event or transaction. Gains or losses of a similar nature that are not individually material shall be aggregated. This disclosure shall include the line items which have been affected by the event or transaction considered to be unusual and/or infrequent. This disclosure is currently required to be reported in annual statement Note 21A. (Reporting entities shall maintain jurisdiction-specific
To allow for aggregate, consistent assessment, the Working Group came to a tentative consensus that all COVID-19 inspired premium refunds, rate reductions, policyholder benefit payments and policyholder dividends shall be disclosed as unusual or infrequent items in annual statement Note 21A. This disclosure is in addition to other existing disclosures on various items related to the policyholder payments. For clarification, refunds required under the policy terms as discussed in paragraph 12, (i.e., policies that require an adjustment to premium based on either the level of exposure to insurance risk or the level of losses) are not required to be aggregated in disclosures of COVID-19 inspired premium refunds, rate reductions, policyholder benefit payments and policyholder dividends. Policies, whose terms were modified after the declaration of emergency in response to COVID-19, are required to disclose the COVID-19 inspired premium refunds, rate reductions, policyholder benefit payments and policyholder dividends.

INT 20-08 Consensus

The Working Group reached a consensus to prescribe statutory accounting guidance for insurance reporting entities providing refunds in response to COVID-19. Pursuant to this consensus:

a. Reporting entities that provide voluntary or jurisdiction-directed premium refunds that are not required under the policy terms shall follow the guidance in paragraphs 8-11 of this interpretation. This guidance stipulates that such premium refunds shall be recognized as a reduction of premium.

b. Reporting entities that provide premium refunds in accordance with insurance policy terms shall follow paragraph 13 of this interpretation. This guidance indicates that existing statutory accounting principles in SSAP No. 53, SSAP No. 54R or SSAP No. 66 shall be followed as applicable.

c. Reporting entities that provide rate reductions shall follow paragraph 14 of this interpretation. This guidance provides direction based on whether the rate reduction is for in-force or future policies.

d. Reporting entities that provide for the payment of discretionary policy benefits through a manual rule filing or policy endorsement that authorizes payments to policyholders not otherwise provided under the contract (e.g., not a payment resulting from an indemnifiable loss or a return of premium based on changes in insurance risk related to the policy or not related to a policy change or cancellation) and that disclosed in those filings that they intended to report those payments as expense shall account for the payments in accordance with the guidance in paragraphs 15 – 17. This INT addresses and is limited to the accounting for the particular circumstances when policyholder payments, as specified in modified policy terms, are related to conditions resulting from COVID-19 for manual rule filings or policy endorsements filed in response to COVID-19 activity.

e. Reporting entities that provide policyholder dividend shall follow the existing guidance for policyholder dividends, which is summarized in paragraphs 18-22 and in addition, shall complete the disclosures described in paragraphs 23-25.

f. Paragraphs 23-25 of this interpretation indicate that reporting entities shall continue to comply with all statutory accounting disclosure requirements, and also require that all premium refunds, rate
reductions, policyholder benefit payments and/or policyholder dividends provided because of the decreased activity due to COVID-19 shall be aggregated and reported in Note 21A as unusual or infrequent items.

g. Any related transactions that do not follow the fact patterns described in paragraph 26a through 26e should be considered a permitted or prescribed practice pursuant to SSAP No. 1.

27. The Working Group noted that premium taxation requirements vary by jurisdiction. Taxation is determined by the jurisdiction where the premium is written/returned to the policyholder according to the laws of that jurisdiction.

28. This interpretation will be automatically nullified on January 1, 2021 and will be included as a nullified INT in Appendix H – Superseded SSAPs and Nullified Interpretations in the “as of March 2021” Accounting Practices and Procedures Manual.

INT 20-08 Status

29. Further discussion is planned.
July 7, 2020

Commissioner Kent Sullivan, Chair
Accounting Practices and Procedures (E) Task Force
National Association of Insurance Commissioners

Via electronic mail to Robin Marcotte

Dear Commissioner Sullivan:

We submit these comments on behalf of the undersigned companies, who together provide insurance and health care coverage for millions of Americans, regarding the accounting treatment for refunds of premium to policyholders that are made in response to the COVID-19 pandemic.

Over the last several months, the emergence of the COVID-19 virus has caused well-documented challenges to people, businesses and institutions across national and global health care systems. Among them is the disruption to traditional patterns of delivering health care causing related economic disruption and imbalances to the nation’s health care coverage systems. In response to this challenge, the undersigned companies have taken a variety of actions to provide financial relief to our members. Once such action is the issuance of premium refunds, including voluntary refunds not outlined in the policy terms. It is the accounting for such programs of refunds or credits that is the subject of this letter.

As you are aware, we supported the accounting treatment proposed in INT 20-08T, as adopted by the Statutory Accounting Principles Working Group on June 15 and by the Accounting Practices and Procedures Task Force on June 22. The Financial Condition Committee has now asked you to reconsider that accounting guidance, in particular to allow more flexibility with regard to non-premium treatment. We strongly urge that any such “flexibility” be limited to the exception proposed in the June 25, 2020 letter from the APCIA, namely:

Companies that filed policy endorsements or manual rate filings and disclosed with the relevant states their intention to report their payments to policyholders as expenses before adoption of the INT should treat those payments as other underwriting expenses, while disclosing those payments as required in Issue 5 of the INT. This treatment would apply to all payments made through the end of 2020.

We urge furthermore that the revised interpretation make clear that this exception is being made as an accommodation, to address concerns raised by regulators and members of the property and casualty industry. We are concerned that any ambiguity on this point could create confusion, and resultant adverse consequences, for both insurers and policyholders.

We believe that treating such refunds and credits to policyholders as a reduction in premium is clearly the proper answer from the standpoint of accounting principles. The payments are not being made as the result of an insured loss, and therefore are not claim payments. They are not being made to purchase goods or services, or to pay for the services of the insurer’s own employees, and therefore are not general expenses. They are not being made pursuant to some statutory authority on the part of policyholders to tax or assess insurers; therefore, they are not taxes, regulatory fees, or assessments. Neither should they be relegated to an undefined, write-in expense category. We are crediting these amounts to policyholders solely because those same policyholders paid premium to us in the first place, and therefore the payments should be related to premium. We recount this at length because we are troubled by the suggestions that appropriate accounting treatment for purposes of solvency regulation should somehow be overridden by concerns such as maximizing premium tax revenue or facilitating the payment of agents’ commissions. We believe...
that it is imperative first to determine the conceptually appropriate accounting treatment, and then to carve out only such limited exceptions as are deemed necessary to address other regulatory goals.

We wish to point out two issues that could arise from creating ambiguity about whether these payments to policyholders are genuinely returns of premium: one from the insurer’s point of view, the other from the policyholder’s. Insofar as the insurer is concerned, it must be clear for purposes of the Affordable Care Act’s Medical Loss Ratio (MLR) rebate provisions that these payments are a reduction of premium. Otherwise, an insurer may be forced to refund the same premium dollar twice, once through these discretionary refunds and again as an MLR rebate. Clearly, it would be an undesirable outcome from the standpoint of solvency regulation that an insurer should be forced to pay out twice a dollar that it had only received once. If the discretionary refund is accounted for as an administrative expense or miscellaneous write-in item rather than a reduction of premium, it would not be given the correct treatment in the MLR rebate calculation, and the undesirable double-payment could result. Even if the refund is initially accounted for as a reduction of premium, if that treatment is viewed as being at the discretion of the insurer, it could be challenged when the MLR calculation is audited by either state insurance regulators or the Centers for Medicare and Medicaid Services.

Even more of a concern may be the potential impact on policyholders, as regards their income taxation. It is well established that a return of premium is generally not taxable to the policyholder; at most, if the premium payment was a deductible expense for that policyholder, the policyholder would lose that deduction. If the NAIC takes the position that these refunds are not a return of premium, that could add confusion to the policyholders’ tax positions. In particular for individual policyholders, for whom the premium payments would typically not be a deductible expense in the first place, this would raise the issue of whether they now have taxable income for federal and/or state income tax purposes. Policyholders would be forced to seek tax advice, or to make a decision on their own as to whether and how to report income from the refund. It is also worth considering whether the payment would be considered income for other purposes; e.g., if an individual policyholder is eligible for some form of government financial assistance, could this payment be deemed income that would reduce or eliminate that eligibility? While we hope that the respective governmental authorities would in each case reach an appropriate conclusion on these issues, we feel that raising the issues in the first place by an ambiguous accounting treatment would create unnecessary uncertainty and burdens for policyholders.

Accordingly, we reiterate our recommendation: that the revised INT make clear that these refunds generally are a return of premium; and that the only exception to that treatment is for the circumstances described in the APCIA’s letter, as cited above.

We would be happy to discuss this matter with you further.

Sincerely,

Commissioner Kent Sullivan, Chair
Accounting Practices and Procedures (E) Task Force
c/o National Association of Insurance Commissioners

Via electronic mail to Robin Marcotte, NAIC Staff

Dear Commissioner Sullivan,

On behalf of America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA), we thank you for the opportunity to provide comments regarding the accounting treatment for refunds of premium to policyholders that are made in response to the COVID-19 pandemic. In these difficult times, providing financial relief in the form of voluntary premium refunds is among the variety of proactive measures for the hundreds of millions of members that AHIP and BCBSA members serve.

We laud the NAIC’s expeditious efforts through recent collaborative discussions at the Statutory Accounting Principles Working Group (SAPWG), this Task Force and Financial Condition (E) Committee to craft guidance that is flexible for the various ways that insurers report premium refunds, rate reductions and policyholder dividends.

We are writing to express our support of the proposed NAIC staff modifications made to INT 20-08T that are included in the materials for this Task Force’s consideration during its upcoming conference call meeting on July 22. We particularly agree with the bifurcated accounting optionality approach for refunds not required under the existing policy terms and the limited time exception for expense reporting as applicable to P&C lines only since underwriting expense treatment is problematic for health products.

We thank the entire Task Force for its consideration of our comments. If you have any questions, please do not hesitate to contact Joe Zolecki at joseph.zolecki@bcbsa.com or Bob Ridgeway at Bridgeway@AHIP.org.

Respectfully yours,

Joe Zolecki
Director, Financial Regulatory Services
Blue Cross Blue Shield Association

Bob Ridgeway
Senior Counsel, Government Affairs
America’s Health Insurance Plans
The Accounting Practices and Procedures (E) Task Force met via conference call June 22, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Jamie Walker (TX); Trinidad Navarro, Vice Chair, represented by Rylynn Brown (DE); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Alan McClain represented by Tony Gilbert (AR); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima M. Woods represented by N. Kevin Brown (DC); David Altmaier represented by Virginia Christy (FL); Doug Omnen represented by Kevin Clark (IA); Stephen W. Robertson and Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Bill Clark (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Eric A. Cioppa represented by Vanessa Sullivan (ME); Anita G. Fox represented by Judy Weaver (MI); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by Diana Sherman (NJ); Russell Toal represented by Leatrice Geckler (NM); Linda A. Lacewell represented by Robert Kasinow (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger, Diane Carter and Andrew Schallhorn (OK); Jessica K. Altman represented by Joe DiMmem (PA); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Larry D. Deiter represented by Johanna Nickelson (SD); Hodgen Mainda represented by Trey Hancock (TN); Todd E. Kiser represented by Jake Garm (UT); Scott A. White represented by Doug Stolte and David Smith (VA); Michael S. Pieciak represented by Karen Ducharme (VT); Mike Kreidler represented by Steve Drutz (WA); Mark Afable represented by Amy Malm (WI); James A. Dodrill represented by Tonya Gillespie (WV); and Jeff Rude represented by Linda Johnson (WY). Also participating was: Eric Moser (IL).

Mr. Bruggeman provided the report of the Statutory Accounting Principles (E) Working Group, which met June 15, May 20, April 15 and March 18. During these meetings, the Working Group took the following action:

   a. Adopted its Jan. 8 minutes, which included the following action:

      1. Adopted an editorial item (Ref #2019-44).

      2. Adopted its 2019 Fall National Meeting minutes.

   b. Adopted the following substantive revisions to statutory accounting guidance:

   c. Adopted the following nonsubstantive revisions to statutory accounting guidance:

      1. **SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments and SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities**: Revisions incorporate principle concepts that will restrict the classification of “rolling” related party or affiliated investments as cash equivalents or short-term investments. The investment schedule will identify investments (or substantially similar investments) that remain on the short-term schedule for more than one consecutive year. (Ref #2019-20)

      2. **SSAP No. 2R**: Revisions reflect that certain cash pools meeting defined criteria shall be reported as cash equivalents. (Ref #2019-42)
3. **SSAP No. 3—Accounting Changes and Corrections of Errors and SSAP No. 51R—Life Contracts**: Revisions specify that changes as a result of VM-21, Requirements for Principle-Based Reserves for Variable Annuities, optional phase-in requirements shall be disclosed as a change in valuation basis, with additional disclosures regarding the phase-in period beginning Jan. 1, 2020. (Ref #2019-47)

4. **SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities**: Revisions expand guidance regarding financial guarantees and the use of the equity method for when losses exceed the subsidiary, controlled and affiliated entity's (SCA’s) equity value. The reported equity losses of an SCA would not go negative (thus stopping at zero); however, the guaranteed liabilities would be reported to the extent that there is a financial guarantee or commitment. (Ref #2018-26)

5. **SSAP No. 5R, SSAP No. 72—Surplus and Quasi-Reorganizations, and SSAP No. 86—Derivatives**: Revisions reject Accounting Standards Update (ASU) 2017-11, Accounting for Certain Financial Instruments with Down Round Features; Replacement of the Indefinite Deferral for Mandatorily Redeemable Financial Instruments of Certain Nonpublic Entities and Certain Mandatorily Redeemable Noncontrolling Interests with a Scope Exception in SSAP No. 86 and incorporate guidance into SSAP No. 5R and SSAP No. 72, requiring issued, free-standing financial instruments with characteristics of both liability and equity to be reported as a liability to the extent that the instrument embodies an unconditional obligation of the issuer. (Ref #2019-43)

6. **SSAP No. 25—Affiliates and Other Related Parties**: Revisions data-capture existing disclosures, which are currently completed in a narrative format. A blanks proposal to data-capture the template was proposed to be concurrently exposed. (Ref #2019-33)

7. **SSAP No. 26R—Bonds**: Revisions clarify that the assessment of an other-than-temporary impairment (OTTI) shall be based on modified contract terms. The revisions provide consistency with guidance in **SSAP No. 36R—Troubled Debt Restructuring** and SSAP No. 103R. (Ref #2020-14)

8. **SSAP No. 41R—Surplus Notes**: Revisions require disclosures of surplus notes that are structured in a manner in which cash-flow exchanges have been reduced or eliminated. (Ref #2019-37)

9. **SSAP No. 47—Uninsured Plans**:
   i. Revisions reject ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers in SSAP No. 47. (Ref #2020-08)
   
   ii. Revisions reject ASU 2018-18, Collaborative Arrangements (Topic 808) in SSAP No. 47. (Ref #2020-09)

10. **SSAP No. 51R, SSAP No. 56—Separate Accounts, and SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance**: Revisions: 1) ensure that separate account guaranteed products are referenced in all applicable paragraphs of the withdrawal characteristics disclosures; 2) correct an identified inconsistency in one of the new disclosures regarding products that will move from the reporting line of having surrender charges at 5% or more to the reporting line of surrender charges at less than 5%; and 3) add a cross reference from SSAP No. 56 to the existing disclosures by withdrawal characteristics in SSAP No. 51R and SSAP No. 61R, as the disclosures include separate account products. (Ref #2019-35)

11. **SSAP No. 51R and SSAP No. 52—Deposit-Type Contracts**: Revisions add a footnote to aggregate deposit-type contracts, which are captured in annual statement Exhibit 5 – Life Contracts. This item did not result in statutory revisions, but instead it resulted in a blanks proposal. (Ref #2019-08)

12. **SSAP No. 53—Property and Casualty Contracts—Premiums**: Revisions clarify that the installment fee guidance should be narrowly applied. If warranted, a separate agenda item would be prepared to discuss any installment expense comments received from the Casualty Actuarial and Statistical (C) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group, as they both were notified of the prior exposure. (Ref #2019-40)
13. **SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses**: Revisions emphasize existing guidance that loss and loss adjusting expense liabilities are established regardless of payments to third parties (except for capitated health claim payments). (Ref #2018-38)

14. **SSAP No. 62R—Property and Casualty Reinsurance**: Revisions incorporate disclosure updates for reinsurers from reciprocal jurisdictions. (Ref #2019-48)

15. SSAP No. 97: Revisions clarify that a more-than-one holding company structure is permitted for look-through if each of the holding companies within the structure complies with the look-through requirements in SSAP No. 97. (Ref #2019-32)

17. **Appendix A—Excerpts of NAIC Model Laws: Appendix A-001, Investments of Reporting Entities**: Revisions add a line for “Total Valuation Allowance” to Appendix A-001, Section 3, Summary Investment Schedule. (Ref #2020-07)

18. **Appendix B—Interpretations of Statutory Accounting Principles**:  
   
i. **Interpretation (INT) 20-01: Reference Rate Reform**: This interpretation provides optional guidance, allowing for the continuation of certain contracts that are modified in response to ASU 2020-04, *Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting*. Additionally, it provides waivers from derecognizing hedging transactions and exceptions for assessing hedge effectiveness as a result of transitioning away from certain interbank offering rates. (Ref #2020-12 and INT 20-01)

   ii. **INT 20-02: Extension of Ninety-Day Rule for the Impact of COVID-19**: This interpretation provides an optional extension of the 90-day rule before nonadmitting premium receivables and receivables from non-government uninsured plans in response to COVID-19. (INT 20-02)

   iii. **INT 20-03: Troubled Debt Restructuring Due to COVID-19**: This interpretation clarifies that a modification of mortgage loan or bank loan terms in response to COVID-19, shall follow the provisions detailed in the April 7, 2020, “Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus,” and the provisions of the federal Coronavirus Aid, Relief and Economic Security (CARES) Act in determining whether the modification shall be reported as a troubled debt restructuring. (INT 20-03)

   iv. **INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19**: This interpretation provides limited time exceptions to defer the assessment of impairment for certain bank loans, mortgage loans and investments that predominantly hold underlying mortgage loans, which are affected by forbearance or modifications in response to COVID-19. (INT 20-04)

   v. **INT 20-05: Investment Income Due and Accrued**: This interpretation provides temporary exceptions for the assessment of collectability for specific investments, as well as exceptions on the nonadmittance of investment income due and accrued that becomes more than 90 days past due in response to COVID-19. (INT 20-05)

   vi. **INT 20-06: Participation in the 2020 TALF Program**: This interpretation provides guidance for reporting entities that participate as a direct borrower or material investor in the 2020 Term Asset-Backed Securities Loan Facility (TALF). This interpretation permits direct borrowers to admit securities pledged to the TALF program; although, the TALF program does not permit substitution of pledged assets if other admittance criteria is met. (INT 20-06)
vii. **INT 20-07: Troubled Debt Restructuring of Certain Debt Investments Due to COVID-19**: This interpretation provides temporary practical expedients in assessing whether modifications in response to COVID-19 are insignificant under SSAP No. 36R and in assessing whether a modification shall be considered an exchange under SSAP No. 103R. (INT 20-07)

19. **Appendix D—Nonapplicable GAAP Pronouncements:**

i. Revisions reject **ASU 2016-14, Presentation of Financial Statements of Not-for-Profit Entities** as not applicable to statutory accounting. (Ref #2019-46)

ii. Revisions reject **ASU 2017-14, Amendments to SEC Paragraphs in Topic 220, Topic 605 and Topic 606** for statutory accounting. (Ref #2020-10)

iii. Revisions reject **ASU 2017-14, Amendments to SEC Paragraphs in Credit Losses (Topic 326) and Leases (Topic 842)** for statutory accounting. (Ref #2020-11)

d. **Adopted the following editorial revisions to statutory accounting:**

1. **SSAP No. 21R—Other Admitted Assets**: Removes the excerpts from SSAP No. 4—Assets and Nonadmitted Assets regarding the definition and accounting treatment for admitted assets. (Ref #2020-06EP)

2. **SSAP No. 51R**: Updates various paragraph references, requiring that changes in valuation basis be consistent with the originally adopted language in **Issue Paper No. 154—Implementation of Principle-Based Reserving, Exhibit A.** (Ref #2020-06EP)

3. **SSAP No. 62R**: Revisions update references in Exhibit A – Implementation Questions and Answers and paragraph 85 to match the current format of property/casualty (P/C) annual statement Schedule F – Reinsurance. (Ref #2019-44EP)

4. Various other SSAPs: Revisions revise all references to the annual statement instructions for consistency and combine life and fraternal statement references. (Ref #2019-44EP)

e. **Disposed the following without revisions to statutory accounting guidance:**

1. **Agenda item 2019-39**: Acceptable Collateral for Derivatives was disposed without statutory revisions as third-party derivative exposure through centrally cleared exchanges is appropriately captured in the existing financial statement disclosure requirements and blanks. (Ref #2019-39)

2. **Agenda Item 2019-41**: Eliminating Financial Modeling Process: This item proposed revisions to **SSAP No. 43R—Loan-Backed and Structured Securities** to remove the financial modeling process. This item was proposed in response to initial action by the Valuation of Securities (E) Task Force. As the Task Force has taken a different approach, this agenda item was disposed without statutory revisions. (Ref #2019-41)

f. **The effective dates for the following INTs are as follows:**

1. **INT 20-02, INT 20-04 and INT 20-05** are effective for the March 31, 2020, and June 30, 2020, financial statements only, but consideration of an extension will occur in August 2020.

2. **INT 20-03 and INT 20-07** have an effective date that mirrors the CARES Act and will only be applicable for the period beginning on March 1, 2020, and ending on the earlier of Dec. 31, 2020, or the date that is 60 days after the date on which the national emergency concerning the COVID-19 outbreak terminates.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the report of the Statutory Accounting Principles (E) Working Group (see **NAIC Proceedings – Summer 2020, Accounting Practices and Procedures (E) Task Force, Attachment One**). The motion passed unanimously.

Mr. Garn provided the report of the Blanks (E) Working Group, which met via conference call May 28 and took the following action:

a. Adopted its Dec. 17, 2019, minutes.

b. Adopted 24 proposals:

1. 2019-25BWG – Modify the instruction for Column 10 (Schedule F, Part 3 – Property and Schedule F, Part 2 – Life/Fraternal Workers’ Compensation Carve-out supplement) to remove instruction to exclude adjusting and other reserves from the column and add instruction to include those reserves with the defense and cost containment reserves. Add a new instruction for Column 12 for the same schedules. Add crosschecks to Schedule P, Part 1.

2. 2019-28BWG – Modify the instruction for Supplemental Investment Risk Interrogatories Lines 13.02 through 13.11 clarifying when to identify the actual equity interests within a fund and aggregate those equity interests for determination of the 10 largest equity interests.

4. 2019-30BWG – Add a category and instructions for Reciprocal Jurisdiction Companies in Schedule S for the Life/Fraternal and Health blanks and to Schedule F for the Property and Title blanks. Add a list of identification numbers in instruction to Schedule Y, Part 1A; Schedule Y, Part 2; and Schedule D, Part 6, Section 1 for Reciprocal Jurisdiction Companies. Add a reference to Reciprocal Jurisdiction Companies in the Trusteed Surplus Statement instructions for Life/Fraternal, Health and Property statements.

5. 2020-01BWG – Add crosschecks to Lines 13 and 14 of the Exhibit of Premiums, Enrollment and Utilization (State Page) to Lines 10 and 11 of the Underwriting and Investment Exhibit, Part 1. Add crosschecks to Lines 9, 10 and 11 of the Underwriting and Investment Exhibit, Part 1 and Schedule T, Line 61.

6. 2020-03BWG – Modify the instruction and illustration for 13(11) to the Notes to Financial Statement. Change the numbering from 1 through 13 to A through M to reflect the disclosure addition for SSAP No. 41R being adopted by the Statutory Accounting Principles (E) Working Group and correct the instruction.

7. 2020-04BWG – Modify the instruction and illustration for Note 23A – Unsecured Reinsurance Recoverables to reflect the disclosure addition for SSAP No. 62R being adopted by the Statutory Accounting Principles (E) Working Group.

8. 2020-05BWG – Modify the instruction and illustration for Note 2 – Accounting Changes and Correction of Errors to reflect the disclosure addition for SSAP No. 3 and SSAP No. 51R being adopted by the Statutory Accounting Principles (E) Working Group.

10. 2020-08BWG – Add a disclosure instruction for 10C to the Notes to Financial Statement for related party transactions not captured on Schedule Y to reflect the disclosure addition for SSAP No. 25 being adopted by the Statutory Accounting Principles (E) Working Group. Combine existing 10C into 1B instructions and illustration narrative.

11. 2020-09BWG – Modify the Annual Statement Instructions for Schedule F, Part 3 to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance.
12. 2020-10BWG – Revise the column 10 header in the Variables Annuities Supplement Blank to be Contract Level Reserves Less Cash Surrender Value. Revise the line descriptions in Lines 1 through 3 in the footer and add a line for the Reserve Credit from Other Reinsurance and for Post-Reinsurance Ceded Aggregate Reserve. Adjust the instructions to correspond with changes made to the blanks, as well as changes in the 2020 Valuation Manual for the new Variable Annuities (VA) Framework.

13. 2020-11BWG – For the VM-20 Reserves Supplement Blank, split Part 1 into Part 1A and Part 1B.
   
   i. For Part 1A, change the description header for column 3 to Due and Deferred Premium Asset to match the instructions. Add “XXX” in the two places needed to indicate that a due and deferred premium asset does not need to be reported in the lines shown for Total Reserves. Change the reporting units for all columns to be in dollars rather than in thousands. Expand all columns to allow room for a number as large as 999,999,999,999. Change the product labels for clarity.

   ii. For Part 1B, change the reporting units for the reserve columns to be in dollars rather than in thousands. Expand the reserve columns to allow room for a number as large as 999,999,999,999. Expand the face amount columns to allow room for a number as large as 9,999,999,999. Change the product labels for clarity. Remove Part 2 and renumber the remaining parts. Adjust the instructions according to the changes made to the blanks. Clarify instructions and add examples for Parts 1A and 1B.

14. 2020-12BWG – The proposal will require appointed actuaries to attest to meeting continuing education (CE) requirements and participate in the Casualty Actuarial Society (CAS)/Society of Actuaries (SOA) CE review procedures, if requested.

15. 2020-13BWG – Remove Line 24.04 from the General Interrogatories, Part 1 and renumber remaining lines for Interrogatory Question 24. Modify Lines 24.05 and 24.06 to require reporting amounts for conforming and non-conforming collateral programs.

16. 2020-14BWG – Modify the columns and rows on the blank pages for the Long-Term Care Experience Reporting Forms 1 through 5 and make appropriate changes to the instructions for those forms.

17. 2020-15BWG – Contains a new Private Flood Insurance Supplement collecting residential and commercial private flood insurance data and revisions to the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages.

18. 2020-16BWG – Modify Questions 3.1 and 3.2 of General Interrogatories Part 2 and provide instructions.

19. 2020-17BWG – Adjust the asset valuation reserve (AVR) presentation to include separate lines for each of the expanded bond designation categories.

20. 2020-18BWG Modified – Clarify the instructions to indicate which funds reported on Schedule D, Part 2, Section 2 (annual filing) and Schedules D, Part 3 and Part 4 (quarterly filing) must have an NAIC designation, NAIC designation modifier, and Securities Valuation Office (SVO) administrative symbol. Modify the reference to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) found in the following investment instructions.

21. 2020-19BWG – Add a code of “%” to the code column for all investments which have been reported on Schedule DA, Part 1 and Schedule E, Part 2 for more than one consecutive year. Add certification to the General Interrogatories, Part 1 inclusion of these investments on Schedule DA, Part 1 and Schedule E, Part 2 (SAPWG 2019-20).

22. 2020-20BWG – For Schedule D, Part 1, add code “10” to Column 26 – Collateral Type for ground lease financing. Renumber “Other” code to “11.”

23. 2020-21BWG – Add a new line 4.05 for valuation allowance for mortgage loans to the Summary Investment Schedule and renumber existing line 4.05 to 4.06. Modify the instructions to include a crosscheck for new line 4.05 back to Schedule B – Verification Between Years. Clarify the instructions for 4.01–4.04 to explicitly show crosschecking to Column 8 of Schedule B, Part 1.
24. 2020-23BWG – Add footnote to Exhibit 5 (life/fraternal & health – life supplement) and Exhibit 3 separate
counts to disclose cases when a mortality risk is no longer present or a significant factor; i.e., due to a
policyholder electing a payout benefit (SAPWG 2019-08).

c. Adopted its editorial listing.

Mr. Garn made a motion, seconded by Mr. Eft, to adopt the report of the Blanks (E) Working Group (Attachment Four-A). The
motion passed unanimously.

3. Adopted INT 20-08

The Task Force took a separate vote on INT 20-08: COVID-19 Premium Refunds, Rate Reductions and Policyholder Dividends,
which was adopted by the Statutory Accounting Principles (E) Working Group with a two-thirds majority vote. This separate
vote was to allow the discussion of additional industry comments. INT 20-08 provides guidance on how to account for premium
refunds, rate reductions and policyholder dividends in response to decreased insured activity related to COVID-19. With
regards to premium refunds that are outside of policy terms, INT 20-08 identifies that these shall be reported as a reduction of
premium and not as an expense. INT 20-08 provides that reporting in expenses would require a prescribed or permitted practice.
INT 20-08 also provides guidance on premium reductions and policyholder dividends. INT 20-08 directs an aggregate
disclosure to allow for the identification of the full impact from COVID-19 in the financial statements. INT 20-08 notes that
premium taxation is determined by the respective jurisdiction and not the interpretation. (INT 20-08)

Ms. Marcotte stated that per the NAIC Policy Statement on Maintenance of Statutory Accounting Principles, interpretations
that provide new guidance or provide temporary overrides to existing guidance are required to be adopted by a two-thirds
majority of the Working Group. In addition, there is a requirement for at least two-thirds of the Working Group to be present
to vote. These vote requirements are in place to permit immediate adoption and application of statutory accounting guidance,
most often in response to catastrophes or other situations that need a quick response. Prior examples include hurricanes; the
California wildfires; and most recently, the COVID-19 pandemic. Additionally, per the policy statement, interpretations can
be adopted, overturned, amended or deferred by a two-thirds majority of the Task Force membership; however, this has not
previously occurred. Ms. Marcotte stated that INT 20-08 was originally exposed by email vote on May 5 and initially discussed
on May 20. After the May 20 discussion, which included consideration of comments received, the Working Group retained the
original concepts within the proposed interpretation but re-exposed the item to include additional provisions for health insurers
and disclosure refinements. On June 15, after discussion and consideration of the recent and previous comments received, the
Working Group adopted the interpretation with 13 members voting and two opposed, noting that the chair also did not vote, as
his vote would not have changed the outcome. The 13 members voting in the affirmative exceeded the two-thirds requirements
for adoption.

Ms. Marcotte stated that several comment letters were received noting that most commenters focused on Issue 1: How to
account for refunds not required under policy terms.

Ms. Marcotte stated there seems to be general support for:

- Issue 2: How to account for refunds required under policy terms.
- Issue 3: How to account for rate reductions on in-force and renewal business.
- Issue 4: Requires policyholder dividends to follow existing guidance and complete the disclosures per Issue 5.
- Issue 5: Requires reporting entities to comply with statutory accounting disclosure requirements, and requires that all
  premium refunds, rate reductions or policyholder dividends provided because of the decreased activity due to COVID-
  19, be aggregated and reported in Note 21A as unusual and infrequent items. She noted that the property and casualty
  actuaries who perform rate reviews and analysis noted that transparency will assist them in evaluating 2020 activity.

Regarding Issue 1, Ms. Marcotte stated that the refund will be an adjustment to written or earned premium with corresponding
adjustments to unearned premium, as applicable. Liability recognition is required in accordance with SSAP No. 5R. It also
states that refunds that are recognized in a different manner (e.g., as an expense), shall be considered a permitted or prescribed
practice pursuant to SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures. She stated Issue 2
specified that refunds required under policy terms shall be recognized as an adjustment to premium; however, discounts on
future business shall be recognized during the future policy period. Issue 3 addresses rate reductions on in-force and renewal
business, and it requires rate reductions on in-force business to be recognized as immediate adjustments to income.
Additionally, rate reductions on future business shall be reflected in premium upon renewal. Issue 4 requires policyholder dividends to continue following existing guidance and to complete the disclosures described in Issue 5. Ms. Marcotte stated that the interpretation notes that premium taxation requirements vary by jurisdiction, and it is determined by each jurisdiction as to whether premium taxation occurs on premium written or returned to the policyholder. Additionally, due to the short-term nature of the items included, this interpretation will be automatically nullified on Jan. 1, 2021. Ms. Marcotte stated the guidance provided in this interpretation would ensure continued financial statement comparability, with variations approved by state insurance regulators as permitted or prescribed practices to then be reported in a data-captured disclosure. Additionally, the guidance is consistent with existing guidance and historical precedent in which amounts returned to policyholders are recognized in the same manner in which they were originally recognized.

Ms. Marcotte stated industry support regarding Issue 1 remains divided. The industry representatives in support of premium reduction also noted historical precedent, comparability, as well as concern that changing policy forms to permit non-indemnity-based payments at the discretion of the company raises several additional issues for accounting and reporting. However, other industry representatives opposed the premium reduction proposal and supported reporting the refund as an underwriting expense, especially in cases where the insurer filed a policy endorsement or amended rate filing with their domestic regulator.

Phillip L. Carson (American Property Casualty Insurance Association—APCIA) stated that the APCIA offered a compromised reporting proposal to the Statutory Accounting Principles (E) Working Group; however, as the compromise was not adopted, the APCIA is requesting consideration at the Task Force level. The reporting compromise would only affect insurers that have filed an endorsement or an amended rate filing with the state. He noted that in these filings, the insurers communicated their intent to report the relief payments as a policyholder expense and desire to be allowed to do so while disclosing those payments per the requirements of this interpretation. This treatment would allow insurers who have taken such actions to continue to report the COVID-19 relief payments as an other underwriting expense. This treatment would apply to all applicable payments made during the remainder of 2020. Mr. Carson noted that the APCIA supports all other aspects of the interpretation; however, it is supportive of allowing a reporting exception for these insurers, who in good faith, developed COVID-19 relief programs and worked with state insurance regulators throughout the crisis. He stated that compromise would not jeopardize consistent reporting, as the disclosure requirements in the interpretation provide adequate financial information and would not negatively affect non-policyholder stakeholders, such as agent commissions or state premium taxes. Additionally, without a compromise, insurers will incur the burden of having to pursue numerous permitted practices in many jurisdictions.

Jeff Beck (Selective Insurance Company of America) stated their organization is comprised of multiple entities in numerous jurisdictions, and it will incur significant logistical challenges in attempting to obtain one consistent accounting treatment among the states in which it operates. He stated that it would be most efficient to allow reporting flexibility and thus not require the administrative process of pursuing a permitted practice, as is directed in the interpretation.

Jeffrey Shank (Progressive Insurance) stated that Progressive supports flexibility in the reporting of COVID-19 relief payments. Progressive operates in a dozen domiciliary states, which if the interpretation is adopted in its current form, will require the insurer to obtain multiple permitted practices. Mr. Shank noted that this process creates uncertainty, and it will likely result in greater inconsistency in reporting.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) stated great respect for statutory accounting and analysis, but he noted that this event is unprecedented and that there is great diversity of actions and preferences among its members. Insurers acted in good faith and in the best interest of their policyholders, and NAMIC is requesting reporting flexibility due to the unprecedented nature of the return of funds to policyholders. Mr. Rodgers noted that without reporting flexibility, state insurance regulators will see an unprecedented volume of permitted practice requests. He stated that the process of obtaining a permitted practice will create an unnecessary hurdle, as flexibility could be granted, thus not requiring the exercise, cost and uncertainty in being granted permitted practice. He stated that in response to COVID-19, insurers have responded to hundreds of special requests or additional regulations—i.e., suspending cancellations for non-payments, waiving late fees, and waiving co-pays—and they view the relief payments, especially those made through a policy endorsement, all in the same category as insurers appropriately responded to the crisis. He stated that characterizing the return of funds to policyholders as a return of premium does not work for everyone. Due to the unprecedented nature of the return of funds to policyholders, the payments were done in a sense of urgency and generally with ongoing communication with domestic regulators. Mr. Rodgers noted that some members desired to treat the payments as a dividend, but they did not have the ability to do so. He stated that rather than pursuing permitted practices, the preferred method to clarify the accounting should be through an interpretation, however flexibility should be allowed so that the accounting through the INT process for such relief...
payments. He noted NAMIC’s support for allowing the method that was previously communicated with domestic regulators. He stated that if flexibility is not permitted, many companies will seek a permitted practice, which also further erodes the comparability of financial statements. Additionally, by not allowing flexibility to treat the relief payments as a reduction in revenues, the impact will be felt by agents through reduced commissions and by states through reduced premium taxes. Mr. Rodgers stated that NAMIC was supportive of the reporting compromise proposed by the APCIA.

Birny Birnbaum (Center for Economic Justice—CEJ) stated that the CEJ began calling for premium relief payments at the early onset of COVID-19. He stated the relief was in correlation with the reduction in risk exposure of affected policies, i.e., a significant reduction in automobile usage, which occurred in early March 2020. The aggregate risk exposures for current policies reflect an overnight reduction in risk, and the return of funds reflect the return of premium associated with the reduced insured risk. Without these premium relief payments, insurers would have experienced windfall profits due to the significantly lower claim counts. Mr. Birnbaum stated that the premium relief was to reflect the new (reduced) expected risk exposure, and it was calculated as a percentage of premium for a certain number of affected months. He stated that to account for these relief payments as an expense would not be appropriate because they do not typically reflect an expense activity. In terms of consistent reporting, the permitted practice process allows for the possibility of inconsistent reporting, while if flexibility is granted in the interpretation, inconsistent reporting is almost assured. Mr. Birnbaum stated support for the accounting treatment as a return of premium, which would assist in both the comparability of financial statements and the ease in analysis by state insurance regulators.

Kevin Spataro (Allstate) stated support of the interpretation as it relates to premium refunds, rate reductions and policyholder dividends, but he stated that the interpretation should be expanded to allow flexibility in the accounting and reporting guidance for discretionary payments provided to policyholders. He stated that the disclosure proposed in the interpretation would provide adequate detail and transparency of the relief payments, and he is supportive of the compromised reporting as proposed by the APCIA and the comments of NAMIC, at least through the end of 2020. He stated that the calculation of the relief payment amounts was significantly more complex than simply reviewing miles driven, and thus a rate filing was not elected. At the time the funds were disbursed to policyholders, actuarial information, such as differences in crash severity, distracted driving, or other vehicle uses, was not available, thus an amended rate filing was not a viable option. Mr. Spataro stated that Allstate believes the nature of its payments to policyholders would qualify as an other underwriting expense, and it supports expanded comprehensive disclosures to detail the policyholder COVID-19 relief payments.

Keith Bell (Travelers) stated that Travelers arrived at the conclusion that these relief payments are in fact a reduction in premium because they reflected a reduction in risk exposures. He noted support for premium reduction for reasons similar to those listed by Mr. Birnbaum. Additionally, by not accounting for the relief payments as a reduction in premium, it would have been improperly reflected in the [pure] loss ratio. Mr. Bell noted that when Travelers heard that some industry members were advocating for expense reporting, it evaluated the definition of an expense and believed these payments did not fulfill the requirements for expense reporting in the guidance or SSAP No. 70—Allocation of Expenses. He said Travelers ultimately reviewed level five guidance in the statutory hierarchy, which includes Financial Accounting Standards Board (FASB) Concept Statement Number 6. He noted that the review concluded that the payments are a reduction of premium revenue. He stated that additionally, Travelers contacted several of its domestic regulators, and they also concurred with the treatments of such payments as a reduction to premium. He also noted that insurers all acted in the best interests of policyholders in returning funds quickly.

Rachel Underwood (The Cincinnati Insurance Companies) stated support for modifying the interpretation to allow for COVID-19 relief payments to be recognized as an expense. She stated that the Cincinnati Insurance Companies believe that reporting relief payments as an expense is the most conservative approach in that it would reflect the true nature of the cash outflows. She stated that if consistent reporting is the primary reason for not allowing flexibility in reporting, the interpretation already allows for some variation through the reporting of either a reduction in premium or a policyholder dividend. She stated that a specific expense line does not currently exist in the financial statements, so the use of an aggregate write-in expense is recommended. Additionally, underwriting or loss data was not evaluated when considering the calculation of the relief payments, thus it is not strictly a reduction to premium. If reported as a reduction to premium, analysis ratios, which rely heavily on premium, could be adversely affected. Ms. Underwood also noted a concern with potentially receiving different treatment from different states of domicile.

Ms. Belfi stated that during the financial crisis, multiple permitted practices were given to multiple companies covering a wide range of issues; however, despite this, there were not any issues with comparability due to the details that are required to be provided in footnote 1. Despite the multiple granted permitted practices, inconsistencies were not noted as a problem among
state insurance regulators, as they work well together and should not cause any undue process in granting permitted practices across multiple jurisdictions.

Ms. Underwood stated the financial crisis was significantly different than the COVID-19 pandemic currently being experienced. During the financial crisis, most permitted practices were related to investments and relief regarding other-than-temporary impairment analysis requirements. Ms. Underwood stated that this situation is different in that COVID-19 is broader and has a greater impact than just on an insurer’s investments. She stated that the nature of the relief payments does not reflect a reduction in premium nor a policyholder dividend, and she supports a one-time aggregate write-in as an expense. She stated that not allowing reporting as an expense feels like a disadvantage, as it creates a burden for insurers who will wish to seek a permitted practice close to the end of the quarter, when the end results will have the same net impact to the income statement.

Mr. Stolte inquired to previous commenters if a policy endorsement has historically allowed a separation from statutory accounting guidance regarding consistency, i.e., allowing a company to determine how financial items are reported.

Mr. Spataro responded that the endorsements are not in the statutory hierarchy. He noted that in his view the nature and intent of the policy endorsement reflects the true nature of the relief payments, that as a policyholder benefit. He said that is why Allstate concluded that expense treatment is appropriate.

Mr. Stolte stated he remained concerned with the lack of consistency if flexibility is granted in the interpretation. He stated that state analysts are experienced in reviewing footnote 1 in terms of permitted or prescribed practices, which note any impact on income or surplus and risk-based capital (RBC). Mr. Stolte stated that he believes not reporting the relief payments as a reduction to revenue does not reflect the economic reality of the transaction and that premium is an important metric. He also noted a concern regarding the comparability of treating some of the payments as a reduction of revenue and others as an underwriting expense.

Mr. Spataro noted support for adequate disclosure.

Mr. Birnbaum stated that if a reporting compromise is allowed, a new disclosure will be required to articulate and detail the financial impact of the relief payments. He noted that the proposed compromise would create diversity in reporting. This new disclosure causes concern, as it will need to be developed and interpreted, all while the existing disclosures required for a permitted practice have been in place for a number of years. Utilizing existing disclosures will ensure consistent reporting. Mr. Birnbaum stated that in response to reporting relief payments as an expense, many insurers called the payments “premium relief,” so by their own definition, this should reflect a reduction in premium.

Commissioner Robertson stated that while consistent reporting is important, we are in unprecedented times and every state has lost tremendous revenue due to the impacts of COVID-19. By requiring companies to record this as a return of premium, the states will be negatively affected through the reduction of premium tax paid to the states. The magnitude of the loss of tax revenue is significant, and Indiana will not support adoption of this interpretation. Commissioner Robertson prefers to account for all relief payments as an expense, with exceptions granted in certain circumstances regarding reductions to premium.

Ms. Brown stated that Delaware agrees with the comments stated by Commissioner Robertson, and it does not support the adoption of requiring relief payments to be accounted for a reduction in premium. She said Delaware would support allowing an aggregate write in as an other underwriting expense. She noted that the focus should be on the temporary issues caused by the pandemic.

Ms. Walker asked for a clarification regarding the position of Commissioner Robertson and Ms. Brown. She asked if their preference was in support of allowing flexibility in reporting or if the preference was to require all the payments be reported as an expense.

Commissioner Robertson noted a preference to have all of the payments be reported as an expense; however, he noted that he appreciates the need for flexibility to allow some of the amounts to be reported as a reduction of premium. He noted concerns about the possibility of state revenue reduction.

Ms. Brown noted support for Commissioner Robertson’s position.
Mr. Bruggeman stated he is open to flexibility in reporting, noting that these payments are akin to a policyholder dividend. He stated that the policy endorsements allowing optional payments are different than negative premium. He supports considering an alternative approach, such as an aggregate write-in, used solely for the purpose of the COVID-19 relief payments. He stated that he understands that the relief provided was not necessarily specific to underwriting, was provided to all applicable policyholders, and was performed at an enterprise level, rather than at an individual policy level. Additionally, if reported as a reduction to revenue, premium taxes, agent commission and reinsurance would be adversely affected.

Mr. Bruggeman noted that reporting as a reduction of premium would affect other schedules that premium is reported on. However, if allowed to be reported as an expense, the relief payments would be segregated so that they do not affect rate filings in upcoming years.

Mr. Bruggeman stated when reviewing on a U.S. generally accepted accounting principles (GAAP) vs. a statutory accounting basis, statutory accounting is more balance sheet focus and rigid in its reporting structure. However, U.S. GAAP filers would typically be allowed to create a supplemental reporting line related to relief payments. Accordingly, an aggregate write-in line, either as an underwriting expense or a negative write-in for miscellaneous income, should be considered for statutory accounting. Mr. Bruggeman stated that in terms of a permitted practice, they only apply to domestic regulated companies, not to all companies that write premium in their state (foreign insurers). He stated that diversity will be very prevalent amongst different filers throughout many states, all of which will have an impact on premium tax revenue. He stated Ohio is supportive of the APCIA proposed compromise.

Mr. Rehagen noted support for flexibility as described by Mr. Bruggeman.

Ms. Belfi stated that throughout the pandemic, state insurance regulators and industry have worked well together to ensure continued financial strength and solvency, all in the interest of policyholders. However, the fundamental building block of reporting consistency remains a cornerstone for statutory accounting. In terms of the flexibility requested by industry, the permitted practice process remains a viable, time tested process, which remains an option for state insurance regulators.

Ms. Belfi stated that the use of a consistent reporting process is important, as the accounting will affect critical ratios that are used for regulatory analysis, especially during COVID-19. She stated that footnote 1 is used to describe any differences in accounting. What is determined will set a precedent for future accounting policy during the next crisis.

Ms. Belfi stated Connecticut is supportive of the interpretation as written, requiring relief payments to be accounted for as a reduction in premium. She noted further that it is what was also communicated to their companies.

Mr. Stolte expressed agreement with the comments expressed by Ms. Belfi, stating consistent reporting is a critical aspect of statutory accounting. He noted that the prescribed or permitted practice is an option for those desiring flexibility in reporting. He noted that as a long-term original member of the Working Group.

Mr. Garn stated he understands the economic concerns noted by Commissioner Robertson. He noted that he serves on other councils dealing with the loss of revenue; however, the discussion today revolves around a technicality in accounting, thus purporting the reduction of revenue. He stated using a technicality to maintain the level of premiums solely to maintain state revenues might not be the best way to address the revenue issues.

Mr. Hudson stated that the discussion presented fair arguments for both perspectives; however, California remains supportive of accounting for COVID-19 relief payments as a reduction to premiums.

Mr. Moser stated that Illinois is a significant marketplace as many property and casualty insurers are domiciled within the state. He stated that Illinois believes that if an insurer has filed an endorsement with the state, then they should be allowed the option to report these relief payments as an expense. Additionally, with all the discussion on this topic, there will likely be great diversity in reporting, however Illinois is supportive of expense treatment in this circumstance.

Mr. Schallhorn expressed support for the position of Illinois.

Mr. Clark stated Iowa is in favor of the interpretation as written, noting that it provides clarity in reporting guidance, and it will ensure consistent reporting among insurers, all while providing flexibility in reporting through the permitted practice process.
Ms. Belfi made a motion, seconded by Mr. Stolte, to adopt the consensus in INT 20-08, as previously adopted by the Statutory Accounting Principles (E) Working Group (see NAIC Proceedings – Summer 2020, Financial Condition (E) Committee, Attachment Seven). The motion passed, with 28 members voting in favor and the following nine members dissenting: Delaware; Indiana; Louisiana; Massachusetts; Missouri; North Carolina; Ohio; Oklahoma; and Rhode Island. New Jersey abstained. The motion met the two-thirds membership requirement required by the NAIC Policy Statement on Maintenance of Statutory Accounting Principles. INT 20-08 is effective on its June 15, 2020, adoption and is effective for 2020 reporting.

Having no further business, the Accounting Practices and Procedures (E) Task Force adjourned.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call May 28, 2020. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair and Perry Kupferman (CA); Jeffery Bethel (AK); William Arfanis (CT); N. Kevin Brown (DC); Tom Hudson (DE); Carolyn Morgan (FL); Daniel Mathis and Carrie Mears (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Lindsay Crawford (NE); Doug Bartlett and Patricia Gosselin (NH); John Sirovetz (NJ); Tom Botsko, Dale Bruggeman and Tracy Snow (OH); Diane Carter (OK); Brian Fordham and James Borrowman OR); Joe DiMemmo (PA); Trey Hancock and Hui Wattanaskolpant (TN); Shawn Frederick (TX); Steve Drutz (WA); Randy Milquett (WI); and Jamie Taylor (WV). Also participating was: David Browning (MS).

1. **Adopted its Dec. 17, 2019, Minutes**

The Working Group met Dec. 17, 2019. During this meeting, the Working Group: 1) adopted its Oct. 22, 2019, minutes; 2) adopted two items previously exposed—a proposal that adds clarifying instructions to address questions that have been received regarding the new Analysis of Operations by Lines of Business on the life and health blank and a proposal that requests the removal of the alphabetic index from inclusion at the back of the annual statement blank, instructions and the Blanks (E) Working Group web page; 3) exposed its procedures; 4) exposed four proposals; and 5) adopted the editorial listing.

Mr. Eft made a motion, seconded by Mr. Sirovetz, to adopt the Working Group’s Dec. 17, 2019, minutes (Attachment Four-A1). The motion passed unanimously.

2. **Considered Adoption of Items Previously Exposed**

   Mr. Snow stated that this proposal modifies the instructions for column 10, Schedule F, Part 3 – Property and Schedule F, Part 2 – Life/Fraternal Workers’ Compensation Carve-Out Supplement, removing instructions to exclude adjusting and other reserves from the column. The proposal adds instructions to include those reserves with the defense and cost containment reserves. It adds a new instruction for column 12, incurred but not reported (IBNR) loss adjustment expense (LAE) reserves for the same schedules. It adds crosschecks to Schedule P, Part 1. He stated that there was a modification made to clarify that the crosscheck for column 10 does not apply to those companies participating in inter-company pooling participation arrangements where the participation percentage in Schedule P, Part 1, column 34 is not equal to zero.

   Mr. Snow made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Sirovetz made a motion, seconded by Mr. Hudson, to adopt the modified proposal (Attachment Four-A2). The motion passed unanimously.

   b. **Modify the Instructions for the Supplemental Investment Risk Interrogatories Lines 13.02 Through 13.11 Clarifying When to Identify the Actual Equity Interests Within a Fund and Aggregate Those Equity Interests for Determination of the 10 Largest Equity Interests (2019-28BWG) Effective Dec. 31, 2020.**

   Mr. Bruggeman stated that the purpose of this proposal is to clarify when reporting entities are required to identify actual equity interests within a fund and aggregate those equity interests to determine their 10 largest equity interests. The Statutory Accounting Principles (E) Working Group adopted this item in December 2019. This proposal modifies those instructions for Supplemental Investment Risk Interrogatories lines 13.02 through 13.11.

   Mr. Bruggeman made a motion, seconded by Ms. Gosselin, to adopt the proposal (Attachment Four-A3). The motion passed unanimously.
c. **Modify the Instructions and Blank for Supplemental Investment Risk Interrogatories Question 14.01 (2019-29BWG)**

Mr. Bruggeman stated that the purpose of this proposal is to clarify that interrogatories 14.06 through 14.15 are to be completed regardless of the answer to Supplemental Investment Risk Interrogatories, question 14.01. This item is in response to questions received on a prior adoption change to specify what is captured in line 2 for total equity exposures. Essentially, the new disclosure for fund managers was captured after a threshold question. The clarification simply indicates that the fund manager disclosure should be completed regardless of that threshold provision. This proposal adds a note to lines 14.06 through 14.15 stating that these lines should be completed, even if the answer to question 14.01 is “yes.”

Mr. Bruggeman made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Four-A4). The motion passed unanimously.

Jake Stultz (NAIC) stated that the intent of this proposal is to set up the annual reporting blanks for companies to report reinsurance with reciprocal jurisdiction reinsurers as soon as the states begin enactment of the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786). These minor revisions are similar to those that were made to incorporate the certified reinsurer provisions in 2011. The proposal adds the ability to report the new type of reinsurer and adds some descriptions of this new category of reinsurer.

Mr. Stultz stated that as a result of the interested party comments, there were several minor revisions highlighted in the proposal. He noted that an instruction was added for the annual 2020 reporting, which clarifies the details for proper reporting where the reporting entity’s software may not yet be able to capture reinsurance from reciprocal jurisdiction reinsurers. Additionally, NAIC staff have made a correction to the original exposed document. The reference to “Alien Insurer Identification Number” was stricken when “Certified Reinsurer Identification Number” should have been removed. This correction has been included in the document presented for adoption.

Ms. Doggett made a motion, seconded by Mr. Sirovetz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Arfanis made a motion, seconded by Ms. Gosselin, to adopt the modified proposal (Attachment Four-A5). The motion passed unanimously.

e. **Add Crosschecks to Lines 13 and 14 of the Exhibit of Premiums, Enrollment and Utilization (State Page) to Lines 10 and 11 of the Underwriting and Investment Exhibit, Part 1. Add Crosschecks to Lines 9, 10 and 11 of the Underwriting and Investment Exhibit, Part 1 and Schedule T, Line 61 (2020-01BWG) Dec. 31, 2020.**

Ms. Gosselin stated that this proposal affects the health blank and adds crosschecks to line 13 and line 14 of the Exhibit of Premiums, Enrollment and Utilization (State Page) to line 10 and line 11 of the Underwriting and Investment Exhibit, Part 1 for the life and property premiums written. It adds crosschecks to line 9, line 10 and line 11 of the Underwriting and Investment Exhibit, Part 1 for the health, life and property premiums to tie to the respective columns within Schedule T for line 61.

Ms. Gosselin made a motion, seconded by Mr. Schaefer, to adopt the proposal (Attachment Four-A6). The motion passed unanimously.

f. **Modify the Instructions and Illustration for Note 10L to Reflect the Disclosure Changes for Statement of Statutory Accounting Principles (SSAP) No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities Being Considered for Adoption by the Statutory Accounting Principles (E) Working Group (2020-02BWG).**

Mr. Bruggeman stated that this proposal was originally intended to modify the instructions and illustration for Note 10L—Information Concerning Parent, Subsidiaries, Affiliates and Other Related Parties to reflect SSAP No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities disclosure changes planned for discussion by the Statutory Accounting Principles
Mr. Bruggeman stated that the purpose of this proposal is to reflect the disclosure addition for SSAP No. 41R—Surplus Notes adopted by the Statutory Accounting Principles (E) Working Group on May 20 and correct the instructions. This proposal modifies the instructions and illustration for 13(11) for the Notes to Financial Statement. It changes the numbering of 1 through 13 to A through M to be more consistent with numbering sequences. Interested parties also requested additional disclosure instructions to reference information about any guarantees, support agreements or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements. He stated that this corresponds to number 18.O of the Statutory Accounting Principles (E) Working Group exposure. It aligns the order of the disclosures between the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group exposures. There were some editorial modifications made to the proposal as requested by interested parties.

Mr. Bruggeman made a motion, seconded by Ms. Crawford, to adopt the proposal (Attachment Four-A8). The motion passed unanimously.

Mr. Bruggeman stated that this proposal modifies the instructions and illustration for Note 2 – Accounting Changes and Correction of Errors to reflect the disclosure addition for SSAP No. 3—Accounting Changes and Corrections of Errors and SSAP No. 51R—Life Contracts adopted by the Statutory Accounting Principles (E) Working Group. He stated that interested parties proposed clarifying language defining the amounts to be disclosed, to use language consistent with VM-21, Requirements for Principle-Based Reserves for Variable Annuities, and to recognize the role of VM-21 to define the reserve requirement.

Mr. Bruggeman made a motion, seconded by Mr. Milquet, to adopt the modified proposal (Attachment Four-A9). The motion passed unanimously.

j. Modify the Instructions and Illustration for Note 19 on Managing General Agents (MGAs) and Third-Party Agents (TPAs) to Reflect the Disclosure Addition for SSAP No. 51R—Life Contracts, SSAP No. 53—Property Casualty Contracts—Premiums, SSAP No. 54R—Individual and Group Accident and Health Contracts and SSAP No. 59—
Mr. Bruggeman stated that this item is still being considered by the Statutory Accounting Principles (E) Working Group. Due to the extent of expected future discussions, it is recommended that the Blanks (E) Working Group withdraw this proposal. A subsequent proposal will be submitted once the Statutory Accounting Principles (E) Working Group has further discussions and determines the appropriate revisions.

Mr. Bruggeman stated that the purpose of this proposal is to reflect the disclosure additions for SSAP No. 61R—Life, Deposit-Type Contracts and Accident and Health Contracts Reinsurance adopted by the Statutory Accounting Principles (E) Working Group. This proposal adds a new disclosure to Note 23 – Reinsurance for Reinsurance Credit (23H – Life/Fraternal, 23E Health and 23K Property). Interested parties had a previous comment regarding capturing the disclosure on a prospective basis. Mr. Bruggeman stated that the comment was rejected as part of statutory accounting.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Four-A10). The motion passed unanimously.

Mr. Bruggeman stated that the purpose of this proposal is to reflect the disclosure addition for SSAP No. 25—Affiliates and Other Related Parties adopted by the Statutory Accounting Principles (E) Working Group in March 2020. This proposal adds a disclosure instruction for 10C to the Notes to Financial Statement for related party transactions not captured on Schedule Y. It combines the existing 10C into 1B instructions and illustration narrative. The interested parties made a few editorial revisions, which have been reflected in the proposal. Interested parties requested a few editorial changes, which were incorporated into the proposal as modifications. Interested parties also suggested that if this disclosure is to be data captured, then the normal instruction about using the exact format(s) needs to be added. That modification has also been made.

Mr. Bruggeman made a motion, seconded by Mr. Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Sirovetz, to adopt the modified proposal (Attachment Four-A11). The motion passed unanimously.

m. Modify the Annual Statement Instructions for Schedule F, Part 3 to Reflect the Factors for All Uncollateralized Reinsurance Recoverable from Unrated Reinsurers be the Same for Authorized, Unauthorized, Certified, and Reciprocal Reinsurance (2020-09BWG) Effective Dec. 31, 2020.

Mr. Botsko stated that this proposal modifies the annual statement instructions for Schedule F, Part 3 to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurance. The factors for reinsurance recoverables from uncollateralized, unrated reinsurers is being updated by the Property and Casualty Risk-Based Capital (E) Working Group to move towards a charge that is more aligned with the risk-indicated factors used by the rating agencies. He stated that with respect to the broader implementation of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), the Working Group identified the need to eliminate the different treatment of uncollateralized reinsurance recoverables from the authorized versus unauthorized, unrated reinsurers.

Mr. Botsko made a motion, seconded by Mr. Milquet, to adopt the proposal (Attachment Four-A12). The motion passed unanimously.

n. Revise the Column 10 Header in the Variables Annuities Supplement Blank to be Contract Level Reserves Less Cash Surrender Value. Revise the Line Descriptions in Line 1 Through 3 in the Footer and Add a Line for the Reserve

© 2020 National Association of Insurance Commissioners
Jennifer Frasier (NAIC) stated that this proposal suggests changes to the Variable Annuities Supplement for the 2020 annual filing. The new framework for the variable annuities reserves was incorporated into the 2020 Valuation Manual. The proposal reflects those changes to include revising the column 10 header in blank to “Contract Level Reserves Less Cash Surrender Value.” It revises the line descriptions in the footer and adds a line for the reserve credit from other reinsurance and for post-reinsurance ceded aggregate reserve to be consistent with the framework changes in the 2020 Valuation Manual.

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the proposal (Attachment Four-A13). The motion passed unanimously.

Ms. Frasier stated that this proposal makes changes to the VM-20, Requirements for Principle-Based Reserves for Life Products, Reserves Supplement blank and instructions for the 2020 filing. There are no new requirements, but there are two main changes to the supplement. For Part 1, the proposal requests changing the reserves to be reported in whole dollars rather than in thousands. She stated that in order to create enough space to allow for this, Part 1 has been split into Part 1A and Part 1B. The intent is to create more consistency with other blanks and reduce reporting errors. Ms. Frasier stated that the proposal also removes Part 2 as it is no longer applicable and re-numbers the remaining parts. She stated that there was an interested party comment regarding the reporting in whole dollars versus thousands. After discussions with interested parties, it was agreed to proceed without any modifications.

Mr. Sirovetz made a motion, seconded by Mr. Eft, to adopt the proposal (Attachment Four-A14). The motion passed unanimously.

Kris DeFrain (NAIC) stated that this proposal requests changes to the Property and Casualty Statement of Actuarial Opinion instructions to require appointed actuaries to meet the education requirements. Some interested party comments were received. Phil Vigliaturo, Casualty Actuarial and Statistical (C) Task Force chair, provided a statement to address the comments. Ms. DeFrain read the statement: “The annual statement instructions in this proposal is in response to the Casualty Actuarial and Statistical (C) Task Force’s continued competence charge, which originated from the Executive (EX) Committee and was adopted by the Property and Casualty Insurance (C) Committee in 2017. It was decided at a higher level than the Casualty Actuarial and Statistical (C) Task Force that this project be performed. The annual statement instructions merely lay the framework for the continuing education (CE) log.

The Casualty Actuarial and Statistical (C) Task Force asked for all of the professional organizations in the United States to participate in the discussion. The Casualty Actuarial Society (CAS) and the Society of Actuaries (SOA) agreed to participate. Most of the remaining comments address the actual CE log, which is not addressed in detail in the annual statement instructions, but instead is being discussed by the Task Force. That discussion does not belong to the Blanks (E) Working Group given the annual statement instructions are meant only to lay the framework for the CE log. The annual statement instructions do not include the detail about the CE log to be required by the CAS and SOA. Therefore, Mr. Vigliaturo asked the Blanks (E) Working Group to adopt the proposal without modification.
Shawna Ackerman (American Academy of Actuaries—Academy) stated that she respects the comments read and is limiting her comments to the framework. As was stated in its May 5 comment letter, the Academy believes it is not necessary as part of the framework because the certification is redundant to the instruction that the NAIC already provides, which requires the appointed actuary to state that he or she is qualified. Ms. Ackerman stated that this would cover all aspects of CE. She stated that secondly, with regards to the framework, the Academy is very concerned with qualifications as is the NAIC. She indicated that the Academy has existing tools that both attest to the qualifications of actuaries and track annual CE, and that it offers those tools again, as well as its help with the certification process, to meet the NAIC’s goals without developing something in addition to what is currently in existence. Mr. Garn stated that he appreciates the Academy’s comments. However, he said this is an issue that should be more appropriately addressed by the Casualty Actuarial and Statistical (C) Task Force and not the Blanks (E) Working Group.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Four-A15). The motion passed unanimously.

Mr. Botsko stated that this proposal removes line 24.04 from the General Interrogatories, Part 1, and modifies line 24.05 and line 24.06 to require reporting amounts for conforming and nonconforming collateral programs. This affects all statement types. He stated that interrogatory question 24.05 and question 24.06 are completely dependent on the answer to question 24.04, which works for companies that have either all conforming or all nonconforming collateral programs. When a company has both, only the collateral amount of the conforming programs is captured. This proposal allows the capture of the amount of collateral for both conforming and nonconforming collateral programs when a company has both.

Mr. Botsko made a motion, seconded by Mr. Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Botsko made a motion, seconded by Mr. Milquet, to adopt the modified proposal (Attachment Four-A16). The motion passed unanimously.

r. Modify the Columns and Rows on the Blank Pages for the Long-Term Care Experience Reporting Forms 1 Through 5 and Make Appropriate Changes to the Instructions for Those Forms (2020-14BWG) Effective Dec. 31, 2020.

Mr. Kupferman, Long-Term Care Actuarial (B) Working Group chair, stated that about 15 years ago, the long-term care (LTC) reporting forms were developed, put into effect and have been reported every year. He stated that the Working Group was surveyed and found that there was very limited use of the current data. Around the same time, Mr. Kupferman received a request from one of the LTC executive committees asking for more meaningful data. Over a three-year period, the Working Group worked to develop changes to the forms that provided more information about stand-alone LTC and the newest version of the hybrid riders to be better able to respond to state insurance commissioners or media requests. Within this proposal, four of the five forms have been revised to accommodate those changes. The changes include separate reporting for individual, for group and for stand-alone policies by state. The Working Group believes this is a vast improvement over the current forms. The changes have been vetted by the Working Group, as well as the Health Actuarial (B) Task Force, and discussed with the America’s Health Insurance Plans (AHIP) and the American Council of Life Insurers (ACLI).

Mr. Kupferman made a motion, seconded by Mr. Sirovetz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Schaefer, to adopt the modified proposal (Attachment Four-A17). The motion passed unanimously.

Mr. Browning stated that this proposal adds a new supplement to collect private flood insurance data for residential and commercial private flood insurance and revises the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages. He stated that throughout 2019, the Property and Casualty Insurance (C) Committee discussed the need for more granular private flood insurance data. Currently, the only private flood data that exists on the Exhibit of Premiums and Losses (state page) does not distinguish between commercial and residential policies and, therefore, has limited utility. The NAIC reports on this data every year, but state insurance regulators and interested parties cannot get a true picture of the growth of
the private residential flood market from the state page. For several years, state insurance regulators have worked on building the private flood market in their states so citizens can be better protected from flood risk. The Federal Emergency Management Agency (FEMA) has had a goal of doubling flood insurance, whether through the National Flood Insurance Program (NFIP) or private policies, and have asked the NAIC to collect more detailed private flood data. Mr. Browning stated that the Property and Casualty Insurance (C) Committee adopted this proposal in an attempt to help state insurance regulators better understand the true growth of the private flood market and the type of polices being written.

Mr. Browning stated that this proposal will separate residential from commercial, as well as capture stand-alone/endorsement and first-dollar/excess policy information. The revisions to the CIEE will allow for the collection of lender-placed flood coverages in order to get a more complete picture of the private flood insurance market. Interested parties have expressed concern with reporting IBNR reserves. Therefore, some modifications have been made to the proposal that would split direct losses into losses paid and paid plus case reserves and case reserves. Similar changes were made to the defense and cost containment expense columns. Interested parties agreed with these changes.

Mr. Hudson made a motion, seconded by Ms. Doggett, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Ms. Doggett, to adopt the modified proposal (Attachment Four-A18). The motion passed unanimously.

Mr. Borrowman stated that the purpose of this proposal is to clarify capturing whether reporting entities have written participating policies in the current calendar year and reporting amount of premium written for both participating and non-participating policies. It modifies question 3.1 and question 3.2 of General Interrogatories Part 2 and provides instructions for the questions to clarify the intended reporting. Question 3.1 currently asks if participating policies are going to be disclosed if both participating and non-participating policies are written. This created a situation where a company that writes participating polices only did not need to answer the subsequent question, which was for the amount. He stated that this proposal removes the word “both” from the question so the amounts would have to be disclosed as well in question 3.2 any time participating policies are being written.

Mr. Borrowman made a motion, seconded by Mr. Sirovetz, to adopt the proposal, including the friendly amendment (Attachment Four-A19). The motion passed unanimously.

Mr. Botsko stated that this proposal adjusts the asset valuation reserve (AVR) presentation to include separate lines for each of the expanded bond designation categories. He stated that the Blanks (E) Working Group and the NAIC Security Valuation Office (SVO) have adopted the 20 bond designations for 2020 reporting in the investment schedules and in the AVR. The reported designations will flow into the risk-based capital (RBC) formula but will not include factors. The current factor for designations 1–6 will remain in the RBC until an impact analysis can be done to confirm the new factors for the 20 designations. This proposal applies the same expanded presentation to the AVR as it is used to populate the life RBC formula.

Mr. Botsko made a motion, seconded by Milquet, to adopt the proposal (Attachment Four-A20). The motion passed unanimously.

Charles Therriault (NAIC) stated that this proposal clarifies the instructions for reporting the NAIC designations, NAIC designation modifiers and SVO administrative symbols for fund investments reported on the common stock schedule. The symbols should only be used for securities reported in the line numbers specified in the proposal for mutual funds, unit investment trusts and closed-end trusts. Otherwise, these NAIC designation fields should not be reported. He stated that additional information was also added to reference where a list of these funds can be found on the SVO web page and how to
receive the NAIC designations published in AVS+ per the instructions in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) on the compilation and publication of the SVO List of Investment Securities.

Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the proposal including the editorial correction (Attachment Four-A21). The motion passed unanimously.

**w. Add a Code of “%” to the Code Column for All Investments Which have been Reported Schedule DA, Part 1 and Schedule E, Part 2 for More Than One Consecutive Year. Add Certification to the General Interrogatories, Part 1 Inclusion of These Investments on Schedule DA, Part 1 and Schedule E, Part 2 (2020-19BWG) Effective Dec. 31, 2020.**

Mr. Bruggeman stated that the purpose of this proposal is to identify instances where cash equivalents and/or short-term investments, or substantially similar investments, remain on the applicable investment schedule for more than one reporting period (i.e., reported as a short-term investment for more than one consecutive year due to the investment being re-underwritten and renewed). This proposal adds a code of “%” to the code column for all investments that have been reported on Schedule DA, Part 1, and Schedule E, Part 2, for more than one consecutive year. It adds a certification to the General Interrogatories, Part 1, questioning the inclusion of these investments on Schedule DA, Part 1, and Schedule E, Part 2.

This item was adopted by the Statutory Accounting Principles (E) Working Group on May 20, and it was noted that the disclosure reference in SSAP No. 2R—Cash, Cash Equivalents, Drafts and Short-Term Investments only included short-term investments. The Statutory Accounting Principles (E) Working Group is planning a subsequent agenda item to specifically include cash equivalents. Mr. Bruggeman stated that he agrees with proceeding with the current proposal with the adoption as planned, pending the adoption of the Schedule E, Part 2, reference by the Statutory Accounting Principles (E) Working Group. If the Statutory Accounting Principles (E) Working Group does not subsequently include the cash equivalents reference, then that will be noted as an editorial change and removed from the financial reporting instructions.

Interested parties suggested modifying this exposure to be consistent with the corresponding Statutory Accounting Principles (E) Working Group exposure by adding clarifying language to the instructions. For Schedule DA – Part 1, Column 2, on page 2 of the proposal, revise the % definition as follows: “Enter “%” in this column for all investments, except cash pooling structures and money market mutual funds, which have been reported on this schedule for more than one consecutive year.” Mr. Bruggeman indicated that this change is not being done because money market mutual funds not reported on the schedule and qualifying cash pools are to be reported on Schedule E, Part 2 as other cash equivalents. The suggestion for Schedule E – Part 2, column 3 on page 3 and page 5 of the portable document format (PDF) being revised to reference the “%” in this column for all investments, except cash pooling structures and money market mutual funds, which have been reported on this schedule for more than one consecutive quarter, but also to include the SSAP No. 2R reference.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. DiMemmo, to adopt the modified proposal pending the Statutory Accounting Principles (E) Working Group adoption for the Schedule E, Part 2, reporting (Attachment Four-A22). The motion passed unanimously.

**x. For Schedule D, Part 1, Add Code “9” to Column 23 – Collateral Type for Ground Lease Financing. Renumber Other” Code to 10 (2020-20BWG) Effective Dec. 31, 2020.**

Mr. Bruggeman stated that during the 2019 Fall National Meeting, the Valuation of Securities (E) Task Force adopted an amendment to add ground lease financing transactions as a newly-defined asset class to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), effective Jan. 1, 2020, and referred such action to the Statutory Accounting Principles (E) Working Group for consideration. While an update was not required in the *Accounting Practices and Procedures Manual* (AP&P Manual), specific identification of such activities is warranted for analysis and reporting purposes. This proposal adds the following for Schedule D, Part 1, add code “10” to column 26 – Collateral Type for ground lease financing. Renumber “Other” code to 11. Mr. Bruggeman stated that interested parties suggested an editorial change correcting the description references of the exposure for Schedule D, Part 1, to be code “10” rather than “9”; the column reference to be “26” rather than “23”; and the “Other” code to be “11” rather than “10”. These changes have been reflected in the proposal.

Mr. Bruggeman made a motion, seconded by Mr. Milquet, to adopt the proposal including the editorial correction (Attachment Four-A23). The motion passed unanimously.
y. Add New Line 4.05 for Valuation Allowance for Mortgage Loans to the Summary Investment Schedule and Renumber Existing Line 4.05 to 4.06. Modify the Instructions to Include a Crosscheck for New Line 4.05 Back to Schedule B – Verification Between Years. Clarify the Instructions for 4.01-4.04 to Explicitly Show Crosschecking to Column 8 of Schedule B, Part 1 (2020-21BWG) Effective Dec. 31, 2020.

Mr. Bruggeman stated that the purpose of this schedule revision is to address that the amount reported on Schedule B, Part 1, column 8 excludes the valuation allowance, but the total reported for mortgage loans in the Summary Investment Schedule must tie to the asset page, which includes the valuation allowance. This change was adopted by the Statutory Accounting Principles (E) Working Group on May 20. This proposal adds a new line 4.05 for valuation allowance for mortgage loans to the Summary Investment Schedule and renumbers the existing line 4.05 to 4.06. It modifies the instructions to include a crosscheck back to Schedule B – Verification Between Years for the new line 4.05. He stated that the proposal clarifies the instructions for lines 4.01 through 4.04 to explicitly show crosschecking to column 8 of Schedule B, Part 1. Interested parties recommend changing the instructions on page 3 for “line 4.0506” to add the appropriate lines: “Sum of Lines 4.01 to 4.0405.” This has been reflected in the proposal.

Mr. Bruggeman made a motion, seconded by Mr. Sirovetz, to adopt the proposal with the editorial correction (Attachment Four-A24). The motion passed unanimously.

z. Modify the Instructions and Illustration for Note 3A and a New Note 3E with Instructions and Illustrations to be Data Captured. Modify the Blank and Instructions for Schedule D, Part 6, Sections 1 and 2 (2020-22BWG).

Mr. Bruggeman stated that this item is still exposed by the Statutory Accounting Principles (E) Working Group, with comments due May 29. It is recommended that the Blanks (E) Working Group defer this item until the Statutory Accounting Principles (E) Working Group reviews comments and takes an action.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Hudson, to defer the modified proposal. The motion passed unanimously.

aa. Add a Footnote to Exhibit 5 (Life/Fraternal & Health – Life Supplement) and Exhibit 3 Separate Accounts to Disclose Cases When a Mortality Risk is No Longer Present or a Significant Factor – i.e. Due to a Policyholder Electing a Payout Benefit (2020-23BWG) Effective Dec. 31, 2020.

Mr. Bruggeman stated that while this update did not result in a statutory accounting change, this footnote will disclose cases when a mortality risk is no longer present or a significant factor, i.e., due to a policyholder electing a payout benefit. This proposal adds a footnote to Exhibit 5 (life/fraternal & health – life supplement) and Exhibit 3 separate accounts. Interested parties recommend changes to the Exhibit 5 footnote. These revisions were reflected in the proposal.

Mr. Bruggeman made a motion, seconded by Mr. Sirovetz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Ms. Carter, to adopt the modified proposal (Attachment Four-A25). The motion passed unanimously.

3. Exposed Proposals

Ms. Frasier stated that this proposal makes changes to the Supplemental Exhibits and Schedules Interrogatories for the 2021 annual filing. There are four certifications related to business subject to Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43) being provided in the Principles-Based Reserve Actuarial Report as required by VM-31. The proposal removes questions 29, 30, 31 and 32 referencing these separate certifications.

Hearing no objection, the proposal was exposed for a 60-day public comment period ending July 28.
b. **Add a New Column 5 to the Blank for Schedule T with Instructions to Specifically Capture the CHIP Premium. Existing Columns After the New Column 5 will be Renumbered (2020-25BWG).**

Mr. Garn stated that this proposal is intended to assist in identifying the Children’s Health Insurance Program (CHIP) premiums as it relates to guaranty fund assessments. This proposal adds a new column to Schedule T with instructions to specifically capture the CHIP premium.

Hearing no objection, the proposal was exposed for a 60-day public comment period ending July 28.

c. **Add a New Column 5 to Schedule DB, Part D, Section 1 and Renumber the Remaining Columns. Add Instruction for the New Column 5, Add the Column Reference to Column 7 and Adjust Other Column References in Crosschecks. Correct Column References for this Schedule on the Liability Page, Asset Page and Schedule DB Verification. Modify Instruction Language for the Disclosure Note 8A(8) (2020-26BWG).**

Mr. Bruggeman stated that the purpose of this proposal is to reflect on Schedule DB, Part D, Section 1, and the Notes to Financial Statement disclosure changes to SSAP No. 97—*Investments in Subsidiary, Controlled and Affiliated Entities* being considered by the Statutory Accounting Principles (E) Working Group. This issue pertains to financing derivatives and would reflect premium due/owed for these derivative transactions to be factored into the “counterparty risk” for RBC purposes.

Hearing no objection, the proposal was exposed for a 60-day public comment period ending July 28.

4. **Adopted the Editorial Listing**

Mr. Hudson made a motion, seconded by Mr. Snow, to adopt the editorial listing (Attachment Four-A26). The motion passed unanimously.

5. **Electronic Blanks and Instructions Publications**

Mr. Garn stated that in order to continue to provide the blanks and instructions to customers during the current remote work situation, the 2019 annual and 2020 quarterly blanks and instructions have been produced in electronic format using the same Bookshelf product being used for the electronic AP&P Manual. He stated that the NAIC products web page notes that: “New in April 2020 – the Annual Statement Instructions for Data Year 2019 and the Quarterly Statement Instructions for Data Year 2020 will now be offered as individual PDFs via an online subscription service (OSS). This new subscription service provides access to the published version of the publications. Subscriptions are specific to an individual user and access to the platform requires a redemption code, which will be provided via email following verification of the purchase.” Mr. Garn stated that customers will need to contact the NAIC publications department for a subscription.

Having no further business, the Blanks (E) Working Group adjourned.
The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met via conference call Dec. 17, 2019. The following Working Group members participated: Jake Garn, Chair (UT); Kim Hudson, Vice Chair (CA); William Arfanis (CT); N. Kevin Brown (DC); Adrienne Lupo (DE); Virginia Christy, Carolyn Morgan and Jason Reynolds (FL); Carrie Mears and Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); Justin Schrader (NE); Patricia Gosselin (NH); John Sirovetz (NJ); Dale Bruggeman and Tracy Snow (OH); Eli Snowbarger and Joel Sander (OK); Joe DiMemmo (PA); Trey Hancock and Hui Wattanaskolpant (TN); Shawn Frederick (TX); Steve Drutz (WA); Randy Milquet (WI); and Jamie Taylor (WV).

1. **Adopted its Oct. 22 Minutes**

Mr. Eft made a motion, seconded by Mr. Sander, to adopt the Working Group’s Oct. 22 minutes (see NAIC Proceedings – Fall 2019, Accounting Practices and Procedures (E) Task Force, Attachment Two). The motion passed unanimously.

2. **Adopted Items Previously Exposed**

   Mr. Schrader stated that this proposal adds clarifying instructions to address questions that have been received regarding the new Analysis of Operations by Lines of Business on the life and health blank. The proposal adds instructions and crosschecks for line 34 on the Analysis of Operations by Lines of Business – Summary. It adds instructions for column 5 for indexed life on the Analysis of Operations by Lines of Business for individual life. It adds clarifying instructions to the Analysis of Operations by Lines of Business for individual life and group life, indicating that the reporting should be consistent with policy type language in the contract and the reporting of policies issued with secondary guarantees that have expired. Mr. Schrader stated that interested parties have some concerns with crosscheck references which have been addressed and highlighted as modifications within the proposal.

   Mr. Schrader made a motion, seconded by Mr. Eft, to adopt the modifications to the proposal. The motion passed unanimously. Connnie Jasper Woodroof (Sapiens) requested that the adopted proposal language be posted on the Blanks (E) Working Group web page as guidance to assist the life, accident & health/fraternal blank filers with the 2019 annual statement reporting of the Analysis of Operations by Lines of Business. The Working Group members agreed to posting the guidance document.

   Mr. Hudson stated that this proposal requests the removal of the alphabetic index from inclusion at the back of the annual statement blank, instructions, and the Blanks (E) Working Group web page. Interested parties indicated that the alphabetic index reference should be deleted from the vendor electronic filing submission directive. Staff will make those changes when updating the directive for the 2019 filing period. The Working Group does not need to take an action on that change.

   Mr. Hudson made a motion, seconded by Ms. Gosselin, to adopt the proposal (Attachment Four-A1b). The motion passed unanimously.
3. Exposed its Procedures

Mr. Garn stated that there have been changes incorporated into the procedures document and even more recent changes related to dates and timing. For example, moving the final adoption date to June 1 rather than “June” or what may have been presumed to be June 30. The proposed procedures include a deadline of April 15 for exposure of proposals with an annual statement effective date. Mary Caswell (NAIC) stated that one recent suggested change was to change the word “may” to “can be technically” in the “subsequent requests” paragraph. The sentence would read, “[a]ny proposal which includes data capture elements will be evaluated individually as to whether the data capture can be technically accommodated in that year.” Mr. Bruggeman stated that he agreed with designating specific dates for exposures and adoptions. He also said allowing for exceptions if technically possible makes it easier to understand the timing. John Bauer (Prudential Financial) agrees with the change of “can be technically” language to be incorporated as indicated.

Mr. Hudson made a motion, seconded by Mr. DiMemmo, to adopt the procedures with the minor word modifications as indicated. The motion passed unanimously.

Mr. Garn stated that interested parties had requested one in-person meeting to be held. Since the procedures reference “meetings,” there is no need to specifically reference “in-person” or a specific time period for that meeting in the procedures document. The 2020 Spring National Meeting has been suggested for an in-person meeting. The Meetings Department will perform the scheduling and avoid conflicts with any Financial Condition (E) Committee, Financial Regulation Standards and Accreditation (F) Committee, or International Insurance Relations (G) Committee groups.

4. Exposed Proposals

Mr. Snow stated that this proposal modifies the instructions for Column 10, Schedule F, Part 3 – Property and the Schedule F, Part 2 – Life/Fraternal Workers’ Compensation Carve-out supplement, removing instructions to exclude adjusting and other reserves from the column. It adds instructions to include those with the defense and cost containment reserves. It adds a new instruction for Column 12 for the same schedules. It adds crosschecks to Schedule P, Part 1. Mr. Snow stated that interested parties had a minor modification to add the word “and” that was missing from the reference to “adjusting and other.”

Mr. Snow stated that interested parties also ask for a wording clarification to address companies that might fail crosschecks because of pooling arrangements. Since the proposal is not effective until the annual 2020 filing, there is time to clarify the language and re-expose the proposal. Mr. Snow made a motion, seconded by Mr. Drutz, to re-expose the proposal with the minor modification adding the word “and,” as well as adding clarifying crosscheck language to address companies involved in pooling. The motion passed unanimously.

Mr. Bauer expressed support for re-exposing the proposal with the clarifying language to address the application of crosschecks for companies involved in pooling. Ms. Caswell stated that, with the approval of the Working Group, staff could add language to the crosscheck reference to indicate that it “does not apply to companies with inter-company pooling participation arrangements having amounts reported in Sch P, Part 1, Column 34.” Staff would set up the crosscheck to test any crosscheck failures to see if amounts are recorded in the pooling column of Schedule P, Part 1, Column 34 and pass the crosscheck. It would be set up like an “if-then” statement test.

b. Modify the Instruction for SIRI Lines 13.02 Through 13.11 Clarifying When to Identify the Actual Equity Interests Within a Fund and Aggregate Those Equity Interests for Determination of the Ten Largest Equity Interests (2019-28BWG)

Mr. Bruggeman stated that the purpose of this proposal is to clarify when to identify the actual equity interests within a fund like an exchange-traded fund (ETF) or a mutual fund and aggregate those equity interests for determination of the 10 largest equity interests. The proposal modifies the instruction for Supplemental Investment Risk Interrogatories (SIRI) lines 13.02 through 13.11. The Statutory Accounting Principles (E) Working Group adopted this application at the 2019 Fall National Meeting. This proposal has an annual 2020 effective date. The clarification indicates that the company must look through a non-diversified fund to aggregate exposures in the top 10 equity interest, but a look through is not required with diversified...
funds. Hearing no state insurance regulator objection, the proposal was exposed for a public comment period ending Feb. 21, 2020.

c. **Modify the Instruction and Blank for Supplemental Investment Risk Interrogatories Question 14.01 (2019-29BWG)**

Mr. Bruggeman stated that this proposal is to clarify that interrogatories 14.06 through 14.15 in the blank are to be completed regardless of the answer to SIRI question 14.01. This item was adopted by the Statutory Accounting Principles (E) Working Group at the 2019 Spring National Meeting and adopted by the Blanks (E) Working Group. This proposal is a clarification of that previous proposal. Hearing no objection, the proposal was exposed for a public comment period ending Feb. 21, 2020.

d. **Add a Category and Instructions for Reciprocal Jurisdiction Companies in Schedule S for the Life/Fraternal and Health Blanks and Schedule F for the Property and Title Blanks. Add a List of Identification Numbers in Instruction to Schedule Y, Part 1A; Schedule Y, Part 2; and Schedule D, Part 6, Section 1 for Reciprocal Jurisdiction Companies. Add a Reference to Reciprocal Jurisdiction Companies in the Trusteed Surplus Statement Instructions for Life/Fraternal, Health and Property Statements (2019-30BWG)**

Jake Stultz (NAIC) stated that this proposal relates to work of the Reinsurance (E) Task Force with regards to the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement) and the creation of a reciprocal jurisdiction. The intent of this proposal is to set up annual reporting blanks to allow companies to report reinsurance with reciprocal jurisdiction reinsurers as soon as the states enact the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786). This is similar to the process used to implement the certified reinsurer provision in 2011. The Reinsurance (E) Task Force exposed this change during the 2019 Fall National Meeting for a concurrent exposure with the Blanks (E) Working Group. Hearing no objection, the proposal was exposed for a public comment period ending Feb. 21, 2020.

5. **Adopted the Editorial Listing**

Mr. Hudson made a motion, seconded by Mr. Snow, to adopt the editorial listing (Attachment Four-A1c). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

ANALYSIS OF OPERATIONS BY LINES OF BUSINESS – SUMMARY

Detail Eliminated to Conserve Space

Column 9 – YRT Mortality Risk Only

Line 34 – Policies/Certificates in Force End of Year

The number provided should be count of direct written policies/certificates in force at the end of the year.

The sum of Columns 2, and 3, 4 and 5 should equal Line 23, Column 9 of Life Insurance (state page).

The sum of Columns 4 and 5 should equal the Exhibit of Number of Policies, Contracts, Certificates, Income Payable and Account Values in Force for Supplementary Contracts, Annuities, Accident and Health and Other Policies Line 9 (Column 1 plus Column 3 for the Supplementary Contracts section) plus Line 9 (sum of Columns 1 through 4 for the Annuities section).

Column 6 should equal sum of Column 1, Column 3 and Column 5, Line 10 – Line 3 + Line 8 of the Exhibit of Number of Policies, Contracts, Certificates, Income Payable and Account Values in Force for Supplementary Contracts, Annuities, Accident and Health and Other Policies in the Accident and Health Insurance section.
**ANALYSIS OF OPERATIONS BY LINES OF BUSINESS – INDIVIDUAL LIFE INSURANCE**

This exhibit shows Lines 1 through 33 of the Summary of Operations by Line of Business, in part.

**Reporting for the columns of this schedule should be consistent with the policy type language per the product contract.**

Policies where the product was issued with secondary guarantees, but those secondary guarantees have since expired should be reported consistent with how the policy was issued (i.e., still report product as one with secondary guarantees).

For definitions of lines of business, see the appendix of these instructions.

A company shall not omit the columns for any lines of business in which it is not engaged.

Identification of Item(s) to Change

Remove the alphabetic index from inclusion at the back of the annual statement blank, instructions and Blanks Working Group Web page.

Reason, Justification for and/or Benefit of Change**

When the index was added back to being included in the hard copy of the annual statement states were still primarily using hard copies of the statement and the index make finding pages in the statement easier. Now the PDF copies of the statement are primarily used and are book marked, inclusion of the index in the statement is no longer needed.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Modify the instruction for Column 10 (Schedule F, Part 3 — Property and Schedule F, Part 2 — Life/Fraternal Workers’ Compensation Carve-out supplement) to remove instruction to exclude adjusting and other reserves from the column and add instruction include along with the defense and cost containment reserves. Add a new instruction for Column 12 for the same schedules. Add crosschecks to Schedule P, Part 1.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is ensure adjusting other and defense and cost containment reserves are reported properly as Known Case LAE Reserves or IBNR LAE Reserves.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

SCHEDULE F – PART 3

CEDED REINSURANCE
AS OF DECEMBER 31, CURRENT YEAR

Detail Eliminated to Conserve Space

Column 9  –  Known Case Loss Reserves

Total multiplied by 1000 should agree with Underwriting and Investment Exhibit, Part 2A, Line 35, Column 3.

Column 10  –  Known Case LAE Reserves

Include: Defense and Cost Containment from Schedule P, Part 1, Columns 18 and Adjusting and Other from Schedule P, Part 1, Column 22, in part

The sum of Schedule F, Part 3, Columns 10 and 12 should equal the sum of Schedule P, Part 1, Columns 18, 20 and 22. (Note: This crosscheck doesn’t apply to those companies participating in inter-company pooling participation arrangements where the participation percentage in Schedule P, Part 1, Column 34 is not equal to zero.)

Exclude: Adjusting & Other Expense Reserves.

Column 11  –  IBNR Loss Reserves

Total multiplied by 1000 should agree with Underwriting and Investment Exhibit, Part 2A, Line 35, Column 7.

Column 12  –  IBNR LAE Reserves

Include: Defense and Cost Containment from Schedule P, Part 1, Columns 20 and Adjusting and Other from Schedule P, Part 1, Column 22, in part

Column 13  –  Unearned Premiums

Total multiplied by 1000 should equal Page 3, Line 9 parenthetical amount.

Detail Eliminated to Conserve Space
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

WORKERS’ COMPENSATION CARVE-OUT SUPPLEMENT

SCHEDULE F – PART 2

CEDED REINSURANCE

Column 9 – Known Case Loss Reserves
Total multiplied by 1000 should agree with Underwriting and Investment Exhibit, Part 4, Column 2.

Column 10 – Known Case LAE Reserves
Include: Defense and Cost Containment from Schedule P, Part 1, Columns 18
Adjusting and Other from Schedule P, Part 1, Column 22, in part

The sum of Schedule F, Part 2, Columns 10 and 12 should equal the sum of Schedule P, Part 1, Columns 18, 20 and 22. (Note: This crosscheck doesn’t apply to those companies participating in inter-company pooling participation arrangements where participation the percentage in Schedule P, Part 1, Column 34 is not equal to zero.)

Exclude: Adjusting and other Expense reserves.

Column 11 – IBNR Loss Reserves
Total multiplied by 1000 should agree with Underwriting and Investment Exhibit, Part 4, Column 5.

Column 12 – IBNR LAE Reserves
Include: Defense and Cost Containment from Schedule P, Part 1, Columns 20
Adjusting and Other from Schedule P, Part 1, Column 22, in part

Column 14 – Contingent Commissions
Include: Contingent commissions receivable from a reinsurer. Regular commissions should be netted with ceded balances payable in Column 16.

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the instruction for Supplemental Investment Risk Interrogatories Lines 13.02 through 13.11 clarifying when to identify the actual equity interests within a fund and aggregate those equity interests for determination of the ten largest equity interests.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to clarify when reporting entities are required to identify actual equity interests within a fund and aggregate those equity interests to determine their ten largest equity interests.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: 

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SUPPLEMENTAL INVESTMENT RISKS INTERROGATORIES

Detail Eliminated to Conserve Space

Line 13.02 through 13.11 – Report the amounts and percentages of admitted assets held in the ten largest equity interests including equity funds that qualify individually as one of the largest equity interests and a look-through of investments in the shares of non-diversified mutual funds and ETFs, preferred stocks, publicly traded equity securities, and other equity securities (including Schedule BA equity interests), and excluding money market and bond mutual funds listed in Part Six, Sections 2(f) and (g) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office as exempt or NAIC 1). Equity interests in all funds that are diversified in accordance with the Investment Company Act of 1940 do not need to be individually assessed and aggregated to determine the ten largest equity interests. For funds that are not diversified within the meaning of the Investment Company Act of 1940, insurance reporting entities are required to identify actual equity interests within the fund and aggregate those equity interests to determine their ten largest equity interests.

Determine the ten largest equity interests by first aggregating investments included in this line by issuer. For example, the reporting entity owns preferred stock of the XYZ Company of $600,000 and common stock of the XYZ Company of $300,000 and $50,000 of XYZ identified through a look-through of a non-diversified stock closed-end fund reported on Schedule D-2-2. The total is $950,000 ($600,000+$300,000+$50,000). The reporting entity also owns bonds issued by the XYZ Company of $500,000 that are excluded from this calculation because bonds are debt instruments. The reporting entity may also have exposure to equity interests in XYZ through mutual funds that are excluded from this calculation as the funds are diversified within the meaning of the Investment Company Act of 1940. Other equity securities include partnerships and Limited Liability Companies (LLC) and any other investments reported in Schedule BA classified as equity.

The following funds shall also be excluded from aggregation as equity interests: SVO-Identified U.S. Direct Obligations / Full Faith And Credit Exempt List of Money Market Mutual Funds, SVO-Identified Bond ETFs, SVO-Identified Bond Mutual Funds and SVO Identified fund investments with underlying characteristics of fixed-income instruments, which do not contain underlying equities and that are outlined within the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the instruction and blank for Supplemental Investment Risk Interrogatories Question 14.01.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to clarify that Interrogatories 14.06 through 14.15 are to be completed regardless of the answer to Supplemental Investment Risk Interrogatories Question 14.01.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:__________________________

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SUPPLEMENTAL INVESTMENT RISKS INTERROGATORIES

Line 14.06 through 14.15 – These lines should be completed even if the answer to Question 14.01 is “YES.”

Report the investments held in the ten largest fund managers, with allocation between funds that are diversified or non-diversified in accordance with the meaning of the Investment Company Act of 1940. This should include all “funds” regardless of the type of fund (private placement, mutual fund, exchange-traded fund, closed-end fund, money market mutual fund, etc), reporting schedule or underlying investments captured in a fund.

ANNUAL STATEMENT BLANK – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SUPPLEMENTAL INVESTMENT RISKS INTERROGATORIES

For The Year Ended December 31, 2019
(To Be Filed by April 1)

14. Amounts and percentages of the reporting entity’s total admitted assets held in nonaffiliated, privately placed equities:

14.01 Are assets held in nonaffiliated, privately placed equities less than 2.5% of the reporting entity’s total admitted assets? Yes [ ] No [ ]

If response to 14.01 above is yes, responses are not required for 14.02 through 14.05 the remainder of Interrogatory 14.

** This section must be completed on all forms. Revised 7/18/2018

© 2020 National Association of Insurance Commissioners
REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE

On June 25, 2019, NAIC Executive (EX) Committee and Plenary adopted revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) to incorporate the relevant provisions from the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement). Under the revisions, credit for reinsurance is allowed for domestic ceding insurers for reinsurance that has been ceded to reinsurers from Reciprocal Jurisdictions, and that those reinsurers are not required to post collateral. As a result, it is necessary to consider revisions to the appropriate reinsurance schedules and instructions in order to collect the relevant information with respect to these reinsurance transactions.

Life/Fraternal and Property

Trusted Surplus Statement
- Add Line 7.4 for Reciprocal Jurisdiction Companies
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL AND HEALTH (INCLUDES HEALTH LIFE SUPPLEMENT)

SCHEDULE S – REINSURANCE

These parts (except Part 1, which shows reinsurance assumed) provide an analysis by reinsurance carrier of reinsurance ceded data shown in total in various parts of the statement. Information is included on all reinsurance ceded to other entities authorized as well as unauthorized or certified in the state of domicile of the reporting entity. Additional data for unauthorized companies is displayed in Part 4; additional data for certified reinsurers is displayed in Part 5.

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule S. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. This will also be the case for reciprocal jurisdiction reinsurance, which may have been classified as certified reinsurance prior to the enactment of the 2019 revisions to the Credit for Reinsurance Models by the domiciliary state of the ceding entity. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Effective date as used in this schedule is the date the contract originally went into effect.

Index to Schedule S

| Part 1, Section 1  | Reinsurance Assumed Life Insurance, Annuities, Deposit Funds and Other Liabilities Without Life or Disability Contingencies, and Related Benefits |
| Part 1, Section 2  | Reinsurance Assumed Accident and Health Insurance |
| Part 2            | Reinsurance Recoverable on Paid and Unpaid Losses |
| Part 3, Section 1 | Reinsurance Ceded Life Insurance, Annuities, Deposit Funds and Other Liabilities Without Life or Disability Contingencies, and Related Benefits |
| Part 3, Section 2 | Reinsurance Ceded Accident and Health Insurance |
| Part 4            | Reinsurance Ceded to Unauthorized Companies |
| Part 5            | Reinsurance Ceded to Certified Reinsurers |
| Part 6            | Five-Year Exhibit of Reinsurance Ceded Business |
| Part 7            | Restatement of Balance Sheet to Identify Net Credit for Ceded Reinsurance |

ID Number

Most parts of Schedule S require that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not to be listed, because Schedule S is intended to identify the risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and reciprocal jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report
all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for reciprocal jurisdiction reinsurance.

**Use of Federal Employer Identification Number**

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

**Alien Insurer Identification Number (AIIN)**

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule S instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Pool and Association Numbers**

In order to report transactions involving non-risk bearing pools or associations consisting of nonaffiliated companies correctly, the company must include on Schedule S the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Certified Reinsurer Identification Number (CRIN)**

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule S instead of the FEIN, AIIN or CRIN. The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving reciprocal jurisdiction reinsurers correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule S instead of the FEIN, AIIN or CRIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.
Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

For 2020 Reporting Only

Reinsurers that have met the requirements for reciprocal jurisdiction reinsurer status in your state of domicile should be reported in the appropriate reciprocal jurisdiction reinsurer category if the reporting entity has implemented the necessary system and reporting changes for 2020 annual reporting to identify and report those reinsurance transactions in the appropriate reciprocal jurisdiction reinsurer category.

If the reporting entity has not been able to make the necessary system and reporting changes for 2020 annual reporting, the reporting entity may report those reinsurance transactions using the authorized reinsurer lines. Any crosschecks the reporting entity fails as a result of reporting reciprocal jurisdiction reinsurers on the authorized reinsurer lines should be explained.

NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC *Listing of Companies*. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC *Listing of Companies*, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Determination of Authorized Status

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule S shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
### SCHEDULE S – PART 1 – SECTION 1

**REINSURANCE ASSUMED LIFE INSURANCE, ANNUITIES, DEPOSIT FUNDS AND OTHER LIABILITIES WITHOUT LIFE OR DISABILITY CONTINGENCIES, AND RELATED BENEFITS LISTED BY REINSURED COMPANY AS OF DECEMBER 31, CURRENT YEAR**

This section should include data on all reinsurance assumed for life insurance, annuities, deposit fund and other liabilities without life or disability contingencies, and related benefits by reinsured company as of December 31, current year.

---
SCHEDULE S – PART 2

REINSURANCE RECOVERABLE ON PAID AND UNPAID LOSSES LISTED BY REINSURING COMPANY AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total line and number:

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

SCHEDULE S – PART 3 – SECTION 1

REINSURANCE Ceded LIFE INSURANCE, ANNUITIES, DEPOSIT FUNDS AND OTHER LIABILITIES WITHOUT LIFE OR DISABILITY CONTINGENCIES, AND RELATED BENEFITS LISTED BY REINSURING COMPANY AS OF DECEMBER 31, CURRENT YEAR

NOTE: This schedule is to include Exhibit 7 cessions. Include actual reinsurance ceded on group cases but exclude jointly underwritten group contracts.

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total line and number:

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

Federal Employer Identification Number (FEIN)
Alien Insurer Identification Number (AIIN)
Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
Certified Reinsurer Identification Number (CRIN)
Pool/Association Identification Number

Detail Eliminated to Conserve Space

SCHEDULE S – PART 4

REINSURANCE CEDED TO UNAUTHORIZED COMPANIES

Contains data on life and accident and health insurance in force that is reinsured with companies not authorized in the state of domicile of the reporting insurance company. The purpose of this schedule is to display reinsurance ceded data used in the development of the liability for reinsurance in unauthorized companies. This liability serves to offset those assets and liability reductions that reflect the result of reinsurance ceded with unauthorized companies.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.

Federal Employer Identification Number (FEIN)
Alien Insurer Identification Number (AIIN)
Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
Certified Reinsurer Identification Number (CRIN)
Pool/Association Identification Number

Detail Eliminated to Conserve Space
SCHEDULE S – PART 5
REINSURANCE CEDED TO CERTIFIED REINSURERS

NOTE: This schedule is to be completed by those reporting entities whose domiciliary state has enacted the Credit for Reinsurance Model Law (#785) and/or Credit for Reinsurance Model Regulation (#786) with the defined certified reinsurer provisions.

Enter one of the following as appropriate CRIN for the entity being reported on the schedule. See the Schedule S General Instructions for more information on these identification numbers.
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

SCHEDULE F – REINSURANCE

Index to Schedule F

Part 1 – Assumed Reinsurance
Part 2 – Portfolio Reinsurance
Part 3 – Ceded Reinsurance
Part 4 – Issuing or Confirming Banks for Letters of Credit from Schedule F, Part 3
Part 5 – Interrogatories for Schedule F, Part 3
Part 6 – Restatement of Balance Sheet to Identify Net Credit for Ceded Reinsurance

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule F. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. This will also be the case for reciprocal jurisdiction reinsurance, which may have been classified as certified reinsurance prior to the enactment of the 2019 revisions to the Credit for Reinsurance Models by the domiciliary state of the ceding entity. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Due Date

All parts of Schedule F are to be filed with the annual statement.

Please note that Parts 1, 3, 4 and 5 of this schedule are reported with thousands omitted. Parts 2 and 6 are reported in whole dollars.

ID Number

Most parts of Schedule F require that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and reciprocal jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule F by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for reciprocal jurisdiction reinsurance.

Use of Federal Employer Identification Number

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers, even if the federal government has issued such a number.
**Alien Insurer Identification Number (AIIN)**

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact with the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Pool and Association Numbers**

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC *Listing of Companies*. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

**Certified Reinsurer Identification Number (CRIN)**

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Certified Reinsurer Identification Number (CRIN). The RJIN number is assigned by the NAIC and is listed in the NAIC *Listing of Companies*. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC *Listing of Companies*, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
For 2020 Reporting Only

Reinsurers that have met the requirements for reciprocal jurisdiction reinsurer status in your state of domicile should be reported in the appropriate reciprocal jurisdiction reinsurer category if the reporting entity has implemented the necessary system and reporting changes for 2020 annual reporting to identify and report those reinsurance transactions in the appropriate reciprocal jurisdiction reinsurer category.

If the reporting entity has not been able to make the necessary system and reporting changes for 2020 annual reporting, the reporting entity may report those reinsurance transactions using the authorized reinsurer lines. Any crosschecks the reporting entity fails as a result of reporting reciprocal jurisdiction reinsurers on the authorized reinsurer lines should be explained.

NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Determination of Authorized Status

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
SCHEDULE F – PART 1

ASSUMED REINSURANCE
AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>
<thead>
<tr>
<th>Column 1</th>
<th>ID Number</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Detail Eliminated to Conserve Space**

Column 1 = ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

SCHEDULE F – PART 2

PREMIUM PORTFOLIO REINSURANCE EFFECTED OR (CANCELED) DURING CURRENT YEAR

This schedule should list by portfolio any original premiums and reinsurance premiums for portfolio reinsurance transactions affected or canceled during the year. Portfolio reinsurance is the transfer of the entire liability of a reporting entity for in force policies as respects a described segment of the reporting entity’s business.

<table>

ANNUAL STATEMENT INSTRUCTIONS – TITLE

SCHEDULE F – REINSURANCE

Index to Schedule F

Part 1 – Assumed Reinsurance  
Part 2 – Ceded Reinsurance  
Part 3 – Provision for Unauthorized Reinsurance  
Part 4 – Provision for Reinsurance Ceded to Certified Reinsurers

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances attributable to a single assuming insurer under multiple classifications within Schedule F. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. This will also be the case for reciprocal jurisdiction reinsurance, which may have been classified as certified reinsurance prior to the enactment of the 2019 revisions to the Credit for Reinsurance Models by the domiciliary state of the ceding entity. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

Due Date

All parts of Schedule F are to be filed with the annual statement.

Please note that Parts 1, 2, 3 and 4 of this schedule are reported with thousands omitted.

ID Number

Schedule F require that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and reciprocal jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for reciprocal jurisdiction reinsurance.

Use of Federal Employer Identification Number

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.
**Alien Insurer Identification Number (AIIN)**

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information for on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Pool and Association Numbers**

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

**Certified Reinsurer Identification Number (CRIN)**

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

**Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)**

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN, Alien Insurer Identification Number (AIIN) or Certified Reinsurer Identification Number (CRIN). The RJIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
For 2020 Reporting Only

Reinsurers that have met the requirements for reciprocal jurisdiction reinsurer status in your state of domicile should be reported in the appropriate reciprocal jurisdiction reinsurer category if the reporting entity has implemented the necessary system and reporting changes for 2020 annual reporting to identify and report those reinsurance transactions in the appropriate reciprocal jurisdiction reinsurer category.

If the reporting entity has not been able to make the necessary system and reporting changes for 2020 annual reporting, the reporting entity may report those reinsurance transactions using the authorized reinsurer lines. Any crosschecks the reporting entity fails as a result of reporting reciprocal jurisdiction reinsurers on the authorized reinsurer lines should be explained.

NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Determination of Authorized Status

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting entity’s state of domicile.
SCHEDULE F – PART 1

ASSUMED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>
<thead>
<tr>
<th>Column 1</th>
<th>ID Number</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Detail Eliminated to Conserve Space</strong></td>
<td></td>
</tr>
</tbody>
</table>

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

SCHEDULE F – PART 2

CEDED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

---

* Pools and Associations consisting of affiliated companies should be listed by individual company names.

# Alien Pools and Associations should be reported on Schedule F under the category “Other Non-U.S. Insurers.”

**NOTE:** Disclosure of the five largest provisional commission rates should exclude mandatory pools and joint underwriting associations.

**Column 1 – ID Number**

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number
**SCHEDULE F – PART 3**

**PROVISION FOR UNAUTHORIZED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR**

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, category, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

<table>

</tbody>
</table>

**SCHEDULE F – PART 4**

**PROVISION FOR REINSURANCE CEDED TO CERTIFIED REINSURERS AS OF DECEMBER 31, CURRENT YEAR**

NOTE: This schedule is to be completed by those reporting entities whose domiciliary state has enacted the Credit for Reinsurance Model Law (#785) and/or Credit for Reinsurance Model Regulation (#786) with the defined certified reinsurer provisions.

<table>

</tbody>
</table>
This schedule reports unpaid loss and loss adjustment expenses on direct and agency operations. Affiliated agencies are those that meet the affiliation standards defined by SSAP No. 25—Affiliates and Other Related Parties. Refer to SSAP No. 57—Title Insurance, paragraphs 8–13, for accounting guidance.

Line 2 — Reinsurance Recoverable from Authorized, Unauthorized and Certified Companies

The amounts shown on this line represent reinsurance ceded recoverables (from authorized, unauthorized and certified companies) on unpaid losses of which notice has been received. This can be done through reinsurance ceded treaties, facultative reinsurance assumed agreements, or under transfer and assumption agreements.

The amounts shown on this line should reconcile to amounts reported in Schedule F, Part 2, Column 9, Total.

The amount shown in Column 1 should agree to Schedule P, Part 1A, Column 19, Line 12.

The amount shown in Column 2 plus the amount shown in Column 3 should agree to Schedule P, Part 1B, Column 19, Line 12.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

WORKERS’ COMPENSATION CARVE-OUT SUPPLEMENT

The Workers’ Compensation Carve-out Supplement shall be completed by those reporting entities that assume or cede workers’ compensation carve-out business.

Workers’ compensation carve-out business is defined as reinsurance (including retrocessional reinsurance) assumed by life and health insurers of medical, wage loss and death benefits of the occupational illness and accident exposures, but not the employer’s liability exposures, of business originally written as workers compensation insurance.

---

NOTE: Certified reinsurer status applies on a prospective basis and is determined by the state of domicile of the ceding insurer. Reciprocal jurisdiction reinsurer status applies on a prospective basis and is for reinsurance agreements entered into, amended, or renewed on or after the effective date of the domiciliary state of the ceding entity enacting the 2019 revisions to the Credit for Reinsurance Models, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal. As such, it is possible that a ceding insurer will report reinsurance balances applicable to a single assuming insurer under multiple classifications within Schedule F. For example, with respect to a certified reinsurer that was considered unauthorized prior to certification, balances attributable to contracts entered into prior to the assuming insurer’s certification would be reported in the unauthorized classification, while balances attributable to contracts entered into or renewed on or after the assuming insurer’s certification would be reported in the certified classification. Proper classification of such balances is essential to ensure accurate reporting of collateral requirements applicable to specific balances and the corresponding calculation of the liability for unauthorized and/or certified reinsurance.

**SCHEDULE F – REINSURANCE**

**Index to Schedule F**

<table>
<thead>
<tr>
<th>Part</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Assumed Reinsurance</td>
</tr>
<tr>
<td>2</td>
<td>Ceded Reinsurance</td>
</tr>
</tbody>
</table>

**ID Number**

Schedule F requires that the “ID Number” be reported for assuming or ceding entities.

Reinsurance intermediaries should not be listed, because Schedule F is intended to identify only risk-bearing entities.

A ceding insurer can have unauthorized reinsurance, certified reinsurance and reciprocal jurisdiction reinsurance with the same reinsurer, based on when the contract became effective. It is important that the ceding insurer report all types correctly. The same reinsurer may be listed on the same Schedule S by the ceding insurer with an AIIN for unauthorized reinsurance, a CRIN for certified reinsurance, and a RJIN for reciprocal jurisdiction reinsurance.

**Use of Federal Employer Identification Number**

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.
Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Pools and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The NAIC Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Alien pools and associations should be reported on Schedule F under the category “Other Non-U.S. Insurers” rather than under “Pools, Associations and Similar Facilities.” Pools and associations consisting of affiliated companies should be listed by individual company names rather than by pool or association identification.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN, or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule F instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
For 2020 Reporting Only

Reinsurers that have met the requirements for reciprocal jurisdiction reinsurer status in your state of domicile should be reported in the appropriate reciprocal jurisdiction reinsurer category if the reporting entity has implemented the necessary system and reporting changes for 2020 annual reporting to identify and report those reinsurance transactions in the appropriate reciprocal jurisdiction reinsurer category.

If the reporting entity has not been able to make the necessary system and reporting changes for 2020 annual reporting, the reporting entity may report those reinsurance transactions using the authorized reinsurer lines. Any crosschecks the reporting entity fails as a result of reporting reciprocal jurisdiction reinsurers on the authorized reinsurer lines should be explained.

NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the “Pool and Association Numbers” section above for details on assignment of Pool/Association Identification Numbers. Risk-bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk-bearing entity (e.g., risk-bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Determination of Authorized Status

The determination of the authorized, reciprocal jurisdiction, unauthorized or certified status of an insurer or reinsurer listed in any part of Schedule F shall be based on the status of that insurer or reinsurer in the reporting company’s state of domicile.
SCHEDULE F – PART 1

ASSUMED REINSURANCE

If a reporting entity has any detail lines reported for any of the following required groups, categories, or subcategories, it shall report the subtotal of the corresponding group, category, or subcategory, with the specified subtotal line appearing in the same manner and location as the pre-printed total or grand total line and number.

Detail Eliminated to Conserve Space

Column 1 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

Detail Eliminated to Conserve Space

SCHEDULE F – PART 2

CEDED REINSURANCE

If a reporting entity has amounts reported for any of the following required groups, categories, or subcategories, it shall report the subtotal amount of the corresponding group, categories, or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total line and number.

**Detail Eliminated to Conserve Space**
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY AND TITLE

NOTES TO FINANCIAL STATEMENTS

Notes to the Annual Statement are to be filed on March 1.

---

Detail Eliminated to Conserve Space

23. Reinsurance

Instruction:

A. Unsecured Reinsurance Recoverables

If the company has with any individual reinsurers (authorized, reciprocal jurisdiction, unauthorized or certified), an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium that exceeds 3% of the company’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting company, and the total unsecured aggregate recoverables for the entire group.

Include: The NAIC group code number, where appropriate, and the Federal Employer Identification Number for each individual company.

---

Detail Eliminated to Conserve Space

F. Retroactive Reinsurance

(1) Provide the following information for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions:

---

Detail Eliminated to Conserve Space

f. List the total Paid Loss/LAE amounts recoverable (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers), any amounts more than 90 days overdue (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers) and for amounts recoverable the collateral held (for unauthorized and certified reinsurers).

The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Do not report transactions utilizing deposit accounting in this note.

---

Detail Eliminated to Conserve Space
A. Unsecured Reinsurance Recoverables

The Company does not have an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses and unearned premium with any individual reinsurers, authorized or unauthorized, that exceeds 3% of the Company’s policyholder surplus.

---

F. Retroactive Reinsurance

(1) Total Paid Loss/LAE amounts recoverable (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers), any amounts more than 90 days overdue (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers), and for amounts recoverable the collateral held (for authorized, reciprocal jurisdiction, unauthorized and certified reinsurers) as respects amounts recoverable from authorized, reciprocal jurisdiction, unauthorized and certified reinsurers:

ANNUAL & QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY & TITLE

SCHEDULE Y

PART 1A – DETAIL OF INSURANCE HOLDING COMPANY SYSTEM

All insurer and reporting entity members of the holding company system shall prepare a schedule for inclusion in each of the individual annual statements that is common for the group with the exception of Column 10, Relationship to Reporting Entity.

<table>
<thead>
<tr>
<th>Column 4</th>
<th>ID Number</th>
</tr>
</thead>
</table>

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)*
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)*
- Certified Reinsurer Identification Number (CRIN)*

* RJIN, AIINs or CRINs are only reported if the entity in Column 8 is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another entity regardless of whether the entity in Column 8 is part of reporting entity’s group.

If not applicable for the entity in Column 8, leave blank.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE Y

PART 2 – SUMMARY OF INSURER’S TRANSACTIONS WITH ANY AFFILIATES

This schedule was designed to provide an overview of transactions among insurance holding company system members. It is intended to demonstrate the scope and direction of major fund and/or surplus flows throughout the system. This schedule should be prepared on an accrual basis.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN) *
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) *
- Certified Reinsurer Identification Number (CRIN) *

* RJIN, AIIN or CRIN numbers are only reported if the entity in Column 3 is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another entity regardless of whether the entity in Column 3 is part of reporting entity’s group or not.

If not applicable for the entity in Column 3, leave blank.
VALUATION OF SHARES OF SUBSIDIARY, CONTROLLED OR AFFILIATED COMPANIES

If a reporting entity has any common stock or preferred stock reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

Column 5 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) General Instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN) *
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) *
- Certified Reinsurer Identification Number (CRIN) *

* RJIN, AIINs or CRINs are only reported if the entity is a reinsurer that has had an RJIN, AIIN or CRIN number assigned or should have one assigned due to transactions being reported on Schedule F (Property and Title) or Schedule S (Life, Health and Fraternal) of another reporting entity.

If not applicable for the entity, leave blank.

QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL AND HEALTH

SCHEDULE S – CEDED REINSURANCE

SHOWING ALL NEW REINSURANCE TREATIES – CURRENT YEAR TO DATE

Detail Eliminated to Conserve Space

Column 1 – NAIC Company Code

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the instruction for Column 2 for details on assignment of Pool/Association Identification Numbers. Risk bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk bearing entity (e.g., risk bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Column 2 – ID Number

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule S General Instructions in the annual statement instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN)
- Alien Insurer Identification Number (AIIN)
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)
- Certified Reinsurer Identification Number (CRIN)
- Pool/Association Identification Number

Federal ID Number (FEIN)

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “Federal ID Number” for other alien insurers even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule S instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.
Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule S the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule S instead of the FEIN or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule S instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.
QUARTERLY STATEMENT INSTRUCTIONS – PROPERTY AND TITLE

SCHEDULE F – CEDED REINSURANCE

SHOWING ALL NEW REINSURERS – CURRENT YEAR TO DATE

<table>
<thead>
<tr>
<th>Column 1</th>
<th>NAIC Company Code</th>

</table>

Company codes are assigned by the NAIC and are listed in the NAIC Listing of Companies. The NAIC does not assign a company code to insurers domiciled outside of the U.S. or to non-risk bearing pools or associations. The “NAIC Company Code” field should be zero-filled for those organizations. Non-risk bearing pools or associations are assigned a Pool/Association Identification Number. See the instruction for Column 2 for details on assignment of Pool/Association Identification Numbers. Risk bearing pools or associations are assigned a company code. If a reinsurer or reinsured has merged with another entity, report the company code of the surviving entity.

If a risk bearing entity (e.g., risk bearing pools or associations) does not appear in the NAIC Listing of Companies, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned. Newly assigned company codes are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

<table>
<thead>
<tr>
<th>Column 2</th>
<th>ID Number</th>
</tr>
</thead>
</table>

Enter one of the following as appropriate for the entity being reported on the schedule. See the Schedule F General Instructions in the annual statement instructions for more information on these identification numbers.

- Federal Employer Identification Number (FEIN).
- Alien Insurer Identification Number (AIIN).
- Reciprocal Jurisdiction Reinsurer Identification Number (RJIN).
- Certified Reinsurer Identification Number (CRIN).
- Pool/Association Identification Number.

Federal ID Number (FEIN)

The Federal Employer Identification Number (FEIN) must be reported for each U.S.-domiciled insurer and U.S. branch of an alien insurer. The FEIN should not be reported as the “ID Number” for other alien insurers even if the federal government has issued such a number.

Alien Insurer Identification Number (AIIN)

In order to report transactions involving alien companies correctly, the appropriate Alien Insurer Identification Number (AIIN) must be included on Schedule F instead of the FEIN. The AIIN number is assigned by the NAIC and is listed in the Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.
Pool and Association Numbers

In order to report transactions involving non-risk bearing pools or associations consisting of non-affiliated companies correctly, the company must include on Schedule F the appropriate Pool/Association Identification Number. These numbers are listed in the NAIC Listing of Companies. The Pool/Association Identification Number should be used instead of any FEIN that may have been assigned. If a pool or association does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semiannually. The NAIC provides this information to annual statement software vendors for incorporation into the software.

Certified Reinsurer Identification Number (CRIN)

In order to report transactions involving certified reinsurers correctly, the appropriate Certified Reinsurer Identification Number (CRIN) must be included on Schedule F instead of the FEIN or Alien Insurer Identification Number (AIIN) or Reciprocal Jurisdiction Reinsurer Identification Number (RJIN). The CRIN is assigned by the NAIC and is listed in the NAIC Listing of Companies. If a certified reinsurer does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Reciprocal Jurisdiction Reinsurer Identification Number (RJIN)

In order to report transactions involving alien companies correctly, the appropriate Reciprocal Jurisdiction Reinsurer Identification Number (RJIN) must be included on Schedule S instead of the FEIN. The RJIN number is assigned by the NAIC and is listed in the NAIC Listing of Companies. If an alien company does not appear in that publication, contact the NAIC Financial Systems and Services Department, Company Demographics Analyst at FDRCCREQ@NAIC.ORG for numbers assigned since the last publication or for information on having a number assigned.

Newly assigned numbers are incorporated in revised editions of the NAIC Listing of Companies, which are available semi-annually. The NAIC also provides this information to annual statement software vendors for incorporation into the software.

Column 5 – Type of Reinsurer

The determination of the authorized, certified or unauthorized status of an insurer or reinsurer shall be based on the status of that insurer or reinsurer in the reporting company’s state of domicile.

Enter “Authorized” “Reciprocal Jurisdiction” “Certified” or “Unauthorized” to indicate the type of reinsurer.

Anticipated Effective Date: Annual 2020

IDENTIFICATION OF ITEM(S) TO CHANGE

Add crosschecks to Lines 13 and 14 of the State Page to Lines 10 and 11 of the Underwriting and Investment Exhibit, Part 1. Also add crosschecks to Lines 9, 10 and 11 of the Underwriting and Investment Exhibit, Part 1 and Schedule T, Line 61.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to add additional crosschecks between the State Page, Schedule T and Underwriting and Investment Exhibit, Part 1 for the direct written premium for the Health, Life and Property business.

**ANNUAL STATEMENT**

Modify the instruction and illustration for 13(11) to the Notes to Financial Statement. Change the numbering from 1 through 13 to A through M.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect the disclosure addition for SSAP No. 41R—Surplus Notes being adopted by the Statutory Accounting Principles (E) Working Group and correct the instruction.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date:

Other Comments:

Proposal is being exposed concurrently with the changes being considered by the Statutory Accounting Principles (E) Working Group.

NOTES TO FINANCIAL STATEMENTS

13. Capital and Surplus, Dividend Restrictions and Quasi-Reorganizations

Instruction:

Disclose the following information related to capital and surplus, shareholder’s dividend restrictions and quasi-reorganizations.

(A) The number of shares of each class of capital stock authorized, issued and outstanding as of the balance sheet date and the par value or stated value of each class.

(B) The dividend rate, liquidation value and redemption schedule (including prices and dates) of any preferred stock issues.

(C) Dividend restrictions, if any, and an indication if the dividends are cumulative.

(D) The dates and amounts of dividends paid. Note for each payment whether the dividend was ordinary or extraordinary.

(E) The portion of the reporting entity’s profits that may be paid as ordinary dividends to stockholders.

(F) A description of any restrictions placed on the unassigned funds (surplus), including for whom the surplus is being held.

(G) For mutual reciprocals, and similarly organized entities, the total amount of advances to surplus not repaid, if any.

(H) The total amount of stock held by the reporting entity, including stock of affiliated entities, for special purposes such as:

   a. Conversion of preferred stock
   b. Employee stock options
   c. Stock purchase warrants

(I) A description of the reasons for changes in the balances of any special surplus funds from the prior period.

(J) The portion of unassigned funds (surplus) represented or reduced by cumulative unrealized gains and losses.

(K) Surplus Notes

For each surplus debenture or similar obligation, except those surplus notes required or those that are a prerequisite for purchasing an insurance policy and are held by the policyholder, furnish the following information:

   a. Date issued
   b. Description and fair value of the assets received
• e.—Holder of the note or, if public, the names of the underwriter and trustee with identification on whether the holder of the surplus note is a related party per SSAP No. 25

  Original issue amount of note
  d. —Par Value (Face Amount of Note)
  e.—Carrying value of note (current year and prior year)
  f.—The rate at which interest accrues
  g.—Maturity dates or repayment schedules, if stated
  h.—Unapproved interest and/or principal
  i.—Interest and/or principal paid in the current year
  j.—Total interest and/or principal paid on surplus notes

  Approved interest recognized and principal paid (current year and life-to-date):
  —Approved interest and/or principal recognized as “paid”
  —Amount of approved interest and/or principal remitted to the holder of the surplus note (actual transfer of cash/ assets) and
  —The amount of approved interest and/or principal not remitted to the holder of the surplus note (no transfer of cash/ assets);

  Life-to-date:
  —Amount of approved interest and/or principal remitted to the holder of the surplus note (actual transfer of cash/ assets)

  Information regarding a 3rd party liquidity source including:
  —Name
  —Identification if a related party
  —Cost of the liquidity guarantee and
  —Maximum amount available should a triggering event occur.

• Percentage of offset interest payments offset through administrative offsetting (not inclusive of amounts paid to a 3rd party liquidity provider). I.E. if $100 in interest was recognized through the year, $10 of which was remitted to a 3rd party liquidity provider and the reminder $90 was offset, the reporting entity shall report 100% as offset.

• Disclosure of whether the surplus note was issued as part of a transaction with any of the following attributes:
  ❖ Do surplus note/associated asset terms negate or reduce cash flow exchanges, and/or are amounts payable under surplus note and amounts receivable under other agreements contractually linked (For example, the asset provides interest payments only when the surplus note provides interest payments).
  ❖ Are any amounts due under surplus notes and associated assets netted or offset (partially or in full) thus eliminating or reducing the exchange of cash or assets that would normally occur throughout the duration, or at maturity, of the agreement (This may be referred to as administrative offsetting.)
  ❖ Were the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note.
If a reporting entity has ceded business to a surplus note issuer that is a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria above, the ceding entity shall provide a description of the transaction, including whether the criteria above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force.

The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note, the following information shall be disclosed regarding the assets received:

- Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation;
- Book/adjusted carrying value of asset as of the current reporting date;
- A description of terms under which liquidity would be provided should a triggering event occur.

- Principal amount value of assets received upon Surplus Note issuance, if applicable;
- k.—Subordination terms
- l.—Liquidation preference to the reporting entity’s common and preferred shareholders
- m.—The repayment conditions and restrictions
- Information about any guarantees, support agreements, or related party transactions associated with the surplus note issuance, and whether payments have been made under such agreements.

If a reporting entity has ceded business to a surplus note issuer that is a related party as part of a reinsurance transaction in which the surplus note meets any of the criteria above, the ceding entity shall provide a description of the transaction, including whether the criteria above were met with respect to the surplus note issuance, as long as the reinsurance agreement remains in force.

The ceding entity should provide a description of the risks reinsured, the related party reinsurer, any guarantees or support agreements and the amount of notes outstanding.

If the proceeds from the issuance of a surplus note used to purchase an asset directly or indirectly from the holder of the surplus note, the following information shall be disclosed regarding the assets received:

- Identification of asset, including the investment schedule where the asset is reported and reported NAIC designation;
- Book/adjusted carrying value of asset as of the current reporting date;
- A description of terms under which liquidity would be provided should a triggering event occur.
- n.—In addition to the above, a reporting entity shall identify all affiliates that hold any portion of a surplus debenture or similar obligation (including an offering registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933), and any holder of 10% or more of the outstanding amount of any surplus note registered under the Securities Act of 1933 or distributed pursuant to Rule 144A under the Securities Act of 1933.

NOTE: For the table illustrated for the disclosures above provide an “Item Number” (4 digits) to identify each surplus note being disclosed and should remain the same between year.

(12)L The impact of the restatement in a quasi-reorganization as long as financial statements for the period of the reorganization are presented.

(13)M The effective date of a quasi-reorganization for a period of ten years following the reorganization.
Illustration:

(44)A The Company has ________ shares authorized, ________ shares issued and ________ shares outstanding. All shares are Class A shares.

(45)B The Company has no preferred stock outstanding.

(46)C Without prior approval of its domiciliary commissioner, dividends to shareholders are limited by the laws of the Company’s state of incorporation, ________, to $_________, an amount that is based on restrictions relating to statutory surplus.

(47)D An ordinary dividend in the amount of $_________ on _________ was paid by the Company.

(48)E Within the limitations of (3) above, there are no restrictions placed on the portion of Company profits that may be paid as ordinary dividends to stockholders.

(49)F There were no restrictions placed on the Company’s surplus, including for whom the surplus is being held.

(50)G The total amount of advances to surplus not repaid is $_________.

(51)H The amounts of stock held by the Company, including stock of affiliated companies, for special purposes are:

   a. For conversion of preferred stock: ________ shares
   b. For employee stock options: __________ shares
   c. For stock purchase warrants: _________ shares

(52)I Changes in balances of special surplus funds from the prior year are due to: ______________________

   ______________________________________________________________________________________

(53)J The portion of unassigned funds (surplus) represented or reduced by cumulative unrealized gains and losses is $ ___________.

This exact format must be used in the preparation of this note for the table below. Reporting entities are not precluded from providing clarifying disclosure before or after this illustration.

(Note: This does not include the ending narrative.)

(44)K The Company issued the following surplus debentures or similar obligations:

#### Notes

- **Date Issued**: [Date]
- **Interest Rate**: [Rate]
- **Par Value (Face Amount of Notes)**: [Value]
- **Carrying Value of Note**: [Value]
- **Interest And/Or Principal Paid Current Year**: [Paid]
- **Total Interest And/Or Principal Paid**: [Paid]
- **Unapproved Interest And/Or Principal**: [Paid]
- **Date of Maturity**: [Date]

* Total should agree with Page 3, Line 32.

The surplus note in the amount of $[Value], listed as item [Number] in the above table, was issued to [Issuer] (parent) in exchange for [Exchanged].

The surplus note, in the amount of $[Value], listed as item [Number] in the above table, was issued pursuant to Rule 144A under the Securities Act of 1933, underwritten by [Underwriter], and is administered by [Trustee] as trustee.

The surplus note has the following repayment conditions and restrictions: (e.g., Each payment of interest on and principal of the surplus notes may be made only with the prior approval of the Commissioner of Insurance of the State and only to the extent the Company has sufficient surplus earnings to make such payment).

The surplus note has the following subordination terms: (e.g., The Notes will rank pari passu with any other future surplus notes of the Parent and with all other similarly subordinated claims).

The liquidation preference to the insurer's common and preferred shareholders are as follows: (e.g., In the event that the Parent is subject to such a proceeding, holders of Indebtedness, Policy Claims and Prior Claims would be afforded a greater priority under the Liquidation Act and the terms of the Notes and, accordingly, would have the right to be paid in full before any payments of interest or principal are made to Note holders).

The surplus debenture in the amount of $[Value], listed as item [Number] in above table, is held by [Holder] (an affiliate).

The surplus debenture in the amount of $[Value], listed as item [Number] in above table, was issued pursuant to Rule 144A under the Securities Act of 1933, and is held by [Holder] in the following ownership percentage [Percentage] (10% or more).

The (an affiliate) holds $[Value] or [Percentage]% of the surplus debenture listed as item [Number] in the above table.

The Company has outstanding $[Value] of [Percentage]% debentures due in 20__ issued on [Date]. The carrying amount of the debt is $[Value] with an effective rate of [Rate]% The debentures are not redeemable prior to 20__. The Company is required to make annual sinking fund payments of $[Value] that will provide sufficient funds for the retirement of debentures at maturity. Interest paid during 20__ was $[Value].
The Company has an outstanding liability for borrowed money in the amount of $_______ due to __________ on __/__/20__. The principal amount is due 20__. At the option of the Company, early repayment may be made. Interest at ___% is required to be paid annually. Interest paid during 20___ was $_______. The Company is required to maintain a collateral security deposit with the lender. Assets in such security deposit are required to be maintained in a fair value amount at least equal to the outstanding principal. At December 31, 20__, assets having an admitted value of $__________ and a fair value of $_______ were on deposit with the lender.

THIS EXACT FORMAT MUST BE USED IN THE PREPARATION OF THIS NOTE FOR THE TABLE BELOW. REPORTING ENTITIES ARE NOT PRECLUDED FROM PROVIDING CLARIFYING DISCLOSURE BEFORE OR AFTER THIS ILLUSTRATION.

23. Reinsurance

Instruction:

A. Unsecured Reinsurance Recoverables

If the company has with any individual reinsurers (authorized, reciprocal jurisdiction, unauthorized or certified), an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium that exceeds 3% of the company’s policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting company, and the total unsecured aggregate recoverables for the entire group.

Include: The NAIC group code number, where appropriate, and the Federal Employer Identification Number for each individual company.

Illustration:

A. Unsecured Reinsurance Recoverables

The Company does not have an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses and unearned premium with any individual reinsurers, authorized or unauthorized, that exceeds 3% of the Company’s policyholder surplus.

DRAFTING NOTE: The tables below will not be data captured

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the instruction and illustration for Note 2 – Accounting Changes and Correction of Errors.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect the disclosure addition for SSAP No. 3—Accounting Changes and Corrections of Errors and SSAP No. 51R—Life Contracts being adopted by the Statutory Accounting Principles (E) Working Group.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

Proposal is being exposed concurrently with the changes being considered by the Statutory Accounting Principles (E) Working Group

** This section must be completed on all forms. Revised 7/18/2018
2. Accounting Changes and Corrections of Errors

Instruction:

Describe material changes in accounting principles and/or correction of errors. Include:

- A brief description of the change, encompassing a general disclosure of the reason and justification for the change or correction.

- The impact of the change or correction on net income, surplus, total assets and total liabilities for the two years presented in the financial statements (i.e., the balance sheet and statement of income).

- The effect on net income of the current period for a change in estimate that affects several future periods, such as a change in the service lives of depreciable assets or actual assumptions affecting pension costs. Disclosure of the effect on those income statement amounts is not necessary for estimates made each period in the ordinary course of accounts for items such as uncollectible accounts. However, disclosure is recommended if the effect of a change in the estimate is material.

- Changes in accounting that are changes in reserve valuation basis as described in SSAP No. 51R—Life Contracts which have elected gradephase-in provided for in the Valuation Manual section VM-21 or other optional application features, shall also include in the change in accounting disclosures information regarding the application of any phasegrade-in as provided for in SSAP No. 51R.

Reporting entities shall provide disclosure of the following:

- The phasegrade-in period being applied, and the remaining time period of the gradephase-in.

- Any adjustments to the phasegrade-in period.

- Amount of change in valuation basis phasegrade-in, which has been recognized in unassigned funds.

- The remaining amount to be phasedgrade-in (reflected in special surplus if the ungraded-in amount represents an increase in reserving).

- When subsequent financial statements are issued containing comparative restated results as a result of the filing of an amended financial statement, the reporting entity shall disclose that the prior period has been restated and the nature and amount of such restatement.
Illustration:

During the current year’s financial statement preparation, the Company discovered an error in the compiling and reporting of investment income from an affiliate for the prior year. In the prior year, common stocks (Assets Page, Line _____) and investment income earned from affiliates (included in Summary of Operation, Line _____) were understated by $________. Line _____ on the Assets Page and Line ____ on the Gains and Losses section of the Summary of Operations have been adjusted in the current year to correct for this error.

In 2020, the Company elected a phase-in period of three years of a change in reserve valuation basis as described in SSAP No. 51R—Life Contracts for its variable annuity reserves. This change in valuation basis, which impacts annuities reserves written from 1981 to 2019 is permitted under the revisions to the Commissioners Annuity Reserve Valuation Method (CARVM) adopted in Valuation Manual Requirements for Principle-Based Reserves for Variable Annuities (VM-21), and Actuarial Guideline 43 CARVM for variable annuities (AG 43). There have been no adjustments to the phase-in period. The amount of phase-in, which has been recognized in unassigned funds is $________. The remaining amount to be phased-in reflects in special surplus is $________.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add new disclosure Note 23 – Reinsurance for reinsurance credit (23H – Life/Fraternal, 23E Health and 23K Property).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect the disclosure additions for SSAP No. 61R—Life, Deposit-Type Contracts and Accident and Health Contracts Reinsurance adopted by the Statutory Accounting Principles (E) Working Group.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms.
23. Reinsurance

Instruction:

H. Reinsurance Credit

(1) Disclose any reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) subject to A-791 that includes a provision, which limits the reinsurer’s assumption of significant risks identified as in A-791. Examples of risk limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. For contracts subject to A-791, indicate if deposit accounting was applied for all contracts, which limit significant risks.

(2) Disclose any reinsurance contracts (or multiple contracts with the same reinsurer or its affiliates) not subject to A-791, for which reinsurance accounting was applied and includes a provision that limits the reinsurer’s assumption of risk. Examples of risk limiting features include provisions such as a deductible, a loss ratio corridor, a loss cap, an aggregate limit or similar effect. If true, indicate the number of reinsurance contracts to which such provisions apply. If affirmative, indicate if the reinsurance credit was reduced for the risk limiting features.

(3) Disclose if any reinsurance contracts contain features (except reinsurance contracts with a federal or state facility) described below which result in delays in payment in form or in fact:

- Provisions which permit the reporting of losses, or settlements are made, less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date (unless there is no activity during the period).
- Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

(4) Disclose if the reporting entity has reflected reinsurance accounting credit for any contracts not subject to Appendix A-791 and not yearly renewable term, which meet the risk transfer requirements of SSAP No. 61R and identify the type of contracts and the reinsurance contracts.

- Assumption Reinsurance – new for the reporting period.
- Non-proportional reinsurance, which does not result in significant surplus relief. If yes, indicate if the insured event(s) triggering contract coverage has been recognized.
(5) Disclose if the reporting entity ceded any risk which is not subject to A-791 and not yearly renewable term reinsurance, under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

- Accounted for that contract as reinsurance under statutory accounting principles (“SAP”) and as a deposit under generally accepted accounting principles (“GAAP”); or
- Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

(6) If affirmative disclosure is required for Paragraph 23H(5) above, explain why the contract(s) is treated differently for GAAP and SAP.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add a disclosure instruction for 10C to the Notes to Financial Statement for related party transactions not captured on Schedule Y. Combine existing 10C into 1B instructions and illustration narrative.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to reflect the disclosure addition for SSAP No. 25—Affiliates and Other Related Parties being adopted by the Statutory Accounting Principles (E) Working Group.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: 

Other Comments:

Proposal is being exposed concurrently with the changes being considered by the Statutory Accounting Principles (E) Working Group.

** This section must be completed on all forms.

Revised 7/18/2018
NOTES TO FINANCIAL STATEMENTS

10. Information Concerning Parent, Subsidiaries, Affiliates and Other Related Parties

Instruction:

The financial statements shall include disclosures of all material related party transactions. In some cases, aggregation of similar transactions that on a stand-alone basis are not material may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary, to the understanding of the relationship, disclose the name of the related party. Transactions shall not be purported to be arm’s-length transactions unless there is demonstrable evidence to support such statement. Note 10 is primarily for SCAs under SSAP No. 97, but the disclosure for 10O should also be completed of SSAP No. 48 entities. The disclosures shall include:

A. The nature of the relationship involved.

B. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions that are less than ½ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:

- (1) Date of transaction;
- (2) Explanation of transaction;
- (3) Name of reporting entity;
- (4) Name of affiliate;
- (5) Description of assets received by reporting entity;
- (6) Statement value of assets received by reporting entity;
- (7) Description of assets transferred by reporting entity; and
- (8) Statement value of assets transferred by reporting entity.

C. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period.

C. Transactions with related parties who are not reported on Schedule Y

A reference number should be provided for each transaction with the related party to be used in the tables for the disclosures below. In each disclosure the transaction for each related party should be reported contiguously together and not separated by other transactions with other related parties. (Multiple transactions with the same related party shall not be aggregated into a single row.)

Example: Company A has three separate transactions with Related Party B. All of transactions with Related Party B would be reported together on three consecutive rows of the disclosure table before reporting transaction with the next related party.)
(1) Detail of material related party transactions

- Date of transaction
- Name of related party
- Nature of relationship

**Options for type of transaction:**
- Loan
- Exchange of assets or liabilities (e.g., buys, sells and secured borrowing transactions)
- Management services
- Cost-sharing agreement
- Other transactions involving services
- Guarantee (e.g., guarantees to related parties, on behalf of, and when beneficiary is related party)
- Other

- Type of transaction

**Options for type of transaction:**
- Loan
- Exchange of assets or liabilities (e.g., buys, sells and secured borrowing transactions)
- Management services
- Cost-sharing agreement
- Other transactions involving services
- Guarantee (e.g., guarantees to related parties, on behalf of, and when beneficiary is related party)
- Other

- Written agreement (Yes/No)
- Due date
- Reporting period date amount due from (to)

(2) Detail of material related party transactions involving services

- Name of related party
- Overview description
- Amount charged
- Amount based on allocation of costs or market rates
- Amount charged modified or waived (Yes/No)
(3) Detail of material related party transactions involving exchange of assets and liabilities

- Name of related party
- Overview description
- Description of assets received
- Description of assets transferred
- Statement value of assets received
- Statement value of assets transferred
- Have terms changed from preceding period? (Yes/No)

(4) Detail of amounts owed to/from a related party

- Name of related party
- Aggregate reporting period amount due from
- Aggregate reporting period amount due to
- Amount offset in financial statement (if qualifying)
- Net amount recoverable/(payable) by related party
- Admitted recoverable

D. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement.

E. Any guarantees or undertakings, written or otherwise, shall be disclosed in Note 14, Liabilities, Contingencies and Assessments, in accordance with the requirements of SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed.

F. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency contracts that remove assets that may otherwise be recorded (and potentially nonadmitted) on the reporting entity’s financial statements.

F. Any guarantees or undertakings, written or otherwise, shall be disclosed in Note 14, Liabilities, Contingencies and Assessments, in accordance with the requirements of SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed.

G. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity being significantly different from those that would have been obtained if the enterprises were autonomous. Disclose the relationship even though there are no transactions between the enterprises.

D. At December 31, 20__, the Company reported $_________ as amounts due to the Parent Company, The ABC Insurance Company. The terms of the settlement require that these amounts be settled within 30 days.

E. The Company has given XYZ Inc., an affiliated company, a standing commitment until January 1, 20__, in the form of guarantees in the event of a default of XYZ on various of its debt issues as disclosed in Note 14.

F.E. The Company has agreed to provide the Parent Company, The ABC Insurance Company, certain actuarial investment services with respect to the administration of certain large group insurance contracts that are subject to group experience rating procedures.

F. The Company has given XYZ Inc., an affiliated company, a standing commitment until January 1, 20__, in the form of guarantees in the event of a default of XYZ on various of its debt issues as disclosed in Note 14.

   The Parent Company has agreed to provide collection services for certain contracts for the Company.

G. All outstanding shares of The Company are owned by the Parent Company, The ABC Insurance Company, an insurance holding company domiciled in the State of ____________.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Modify the Annual Statement Instructions for Schedule F, Part 3 to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurance.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

1. The factor for reinsurance recoverable from uncollateralized, unrated reinsurers is being updated by PCRBC WG to move towards a charge that is more aligned with risk-indicated factors used by the ratings agencies.

2. With respect to the broader implementation of the Covered Agreement, the PCRBC WG identified the need to eliminate the different treatment of uncollateralized reinsurance recoverable from authorized versus unauthorized, unrated reinsurers.

<table>
<thead>
<tr>
<th></th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
</table>

Utilize the table below and report a reinsurer designation equivalent code of 1 through 6 (where 6 represented vulnerable 6 or unrated) or 7 (for unrated authorized reinsurers). The equivalent designation category assigned will correspond to a current financial strength rating received from an approved rating agency as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. If the reinsurer is unauthorized and does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated Unauthorized Reinsurers” equivalent rating. If the reinsurer is authorized and does not have at least one financial strength rating, it should be assigned the “Unrated Authorized Reinsurers” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “reinsurer equivalent code of 3.” An authorized association including incorporated and individual unincorporated underwriters or a member thereof may utilize the lowest financial strength group rating received from an approved rating agency.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VARIABLE ANNUITIES SUPPLEMENT
PARTS 1 AND 2

This supplement is to be filed on or before April 1.

Complete this supplement for contracts and certificates subject to VM-21 or AG 43. A separate chart shall be prepared for individual contracts and for group contracts with individual certificates.

For variable annuities (VAs) with guaranteed benefits, disclose the type(s) of guaranteed benefit(s), the number of contracts or certificates with those benefits, the amount of the benefit base related to each type of benefit, the net amount at risk for death benefits and the guaranteed annual payout for income and withdrawal benefits, the gross amount of the reserve for the guaranteed benefit(s), the portion of the contract/certificate account value related to contract/certificate funds in the General Account or the Separate Account, and the percent of the guaranteed benefit reinsured.

Column 1 & Column 2  –  Type of Guaranteed Benefit

For purposes of this supplement, a Guaranteed Death Benefit is defined in accordance with the term “Guaranteed Minimum Death Benefit” in VM-21, and a Guaranteed Living Benefit (GLB) is defined in accordance with the term “Variable Annuity Guaranteed Living Benefits” in VM-01.

“Type” shall include a summary description of the type of benefit. Examples are provided in the table illustrated below. Descriptions that may apply when identifying “Type” for Column 2 include, “Guaranteed Minimum Accumulation Benefit” (GMAB), “Guaranteed Minimum Income Benefit” (GMIB), “Hybrid GMIB,” “Traditional GMIB,” “Guaranteed Minimum Withdrawal Benefit” (GMWB), “Lifetime GMWB,” “Non-Lifetime GMWB,” and “Guaranteed Payout Annuity Floor” (GPAF). These terms are defined in VM-01. For those guaranteed benefits that include waiting periods before any benefit can be realized, include the length of the original waiting period in the description.

- A separate line shall be created for each combination of Guaranteed Death Benefit and Guaranteed Living Benefit.
  - See the illustration in the table below for an example.
  - For a category with only one guarantee, show “None” in the other column.
  - For a category with no guaranteed benefit, show “None” in both columns.
- Each contract/certificate shall be included in one and only one line.
  - For a contract with multiple living benefits, determine the most appropriate classification.

A separate chart shall be prepared for individual contracts and for group contracts with individual certificates. In each chart, show the amount of any reinsurance reserve credit being taken separately for treaties with affiliated captive reinsurers and for other reinsurers.

For purposes of this supplement, a Guaranteed Living Benefit (GLB) is defined as a contract/certificate, agreement or rider in which the insurance entity guarantees specified payouts during a defined period, which may include the lifetime of the insured(s). For VAs, these guaranteed payouts are typically made regardless of the performance of the contractual account value that is used to determine cash surrender values and/or withdrawal benefits.

Column 3  –  Number of Individual (Part 1) Contracts or Group (Part 2) Certificates
<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Column 4</td>
<td>Benefit Base For Guaranteed Death Benefit (Col 1)</td>
</tr>
<tr>
<td></td>
<td>Report the Benefit Base (defined in the contract/certificate) as of the valuation date as the basis for the guaranteed value. If no guarantee exists, enter $0.</td>
</tr>
<tr>
<td>Column 5</td>
<td>Benefit Base For Guaranteed Living Benefit (GLB) (Col 2)</td>
</tr>
<tr>
<td></td>
<td>Report the Benefit Base (defined in the contract/certificate) as of the valuation date as the basis for the guaranteed value. If no guarantee exists, enter $0.</td>
</tr>
<tr>
<td>Column 6</td>
<td>Net Amount at Risk For Guaranteed Death Benefit (Col 1)</td>
</tr>
<tr>
<td></td>
<td>Death Benefit Net Amount at Risk (NAR) is defined as the greater of a) zero and b) the difference between the Guaranteed Death Benefit and the Account Value as of the valuation date. Report the sum of the NAR for all contracts/certificates.</td>
</tr>
<tr>
<td>Column 7</td>
<td>Guaranteed Annual Income Amount For Guaranteed Living Benefit (GLB) (Col 2)</td>
</tr>
<tr>
<td></td>
<td>Report the total annual income/withdrawal benefits available if the income/withdrawal guarantees were elected on the valuation date. If no GLB/GMWB is available on the valuation date for a particular contract/certificate (e.g. due to a waiting period), use $0. Note, for GLB and GMWB previously elected, show the guaranteed amount based on the prior elections. For GMAB, use $0 since this is not an income benefit. Disclosures for GMAB shall be provided in the AG 43 Memorandum.</td>
</tr>
<tr>
<td>Column 8</td>
<td>Account Value – General Account</td>
</tr>
<tr>
<td>Column 9</td>
<td>Account Value – Separate Account</td>
</tr>
<tr>
<td>Column 10</td>
<td>Reserve for Guaranteed Benefits (Total Reserve Less Base Adjusted Reserve) Contract-Level Reserves Less Cash Surrender Value</td>
</tr>
<tr>
<td></td>
<td>Total gross reserve for guarantees as defined in AG 43 or VM 21 as applicable in excess of the base contract reserve. Reserves calculated according to AG 43 and VM 21 are allocated to individual contracts or certificates following the guidance of Appendix 6 of AG 43 or Section 8 of VM 21. Report in column 10 the excess of this per policy reserve over the base contract reserve. For base contract reserve, the company may use CSV or Base Adjusted Reserve (defined in Appendix 3, A.3.2D of AG 43 or Section 5, B.4. of VM 21) for that contract or certificate. For each contract/certificate, calculate the excess amount of the pre-reinsurance ceded contract-level reserve, defined in VM-21, over the contract’s cash surrender value. For each “Type” listed under Columns 1 and 2, report the sum of the excess amounts calculated for the associated contracts/certificates. For the Subtotal, report the sum of the excess amounts calculated for all contracts/certificates. The Subtotal should equal the excess of the aggregate reserve over the aggregate cash surrender value.</td>
</tr>
<tr>
<td>Column 11 &amp; Column 12</td>
<td>Percentage of Guaranteed Benefits Reinsured</td>
</tr>
<tr>
<td></td>
<td>Show percentage of the Guaranteed Benefit ceded to all reinsurers.</td>
</tr>
<tr>
<td>Line 1</td>
<td>Aggregate Cash Surrender Value</td>
</tr>
<tr>
<td></td>
<td>Report the sum of the cash surrender values for all contracts/certificates.</td>
</tr>
</tbody>
</table>
**Line 2**  –  Pre-Reinsurance Ceded Aggregate Reserve (Subtotal for Column 10 plus Line 1)

Report the sum of the pre-reinsurance ceded contract-level reserves for all contracts/certificates. This should equal the Subtotal Line for Column 10 plus Line 1.

**Line 3**  –  Reserve Credit from affiliated captive reinsurance

**Line 4**  –  Reserve Credit from other reinsurance

**Line 3-5**  –  Total Net of Reinsurance Post-Reinsurance Ceded Aggregate Reserve

Line 3 Total Net of Reinsurance should equal the Subtotal Line for Column 10 minus the sum of Line 1 Reserve Credit from Affiliated Captive Reinsurance and Line 2 Reserve Credit from Other Reinsurance. Report the sum of the post-reinsurance ceded contract-level reserves for all contracts/certificates.

- Splitting Part 1 into Part 1A and Part 1B.
- For Part 1A:
  - Changing the description header for Column 3 to be “Due and Deferred Premium Asset” so that it matches the instructions.
  - Adding “XXX” in two places to indicate that a Due and Deferred Premium Asset does not need to be reported in the lines shown for Total Reserves.
  - Changing the reporting units for all columns to be in dollars rather than in thousands.
  - Expanding all columns to allow room for a number as large as 999,999,999,999.
  - Changing the product labels for clarity.
- For Part 1B:
  - Changing the reporting units for the Reserve columns to be in dollars rather than in thousands.
  - Expanding the Reserve columns to allow room for a number as large as 999,999,999,999.
  - Expanding the Face Amount columns to allow room for a number as large as 9,999,999,999.
  - Changing the product labels for clarity.
- Removing Part 2 and re-numbering the remaining Parts.

VM-20 Reserves Supplement Instructions:

- Adjusting the instructions according to the changes made to the blanks.
- Clarifying instructions and adding examples for Parts 1A and 1B.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VM-20 RESERVES SUPPLEMENT—PART 1

Life Insurance Reserves Valued According to VM-20 by Product Type

($000 Omitted Except for Number of Policies)

This Supplement provides information on the reserves required to be calculated by Section VM-20 of the Valuation Manual. This includes the Net Premium Reserve and, as applicable, the Deterministic Reserve and the Stochastic Reserve. This Supplement also provides information regarding business where VM-20 of the Valuation Manual is not required to be applied. Only business issued on or after Jan. 1, 2017, valued by the requirements of VM-20 should be reported in Part 1A and Part 1B. Part 1A and Part 1B are intended to aid regulators in the analysis of reserves as determined under Section VM-20 of the Valuation Manual for both the prior and current year. Companies that elect the three-year transition for some of their policies should not report those policies in this part.

This Supplement also provides information regarding business where VM-20 of the Valuation Manual is not required to be applied. Companies that elect the three-year transition period for all of their business or are otherwise exempted from the requirements of Section VM-20 are not required to complete Part 1A or Part 1B of this Supplement pursuant to the instructions in Part 2 of this Supplement, but must complete Part 2 or Part 3 as applicable.

VM-20 RESERVES SUPPLEMENT – PART 1A

Life Insurance Reserves Valued According to VM-20 by Product Type

Part 1A of this Supplement breaks out, by product type, the prior year and current year reported reserves on a Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded basis as defined in Section 8.D of Section VM-20 of the Valuation Manual. The Due and Deferred Premium Asset for the current year is also shown. In addition, Part 1 of this Supplement shows, by product type for the current year, the Due and Deferred Premium Asset, the Net Premium Reserve (NPR), the Deterministic Reserve (DR) and the Stochastic Reserve (SR), where the NPR, DR and SR are as defined in Section VM-20 of the Valuation Manual. This Supplement is intended to aid regulators in the analysis of reserves as determined under Section VM-20 of the Valuation Manual for both the prior and current year.

Section VM-20 of the Valuation Manual requires that the Post-Reinsurance-Ceded Reserve be determined by three product groups VM-20 Reserving Categories: Term Insurance, Universal Life with Secondary Guarantees (ULSG) and all other. Term Insurance should be reported on line 1.1. ULSG, including Variable Universal Life with a secondary guarantee, Indexed life insurance with a secondary guarantee, regular Universal Life with a secondary guarantee, and ULSG policies with a non-material secondary guarantee as defined in Section VM-01 of the Valuation Manual, should be reported on line 1.2. Each of the other products reported in lines 1.3 – 1.8 should be determined as the sum of the policy reserves using the policy reserves determined following the allocation process of VM-20 Section 2. A similar process should be used for each of the pre-reinsurance-ceded reserves.

Section A: Columns 4 through 8 are to be completed if each of the reserves in Columns 4 through 6 (NPR, DR, SR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section B: Columns 9 through 12 are to be completed only if the reserves in Columns 9 and 10 (NPR, DR) are calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section C: Columns 13 through 15 are to be completed only if the reserve in Column 13 (NPR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.
Column 1 & 2 – Reported Reserve

Provide the reported reserve, in thousands whole dollars, for the prior year and current year for each line item. Post-Reinsurance-Ceded is net of reinsurance ceded, and Pre-Reinsurance-Ceded includes reinsurance assumed and excludes any reinsurance ceded should be prior to any reinsurance ceded and include reinsurance assumed. Sections 2 and 8 in the Valuation Manual further describe the required reserve and treatment of reinsurance. The reported reserve for the current year should reflect all policies in force as of the end of the current year. The reported reserve for the prior year should reflect all policies in force as of the end of the prior year.

Column 3 – Due and Deferred Premium Asset

Provide the due and deferred premium asset amount, in thousands whole dollars, associated with the current year Reported Reserve from Column 2 and calculated in a manner consistent with lines 15.1 and 15.2 of the Annual Statement Assets page.

**Example 1:**
A company reinsures a ULSG product using YRT reinsurance.
- The ceding company reports their reserve on lines 1.2 and 3.2 for ULSG.
- The assuming company reports their reserve on lines 1.1 and 3.1 for Term.

**Example 2:**
A company reinsures a Term product using YRT reinsurance.
- The ceding company reports their reserve on lines 1.1 and 3.1 for Term.
- The assuming company reports their reserve on lines 1.1 and 3.1 for Term.
VM-20 RESERVES SUPPLEMENT – PART 1B

Life Insurance Reserves Valued According to VM-20 by Product Type

($000 Omitted for Face Amount)

Part 1B of this Supplement provides details underlying the amounts shown in Part 1A.

Section A: Columns 4.1 through 8.5 are to be completed if each of the reserves in Columns 4.1 through 6.3 (NPR, DR, SR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section B: Columns 9.6 through 12.9 are to be completed only if the reserves in Columns 9.6 and 10.7 (NPR, DR) are calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section C: Columns 13.10 through 15.12 are to be completed only if the reserve in Column 13.10 (NPR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Column 4.1, 9.6 & 13.10 – Net Premium Reserve (NPR)

Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Net Premium Reserve for each product type, in whole dollars. The Net Premium Reserve is defined in Section 3 in VM-20 of the Valuation Manual.

Column 5.2 & 10.7 – Deterministic Reserve

Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Deterministic Reserve for each product type, in thousand whole dollars. Report the amount whether it is positive or negative; do not floor the amount at zero if it is negative. The Deterministic Reserve calculation is defined in Section 4 in VM-20 of the Valuation Manual.

Column 6.3 – Stochastic Reserve

Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Stochastic Reserve for each product type, in thousand whole dollars. Report the amount whether it is positive or negative; do not floor the amount at zero if it is negative. The Stochastic Reserve calculation is defined in Section 5 in VM-20 of the Valuation Manual.

Column 7.4, 11.8 & 14.11 – Number of Policies

Report the number of individual life insurance policies by product type and by the required VM-20 methodology used as described in Section A, Section B and Section C above. The number of policies should be prior to any reinsurance ceded and include reinsurance assumed.

Column 8.5, 12.9 & 15.12 – Face Amount

Report the face amount, in thousands, of individual life insurance by product type and by the required VM-20 methodology used as described in Section A, Section B and Section C above. The face amount should be prior to any reinsurance ceded and include reinsurance assumed.

Example:
A company has Term business subject to VM-20, and there is no reinsurance. The Stochastic Exclusion Test was passed. The Deterministic Reserve at year-end was negative.

- The company completes Section B.
- The Net Premium Reserve is reported in whole dollars in Column 6.
- The negative Deterministic Reserve is reported in whole dollars in Column 7.
- The Number of Policies is reported in Column 8.
- The Face Amount is reported in thousands in Column 9.
VM-20 RESERVES SUPPLEMENT—PART 2

Three Year-Transition Period

($000 Omitted Except for Number of Policies)

This section of the Supplement should be completed when a reporting entity has elected to apply the three-year transition provided in Section II, Sub-section C under Life Insurance Products of the Valuation Manual to some or all of its business. This Part 2 should include the values requested for the business for which the three-year transition has been elected and should not include values for any policies valued based on VM-20. This Part 2 allows the company to establish minimum reserves according to applicable requirements stated in Appendix A (VM-A) and Appendix C (VM-C), in the Valuation Manual, for business otherwise subject to VM-20 requirements and issued during the first three years following the Operative Date of the Valuation Manual. If a company does not elect this three-year transition, but elects to apply VM-20 to a block of business issued on and after the Operative Date, then such company must continue to apply the requirements of VM-20 to this block of business, as well as future new issues of this type of business.

A company that elects to apply the three-year transition for all of its products within the scope of VM-20 does not have to complete Part 1 of the VM-20 Supplement. If a company applies VM-20 to a product or products, then Part 1 of this VM-20 Supplement will need to be completed.

VM-20 RESERVES SUPPLEMENT – PART 3-2

Life PBR Exemption

This section of the Supplement should be completed by a company that has filed and been granted a Life PBR Exemption from its state of domicile.

If a company has been granted a Life PBR Exemption, the company must indicate the source of the Life PBR Exemption, which could be defined in a state statute, a state regulation or in the NAIC-adopted Valuation Manual. If the source of the granted Life PBR Exemption is not the NAIC-adopted Valuation Manual, the company must disclose the criteria of the state’s Life PBR Exemption that the company has met, and the company must disclose the minimum reserve requirements that are required by the state of domicile. If the minimum reserve requirements of the state of domicile are the same as those specified in the NAIC-adopted Valuation Manual, the company may indicate: “Same as NAIC VM”.

Companies whose individual ordinary life business is exempted from the requirements of VM-20 pursuant to a Life PBR Exemption are not required to complete Part 1 of this VM-20 Supplement.

VM-20 RESERVES SUPPLEMENT – PART 4-3

Other Exclusions from Life PBR

Questions 1 and 2 of this section of the Supplement should be completed by a company that has filed and been granted a Single State Exemption from the reserve requirements of VM-20 by its state of domicile pursuant to requirements similar to the optional Section 15 of the NAIC Standard Valuation Law (#820). The response to question 2 should be “Yes” if the company has any business assumed that relates to issues outside the state of domicile.

Question 3 of this section of the Supplement should be completed by a company if all its life business is excluded from the requirements of VM-20 pursuant to Section II.B of the Valuation Manual.

Companies responding “Yes” to question 1 are not required to complete Part 1 of this VM-20 Supplement if all of their individual ordinary life business was covered under the Single State Exemption. Companies responding “YES” to question 3 are not required to complete Part 1 of this VM-20 Supplement.

### VM-20 RESERVES SUPPLEMENT – PART 3-2

**Life PBR Exemption**  
*For The Year Ended December 31, 20__*  
*(To Be Filed by March 1)*

**Life PBR Exemption as defined in the NAIC adopted Valuation Manual (VM)**

1. Has the company filed and been granted a Life PBR Exemption from the reserve requirements of VM-20 of the Valuation Manual by their state of domicile?  
   Yes [   ] No [   ]

2. If the response to Question 1 is "Yes", then check the source of the granted “Life PBR Exemption” definition? (Check either 2.1, 2.2 or 2.3)

   2.1 NAIC Adopted VM  
   2.2 State Statute (SVL)  
   a. Is the criteria in the State Statute (SVL) different from the NAIC adopted VM?  
      Yes [   ] No [   ]
   b. If the answer to "a" above is “Yes”, provide the criteria the state has used to grant the Life PBR Exemption (e.g., Group/Legal Entity criteria) and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................

   2.3 State Regulation  
   a. Is the criteria in the State Regulation different from the NAIC adopted VM?  
      Yes [   ] No [   ]
   b. If the answer to "a" above is “Yes”, provide the criteria the state has used to grant the Life PBR Exemption (e.g., Group/Legal Entity criteria) and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................
      .................................................................................................................................

IDENTIFICATION OF ITEM(S) TO CHANGE

The proposal will require appointed actuaries to attest to meeting Continuing Education (CE) requirements and participate in the CAS/SOA CE review procedures, if requested. These proposed changes were adopted by the Task Force on Jan. 28, 2020.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

As charged by the Property and Casualty Insurance (C) Committee to ensure continued competence of appointed actuaries, the revisions would implement the CAS and SOA P/C Appointed Actuary Continuing Education Verification Process.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:________________________

Other Comments:________________________

** This section must be completed on all forms. Revised 7/18/2018
ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of the Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the Annual Statement Instructions – Property and Casualty.

Upon initial engagement, the Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

a. Name and title (and, in the case of a consulting actuary, the name of the firm).

b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).

c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

If subject to the U.S. Qualification Standards, the Appointed Actuary shall annually attest to having met the continuing education requirements under Section 3 of the U.S. Qualification Standards for issuing Actuarial Opinions. As agreed with the actuarial organizations, the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) will determine the process for receiving the attestations for their respective members and make available the attestations to the public. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall select one of the above organizations to submit their attestation.

In accordance with the CAS and SOA’s continuing education review procedures, an Appointed Actuary who is subject to the U.S. Qualification Standards and selected for review shall submit a log of their continuing education in a form determined by the CAS and SOA. The log shall include categorization of continuing education approved for use by the Casualty Actuarial and Statistical Task Force. As agreed with the actuarial organizations, the CAS and SOA will provide an annual consolidated report to the NAIC identifying the types and subject matter of continuing education being obtained by Appointed Actuaries. An Appointed Actuary subject to the U.S. Qualification Standards and not a member of the CAS or SOA shall follow the review procedures for the organization in which they submitted their attestation.

The Appointed Actuary shall provide to the Board of Directors qualification documentation on occasion of their appointment, and on an annual basis thereafter, directly or through company management. The documentation should include brief biographical information and a description of how the definition of “Qualified Actuary” is met or expected to be met (in the case of continuing education) for that year. The documentation should describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion. The Board of Directors shall document the company’s review of those materials and any other information they may deem relevant, including information that may be requested directly from the Appointed Actuary. The qualification documentation shall be considered workpapers and be available for inspection upon regulator request or during a financial examination.

Anticipated Effective Date: Annual 2020

IDENTIFICATION OF ITEM(S) TO CHANGE

Remove Line 24.04 from the General Interrogatories, Part 1 and renumber remaining lines for Interrogatory Question 24. Modify Lines 24.05 and 24.06 to require reporting amounts for conforming and non-conforming collateral programs.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Interrogatory Questions 24.05 and 24.06 are completed dependent on the answer to Question 24.04 which works for companies that have either all conforming or all non-conforming collateral programs. When a company has both, only the collateral amount of the conforming programs is captured. This proposal allows the capture of the amount of collateral for both conforming and non-conforming collateral programs when a company has both.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: ________________________________

Other Comments: ________________________________

** This section must be completed on all forms. Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

GENERAL INTERROGATORIES

PART 1 – COMMON INTERROGATORIES

INVESTMENT

24. For the purposes of this interrogatory, “exclusive control” means that the company has the exclusive right to dispose of the investment at will, without the necessity of making a substitution thereof. For purposes of this interrogatory, securities in transit and awaiting collection, held by a custodian pursuant to a custody arrangement or securities issued subject to a book entry system are considered to be in actual possession of the company.

If bonds, stocks and other securities owned December 31 of the current year, over which the company has exclusive control are: (1) securities purchased for delayed settlement, or (2) loaned to others, the company should respond “NO” to 24.01 and “YES” to 25.1.

24.03 Describe the company’s securities lending program, including value for collateral and amount of loaned securities, and whether the collateral is held on- or off-balance sheet. Note 17 of Notes to Financial Statement provides a full description of the program.

24.04 A company with a conforming securities lending program as defined in the risk-based capital instructions should respond “YES.”

24.045 Report amount of collateral for conforming programs as outlined in the Risk-Based Capital Instructions (24.04 answer is “YES”).

24.056 Report amount of collateral for other programs (24.04 answer is “NO”).

24.1091 The fair value amount reported should equal the grand total of Schedule DL, Part 1, Column 5 plus Schedule DL, Part 2, Column 5.

The fair value amount reported amount should also equal the fair value amount reported in Note 5E(5)a1(m).

24.1092 The book adjusted/carrying value amount reported should equal the grand total of Schedule DL, Part 1, Column 6 plus Schedule DL, Part 2, Column 6.

24.1093 The payable for securities lending amount reported should equal current year column for payable for securities lending line on the liability page.
ANNUAL STATEMENT BLANK – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

GENERAL INTERROGATORIES

PART 1 – COMMON INTERROGATORIES

Detail Eliminated to Conserve Space

INVESTMENT

24.01 Were all the stocks, bonds and other securities owned December 31 of current year, over which the reporting entity has exclusive control, in the actual possession of the reporting entity on said date? (other than securities lending programs addressed in 24.03)
Yes [ ] No [ ]

24.02 If no, give full and complete information, relating thereto

24.03 For securities lending programs, provide a description of the program including value for collateral and amount of loaned securities, and whether collateral is carried on or off-balance sheet. (an alternative is to reference Note 17 where this information is also provided)

24.04 Does the company's security lending program meet the requirements for a conforming program as outlined in the Risk-Based Capital Instructions?
Yes [ ] No [ ] N/A [ ]

24.05 For the reporting entity’s security lending program, report amount of collateral for conforming programs as outlined in the Risk-Based Capital Instructions.
$ _____________________

24.06 For the reporting entity’s securities lending program, report amount of collateral for other programs.
$ _____________________

24.08 Does the reporting entity non-admit when the collateral received from the counterparty falls below 100%?
Yes [ ] No [ ] N/A [ ]

24.09 Does the reporting entity or the reporting entity’s securities lending agent utilize the Master Securities Lending Agreement (MSLA) to conduct securities lending?
Yes [ ] No [ ] N/A [ ]

24.10 For the reporting entity’s securities lending program, state the amount of the following as of December 31 of the current year:

24.101 Total fair value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2
$ _____________________

24.102 Total book adjusted/carrying value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2
$ _____________________

24.103 Total payable for securities lending reported on the liability page

#### IDENTIFICATION OF ITEM(S) TO CHANGE

Modify the columns and rows on the blank pages for the Long-Term Care Experience Reporting Forms 1 through 5 and make appropriate changes to the instructions for those forms.

#### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Changes are proposed to provide more accurate and useful information to regulators and their customers, and to facilitate greater consistency among and ease of reporting by insurers.

© 2020 National Association of Insurance Commissioners
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH AND PROPERTY

LONG-TERM CARE INSURANCE EXPERIENCE REPORTING FORMS 1 THROUGH 5

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue). If a policy form has had no policies in force and all claims on the policy form have been settled for more than one year, then the policy form is no longer reported on Forms 1, 2 and 4.

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2010, and 2011 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Form 1 focuses on the critical assumptions of morbidity and persistency while still presenting loss ratio data (without the level of detail in the original forms). As noted in the instructions specific to the form, prior year values will be filled in over time. Only information as of 2009 and subsequent years is required on the forms, unless it was required on the previous Long-Term Care Insurance Experience Reporting Forms. Companies are not required to supply information for spaces on the forms corresponding to any year prior to adoption of the forms, unless that information was previously reported. Form 2 focuses on the developing level of funds from the issue age premium basis and compares this to the active life reserve. As noted in the instructions specific to the form, prior year values will be filled in over time. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 is to include life and annuity products that are not exempt as outlined in the Long-Term Care Insurance Model Regulation. Form 5, which replaces the LTC experience Form C, requires information at the state level. In addition to the considerable changes in the structure and purpose of the forms, the new forms are based on adding additional calendar years of experience to prior results. To more appropriately compare the actual results with expectations, the expected values are based on the exposure at the beginning of that year, not the original assumed sales distribution used when completing the original forms.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident and health annual statement. The list of the various annual statements is: life/fraternal, accident and health, property/casualty and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.
Experience for LTC insurance should be reported separately by stand-alone LTC policy form or by rider where experience is to be reported by form. Reporting by rider is applicable only to riders having distinct premiums for LTC coverage that are attached to products other than stand-alone LTC policies. Experience under forms that provide substantially similar coverage and provisions, that are issued to substantially similar risk classes and that are issued under similar underwriting standards, may be combined. If this option is utilized, the forms combined should be identified in the column captioned “Policy Form.”

Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods:

1. If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.

2. If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve would be the paid-up value and future incurred claims will be only for LTC benefits.

Report using (1) above unless there are system limitations which require data to be entered under assumption (2).

When reporting dollar amounts, report the amount in thousands ($000 omitted). For non-dollar values, do not truncate the amounts.

Definition of Incurred Claims:

The amount of developed claims incurred during the calendar year is equal to the present value of all claim payments during the year and any changes in claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

- Paid claims in the year of incurrar are discounted one-quarter year.
- Paid claims subsequent to the year of incurrar are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 of Form 3 are discounted from the valuation date to the midpoint of the incurred year.

If

\[ iy = \text{Incurred year} \]
\[ T = \text{Report year} – \text{incurred year} \]
\[ v = \text{Discount rate} \]
\[ \text{Paid Claims}_{t}^{iy} = \text{Paid claims during current or prior calendar year } t \text{ from claims incurred in year } iy \]
\[ \text{Case Reserve}_{t}^{iy} = \text{Case reserve at end of calendar year } t \text{ from claims incurred in } iy \]
\[ \text{Transferred Reserve}_{t}^{iy} = \text{Transferred reserve at end of calendar year } t \text{ from claims incurred in } iy \]
t = iy, iy+1, iy+2, ..., iy + T

then the Present Value of Incurred Claims for incurred year iy:

For T=0
\[ \text{iyPaid Claims}_0 \times v^{iy/2} + \text{iyCase Reserve}_0 \times v^{iy/2} + \text{iyIBNR}_0 \times v^{iy/2} + \text{iyTransferred Reserve}_0 \times v^{iy/2} \]

For T>0
\[ \text{iyPaid Claims}_0 \times v^{iy/2} + (\text{iy+1Paid Claims}_0 \times v^{iy+1/2}) + \text{iy+2Paid Claims}_0 \times v^{iy+2/2} + \ldots + (\text{iy+TPaid Claims}_0 \times v^{iy+T/2}) + \text{iy+TCase Reserve}_0 \times v^{iy+T/2} + (\text{iy+TIBNR}_0 \times v^{iy+T/2}) + \text{iy+TTransferred Reserve}_0 \times v^{iy+T/2} \]

If a portion of the IBNR is held for years other than the current calendar year, the value in the parentheses should be used.

The total case reserves and IBNR equal the portion of the total direct liability attributable to LTC business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health & fraternal) attributable to LTC business for life, accident & health and fraternal only.

This amount includes accrued and unaccrued claims liabilities that are incurred but not yet paid, both reported and not reported.
INSTRUCTIONS FOR FORM 1  
Stand-Alone LTC Only ($000 Omitted)

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual premium, claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons for direct, assumed, and ceded business are exhibited.

OVERVIEW

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual claims and persistency against expected on a nationwide basis. Certain group business is reported separately from individual and some group business. (See Section 4(E) of the Long-Term Care Insurance Model Act.) Policy forms are grouped into three categories: comprehensive, institutional only or non-institutional. Yearly and cumulative comparisons are exhibited. Even though only policy form groupings are displayed, policy form level information should be kept. It may facilitate rating reviews by the regulators. If a policy form has had no policies in force and all claims on the policy form have been settled for more than one year, then the policy form is no longer reported on this form.

DEFINITIONS AND FORMULAS

**Comprehensive**

Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

**Institutional Only**

Policy forms that provide institutional coverage only.

**Non-Institutional Only**

Policy forms that provide only non-institutional coverage.

**Current**

Current calendar year of reporting.

*Example:* For a specific policy form category, the first year of issue was 2001. This Form 1 is required starting for the year 2009 and the reporting year is 2011. The current year would be 2011.

**Prior**

The year immediately prior to the year of reporting.

*Example:* 2010

**2nd Prior**

Two years prior to the year of reporting.

*Example:* 2009

**3rd Prior**

Three years prior to the year of reporting.

*Example:* Blank, because the first year of reporting is 2009.
4th Prior

Four years prior to the year of reporting.

Example: Blank, because the first year of reporting is 2009.

5th Prior

Five years prior to the year of reporting.

Example: Blank, because the first year of reporting is 2009.

Form Inception-to-Date

Aggregate experience data since the adoption of this Form 1.

Example: Data from 2009 through 2011.

Actual and expected in force counts are sums of counts for all years since adoption of Form 1.

Total Inception-to-Date

Aggregate experience data since issuance of policies.

Example: Data from 2001 through 2011.

Assumed/Ceded Rows

Does not include YRT reinsurance transactions. For columns that are reported as “Number of” (count) rather than an amount, assumed/ceded business is only recorded here if the business is 100% coinsured.

Column 1 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, Line 10.3 for Individual Business section and Line 12 Group Business section.

Column 2 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

If $iy$ = Incurred year
$T$ = Report year – incurred year
$V$ = Discount rate
$\text{Paid Claims}_{iy, t}$ = Paid claims during claim duration $t$ from claims incurred in year $iy$, $t = 0, 1, 2, 3, \ldots T$
$\text{Case Reserve}_{iy}$ = Case reserve at end of report year from claims incurred in $iy$
**Incurred claims for incurred year iy:**

**For** \( T=0 \)

\[
\text{Paid Claims}_i \times v^{\frac{1}{2}} + \text{Case Reserve}_i \times v^{\frac{1}{2}} + \text{IBNR}_i \times v^{\frac{1}{2}}.
\]

**For** \( T>0 \)

\[
\text{Paid Claims}_i \times v^T + \text{Paid Claims}_i \times v^{T-1} + \text{Paid Claims}_i \times v^{T-2} + \ldots + \text{Paid Claims}_i \times v^1 + \text{Paid Claims}_i \times v^0 + \text{Case Reserve}_i \times v^{T+\frac{1}{2}} + (\text{IBNR}_i \times v^{T+\frac{1}{2}})
\]

This is the developed claim amounts for claims incurred during the specific calendar year. For each claim, the incurred claim equals the present values of all claim payments and the present value of any outstanding case reserve. This will be different from the reported financial incurred claims. The financial incurred claims, including the change in claim reserves that contains gain or loss due to reserve estimation different from actual payments for claims incurred in prior years.

For purposes of the present value calculation, assume all payments are made in the middle of the calendar year and the case reserve is at the end of the calendar year. The discount rate is the statutory valuation interest rate for case reserve. For the current calendar year, an Incurred But Not Reported (IBNR) reserve should be assigned. If a portion of the IBNR is held for years other than the current calendar year, the value in the parentheses should be used.

The total case reserves and IBNR equal the portion of the direct liability attributable to long term care business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business for life, accident & health and fraternal only. This amount includes accrued and unaccrued claims liabilities, which are incurred but not yet paid, both reported and not reported.

The incurred claims should be consistent with the claims exhibited on Form 3.

**Column 3** — **Number of Claims Opened**

The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

**Column 4** — **Number of Claims Closed**

Number of claims that had been opened, which became closed during the year due to recovery, exhaustion of benefits, or death.

**Column 5** — **Number of Claims Remaining Open**

Open claims are all claims that have been opened at any date, but have not been closed as of the end of the year.

**Column 6** — **Number of Terminations**

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

<td></td>
<td>Total amount of any other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business. A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Column 3</th>
<th>Valuation Expected Incurred Claims</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The expected claim cost for an individual covered under a policy in force at the beginning of the calendar year based on statutory active life reserve morbidity assumption. This is the interpolation of successive policy year expected claim cost for all coverages in force at the beginning of the year. Simple averaging is acceptable. An acceptable approximation is the expected claim cost multiplied by an exposure adjustment, where expected claim cost is the sum of claim costs during the year based on the valuation morbidity assumption of each life in force at the beginning of the year. The valuation claim cost during the year is an interpolation of successive claim costs by policy year. Other approximations may also be acceptable. Any changes in method should be disclosed on the form. The exposure adjustment is:</td>
</tr>
</tbody>
</table>

\[
\text{Exposure Adjustment} = \frac{\text{Actual Number of Lives In Force at Beginning of Year} - (\text{Expected Deaths} + \text{Expected Lapses})}{2} \div \text{Actual Number of Lives In Force at Beginning of Year},
\]

where Expected Deaths and Expected Lapses are based on valuation assumptions. They can be derived from a single average decrement rate combining deaths and lapses, or specific decrement rates applying to actual exposures. If there is no in force at the beginning of the year, the expected claim cost can be zero. |

---

2 If active life reserves are not held for claimants, then exclude the claimants.

© 2020 National Association of Insurance Commissioners
Column 4 — Actual to Expected Incurred Claims

Actual incurred claims as a percentage of valuation expected incurred claims.

Column 5 — Open Claim Count

Number of claims that have at least one benefit payment made during the year after the elimination period. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. Examples are payments of caregiver training benefits and optional care coordination benefits. For these examples, if the amounts paid are included as benefits under the policy, they should be included in the claim amounts but excluded from the claim counts. A claim should be included in the count, even though it has terminated by the end of the year.

Column 6 — New Claim Count

Number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A new claim should be included in the count even though it has terminated by the end of the year.

Column 7 — Lives In Force End of Year

Actual number of lives in force at the end of the year. Joint policies should be counted by number of lives.

Column 8 — Expected Lives In Force End of Year

Expected number of lives in force at the end of the year:

\[
\text{Actual Number of Lives In Force at Beginning of Year} + \text{New Issue Lives} - \text{Expected Deaths} - \text{Expected Lapses},
\]

where Expected Deaths and Expected Lapses are based on valuation assumptions. They can be derived from a single average decrement rate combining deaths and lapses or specific decrement rates applying to actual exposures. Joint policies should be counted by number of lives.

Column 9 — Actual to Expected Lives In Force

Actual number of lives in force as a percentage of expected number of lives in force at the end of the year.

NOTES

1. Form 1 applies to direct business only.

2. Prior years’ figures, except for incurred claims, should be the same as the figures from prior years’ Form 1.

3. Form Inception-to-Date figures, except for incurred claims, should be the corresponding figures from prior year Form 1 plus the figures for the current year. No interest discounting is required to determine Form Inception-to-Date and Total Inception-to-Date figures.

4. If Incurred But Not Reported reserves must be allocated by policy form, the allocation should be based on paid claims and change in case reserves.
5. Use the valuation assumptions corresponding to the current reserves being held. They are not necessarily the original reserve assumptions if strengthening or release of reserves has been made in the past. The assumptions for each year should be applied to the actual in-force (age, gender, plan distribution), not the distribution originally expected or issued.

6. An insurance company may use more refined methods in determining the required information than those described in the definitions and instructions. Methods must be consistent from report year to report year.
INSTRUCTIONS FOR FORM 2
Direct Individual Experience – Stand-Alone Only ($000 Omitted)

Primary Issue Period Splits

Experience data for each policy should be aggregated in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

OVERVIEW

The purpose of Form 2 is to calculate a ratio of an experience reserve to the reported reserve by calendar year on a nationwide basis. Summary data by policy form is to be reported. Data for the current reporting year, as well as that reported in each of the prior two reporting years, is to be shown on Form 2.

The following formulae specify data by calendar duration (t) and calendar year of issue (n). Data at this detail is required for the calculation of the experience reserve, although only totals by policy form are illustrated. Experience data is notated by a superscript E to distinguish from valuation assumptions. The experience reserve reported in column 13 is developed from: 1) the experience reserve at the end of the prior reporting year (t-1); 2) valuation net premiums and interest rates; and 3) experience incurred claims, earned premiums, and actual persistency. The valuation net premiums used are the actual net premiums used for that reporting year. As an example, if a factor file method is used, the valuation net premiums used to calculate the reserve factors would be used for Form 2.

For 2009, the experience reserve (column 13) was calculated using the reported reserve as of the end of 2008 as the prior year’s reserve. Similarly, for acquired business, the experience reserve as of the year-end following acquisition is set equal to the reported reserve as of that date. The experience reserve as of subsequent periods is developed from the first experience reserve reported in this form. If a policy form has had no policies in force and all claims on the policy form have been settled for more than one year, then the policy form is no longer reported on this form.

Experience and valuation data are reported by base policy form. Rider forms will be reported with the base forms to which they are attached.

Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

DEFINITIONS AND FORMULAS

Current

Current calendar year of reporting.

Total Inception-to-Date

Aggregate experience data since issuance of policies.

Comprehensive

Policies that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.
Institutional Only

Policies that provide institutional coverage only.

Non-Institutional Only

Policies that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain in force as of 12/31.

Column 2 – Percent Male Lives Insured

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.

Column 3 – Average Attained Age

Arithmetic mean of the attained ages of all in force policyholders in the block at year end.

Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, Line 10.3 for Individual Business section and Line 12 Group Business section.

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 – Number of Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Number of Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – Number of New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
Column 3 — Last Year Issue

For closed blocks of business, report the last year a policy was issued for the policy form. For open blocks of business, leave blank.

Column 4 — Earned Premiums

\[ \text{EP}_n = \text{The direct earned premium in calendar duration } t \text{ for all business of Calendar Year of Issue (CYI) } n. \]

Include earned premiums only for the reporting year. Total direct earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2 for life, accident & health, fraternal and property/casualty only.

Column 5 — Incurred Claims

\[ \text{IC}^t_n = \text{The experience incurred claims of all business of CYI } n \text{ in calendar duration } t \text{ for the reporting year.} \]

Where:

\[ \text{(Paid Claims)}_n = \text{The paid claims of all business of CYI } n \text{ in calendar duration } t \text{ for the reporting year. Paid claims is the total direct paid claims for LTC business from Exhibit 8, Part 2, Line 1.1 for life, accident & health and fraternal only.} \]

\[ i_n = \text{The valuation interest rate for CYI } n. \]

\[ \text{CLiab}^t_n = \text{The claim liability of all business of CYI } n \text{ in calendar duration } t \text{ for the reporting year. CLiab}^t_n \text{ is the portion of the total direct claim liability attributable to LTC business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business for life, accident & health and fraternal only. This amount includes accrued and unaccrued claims liabilities, which are incurred but not yet paid, both reported and not reported.} \]

\[ \text{CLiab}^{t-1}_n = \text{The claim liability of all business of CYI } n \text{ in calendar duration } t-1 \text{ for the prior reporting year. CLiab}^{t-1}_n \text{ is the total direct claim liability for LTC business from Exhibit 8, Part 2, Line 4.1 (life, accident & health and fraternal) of the current year’s annual statement plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business on the prior year’s annual statement for life, accident & health and fraternal only. This amount includes accrued and unaccrued claims liabilities that were incurred but not paid at the prior year end, both reported and not reported.} \]

Column 6 — Loss Ratio

\[ \text{LR}_n = \text{The incurred claims loss ratio in calendar duration } t \text{ for all business of CYI } n. \]

\[ \text{LR}_n = \frac{\text{IC}^t_n}{\text{EP}_n} \]

Column 6 = Column 5 / Column 4 x 100
Column 7 — Annual Net Premium/Annual Gross Premium

The ratio of annual net premium to annualized gross premium.

Annual Net Premium = \sum (annual valuation net premiums for policies issued in calendar year \( n \) at the start of calendar duration \( t \)). Companies may report zero (0) for the net premiums during the Preliminary Term period.

Annual Gross Premium = \sum (Annualized Premium In Force, including mode loadings for policies issued in calendar year \( n \) at the start of calendar duration \( t \)). For calendar duration 0, the net premiums and gross premiums at issue should be used.

Column 8 — Current Year Net Premiums

\( tPn = \) The annual valuation net premium for all business of CYI \( n \) in calendar duration \( t \).

\( tPn = EPn \times \sum (annual valuation net premiums for policies issued in calendar year \( n \) at the start of calendar duration \( t \))/\sum (Annualized Premium In Force for policies issued in calendar year \( n \) at the start of calendar duration \( t \)). At the detail level of CYI \( n \) and calendar duration \( t \), Column 8 = Column 4 x Column 7.

Column 9 — In Force Count Beginning of Year

\( t_{-1}IFn = \) The in force count in calendar duration \( t-1 \) for all business of CYI \( n \) at the end of the calendar year preceding the reporting year. In Force Count Beginning of Years should equal in force end of prior year from the Exhibit of Number of Policies (Accident and Health Insurance, Line 1) for LTC business for life, accident & health and fraternal only.

Column 10 — New Issues Current Year

The new issues count during the reporting year. New Issues Current Year should equal issued during year from the Exhibit of Number of Policies (Accident and Health Insurance, Line 2) for LTC business for life, accident & health and fraternal only.

Column 11 — In Force Count End of Year

\( tIFn = \) The in force count in calendar duration \( t \) for all business of CYI \( n \) at the end of the reporting year. In Force Count End of Years should equal in force end of year from the Exhibit of Number of Policies (Accident and Health Insurance, Line 9) for LTC business for life, accident & health and fraternal only.

Column 12 — Persistency Rate

\[
\text{Persistency Rate} = \frac{(Column 11 - .5 \times Column 10)}{(Column 9 + .5 \times Column 10)}
\]
Column 13 — Experience Policy Reserves

\[ V_{n}^{E} = \left( V_{n-1}^{E} + P_{n} \right) \times (1 + i_{n}) - tIC_{n} \times (1 + i_{n})^{1/2} \]

Where:

- \( V_{n}^{E} \) = The experience reserve as of the end of the reporting year for calendar duration \( t \), and CYI \( n \).
- \( V_{n-1}^{E} \) = The experience reserve as of the end of the prior reporting year for calendar duration \( t-1 \), and CYI \( n \). For the first filing of this form, the experience reserve as of the second prior year is set equal to the reported reserve as of that date.
- \( P_{n} \) = The annual valuation net premium for all business of CYI \( n \) in calendar duration \( t \). The total for the reporting year is the amount reported in Column (8).
- \( i_{n} \) = The valuation interest rate for CYI \( n \).
- \( tIC_{n} \) = The experience incurred claims for all business of CYI \( n \) in calendar duration \( t \). The total amount for the reporting year is reported in Column (5).

Column 14 — Reported Policy Reserves

The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health and fraternal only.

Column 15 — Experience: Reported Ratio

\[ \text{Column 15} = \frac{\text{Column 13}}{\text{Column 14}} \times 100 \]

Section C — Summary

Line 1 — Total Current — Individual = Sum of each Section A, Line 1 (all policy forms)
Line 2 — Total Prior — Individual = Sum of each Section A, Line 2 (all policy forms)
Line 3 — Total 2nd Prior — Individual = Sum of each Section A, Line 3 (all policy forms)
Line 4 — Total Current — Group = Sum of each Section B, Line 1 (all policy forms)
Line 5 — Total Prior — Group = Sum of each Section B, Line 2 (all policy forms)
Line 6 — Total 2nd Prior — Group = Sum of each Section B, Line 3 (all policy forms)
Line 7 — Current Year Total = Section C, Line 1 + Section C, Line 4
INSTRUCTIONS FOR FORM 3
LTC Experience Development ($000 Omitted)

The purpose of this form is to test the adequacy of claim reserves held on long-term care policies. This form allows for the
development of a seven-year trend of losses incurred by incurred calendar a specific year group of claimants. This form is to
be prepared on a nationwide basis.

Report all dollar amounts in thousands ($000 omitted).

Part 1 – Total Amount Paid Policyholders

Show paid claims by year paid and year incurred. Claims are on a direct basis, including transfers before any reinsurance.
Claims incurred prior to the year shown on Line 2 should be included in Column 1.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will
include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These
policies will be recorded in these parts of this exhibit while the company owns them.

Part 2 – Sum of Total Amount Paid Policyholders and Claim Liability and Reserve Outstanding at End of Year

This section provides a claim cost development overview to show the adequacy of claim reserves for a particular incurral
year at the end of that year and at the end of subsequent years. The entry in Line X and Column Y is the cumulative claims
incurred during year X and paid through the end of year Y for claims incurred in year X, plus the reserve at the end of year Y
for claims incurred in year X.

Claims are on a direct basis including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2
should be included in Line 1, Columns 1 through 8.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will
include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These
policies will be recorded in these parts of this exhibit while the company owns them.

Part 3 – Transferred Reserves

Claim reserves for transfer claims (acquired or sold) are shown here, by claim incurred year, starting from the year of
transfer. For sold business, the entries are positive. For acquired business, the entries are negative. For years after the transfer
year, the reserves are increased with interest.

Claim reserves for the buyer are the reserves initially set by the buyer, not necessarily equal to the reserves for the seller.

Part 4 – Present Value of Incurred Claims (Interest Adjusted Development of Incurred Claims)

Because claim reserves for long-duration claims are generally discounted, the year-to-year comparison in Part 2 is misleading
to the extent interest income on claim reserves is material. To show consistent values; paid claims; transferred reserves and
claim reserves are discounted to a common point in time (assumed to be July 1 of the incurred year). The discount rate is the
statutory valuation interest rate for case reserves.
• Paid claims in the year of incurral are discounted one-quarter year.

• Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.

• Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 are discounted from the valuation date to the midpoint of the incurred year.

• Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

If $i_y$ = Incurred year

$T$ = Report year – incurred year

$v$ = Discount rate

$\text{tPaid Claims}_{i_y}$ = Paid claims during current or prior calendar year $t$ from claims incurred in year $i_y$

$\text{Case Reserve}_{i_y}$ = Case reserve at end of calendar year $t$ from claims incurred in $i_y$

$\text{Transferred Reserve}_{i_y}$ = Transferred reserve at end of calendar year $t$ from claims incurred in $i_y$ and

$t = i_y, i_y+1, i_y+2, \ldots, i_y+T$

then the Present Value of Incurred Claims for incurred year $i_y$:

For $T=0$

$$\text{tPaid Claims}_{i_y} \times v^{t/4} + \text{Case Reserve}_{i_y} \times v^{t/2} + \text{IBNR}_{i_y} \times v^{t/2} + \text{Transferred Reserve}_{i_y} \times v^{t/2}$$

For $T>0$

$$\text{tPaid Claims}_{i_y} \times v^{T/4} + \text{tPaid Claims}_{i_y+1} \times v^{T} + \text{tPaid Claims}_{i_y+2} \times v^{T} + \ldots + \text{tPaid Claims}_{i_y+T} \times v^{T}$$

$$+ \text{Case Reserve}_{i_y} \times v^{T+T/2} + (\text{IBNR}_{i_y} \times v^{T+T/2}) + \text{Transferred Reserve}_{i_y} \times v^{T+T/2}$$

If a portion of the IBNR is held for years other than the current calendar year, the value in the parentheses should be used.

The total case reserves and IBNR equal the portion of the total direct liability attributable to LTC business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business for life, accident & health and fraternal only. This amount includes accrued and unaccrued claims liabilities that are incurred but not yet paid, both reported and not reported.
INSTRUCTIONS FOR FORM 4
Direct Group Experience – Stand-Alone Only ($000 Omitted)

OVERVIEW

Long-Term Care Insurance Experience Reporting Form 4 is intended to track life insurance and annuity products that have long-term care benefits provided by acceleration of certain benefits within these products. Include only the products that are not exempt as outlined in the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio, and premium rate increases also defined as “incidental” at the beginning of these experience forms instructions). This form is not to include stand-alone LTC products. Individual and group business is separated in this form.

DEFINITIONS AND FORMULAS

Current

Current calendar year of reporting.

Example: For a specific policy form category, the first year of issue was 2001. This Form 4 is required starting for the year 2009 and the reporting year is 2010. The current year would be 2010.

Prior

The year immediately prior to the year of reporting.

Example: 2009

2nd Prior

Two years prior to the year of reporting.

Example: Blank, because the first year of reporting is 2009.

Total Inception-to-Date

Aggregate experience data since issuance of policies or certificates.

Example: Data from 2001 through 2010.

Comprehensive

Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

Institutional Only

Certificates that provide institutional coverage only.

Non-Institutional Only

Certificates that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain in force as of 12/31.

INSTRUCTIONS FOR FORM 5
Standalone and Hybrid Products – Direct State Reporting ($000 Omitted)

Form 5 provides LTC sales and claims experience on a state-by-state basis. These are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on life policies or annuity contracts.

OVERVIEW

For long-term care insurance reported in the Long-Term Care Insurance Experience Reporting Form 1, Form 2 and Form 3, these lines are the state’s portion of the earned premium, incurred claims and number of in force count of lives at end of the year. A schedule must be prepared for each jurisdiction in which the company has long-term care direct earned premiums and/or has direct incurred claims. In addition, a schedule must be prepared that contains the grand total (GT) for the company.

DEFINITIONS AND FORMULAS

Current

Current calendar year of reporting.

Total Inception-to-Date

Aggregate experience data since issuance of policies.

Stand-alone LTC

An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Hybrid Accelerated Benefits Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Hybrid Extension of Extended Benefit Riders

Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – Number of New Lives Insured

Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

Column 2 – Number of Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 3 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.
Column 4 — Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 5 — Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 — Number of Claims Remaining Open

Open claims are all claims that have been opened at any date but have not been closed as of the end of the year.

Column 7 — Number of Claims Opened

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 8 — Number of New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 9 — Accelerated Benefits Available

Maximum amount of death benefits available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders on in force business.

Column 10 — Extended Benefits Available

Maximum amount of extended benefits available to policyholders with extension of benefit riders on in force business.

Policy forms should be grouped by individual and group and reported on Lines 1 and 2, respectively. The subtotals for these two classes (i.e., individual and group) must be provided. Line 3 is the sum of Lines 1 and 2.

Column 1 — Earned Premiums

Earned premiums reported should be the state amount that is included in the current year of Form 2, Part C, Column 4.

Grand Total Page:

Line 1 should equal the amount in Form 2, Part C, Column 4, Line 1.

Line 2 should equal the amount in Form 2, Part C, Column 4, Line 4.
Line 3 should equal the amount in Form 2, Part C, Column 4, Line 7.

For Line 4 “Actual total reported experience through prior year”, the amount will be Line 5 from the previous year’s report.

For Line 5 “Actual total reported experience through statement year”: should be the state’s allocated earned premium for the current year (as reported on Line 3) added to the state’s cumulative experience through prior year (as reported on Line 4).

Column 2 — Incurred Claims

Incurred claims reported should be the state amount that is included in the current year of Form 2, Part C, Column 5. Incurred claims should be paid claims in the state plus a reasonable allocation of claim reserves less the reported allocated portion of the prior year’s claim reserve. The allocation method should be consistent from year to year when estimating reserves for each state.

Grand Total Page:

Line 1 should equal the amount in Form 2, Part C, Column 5, Line 1.

Line 2 should equal the amount in Form 2, Part C, Column 5, Line 4.

Line 3 should equal the amount in Form 2, Part C, Column 5, Line 7.

For Line 4 “Actual total reported experience through prior year”, the amount will be Line 5 from the previous year’s form.

For Line 5 “Actual total reported experience through statement year”: This should be the state’s allocated incurred claims for the current year (as reported on Line 3) added to the state’s cumulative experience through prior year (as reported on Line 4).

Column 3 — In Force Count End of Year

The In Force Count End of Year should be the state total used in calculating the In Force Count End of Year in Form 2, Part C, Column 11.

Grand Total Page:

Line 1 should equal the amount in Form 2, Part C, Column 11, Line 1.

Line 2 should equal the amount in Form 2, Part C, Column 11, Line 4.

Line 3 should equal the amount in Form 2, Part C, Column 11, Line 7.

Column 4 — Lives In force End of Year

Actual number of lives in force at the end of the year. Joint policies should be counted by number of lives. Once the state forms are completed, the Lives In force End of Year for all states (Grand Total State Page) LTC Form 5, Column 4, Line 01 should equal LTC Form 1, Column 7, Line A01 + A09 + A17 and Form 5, Line 02 should equal Form 1, Line B01 + B09 + B17. The number of lives for each state for individual policies should be based on the policies that were issued in that state. The number of lives for each state in group policies should be based on the certificates that were issued in that state.

- [ ] Health (Life Supplement)

Anticipated Effective Date: Annual 2020

### IDENTIFICATION OF ITEM(S) TO CHANGE

A new Private Flood Insurance Supplement collecting residential and commercial private flood insurance data and revisions to the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages.

### REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The State Page currently collects private flood insurance data but does not split residential from commercial coverages. Regulators, as well as industry and consumers, have a desire to better monitor and assess the growth of the residential private flood insurance market as that market begins to grow. A new Supplement will separate residential from commercial as well as capturing stand-alone/endorsement and first dollar/excess policy information. The revisions to the CIEE will allow for the collection of lender-placed flood coverages in order to get a more complete picture of the private flood insurance market.

### NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

**This section must be completed on all forms.**

© 2020 National Association of Insurance Commissioners
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

PRIVATE FLOOD INSURANCE SUPPLEMENT

This supplement should be completed by those reporting entities including surplus line insurers and Risk Retention Groups that provide private flood insurance in a stand-alone policy or as part of a package policy. If the reporting entity’s answer to all of the question for Part 1 – Interrogatories would be “NO,” the reporting entity should not complete the supplement. If the reporting entity answers “YES” to any of those questions, the supplement should be completed. The supplement should be reported on a direct basis (before assumed and ceded reinsurance).

If the reporting entity reports any premium, losses or loss adjustment expense for Annual Statement Line 2.5 on the Exhibit of Premiums and Losses (State Page), it should answer “YES” to at least one of the Part 1 – Interrogatories questions and complete this supplement.

Stand-alone Policy: Private flood coverage sold as an individual policy or as a policy bundled with other policies.

Endorsement: Private flood coverage sold as an endorsement to another policy. If a rider, endorsement or floater acts like a separate policy with separate premium, deductible and limit, then it is to be recorded on the same annual statement line as if it were a stand-alone policy regardless of whether it is referred to as a rider, endorsement or floater. If there is no additional premium, separate deductible or limit, the rider, endorsement or floater should be reported on the same annual statement line as the base policy.

Creditor-placed (also known as lender-placed and force-placed insurance) is insurance that is placed by the lender subsequent to the date of the credit transaction, providing coverage against loss, expense or damage to collateralized property as a result of fire, theft, collision or other risks of loss that would either impair a creditor’s interest or adversely affect the value of collateral covered by limited dual-interest insurance. It is purchased by the lender according to the terms of the credit agreement as a result of the borrower’s failure to provide required insurance, with the cost of the coverage being charged to the borrower. It may be either single-interest insurance or limited dual-interest insurance.

Part 1 - Interrogatories

1 Answer “YES” if the reporting entity writes stand-alone first-dollar private flood insurance on residential property. Complete Part 2 if the question is answered “YES.”

2 Answer “YES” if the reporting entity writes stand-alone excess private flood insurance on residential property. Complete Part 3 if the question is answered “YES.”

3 Answer “YES” if the reporting entity writes first-dollar private flood insurance as an endorsement on residential property. Complete Part 4 if the question is answered “YES.”

4 Answer “YES” if the reporting entity writes excess private flood insurance as an endorsement on residential property. Complete Part 5 if the question is answered “YES.”

5 Answer “YES” if the reporting entity writes stand-alone or excess private flood insurance as a stand-alone policy or an endorsement on commercial property. Complete Part 6 if the question is answered “YES.”

</tbody>
</table>
### Column 7 – Defense and Cost Containment Case Incurred

For Lines 1 through 56, the sum of Parts 2 through 6 should equal Column 9, Line 2.5 of the corresponding Exhibit of Premiums and Losses (State Page) for the state.

For Line 57, the sum of Parts 2 through 6 should equal Column 9, Line 2.5 of the Exhibit of Premiums and Losses (State Page) – Grand Total.

### Column 8 – Defense and Cost Containment Case Unpaid

For Lines 1 through 56, the sum of Parts 2 through 6 should equal Column 10, Line 2.5 of the corresponding Exhibit of Premiums and Losses (State Page) for the state.

For Line 57, the sum of Parts 2 through 6 should equal Column 10, Line 2.5 of the Exhibit of Premiums and Losses (State Page) – Grand Total.

### Column 29 – Number of Policies In Force End of the Prior Year

Provide the number of policies in force as of the end of the prior reporting year, Dec. 31.

### Column 310 – Number of Policies In Force End of Current Year

Provide the number of policies in force as of the end of the current reporting year, Dec. 31.

### Column 311 – Number of Claims Open Beginning of the Current Year

Provide the number of claims open at the beginning of the reporting year, Jan. 1.

### Column 312 – Number of Claims Opened During the Reporting Year

Provide the number of claims opened during the reporting year.

### Column 313 – Number of Claims Open End of the Current Year

Provide the number of claims open at the end of the reporting year, Dec. 31.

### Column 314 – Number of Claims Closed with Payment

Provide the number of claims closed with payment for reporting year.
ANNUAL STATEMENT INSTRUCTIONS – PROPERTY AND LIFE/FRATERNAL

CREDIT INSURANCE EXPERIENCE EXHIBIT

10. Part 4 Coverage Definitions

Creditor-placed (also known as lender-placed and force-placed insurance) is insurance that is placed by the lender subsequent to the date of the credit transaction, providing coverage against loss, expense or damage to collateralized property as a result of fire, theft, collision or other risks of loss that would either impair a creditor’s interest or adversely affect the value of collateral covered by limited dual-interest insurance. It is purchased by the lender according to the terms of the credit agreement as a result of the borrower’s failure to provide required insurance, with the cost of the coverage being charged to the borrower. It may be either single-interest insurance or limited dual-interest insurance. “Creditor Placed Insurance” means insurance that is purchased unilaterally by the creditor, who is the named insured, subsequent to the date of the credit transaction, providing coverage against loss, expense or damage to property as a result of fire, theft, collision or other risks of loss that would either impair a creditor’s interest or adversely affect the value of collateral. “Creditor Placed Home Hazard” means “Creditor Placed Insurance” on homes, mobile homes and other real estate. “Creditor Placed Auto” means insurance on automobiles, boats or other vehicles.

“Single Interest” means insurance that protects only the creditor’s interest in the collateral securing a debtor’s credit transaction.

“Dual Interest” means insurance that protects the creditor’s and the debtor’s interest in the collateral securing the debtor’s credit transaction. “Dual Interest” includes insurance commonly referred to as “Limited Dual Interest.”

“Wind Only” means named-peril coverage for losses due to wind.
“Flood Only” means named-peril coverage for losses due to flood.

“First Dollar” means coverage for first dollar losses, not contingent to alternate coverage (for example, an NFIP policy).

“Excess” means coverage for excess amounts over and above another policy (for example, an NFIP policy).

“Credit Personal Property Insurance” means insurance written in connection with a credit transaction where the collateral is not a motor vehicle, mobile home or real estate and that:

1. Covers perils to the goods purchased through a credit transaction or used as collateral for a credit transaction and that concerns a creditor’s interest in the purchased goods or pledged collateral, either in whole or in part; or

2. Covers perils to goods purchased in connection with an open-end credit transaction.

11. Written Exposures (Line 6 – Part 4 only)

The total number of exposures, in car-years, of all policies issued during a given time period.
12. **Earned Exposures (Line 7 – Part 4 only)**

The portion of the total amount of exposure (risk) corresponding to the coverage provided during a given time period.

4+13. **Part 5 Coverage Definitions**

GAP insures the excess of the outstanding indebtedness over the primary property insurance benefits in the event of a total loss to a collateral asset. Primary property insurance refers to the underlying P&C insurance policy insuring the property, such as automobile physical damage insurance. For reporting experience in the CIEE, “Personal GAP” refers to contributory coverage for which the borrower pays the premium for the insurance and receives a certificate or policy of coverage.

“Credit Family Leave” provides a monthly or lump sum benefit during an unpaid leave of absence from employment resulting from specified causes, such as illness of a close relative, adoption or birth of a child. If the Credit Family Leave benefit is included with the involuntary unemployment benefit without a specific identifiable charge, Credit Family Leave experience may be included with the Involuntary Unemployment Experience in Part 3.

4214. **Part 6 Coverage Definitions**

This exhibit is to be completed on a nationwide basis. The expense definitions follow those used in the Insurance Expense Exhibit.

Anticipated Effective Date: Annual 2020

IDENTIFICATION OF ITEM(S) TO CHANGE

Modify Questions 3.1 and 3.2 of General Interrogatories Part 2 and provide instructions for the questions.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to clarify capturing whether reporting entities have written participating policies in the current calendar year and reporting amount of premium written for both participating and non-participating policies.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms.

© 2020 National Association of Insurance Commissioners 1
3.1 Answer “YES” if the reporting entity has issued participating policies during the calendar year.

Participating Policies:

An insurance contract where the ultimate policy premium is affected by profitability which could result in a change of premium for the policy period written. The effect on premium could be in the form of a dividend, a refund in premium, experienced based premium or additional premium billable.

3.2 If “Yes”, provide the amount of premium written for participating and/or non-participating policies during the calendar year.

ANNUAL STATEMENT BLANK – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

GENERAL INTERROGATORIES

PART 2 – PROPERTY & CASUALTY INTERROGATORIES

3.1 Did the reporting entity issue both participating and non-participating policies during the calendar year?

Yes [   ] No [   ]

3.2 If yes, state the amount of premium written for participating and/or non-participating policies during the calendar year.

$ _____________________

3.21 Participating policies
3.22 Non-participating policies

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Adjust the AVR presentation to include separate lines for each of the expanded bond designation categories.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The Blanks Working Group and the Security Valuation Office have adopted the 20 bond designations for 2020 reporting. The reported designations will flow into the RBC but will not include factors. The current factor for designations 1-6 will remain in the RBC until an impact analysis can be done to confirm the new factors for the 20 designations. This proposal applies the same expanded presentation to the AVR as it is used to populate the life RBC formula.

IDENTIFICATION OF ITEM(S) TO CHANGE

See next page for details.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to clarify where to find the list of funds that must have NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol provided on Schedule D, Part 2, Section 2 (annual filing) and Schedules D, Parts 3 and 4 (quarterly filing). Modify the reference to the Purposes and Procedures Manual of the NAIC Investment Analysis Office found in other investment instructions due to changes in the manual.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date:

Other Comments:

** This section must be completed on all forms. Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

Clarify the instructions for what funds reported on Schedule D, Part 2, Section 2 (annual filing) and Schedules D, Part 3 and 4 (quarterly filing) must have NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol.

Modify the reference to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* found in the following investment instructions.

**Annual Statement:**

- Investment Schedules General Instructions
- Summary Investment Schedule
- Schedule D, Part 1, Section 1
- Schedule D, Part 2, Section 2
- Schedule E, Part 2
- Supplemental Investment Interrogatories

**Quarterly Statement:**

- Investment Schedules General Instructions
- Schedule E, Part 2
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 2 – SECTION 2

COMMON STOCKS OWNED DECEMBER 31 OF CURRENT YEAR

Detail Eliminated to Conserve Space

Column 18 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

For securities reported on Line 9499999 (Mutual Funds), Line 9599999 (Unit Investment Trusts) and Line 9699999 (Closed-End Funds), provide the appropriate NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol combination as assigned by the Securities Valuation Office and published in AVS+ per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities. A list of these funds can be found on the Securities Valuation Office Web page (https://www.naic.org/svo.htm).

NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these lines that have not been assigned one by the Securities Valuation Office. For all other common stock line categories, the NAIC Designation and NAIC Designation Modifier field should not be left blank provided.

Detail Eliminated to Conserve Space

NAIC Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on Line 9499999 (Mutual Funds), Line 9599999 (Unit Investment Trusts) and Line 9699999 (Closed-End Funds) if eligible to receive one, as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), otherwise, the field should not be left blank provided.

The Designation Modifier should not be left blank provided for securities reported on lines below.

- Industrial and Miscellaneous (Unaffiliated) Publicly Traded Line 9099999
- Industrial and Miscellaneous (Unaffiliated) Other Line 9199999
- Parent, Subsidiaries and Affiliates Publicly Traded Line 9299999
- Parent, Subsidiaries and Affiliates Other Line 9399999
- Unit Investment Trusts Line 9599999
- Closed-End Funds Line 9699999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should not be left blank provided.

Refer to the P&P Manual for the application of these modifiers.

Detail Eliminated to Conserve Space
SCHEDULE D – PART 1

LONG-TERM BONDS OWNED DECEMBER 31 OF CURRENT YEAR

Detail Eliminated to Conserve Space

Column 34 – Capital Structure Code

Please identify the capital structure of the security using the following codes consistent with the SVO Notching Guidelines in Part One, Section 3 of the Purposes and Procedures Manual of the NAIC Investment Analysis Office:

Capital structure is sometimes referred to as rank or payment priority and can be found in feeds from the sources listed in the Issue and Issuer column.

As a general rule, a security is senior unsecured debt unless legal terms of the security indicate another position in the capital structure. Securities are senior or subordinated and are secured or unsecured. Municipal bonds, Federal National Mortgage Association securities (FNMA or Fannie Mae) and Federal Home Loan Mortgage Corporation securities (FHLMC or Freddie Mac) generally are senior debt, though there are examples of subordinated debt issued by Fannie and Freddie. 1st Lien is a type of security interest and not capital structure but could be used to determine which capital structure designation the security should be reported under. The capital structure of “Other” should rarely be used.

Capital structure includes securities subject to SSAP No. 26R—Bonds and SSAP No. 43R—Loan-Backed and Structured Securities.

1. Senior Secured Debt

   Senior secured is paid first in the event of a default and also has a priority above other senior debt with respect to pledged assets.

2. Senior Unsecured Debt

   Senior unsecured securities have priority ahead of subordinated debt for payment in the event of default.

3. Subordinated Debt

   Subordinated is secondary in its rights to receive its principal and interest payments from the borrower to the rights of the holders of senior debt (e.g., for loan-backed and structured securities, this would include mezzanine tranches).

   (Subordinated means noting or designating a debt obligation whose holder is placed in precedence below secured and general unsecured creditors e.g., another debtholder could block payments to that holder or prevent that holder of that subordinated debt from taking any action.)

4. Not Applicable

   Securities where the capital structure 1 through 3 above do not apply (e.g., Line 5899999 Exchange Traded Funds – as Identified by the SVO and Line 5999999 Bond Mutual Funds – as Identified by the SVO).
### SUMMARY INVESTMENT SCHEDULE

**Line 1.01 – U.S. Governments**

Column 1 should equal the Schedule D, Part 1, Line 0599999.

**Line 1.05 – U.S. Special Revenue & Special Assessment Obligations, etc. Non-Guaranteed**

Include: The value of those U.S. government issues not listed as “Securities That Are Considered “Exempt Obligations” For Purposes of Determining The Asset Valuation Reserve And The Risk-Based Capital Calculation” in Part Six, Section 2(c) of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, yet included as “Filing Exemptions for Other U.S. Government Obligations” in Part Two, Section 4(c)(ii). This category also includes bonds that are issued by states, territories, possessions and other political subdivisions that are issued for a specific financing project rather than as general obligation bonds.

Column 1 should equal the Schedule D, Part 1, Line 3199999.

**Line 1.09 – SVO Identified Funds**

Include: The value of all Bond Mutual Funds included on the “NAIC Bond Mutual Fund List” as listed in Part Six, Section 2(b) of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and Exchange Traded Funds (ETF) included on the “SVO-Identified Bond ETF List” as published on the Securities Valuation Office Web page ([https://www.naic.org/svo.htm](https://www.naic.org/svo.htm)) that the SVO has determined are in scope of SSAP No. 26R - Bonds and can be reported on Schedule D, Part 1 and the SVO assigned a NAIC Designation, NAIC Designation Category and SVO Administrative Symbol published in the NAIC’s AVS+ system per the instructions in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* on the Compilation and Public Release of the SVO List of Investment Securities listed in Part Six, Section 2(i) of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

Column 1 should equal the Schedule D, Part 1, Line 6099999.
SUPPLEMENTAL INVESTMENT RISKS INTERROGATORIES

Line 2 – Report the single 10 largest exposures to a single issuer/borrower/investment.

Determine the ten largest exposures by first, aggregating investments from all investment categories (except the excluded categories) by issuer. The first six digits of the CUSIP number can be used as a starting point; however, please note that the same issuer may have more than one unique series of the first six digits of the CUSIP. For example, the reporting entity owns bonds issued by the XYZ Company of $500,000 and common stock of the XYZ Company of $600,000. In addition the reporting entity has a mortgage loan to the XYZ Company of $300,000. The total exposure to Issuer XYZ Company is $1.4 million ($500,000+$600,000+$300,000).

For funds that are not diversified within the meaning of the Investment Company Act of 1940, insurance reporting entities are required to identify actual exposures and aggregate those exposures with directly held investments to determine the 10 largest exposures. For example, if a reporting entity directly holds a significant number of investments in Exxon Mobil and holds a non-diversified closed-end fund with a high concentration of Exxon Mobil, the reporting entity shall aggregate the direct investments with the investments in the closed-end funds to determine the aggregate investment risk to Exxon Mobil.

SEC registered investment funds are required by law to disclose holdings within 60 days following the fund’s fiscal quarter end. Insurers who own funds classified as “non-diversified” are to use the last publicly available fund holding disclosure to account for holdings that should be included in their Top 10 holdings.

Exclude: U.S. government and U.S. Government Agency securities listed as “Securities That Are Considered “Exempt Obligations” For Purposes of Determining The Asset Valuation Reserve And The Risk-Based Capital Calculation” (Part Six, Section 2(e)), U.S. government agency securities (Part Six, Section 2(e)).

Property occupied by the company;

Policy loans

All SEC and foreign registered funds (open-end, closed-end, UIT and ETFs) and common trust funds that are diversified within the meaning of the Investment Company Act of 1940 [Section 5(b) (1)].

In Column 2, list the categories of securities that are included in the total for each issuer (e.g., bonds, mortgage loans, etc.)
Line 13.02 through 13.11 — Report the amounts and percentages of admitted assets held in the ten largest equity interests (including investments in the shares of mutual funds, preferred stocks, publicly traded equity securities, and other equity securities (including Schedule BA equity interests), and excluding money market included on the “NAIC U.S. Direct Obligations/Full Faith and Credit Exemption Money Market Fund List”, exchange traded funds included on the “SVO-Identified Bond ETF List” and bond mutual funds included on the “NAIC Bond Mutual Fund List” as found on the Securities Valuation Office Web page (https://www.naic.org/svo.htm) listed in Part Six, Sections 2(f) and (g) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office as exempt or NAIC 1).

Determine the ten largest equity interests by first aggregating investments included in this line by issuer. For example, the reporting entity owns preferred stock of the XYZ Company of $600,000 and common stock of the XYZ Company of $300,000. The total is $900,000 ($600,000+$300,000). The reporting entity also owns bonds issued by the XYZ Company of $500,000 that are excluded from this calculation because bonds are debt instruments. Other equity securities include partnerships and Limited Liability Companies (LLC) and any other investments reported in Schedule BA classified as equity.
QUARTERLY STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 3

LONG-TERM BONDS AND STOCKS ACQUIRED DURING THE CURRENT QUARTER

Detail Eliminated to Conserve Space

Column 10 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

Provide the appropriate combination of NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol (see below) at the end of the quarter for each security shown. The list of valid SVO Administrative Symbols is shown below.

Detail Eliminated to Conserve Space

NAIC Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on the lines below if eligible to receive one, as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), otherwise, the field should not be left blank provided.

- Bonds Lines 0199999 through 8299999
- Preferred Stocks Line 8499999 and 8599999
- Common Stocks Lines 9499999 through 9699999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should not be left blank provided.

For securities reported on Line 9499999 (Mutual Funds), Line 9599999 (Unit Investment Trusts) and Line 9699999 (Closed-End Funds) provide the appropriate NAIC Designation and NAIC Modifier as assigned by the Securities Valuation Office. NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these lines that have not been assigned one by the Securities Valuation Office and published in AVS+ per the instructions in the Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities. For all other common stock line categories, the NAIC designation and NAIC Modifier a should not be provided.

Refer to the P&P Manual for the application of these modifiers.

SVO Administrative Symbol:

Detail Eliminated to Conserve Space
Common Stock:

For securities reported on Line 9499999 (Mutual Funds) provide the appropriate NAIC Designation (1 through 6) and NAIC Modifier as assigned by the Securities Valuation Office. For all other common stock the NAIC designation, NAIC Modifier and SVO Administrative Symbol field should be left blank.

Following are valid SVO Administrative Symbols for common stock. Refer to the P&P Manual for the application of these symbols.

YE Year-end carry over

SCHEDULE D – PART 4

LONG-TERM BONDS AND STOCKS SOLD, REDEEMED OR OTHERWISE DISPOSED OF DURING THE CURRENT QUARTER

Column 22 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol

Provide the appropriate combination of the NAIC Designation (1 through 6), NAIC Designation Modifier (A through G) and SVO Administrative Symbol (see below) at date of disposal for each security shown. The list of valid SVO Administrative Symbols is shown below.

NAIC Designation Modifier:

The NAIC Designation Modifier should only be used for securities reported on the lines below if eligible to receive one, as defined in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual), otherwise, the field should not be left blank provided.

- Bonds Lines 0199999 through 8299999
- Preferred Stocks Line 8499999 and 8599999
- Common Stocks Lines 9499999 through 9699999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should not be left blank provided.
For securities reported on Line 9499999 (Mutual Funds), Line 9599999 (Unit Investment Trusts) and Line 9699999 (Closed-End Funds) provide the appropriate NAIC Designation and NAIC Modifier as assigned by the Securities Valuation Office. NAIC Designation and NAIC Designation Modifier should not be provided for securities reported on these lines that have not been assigned one by the Securities Valuation Office and published in AVS+ per the instructions in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office on the Compilation and Publication of the SVO List of Investment Securities*. For all other common stock line categories, the NAIC designation and NAIC Modifier a should not be provided.

Refer to the P&P Manual for the application of these modifiers.

SVO Administrative Symbol:

Common Stock:

For securities reported on Line 9499999 (Mutual Funds) provide the appropriate NAIC Designation (1 through 6) and NAIC Modifier as assigned by the Securities Valuation Office. For all other common stock the NAIC designation, NAIC Modifier and SVO Administrative Symbol field should be left blank.

Following are valid SVO Administrative Symbols for common stock. Refer to the P&P Manual for the application of these symbols.

YE Year-end carry over

© 2020 National Association of Insurance Commissioners
A money market fund shall be reported in this schedule as an Exempt Money Market Mutual Fund if such money market fund is identified by the SVO as meeting the required conditions found in Part Six, Section 2(b)(i) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office. A “NAIC U.S. Direct Obligations/Full Faith and Credit Exemption Money Market Fund List” can be found on the Securities Valuation Office Web page (https://www.naic.org/svo.htm). All money market mutual funds that are not identified by the SVO on the U.S. Direct Obligations/Full Faith and Credit Exempt List shall be reported in this schedule as an “all other money market mutual fund.”

Column 1 – CUSIP Identification

All CUSIP numbers entered in this column must conform to those as published in the Purposes and Procedures Manual of the NAIC Investment Analysis Office, Part Six, Sections 2(f) and (g).

CUSIP identification is required and valid only for Exempt Money Market Mutual Funds – as Identified by SVO (Line 8599999) and All Other Money Market Mutual Funds (Line 8699999).
INVESTMENT SCHEDULES GENERAL INSTRUCTIONS
(Applies to all investment schedules)

General Classifications Bonds Only:

Refer to SSAP No. 26R—Bonds, SSAP No. 43R—Loan-Backed and Structured Securities and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities for additional guidance.

U.S. Government:

U.S. Government shall be defined as U.S. Government Obligations as defined per the Purposes and Procedures Manual of the NAIC Investment Analysis Office, Part Two, Section 4:

(i) Filing Exemption for Direct Claims on, or Backed Full Faith and Credit of the United States

“U.S. Government Obligations” means all direct claims (including securities, loans, and leases) on, and the portions of claims that are directly and unconditionally guaranteed by the United States Government or its agencies.

“U.S. Government agency” means an instrumentality of the U.S. Government the debt obligations of which are fully guaranteed as to the timely payment of principal and interest by the full faith and credit of the U.S. Government. This category includes in addition to direct claims on, and the portions of claims that are directly and unconditionally guaranteed by, the United States Government agencies listed below, claims collateralized by securities issued or guaranteed by the U.S. government agencies listed below for which a positive margin of collateral is maintained on a daily basis, fully taking into account any change in the insurance company's exposure to the obligor or counterparty under a claim in relation to the market value of the collateral held in support of that claim.

U.S. Special Revenue and Special Assessment Obligations and All Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions:

Those U.S. government issues not listed as “Securities That Are Considered “Exempt Obligations” For Purposes of Determining The Asset Valuation Reserve And The Risk-Based Capital Calculation” in Part Six, Section 2(e) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office, yet included as “Filing Exemptions for Other U.S. Government Obligations” in Part Two, Section 4(c)(ii). This category also includes bonds that are issued by states, territories, possessions and other political subdivisions that are issued for a specific financing project rather than as general obligation bonds. Also include mortgage reference securities that are within the scope of SSAP No. 43R—Loan-Backed and Structured Securities.

Industrial and Miscellaneous (Unaffiliated):

This category includes all non-governmental issues that do not qualify for some other category in Schedule D, Part 1, including privatized (non-government ownership) utility companies. Include Public Utilities.
SVO Identified Funds:

This category includes all Bond Mutual Funds included on the “List of Bond Mutual Funds Filed with the SVO (Bond Fund List)” as listed in Part Six, Section 2(h) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office and Exchange Traded Funds included on the “List of Exchange Traded Funds Eligible for Reporting as a Schedule D Bond (the ETF Bond List)” as found on the Securities Valuation Office Web page ([https://www.naic.org/svo.htm](https://www.naic.org/svo.htm)) listed in Part Six, Section 2(i) of the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

---

Detail Eliminated to Conserve Space

---

General Classifications Preferred Stock Only:

Refer to SSAP No. 32—Preferred Stock and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

Industrial and Miscellaneous (Unaffiliated):

All unaffiliated preferred stocks. Include Public Utilities, Banks, Trusts and Insurance Companies. This category includes Exchange Traded Funds included on the “List of Exchange Traded Funds Eligible for Reporting as a Schedule D Preferred Stock” as found on the Securities Valuation Office Web page ([https://www.naic.org/svo.htm](https://www.naic.org/svo.htm)) listed in Part Six, Section 2 of the Purposes and Procedures Manual of the NAIC Investment Analysis Office.

**Anticipated Effective Date:** Annual 2020

**IDENTIFICATION OF ITEM(S) TO CHANGE**

Add a code of “%” to the code column for all investments which have been reported Schedule DA, Part 1 and Schedule E, Part 2 for more than one consecutive year. Add certification to the General Interrogatories, Part 1 inclusion of these investments on Schedule DA, Part 1 and Schedule E, Part 2.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

To identify instances where cash equivalents and/or short-term investments (or substantially similar investments) remain on the applicable investment schedule for more than one reporting period (i.e. reported as a short-term investment for more than one consecutive year due to the investment being re-underwritten and renewed).

<table>
<thead>
<tr>
<th>Column 2</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Enter “*” in this column for all SVO Identified Funds designated for systematic value.

Enter “@” in this column for all Principal STRIP Bonds or other zero coupon bonds.

Enter “%” in this column for all investments which have been reported on this schedule for more than one consecutive year.

Enter “^” in this column for all assets that are bifurcated between the insulated separate account filing and the non-insulated separate account filing.

If short-term investments are not under the exclusive control of the company as shown in the General Interrogatories, they are to be identified by placing one of the codes (identified in the Investment Schedules General Instructions) in this column.

If the security is an SVO Identified Fund designated for systematic value or Principal STRIP bond or other zero coupon bond and is not under the exclusive control of the company, the “*”, “@” or “%” should appear first, immediately followed by the appropriate code (identified in the Investment Schedules General Instructions).

If the “%” code is used in conjunction with the “*” or “@” codes, the “%” code should appear after the “*” or “@” codes immediately followed by the appropriate code for not being under the exclusive control of the company (identified in the Investment Schedules General Instructions).

**Separate Account Filing Only:**

If the asset is a bifurcated asset between the insulated separate account filing and the non-insulated separate account filing, the “^” should appear first and may be used simultaneously with the “*”, “@” or “%” with the “^” preceding the “*”, “@” or “%” depending on the asset being reported, immediately followed by the appropriate code for not being under the exclusive control of the company (identified in the Investment Schedules General Instructions).

If the “%” code is used in conjunction with the “*” or “@” codes, the “%” code should appear after the “*” or “@” codes immediately followed by the appropriate code for not being under the exclusive control of the company (identified in the Investment Schedules General Instructions).

Enter “%” in this column for all investments except qualifying cash pooling structures per SSAP No. 2R and money market mutual funds which have been reported on this schedule for more than one consecutive quarter.

Enter “^” in this column for all assets that are bifurcated between the insulated separate account filing and the non-insulated separate account filing.

If a cash equivalent is not under the exclusive control of the company as shown in the General Interrogatories, it is to be identified by placing one of the codes identified in the Investment Schedules General Instructions in this column.

If the “%” code is used, the “%” code should appear first, immediately followed by the appropriate code for not being under the exclusive control of the company (identified in the Investment Schedules General Instructions).

Separate Account Filing Only:

If the asset is a bifurcated asset between the insulated separate account filing and the non-insulated separate account filing, the “^” should appear first and may be used simultaneously with the “%” code, immediately followed by the appropriate code for not being under the exclusive control of the company (identified in the Investment Schedules General Instructions).
OTHER

36. The purpose of this General Interrogatory is to capture information about payments to any trade association, service organization, and statistical or rating bureau. A “service organization” is defined as every person, partnership, association or corporation that formulates rules, establishes standards, or assists in the making of rates or standards for the information or benefit of insurers or rating organizations.

37. The purpose of this General Interrogatory is to capture information about legal expenses paid during the year. These expenses include all fees or retainers for legal services or expenses, including those in connection with matters before administrative or legislative bodies. It excludes salaries and expenses of company personnel, legal expenses in connection with investigation, litigation and settlement of policy claims, and legal fees associated with real estate transactions, including mortgage loans on real estate. Do not include amounts reported in General Interrogatories No. 36 and No. 39.

38. The purpose of this General Interrogatory is to capture information about expenditures in connection with matters before legislative bodies, officers or departments of government paid during the year. These expenses are related to general legislative lobbying and direct lobbying of pending and proposed statutes or regulations before legislative bodies and/or officers or departments of government. Do not include amounts reported in General Interrogatories No. 36 and No. 38.

35. By assigning FE to a Schedule BA non-registered private fund, the reporting entity is certifying the following elements of each self-designated FE fund:
   a. The shares were purchased prior to January 1, 2019.
   b. The reporting entity is holding capital commensurate with the NAIC Designation reported for the security.
   c. The security had a public credit rating(s) with annual surveillance assigned by an NAIC CRP in its legal capacity as an NRSRO prior to January 1, 2019.
   d. The fund only or predominantly holds bonds in its portfolio.
   e. The current reported NAIC Designation was derived from the public credit rating(s) with annual surveillance assigned by an NAIC CRP in its legal capacity as an NRSRO.
   f. The public credit rating(s) with annual surveillance assigned by an NAIC CRP has not lapsed.

   Has the reporting entity assigned FE to Schedule BA non-registered private funds that complied with the above criteria? Yes [    ] No [   ]

36. By rolling/renewing short-term or cash equivalent investments with continued reporting on Schedule DA, Part 1 or Schedule E Part 2 (identified through a code % in those investment schedules), the reporting entity is certifying to the following:
   a. The investment is a liquid asset that can be terminated by the reporting entity on the current maturity date.
   b. If the investment is with a nonrelated party or nonaffiliate then it reflects an arms-length transaction with renewal completed at the discretion of all involved parties.
   c. If the investment is with a related party or affiliate then the reporting entity has completed robust re-underwriting of the transaction for which documentation is available for regulator review.
   d. Short-term and cash equivalent investments that have been renewed/rolled from the prior period that do not meet the criteria in 36.a -36.c are reported as long-term investments.

   Has the reporting entity rolled/renewed short-term or cash equivalent investments in accordance with these criteria? Yes [    ] No [   ] N/A [   ]

Anticipated Effective Date: Annual 2020

** IDENTIFICATION OF ITEM(S) TO CHANGE **

For Schedule D, Part 1, add code “10” to Column 26 – Collateral Type for ground lease financing. Renumber “Other” code to 11.

** REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE **

During the 2019 Fall National Meeting, the Valuation of Securities (E) Task Force adopted an amendment to add ground lease financing transactions as a newly defined asset class to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) effective January 1, 2020, and referred such action to the SAPWG for consideration. While an update was not required in the Accounting Procedures and Practices Manual (AP&P Manual), specific identification of such activities is warranted for analysis and reporting purposes.

** This section must be completed on all forms. **

Revised 7/18/2018
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 1

LONG-TERM BONDS OWNED DECEMBER 31 OF CURRENT YEAR

Detail Eliminated to Conserve Space

Column 26 – Collateral Type

Use only for securities included in the following subtotal lines.

Industrial and Miscellaneous (Unaffiliated)

<table>
<thead>
<tr>
<th>Collateral Type</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Residential Mortgage-Backed/Securities</td>
<td>3399999</td>
</tr>
<tr>
<td>Commercial Mortgage-Backed Securities</td>
<td>3499999</td>
</tr>
<tr>
<td>Other Loan-Backed and Structured Securities</td>
<td>3599999</td>
</tr>
</tbody>
</table>

Enter one of the following codes to indicate collateral type. Pick exactly one collateral type for each reported security. For securities that fit in more than one type, pick the predominant one. Judgment may need to be used when making selections involving prime, Alt-A and subprime, as there are no uniform definitions for these collateral types. In the description field, use abbreviations like ABS, CDO or CLO to disclose the type of the loan-backed/structured security. Note: various investments below require SVO review and approval, please refer to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) for further description.

1  Residential Mortgage Loans/RMBS

Include all types of residential first lien mortgage loans as collateral (e.g., prime, subprime, Alt-A).

2  Commercial Mortgage Loans/CMBS

Include all types of commercial mortgage loans as collateral (e.g., conduits, single name, etc.).

3  Home Equity

Include all home equity loans and/or home equity lines of credit as collateral. These are not first liens and are deemed loans to individuals. Bonds that are collateralized by home equity loans/lines of credit are considered asset-backed securities (ABS) rather than RMBS.

4  Individual Obligations – Credit Card, Auto, Student Loans and Recreational Vehicles

Include bonds collateralized by individual obligations. Do not include individual obligations that have a real-estate aspect.

5  Corporate/Industrial Obligations – Tax Receivables, Utility Receivables, Trade Receivables, Small Business Loans, Commercial Paper

Include bonds collateralized by corporate or industrial obligations (sometimes referred to as commercial obligations).
6  Lease Transactions – Aircraft Leases, Equipment Leases and Equipment Trust Certificates

Include bonds collateralized by leases. Equipment leases are loans on heavy equipment. Equipment trust certificates are certificates that entitle the holder to the lease payments on the underlying assets.

7  CLO/CBO/CDO

Include bank loans, which securitize CLOs; investment grade and high-yield corporate bonds, which securitize CBOs; and corporate bonds and structured securities, which securitize CDOs.

8  Manufactured Housing and Mobile Home Loans

Include manufactured housing loans and mobile home loans as collateral. These are not typical residential mortgage loans, and when they securitize bonds, they are considered ABS.

9  Credit Tenant Loans

Real estate loans secured by the obligation of a single (usually investment grade) company to pay debt service by means of rental payments under a lease, where real estate is pledged as collateral also referred to as credit tenant lease, sale-leaseback or CTL.

10  Ground Lease Financing

Real estate loans secured by the obligation to pay debt service by means of rental payments of subleased property; where a long-term ground lease was issued in which the lessee intends significant land development and the subleasing of such property to other long-term tenants.

11  Other

Include other collateral types that do not fit into categories 1 through 910.

For Columns 27 through 29, make whole call information is not required.

Anticipated Effective Date: Annual 2020

IDENTIFICATION OF ITEM(S) TO CHANGE

Add new Line 4.05 for valuation allowance for mortgage loans to the Summary Investment Schedule and renumber existing Line 4.05 to 4.06. Modify the instructions to include a crosscheck for new Line 4.05 back to Schedule B – Verification Between years. Clarify the instructions for 4.01-4.04 to explicitly show crosschecking to Column 8 of Schedule B, Part 1.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this schedule is to address the fact that the amount reported on Schedule B, Part 1, Column 8 excludes the valuation allowance but the total reported for mortgage loans in the Summary Investment Schedule must tie to the asset page which includes the valuation allowance.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SUMMARY INVESTMENT SCHEDULE

Detail Eliminated to Conserve Space

Line 4.01 – Mortgage Loans – Farm Mortgages

Include: The value of loans secured by farmland and improvements thereon, as evidenced by mortgages or other liens. Farmland includes all land known to be used or usable for agricultural purposes, such as crop and livestock production. Farmland includes grazing or pasturage, whether tillable or not and whether wooded or not. Include loans secured by farmland that are guaranteed by the Farmers Home Administration (FmHA) or by the Small Business Administration (SBA) and that are extended, serviced and collected by any party other than the FmHA or SBA.

Column 1 should equal the sum of Lines 0199999, 0999999, 1799999 and 2599999 on Schedule B, Part 1, Column 8.

Line 4.02 – Mortgage Loans – Residential Mortgages

Include: The value of loans secured by real estate as evidenced by mortgages (FHA, FmHA, VA or conventional) or other liens on nonfarm property containing one to four dwelling units (including vacation homes) or more than four dwelling units if each is separated from other units by dividing walls that extend from ground to roof (e.g., row houses, townhouses or the like); mobile homes where (a) state laws define the purchase or holding of a mobile home as the purchase or holding of real property and where (b) the loan to purchase the mobile home is secured by that mobile home as evidenced by a mortgage or other instrument on real property; individual condominium dwelling units and loans secured by an interest in individual cooperative housing units, even if in a building with five or more dwelling units; and housekeeping dwellings with commercial units combined where use is primarily residential and where only one to four family dwelling units are involved.

Column 1 should equal the sum of Lines 0299999, 0399999, 1099999, 1199999, 1899999, 1999999, 2699999 and 2799999 on Schedule B, Part 1, Column 8.

Line 4.03 – Mortgage Loans – Commercial Mortgages

Include: The value of loans secured by real estate as evidenced by mortgages or other liens on business and industrial properties, hotels, motels, churches, hospitals, educational and charitable institutions, dormitories, clubs, lodges, association buildings, "homes" for aged persons and orphans, golf courses, recreational facilities, and similar properties.

Column 1 should equal the sum of Lines 0499999, 0599999, 1299999, 1399999, 2099999, 2199999, 2899999 and 2999999 on Schedule B, Part 1, Column 8.
Line 4.04 – Mortgage Loans – Mezzanine Real Estate Loans

Include: Mezzanine real estate loans as defined in SSAP No. 83—Mezzanine Real Estate Loans.

Column 1 should equal the sum of Lines 0699999, 1499999, 2299999 and 3099999 on Schedule B, Part 1, Column 8.

Line 4.05 – Total Valuation allowance

Column 1 should equal Schedule B – Verification Between Years Line 12.

Line 4.0506 – Total Mortgage Loans

Sum of Lines 4.01 to 4.0405.

The amount reported in Column 1 should equal the amount reported in Line 3.1 plus Line 3.2, Column 1, Page 2, Assets.

The amount reported in Column 3 should equal the amount reported in Line 3.1 plus Line 3.2, Column 3, Page 2, Assets.

EXHIBIT 3 – INTERROGATORIES

1.1 Has the reporting entity ever issued both participating and non-participating variable life insurance contracts?
Yes [ ] No [ ]

2.1 Does the reporting entity at present issue both participating and non-participating variable life insurance contracts?
Yes [ ] No [ ]

2.2 If not, state which kind is issued...

3.1 Is any surrender value promised in excess of the reserve as legally computed?
Yes [ ] No [ ]

3.2 If so, the amount of such excess must be included in surrender values in excess of reserves otherwise required and carried in this schedule. Has this been done?
Yes [ ] No [ ]

Attach a statement of methods employed in the valuation of variable life insurance contracts issued at, or subsequently subject to, an extra premium or in the valuation of contracts otherwise issued on lives classified as substandard for the plan of contract issued or on special class lives (including paid-up variable life insurance).

ANNUAL STATEMENT BLANK – LIFE/FRATERNAL AND HEALTH (LIFE SUPPLEMENT)

EXHIBIT 5 – AGGREGATE RESERVES FOR LIFE CONTRACTS

Footnote (a):

Deposit-type contracts such as GICs and supplemental contracts are generally reported in Exhibit 7 – Deposit Type Contracts. However, certain contracts (which have similar characteristics to deposit-type contracts) incorporate mortality risk components which qualify those contracts to be reported in Exhibit 5 – Aggregate Reserve for Life Contracts. A common example is a supplemental contract which provides for a life-contingent payout with a specified certain period. Because the contract was life-contingent at issue, it is reported in Exhibit 5 and remains in Exhibit 5 after the death of the annuitant as remaining guaranteed payments continue to the beneficiary. Additionally, state insurance departments have the discretion to approve or require a contract to be classified as a life insurance contract. This footnote captures the amounts reported on Exhibit 5 for deposit-type contracts that originally contained a mortality risk, but no longer contain that risk.

EXHIBIT 3 – AGGREGATE RESERVE FOR LIFE, ANNUITY AND ACCIDENT AND HEALTH CONTRACTS

Footnote (a):

Deposit-type contracts such as GICs and supplemental contracts are generally reported in Exhibit 4 – Deposit Type Contracts. However, certain contracts (which have similar characteristics to deposit-type contracts) incorporate mortality risk components which qualify those contracts to be reported in Exhibit 3 – Aggregate Reserve for Life, Annuity and Accident and Health Contracts. A common example is a supplemental contract which provides for a life-contingent payout with a specified certain period. Because the contract was life-contingent at issue, it is reported in Exhibit 3 and remains in Exhibit 3 after the death of the annuitant as remaining guaranteed payments continue to the beneficiary. Additionally, state insurance departments have the discretion to approve or require a contract to be classified as a life insurance contract. This footnote captures the amounts reported on Exhibit 3 for deposit-type contracts that originally contained a mortality risk, but no longer contain that risk.

**Effective** | **Table Name** | **Description** | **Statement Type** | **Filing Type**
--- | --- | --- | --- | ---
2020 | Equity and Other Invested Asset Component – Basic Contribution, Reserve Objective and Maximum Reserve Calculations | **Column 6** – Contracts with Book/Adjusted Carrying Value < 0 (i.e., credit balance on balance sheet)

On the first line, show the sum of the Book/Adjusted Carrying Value statement values in parentheses ( ) of all exchange traded derivatives that have a negative Book/Adjusted Carrying Value.

For futures, this equals the sum of the negative cumulative variation margin for highly effective futures (Part B, Section 1, Column 15).

On subsequent lines, show the sum of the Book/Adjusted Carrying Values in parentheses ( ) of all derivative instruments with the counterparty or central clearinghouse that have a negative Book/Adjusted Carrying Value. | L/F | Annual

---

**CHANGE TO INSTRUCTION**

Update reserve factors as shown below.

**Line 1** – Unaffiliated Common Stocks – Public

Report the book/adjusted carrying value of all publicly issued common stock, including mutual funds (except money market mutual funds appropriately reported on Schedule E, Part 2) in unaffiliated companies in Columns 1 and 4. Multiply Column 4 by the reserve factor calculated for Columns 5, 7 and 9, and report the products in Columns 6, 8 and 10, respectively.

The Line 1, Column 7 and 9 reserve factors must be at least 4012.15% but not more than 2024.31%.

The reserve factor is equal to 1315.80% times the company’s weighted average portfolio beta. The weighted average portfolio beta is the market value weighted average of four (4) portfolio betas, one from the end of the prior year and the remaining from the first three (3) quarters of the current year. Calculation of this weighted average portfolio beta is illustrated in the following worksheet.

| 2021      | Notes to Financial Statements | **CHANGE TO INSTRUCTION**  
The change below was not reflected in proposal 2019-07BWG but was part of the changes adopted by the SAPWG for SSAP No. 100R—Fair Value.  

20. **Fair Value Measurements**  

**Instruction:**  
A. The objective of the disclosure requirements is to provide information about assets and liabilities measured at fair value in the financial statements as well as fair value amounts disclosed in the Notes to Financial Statements or reporting schedules. A reporting entity shall disclose information that helps users of the financial statements to assess both of the following:  

   For assets and liabilities that are measured and reported at fair value or net asset value (NAV) in the statement of financial position after initial recognition, the valuation techniques and the inputs used to develop those measurements.  

   For fair value measurements in the statement of financial position determined using significant unobservable inputs (Level 3), the effect of the measurements on earnings (or changes in net assets) for the period. | H, L/F, P/C, T | Quarterly |

### Schedule BA, Part 1

#### CHANGE TO INSTRUCTION

Make the changes below to correct line references for Column 6.

**Column 6 – NAIC Designation, NAIC Designation Modifier and SVO Administrative Symbol**

**NAIC Designation Modifier:**

The NAIC Designation Modifier should only be used for securities reported on the lines below if eligible to receive one, as defined in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual), otherwise, the field should be left blank.

- **Underlying Characteristics of Bonds**
  - Lines 0799999 through 0899999

- **Underlying Characteristics of Preferred Stocks**
  - Line 41599999 through 41699999

As defined in the P&P Manual, there is not an NAIC Designation Modifier for investments reporting an NAIC Designation 6, therefore, the NAIC Designation Modifier field should be left blank.

### Supplemental Exhibits and Schedules Interrogatories

#### CHANGE TO BLANK

For 2020 show Lines 29, 30, 31 and 32 as struck through and remove from specs data table. Proposal to formally remove the lines will be made for 2021.

The Capital Adequacy (E) Task Force met via conference call Aug. 5, 2020. The following Task Force members participated: Jillian Froment, Chair, represented by Tom Botsko (OH); Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Jim L. Ridling represented by Shelia Travis (AL); Alan McClain represented by Mel Heaps (AR); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmair represented by Ray Spudeck and Carolyn Morgan (FL); Doug Ommon represented by Mike Yanacheak (IA); Dean L. Cameron represented by Nathan Faragher (ID); Robert H. Muriel represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Steve Kelley represented by Kathleen Orth (MN); Chlora Lindley-Myers represented by Debbie Doggett (MO); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Barbara D. Richardson represented Kelsey Barlow (NV); Glen Mulready represented by Diane Carter (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Raymond G. Farmer represented Will Davis (SC); Kent Sullivan represented by Jamie Walker (TX); Mike Kriedler represented by Steve Drutz (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its June 30 Minutes**

   Mr. Yanacheak made a motion, seconded by Mr. Chou, to adopt the Task Force’s June 30 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its Working Group Reports and Minutes**

   Mr. Chou made a motion, seconded by Mr. Davis, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Two), the Investment Risk-Based Capital (E) Working Group (Attachment Three), the Life Risk-Based Capital (E) Working Group (Attachment Four), and the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Five). The motion passed unanimously.

3. **Adopted its Working Agenda**

   a. Mr. Drutz said the health risk-based capital (RBC) working agenda has been updated to add the following items: 1) proposal 2020-02CA for the deletion of the federal Affordable Care Act (ACA) Fee Sensitivity test that was added as part of the evaluation of the impact of the federal health care law; 2) review and consideration of the formula for the inclusion of the MAX function of Line 17 of the excessive growth charge as proposal 2020-04-H; and 3) consideration of the impact of COVID-19 and pandemic risk on the health RBC formula.

   b. Mr. Barlow added that the Life Risk-Based Capital (E) Working Group is focused on C-3 updates and the two new items that were referred by the Investment Risk-Based Capital (E) Working Group.

   c. Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group is focused on restructuring mechanisms and two referrals that were received regarding installment fees and expenses and retroactive reinsurance. The Task Force will focus on hybrids for its next conference call.

   d. Mr. Botsko also said the items previously listed under Investment Risk-Based Capital (E) Working Group will move to the Task Force or the individual working groups for further discussion. Mr. Fry made a motion, seconded by Mr. Barlow, to disband the Investment Risk-Based Capital (E) Working Group. The motion passed unanimously.
   
   Mr. Botsko also thanked Mr. Fry for his expertise and dedication to this project.

   Mr. Chou made a motion, seconded by Mr. Yanacheak, to adopt the working agenda (Attachment Six). The motion passed unanimously.

4. **Exposed Proposal 2020-02-CA (ACA Fee Sensitivity Test Removal)**

   Mr. Drutz said the ACA fee was repealed for 2021. This proposal would delete the ACA Fee Sensitivity test from each RBC formula. The Working Group is asking the Task Force to expose it since this will affect all formulas, and comments can be sent to the Health Risk-Based Capital (E) Working Group to address.

   Mr. Botsko agreed that the Task Force will expose proposal 2020-02-CA (Attachment Seven) for a 30-day public comment period ending Sept. 4.
5. Exposed its 2021 Proposed Charges

Mr. Botsko explained that the charges were updated to reflect the disbandment of the Investment Risk-Based Capital (E) Working Group, and its sole charge will be placed under the Task Force. The proposed charges (Attachment Eight) will be exposed for a 30-day public comment period ending Sept. 4. Mr. Chou noted that the heading still says 2020. Jane Barr (NAIC) said she would update the charges before the exposure email is sent.

6. Adopted Proposal 2020-03-L (C-3 Instructions and C-3 Guidance)

Mr. Botsko said proposal 2020-03-L (C-3 Instructions and C-3 Guidance) was inadvertently missed in the Task Force’s June 30 agenda. Since this instructional update is past the RBC cutoff date, the Task Force will need to vote on whether to consider the proposal. The Task Force unanimously agreed to accept the proposal after the cutoff date.

Mr. Barlow said the changes to the instructions for C-3 were clarifying language on potential issues in 2019, which is no longer applicable, so that language was removed.

Mr. Barlow made a motion, seconded by Ms. Orth, to adopt proposal 2020-03-L (Attachment Nine). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\CapAdequacy/08_CapitalAdequacyTFmin
The Capital Adequacy (E) Task Force met via conference call June 30, 2020. The following Task Force members participated: Jillian Froment, Chair, represented by Tom Botsko (OH); Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Lori K. Wing-Heier represented by David Phifer and Wally Thomas (AK); Jim L. Ridling represented by Blase Abreo (AL); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Jason Reynolds (FL); Doug Ommen represented by Mike Yanacheak (IA); Dean L. Cameron represented by Eric Fletcher (ID); Robert H. Muriel represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Chlora Lindley-Myers represented by John Rehagen and William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Rhonda Ahrens (NE); Barbara D. Richardson represented by Joel Beng (NV); Glen Mulfrey represented by Andrew Schallhorn and Diane Carter (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Raymond G. Farmer represented by Michael Shull (SC); Kent Sullivan represented by Mike Boerner (TX); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Mr. Yanacheak made a motion, seconded by Mr. Boerner, to adopt the Task Force’s Dec. 8, 2019, minutes (*see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force*). The motion passed unanimously.

2. **Adopted its Jan. 27 and April 30 Minutes**

   The Task Force met Jan. 27 to adopt the 2019 Catastrophe Event List and its April 30 minutes. The Task Force met April 30 and took the following action: 1) adopted proposal 2019-16-CA (20 Designation Bond Structure for Year-End 2020); and 2) adopted proposal 2019-13-L (Longevity Risk Structure).

   Mr. Phifer made a motion, seconded by Mr. Yanacheak, to adopt the Task Force’s Jan. 27 (Attachment One-A) and April 30 (Attachment One-B) minutes. The motion passed unanimously.

3. **Adopted Proposal 2020-05-CA**

   Mr. Botsko explained that the purpose of this proposal is to insert the word “Overview” in the page heading and modify the table of contents in the risk-based capital (RBC) instructions for page references. The proposal was exposed for a 30-day public comment period ending May 15, and no comments were received.

   Mr. Leung made a motion, seconded by Mr. Chou, to adopt proposal 2020-05-CA (Attachment One-C). The motion passed unanimously.

4. **Adopted Proposal 2020-06-L (Longevity Risk for Life/Fraternal Instructions)**

   Mr. Barlow explained that a new schedule in the life/fraternal RBC formula for longevity risk should be considered to determine the appropriate guardrails and factor. Therefore, more information must be obtained in order to develop the guardrails and factors, and it is important that the instructions indicate that the 2020 year-end factors will be zero in order to collect this information for analysis in determining the factor for 2021.

   Mr. Barlow made a motion, seconded by Ms. Crawford, to adopt proposal 2020-06-L (Attachment One-D). The motion passed unanimously.
5. **Adopted Property/Casualty Proposals**

a. Proposal 2018-19-P (Vulnerable 6 or Unrated Risk Charge) is to modify the instructions to reflect that the factors for all uncollateralized reinsurance recoverables from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance. The factor is being updated to be more aligned with risk-indicated factors used by rating agencies.

b. Proposal 2020-01-P (Line 1 Premium and Reserve Underwriting Factors) is an annual update for the underwriting factors for premium and reserves.

Mr. Chou made a motion, seconded by Mr. Milquet, to adopt proposal 2018-19-P (Attachment One-E) and proposal 2020-01-P (Attachment One-F). The motion passed unanimously.

6. **Discussed Other Matters**

Mr. Botsko said the Task Force will be discussing hybrid bonds on its next conference call to determine if it should receive the same 20 designations as other bonds. NAIC staff mentioned that the Securities Valuation Office (SVO) would be treating hybrids like all other bonds with a designation classification between 1 and 20.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
Capital Adequacy (E) Task Force
Conference Call
January 27, 2020

The Capital Adequacy (E) Task Force met via conference call Jan. 27, 2020. The following Task Force members participated:
Jillian Froment, Chair, represented by Tom Botsko (OH); Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Jim L. Ridling represented by Richard Ford (AL); Allen W. Kerr represented by Mel Anderson (AR); Richard Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Carolyn Morgan and Virginia Christy (FL); Doug Ommen represented by Kim Cross (IA); Robert H. Muriel represented by Kevin Fry and Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Steve Kelley represented by John Robinson (MN); Chlora Lindley-Myers represented by Julie Lederer (MO); Mike Causey represented by Jackie Obusek (NC); Marlene Caride represented by Diana Sherman (NJ); Barbara D. Richardson represented Joel Bengo (NV); Glen Mulready represented by Joel Sander (OK); Kent Sullivan represented by Mike Boerner (TX); Mike Kreidler represented by Patrick McNaughton and Steve Drutz (WA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its Dec. 30, 2019, Minutes**

During its Dec. 30, 2019, meeting, the Task Force exposed a revised structure for reporting bond designations at year-end 2020 for a 45-day public comment period.

Mr. Chou made a motion, seconded by Ms. Obusek, to adopt the Task Force’s Dec. 30, 2019, minutes (Attachment One-A1). The motion passed unanimously.

Mr. Boerner made a motion, seconded by Mr. Milquet, to adopt the U.S. and non-U.S. list of catastrophes to be used for 2019 property/casualty (P/C) risk-based capital (RBC) reporting, subject to several nonsubstantive edits suggested by Mr. Robinson (Attachment One-A2). The motion passed unanimously.

3. **Agreed to Sponsor Blanks (E) Working Group Proposal**

The Task Force members agreed to sponsor proposed changes to Interrogatory #24 in all 2020 annual financial statement blanks. The change improves clarity on reporting of conforming versus non-conforming collateral related to securities lending. All RBC formulas rely on data from that interrogatory. The proposed blanks change will go to the Blanks (E) Working Group for further action.

Mr. Botsko thanked Commissioner Altmaier for his leadership as former chair of the Task Force.

Having no further business, the Capital Adequacy (E) Task Force adjourned.
The Capital Adequacy (E) Task Force met via conference call Dec. 30, 2019. The following Task Force members participated:

David Altmaier, Chair (FL); Ricardo Lara represented by Shaoping Chang (CA); Andrew N. Mais represented by Wanchin Chou (CT); Stephen C. Taylor represented by Philip Barlow (DC); Doug Ommen represented by Carrie Mears (IA); Robert H. Muriel represented by Kevin Fry (IL); Vicki Schmidt represented by Tish Becker (KS); Chlora Lindley-Myers represented by John Rehagen and Julie Lederer (MO); Mike Causey represented by Jackie Obusek (NC); Marlene Caride represented by John Sirovetz (NJ); John G. Franchini represented by Anna Krylova (NM); Jillian Froment represented by Dale Bruggeman and Tom Botsko (OH); Glen Mulready represented by Joel Sander (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Mike Boerner (TX); and Mike Kreidler represented by Steve Drutz (WA).

1. Exposed the Bond Structure Proposal

Commissioner Altmaier said the purpose of this conference call is to consider exposure of a proposed structure change to the risk-based capital (RBC) formula to accommodate the expansion of bond factors from six designations to 20 designations.

Commissioner Altmaier said that although the Investment Risk-Based Capital (E) Working Group is still working on the factors associated with the expanded designations, the structure change is a logical step forward given that: 1) there is wide consensus about the expansion; 2) the Blanks (E) Working Group and the NAIC Securities Valuation Office (SVO) have adopted the expansion; and 3) the structure change would give the Task Force the opportunity to collect data that will allow for impact testing as the Health Risk-Based Capital (E) Working Group, the Investment Risk-Based Capital (E) Working Group, the Life Risk-Based Capital (E) Working Group and the Property and Casualty Risk-Based Capital (E) Working Group continue developing the factors.

Commissioner Altmaier added that, logistically, this structure change would, as mentioned, expand the current six designations to 20, but it would group these 20 factors in a manner that would allow the current six factors to be applied the same way that they have historically been applied.

Mr. Barlow explained that the life RBC formula will need to make adjustment to its formula for the portfolio adjustment, which is not reflected in the current proposal.

Commissioner Altmaier said the reason for the exposure now is to meet the RBC procedural deadline of Jan. 30, 2020, for any structure changes to be proposed. He stressed that if this structure change is ultimately adopted, it would not expedite or impose any deadline on the development of the associated factors. Having the 20 designations continue to hold their six factors will allow for the development of the factors to continue as it has, with some discussions on that front to continue shortly after the beginning of 2020.

The Task Force agreed to expose the bond structure proposal for a 45-day public comment period ending Feb. 14, 2020.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

2019 U.S. and non-U.S. Catastrophe Event Lists

**REASON OR JUSTIFICATION FOR CHANGE **

New events were determined based on the sources from Swiss Re and Aon Benfield.

Additional Staff Comments:

11/8/19 The Catastrophe Risk SG exposed the proposal for 14 days public comment period ending 11/24/19.
12/6/19 The Catastrophe Risk SG adopted the lists. For any additional events that occur between 11/1 and 12/31, the SG will either schedule a call or conduct an email vote to adopt the updated list.
12/8/19 The PCRBC WG adopted the lists. For any additional events that occur between 11/1 and 12/31, the SG will either schedule a call or conduct an email vote to adopt the updated list.
1/7/20 The Catastrophe Risk SG exposed the additional events for 14 days public comment period ending 1/21/20. One earthquake event was added to the non-U.S. Catastrophe Event Lists.

The Capital Adequacy (E) Task Force met via conference call April 30, 2020. The following Task Force members participated: Jillian Froment, Chair, represented by Tom Botsko (OH); Todd E. Kiser, Vice Chair, represented by Jake Garn (UT); Jim L. Ridling represented by Richard Ford (AL); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Perry Kupferman (CA); Andrew N. Mais represented by Kathy Belfi and Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); David Altmaier represented by Ray Spadeck (FL); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Chloria Lindley-Myers represented by John Rehagen and William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Raymond G. Farmer represented by Michael Shull (SC); Kent Sullivan represented by Mike Boerner (TX); Mike Kreidler represented by Steve Drutz (WA); and Mark Afable represented by Amy Malm (WI).

1. **Heard Introductory Remarks**

   Mr. Botsko announced that the Task Force was given special allowances to hold its April 30 conference call in order to adopt the required changes for 2020 year-end reporting and to meet its risk-based capital (RBC) forecasting publication deadlines. All other non-COVID-19 related topics or discussion items will resume after the Summer National Meeting.

2. **Adopted Proposal 2019-16-CA (Bond Designation Structure)**

   Mr. Rehagen made a motion, seconded by Mr. Drutz, to adopt proposal 2019-16-CA (Attachment One-B1). The motion passed unanimously.

   Mr. Barlow explained that a new schedule in the life/fraternal RBC formula for longevity risk should be considered to determine the appropriate guardrails and factor. Therefore, more information must be obtained in order to develop the guardrails and factors, and it is important that the structure be in place for 2020 year-end with zero factors in order to collect this information.

   Mr. Barlow made a motion, seconded by Mr. Boerner, to adopt proposal 2019-13-L (Attachment One-B2). The motion passed unanimously.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

[ ] Health RBC Instructions  [ ] Property/Casualty RBC Instructions  [ X ] Life and Fraternal RBC Blanks
[ ] OTHER ____________________________

DESCRIPTION OF CHANGE(S)
Incorporate the 20 designations for Bonds structure into the RBC formula in order to conduct an impact analysis for 2020 year-end reporting.

REASON OR JUSTIFICATION FOR CHANGE **
The Blanks Working Group and the Security Valuation Office have adopted the 20 bond designations for 2020 reporting. The reported designations will flow into the RBC but will not include factors. The current factor for designations 1-6 will remain in the RBC until an impact analysis can be done to confirm the new factors for the 20 designations.

Additional Staff Comments:
2/25/20 – Based on NAIC Staff reviewed the comments received along with changes to the 2020 Annual Statement blanks, modifications were made to the following pages, for property: PR006, PR015, PR030 and for health: XR006, XR007.1-XR007.h, XR007.2 and XR023. Because the life formula pulls from the Asset Valuation Reserve, there were only minor changes needed to two total lines on LR002, one on the AVR page and one line description change each on LR030 and LR031. Eky
3/5/20 – Modifications were made to 1) exclude the Hybrid Securities in the PRBC and HRBC PR006 and XR007 Electronic Tables and 2) adjust the XR007 Line 27 to pick up the correct line #. Eky

** This section must be completed on all forms. Revised 2-2019

† The factor for publicly traded common stock should equal 30 percent adjusted up or down by the weighted average beta for the publicly traded common stock portfolio subject to a minimum of 22.5 percent and a maximum of 45 percent in the same manner that the similar 13 percent factor for publicly traded common stock in the Asset Valuation Reserve (AVR) calculation is adjusted up or down. The rules for calculating the beta adjustment are set forth in the AVR section of the annual statement instructions.

(62) Total of Issuer = Sum of Lines (1) through (61)

**NOTE:** Ten issuer sections and a grand total page will be available on the filing software. The grand total page is calculated as the sum of issuers 1-10 by asset type.

‡ Refer to the instructions for the Asset Concentration Factor for details of this calculation.

Denotes items that must be manually entered on the filing software.

Note: For the intermediate category of hedging, we recommend that the risk mitigation and resulting RBC credit be determined as if each specific security common to both the index/basket hedge and the portfolio is a basic hedge with the entire basic hedge methodology applied to each matching name. This includes the application of the maturity mismatch formula and the maximum RBC credit of 94% of the C-1 asset charge for fixed income hedges.

† Columns are derived from investment schedules.
‡ The portion of Column (2) Notional Amount of the Hedging Instrument that hedges Column (7) Book / Adjusted Carrying Value. This amount cannot exceed Column (7) Book / Adjusted Carrying Value.
§ Factor based on Column (10) NAIC Designation and NAIC C-1 RBC factors table.
* Column (7) Book / Adjusted Carrying Value multiplied by Column (11) RBC Factor.
£ Column (13) is calculated according to the risk-based capital instructions.
** Column (12) Gross RBC Charge minus Column (13) RBC Credit for Hedging Instruments.

Denotes manual entry items that do not arise directly from the annual statement.
### Off-Balance Sheet Collateral

(Including any Schedule DL, Part 1 Assets not Included in the Asset Valuation Reserve)

### DESCRIPTION OF CHANGE(S)

This proposal creates a new schedule in the life and fraternal RBC formula along with the necessary instructions to incorporate a charge for longevity risk.

### REASON OR JUSTIFICATION FOR CHANGE **

The Longevity Risk (A/E) Subgroup was charged with providing recommendations for recognizing longevity risk in statutory reserves and/or RBC, as appropriate. This represents the Subgroup’s recommendation as it applies to RBC.

### Additional Staff Comments:

- 11-4-19: Proposal was exposed for comments (DBF)
- 12-4-19: Proposal was re-exposed for comments by the Life Risk-Based Capital (E) Working Group (DBF)
- 2-14-20: Proposal was adopted by the Life Risk-Based Capital (E) Working Group (DBF)

** This section must be completed on all forms.

LONGEVITY RISK
LRtbd

Basis of Factors

The factors chosen represent surplus needed to provide for claims in excess of reserves resulting from increased policyholder longevity calibrated to a 95th percentile level. For the purpose of this calibration aggregate reserves were assumed to provide for an 85th percentile outcome.

Longevity risk was considered over the entire lifetime of the policies since these annuity policies are generally not subject to repricing. Calibration of longevity risk considered both trend risk based on uncertainty in future population mortality improvements, as well as level or volatility risk which derives from misestimation of current population mortality rates or random fluctuations. Trend risk applies equally to all populations whereas level and volatility risk factors decrease with larger portfolios consistent with the law of large numbers.

Statutory reserve was chosen as the exposure base as a consistent measure of the economic exposure to increased longevity. Factors were also scaled by reserve level since number of insured policyholders is a less accessible measure of company specific volatility risk. Factors provided are pre-tax and were developed assuming a 21% tax adjustment would be subsequently applied.

Specific Instructions for Application of the Formula

Annual statement reference is for the total life contingent reserve for the products in scope. The scope includes annuity products with life contingent payments where benefits are to be distributed in the form of an annuity. It does not include annuity products that are not life contingent, or deferred annuity products where the policyholder has a right but not an obligation to annuitize. Line (3) for General Account Life Contingent Miscellaneous reserves is included in the event there are any reserves for products in scope reported on Exhibit 5 line 079999; it is not meant to include cash flow testing reserves reported on this line. Included in scope are:

- Single Premium Immediate Annuities (SPIA) and other payout annuities in pay status
- Deferred Payout Annuities which will enter annuity pay status in the future upon annuitization
- Structured Settlements for annuitants with any life contingent benefits
- Group Annuities, such as those associated with pension liabilities with both immediate and deferred benefits

The total reserve exposure is then further broken down by size as in a tax table. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to reserves is completed automatically. The calculation is as follows:

<table>

### Overview of the NAIC Health Risk-Based Capital Report

**Introduction**

Risk-based capital (RBC) is a method of measuring the minimum amount of capital appropriate for a reporting entity to support its overall business operations in consideration of its size and risk profile. It provides an elastic means of setting the capital requirement in which the degree of risk taken by the insurer is the primary determinant. The five major categories of risks involved are:

<table>
<thead>
<tr>
<th>Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Insurance Affiliates H–0 And Misc. Other</td>
<td>This is the risk from declining value of insurance subsidiaries as well as risk from off-balance sheet and other misc. accounts (e.g. DTAs).</td>
</tr>
<tr>
<td>Asset Risk – Other H–1</td>
<td>This is the risk of assets’ default of principal and interest or fluctuation in market value.</td>
</tr>
</tbody>
</table>

**Detail Eliminated To Conserve Space**
Overview of the NAIC Life and Fraternal Risk-Based Capital Report

Introduction

Risk-based capital (RBC) is a method of measuring the minimum amount of capital appropriate for an insurance company to support its overall business operations in consideration of its size and risk profile. It provides an elastic means of setting the capital requirement in which the degree of risk taken by the insurer is the primary determinant. The five major categories of risks involved are:

- **Insurance Affiliates and Misc. Other (C-0)**
  This is the risk from declining value of insurance subsidiaries as well as risk from off-balance sheet and other misc. accounts (e.g., DTAs).

- **Asset Risk - Other (C-1)**
  This is the risk of assets' default of principal and interest or fluctuation in fair value.

- **Insurance Risk (C-2)**
  This is the risk of underestimating liabilities from business already written or inadequately pricing business to be written in the coming year.
Overview of the NAIC Property and Casualty Risk-Based Capital Report

Introduction

Risk-based capital is a method of establishing the minimum amount of capital appropriate for an insurance company to support its overall business operations in consideration of its size and risk profile. It provides an elastic means of setting the minimum capital requirement in which the degree of risk taken by the insurer is the primary determinant.

A company’s risk-based capital is calculated by applying factors to various asset, premium and reserve items. The factor is higher for those items with greater underlying risk and lower for less risky items. The adequacy of a company’s actual capital may then be measured by a comparison to its risk-based capital as determined by the formula.

Risk-based capital standards will be used by regulators to set in motion appropriate regulatory actions relating to insurers that show indications of weak or deteriorating conditions. It also provides an additional standard for minimum capital requirements that companies should meet to avoid being placed in conservatorship.

Life and Fraternal RBC Instructions

DESCRIPTION OF CHANGE(S)

This proposal creates the instructions necessary to complete the new longevity risk schedule.

REASON OR JUSTIFICATION FOR CHANGE **

The Longevity Risk (A/E) Subgroup was charged with providing recommendations for recognizing longevity risk in statutory reserves and/or RBC, as appropriate. The Subgroup’s recommendation for the structure necessary was adopted by the Life Risk-Based Capital (E) Working Group on 2-14-20 in proposal 2019-13-L.

Additional Staff Comments:

• 4-30-20: The instructions including zero factors was exposed for comment (DBF)

** This section must be completed on all forms.

Revised 2-2019
LONGEVITY RISK

Basis of Factors

The factors chosen represent surplus needed to provide for claims in excess of reserves resulting from increased policyholder longevity calibrated to a 95th percentile level. For the purpose of this calibration aggregate reserves were assumed to provide for an 85th percentile outcome.

Longevity risk was considered over the entire lifetime of the policies since these annuity policies are generally not subject to repricing. Calibration of longevity risk considered both trend risk based on uncertainty in future population mortality improvements, as well as level or volatility risk which derives from misestimation of current population mortality rates or random fluctuations. Trend risk applies equally to all populations whereas level and volatility risk factors decrease with larger portfolios consistent with the law of large numbers.

Statutory reserve was chosen as the exposure base as a consistent measure of the economic exposure to increased longevity. Factors were also scaled by reserve level since number of insured policyholders is a less accessible measure of company specific volatility risk. Factors provided are pre-tax and were developed assuming a 21% tax adjustment would be subsequently applied.

Specific Instructions for Application of the Formula

Annual statement reference is for the total life contingent reserve for the products in scope. The scope includes annuity products with life contingent payments where benefits are to be distributed in the form of an annuity. It does not include annuity products that are not life contingent, or deferred annuity products where the policyholder has a right but not an obligation to annuitize. Line (3) for General Account Life Contingent Miscellaneous reserves is included in the event there are any reserves for products in scope reported on Exhibit 5 line 0799999; it is not meant to include cash flow testing reserves reported on this line. Included in scope are:

- Single Premium Immediate Annuities (SPIA) and other payout annuities in pay status
- Deferred Payout Annuities which will enter annuity pay status in the future upon annuitization
- Structured Settlements for annuitants with any life contingent benefits
- Group Annuities, such as those associated with pension liabilities with both immediate and deferred benefits

The total reserve exposure is then further broken down by size as in a tax table. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to reserves is completed automatically. The calculation is as follows:

DESCRIPTION OF CHANGE(S)
Modify the instruction to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurance.

REASON OR JUSTIFICATION FOR CHANGE **
1. The factor for reinsurance recoverable from uncollateralized, unrated reinsurers is being updated to move towards a charge that is more aligned with risk-indicated factors used by the ratings agencies.
2. With respect to the broader implementation of the Covered Agreement, the PCRBC WG identified the need to eliminate the different treatment of uncollateralized reinsurance recoverable from authorized versus unauthorized, unrated reinsurers.

Additional Staff Comments:
12/8/19 – The PCRBC WG agreed to expose this proposal for a 45-day public comment period ending Jan. 21.
1/9/20 – The RAA submitted a comment letter.
1/21/20 – The APCIA submitted a comment letter.
2/3/20 – The PCRBC WG adopted the proposal at the Joint Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup conference call. Also the Blank’s proposal has been forwarded to the Blank’s (E) Working Group.

© 2020 National Association of Insurance Commissioners
For the purpose of the credit risk-based capital charge, the equivalent rating category assigned will correspond to current financial strength rating received from an approved rating agency as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. If the reinsurer does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated Reinsurers” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “Secure 3” equivalent rating. An authorized association including incorporated and individual unincorporated underwriters or a member thereof may utilize the lowest financial strength group rating received from an approved rating agency. The table below shows the R3 reinsurer equivalent rating categories and corresponding factors for A.M. Best, Standard and Poor’s, Moody’s and Fitch ratings.

#### Identification of Item(s) to Change

Modify the Annual Statement Instructions to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified, and reciprocal reinsurers.

**Reason, Justification for and/OR Benefit of Change**

1. The factor for reinsurance recoverable from uncollateralized, unrated reinsurers is being updated by PCRCB WG to move towards a charge that is more aligned with risk-indicated factors used by the ratings agencies.

2. With respect to the broader implementation of the Covered Agreement, the PCRCB WG identified the need to eliminate the different treatment of uncollateralized reinsurance recoverable from authorized versus unauthorized, unrated reinsurers.

</table>

Utilize the table below and report a reinsurer designation equivalent code of 1 through 6 (where 6 represented vulnerable 6 or unrated). The equivalent designation category assigned will correspond to a current financial strength rating received from an approved rating agency as outlined in the table below. Ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. If the reinsurer does not have at least one financial strength rating, it should be assigned the “Vulnerable 6 or Unrated Reinsurers” equivalent rating. Amounts recoverable from unrated voluntary pools should be assigned the “reinsurer equivalent code of 3.” An authorized association including incorporated and individual unincorporated underwriters or a member thereof may utilize the lowest financial strength group rating received from an approved rating agency.

**DESCRIPTION OF CHANGE(S)**

The proposed change would update the Line 1 Factors for PR017 and PR018.

**REASON OR JUSTIFICATION FOR CHANGE **

The proposed change would provide routine annual update of the industry underwriting factors (premium and reserve) in the PCRBC formula.

**Additional Staff Comments:**

The P/C RBC WG exposed this proposal for a 30-day public comment period ending May 9.

**This section must be completed on all forms.**

Capital Adequacy (E) Task Force
NAIC Proceedings – Summer 2020
The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call July 30, 2020. The following Working Group members participated: Steve Drutz, Chair (WA); Steve Ostlund (AL); Eric Unger (CO); Wanchin Chou (CT); Carolyn Morgan (FL); Tish Becker (KS); Rhonda Ahrens (NE); Kelsey Barlow (NV); Tom Dudek (NY); Kimberly Rankin (PA); and Mike Boerner (TX).

1. **Adopted its Dec. 17, 2019, Minutes**

The Working Group met Dec. 17, 2019, and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) discussed the draft health bond structure and factors; 3) discussed the bond portfolio adjustment; 4) discussed investment grade bond factors; 5) discussed investment income included in the development of the bond factors; and 6) discussed using a five-year time horizon in the development of the bond factors.

Mr. Ostlund made a motion, seconded by Mr. Dudek, to adopt the Working Group’s Dec. 17, 2019, minutes (Attachment Two-A). The motion passed unanimously.

2. **Approved the 2019 Health RBC Statistics**

Mr. Drutz said the 2019 health statistics were run on July 13, and there were 1,012 health risk-based capital (RBC) filings loaded onto the NAIC database compared to 965 in 2018. He said there were 15 companies that triggered an action level and 14 companies that triggered the trend test. He noted that an inconsistency was found and corrected in the 2017 Health RBC Excluding ACA Fees in Companies column on the “Action Level” lines and the “# of companies with an RBC ratio less < 200%” line.

Hearing no objections, the Working Group approved the 2019 Health RBC Statistics (Attachment Two-B). They will be posted on the Working Group’s webpage.

3. **Referred the ACA Fee Sensitivity Test Proposal (2020-02-CA) to the Capital Adequacy (E) Task Force for Exposure**

Mr. Drutz said the federal Affordable Care Act (ACA) fee was repealed for 2021. As a result, proposal 2020-02-CA was developed to delete the sensitivity test from the health, life and fraternal, and property/casualty (P/C) RBC formulas. Mr. Drutz suggested that the Working Group refer the proposal to the Capital Adequacy (E) Task Force for a 30-day public comment period.

Hearing no objections, the Working Group referred proposal 2020-02-CA to the Capital Adequacy (E) Task Force for a 30-day public comment period.

4. **Adopted Proposal 2020-04-H for the MAX Function in Line 17 of the Excessive Growth Charge**

Mr. Drutz said NAIC staff received an inquiry from a software vendor on an inconsistency between the health RBC forecasting formula and the validation in Line 17 of the excessive growth charge on page XR021. The validation included the MAX function, while the formula in the forecasting spreadsheet did not. The MAX function will convert a negative amount to zero. Mr. Drutz said the proposal was exposed for comment in April to incorporate the MAX function, and no comments were received.

Mr. Boerner made a motion, seconded by Mr. Unger, to adopt proposal 2020-04-H (Attachment Two-C) to add the MAX function to Line 17 of the health RBC forecasting formula for 2021 reporting. The motion passed unanimously.
5. **Received an Update on the Health Bond Factors**

a. **Investment Income**

Mr. Drutz said the Working Group asked the American Academy of Actuaries (Academy) to address comments brought forward on the inclusion of investment income in the proposed bond factors. Derek Skoog (Academy) summarized the Academy’s response letter (Attachment Two-D) that considering investment income is a reasonable argument; and while the Academy’s approach does consider the investment income on the assets that underlie the asset risk that is being evaluated, it does not contemplate all of the investment income. He said based on the comments received, the desire is to account for investment income in the asset risk charges, and that would result in diluting the size of the asset risk charges and potentially have zero asset risk charges for some asset risk classes. He said that underestimates the risk of default because there is real default risk. He said the Academy suggests that an alternative way forward may be to match the P/C approach, where investment income for other assets like the assets that underly a company’s reserves are used as an offset for underwriting risk, rather than applying all investment income to the bond default risk.

James Braue (UnitedHealth Group—UHG) said the suggestion of investment income was proposed in a previous comment letter from UHG, and the Academy’s response does not fully address the issue that was raised. He said in the Academy’s letter, it noted that using a discount rate on the factor only reflects investment income on the bonds that support the RBC for bond default itself, which, generally speaking, is only going to be a tiny fraction of the total bond holdings. He said some portion of that investment income is essentially, explicitly for bond default risk. He said bonds generally have a spread above the risk free rate, unless you are talking about U.S. Treasury in which there is usually a proxy for the risk free rate, and the purpose of that spread is to compensate for the bond default risk; so not reflecting this is comparable to modeling underwriting losses on the assumption that there is no premium so that the first dollar of losses has to be paid out of surplus. He said this is not a conceptually correct approach to the modeling. He said it is true that the spread is not the entire amount of interest income, and UHG suggested using the entire interest rate as a matter of simplicity, not just the credit spread, and this approach still has merit, particularly when you consider how the risk free portion of the rate would otherwise be reflected. He said the Academy suggested including it in other risk factors, such as underwriting risk. He said there are several issues with this: 1) it is unlikely that it would happen in practice, as there is no current initiative to update the underwriting risk factors, and it is unknown on when it would be taken into account; and 2) if it were done, the Academy group responsible for doing modeling might decline to include investment income on the grounds that difficulties and uncertainties related to doing so outweigh the usefulness of the inclusion. He said even if it was included in the modeling, the current unwriting factors are pretty heavily rounded, so it is very possible that the impact would be rounded away; or conversely, if the rounding went in the other direction, the factors might be reduced by much more than the investment income actually warranted. He said this seems to be a problem with saying that it should be included in the underwriting risk factors. He said applying interest income to underwriting risk rather than default risk is actually a lot less risk-based from an RBC perspective. He said if you are modeling investment income in your underwriting risk factors, assumptions have to be made about the amount of assets held for a given line of business, how much of those assets are bonds versus things like premiums receivables or health care receivables or other types of investments, and the credit quality distribution or average credit quality of the bond held. He said if you model investment income in bond default risk, you automatically take into account the actual amount of bonds held and the actual credit quality distribution of the bond. He said UHG believes it is more appropriate to apply the investment income in the credit risk default factors, and the Working Group was correct in directing the Academy to do that; and if there is a concern about the factors being reduced too much, there is already a minimum being applied. Given the simplified approach that UHG has suggested, it believes that it would be possible for someone other than the Academy to undertake doing that work if the Working Group agreed that it should be done. Mr. Braue said if there were no preferable alternatives, UHG would undertake to do that itself.

Mr. Skoog said the overarching idea from the Academy was to ascribe investment income to the assets that were underlying to the risk-factor risks, as opposed to all of the investment income, with the understanding that a significant portion of the assets of a health insurer balance sheet would be supporting underwriting risk; therefore, it thought it was more appropriate to mirror the P/C approach and not create a third approach between each of the formulas, but instead ascribe investment income to the assets underlying the underwriting risk. He said the Academy understands the arguments on both sides, but the most straightforward approach would be to ascribe the investment income to the assets that underly each respective risk type.

Mr. Drutz suggested that based on the Academy’s findings, and for added consistency between the health and P/C formulas, the Working Group requests that the Academy look at adding investment income into the underwriting portion of the health formula. He suggested that this project would run parallel to the bond risk factors project, and it would look at changing the
underwriting risk factors to include the investment income, such that both could occur within a reasonable amount of time to each.

Mr. Braue said this approach would address his concerns if it was shown that investment income could, as a practical matter, be properly reflected in the underwriting risk factors. He said the Academy may be overlooking some of the practical difficulties associated with that. He said he would be happy to see it attempted; however, depending on the outcome, we could be back in the same place we are now.

The Working Group agreed to direct NAIC staff to draft a letter to the Academy to request that it evaluate and consider incorporating investment income into the underwriting risk factors. The Working Group will review the letter on its Aug. 18 conference call.

b. Time Horizon

Mr. Drutz said during the Dec. 17, 2019, call, the Working Group discussed incorporating a longer time horizon of five years into the bond factors, due to several factors: 1) the duration of assets for health insurers is about 5.2 years, which is longer than the duration of liabilities; 2) using a two-year time horizon makes it harder from regulatory framework to support an amortized cost basis rather than a market value-based valuation; and 3) increased consistency with the P/C formula. During this call, the Working Group asked the Academy to provide it with both two-year and five-year time horizon factors.

Lou Felice (NAIC) said amortized cost is a key underpinning of our solvency system and accounting basis. When you have a two-year duration, it is hard to make a case that it is compatible with amortized cost since it is more compatible with the risk of changes in value; so for bonds, that would be interest rate fluctuations and other mechanisms that adjust the value of the bond. He said in the current formula, NAIC designation 1 and 2 bonds are treated at amortized cost; if a two-year duration is applied that is more generally associated to market risk, it does open it up for criticism for use of amortized cost more generally. He said based on the Academy report, health bond investments cover both claims and surplus, so there is no reason that you should solely look to the duration of liabilities for a health filer. He said it is important to keep a strong adherence to what amortized cost was intended to mean. He said the data seems to indicate a five-year holding period for these bonds, then the default risk should relate more to that holding period. That being said, something less than five or more than two could still be considered. Mr. Ostlund said he is concerned that a company with shorter duration bonds would be penalized for going to a longer duration due to the significant difference in the two-year and five-year factors. Mr. Felice said every formula uses some duration that is applied to the factor, and the durations used in the other formulas are more consistent with an amortized cost or smoothing over time of the change in the value of investment grade bonds. He said the fact that the factor is more in a five-year versus a two-year duration is something to consider; however, it should be balanced against the potential of losing value on the valuation side when using a two-year duration, because it would be unlikely to continue to use amortized cost if a two-year duration was used.

Mr. Ostlund asked if the intent of the change was to decrease the RBC ratio for all companies. Mr. Felice said the intent of the project was to be more risk-focused and expand the designations from six to 20. He said the current NAIC 1 and 2 designations would expand into about 11 designations under the new structure, and the idea would be that the spectrum of the NAIC 1 and 2 designations would be split out, and that would determine if it increased or decreased. He also said they would still go through covariance, which would further reduce the impact of the increase or decrease. Mr. Ostlund said he would not want the expansion of the bond factors to cause a reduction in the RBC ratio for the additional designation classes; he would want the effect to be neutral. He said if this is for allocation between categories, he does not have a concern, but if the change would affect every company’s RBC ratio because of the increase in the designations, it seems inappropriate.

Mr. Drutz said the original intent of the project was to increase the bond designations from six to 20, and the appropriate factors then have to be applied to each of those new designations. He suggested that the Working Group expose the Academy’s letter containing the two- and five-year factors for comment. Those factors would then be used in an impact analysis in early 2021 to evaluate the differences of the two sets of factors based on the data reported in the new bond structure implemented for year-end 2020. This will allow the Working Group to get a handle on the whether it is causing a significant change in the RBC ratio. Mr. Drutz said the Working Group is not making a determination of the final factors, but instead on which factors to use in an impact analysis, and then using that analysis to make the final determination of the factors.
Mr. Skoog summarized the Academy’s letter (Attachment Two-E), which included the two- and five-year duration; the model was run using the five-year time horizon. He said the significant differences in the factors was because with a longer time horizon, there is a greater chance that a particular bond would default over that time horizon. He said the model is reflecting that increased probability. Otherwise, an identical methodology was maintained to the two-year factors that were previously exposed.

Crystal Brown (NAIC) noted that the proposed factors include an adjustment for the bond portfolio adjustment since the current health formula does not have a bond portfolio adjustment calculation. Mr. Chou asked if the Working Group is ready to finalize the factors for the health formula, because the bond factors in the life formula have not yet been finalized. Mr. Drutz said the health factors were separated from the life factors at this time due to differences in a life and health company. He said before final factors are determined for year-end 2021, the Working Group plans to do the impact analysis on the year-end 2020 data.

Hearing no objections, the Working Group agreed to expose the Academy’s bond factor letter for a 32-day public comment period ending Aug. 31.

6. **Adopted Updates to its 2020 Working Agenda**

Mr. Drutz said the 2020 working agenda has been updated to add the following items: 1) proposal 2020-02-CA for the deletion of the ACA Fee Sensitivity Test that was originally added as part of the evaluation of the impact of the Federal Health Care Law; 2) review and consideration of the formula for the inclusion of the MAX function on Line 17 of the excessive growth charge as proposal 2020-04-H; and 3) consideration of the impact of COVID-19 and pandemic risk on the health RBC formula.

Mr. Ostlund made a motion, seconded by Mr. Chou, to adopt the updates to the 2020 health RBC working agenda. The motion passed unanimously.

7. **Discussed the Impact of COVID-19 and Pandemic Risk in the Health RBC Formula**

Mr. Drutz said the Solvency Modernization Initiative Risk-Based Capital (E) Subgroup tasked the Working Group in 2011 with looking at catastrophic risks, such as pandemic and biological risks, should such an event occur. He said the Working Group added interrogatory questions for informational purposes only that were included in the formula for several years. However, the Working Group found that only a small number of companies indicated that they allocated a component of surplus for pandemic and biological risks. Mr. Drutz asked the Working Group if there is a need to reevaluate the pandemic and biological risk interrogatories that had previously been included in the health RBC formula. He said with the information that we have currently, it seems like it would be timely for the Working Group to review the previous interrogatories and expand upon those based on the real time lessons we are learning now.

The Working Group agreed to discuss this topic on future calls.

8. **Exposed the Health Care Receivable Guidance**

Mr. Drutz said the health care receivable guidance was exposed for comment at the 2019 Fall National Meeting, and one comment letter was received.

Connie Jasper Woodroof (Sapiens) summarized her comments on the health care receivable guidance (Attachment Two-F). She agreed that extra guidance on the health care receivables would be beneficial, and she suggested incorporating this language into the official annual statement instructions. She also suggested including examples of how Exhibit 3 and Exhibit 3A should be completed.

Mr. Drutz said based on the comments received and ongoing conversations with the Academy, we are working to better clarify the instructions and develop examples. He said the plan is to work on guidance for 2020 annual statement reporting and a proposal to clarify the annual statement instructions for 2021 reporting. He said the goal is to bring the guidance and proposal to the Working Group on either the August or September call to expose for comment and then refer them to the Blanks (E) Working Group for consideration.
9. Received an Update on the Health Test Ad Hoc Group

Mr. Drutz said the Health Test Ad Hoc Group has not met since prior to the COVID-19 pandemic; however, the revised health test language was exposed on Feb. 13, and one comment letter was received during that exposure period from America’s Health Insurance Plans (AHIP).

Ray Nelson (AHIP) summarized his comment letter (Attachment Two-G), which included editorial changes to the health test language.

Mr. Drutz said since the exposure, NAIC staff have performed additional analysis of the companies that could be affected by the changes to the health test language, and through this analysis, additional questions were brought to light. NAIC staff sent a brief survey to the states regarding the methodology to be used in modifying the health test. Mr. Drutz said based on the responses received, he plans to ask the Ad Hoc Group to re-evaluate the approach, put a pause on the health test language, and begin looking at changes that could be considered in the annual statement blanks. He said the Ad Hoc Group has developed a good starting point with the current revisions; however, it may be beneficial to first look at the annual statement blanks to determine how to continue to move forward. He said the Ad Hoc Group will meet again on Sept. 1 and discuss how to continue moving the project forward. He asked that anyone interested in participating in the Ad Hoc Group contact Ms. Brown.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

W:\QA\RBC\HRBC\2020\Calls And Meetings\Summer National Meeting HRBC\07_30_20_HRBC Minutes.Docx
Health Risk-Based Capital (E) Working Group
Conference Call
December 17, 2019

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Dec. 17, 2019. The following Working Group members participated: Patrick McNaughton, Chair, and Steve Drutz (WA); Steve Ostlund (AL); Eric Unger (CO); Wanchin Chou (CT); Gilbert Moreau and Kyle Collins (FL); Chut Tee (KS); Kristi Bohn (MN); Michael Muldoon (NE); Annette James (NV); Tom Dudek (NY); and Aaron Hodges (TX).

1. **Adopted its Fall National Meeting Minutes**

The Working Group met Dec. 8 and took the following action: 1) adopted its Oct. 21 and Sept. 9 minutes; 2) discussed the draft health bond structure; 3) received an update on the Health Test Ad Hoc Group; 4) exposed the health care receivables guidance for 30-day public comment period; 5) adopted updates to the 2020 working agenda; and 6) received an update on the Excessive Growth Charge Ad Hoc Group.

Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the Working Group’s Dec. 8 minutes (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Two). The motion passed.

2. **Discussed the Draft Health Bond Structure**

Mr. McNaughton said that the Working Group will discuss comments previously received from UnitedHealth Group and America’s Health Insurance Plans (AHIP) on the health bond structure and factors.

a. **Bond Portfolio Adjustment**

Mr. McNaughton said the July 29 comment letter from AHIP expressed concerns with the recommended American Academy of Actuaries (Academy) factors that included the bond portfolio adjustment for the speculative grade bonds. AHIP noted that it could find no basis for the assumption that the statistical fluctuation based on the portfolio size from the default/no-default variation is appropriate for any presumed variation by portfolio size due to market value fluctuations.

Mr. McNaughton said that from a consistency standpoint, the health formula is deviating from the treatment of the bond portfolio adjustment used in the life and property/casualty (P/C) formulas by incorporating the bond portfolio adjustment into the factor itself. He said that the life and P/C formulas do not differentiate between investment grade and speculative grade bonds when calculating the bond portfolio adjustment. Therefore, excluding the bond portfolio adjustment from the speculative bond factors would be an additional inconsistency incorporated into the health formula.

Mr. McNaughton said that through discussions with the Academy, it was noted that the data was not split between investment grade and speculative grade bonds and if this approach was taken, the Academy would need to go back and reevaluate the data. The Academy indicated that removing the bond portfolio adjustment from the speculative grade bond factors could increase the investment grade bond factors.

Mr. McNaughton said it was his recommendation at the Fall National Meeting not to bifurcate the investment grade and speculative grade bonds due to the effort needed to reanalyze the data, which does not appear to provide a material change. He said that from a conservatism perspective, the health formula is a generic formula, and increased granularity can result in a lot of work with little gain from a regulatory perspective in capturing a weakly capitalized company. Mr Ostlund and Mr. Chou agreed with Mr. McNaughton’s assessment.

Bill Weller (AHIP) said that the approach being suggested was to take the modeled bond factor from a default point of view and increase that by the portfolio adjustment factor recommended by the Academy and compare that result for certain speculative grade bonds to that increased bond factor. He said that the higher of the two factors would be used: market risk factor or the bond factor adjusted for portfolio risk. He said there would be no additional work required by the Academy and if the market risk factor unadjusted for portfolio is higher than the default risk factor adjusted for portfolio size, the default risk for all classes is covered. Mr. Weller said that AHIP does not see a basis for saying that there should be portfolio adjustment on the market risk factor and that AHIP is not suggesting to use a lower factor. However, AHIP is asking for consideration to
not apply the portfolio adjustment factor to the market risk factor when it exceeds the calculated default risk factor with the portfolio adjustment. He said it is a matter of comparing the factors for NAIC 3, NAIC 4 and NAIC 5 bonds and then picking the higher of the two. Crystal Brown (NAIC) asked if the recommendation to use the market risk factor would not reflect the bond portfolio adjustment in the factor. Mr. Weller said the Academy report had a default model risk factor for each of the six classes before the bond portfolio adjustment. He said one would take those factors and apply the portfolio adjustment and then compare those to the market risk factors without any portfolio adjustment because there is no basis for the size of the portfolio changes the market risk. He said the higher of the two factors would be used. He said the AHIP proposal would use the market risk factor without portfolio adjustment for NAIC 3 and NAIC 4 and the default risk adjusted for portfolio for NAIC 5 because it is higher of the two factors.

Mr. Ostlund asked if the proposed changes would improve precision in the formula. Mr. Weller said the point of the modeling and coming up with factors is to apply an inherently consistent structure to risk-based capital (RBC) and when developing factors on the basis of default and no default, the size of the portfolio matters. He said when looking at market risk, it applies to all bonds, and there is no effect on the portfolio size. Mr. Ostlund said that the Working Group is using a consistent approach with the other formulas, but this proposed change may not improve predictability.

Derek Skoog (Academy) said that in the Academy’s study, the speculative grade bonds tended to be a very small percentage of the overall health portfolio. He said that it may not add a lot of value to the health RBC formula. Mr. Chou asked when the Working Group plans to implement the changes into the health formula. Mr. McNaughton said that the Working Group has already agreed with the structure and would like to finalize the factor discussion as soon as possible.

b. Investment Grade Bond Factors

Mr. McNaughton said that UnitedHealth Group indicated that the Aaa and Aa1 bonds are less risky than the Aa2 bonds and recommended that a lower factor of 0.1% be applied to these types of bonds. UnitedHealth Group suggested factors of 0.03% and 0.07%, respectively. In the Academy’s report, it recommended a factor of 0.1% for Aaa, AA1 and Aa2 bonds for reasons of conservatism. The Academy noted that if cash had a risk charge, then bonds should have a charge at least as great. It also said that there could be other risks outside of the modeled risk of misuse or loss that should also be taken into consideration. Mr. McNaughton said that from a solvency and conservatism perspective, it seems reasonable that the Working Group would consider retaining the recommended factor of 0.1% for the Aaa and AA1 bonds. Mr. Chou agreed with retaining the 0.1% factor for consistency.

Jim Braue (UnitedHealth Group) said that the cash factor is not literally for cash in the bank but also for cash, cash equivalents and short-term bonds and that it is not necessarily clear that the factor for cash should be less than a two-year AAA-rated bond. If the Academy analysis shows the factor is less than 1/10 of a percent, then it could imply that the cash factor is too high, and it should be reevaluated. Mr. Braue said any factors in the formula that are derived from the bond factors should be reviewed and reevaluated. Mr. Skoog agreed that the Working Group should consider the relationship between those factors. Mr. McNaughton agreed but said it has broader implications across all formulas as the factors for cash would have to be looked at in all formulas.

c. Investment Income

Mr. McNaughton said that UnitedHealth Group brought forth the suggestion of including investment income in the development of the bond risk factors for the health RBC formula. UnitedHealth Group indicated that just as the health formula would not reflect losses from insurance claims and operating expenses without also reflecting the insurance premium that is charged to fund those losses, likewise the formula should not reflect the losses from investments without reflecting the income from those investments. The Academy responded that investment income was used in the development of the underwriting risk in the P/C RBC formula, and it would be redundant to include it in the development of the bond factors. However, it was unclear if the health formula used a similar consideration in the development of the underwriting risk. The Academy further noted that updating the factors to include the investment income would require a number of considerations and assumptions to accommodate the impact. The Academy asked the Working Group to consider and review if investment income is already included in the formula.

Mr. McNaughton said that NAIC staff performed a review of past Working Group minutes and did not find that the investment income was considered in the development of the factors in the health RBC formula. During the Working Group’s discussion at the Fall National Meeting, Donna Novak (NovaRest Consulting) commented that she worked on the underwriting risk
modeling when the health formula was developed and indicated that she did not recall that investment income was considered in the development of the formula.

Mr. Braue said that UnitedHealth Group offered a simplified approach in moving forward with further studies on incorporating investment income into the factors. Mr. Weller agreed with incorporating a simplified approach for incorporating the investment income and that investment income was not incorporated in the underwriting factors. Lou Felice (NAIC) also agreed that investment income was not included in the health underwriting factors as they were in P/C because average duration of liabilities in P/C is longer and this leads to a more aligned period of assets to liabilities. He said that that due to the short duration of liabilities in the health formula at the time investment risk was not a material consideration of underwriting risk.

d. Time Horizon

Mr. McNaughton said that the proposed factors from the Academy were based on a two-year time horizon. However, the Academy noted on page 27 of its report that a longer time horizon of three, four or five years could be considered. The Academy specifically noted that the duration of assets for health insurers is about 5.2 years, which is longer than the duration of health liabilities. It further noted that the health bond risk factors could be calibrated with time horizons of three, four or five years. The inclusion of investment income could further be considered if a longer time horizon were included. Mr. Felice said that there is a concern of the short two-year time horizon being consistent with the regulatory framework of amortized cost basis valuation and analysis that used default and recovery periods in tandem to determine the default rate. He said that when using a two-year time horizon, it makes it harder from a regulatory framework to support an amortized cost basis rather than a market value-based valuation. He said there can be a lot of ups and downs in a two-year bond.

Mr. McNaughton suggested that due to the duration of time in which assets are held, the Working Group should ask the Academy to provide factors with a five-year time horizon without the inclusion of investment income and similar to that which UnitedHealth Group appears to be suggesting. Once these factors are received, they could then be exposed for comment. Alabama and New York agreed with moving forward with a five-year time horizon.

Mr. Weller asked why we are going to a five-year time horizon rather than a three- or four-year time horizon. Mr. McNaughton said that there are a two reasons: 1) this is more consistent with the property formula; and 2) the asset duration for health is 5.2 years.

The Working Group agreed to move forward with the Academy’s recommendation to include the bond portfolio adjustment in the speculative grade bond factors, to keep the 0.1% factor for Aaa and Aa1 bonds and to ask the Academy to look at factors with a five-year time horizon without the inclusion of investment income and with the inclusion of investment income.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

DESCRIPTION OF CHANGE(S)
Add a MAX function to the calculation of Line 17 – RBC Safe Growth Safe Harbor on Page XR021 to match the validation and start the calculation at 0.

REASON OR JUSTIFICATION FOR CHANGE **

NAIC staff received an inquiry from a software vendor on an inconsistency between the HRBC formula within the forecasting file and the validation for the MAX function in the validation of line 17 of the excessive growth charge. The attachment shows how the current calculation in the formula of the forecasting file is working without the MAX function while the validation includes the MAX function which will convert a negative amount to 0. The last screen shot shows the difference in the charge if the MAX function were incorporated into the formula within the forecasting file. The MAX function is included within other parts of the HRBC formula, while it is specifically excluded from the Underwriting portion on page XR012.

Additional Staff Comments:

Re: Draft Bond Structure and Instructions

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries\(^1\) Health Solvency Subcommittee, I am pleased to provide this response letter to the NAIC Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the HRBC Working Group comment letters received on the exposure of the Draft Bond Structure and Instructions, specifically as they relate to the treatment of investment income. In particular, this is in response to the comment letters from UnitedHealth Group dated Oct. 4, 2018, and Nov. 13, 2018.

In the Aug. 3, 2015, Academy CI Work Group report titled “Model Construction and Development of RBC Factors for Fixed Income Securities for the NAIC’s Life Risk-Based Capital Formula,” the group noted that “C1 capital represents the amount of funds needed such that this amount is sufficient to cover losses in excess of those anticipated in policy reserves that could occur within the bond portfolio over the specified time horizon within the stated confidence level. In essence, the C1 capital is equivalent to pre-funding future excess losses at the chosen confidence level and time horizon (i.e., ten years).” Given the design of the bond factor model, the group goes on to note that “[t]he required capital for a given scenario is calculated as the amount of initial funds needed such that the accumulation of this initial fund and subsequent cash flows will not become negative at any point throughout the modeling period. … There are additions and subtractions from this required capital fund:

- Additions to the capital fund include fund interest, tax recoveries on the loss, and an annual ‘risk premium’
- Subtractions to the capital fund include default losses net of recoveries and any taxes paid.”

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
In our modeling for the health bond factors,\textsuperscript{2} we utilized a discount rate of 2\% over the time horizon. This was based on June 2018 US Treasury rates and LIBOR Swap rates, and 20-year average interest rates for durations of 1-5 years ranging from 2\% to 3\%. While this modeling approach does not explicitly account for coupon income, the 2\% rate is largely consistent with yield data we reviewed, which was provided by the NAIC. Additionally, the indicated risk factors are not very sensitive to the interest rate selection.

While an argument could be made that this approach does not consider \textit{all} investment income—namely, it ignores investment income related to assets supporting other risk capital or excess capital—we do not think it would be appropriate to ascribe all that income to offset asset default risk. A more appropriate approach would utilize investment income to offset specific risk charges. For example, within the property/casualty RBC formula, investment income is explicitly included as an offset to underwriting risk factors by considering the investment income related to claims and claim adjustment expenses unpaid as well as unearned premium. This issue might be considered for the health RBC formula the next time other significant risk factors are evaluated, when there are associated assets, e.g., underwriting risk and associated claims unpaid.

We appreciate the opportunity to provide these comments and would welcome the opportunity to speak with you regarding these comments in more detail and answer any questions you might have. If you have any questions or would like to discuss further, please contact Devin Boerm (boerm@actuary.org) or Craig Hanna (hanna@actuary.org) at 202-223-8196.

Sincerely,
Derek Skoog, MAAA, FSA

Re: Draft Bond Structure and Instructions

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries1 Health Solvency Subcommittee, I am pleased to provide this response letter to the NAIC Health Risk-Based Capital (HRBC) Working Group. This letter is in response to the request from the HRBC Working Group to provide the health bond factors over both a two-year and five-year time horizon.

The table below shows the health base risk factors over a two-year and five-year time horizon before any adjustments have been made to account for minimum risk factors.

Patrick McNaughton, Chair  
Health Risk-Based Capital Working Group  
RE: Health Care Receivables Guidance proposal  

Although the intent of the guidance is clear, its effectiveness would be questionable. Companies must first know guidance on a topic is available before they will search for it. Additionally, in the past the NAIC has indicated that guidance posted to a NAIC website is not the same as official instructions, making it even less likely industry will be searching for it. How will companies be notified the guidance is posted?  

Wouldn’t it be more effective to revise the instructions for preparing Exhibit 3 and Exhibit 3A? Part of the revised instructions should be examples of different circumstances. It is not unusual for the statement instructions to include examples of expected reporting; for example, that is done in the Property/Casualty Statement Instructions for Schedule P. Specific examples would provide more clarity. There is still time to get an instructional change adopted for the 2020 statement instructions.  

A statement proposal for revising the instructions would need to be submitted to the Blanks Working Group (BWG) by April 1, 2020. To be effective for year-end 2020, the proposal has to be adopted by BWG no later than their scheduled May conference call. (According to recently revised and adopted BWG procedures.)  
At the very least, if the Working Group moves forward with posting guidance, examples should be included in that guidance. The current proposed guidance provides background and explains why Exhibit 3 and Exhibit 3A reporting is currently not felt to be accurate, but provides no specific information to companies on how to rectify their reporting.

Washington, D.C.  20001-1509

Re:  AHIP’s Comments on the February 2020 exposure of Health Test Language

Dear Mr. Drutz and Ms. Brown:

America’s Health Insurance Plans (AHIP) appreciates the opportunity to provide the following comments regarding the Health Test Language exposed in February 2020.

AHIP appreciates the work done by the NAIC’s Health Risk Based Capital (E) Working Group, Health Test Ad Hoc Group, and NAIC staff in creating the revised wording for the Health Test Language.  AHIP believes that the February 2020 exposure draft captures the essence of discussions held by Health Test Ad Hoc Group over previous calls.

During final review of the exposure draft, AHIP did notice a few minor typos and places for suggested editorial changes.  We have discussed these changes with NAIC staff and are providing these suggestions via the attached document (with track changes and comments noted on pages 5, 6, 8 and 9 of the attached Microsoft Word file).

We thank you for your consideration of these comments and would be happy to address any questions the Working Group may have.

Sincerely,

Ray Nelson, TriPlus Service – Consultant to AHIP
rnelson@triplusservices.com

Health Annual Statement

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The Health Statement Threshold result should be considered a starting point for the domestic regulator in considering which blank the reporting entity should file to most appropriately reflect the data and risks associated with the type of business written. The 90% threshold could be used as a trigger; however, the domestic regulator may begin the discussion before the percentage threshold is triggered. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Threshold calculation:**

   If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Threshold calculation.

   The Health Statement Threshold calculation is designed to determine whether a reporting entity reports predominantly health lines of business. The purpose of this threshold is to identify a reporting entity writing predominantly health business (premium ratio of 90% or more) that should continue to file on a Health Statement and the associated Health RBC filing (if required) resulting in better disclosures and analysis of the health business being written. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts, which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, and Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XVII, Medicaid Title XIX, Medicare Pass-Through Payments, and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, and Hospital Indemnity and Specified Disease Limited Benefit Plans, and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

   Core and non-core health business are split is to help guide the conversation between the reporting entity and the domiciliary regulator when determining which blank the reporting entity should file on. Core health business generally reflects business that is captured in more detail on the Health Blank, and therefore better captures the risks associated with writing that business. Non-core health business is generally not captured in as much detail on the Health Blank, and therefore might have less influence in determining which blank the reporting entity should file on.

**Meeting the Threshold:**

A reporting entity is deemed to have met the Health Statement Threshold if the values for the premium ratio in the Health Statement Threshold calculation (General Interrogatories, Part 2) equal or exceed 90% for both the reporting and prior year.

**Not Meeting the Threshold:**

Once the reporting entity has met the health threshold and is currently filing on the Health Statement (Health RBC filing), the health threshold calculation will be used to demonstrate that the insurer is still predominantly writing health business as defined above. If the premium ratio falls below 90% the company could still be viewed as writing predominantly health business and should continue to file on the Health Statement (and Health RBC Filing) but notify the domestic regulator as indicated below.
Variances from following these instructions:

If the reporting entity has consistently reported a premium ratio of 90% or greater in prior years and filed on the health blank but falls below the 90% premium ratio in the current year, the reporting entity shall apprise the domestic regulator and should advise of any changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the health annual statement and risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty annual statement blank and associated risk-based capital report. The domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Threshold is submitted if a change in statement blank will be required in a following year.

Consideration may be given by the domestic regulator as to the break-out of business written on a percentage basis by the reporting entity. For example, the reporting entity wrote 90% core business and 9% non-core business in the first year in which it filed on the health blank and in the subsequent years, the writings went down to 80% core health business and 9% non-core health business. The domestic regulator should consider the reporting entity’s overall business plan going forward to determine if the reporting entity should continue to report on the health blank and whether the health blank provides adequate disclosures and identification of significant risks associated with the type of business the company plans to write in the future.

The closer the reporting entity comes to a Health Premium Ratio of 90%, the more importance the split between core and non-core health business might have on the domiciliary regulator’s decision as to which blank the reporting entity should file on. The more non-core health business drives the Health Premium Ratio result, the more the domiciliary regulator may consider other factors when determining which blank to file on, such as the reporting entity’s future business plans, which blank the reporting entity is currently filing on, or what other lines of business the reporting entity writes. In making the blanks determination, the larger the percentage of core health business written, the more likely the Health Blank would better capture the risks and detailed health data that regulators use to make informed decisions in analysis and regulation of the reporting entity.

PART 2 – HEALTH INTERROGATORIES

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts, which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XVIII, Medicaid Title XIX.
Medicaid Pass-Through Payments and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC Business Reported as Revenue, and Limited Benefit Plans. Core health business would include comprehensive medical, Medicare Supplement, Dental and Vision, Stand-Alone Medicare Part D Coverage, Medicare Title XVIII, Medicaid Title XIX and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, and Hospital Indemnity and Specified Disease and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

All reporting entities should file the health threshold calculation.

Premium information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

### Life Annual Statement

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The Health Statement Threshold should be considered a starting point for the domestic regulator in considering which blank the reporting entity should file to most appropriately reflect the data and risks associated with the type of business written. The 90% threshold could be used as a trigger; however, the domestic regulator may begin the discussion before the percentage threshold is reached. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Threshold Calculation:**

   If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Threshold calculation.
The purpose of the Health Statement Threshold calculation is to identify a reporting entity writing predominantly health lines of business (premium ratio of 90% or more), that should move and file on a Health Statement and the associated Health RBC filing (if required). The Health Statement provides for better disclosure and analysis of the health business written compared to other statement types. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XVIII, Medicaid Title XIX, Medicaid Pass-Through Payments and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC Business Reported as Revenue, and Limited Benefit Plans. Core health business would include comprehensive medical, Medicare Supplement, Dental and Vision, Stand-Alone Medicare Part D Coverage, Medicare Title XVIII, Medicaid Title XIX and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, Hospital Indemnity and Specified Disease and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

Core and non-core health business are split is to help guide the conversation between the reporting entity and the domiciliary regulator when determining which blank the reporting entity should file on. Core health business generally reflects business that is captured in more detail on the Health Blank, and therefore better captures the risks associated with writing that business. Non-core health business is generally not captured in as much detail on the Health Blank, and therefore might have less influence in determining which blank the reporting entity should file on.

Meeting the Threshold:

A reporting entity is deemed to have met the Health Statement Threshold if:

The values for the premium ratio in the Health Statement Threshold calculation equal or exceed 90% for both the reporting and prior year. The 90% threshold would include core and non-core health business, however, if the reporting entity falls below 90%, the domestic regulator may consider if there is a benefit to the reporting entity to file on the health blank.

If a reporting entity completes the Life, Accident and Health annual statement for the reporting year and b) meets the threshold of the Health Statement Threshold calculation (as described above), the reporting entity must begin completing the health statement with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Threshold and must also file the corresponding risk-based capital report and the life supplements for that year-end. (e.g. If the company passed the health threshold for year-end-2019 reporting, the company must begin filing the health blank with first quarter 2021). With permission from the domiciliary regulator, the reporting entity may begin filing on the Health Statement with the first quarter’s statement for the first year following the reporting year (e.g. first quarter 2020).

Variance from following these instructions:

If the reporting entity has consistently reported a premium ratio below 90% or greater in prior years and filed on the health life blank but falls below 90% in the current year, the reporting entity shall apprise the domestic regulator if they fall below 90% and should advise of significant changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the health life annual statement and associated risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty health annual statement form and risk-based capital report. The domestic regulator shall
notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Threshold is submitted if a change in the statement blank will be required in the following year.

To determine if the reporting entity should move from the life blank to the health blank consideration may be given by the domestic regulator as to the break-out of business written on a percentage basis by the reporting entity. For example, the reporting entity wrote 80% core business and 9% non-core business in the a prior year and in the subsequent years, the writings increased to 85% core health business and 9% non-core health business. In this instance, the domestic regulator should consider the reporting entity’s overall business plan going forward and determine if the reporting entity should move to report on the health blank as this would provide better disclosures and risks associated to this type of business.

The closer the reporting entity comes to a Health Premium Ratio of 90%, the more importance the split between core and non-core health business might have on the domiciliary regulator’s decision as to which blank the reporting entity should file on. The more non-core health business drives the Health Premium Ratio result, the more the domiciliary regulator may consider other factors when determining which blank to file on, such as the reporting entity’s future business plans, which blank the reporting entity is currently filing on, or what other lines of business the reporting entity writes. In making the blanks determination, the larger the percentage of core health business written, the more likely the Health Blank would better capture the risks and detailed health data that regulators use to make informed decisions in analysis and regulation of the reporting entity.

PART 2 – LIFE ACCIDENT HEALTH COMPANIES/FRATERNAL BENEFIT SOCIETIES INTERROGATORIES

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XIX, Medicare Title XIX, Medicaid Pass-Through Payments and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC Business Reported as Revenue, and Limited Benefit Plans. Core health business would include comprehensive medical, Medicare Supplement, Dental and Vision, Stand-Alone Medicare Part D Coverage, Medicare Title XIX, Medicaid Title XIX and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, Hospital Indemnity and Specified Disease and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income...
coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

All reporting entities should file the threshold calculation.

Premium information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

**Property/Casualty Annual Statement**

**GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state’s filing requirements. The domiciliary state’s insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The Health Statement Threshold result should be considered a starting point for the domestic regulator in considering which blank the reporting entity should file to most appropriately reflect the data and risks associated with the type of business written. The 90% threshold could be used as a trigger; however, the domestic regulator may begin the discussion before the percentage threshold is triggered. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. **Health Statement Threshold Calculation:**

   If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Threshold calculation.

   The purpose of Health Statement Threshold calculation is to identify a reporting entity writing predominantly health lines of business (premium ratio of 90% or more), that should move and file on a Health Statement and the associated Health RBC filing (if required). The Health Statement provides for better disclosure and analysis of the health business written compared to other statement types. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XVIII, Medicaid Title XIX, Medicaid Pass-Through Payments and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC Business Reported as Revenue, and Limited Benefit Plans. Core health business would include comprehensive medical, Medicare Supplement, Dental and Vision, Stand-Alone Medicare Part D Coverage, Medicare Title XVIII, Medicaid Title XIX and...
Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, Hospital Indemnity and Specified Disease and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers’ compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

Core and non-core health business are split is to help guide the conversation between the reporting entity and the domiciliary regulator when determining which blank the reporting entity should file on. Core health business generally reflects business that is captured in more detail on the Health Blank, and therefore better captures the risks associated with writing that business. Non-core health business is generally not captured in as much detail on the Health Blank, and therefore might have less influence in determining which blank the reporting entity should file on.

Meeting the Threshold:

A reporting entity is deemed to have met the Health Statement Threshold if:

The values for the premium ratio in the Health Statement Threshold calculation equal or exceed 90% for both the reporting and prior year. The 90% threshold would include core and non-core health business, however, if the reporting entity falls below 90%, the domestic regulator may consider if there is a benefit to the reporting entity to begin filing on the health blank.

If a reporting entity completes the property and casualty annual statement for the reporting year and b) meets the threshold of the Health Statement Threshold (as described above), the reporting entity must begin completing the health statement with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Threshold and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end. (e.g. If the company passed the health threshold for YE-2019 reporting, the company must begin filing the health blank with first quarter 2021). With the permission of the domiciliary regulator, the reporting entity may begin filing on the health blank with the first quarters statement for the first year following the reporting year (e.g. first quarter 2020).

Variance from following these instructions:

If the reporting entity has consistently reported a premium ratio of below 90% or greater in prior years and filed on the health-property/casualty blank but [RN5] falls below exceeds the 90% premium ratio in the current year, the reporting entity shall apprise the domestic regulator if they fall below 90% and should advise of significant changes in their business at the time of their annual statement filing. This will allow the domestic regulator to work with the reporting entity to determine if the company should continue to complete the property/casualty health annual statement and risk-based capital report or if the reporting entity should begin completing the life, accident and health and fraternal or property and casualty health annual statement form and associated risk-based capital report. The domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which the Health Statement Threshold is submitted if a change in statement blank will be required in the following year [RN7].

To determine if the reporting entity should move from the property/casualty blank to the health blank consideration may be given by the domestic regulator as to the break-out of business written on a percentage basis by the reporting entity. For example, the reporting entity wrote 90% core business and 9% non-core business in a prior year and one and in the subsequent years, the writings increased down to 85% core health business and 9% non-core health business. The domestic regulator should consider the reporting company’s overall business plan going forward to determine if the reporting entity should move to report on the health blank and whether the health blank provides adequate disclosures and identification of significant risks associated with the type of business the reporting entity plans to write in the future.

The closer the reporting entity comes to a Health Premium Ratio of 90%, the more importance the split between core and non-core health business might have on the domiciliary regulator’s decision as to which blank the reporting entity should
file on. The more non-core health business drives the Health Premium Ratio result, the more the domiciliary regulator may consider other factors when determining which blank to file on, such as the reporting entity’s future business plans, which blank the reporting entity is currently filing on, or what other lines of business the reporting entity writes. In making the blanks determination, the larger the percentage of core health business written, the more likely the Health Blank would better capture the risks and detailed health data that regulators use to make informed decisions in analysis and regulation of the reporting entity.

GENERAL INTERROGATORIES
PART 2 – PROPERTY & CASUALTY INTERROGATORIES

2. Health Threshold Calculation:

PART 2 – PROPERTY AND CASUALTY INTERROGATORIES

2. This General Interrogatory is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts which can further be broken out into two main types: core health business and non-core health business. Core health business would include comprehensive medical – commercial individual, group and minimum premium, Medicaid Title XXI (SCHIP), TRICARE, Medicare Supplement, Dental only, Vision only, Stand-Alone Medicare Part D Coverage, Other Stand-Alone RX Plans, Medicare Title XVIII, Medicaid Title XIX, Medicaid Pass-Through Payments and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC Business Reported as Revenue, and Limited Benefit Plans. Core health business would include comprehensive medical, Medicare Supplement, Dental and Vision, Stand-Alone Medicare Part D Coverage, Medicare Title XVIII, Medicaid Title XIX and Federal Employee Health Benefit Plans. Non-core health business would include such lines as Other Health, Stop Loss, ASC and ASO Business Reported as Revenue, Hospital Indemnity and Specified Disease and Medicaid Pass-Through Payments. Other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers compensation, accidental death and dismemberment policies and long-term care policies should be excluded.

All reporting entities should file the threshold calculation.

Premium information is obtained from the annual statement sources referenced on the form or from the related risk-based capital report for the corresponding premium descriptions relating to the current and prior reporting periods.

The Investment Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Feb. 25, 2020. The following Working Group members participated: Kevin Fry, Chair, and Vincent Tsang (IL); Philip Barlow, Vice Chair (DC); Kathy Belfi, Wanchin Chou and Manny Hidalgo (CT); Robert Ridenour (FL); Chut Tee (KS); Anna Taam and Victor Agbu (NY); Tom Botsko (OH); Tim Hays (WA); and Randy Milquet (WI). Also participating were: Steve Ostlund (AL); Alice Fontaine (AZ); Mitchell Bronson (CO); Adrienne Lupo (DE); Carrie Mears (IA); Rhonda Ahrens (NE); and Mike Boerner and Rachel Hemphill (TX).

1. Discussed Comments Regarding Bond Proposals

Mr. Fry said that during the Capital Adequacy (E) Task Force conference call held Dec. 30, 2019, the proposed expansion for risk-based capital (RBC) bond structures were exposed for a 45-day public comment period ending Feb. 14, 2020. He indicated that the proposed structure would provide an opportunity to collect data needed for the sensitivity analysis in the future. He also stated that the Task Force and Working Group received four comment letters during the exposure period.

Nancy Bennett (American Academy of Actuaries—Academy) said the Academy supports the expansion of the bond designations to a 20-factor structure for any asset type that currently utilizes a six-factor structure. However, the current exposure does not expand the designations for unaffiliated preferred stock, surplus and capital notes, derivative instruments, and separate accounts with guarantees or synthetic guaranteed investment contracts. She also recommended that the Working Group consider adopting the expanded structure at the same time for both asset valuation reserves (AVR) and life RBC.

Mr. Fry said it will make sense to have the same expansion to other types of assets.

Dave Fleming (NAIC) said a proposal that will apply the same expanded presentation to the AVR as it is used to populate the life RBC formula will be exposed by the Blanks (E) Working Group during the Spring National Meeting.

Paul S. Graham (American Council of Life Insurers—ACLI) said that the ACLI continues to support the expansion of the bond factors from six categories to 20 categories. Additionally, the same issues that the Academy presented earlier were identified. He said the ACLI recommended that the Working Group consider clarifying language in the RBC bond instructions.

Mr. Fleming said the Working Group will expose the modified instruction in April.

Jonathan Rogers (National Association of Mutual Insurance Companies—NAMIC) said NAMIC supports the NAIC performing an impact analysis of the 20 new bond designations against the current factors for designation 1 through designation 6. He believed that performing a cost-benefit analysis is necessary, as the purpose of the RBC is for state insurance regulators to have the ability to identify weakly capitalized companies. He also recommended that the Working Group expose the analysis for public comment in the future.

Mr. Fry agreed that the sensitivity analysis will be able to determine how material affects the industry. The Working Group will be sure to provide a proper exposure period to the interested parties to analyze the results.

Connie Jasper Woodroof (Sapiens) said that as she noticed some inconsistency between the RBC proposed structure and the Annual Statement instructions, suggested mechanical corrections related to the bond proposals for each of the RBC formulas were submitted to the NAIC staff.

Eva Yeung (NAIC) said the modified structure that the Working Group will consider exposing will address most of the issues that Ms. Woodroof identified. She encouraged her to review the modified structure and provide feedback to the Working Group afterward.
Julie Gann (NAIC) suggested the change of Line 1 description in property/casualty (P/C) and health structures to “NAIC U.S. Government – Direct and Guaranteed / NAIC U.S. Direct Obligations / Full Faith and Credit Exempt Money Market Mutual Funds List.”

Mr. Fry said all the changes will be included in the upcoming exposure.

2. Re-Exposed Bond Proposals

Mr. Fry said that after the NAIC staff reviewed the comments received, along with the changes to the 2020 annual financial statement blanks, the structure modifications were made to the P/C and health RBC formulas. He also indicated that the life formula pulls from the annual financial statement AVR; there were only minor changes needed to the life RBC formula and AVR. He also stated that the purpose of this structure change is to allow NAIC staff to perform an impact analysis on the 2020 data; further modification of the structure will likely be necessary for year-end 2021 reporting for the purpose of increased transparency and auditability.

Ms. Belfi said Connecticut supports looking into the mechanism to get a second opinion on this proposal.

Mr. Barlow commented that he does not see the need for engaging a third party to do the review. He believes the work that the Academy did supports the factor that they developed.

Mr. Graham said the ACLI supports the comment from Connecticut. The ACLI will discuss the project funding aspect with the members soon; funding will be provided in the upcoming meeting.

Mr. Fry said the outstanding discussion will be continued at the Spring National Meeting.

In order to allow the industry parties to have time to review the changes of the structures, the Working Group agreed to re-expose the structures for a 10-day public comment period ending March 6.

3. Discussed Other Matters

Mr. Fry said the Working Group plans to meet at the Spring National Meeting on Sunday, March 22. The main purpose of this meeting is to hear the Academy’s final summary of the bond report. He stated that the Working Group plans to finalize the bond and real estate equity proposal for 2021 RBC reporting.

Having no further business, the Investment Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 30, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Perry Kupferman (CA); Deborah Batista (CO); Wanchin Chou (CT); Caroline Morgan (FL); Vincent Tsang (IL); William Leung (MO); Rhonda Ahrens (NE); Dave Wolf (NJ); Bill Carmello (NY); Diane Carter (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Adopted its July 10, June 30, June 11 and Spring National Meeting Minutes

The Working Group met July 10, June 30, June 11 and March 23. During its July 10 and June 30 meetings, the Working Group discussed an industry request for risk-based capital (RBC) mortgage reporting guidance. During its June 11 meeting, the Working Group took the following action: 1) adopted the instructions for incorporating a longevity risk charge; and 2) discussed the American Council of Life Insurers’ (ACLI) request for guidance on the life RBC reporting of mortgages.

Mr. Ostlund made a motion, seconded by Mr. Boerner, to adopt the Working Group’s July 10 (Attachment Four-A), June 30 (Attachment Four-B), June 11 (Attachment Four-C) and March 23 (Attachment Four-D) minutes. The motion passed unanimously.

2. Adopted the 2020 Life RBC Newsletter

Mr. Wolf made a motion, seconded by Mr. Ostlund, to adopt the 2020 life RBC newsletter (Attachment Four-E). The motion passed unanimously.

3. Discussed the 2019 Life and Fraternal Statistics

Mr. Barlow said because the life and fraternal formulas were combined, there is no longer a separate section for each. He said he has noted this previously, but he would like to have in-depth discussions about the statistics to determine if the right ones are being captured and what these might mean with respect to decisions the Working Group makes. He said the statistics are to be posted to the Working Group’s page on the NAIC website.

Paul Graham (ACLI) suggested that it would be more helpful to have the breakouts of RBC ratios be shown as 300%–500% as opposed to 250%–500%.

Dave Fleming (NAIC) said that not all states have yet adopted the 300% threshold and, as such, it is still necessary to include the 250% threshold.

4. Continued Discussion of Industry Request for RBC Mortgage Reporting Guidance

Mr. Barlow reminded the Working Group that the industry has brought forth four requests for RBC mortgage reporting guidance and that the Working Group has addressed the three that would be applicable to year-end 2020 RBC reporting and deferred action on the fourth while agreeing to reconsider as new information is presented. He said the industry has continued to work on this to provide additional information to assist the Working Group in deciding on the fourth item, which is net operating income (NOI).

John Waldeck (Pacific Life Insurance) said he is representing the Mortgage Bankers Associations (MBA) and the ACLI and presented an update on the status of their work (Attachment Four-F). He asked Working Group members for anything else that they would like to have specific focus on as they continue their work to provide more information for the Working Group.

Ms. Ahrens said the proposed approach is to use the greater of 2020 NOI or 85% of 2019 NOI and asked if it was possible to use more timely information such as the third quarter of 2020.
Mr. Waldeck indicated that many of the loans on the books of insurers are smaller loans that only receive annual financial statements and that this was one of the reasons for the current RBC calculation.

Instead of changing the underlying data point because of the credibility of the data point, Mr. Chou suggested the possibility of changing the weight given to the data points.

Because the calculation for 2020 could not be changed, Mr. Waldeck said this request was just for guidance on how to treat the NOI as an input into the calculation. He said he believes using 85% of 2019 results in an outcome very similar to changing the weights given.

Mr. Barlow asked if some analysis could be done with the actual worksheet calculations to determine the RBC category for each loan for previous years substituting the 85% of the prior year NOI as the proposal is requesting for 2020 to see if it materially changes the categorization of loans.

Mr. Waldeck indicated that some information to that end could be provided.

Mr. Barlow said the Working Group will continue to look at this issue and consider it again as more information is presented.

5. Discussed the Working Agenda and Upcoming Conference Calls

Mr. Barlow said the American Academy of Actuaries (Academy) has had a couple of projects it has been working on, specifically C-3 and C-2, which it is ready to present to and get feedback from the Working Group but have been delayed due to the focus on work relating to the pandemic. He said the Working Group has conference calls scheduled for Aug. 21 and Sept. 11 to discuss these items and other items on the working agenda.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call July 10, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Perry Kupferman (CA); Deborah Batista (CO); Wanchin Chou (CT); Gilbert Moreau (FL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Discussed and Deferred an Industry Request for RBC Mortgage Reporting Guidance

Mr. Barlow said two of the four items the industry is requesting risk-based capital (RBC) reporting guidance on were addressed on the June 30 conference call with the Working Group adopting the requested guidance for construction loans and origination date, valuation date, property value and 90 days past due.

Mr. Barlow said this call is to address the two remaining items, net operating income (NOI) and contemporaneous property values. With respect to the remaining two items, he said there were some concerns that the requested guidance seems to completely discount any potential impact on commercial mortgages of the current pandemic. He said the Mortgage Bankers Association (MBA) and the American Council of Life Insurers (ACLI) have provided updated recommendations (Attachment Four-A1 and Attachment Four-A2) based on the feedback from the Working Group’s last call.

John Waldeck (Pacific Life Insurance) said he is representing the MBA and the ACLI. With respect to NOI, he said the first proposal suggested using the greater of 2020 or 2019 NOIs. He said they went back to see what would be more justifiable and have updated the proposal to use the greater of 2020 or 85% of 2019 NOI, and he presented the rationale supporting this revision.

Mr. Barlow suggested addressing the two issues one at a time. He said the NOI guidance would not affect the 2020 RBC calculation, but it would affect the three subsequent years. He suggested that if the Working Group is inclined to support this proposal as-is or with some modification, it should indicate this but consider revising the worksheet for 2021.

Mr. Robinson noted the existing weighted average for NOI, and he is inclined to let it work in the way it was intended. He said he is in favor of gathering the information for the 2020 NOI and considering revisiting the construct for 2021 when they have information to base the decision on.

Mr. Carmello asked about the timing requirements for getting the information and making the changes. Mr. Barlow said he believes these would be instructional changes subject to the June 30 deadline.

Dave Fleming (NAIC) said changes would need to be exposed for comment by the end of April.

Mr. Barlow said this is not information that will be captured in an NAIC filing, and he believes the Working Group would need to look to the industry to provide that information.

Mr. Waldeck indicated that the time frame for getting this information for individual properties for the 2020 filings would be around June or July, which would be outside of the Working Group’s timeline.

Mr. Barlow asked if there is information that could be obtained that could serve as a proxy in order for the Working Group make a more informed decision.

Mr. Waldeck indicated that there may be some potential data points that could be used. He reminded the Working Group that part of the reason for this request is that the decision on the treatment of 2020 NOI will have an impact on the desire to place new investments this year, and that is why guidance now is important. He said this guidance is also important to companies in order to plan for their capital needs.

Mr. Robinson made a motion, seconded by Ms. Eom, to defer the request subject to more information being provided.
Mr. Waldeck said he would appreciate reconsideration of rejecting the proposal, and he reiterated the importance of having the Working Group address this now. He said the likelihood is that the additional information on the 2020 NOI might come late in the second quarter next year, which is past the time the Working Group would need to address it.

So the industry has some indication on how to move forward, Mike Monahan (ACLI) suggested adopting the change for 2021, with it to be reconsidered for 2022 and 2023 as additional information becomes available.

Mr. Carmello suggested that the Working Group indicate that it would reconsider before the end of this year.

Mr. Barlow asked if industry could provide information that would influence the Working Group’s decision by the end of the year.

Mr. Waldeck said one concern is decisions about new investments being made without clarity on the RBC considerations. He said another concern is that the 2020 NOI is not impactful to the 2020 RBC calculation but is for planning companies will do for the following year and the investments they make based on the 2020 NOI.

Mr. Robinson and Ms. Eom accepted a friendly amendment to the motion to reconsider in time to make changes for next year. California, Colorado, Connecticut, Florida, Minnesota, Missouri and New Jersey voted in favor of the motion. Nebraska, New York, Oklahoma, Texas and Utah voted against the motion. Alabama abstained. The motion passed.

2. Adopted Requested Guidance on Contemporaneous Property Values

Mr. Waldeck said the requested guidance on contemporaneous property values affects only the 2020 year-end RBC calculation, and it is designed solely to adjust out any shock effect that could be in the National Council of Real Estate Investment Fiduciaries (NCREIF) price index. He said the proposal is to use the average of the 2019 and 2020 NCREIF values. If there is a decline, he said this would reflect only half of that decline, and it reflects the state insurance regulators’ concerns about totally discounting the decline.

Mr. Carmello made a motion, seconded by Ms. Ahrens, to adopt the requested guidance on contemporaneous property values (Attachment Four-A2). The motion passed, with Minnesota voting against the motion.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
July 7, 2020

Philip A. Barlow, FSA, MAAA
Chair, Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197
Re: Supplement to June 8, 2020 Request for Risk-Based Capital Reporting Guidance

Dear Mr. Barlow:

The Mortgage Bankers Associations (MBA) and the American Council of Life Insurers (ACLI) on behalf of our respective member insurers, respectfully submit to the Life Risk-Based Capital Working Group of the National Association of Insurance Commissioners (NAIC) this Supplement to our June 8, 2020 request for risk-based capital reporting guidance.

We appreciate the Working Group’s approval on June 30, 2020 of our requested reporting guidance for Construction Loans and for Origination Date, Valuation Date, Property Value, and 90 Days Past Due.

We also appreciate the thoughtful feedback regulators provided in the Working Group’s discussion of our requested reporting guidance on Net Operating Income and on Contemporaneous Property Values. In response to that feedback, our organizations convened a large working group of insurers to consider modifications of the reporting guidance we recommended for those two items.

The attached Supplement describes revised recommendations developed by that working group that we believe address the concerns raised by the regulators. We look forward to discussing these proposed recommendations on the Working Group call scheduled for July 10, 2020.

1 The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 280,000 people in virtually every community in the country. Its membership of over 2,300 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, 70 life insurance companies engaged in real estate finance, and others in the mortgage lending field. For additional information, visit MBA’s website: www.mba.org

2 The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States. Learn more at www.acli.com
We want to thank you and other regulators, and NAIC staff, for your considerable time and attention to this request. Please feel free to contact Bruce Oliver at boliver@mba.org or 202-557-2840 or Mike Monahan at mikemonahan@acli.com or 202-624-2324 for any additional information.

Sincerely,

Mike Flood

Paul Graham

Attachment: Supplement to June 8, 2020 Request for Risk-Based Capital Reporting Guidance

cc: Dave Fleming, NAIC Senior Insurance Reporting Analyst
Supplement to June 8, 2020 letter to the Life Risk-Based Capital Working Group
Revised RBC Reporting Guidance Proposals
July 7, 2020

This document supplements the proposal submitted to the Life Risk-Based Capital Working Group of the National Association of Insurance Commissioners, submitted by the Mortgage Bankers Association and the American Council of Life Insurers on June 8, 2020, following up on the Working Group call of June 30, 2020.

I. NET OPERATING INCOME

Background

Net Operating Income (NOI) inputs are reported in items (14), (15), and (16), and those inputs are used to compute a Rolling Average NOI under item (36).

The Rolling Average NOI is weighted as follows:

- 50% of NOI at year-end of preceding year
- 30% of NOI at year-end of next preceding year
- 20% of NOI at year-end of next preceding year

As a result, 2020 NOI will be an input into reporting for 2021, 2022, and 2023 reporting, and will not to be an input into 2020 RBC reporting.

June 8 proposed reporting guidance

For 2020 NOI inputs used to compute rolling average NOI for 2021, 2022, and 2023 reporting, use the greater of:

- 2020 NOI; or
- 2019 NOI.

Revised proposed reporting guidance

For 2020 NOI inputs used to compute rolling average NOI for 2021, 2022, and 2023 reporting, use the greater of—

- 2020 NOI; or
- 85% of 2019 NOI.

Rationale

Industry recognizes that substituting 2019 NOI for properties whose NOIs have decreased could be viewed as ignoring the credit risk impact of temporary business shutdowns resulting from the COVID-19 pandemic.
On the other hand, direct application of 2020 NOI for properties affected by temporary business shutdowns resulting from the COVID-19 pandemic would overstate the actual increase in the credit risk exposure presented by temporary impacts to properties.

Direct application of the 2020 NOI would also create disincentives for insurers to work prudently with borrowers. Lenders retain approval rights for many leasing actions, including forgiveness or reductions in rent, and granting approval of rent forgiveness or reductions directly reduces NOI.

The revised proposal is an effort to balance these competing concepts. It recognizes reductions in NOI, and so does not ignore the credit risk impact of the pandemic. At the same time, it also proposes an 85% floor on reductions from 2019 NOI. That floor reduces the likelihood of overstating the actual change in credit risk. It also reduces disincentives for insurers to approve rent concessions that would reduce NOI, but that also are in the best interests of the insurer, the borrower, the tenants, and the economy generally.

The revised proposal also reflects practical considerations. Specifically, it is supportable by readily available reports. NOI for most properties is reported only annually, typically three to four months after year-end. As a result, 2019 and 2020 NOI year-end values will be readily available for 2021 reporting. In contrast, information necessary to support a possible approach based on quarterly NOI would generally not be available at all, and information to support an approach based on 2021 NOI would generally not be available in time for timely 2021 year-end reporting.

The 85% floor was identified as reasonable because a 15% drop in NOI represents roughly three times the worst four-quarter decline in NCREIF NOI values over the past 20 years. From the NCREIF data, the largest four-quarter decline in NOI (across all property types) during the Global Financial Crisis was 3.15% in Q1 2010. During the 2001 Recession (which was harder on NOIs), there was a 5.91% four-quarter decline in 2003 Q3 – with an aggregate 11.5% decline between 2001 Q2 and 2004 Q1.

Moreover, a 15% reduction in NOI has been recognized to be substantial in another regulatory capital context. Specifically, the Federal Housing Finance Agency (FHFA) used a 15% reduction in NOI as a stress input to calibrate multifamily mortgage credit risk for Fannie Mae and Freddie Mac in its recently proposed risk-based capital regulations.

- See 85 Fed. Reg. 39274, 39322 (June 30, 2020) (“FHFA generally calibrated the base risk weights and risk multipliers for multifamily mortgage exposures to require credit risk capital sufficient to absorb the lifetime unexpected losses incurred on multifamily mortgage exposures experiencing a shock to property values similar to that observed during the 2008 financial crisis. … For the purpose of the proposed rule, the multifamily-specific stress scenario assumes an NOI decline of 15 percent ….”).
While the FHFA used a 15% reduction for a somewhat different regulatory capital purpose, its use of a 15% reduction in NOI to calibrate the multifamily mortgage credit risk element of its proposed risk-based capital regulations does support identifying 85% of 2019 NOI (i.e., a 15% reduction in NOI) as a reasonable floor here.

II. CONTEMPORANEOUS PROPERTY VALUE

Background

Contemporaneous Property Value (40) is a field computed as: the Property Value (20) at the time the loan was originated, was revalued due to impairment underwriting, restructure, extension, or other re-writing; times that ratio (rounded to 4 decimal places) of the Price Index current to the Price Index at valuation (39).

The Price Index at Valuation is the value of the NCREIF Price Index on the last day of the calendar quarter that includes the date defined in (21) and (22). However, the “Price Index current” is not a defined or numbered input into risk-based capital reporting.

The Contemporaneous Property Value (40) becomes an input into the computation of RBC LTV. RBC LTV is computed as Total Loan Value (13) divided by the Contemporaneous Property Value (40), rounded to the nearest percent. RBC LTV is then a factor in determining the risk category (from CM1 to CM5) for any loan that is not 90 days or more overdue, which is then used to determine the risk-based capital requirement for the loan.

The Contemporaneous Property Value is the property value at origination, adjusted by applying the NCREIF Price Index. That value becomes an input into the computation of RBC LTV, which affects the classification of the loan.

June 8 proposed reporting guidance

As “Price Index current” input used to compute Property Value for 2020 year-end reporting, use:

- The 2019 NCREIF Price Index.

Revised proposed reporting guidance

As “Price Index current” input used to compute Property Value for 2020 year-end reporting, use:

- Use the average of:
  1. The year-end 2019 NCREIF Price Index; and
  2. The 2020 NCREIF Price Index.
Rationale

Industry recognized that substituting 2019 NCREIF Price Index could be viewed as ignoring the credit risk impact of temporary business shutdowns resulting from the COVID-19 pandemic.

On the other hand, direct application of 2020 NCREIF Price Index could introduce anomalous 2020 market activity and so could overstate the actual increase in the credit risk exposure presented by changes in the continuing value of those properties.

The revised proposal is an effort to balance these two competing concepts. It does so by recognizing that reductions in property values may occur in 2020, and so does not ignore the credit risk impact of the pandemic, but it also moderates the distortive effects of anomalous 2020 market activity by averaging the indexes for 2019 and 2020.

The information needed to implement this proposal would be readily available for 2020 reporting because the only additional information not already required for 2020 reporting would be the 2019 year-end NCREIF Price Index.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call June 30, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Perry Kupferman (CA); Manuel Hidalgo (CT); Gilbert Moreau (FL); John Robinson (MN); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Discussed an Industry Request for Risk-Based Capital Mortgage Reporting Guidance

Mr. Barlow said the Working Group received a request from industry for risk-based capital (RBC) commercial reporting guidance (Attachment Four-B1).

Mr. Barlow said it is too late to make changes to the 2020 RBC instructions and what the Working Group will be considering is whether to provide some guidance to companies on completing the commercial mortgage worksheets in the life RBC formula for this year-end due to the impact of the current pandemic.

John Waldeck (Pacific Life Insurance) said he is representing the Mortgage Banking Association (MBA) and the American council of Life Insurers (ACLI). He said the request is to deal with the year 2020 but that it does impact more than just the 2020 year-end RBC calculation. With respect to construction loans and origination date, valuation date, property value, and 90 days past due, he said the requested guidance is to extend guidance provided by the Financial Condition (E) Committee until Dec. 31, which, while most companies typically calculate RBC on a quarterly basis, is the period for which most companies will be submitting RBC filings.

With respect to the requested guidance on net operating income (NOI), Mr. Waldeck said the calculation for 2020 is going to be hampered by the fact that there was a long-term closure the economy had that impacted, in terms of the deferment of rent, on many of the commercial real estate properties held by insurers. He said the NOI for 2020 is used in the 2021, 2022 and 2023 RBC calculations done by insurers and this is used in making new loans for 2020, as well as RBC needs going forward so they are asking for the requested guidance at this time in order to understand the RBC impact in that process.

Mr. Waldeck said the assumption is that the NOI is reflective of how the property operates and, unfortunately, during the COVID-19 closures the properties are not operating anywhere near a normal situation. Many of these were doing well or exceeding prior year expectations but, with the closures, he said most of 2020 is going to be impacted. He said the request is to use the greater of the 2019 or 2020 NOI in the calculation as a proxy for how the property could have performed in 2020 absent the COVID-19 issue.

Mr. Barlow said it seems like the implication of making that change is that the current situation had zero impact on the riskiness of the underlying commercial mortgages.

Mr. Waldeck said it is not that COVID-19 had no impact but that the 2020 statistics will not reflect that riskiness if the properties were allowed to be open and operating.

While some commercial mortgages will revert to normal after the current situation, Mr. Barlow expressed concern that others will not and that those lingering impacts will not be reflected in the RBC calculation.

Mr. Waldeck said that is accurate in that the components of the previous year’s NOI are weighted.

With respect to the requested guidance on contemporaneous property values, Mr. Waldeck said the two main statistics used in the RBC calculation are the debt coverage ratio (DCR), which is impacted by the NOI, and the loan-to-value (LTV) and this is impacted by property value. This takes the origination value and brings it forward to a current value by use of the NCREIF price index.
Mr. Waldeck said the concern is that this will be impacted in a similar fashion as the NOI by COVID-19 in that this component of LTV will drive down and cause an RBC change. He said the requested guidance is to have these values held at the 2019 year-end NCREIF values for RBC calculations through 2020 year-end but revert back to the current NCREIF values with the first quarter 2021 calculation. He said this change would impact only the 2020 RBC calculation.

Mr. Barlow asked if, assuming the pandemic does not continue past 2020, the request for NOI guidance will affect 2021 through 2023 but will not affect 2020 year-end RBC calculations while the requested guidance for contemporaneous property values, construction loans and the origination date, valuation date, property value, and 90 days past due will affect the 2020 RBC calculation but not 2021 through 2023.

Mr. Waldeck said that is correct and noted that what all four requests share is they are each dealing with the impact that occurs in 2020.

Mr. Barlow asked if, similar to the concern he expressed on NOI, the request on contemporaneous property values would effectively treat the calculation as if the current situation had zero impact on the riskiness of the mortgages.

Mr. Waldeck said that is correct but noted that none of these conditions really change the fact that, on an accounting basis, they are required to have each transaction as more than a short-term impact where other than temporary impairments would be addressed through the accounting guidance in a separate manner.

While acknowledging that the impact is not going to be uniform on commercial mortgages and some will come through fine, Mr. Barlow reiterated his concern that some are less likely to and said he is concerned with modifying the RBC calculation to ignore the impact of the current pandemic on the ultimate riskiness of commercial mortgages.

Mr. Hidalgo said he is also hesitant and suggested, if the Working Group is going to make a change, using an average of the values as opposed to just using the 2019 values.

Ms. Ahrens said 2020 may be an extreme measure and using 2019 values may be a more realistic indicator of the true behavior. She said some averaging may be better and suggested this is why there is a three-year average used in the NOI calculation. She said the purpose of having a measurement of required capital is for cases like the current situation and, in this scenario, is it going to be a requirement to increase that measure, in effect, doubling down by increasing the denominator in the RBC calculation while the numerator is already impacted.

Mr. Barlow said RBC does not work like the asset valuation reserve (AVR) where it is built up and released to help with a bad situation but is a snapshot of the risk of a company at year-end and determining how much capital is needed. When bad situations occur, he said not only is the reported capital impacted but by the nature of the RBC calculation the riskiness increases and puts an additional element into the requirement.

Mr. Barlow suggested continuing the discussion on the request with respect to the NOI and contemporaneous property values on the Working Group’s July 10 conference call. With respect to the requested guidance on construction loans and the requested guidance for the origination date, valuation date, property value, and 90 days past due, Mr. Barlow said he has no issue with these and is comfortable with continuing the guidance provided by the Financial Condition (E) Committee through Dec. 31 for use in the 2020 RBC calculation.

Mr. Boerner made a motion, seconded by Mr. Carmello, to continue the guidance provided by the Financial Condition (E) Committee through Dec. 31 as it relates to construction loans and the origination date, valuation date, property value and 90 days past due. The motion passed unanimously.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Philip A. Barlow, FSA, MAAA
Chair, Life Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Re: Request for Risk-Based Capital Reporting Guidance

Dear Mr. Barlow:

The Mortgage Bankers Associations (MBA)\(^1\) and the American Council of Life Insurers (ACLI)\(^2\), on behalf of our respective member insurers, respectfully submit this request for risk-based capital reporting guidance to the Life Risk-Based Capital Working Group of the National Association of Insurance Commissioners (NAIC).

We appreciate all that you and other regulators, and NAIC staff, have done to date to help insurers navigate the COVID-19 pandemic, and we look forward to working with you on this request. Please feel free to contact Bruce Oliver at boliver@mba.org or 202-557-2840 or Mike Monahan at mikemonahan@acli.com, 202-624-2324 for any additional information.

Sincerely,

Mike Flood Paul Graham

cc: Dave Fleming, NAIC Senior Insurance Reporting Analyst

\(^1\) The **Mortgage Bankers Association (MBA)** is the national association representing the real estate finance industry, an industry that employs more than 280,000 people in virtually every community in the country. Its membership of over 2,300 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, life insurance companies, and others in the mortgage lending field. For additional information, visit MBA’s website: [www.mba.org](http://www.mba.org).

\(^2\) The **American Council of Life Insurers (ACLI)** is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
Request for Guidance for 2020 RBC Reporting

Introduction

Some risk-based capital reporting impacts of the COVID-19 pandemic have been addressed in Guidance for Troubled Debt Restructurings for March 31-June 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings (where required), issued by the Financial Condition (E) Committee on March 27, 2020, and in subsequent NAIC staff Questions and Answers. However, additional guidance is necessary on the application of Risk-Based Capital Reporting Instructions to reasonably apply them to the unusual circumstances of 2020.

Specifically, we request guidance on the application of Risk-Based Capital Reporting Instructions to the 2020 reporting of:

- Net Operating Income
- Contemporaneous Property Values
- Construction Loans
- Origination Date, Valuation Date, Property Value, and 90 Days Past Due

These requests were previously brought to the attention of the Financial Condition (E) Committee in a joint trades letter of April 10, 2020 (link below). As is reflected in NAIC staff questions and answers (link below), we understand that consideration of these requests has been referred to the Life Risk-Based Capital (E) Working Group. This request is intended to facilitate the Working Group’s consideration of these requests.

Net Operating Income

Background

Net Operating Income (NOI) inputs are reported in items (14), (15), and (16), and those inputs are used to compute a Rolling Average NOI under item (36). Note 1 references under items (14), (15), and (16) provides in relevant part as follows:

The majority of commercial mortgage loans require the borrower to provide the lender with at least annual financial statements. The NOI would be determined at the RBC calculation date based on the most recent annual period from financial statements provided by the borrower and analyzed based on accepted industry standards. …

The accepted industry standards for determining NOI were developed by the Commercial Mortgage Standards Association now known as CRE Financial Council (CREFC). The company must develop the NOI using the standards provided by the CREFC Methodology for Analyzing and Reporting Property Income Statements v.5.1. (www.crefc.org/irp). These standards are part of the CREFC Investor Reporting Package (CREFC IRP Section VII.) developed to support consistent reporting for commercial real estate loans owned by third-party investors. This guidance would be a standardized basis for determining NOI for RBC.
Discussion/Analysis

NOI inputs and computations are used to assess and quantify the credit risk of commercial loans, based on the expectation that a reduction in a borrower’s NOI for any particular year will be highly correlated to credit risk in the future. However, NOI becomes less reliable as a measure of credit risk under unusual circumstances that are being experienced as a result of the COVID-19 pandemic, because reductions in NOI during 2020 will often reflect temporary conditions. Therefore, NOI values for 2020 may provide misleading indications of future credit risk. As a result, a strict application of 2020 NOIs in risk-based capital reporting would likely result in required capital levels that are not commensurate with the future credit risk that capital is intended to address.

For example, many properties have closed for an extended period of time and are reopening in a limited capacity only as phased-in easing of restrictions occurs. As a result, 2020 NOI may reflect less than six months of NOI in normal operating capacity. A borrower affected by such closures may not seek relief, but, absent the requested guidance, insurers could nevertheless be forced to reclassify a loan as a CM4, or CM5 for a property that will return to normal NOI in 2021, was a CM1 in 2019, and where the borrower made every payment through the shutdown. The need for the guidance to address all loans arises, not because the properties are necessarily problematic, but because the data insurers feed into the RBC calculation may be flawed. The recommended guidance below attempts to address that, without continuing that into additional periods. In that manner, it would adjust for the data flaws of 2020, without ignoring the long-term impacts that a property could face beyond 2020.

The CREF-C IRP standards include a restriction on reporting financial information when less than 6 months of relevant data is available. The COVID-19 pandemic is creating that circumstance, where relevant data, due to the closure of properties and the lack of economic activity due to stay at home orders, is leading to less than 6 months of relevant data for 2020 operations. A strict read of the CREF-C IRP standards would lead to a non-reporting of 2020 NOI in this circumstance, but that is not workable where the RBC calculations require a value.

Recommended Guidance

On March 27, 2020, the Financial Condition (E) Committee issued Guidance for Troubled Debt Restructurings for March 31-June 30 Statutory Financial Statements and Related Interim Risk-Based Capital Filings (where required) (the “RBC Guidance”). The RBC Guidance stated that COVID-19 related modifications would not affect the net operating income utilized during the December 31, 2019 RBC Filing.

Based on the CREF-C IRP standards and the RBC Guidance and for purposes of the inputs at (14), (15), (16), and the computation at (36), it will be deemed to be consistent with industry standards for an insurer to report NOI for any 12-month fiscal period ending after June 30, 2020 but not later than June 30, 2021 to be equal to the greater of: (1) actual NOI as determined under the CREFC IRP Standards or (2) NOI determined for the immediate preceding fiscal year’s annual report. This guidance with respect to 2020 NOI applies to the application of the 2020 NOI in risk-based capital reporting for 2021, 2022, and 2023.

By using the 2019 NOI for use in calculations where 2020 NOI would otherwise be used, Insurers would be using the most relevant estimate for property operations in 2020 absent COVID-19. This guidance would apply to all mortgages and not just those mortgages where a COVID-19
modification occurred, because every commercial real estate property was impacted by COVID-19 and the same impacts of using irrelevant data for 2020 applies whether a modification was granted or not.

It should also be made clear that this change is for 2020 NOI only and not subsequent years. As the economy reopens and properties operate within the affected economy, their future year operations will be relevant to the risk classification of Insurer’s mortgages, absent a similar event with stay at home orders and government mandated property closures. This means that the long-term impacts of COVID-19 will affect the risk ratings for Insurers mortgages as those future NOI values are factored into the analysis.

Contemporaneous Property Values

Background

Contemporaneous Property Value (40) is a field computed as: the Property Value (20) at the time the loan was originated, was revalued due to impairment underwriting, restructure, extension, or other re-writing; times that ratio (rounded to 4 decimal places) of the Price Index current to the Price Index at valuation (39).

The Price Index at Valuation is the value of the NCREIF Price Index on the last day of the calendar quarter that includes the date defined in (21) and (22). However, the “Price Index current” is not a defined or numbered input into risk-based capital reporting.

The Contemporaneous Property Value (40) becomes an input into the computation of RBC LTV. RBC LTV is computed as Total Loan Value (13) divided by the Contemporaneous Property Value (40), rounded to the nearest percent. RBC LTV is then a factor in determining the risk category (from CM1 to CM5) for any loan that is not 90 days or more overdue, which is then used to determine the risk-based capital requirement for the loan.

Discussion/Analysis

The “Price Index current” applied in item (40) is not a defined or numbered input into risk-based capital reporting, but it is generally assumed to mean the most recent available NCREIF Price Index. Ordinarily, this is a reasonable practice in that it is widely considered to be a reasonable indication of changes in the current value of a diverse portfolio of properties, as the index is based on appraisals that generally are based on a robust set of market information.

These are not ordinary times, however, in that various segments of markets for commercial properties may not provide adequate information to develop conclusive values for commercial properties. In addition, as we describe above, NOIs in 2020 will be artificially low as a result of temporary business shutdowns and other temporary impacts of the pandemic. Because appraisals leverage both NOIs and capitalization rates when estimating the current market value of commercial properties, the level of confidence one can place in appraisal estimates of value at year-end 2020 will be less than it ordinarily would be, and those estimates may systematically skew low. Therefore, an index based on such appraisals could create a prejudice that all properties have lost value as of the end of 2020 and cause the life companies to show a corresponding prejudiced increase in credit risk for 2020. Incorporating those lowered values into the computation of RBC LTV then results in capital requirements that are not commensurate with the credit risk they face going forward.
The alternative of applying the year-end 2019 NCREIF Price Index as the “Price Index current” for purposes of 2020 risk-based capital reporting is also imperfect in that it will be a year old at the time it is applied. However, we believe that, given the unusual circumstances, it would serve as a less imperfect measure of contemporaneous value for establishing required capital levels for insurers at year-end 2020, for the credit risk they face going into 2021.

Recommended Guidance

To prevent computed Contemporaneous Property Values from providing a misleading picture of credit risk, one that could result in artificially high risk-based capital requirements, for purposes of computing the Contemporaneous Property Value (40) for any period ending in 2020, an insurer may use the NCREIF Price Index as of 12/31/2019 for the Price Index current value.

Using the 12/31/2019 NCREIF Price Index for the Price Index current is consistent with the RBC Guidance. The RBC Guidance stated that COVID-19 related modifications are not required to be reclassified to a different RBC Category than was utilized during the December 31, 2019 RBC filing. By using the 12/31/2019 NCREIF Price Index, the Contemporaneous Property Value (40) for the filings for any period ending in 2020 will be equal. Therefore, the LTV component of the RBC calculation will not change or cause the RBC Category to change as the RBC Guidance stated.

This guidance would apply to all mortgages and not just those mortgages where a COVID-19 modification occurred, because every commercial real estate property will be impacted by COVID-19 related prejudice in valuation data, whether a modification was granted or not.

It should also be made clear that this change is for the filings for any period ending in 2020 only and not subsequent years. As the economy reopens and properties operate within the affected economy, their future year valuations will be relevant to the risk classification of Insurers’ mortgages, absent a similar event with stay at home orders and government mandated property closures. In addition, the short-term prejudice in property valuation will no longer be occurring. This means that the long-term impacts of COVID-19 will affect the risk ratings for Insurers’ mortgages as those future Contemporaneous Property Values are factored into the analysis.

Construction Loans

Background

Under Note 4 of the Risk-Based Capital Reporting Instructions, construction loans are categorized CM5 based on a determination by the loan servicer that “construction issues exist.”

On April 22, 2020, NAIC staff posted a question and answer for the RBC Guidance regarding the treatment of construction loans affected by the COVID-19 pandemic, as follows:

Q3—Some construction projects are not allowed to operate because of government imposed stay-at-home orders. Current RBC rules specify that a loan with “construction loan issues” (e.g., abandoned) is required to have a CM5 rating. Is the guidance that loans are not required to be reclassified to a different RBC category as a result of government-mandated delays in any required principal and interest payments in the first and second quarters of 2020 also intended not to require recategorization of construction loans in cases of government-mandated delays in construction?
A3 - Yes. No RBC category change is required to be changed for March 31 and June 30 as a result of government-mandated construction delays in the first and second quarters of 2020. The expectation is that further, more deliberative discussion is expected to occur in the future, likely through the Life Risk-Based Capital (E) Working Group, regarding these loans for future reporting periods.

Consistent with the RBC Guidance the Question and Answer was interpreting, Question and Answer 3 applies only to March 31 and June 30, 2020 reporting.

Recommended Guidance

For purposes of Note 4 to the Risk-Based Capital Reporting Instructions, government-mandated construction delays due to COVID-19 that occur at any time during 2020 are not “construction issues.” This guidance would apply to all mortgages and not just those mortgages where a COVID-19 modification occurred.

Origination Date, Valuation Date, Property Value, and 90 Days Past Due

Background

Under Description/explanation of item in the Risk-Based Capital Reporting Instructions for Date of Origination (2), Property Value (20), Year of Valuation (21, and by reference Quarter of Valuation - 22), the filer is instructed to update these values if the loan has been restructured, extended, or otherwise re-written, or refinanced. A loan is traditionally treated as restructured when a loan modification or forbearance occurs.

In addition, the Description/explanation of item 90 Days past Due? (29) requires an insurer to specify if a loan is 90 days past due. Depending on the structure of the forbearance related to COVID-19, a loan in forbearance may be shown on an insurers statements as being 90 days past due, even though the Borrower is abiding by the terms of the forbearance. This is done when lender is protecting its rights under the loan agreement for a loan that may have gone into default prior to requesting forbearance.

On April 22, 2020, NAIC staff posted a question and answer for the RBC Guidance regarding the treatment of these values, as follows:

Q2 - Is this guidance intended to apply to all COVID-19 loan modifications that occur through June 30, 2020, so that an insurer that modifies a loan in accordance with the parameters of the guidance within that period is not required to adjust the origination date, valued date, or property value as of the modification date (as required under current RBC rules for loan restructures) for current or future RBC reporting periods?

A2 - Yes. The intent of the guidance is to encourage insurers to make prudent loan modifications for borrowers who are temporarily unable to meet their contractual payment obligations because of the effects of COVID-19 and is not intended to have long-term negative impacts under current RBC rules. Consistent with this intent, if an insurer modifies a loan in accordance with the parameters of the guidance, the insurer is not required to adjust the origination date, valued date, or property value for current or future RBC reporting periods. In addition, an insurer is not required to reclassify to a different RBC category (such as within CM categories (e.g., CM1 to CM2) or within standing categories (e.g., In Good Standing, Overdue, Not in Process, In Process of
Foreclosure) for March 31 and June 30. The expectation is that further, more deliberative discussion is expected to occur in the future, likely through the Life Risk-Based Capital (E) Working Group, regarding these loans for future reporting periods.

Consistent with the RBC Guidance the Question and Answer was interpreting, Question and Answer 2 applies only to March 31 and June 30, 2020 reporting.

Recommended Guidance

For purposes of the Description/explanation of item in the Risk-Based Capital Reporting Instructions for Date of Origination (2), Property Value (20), Year of Valuation (21 and by reference Quarter of Valuation - 22), and 90 Days Past Due? (29), no changes to these values are required for any COVID-19 related modifications that occur during 2020. This guidance is consistent with the Question and Answer issued by the NAIC, but extended for COVID-19 modifications that occur through the end of 2020. As insurers deal with COVID-19 related issues with their mortgages, it is common for insurers to make interim modifications that provide a short initial period of mortgage relief.

This is being done to provide additional clarity to what assistance is needed for the mortgage. At the onset of the COVID-19 pandemic, insurers had no clarity around the length of stay at home orders, which businesses would be allowed to reopen in which phases, and how fast economic activity would return after these orders ended. To provide long term relief for a mortgage that possibly could be facing only a short closure would be unnecessary and imprudent. Therefore, many of these initial modifications will likely be re-looked at during the 3rd and 4th quarters to provide relief consistent with the COVID-19 impacts for the individual mortgage. Insurers need the balance of 2020 to make these informed decisions. Not providing this extension of time will force insurers into modifications prior to the RBC Guidance end date of June 30 that may not be necessary or prudent but is the only way to preserve the RBC treatment provided under the RBC Guidance.

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call June 11, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Steve Ostlund (AL); Perry Kupferman (CA); Deborah Batista (CO); Wanchin Chou (CT); Carolyn Morgan (FL); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Adopted the Instructions and Factors for 2020 Longevity Risk

Ms. Ahrens reminded the Working Group that potential factors of zero were exposed for longevity risk for 2020 implementation. She said this would allow companies to complete the new structure, which will allow a study of the impact of the various methodologies, correlation and guardrail factors so they can be finalized in time for year-end 2021.

Mr. Barlow said there were two comment letters received.

Brian Bayerle (American Council of Life Insurers—ACLI) summarized the ACLI’s comment letter, indicating support for the proposed zero factors for year-end 2020 reporting. He said the ACLI believes this approach will provide the NAIC with the appropriate information for the necessary impact analysis of the factors, as well as give state insurance regulators valuable information to determine the level of correlation and guardrail factors.

Paul Navratil (American Academy of Actuaries—Academy) presented the Academy’s comment letter. He said there are two main sections with the first section being focused on suggested changes to the instructions for 2020 to provide added clarity along with suggested changes to the instructions and blank for the inclusion of adjustments for modified coinsurance. He said the second section of the letter may be something for discussion in conjunction with the review of 2020 results, but it deals with the impact of correlation and what the overall C2 component is going to look like.

Mr. Barlow suggested that it was too late to make changes to the 2020 instructions.

Dave Fleming (NAIC) said it was because the deadline for exposure of the changes was the end of April.

Mr. Barlow suggested exposing the suggested edits for clarification so companies could have them available.

Mr. Ostlund made a motion, seconded by Ms. Ahrens, to adopt the instructions before any of the Academy’s suggested edits indicating base factors of zero with the correlation and guardrail factors included in the blank schedules are determined (see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment One-D). The motion passed unanimously.

The Working Group agreed to expose the Academy’s suggested changes for a 60-day public comment period (Attachment Four-C1).

2. Discussed Other Matters

Mr. Barlow said the Mortgage Bankers Association (MBA) and the ACLI have submitted a letter requesting guidance on the risk-based capital (RBC) reporting of commercial mortgages for 2020 in light of the pandemic emergency and the impact it is having on commercial mortgages. He suggested having this distributed to Working Group members, and he said the Working Group will be scheduling calls in the short term to address this.

Mr. Barlow said there are a number of areas in which work is being done by the Academy so when calls not related to the pandemic can resume, these will be scheduled. He asked for a brief update on the work the Academy is doing on mortality.
Chris Trost (Academy) said that during the Working Group’s March 23 conference call, the Academy’s C2 Work Group introduced some of the work it is doing around a component of catastrophe risk or a more sustained event. He said it would be beneficial to get more detailed feedback from the Working Group on a future call.

Ms. Ahrens said the longevity risk component currently adopted does not include in scope longevity reinsurance transactions, which are currently not that common in the U.S. insurance industry. She said the Longevity Risk (E/A) Subgroup will be discussing this, and she asked for industry volunteers to contribute to these discussions.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
May 29, 2020

Mr. Philip Barlow  
Chair, Life Risk Based Capital (E) Working Group  
National Association of Insurance Commissioners (NAIC)

Via email: Dave Fleming (dfleming@naic.org)

Re: Longevity Risk Charge

Dear Philip,

On behalf of the C-2 Longevity Risk Work Group of the American Academy of Actuaries,¹ I am providing suggested edits to the risk-based capital (RBC) forms and instructions for C-2b longevity risk to address some questions and ambiguities that have come to our attention. I am also providing additional information on the impact of adding a longevity risk charge together with correlation would have on Life Risk-Based Capital (LRBC) results. There was discussion on the February 14, 2020, LRBC call on the potential for C-2 to decrease with correlation and the ability for a ‘guardrail’ factor to prevent such decrease. We want to ensure the impact of correlation is clear when the Life RBC Working Group decides on a correlation factor to implement.

Included with this letter are several updated documents which include redlined suggested changes that address several areas where we believe additional clarification is warranted to promote uniform application across companies:

- Revised draft of RBC instructions C-2b longevity risk with clarification of scope.
- Revised form LRtbd for C-2b longevity risk including adjustment for modified coinsurance (MODCO) reinsurance.
- Suggested forms LRtbdCeded and LRtbdAssumed to adjust the C-2b amount to reflect reserves ceded and/or assumed via MODCO.
- Revised draft of RBC instructions for MODCO reinsurance arrangements.

There were three clarifications to Scope in the instructions for C-2b longevity risk:

1. Clarification that the entire reserve for contracts with both certain and life contingent payments are in scope for C-2. Some companies may have interpreted the prior instructions to allow for exclusion of the portion of the reserve associated with the non-

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
life contingent payments. The recommended factors we provided at the 2019 Spring Meeting were calibrated to apply to the entire reserve for these contracts, and field study results confirmed that this approach was reasonable across different product types.

2. Specific mention that variable immediate annuities under VM-21 are in scope.

3. Specific exclusion of variable deferred annuities under VM-21, including those where the contract account value has reached zero but a lifetime benefit is still payable by the insurer. Deferred variable annuity benefits were excluded from scope for this phase of work on longevity risk. The currently exposed factors could conceptually be applied to the reserves for living benefit policies whose account values have reached zero. In practice it may be difficult to allocate VM-21 reserves for policies with zero account value. We continue to recommend future work to determine a method for longevity C-2 that can be applied consistently for all variable annuity living benefits.

The suggested edits in the documents accompanying this letter provide an adjustment to align the C-2b longevity risk with the assuming company rather than the ceding company under modified coinsurance (MODCO). This adjustment is analogous to what is done in LR045, LR046, LR047, and LR048 for C-1 risk under MODCO or funds withheld reinsurance. For C-2b longevity risk, which is calculated as a factor applied to reserves, this adjustment is only needed for MODCO where reserves are retained by the direct writer or ceding company. Reserves under coinsurance or funds withheld reinsurance are reported by the assuming company and longevity risk capital would apply to the reinsurer without further adjustment.

None of these suggested edits address the circumstance where only longevity risk is reinsured as this type of reinsurance has been specifically excluded from C-2b pending further regulator discussion.

*****

Overall, the introduction to LRBC of longevity risk correlated with mortality risk will identify companies with concentrated exposure to longevity risk, while appropriately having little impact on companies with low or balanced levels of longevity risk.

A negative correlation factor between mortality and longevity risk will have the potential to result in a small decrease to C-2 for some companies. The following illustrative graphs both show how C-2 would change for a company with $100 of C-2 mortality risk following the addition of C-2 longevity risk at different amounts. The two graphs show the same underlying information but with different scales which highlight different observations:

1. The first graph shows that total C-2 changes vary little when longevity risk is less than mortality risk but increases materially once longevity is the larger risk.
   - This appropriately results in little change to RBC for companies with low or balanced exposure to longevity risk.
   - It is also successful in identifying and increasing RBC for companies with concentrated exposure to longevity risk.
2. The second graph is zoomed in on the left portion of the first graph and more clearly shows the decrease to total C-2 that would result when longevity exposure is low relative to mortality.
   - For C-2 Longevity amounts less than $66 the resulting total C-2 is less than $100.
   - The lowest possible resulting C-2 is $94.4, representing a 5.6% decrease. (With a -25% correlation assumption, the lowest possible result is $96.8, or a 3.2% decrease.)
   - Total C-2 increases for C-2 Longevity amounts greater than $66. (Total C-2 increases for C-2 Longevity amounts greater than $50 under the -25% correlation assumption.)

The results and impacts to actual companies are unknown; it is unclear what proportion of companies will fall in the left portion of the graph with minimal impact to RBC vs. the right portion where total C-2 would increase with the introduction of longevity C-2. A future impact study would provide a better understanding of how the introduction of C-2 would affect actual companies across the industry but would not change our recommendation for the correlation factor that appropriately reflects the relationship between longevity and mortality risk.

It may also be useful to recall examples that have previously been shared with Life RBC Working Group illustrating hypothetical company impacts of adding Longevity C-2. These examples start with the 2017 aggregate Life RBC Working Group results and show the hypothetical impact of adding Longevity C-2 for a company with Low, Balanced, and Concentrated exposure to longevity risk.
   - The low longevity exposure example results in a two-percentage point increase (from 517% to 519%) to the hypothetical company CAL RBC ratio under the proposed -33% correlation factor.
   - The balanced longevity exposure example results in a 7% decrease to the hypothetical company CAL RBC ratio.
   - The concentrated longevity exposure example results in a 105% decrease to the hypothetical company CAL RBC ratio.
We believe these examples demonstrate that the introduction of the longevity risk charge would be effective in identifying companies with concentrated exposure to longevity risk, while having appropriately little impact on companies with limited or balanced exposure to longevity risk. While a guardrail factor could be implemented as a floor to total C-2, this floor would have little impact on RBC results as these examples illustrate. We would be glad to further discuss or provide additional analysis to assist the Life RBC Working Group in this matter.

Also note that the analysis used to develop both capital and correlation factors was long term in nature and is not based on the actual or projected impact of recent longevity or mortality events.

Should you have any questions or comments regarding this letter, please contact Ian Trepanier, life policy analyst at the Academy (trepanier@actuary.org).

Sincerely,

Paul Navratil, MAAA, FSA
Chairperson, C-2 Longevity Risk Work Group
American Academy of Actuaries
LONGEVITY RISK
LRtbd

Basis of Factors

The factors chosen represent surplus needed to provide for claims in excess of reserves resulting from increased policyholder longevity calibrated to a 95th percentile level. For the purpose of this calibration aggregate reserves were assumed to provide for an 85th percentile outcome.

Longevity risk was considered over the entire lifetime of the policies since these annuity policies are generally not subject to repricing. Calibration of longevity risk considered both trend risk based on uncertainty in future population mortality improvements, as well as level or volatility risk which derives from misestimation of current population mortality rates or random fluctuations. Trend risk applies equally to all populations whereas level and volatility risk factors decrease with larger portfolios consistent with the law of large numbers.

Statutory reserve was chosen as the exposure base as a consistent measure of the economic exposure to increased longevity. Factors were also scaled by reserve level since number of insured policyholders is a less accessible measure of company specific volatility risk. Factors provided are pre-tax and were developed assuming a 21% tax adjustment would be subsequently applied.

Specific Instructions for Application of the Formula

Annual statement reference is for the total life contingent reserve for the products in scope. The scope includes annuity products with life contingent payments where benefits are to be distributed in the form of an annuity. The entire reserve amount for contracts in scope that include any life contingent payments are in scope. For example, under a certain-and-life style annuity, the entire reserve for both the certain payments and life contingent payments are in scope. Variable immediate annuity reserves under VM-21 are also in scope where there are life contingent payments.

Included in scope are:
- Single Premium Immediate Annuities (SPIA) and other payout annuities in pay status
- Deferred Income Payout Annuities which will enter annuity pay status in the future upon annuitization
- Structured Settlements for annuitants with any life contingent benefits
- Group Annuities, such as those associated with pension liabilities with both immediate and deferred benefits

Scope does not include annuity products that are not life contingent, or deferred annuity products where the policyholder has a right but not an obligation to annuitize. A certain-and-life style annuity, where only certain payments remain (such as following the death of the annuitant), is out of scope. Variable deferred annuity contract reserves under VM-21 are out of scope, including reserves valued under VM-21 for any contracts where policyholder account value has reached zero, but a lifetime benefit may still be payable by the insurer. Line (3) for General Account Life Contingent Miscellaneous reserves is included in the event there are any reserves for products in scope reported on Exhibit 5 line 0799999; it is not meant to include cash flow testing reserves reported on this line.

(additional instructions would be required if Longevity Reinsurance product remains in scope — placeholder pending decision on scope)

The total reserve exposure is then further broken down by size as in a tax table. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to reserves is completed automatically. The calculation is as follows:

Total Life Contingent Annuity Reserves
MODCO OR FUNDS WITHHELD REINSURANCE AGREEMENTS
LR045, LR046, LR047, and LR048, LRtbdCeded, and LRtbdAssumed

References to MODCO and funds withheld reinsurance agreements apply to all treaties in effect.

Basis of Factors

When the default risk in modified coinsurance (MODCO) and other reinsurance transactions with funds withheld is transferred, this transfer should be recognized by reducing the RBC for the ceding company and increasing it for the assuming company. In the event that the entire asset credit or variability in statement value risk associated with the assets supporting the business reinsured is not transferred to the assuming company for the entire duration of the reinsurance treaty, the RBC for the ceding company should not be reduced.

When the longevity risk in modified coinsurance (MODCO) is transferred, this transfer should be recognized by reducing the RBC for the ceding company and increasing it for the assuming company. The longevity risk adjustment is not required under funds withheld reinsurance as the RBC for longevity risk is assessed based on the reserves which are already reported by the assuming company. In the event that the entire longevity risk associated with the liability is not transferred to the assuming company for the entire duration of the reinsurance treaty, the RBC for the ceding company should not be reduced.

Assets

The total RBC related to assets (i.e., bonds, mortgages, unaffiliated preferred and common stock, separate accounts, real estate and other long-term assets) in MODCO or Funds Withheld reinsurance agreements, should be reduced (increased) by the amounts of RBC ceded (assumed). There is a separate line in each asset section to achieve this reduction (i.e., “Reduction in RBC for MODCO or Funds Withheld reinsurance ceded agreements”). The amount ceded is determined using the assets supporting the ceded liabilities as of Dec. 31. (In some instances, there may be assets in a trust that exceed the amount needed to support the liabilities; only the portion of assets used to support the ceded liabilities is used to determine the ceded RBC). The ceding company will need to supply the assuming company with sufficient information in order for the assuming company to determine the amount of RBC assumed. With the exception of the impact of the size factor, the amount of RBC ceded should be equal to the amount of RBC assumed. Put another way, there should be “mirror imaging” of RBC, except for the impact of the size factor. For MODCO or Funds Withheld reinsurance agreements, there will be no specific, line-by-line inventory of ceded assets and corresponding ceded RBC; however, ceding and assuming companies must keep detailed records and be prepared to produce those records upon request. The ceding company is required to supply the assuming company with sufficient information in order for the assuming company to determine the amount of RBC assumed.

A reinsurer that has not received such information shall calculate MODCO adjustments for reinsurance assumed as follows:

- If the reinsurer has received data for periods prior to the effective date of the RBC filing, a “MODCO liability ratio” will be developed by comparing the MODCO liabilities at the filing date to the MODCO liabilities as of the last date for which data were received. The required capital for MODCO assumed is the required capital as calculated based on these data multiplied by the “MODCO liability ratio.”
- If the reinsurer has never received data from the ceding company, a “MODCO liability ratio” will be developed by comparing the MODCO liabilities to the reinsurer’s total invested assets (Page 2, Line 12 of the blue blank, or its equivalent). The required capital for MODCO assumed is the reinsurer’s required capital as calculated prior to MODCO ceded and assumed adjustments multiplied by the “MODCO liability ratio.”

Adjustments for MODCO or Funds Withheld reinsurance agreements should be based on pre-tax factors.

Size Factor

Companies with MODCO or Funds Withheld reinsurance agreements should adjust the company’s year-end size factors according to the way the bonds are handled in the treaties. The assuming company includes the bonds that support its share of the liabilities; the ceding company includes the bonds that support its share of the liabilities. No adjustment is made for bonds purchased subsequent to June 30 of the valuation year and that solely support ceded liabilities.
Mortgages
The amount of RBC for mortgages is based upon the ceding company’s calculation for the mortgages, or portion of these mortgages, which support the ceded liabilities. Thus, the amount of RBC ceded is equal to the amount of RBC assumed.

Specific Instructions for Application of the Formula

MODCO OR FUNDS WITHHELD REINSURANCE AGREEMENTS
Reinsurance Ceded - Bonds C-1o
LR045

Column 4
Enter by reinsurer, the amount of C-1o RBC the insurance company has ceded that is attributable to bonds. The “total” should equal the total amount of the reduction in C-1o RBC shown on Line (19) of page LR002 Bonds.

MODCO OR FUNDS WITHHELD REINSURANCE AGREEMENTS
Reinsurance Assumed - Bonds C-1o
LR046

Column 4
Enter by ceding company, the amount of C-1o RBC the insurance company has assumed that is attributable to bonds. The “total” should equal the total amount of the increase in C-1o RBC shown on Line (20) of page LR002 Bonds.

MODCO OR FUNDS WITHHELD REINSURANCE AGREEMENTS
Reinsurance Ceded – All Other Assets C-0, C-1o And C-1cs
LR047

Column 4
Enter by reinsurer, the amount of C-0, C-1o And C-1cs RBC the company has ceded that is attributable to all assets except bonds. The “total” should equal the total amount of the reduction of C-0, C-1o And C-1cs RBC attributable to all assets except bonds for MODCO and funds withheld agreements.

MODCO OR FUNDS WITHHELD REINSURANCE AGREEMENTS
Reinsurance Assumed – All Other Assets C-0, C-1o And C-1cs
LR048

Column 4
Enter by ceding company, the amount of C-0, C-1o And C-1cs RBC the insurance company has assumed that is attributable to all assets except bonds. The “total” should equal the total amount of the increase in C-0, C-1o And C-1cs RBC attributable to all assets except bonds for MODCO and funds withheld agreements.

MODCO REINSURANCE AGREEMENTS
Reinsurance Ceded – Longevity C-2 Reserves
LRbdCeded

Column 4
Enter by reinsurer, the amount of reserves in scope for C-2b longevity risk per LRbd the insurance company holds for business ceded via MODCO reinsurance agreements.
Column 4
Enter by ceding company, the amount of reserves in scope for C-2b longevity risk per LRtbd the direct writer or ceding company holds for business assumed by the insurance company via MODCO reinsurance agreements.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call March 23, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Deborah Batista (CO); Wanchin Chou (CT); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT). Also participating was: Steve Drutz (WA).

1. **Adopted its Feb. 14 and 2019 Fall National Meeting Minutes**

   Mr. Ostlund made a motion, seconded by Mr. Boerner, to adopt the Working Group’s Feb. 14, 2020 (Attachment Four-D1) and Dec. 7, 2019 (see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Three) minutes. The motion passed unanimously.

2. **Exposed the Deletion of C-3 2019 Instruction for Public Comment**

   Mr. Barlow said he believes the deletion of those items in the C-3 instructions that were specific to 2019 are straightforward, but he suggested that the Working Group expose the changes to make sure they were done properly and completely. The Working Group agreed to expose the deletion of the 2019 specific instructions for a public comment period ending April 22.

3. **Discussed the Academy’s Bond Proposal**

   Mr. Barlow reminded Working Group members that this proposal has been discussed by the Investment Risk-Based Capital (E) Working Group for many years. He said there have been some questions raised by the industry and some state insurance regulators about the American Academy of Actuaries’ (Academy) proposal and a request for an additional review. He said he believes that there needs to be a resolution on this because the bond factors have not been updated since they were initially developed. He noted a real estate proposal that is related to this. He said he has been on the Investment Risk-Based Capital (E) Working Group and following this from the beginning, and he believes that the Academy has done what they were asked to do and developed a proposal that is in line with the original methodology. He said the Working Group would ultimately be asked to approve any changes, so he asked for Working Group members’ thoughts.

   Mr. Chou said Connecticut has been closely monitoring the discussions, and he would like to see a more enhanced study on this because the impact to the industry is quite significant.

   Mr. Tsang said he believes the questions raised are not about questioning the Academy’s factors but a desire to have another viewpoint to consider.

   While he recognizes that this is a significant change, Mr. Barlow said the Academy’s proposal has been presented with extensive documentation and exposed for comment by the Investment Risk-Based Capital (E) Working Group with those comments being reviewed and considered. He questioned whether it will significantly affect the primary purpose of risk-based capital (RBC), which is identifying weakly capitalized companies because the life insurance industry is very well capitalized. He said there is one area where he would favor making a non-actuarial adjustment to the Academy’s proposal and that is to the portfolio adjustment because he believes that it may adversely affect smaller insurance companies. He said he is not completely clear on what the Working Group would gain by additional work on the proposal that has been presented.

   Ms. Ahrens agreed and questioned what will come from an additional review with the Academy’s proposal being vetted for several years. While sympathetic to companies that will see higher C-1 charges, she said the reason the bonds were reviewed was due to companies seeking a higher yield in this interest rate environment, and it seems clear that the yield comes with risk.

   Mr. Barlow said the Working Group will schedule a conference call to devote more time to this discussion.

   Nancy Bennett (Academy) said the Academy will provide any information or presentation that the Working Group needs.
Paul S. Graham (American Council of Life Insurers—ACLI) said the industry still has significant concerns with the proposal, and it is still working on a request for proposal (RFP) with the intention to communicate with state insurance regulators to ensure that it yields information that is useful in making the final decision because it will have a significant impact.

4. **Heard an Update from the Academy C2 Work Group**

Chris Trost (Academy) provided a follow up from the update given at the 2019 Fall National Meeting where he discussed what the Academy C2 Work Group would change relative to the original work done. He said the work group’s evaluation of level risk was less than what came out of the original work. Based on the feedback that the work group received, he said the work group should be vetting emerging sustained mortality events, which it believed are better categorized as catastrophe risk, and this is what the work has been focused on. He said he just wanted to introduce this concept, and he indicated that it could be more fully discussed on a subsequent conference call.

Mr. Trost presented an update (Attachment Four-D2) that described the overall approach being taken, highlighted the inclusion of this new element of a sustained mortality increase from an emerging mortality risk, and noted the ongoing discussion of the correlation between the various risks. With respect to the current C-2 life mortality, he said the Work Group has been primarily focused on individual, but it has started work on group mortality. He discussed in more detail about the additional catastrophe component and product differentiation, and he presented the Work Group’s next steps.

5. **Heard an Update from the Academy C3 Life and Annuities Work Group**

Link Richardson (Academy) provided a brief overview of the work being done by the Academy’s C3 Life and Annuities Work Group (Attachment Four-D3). He discussed the request that the Work Group received and the high-level conceptual recommendations the Work Group has developed, and the desire is to get feedback before developing specific recommendations. Mr. Barlow said a conference call will be scheduled to have a more detailed discussion of this topic.

6. **Discussed Longevity Risk Correlation**

Mr. Barlow reminded the Working Group that it adopted a structural change to include the covariance adjustment and the guardrail with further discussion needed to determine what those factors will be before the end of June.

Ms. Ahrens noted the discussion on the bond proposal and the concern about the impact and the need to relook at that. She said she has been thinking about how to get a feel for the actual impact of adding the longevity factors at different correlations. She said one of the reasons the guardrail was included in what was recommended was a concern that there may be companies that actually get a reduction to the overall C-2 charge, and this needs to be more fully explored. She said the information needed to calculate the recommended longevity charge is not readily available in the current annual financial statement format, and trying to do an impact study is difficult to do. Trying to get that study done in the existing deadlines for RBC is going to be challenging, so she suggested that the Working Group could contemplate a different effective date or a field study based on companies using the 2019 information and making the needed adjustments. She said another alternative is to use the structure that has been adopted to capture the needed data for year-end 2020 to determine what the appropriate factors are.

7. **Received an Update on the Health Test Language Proposal**

Mr. Drutz said the Health Risk-Based Capital (E) Working Group formed the Health Test Ad Hoc Group that has been looking at possible changes to the health test, which helps determine what blank insurers file. The basis for the possible change to the health test is to ensure that health data written by life and property/casualty (P/C) companies is available in sufficient detail to help state insurance regulators make informed decisions. He said he believes that about 25% of health premium is reported on the life blank, and the detail provided on that blank is often not detailed enough to help in health-related analyses.

Mr. Drutz said the approach of the ad hoc group has been to look at possible changes to the health test itself, while also looking at possible blanks changes to capture more health data written by P/C and life blank filers and try to make the data already captured on those blanks consistent with the data captured on the health blank. He said the health test language changes were recently exposed, but work will likely now turn to the blanks themselves in more detail as changes in the blanks might affect how much state insurance regulators believe the health test language should be modified.
Mr. Drutz said the ad hoc group wants to ensure that state insurance regulators and interested parties are aware of the work being done, and he encouraged anyone interested to join the ad hoc group to help ensure that any proposed changes to the blanks or health test language have been thoroughly vetted to avoid any unintended consequences.

Mr. Drutz said the ad hoc group has pondered getting rid of the reserve ratio in the health test and changing the premium test threshold, but he is aware that by moving some life and possibly a few P/C companies to the health blank, state insurance regulators may lose useful data that is specific to those two blanks. He said the ad hoc group is trying to avoid that. He said he believes that the work the ad hoc group is doing is necessary but complicated, and having additional input from state insurance regulators and interested parties as the ad hoc group proceeds would be valuable to assure that it ends up with proposals that are well vetted and provides state insurance regulators with the data they need.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Feb. 14, 2020. The following Working Group members participated: Philip Barlow, Chair (DC); Perry Kupferman (CA); Deborah Batista (CO); Wanchin Chou (CT); Gilbert Moreau (FL); Vincent Tsang (IL); John Robinson (MN); William Leung (MO); Rhonda Ahrens (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

Ms. Ahrens reminded the Working Group that there are two proposals with the American Academy of Actuaries’ (Academy) suggested factors for longevity exposed: one without a covariance adjustment and one with a covariance adjustment.

Mr. Barlow said the Working Group received several comment letters (Attachment Four-D1a). He provided those submitting comment letters the opportunity to speak on their comments.

Mr. Carmello said he understands the possible correlation between mortality and longevity, but the risk-based capital (RBC) formula is rather crude, and there are other places where possible correlations are not used. He said including the correlation in this instance would, for a number of companies, result in no charge for longevity risk, which defeats the purpose of this project. He said New York supports the version of the proposal without correlation.

Paul Navratil (Academy) presented the Academy’s comment letter. He said there had been some questions in the past about whether the proposed factors would change depending upon whether correlation is included, and he said they would not. He said the Academy does believe reflecting the correlation is important to achieve consistency across companies.

Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI’s comment letter, noting the ACLI’s support for the Academy’s proposal with the covariance adjustment. He said the ACLI also recommends deferring implementation until the Academy’s work on new mortality factors is completed, and he suggested the possibility of including the longevity proposal on an informational basis for 2020 reporting.

Frederick Slater (Nationwide) presented Nationwide’s comment letter, indicating support for the version of the proposal, including covariance along with suggesting clarity with respect to scope regarding variable annuity living benefits.

Arthur Panighetti (Pacific Life) presented Pacific Life’s comment letter supporting the Academy’s proposal and echoing the ACLI’s support for the inclusion of covariance.

Sam Early (Principal) presented Principal’s comment letter expressing support for the proposal that includes a –33% correlation. He said any implementation of the longevity charge will require taking a position, either explicitly or implicitly, on what the correlation between the longevity charge and the mortality charge is.

Mr. Carmello asked whether the Academy’s proposal limits the covariance adjustment, so a company does not end up with a lower RBC requirement than before the longevity charge goes into effect if the Working Group goes with the correlation approach.

Mr. Barlow said his understanding is that there is nothing built into the proposal to do that, and depending on the correlation factor chosen, there could be companies whose authorized control level RBC could decrease.

Mr. Navratil said that the recommendation would, in theory, allow for a reduction in C-2 of around 4%–6% maximum, which the Academy believes is consistent with the offsets between the risks. He said the Academy also provided an alternative formula that would introduce guardrail factors that would floor the C-2 risk at the higher of the longevity or the mortality amount and prevent C-2 from ever going down.
Based on the comments received, Mr. Barlow suggested that the first decision the Working Group needs to make is whether to defer the proposal until the Academy’s work on potential mortality changes is complete. If the Working Group wants to move forward, he suggested that the Working Group could either adjust the covariance factor or put in something that prevents a negative C-2 amount. If the Working Group decides to adjust the factor, he suggested that the Working Group could move forward with the structural change needed and have a little more time to decide on the appropriate covariance factor.

Ms. Ahrens made a motion, seconded by Mr. Carmello, to adopt proposal 2019-13-L, the structural changes to incorporate a longevity risk charge as presented in the Academy’s Nov. 22, 2019, letter, which includes the covariance adjustment and the guardrail to be determined by the end of June, with the individual longevity schedule that was not included in that letter, along with suggested corrections to the annual financial statement references (see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment One-B2). The motion passed unanimously.

2. Adopted Proposal 2020-03-L (C-3 Instructions and C-3 Guidance)

Ms. Hemphill said this issue has to do with the adoption of the Variable Annuities Framework and the timing of comparisons involved in the phase-in for reserves versus the phase-in for C-3 and the impact of voluntary reserves. She said there is a similar issue with smoothing. The modifications to the instructions will address this for year-end 2020, and the guidance document is to highlight the issue on smoothing for 2019.

Ms. Hemphill made a motion, seconded by Mr. Leung, to adopt proposal 2020-03-L, the C-3 instructional changes for year-end 2020 and the C-3 guidance document (see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment Nine). The motion passed unanimously.

3. Discussed the Treatment of Alien Affiliates

Mr. Barlow asked Working Group members to consider two items with respect to the life RBC treatment of alien affiliates. The first has to do with a distinction between Canadian and other alien affiliates. He said there have not been any reported Canadian affiliates in 10 years, and he suggested eliminating that distinction. The second has to do with other alien affiliates and a change made in 2010 to exclude them from both the numerator and the denominator of the RBC calculation.

Mr. Barlow said the issues that gave rise to this change were that it was not really risk-based in that the affiliate having more capital negatively affected the RBC calculation and, to a lesser extent, the comparability between mutual and stock companies. With the work being done by the Group Capital Calculation (E) Working Group and the fact that there is more information now about these types of companies, he suggested that it would be good for the Working Group to review both of these. He asked Working Group members to start thinking about these items.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.
January 23, 2020

Re: Exposure of proposed longevity risk charge

Dear Philip,

On behalf of the Longevity Risk Task Force of the American Academy of Actuaries,1 I am providing additional comments on the exposure of the longevity risk charge and risk-based capital (RBC) instructions update from the working group’s December 7, 2019, meeting. We want to reinforce our recommendation to add a longevity risk charge to the Life Risk-Based Capital formula (LRBC), and to express our support to include an explicit correlation factor less than 100% within the C-2 component.

The task force’s longevity factor recommendation was developed in line with the guidance from the Life Risk-Based Capital (E) Working Group to target a statistical safety level of 95th percentile associated with a longevity risk event that occurs over a 10-year period. The recommended longevity risk factors were calibrated to that target level. Given the close relationship between longevity risk (living longer than expected) and mortality risk (living shorter than expected), the Academy correlation recommendation (of -33%) was developed to maintain the 95th percentile capital target for the aggregate risk of uncertain future life span.

There are two different versions of the RBC worksheet and instructions included in the exposure. One includes a structure to allow for an explicit and transparent correlation between longevity and mortality risk with a correlation factor that can be specified. The second structure implicitly includes 100% correlation between longevity and mortality with no ability to adjust to a different correlation factor. We support the first structure that provides for an explicit correlation assumption and do not support the second, which keeps correlation implicit in the formula and restricted to a value of 100%.

Adding longevity risk and mortality risk with 100% correlation within LRBC would only represent a 95th percentile outcome for companies with concentrated exposure to either longevity

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
risk or mortality risk, while representing an outcome materially in excess of 95\textsuperscript{th} percentile for companies with exposure to both longevity and mortality risks. Using a 100\% correlation could reduce the usefulness of LRBC as a consistent tool to identify potentially weakly capitalized life insurers.

A 100\% correlation assumption would express the view that an adverse longevity outcome where annuitants are living longer than expected would, with 100\% certainty, occur concurrent with an equally adverse mortality outcome where insureds are dying sooner than expected. We do not believe this to be a plausible view of how longevity and mortality risk are related. Using a 100\% correlation would result in a total C-2 amount that exceeds the 95\textsuperscript{th} percentile objective.

While the task force understands that some regulators might not support a correlation assumption of -33\% based on the concern that it may overstate the diversification between mortality risk and longevity risk, we believe that positive 100\% correlation is unreasonable and inconsistent with the current RBC framework. The current framework clearly recognizes that the individual risk factors are not expected to all happen at the same time, and that is why a correlation adjustment across the various risk (C-0, C-1, etc.) is part of the current formula. We strongly believe that a similar approach should be applied for the longevity and mortality risk categories, because they are clearly not 100\% correlated (and, in our view, are at least partially negatively correlated).

I shared a summary of the correlation recommendation and rationale on behalf of the Longevity Risk Task Force at the NAIC Summer 2019 National Meeting and would gladly share additional detail or address questions at a future call if that would be useful to the working group in moving forward toward implementation of longevity risk within Life Risk-Based Capital.

****

Should you have any questions or comments regarding this letter, please contact Ian Trepanier, life policy analyst at the Academy (trepanier@actuary.org).

Sincerely,

Paul Navratil, MAAA, FSA

Mr. Philip Barlow  
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

Re: Longevity Risk Charge Proposal

Dear Philip:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to provide comments regarding the longevity risk charge proposal exposed for comment during the NAIC Fall Meeting. We appreciate all of the hard work of the American Academy of Actuaries Longevity Risk Task Force (Academy) to develop the factors and provide the rationale behind the assumptions and regulators’ thorough review of their work.

ACLI is supportive of the Academy recommendation regarding the longevity risk charge, contingent upon a reasonable correlation factor between the C-2 charges (mortality and longevity). We support both the recommendation on the factors themselves, as well as the recommended -33% covariance adjustment. We have the following comments regarding the exposure:

**A reasonable correlation adjustment is appropriate and necessary**

ACLI urges Life RBC to adopt the formula reflecting the correlation factor. As pointed out in our November 26\(^{th}\) letter, excluding the correlation factor in the RBC pages is equivalent to a +100% correlation. Given the generally inverse relationship between mortality and longevity risk, ACLI does not believe this to be a reasonable assumption. Such an additive view of the risks would overstate the capital needed for C-2 risks for companies with a balanced mix of mortality and longevity exposure. At the direction of the Longevity Risk (A/E) Subgroup, the Academy provided a recommendation of -33% for a correlation adjustment based on their analysis. We found their rationale for the -33% compelling, and as the Academy notes, it is in line with other jurisdictions (-25% for Canada and EU, -50% for Bermuda).

**Longevity Risk Charge should be paired with updated mortality factors**

ACLI recommends Life RBC delay implementation of the new longevity risk charge until the new mortality factors are adopted. This approach will allow the Longevity Risk Subgroup additional time to evaluate factors and methodology to include longevity reinsurance transactions. This approach would incorporate

---

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.
all C-2 changes for yearend 2021 reporting, assuming the mortality factors are approved in a timely manner. In the absence of deferred implementation, we would recommend making the first reporting of the longevity factors informational only; this approach will allow regulators to assess the industry impact and the effect of the correlation factor.

We look forward to discussing our comments on a future call.

Sincerely,

[Signature]

Re: RBC risk charge for longevity

Dear Philip,

Nationwide appreciates the opportunity to provide comments on the longevity risk charge proposal exposed for comment during the NAIC Fall Meeting. We appreciate the efforts of the American Academy of Actuaries Longevity Risk Task Force (LRTF) in developing the proposal and of the regulators in reviewing their work.

About Nationwide

Nationwide, a Fortune 100 company based in Columbus, Ohio, is one of the largest and strongest diversified insurance and financial services organizations in the United States. Nationwide is rated A+ by both A.M. Best and Standard & Poor’s. An industry leader in driving customer-focused innovation, Nationwide provides a full range of insurance and financial services products including auto, business, homeowners, farm and life insurance; public and private sector retirement plans, annuities and mutual funds; excess & surplus, specialty and surety; pet, motorcycle and boat insurance.

Nationwide supports the version of the Longevity C-2 proposal outlined in the November 22, 2019 letter from LRTF to the Longevity Risk (A/E) Subgroup. This version of the proposal allows for appropriate consideration of the covariance between longevity and mortality risk. We believe the LRTF’s proposal of a -33% correlation factor is well-supported and within the realm of assumptions used by other jurisdictions. However, if Life RBC is inclined to add conservatism to this assumption, the LRTF proposal allows the flexibility to substitute a more conservative factor.

Nationwide does not support the proposal that does not include a covariance adjustment. This version effectively assumes tail risks with respect to mortality and longevity are 100% correlated. Such an assumption does not reasonably take account of the generally inverse relationship between the two risks and would significantly overstate the amount of capital required to cover tail events for companies with a balanced mix of these risks.

Based on material presented by LRTF to the 2019 Spring NAIC meeting, Nationwide’s understanding of the intended scope of the longevity risk charge is that it excludes living benefit guarantees associated with variable annuities, even after the account value has been exhausted, as these would be captured in C3 Phase 2 testing. While the exposed instructions do not explicitly include such benefits in scope,
Nationwide suggests that specifically excluding VA living benefit guarantees from the scope would be useful in clarifying the intention.

Thank you for your consideration.

Sincerely,

Frederick W. Slater, MAAA, FSA

Re: Longevity Risk Charge Proposal

Philip:

Thank you for the opportunity to provide comments on the longevity risk charge proposal that was exposed for comment at the NAIC Fall Meeting in Austin. Pacific Life joins the ACLI in commending the quality work of the American Academy of Actuaries and the Longevity Risk (A/E) Subgroup in developing and supporting appropriate and reasonable factors to implement a new risk charge for longevity. With the ACLI we also support the Academy factors as well as an appropriate covariance adjustment, which the Academy recommends at -33%.

We strongly agree with the ACLI recommendation to adopt the formula that reflects the correlation factor. In addition to the reasons the ACLI cites, keeping the formula in Life RBC allows regulators the flexibility to monitor and adjust the correlation should future experience justify such a change. While a risk factor for longevity is currently prudent and appropriate, there is recent evidence of slowing improvement and even dis-improvement in mortality trends. Locking in a +100% correlation does is not necessary or appropriate, as ACLI also suggests.

As always, I am available for further comments or discussion

Sincerely,

Art Panighetti

RE: Principal Life Insurance Company
Academy Proposal for Risk-Based Capital for Longevity Risk

Dear Mr. Barlow,

This letter is written on behalf of Principal Life Insurance Company (Principal) to provide comments on the American Academy of Actuaries Longevity Risk Working Group’s (Academy) proposal to add a longevity component to the C-2 factor within the Life RBC formula. We appreciate this opportunity to comment on the proposal. Principal is a top five payout annuity provider within the U.S. industry, with over $25B of reserves. We believe that payout products serve a critical need to retirees, providing income protection for life.

Principal encourages the Working Group to adopt the Academy proposal to include Longevity Risk within the RBC formula, including the Academy’s recommended -33% correlation between the new longevity risk charge and the mortality risk charge. Reflecting longevity risk has the potential to make the RBC formula more risk sensitive and more useful to regulators, provided it is designed appropriately.

Under consideration are a range of scenarios for correlation between mortality and longevity risk, including the Academy’s -33% recommendation, a 0% correlation, and a 100% correlation, which is embedded in one of the options exposed. The Academy extensively analyzed the correlation component of their recommendation. Through this work, the Academy determined that 100% correlation was inappropriate.

Principal agrees with the Academy and views a 100% correlation factor as being critically flawed. The 100% correlation scenario provides no recognition or incentive for companies to create a naturally hedged book of business. Adopting this version of the exposure would be unsupported by theory, observable results, and would be contrary to the work done by the Academy. It would also lead to a distorted impact on the RBC results of companies that issue both life insurance and payout annuity business.
Academy Proposal for Risk-Based Capital for Longevity Risk
Page 2

A 100% correlation implies simultaneous tail events occur on Life and Annuity blocks. This suggests a pandemic-like event only strikes life-insured participants while a critical life extending event only impacts a company’s annuitants. This is statistically improbable and implausible. A tail event for either a longevity risk or a mortality risk event would not discriminate towards either the annuitant block or the life block, creating a natural hedge.

In conclusion, Principal supports the Academy’s recommendation to include a charge for Longevity Risk in the RBC formula with a correlation factor of -33%. Thank you again for the opportunity to comment on the proposal.

Re: Exposure for incorporating Longevity Risk has an RBC charge the Life/Fraternal RBC formula

In attachment #1 of the exposure, the listed references in the Annual Statement Source column of the formula page are not formatted in the same manner as the rest of the formula. Statement references shown in this column are normally assumed to be for the General Accounts unless stated otherwise in the instructions or the line description. Additionally, the terms “blue book” and “green book” as references are not used anywhere else in the risk-based capital formula; not even on LR006 which specifically addresses Separate Accounts. The references in this column also indicate a “row” number. The correct term is “line.”

The line description for each of the four data lines already indicate if the general account or the separate account is being addressed. Therefore, it would seem logical that the reference listed in the Annual Statement Source column need only indicate the Exhibit, Column and Line number, although it might be a good idea to include a reference to the Separate Accounts in Line (4).

The following suggestion maintains the format normally used in the formula.

<table>
<thead>
<tr>
<th></th>
<th>General Account Life Contingent Annuity Reserves</th>
<th>Exhibit 5 Column 2 Line 0299999, in part†</th>
</tr>
</thead>
<tbody>

**Academy C-2 Mortality Work Group Update**

*Chris Trost, MAAA, FSA*

Chairperson, C-2 Work Group
American Academy of Actuaries

---

**Agenda**

- Follow-up from December update at National Association of Insurance Commissioners (NAIC) Fall National meeting
  - Additional catastrophe component for an emerging sustained risk
  - Product differentiation
- Next steps

---

**C-2 Mortality Overall Approach**

- C-2 requirement covers mortality risk at the 95th percentile and is net of risk covered in statutory reserves
- C-2 requirement includes mortality risks related to:
  - Volatility risk—natural statistical deviations in experienced mortality
  - Level risk—error in base mortality assumption
  - Trend risk—adverse mortality trend
  - Catastrophe risk
  - Large temporary mortality increase from a severe event such as a pandemic or terrorism
- Sustained mortality increase from an emerging mortality risk
- Evaluate mortality risks using Monte Carlo simulation
- Express capital requirement using a factor-based approach (e.g., factor applied to Net Amount at Risk)

---

**Current C-2 Life Mortality Risk-Based Capital**

Additional Catastrophe Component for Emerging Risks

- Feedback from December NAIC meeting was that the LRBCWG should consider adding a component for an emerging mortality risk
- C-2 Work Group developed a second catastrophe component informed by historical health events impacting the US population e.g., AIDS and opioids
  - Component is intended to cover emerging risks that could materialize in the insured population
  - Conceptually, the component is expressed as a low annual probability of a sustained severe mortality increase (example approach provided in appendix)

Product Differentiation

- The work group is considering differentiating factors between products with near-term inforce pricing flexibility and those with minimal/no inforce pricing flexibility
- Higher factors are associated with products that have long-term guarantees
- Two options are under consideration
  1. Develop separate factors for product categories
  2. Blend the categories into one aggregate factor

Next Steps

- Follow-up call with LRBCWG to get more detailed feedback
- Finalize model and assumptions
  - Group life
  - Review size bands against current industry data
  - Review aggregate model output and peer review

AIDS (1995) and opioids (2017) both peaked near a 2% increase to U.S. population mortality. Assumption for a 5% increase was derived by conservatively applying the increase in mortality at the worst age band in the worst year. Probability and magnitude are less than anticipated AIDS impact in early 1990s factor development (i.e., AIDS was a major concern at the time)

- However, additional component is greater than the actual mortality costs experienced in the insured population.
- Provides for the likelihood of a sustained event over a 40-year period.

### Appendix: Additional Catastrophe Component for Emerging Risks
(Expressed as a 2.5% annual probability of a 5% sustained mortality increase)

C-3 Work Group Update

Link Richardson, MAIA, FSA
Chairperson, C-3 Work Group
American Academy of Actuaries

NAIC 2020 Spring National Meeting - Life Risk-Based Capital (E) Working Group

Discussion Outline

- 2015 C-3 Phase I (C-3 P1) Field Test Recap
- Highlights of changes since 2015
- Key remaining differences—C-3 P1 versus C-3 P2
- Scenario considerations
- High-level recommendations
- Analysis considerations

Discussion Topic

- The Academy C-3 Life and Annuities Work Group (C-3 WG) has a request from the NAIC Life Risk-Based Capital (E) Working Group (LRBC) to “Update the current C-3 Phase I or C-3 Phase II methodology to include Indexed Annuities.”
- The C-3 WG has developed high-level conceptual recommendations with respect to this request and would like to discuss them with the Life Risk-Based Capital Working Group (LRBC) before proceeding to develop the specifics of the recommendations.

C-3 Phase 1 Field Test Recap

- 2015 Field Test used 03/31/2014 models and scenarios, and essentially tested Phase 1 in the then-current C-3 Phase 2 framework
- Participation was made mandatory for large companies via Risk-Based Capital (RBC) Instructions, with results due in the February RBC filing
- Tested 200 “VM-20” interest rate scenarios
  - Key difference was Mean Reversion Point (MRP) of 4.00%, down from 6.55%
  - Resulting C-3 requirements were significantly higher, likely due to reinvestment effects for long-duration products, from lower MRP
- Also tested conditional full expectation (CTE) 90 metric, versus 92nd through 98th percentile (with boosted weight at 95%)
  - Change in metric made little difference to results
- C-3 Phase 1 use of expected defaults, and no Asset Valuation Reserve (AVR), was made explicit for C-3 Phase 2
C-3 Phase 2—Highlights of Changes since 2015 Field Test

- Interest rate scenarios now prescribed
- CTE 90 metric changed to 25% of CTE 98 minus CTE 70, from curve distribution, except for tax adjustment
- C-1 charges prescribed at CTE 70 level
- AWI only included if not used in cash flow testing (CFT)
- RBC Standard Scenario eliminated, but Reserve Additional Standard Projection Amount (ASP) doesn’t reduce RBC
- Working Reserve (WR) set to zero, instead of Cash Surplus value (CSV)
- Lower Error Factor allowed for implicit method of reflecting hedging
- Smoothing now applies to MRPs instead of CTE 98 – CTE 90
- SAP 108 allows hedge accounting for derivatives hedging US guarantees

C-3 Phase 1 Versus Updated Phase 2—Key Differences

- Minimum RBC is 50% of factor-based amount vs. implicit floor because reserves and RBC are from the same distribution
- ESG Mean Reversion Point (MRP) 6.55% vs. formulaic—currently 3.50%
- Capital requirement based on approximately CTE 90 vs. 25% of (CTE 98 minus CTE 70)
- C-1 charges at expected levels vs. CTE 70
- Surplus in projections based on reserves vs. WR of zero

Scenario Considerations

- No changes have been made for the MRPs. We currently have two MRPs—high one for C-3 F1 and a low one for F2 & C-3 F2
- A good solution is an MRP between these two, along with an update to increase the interest rate volatility. This recommendation could be provided as guidance to the development of the new ESG. It may be instructive to look at combined results for these two current scenario sets as a proxy for how that solution might look.
- The 2015 field test used 200 identical interest rate scenarios for all companies. Most companies ran 1,000 scenarios for C-3 F2. A two-dimensional stratification (interest rates and equity returns) was developed for 2015, but not used because Indebted Annuities were excluded.
- Use of the two-dimensional 200 scenario framework is recommended, and would allow for comparisons to both the current 50-scenario C-3 F1 framework and the typical 1,000 scenarios for C-3 F2.

High-Level Recommendations

- Repeat the 2015 C-3 Phase 3 field test, in 2020 for 1/1/2020 models, but using the updated C-3 Phase 2 framework and including various annuities, along with all products currently in scope for C-3 F1
- If the field test is mandatory for large companies, as the 2015 test was, change the timing to occur after year-end work is largely complete. Results could be due with the 1Q12 filing instead of February.
- Since the C-3 F1 framework now specifies interest rate scenarios as well as equity returns and hedging guidance, necessary adjustments to include Indebted Annuities should be minimal.
- The Total Asset Requirement (TAR) framework is suited to handling differing levels of reserve construction but is complicated by the change to 25% of CTE 98 minus CTE 70. Develop specific recommendations for treatment of reserves not equal to a CTE 70 basis. This type of field test could be performed before PM-22 updates are completed, even if PM-22 updates only apply to new business.
- Once new economic scenarios are available, a broader field test could be performed, including all products and frameworks to which the scenarios would apply, such as VMR, TAR, and C-3 testing.
Results Analysis Considerations

- Regulators and the Academy WG should develop a useful set of filing requirements and questions to facilitate and elicit participants’ comments on their own results. For example:
  - Results by model or product group would be helpful to analysis efforts.
  - Present values of ending surplus can be a useful indicator of the potential margin before deficiencies would develop, for scenarios where there is no deficiency.
  - Results with projected reserves, and with working reserves equal zero, can help with analysis of the significance of this choice.
  - The confidentiality provisions around RBC filings were relied upon in 2015, and would likely be suitable again. NAIC staff and regulators can perform work on summarization and aggregation of results.
  - If the High-Level Recommendations and Analysis Considerations are acceptable, the Academy C-3 WG can begin drafting of proposed RBC Instructions.

What RBC Pages Should Be Submitted?

For year-end 2020 life and fraternal risk-based capital (RBC), submit hard copies of pages LR001 through LR049 to any state that requests a hard copy in addition to the electronic filing. Starting with year-end 2007 RBC, a hardcopy was not required to be submitted to the NAIC. However, a portable document format (PDF) file representing the hard copy filing is part of the electronic filing.

If any actuarial certifications are required per the RBC instructions, those should be included as part of the hard copy filing. Starting with year-end 2008 RBC, the actuarial certifications were also part of the electronic RBC filing as PDF files, similar to the financial annual statement actuarial opinion.

Other pages, such as the mortgage and real estate worksheets, do not need to be submitted. However, they still need to be retained by the company as documentation.

Bond Designation Structure

The Capital Adequacy (E) Task Force adopted proposal 2019-16-CA to incorporate the 20 designation categories for bonds into the life and fraternal RBC formula to be used in conducting an impact analysis study for year-end 2020 reporting during its April 30, 2020 conference call. The 20 bond designation categories were incorporated into the Bonds page (LR002), Asset Concentration page (LR010) and Off Balance Sheet Collateral page (LR017).

Longevity Risk

As a result of the adoption of proposal 2019-13-L by the Capital Adequacy (E) Task Force on its April 30, 2020 conference call, changes developed by the Longevity Risk (E/A) Subgroup and recommended to the Life Risk-Based Capital (E) Working Group to implement the structure for a longevity risk charge were incorporated into the life RBC formula. On its June 30, 2020 conference call, the Task Force adopted the instructions with proposal 2020-06-L, which includes factors of zero for 2020. The structure adopted will provide information to be used in the ultimate determination of factors for 2021 reporting.

Capitation Tables

The Capital Adequacy (E) Task Force adopted proposal 2018-17-CA to capture the Capitation Tables electronically through the file submission of the life RBC formula during its June 28, 2019 conference call.

RBC Preamble

As a result of the adoption of proposal 2019-07-CA by the Capital Adequacy (E) Task Force at the 2019 Fall National Meeting, the Risk-Based Capital Preamble was added to the RBC instructions to provide a clear understanding of the purpose or RBC and goals of RBC as the Capital Adequacy (E) Task Force and RBC Working Groups review referrals and proposals.

Overview and Table of Contents

As a result of the adoption of proposal 2020-05-CA by the Capital Adequacy (E) Task Force during its June 30, 2020 conference call, the page iv instructions were modified to insert the word “Overview” in the page heading and the Table of Contents were modified to include only the page heading and delete references to the individual sections of the Overview.
RBC Forecasting and Instructions

The Life and Fraternal RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2020 NAIC Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies, and is available to download from NAIC Account Manager. The 2020 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies publication is available for purchase in hardcopy or electronic format through the NAIC Publications Department. This publication is available on or about Nov. 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

**WARNING:** The RBC Forecasting Spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted and the RBC will not have been filed.
July 23, 2020

Philip A. Barlow, FSA, MAAA  
Chair, Life Risk-Based Capital (E) Working Group  
National Association of Insurance Commissioners  
1100 Walnut Street, Suite 1500  
Kansas City, MO 64106-2197

Re: Progress Report for July 30, 2020 Working Group Meeting

Dear Mr. Barlow:

The Mortgage Bankers Associations (MBA)\(^1\) and the American Council of Life Insurers (ACLI),\(^2\) on behalf of our respective member insurers, respectfully submit to the Life Risk-Based Capital Working Group of the National Association of Insurance Commissioners (NAIC) the attached materials to support our report on the July 30, 2020 call, reporting on our progress following up on the Working Group’s July 10, 2020 call.

We appreciate the Working Group’s approval on that call of our requested reporting guidance on Contemporaneous Property Valuation, and we look forward to continuing to engage on reporting of 2020 Net Operating Income (NOI).

---

\(^1\) The Mortgage Bankers Association (MBA) is the national association representing the real estate finance industry, an industry that employs more than 280,000 people in virtually every community in the country. Its membership of over 2,300 companies includes all elements of real estate finance: mortgage companies, mortgage brokers, commercial banks, credit unions, thrifts, REITs, Wall Street conduits, 70 life insurance companies engaged in real estate finance, and others in the mortgage lending field. For additional information, visit MBA’s website: www.mba.org

\(^2\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States. Learn more at www.acl.com
We want to thank you and other regulators, and NAIC staff, for your considerable time and attention to this request. Please feel free to contact Bruce Oliver at boliver@mba.org or 202-557-2840 or Mike Monahan at mikemonahan@acli.com or 202-624-2324 for any additional information.

Sincerely,

Mike Flood

Paul S. Graham, III

Attachment: Supplement to June 8, 2020 Request for Risk-Based Capital Reporting Guidance

cc: Dave Fleming, NAIC Senior Insurance Reporting Analyst
I. BACKGROUND
A. The need for RBC guidance generally
Owners of properties that secure mortgage loans are experiencing temporary decreases in income, including rent income, from mandatory shutdowns and other governmental actions taken to flatten the COVID-19 pandemic curve. This is especially the case for properties in the retail and hospitality sectors.

RBC reporting standards were not designed with these circumstances in mind. Accordingly, the Financial Condition (E) Committee issued RBC guidance to adapt current RBC reporting standards to these unique circumstances. That guidance addresses RBC reporting treatments that would otherwise discourage or penalize reasonable and prudent temporary modifications of loans affected by the pandemic.

The E Committee delegated to the Life RBC Working Group the task of addressing further RBC reporting guidance, at a more detailed level, that may be appropriate to similarly address these unique circumstances.

Consistent with that delegation, the Life RBC Working Group has (1) extended the E Committee RBC Guidance to December 31, 2020 reporting, (2) adopted guidance on RBC treatment of construction loans paused under governmental directives, and (3) adopted guidance on reporting of Contemporary Property Values for 2020 RBC reporting.

The Working Group determined to defer consideration of a COVID-19-related adaptation of the reporting of 2020 Net Operating Income (NOI), which will affect 2021, 2022, and 2023 RBC reporting.

B. NOI and RBC reporting
NOI is the net of all operating income from a property, less all reasonably necessary operating expenses. Income for a property includes rents received, and operating expenses excludes principal and interest payments on loans.

For performing loans, the CM category is based on a matrix of Debt Service Coverage (DSC) and LTV. NOI affects RBC reporting because NOI is an element of DSC.

\[
DSC = \frac{\text{Net Operating Income (NOI)}}{\text{RBC Debt Service}}
\]

In 2013, regulators determined to dampen the direct impact of changes in NOI on RBC reporting by adopting a weighted-average approach to applying NOI values, as follows:

- 50% of preceding year NOI
- 30% of next preceding year NOI; and
- 20% of next preceding year NOI.

C. The need for RBC reporting guidance on 2020 NOI
NOI can provide insights into future credit risk where one can reasonably assume that future NOI will be similar to current NOI.

Given the unique nature of the COVID-19 pandemic, however, one cannot reasonably assume that 2021, 2022, and 2023 NOIs will be similar to 2020 NOI.

As a result, absent an adjustment to how 2020 NOI is reported at year end 2021, 2022, and 2023, RBC reporting would overstate the future credit risk impacts of temporary reductions in rent income that occur in 2020.
II. INDUSTRY 2020 NOI RECOMMENDATIONS

A. Revised Recommendation

For 2021, 2022, and 2023 RBC reporting:

- **Initial recommendation.** To prevent 2020 NOI values affected by temporary impacts of COVID-19 from overstating credit risk, industry initially recommended that, where a value of 2020 NOI is an input into the computation of the Rolling Average NOI, insurers should use the greater of:
  - 2020 NOI; or
  - [100% of] 2019 NOI.

- **Revised recommendation.** To address regulator feedback received in the June 30 WG conference call, industry revised its recommendation July 7 to reflect reductions in income in 2020, but with a floor.

  Specifically, industry recommends that, where a value of 2020 NOI is an input into the computation of the Rolling Average NOI, insurers should use the greater of:
  - 2020 NOI; or
  - 85% of 2019 NOI.

B. Why Revised Recommendation is Reasonable

- **Benchmark for 85%.** An NOI drop to 85% of a prior year's NOI is recognized as substantial by FHFA, which used a 15% drop in NOI (i.e., to 85% of the prior-year NOI) as a key “stress” assumption to calibrate multifamily credit risk in proposed GSE risk-based capital standards.

- **Consideration of historical data.** An NOI drop to 85% of a prior-year NOI represents roughly three times the historical worst four-quarter decline in NCREIF NOI values over the past 20 years, which includes the great financial crisis.

- **Non-performing loans are effectively excluded from recommendation.** A non-performing loan is classified in category CM6 or CM7, without regard to NOI. As a result, the recommended treatment of 2020 NOI would apply only to loans that are performing as of December 31, 2021, or a later reporting date.

- **2021 reductions in property valuation will be fully recognized.** The treatment of property valuations adopted by the WG on July 10 applies only for 2020 RBC reporting. As a result, 2021 reductions in property valuations (including those resulting from reduced NOI), will be fully reflected in LTVs for 2021 year-end RBC reporting.

C. Why Guidance is Necessary Now

While 2020 NOI is not incorporated into RBC reporting until year-end 2021, a lack of guidance on 2020 NOI RBC reporting has impacts now.

- **Evaluating new loans.** Insurers evaluating new loans as appropriate investments consider the return on capital as well as credit risk. Uncertainty as to RBC treatment of new loans impairs the ability to conduct that analysis. As a result, RBC considerations can prevent insurers from being competitive when seeking to make sound and appropriate mortgage investments.

  This impact would be most pronounced for loans on properties in states and regions that are hardest hit by actions to curb the COVID-19 pandemic.

- **Capital planning.** Regulators expect insurers to conduct robust capital planning, as do ratings agencies and investors and other stakeholders.

  A lack of clarity now as to impacts of 2020 NOIs on RBC reporting for 2021 and later years reduces insurers’ ability to account for their portfolios of mortgages in such capital planning.
III. PROGRESS REPORT

Industry actions following up on July 10 call

To provide the WG with additional information to support its reconsideration of the revised NOI recommendation, industry will:

A. Review and assess 2Q 2020 NOI information from various sources. This will include review and assessment of properties for which insurers receive quarterly NOI values, and any other similarly information that is available.

B. Consider market forecasts and projections from credible sources. See, e.g., MBA Commercial Real Estate Finance Forecast, by Jamie Woodwell; Reggie Booker (July 16, 2020) (excerpt below).

"For multifamily properties, much appears to depend on the federal government. Despite major disruptions in the labor market, the unemployment rate fell from 14% in April to 10% in June. If the economy rebounds, the apartment market should remain relatively balanced. This forecast anticipates continued federal support with a stimulus bill. The one-off checks and expanded unemployment insurance should support for displaced workers continue as the economy rebounds. This forecast anticipates continued federal support with a 'normal' (or 'GFC') - relatively light given the amount of labor market distress.

For office properties, the outcome will hinge on the tug-of-war between how dramatically companies embrace teleworking and shed office space on the one hand, and how companies resume their office space on the other. We anticipate that for most properties in most markets, the latter could largely mute the former, and that the greatest impact will come through shorter-term decision-making that maintains the leasing status quo. Looking across all property types, we expect the aggregate decline in NOI this recession could exceed that of the 2007 recession or GFC, but that impacts will be very different across different property types. The overall decline will also be concentrated in 2020."

© 2020 National Association of Insurance Commissioners
The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call July 30, 2020. The following Working Group members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Sheila Travis (AL); Mitchell Bronson, Rolf Kaumann and Eric Unger (CO); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Will Davis (SC); Miriam Fisk (TX); and Randy Milquet (WI).

1. Adopted its June 12 and Feb. 3 Minutes

Mr. Botsko said the Working Group conducted an e-vote that concluded June 12 to adopt the updated Line 1 premium and reserve industry underwriting factors in the 2020 property/casualty (P/C) risk-based capital (RBC) formula.

The Working Group also met via conference call Feb. 3 in joint session with the Catastrophe Risk (E) Subgroup and took the following action: 1) adopted the Catastrophe Risk (E) Subgroup’s 2019 Fall National Meeting minutes; 2) adopted the Property and Casualty Risk-Based Capital (E) Working Group’s 2019 Fall National Meeting minutes; 3) adopted the Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup’s e-vote minutes; 4) adopted proposal 2018-19-P Vulnerable 6 or Unrated Risk Charge) and agreed to refer the Schedule F proposal to the Blanks (E) Working Group; 5) received referrals from the Statutory Accounting Principles (E) Working Group regarding Ref #2019-49: Retroactive Reinsurance Exception and Ref #2019-40: Reporting of Installment Fees and Expenses; and 6) received a referral from the Restructuring Mechanisms (E) Subgroup regarding the request to determine if changes should be made to the P/C formula to better assess companies in runoff.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt the Working Group’s June 12 minutes (Attachment Five-A) and Feb. 3 joint minutes with the Catastrophe Risk (E) Subgroup (Attachment Five-B). The motion passed unanimously.

2. Adopted the Report of the Catastrophe Risk (E) Subgroup

Mr. Botsko said the Catastrophe Risk (E) Subgroup met July 29 and took the following action: 1) adopted its Feb. 3 joint minutes with the Property and Casualty Risk-Based Capital (E) Working Group; 2) heard a presentation from Karen Clark & Company (KCC) on its catastrophe model. The presentation included the following topics: a) innovative risk metrics for identifying threats to solvency; b) how KCC partners with state insurance regulators; and c) an introduction to different KCC models; 3) discussed the possibility of allowing additional third-party commercial vendor models; and 4) discussed the internal catastrophe model evaluation process. The discussion included the following items: a) a definition of internal catastrophe model; b) NAIC guidance related to the use of “own models” for RBC catastrophe risk charges; and c) model validation and the Actuarial Standard of Practice (ASOP) No. 56.

Ms. Mottar made a motion, seconded by Mr. Chou, to adopt the report of the Catastrophe Risk (E) Subgroup (Attachment Five-C). The motion passed unanimously.

3. Adopted the 2020 P/C RBC Newsletter

Mr. Botsko said each year, NAIC staff incorporate all adopted current year proposals into the current year (RBC) formula. The 2020 changes have been incorporated into the P/C RBC newsletter.

Mr. Chou made a motion, seconded by Mr. Luk, to adopt the 2020 P/C RBC newsletter (Attachment Five-D). The motion passed unanimously.
4. **Discussed 2019 P/C RBC Statistics**

Mr. Botsko said the results of the 2019 P/C RBC report compiled by NAIC staff were fairly consistent with prior years. There were only 1.53% of the total companies that fell under the 200% RBC ratio, which is less than the historical failing percentage of around 2.3%. Overall, the asset risk has slightly increased overtime. It appears that a significant portion of the increase in R0 and R2 components. However, Mr. Botsko stated that the increase is concentrated on 15 insurers. These companies attribute to the 80.6% and 84.6% increase in R0 and R2, respectively (Attachment Five-E).

5. **Discussed the Possibility of Using the NAIC as a Centralized Location for Reinsurer Designations**

Charles A. Therriault (NAIC) said this project would be a substantial cost to the NAIC. He anticipated that it will be self-funded through some type of a fee structure that allows the NAIC to recoup its initial and ongoing costs from the industry (Attachment Five-F).

W. Scott Williamson (Reinsurance Association of America—RAA) said he believes that it should be a straightforward process. He said based on the Schedule F instructions, reporting companies are not permitted to list a reinsurer on Schedule F if it is not in the NAIC Electronic Listing of Companies. He recommended that the Working Group consider adding an equivalent reinsurer designation column in the NAIC Electronic Listing of Companies. He anticipated that the filing errors should be significantly reduced.

Mr. Botsko asked interested parties to document the concerns and share thoughts on the Working Group’s upcoming conference call.

6. **Discussed the R3 Credit Risk and Rcat Contingent Credit Risk Charges**

Mr. Felice said it is not clear that the entire 3% credit risk charge included in the Rcat risk factor is all operational risk. He suggested that by reducing the catastrophe credit risk charge to 3.8% from 4.8%, a 3% reduction in overall RBC would be achieved before operational risk if the Working Group decides to reduce the catastrophe credit risk charge to recognize the double counting issue.

Mr. Williamson said applying a 4.8% contingent credit risk factor, which is the same as the uncollateralized factor for the Secure 3 ratings category in the R3 charge, is far exceeding the targeted operational risk capital add-on charge. He recommended that the Working Group should consider eliminating the 3% operational risk cushion from the Rcat reinsurance contingent credit risk charge, as it causes a significant overstatement of RBC for catastrophe-exposed writers that utilize reinsurance to diversify their risk.

Mr. Botsko said two scenario testing was performed using 2019 P/C RBC data. He encouraged the interested parties to review the impact on both scenarios (Attachment Five-G) and provide thoughts to the Working Group during an upcoming conference call.

7. **Discussed Referrals from the Statutory Accounting Principles (E) Working Group**

a. **Ref #2019-49: Retroactive Reinsurance Exception**

Mr. Botsko said the Casualty Actuarial and Statistical (C) Task Force has organized a small group tasked with responding to the referral from the Statutory Accounting Principles (E) Working Group regarding Ref #2019-49: Retroactive Reinsurance Exceptions (Attachment Five-H) to clarify the accounting and reporting for retroactive reinsurance that meets the Statement of Statutory Accounting Principles (SSAP) No. 62R—Property Casualty Reinsurance exceptions to be accounted for as prospective reinsurance. Once a response is developed, both working groups will respond to the Statutory Accounting Principles (E) Working Group.

Ralph Blanchard (Travelers) commented that using a straight average across all companies will not materially distort the result if one company had erroneous data. However, using a weighted average approach could distort the industry experience adjustment if a large entity did a retroactive with prospective reinsurance treatment. He also pointed out that we would need to give consideration for those circumstances so there are no unintended consequences.
b. **Ref #2019-40: Reporting of Installment Fees and Expenses**

Mr. Botsko said the Casualty Actuarial and Statistical (C) Task Force submitted comments to the Statutory Accounting Principles (E) Working Group regarding Ref #2019-40: Reporting of Installment Fees and Expenses (Attachment Five-I) for the exposure draft of changes proposed to Footnote 1 of SSAP No. 53—*Property Casualty Contracts—Premiums* on Feb. 18.

Mr. Botsko stated that the Task Force supports the revisions proposed to Footnote 1 of SSAP No. 53 as detailed in the Statutory Accounting Principles (E) Working Group’s Ref #2019-40. He said the Working Group agreed with the Task Force decision in supporting clarification that ensures fees and charges associated with the transfer of risk are reported as premium and that fees and charges not associated with the transfer of risk are not reported as premium.

Jonathan Rodgers (National Association of Mutual Insurance Companies—NAMIC) stated that a distinction should be made in the proposal for those fees that do affect premium and those that do not, such as insufficient funds fees.

8. **Forwarded the Request for Extension to the Restructuring Mechanisms (E) Subgroup**

Mr. Botsko said a survey result regarding the definition of runoff companies was received earlier. He encouraged all the interested parties to review it and provide comments during the upcoming conference call. He also said a request for extension was drafted, as he anticipated that the Working Group may not be able to come to a conclusion prior to the Fall National Meeting due to the current pandemic.

Mr. Milquet made a motion, seconded by Ms. Travis, to forward the request for extension (Attachment Five-J) to the Restructuring Mechanisms (E) Subgroup. The motion passed unanimously.

9. **Adopted its 2020 Working Agenda**

Mr. Botsko summarized the changes to the Working Group’s 2020 working agenda: 1) removed “Evaluate the AEP vs OEP factors” and “Evaluate the impact to RBC on: a) PreTax vs. After Tax; and b) Tax reform on Total Adjusted Capital” in the carry-over items; and 2) added “evaluate the RBC impact on two different retroactive reinsurance exception approaches,” “evaluate the RBC impact on the modification of the installment fees and expenses reporting guidance,” “evaluate if changes should be made to the P/C formula to better assess companies in runoff,” and “evaluate the underwriting risk line 1 factors in the P/C formula” in the new items section, respectively.

Mr. Chou made a motion, seconded by Mr. Luk, to adopt the Working Group’s 2020 working agenda (see *NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment Six*). The motion passed unanimously.

10. **Heard Updates on Current P/C RBC Projects from the Academy**

Lauren Cavanaugh (American Academy of Actuaries—Academy) said the Academy P/C RBC committee is continuing its work on reviewing the various components of the underwriting risk. She stated that the Academy is planning to release a report in the near future. The report will provide recommended updated line of business underwriting risk factors (Line 4 on PR017 and PR018). This will incorporate the Academy research from 2016 with additional data included. Ms. Cavanaugh also anticipated that another report, which is the investment income adjustment and loss/premium concentration factors report, will be released sometime next year.

11. **Discussed Line 1 Underwriting Risk Reserves and Premiums Methodology**

Mr. Botsko said that, prior to 2016, the line 1 of PR017 and PR018 are updated annually using the straight average approach for all lines of business. The Working Group noticed that results from this approach, especially for those lines with smaller populations, could be fluctuated or biased by different factors, such as intercompany pooling arrangements. In 2016, the Working Group adopted the approach of using weighted average approach on the smaller population, which is 500 or less companies. Mr. Botsko said that recently, some state insurance regulators asked the Working Group to determine the impact to the industry RBC result if the weighted average approach calculation were used across all lines.

Mr. Blanchard reiterated his comment in item #7a.
Mr. Botsko asked all the interested parties to review the analysis in the materials (Attachment Five-K) and provide comments during an upcoming conference call.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

W:\National Meetings\2020\Summer\TF\CapAdequacy\PCRBC\Att01_07_30propertyrbewg.doc
Property and Casualty Risk-Based Capital (E) Working Group  
E-Vote  
June 12, 2020

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote that concluded June 12, 2020. The following Working Group members participated: Tom Botsko, Chair (OH); Richard Ford (AL); Mitchell Bronson (CO); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Will Davis (SC); Miriam Fisk (TX); and Randy Milquet (WI).

1. **Adopted Proposal 2020-01-P (Underwriting Risk Line 1 Factors)**

The Working Group conducted an e-vote to consider adoption of the updated Line 1 premium and reserve industry underwriting factors in the 2020 P/C RBC formula.

Mr. Luk made a motion, seconded by Mr. Milquet, to adopt proposal 2020-01-P *(see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment One-F)*. The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

W:\National Meetings\2020\Summer\TF\CapAdequacy\PCRBC\Proceedings\Att5A_UWL1 Email Vote 061220.docx
Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup
Conference Call
February 3, 2020

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call Feb. 3, 2020, in joint session with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Working Group members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Richard Ford (AL); Mitchell Bronson, Rolf Kaumann and Eric Unger (CO); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Will Davis (SC); and Randy Milquet (WI). The following Subgroup members participated: Tom Botsko, Chair, and Dale Bruggeman (OH); Robert Ridenour, Vice Chair (FL); Kim Hudson and Laura Clements (CA); Mitchell Bronson, Rolf Kaumann and Eric Unger (CO); Wanchin Chou (CT); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Andrew Schallhorn (OK); and Will Davis (SC). Also participating were: Julie Lederer (MO); and Steve Drutz (WA).

1. **Adopted the Subgroup’s 2019 Fall National Meeting Minutes**

Ms. Mottar made a motion, seconded by Mr. Chou, to adopt the Subgroup’s Dec. 6, 2019, minutes (*see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Four-B*). The motion passed unanimously.

2. **Adopted the Working Group’s 2019 Fall National Meeting Minutes**

Mr. Milquet made a motion, seconded by Ms. Mottar, to adopt the Working Group’s Dec. 8, 2019, minutes (*see NAIC Proceedings – Fall 2019, Capital Adequacy (E) Task Force, Attachment Four*). The motion passed unanimously.

3. **Adopted the Working Group and Subgroup’s Jan. 22 Minutes**

Mr. Botsko said the Working Group and the Subgroup conducted an e-vote to consider adoption of proposal 2019-14-CR (2019 U.S. and Non-U.S. Catastrophe Risk Event Lists).

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt the Working Group and Subgroup’s Jan. 22 minutes (Attachment Five-B1). The motion passed unanimously.

4. **Adopted Proposal 2018-19-P (Vulnerable 6 or Unrated Risk Charge) and Agreed to Refer the Schedule F Proposal to the Blanks (E) Working Group**

Mr. Botsko said the purpose of this proposal is to modify the instructions to reflect that the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance.

W. Scott Williamson (Reinsurance Association of America—RAA) said the RAA supports the proposal and the associated changes to the annual financial statement. He agreed with the Working Group approach to consider moving, over time, toward a charge that is more aligned with risk-indicated factors used by the rating agencies. He also recommended that the Working Group should consider applying different charges for: 1) captives and runoff reinsurers, as they may not obtain financial strength ratings; 2) reinsurer designation equivalent to categories 1 through 6 to reflect the most recent credit default experience and consistency with reinsurance recoverable credit risk factors in use by the rating agency capital models; and 3) lowering the cushion or margin for operational risk that is embedded in the credit risk factors.

Matthew B. Vece (American Property Casualty Insurance Association—APCIA) said he is concerned that this proposal inappropriately combines two groups with inherently different risk characteristics. He recommended an alternative approach to retain the current seven categories for the RBC R3 credit risk charge, with the last two categories being: 1) vulnerable 6; and 2) unrated (whether authorized, unauthorized, certified or reciprocal).

Mr. Williamson said the unrated category includes vulnerable reinsurers in addition to solvent reinsurers. He agreed with the current proposal that eliminates the NAIC 7 designation. If in the future, the Working Group defines a category for solvent runoff or other situations eligible for a capped factor, the NAIC 7 designation could be reactivated at that time.
Mr. Milquet asked if reclassifying NAIC 7 back to NAIC 6 creates more work for filing companies.

Mr. Williamson replied that it is necessary to take this action to ensure that future RBC filings are not populated with “legacy” NAIC 7 designations if and when a new definition is adopted.

Mr. Botsko said he understands the industry concerns. However, it was the Working Group’s intention to evaluate the data annually until reaching any agreed upon change to the factor and the structure. He recommended that the Working Group consider: 1) adopting proposal 2018-19-P for 2020 RBC filing; 2) forwarding the blanks proposal to the Blanks (E) Working Group for consideration; and 3) documenting the industry concerns in the working agenda for future discussion.

Mr. Milquet made a motion, seconded by Mr. Ridenour, to refer the Schedule F proposal to the Blanks (E) Working Group and adopt proposal 2018-19-P, subject to adoption of the Schedule F blanks proposal from the Blanks (E) Working Group (see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment One-E). The motion passed unanimously.

5. Received Referrals from the Statutory Accounting Principles (E) Working Group

Mr. Botsko said the Working Group received two referrals from the Statutory Accounting Principles (E) Working Group.

Mr. Botsko said the first referral is regarding Ref #2019-49: Retroactive Reinsurance Exception. He said this agenda item addresses a request from the American Academy of Actuaries’ (Academy) Committee on Property and Liability Financial Reporting (COPLFR) Work Group to clarify both the accounting and reporting for retroactive contracts, which are accounted for prospectively. The COPLFR noted that there is diversity in the current practice due to lack of specific guidance. The clarifications requested include: 1) both the ceding entity and assuming entity, where both are members of the same group and are consolidated in the same combined annual statement; and 2) the reporting method to be used if the ceding entity and assuming entity are not in the same group.

Robin Marcotte (NAIC) said the Statutory Accounting Principles (E) Working Group is currently seeking: 1) input related to the RBC impacts; and 2) volunteers to assist with developing guidance. She encouraged volunteers to contact her.

Mr. Botsko said another referral is regarding Ref #2019-40: Reporting of Installment Fees and Expenses. Ms. Marcotte said the purpose of this exposure is to include a minor clarification of the current installment fee guidance in Statement of Statutory Accounting Principles (SSAP) No. 53—Property Casualty Contracts – Premiums and request input from the Working Group on the questions that are included in the referral regarding if incurred installment fee expenses should be allowed to be reported in other expenses. Excluding expenses from underwriting can have an impact on underwriting ratios.

Mr. Bruggeman encouraged members and interested parties to review this referral and share their thoughts during the Spring National Meeting.

Mr. Botsko said the Working Group will coordinate with the Casualty Actuarial and Statistical (C) Task Force to determine how to approach these referrals and provide findings during the Spring National Meeting.

6. Discussed Other Matters

Mr. Botsko said the Working Group just received another referral from the Restructuring Mechanisms (E) Subgroup. He stated that the purpose of the referral is requesting that the Working Group determine if changes should be made to the property/casualty formula to better assess companies in runoff. He encouraged interested parties to review the referral; the Working Group plans to have a more in-depth discussion at the Spring National Meeting.

Mr. Bruggeman said the survey included in the referral provided some example definitions of the runoff companies. He encouraged members and interested parties to review the survey and share their thoughts at the Spring National Meeting.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

© 2020 National Association of Insurance Commissioners
Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup
E-Vote
January 22, 2020

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force that concluded Jan. 22, 2020. The following Working Group members participated: Tom Botsko, Chair (OH); Mitchell Bronson (CO); Wanchin Chou (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Will Davis (SC); Miriam Fisk (TX); and Randy Milquet (WI). The following Subgroup members participated: Tom Botsko, Chair (OH); Robert Ridenour, Vice Chair (FL); Mitchell Bronson (CO); Wanchin Chou (CT); Judy Mottar (IL); Anna Krylova (NM); Sak-man Luk (NY); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk (TX).

The Working Group and the Subgroup conducted an e-vote to consider adoption of the updated 2019 U.S. and non-U.S. catastrophe event lists.

Mr. Bronson made a motion, seconded by Mr. Schallhorn, to adopt proposal 2019-14-CR (*see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment One-A2*). The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

W:\National Meetings\2020\Summer\TF\CapAdequacy\PCRBC\Proceedings\att5b1_Cat Risk Email Vote 012220_TPRd.docx
The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met via conference call July 29, 2020. The following Subgroup members participated: Tom Botsko, Chair (OH); Robert Ridenour, Vice Chair (FL); Susan Bernard (CA); Mitchell Bronson and Eric Unger (CO); Wanchin Chou (CT); Judy Mottar (IL); Gordon Hay and Justin Schrader (NE); Anna Krylova (NM); Gloria Huberman and Sak-man Luk (NY); Cuc Nguyen (OK); Michael Wise (SC); and Miriam Fisk (TX).

1. **Adopted its Feb. 3 Minutes**

Mr. Botsko said the Catastrophe Risk (E) Subgroup met via conference call Feb. 3 in joint session with the Property and Casualty Risk-Based Capital (E) Working Group and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted the Property and Casualty Risk-Based Capital (E) Working Group’s 2019 Fall National Meeting minutes; 3) adopted its Jan. 22 minutes; 4) adopted proposal 2018-19-P (vulnerable 6 or unrated risk charge) and agreed to refer the Schedule F proposal to the Blanks (E) Working Group; 5) received referrals from the Statutory Accounting Principles (E) Working Group regarding Ref #2019-49: Retroactive Reinsurance Exception and Ref #2019-40: Reporting of Installment Fees and Expenses; and 6) received a referral from the Restructuring Mechanisms (E) Subgroup regarding the request to determine if changes should be made to the property/casualty (P/C) formula to better assess companies in runoff.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt the Subgroup’s Feb. 3 minutes (see NAIC Proceedings – Summer 2020, Capital Adequacy (E) Task Force, Attachment Four-B). The motion passed unanimously.

2. **Heard a Presentation from Karen Clark & Company (KCC) on its Catastrophe Model**

Glen Daraskevich (Karen Clark & Company—KCC) said KCC is dedicated to delivering innovative approaches and new scientific tools for addressing current challenges in estimating and managing catastrophe risk. In addition to all the traditional metrics, Mr. Daraskevich said the KCC model provides: 1) additional risk metrics for underwriting and portfolio management; 2) unique sampling methodology enabling robust high-resolution (location level) loss analyses; 3) fully transparent model components; 4) built-in tools and high-resolution mapping for more efficient internal modeling process; and 5) more accurate model loss estimates. Joanne Yammine (KCC) stated that currently, the KCC model supports different major catastrophe perils such as earthquake, hurricane, coastal flood, inland flood, tornado/wind, wildfire, winter storm and hail, etc. (Attachment Five-C1)

Mr. Botsko encouraged interested parties to review the materials and provide their comments during the Subgroup’s next meeting.

3. **Discussed the Possibility of Allowing Additional Third-Party Commercial Vendor Models**

Mr. Botsko said the current risk-based capital (RBC) instructions clearly state that only five third-party commercial vendor catastrophe models were approved to calculate Rcat modeled losses. He stated that several modeling firms expressed their interest in becoming one of the approved models. He asked the interested parties to consider whether the Subgroup should allow any additional third-party commercial vendor models to be included in the approved model list. Comments and thoughts will be discussed during the Subgroup’s next meeting.

4. **Discussed the Internal Catastrophe Model Evaluation Process**

Mr. Chou said he believes that the definition of the internal catastrophe model should include: 1) internal catastrophe models for different natural perils; 2) vendor catastrophe models with certain adjustments; and 3) derivative models based on vendors’ catastrophe models. However, he said he thinks that the current NAIC RBC instructions do not cover the entire definition of the internal catastrophe model. Mr. Chou recommended that the Subgroup consider modifying the RBC instructions to cover the definition he mentioned. He also suggested that the Subgroup use the following as some of the possible references on modifying the current RBC instructions: 1) the Actuarial Standard of Practice (ASOP) No.56, *Modeling*, which provides
guidance to actuaries when performing actuarial services with respect to designing, developing, selecting, modifying, using, reviewing and evaluating models; 2) model validation from the company’s state of domicile; and 3) field exams. (Attachment Five-C2)

Mr. Botsko encouraged interested parties to consider the recommendation above and share comments and thoughts during the Subgroup’s next meeting.

5. Discussed Other Matters

Mr. Botsko said he plans to schedule a conference call in September to continue discussing all the outstanding issues.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.
About Karen Clark & Company

- Established in 2006 by insurance industry veterans and pioneers in catastrophe risk management
- Karen Clark developed the first commercial hurricane model and launched the first catastrophe modeling company, AIR
- Vivek Basrur architected and led the development of AIR software technology, including CLAVE/L, CFFARADAR, and WinDrought (now PerilIndex)
- Senior staff have extensive experience in catastrophe model development and risk management
- KCC is dedicated to delivering innovative approaches and new scientific tools for addressing current challenges in estimating and managing catastrophe risk
- Characteristic Event methodology
- Physical models
- Live event technology
- KCC supports a diverse client base with consulting services and the RiskIntegrity® open modeling platform
- Top 10 U.S. P&I insurers
- Global reinsurance intermediaries
- Leading global reinsurers
- Cat Bond/ILS fund managers
- Regulators
- Academics

Opportunities for Improving Catastrophe Risk Management Practices

- More accurate and operational metrics for identifying threats to solvency
- Improved consistency and reliability in the average annual loss estimates used in ratemaking
- Direct access to the data and calculations underlying catastrophe models
- Open platform
- Transparent hazard and vulnerability components
- Embedded visualizations tools
- Innovative tools for delivering actionable information to decision makers
- Live event reporting
What's Different about Karen Clark & Company Models?

- Based on the same science and components as traditional models.
- Provides all the traditional metrics including PMLs, TVaRs, and AULs.
- Advancement: Additional risk metrics for underwriting and portfolio management.
- Advancement: Unique sampling methodology enabling robust high-resolution (location level) loss analysis.
- Advancement: Model components fully transparent.
- Advancement: Built-in tools and high resolution mapping for more efficient internal modeling process.
- Advancement: More accurate model loss estimates.

KCC's Unique Characteristic Events (CEs) Address These Questions

CEs Reveal Large Loss Potential Can Be Very Different Between Insurers with Similar PMLs

Why New Risk Metrics—EP Curves and PMLs Answer Some but Not All Important Questions

- 1% in 100 year PML
- 2% in 250 year PML

Introduction to KCC Models – Additional KECUS Reference Models

Other Major US Perils Supported

Challenges with Traditional Statistical Approaches to Modeling - Historical Hail Reports

Issues with Reporting: Forecast Offices
KCC SCS Reference Model Leverages Physical Modeling for Hail Detection

- Reflectivity is measured in dBZ
- Radars scan at different tilt angles
- Base reflectivity is the lowest 0.5° tilt
- Composite reflectivity is the maximum reflectivity at any tilt
- Is combined with NWP to identify hail forming regions

Validation of KCC Simulated Hail Intensity with SPC Hail Reports and Claims Data

Simulated Hail Intensity Legend

SPC Reports
Hail Intensity
Hail Claims

KCC Employs a Composite Index to Capture the Physical Variables Driving Tornado and Straight-line Wind Behavior

- CAPE, SHEAR, and SRH are very useful, but SCS require many ingredients
- Composite Index – combines multiple parameters

Enhanced Significant Tornado Parameter

\[
\text{ESTP} = f(SRH, CAPE, SHEAR, LCL, CIN)
\]
KCC Physical Models Enable Daily Loss and Claims Estimates for Hail and Tornado/Wind

Leveraging Real Time Losses

- Improve claims handling
- Notify insured of possible damage
- Detect possible fraudulent claims

Flood Reference Model - Modeling Inland Flooding

- Two major types of inland flooding are fluvial (riverine and pluvial) and surface flooding.
- Many areas in the US are susceptible to riverine flooding (major river floodplains, areas with high topography).
- Regions that are flat are more susceptible to surface flooding.

Flood Reference Model - What Makes Modeling Inland Flood Challenging?

- There is no single meteorological definition of an event occurring on a large spatial scale.
- Data on flood inundation is scarce, especially for surface flooding.
- Hazard occurs on a very small scale but over a large area.
How CEs Can Assist Rating Agencies and Regulators in Evaluating Threats to Surplus

How KCC Can Support Regulators

- More intuitive and operational CE metric for identifying threats to solvency
- Improved consistency and stability in the average annual loss estimates used in ratemaking
- Increased transparency and direct access to the data and calculations underlying catastrophe loss estimates
- Open platform
- Transitioned from loss estimates to community risk estimates
- Embedded visualization tools
- Innovative tools for delivering actionable information to decision makers
- Live event reporting
- Multiple impacts to the entire market

Landfall Point

Flood Reference Model – Cellular Automata Supports High Resolution Pluvial Flood Modeling

- Different methods have been applied to modeling pluvial flooding

1. Solving the shallow water equations (SWEs)
   - Bernoulli equation in single-coupling studies
   - Difficulty capturing flood inundation in large catchments
   - Non-continuous for large spatial scales and large spatial detail

2. Rapid Flood Model (RFM)
   - Faster in case than SWEs by orders of magnitude
   - Represents temporal evolution of flood
   - Requires substantial pre- and post-processing and tuning

3. Cellular Automata
   - Method is comparable to the SWE approach for flood flooding (e.g., Summerfield et al., 2003, Summerfield et al., 2004, and Summerfield et al., 2008)
   - Even more rapid than the RFM but more accurate than the SWE
   - Represents the physics of water flowing over topography

Flood Reference Model - Validation of the High-Resolution Footprints using Flood Reports

- Different methods have been applied to modeling pluvial flooding

1. Solving the shallow water equations (SWEs)
   - Bernoulli equation in single-coupling studies
   - Difficulty capturing flood inundation in large catchments
   - Non-continuous for large spatial scales and large spatial detail

2. Rapid Flood Model (RFM)
   - Faster in case than SWEs by orders of magnitude
   - Represents temporal evolution of flood
   - Requires substantial pre- and post-processing and tuning

3. Cellular Automata
   - Method is comparable to the SWE approach for flood flooding (e.g., Summerfield et al., 2003, Summerfield et al., 2004, and Summerfield et al., 2008)
   - Even more rapid than the RFM but more accurate than the SWE
   - Represents the physics of water flowing over topography

The Definition of Internal CAT Model

- Internal CAT Models – Natural Perils
- Vendor CAT Models with Adjustments
- Derivative Model Based on Vendor Models

NAIC Guidance Related to the Use of “Own Models” for RBC Catastrophe Risk Charges – PR027

The projected losses can be modeled using the following: NAIC approved third-party commercial reinsurance catastrophe models, GLA, EPIC, RMS, the Aon BestLoss Model, or the Florida Public Model for hurricane, as well as catastrophe models that are internally developed by the insurer or that are the result of adjustments made to the insurer’s reinsurance models to represent the insurer’s view of catastrophe risk differences (‘own models’).

To obtain permission to use the own model, the insurer must provide the domicile or host state insurance regulator with written evidence of each of the following:

1. The use of the own model is reasonable considering the insurer’s risk and complexity of the insurer’s catastrophe risk;
2. The own model is used for catastrophe risk management and capital assessment, and the capital allocations process and the model has been used for at least the last 2 years;
3. The peril included in the RBC Catastrophe Risk Charge have been validated by the insurer and that these perils include both US and global exposure, where applicable;
4. The own model has been developed using reasonable data and assumptions and that model results used in determining the RBC Catastrophe Risk Charge reflect exposure that is no other than 6 months;
NAIC Guidance Related to the Use of “Own Models” for RBC Catastrophe Risk Charges – PR027

5. The insurer has submitted to the NAIC and other parties with whom it has an agreement to develop and maintain a model that has been validated and a copy of the most recent validation report. The insurer is to be responsible for the relevant cost. For each period included in the RBC Reporting Year, the validation report shall include a description of the assumptions, results, and limitations of the validation, the individual qualifications of the validation, and the state of the validation. The model documentation and the model validation report must be made available at a minimum once every five years, or whenever the basis or scope of validation is changed, or whenever there is a material change in the insurer’s exposure to catastrophe risk.

6. The results of the model should be compared with the results produced by at least one of the following models: LCR, DIRO, DIRO, RBC, RBC, RBC, or the Dynamic Climate Model. The insurer must ensure that the comparison and an explanation of the differences between the results produced by the internal models and results produced by the external models.

7. If the model has been approved by the NAIC and/or the Regulatory Bodies, the insurer must submit the results of the validation to the NAIC and/or the Regulatory Bodies.

Questions?
What RBC Pages Should Be Submitted?

For year-end 2020 property/casualty (P/C) risk-based capital (RBC), hardcopies of pages PR001 through PR035, as well as PR038 and PR039, should be submitted to any state that requests a hardcopy. Beginning with the year-end 2007 RBC, a hardcopy was not required to be submitted to the NAIC, but a portable document format (PDF) file representing the hardcopy filing is part of the electronic filing with the NAIC.

Capitation Tables

The Capital Adequacy (E) Task Force adopted proposal 2018-17-CA to capture the capitation table electronically through the file submission of the P/C RBC formula during its June 28, 2019, conference call.

RBC Preamble

As a result of the adoption of proposal 2019-07-CA by the Capital Adequacy (E) Task Force at the 2019 Fall National Meeting, the Risk-Based Capital Preamble was added to the RBC instruction to provide a clear understanding of the purpose of RBC and goals of RBC as the Task Force and Working Groups review referral and proposals.

Bond Designation Structure

The Capital Adequacy (E) Task Force adopted proposal 2019-16-CA to incorporate the 20 designation categories for bonds into the P/C RBC formula to be used in conducting an impact analysis study for year-end 2020 reporting during its April 30, 2020, conference call. The 20 bond designation categories were incorporated into the Bonds page (PR006), the Asset Concentration page (PR011) and the Off-Balance Sheet Security Lending Collateral and Schedule DL page (PR015).

Credit Risk

Vulnerable 6 or Unrated Risk Charge

As a result of the adoption of proposal 2018-19-P by the Capital Adequacy (E) Task Force during its June 30, 2020, conference call, the instruction was modified to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance.

Clarification to Instructions Regarding Lloyd’s of London

As a result of the adoption of proposal 2019-11-P by the Capital Adequacy (E) Task Force at the 2019 Fall National Meeting, the instructions were changed to clarify the reinsurance recoverable from individual syndicates of Lloyd’s of London that are covered under the Lloyd’s Central Fund may utilize the lowest financial strength group rating received from an approved rating agency.

Elimination of PR038 Adjustment for Reinsurance Penalty for Affiliates Applicable to Schedule F

As a result of the adoption of proposal 2019-12-P by the Capital Adequacy (E) Task Force at the 2019 Fall National Meeting, the adjustment for Reinsurance Penalty for Affiliates Applicable to Schedule F in PR038 is no longer needed because the computation of RBC charge for reinsurance recoverable has been moved to the Annual Statement Schedule F, Part 3.

Overview and Table of Contents

As a result of the adoption of proposal 2020-05-CA by the Capital Adequacy (E) Task Force during its June 30, 2020, conference call, the page iv instructions were modified to insert the word “Overview” in the page heading, and the Table of Contents was modified to include only the page heading and delete references to the individual sections of the Overview.
New Industry Average Risk Factors – Annual Update

On its June 30, 2020, conference call, the Capital Adequacy (E) Task Force adopted the annual update of industry average development factors:

RBC Forecasting and Instructions

The P/C RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2020 NAIC Property & Casualty Risk-Based Capital Report Including Overview & Instructions for Companies, and is available to download from NAIC Account Manager. The 2020 NAIC Property & Casualty Risk-Based Capital Report Including Overview & Instructions for Companies publication is available for purchase in hardcopy or electronic format through the NAIC Publications Department. This publication is available for purchase on or about Nov. 1 each year. The User Guide is no longer included in the RBC publications.

**WARNING:** The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual financial statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

Source: NAIC Financial Database

© 2020 National Association of Insurance Commissioners
MEMORANDUM

To: Thomas Botsko, Chair, Property and Casualty Risk-Based Capital (E) Working Group
Members of the Property and Casualty Risk-Based Capital (E) Working Group

From: Charles Therriault, Director, NAIC Securities Valuation Office

Cc: Dan Daveline, Director, NAIC Financial Regulatory Services
Julie Gann, Assistant Director, NAIC Financial Regulatory Services
Eva Yeung, Sr. P/C RBC Analyst/Technical Lead, NAIC Financial Regulatory Services

Date: February 27, 2020

Re: Reinsurer financial strength ratings

The staff supporting the Property and Casualty Risk-Based Capital (E) Working Group inquired about the Security Valuation Office’s (SVO) access to financial strength ratings for reinsurers that are referenced in the Credit for Reinsurance Model Regulation (MDL-786). The SVO receives ratings data feeds from nine credit rating providers (CRP), nationally recognized statistical ratings organizations (NRSRO) that supply the NAIC with credit ratings data. This list of CRPs includes the four rating agencies identified as assigning acceptable financial strength ratings in MDL-786: Standard & Poor’s; Moody’s Investors Service; Fitch Ratings; and A.M. Best Company. The SVO receives issuer level financial strength ratings from these CRPs but that data is not currently stored within any NAIC system or database.

The NAIC uses credit rating data in its processes for investment securities but those ratings cannot be revealed to external parties outside of the NAIC, including NAIC members. This licensing restriction would also apply to any usage of the financial strength ratings for the Working Group. Similarly, external vendors sometimes report ratings, including financial strength ratings, within their applications and permit that information to be downloaded by a user into Microsoft’s Excel but there are often very strict licensing restrictions that limit the usage and redistribution of that ratings data by a user of the application that would prevent the NAIC from utilizing this data for any NAIC process.

The NAIC can initiate a project to utilize the data the SVO currently receives but does not store to create the reinsurer equivalent of an NAIC Designation; possibly, calling it a NAIC Reinsurer Designation. The SVO could administer such a process, as the only NAIC department licensed to access ratings data, and publish the results under its compilation instructions in a system like AVS+. The NAIC would be unable to share the actual financial strength ratings but there would be an NAIC measure of financial risk. This project would require support from the Working Group, the Capital Adequacy (E) Task Force and the Valuation of Securities (E) Task Force along with approval for funding through an NAIC fiscal request to the NAIC Executive Committee/Internal Administration (EX1) Subcommittee. It is likely that an NAIC technology project could easily require $300-500+...
thousand and there may be additional licensing costs from the rating agencies. A more detailed requirements
gathering, and cost estimate effort could be initiated if the Working Group receives approval to pursue this
project.

This would be a substantial cost to the NAIC and, given other NAIC priorities, it may be necessary for this project
to be self-funded through some type a fee structure that allows the NAIC to recoup its initial and ongoing costs
from the industry, as generally such self-funded projects are more likely to be approved by the NAIC Executive
Committee/Internal Administration (EX1) Subcommittee.
Based on the data, about half the companies that were flagged as significant CAT risk writers have an increase of greater than 10% (percent not points) in RBC ratio by eliminating the 3% credit risk load. About 9% of the remaining companies that write CAT risk also have an increase in RBC ratio of greater than 10%. In neither case does a company in action level move out of action level because of the change.

The 3% overall basic operational risk charge added to the formula last year was set at that level in recognition that there are other operational risk charges embedded in the RBC formulas. However, it did recognize specific operational charges in the LRBC formula (C-4a) and offset for those charges. Like C-4a, it is not clear that the entire 3% credit risk charge included in the RCAT risk factor is all op risk. Some reasonable portion should be retained for other risks such as contractual, dispute and legal risks. Therefore, I would say that the PRBCWG did decide to adjust the factor the members could consider reducing the load from 3% to something smaller in line with the following comments.

The notion of duplication of the op risk charge is based on duplication caused by the addition of a basic op risk charge that was added to all the RBC formulas. Therefore it seems that any reduction in RBC for duplication should be limited to the amount of the basic op risk charge as was done for Life RBC. Particularly for significant cat risk writers, changing the risk factor from 4.8% to 1.8% for cat risk (or for that matter even 2.8%) results in a much greater reduction to required RBC than simply eliminating the basic op risk charge. Going this route would seem to be akin to eliminating the business risk charge in the LRBC formula rather than essentially using the greater of the C-4a charge and the basic op risk charge. If the idea is to remove duplication, limiting the reduction in RBC to the amount of basic op risk would be the way to go for P/C. However, that would be more difficult to would into the P/C formula due to the cat risk credit risk charge being run through covariance.

As an alternative, in the aggregate a reduction in the Cat credit risk charge to 3.8% from 4.8% would achieve approximately a 3% reduction in overall RBC before op risk for the cohort of large cat writers (See chart below). A 3.9% factor would be just about equal to a 3% overall reduction.

Consideration of the Operational Risk Charge Components of RBC R3 & Rcat

Overview: The operational risk charge had been under development by the Operational Risk Subgroup since 2013, and the original proposal was to apply an explicit 3% operational risk factor to the greater of net premiums or net reserves, with a possible excessive growth risk component as well. Ultimately this “factor applied to net-proxies” approach was abandoned, and the existing excessive risk growth charge in R4 & R5 was retained. Beginning with 2018 year-end reporting, the Capital Adequacy Task Force implemented a 3% capital add-on charge, applied to overall RBC after covariance.

Part of the rationale for selecting 3% (which equates to a lower operational risk capital charge than in certain non-U.S. jurisdictions), was that many components of US RBC already implicitly contemplate operational risk.

However, contemporaneously with the development of the explicit operational risk “factor applied to net proxies” charge; the P&C RBC Working Group was developing an explicit operational risk charge applied to ceded reinsurance recoverable in RBC R3 credit risk. This was being done to ensure that the targeted 3% factor (being discussed by the Operational Risk Subgroup) would be applied to reinsurance; because a “net proxies” approach, by definition, would “net-out” ceded reinsurance.

When the “net proxies” approach was abandoned in favor of an after-covariance capital add-on, the explicit operational risk charge in R3 had already been incorporated into the credit risk factors applicable to reinsurance recoverable. This results in a double assessment of a charge for operational risk that gets applied to reinsurance recoverable.

This explicit operational risk charge is inadvertently being applied again in Rcat because the reinsurance contingent credit risk component of Rcat borrows from the R3 credit risk factor, which is primarily comprised of operational risk. Application of the 3% operational risk factor in Rcat is particularly burdensome because Rcat is calibrated at the 1-in-100-year modeled loss level.

R3 Reinsurance Credit Risk Charge: Beginning with 2018 year-end reporting, the Capital Adequacy Task Force implemented a new risk-based approach for assessing the credit risk charge applicable to reinsurance recoverable. This approach replaced the previous 10% factor that applied across the board to all reinsurance recoverable. The basis of this new charge borrowed from the asset credit risk factors for reinsurance recoverable used by Standard and Poor’s in their capital model. These factors are derived from historical credit default experience associated with different reinsurer financial strength rating categories. Table 1 below, demonstrates how the
current R3 factors were derived and how an explicit operational risk cushion was applied to mirror the “factor applied to net-proxies” approach.

(See the Appendix for more detail on S&P’s methodology)

Some stakeholders have commented in the past that the previous 10% credit risk charge contemplated “other than credit risk” to address things like dispute risk and adverse reserve development. Therefore, there is a stated rationale for keeping some additional amount of operational risk cushion in R3.

However, other aspects of R3 and the Schedule F Penalty already address many of these same concerns. For instance, 20% penalties are assessed on amounts in dispute, reinsurance recoverable over 90 days past due, and reinsurance recoverable from slow paying reinsurers. After all the Schedule F penalties are applied, R3 further “stresses”, or grosses-up by 20%, the reinsurance recoverable before applying the credit risk charges to further account for dispute risk, commutation risk, and overreliance on reinsurance, etc.

Some stakeholders have noted that even if an explicit operational risk charge is being assessed, essentially twice; making a change to R3 would not be all that material to RBC overall. However, addressing this issue does not involve extensive project and time resources on the part of regulators or industry and is as simple as adjusting the explicit operational risk factor shown in Item 3 in the table above.

**R3 Proposal:** Consider eliminating or reducing the 3% operational risk cushion as it is redundant to the 20% stressing, the Schedule F Penalties, and the 3% capital add-on; which already address the various elements of operational risk related to reinsurance credit risk.
**Rcat Reinsurance Contingent Credit Risk Charge (RCCRC):** Beginning with 2017 year-end reporting, the Capital Adequacy Task Force implemented a new Catastrophe Risk Charge (Rcat) based on 1-in-100-year modeled losses, separately calculated for the hurricane and earthquake perils. Rcat is first applied to gross losses, but credit is given for modeled reinsurance recoverable. So, in practice, it is a net-of reinsurance charge. **There was never any intention to apply an explicit operational risk charge to Rcat. In fact, there is no element of Rcat that applies any operational risk charge to gross modeled losses.**

However, because Rcat contemplates modeled reinsurance recoverable, it was decided to include a reinsurance contingent credit risk charge component. Rcat borrows from the credit risk factor matrix shown in Table 1 above.

**How the RCCRC Factor was Derived:**

The contingent credit risk factor is 4.8%, which is the same as the uncollateralized factor for the Secure 3 ratings category in the R3 charge above. As a practical matter, catastrophe risk is not ceded to reinsurers with ratings below Secure 4 and the vast majority of CAT risk is ceded to reinsurers rated Secure 2 or 3.

About 63% of this 4.8% credit risk factor is attributable to another explicit, yet unintentional assessment of an operational risk charge on reinsurance recoverable; which again, was not the purpose of Rcat or the RCCRC. Stated another way, a 4.8% RCCRC is 2.66 times higher than the indicated credit risk.

Further, Rcat is different from other components of RBC because it is calibrated at a 1-in-100-year modeled loss level. Applying a 4.8% credit risk charge in R3 is akin to assessing the charge on an “average annual loss” type of balance. However, applying it in Rcat assesses the charge on a 1-in-100-year modeled balance. This calibration issue results in a disproportionate modeled reinsurance recoverable that can far exceed the targeted operational risk capital add-on charge.

**Table 2,** on the following page, shows the results of a NAIC staff analysis on the impact of the operational risk component of the RCCRC to a group of Florida market specialist (predominately writing hurricane exposed risks) relative to all others.

The analysis shows that “about half the companies that were flagged as significant CAT risk writers have an increase of greater than 10% (percent not points) in RBC ratio by eliminating the 3% credit risk load. About 9% of the remaining companies that write CAT risk also have an increase in RBC ratio of greater than 10%. In neither case does a company in action level move out of action level because of the change.”

Stated another way, the operational risk component of the RCCRC is producing after covariance capital requirements that are more than 3 times the capital add-on target of 3% after covariance for these Florida market specialists.

<td>0.12%</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Rcat-RCCRC Proposal:** Consider completely, eliminating the 3% Operational Risk cushion from the RCCRC. Rcat was never intended to address operational risk. It is only being applied (inadvertently) with respect to the reinsurance component of the charge and is not applied at all in the modeled loss component. Further, the calibration of an explicit 3% operational risk charge to the reinsurance recoverable balances in Rcat is not at all comparable to R3 and causes significant overstatement of RBC for catastrophe-exposed writers that utilize reinsurance to diversify their risk.
Appendix

Standard and Poor’s Explanation of Asset Charge for Reinsurance Recoverable

Source: standardandpoors.com

Other Asset Credit Risk Charges

Reinsurance receivables plus reinsurance recoveries, less reinsurance deposits and LOCs

The risk inherent in reinsurance recoverable is often the largest asset-based risk for P/C companies; particularly those writing longer tailed lines of business. In that case, the primary company will estimate and record a reserve for notified outstanding claims and incurred but not reported claims and will offset any reinsurance arrangement that it believes will bear a portion of those claims. However, the reinsurer will not settle these potential obligations until the insurers have settled the gross claim, which may be a lengthy period. For this reason, Standard & Poor’s selected a single tenor of 10 years for nonlife insurance companies in computing the credit default factor. In the U.S., because this lag phenomenon in the life insurance sector is substantially reduced, a single tenor of one year was applied for life insurance companies.

Methodology for computing default factors. A single tenor of 10 years across the rating range for nonlife insurers and one year across the rating range for life insurers was selected. The factor applied to the recoverables from reinsurers will be subject to the specific reinsurer rating. To the extent that letters of credit from a financially secure financial institution or suitable trust assets are available to offset the recoverability risk, credit for up to 100% of the collateral could be used to offset the reinsurance recoverable credit risk charge. A surcharge of 20% on reinsurance recoverable balances related to asbestos and environmental pollution losses will be computed to reflect the prospective impact on capital due to disputed coverage. This surcharge will not apply to intragroup reinsurance recoverable where the reinsurer is highly rated.

TO: Phil Vigliaturo, chair representative of Steve Kelley, Chair, (MN), of the Casualty Actuarial and Statistical (C) Task Force  
Tom Botsko, OH), Chair of the Property and Casualty Risk Based Capital Working Group  
FROM: Dale Bruggeman (OH), Chair of the Statutory Accounting Principles (E) Working Group  
DATE: January 7, 2020  
RE: Ref #2019-49: Retroactive Reinsurance Exception

This referral has been provided to notify the Casualty Actuarial and Statistical (C) Task Force of a current Statutory Accounting Principles (E) Working Group agenda item to allow for ongoing coordination. This agenda item is to address a request from the Committee on Property and Liability Financial Reporting (COPLFR) of the American Academy of Actuaries Working Group. The request, which was also received by the Task Force, was to clarify the accounting and reporting for retroactive reinsurance which meets the SSAP No. 62R—Property and Casualty Reinsurance exceptions to be accounted for as prospective reinsurance. The comment deadline for the public exposure is January 31, 2020, but the Working Group is primarily notifying the Task Force of the project and requesting volunteers.

During the 2019 Fall National Meeting, the Statutory Accounting Principles (E) Working Group exposed agenda item 2019-49: Retroactive Reinsurance Exception which includes a request for comments and for industry and regulator volunteers to assist with developing guidance. The goal is to clarify both the accounting and reporting for retroactive contracts which are accounted for prospectively, including:

- Both the ceding entity and assuming entity, where both are members of the same group and are consolidated in the same Combined Annual Statement.  
- The reporting method to be used if the ceding entity and assuming entity are not in the same group.

Comments are specially requested regarding the preferred approaches to reporting and the advantages and disadvantages to each approach being used, including both the Schedule P (and related loss analysis) and risk-based capital impacts.

Because the items under discussion can have impact on information reported in Schedule P, the Working Group directed notification of the exposure to seek your input. Please contact, Robin Marcotte, NAIC staff Rmarcotte@naic.org of the Statutory Accounting Principles (E) Working Group with any questions or volunteers.

Dale Bruggeman, Chair
Statutory Accounting Principles (E) Working Group
National Association of Insurance Commissioners

Via email

Dear Mr. Bruggeman:

I am writing on behalf of the American Academy of Actuaries\(^1\) Committee on Property and Liability Financial Reporting (COPLFR). We are following up on previous correspondence regarding Schedule P Instructions for Retroactive Reinsurance between Affiliates and Non-Affiliates.

COPLFR appreciates that the Statutory Accounting Principles Working Group (SAPWG) is looking into certain inconsistencies that were identified in our May 21, 2019, letter to you. In July, Julie Lederer, acting in her capacity as a member of the Casualty Actuarial and Statistical (C) Task Force, posed several questions about specific details in our initial comment letter. Her comments and COPLFR’s replies are presented here.

**Julie Lederer’s Comment**

1. I’m not sure what Allianz/Allianz Re agreement the letter is referring to. The letter suggests that this agreement was enacted in 2015 and that the accounting changed between year-ends 2015 and 2016, but Allianz Re’s 2018 MD&A (which is said to be included as an attachment to COPLFR’s letter but is not) suggests that the agreements between Allianz and Allianz Re weren’t enacted until 2016. Allianz Re did assume retroactive business from a different entity, Fireman’s Fund, in 2015:

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
a. There’s hardly any workers comp data in Allianz’s 2015 Schedule P. There’s a lot of WC data at year-end 2016, which appears to be due to the addition of Firemen’s Fund to the pooling agreement.

b. When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. There is significant assumed premium reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior. I think this is related to Allianz Re’s transaction with FFIC (as mentioned in the MD&A above), not with Allianz.

COPLFR’s Response

The May 21, 2019, COPLFR letter is referring to the July 1, 2015, reinsurance agreement between FFIC and Allianz Reinsurance America (“Allianz Re”), where Allianz Re agreed to reinsure certain workers’ compensation (WC) and construction defect liabilities. The 2015 Schedule P, Part 1 of Allianz Re (page 4 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year direct and assumed WC earned premium, presumably this Loss Portfolio Transfer. The 2016 Schedule P of Allianz Global Risk US Ins Co. (“Allianz or FFIC”) (page 7 of the May 21 letter PDF) shows $1.1 billion of 2015 accident year WC ceded earned premium, about equal to the assumptions of the Allianz Re premium discussed in the prior sentence. Allianz Global Risk US is synonymous with FFIC, as we understand it.

In our May 21, 2019, letter, we did state that “Initially, as of December 31, 2015, Allianz included all of the ceded losses in accident year (‘AY’) 2015.” We did only include the 2016 Allianz Schedule P; it would have been clearer to include the 2015 Allianz Schedule P as well, which we have attached as page 15 of the May 21 letter PDF (Attachment A). We agree with the comment in a. above that the additional data is due to the addition of Fireman’s Fund in the pooling agreement. Similarly, for b., we only show Allianz Re’s 2015 Schedule P.; we should additionally obtain Allianz Re’s 2016 Schedule P. We would not expect much change from the 2015 to 2016 Schedule P. Finally, our comments were not intended to suggest that the agreement between Allianz and Allianz Re was not enacted until 2016. We did, however, want to point out that as of Dec. 31, 2015, Allianz included all of the ceded losses in AY 2015, and in the following year, as of Dec. 31, 2016, Allianz recorded the ceded losses across the subject AYs 2012 and prior, as shown in Schedule P, Part 2 of Allianz (see page 8 of the PDF).

Julie Lederer’s Comment

2. I believe some of the attachments noted in the letter are missing:
   a. The letter includes Allianz Re’s 2015 Schedule P and Allianz’s 2016 Schedule P, but the text of the letter suggests that Allianz’s 2015 and 2016 Schedule Ps are included.
Regardless, it’s pretty hard to compare Allianz’s 2015 and 2016 Schedule Ps anyway, since Fireman’s Fund was added to the intercompany pool in 2016 and the historical AYs in Allianz’s 2016 Schedule P were adjusted accordingly.

When I compare Allianz Re’s 2015 and 2016 Schedule Ps, I don’t see major changes. The assumed premium is reported in CY 2015 in both statements, and both statements show assumed reserves only for AYs 2012 and prior.

Attachment A1SAO (Allianz Re’s 2018 SAO) is missing. I looked up the SAO myself and found this passage, which is rather vague, doesn’t name the counterparties, and doesn’t discuss the accounting for the agreements:

- The Company entered into several significant reinsurance arrangements during calendar years 2015 – 2018, some of which serve to mitigate the risk factors discussed above.
  1. Effective January 1, 2015, the Company entered into a reinsurance agreement whereby the Company assumed and agreed to reissue certain A&E reserves. Effective July 1, 2015, the Company further assumed and agreed to reissue certain WC and CD reserves.
  2. Effective January 1, 2016, the Company entered into a reinsurance agreement by which the Company ceded 50% of the Company’s carried A&E, WC, and CD liabilities acquired in 2015.
  Additionally, effective January 1, 2016, the Company entered into reinsurance agreements whereby the Company assumed and agreed to reissue certain Professional Healthcare Liabilities and certain A&E, GL-Excess and WC Liabilities. Effective July 1, 2016, the Company entered into another reinsurance agreement by which the Company assumed and agreed to reissue certain GL-Excess exposure.

Attachment A2MDA (Allianz Re’s 2018 MD&A) is missing. I looked this up myself and included a relevant passage above in item #1.

COPLFR’s Response

The attachments were in the Academy’s submission to the CASTF and were in the CASTF materials for a call in June, but apparently were omitted by NAIC staff in materials provided for subsequent calls and referrals.

We too consider the excerpt you provided to be vague. To help clarify the issue, we are attaching MD&As from 2015 and 2016 that include Fireman’s Fund Insurance Company in their scope (attachments B and C). One of the difficulties in tracking this issue is the series of actions taken by Allianz since 2015.

Julie Lederer’s Comment

3. GEICO’s Note 21, included as an attachment, is useful, but it’s not clear what we should take away from GEICO’s 2014 Schedule P alone. It might have been useful to attach the 2013 Schedule P as well. By comparing the 2013 and 2014 Schedule Ps, it’s clear that GEICO made significant cessions in 2014 and that these were spread among older AYs.

COPLFR’s Response

Our takeaway from GEICO’s 2014 Schedule P alone is that Schedule P, Part 2 (page 13 of the PDF) shows $3.3 billion of decreased development. This is a distortion as we understand it and is supported by the 2013 and 2014 comparison noted above. That distortion would carry over to the RBC filings of the respective entities (based on our understanding of the RBC formula and...
related instructions). Industry Schedule P data can also be distorted based on what is and is not included in industry totals based on the data scrubbing performed.

We believe that this additional information clarifies our original comments and will help SAPWG to move forward with its own analysis. If you have additional questions, contact Marc Rosenberg, the Academy’s senior casualty policy analyst, at 202-785-7865 or rosenberg@actuary.org.

Sincerely,

Kathy Odomirok, MAAA, FCAS
Chairperson, COPLFR

TO: Phil Vigliaturo, chair representative of Steve Kelley, Chair, (MN), of the Casualty Actuarial and Statistical (C) Task Force  
Tom Botsko, Chair, (OH) Property and Casualty Risk-Based Capital (E) Working Group  
FROM: Dale Bruggeman (OH), Chair of the Statutory Accounting Principles (E) Working Group  
DATE: January 7, 2020  
RE: Ref #2019-40: Reporting of Installment Fees and Expenses  

This referral has been provided to notify the Casualty Actuarial and Statistical (C) Task Force and the Property and Casualty Risk-Based Capital (E) Working Group of a current Statutory Accounting Principles (E) Working Group exposure to allow for comments. The comment deadline for the public exposure is January 31, 2020, but the Working Group can provide additional time if needed.  

During the 2019 Fall National Meeting, the Statutory Accounting Principles (E) Working Group exposed agenda item 2019-40: Reporting of Installment Fees and Expenses. The exposure included a minor clarification noting that the current installment fee guidance in SSAP No. 53—Property and Casualty Contracts - Premium, which allows installment fees which meet the criteria to be excluded from premium and reported as other income, is to be narrowly applied. This clarification is being added because the Working Group was made aware of some writers (particularly non-standard writers) who were attempting to use the language to exclude a material portion of fees from premium.  

In addition, the Working Group requested input on whether to develop guidance that allows for different reporting on related installment fee expenses. Both the exposed language and the questions for exposure are excerpted on the following pages.  

Because the items under discussion can have impact on the loss ratios and information reported in Schedule P, the Working Group directed notification of the exposure to seek your input. Please contact NAIC staff of the Statutory Accounting Principles (E) Working Group with any questions.  

Cc: Julie Gann, Robin Marcotte, Fatima Sediqzad, Jake Stultz, Jim Pinegar, Kris DeFrain, Eva Yeung; Jane Barr
Issue 1 - Exposed the following revisions to the existing footnote in SSAP No. 53:

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums1 (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

1 If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Note that this footnote on flat fee service charges on installment premium is intentionally narrow and specific and this guidance should not be applied to other fees or service charges. Clarification reporting of installment fees in of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

Issue 2 – Exposed a request for regarding if incurred installment fee expenses should be allowed to be reported in other expenses?

As background note the following:

- SSAP No. 53 allows for installment fee income that meets specified criteria to be excluded from premium and reported as other income with finance and service charges, however it does not separately address the related installment fee expenses incurred by the reporting entity.
- The annual statement instructions provide that the expenses that are most commonly associated with installment expense such as postage printing and stationery are reported in underwriting expenses. These expenses and their related revenue are typically immaterial for most property and casualty products but are material for some nonstandard product writers. Having a mismatch between underwriting revenue / underwriting expenses and other revenue / other expenses can affect a reporting entity’s combined ratio as the combined ratio considers the losses, loss adjusting expenses and underwriting expenses.
- From a purely conceptual basis, it might be more consistent if the installment fee expenses are reported in other expenses. This is because it is a theoretical mismatch in the annual statement to report the installment fees in other revenue and have the related expenses in underwriting expenses. While this might be better theoretical match to have both the revenue and expense in the same category, NAIC staff notes that not having “other expenses” in the property and casualty income statement seems to be an intentional choice as there are no “other expense” reporting lines. Therefore an “other expense” would have to be reported as a contra revenue.
- If incurred installment fee expenses were to be reported in other expenses, a reporting location would need to be determined as there is not an annual statement line to accommodate such reporting. If it was reported, it would most like have to be report as a contra amount in “Aggregate Write-Ins for Miscellaneous Income” (not in underwriting expenses) as netting it in Finance and service charges would not provide transparency. Further, if reported, limitations would need to be determined – i.e. expenses not to exceed installment fee revenue.
Ultimately adoption of any such guidance would also require updates to the existing annual statement instructions.

Questions exposed:

a. Should the Working Group develop guidance to allow installment fee expenses associated with fees that are reported in other income according to the criteria in SSAP No. 53 be permitted reported in or as an expense in “Other Income?”

b. If included in Other Income, should the expense be classified as a contra revenue in or “Aggregate Write-Ins for Miscellaneous Income”?

c. Installment fees and expenses are often immaterial for property and casualty except for nonstandard writers. Comments are also requested on allowing diversity in reporting installment fee expenses (that is optional to report as other expense category of contra other revenue Aggregate Write-Ins for Miscellaneous Income,” particularly for immaterial amounts.

RE: Ref #2019-40: Reporting of Installment Fees and Expenses

Thank you for the opportunity to comment on the Statutory Accounting Principles (E) Working Group’s (“SAPWG”) exposure draft of changes proposed to Footnote 1 of SSAP No. 53 - Property Casualty Contracts–Premiums.

As you know, the Property and Casualty Risk Based Capital Working Group (P&C RBC WG) exists under the National Association of Insurance Commissioners (NAIC) Capital Adequacy Task Force and ultimately the Financial Condition (E) Committee. The Task Force’s mission is to evaluate and recommend appropriate refinements to capital requirements for all types of insurers. The Property and Casualty Risk Based Capital Working Group supports the Task Force from the Property and Casualty Risk Based Capital perspective. One of the charges for the Working Group is monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the Accounting Practices and Procedures Manual to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives. Our members include the state insurance regulators tasked with reviewing and maintaining the Property and Casualty Risk Based Capital formula in accordance with monitoring minimum capital requirements. As such, we have interest in the SAPWG’s proposed changes to Footnote 1 of SSAP No. 53 - Property Casualty Contracts–Premiums.

As noted in Footnote 1 of SSAP No. 53, an installment fee “has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum” and “there is no underwriting risk” associated with an installment fee. As such, an installment fee is not related to the transfer of risk and should not be reported as premium. In addition, there may be other fees that may need to be considered as not related to the transfer of risk. These include, but not limited to Non-Sufficient Funds or Late Fees. However, there are other charges and fees that are related to the transfer of risk and that should be reported as premium, such as a policy fee. The members of P&C RBC WG support clarification that ensures fees and charges associated with the transfer of risk are reported as premium and that fees and charges not associated with the transfer of risk will not be reported as premium. This will help ensure that the minimum capital requirement appropriately reflects the risk of the company.

For these reasons, the members of P&C RBC WG support the revisions proposed to Footnote 1 of SSAP No. 53 as detailed in SAPWG’s Ref# 2019-40. We are also open to your recommendations for additional reporting categories for these fees.

Please contact, Eva Yeung, NAIC staff eyeung@naic.org of the Property and Casualty Risk-Based Capital (E) Working Group with any questions.

MEMORANDUM

TO: Thomas Botsko (OH)
Chair of the Property Casualty Risk-Based Capital (E) Working Group

FROM: David Smith & Doug Stolte (VA)
Co-Chairs of the Restructuring Mechanisms (E) Subgroup

DATE: January 29, 2020

RE: Request for Input

The Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group and Restructuring Mechanisms (E) Subgroup in early 2019. The Subgroup has determined that its priority in addressing its charges is to develop best practices as it relates to reviewing and considering such transactions for approval. While the Subgroup intends to leverage existing practices used by international regulators and other practices proposed in the past for liability-based restructuring, addressing this priority charge is expected to take some time. Among other things, the Subgroup is also charged with the following:

Consider the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff. Complete by the 2020 Fall National Meeting.

In order to be responsive to the RBC charge noted above, the Subgroup requests your Working Group to take the lead in addressing this charge. More specifically, as the subject matter experts of the Property Casualty RBC formula, you are best equipped to determine if changes should be made to the formula to better assess companies in runoff. As the issues and positions are identified, we ask that P&C RBC also to take the lead in coordinating with other RBC working groups including Life and Health.

We note that the above charge is for companies in run-off rather than for blocks of business only in run-off. The subgroup’s survey of states asked questions regarding the definition of run-off. These responses are shared with the Working Group on the following page for discussion.

As noted above, our charge has a due date of the 2020 Fall National Meeting; therefore to the extent you are unable to come to a conclusion prior to that date, please notify us and include in such a notification a more appropriate date under which you could make such a determination. From there, the Subgroup will request an extension based upon your suggestion.

Please contact me or NAIC staff for this project, Robin Marcotte rmarcotte@naic.org, if you have any questions.

1. Does your state have a definition for “Runoff Companies”?

   a. Yes – 4 states
   b. No – 29 states however, 4 provided responses.

<table>
<thead>
<tr>
<th>State</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Yes (none was provided). Comment in RBC it discusses running off or run off but not definition.</td>
</tr>
<tr>
<td>2.</td>
<td>Yes. There is no formal definition. It is understood to mean companies that, voluntary or not, have ceased writing premium except for mandatory renewals required by regulation in various states.</td>
</tr>
<tr>
<td>3.</td>
<td>Yes. Licensed companies that are no longer writing business and have no plans to write in the future.</td>
</tr>
<tr>
<td>4.</td>
<td>Yes. Under the state’s laws &quot;Run-off insurer&quot; means an insurer that: (i) Is domiciled in the state; (ii) Has liabilities under policies for property and casualty lines of business; (iii) Has ceased underwriting new business; and (iv) Is only renewing ongoing business to the extent required by law or by contract. However, for purposes of the Restructuring Mechanism Subgroup, we believe the following definition is appropriate to define &quot;Runoff Companies&quot; in general: &quot;Companies that are no longer actively writing new insurance business or collecting premiums except where required to in accordance with contractual or regulatory obligations, and whose sole material business is the management of an existing or assumed group of insurance policies or contracts through their termination.&quot;</td>
</tr>
<tr>
<td>5.</td>
<td>No. However, in practice, a run-off company services only existing business, does not write new business, and has no intent to acquire or engage in the business of run-off by acquiring other run-off blocks of business</td>
</tr>
<tr>
<td>6.</td>
<td>No. The state’s insurance law does not define “runoff companies;” however, the state applies a general concept of “runoff companies” to include an insurer that writes no new premium or has had no new policyholders for several years leading to claims administration only.</td>
</tr>
<tr>
<td>7.</td>
<td>No. This concept is something we plan to institute internally in 2019. The details have yet to be determined.</td>
</tr>
<tr>
<td>8.</td>
<td>No. There is no formal definition for &quot;Runoff Companies&quot; in the statutes or regulations.</td>
</tr>
</tbody>
</table>

---

1 State numbers are just for the responses and state 1 in a chart may be a different state in the next chart.
1) What is the definition for “Runoff Companies” in your state? (please review the 2nd page of the attachment for reference)

CT does not have a definition for ‘Runoff Companies”. However, in practice, a run-off company services only existing business, does not write new business, and has no intent to acquire or engage in the business of run-off by acquiring other run-off blocks of business.

Colorado does not define Run-off companies officially.

There is no formal definition in Florida Statutes or Florida Administrative Code. A company in run-off can mean the company is no longer writing new business in all lines of insurance but continues to collect premiums, pay claims, and only servicing existing business to the extent required by statute.

SC doesn’t have a definition of “runoff company”. we generally understand it to mean a licensed company that is no longer writing premium and has no plans to write.

There is no formal definition for "Runoff Companies" in our statutes or regulations. (this response was also previously submitted to the restructuring mechanisms group’s survey)

There is none in Wisconsin that I am aware of.

2) How to identify the “Runoff Companies” by the available Annual Statement data?

No annual statement data specifically indicated that, but the five-year historical data, Schedule P and Schedule T might provide useful reference.

Lack of new business (underwriting).

- Decline in capital and surplus;
- Decrease in premiums written;
- Decrease in operating expenses because of cost-cutting measures
- Increase in loss ratio;
- Lack of income;
- Commutations of reinsurance agreements

$0 direct and assumed written premium for a certain number of years? Maybe a combination of having [some number of consecutive years of] $0 direct and assumed written premium, plus [net?] LLAE reserves have decreased to a certain percentage of what it was as of the last year-end where the company had non-zero written premium?

Domestics - Would know due to interaction with companies. Non-domestics, largely the MD&A after seeing minimal, no, or negative premium and large development.
Runoff Survey – PC RBC

3) Once the Working Group identifies a “Runoff Company”, where should the Runoff indicator be reported? (Annual Statement or RBC Report?)

I would suggest that the Runoff indicator to be reported in both annual statement and RBC reports. The Department asks for a quarterly liquidity report. On a case-by-case basis we may enter into a Stipulation and Consent Order which may contain certain reserving requirements.

The Annual Statement (interrogatories?)

Annual Statement

I don’t have good answers right now.

I am not sure of the value of the Run-Off indicator being in a company’s RBC report. This would be considered confidential. How would the ceding companies to this reinsurer know for completion of PR012.

4) Should the RBC formula be adjusted for the “Runoff Companies”?

Yes, they are different from the ongoing companies. The RBC formula in underwriting risk charges for written premium (R5) will not be relevant to the ‘Runoff companies’, and the other risk charges (R0-R4) need to be adjusted properly to reflect their differences in business operations.

No

No. The Office believes an insurer writing no business and running-off its existing business should be allowed to continue its run-off. This is usually done through a consent order order approving the run-off plan. The company may be required to maintain a specified minimum surplus amount and a minimum net reserve to surplus ratio or any other requirements deemed necessary for a solvent run-off.

I don’t have good answers right now.

The charge should be relevant to the financial condition of a reinsurer and not their operational status. Reinsurers without an NRSRO rating and an RBC of 300% or more could have a 10% risk factor (the general old factor), whereas reinsurers who do not meet RBC of 300% should use 14% or a higher. It may be reasonable to use 200% and don’t meet the trend test, however companies in run-off, especially with adverse development trigger would trigger the trend test due to their combined ratio. This becomes an issue for reinsurers who do not report RBC which would be a concern in and of itself.

5) How to reflect the appropriate risk of a given “Runoff Companies” relative to an ongoing companies?

- They are not having the new written premium or earned premium in the future.
- The accuracy of their reserving especially long tail lines probably should be individually modeled instead of using aggregate triangles.
- The understanding of the acquisition and transaction details, and
- The market and industry operational and liquidity risks.
- The Runoff companies might have two separate categories. One without new business in their own business, and the others are specialized in assuming runoff business from other companies. These two require different strategies and expertise.

I will have to defer to more informed members of the group.

Liquidity risk factor. Assets and income must be maintained to cover the claims and administrative costs; however, run-off companies only source of income may be their investment income. There is always the possibility of not being able to collect loss payments from the reinsurers.
Runoff Survey – PC RBC

I don’t have good answers right now.

See the response above.

I am concerned about who would have the responsibility of identifying run-off status. This is a status of the reinsurer which would be used by the ceding insurer. It would be more consistent if this was a status given to the reinsurer by its state of domicile which is reported in the financial statements and the ceding insurers could use. The definition of run-off could be determined by the restructuring working group. However, the definition should be more difficult than flipping a switch to change.
TO: David Smith & Doug Stolte (VA)  
Co-Chairs of the Restructuring Mechanisms (E) Subgroup  
FROM: Tom Botsko, OH), Chair of the Property and Casualty Risk Based Capital Working Group  
DATE: July 30, 2020  
RE: Request for Extension  

The Property and Casualty Risk-Based Capital (E) Working Group is responding to the request from the Restructuring Mechanisms (E) Working group for taking the lead in addressing the charges of: 1) considering the need to make changes to the Property and Casualty RBC formula to better assess the minimum surplus requirements for companies in runoff; and 2) coordinating with other RBC working groups as the issues and positions are identified.

As noted in the request memo, the due date of the charge is 2020 Fall National Meeting. At this time, the Working Group requests an extension until the 2021 Fall National Meeting in order to have the necessary time to review the definition of the Property and Casualty companies in run-off to better address the issues when determining future factor changes to the Vulnerable 6 or Unauthorized Unrated category in R3 component of the Risk-Based Capital Formula. The Working Group anticipated that this issue would require extensive discussions to make determination in the future.

The Working Group appreciates this opportunity to take the lead to address these charges. Please contact, Eva Yeung, NAIC staff eyeung@naic.org of the Property and Casualty Risk-Based Capital (E) Working Group with any questions.

Remarks: PR018 Official Line 1 Factors are PR018 Line 1 Factors officially adopted in the RBC filings. For those lines subject to straight average calculation under current RBC formula, PR018 Recalculated Line 1 Factors are the industrywide straight average LLAE ratios computed using populations recently pulled. For those lines subject to straight average calculation under current RBC formula, PR018 All Weighted Line 1 Factors are the industrywide weighted average LLAE ratios computed using populations recently pulled. Line 1 Factors stay the same for those lines subject to weighted average calculation under current RBC formula.

- Evaluation using straight average
- Evaluation using weighted average

W:\QA\CADTF\Working Agenda 2020 as of 08-05-2020.xls
Delete the ACA Fee Sensitivity Test from each formula.

The purpose of the proposal is to delete the ACA Fee Sensitivity test from each formula as a result of the repeal of the ACA HIT tax for 2021. The SAP Working Group is also drafting a Form A to remove the disclosures of the ACA fee in 2021.

© 2020 National Association of Insurance Commissioners
Draft: 7/31/20
Adopted by the Executive (EX) Committee and Plenary, Dec. xx, 2020
Adopted by the Financial Condition (E) Committee, Dec. xx, 2020
Adopted by the Capital Adequacy (E) Task Force, Aug. 5, 2020

2021 Proposed Charges

CAPITAL ADEQUACY (E) TASK FORCE

The mission of the Capital Adequacy (E) Task Force is to evaluate and recommend appropriate refinements to capital requirements for all types of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The Capital Adequacy (E) Task Force will:
   A. Evaluate emerging “risk” issues for referral to the risk-based capital (RBC) working groups/subgroups for certain issues involving more than one RBC formula. Monitor emerging and existing risks relative to their consistent or divergent treatment in the three RBC formulas.
   B. Review and evaluate company submissions for the schedule and corresponding adjustment to total adjusted capital (TAC).
   C. Evaluate relevant historical data and apply defined statistical safety levels over appropriate time horizons in developing recommendations for revisions to the current asset risk structure and factors in each of the risk-based capital (RBC) formulas and delivering those recommendations to the Capital Adequacy (E) Task Force.
   D. Evaluate relevant historical data and apply defined statistical safety levels over appropriate time horizons in developing recommendations for revisions to the current asset risk structure and factors in each of the risk-based capital (RBC) formulas and delivering those recommendations to the Capital Adequacy (E) Task Force.
   E. 

2. The Health Risk-Based Capital (E) Working Group, Life Risk-Based Capital (E) Working Group and Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Evaluate refinements to the existing NAIC risk-based capital (RBC) formulas implemented in prior year. Forward the final version of the structure of the current year life and fraternal, property/casualty (P/C) and health RBC formulas to the Financial Condition (E) Committee by June.
   B. Consider improvements and revisions to the various RBC blanks to: 1) conform the RBC blanks to changes made in other areas of the NAIC to promote uniformity; and 2) oversee the development of additional reporting formats within the existing RBC blanks as needs are identified. Any proposal that affects the RBC structure must be adopted no later than April 30 in the year of the change, and adopted changes will be forwarded to the Financial Condition (E) Committee by the next scheduled meeting or conference call. Any adoptions made to the annual financial statement blanks or statutory accounting principles that affect an RBC change adopted by April 30 and results in an amended change may be considered by July 30 for those exceptions where the Capital Adequacy (E) Task Force votes to pursue by super-majority (two-thirds) consent of members present, no later than June 30 for the current reporting year.
   C. Monitor changes in accounting and reporting requirements resulting from the adoption and continuing maintenance of the revised Accounting Practices and Procedures Manual (AP&P Manual) to ensure that model laws, publications, formulas, analysis tools, etc., supported by the Task Force continue to meet regulatory objectives.
   D. Review the effectiveness of the NAIC’s RBC policies and procedures as they affect the accuracy, audit ability, timeliness of reporting access to RBC results and comparability between the RBC formulas. Report on data quality problems in the prior year RBC filings at the summer and fall national meetings.

3. The Investment Risk-Based Capital (E) Working Group will:
   A. Evaluate relevant historical data and apply defined statistical safety levels over appropriate time horizons in developing recommendations for revisions to the current asset risk structure and factors in each of the risk-based capital (RBC) formulas and delivering those recommendations to the Capital Adequacy (E) Task Force.
4. The **Variable Annuities Capital and Reserve (E/A) Subgroup**, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Monitor the impact of the changes to the variable annuities reserve framework and risk-based capital (RBC) calculation, and determine if additional revisions need to be made.
   B. Develop and recommend appropriate changes including those to improve accuracy and clarity of variable annuity (VA) capital and reserve requirements.

5. The **Longevity Risk (A/E) Subgroup**, a joint subgroup of the Life Risk-Based Capital (E) Working Group and the Life Actuarial (A) Task Force, will:
   A. Provide recommendations for recognizing longevity risk in statutory reserves and/or risk-based capital (RBC), as appropriate. Complete by the 2020 Spring National Meeting.
   B. Complete the appropriate treatment of longevity risk transfers by the new longevity factors.

6. The **Catastrophe Risk (E) Subgroup** of the Property and Casualty Risk-Based Capital (E) Working Group will:
   A. Recalculate the premium risk factors on an ex-catastrophe basis, if needed.
   B. Continue to update the U.S. and non-U.S catastrophe event list.
   C. Continue to evaluate the need for exemption criteria for insurers with minimal risk.
   D. Evaluate the risk-based capital (RBC) results inclusive of a catastrophe risk charge.
   E. Refine instructions for the catastrophe risk charge.
   F. Continue to evaluate any necessary refinements to the catastrophe risk formula.
   G. Evaluate other catastrophe risks for possible inclusion in the charge.

DESCRIPTION OF CHANGE(S)

This proposal modifies the C-3 RBC instructions for 2020 and creates guidance for 2019 reporting. It also includes the deletion of instructions specific to 2019 which are not applicable for 2020 and beyond.

REASON OR JUSTIFICATION FOR CHANGE **

This proposal incorporates changes into the C-3 RBC instructions for 2020 to address an issue with the phase in of the new Variable Annuities Framework and guidance for a related issue with smoothing due to the treatment of voluntary reserves.

Additional Staff Comments:

• 1-13-20: Proposal was exposed for comments (DBF)
• 2-14-20: Proposal was exposed for comments adopted (DBF)
• 3-23-20: 2019 specific instruction deletion approved by Working Group and exposed for comment with no comments received. (DBF)

** This section must be completed on all forms.
INTEREST RATE RISK AND MARKET RISK
LR027

Overview

The amount reported on Line (35) and Line (37) is calculated using the 7-step process defined below. This calculation applies to all policies and contracts that have been valued following the requirements of AG-43 or VM-21. For contracts whose reserve was determined using the Alternative Methodology (VM-21 Section 7) see step 3 while all other contracts follow steps 1 and 2, then all contracts follow steps 4 - 7.

Step 1 CTE98: The first step is to determine CTE98 by applying the one of the two methodologies described in paragraph A below.

Step 2 C-3 RBC: using the formulas in paragraph B, determine the C-3 RBC amount based on the amount calculated in step (1). Floor this amount at $0.

Step 3 Determine the C-3 RBC using the Alternative Methodology for any business subject to that requirements as described in paragraph C.

Step 4 As described in paragraph D below, the C-3 RBC amount is the sum of the amounts determined in steps 2 and 3 above, but not less than zero. The Total Asset Requirement is the Reserve based on the requirements of VM-21 prior to the application of any phase-in, plus the C-3 RBC amount.

Step 5: For a company that has elected a Phase-in for reserves following VM-21 Section 2.B., the C-3 RBC amount is to be phased-in over the same time period following the requirements in paragraph E below.

Step 6 Apply the smoothing rules (if applicable) to the C-3 RBC amount in step (4) or (5) as applicable.

Step 7 Divide the amount from Step 4, 5, or 6 (as appropriate) by (1-enacted maximum federal corporate income tax rate). Split this amount into an interest rate risk portion and a market risk portion, as described in paragraph G.

The interest rate portion of the risk should be included in Line (35) and the market risk portion in Line (37).

The C-3 RBC is calculated as follows:

A. CTE (98) is calculated as follows: Except for policies and contracts subject to the Alternative Methodology (See C. below), apply the CTE methodology described in NAIC Valuation Manual VM-21 and calculate the CTE (98) as the numerical average of the 2 percent largest values of the Scenario Reserves, as defined by Section 4 of VM-21. In performing this calculation, the process and methods used to calculate the Scenario Reserves use the requirements of VM-21 and should be the same as used for the reserve calculations. The effect of Federal Income Tax should be handled following one of the following two methods

1. If using the Macro Tax Adjustment (MTA): The modeled cash flows will ignore the effect of Federal Income Tax. As a result, for each individual scenario, the numerical value of the scenario reserve used in this calculation should be identical to that for the same scenario in the Aggregate Reserve calculation under VM-21. Federal Income Tax is reflected later in the formula in paragraph B.1.

2. If using Specific Tax Recognition (STR): At the option of the company, CTE After-Tax (98) (CTEAT (98)) may be calculated using an approach in which the effect of Federal Income Tax is reflected in the projection of Accumulated Deficiencies, as defined in Section 4.A. of VM-21, when calculating the Scenario Reserve for each
scenario. To reflect the effect of Federal Income Tax, the company should find a reasonable and consistent basis for approximating the evolution of tax reserves in the projection, taking into account restrictions around the size of the tax reserves (e.g., that tax reserve must equal or exceed the cash surrender value for a given contract). The Accumulated Deficiency at the end of each projection year should also be discounted at a rate that reflects the projected after-tax discount rates in that year. In addition, the company should add the Tax Adjustment as described below to the calculated CTEAT (98) value.

3. A company that has elected to calculate CTEAT (98) using STR may not switch back to using MTA in the projection of Accumulated Deficiencies without prominently disclosing that change in the certification and supporting memorandum. The company should also disclose the methodology adopted, and the rationale for its adoption, in the documentation required by paragraph J below.

4. Application of the Tax Adjustment: Under the U.S. IRC, the tax reserve is defined. It can never exceed the statutory reserve nor be less than the cash surrender value. If a company is using STR and if the company’s actual tax reserves exceed the projected tax reserves at the beginning of the projection, a tax adjustment is required. The CTEAT (98) must be increased on an approximate basis to correct for the understatement of modeled tax expense. The additional taxable income at the time of claim will be realized over the projection and will be approximated using the duration to worst, i.e., the duration producing the lowest present value for each scenario. The method of developing the approximate tax adjustment is described below.

The increase to CTEAT (98) may be approximated as the corporate tax rate times f times the difference between the company’s actual tax reserves and projected tax reserves at the start of the projections. For this calculation, f is calculated as follows: For the scenarios reflected in calculating CTE (98), the scenario reserve is determined and its associated projection duration is tabulated. At each such duration, the ratio of the number of contracts in force (or covered lives for group contracts) to the number of contracts in force (or covered lives) at the start of the modeling projection is calculated. The average ratio is then calculated over all CTE (98) scenarios and f is one minus this average ratio. If the Alternative Method is used, f is approximated as 0.5.

B. Determination of RBC amount using stochastic modeling:

1. If using the MTA: Calculate the RBC Requirement by the following formula in which the statutory reserve is the actual reserve reported in the Annual Statement. In the second term – i.e., the difference between statutory reserves and tax reserves multiplied by the Federal Income Tax Rate – may not exceed the portion of the company’s non-admitted deferred tax assets attributable to the same portfolio of contracts to which VM-21 is applied in calculating statutory reserves:

\[ 0.25 \times \left( (\text{CTE (98)} + \text{Additional Standard Projection Amount} - \text{Statutory Reserve}) \times (1 - \text{Federal Income Tax Rate}) - (\text{Statutory Reserve} - \text{Tax Reserve}) \times \text{Federal Income Tax Rate} \right) \]

2. If the company elects to use the STR: the C-3 RBC is determined by the following formula:

\[ 0.25 \times (\text{CTEAT (98)} + \text{Additional Standard Projection Amount} - \text{Statutory Reserve}) \]

The Additional Standard Projection Amount is calculated using the methodology outlined in Section 6 of VM-21.

C. Determination of C-3 RBC using Alternative Methodology: This calculation applies to all policies and contracts that have been valued following the requirements of AG-43 or VM-21, for which the reserve was determined using the Alternative Methodology (VM-21 Section 7). The C-3 RBC amount is determined by applying the methodology as defined in Appendix 2 to these instructions.
D. The C-3 RBC amount is the sum of the amounts determined in paragraphs B and C above, but not less than zero. The TAR is defined as the Reserve determined according to VM-21 plus the C-3 RBC amount. All values are prior to any consideration of Phase-in allowances for either reserve or C-3 RBC, or any C-3 RBC smoothing allowance. The RBC values are post-tax.

E. Phase in: A company that has elected to phase-in the effect of the new reserve requirements following VM-21 Section 2.B. shall phase in the effect on C-3 RBC over the same time period, using the following steps:
1. Begin with the C-3 RBC amount from step 7 for Dec. 31, 2019 LR027 Line (37) instructions for all business within the scope of the Variable Annuities modeling requirements as of 12/31/19. Add to this any voluntary reserves which were subtracted from TAR when the C-3 RBC amount reported for 2019 was determined. Also add to this the amount of C-3 RBC computed in the same manner as the 2019 value for any reinsurance ceded that is expected to be recaptured in 2020 and in the scope of the Variable Annuities modeling requirements. This amount is 2019 RBC
2. Determine the C-3 RBC amount as of 12/31/19 using paragraphs A, B, C, and D for the same inforce business as in 1. Exclude any voluntary reserves in these calculations. Labeled as 2019 RBC New.
3. Determine the phase-in amount (PIA) as the excess of 2019RBC New over 2019RBC
4. For 12/31/2020, compute the C-3 RBC following paragraphs A – D above, then subtract PIA times (2/3)
5. For 12/31/2021, compute the C-3 RBC following paragraphs A – D above, then subtract PIA times (1/3)

Guidance Note: For a company that has adopted a Phase-in for reserves longer than 3 years, adjust the above formula to reflect the actual period with uniform amortization amounts during that period.

Guidance Note: An adjustment is made for voluntary reserves. Voluntary reserve means any reserve that is not required by AG-43, VM-21 and/or a state in which the company is doing business and was subtracted from TAR in 2019 to determine the RBC.

F. Smoothing of C-3 RBC amount
A company should decide whether or not to smooth the C-3 RBC calculated in paragraph D or E above to determine the amount in Line (37). For any business reinsured under a coinsurance agreement that complies with all applicable reinsurance reserve credit “transfer of risk” requirements, the ceding company shall reduce the reserve in proportion to the business ceded while the assuming company shall use a reserve consistent with the business assumed.

A company may choose to smooth the C-3 RBC calculated in paragraph D or E above. A company is required to get approval from its domestic regulator prior to changing its decision about smoothiing from the prior year. In addition, a company that has elected to smooth the risk-based capital is required to get approval from its domestic regulator prior to smoothing if it has experienced a material change in its Clearly Defined Hedging Strategy from the prior year. For this purpose, a company’s Clearly Defined Hedging Strategy is considered to have experienced a material change if any of the items outlined in VM-21 Section 1.D.2 in the current year differs from that in the prior year.

To implement smoothing, use the following steps. If a company does not qualify to smooth or a decision has been made not to smooth, go to paragraph G.
1. Determine the C-3 RBC amount calculated in paragraph D or E above
2. Determine the aggregate reserve for the contracts covered by the Variable Annuity Stochastic modeling requirements.
3. Determine the ratio of the C-3 RBC / reserve for current year.
4. Determine the C-3 RBC as actually reported for the prior year Lines (35) plus (37) and adjust that amount to a post-tax amount by multiplying by (1 - enacted maximum federal corporate income tax rate). Restate the amount to remove the effect of any voluntary reserves held in prior years that materially differ in amount from the voluntary reserves held in the current year.
5. Determine the aggregate reserve for the contracts in scope of these requirements for the prior year-end. Restate the aggregate reserve to remove any voluntary reserves held for the prior year-end that materially differ in amount from the voluntary reserves held as of the current year-end.
6. Determine the ratio of the C-3 RBC / reserve for prior year.
7. Determine a ratio as 0.4*(6) plus 0.6*(3) {40% prior year ratio and 60% current year ratio}.
8. Determine the risk-based capital for current year as the product of (7) and (2) (adjust (2) to be actual 12/31 reserve).

G. The amount determined in paragraphs D., E., or F. above for the contracts shall be divided by (1 - enacted maximum federal corporate income tax rate) to arrive at a pre-tax amount. This pre-tax amount shall be split into a component for interest rate risk and a component for market risk. Neither component may be less than zero. The provision for the interest rate risk, if any, is to be reported in Line (35). The market risk component is reported in Line (37).

The amount reported in Line (37) is to be combined with the C-1cs component for covariance purposes.

H. The way grouping (of funds and of contracts), sampling, number of scenarios, and simplification methods are handled is the responsibility of the company. However, all these methods are subject to Actuarial Standards of Practice, supporting documentation and justification, and should be identical to those used in calculating the company's statutory reserves following VM-21.

I. Certification of the work done to set the C-3 RBC amount for Variable Annuities and Similar products are the same as are required for reserves as part of VM-31. The certification should specify that the actuary is not opining on the adequacy of the company's surplus or its future financial condition.

The certification(s) should be submitted by hard copy with any state requiring an RBC hard copy.

J. An actuarial memorandum should be constructed documenting the methodology and assumptions upon which the required capital for the variable annuities and similar products is determined. Since the starting point for the C-3 RBC calculation is the cash flow modeling used for the reserves, the documentation requirements for reserves (VM-31) should be followed for the C-3 RBC. The reserve report may be incorporated by reference, with this C-3 RBC memorandum focused on identifying differences and items unique to the C-3 RBC process, or at the company's option, the documentation of C-3 RBC may be merged into the VA Report with the differences for C-3 RBC discussed in a separate section of the Memorandum as outlined in VM-31.

These differences that would need to be identified either in the RBC Actuarial Memorandum or the VA Report will typically include:
* the basis for considering federal income tax,
* whether or not smoothing was applied, and the effect of that smoothing,
* whether or not a phase in was used, and the impact on the reported values,
* If the company elects to calculate CTEAT (98) using STR whereby the effect of Federal Income Tax is reflected in the projection of Accumulated Deficiencies, the company should still disclose in the memorandum the Total Asset Requirement and C-3 RBC that would be obtained if the company had elected to use the MTA method.
* Documentation of the alternative methodology calculations, if applicable, and
* Documentation of how the C-3 RBC values were allocated to the interest and market risk components.

This actuarial memorandum will be confidential and available to regulators upon request.
The lines on the alternative calculations page will not be required for 2019 or later.

The total of all annual statement reserves representing exposure to C–3 risk on Line (36) should equal the following:

Exhibit 5, Column 2, Line 0199999
- Page 2, Column 3, Line 6
+ Exhibit 5, Column 2, Line 0299999
+ Exhibit 5, Column 2, Line 0399999
+ Exhibit 7, Column 1, Line 14
+ Separate Accounts Page 3, Column 3, Line 1 plus Line 2 after deducting (a) funds in unitized separate accounts with no underlying guaranteed minimum return and no uninsured guaranteed living benefits; (b) non-indexed separate accounts that are not cash flow tested with guarantees less than 4 percent; (c) non-cash-flow-tested experience-rated pension reserves/liabilities; and (d) guaranteed indexed separate accounts using a Class II investment strategy.
- Non policyholder reserves reported on Exhibit 7
+ Exhibit 5, Column 2, Line 0799997
+ Schedule S, Part 1, Section 1, Column 12
- Schedule S, Part 3, Section 1, Column 14
During the Life Risk-Based Capital (E) Working Group’s discussion at the Fall National Meeting, an issue was raised with respect to voluntary reserves and smoothing that may impact those companies that choose to early adopt for 2019. To highlight and address this issue, the Working Group exposed proposed modifications to the 2020 RBC instructions for comment. Additionally, as indicated, the Working Group is also now exposing the following recommendation for 2019 reporting for comment:

For insurers that meet the following three criteria:

1. Are early adopting the revised methodology for variable annuity reserves and C-3 RBC;
2. Held voluntary reserves in 2018 and intend to reduce or eliminate voluntary reserves in 2019;
3. Are currently smoothing or intend to request permission to smooth for 2019;

It is recommended those insurers do not smooth for 2019. Those insurers may then choose to begin smoothing in 2020. The smoothing instructions have been proposed to be revised for 2020 and the impact of the change will be a discontinuity in the C-3 RBC amount between 2019 and 2020 for those companies meeting the criteria identified above. A change in smoothing does require approval from the state of domicile.
INTEREST RATE RISK AND MARKET RISK
LR027

The following instructions for the Interest Rate Risk and Market Risk will remain effective independent of the status of the sunset provision, Section 8, of Actuarial Guideline XLVIII (AG 48) in a particular state or jurisdiction. This instruction will be considered for change once the amendment referenced in AG 48, Section 8, regarding credit for reinsurance, is adopted by the NAIC.

Detail Eliminated To Conserve Space

Cash Flow Modeling for C-3 RBC Requirements for Variable Annuities and Similar Products:

Instructions for 2019:

2019 is a transition year to a new modeling framework. A company must follow one of two options to develop the C-3 RBC amount:

A. If the company has elected to apply the requirements of VM-21 from the 2020 version of the NAIC valuation manual to determine reserves for the Variable Annuities for 12/31/19, the company shall follow the instructions beginning on page 16 labeled “Instructions for 2020 and Later” for determining the C-3 RBC requirement on the Variable Annuities and similar contracts, but may not apply the phase-in provisions of paragraph E on page 18. Otherwise,

B. The company shall follow the nine-step process below through page 15.

Overview (2019)

The amount reported on Line (37) is calculated using a nine-step process. As in Step 3 of the Single Scenario C-3 Measurement Considerations section of Appendix 1a – Cash Flow Testing for C-3 RBC Methodology, existing AVR-related assets should not be included in the initial assets used in the C-3 modeling unless AVR has been excluded from TAC due to its use in the asset adequacy analysis supporting reserves. AVR-related assets may be included with C-3 testing to the extent that the AVR has been used in the cash flow testing and is therefore excluded from TAC, and that portion of the AVR-related assets relates to the business being tested. These assets are available for future credit loss deviations over and above expected credit losses. These deviations are covered by C-1 risk capital. Similarly, future AVR contributions should not be modeled. However, the expected credit losses should be in the C-3 modeling. (Deviations from expected are covered by both the AVR and C-1 risk capital and should not be modeled).

IMR assets should be used for C-3 modeling. If negative cash flows are handled by selling assets, then appropriate modeling of contributions to and amortization of the IMR need to be reflected in the modeling.
The first step is determined by applying the methodology described in the report “Recommended Approach for Setting Risk-Based Capital Requirements for Variable Annuities and Similar Products Presented by the American Academy of Actuaries’ Life Capital Adequacy Subcommittee to the National Association of Insurance Commissioners’ Capital Adequacy Task Force (June 2005)” to calculate the total asset requirement. Although Appendix 2 in the Report notes path-dependent models under a different set of initialization parameters might produce scenarios that do not satisfy all the calibration points shown in Table 1, to be in compliance with the requirements in this first step, the actual scenarios used for diversified U.S. equity funds must meet the calibration criteria. The scenarios need not strictly satisfy all calibration points in Table 1 of Appendix 2, but the actuary should be satisfied that any differences do not materially reduce the resulting capital requirements. See the Preamble to the Accounting Practices and Procedures Manual for an explanation of materiality. Include the Tax Adjustment as described in the report using the enacted maximum federal corporate income tax rate. If using the Alternative Method for GMDB Risks, use 1 minus the enacted maximum federal corporate income tax rate in place of the 65% adjustment contained in paragraph 4 (page 55) and the enacted maximum federal corporate income tax rate in place of the 35% Income Tax Rate shown in Table 8-9 (page 78). The discount rate in Table 8-9 should also be adjusted for the appropriate enacted maximum federal corporate income tax rate.

The second step is to reduce the amount calculated in (1) above by the interest rate portion of the risk (i.e., only the separate account market risk is included in this step).

The third step is to calculate the Standard Scenario Amount.

Take the greater of the amounts from steps (2) and (3).

Apply the smoothing and transition rules (if applicable) to the amount in step (4).

Add the general account interest rate portion of the risk to the amount in step (5).

Subtract the reported statutory reserves for the business subject to the Report from the amount calculated in step (6). Floor this amount at $0.

Divide the result from step (7) by (1 - enacted maximum federal corporate income tax rate) to arrive at a pre-tax amount.

Split the result from step (8) into an interest rate risk portion and a market risk portion. Note that the interest rate portion may not equal the interest rate portion of the risk used in steps (2) and (6) above even after adjusting these to a pre-tax basis. The interest rate portion of the risk should be included in Line (35) and the market risk portion in Line (37).

The lines on the alternative calculations page will not be required for 2019.

Calculation of the Total Asset Requirement

The method of calculating the Total Asset Requirement is explained in detail in the AAA’s June 2005 report, referenced above. In summary, it is as follows:

A—Aggregate the results of running stochastic scenarios using prudent best estimate assumptions (the more reliable the underlying data is, the smaller the need for margins for conservatism) and calibrated fund performance distribution functions. If utilizing prepackaged scenarios as outlined in the American Academy of Actuaries’ report, Construction and Use of Pre-Packaged Scenarios to Support the Determination of Regulatory Risk-Based Capital Requirements for Variable Annuities and Similar Products, Jan. 13, 2006, the Enhanced C-3 Phase I Interest Rate Generator should be used in generating any interest rate scenarios or regenerating pre-packaged fund scenarios for funds that include the impact of bond yields. Details concerning the Enhanced C-3 Phase I Interest Rate Generator can be found on the American Academy of Actuaries webpage at the following address http://www.actuary.org/pdf/life/c3supp_jan06.pdf. The Enhanced C-3 Phase I Interest Rate Generator, with its ability to use the yield curve as of the run date and to regenerate pre-packaged fund returns using interest rate scenarios based on the current yield curve replaces the usage of the March 2005 pre-packaged scenarios.
B. Calculate required capital for each scenario by calculating accumulated statutory surplus, including the effect of federal income taxes at the enacted maximum federal corporate income tax rate, for each calendar year end and its present value. The negative of the lowest of these present values is the asset requirement for that scenario. These values are recorded for each scenario and the scenarios are then sorted on this measure. For this purpose, statutory surplus is modeled as if the statutory reserve were equal to the working reserve.

C. The Total Asset Requirement is set at the 90 Conditional Tail Expectation by taking the average of the worst 10 percent of all the scenarios’ asset requirements (capital plus starting reserve). Risk-based capital is calculated as the excess of the Total Asset Requirement above the statutory reserves. For products with no guaranteed living benefit, or just a guaranteed death benefit, an alternative method is allowed, as described in the AAA report.

D. Risk-based capital is calculated as the excess of the Total Asset Requirement above the statutory reserves. Except for the effect of the Standard Scenario and the Smoothing and Transition Rules (see below), this RBC is to be combined with the C-1cs component for covariance purposes.

E. A provision for the interest rate risk of the guaranteed fixed fund option, if any, is to be calculated and combined with the current C-3 component of the formula.

F. The way grouping (of funds and of contracts), sampling, number of scenarios, and simplification methods are handled is the responsibility of the actuary. However, all these methods are subject to Actuarial Standards of Practice, supporting documentation and justification.

G. Certification of the work done to set the RBC level will be required to be submitted with the RBC filing. Refer to Appendices 10 and 11 of the AAA LCAS C-3 Phase II RBC Report (June 2005) for further details of the certification requirements. The certification should specify that the actuary is not opining on the adequacy of the company’s surplus or its future financial condition. The actuary will also note any material change in the model or assumptions from that used previously and the impact of such changes (excluding changes due to a change in these NAIC instructions). Changes will require regulatory disclosure and may be subject to regulatory review and approval. Additionally, if hedging is reflected in the stochastic modeling, additional certifications are required from an actuary and financial officer of the company.

The certification(s) should be submitted by hard copy with any state requiring an RBC hard copy.

H. An actuarial memorandum should be constructed documenting the methodology and assumptions upon which the required capital is determined. The memorandum should also include sensitivity tests that the actuary feels appropriate, given the composition of their block of business (i.e., identifying the key assumptions that, if changed, produce the largest changes in the RBC amount). This memorandum will be confidential and available to regulators upon request.

Application of the Tax Adjustment

Tax Adjustment: Under the U.S. IRC, the tax reserve is defined. It can never exceed the statutory reserve nor be less than the cash surrender value. If tax reserves assumed in the projection are set equal to Working Reserves and if tax reserves actually exceed Working Reserves at the beginning of the projection, a tax adjustment is required.

A tax adjustment is not required in the following situations:

- Tax reserves are projected directly, that is, it is not assumed that projected tax reserves are equal to Working Reserves, whether these are cash values or other approximations.
- Tax reserves at the beginning of the projection period are equal to Working Reserves.
- Tax reserves at the beginning of the projection period are lower than Working Reserves. This situation is only possible for contracts without cash surrender values and when these contracts are significant enough to dominate other contracts where tax reserves exceed Working Reserves. In this case the modeled tax results are overstated each year for reserves in the projection, as well as the projected tax results reversed at the time of claim.
If a tax adjustment is required, the Total Asset Requirement (TAR) must be increased on an approximate basis to correct for the understatement of modeled tax expense. The additional taxable income at the time of claim will be realized over the projection and will be measured approximately using the duration to worst, i.e., the duration producing the lowest present value for each scenario. The method of developing the approximate tax adjustment is described below.

The increase to TAR may be approximated as the corporate tax rate times \( t \) times the difference between tax reserves and Working Reserves at the start of the projections. For this calculation, \( t \) is calculated as follows: For the scenarios reflected in calculating 90 CTE, the lowest of these present values of accumulated statutory surplus is determined for each calendar year end and its associated projection duration is tabulated. At each such duration, the ratio of the number of contracts in force (or covered lives for group contracts) to the number of contracts in force (or covered lives) at the start of the modeling projection is calculated. The average ratio is then calculated, over all 90 CTE scenarios, and \( f \) is one minus this average ratio. If instead, RBC is determined under the standard scenario method then \( f \) is based on the ratio at the worst duration under that scenario. If the Alternative Method is used, \( f \) is approximated as 0.8.

Calculation of the Standard Scenario Amount

Standard Scenario for C-3 Phase II Risk Based Capital (RBC) Determination

1. Overview

   A) Application to Determine RBC:

   A Standard Scenario Amount shall be determined for all of the contracts under the scope described in the June 2005 report, “Recommended Approach for Setting Risk-Based Capital Requirements for Variable Annuities and Similar Products”. If the Standard Scenario Amount is greater than the Total Asset Requirement less any amount included in the TAR but attributable to and allocated to C-3 (Interest Rate Risk) otherwise determined based on the Report, then the Total Asset Requirement before tax adjustment used to determine C-3 Phase II (Market Risk) RBC shall be the Standard Scenario Amount.

   The Standard Scenario Amount shall be the sum of the following:

   1. For contracts for which RBC is based on the Alternative Methodology applied without a model office using 100 percent of the MGDB mortality table, the Standard Scenario Amount shall be the sum of the total asset requirement before tax adjustment from the Alternative Methodology applied to such contracts.

   2. For contracts without guaranteed death benefits for which RBC is based on the Alternative Methodology applied without a model office, the Standard Scenario Amount shall be the sum of the total asset requirements before tax adjustment from the Alternative Methodology applied to such contracts.

   3. For contracts under the scope of the Report other than contracts for which paragraphs 1 and 2 apply, the Standard Scenario Amount is determined by use of The Standard Scenario Method described in Section III. The Standard Scenario Method requires a single projection of account values based on specified returns on the assets supporting the account values. On the valuation date an initial drop is applied to the account values based on the supporting assets. Subsequently, account values are projected at the rate earned on supporting assets less a margin. Additionally, the projection includes the cash flows for certain contract provisions, including any guaranteed living and death benefits using the assumptions in Section III. Thus, the calculation of the Standard Scenario Amount will reflect the greatest present value of the accumulated projected cost of guaranteed benefits less the accumulated projected revenue produced by the margins in accordance with Subsection III (D).

B) The Standard Scenario Amount under the Standard Scenario Method

The Standard Scenario Amount for all contracts subject to the Standard Scenario Method is determined as of the valuation date under the Standard Scenario Method described in Section III based on a rate, \( DR \). \( DR \) is the annual effective equivalent of the 10-year constant maturity treasury rate reported by the Federal Reserve for the month of valuation plus 50 basis points. However, \( DR \) shall not be less than 3 percent or more than 9 percent. If the 10-year constant maturity treasury rate is no longer available, then a substitute rate determined by the National Association of Insurance Commissioners shall be used. The accumulation rate, \( AR \), is the product of \( DR \) and one minus the tax rate defined in paragraph III(D)(10).
No modification is allowed from the requirements in Section III unless the Domiciliary Commissioner approves such modification as necessary to produce a reasonable result.

C) Illustrative Application of the Standard Scenario Method to a Projection, Model Office and Contract by Contract

To provide information on the significance of aggregation, a determination of the Standard Scenario Amount based on paragraphs III(B)(1) and III(B)(2) is required for each contract subject to paragraph I(A)(3). The sum of all such Standard Scenario Amounts is described as row B in Table A. In addition, if the Conditional Tail Expectation Amount in the Report is determined based on a projection of an inforce prior to the statement date and/or by the use of a model office, which is a grouping of contracts into representative cells, then additional determinations of the Standard Scenario Amount shall be performed on the prior inforce and/or model office. The calculations are for illustrative purposes to assist in validating the reasonableness of the projection and/or model office and to determine the significance of aggregation.

Table A identifies the Standard Scenario Amounts required by this section. The Standard Scenario Amounts required are based on how the Conditional Tail Expectation projection or Alternative Methodology is applied. For completeness, the table also includes the Standard Scenario Amount required by paragraph I(A)(3). The amounts in Table A should be included as part of the certifying actuary’s annual supporting memorandum specified in paragraph (H) of the “Calculation of the Total Asset Requirement” section of the RBC instructions.

- Standard Scenario Amounts in rows A and B in Table A are required of all companies subject to paragraph I(A)(3). No additional Standard Scenario Amounts are required if a company’s stochastic or alternative methodology result is calculated on the statement date using individual contracts (i.e., without a model office).
- A company that uses a model office as of the statement date to determine its stochastic or alternative methodology result must provide the Standard Scenario Amount for the model office. This is row C.
- A company that uses an aggregation by duration of contract by contract projection of a prior inforce to determine its stochastic or alternative methodology with result PS and then projects requirements to the statement date with result S must provide the Standard Scenario Amount for the prior inforce, row D.
- A company that uses a model office of a prior inforce to determine its stochastic or alternative methodology requirements with result PM and then projects requirements to the statement date with result S must provide the Standard Scenario Amount for the model office on the prior inforce date, row E.

<td>If not material to model office or projection validation</td>
<td>(A/E – S/PM) compare to 0</td>
<td></td>
</tr>
</tbody>
</table>

Modification of the requirements in Section III when applied to a prior inforce or a model office is permitted if such modification facilitates validating the projection of inforce or the model office. All such modifications should be documented. No modification is allowed for row B as of the statement date unless the Domiciliary Commissioner approved such modification as necessary to produce a reasonable result under the corresponding amount in row A.

II) Basic Adjusted Reserve

For purposes of determining the Standard Scenario Amount for Risk-Based Capital, the Basic Adjusted Reserve for a contract shall be the Working Reserve, as described in the Report, as of the valuation date.

III) Standard Scenario Amount – Application of the Standard Scenario Method

A) General

Where not inconsistent with the guidance given here, the process and methods used to determine results under the Standard Scenario Method shall be the same as required in the calculation under the modeling methodology required by the Report. Any additional assumptions needed to apply the Standard Scenario Method to the inforce shall be explicitly documented.
B) Results for the Standard Scenario Method.

The Standard Scenario Amount is equal to (1) + (2) – (3) where:

1) Is the sum of the Basic Adjusted Reserve as described in Section II for all contracts for which the Standard Scenario Amount is being determined,

2) Is zero or if greater the aggregate greatest present value for all contracts measured as of the end of each projection year of the negative of the Accumulated Net Revenue described below using the assumptions described in Subsection III(D) and a discount rate equal to the Accumulation Rate, AR. The Accumulated Net Revenue at the end of a projection year equals (i) + (ii) – (iii) where:

(i) Is the Accumulated Net Revenue at the end of the prior projection year accumulated at the rate AR to the end of the current projection year. The Accumulated Net Revenue at the beginning of the projection (i.e., time 0) is zero.

(ii) Are the margins generated during the projection year on account values as defined in paragraph III(D)(1) multiplied by one minus the tax rate and accumulated at rate AR to the end of current projection year, and

(iii) Are the contract benefits paid in excess of account value applied plus the Individual reinsurance premiums (ceded less assumed) less the Individual reinsurance benefits (ceded less assumed) payable or receivable during the projection year multiplied by one minus the tax rate and accumulated at rate AR to the end of current projection year. Individual reinsurance is defined in paragraph III(D)(2).

3) Is the value of approved hedges and Aggregate reinsurance as described in paragraph III(E)(2). Aggregate reinsurance is defined in paragraph III(D)(2).

C) The actuary shall determine the projected reinsurance premiums and benefits reflecting all treaty limitations and assuming any options in the treaty to the other party are exercised to decrease the value of reinsurance to the reporting company (e.g., options to increase premiums or terminate coverage). The positive value of any reinsurance treaty that is not guaranteed to the insurer or its successor shall be excluded from the value of reinsurance. The commissioner may require the exclusion of any portion of the value of reinsurance if the terms of the reinsurance treaties are too restrictive (e.g., time or amount limits on benefits correlate to the Standard Scenario Method).

D) Assumptions for Paragraph III (B) (2) Margins and Account Values.

1) Margins on Account Values. The bases for return assumptions on assets supporting account values are shown in Table I. The initial returns shall be applied to the account values assigned to each asset class on the valuation date as immediate drops, resulting in the Account Values at time 0. The “Year 1” and “Year 2+” returns are gross annual effective rates of return and are used (along with other decrements and/or increases) to produce the Account Values as of the end of each projection year. For purposes of this section, money market funds shall be considered part of the Bond class.

The Fixed Fund rate is the greater of the minimum rate guaranteed in the contract or 3.5 percent but not greater than the current rates being credited to Fixed Funds on the valuation date.

Account Values shall be accumulated after the initial drop using the rates from Table 1 with appropriate reductions applied to the supporting assets. The appropriate reductions for account values supported by assets in the Equity, Bond or Balance Classes are all fund and contract charges according to the provisions of the funds and contracts. The appropriate reduction for Account Values supported by Fixed Funds is zero.
The margins on Account Values are defined as follows:

a) During the Surrender Charge Period:
   i. 0.10% of Account Value; plus
   ii. The maximum of:
      - 0.20% of Account Value; or
      - Explicit and optional contract charges for guaranteed living and death benefits.

b) After the Surrender Charge Period:
   i. The amount determined in (a) above; plus
   ii. The lesser of:
      - 0.65% of Account Values; and
      - 50% of the excess, if any, of all contract charges over (a) above.

However, on fixed funds after the surrender charge period, a margin of up to the amount in (a) above plus 0.4% may be used.

</tr>
</tbody>
</table>

3) Reinsurance Credit: Individual reinsurance is defined as reinsurance where the total premiums for and benefits of the reinsurance can be determined by applying the terms of the reinsurance to each contract covered without reference to the premiums or benefits of any other contract covered and summing the results over all contracts covered. Reinsurance that is not individual reinsurance is Aggregate reinsurance.

Individual reinsurance premiums projected to be payable on ceded risk and receivable on assumed risk shall be included in subparagraph III(B)(2)(iii). Similarly, Individual reinsurance benefits projected to be receivable on ceded risk and payable on assumed risk shall be included in subparagraph III(B)(2)(iii). No Aggregate reinsurance shall be included in subparagraph III(B)(2)(ii).
3) Lapses, Partial Withdrawals, and Moneyness. Partial withdrawals elected as guaranteed living benefits or required contractually (e.g., a contract operating under an automatic withdrawal provision on the valuation date) are to be included in subparagraph III(B)(2)(iii). No other partial withdrawals, including free partial withdrawals, are to be included. All lapse rates shall be applied as full contract surrenders.

A contract is in the money (ITM) if it includes a guaranteed living benefit and at any time the portion of the future projected account value under the Standard Scenario Method required to obtain the benefit would be less than the value of the guaranteed benefit at the time of exercise or payment. If the projected account value is 90 percent of the value of the guaranteed benefit at the time of exercise or payment, the contract is said to be 10 percent in the money. If the income from applying the projected account value to guaranteed purchase rates exceeds the income from applying the projected benefit base to GMIB purchase rates for the same type of annuity, then there is no GMIB cost and the GMIB is not in the money. A contract not in the money is out of the money (OTM). If a contract has multiple living benefit guarantees then the contract is ITM to the extent that any of the living benefit guarantees are ITM. Lapses shall be at the annual effective rates given in Table II.

</tr>
<tr>
<td>Any Other Guaranteed Living Benefits ITM</td>
</tr>
</tbody>
</table>

4) Account Transfers and Future Deposits. No transfers between funds shall be assumed to determine the greatest present value amount required under paragraph III(B)(2) unless required by the contract (e.g., transfers from a dollar cost averaging fund or contractual rights given to the insurer to implement a contractually specified portfolio management strategy or a contract operating under an automatic re-balancing option). When transfers must be modeled, to the extent not inconsistent with contract language, the allocation of transfers to funds must be in proportion to the contract’s current allocation to funds.

Margins generated during a projection year on funds supporting account values are transferred to the Accumulation of Net Revenue at year-end and are subsequently accumulated at the Accumulation Rate. Assets for each class supporting account values are to be reduced in proportion to the amount held in each asset class at the time of transfer of margins or any portion of Account Value applied to the payment of benefits.

No future deposits shall be assumed unless required by the terms of the contract to prevent contract or guaranteed benefit lapse, in which case they must be modeled. When future deposits must be modeled, to the extent not inconsistent with contract language, the allocation of the deposit to funds must be in proportion to the contract’s current allocation to funds.

5) Mortality. Mortality at 80 percent of the 1994 MGDB tables through age 95 increasing by 1 percent each year to 100 percent of the 1994 MGDB table at age 115 shall be assumed in the projection used to determine the greatest present value amount required under paragraph III(B)(2).
6) Projection Frequency. The projection used to determine the greatest present value amount required under paragraph III(B)(2) shall be calculated using an annual or more frequent time step, such as quarterly. For time steps more frequent than annual, assets supporting Account Values at the start of each projection year may be retained in such funds until year-end (i.e., pre-tax margin earned during the year will earn the fund rates instead of the Discount Rate until year-end) or removed after each time step. However, the same approach shall be applied for all years. Subsequent to each projection year-end, Accumulated Net Revenues for the year shall earn the Accumulation Rate. Similarly, projected benefits, lapses, elections, and other contract activity can be assumed to occur annually or at the end of each time step, but the approach shall be consistent for all years.

7) Surrender Charge Period. If the surrender charge for the contract is determined based on individual contributions or deposits to the contracts, the surrender charge amortization period may be estimated for projection purposes. Such estimated period shall not be less than the remaining duration based on the normal amortization pattern for the remaining total contract charge assuming it resulted from a single deposit, plus one year.

8) Contract Holder Election Rates. Contract holder election rates to determine amounts in subparagraph III(B)(2)(iii) shall be 15 percent per annum for any elective ITM benefit except guaranteed withdrawal benefits, but only to the extent such election does not terminate a more valuable benefit subject to election. Guaranteed Minimum Death Benefits are not benefit subject to election. Exception: Contract holder election rates shall be 100 percent at the last opportunity to elect an ITM benefit, but only to the extent the such election does not terminate a more valuable benefit subject to election. A benefit is more valuable if it is more ITM in absolute dollars using the definition of ITM in paragraph III(D)(3).

For guaranteed minimum withdrawal benefits, a partial withdrawal equal to the applicable percentage in Table III applied to the contract’s maximum allowable partial withdrawal shall be assumed in subparagraph III(B)(2)(iii). However, if the contract’s minimum allowable partial withdrawal exceeds the partial withdrawal from applying the rate in Table III to the contract’s maximum allowable partial withdrawal, then the contract’s minimum allowable partial withdrawal shall be assumed in subparagraph III(B)(2)(iii).

</tr>
</tbody>
</table>

9) GMIB. For subparagraph III(B)(2)(iii), GMIB cost at the time of election shall be the excess, if positive, of the reserve required for the projected annuitization stream over the available account value. If the reserve required is less than the account value, the GMIB cost shall be zero. The reserve required shall be determined using the Annuity 2000 Mortality Table and a valuation interest rate equal to the Discount Rate. If more than one annuity option is available, choose the option with a reserve closest to the reserve for a life annuity with 10 years of certain payments.

10) Indices. If an interest index is required to determine projected benefits or reinsurance obligations, the index must assume interest rates have not changed since the last reported rates before the valuation date. If an equity index is required, the index shall be consistent with the last reported index before the valuation date, the initial drop in equity returns, and the subsequent equity returns in the standard scenario projection up to the time the index is used. The sources of information and how the information is used to determine indexes shall be documented and, to the extent possible, consistent from year to year.

11) Taxes. All taxes shall be based on the enacted maximum federal corporate income tax rate.

E) Assumptions for use in paragraph III (B) (3).
1) The Value of Aggregate Reinsurance. The value of Aggregate reinsurance is the discounted value, at rate AR, of the excess of: a) the benefit payments from the reinsurance, over b) the reinsurance premiums, where (a) and (b) are determined under the assumptions described in Subsection III(D).

2) The Value of Approved Hedges. The value of approved hedges shall be calculated separately from the calculation in paragraph III(B)(2). The value of approved hedges is the difference between: a) the discounted value at rate AR of the after-tax cash flows from the approved hedges; less b) their statement values on the valuation date.

To be an approved hedge, a derivative or other investment has to be an actual asset held on the valuation date, be designated as a hedge for one or more contracts subject to the Standard Scenario, and be part of a clearly defined hedging strategy as described in the Report. If the approved hedge also supports contracts not subject to the Standard Scenario, then only that portion of the hedge designated for contracts subject to the Standard Scenario shall be included in the value of approved hedges. Approved hedges must be held in accordance with an investment policy that has been implemented for at least six months, and has been approved by the Board of Directors or a subcommittee of Board members. A copy of the investment policy and the resolution approving the policy shall be maintained with the documentation of the Standard Scenario and available on request. Approved hedges must be held in accordance with a written investment strategy developed by management to implement the Board’s investment policy. A copy of the investment strategy on the valuation date, the most recent investment strategy presented to the Board if different and the most recent written report on the effectiveness of the strategy shall be maintained with the documentation of the Standard Scenario and available on request.

The commissioner may require the exclusion of any portion of the value of approved hedges upon a finding that the company’s documentation, controls, measurement, execution of strategy, or historical results are not adequate to support a future expectation of risk reduction commensurate with the value of approved hedges.

The item being hedged, the contract guarantees, and the approved hedges are assumed to be accounted for at the average present value of the tail scenarios. The value of approved hedges for the standard scenario is the difference between an estimate of this “tail value” and the “fair value” of approved hedges. For this valuation to be consistent with the statement value of approved hedges, the statement value of approved hedges will need to be held at fair value with the immediate recognition of gains and losses. Accordingly, it is assumed that approved hedges are not subject to the IMR or the equity component of the AVR. Approved hedges need not satisfy SSAP No. 86. In particular, as gains and losses of approved hedges are recognized immediately, approved hedges need not satisfy the requirements for hedge accounting of fair value hedges.

It is the combination of hedges and liabilities that determine which scenarios are the tail scenarios. In particular, scenarios where the hedging is least effective are likely to be tail scenarios and liabilities that are a left tail risk could in combination with hedges become a right tail risk.

The cash flow projection for approved hedges that expire in less than one year from the valuation date should be based on holding the hedges to their expiration. For hedges with an expiration of more than one year, the value of hedges should be based on liquidation of the hedges one year from the valuation date. Where applicable, the liquidation value of hedges shall be consistent with Black-Scholes pricing, a risk-free rate of DR, annual volatility implicit as of the valuation date in the statement value of the hedges under Black-Scholes pricing and a risk-free rate of DR and the assumed returns in the Standard Scenario from the valuation date to the date of liquidation.

There is no credit in the Standard Scenario for dynamic hedging beyond the credit that results from hedges actually held on the valuation date. There is no credit for hedges actually held on the valuation date that are not approved hedges as the commitment to maintain the level of risk reduction derived from such hedges is not adequate.

3) Retention of Components. For the Standard Scenario Amounts on the statement date the company should have available to the Commissioner the following values:
   a) For runs A and B as defined in I(C) by contract and in aggregate the amounts determined in III(E)(1) and III(E)(2);
   b) For run A the aggregate amounts determined in III(E)(1) and III(E)(2).

Smoothing and Transition Rules
1. Determine the Total Asset Requirement as the greater of that produced by the “Recommended Approach for Setting Risk-Based Capital Requirements for Variable Annuities and Similar Products” presented by the American Academy of Actuaries’ Life Capital Adequacy Subcommittee to the National Association of Insurance Commissioner’s Capital Adequacy Task Force (June 2005) for the definition of this phrase) or some or all of its business, a decision should be made whether or not to smooth the TAR. In all cases, where ‘cash value’ is to be used, the values used must be computed on a consistent basis for each block of business at successive year-ends. For deferred annuities with a cash value option, direct writers will use the cash value. For deferred annuities with no cash value option, or for reinsurance assumed through a treaty other than coinsurance, use the policy holder account value of the underlying contract. For payout annuities, or other annuities with no account value or cash value, use the amount as defined for variable payout annuities in the definition of Working Reserve. For any property insurance, use the policy holder account value of the underlying contract. For any business reinsured under a coinsurance agreement that complies with all applicable reinsurance reserve credit “transfer of risk” requirements, the ceding company shall reduce the value in proportion to the business ceded while the assuming company shall use an amount consistent with the business assumed.

A company who reported an amount in Line (37) last year may choose to smooth the Total Asset Requirement. A company is required to get approval from its domestic regulator prior to changing its decision about smoothing from the prior year. To implement smoothing, use the following steps. If a company does not qualify to smooth or a decision has been made not to smooth, go to the step “Reduction for Reported Statutory Reserves.”

Instructions—2007 and Later

1. Determine the Total Asset Requirement as the greater of that produced by the “Recommended Approach for Setting Risk-Based Capital Requirements for Variable Annuities and Similar Products” presented by the American Academy of Actuaries’ Life Capital Adequacy Subcommittee to the National Association of Insurance Commissioner’s Capital Adequacy Task Force (June 2005) or the value produced by the “Standard Scenario” as outlined above.

2. Determine the aggregate cash value for the contracts covered by the Stochastic modeling requirements.

3. Determine the ratio of TAR / CV for current year.

4. Determine the Total Asset Requirement as actually reported for the prior year Line (37).

5. Determine the aggregate cash value for the same contracts for the prior year-end.

6. Determine the ratio of TAR / CV for prior year.

7. Determine a ratio as 0.4*(6) plus 0.6*(3) {40% prior year ratio and 60% current year ratio}.

8. Determine TAR for current year as the product of (7) and (2) {adjust (2) to be actual 12/31 cash value}.

Reduction for Reported Statutory Reserves

The amount of the TAR (post Federal Income Tax) determined using the instructions for the applicable year is reduced by the reserve, net of reinsurance, for the business subject to this instruction reported in the current statutory annual statement.

Allocation of Results to Line (35) and Line (37)

See step (9) located in the overview section at the beginning of the instructions for this line.
Cash Flow Modeling for the C-3 RBC Requirements for Variable Annuities and Similar Products: Instructions for 2020 & Later

Drafting Note: in the material that follows, Oliver Wyman’s proposed instructions are modified to present a more understandable requirement, but the only changes to actual requirements are for: C. Alternative Methodology, E. Phase-in, F. Smoothing, and I. Format of documentation.

The Receivership and Insolvency (E) Task Force met via conference call Aug. 7, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by James Kennedy (TX); Karima M. Woods, Vice Chair (DC); Alan McClain represented by Steve Uhrynowycz (AR); Ricardo Lara represented by Joe Holloway (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); David Altmaier represented by Toma Wilkerson (FL); Doug Ommen represented by Kim Cross (IA); Robert H. Muriel represented by Kevin Baldwin (IL); Vicki Schmidt represented by Chut Tee (KS); Sharon P. Clark represented by Rodney Hugle (KY); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Anita G. Fox represented by James Gerber (MI); Chlora Lindley-Myers represented by Debbie Doggett and Shelley Forrest (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Glen Mulready represented by Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker (PA); Elizabeth Kelleher Dwyer and Matt Gendron (RI); Raymond G. Farmer represented by Ryan Basnett (SC); Hodgen Mainda represented by Patrick Merkel (TN); and Todd E. Kiser represented by Jake Garn (UT).

1. **Adopted its March 4, Jan. 8, and 2019 Fall National Meeting Minutes**

Ms. Cross made a motion, seconded by Ms. Wilson, to adopt the Task Force’s March 4, Jan. 8 (Attachment One), and 2019 Fall National Meeting (see NAIC Proceedings – Fall 2019, Receivership and Insolvency (E) Task Force) minutes. The motion passed unanimously.

2. **Adopted Revisions to the Receiver’s Handbook for Insurance Company Insolvencies**

Ms. Slaymaker made a motion, seconded by Mr. Baldwin, to adopt the Receiver’s Handbook for Insurance Company Insolvencies for federal taxes and federal releases (Attachment Two). The motion passed unanimously.

Ms. Wilson said the Receivership Financial Analysis (E) Working Group met Aug. 4 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings to discuss the status of individual receiverships and related issues. Ms. Wilson made a motion, seconded by Ms. Wilkerson, to adopt the Working Group’s report. The motion passed unanimously.

4. **Adopted the Report of the Receivership Large Deductible Workers’ Compensation (E) Working Group**

Ms. Slaymaker said the Receivership Large Deductible Workers’ Compensation (E) Working Group met March 2 and took the following action: 1) received comments on a draft model guideline that provides alternative language for the Insurer Receivership Model Act Section 712—Administration of Loss Reimbursement Policies; and 2) formed a drafting group to address comments received. The drafting group and the Working Group will reconvene after the national meeting. Ms. Slaymaker made a motion, seconded by Mr. Wake, to adopt the Working Group’s report, including its March 2 minutes (Attachment Three). The motion passed unanimously.

5. **Exposed Key Provisions of Receivership and Guaranty Fund Laws**

Mr. Kennedy discussed the Task Force’s response to the Macroprudential Initiative (MPI). The Task Force received comments on key provisions of receivership and guaranty fund laws that states should consider adopting into their laws, particularly with respect to receiverships of insurers operating in multiple states. The Task Force discussed the comments on its March 4 conference call. He said the key provisions identified in comments will be exposed for a 30-day public comment period ending Sept. 8 for state insurance regulators and interested parties to provide additional feedback for each provision (Attachment Four). The Task Force requests comments on each key provision as follows: 1) if it is critical for all states to have in receivership and guaranty fund law in a receivership affecting multiple states; 2) if it should be considered for a limited scope accreditation standard; 3) if other methods should be used to encourage its adoption; and 4) if there are impediments to its adoption.
6. **Heard a Presentation on Cyber Claims in Receivership**

Roger H. Schmelzer (National Conference of Insurance Guaranty Funds—NCIGF), Chad Anderson (Western Guaranty Fund Services—WGFS), and Tim Schotke (Illinois Insurance Guaranty Fund—IIGF) gave a presentation on the NCIGF’s white paper, *Insurance Resolution: Preparing for Cyber Claims*, which is located on the NCIGF’s webpage.

Mr. Schotke said there is more risk in cyberinsurance due to lack of pricing and loss experience. He said cyberinsurance is operationally very different from any other business that guaranty funds deal with, such as indemnity provisions and in-kind services; therefore, receivers need to be prepared. There may be tasks that receivers are not prepared to provide, such as restoring system and forensic work. Mr. Anderson said these policies are complicated and inconsistent and there is little standardization. He said guaranty associations are aiming to be prepared for potential issues in the future. He said guaranty associations are looking for state insurance regulators and receivers to acknowledge potential issues with cyber claims in a receivership and engage in early communication with guaranty funds when an insurer that writes cyber policies becomes troubled. Guaranty associations are looking to put together a group of experts as contacts, if needed, such as forensic experts. Guaranty associations will also be internally evaluating potential claims or other issues. Mr. Schmelzer said guaranty associations are open and eager to work in advance with state insurance regulators and receivers on potential issues with a receivership of cyberinsurance.

7. **Heard an Update on International Resolution Activities**

Mr. Kennedy reported that the International Association of Insurance Supervisors (IAIS) Resolution Working Group (ReWG) met via conference call in April 2020 to continue development of the *Application Paper on Resolution Planning*. The ReWG expects to finalize the draft of the application paper at a conference call in September 2020. The draft paper is expected to be exposed for consultation in November 2020.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
The Receivership and Insolvency (E) Task Force met via conference call March 4, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by James Kennedy (TX); Karima M. Woods, Vice Chair, represented by N. Kevin Brown (DC); Lori K. Wing-Heier represented by David Phifer (AK); Allen W. Kerr represented by Steve Uhrynowycz (AR); Ricardo Lara represented by David Wilson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jon Arsenault (CT); David Altmaier represented by Toma Wilkerson (FL); Doug Ommen represented by Karen Cross (IA); Robert H. Muriel represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary Anderson represented by Christopher Joyce (MA); Chlora Lindley-Myers (MO); Matthew Rosendale represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Lindsay Crawford (NE); Glen Muleady represented by Donna Wilson (OK); Jessica K. Altman represented by Laura Lyon Slaymaker and Crystal McDonald (PA); Raymond G. Farmer represented by Geoffrey Bonham (SC); Hodgen Mainda represented by Nikita Hampton (TN); and Todd E. Kiser represented by Jake Garn (UT).

1. Discussed Comments on Key Provisions of Receivership and Guaranty Fund Laws

Mr. Kennedy said that as part of the Task Force’s response to the Macroprudential Initiative (MPI), during its conference call on Jan. 8, the Task Force requested comments on key provisions of receivership and guaranty fund laws that states should consider adopting into their laws, particularly with respect to receiverships of insurers operating in multiple states.

Mr. Kennedy summarized the comments received from Missouri, Pennsylvania, Texas, the American Council of Life Insurers (ACLI), the National Conference of Insurance Guaranty Funds (NCIGF), and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) (Attachment One-A).

Barbara Cox (NCIGF) said she disagrees with the comment from Pennsylvania that all states should have uniform property/casualty (P/C) guaranty fund limits as there may be local variation between states—for example, home values. The claim cap in one state may not be appropriate in another state, so some difference in claim caps is probably appropriate for P/C business. Ms. McDonald said the Pennsylvania comment was regarding medical malpractice insurance.

Bill O’Sullivan (NOLHGA) said on the life side, there has been good success in states updating their laws to adopt the provisions of Life and Health Insurance Guaranty Association Model Act (#520). He said 28 states have adopted the 2017 revisions to the Model #520, and another nine states are expected to propose revisions in 2020. He said NOLHGA would have concerns if Model #520 were further revised as it may create delays in states adopting the 2017 revisions. He said NOLHGA has not identified any significant issues that would require amendments to Model #520. He said NOLHGA has not discussed consideration of changes to accreditation standards. He said it would be complicated to identify the standards and to compare them to states’ laws.

Wayne Mehlman (ACLI) said an ad hoc committee of the ACLI has had these comments under consideration. He said the comments address holistic improvements to the system rather than specific provisions. Ms. Wilkerson asked for clarification on ACLI’s comment related to timing of orders of liquidation. Mr. Mehlman said the intent was to address the length of time a rehabilitation order can continue as the administrative expenses of receivership consume resources before liquidation. Mr. Kennedy said Texas had a provision that imposed a deadline for closing a rehabilitation, but it created many legal problems, was unworkable and was repealed. He said there may be other ways to address the issue other than time limits in state statutes.

Mr. Kennedy said NAIC staff would circulate a list of the items identified in the comment letters to all members, interested state insurance regulators and interested parties and request feedback on each item: 1) agree or disagree to include the item in a response to the Financial Stability (EX) Task Force that this provision(s) is critical for states to have in law for a multi-jurisdiction receivership as it addresses financial stability concerns in resolution; and 2) agree or disagree that this provision(s) is critical for states to have in law for a multi-jurisdiction receivership and should be considered in further discussions regarding a possible update to accreditation standards. He requested responses by March 13.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.
The Receivership and Insolvency (E) Task Force met via conference call Jan. 8, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by James Kennedy (TX); Stephen C. Taylor, Vice Chair, represented by N. Kevin Brown (DC); Allen W. Kerr represented by Steve Uhrynowycz (AR); Ricardo Lara represented by Joe Holloway and David Wilson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jon Arsenault (CT); David Altmaier represented by Toma Wilkerson (FL); Doug Ommen represented by Carrie Mears and Kim Cross (IA); Robert H. Muriel represented by Kevin Baldwin (IL); Vicki Schmidt represented by Paige Blevins (KS); Gary Anderson represented by Christopher Joyce (MA); Chlora Lindley-Myers represented by John Rehagen (MO); Matthew Rosendale represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge represented by Justin Schrader and Lindsay Crawford (NE); Glen Mulready represented by Donna Wilson (OK); Jessica Altman represented by Laura Lyon Slaymaker (PA); Raymond G. Farmer represented by Lee Hill (SC); Hodgen Mainda represented by Bill Huddleston (TN); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); and Mike Kreidler represented by Ron Pastuch (WA).

1. **Adopted a Referral to the Financial Condition (E) Committee**

Mr. Kennedy said at the 2019 Fall National Meeting, the Task Force discussed requesting that the Financial Condition (E) Committee consider opening the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) to consider revisions to address issues with the continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company, specifically agreements with affiliated entities whose sole business purpose is to provide services to the insurance company.

Iain Nasatir (Pachulski Stang Ziehl & Jones) asked if the Task Force had considered if such changes to Model #440 would conflict with federal laws, such as the McCarran-Ferguson Act or the federal bankruptcy law. Mr. Kennedy said that future discussions will include potential conflicts with other laws.

Mr. Kaumann made a motion, seconded by Mr. Hill, to adopt the referral to the Financial Condition (E) Committee (Attachment One-B). The motion passed unanimously.

2. **Requested Comments on Key Provisions of Receivership and Guaranty Fund Laws**

Mr. Kennedy said that as part of the Macroprudential Initiative (MPI), a recommendation was adopted by the Task Force to consider methods to encourage states to adopt provisions in receivership and guaranty fund laws that promote effectiveness and consistency, particularly with respect to receiverships of insurers operating in multiple states.

Mr. Kennedy requested that Task Force members, interested state insurance regulators, and interested parties submit suggestions for a list of key provisions that states should have in their laws to promote effectiveness and consistency in receiverships affecting multiple states. Comments should be submitted to Jane Koenigsman (NAIC) by Feb. 7, 2020.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

Receivership and Insolvency (E) Task Force
Conference Call
January 8, 2020
MISSOURI COMMENTS

Sent: Friday, February 7, 2020 2:49 PM
Subject: Comments on Key Provisions of Receivership Laws

You requested suggestions for a list of key provisions that states should have in its laws to promote effectiveness and consistency in receiverships impacting multiple states. I suggest that states consider adding provisions relating to the following:

1. **Conflicts of Law.** Please see the Insurer Receivership Model Act (MDL-555), Section 102. Conflicts of Law. “This Act, Title [XXX], and the state insurance guaranty association acts constitute this state’s insurer receivership laws, and these laws shall be construed together in a manner that is consistent. In the event of a conflict between the insurer receivership laws and the provisions of any other law, the insurer receivership laws shall prevail.”

2. **Police and Regulatory Exception to Stay.** The Bankruptcy Code includes certain exceptions to the automatic stay, including an exception for a governmental unit to enforce such governmental unit’s police or regulatory power. See 11 U.S.C. §362(b)(4). States should consider including such an exception to receivership statutes relating to injunctions and orders. Section 108 of the MDL-555 relates to Injunctions and Orders. Including an exception to the stay provision would confirm for states that an action by an insurance department, while exercising its regulatory powers against a license of an insurance company in a receivership case pending in a different state, is not stayed by the commencement of a receivership proceeding.

Please let me know if you would like additional information about the foregoing.

Best regards,

Shelley L. Forrest
Receivership Counsel
Missouri Department of Commerce and Insurance
Suggestions from Pennsylvania focus on three different areas where we feel there is a lack of effectiveness and consistency in receiverships that impact multiple states. The biggest inconsistency is the recognition of stays and the failure to give full faith and credit when lawsuits are pending in states that are not the domestic state. Obviously in Pennsylvania we view the Warrantech issue and over the cap payments to claimants to be a large issue. Lastly the Model Act 520 did a lot to change inconstancies on the life and health side but we view the varying property and casualty GA limits across the country as an issue and something to possibly be addressed.

If there is anything else you need from me do not hesitate to reach out.

Best,

Crystal McDonald

Crystal D. McDonald, Esquire | Project Director
Insurance Department | Office of Liquidations, Rehabilitations and Special Funds
Insurer Receivership Model Act Key Provisions

Article X. Interstate Relations

Article X was drafted to resolve issues that arise in receiverships impacting multiple states. The enactment of these provisions would enhance the efficiency and effectiveness of receiverships.

Section 1001 provides for an ancillary conservation of foreign insurers. The adoption of this section would avoid unnecessary ancillary receiverships. In some cases, ancillary receiverships can increase the costs of administration while providing little or no benefit to policyholders.

Section 1002 deals with domiciliary receivers in other states, and addresses two important issues:

- It ensures that other states’ receivership statutes and court orders are given full faith and credit. This promotes a uniform application of laws and orders in receivership proceedings. It also avoids any criteria for determining whether another state qualifies as a “reciprocal state”, which is inconsistent in existing statutes. In 2017, the NAIC Financial Condition Committee encouraged states to enact laws according full faith and credit to stays and injunctions entered in other states’ receivership proceedings. This recommendation also suggested that states consider adopting the stay provisions of the more recent NAIC models (See IRMA §108).

- It provides for the disposition of deposits held for an insurer placed in receivership, and ensures that they are available to the receivership estate or guaranty associations, as applicable. This can avoid a situation where deposits languish due to statutory ambiguities or inconsistencies.

Section 102. Conflicts of Law

This section provides that the Insurer Receivership Act and state insurance guaranty association acts shall prevail in the event of a conflict with other laws. This is an important principle, as these laws must control over general laws governing insurers.

Section 502. Continuance of Coverage

This section governs the continuation of coverage under policies when a liquidation order is entered. Section 502 D specifies that insurance policies or annuities covered by a life and health insurance guaranty association continue in force after the entry of a liquidation order. This provision is critical in a liquidation of a life or health insurer, as it ensures that such policies are not automatically terminated as a result of a liquidation order. Section 502 B also permits the Liquidator, with court approval, to set the date on which policies not covered by a life and health insurance guaranty association are canceled. This gives the Liquidator flexibility to deal with situations where the default 30-day period might not be appropriate.

Section 801. Priority of Distribution

The priority scheme governing the distribution of assets must comport with the Supreme Court’s decision in United States Department of Treasury v. Fabe.

Guideline for Implementation of State Orderly Liquidation Authority

The NAIC Receiver’s Handbook for Insurance Company Insolvencies addresses the implementation of a receivership in the event of a proceeding under Title II of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Title II). It includes a guideline for initiating a receivership in connection with a proceeding under Title II. A receivership act should include
TEXAS COMMENTS

authority similar to the guideline to ensure that expeditious action can be taken if there is a proceeding under Title II.

RE: List of Key Provisions to Promote Effectiveness and Consistency
in State Receivership and Guaranty Association Laws

Dear Chairman Kennedy:

The American Council of Life Insurers ("ACLI")\(^1\) appreciates this opportunity to respond to the Task Force’s request for a list of key provisions that states should adopt in its receivership and guaranty association laws in order to promote effectiveness and consistency, particularly with regard to multi-state receiverships.

The ACLI believes that both the state receivership and guaranty association systems have operated very efficiently and effectively since their inception and that there is a high degree of consistency among the states, particularly with regard to state guaranty association laws.

That being said, there is always room for improvement, which is why we are recommending a list of potential improvements. We are not, however, seeking to “open up” either the receivership or guaranty association models to revisions or additional provisions, though we are suggesting some amendments to the Insurance Holding Company System Regulatory Act which the Task Force is currently looking to revise.

Instead, we are seeking more holistic ways of improving the overall receivership and guaranty association systems and related state laws, including those pertaining to the timing, administration and costs of rehabilitations and liquidations, as well as to the judiciary and the NAIC.

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States. Learn more at www.acli.com.

American Council of Life Insurers
101 Constitution Avenue, NW, Washington, DC 20001-2133
(202) 624-2135  waynemehlman@acli.com
Below is a list of our suggested improvements:

- Encourage all states to adopt the NAIC’s recently-revised *Life and Health Insurance Guaranty Association Model Act*

- Create a NAIC accreditation standard that would require states to adopt, in a “functionally consistent” manner, the *Life and Health Insurance Guaranty Association Model Act*

- Align our receivership and guaranty association laws as they relate to life and health reinsurance

- Promote least-cost resolution at the administrative level and in the early stages of judicial proceedings

- Limit how long a receivership proceeding can be left open (since administration expenses can consume considerable resources)

- Address the timing of orders of liquidations

- Limit judicial discretion regarding a regulator’s petition for rehabilitation or liquidation

- Create a designated receivership court in every state

- Provide standardized judicial education on the receivership process

- Strengthen the NAIC’s Financial Analysis Working Group (FAWG) and Receivership Financial Analysis Working Group (R-FAWG)

- Create a NAIC “SWAT” team of receivership experts

- Continue to address modifications to Section 7 of the *Insurance Holding Company System Regulatory Act* that would assure the continuation of inter-affiliate services where receiverships impact multiple states

- Create crisis management groups for supervisory colleges within Section 7 of the *Insurance Holding Company System Regulatory Act* and/or guidance such as the Receivers’ Handbook

Thanks again for this opportunity to comment. If you have any questions, feel free to contact me at waynemehlman@acli.com or 202-624-2135.

Sincerely,

Wayne Mehlman

Subject: Response to Request for Comment on Key Provisions for Insolvency Laws

Dear James:

Thank you for inviting comments on Key Provisions for Insolvency Laws. In response NCIGF offers the following:

The NCIGF is undertaking a multi-year effort to implement various revisions to property and casualty guaranty fund acts. This effort will focus on the following areas:

1) Modernization as needed of state laws. A small minority of states need updates to provisions in their laws such as the base for calculation of member assessments, claim bar dates and other matters. We plan to identify areas where an update may be needed and offer suggestions to fund managers and their boards in this regard.

2) Statutory changes to accommodate transactions under Insurance Business Transfer and corporate division statutes. We have advised the Restructuring Mechanisms Working Group that we have concerns that under current state guaranty fund laws certain claimants involved in these transactions may not be covered in the event of the insolvency of a new entity. NCIGF recently adopted a policy stating that coverage should remain in place for those claimants who would have had guaranty fund coverage before the transaction. Conversely, the policy states that guaranty fund coverage should not be created for such claims that would not have been covered claims before the transaction. We are in the process of developing statutory language to achieve this result and will suggest to local managers that the changes be implemented as needed and assist them in tailoring our template language to their local statutes.

3) Specific statutory changes if needed to permit guaranty funds to assess for administrative costs that are not tied to the volume of insolvency activity. As you are aware the guaranty funds are often called upon to “ramp up” very quickly to address new liquidations. To achieve this “always ready” status it is important that a minimal cadre of experienced staff be available to handle short-notice influx of claims and that physical guaranty fund facilities be maintained. Some
states may need specific statutory changes to address this need and we will be assisting our members in this regard.

4) Statutory changes as needed to prevent “orphan claims” scenarios. In a minority of states non-standard language, usually related to residency requirements, is on the books. This could create a claim denial of a claim the system is intended to cover. We plan to work with those states, again a minority, in which such problem could arise.

With regard to liquidation acts, as you know, the NCIGF for some time has promoted specific liquidation act language to address large deductibles. The NAIC’s IRMA model has such a provision and recently the large deductible working group has exposed an alternative approach as a “guideline” for states to consider. This alternative approach calls for the asset to be remitted in full to the guaranty funds and not be treated as a general asset of the estate. The NCIGF supports the alternative approach proposed by the Large Deductible Working Group with some technical tweaks that will be offered in our comments. The Large Deductible Working Group has concluded, and we agree, that large deductible business, in an insurance liquidation, is best managed when there is a statute in place.

Thank you for considering our comments. We would be happy to answer any questions the RITF may have.

Very truly yours,

Barbara F. Cox
Attorney at Law
Barbara F. Cox, LLC

James Kennedy, Chair
Receivership and Insolvency Task Force
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Jane M. Koenigsman, Life/Health Financial Analysis Manager
National Association of Insurance Commissioners
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

Dear Mr. Kennedy and Ms. Koenigsman:

We understand that the NAIC’s Receivership and Insolvency Task Force is requesting comments from Interested Regulators and Interested Parties concerning efforts to encourage state adoption of provisions in receivership and guaranty association laws that promote effectiveness and consistency in multi-state insurer insolvencies, in furtherance of recommendations made related to the NAIC’s Macro Prudential Initiative. We understand further that the Task Force intends to develop a list of “key” receivership and guaranty fund provisions to recommend for adoption in the states. We appreciate the opportunity to have input in this process.

The Life and Health Insurance Guaranty Association system has already achieved a high degree of statutory consistency with the NAIC’s Life and Health Insurance Guaranty Association Model Act (“Model Act”). To date, there are 46 states that are substantially consistent with the key provisions of the Model Act, as it existed prior to the recently adopted 2017 amendments.¹

As you know, the process for amending the Model Act in 2017 was very thorough and resulted in extensive changes to reflect the Guaranty System’s most recent insolvency experience dealing with long term care insurance. Since the NAIC’s adoption of the 2017 amendments, there has been a successful effort to seek enactment of those amendments across the country. To date, 27

¹ The key provisions deal with coverage limits, triggering, the definitions of insolvent and impaired insurer, non-resident coverage, coverage of citizens living abroad, payee coverage for structured settlement annuities, non-guaranteed products, interest rate adjustments, equity indexed products, Medicare Part C and D products and reinsurance.
states have substantially adopted the 2017 amendments, and there are continuing efforts to update the guaranty association laws in the balance of the states, including bills introduced or soon to be introduced for 2020 legislative sessions.

Given that the Model Act was recently updated in 2017, and given that there already is a high level of conformity between state law and the Model Act, we believe that the focus of current efforts should be on supporting the adoption of the 2017 amendments in the remaining states rather than reopening discussions about the Model Act. We would be concerned that such discussions, in particular if they resulted in additional changes to the Model Act, could distract and disrupt efforts to adopt the 2017 amendments in the remaining states.

Again, we thank you for this opportunity to comment, and we would be happy to answer any questions that you may have concerning our comments.

Sincerely,

Peter G. Gallanis
President

---

2 Of these 27 states, one state, Utah, has adopted a 75 25 split between life and health insurers for purposes of allocating the costs of long-term care assessments.
To:  Financial Condition (E) Committee  
From:  Receivership and Insolvency (E) Task Force  
Date:  January 8, 2020  
RE:  Model Law Request for Insurance Holding Company System Regulatory Act (#440) and  
Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

The Receivership and Insolvency (E) Task Force requests the Committee consider opening the Insurance Holding Company System Regulatory Act (#440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450) to consider revisions to address issues with continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company, specifically agreements with affiliated entities whose sole business purpose is to provide services to the insurance company.

The Task Force is cognizant of other unrelated revisions being considered for Models 440 and 450 under an existing open Model Law Request and understands the sensitivity of the timing of that work. Work related to the continuation of essential services is not intended to delay or impede any other revisions; however, the Task Force feels it may be efficient to conduct its review and drafting concurrently with that work.

Background and Rationale

In 2018 the Financial Stability (EX) Task Force made a referral to the Receivership and Insolvency (E) Task Force as part of the Macro Prudential Initiative (MPI). At the 2019 Summer National Meeting, the Receivership and Insolvency (E) Task Force adopted a report including recommendations to address receivership powers that are implicit in state laws, rather than explicit. One such area is the power to ensure the continuity of essential services and functions within a holding company group once an insurer is placed into receivership.

The Financial Stability Board’s (FSB) Key Attributes (KAs) of Effective Resolution Regimes for Financial Institutions KA 3.2 states that a resolution authority should have the power to ensure the continuity of essential services and functions by requiring companies in the group to continue providing services. Under Common Framework for the supervision of Internationally Active Insurance Groups (ComFrame) (CF 12.7a), a resolution authority may take steps to provide continuity of essential services by requiring other entities within the IAIG (including non-regulated entities) to continue services. The Task Force identified the following authority and remedies available within the US regime related to these international standards:

- The Insurance Holding Company System Model Act (#440) requires approval of affiliated transactions, allowing a regulator to identify agreements that could create obstacles in a receivership. The Insurance

© 2020 National Association of Insurance Commissioners
Holding Company System Model Regulation (#450), Section 19, provides that cost sharing and management agreements specify if the insurer is placed in receivership that an affiliate has no automatic right to terminate the agreement.

- The Receiver can take action against a provider that refuses to continue services under a contract, or seek an order requiring it to turn over records. If an affiliate providing services is inextricably intertwined with the insurer, the Receiver could also seek to place the affiliate into receivership.

However, it was noted that some of these authorities and remedies may not address the immediate need to continue services in some receiverships. Despite these available remedies, receivers continue to be challenged by this issue in receivership, often resulting in significant additional legal and administrative expenses to the receivership estate.

One potential solution is to revise the definition of “insurer” under state insurance holding company laws to encompass affiliated entities whose sole purpose is to provide services to the insurer.

The NAIC adopted 2020 charges for the Receivership Law (E) Working Group to: “Review and provide recommendations for remedies to ensure continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Consult with the Group Solvency Issues (E) Working Group as the topic relates to affiliated intercompany agreements.”

Scope of the Proposed Revisions to Models 440 and 450
The scope of the request is limited to addressing the issue of continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company. The Receivership Law (E) Working Group under the Receivership and Insolvency (E) Task Force would complete the review and recommend proposed draft Models 440 and 450 revisions. Revisions may be necessary to the following sections of Models 440 and 450 including, but not limited to:

- Model 440 Section 1. Definitions
- Model 440 Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System
- Model 440 Section 12. Receivership
- Model 450. Consistency with any revisions to Model 440

Any questions about this memorandum may be directed to NAIC staff, Jane Koenigsman (jkoenigsman@naic.org), 816-783-8145).
Chapter 3 – Accounting and Financial Analysis

CHAPTER 3 – ACCOUNTING AND FINANCIAL ANALYSIS

***********TEXT NOT SHOWN TO CONSERVE SPACE***********

VIII. TAX ISSUES

In virtually every receivership federal tax issues must be considered. The insurer cannot be discharged or liquidated without the filing of federal income tax returns. In addition, consideration should be given to the payment of federal corporate income and other taxes. The receiver can be held personally liable for the payment of certain unpaid taxes if specific procedures are not followed.

Because of the complexity of federal income taxation issues, the potential personal liability of the Receiver and the additional complexities associated with receiverships, and the significant impact on the estate from items such as forgiveness of debt, alternative minimum tax, Phase III tax triggering for life companies, consolidation rules and other matters, the receiver should hire individuals with expertise in these areas. Such experts could include independent CPAs or counsel with experience in such matters. Furthermore, because of the continuously evolving nature of federal income taxation issues, many of the issues addressed in this chapter may have changed. This is a reason that the receiver should hire individuals that will be as up-to-date as possible in these areas, and why receivers should seek updated guidance on tax matters (both federal income and state premium tax issues) in reference to the issues addressed in this Handbook.

The receiver should ascertain the insurer’s tax status as part of the takeover procedure, in addition to securing copies of tax returns and company tax payment records. Foremost, the receiver should learn whether all tax returns due have been filed and any amounts owing have been paid. In addition, the receiver should learn whether the insurer was part of a consolidated group filing or party to any tax sharing or similar contractual agreements. The receiver should also obtain and carefully review and understand the provisions of any tax sharing agreements between the insurer and any related parties. In almost all receiverships, the receiver takes over the insurer, but not necessarily its holding company or other affiliated group with which the insurer may be consolidated for tax purposes. In addition, the insurer may own non-regulated subsidiaries that are taxed differently from the insurer.

Prior years’ returns and any correspondence with the IRS also should be reviewed. Discussion may be held with any outside CPAs or counsel who may have been involved in filing the returns or in handling any disputes with the IRS. The receiver should be alert to any contingencies that may exist for payment of taxes, penalties and interest resulting from failure to file on time, failure to pay tax due on the return, inappropriate treatment of income or deductions on the return, etc. Contingency reserves recorded on the balance sheet of the insurer or its parent should be reviewed and analyzed for purposes of determining tax positions taken by the company which are not “more likely than not.” The receiver should consider these contingencies when allocating distributable assets of the estate in light of the priority generally alleged by the federal government and accorded by the applicable priority statute (see Chapter 9—Legal Considerations).

The receiver may request an “Account Transcript” from the IRS for the receivership entity. The transcript, available by type of tax (Form 1120, Form 941, etc.) and year, may be obtained by filing form 4506-T, Request for Transcript of Tax Return. An account transcript typically contains information on tax payments (amounts and dates) and filing of returns (dates).

Income taxation of insurers is somewhat different from conventional corporations, with additional provisions that are applicable to life insurers contained in Part I of Subchapter L of the Internal Revenue Code (“IRC”) and specific provisions applicable to other insurance companies contained in Part II of Subchapter L of the IRC, and taxation of life insurers differs to some extent from taxation of property and casualty insurers. To further confuse the issue, mutual life insurers are subject to tax adjustments not applicable to stock life insurers.
Even though an insurer may have substantial statutory losses, it is possible that based on its taxable income, federal income taxes will be due. See discussion in this chapter of deferred income that may be taxed when a company loses its status as a life insurance company for federal tax purposes. There also exists the possibility that the insurer is entitled to recover prior years’ taxes because of the existence of capital losses, operating losses or tax credits. Operating losses, which can be carried back two years and forward 20 years by property and casualty insurers. Prior to 2018, life insurers were allowed to carry back ordinary losses for 3 years and carry forward losses for 15 years. No carryback is allowed for operating losses of insurers other than property and casualty insurers for taxable years after December 31, 2017, but these insurers are allowed indefinite carryforwards which are limited to 80% of taxable income in each year to which the operating loss is carried. All insurers are allowed to carry back capital losses 3 years and forward up to 5 years to offset capital gains and tax credit carrybacks vary depending upon the type of credit, so you should always check with a tax advisor. The insurer may also have made estimated tax payments that can be recovered. An insurer may also be entitled to a tax recovery because of its inclusion in a consolidated tax filing where its losses were used to set off taxable income from affiliated entities. Tax recovery due to tax sharing agreements will not be recoverable from the IRS but must be recovered from affiliated entities. Therefore, income tax recoverable may not be collectible and, as such, should not be booked. In addition, under Section 848 of the Internal Revenue Code, an insurer must capitalize its estimated acquisition expenses, which are then amortizable (deductible) over the ensuing 10-year period for amounts capitalized prior to through Dec. 31, 2017 and over a 15-year period for amounts capitalized after December 31, 2017.(five years for smaller companies).

The receiver should be aware that IRC Section 6511(a) places a deadline by which claims for credit or refund of taxes must be made. In many instances, this deadline will be three years from the due date of the return for which the claim for refund is being made. However, if the claim for refund results from the carryback of a net operating losses to the preceding tax years, the deadline will be three years from the due date of the return which generated the net operating loss. Due to the critical nature of properly determining these deadlines, the receiver should consider consulting independent CPAs or counsel with experience with these matters.

In addition to federal corporate income taxes, the receiver also has to be concerned about state corporate income taxes, federal and state payroll taxes, premium taxes, real estate taxes, federal excise taxes, state franchise and excise taxes, sales taxes, and personal property taxes, along with myriad reporting and filing requirements. The receiver will also need to file final tax returns upon the closing of the receivership estate.

A. Notice

Within 10 days from the date a receiver is appointed, Form 56 (Notice Concerning Fiduciary Relationship) must be filed with the IRS. A certified copy of the court appointment should be attached. This form should be filed for all forms of receivership. The receiver should specify that he is to receive notice concerning income, excise, sales and property, and payroll tax matters. The list of tax forms should include Form 1120L (for life companies) or Form 1120PC (for property and casualty companies), Form 941 (quarterly payroll tax returns), Form 940 (Federal Unemployment Compensation Tax), and Form 720 (Federal Quarterly Excise Tax Return). If the insurer owns subsidiaries, the receiver should also file a Form 56 notice for each subsidiary.

In addition to the federal filing, many states have similar notice requirements. Even without a specific requirement, sending similar notice to the taxing authorities of those states and foreign countries where the insurer did business or had employees should be considered.

Form 56 is not to be used to update the last known address of the receivership entity. The receiver should file form 8822, Change of Address, with the IRS.

B. Income Taxes

Under Section 1.6012-3(b)(4) of the Federal Income Tax Regulations, a receiver or trustee who, by order of a court of competent jurisdiction, by operation of law or otherwise, has possession of or holds title to
Chapter 3 – Accounting and Financial Analysis

all, or substantially all, the property or business of a corporation, must file a return in the same manner and form as the corporation.

The due date for filing federal corporate income tax returns for insurance companies is the 15th day of the fourth month (generally March April 15) of the following year following the year end of the company. [For years beginning prior to 2016, the due date was the 15th day of the third month (generally March 15) of the year following the year end of the company.] A six-month extension to October 15 can be obtained for the filing of the return, if the extension form is sent to the IRS prior to the March April 15 deadline. This extension, however, is only for the filing of the return and not for the payment of tax liabilities. The March April 15 deadline is applicable to calendar-year companies only. There may be certain non-insurance companies under the receiver’s authority that have fiscal year-ends.

Once an affiliated group of corporations files a consolidated return, it must continue to do so as long as the group remains in existence. Therefore, consolidated returns must continue to be filed with the insurer’s subsidiaries. In addition, the IRS has ruled under PLR 9246031 that an insurer in liquidation under state law is required to be included in its common parent’s consolidated federal income tax return. The receiver may request approval from the IRS to file separate returns. This permission may be granted on a case-by-case basis for good cause shown. Pursuant to the consolidated return regulations (1.1502-75), the parent of the affiliated group must request deconsolidation for good cause. A deconsolidation may weaken the IRS’s position; as such, the granting of a deconsolidation is not guaranteed.

Following is a list of various insurance or insurance-related entities and the Federal Income Tax Form that should be filed:

</tbody>
</table>

For a company to be considered an “insurance company,” at least half of its business during the taxable year must be the issuing of insurance or annuity contracts or the reinsuring of risks underwritten by insurance companies.

For a company to be considered a “life insurance company,” it must be engaged in the business of issuing life insurance and annuity contracts (either separately or combined with accident and health insurance), or noncancellable and/or guaranteed renewable contracts of health and accident insurance. Also, its life insurance reserves plus unearned premiums—and unpaid premiums on unpaid losses and on noncancellable life, accident, or health policies not included in life reserves—must make up 50 percent or more of its total reserves.

In certain special situations, managed care organizations may qualify for tax exempt status; if so, they would file Form 990.
1. Life Insurance Companies

Life insurers (whether stock, mutual or mutual benefit) that meet certain reserve requirements file Form 1120-L. If a life insurer does not meet the reserve requirements, then it must file Form 1120-PC. If a stock life insurer loses its life insurance tax status because its life insurance reserves fall below the minimum requirement, then taxes that were deferred in earlier years may now become due.

In Revenue Procedure 2018-31, Section 26.03 provides for an automatic accounting method change when there’s a change in qualification as a life insurance company as defined in Internal Revenue Code (“IRC”) Section 816(a). This happens when, under prior federal law, a portion of the income earned by a life insurer was considered to belong to the policyholders and was excluded from income. It was segregated and carried on the tax return in an account called “policyholder surplus.” Upon loss of life insurance company tax status, or certain other events, all or a portion of the “policyholder surplus” account may be taxed. This is referred to as “Phase III tax liability” and can be a material amount for some life insurers. Phase III tax liability also can result from losses exceeding prior years’ accumulated taxable income and reduction of premium volume or reserves or loss of insurance company status.

Phase III tax may be a liability which arises prior to the receivership or during the administration of the estate. This may have a significant impact on the statute of limitations for assessment of the tax as well as the priority of the claim for payment of the tax relative to creditors and policyholders. The existence of net operating losses may be unavailable in reducing or avoiding a Phase III tax liability.

For taxable years ending before January 1, 2018, life insurers with less than $500 million in assets are entitled to a small life insurer deduction of 60 percent of their “life insurance company taxable income.” This deduction is available for income up to $3 million and then is gradually phased out on income from $3 million to $15 million. Alternative minimum tax should be considered in calculating the benefit of the small company deduction. For taxable years after December 31, 2017, the small life insurer company deduction is repealed, and the alternative minimum tax for corporations is repealed as well.

2. Non-Life Insurance Companies

Non-life insurers (stock and mutual) file Form 1120-PC. Non-life companies generally are taxed on their statutory income with certain modifications, including the discounting of loss reserves and the non-deductibility of 20% of the increase of the unearned premium reserves. The non-deductible 20% of the unearned premium reserve (UPR) gives the taxpayer a tax benefit when the UPR is reduced but the effect of the reversal of the 80% deductible portion has a greater impact and may create taxable income. As previously stated, the receiver should consult their tax consultant regarding the ramifications of these issues.

Non-life insurers whose written premiums for the year do not exceed $42.2 million (an amount which is inflation-adjusted for each taxable year beginning after 2015) may elect to be taxed only on investment income under Code Section 831(b). The premium limits are based upon the premiums of a “controlled group” of corporations as defined by Code Section 1563(a), with the exception that more than 50% is the definition of control. The fact that an insurer is in receivership does not remove it from a “controlled group.” The company also must meet certain diversification requirements with regard to premiums and owners as prescribed in IRC Section 831(b)(2)(B)). Taxation on investment income may not be advantageous to companies that are currently generating or utilizing net operating losses, as the company may lose the benefit of those losses. IRC Section 831(b)(3) prescribes limitations on the use of net operating losses for insurance companies taxed only on investment income.

Prior to January 1, 2005, small non-life insurers with less than $350,000 of premium income could qualify to be exempt from income tax under Code Section 501(c)(15). Many receivers took advantage
of this provision to exempt liquidation estates from federal income taxation. In 2004, Section 501(c)(15) was amended to provide tax exempt status only to those non-life insurers with gross receipts less than $600,000, and then only if more than 50% of the gross receipts were from premiums. Since most companies in liquidation have virtually zero premium income after the first couple of years of the liquidation, and since most have annual income exceeding the $600,000 cap, this amendment to Code Section 501(c)(15) generally eliminated its applicability to insurance receiverships.

The impact upon insurance companies in receivership was considered as Code Section 501(c)(15) was being amended in 2004, and the applicability of the exemption to insurance companies in receivership was specifically extended through calendar year 2007. However, as of January 1, 2008, any insurers in liquidation that may have previously been qualified for exemption under the pre-2005 provisions of Code Section 501(c)(15) became ineligible for such exemption and are subject to federal income tax from that time forward unless they met the new requirements.

3. Special Relief

Under Revenue Procedure 84-59, the receiver may apply to the District Director of Internal Revenue for relief from the filing requirements under limited circumstances. In order to request this relief, the insurer has to have ceased operations and no longer have assets or income.

4. Prompt Audit

The receiver may request that a prompt determination be made under Revenue Procedure 2006-2426-23 whether the income tax return is being selected for examination by the IRS or is accepted as filed. The receiver will be discharged from any liability upon payment of the tax shown on the return if the IRS does not notify the receiver within 60 days after the request that the return has been selected for examination, or if the IRS does not complete the examination and notify the receiver of any tax due within 180 days after the request. This procedure enables the receiver to proceed with the receivership, or enhances the possible sale of the insurer, by resolving contingencies relating to taxes due for prior periods. The prompt audit provisions specifically apply to bankruptcy proceedings, not state liquidations. Certain IRS offices have approved applying the provisions to state liquidations; however, the approval is not automatic. When this is the case, a request for prompt assessment should be made under I.R.C. §6501(d). This will reduce the statute of limitations for assessment to 18 months. The request contemplates a corporate dissolution in 18 months and requires the submission of Form 4810 to the IRS.

5. Carrybacks

An insurer often becomes financially troubled because it incurred operating and/or other losses. Such losses may be deductible for income tax purposes. A review may be made of the deductibility of such losses to determine if the losses were deducted in the correct fiscal year and may be carried back to recover previously paid income taxes. If the losses were not deducted in the correct years, prior years’ income tax returns may have to be amended. Net operating losses can be carried back for two years, and capital losses can be carried back for three years.

Under the Tax Cuts and Jobs Act of 2017 (TCJA) net operating losses of non-life insurance companies can still be carried back two years and carried forward 20 years (Internal Revenue Code Section 172(b)(1)(C)). However, there is no carryback for life insurance company net operating losses arising in 2018 and later years and an unlimited carry forward period (Internal Revenue Code Section 172(b)(1)(A)). Operational losses of life insurers arising in 2017 and earlier are carried back three years and forward fifteen years. A non-life insurance company can use the full amount of its net
operating losses to offset taxable income (Internal Revenue Code Section 172(f)). A life insurance company is limited to an 80% net operating loss deduction against taxable income (Internal Revenue Code Section 172(a)(2)).

An example of a restructuring technique used in the liquidation of Reliance Insurance Company to address significant net operating loss carryovers is available in Exhibit 3-4.

6. Carryovers

To the extent that there is a discharge of indebtedness, any net operating loss carryover may be reduced by the amount of the discharge, which may trigger alternative minimum tax liabilities. A company could have alternative minimum tax, even if there are net operating losses available to offset the income, because of the 90% limitation for alternative minimum tax net operating losses. If guaranty funds or other creditors are entitled to future funds, there may not have been a complete discharge.

Net operating losses are allowed an indefinite carryover period in taxable years beginning after December 31, 2017. The net operating loss deduction is limited to 80 percent of taxable income (without regard to the deduction) for losses arising in taxable years beginning after December 31, 2017. Therefore, even when there are net operating loss carryovers available, discharge of indebtedness could still result in income tax liabilities due because of the carryover taxable income limitations.

C. Premium Taxes

If the insurer is in rehabilitation, the receiver may be required to continue paying state and municipal premium taxes. Insurers are usually required to pay premium taxes that are calculated as a percent of direct premiums written. Many state and local tax authorities require insurers to pay estimated premium taxes. In many cases, a financially troubled insurer may experience a decrease in premium volume, or policies in force may be canceled. This may result in a reduction in premiums written and the related premium taxes. A review may be made to determine whether the insurer is entitled to premium tax refunds. It may then be necessary to refile the most recent returns to reflect the reduction in premium income. In addition, the receiver may attempt recovery of any prepaid or estimated premium taxes. If premium taxes are owed in a liquidation many states may relegate premium tax claims to a lower or general creditor status.

D. Payroll Taxes

Insurers are required to withhold federal income tax and social security tax (as well as state and local income taxes) from the wages and salaries of their employees. All of these taxes are considered “trust fund taxes” and must be remitted periodically to the various taxing authorities. The receiver should promptly ascertain that all payroll tax payments have been remitted by the insurer. If the receiver finds that taxes have not been paid, the Special Procedures Office of the IRS should be notified. In this way, the taxes or 100% penalty can be assessed against the former officers or persons with the responsibility for paying the taxes. The receiver may be asked to complete Form 4180 or Form 4181, which are questionnaires relating to the payment of “trust fund taxes.”

If the receiver fails to follow these procedures and funds that could have been used to pay “trust fund liabilities” are used for other purposes, the receiver may be held personally liable. The receiver should make certain that any plan filed with the court for the distribution of assets provides for the payment of these outstanding federal tax liabilities.
Many states have similar laws relating to withheld payroll taxes, and the receiver should be aware of the responsibilities imposed by these laws. The receiver should continue to file W-2s, as well as Forms 940 and 941, for employees of the insolvent insurer.

E. Other Taxes and Assessments

1. Real Estate and Corporate Personal Property Taxes

The receiver should ascertain whether all real estate tax payments have been made, including those that the insurer has been collecting on mortgages it holds or services. The tax collector should be notified of the receivership proceeding and instructed to send any notices to the receiver.

2. Guaranty Fund Assessments

State guaranty funds periodically assess insurers to cover their administrative and claim costs. If the insurer is operating under supervision or rehabilitation, it may still be liable for guaranty fund assessments. If the insurer is in liquidation, the funds will typically waive payment of the assessment upon notice of the insolvency.

3. Excise Taxes

Some insurers are required to remit excise taxes to the IRS because of foreign reinsurance premiums. These taxes are also considered “trust fund taxes,” and the same care should be afforded these taxes as is given to withheld payroll taxes.

4. Commissions and Other Payments

At year-end, insurers are required to file Forms W-2 and/or 1099 for all commissions and other payments to an individual or partnership in excess of $600 during the year. In addition, the receiver is required to prepare Forms 1099 and send the forms to policyholders of life companies while business is still being serviced by the insolvent insurer. In addition, if the insurer has received interest from mortgages, the receiver is required to prepare and provide Form 1098 to the payer. If more than 250 1099 forms are to be issued, the filing is required to be done electronically. However, relief from this electronic filing may be secured upon request to the IRS. The receiver should be able to demonstrate that an electronic filing would place an undue hardship on the insolvent insurer. The IRS can assess penalties for both the failure to issue the forms to agents and the failure to file the forms with the IRS. If the receiver has not already sought relief and the estate is assessed, the IRS may waive the assessment upon request. Additionally, most states and some localities have filing requirements.

5. Franchise Taxes

Several states have franchise taxes. The tax basis can be the net worth of the insurer, the assets of the insurer, the number of shares of authorized stock or the amount of paid-in capital. The failure to file and pay these taxes may result in the cancellation of the insurer’s corporate certificate of authority.

6. Other State Taxes and Licenses

Insurers are subject to numerous state taxes and assessments, including: workers’ compensation; second injury funds; firemen’s and policemen’s pension funds; medical disaster funds; major medical insurance funds; arson, fire and fraud prevention funds; fire marshal tax; insurance department administrative assessments; “Fair Plan” assessments; and motor vehicle insurance funds. In addition, many localities have licenses and taxes unique to insurers. Comprehensive summaries are published...
by several insurers groups, including the Property Casualty Insurers Association of America (PCI), the American Insurance Association (AIA) and the American Council of Life Insurers (ACLI). The receiver should also ascertain if the insurer has any responsibility for filing informational returns and/or paying other state or local taxes such as sales and use taxes, water and sewer taxes, business and occupational privilege licenses, and taxes for employment training funds. Before paying these taxes, consideration should be given to the importance or lack of importance of maintaining state corporate certificates of authority and/or licenses.

All taxes should be reviewed to determine how any liability should be included in the priority scheme. The receiver should consider whether the certificate of authority or licenses have value before they are allowed to expire or be cancelled.

IX. INVESTMENTS

F. Other Considerations

The insurer may be the owner of various tangible and intangible assets that may not be apparent on its statutory balance sheet. The receiver should try to identify and value all possible assets of the insurer, including the insurance licenses, the value of the shell of the company, assets that have been previously written off, and any assets that are listed in Schedule X of the annual statement.

1. Pension and Deferred Compensation Plans

The insurer’s employee benefits may include participation in either a defined-benefit or defined-contribution pension plan. The plan may require or allow that a percentage of the assets of the plan be invested in shares of the insurer. It is not uncommon for the trustees of the plan to be officers of the insurer. Also, the plan administrator may be the insurer itself or an outside financial institution. The regulatory action will create several uncertainties in relation to the plan. The receiver should be familiar with the provisions of the plan and whether a complete liquidation and distribution is required. The provisions of the pension plan agreement and the Employee Retirement Income Security Act of 1974 (ERISA) may clarify some of these issues. It is recommended that the receiver retain the services of a consultant CPA firm to audit and provide independent opinion regarding compliance with IRS and ERISA requisites.

If the insurer is insolvent and the plan is heavily invested in shares of the insurer, then the plan may be insolvent also. The administrator, therefore, may need to liquidate the plan. If the pension plan is solvent, the administrator must continue with its duties. If the insurer is the plan administrator, the receiver may become the plan administrator by succession. If the plan administrator is a third party, the receiver may wish to evaluate the propriety of changing administrators.

The insurer may have hidden equity in other employee benefit plans. A saving plan that requires the insurer to partially match amounts contributed by the employees may be such a plan. The plan agreement will detail the operation of the plan and when the insurer’s contributions vest to the employees. The plan should have provisions for possible employee termination on a voluntary or involuntary basis. Depending upon the terms of the plan, the receiver may recover contributions that have not vested to the employees, or amend terms, for example, to eliminate employer matching of contributions.

Pension considerations may be further complicated if an employee benefit plan is established to cover the employees of a parent holding company and its many subsidiaries, of which the receiver has
authority only for one or more insurer subsidiaries. The desire of the receiver to terminate the plan and attach excess assets (or reduce additional exposure to underfunding) may be mitigated by excise tax issues on termination, ERISA and other considerations.

It should be noted that under some state liquidation priority statutes, amounts and priorities due employees may be limited. Compensation and benefits due officers and directors may also be excluded in their entirety.

*************TEXT NOT SHOWN TO CONSERVE SPACE**********************

3. Structured Settlements

In the insolvency of an annuity insurer, special consideration should be given to any single premium immediate annuities that were issued to form the basis of funding periodic or lump sum payments in personal injury settlements, commonly known as “structured settlement annuities.”

These annuities are normally issued to qualified assignment (QA) companies in order to comport with numerous IRS Tax Codes (primarily 104(a)(2)) and various Revenue Ruling in order to preserve the tax benefit to the beneficiary or payee. However, some older annuities (prior to 1986), although not issued to a QA company, may nonetheless enjoy the same tax benefits. Generally, periodic payments are excludable from the recipient’s gross income only if the payee is not the legal or constructive owner of the annuity and does not have the current economic benefit of the sum required to purchase the periodic payments.

When these blocks of business are resolved in the insolvency context (typically through assumption reinsurance), extreme care must be taken to ensure that the resolution does not compromise the tax benefits to the payees. It is strongly recommended that competent and experienced tax counsel be retained to guide the receiver through this potentially complicated process.
**Example: Restructuring Transaction**

When placed into liquidation, Reliance was part of a three-tiered holding company structure, whereby 100% of the stock of Reliance was owned by Reliance Financial Services Corp (“RFS”). RFS, in turn, was wholly-owned by Reliance Group Holdings, Inc. (“RGH”).[1] In 2003, a settlement agreement was entered into between Reliance, RFS, and RGH whereby, among other things, the parties created a new consolidated tax group for federal income tax purposes with RFS as the common parent and with Reliance as a member.

In 2015, after collection of certain assets, RFS desired to terminate its existence and dissolve. Because Reliance is part of the consolidated tax group, the dissolution of RFS could have led to a change in ownership of Reliance which, under §382 of the Internal Revenue Code of 1986, as amended (“Code”), could have adversely affected the significant net operating loss carryovers (“NOLs”)[2] held by Reliance which may be used to offset future net income, thereby reducing tax liabilities. Therefore, Reliance and its advisors developed a restructuring plan and a transaction which was approved by this Court and executed as of December 31, 2016.

The transaction resulted in an ownership change of Reliance which qualified for the bankruptcy exception under §382(l)(5) of the Code. Pursuant to the plan, all of the issued Reliance common shares are now owned by 4 GAs (“Participating GAs”) who paid Reliance policyholder claims and who received Reliance stock in exchange for the partial cancellation of such indebtedness. Each Participating GA has entered into a shareholder’s agreement which restricts the sale, transfer, pledge or assignment of the shares, and each shareholder executed a revocable proxy granting the right to vote all the shares to the Pennsylvania Insurance Commissioner as Liquidator. The Participating GAs will receive no preference as to their claims against Reliance due to their new ownership status.

Furthermore, the Reliance stock issued to the Participating GAs provides them with no additional viable claim against Reliance as assets will be insufficient for distributions to any creditors below priority class (b), much less priority class (i) shareholders. Furthermore, the Reliance stock issued to the Participating GAs provides them with no additional viable claim against Reliance as assets will be insufficient for distributions to class (i) creditors (shareholders).

The transaction received a favorable private letter ruling on August 24, 2016 from the Internal Revenue Service holding that the Participating GAs would be treated as receiving the Reliance stock in their capacity as creditors of Reliance for purposes of the Code. The plan preserved the substantial NOLs for the benefit of the Reliance estate and allows Reliance to control its own future regarding tax positions and negotiations with the Internal Revenue Service. As a result of the restructuring, Reliance will become its own tax filer and will no longer be part of a consolidated tax group.[3]

---

[1] RGH and RFS jointly filed for bankruptcy in 2001 and the RGH and RFS reorganization plan was approved in 2005 with RGH converting into a liquidating trust and RFS converting into Reorganized RFS Corporation.

[2] As a result of the large losses suffered by Reliance during the final years of its independent operations and during its liquidation, in excess of $4 billion of NOLs were accumulated through 2014. Approximately $1.5 billion of that $4 billion was utilized in the 2015 consolidated tax return.

[3] For additional details, see the Liquidator’s Application for Approval of Restructuring Proposal filed with the Court on October 7, 2016, which is document # 3745 on the www.reliancedocuments website.
III. CONSIDERATIONS PRIOR TO CLOSURE OF A LIQUIDATION

B. Tax Issues to be Considered Prior to Closure

1. General

Generally, federal and state tax returns should be filed by the liquidator throughout the liquidation. The final returns will be filed as of December 31 of the year during which final distributions are paid. As set forth above, the expenses that will be incurred to prepare the returns should be prepaid, as the actual filings will occur in the year subsequent to closure.

With each of the federal tax returns filed during the liquidation, the liquidator may consider the submission of a written application requesting a Prompt Audit and Determination under Revenue Procedure 76-23 2006-24 to the IRS. Generally, this will expedite the entire process and end the statute of limitations for the returns. Technically, this procedure only applies to companies in a bankruptcy proceeding (Title 11), but in the past the IRS has extended it to insurers in receivership. If this procedure is not extended to an insurer in receivership, however, the IRS has taken the position that Revenue Procedures 76-23 and 81-17 do not apply to insurance companies in receivership. This position requires insurance company receivers to file federal income tax returns in the normal course of business as if the insolvent insurer were a perpetual concern, with no mechanism to sever the statute of limitations period. As it stands, this is an impediment to closure of an estate that must be dealt with by receivers on a case by case basis through closing agreements with the IRS.

For more information regarding tax issues, refer to Chapter 3—Accounting and Financial Analysis. It is strongly recommended that the receiver consult and retain a tax expert for all tax related issues.

2. Phase III Tax of Life Insurance Companies

Any life insurance company that was a stock life insurance company before 1984 potentially has a balance in a Policyholder Surplus Account (as defined in Section 815 of the Internal Revenue Code). The balance represents previously deferred income, which is potentially subject to recapture at some point prior to closure of the estate, producing a tax liability without an increase in the ability to pay.

Some estates have recently filed returns taking the position that the recapture event does not occur in the course of an insolvency proceeding. One theory is based on an assertion that the legislative history of Section 815 provides ample evidence of a Congressional intent not to impose the Phase III tax when a Policyholder Surplus Account is eliminated due to events occurring in a liquidation. This theory seems enhanced by the obvious statutory reliance on regulatory accounting principles, under which the real surplus of the company has been obliterated by losses.

Another theory that has been advanced is that, as a result of the changes made by the Tax Reform Act of 1984, a literal interpretation of the statute allows the recapture to be offset by operating losses, clearly a benefit not previously allowable.
While these techniques for achieving a non-taxable (or partially sheltered) elimination of the Policyholder Surplus Account seem quite credible, the IRS has opposed their use in some cases. Nevertheless, on November 8, 1994, in *Monat Capital Corporation v United States*, 869 F. Supp. 1513 (D. Kansas 1994), the federal district court in Kansas ruled that in the case of an insolvent life insurance company where no shareholder will receive any distribution from the Policyholder Surplus Account, the account should not be restored to taxpayers’ income. Accordingly, these theories should be explored with tax counsel and, if any such position is taken on a tax return, it is recommended that adequate disclosure be made in the return to maximize protection against the imposition of the 20% penalty under Section 6662 of the Internal Revenue Code. Of course, absolute immunity from penalties can only be secured by taking this position and claiming a refund of Phase III tax paid in an amended return, which can be filed immediately after the original return has been filed. These issues must be addressed prior to closure.

3. Internal Revenue Codes Relative to Insurance Contracts and Distributions

Tax implications and/or consequences of assumption transactions, 1035 exchanges or other such transfer of policyholder liabilities or payout of policyholder benefits is also an area of concern and consideration by the receiver. In response to insurer insolvencies, the IRS has addressed several issues affecting such taxation and tax implications. Such rulings have addressed issues such as funding in “steps,”1 tax free exchanges,2 multiple contract issues3 and contract dates and testing for compliance,4 to name a few, and specifically relate to Internal Revenue Codes 72 and 7702.

Section 72 of the IRC, “Annuities; Certain Proceeds of endowment and life insurance contracts,” specifically subsection (s), references required distributions where the holder of an annuity dies before the entire interest is distributed. The rules in Section 72 govern the income taxation of all amounts received under annuity contracts and living proceeds from life insurance policies and endowment contracts. Section 72 also covers the tax treatment of policy dividends and forms of premium returns.

---

1 (Rev. Rul.) 92-43, 1992-1 CB 288. The IRS will allow a valid exchange where funds come into the contract or policy in a series of transactions if the insurer issuing the contract or policy to be exchanged is subject to a “rehabilitation, conservatorship or similar state proceeding.” Funds may be transferred in this “serial” manner if: (1) the old policy or contract is issued by an insurer subject to a “rehabilitation, conservatorship, insolvency or similar state proceeding” at the time of the cash distribution; (2) the policy owner withdraws the full amount of the cash distribution to which he is entitled under the terms of the state proceeding; (3) the exchange would otherwise qualify for Section 1035 treatment; and (4) the policy owner transfers the funds received from the old contract to a single new contract issued by another insurer not later than 60 days after receipt or, if later, September 13, 1992. If the amount transferred is not the full amount to which the policy owner is ultimately entitled, the policy owner must assign his right to any subsequent distributions to the issuer of the new contract for investment in that contract. Revenue Proc. (Rev. Proc.) 92-44, 1992-1 CB 875, as modified by Rev. Proc. 92-44A, 1992-1 CB 876; (Let. Rul.) 9335054.

2 If a non-qualified annuity contract is exchanged under Section 1035 within the scope of Rev. Rul. 92-43 (i.e., as part of a rehabilitation proceeding), the annuity received will retain the attributes of the annuity for which it was exchanged for purposes of determining when amounts are to be considered invested and for computing the taxability of any withdrawals.

3 An annuity that is received as part of a Section 1035 exchange that was undertaken as part of a troubled insurer’s rehabilitation process under Rev. Rul. 92-43 is considered to have been entered into for purposes of the multiple contract rule on the date that the new contract is issued. The newly-received contract is not “grandfathered” back to the issue date of the original annuity for this purpose. Let. Rul. 9442030.

4 The IRS, in response to insurer insolvency proceedings, stated that modification of an annuity, life insurance, or endowment contract after Dec. 31, 1990, that is necessitated by the insurer’s insolvency will not affect the date on which such contract was issued, entered into or purchased for purposes of IRC Section 72, 101(f) 264, 7702 and 7702A and also as not resulting in retesting or the start of a new test period under §§7702(f)(7)(B)(i) and 7702A(c). Rev. Proc. 92-57, 1992-2 CB 410; Let. Rul. 9239026. See also Let. Rul. 9305013. The date is not affected by assumption reinsurance transactions entered into by the insurer provided that the terms and conditions of the policies, other than the insurer, do not change. Let. Ruls. 9323022, 9305013. The IRS also concluded that where a nonqualified annuity is exchanged for another via Section 1035 as part of a troubled insurer’s rehabilitation process under Rev. Rul. 92-43, the annuity received in the exchange will be treated as issued, entered into, or purchased as of the date of the exchange except as provided in IRC Sections 72(e)(5) and 72(q)(2)(F). Let. Rul. 9442030.
Chapter 10 – Closing Estates

IRC Section 7702 relates to the definition of a life insurance contract. For purposes of this section, the term “life insurance contract” means any contract that is a life insurance contract under the applicable law, but only if such contract meets the cash value accumulation test as defined in Section 7702(b), or meets the guideline premium requirements of Section 7702(c) and falls within the cash value corridor of Section 7702(d).

a. Cash Value Accumulation Test

Generally, a contract meets the cash value accumulation test if, by the terms of the contract, the cash surrender value of the contract may not at any time exceed the net single premium that would have to be paid at such time to fund future benefits under the contract.

b. Guideline Premium Requirement and Cash Value Corridor

With respect to the guideline premium, a contract generally meets this requirement if the sum of the premiums paid under the contract does not at any time exceed the guideline premium limitation as of such time. Guideline premium limitation means, as of any date, the greater of the guideline single premium or the sum of the guideline level premiums to such date. Guideline single premium means the premium at issue with respect to future benefits under the contract. Guideline level premium means the level annual amount, payable over a period not ending before the insured attains age 95, computed on the same basis as the guideline single premium.

A contract generally falls within the cash value corridor if the death benefit under the contract at any time is not less than the applicable percentage of the cash surrender value.

As with any tax issue, the implications of all Internal Revenue Codes to a particular liquidation proceeding and that proceeding’s specific transactions should be explored with tax counsel.

4. Collection of Tax

Under Section 801 of IRMA, claims of the federal government are assigned a Class 5 priority and claims of state or local government are assigned a Class 8 priority, unless the claims represent losses incurred under policies of insurance (Class 3 or 4 claims). Thus, tax liabilities not properly characterized as an expense of receivership administration (Class 1) rank behind any claims for guaranty fund administrative expenses (Class 2) and all claims of policyholders (Class 3 or 4), including guaranty funds. Conversely, under the federal “super-priority” statute, 31 U.S.C. § 3713, claims of the federal government (in cases not covered by the bankruptcy code) are given first priority. The Supreme Court of the United States has resolved this conflict in United States Department of the Treasury, et al v. Fabe, 508 U.S., 491, 113 S. Ct. 2202, 124 L. Ed. 2d 449 (1993). The Court held that the Ohio priority of distribution statute was not pre-empted by the federal statute to the extent that the Ohio law protects policyholders, because to that extent it constitutes a law enacted “for the purpose of regulating the business of insurance.” Since the court also viewed administrative expenses as incurred in the process of protecting policyholders, administrative expenses also were ranked ahead of federal claims.

More recently, the 1st U.S. Circuit Court of Appeals has ruled that the federal government does not automatically have priority over other creditors, including state guaranty funds, in insurer liquidations. The 1st Circuit panel’s ruling in Ruthardt vs. United States of America (see Chapter 9—Legal Considerations, section on Federal Government Claims) affirmed a Massachusetts district court’s decision. In this litigation, the federal government challenged two aspects of the Massachusetts liquidation statute. First, the government argued that the liquidation priority provision...
in the statute is preempted by federal law to the extent it provides for payment of guaranty association claims ahead of claims of the federal government. The federal government also argued that the state’s statutory bar date for filing claims against the insolvent insurer’s estate does not apply to claims of the federal government. The federal district court ruled that the provision affording priority to guaranty association claims under the Massachusetts statute is a provision enacted for the purpose of regulating the business of insurance and is therefore shielded from federal pre-emption in accordance with the McCarran-Ferguson Act. With respect to the claims bar date, the district court concluded that it was bound by a controlling 1993 First Circuit decision finding that the benefits provided to policyholders by a state’s claim bar date were too tenuous for that provision to constitute the regulation of the business of insurance subject to the McCarran-Ferguson protections. The Court of Appeals affirmed on both issues.

Generally, taxes are, at most, an expense of administration if the taxes arise during the period of administration (as distinguished from unpaid taxes for periods ending before commencement of liquidation) and are incurred by the estate, i.e., imposed on income from which the estate derived some benefit. While the matter has not yet been tested in court, it is likely that the Phase III tax would not be treated as an expense of administration, since the income upon which it was imposed was obviously earned, collected and dissipated before the liquidation commenced. Decisions regarding the payment of computed taxes should only be made after consultation with legal counsel.

5. Filing of Tax Returns

The entry of an order of liquidation does not terminate the existence of the insurer for tax purposes, regardless of the impact the order may have under state law. The taxable entity remains in existence until the liquidation is complete, i.e., all the assets have been distributed. Accordingly, the liquidator must attend to the continued filing of tax returns during the liquidation proceeding, which may include several taxable years. Therefore, the liquidator should recognize the need to undertake tax planning.

As set forth above, it is possible that over the period of administration, an insolvent insurer may lose its status as an insurance company or become exempt from taxation altogether. Since these classifications are based on a testing of the company’s activities and reserve characteristics, as activities cease, premium diminishes and insurance obligations are ceded under assumption reinsurance arrangements, the company may begin to fail these tests. The liquidator should anticipate the occurrence of this, and plan for the attendant consequences (reserve restoration, Phase III tax, etc.).

If the insurance company placed in liquidation is the common parent of a group that has been filing consolidated returns, the receiver may have to continue filing on that basis. If the company was a subsidiary in a consolidated group, it is arguable that an order of liquidation should cause a termination of membership in the group. It should be noted that the only apparent pronouncement in this area is a 1985 private ruling (LTR 8544018) in which the IRS held that continued inclusion in a consolidated group is required of an insurer throughout the period of administration. However, among the consequences of entering an order of liquidation are the facts that the liquidator is given the power to exercise all shareholder rights (Section 504A(16) of IRMA), the receiver may contemporaneously dissolve the corporate existence under state law (Section 503) and the shareholders, in their capacity as owners, become creditors of the estate (Section 501). Any one of these conditions, and certainly all of them in combination, would seem to indicate that the parent company no longer has any stock ownership interest in the insurer, much less any voting rights. Furthermore, considering that this is a permanent stockholder displacement rather than a mere suspension of rights, the ruling seems rather questionable. In this situation, tax counsel should be consulted. When dealing with tax sharing agreements and consolidated tax returns, the need for termination of any prior agreements should
Chapter 10 – Closing Estates

quickly be assessed. Termination of these agreements could prevent a parent of a subsidiary insurance company from taking away tax benefits that rightfully belong to the estate.

The liquidator needs to also be aware of the tax consequences for a member of a consolidated group upon its ceasing to be a member. It will have two short-period years, one ending on the day it leaves the group that will be included in the group’s consolidated return, and one beginning on the next day and ending at the insurer’s normal year-end that will require a separate return. Even though the insurer might be included in the group’s consolidated return for a small portion of the year, it will be jointly and severally exposed to the group’s consolidated tax for the entire year, which tax could be increased by the recognition of an excess loss account (i.e., negative basis) that the group might have in the stock of the insurer. If gains of the insurer on prior transactions with other members were deferred, the gains must be recognized in the consolidated return upon the member’s departure. The tax thereon can come back to the insurer, either through joint and several liability or under a tax allocation agreement of the group. Any estimated tax payments made by the group during the year must be allocated. Operating losses sustained by the insurer in subsequent periods that can be carried back to prior consolidated returns will produce refunds that will be made to the common parent of the group.

Affiliates’ use of losses within a consolidated return presents a difficult issue regarding the estate’s ability to recover any portion of the benefit. If the group had entered into a tax allocation agreement, the estate’s benefit would be determined pursuant to that agreement. However, absent a written agreement, as a matter of equity, courts seem to allocate tax benefits according to which entities paid the tax being recovered, or whose income is being offset (thus giving value to the loss). Note that the rules contained in the Department of the Treasury’s regulations regarding allocations of consolidated tax are effective only for determining income tax consequences and do not, in and of themselves, create a contractual right of any member to receive any tax payments from another member.

Accordingly, a loss of the insurer, which can only be used against income of other members in the current year or another year and producing a refund of consolidated tax paid in by other members, is not likely to provide a material benefit for the insurer. If a refund potential exists, the liquidator might consider taking the position that inclusion in a consolidated return by a subsidiary insurer is no longer permitted or required (pursuant to the discussion above), thereby perhaps developing some leverage in negotiating a tax allocation agreement.

6. Net Operating Losses

An insurer placed under a liquidation order will ordinarily have incurred large operating losses, some of which may have been realized prior to the receivership and remain eligible for carryover to periods ending after the receivership began, and some of which may be realized during the receivership and may be carried back to earlier periods. Operating losses incurred by life insurers may no longer be carried back for taxable years beginning after December 31, 2017. Net operating loss deductions (“NOLs”) are limited to 80 percent of taxable income (without regard to the deduction) for losses arising in taxable years beginning after December 31, 2017. Carryovers to other years are adjusted to take accounting of this limitation and may be carried forward indefinitely. Property and casualty insurers may carry back losses 2 years and forward 20 years. The 80 percent limitation on use of NOLs does not apply to a property and casualty insurance company.

Under general rules, loss carryovers expire if not used within a certain period of time. It may be, therefore, necessary for the liquidator to project the probable timing of income realization, particularly for property and casualty insurers where loss carryovers expire if not used within a
The major item of income realization which may be debt cancellation income when advances from guaranty funds, for example, are forgiven at closing.

The general rules for carryback and carryover of losses are modified if there is a change in the status of the insurer before January 1, 2018. A loss of a life insurance company may only be carried back to a year in which it qualified as a life insurance company if the loss occurs prior to January 1, 2018. For years beginning after December 31, 2017, life insurance companies are allowed the NOL deduction under section 172. A similar rule exists for property and casualty companies. As to loss carryovers, a change in character does not result in denial of the carryover, but the amount of loss from the earlier year may not exceed the amount it would have been if the insurer had the same character in all relevant years as it has in the year to which the loss is carried.

Loss carryforwards generally become severely restricted upon a substantial change in the ownership of the stock of a corporation. However, the rules requiring this result should not apply in these cases. If the IRS takes the position that the entry of an order of liquidation does not affect stock ownership (as, for example, in LTR 8544018), then the rules are not invoked. Conversely, if the entry of the order, in fact, does represent a complete change in ownership, then the exception for “Title 11 or similar case,” e.g., bankruptcy or receivership, should be available (see 26 U.S.C. § 382(l)(5)).

The liquidator should consider techniques having the effect of accelerating income, such as the sale of appreciated property, reserve adjustments or reinsurance transactions. If the insurer can remain in a profitable consolidated group with which it has a tax allocation agreement, benefits can be realized without regard to extraordinary transactions.

7. Federal Claims and Releases

a. Communicating with the Department of Justice.

Contact with the Department of Justice ("DOJ") at the inception of a receivership estate is critical to obtaining a prompt release of personal liability of the Receiver under 31. U.S.C. 3713(b) (the “3713 Release”) to facilitate estate distributions to policyholders, claimants against policyholders, guaranty associations and other creditors. DOJ has historically identified a single Assistant U.S. Attorney as gatekeeper between the receiver and all federal agencies, except for the Internal Revenue Service, that may have claims against the receivership estate. Receivers may want to limit the number of people communicating with the DOJ to reduce the possibility of mixed messages, or messages going to the wrong person. Additionally it is recommended that Receivers follow the checklist provided by the DOJ when submitting documents. Contact the NAIC’s office in DC if you need assistance to identify the current DOJ receivership contact.

b. Identifying potential federal claims, particularly long tail claims.

The Receiver’s initial goal should be to identify potential federal claims from the insurer’s claim and corporate files. Federal claims that are classified at the policyholder priority level as claims under an insurance policy or against an insured under an insurance policy should be reviewed and adjusted as soon as possible and their resolution and adjudication should be summarized for the DOJ in connection with the 3713 Release request. In addition to potential federal claims identified by the receiver, DOJ will typically request the receiver to identify all former policyholders of the insurer, including policy periods and limits of coverage so that federal agencies can perform their own search of potential claims against the insurer. An example of claims with a federal agency as a claimant are claims identified as having an environmental exposure.
c. Classification and handling of federal claims.

Pursuant to United States Dept. of Treas. v. Fabe, 508 U.S. 491 (1993), state law may prioritize payment of administrative expenses and policyholder claims, including claims by third parties against policyholders and claims by guaranty associations, ahead of claims of all other general unsecured creditors, provided that the priority of federal claims immediately follows that of policyholders and precedes all other creditor classes. Claims of federal agencies under a policy of insurance or against a policyholder, however, are entitled to policyholder priority treatment.

d. Facilitating the process of obtaining a federal release.

All federal claims that are prioritized at the policyholder priority level should be identified and resolved before applying to the DOJ for a 3713 Release. The process of interacting with the DOJ, including the DOJ’s survey of federal agencies for potential federal claims can take several years. Long-tail claims, such as claims involving environmental liability and coverage, as well as the number of policy years that the insurer provided coverage for long-tail exposures, is likely to increase the amount of time needed to resolve the potential federal claims and obtain the 3713 Release.

A best practice is to provide the DOJ with very detailed information on policies and claim information in order to avoid prolonging the process unnecessarily and lead to a long series of back-and-forth requests and production of additional data. For example, include a list of all policyholders unless the lines of business were limited to medical insurance. It may be helpful to segregate the various lines of business as the Environmental Protection Agency (EPA) is more interested in general liability lines as opposed to workers compensation exposures. If the company uses specific policy prefixes for different lines of business, a listing of the policy prefix definitions should be submitted with the list of policies. DOJ resources are usually limited, so key to successfully receiving the Release, it is helpful to keep the lines of communication open, not press for immediate results, consider routine follow-ups with the DOJ such as scheduled monthly status calls.

e. Impact of federal release on receivership closure.

Obtaining the 3713 Release is essential to protecting the receiver against the personal liability imposed under 31 U.S.C. s.3713, and accordingly impacts the receiver’s ability to make final distributions of estate assets and close the estate. The foregoing practices should be commenced at the outset of the receivership and pursued with diligence throughout the life of the estate to ensure that the ultimate discharge of the estate is not prolonged.

7. Closing Agreement

The liquidator may want to consider utilizing a closing agreement pursuant to Revenue Procedure 2019-98-1, IRS Procedures for providing advice to taxpayers in the form of letter rulings, closing agreements, determination letters and information letters, and orally on issues Issuing Rulings, Determination Letters, and Information Letters, and for Entering Into Closing Agreements on Specific Issues Uu nder the Jurisdiction of the Associate Chief Counsels (DomesticCorporate), (Employee Benefits and Exempt Organizations), (Financial Institutions & Products), (Income Tax & Accounting), (International), (Passthroughs & Special Industries), (Procedure and Administration) and (Enforcement Litigation). The closing agreement is a final agreement between the IRS and the taxpayer on a specific issue or liability and is entered into under the authority in §7121. The closing agreement would provide for a final determination to be made by the IRS with respect to tax returns filed on
behalf of the insolvent company for specific years and would be final and conclusive except in the event of fraud, malfeasance or misrepresentation of material fact.

Additionally, retaining a Taxpayer Advocate’s opinion is a possible best practice to address potential tax liability after receivership closure. Because the Taxpayer Advocate is associated with the IRS, this type of opinion could create an obstacle for tax authorities if they decide to revisit a tax return.
The Receivership Large Deductible Workers’ Compensation (E) Working Group of the Receivership and Insolvency (E) Task Force met via conference call March 2, 2020. The following Working Group members participated: Donna Wilson, Co-Chair (OK); Laura Lyon Slaymaker, Co-Chair (PA); Steve Uhrynowycz (AR); Toma Wilkerson (FL); Kevin Baldwin (IL); Robert Wake (ME); John Rehagen (MO); Tom Green (NE); Mark Jordan (NM); and James Kennedy (TX).

1. Reviewed the Exposure of a Memorandum Regarding Model #555

Ms. Wilson presented an overview of the memorandum (Attachment Three-A) from NAIC staff regarding a guideline for an alternative to Section 712 of the *Insurer Receivership Model Act* (#555) (Attachment Three-B) that was exposed until Jan. 31, 2020.

2. Considered Comment Letters from the Exposure of a Model #555 Guideline

Ms. Slaymaker informed the Working Group that two comment letters had been received during the comment period from Mr. Wake and Barbara F. Cox (National Conference on Insurance Guaranty Funds—NCIGF) (Attachment Three-C). Mr. Wake presented a summary (Attachment Three-D) of the original comment letter (Attachment Three-E) submitted to the Working Group. Based on Mr. Wake’s comments, the Working Group agreed to form an ad hoc drafting group consisting of Mr. Wake, Mr. Kennedy, Ms. Wilkerson, Ms. Wilson, Ms. Cox and Rowe W. Snider (Locke Lord LLP) to develop revisions based on the comments received from Maine and NCIGF.

Having no further business, the Receivership Large Deductible Workers’ Compensation (E) Working Group adjourned.
MEMORANDUM

TO: Receivership Large Deductible Workers’ Compensation (E) Working Group

FROM: NAIC Staff

DATE: December 2, 2019

RE: Guideline: Alternative to Section 712 of Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies

Executive Summary

Having the necessary statutory authority specific to large deductible workers’ compensation products in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted: 1) Section 712 of the NAIC Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies; and 2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation.

NAIC staff has been asked to draft the attached Guideline: Alternative to Section 712 of Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies as alternative language to Section 712 of Model #555.

Guideline v. Model Law

The NAIC model law development process helps provide uniformity while balancing the needs of insurers operating in multiple jurisdictions with the unique nature of state judicial, legislative and regulatory frameworks. In 2007, the NAIC changed the way model laws and model regulations were developed. The criteria for development of a model law or regulation now involve a two-pronged test. First, the subject matter of the model law or regulation must call for a minimum national standard or require uniformity among the states. The second part of the test is the NAIC members must be committed to dedicating significant regulator and NAIC staff resources to educating, communicating and supporting the adoption of the model law or regulation.

When issues arise where a proposed model law does not meet the two-pronged test, a group can proceed to develop a guideline to address the regulatory issue. Guidelines are not considered to be equivalent to model laws of the NAIC. They are considered regulatory best practices. While Section 712 of Model #555 is a model law, it is the opinion of NAIC staff that the alternative language to Section 712 should be drafted as a guideline, because it does not meet the two-pronged test to be a model law.

2016 Workers’ Compensation Large Deductible Study

Section 712 of Model #555 was originally adopted in 2007 separately from the other provisions of Model #555. After discussion and consideration of recent workers’ compensation insurer insolvencies, the growth of the large
deductible market and the increased number of workers affected by large deductibles, the NAIC/IAIABC Joint (C) Working Group was charged in 2015 to provide an update to the 2006 Workers’ Compensation Large Deductible Study. The 2016 Workers’ Compensation Large Deductible Study provides the following discussion on the use, business practices and potential risks of large deductible policies in workers’ compensation:

**Current State of the Law**

In most states, there is little guidance governing the rights and obligations of the parties when an insurance company with a large deductible portfolio becomes insolvent. One approach to the problem could be called the “secured claim” approach, which places the highest importance on the principle that claims within the deductible are primarily the obligation of the policyholder. Under this approach, deductible reimbursements are earmarked to pay those claims, and any collateral posted by or on behalf of the policyholder is held to ensure that those claims are paid. Accordingly, when the guaranty association takes on the responsibility of paying a claim within the deductible, it earns the benefit of the reimbursement due from the policyholder, and the right to draw on the collateral if necessary, or to initiate a draw by the receiver, for the benefit of the guaranty fund. [Note: this is the approach of the NCIGF Model].

Another approach could be called the “reinsurance” approach, which places the highest importance on the principle that the insurer’s obligation to pay all covered claims and the policyholder’s obligation to reimburse the insurer are unconditional and that each is independent of the other. Under this approach, deductible reimbursements are a general asset of the estate so that large deductible policies and guaranteed cost policies are essentially identical from the guaranty fund’s perspective, and the guaranty fund only benefits from the deductible reimbursements in proportion to its share as a creditor of the estate. The NAIC has largely taken the second approach. Under the Insurer Receivership Model Act (Model #555), Section 712—Administration of Loss Reimbursement Policies, the receiver has the right to collect all deductible reimbursements, drawing on collateral as necessary. All such payments are general assets of the estate. Any reimbursements paid to the guaranty association are treated as early access distributions and offset from future recoveries from the estate. However, the receiver also has the option to enter into an agreement under which the policyholder takes on responsibility for claims within the deductible, directly or through a TPA, and any such claims remain off the books of both the estate and the guaranty fund. It should be noted that no state has enacted the reinsurance approach embodied in Model #555. The NCIGF approach, on the other hand, has had some success in state legislatures, as the paragraph below demonstrates. Further, some states may have concerns about the impact of the Model #555 approach on statutory deposit requirements in California.

[Update: Eleven states currently have statutes in place: California, Florida, Illinois, Indiana, Michigan, Missouri, New Jersey, Pennsylvania, Texas, West Virginia and Utah.] Most of these states follow the NCIGF approach and have amended their insurance liquidation acts to clarify the following when to secure competing claims such as deductible amounts owed the insurer and retroactive premium balances: 1) the ownership of the deductible reimbursements or collateral drawdowns; 2) claims-handling matters; 3) collection responsibility; and 4) allocation of collateral.

**Variations on NCIGF Model**

Some states have adopted variations from the NCIGF model that may be considered by states when they are considering adding such language. For example, Illinois, Michigan, and Pennsylvania adopted laws that provide for a three percent administrative fee for the receiver. The following is example language the Working Group included in the Guideline in section F:

The Commissioner as receiver is entitled to deduct from the collateral or from the deductible reimbursements reasonable and actual expenses incurred in connection with the collection of the collateral and deductible reimbursements as provided pursuant to [insert state priority of claim statute].
Another variation noted by the Working Group was that California law includes a variation in the threshold amount for the deductible. The Working Group edited section A(1)(b) to reflect a reference to each states’ definition of large deductible.

See ALTERNATIVE TO SECTION 712 OF INSURER RECEIVERSHIP MODEL ACT (#555) “ADMINISTRATION OF LOSS REIMBURSEMENT POLICIES”
GUIDELINE: ALTERNATIVE TO SECTION 712 OF INSURER RECEIVERSHIP MODEL ACT (#555)
“ADMINISTRATION OF LOSS REIMBURSEMENT POLICIES”

Drafting Note: Having the necessary statutory authority specific to large deductible workers’ compensation policies in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted: 1) Section 712 of the NAIC Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies; and 2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation. Generally, both approaches provide for the collection of reimbursements, resolve disputes over who gets the reimbursements and ensure that the claimants are paid. The provisions in each of the two options generally complement each other, except for conflicting provisions regarding the issue of the ultimate ownership of, and entitlement to, the deductible recoveries and collateral as between the estate and the guaranty fund. The issue is whether the guaranty funds, on behalf of the claimants, are entitled to any deductible reimbursements or whether they are a general estate asset that is shared pro rata by the guaranty funds and the uncovered claimants.

Alternative Model Section 712. Administration of Large Deductible Policies and Insured Collateral

This section shall apply to workers’ compensation large deductible policies issued by an insurer subject to delinquency proceedings under this chapter; however, this section shall not apply to first party claims, or to claims funded by a guaranty association net of the deductible unless paragraph B. of this section applies. Large deductible policies shall be administered in accordance with their terms, except to the extent such terms conflict with this section.

A. Definitions. For purposes of this section:

(1) “Large deductible policy” means any combination of one or more workers compensation policies and endorsements issued to an insured, and contracts or security agreements entered into between an insured and the insurer in which the insured has agreed with the insurer to:
(a) Pay directly the initial portion of any claim under the policy up to a specified dollar amount, or the expenses related to any claim; or
(b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term “large deductible policy” also includes policies which contain an aggregate limit on the insured’s liability for all deductible claims in addition to a per claim deductible limit. The primary purpose and distinguishing characteristic of a large deductible policy is the shifting of a portion of the ultimate financial responsibility under the large deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer. A large deductible shall include [any policy with a deductible of fifty thousand dollars or greater] [Alternative: inset state specific citation for the definition of large deductible].

Large deductible policies do not include policies, endorsements or agreements which provide that the initial portion of any covered claim shall be self-insured and further that the insurer shall have no payment obligation within the self-insured retention. Large deductible policies also do not include policies that provide for retrospectively rated premium payments by the insured or reinsurance arrangements or agreements, except to the extent such arrangements or agreements assume, secure, or pay the policyholder’s large deductible obligations.

(2) “Deductible claim” means any claim, including a claim for loss and defense and cost containment expense (unless such expenses are excluded), under a large deductible policy that is within the deductible.

(3) “Collateral” means any cash, letters of credit, surety bond, or any other form of security posted by the insured, or by a captive insurer or reinsurer, to secure the insured’s obligation under the large deductible policy to pay deductible claims or to reimburse the insurer for deductible claim payments. Collateral may also secure an insured’s obligation to reimburse or pay to the insurer as may be required for other secured obligations.

(4) “Commercially Reasonable” means, to act in good faith using prevailing industry practices and making all reasonable efforts considering the facts and circumstances of the matter.
“Other secured obligations” means obligations of an insured to an insurer other than those under a large deductible policy, such as those under a reinsurance agreement or other agreement involving retrospective premium obligations the performance of which is secured by collateral that also secures an insured’s obligations under a large deductible policy.

B. Handling of Large Deductible Claims.

Unless otherwise agreed by the responsible guaranty association, all large deductible claims, which are also “covered claims” as defined by the applicable guaranty association law, including those that may have been funded by an insured before liquidation, shall be turned over to the guaranty association for handling. To the extent the insured funds or pays the deductible claim, pursuant to an agreement by the guaranty fund or otherwise, the insured’s funding or payment of a deductible claim will extinguish the obligations, if any, of the receiver and/or any guaranty association to pay such claim. No charge of any kind shall be made against the receiver or a guaranty association on the basis of an insured’s funding or payment of a deductible claim.

C. Deductible claims paid by a guaranty association.

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the net amount of the reimbursement, and available collateral as provided for under this section to the extent necessary to reimburse the guaranty association. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [cite to priority distribution statute] or as early access payments under [cite to early access statute].

To the extent that a guaranty association pays a deductible claim that is not reimbursed either from collateral or by insured payments, or incurred expenses in connection with large deductible policies that are not reimbursed under this section, the guaranty association shall be entitled to assert a claim for those amounts in the delinquency proceeding.

Nothing in this subsection limits any rights of the receiver or a guaranty association that may otherwise exist under applicable law to obtain reimbursement from insureds for claims payments made by the guaranty association under policies of the insurer or for the guaranty association’s related expenses, such as those provided for pursuant to [insert cite to guaranty association net worth provision], or existing under similar laws of other states.

D. Collections

(1) The receiver shall have the obligation to collect reimbursements owed for deductible claims as provided for herein and shall take all commercially reasonable actions to collect such reimbursements. The receiver shall promptly bill insureds for reimbursement of deductible claims:

(a) Paid by the insurer prior to the commencement of delinquency proceedings;

(b) Paid by a guaranty association upon receipt by the receiver of notice from a guaranty association of reimbursable payments; or

(c) Paid or allowed by the receiver.

(2) If the insured does not make payment within the time specified in the large deductible policy, or within sixty (60) days after the date of billing if no time is specified, the receiver shall take all commercially reasonable actions to collect any reimbursements owed.

(3) Neither the insolvency of the insurer, nor its inability to perform any of its obligations under the large deductible policy, shall be a defense to the insured’s reimbursement obligation under the large deductible policy.

(4) Except for gross negligence, an allegation of improper handling or payment of a deductible claim by the insurer, the receiver and/or any guaranty association shall not be a defense to the insured’s reimbursement obligations under the large deductible policy.
E. Collateral.

(1) Subject to the provisions of this subsection, the receiver shall utilize collateral, when available, to secure the insured’s obligation to fund or reimburse deductible claims or other secured obligations or other payment obligations. A guaranty association shall be entitled to collateral as provided for in this subsection to the extent needed to reimburse a guaranty association for the payment of a deductible claim. Any distributions made to a guaranty association pursuant to this subsection shall not be treated as distributions under [Insert state insurance liquidation priority distribution statute] or as early access payments under [Insert state early access statute].

(2) All claims against the collateral shall be paid in the order received and no claim of the receiver, including those described in this Subsection, shall supersede any other claim against the collateral as described in Subsection (4) of this Section.

(3) The receiver shall draw down collateral to the extent necessary in the event that the insured fails to:
   (a) Perform its funding or payment obligations under any large deductible policy;
   (b) Pay deductible claim reimbursements within the time specified in the large deductible policy or within sixty (60) days after the date of the billing if no time is specified;
   (c) Pay amounts due the estate for pre-liquidation obligations
   (d) Timely fund any other secured obligation; or
   (e) Timely pay expenses.

(4) Claims that are validly asserted against the collateral shall be satisfied in the order in which such claims are received by the receiver.

(5) Excess collateral may be returned to the insured as determined by the receiver after a periodic review of claims paid, outstanding case reserves and a factor for incurred but not reported claims.

E. Administrative Fees.

(1) The Commissioner as receiver is entitled to deduct from the collateral or from the deductible reimbursements reasonable and actual expenses incurred in connection with the collection of the collateral and deductible reimbursements as provided pursuant to [insert state priority of claim statute].
Laura Slaymaker, Co-Chairman, Large Deductible Working Group
Donna Wilson, Co-Chairman, Large Deductible Working Group
1100 Walnut Street
Suite 1500
Kansas City, MO 64106-2197

Dear Ms. Slaymaker and Ms. Wilson:

Thank you for the opportunity to comment on the proposed draft guideline regarding large deductible treatment in liquidation. We applaud your efforts to make this process more efficient and cost effective in liquidation by proposing this draft guideline. As does the Working Group, NCIGF believes that clear statutory guidance is the best way for a state to manage large deductible claims in liquidation.

As you know, the NCIGF supports the alternative approach, GUIDELINE: ALTERNATIVE TO SECTION 712 OF INSURER RECEIVERSHIP MODEL ACT (§555) “ADMINISTRATION OF LOSS REIMBURSEMENT POLICIES” as attached to the memo forwarded for comment. The memo notes that some variation of this approach, which calls for the deductible collections and collateral draw downs to be remitted in full to the guaranty associations to the extent of their claim payments, has been adopted in eleven states. At this point, there are actually twelve states that have adopted this approach – Louisiana now has a provision which is effective January 1, 2020.

Regarding the specific language of the alternative we suggest the following revision to make the guideline more clearly reflect its intent.

The alternative is very close in language to the NCIGF Model Deductible statute. This statute reads in paragraph C:

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the full amount of the reimbursement, and available collateral as provided for under this section to the extent necessary to reimburse the guaranty association. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [cite to priority distribution statute] or as early access payments under[cite to early access statute].
The proposed NAIC Guideline Paragraph C reads as follows:

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the net amount of the reimbursement, and available collateral as provided for under this section to the extent necessary to reimburse the guaranty association. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [cite to priority distribution statute] or as early access payments under [cite to early access statute].

We believe the rephrased portion of this paragraph was meant to reference the second paragraph E in the draft guideline. (It is likely meant to be paragraph F.) This paragraph allows the receiver to deduct reasonable expenses from collected or drawn down amounts. We would suggest the following modification to paragraph C of the draft guideline to better reflect the intent:

To the extent a guaranty association pays any deductible claim for which the insurer would have been entitled to reimbursement from the insured, a guaranty association shall be entitled to the full amount of the reimbursement, and available collateral as provided for under this section to the extent necessary to reimburse the guaranty association less any expenses reasonably incurred by the receiver in accordance with paragraph F of this section. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under [cite to priority distribution statute] or as early access payments under [cite to early access statute].

Thank you for considering our comments. We look forward to discussing them with you and we are available to answer any questions the Working Group may have.

Very truly yours,

Barbara F. Cox
Attorney at Law
Barbara F. Cox, LLC
Summary of Proposed Maine Revisions to Section 712 Guideline

General Structure: The NCIGF Model is a stand-alone Model Act, which makes sense from NCIGF’s perspective, since they don’t have a comprehensive model receivership law. However, once our work product is ultimately enacted in the states that choose to adopt it, it ought to go in the state’s comprehensive receivership law. Where this issue fits in the NAIC Model Law scheme is IRMA § 712. Furthermore, we aren’t changing the existing Section 712 at all, except to prepare a parallel version for states that choose to grant injured workers (and through them the guaranty funds) a property interest in the employer payment stream. Because we need to address the same issues either way, and the Alternative Section 712 can be drafted as a set of discrete amendments to the existing Model, I think we should go that route, which preserves the structure of the existing Model Law and makes clearer what is different under the Guideline and what is the same.

The D-Word: One big difference between the exposure draft and the existing IRMA language is editorial rather than substantive. The exposure draft refers to “large deductible” policies, while IRMA calls them “loss reimbursement” policies. “Large deductible” has one obvious advantage—that’s what everyone calls them in real life. If we were writing from a clean slate, that might sway me, but there are three reasons I prefer “loss reimbursement,” even though it’s a made-up term that nobody uses outside IRMA. The first is that we’re not proposing to use it outside IRMA—all other things being equal, if we’re drafting an alternate version of IRMA § 712, I think we should avoid unnecessary deviations. The second is that even though it’s supposed to be entirely a stylistic difference, it can have unintended legal consequences in practice—we’ve already seen that some courts have looked at the word “deductible” in a policy and applied laws that were clearly intended to apply only to true deductibles where the insurer has no obligation to pay below the deductible, even to the point of overriding the state’s strong public policy that injured workers should always have guaranty fund coverage. Finally, if we use the term “large deductible,” we either have to say “not only didn’t we really mean ‘deductible,’ we didn’t really mean ‘large’ either!” or (as in the exposure draft), we have to make an arbitrary decision how large is “large” enough? That would only make sense if there’s a reason for treating employer reimbursements (and the collateral that secures them) differently depending on the claim attachment point, and I haven’t heard anyone suggest such a reason. I did add a drafting note discussing this issue, which includes some language from the exposure draft that makes more sense as an explanatory note than as a defining criterion. (If it’s a “distinguishing characteristic” as a matter of law, does that mean people will have the right to dispute the law’s applicability to a particular case by litigating the “primary purpose” of the specific policy that’s at issue in that case?)

Decision Point – do we limit the Guideline to Workers’ Comp? I think this might have been a discussion worth having if we were reopening IRMA itself, but if we’re going to have two versions of Section 712 for states to choose from, does it make sense to limit one of them to workers’ compensation but not the other?

Net Reimbursement: As the NCIGF observed, the exposure draft refers to the “net amount of the reimbursement” but doesn’t say net of what. NCIGF and I both concluded that this refers to the provision allowing “reasonable and actual expenses incurred in connection with the collection of the collateral and deductible reimbursements” to be deducted “from the collateral or from the deductible reimbursements.” This is a place where I prefer the existing IRMA language. Subsection 712(G) expressly authorizes the receiver to recover these costs “through billings to the insured or from loss reimbursement collateral” – deducting these amounts from the guaranty fund
reimbursements should be a last resort, only if the collateral is insufficient to cover both the guaranty fund reimbursements and the collection costs, and the deficiency cannot be recovered from the insured.

**Other Secured Obligations:** They exist, so the law needs to address them – and even to honor them when that doesn’t come at more deserving parties’ expense – but commingled collateral should be disfavored, and I don’t think we should take the exposure draft’s approach of giving workers’ compensation claims and collateral-diluting side deals equal priority when there isn’t enough collateral to go around.

**Claims of the Receiver:** The exposure draft says “no claim of the receiver, including those described in this Subsection, shall supersede any other claim against the collateral as described in Subsection (4) of this Section.” My proposal says, instead, that the priority (regardless of who is making the claim) should be (1) uncovered policy claims (if any) secured by the same collateral; (2) reimbursements for covered claims, whether paid by the guaranty fund or by the receiver; (3) other secured obligations; and (4) return of excess collateral with strict guardrails.

**Gross negligence:** Both the exposure draft and existing Section 712 include language barring allegations of improper handling or payment of a claim as a defense against the employer’s obligation to reimburse the claim. The exposure draft makes an exception for gross negligence. This is worth discussing, but it has nothing to do with the issues that motivated the Guideline, so my comments suggest that if we did agree to propose a gross negligence exception, it ought to be done in a drafting note that makes clear that this is an optional provision states could consider whether they follow the Guideline approach or the existing IRMA approach.

**“No Charge of Any Kind”:** In addition to the language providing that any claim payment made by the insurer extinguishes both the estate’s and the guaranty fund’s liability for that claim or the relevant portion of that claim, the exposure draft includes the sentence “No charge of any kind shall be made against the receiver or a guaranty association on the basis of an insured’s funding or payment of a deductible claim.” What is the problem this additional language is trying to solve? What kind of charge might be made, in what circumstances, in the absence of this sentence?

**Miscellaneous Issues If We Stay with the Exposure Draft’s Format:** All the issues below are moot if we go with my draft, but if we revert to the exposure draft, I think we should make changes to address the following additional issues flagged in my balloon comments (numbered as in the handout): (2) Why are “claims funded by a guaranty association net of the deductible” exempt from this section? (6) The exposure draft exempts policies with aggregate-only deductibles – was this intended? (10) The exposure draft makes an exception to the reinsurance exception for reinsurance “arrangements or agreements [that] assume, secure, or pay the policyholder’s large deductible obligations” - does this encourage sham coverage with side agreements saying it will only be used as security even though the contract by its terms is absolute? (14) The right to opt out of the entire section by agreement with the guaranty association seems overbroad, especially if it purports to delegate powers that ought to be exercised only by the receiver; (16) I think self-pay agreements with employers should be under the ultimate control of the receiver, not the guaranty fund; (19 & 39) Especially since “the policy” is defined to include side agreements, the exposure draft’s deference to the policy terms seems overbroad and should be subject to the receiver’s usual powers to abrogate or modify executory contracts – this is a particularly serious problem where the exposure draft requires the receiver to honor any self-pay agreements the
insurer entered into before it was taken down (even if they’re a contributing cause of the insolvency); (34) the exposure draft defines “commercially reasonable” for purposes of Section 712, but the term is used multiple times elsewhere in IRMA – is it intended to have a different meaning there? (35) The exposure draft provides that “the insurer’s” inability to perform its contractual obligations isn’t a defense to the employer’s reimbursement obligations (and therefore must be pursued, if at all, in some collateral action) – should we clarify that this is the insurer’s “or receiver’s” inability to perform? (46) The exposure draft gives the receiver the obligation to make all commercially reasonable efforts to obtain reimbursement, but doesn’t give the guaranty fund any remedy if the receiver fails to do it – I think we should include the existing Model’s language allowing the guaranty fund to go after the employer “on the same basis as the receiver, and with the same rights and remedies including without limitation the right to recover reasonable costs of collection from the insured”; (52) The exposure draft has language clarifying that the guaranty fund’s reimbursement rights under this section don’t limit any rights that might exist under other applicable laws – in particular the guaranty fund’s right to reimbursement by high-net-worth employers under the pay-and-recover clause – do we need express language clarifying that the aggregate reimbursement can’t exceed the amount paid? (So that you can’t, for example, draw collateral to pay the worker and collect a high-net-worth reimbursement for the same claim)
Maine alternative proposal, January 6, 2020. I think that if we’re presenting an alternative to Section 712, without proposing amendments, we should avoid unnecessary inconsistencies between the two versions. In particular, I think it confuses the issue to have one version call these policies “large deductible” policies and the other version call them “loss reimbursement policies.” There are pros and cons to both approaches, and I don’t think they have anything to do with the substantive differences between existing IRMA § 712 and the Guideline alternative. Accordingly, the draft I’m proposing is marked up against the existing language (with explanatory balloon comments in the margin), except for the drafting note at the top, which is marked up against the exposure draft.

GUIDELINE: ALTERNATIVE TO SECTION 712 OF INSURER RECEIVERSHIP MODEL ACT (#555) “ADMINISTRATION OF LOSS REIMBURSEMENT POLICIES”

Drafting Note: Having the necessary statutory authority specific to so-called “large deductible” workers’ compensation products in receiverships is key to the successful resolution of these insurers. There are currently two statutory authority options available, and there are differences across states as to which authority has been adopted:
1) Section 712 of the NAIC Insurer Receivership Model Act (#555), Administration of Loss Reimbursement Policies; and
2) the National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Legislation, Administration of Large Deductible Policies and Insured Collateral. Both provide statutory guidance that articulates the respective rights and responsibilities of the various parties, which greatly enhance a state’s ability to manage complex large deductible programs in liquidation. Generally, both approaches provide for the collection of reimbursements, resolve disputes over who gets the reimbursements and ensure that the claimants are paid. The provisions in each of the two options are generally consistent with one another, except for conflicting provisions regarding the issue of the ultimate ownership of, and entitlement to, the deductible recoveries and collateral as between the estate and the guaranty fund. The issue is whether the guaranty funds, on behalf of the claimants, are entitled to any deductible reimbursements or whether they are a general estate asset that is shared pro rata by the guaranty funds and the uncovered claimants.

Alternative Section 712. Administration of Loss Reimbursement Policies

A. For purposes of this section:

(1) “Loss reimbursement policy” means any combination of one or more policies, endorsements, contracts or security agreements in which:

(a) The insured has agreed with the insurer to: (i) Pay directly any portion of a loss or loss adjustment expense owed by the insurer under the policy up to a specified dollar amount; or (ii) Reimburse the insurer for its payment of loss and loss adjustment expense under the policy up to a specified dollar amount; and

(b) Under which the insurer remains liable for payment of loss and loss adjustment expense under the policy regardless of whether the insured has met its obligations. A loss reimbursement policy may provide for a specific dollar amount of loss reimbursement applicable to each claim, an aggregate dollar amount applicable to all claims under the policy, or both.

Drafting Note: The primary purpose of a loss reimbursement policy is the shifting of a portion of the ultimate financial responsibility to pay claims from the insurer to the insured, even though the initial obligation to pay claims may remain with the insurer. Because the payment of the entire amount of each claim remains the unconditional obligation of the insurer, the insured’s loss reimbursement obligation should not be treated as a “deductible” for

Commented [RAW1]: The exposure draft leaves out the expletive in the first line of Paragraph A(1). It should be restored if we retain the restriction to workers’ compensation. (Even if we don’t—see next comment—I have no problem with keeping the word “deductible” which references to workers’ comp or the term “large deductible” in the drafting note, since that provides useful background on the context and purpose.

Deleted: complement each

Formatted: Font: italic

Commented [RAW2]: The exposure draft makes this section inapplicable to “claims funded by a guaranty association net of the deductible unless paragraph B of this section applies.” I don’t understand the purpose of this exclusion, and I don’t see a need for it. Paragraph B of the exposure draft is what does apply when the insured self-pays the claim within the deductible. And even if, God forbid, the state in its wisdom decides injured workers deserve no guaranty fund protection if they were foolish enough to work for employers that might default on their loss reimbursement obligations, the provisions for the receiver collecting reimbursements should still apply, and the provisions for paying the GA aren’t relevant because in that scenario the claim within the deductible isn’t a “covered claim.”

Commented [RAW3]: If we were to apply this Guideline only to deductibles above a certain threshold, as the exposure draft proposes, then I would agree that the term needs to be changed to “large deductible” policies—and the definition should be changed accordingly, similar to the change proposed in the exposure draft. But why? What law would then apply to “small and mid-size” deductibles?

Commented [RAW4]: Should the scope be limited to workers’ compensation? Or more broadly, to P&C policies? I think that’s an IRMA question rather than a question specific to the Guideline proposal, so I don’t see any compelling reason for the scope of the Guideline to be different from the scope of the existing provision.

Commented [RAW5]: However, if the consensus is that we want the two different versions of IRMA § 712 to have different scopes (or if down the road we want to amend both versions), then change “one or more policies” to “one or more workers’ compensation policies.”

Commented [RAW6]: This seems much clearer than the “also applies” clause in the exposure draft. As written, the exposure draft would not apply to a policy with a billion-dollar aggregate deductible and no specific coverage below it, which if I recall correctly was one of the examples that touched off this latest round of review.

Commented [RAW7]: The first sentence is taken from the exposure draft, which has it in the body of the definition, but it seems more suitable to a drafting note. The exposure draft also says this is a “distinguishing characteristic” of large deductible policies, but contradicts this by explicitly enumerating three other types of policies that share this...

[1]
purposes of any applicable exclusion from guaranty association coverage, even though these policies are commonly referred to as “large deductible” policies.

(2) “Loss reimbursement” means any payment made by the insured to or on behalf of the insurer for loss or loss adjustment expense pursuant to the terms of a loss reimbursement policy, to the extent that the insurer is responsible for payment regardless of whether the insured has met its obligations. Loss reimbursement includes any voluntary or involuntary application of loss reimbursement collateral to the loss reimbursement obligations of the insured. Loss reimbursement does not include:

(a) Payments made by the insured pursuant to a deductible arrangement under which the insurer has no obligation to pay or advance the amount of the deductible on behalf of the insured or a self-insurance arrangement under which the insurer has no payment obligation for the obligation of the self-insured;

(b) Retrospectively rated premium payments; or

(c) Reinsurance claim payments made by a captive reinsurer or other reinsurer affiliated with or funded by the insured or affiliated with the insurer.

(3) “Loss reimbursement claim” means any claim on a loss reimbursement policy that has been made against the estate, or that was previously paid by the insurer, to the extent that it is subject to an insured’s loss reimbursement obligation. A loss reimbursement claim includes any loss adjustment expenses that are subject to reimbursement by the terms of the policy.

(4) “Loss reimbursement collateral” means any cash, letters of credit, surety bond or any other form of security provided by the insured to secure its loss reimbursement obligations, regardless of whether the collateral is held by, for the benefit of, or assigned to the insurer, and regardless of whether the collateral also secures other obligations of the insured.

(5) “Uncovered loss reimbursement claim” means a loss reimbursement claim that is not defined as a covered claim under the relevant guaranty association statute.

(6) “Other secured obligations” means any obligations, such as reinsurance or retrospective premium obligations, that are payable by the insured to the insurer and which are secured by collateral that also secures a loss reimbursement obligation.

B. Administration of Loss Reimbursement Claims.

(1) Except as otherwise provided in this section, all loss reimbursement claims that are also “covered claims” under an applicable guaranty association law, including those that may have been funded by an insured before liquidation, shall be turned over to the guaranty association for administration and payment as provided in the guaranty association law.
(2) Unless otherwise prohibited by law, the receiver, with notice to all affected guaranty associations, may enter into agreements allowing an insured to fund or pay loss reimbursement claims, directly or through a third-party administrator:

(a) If the insurer previously allowed the insured to fund or pay loss reimbursement claims directly or through a third-party administrator, the arrangement is subject to assumption or rejection by the receiver as an executory contract under Section 114.

(b) This paragraph does not preclude a guaranty association that is responsible for payment of a loss reimbursement claim from entering into an agreement with an insured, or a third-party administrator selected by an insured, to administer or pay loss reimbursement claims on behalf of the guaranty association.

(3) The insured’s payment of a loss reimbursement claim in whole or part, including any payment made by a third-party administrator on behalf of the insured, shall extinguish the obligation, if any, of the receiver or any guaranty association to pay that claim or that portion of the claim. Acceptance of the insured’s payment by a claimant in full or final settlement of a claim shall bar the assertion of that claim in the delinquency proceeding or the guaranty association claims process.

(4) An agreement entered into or reaffirmed under this subsection may be terminated in the manner specified in the agreement.

C. Any loss reimbursements owed by an insured shall be administered as follows:

(1) The receiver shall bill an insured for reimbursement of a loss reimbursement claim when:

(a) the insured paid the claim prior to the commencement of delinquency proceedings;

(b) the receiver is notified that a guaranty association has paid a loss reimbursement claim;

(c) the receiver has paid a loss reimbursement claim; or

(d) a loss reimbursement claim is allowed in liquidation proceedings.

(2) If the receiver is reimbursed by or on behalf of the insured, or obtains reimbursement by drawing collateral, for all or part of a loss reimbursement claim that a guaranty association has paid or is obligated to pay, the receiver shall remit such funds to the guaranty association, net of any reasonable and actual collection costs the receiver was unable to recover from the insured, to the extent necessary to reimburse the guaranty association. Reimbursements paid to the guaranty association pursuant to this subsection shall not be treated as distributions under Section 802 or early access payments under Section 803. The extent to which the guaranty association is not fully reimbursed for its claim payments and its loss reimbursement claim payments shall be rebated to the insured.

Commented [RAW16]: The exposure draft gives this power to the guaranty association. I think it has to be the receiver when it’s a global agreement for the entire policy.

Commented [RAW17]: Doesn’t affect the meaning, but emphasizes that the decision needs to be made on a policy-by-policy basis.

Commented [RAW18]: IRMA’s punctuation is inconsistent – when “third-party” is used as an adjective, IRMA hyphenates it 6 times and leaves out the hyphen. ... [2]

reasonable and actual expenses, it shall be entitled to assert a claim for those amounts in the delinquency proceeding.

(3) If the insured does not make payment within the time specified in the loss reimbursement policy, or within sixty (60) days after receipt of the billing if no time is specified, the receiver has the obligation to take all commercially reasonable actions necessary to collect any reimbursements owed.

(4) The insolvency of the insurer, the insurer’s or receiver’s inability to perform any of the insurer’s obligations under the loss reimbursement policy, or any allegation of improper handling or payment of a loss reimbursement claim by the receiver and/or any guaranty association shall not be a defense to the insured’s reimbursement obligation under the loss reimbursement policy.

D. Any collateral held under a loss reimbursement policy issued by an insurer subject to a delinquency proceeding under this Act shall be maintained and administered in accordance with the loss reimbursement policy except where the loss reimbursement policy conflicts with this section.

E. If the loss reimbursement collateral, when combined with loss reimbursement payments that have been made by the insured, is insufficient to reimburse loss reimbursement claims already paid by the insurer, the receiver and guaranty associations, and to discharge all currently and past due loss reimbursement claims and other secured obligations, then the collateral shall be applied first to fully meet any uncovered loss reimbursement claims whose reimbursement is secured by the collateral, then to all reimbursements due to guaranty associations under paragraph (C)(2) or for covered claims that have been paid directly by the receiver, and finally to any other secured obligations.

(1) Claims of the same type shall be paid in the order filed with the receiver.

(2) Excess collateral may be returned to the insured only if the receiver determines, after a periodic review of claims paid, that the collateral is sufficient, with a confidence level of at least 95%, to discharge both outstanding case reserves and incurred but not reported claims.

F. If the receiver declines to seek or is unsuccessful in obtaining reimbursement from the insured for a loss reimbursement claim and there is no available collateral, a guaranty association may, after notice to the receiver, seek to collect reimbursement due from the insured on the same basis as the receiver, and with the same rights and remedies including without limitation the right to recover reasonable costs of collection from the insured. The guaranty association shall report any amounts so collected from each insured to the receiver. The receiver shall provide the guaranty association with available information needed to collect a reimbursement due from the insured. Whenever a guaranty association undertakes to collect reimbursements from an insured, it shall notify all other guaranty associations that have paid loss reimbursement claims on behalf of the same insured. Amounts collected by a guaranty association pursuant to this paragraph shall be treated in accordance with subparagraph C(2), The expenses incurred by a guaranty association in pursuing reimbursement shall not be permitted as a claim in the delinquency proceeding at

Deleted: (3) Any loss reimbursement paid to the receiver that is allocable to a claim paid by a guaranty association shall be immediately distributed to that guaranty association as an early access payment in accordance with Section 803; provided, however, that notwithstanding the provisions of Section 803, receivership court approval shall not be required for early access distributions made pursuant to this section.

Commented [RAW32]: No change from original.

Commented [RAW33]: Existing Section 712 says “receiver’s,” exposure draft says “insurer’s.” If I had to pick between the two, I’d go with “receiver’s,” because the insurer’s insolvency is already listed separately and other types of “inability” are more likely to be post-receivership issues.

Deleted: is authorized

Commented [RAW34]: The exposure draft includes a definition of this term. However, it’s used multiple times in other provisions of IRMA, and shouldn’t have a separate definition for purposes of this section. Perhaps a drafting note suggesting that states consider defining the term if it doesn’t already have an established meaning under state law?

Commented [RAW35]: The exposure draft makes an exception for gross negligence. This is worth discussing.

Commented [RAW36]: The exposure draft goes in 2022.

Commented [RAW37]: The applicable contractual definitions are referenced for the first time in the exposure draft here.

Commented [RAW38]: The applicable contractual definitions are referenced for the first time in the exposure draft here.

Commented [RAW39]: The exposure draft is broad.

Commented [RAW40]: Should there be any reference to the contractual definitions?

Commented [RAW41]: This is a substantive difference.

Commented [RAW42]: I think we ought to consider...

Deleted: all early access obligations

Deleted: the

Commented [RAW43]: The exposure draft says “in,” original says “as in accordance with.”

Commented [RAW44]: This is in the exposure draft.

Formatted: indent: Left: 0.5"

Commented [RAW45]: This is an important addition.

Commented [RAW46]: I’m surprised this has no
discussion around it.

Commented [RAW47]: Is this the only trigger, or is there a
backup?

Deleted: as

Commented [RAW48]: The phrase “as in accordance with” is
already in the exposure draft.

Deleted: of this section
any priority, except as agreed by the receiver at or before the time the expenses are incurred; however, a guaranty association may net the expenses incurred in collecting any reimbursement against that reimbursement.

G. The receiver is entitled to recover through billings to the insured or from loss reimbursement collateral all reasonable expenses that the receiver or guaranty associations incur in fulfilling their responsibilities under this Section. All such deductions or charges shall be in addition to the insured’s obligation to reimburse claims and related expenses and shall not diminish the rights of claimants or guaranty associations.

H. Nothing in this section limits any rights of the receiver or a guaranty association that may otherwise exist under applicable law to obtain reimbursement from insureds for claims payments made by the guaranty association under policies of the insurer or for the guaranty association’s related expenses, such as those provided for pursuant to [insert cite to guaranty association net worth provision], or existing under similar laws of other states, provided that the guaranty association’s aggregate reimbursement attributable to any claim or expense payment may not exceed the actual amount paid.

J. [OPTIONAL] The provisions of this section shall be applied in all receiverships pending at the time of enactment.

Drafting Note: Attention should be drawn to whether Section 712 is adopted with IRMA or as a stand-alone. If it is adopted with IRMA, then the provisions in Section 111 of IRMA may apply. States may wish for this particular section to not apply retroactively even if electing to have the rest of IRMA so applied, or may wish to apply Section 712 retroactively while having the rest of IRMA applying prospectively.
The first sentence is taken from the exposure draft, which has it in the body of the definition, but it seems more suitable to a drafting note. The exposure draft also says this is a “distinguishing characteristic” of large deductible policies, but contradicts this by explicitly enumerating three other types of policies that share this characteristic: smaller deductibles, retros, and captive reinsurance.

IRMA’s punctuation is inconsistent – when “third-party” is used as an adjective, IRMA hyphenates it 6 times and leaves out the hyphen 14 times. Even the three references to TPAs within Section 712 are inconsistent. So I went with what I consider the correct form.

Existing Section 712, as written, seems to require the receiver to keep any pre-receivership self-pay arrangement in place, even if it’s unwritten and undesirable. This is even more problematic in the framework of the existing Model than it is for our Guideline, since under the existing Model, self-pay arrangements operate to diminish the estate.

Something to discuss – not sure whether it’s an appropriate addition. Global agreements are the receiver’s call, but maybe there’s a place for separate agreements with individual GAs if there’s no global agreement?

I think this is a helpful clarification, though it was omitted from the exposure draft. It avoids any ambiguity regarding a single workers’ compensation “claim” encompassing a series of periodic “claims” against the estate, and also addresses the situation where the money runs out in the middle of a single payment.

Exposure draft omits reference to TPAs. Not strictly necessary, but I think it’s a helpful clarification.

The exposure draft’s counterpart to this paragraph includes the sentence “No charge of any kind shall be made against the receiver or a guaranty association on the basis of an insured’s funding or payment of a deductible claim.” Maybe I’m just burned out as I try to wrap this up, but I’m baffled by this sentence. What is the problem it’s trying to solve? What kind of charge might be made, in what circumstances, in the absence of this sentence?

The exposure draft is more forceful, but “shall have the obligation to” and “shall” actually mean the same thing, and the rights and duties of the receiver and GA seem to be a better fit in Paragraph (4) below.
The deleted half of this paragraph is one of the awkward features of existing Section 712 – what happens when the employer is required to reimburse the same claim under both a large deductible agreement and a net worth “pay and recover” law? It’s been deleted because the Guideline approach eliminates the conflict so there’s no need to resolve it – the guaranty association is entitled to the reimbursement either way.

Since the sentence that follows is deleted, these subparagraphs don’t need to be numbered inline.

A version of this clause appears in both the existing Model and the exposure draft, but how can the mere allowance of a claim trigger an obligation to “reimburse” a claim that hasn’t been paid? Should this be limited to cases where the insurer has the contractual right to bill the employer as soon as the claim is accepted? Are there such contracts?

The exposure draft phrases reimbursements by the insured and draws on collateral as though they were two different things. But as far as we’re concerned, it all comes from the insured, one way or another. If a surety or guarantor has collection issues with the insured, that’s their problem, not ours.

This paragraph, and the deletion of existing paragraph (3), are the heart of the difference between the Guideline approach and the approach taken by the existing IRMA language. This draft is generally based on the first two paragraphs of Subsection C of the exposure draft, but I tried to clarify certain points. For example, the exposure draft says the GA “shall be entitled to recover” but doesn’t say from whom.

The exposure draft says “net amount of the reimbursement,” but doesn’t explain “net of what?” in this paragraph. That seems to be the point of the second Subsection E of the exposure draft, but I prefer existing Subsection G which makes those costs the responsibility of the insured if possible.

Note also that the exposure draft has two “Subsection E”s – if we keep the exposure draft’s organization, the second of those, “Administrative Fees,” should be F. It also consists in its entirety of a single numbered paragraph (1), with no paragraph (2), so the internal numbering seems superfluous.

The exposure draft has placeholder language, which would make sense in a stand-alone law, but I think it’s understood, when a state only adopts IRMA (or any other Model) in part, that internal cross-references might need to be changed to reference some other law. (For that matter, even when IRMA is adopted intact the internal cross-references might need to change to match the state’s own numbering scheme.)
The exposure draft makes an exception for gross negligence. This is worth discussing (we’re talking here about allegations that the insurer paid meritless claims because it wasn’t the insurer’s own money on the line), but is there a good reason for the two versions to be inconsistent here? If we agree to propose a gross negligence exception, consider doing it as a drafting note suggesting that states might want to consider such an exception, whichever version of Section 712 they adopt.

The exposure draft goes into more detail about the triggers for draws on collateral. Is that material necessary? I don’t see it as a substantive difference from the existing language, nor as a clarification that patches a hole that’s created any actual problems.

The applicable contractual provisions might not be in the policy itself, but I think that’s taken care of by the definition of “loss reimbursement policy.”

The exposure draft is broader, saying the entire policy applies unless there’s a conflict with this section. To the extent that it does more than restate the obvious, it doesn’t seem appropriate, since it seems to say the contract trumps all other sections of the receivership law, including all discretionary powers of the receiver therein, except Section 712. Seems particularly dangerous since the policy is defined to include all applicable side agreements.

Should there be any reference to Section 710 here, which addresses collateral more generally? Note that the race-to-file provision we’re proposing is different from the pro rata distribution called for by Subsection 710(B), but that ambiguously worded subsection seems to be intended to apply only to surety bond collateral.

This is a substantive difference between the exposure draft and the existing IRMA language where I strongly prefer the existing language. “Other secured obligations” that weaken the collateral should be disfavored and should not be entitled to compete on equal terms in the race to access the collateral.

I think we ought to consider giving uncovered secured claims – if they exist – priority over the Gas. If we don’t do this, however, we should as noted earlier delete the definition of “uncovered loss reimbursement claims because the term isn’t used.

The exposure draft says “no claim of the receiver, including those described in this Subsection, shall supersede any other claim against the collateral as described in Subsection (4) of this Section.” This seems wrong for three reasons. One is that it contradicts the other provisions in the exposure draft expressly allowing the receiver to net out actual and reasonable collection expenses. The other is that I don’t understand why claims of the same type should be treated differently depending on which responsible party happened to be on the spot to make the initial payment. Finally, if we keep the provision protecting uncovered loss reimbursement claimants, this is based on paying them out of the collateral and loss reimbursements as secured claimants, not paying them in full out of general estate assets and making the receiver go to the tail of the line for reimbursement.

This is in the exposure draft but not in the existing IRMA. Not sure why – is that because it doesn’t matter as much if they’re merely Early Access Distributions and not final payments?
This is an important addition made by the exposure draft, but I don’t think the exposure draft is strong enough. Even the 95th confidence level has, by definition, one chance in 20 of being inadequate. I omitted the reference to “a factor for” IBNR because I was afraid it might encourage reliance on rules of thumb which are often insufficient.

I’m surprised this has no counterpart in the exposure draft. The receiver has the obligation to pursue prompt and diligent collection of reimbursements, but what’s the remedy if the receiver doesn’t successfully get them?

Is this the only trigger, or should the receiver have the authority to delegate the authority to collect reimbursements and administer collateral to one or more Gas by agreement? (Or does that power already exist, to whatever extent it might be useful, when the law is silent?)

The phrase “as in accordance with” in existing IRMA looks like a typo. Should be either “in accordance with” or (but only in the existing version, not the Guideline alternative, of course!) “as early access payments in accordance with”

The Reinsurance (E) Task Force met via conference call Aug. 6, 2020. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Ryan Basnett (SC); Lori K. Wing-Heier represented by David Abreo (AL); Elizabeth Perri (AS); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi (CT); David Altmair represented by Carolyn Morgan and Virginia Christy (FL); Doug Ommen represented by Carrie Mears and Kim Cross (IA); Dean L. Cameron represented by Nathan Faragher (ID); Robert H. Muriel represented by Susan Berry (IL); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa represented by Robert Wake (ME); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by John Tirado (NJ); Barbara D. Richardson represented by Perter Rao and Gennady Stolyarov (NV); Linda A. Lacewell represented by Mona Bhalla (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Michael S. Pieciak represented by David Provost (VT); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted its June 9 Minutes**

Mr. Rehagen stated that the Task Force met June 9 and took the following action: 1) adopted its March 11, Jan. 29, and Dec. 8, 2019, minutes; 2) discussed whether Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) should be considered to be “substantially similar” to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) for purposes of accreditation; and 3) adopted the new Uniform Checklist for Reciprocal Jurisdiction Reinsurers and revisions to the Uniform Application Checklist for Certified Reinsurers.

Ms. Belfi made a motion, seconded by Mr. Milquet, to adopt the Task Force’s June 9 minutes (Attachment One). The motion passed unanimously.

2. **Adopted its 2021 Proposed Charges**

Mr. Rehagen stated that the proposed 2021 charges include minor revisions to the 2020 charges, and the charges related to the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) had been incorporated during the prior year.

Ms. Macaluso made a motion, seconded by Mr. Eft, to adopt the 2021 proposed charges of the Task Force, the Reinsurance Financial Analysis (E) Working Group, and the Qualified Jurisdiction (E) Working Group (Attachment Two). The motion passed unanimously.

Mr. Kaumann provided the report of the Working Group. He stated that the Working Group met March 11 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to adopt the new Uniform Checklist for Reciprocal Jurisdiction Reinsurers and revisions to the Uniform Application Checklist for Certified Reinsurers.

Mr. Kaumann stated that the Working Group monitors 33 certified reinsurers that have been recommended for passporting, and the reviews of these certified reinsurers must be completed before year end. He stated that the Working Group will begin discussions to determine the best and most effective approaches for the financial solvency surveillance of the reciprocal jurisdiction reinsurers in the next several months.
Mr. Kaumann made a motion, seconded by Mr. Wake, to adopt the report of the Reinsurance Financial Analysis (E) Working Group. The motion passed unanimously.

4. Adopted the Report of the Qualified Jurisdiction (E) Working Group

Mr. Wake stated that the Working Group has not met during 2020. He stated that during the fall of 2019, the Working Group completed several projects related to the 2019 revisions to Model #785 and Model #786, and he noted that the Working Group also completed the re-reviews of the qualified jurisdictions that were due prior to Jan. 1, 2020, and the initial reviews of the reciprocal jurisdictions that are not subject to covered agreements.

Mr. Wake stated that the Working Group has been approached by three countries that have shown interest in becoming qualified jurisdictions. He stated that the Working Group intends to perform the initial reviews of these countries over the next several months. He noted that the Working Group stands ready to assist with any issues.

Dan Schelp (NAIC) stated that the Working Group has committed to updating the Process for Evaluating Qualified and Reciprocal Jurisdictions to include a process for termination of a qualified jurisdiction or reciprocal jurisdiction.

Mr. Wake made a motion, seconded by Mr. Kaumann, to adopt the report of the Qualified Jurisdiction (E) Working Group. The motion passed unanimously.

5. Received a Status Report on the States’ Implementation of the 2019 Revisions to Model #785 and Model #786

Mr. Rehagen stated that as of July 7, 11 U.S. jurisdictions have adopted the 2019 revisions to Model #785, and 17 jurisdictions have action under consideration. He noted that Virginia has adopted the revisions to Model #786, and Kentucky, Pennsylvania, and West Virginia currently have action under consideration. He stated that the maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Three).

Mr. Rehagen stated that the 2019 revisions to the models must be adopted by the states prior to Sept. 1, 2022, which is when the revisions are expected to become an accreditation standard. He noted that Sept. 1, 2022, is also the date at which the Federal Insurance Office (FIO) must complete its federal preemption reviews under the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement). He noted that the COVID-19 pandemic has slowed the adoption process, and several state legislatures have temporarily closed or have primarily focused on the pandemic. He stated that the Task Force will provide support to the states to meet this deadline, and it will communicate with the U.S. Department of the Treasury (Treasury Department) and the FIO, as necessary. He noted that there have not been any specific conversations with either the FIO or the European Union (EU) about extending this deadline, but there have been some preliminary discussions with the FIO on the status of state adoptions.

Mr. Rehagen stated that the SMI Dashboard is updated regularly to show the current adoptions of several model laws and regulations, and it can be found on the Financial Condition (E) Committee’s webpage. He noted that Mr. Schelp and Jake Stultz (NAIC) can answer any technical questions during the legislative process, and Holly Weatherford (NAIC), Legislative Counsel, is working directly with the states on the adoption of the 2019 revisions to Model #785 and Model #786.

Karalee C. Morell (Reinsurance Association of America—RAA) stated that there has been a significant amount of work completed by the state legislatures, but the process has been slowed by COVID-19. She noted that several states had to stop all legislative activity earlier in early 2020, and she noted that with the potential risk of a second wave of COVID-19, the states must plan around any potential further legislative recesses in the next few months. She stated that the EU Covered Agreement effective dates are not flexible. She noted that the RAA can assist the state legislatures during the adoption process.

Mr. Kaumann asked if the RAA has talking points that they can provide to the states. Ms. Morell stated that she can provide the RAA talking points directly to anybody that requests them. Mr. Schelp noted that the NAIC has a legislative packet with talking points and other information that has been distributed to the state legislative liaisons, and NAIC staff can resend those to any states that need them during the legislative process.

Having no further business, the Reinsurance (E) Task Force adjourned.
The Reinsurance (E) Task Force met via conference call June 9, 2020. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Daniel Morris (SC); Lori K. Wing-Heier represented by David Phifer (AK); Alan McClain represented by Mel Anderson (AR); Ricardo Lara represented by Monica Macaluso and Kim Hudson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi and Jim Jakielo (CT); Trinidad Navarro represented by Dave Lonchar (DE); David Altmaier represented by Carolyn Morgan (FL); John F. King (GA); Doug Ommen represented by Carrie Mears (IA); Dean L. Cameron represented by Nathan Faragher (ID); Robert H. Muriel represented by Eric Moser (IL); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa, represented by Robert Wake (ME); Matthew Rosendale represented by Steve Matthews (MT); Mike Causey represented by Jackie Obusek (NC); Jon Godfried represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford and Justin Schrader (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by John Tirado (NJ); Barbara D. Richardson represented by Joel Bengo (NV); Linda A. Lacewell represented by Michael Campanelli (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Andrew Schallhorn (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Jamie Walker and Mike Boerner (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Mark Afable represented by Randy Milquet (WI).

1. Adopted its March 11, Jan. 29, and 2019 Fall National Meeting Minutes

Mr. Rehagen stated that the Task Force met March 11, Jan. 29, and Dec. 8, 2019. During its March 11 meeting, the Task Force: 1) adopted a recommendation that the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) be an accreditation standard for risk retention groups (RRGs); and 2) discussed whether Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) should be considered to be “substantially similar” to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) for purposes of accreditation. During its Jan. 29 meeting, the Task Force adopted technical revisions to Model #787.

Mr. Eft made a motion, seconded by Ms. Obusek, to adopt the Task Force’s March 11 (Attachment One-A), Jan. 29 (Attachment One-B) and Dec. 8, 2019 (see NAIC Proceedings – Fall 2019, Reinsurance (E) Task Force) minutes. The motion passed unanimously.

2. Discussed Whether Compliance with AG 48 Should be Considered “Substantially Similar” to Model #787 for Accreditation Purposes

Mr. Rehagen stated that the Task Force discussed whether compliance with AG 48 should be considered “substantially similar” to Model #787 for accreditation purposes on its March 11 conference call. He stated that the Task Force exposed a memorandum (See NAIC Proceedings – Summer 2020, Reinsurance (E) Task Force, Attachment One-A2) on Feb. 5 for a 21-day public comment period. He noted that the Financial Regulation Standards and Accreditation (F) Committee has adopted Model #787 as an accreditation standard, recommended to be effective Sept. 1, 2022, with enforcement beginning Jan. 1, 2023. He stated that his preference was to not provide a formal recommendation to the Committee, leave the current recommendation in place for adoption by the Executive (EX) Committee and Plenary, and allow the Financial Regulation Standards and Accreditation (F) Committee to review and address potential accreditation issues on a case-by-case basis.

Dan Schelp (NAIC) stated that the Accreditation Program Manual provides a definition of “substantially similar” that does not require a state to adopt every significant element of a model, but the state may also rely on an administrative practice that results in solvency regulation that is similar in force and no less effective than the NAIC model law or regulation for that standard. He stated that on an annual basis, the NAIC Legal Division will perform a Part A review of the state’s laws and regulations and will then provide an opinion to the Financial Regulation Standards and Accreditation (F) Committee as to whether a state’s administrative practices or other laws or regulations are similar in force and no less effective than the model.
He noted that this is normally an outcomes-based approach, and if the state is achieving “substantially similar” financial solvency results as under the model, the practice would be considered “substantially similar.”

Mr. Schelp noted that there is a caveat that the department of insurance (DOI) must not have encountered a successful challenge to the required administrative practice by an insurer, and the DOI must generally support compliance with the practice by the insurers. He stated that it is the opinion of NAIC staff that AG 48 is an administrative practice that if enforced by a state would result in financial solvency regulation that is “substantially similar” to Model #787. He noted that the Financial Regulation Standards and Accreditation (F) Committee generally accepts the opinion of the NAIC Legal Division, but this issue remains at the discretion of the Committee.

Becky Meyer (NAIC) stated that all companies are currently complying with AG 48 without a need to take the penalty. She noted that concerns have been expressed that the reason for compliance is the strong emphasis on making Model #787 an accreditation standard and the penalty that comes with non-compliance with Model #787. She noted that having Model #787 as the accreditation standard, along with an outcomes-based approach that allows AG 48 as an administrative practice rather than a strict recommendation that states must adopt Model #787, provides flexibility to ensure that the goals of the standard are met by all states.

Ms. Belfi stated that based on the comments provided by Mr. Schelp and Ms. Meyer, Connecticut agrees with the approach of not providing any further recommendation from the Task Force to the Financial Regulation Standards and Accreditation (F) Committee.

Mr. Rehagen stated that the Task Force will not make any further recommendations to the Financial Regulation Standards and Accreditation (F) Committee, and it will rely on the Committee’s judgment, based on the case-by-case analysis of whether a state is in compliance with the accreditation standard.

3. Adopted the Uniform Checklist for Reciprocal Jurisdiction Reinsurers and Updates to the Uniform Application Checklist for Certified Reinsurers

Mr. Rehagen stated that because of the 2019 revisions to Model #785 and Model #786, there are minor revisions needed for the existing Uniform Application Checklist for Certified Reinsurers (Attachment One-C), and a new Uniform Checklist for Reciprocal Jurisdiction Reinsurers (Attachment One-D) is needed. He stated that the Reinsurance Financial Analysis (E) Working Group was tasked with creating and modifying these checklists. On May 4, the Task Force exposed the checklists for a 21-day public comment period, and two comment letters (Attachment One-E) were received: 1) one from the International Underwriting Association of London (IUA); and 2) a combined letter from the Reinsurance Association of America (RAA) and Lloyd’s.

Mr. Schelp stated that in addition to the comment letters received, informal comments had been provided by the Association of Bermuda Insurers and Reinsurers (ABIR) and the European Commission. He stated that as a result of the comments received, a revised version of the Uniform Checklist for Reciprocal Jurisdiction Reinsurers was sent via email by NAIC staff on June 8 (Attachment One-F). He provided a brief description of these revisions.

Mr. Wake stated that he agrees with revisions that were made and are included in the version that was emailed by NAIC staff on June 8.

Mr. Bruggeman asked if both checklists would be required for companies that have both certified reinsurer business and reciprocal jurisdiction reinsurer business. Mr. Schelp stated that companies will be required to file both if they are doing both types of business.

Karalee C. Morell (RAA) stated that the RAA agrees with the revisions that were included in the draft sent by NAIC staff on June 8. Sabrina A. Miesowitz (Lloyd’s) stated that Lloyd’s agrees with the RAA’s statement.

Mr. Kaumann made a motion, seconded by Mr. Wake, to adopt the revised Uniform Application Checklist for Certified Reinsurers (Attachment One-C) and the new Uniform Checklist for Reciprocal Jurisdiction Reinsurers with the edits that were sent out by NAIC staff via email on June 8 (Attachment One-F). The motion passed unanimously.

Having no further business, the Reinsurance (E) Task Force adjourned.
The Reinsurance (E) Task Force met via conference call March 11, 2020. The following Task Force members participated: Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, and Daniel Morris (SC); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling represented by Sheila Travis (AL); Ricardo Lara represented by Monica Macaluso and Kim Hudson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi and Jim Jakielo (CT); Trinidad Navarro represented by Dave Lonchar (DE); David Altmaier represented by Carolyn Morgan (FL); John F. King represented by Martin Sullivan (GA); Dean L. Cameron represented by Nathan Faragher (ID); Robert H. Muriel represented by Eric Moser and Susan Berry (IL); Stephen W. Robertson represented by Roy Eft (IN); Vicki Schmidt represented by Chut Tee (KS); Sharon P. Clark represented by Russell Coy (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Eric A. Cioppa, represented by Robert Wake (ME); Jon Godfread represented by Colton Schulz (ND); Bruce R. Ramey represented by Lindsay Crawford (NE); Chris Nicolopoulos represented by Doug Bartlett (NH); Marlene Caride represented by John Tirado (NJ); Barbara D. Richardson represented by Joel Bengo (NV); Linda A. Lacewell represented by Michael Campanelli (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Diane Carter (OK); Kent Sullivan represented by Doug Slape and Mike Boerner (TX); Todd E. Kiser represented by Reed Stringham (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Michael S. Pieciak represented by Sandra Bigglestone (VT); and Mark Afable represented by Randy Milquel (WI).

1. **Adopted a Recommendation to the Financial Regulation Standards and Accreditation (F) Committee that the 2019 Revisions to Model #785 and Model #786 Should be an Accreditation Standard for RRGs**

Mr. Rehagen stated that at the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the 2019 revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) as an accreditation standard. The Executive (EX) Committee and Plenary are expected to consider it for final adoption at the Spring National Meeting, to be effective Sept. 1, 2022.

Dan Schelp (NAIC) stated that during the drafting process for the 2019 revisions to Model #785 and Model #786, risk retention groups (RRGs) were never specifically addressed. He stated that a memorandum (Attachment One-A1) was prepared by NAIC staff that recommended that both the 2011 revisions and 2019 revisions to Model #785 and Model #786 should be adopted as an accreditation standard. He stated that the memorandum also recommends that the 2011 revisions to the models relating to certified reinsurers and qualified jurisdictions also be made a part of the accreditation standard since the 2019 revisions are based on the earlier revisions. Finally, the Risk Retention Group (E) Task Force unanimously adopted this recommendation during its March 2, 2020, conference call.

Mr. Kaumann made a motion, seconded by Mr. Stolte, to adopt the motion to confirm the Task Force’s support for the memorandum prepared by NAIC staff, specifically that both the 2011 revisions to Model #785 and Model #786 relating to certified reinsurers and qualified jurisdictions and the 2019 revisions relating to reciprocal jurisdictions be applicable to RRGs for accreditation purposes, with an effective date of Sept. 1, 2022. The motion passed unanimously.

2. **Discussed Whether Compliance with AG 48 Should be Considered “Substantially Similar” to Model #787 for Accreditation Purposes**

Mr. Rehagen stated that at the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as an accreditation standard with an effective date of Sept. 1, 2022. Model #787 is a codification of Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48), with the primary exception that AG 48 and Model #787 contain different penalty provisions.

Mr. Rehagen stated that during the Jan. 29, 2020, call of the Task Force, there was a discussion about whether compliance with AG 48 should be considered to be “substantially similar” to Model #787 for accreditation purposes. As a result of this discussion, the Task Force exposed a memorandum (Attachment One-A2) on Feb. 5, 2020, for a 21-day public comment period.
Mr. Rehagen stated that three comment letters were received, one from the American Academy of Actuaries (Academy), one from the Connecticut Insurance Department, and a combined letter from New York Life and Northwestern Mutual (Attachment One-A3). He stated that the three comment letters supported the adoption of Model #787, rather than reliance on AG 48 for the Reinsurance Ceded accreditation standard.

Mr. Schelp provided background information on this issue. He noted that the recommendation from the Task Force to the Financial Regulation Standards and Accreditation (F) Committee in 2017 was to make Model #787 an accreditation standard effective Jan. 1, 2020, which coincided with the effective date of the accreditation standard for principle-based reserving (PBR). He noted that it was recognized that some states might have problems meeting this expedited schedule, so the Task Force also recommended that in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Committee as substantial compliance with Model #787. The adoption of Model #787 as an accreditation standard was delayed by the Committee due to the issuance of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017.

Mr. Schelp stated that the issue is whether AG 48 should be considered to be substantially similar to Model #787 for accreditation purposes. He noted that the requirements under both AG 48 and Model #787 are virtually identical, except for the penalty provision if the requirements are not met. Under AG 48, the penalty is a qualified actuarial opinion and an increase in the Authorized Control Level Risk-Based Capital (RBC) equal to the primary security shortfall. The penalty under Model #787 is that the ceding insurer is required to establish a liability equal to the excess of the credit for reinsurance taken over the amount of primary security.

Mr. Schelp stated that the Accreditation Program Manual has a definition of “substantially similar” that declares that a state is required to demonstrate that its law, regulation or administrative practice is similar in force and no less effective than the NAIC model. Since 2016, NAIC staff have been assessing compliance with AG 48, and it has ascertained that there were no transactions that had either a primary security shortfall or another security shortfall in any of the years reviewed.

Mr. Hudson stated that he understood AG 48 to be temporary and that it was to be replaced by Model #787. Mr. Schelp stated that at the time that Model #787 was being contemplated, the intention was for it to replace AG 48 for accreditation purposes. He stated that the accreditation standards are usually based on NAIC model laws, which are required to be adopted by the states. He noted that Model #787 was the codification of AG 48. He stated that after Model #787 was adopted, AG 48 was updated and revised to make it consistent with Model #787. He noted that AG 48 has a sunset provision that it will sunset when a state adopts a regulation substantially similar to Model #787, but it will continue to apply only with respect to the limited number of states in which their version of Model #787 applies prospectively only. Mr. Stolte stated that the intention was for AG 48 to be a temporary transition guidance until Model #787 was adopted by the states.

Ms. Belfi referred to the comment letter from the Connecticut Insurance Department, and she stated that there are substantial differences between Model #787 and AG 48. She noted that the impact of a qualified actuarial opinion results in a modified RBC for AG 48 instead of the direct balance sheet effect as prescribed by Model #787, which is a significant difference. Ms. Berry asked if Ms. Belfi’s only objection was with the difference in the penalty and whether modifying the penalty in AG 48 would be satisfactory. Mr. Rehagen noted that evaluation of credit for reinsurance is part of the state insurance regulator’s role and not that of actuaries, so it is his opinion that the penalty provision of AG 48 cannot be changed to match that of Model #787.

Ms. Belfi proposed modifying AG 48 to include provisions from Model #787 and allowing more time for the states to adopt Model #787. Mr. Schelp stated that actuarial guidelines generally only affect reserves, while Model #787 directly affects credit for reinsurance. Mr. Boerner noted that a stronger penalty could be added to AG 48, but Texas prefers that AG 48 be considered substantially similar to Model #787 for accreditation purposes. He stated that while AG 48 and Model #787 have different penalties, they have had the same outcome of preventing these transactions.

Richard Daillak (American Academy of Actuaries—Academy) stated that the Academy’s concern is with the difference in penalty between AG 48 and Model #787. He stated that the Academy has concerns with having a forced qualified actuarial opinion as the penalty mechanism, and he stated that AG 48 was intended to sunset after a state adopts Model #787.

Mr. Boerner asked if the Academy agrees that AG 48 should remain effective for contracts that were already in force prior to adoption of Model #787. Mr. Daillak stated that in that case, it would be appropriate to use AG 48 for those contracts, but he recommended the elimination of the use of AG 48 for everything else. Mr. Bruggeman stated that with AG 48, a company can
correct the problem with reserves prior to the qualified actuarial opinion being issued, and the company will then receive an unqualified actuarial opinion.

Mr. Slape stated that if a company is in compliance with either AG 48 or Model #787, it will receive an unqualified actuarial opinion, and if it is out of compliance with either AG 48 or Model #787, it will receive a qualified actuarial opinion. Mr. Wake stated that there is a difference between legal compliance and compliance with actuarial guidelines. He stated that there is an actuarial penalty for violating either AG 48 or Model #787, but only Model #787 has the regulatory penalty of a denial of credit for reinsurance, which results in a direct balance sheet impact, in addition to the indirect impact on the reserves. Mr. Jakielo noted that Model #787 does not have a requirement of a qualified actuarial opinion.

Doug Wheeler (New York Life) made reference to his letter, and he stated that the process to create Model #787 was a multi-year process and was heavily negotiated. He noted that there are fundamental differences between the penalties in Model #787 and AG 48. He stated that he agrees with giving the states more time to adopt Model #787 and moving the effective date of the accreditation standard further into the future. Andrew T. Vedder (Northwest Mutual) agreed with the points made by Mr. Wheeler, and he agreed that Model #787 should be the accreditation standard.

Mr. Rehagen asked the Task Force members if the recommendation to the Financial Regulation Standards and Accreditation (F) Committee should be that the effective date should be moved into the future and they should discuss allowing AG 48 with added penalty provisions as a substitute for Model #787. Mr. Hudson stated that California believes that Model #787 should be the standard, and it does not support AG 48 as a permanent substitute. Mr. Bruggeman stated that Ohio intends to adopt Model #787, but the effective date of Sept. 1, 2022, will be too soon to get the legislative work completed. He stated that extending that date may be a solution.

Ms. Belfi asked if there is a way to allow a reprieve to allow the states more time to adopt Model #787 and increase the RBC penalty for violating AG 48. Mr. Slape stated that the effective date is not the issue for Texas, and they believe that AG 48 and Model #787 are substantially similar. Mr. Bruggeman stated that extending the date would be helpful for Ohio. Mr. Jakielo suggested working through the RBC instructions to make the penalty equivalent for AG 48 and Model #787.

Mr. Rehagen directed NAIC staff to create a document that outlines today’s discussion and includes arguments for and against having AG 48 be considered substantially similar to Model #787, which can be voted on by the Task Force during its April 2020 conference call.

Having no further business, the Reinsurance (E) Task Force adjourned.
MEMORANDUM

To: Financial Regulation Standards and Accreditation (F) Committee

From: NAIC Staff

Date: February 12, 2020

Re: 2011 & 2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786)—Applicability to Risk Retention Groups (RRGs)

Executive Summary

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). These revisions were intended to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted these revisions to the Reinsurance Ceded accreditation standard effective Sept. 1, 2022, for consideration by the Executive (EX) Committee and Plenary for final adoption at the Spring National Meeting.

The purpose of this memorandum is to clarify the applicability of these revisions to risk retention groups (RRGs) organized as captives. The recommendation to this Committee is that the 2019 revisions to Model #785 and Model #786, as well as the 2011 revisions establishing certified reinsurers and qualified jurisdictions (which became applicable as an accreditation standard Jan. 1, 2019), also should be made applicable to RRGs.

Risk Retention Groups Organized as Captives

Article 3 (Reinsurance) of the Covered Agreement is applicable to ceding insurers, which Article 2(j) defines as “an undertaking which is authorized or licensed to take up or engage in the business of direct or primary insurance.” This would arguably include RRGs that are organized or incorporated by states as captive insurers. Reinsurance Ceded is part of the Part A accreditation requirements for RRGs, and requires that state law should contain Model #785 and Model #786, or substantially similar laws. The primary difference between the current reinsurance accreditation standard for RRGs is that “a state’s laws and regulations may allow RRGs to take credit for reinsurance without posting collateral in circumstances not contemplated by the Credit for Reinsurance Model Law and Regulation. For such cases, the Accreditation Interlineations include ‘Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers’ and a state’s laws and regulations must comply with the guidelines in order to be considered substantially similar with this standard.”

NAIC staff has reviewed the laws and regulations with respect to the fifteen (15) NAIC jurisdictions which currently license multi-state RRGs as captive insurers (AL, AZ, CO, DE, DC, HI, KY, ME, MT, NV, NC, OK, SC, TN and VT), and each meets the current Reinsurance Ceded accreditation standard in a very similar manner. First, each
states’ laws require that an RRG must be licensed as a captive insurer (and in some instances, a specific type of captive insurer) subject to its captive insurance laws. Second, the captive insurance laws generally exempt captive insurers from the general laws with respect to traditional insurers, except as is otherwise specified in statute. Finally, the statutes make RRGs that are licensed as captive insurers subject to the state’s credit for reinsurance laws, either generally (e.g., an RRG licensed as a captive insurer must comply with all of the laws, rules, regulations and requirements applicable to insurers chartered and licensed in the state) or specifically (e.g., an RRG licensed as a captive insurer must comply with the laws specified in this chapter, including specifically the credit for reinsurance laws). We also reviewed the proposed legislation of the five states currently considering adoption of the 2019 revisions to the models (ME, OK, SC, TN & VT), and the proposed legislation would not change this outcome.

**Recommendation**

NAIC staff recommends that the Committee consider making the 2019 revisions to Model #785 and Model #786 an accreditation standard for RRGs effective Sept. 1, 2022, with enforcement of the standard to commence Jan. 1, 2023. Staff further recommends that the 2011 revisions to the models relating to certified reinsurers and qualified jurisdictions also be made a part of the accreditation standard, because the 2019 revisions are in large part based on these earlier revisions. Finally, we recommend that the changes in the attached redlined accreditation standard be adopted as the new accreditation standard for reinsurance ceded to RRGs. [The Risk Retention Group (E) Task Force met on March 2, and approved these recommendations.]
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) or substantially similar laws.

Complete the following question only if this is an interim annual review:

Have there been any changes to the department’s ceded reinsurance requirements since last year’s review?

YES  NO

If the response is NO, there is no further information needed regarding this standard, please proceed to the next standard.

If the response is YES, in the reference column please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that had a change and ensure that they are clearly marked for the changes that have been made (i.e., highlight the changes, redlined version, etc.) Please place an asterisk (*) in the reference column on the right-hand side of the page by each citation that has been changed. Also, please include below a brief description of the nature or reason for the change.

If the department is completing the self-evaluation guide due to an upcoming full review, please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that are listed in the reference column.

FROM: NAIC Staff
RE: Comparison of Term and Universal Life Insurance Reserve Financing Model Regulation (#787) and Actuarial Guideline XLVIII
DATE: February 5, 2020

Executive Summary

At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as an accreditation standard. The NAIC Executive (EX) Committee and Plenary are expected to consider it for final adoption at the Spring National Meeting, to be effective Sept. 1, 2022. On its conference call on Jan. 29, the Reinsurance (E) Task Force discussed whether compliance with Actuarial Guideline XLVIII (AG 48) should be considered “substantially similar” to Model #787 for accreditation purposes. Acting Chair John Rehagen (MO) directed NAIC staff to distribute a memorandum comparing the significant differences between AG 48 and Model #787 for a 21-day public comment period requesting comments on whether compliance with AG 48 should be considered substantially similar to Model #787.

2017 Recommendation on Accreditation

In its memorandum dated August 24, 2017, the Reinsurance Task Force recommended that “a state’s adoption of AG 48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787.” (Appendix A). This recommendation was based on an expedited effective date for the accreditation standard of January 1, 2020. The Task Force recognized that “meeting the expedited date may not be feasible for some states in instances due, in whole or part, to other legislative priorities of the states. It is the recommendation of the Task Force that, in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Financial Regulation Standards and Accreditation (F) Committee as substantial compliance with Model #787.”

At that time the Committee deferred its consideration of Model #787 as an accreditation standard due to concerns expressed with respect to the impending Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance (Covered Agreement), which was signed on September 22, 2017. In 2017 AG 48 was amended “to redraft AG 48 to make it as consistent as possible with the provisions of Model #787.”

Comparison of Model #787 and AG 48

The primary difference between AG 48 and Model #787 are the consequences to an insurer if the requirements of either are not met. Paragraph 6B(1) of AG 48 (Appendix B) provides, as follows:
B. Qualified Actuarial Opinion; Remediation

(1) **The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion** as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the *Valuation Manual*, as applicable, unless:

(a) The requirements of Section 6A(1) and 6(A)(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or

(c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).

[Emphasis Added]. A Drafting Note to this paragraph provides that the “remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787.” In addition, the following proposals related to the XXX/AXXX Reinsurance Framework were adopted by the Capital Adequacy (E) Task Force on its June 30, 2015, conference call:

1. **2014-33-L-Mod Qualified Actuarial Opinion** – This proposal modifies the interrogatory on LR027 Interest Rate Risk and Market Risk. This interrogatory allows companies submitting an unqualified opinion to receive a one-third reduction in the factors. It was modified to prevent an opinion qualified solely due to the direction in AG 48, which is line of business specific, from impacting all lines of business.

2. **2014-35b-L-Mod Primary Securities Shortfall** – This proposal adds a new schedule showing the primary security shortfall by individual cession. The cumulative amount of primary security shortfalls, with no offset for any surpluses, is then taken as a dollar-for-dollar addition to the reporting company’s Authorized Control Level.

3. **2014-42-L-Mod RBC Shortfall** – This proposal adds a new schedule which shows the RBC calculation by individual captive. The cumulative amount of RBC shortfalls, with no offset for any surpluses, is then taken as a dollar-for-dollar reduction to the reporting company’s Total Adjusted Capital.

In summary, the Qualified Actuarial Opinion under paragraph 1-above does not constitute an RBC penalty in and of itself, but is a required element to trigger the RBC penalty under paragraph 2 and is applicable only with respect to AG 48. The RBC penalty under paragraph 3 is applicable to both noncompliance with AG 48 and Model #787. Section 7B of Model #787 then provides the following additional consequences for failure to follow its requirements:
B. Requirements at Inception Date and on an On-going Basis; Remediation

   (1) The requirements of Section 7A must be satisfied as of the date that risks under
Covered Policies are ceded (if such date is on or after the effective date of this
regulation) and on an ongoing basis thereafter. Under no circumstances shall a
ceding insurer take or consent to any action or series of actions that would result
in a deficiency under Section 7A(3) or 7A(4) with respect to any reinsurance
treaty under which Covered Policies have been ceded, and in the event that a
ceding insurer becomes aware at any time that such a deficiency exists, it shall
use its best efforts to arrange for the deficiency to be eliminated as expeditiously
as possible.

   (2) Prior to the due date of each Quarterly or Annual Statement, each life insurance
company that has ceded reinsurance within the scope of Section 3 shall perform
an analysis, on a treaty-by-treaty basis, to determine, as to each reinsurance treaty
under which Covered Policies have been ceded, whether as of the end of the
immediately preceding calendar quarter (the valuation date) the requirements of
Sections 7A(3) and 7A(4) were satisfied. The ceding insurer shall establish a
liability equal to the excess of the credit for reinsurance taken over the
amount of Primary Security actually held pursuant to Section 7A(3), unless
either:

   (a) The requirements of Section 7A(3) and 7A(4) were fully satisfied as of the
valuation date as to such reinsurance treaty; or

   (b) Any deficiency has been eliminated before the due date of the Quarterly or
Annual Statement to which the valuation date relates through the addition
of Primary Security and/or Other Security, as the case may be, in such
amount and in such form as would have caused the requirements of
Section 7A(3) and 7A(4) to be fully satisfied as of the valuation date.

[Emphasis added]. Finally, Paragraph 8 of AG 48 provides that it will sunset when a state adopts a
regulation substantially similar to Model #787, but will continue to apply only with respect to the
limited number of states in which their version of Model #787 applies prospectively only.

Substantially Similar

The NAIC Financial Standards and Accreditation Program provides the following definition of
“substantially similar”:

For those standards included in the Part A: Laws and Regulations Standards where the term
“substantially similar” is included, a state must have a law, regulation, administrative practice or
a combination of the above which addresses the significant elements included in the NAIC
model laws or regulations… It is NOT required that states adopt every “significant” element in
the interim annual review form by law or regulation. Instead, it is required that the state
demonstrate that the law, regulation, administrative practice or a combination of the above
enforced by a state insurance department results in solvency regulation that is similar in force
and no less effective than the NAIC model law or regulation for that standard.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee
FROM: Reinsurance (E) Task Force
DATE: August 24, 2017
RE: Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

The NAIC membership adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the 2016 Fall National Meeting on Dec. 13, 2016. At that same time, the NAIC membership also adopted revisions to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) to conform with the provisions of Model #787, effective Jan. 1, 2017. Model #787 establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees, and ensures that funds consisting of primary security and other security are held in the forms and amounts required.

At its meeting on Aug. 7, 2017, the Reinsurance (E) Task Force agreed to submit the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. Model #787 should be adopted as a new accreditation standard by the NAIC, with significant elements as outlined in Attachment A.

2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Jan. 1, 2020. The Task Force further recommends that a state’s adoption of AG 48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787.

3. The 2016 revisions to the Credit for Reinsurance Model Law (#785) should be considered acceptable but not required by the states.

In addition to the preceding recommendations, the Task Force is offering the following additional information in order to assist the Financial Regulation Standards and Accreditation (F) Committee in reviewing the proposed accreditation standard for Model #787.
Substantially Similar

The Task Force has recommended in the draft accreditation standard that the “substantially similar” standard be utilized to meet the minimum requirements of the standard. However, the Task Force did note that Drafting Notes to Section 2, Section 3 and Section 5 of Model #785 might suggest a stronger standard of review than “substantially similar.” The Drafting Notes provide, as follows: “To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are substantially similar in all material respects to NAIC adopted model regulations in the handling and treatment of such reinsurance arrangements.” [Emphasis added]. In recognition of this, and to assist in review of the actuarial method used to determine the required level of primary security as described in Section 6 of Model #787, the Task Force recommends that the NAIC Legal Division specifically note any material changes in a state’s regulation during an accreditation review for consideration by the Financial Regulation Standards and Accreditation (F) Committee.

State Adoption of AG 48

The Task Force recommends that the accreditation standard become effective on an expedited basis beginning Jan. 1, 2020. However, the Task Force further recognizes that meeting the expedited date may not be feasible for some states in instances due, in whole or part, to other legislative priorities of the states. It is the recommendation of the Task Force that, in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Financial Regulation Standards and Accreditation (F) Committee as substantial compliance with Model #787. AG 48 became effective Jan. 1, 2015, and became part of the Accounting Practices and Procedures Manual through its inclusion in Appendix C, and has been amended to conform with Model #787 effective Jan. 1, 2017.

2016 Revisions to Model #785

The Task Force does not recommend that the 2016 revisions to Model #785 be included in the proposed accreditation standard. These revisions provide that the commissioner may adopt regulations with respect to: 1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; 2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; 3) variable annuities with guaranteed death or living benefits; 4) long-term care insurance policies; and 5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices, and is: 1) licensed in at least 26 states; or 2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

The reasoning of the Task Force is that Model #787 only applies to term life and universal life with secondary guarantees (XXX/AXXX) captive reinsurance transactions, and that variable annuities, long-term care insurance and other life and health insurance and annuity products are not currently addressed. Therefore, it would be considered to be premature to require the states to adopt these provisions. In addition, the professional reinsurer exemption of Section 5B(4) of Model #785 is specifically referenced in the draft accreditation standard. Therefore, it is the recommendation of the Task Force that the 2016 revisions to Model #785 are optional, and should be considered as acceptable but not required by the states.
Proposed Accreditation Standard

Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

State statute and/or regulation should be substantially similar to uniform, national standards that govern reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees, to ensure that both the total security and the primary security are provided in forms and amounts that are in compliance with the requirements set forth in the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

a. Provides that the Credit for Reinsurance Model Regulation (#786) and Model #787 shall both apply to reinsurance treaties that cede liabilities pertaining to Covered Policies; provided, that in the event of a direct conflict between the provisions of Model #787 and the provisions of Model #786, the provisions of Model #787 shall apply, but only to the extent of the conflict, substantially similar to Section 3 of Model #787?

b. Provides that Model #787 does not apply to reinsurance exempt by the provisions of Section 4 of Model #787, including reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of the Credit for Reinsurance Model Law (#785), which pertains to certain certified reinsurers, or Section 5B(4)(b) of Model #785, which pertains to reinsurers meeting certain threshold size and licensing requirements?

c. Provides definitions of “Covered Policies,” “Grandfathered Policies,” “Required Level of Primary Security,” “Actuarial Method,” “Primary Security,” “Other Security” and “Valuation Manual” that are substantially similar to such terms as defined in Section 5 of Model #787?

d. Provides for an Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation that is substantially similar to the methodology as set forth in Section 6A of Model #787?

e. Provides for valuations to be used 1) in calculating the Required Level of Primary Security pursuant to the Actuarial Method; and 2) in determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, that are substantially similar to the valuations set out in Section 6B of Model #787?

f. Provides for requirements to obtain credit for reinsurance with respect to ceded liabilities pertaining to Covered Policies that are substantially similar to the requirements set out in Section 7A of Model #787?

g. Provides for requirements at inception date and on an ongoing basis substantially similar to Section 7B(1) of Model #787?

h. Provides that if the requirements to hold Primary Security and total security are not both satisfied, the ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held, unless any deficiency has been eliminated pursuant to remediation provisions substantially similar to Section 7B(2) of Model #787?

i. Includes a prohibition against avoidance provision similar to Section 9 of Model #787?
Appendix B

Actuarial Guideline XLVIII
(Appplies to 2017 and Subsequent Year Valuations)

ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL #830)

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force (“PBRI Task Force”) serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as “XXX/AXXX Captive arrangements,” although not all such arrangements actually involve reinsurers organized as captives. In this connotation, XXX denotes the reserves prescribed by Section 6 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model #830) while AXXX denotes the reserves prescribed by Section 7 of Model #830, and by Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation (AG 38). On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the “June 2014 Rector Report”). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the “Required Level of Primary Security”) that must be supported by certain defined assets (“Primary Security”). The level of reserves is to be calculated by a method referred to as the “Actuarial Method.” Another charge to LATF was to promulgate an actuarial guideline specifying that, in order to comply with the NAIC Actuarial Opinion and Memorandum Regulation, Model 822 (“AOMR”) as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer’s reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. The initial version of Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) was developed in response to that charge, with an effective date of January 1, 2015.

Coordination between this Actuarial Guideline and the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)

Subsequently, on January 8, 2016, the NAIC adopted revisions to the Credit for Reinsurance Model Law (Model #785). Among other things, the revisions to Model #785 provide commissioners with the authority to enact, by regulation, additional requirements for ceding insurers to claim credit for reinsurance with respect to certain XXX/AXXX financing arrangements. On December 13, 2016, the NAIC adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787) as the regulation permitted by Model #785. LATF subsequently received a charge to redraft AG 48 to make it as consistent as possible with the provisions of Model #787. The current version of this actuarial guideline is the result.

The following is an overview of the interrelationship between this actuarial guideline and Model #787, and the regulatory strategy that led to the adoption of each:

1. The initial version of this actuarial guideline immediately established national standards for the use of XXX/AXXX financing arrangements in an attempt to quickly set minimum standards based on the framework adopted by the PBRI Task Force on June 30, 2014. This initial version applied to such reinsurance arrangements entered into on or after 1/1/2015.

© 2020 National Association of Insurance Commissioners
2. The revised statute (the NAIC Credit for Reinsurance Model Law (Model #785)) and a new regulation (the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)) were then developed and adopted by the NAIC.

3. Except as noted in #4 below, this actuarial guideline will cease to be effective, on a state by state basis, as individual states enact Model #785 and adopt Model #787 to replace it.

4. Notwithstanding, it is anticipated that in a small number of states, Model #787 will need to be adopted on a “prospective” basis only (that is, it will only apply to ceded policies issued on or after the effective date thereof). In those cases, this actuarial guideline will remain as the authority for ceded policies subject to this actuarial guideline but to which Model #787, as adopted in a given state, does not apply. So although its role might diminish, this actuarial guideline will remain an essential part of the regulatory framework for a small number of states for many years to come.

5. To ensure uniformity of treatment between states, companies, and ceded policies (whether governed by this actuarial guideline or by Model #787) and to avoid confusion, this actuarial guideline is being updated, effective as of January 1, 2017, to make it as substantively identical to Model #787 as possible.

Authority, Avoidance, and Purpose

The requirements in this actuarial guideline derive authority from Section 3 of the AOMR, or, after the Operative Date of the Valuation Manual, from Section 1 of VM-30 of the Valuation Manual. Both Section 3 of the AOMR and Section 1 of VM-30 provide that the commissioner has the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items. As contained in the framework adopted by the PBRI Task Force on June 30, 2014, this actuarial guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this actuarial guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this actuarial guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer’s domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this actuarial guideline.

The purpose and intent of this actuarial guideline is to establish uniform, national standards governing XXX or AXXX reserve financing arrangements in conformity with the PBRI Task Force framework and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in

---

1 In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).
Section 4.B., the provisions of this actuarial guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this actuarial guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this actuarial guideline if the facts and circumstances warrant such action.

Text

1. Authority

Pursuant to Section 3 of the AOMR or, after the Operative Date of the Valuation Manual, to Section 1 of VM-30 of the Valuation Manual, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner’s judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

This actuarial guideline applies to reinsurance contracts that cede liabilities pertaining to Covered Policies as that term is defined in Section 4.

3. Exemptions

This actuarial guideline does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

(1) Policies that satisfy the criteria for exemption set forth in Section 6F or Section 6G of Model #830; and which are issued before the later of:

   (a) The effective date of Model #787 in the state of domicile of the ceding insurer, and
   (b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in Section 6E of Model #830 and which are issued before the later of:

   (a) The effective date of Model #787 in the state of domicile of the ceding insurer, and
   (b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(3) Any universal life policy that meets all of the following requirements:

   (a) Secondary guarantee period, if any, is five (5) years or less;
(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables and valuation interest rate applicable to the issue year of the policy; and

(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; or

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year; or

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Section 2D of Model #785; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer’s reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures (“SSAP No. 1”); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC Risk-Based Capital (RBC) for Insurers Model Act (Model #312) when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Is not an affiliate, as that term is defined in Section 1A of the NAIC Insurance Holding Company System Regulatory Model Act (Model #440), of:

(a) The insurer ceding the business to the assuming insurer; or

(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;
(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and

(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in Model #312 when its risk-based capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus; or

E. Reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of Model #785, pertaining to certain certified reinsurers or Section 5B(4)(b) of Model #785, pertaining to reinsurers meeting certain threshold size and licensing requirements; or

F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this actuarial guideline (as described in the Authority, Avoidance and Purpose section above);

(2) The risks are included within the scope of this actuarial guideline only as a technicality; and

(3) The application of this actuarial guideline to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 3F to exempt a reinsurance treaty from this actuarial guideline, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: The exemption set forth in Section 3F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this actuarial guideline purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 3A, B, C, D, or E or meet the substantive requirements of this actuarial guideline.
4. Definitions

A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 5.

B. “Covered Policies” means the following: Subject to the exemptions described in Section 3, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:

(1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,

(2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

Note: Although “Covered Policies” is defined to include all the policies described in Subsections B1 and B2 above, it is noted that whether a given “Covered Policy” is subject to this actuarial guideline or, instead, to Model #787 should be determined under Section 8 (Sunset).

C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:

(1) Issued prior to January 1, 2015; and

(2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 3 had that section then been in effect.

D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

F. “Primary Security” means the following forms of security:

(1) Cash meeting the requirements of Section 3A of Model #785;

(2) Securities listed by the Securities Valuation Office meeting the requirements of Section 3B of Model #785, but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and

(3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:

(a) Commercial loans in good standing of CM3 quality and higher;

(b) Policy Loans; and
(c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

5. The Actuarial Method

A. Description of Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this actuarial guideline shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 4B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 4B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(2) For Covered Policies described in Section 4B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;
(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed \[c_\times \times (2 \times \text{number of reinsurance premiums per year})\] where \(c_\times\) is calculated using the same mortality table used in calculating the Net Premium Reserve; and

(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this actuarial guideline, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this actuarial guideline.
(7) If a reinsurance treaty subject to this actuarial guideline cedes risk on both Covered and Non-Covered Policies:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies; and

(b) Any Primary Security and/or Other Security used to meet any requirements pertaining to the Non-Covered Policies may not be used to satisfy any requirements related to the Required Level of Primary Security and/or Other Security for the Covered Policies.

B. Valuation Used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

(1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

(2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the NAIC’s Life Actuarial (A) Task Force no later than the December 31 on or immediately preceding the valuation date for which the Required Level of Primary Security is being calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

6. Required Actuarial Analysis and Actuarial Opinion and Memorandum Requirements

A. Required Actuarial Analysis

Before the due date of each actuarial opinion, as to each reinsurance treaty in which Covered Policies have been ceded, the appointed actuary of each ceding insurer must perform an analysis on a treaty by treaty basis, of such Covered Policies to determine whether, as of the immediately preceding December 31 (the valuation date):

(1) Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of Section 3 of Model #785, on a funds withheld, trust, or modified coinsurance basis; and

(2) Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (1) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of Section 3 of Model #785; and
**Note:** For the sake of clarity, funds consisting of Primary Security pursuant to Paragraphs (1) may exceed the Required Level of Primary Security, and Other Security is only required under Paragraph (2) to the extent that there is any portion of the statutory reserves as to which Primary Security is not so held. For example, if a ceding insurer’s statutory reserves equal $1 Billion, its Required Level of Primary Security is $600 Million, and it holds $1 Billion in Primary Security pursuant to Paragraph (1), no Other Security is required under Paragraph (2).

(3) Any trust used to satisfy the requirements of this Section 6 complies with all of the conditions and qualifications of Section 11 of the NAIC Credit for Reinsurance Model Regulation (Model #786), except that:

(a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5B, be valued according to the valuation rules set forth in Section 5B, as applicable; and

(b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 6A(1); and

(c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 6A(1)) below 102% of the level required by Section 6A(1) at the time of the withdrawal or substitution.

**B. Qualified Actuarial Opinion; Remediation**

(1) The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, unless:

(a) The requirements of Section 6A(1) and 6A(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or

(c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).

(2) In addition to the requirement set forth in Section 6B(1) above, the appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, if the appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such affiliated reinsurer where (a) the affiliate reinsures Covered Policies of the ceding insurer and (b) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this actuarial guideline.
Note: The remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787. Under this option, a ceding company may choose to avoid the consequence (a qualified opinion under this actuarial guideline) by establishing a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held. For example, suppose a ceding insurer has established statutory reserves of $1 Billion and has Primary Security of $550 Million and Other Security of $450 Million. Suppose further that the actuary determines that the insurer’s Required Level of Primary Security is $600 Million. Under Section 6B(1)(c), the insurer may avoid a qualified opinion by establishing a liability equal to $450 Million (the difference between the statutory reserve of $1 Billion and the $550 Million amount of Primary Security actually held).

C. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this actuarial guideline

(1) In the statement of actuarial opinion, the appointed actuary of the ceding insurer must state whether (i) he has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.

(2) In the actuarial memorandum as described by Section 7 of the AOMR or Section 3B of VM-30 of the Valuation Manual, as applicable, the appointed actuary of the ceding insurer must document the analysis and requirements applied by this actuarial guideline as to each reinsurance arrangement under which Covered Policies are ceded.

(3) In the event that a reinsurance treaty contains both (1) Covered Policies subject to this actuarial guideline rather than to Model #787, and (2) Covered Policies subject to Model #787 rather than to this actuarial guideline, the treaty shall be tested as a whole for purposes of a ceding insurer’s compliance with both (a) the requirements of Section 6A(1) and Section 6A(2) of this actuarial guideline and (b) the requirements of Section 7A(3) and Section 7A(4) of Model #787; provided further, that:

(a) If funds consisting of Primary Security are held in amounts less than the Required Level of Primary Security, such funds consisting of Primary Security shall be allocated first to fulfill the Required Level of Primary Security for the Covered Policies subject to this actuarial guideline, with any remainder allocated to those Covered Policies subject to Model #787; and

(b) If funds consisting of Other Security are held in amounts less than the requirements of Section 6A(2), such funds consisting of Other Security shall be allocated first to fulfill the Other Security requirements for the Covered Policies subject to this actuarial guideline, and any remainder shall be allocated to those Covered Policies subject to Model #787.
7. Effective Date
This actuarial guideline shall become effective as of January 1, 2017 with respect to all Covered Policies. This actuarial guideline supersedes and replaces all previous versions thereof with respect to actuarial opinions rendered as to valuation periods ending on or after January 1, 2017.

Note: For the avoidance of doubt, actuarial opinions issued with respect to the year ended December 31, 2016, shall be governed by the version of AG 48 in effect on December 31, 2016, as included in the Accounting Practices and Procedures Manual.

8. Sunset Provision
This actuarial guideline shall cease to apply as to Covered Policies that are both (a) issued by ceding insurers domiciled in a jurisdiction that has in effect, as of December 31st of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a regulation substantially similar to Model #787 adopted by the NAIC on December 13, 2016; and (b) subject to Model #787 as so adopted by the ceding insurer’s jurisdiction of domicile. This Actuarial Guideline shall continue to apply, without interruption, to any and all Covered Policies not included in both (a) and (b) of the immediate preceding sentence.

Note: It is anticipated that, for most states, this actuarial guideline will sunset pursuant to (a) and (b) of Section 8 and will continue only with respect to the limited number of states in which their version of Model #787 applies prospectively only, i.e., applies only to Covered Policies issued on or after the effective date of their version of Model #787. It is anticipated, however, that most states will be able to adopt a version of Model #787 that, like the Model itself, applies to all Covered Policies (subject to the applicable exemptions and grandfathering provisions) that are “in force” on or after the effective date, even if the policies were originally issued prior to that effective date. The goal of Section 8 is to ensure that all Covered Policies ceded in reinsurance transactions within the scope of this actuarial guideline continue to be subject to this actuarial guideline unless and until they become subject to Model #787.
February 26, 2020

Director Chlora Lindley-Myers
Chair, Reinsurance (E) Task Force
Attn: John Rehagen
National Association of Insurance Commissioners (NAIC)

Dear Director Lindley-Myers,

The Life Reinsurance Work Group (“the Work Group”) of the American Academy of Actuaries appreciates the opportunity to comment on the NAIC’s Model #787 Exposure Memorandum, requesting comments on whether compliance with Actuarial Guideline XLVIII (AG 48) should be considered to be “substantially similar” to Model #787 under the NAIC Financial Standards and Accreditation Program.

In the Work Group’s view, Model #787 and AG 48 differ in significant ways, and a sunset of AG 48 and its replacement by Model #787, wherever possible, is important to achieve, for reasons described below.

Model #787 and AG 48 differ principally in the means by which they require or incentivize companies to conform their captive reinsurer arrangements (if they have them) to certain standards. For business within its scope, Model #787 defines the standards in order for the cedent to receive full reserve credit for reinsurance. Further, Model #787 directly requires the ceding insurer to establish an additional liability if there is an uncorrected shortfall in amounts of Primary Security or Other Security, as defined in the model. AG 48 sets out similar standards and definitions of required amounts of Primary Security and Other Security for a captive arrangement and requires the cedent’s Appointed Actuary to issue a “Qualified Actuarial Opinion” on the cedent reserves in cases where the AG 48 standards are not met. The Qualified Actuarial Opinion, along with adverse risk-based capital (RBC) consequences for any shortfall in amount of Primary Security, together constitute the enforcement means for AG 48.

Throughout the development of AG 48 in 2014, the Academy’s Life Practice Council expressed concerns several times with the NAIC’s proposed forced use of a Qualified Actuarial Opinion to achieve the goals of the new captive regulatory framework. We stated these concerns in our June 25, 2014, letter to the PBR Implementation (EX) Task Force; our Sept. 17, 2014, letter to the Life Actuarial Task Force (LATF); and our Oct. 30, 2014, letter to the PBR Implementation (EX) Task Force.

In the Work Group’s view, a forced Qualified Actuarial Opinion is inconsistent with the purpose and intent of the Actuarial Opinion and Memorandum Requirements (AOMR) in VM-30, which places responsibility on the appointed actuary to issue an opinion as to the overall adequacy of reserves.

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
Codifying circumstances when an appointed actuary must qualify his/her opinion reduces the independence given to the appointed actuary in the AOMR in forming his/her opinion.

The AOMR is designed to ensure the overall adequacy of an insurer’s reserves based on asset adequacy analysis and is not designed or intended to implement new transaction-specific calculation requirements. Section 1(A)(3) of the VM-30 provides (emphasis added):

The AOM requirements shall be applied in a manner that allows the appointed actuary to use his or her professional judgment in performing the actuarial analysis and developing the actuarial opinion and supporting actuarial memoranda, conforming to relevant ASOPs. However, a state commissioner has the authority to specify methods of analysis and assumptions when, in the commissioner’s judgment, these specifications are necessary for the actuary to render an acceptable opinion relative to the adequacy of reserves and related actuarial items. For purposes of VM-30, the requirements of Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48), of the AP&P Manual, shall be applicable.

The reference to actuarial methods and assumptions in Section 1(A)(3) supports our view that the AOMR is focused on reserve adequacy with an independent, professional actuarial opinion as its cornerstone.

Although the Work Group acknowledges that the NAIC took steps in 2015 to distinguish the RBC consequences of an actuarial opinion deemed as qualified solely on account of AG 48, we still have strong concerns with the approach taken in AG 48 requiring that the Appointed Actuary issue a qualified opinion in a specific circumstance. We continue to believe it is anomalous for regulators to mandate a Qualified Actuarial Opinion via AG 48, the AOMR, or otherwise. In our view, the Appointed Actuary’s Opinion should be preserved as just that—a professional opinion rendered by the Appointed Actuary.

In 2014, the NAIC implemented its new captive regulatory framework via actuarial guideline (namely, AG 48) principally to expedite implementation of the new framework, recognizing that implementation through model law, model regulation, and NAIC adoption as an accreditation standard would take years. The expressed plan, explicit in AG 48 itself, was to sunset AG 48 once the equivalent model law and regulation was adopted at NAIC and by the states. The Work Group believes that if AG 48 is deemed substantially similar to Model #787, then its replacement by Model #787 could be deferred indefinitely by some states, and deferral would maintain the use of a forced Qualified Actuarial Opinion, which we believe is undesirable.

Should you have questions regarding these suggestions, please contact Ian Trepanier, the Academy’s life policy analyst, at trepanier@actuary.org.

Sincerely,

Richard Daillak, MAAA, FSA
Chairperson, Life Reinsurance Work Group
American Academy of Actuaries
Mr. John Rehagen  
Acting Chair, Reinsurance (E) Task Force  
National Association of Insurance Commissioners  
Via email: Dan Schelp (dschelp@naic.org)

Dear John:

Connecticut appreciates the opportunity to comment on the February 5, 2020 staff memo to the Reinsurance Task Force comparing the significant differences between AG48 and NAIC Model Regulation #787. We would also like to acknowledge the thoroughness of the staff review of the subject matter.

We concur that the primary difference between AG48 and Model #787 is the consequence to an insurer if the requirements of either are not met. AG48 merely calls for the filing of a qualified actuarial opinion, whereas Model #787 calls for the ceding insurer to establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held.

Normally a qualified actuarial opinion generates a substantial (50%) increase in the Interest Rate Risk and Market Rate Risk factors used in determining minimum RBC requirements. However, the normal RBC penalty normally associated with a qualified actuarial opinion is not being applied in this instance. Instead, a dollar-for-dollar addition to the reporting company’s ACL RBC amount equal to the shortfall in Primary Security is mandated.

The staff memo notes the existence of a second potential RBC “penalty” related to cessions to captives. Since any such penalty is applicable to noncompliance with both AG48 and Model #787, we do not feel that penalty is germane to the discussion at hand.

The staff memo also notes that the Financial Regulation Standards and Accreditation (F) Committee chose to defer consideration of Model #787 as an accreditation standard in recognition of the impending adoption of the Covered Agreement. We would like to point out that the functional word is “defer”, as the Committee’s main consideration was to avoid asking states to revise their regulations and statutes multiple times in a short time span. Hence the wording of the August 24, 2017 recommendation of the Reinsurance Task Force that “a state’s adoption of AG48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787”.

Connecticut does not consider the consequences of a modest change to the cedant’s RBC ratio to be substantially similar to reducing surplus by the entire excess of the credit for reinsurance taken over the amount of Primary Security actually held. Simply put, AG48 does not
contemplate or effect a balance sheet adjustment. Further, we are aware that the drafters of Model #787 considered and ultimately rejected incorporating a more modest consequence of non-compliance that would have limited the balance sheet adjustment to the shortfall from full coverage of the Required Level of Primary Security.

Regards,

Kathy Belfi, CPA
Director, Financial Regulation

Re: Reinsurance (E) Task Force Exposure Comparing Model # 787 and AG 48

Director Lindley-Myers:

New York Life Insurance Company and The Northwestern Mutual Insurance Company offer the following comments on the February 5, 2020 memorandum (the “Memo”) from NAIC Staff to the Reinsurance Task Force (the “Task Force”) entitled “Comparison of Term and Universal Life Insurance Reserve Financing Model Regulation (#787) and Actuarial Guideline XLVIII”. Our companies have engaged extensively with the NAIC and the Task Force over the years as it considered the recommendations made in the Rector Report and subsequently developed both AG 48 and Model 787.

Background of Accreditation Discussions

In 2017, we submitted several joint comment letters supporting the NAIC’s efforts to make Model 787 an accreditation standard. We continue to believe that taking this step will strengthen the state-based system of insurance regulation, ensuring the consistent adoption of the NAIC’s framework for regulating the solvency of XXX and AXXX life insurer captives.

At that time, the NAIC was contemplating making Model 787 an accreditation standard on an expedited basis so that it would become effective concurrently with the nation-wide transition to principles-based reserving. However, at the 2017 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee (“F Committee”), while strongly supporting moving forward, agreed to defer this recommendation in light of the then-pending changes to the Credit for Reinsurance Model Law and Regulation (respectively, “Models 785 and 786”) to reflect the US-EU Covered Agreement. This step as articulated by F Committee members was intended to prevent state legislatures from needing to reopen the reinsurance-related provisions of the insurance code multiple times in a short period. It was the F Committee’s clear intention that accreditation standards for Models 785, 786 and 787 would ultimately proceed alongside one another.

In the years since this decision, the NAIC has completed its revisions to Models 785 and 786 and a few states have moved forward with adopting Model 787, notwithstanding the absence of an accreditation standard. At the 2019 Fall National Meeting, the F Committee adopted a recommendation to make Model 787 an accreditation standard on an expedited basis, which would move in parallel with the accreditation standards for Models 785 and 786. This adoption
was consistent with the discussions in 2017, which focused not on whether Model 787 should be an accreditation standard, but rather the timing for the standard’s effective date.

Reliance on AG 48 for Accreditation Purposes

The Memo explores whether states could, for accreditation purposes, rely on ongoing enforcement of AG 48 as a “substantially similar” provision to Model 787. While the definition of “substantially similar” is seemingly broad enough to encompass this position, there are meaningful differences between Model 787 and AG 48, including both the penalty provisions and the reliance upon the actuarial opinion.

The Penalty Provisions in AG 48 and Model 787 Differ Significantly

As noted in the Memo, the primary difference between Model 787 and AG 48 is the consequences to an insurer if an insurer fails to hold a sufficient level of Primary Security. Model 787 contains a penalty provision specifically aimed at deterring behavior that contravenes its positions: the loss of reinsurance credit for improperly reserved transactions.

AG 48’s penalty provision, in contrast, is indirect. In the event of a deficiency in Primary Security, insurers are subject to an RBC penalty commensurate with the amount of the shortfall. As you know, RBC was designed as an early warning system for the identification of weakly capitalized companies. It was never intended to evaluate well-capitalized companies. Ultimately, while AG 48’s penalty could have a meaningful effect on RBC ratios, reliance on such ratios to bring regulatory attention to Primary Security shortfalls or otherwise deter non-compliance with AG 48’s requirements is inconsistent with the purposes for which RBC was developed.

The inclusion of an RBC penalty in AG 48 reflects several factors arising from the intensive negotiations regarding the implementation of the Rector Framework, including an acknowledgment that additional penalties could not be included in an Actuarial Guideline, and that AG 48 itself would ultimately sunset once Model 787 was adopted. A similar logic undergirds AG 48’s reliance on the issuance of a qualified actuarial opinion as a trigger for these penalty provisions. Generally speaking, an actuarial opinion is designed to be an independent actuarial assessment of overall reserve adequacy, and is not intended as a compliance mechanism for a particular regulatory requirement. Indeed, the Academy of Actuaries, among others, expressed serious concerns with AG 48 being the permanent, or even the temporary, solution. However, all parties agreed to stand down on the issue when it became clear that AG 48 would be used in limited, short-term circumstances.

Regulators Intended AG 48 to be Temporary Solution

At the time that the NAIC first considered making Model 787 an accreditation standard, it was acknowledged that the expedited time frame could present challenges for some states. The solution to this was not to keep AG 48 in place forever and for all XXX and AXXX business, but rather to develop some exceptions for specific circumstances.
In states that were unable to comply with the expedited time frame, the Task Force acknowledged that compliance with AG 48 would be satisfactory for accreditation purposes. The Task Force’s acknowledgment did not envision, however, that AG 48 would remain in place in those states indefinitely.

This is consistent with the introductory language of AG 48 itself, which notes that AG 48 was adopted to “quickly set minimum standards” for XXX/AXXX reinsurance transactions. The introductory language also contemplates that AG 48 would eventually sunset in most states as Model 787 was adopted to replace it. The only caveat to that expectation is a recognition that “in a small number of states,” Model 787 would be adopted on a prospective basis (meaning it would only apply to policies issued after the date that the state adopted the model). In that minority of cases, AG 48 would remain in effect (along with Model 787) for the subset of policies issued after January 1, 2015 but before a state adopted the Model.

Conclusion

Finally, we would note that when the F Committee agreed in 2017 to delay the adoption of an accreditation standard for Model 787, they were responding to regulators’ legitimate concerns that they would need to approach their legislatures several times in quick succession regarding revisions to Model 785. There was no discussion at that time about never approaching legislatures to obtain the requisite authority to issue Model 787. If regulators remain concerned with making repeated requests on similar topics then we would urge them to include both the changes responsive to the US-EU Covered Agreement and the authorizing language in their legislative packages. If regulators remain concerned with completing the revisions to Model 785, 786 and 787 on an expedited basis then we would suggest that a preferable solution is to extend the time frame for making Model 787 an accreditation standard rather than to allow states to rely on AG 48 in perpetuity for all XXX/AXXX business.

New York Life Insurance Company

Andrew T. Vedder  
Vice President – Solvency Policy & Risk Management  
The Northwestern Mutual Life Insurance Company
The Reinsurance (E) Task Force met via conference call Jan. 29, 2020. The following Task Force members participated:

Chlora Lindley-Myers, Chair, represented by John Rehagen (MO); Raymond G. Farmer, Vice Chair, represented by Lee Hill (SC); Jim L. Ridling represented by Richard Ford (AL); Allen W. Kerr represented by Mel Anderson (AR); Ricardo Lara represented by Monica Macaluso and Kim Hudson (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Charles Santana (DE); David Almtaier represented by Robert Ridenour (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen represented by Carrie Mears (IA); Dean L. Cameron represented by Eric Fletcher (ID); Robert H. Muriel represented by Eric Moser (IL); Stephen W. Robertson represented by Roy Eft and Amy Beard (IN); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Rodney Hugle (KY); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by Christopher Joyce (MA); Jon Godfread represented by Matt Fischer (ND); Bruce R. Ramge represented by Lindsay Crawford (NE); Alexander K. Feldvebel represented by Doug Bartlett and Patricia Gosselin (NH); Marlene Caride represented by John Tirado (NJ); Barbara D. Richardson represented by Joel Bengo (NV); Linda A. Lacewell represented by Michael Campanelli (NY); Jillian Froment represented by Dale Bruggeman (OH); Glen Mulready represented by Eli Snowbarger (OK); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Kent Sullivan represented by Doug Slate and Mike Boerner (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Michael S. Pieciak represented by Stacey Alden (VT); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted Technical Edits to Model #787**

Mr. Rehagen stated that at the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as an accreditation standard. The NAIC Executive (EX) Committee and Plenary are expected to consider it for final adoption at the Spring National Meeting, to be effective Sept. 1, 2022. He noted that several technical edits are required to Model #787 prior to becoming an accreditation standard. Mr. Rehagen stated that the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) were also adopted as accreditation standards at the 2019 Fall National Meeting, but that there are no revisions to Model #785 and Model #786 currently being considered.

Dan Schelp (NAIC) stated that the NAIC adopted Model #787 in 2016 to address captive reinsurance transactions involving term life and universal life with secondary guarantees (ULSG), which are often referred to as XXX/AXXX policies. This was part of a long process that included adoption of the XXX/AXXX Captive Reinsurance Framework in 2013, as well as Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) in 2014. In 2015, the NAIC amended the Preamble of the Accreditation Program Manual to provide that XXX/AXXX Captive Reinsurers that reinsure business covering risks residing in at least two states are multistate insurers and are subject to the accreditation standards. However, they can satisfy these standards by complying with the XXX/AXXX Captive Reinsurance Framework. NAIC staff confirm each year that captive reinsurers are complying with this requirement. Model #787 was then intended to codify AG 48 and be adopted as its own accreditation standard.

Mr. Schelp stated that the NAIC adopted revisions to Model #785 in 2016, which included a new Section 5B. He stated that Section 5B(1)-(3) provide enabling legislation permitting a commissioner to adopt Model #787 and other related regulations, and that Section 5B(4) provides an exemption for “professional reinsurers” from Model #787. Mr. Schelp stated that at the 2017 Summer National Meeting, the Task Force presented a new recommended accreditation standard but did not include Model #785 as part of that accreditation standard. He noted that it does include reinsurance exempted under Section 4 of Model #787, which covers an assuming insurer meeting the requirements of either Section 5B(4)(a) or Section 5B(4)(b) of Model #785. Mr. Schelp stated that these requirements were only referenced in Model #787, but the actual technical exemptions themselves are only included in Model #785. The Financial Regulation Standards and Accreditation (F) Committee deferred action on Model #787 at that time due to uncertainties surrounding the Covered Agreement.

Mr. Schelp stated that the proposed revisions to Model #787 are technical in nature and may be adopted by the Task Force. They would still need to be reported to the Financial Condition (E) Committee and NAIC Executive (EX) Committee and Plenary.
Mr. Slape stated that the memorandum from the Task Force to the Financial Regulation Standards and Accreditation (F) Committee in 2017 noted that adoption of AG 48 was substantially similar to adoption of Model #787, and he asked if this is still the case.

Mr. Schelp stated that AG 48 was not included in the motion related to making Model #787 an accreditation standard at the 2019 Fall National Meeting. He noted that the main differences between AG 48 and Model #787 are the penalty provisions. He stated that if a company does not meet the standards of AG 48, it must file a qualified actuarial opinion, and if a company does not meet the standard of Model #787, it will not receive credit for reinsurance with respect to the securities that do not meet the standard of Model #787. Mr. Schelp added that AG 48 sunsets in a state once that state has enacted Model #787.

Becky Meyer (NAIC) stated that the Financial Regulation Standards and Accreditation (F) Committee will make the ultimate determination of whether AG 48 and Model #787 are substantially similar and that the Committee will welcome recommendations from the Task Force.

Mr. Slape stated that he believes that AG 48 and Model #787 are substantially similar. He noted that in addition to the penalties described by Mr. Schelp, there is a risk-based capital (RBC) impact for companies that file a qualified actuarial opinion under AG 48. He stated that Texas supports the Task Force considering AG 48 and Model #787 as substantially similar. Mr. Boerner provided some additional information on the RBC impact of a violation of AG 48.

Ms. Belfi stated that she disagrees with the position that AG 48 and Model #787 are substantially similar and that she would provide her comments in writing to the Task Force. She also recommended that the American Academy of Actuaries (Academy) be contacted for comment.

Mr. Rehagen directed NAIC staff to create a memorandum that shows the differences between AG 48 and Model #787 and expose that memorandum for a 21-day public comment period to solicit comments on whether they should be considered substantially similar for the accreditation standard.

Ms. Beard stated that Indiana is working on an expedited process to implement Model #787 and that this process must be done in the next few weeks to work within the legislative session. She said she will need the feedback as soon as possible to ensure that it is enacted correctly.

Ms. Belfi made a motion, seconded by Mr. Hill, to adopt the technical revisions to Section 1, Section 4E and Section 7 of Model #787 (Attachment One-B1). The motion passed, with Ohio and Texas abstaining.

Having no further business, the Reinsurance (E) Task Force adjourned.
TERM AND UNIVERSAL LIFE INSURANCE RESERVE FINANCING MODEL REGULATION

Section 1. Authority

This regulation is adopted and promulgated by [title of supervisory authority] pursuant to [insert provision of state law equivalent to section 5A of the Credit for Reinsurance Model Law] of the [name of state] Insurance Code.

Section 2. Purpose and Intent

The purpose and intent of this regulation is to establish uniform, national standards governing reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees; and to ensure that, with respect to each such financing arrangement, funds consisting of Primary Security and Other Security, as defined in Section 5, are held by or on behalf of ceding insurers in the forms and amounts required herein. In general, reinsurance ceded for reserve financing purposes has one or more of the following characteristics: some or all of the assets used to secure the reinsurance treaty or to capitalize the reinsurer (1) are issued by the ceding insurer or its affiliates; or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty).

Section 3. Applicability

This regulation shall apply to reinsurance treaties that cede liabilities pertaining to Covered Policies, as that term is defined in Section 5B, issued by any life insurance company domiciled in this state. This regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation] shall both apply to such reinsurance treaties; provided, that in the event of a direct conflict between the provisions of this regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation], the provisions of this regulation shall apply, but only to the extent of the conflict.

Section 4. Exemptions from this Regulation

This regulation does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

1. Policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6F of the Valuation of Life Insurance Policies Model Regulation] or [insert provision of state law equivalent to Section 6G of the Valuation of Life Insurance Policies Model Regulation]; and which are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than Jan 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6E of the Valuation of Life Insurance Policies Model Regulation] and which are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than Jan. 1, 2020;

(3) Any universal life policy that meets all of the following requirements:
(a) Secondary guarantee period, if any, is five (5) years or less;
(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the Commissioners Standard Ordinary (CSO) valuation tables and valuation interest rate applicable to the issue year of the policy; and
(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; nor

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provision of state law equivalent to Section 2D of the Credit for Reinsurance Model Law]; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in addition:

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer’s reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1 (“SSAP 1”); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in [insert provision of state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in addition:
(1) Is not an affiliate, as that term is defined in [insert provision of state law equivalent to Section 1A of the Insurance Holding Company System Regulatory Model Act], of:

(a) The insurer ceding the business to the assuming insurer; or

(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;

(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and

(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in [insert provision of state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its Risk-Based Capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus; or

Reinsurance ceded to an assuming insurer that meets the requirements of either [insert provision of state law equivalent to Section 5B(4)(a) of the Credit for Reinsurance Model Law, pertaining to certain certified reinsurers] or [insert provision of state law equivalent to Section 5B(4)(b) of the Credit for Reinsurance Model Law, pertaining to reinsurers meeting certain threshold size and licensing requirements]; or

Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this regulation (as described in Section 2 above);

(2) The risks are included within the scope of this regulation only as a technicality; and

(3) The application of this regulation to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 4F to exempt a reinsurance treaty from this regulation, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: The exemption set forth in Section 4F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this regulation purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 4A, B, C, D, or E or meet the substantive requirements of this regulation.

Section 5. Definitions

A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 6.

B. “Covered Policies” means the following: Subject to the exemptions described in Section 4, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:
   
   (1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,
   
   (2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:
   
   (1) Issued prior to January 1, 2015; and
   
   (2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 4 had that section then been in effect.

D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

F. “Primary Security” means the following forms of security:
   
   (1) Cash meeting the requirements of [insert provision of state law equivalent to Section 3A of the Credit for Reinsurance Model Law];
   
   (2) Securities listed by the Securities Valuation Office meeting the requirements of [insert provision of state law equivalent to Section 3B of the Credit for Reinsurance Model Law], but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and
   
   (3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:
      
      (a) Commercial loans in good standing of CM3 quality and higher;
      
      (b) Policy Loans; and
      
      (c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

Drafting Note: Section 5H presumes that each state is permitted under its state laws to directly reference the Valuation Manual adopted by the NAIC. If a state is required by its state laws to reference a state law or regulation, it should modify Section 5H as appropriate to do so.

Drafting Note: Sections 5H and I presume that each state is permitted under its state laws to “adopt” the Valuation Manual in a manner similar to how the Accounting Practices and Procedures Manual becomes effective in many states, without a separate regulatory process such as adoption by regulation. It is desirable that all states adopt the Valuation Manual requirements and that such adoption be achieved without a separate state regulatory process in order to achieve uniformity of reserve standards in all states. However, to the extent that a state may need to adopt the valuation manual through a formal state regulatory process, these sections may be amended to reflect any state’s need to adopt the Valuation Manual through regulation or otherwise.

Section 6. The Actuarial Method

A. Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 5B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 5B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations.

(2) For Covered Policies described in Section 5B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;

(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be
(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this Regulation, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this Regulation;

(7) If a reinsurance treaty subject to this Regulation cedes risk on both Covered and Non-Covered Policies, credit for the ceded reserves shall be determined as follows:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies, and Section 7 shall be used to determine the reinsurance credit for the Covered Policy reserves; and

(b) Credit for the Non-Covered Policy reserves shall be granted only to the extent that security, in addition to the security held to satisfy the requirements of Subparagraph (a), is held by or on behalf of the ceding insurer in accordance with [cite the state’s version of Sections 2 and 3 of the Credit for Reinsurance Model Law]. Any Primary Security used to meet the requirements of this Subparagraph may not be used to satisfy the Required Level of Primary Security for the Covered Policies.

B. Valuation used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

(1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

(2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the
Section 7. Requirements Applicable to Covered Policies to Obtain Credit for Reinsurance; Opportunity for Remediation

A. Requirements

Subject to the exemptions described in Section 4 and the provisions of Section 7B, credit for reinsurance shall be allowed with respect to ceded liabilities pertaining to Covered Policies pursuant to [insert provisions of state law equivalent to Sections 2 or 3 of the Credit for Reinsurance Model Law] if, and only if, in addition to all other requirements imposed by law or regulation, the following requirements are met on a treaty-by-treaty basis:

(1) The ceding insurer’s statutory policy reserves with respect to the Covered Policies are established in full and in accordance with the applicable requirements of [insert provisions of state law equivalent to the Standard Valuation Law] and related regulations and actuarial guidelines, and credit claimed for any reinsurance treaty subject to this regulation does not exceed the proportionate share of those reserves ceded under the contract; and

(2) The ceding insurer determines the Required Level of Primary Security with respect to each reinsurance treaty subject to this regulation and provides support for its calculation as determined to be acceptable to the commissioner; and

(3) Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law], on a funds withheld, trust, or modified coinsurance basis; and

(4) Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (3) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law]; and

(5) Any trust used to satisfy the requirements of this Section 7 shall comply with all of the conditions and qualifications of [insert provision of state law equivalent to Section 12 of the Credit for Reinsurance Model Regulation], except that:

(a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 6B, be valued according to the valuation rules set forth in Section 6B, as applicable; and

(b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 7A(3); and

(c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 7A(3)) below 102% of the level required by Section 7A(3) at the time of the withdrawal or substitution; and

(d) The determination of reserve credit under [insert provision of state law equivalent to Section 12 of the Credit for Reinsurance Model Regulation] shall be determined according to the valuation rules set forth in Section 6B, as applicable; and
B. Requirements at Inception Date and on an On-going Basis; Remediation

(1) The requirements of Section 7A must be satisfied as of the date that risks under Covered Policies are ceded (if such date is on or after the effective date of this regulation) and on an ongoing basis thereafter. Under no circumstances shall a ceding insurer take or consent to any action or series of actions that would result in a deficiency under Section 7A(3) or 7A(4) with respect to any reinsurance treaty under which Covered Policies have been ceded, and in the event that a ceding insurer becomes aware at any time that such a deficiency exists, it shall use its best efforts to arrange for the deficiency to be eliminated as expeditiously as possible.

(2) Prior to the due date of each Quarterly or Annual Statement, each life insurance company that has ceded reinsurance within the scope of Section 3 shall perform an analysis, on a treaty-by-treaty basis, to determine, as to each reinsurance treaty under which Covered Policies have been ceded, whether as of the end of the immediately preceding calendar quarter (the valuation date) the requirements of Sections 7A(3) and 7A(4) were satisfied. The ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 7A(3), unless either:

(a) The requirements of Section 7A(3) and 7A(4) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Quarterly or Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 7A(3) and 7A(4) to be fully satisfied as of the valuation date.

(3) Nothing in Section 7B(2) shall be construed to allow a ceding company to maintain any deficiency under Section 7A(3) or 7A(4) for any period of time longer than is reasonably necessary to eliminate it.

Section 8. Severability

If any provision of this regulation is held invalid, the remainder shall not be affected.

Section 9. Prohibition against Avoidance

No insurer that has Covered Policies as to which this regulation applies (as set forth in Section 3) shall take any action or series of actions, or enter into any transaction or arrangement or series of transactions or arrangements if the purpose of such action, transaction or arrangement or series thereof is to avoid the requirements of this regulation, or to circumvent its purpose and intent, as set forth in Section 2.

Section 10. Effective Date

This regulation shall become effective [insert date] and shall pertain to all Covered Policies in force as of and after that date.
Uniform Application Checklist for Certified Reinsurers
(Initial and Renewal Applications)

Applicant Information

Company Name:
Address:
Primary Contact:
Domiciliary Jurisdiction / Supervisory Authority:
Applicable Lines of Business:

I. Filing Requirements for Reinsurer Currently Certified by Another NAIC-Accredited Jurisdiction

If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the [Commissioner] has the discretion to defer to that jurisdiction’s certification and assigned rating; i.e., “passporting.” To assist the [Commissioner] in the determination to defer to another jurisdiction’s certification the following application procedures should be followed:

a. Has the applicant been certified by an NAIC accredited jurisdiction? (Yes or No) ____;

   [If “Yes,” this state (the “Lead” state) will confirm that the initial or renewal certification has been reviewed by the NAIC Reinsurance Financial Analysis (E) Working Group (“ReFAWG”) for passporting purposes.]

b. If the answer to question I.a. (above) is “No,” please proceed to Section II of this application.

c. If the answer to question I.a. (above) is “Yes,” the applicant shall provide the information specified in the table below for consideration by the [Commissioner]. In the alternative, the [Commissioner] may permit the applicant to provide written certification that some or all the required information was previously filed with the Lead State and the ReFAWG.

Note: The ReFAWG and the Lead State may have already collected, reviewed and approved relevant documentation such as; Biographical Affidavits, Certificates of Good Standing, Licenses, Rating Agency Reports, Reports of Auditors and other certification documents. States are encouraged to accept these prior filings as complete, in lieu of duplicative filing requests.

<td></td>
<td></td>
</tr>
</tbody>
</table>
At a minimum, this letter must confirm the following information:

a. Name of state(s) in which applicant is currently certified.

b. The rating and collateral percentage assigned by the accredited jurisdiction with respect to the applicant.

c. The effective and expiration dates with respect to the certification.

d. The lines of business to which the certification is applicable.

e. The applicant’s commitment to comply with all requirements necessary to maintain certification.

Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer:
The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. If the applicant intends to utilize a multi-beneficiary trust for this purpose, the applicant must submit (1) a copy of the approval from the domiciliary regulator with regulatory oversight of the 100% collateral and reduced collateral multi-beneficiary trusts or its intention to secure the approval of the domiciliary regulator of the trust before either trust can be used. (2) the form of the trust that will be used to secure obligations incurred as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status, i.e., the applicant’s 100% collateralized trust (if applicable). The form of each trust is required to be submitted pursuant to state law in order to ensure that security for these obligations will be kept separate and to ensure that each trust meets the requirements of the jurisdiction.

II. **Filing Requirements for Full Application**

a. The applicant shall provide the information required within Section II if:
   - The applicant has not been certified by an NAIC accredited jurisdiction; or
   - The Commissioner makes a determination not to recognize or defer to the certification issued by another NAIC accredited jurisdiction; or
   - The applicant is renewing its certification with the lead state or a state is not relying on the certification by another NAIC accredited jurisdiction.

b. Check appropriate box:
   - [ ] Initial Application
   - [ ] Renewal Application

### Status of Domiciliary Jurisdiction / Proof of Licensure and Good Standing

The applicant must be domiciled and licensed in a Qualified Jurisdiction, as determined by this state. The applicant must be in good standing (or the jurisdiction’s equivalent classification) and maintain capital and surplus in excess of its domiciliary jurisdiction’s highest regulatory action level.

The Commissioner will consider the following information with respect to the applicant’s domiciliary jurisdiction:
a. Whether the domestic supervisory authority been approved as a Qualified Jurisdiction in this state.

b. Confirmation as to whether the domestic supervisory authority is included on the NAIC List of Qualified Jurisdictions.

The applicant must provide the following information:

a. A copy of the certificate of authority or license to transact insurance and/or reinsurance from the applicant’s domiciliary jurisdiction.

b. A certification from the applicant’s domestic supervisory authority affirming that the applicant is in good standing (or the jurisdiction’s equivalent classification) and maintains capital and surplus in excess of the jurisdiction’s highest regulatory action level.

**Mechanisms Used to Secure Obligations Incurred as a Certified Reinsurer:**
The applicant must specify the mechanisms it will use to secure obligations incurred as a Certified Reinsurer. If the applicant intends to utilize a multi-beneficiary trust for this purpose, the applicant must submit (1) a copy of the approval from the domiciliary regulator with regulatory oversight of the 100% collateral and reduced collateral multi-beneficiary trusts or its intention to secure the approval of the domiciliary regulator of the trust before either trust can be used; (2) the form of the trust that will be used to secure obligations incurred as a certified reinsurer; and (3) the form of the trust that will be used to secure obligations incurred outside of the applicant’s certified reinsurer status, i.e., the applicant’s 100% collateralized
trust (if applicable). The form of each trust is required to be submitted pursuant to state law in order to ensure that security for these obligations will be kept separate and to ensure that each trust meets the requirements of the state’s Credit for Reinsurance statute and/or regulation.

**NOTE:**
*The MBT includes a provision that:*
The certified reinsurer must bind itself by the language of the multi-beneficiary trust and agreement with the commissioner with principal regulatory oversight of each such trust account, to fund, upon termination of any such trust account, out of the remaining surplus of such trust any deficiency of any other such trust account.

### Financial Strength Ratings (Stand-Alone or Group):
The applicant must maintain interactive financial strength ratings from two or more acceptable rating agencies. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date. The applicant must provide the following:

a. Confirm all interactive financial strength ratings currently maintained by the applicant.

b. Specify the type of financial strength rating (i.e., stand-alone or group).

c. If the financial strength rating is not on a stand-alone basis, provide the rationale for the group rating.

d. Copies of full rating agency reports with respect to all financial strength ratings currently maintained by the applicant. If a full report is not available, the applicant must provide a letter from the applicable rating agency.
agency affirming its current financial strength rating. Initial or Affirmed financial strength rating dates must be within 15 months of the application date/renewal filing date.

e. An explanation of any changes in the financial strength rating during the last three years.

**NOTE:** Acceptable rating agencies include A.M. Best, Fitch Ratings, Moody’s Investor Service, Standard & Poor’s, Kroll Bond Rating Agency, or any other Nationally Recognized Statistical Rating Organization recognized by the SEC to provide financial strength ratings on insurance companies.

### Disputed and/or Overdue Reinsurance Claims / Business Practices:
The Commissioner may consider the applicant’s business practices in dealing with its ceding insurers, including compliance with contractual terms and obligations. The applicant must provide the following if 1) applicant’s reinsurance obligations to U.S. cedents that are in dispute and/or more than 90 days past due exceed 5% of its total reinsurance obligations to U.S. cedents as of the end of its prior financial reporting year; or 2) the applicant’s reinsurance obligations to any of the top 10 U.S. cedents (based on the amount of outstanding reinsurance obligations as of the end of its prior financial reporting year) that are in dispute and/or more than 90 days past due exceed 10% of its reinsurance obligations to that U.S. cedent,

Then, in either case, the applicant will provide:

a. Notice of that fact to the Commissioner and a detailed explanation regarding the reason(s) for the amount of disputed or overdue claims exceeding the levels noted above; and
b. A description of the applicant’s business practices in dealing with U.S. ceding insurers and a statement that the applicant commits to comply with all contractual requirements applicable to reinsurance contracts with U.S. ceding insurers. 

Upon receipt of such notice and explanation, the Commissioner may request additional information concerning the applicant’s claims practices with regard to any or all U.S. ceding insurers.

### Schedules for Reinsurance Assumed and Reinsurance Ceded:
The applicant must provide the following:

a. For applicants domiciled in the U.S., provide the most recent NAIC Annual Statement Blank Schedule F (property/casualty) and/or Schedule S (life and health).

b. For applicants domiciled outside the U.S. provide Form CR-F (property/casualty) and/or Form CR-S (life and health), completed in accordance with the instructions adopted by the NAIC [include link to instructions.]

### Regulatory Actions:
The applicant must provide a description of any regulatory actions taken against the applicant.

a. Include all regulatory actions, fines and penalties, regardless of the amount.

b. Provide a description of any changes in with respect to the provisions of the applicant’s domiciliary license.

[NOTE: Reinsurance-FAWG requires this information for the last three years for passporting purposes.]

### Financial/Regulatory Filings:
The applicant must provide the following:
a. A copy of the most recent report of the independent auditor.

b. Copies of the audited financial statements for the last three years filed with its jurisdiction supervisor. Financial statements must demonstrate that the applicant has minimum capital and surplus, or the equivalent, of at least $250,000,000. If the applicant is an association including incorporated and individual unincorporated underwriters, statements must demonstrate that the applicant has capital and surplus equivalents (net of liabilities) of at least $250,000,000, and a central fund containing a balance of at least $250,000,000. Please note the following requirements with respect to these financial statements:

c. Audited U.S. GAAP basis statements must be submitted if available.

d. Audited IFRS basis statements are acceptable but must include an audited footnote reconciling equity and net income to a U.S. GAAP basis.

With the permission of the Commissioner, an applicant may be allowed to submit audited IFRS basis statements with reconciliation to U.S. GAAP certified by an officer of the applicant. The reconciliation of equity and net income must include all adjustments (positive or negative) by line item equal to or greater than 5% of equity and/or in aggregate equal to or greater than 10% of equity where each line item is less than 5% of equity.

Upon the initial certification, the Commissioner may consider audited financial statements for the last three years as filed with the applicant’s non-U.S. jurisdiction.
<table>
<thead>
<tr>
<th><strong>jurisdiction supervisor. If the Commissioner accepts such statements in the initial filing, the applicant must acknowledge and commit that future financial statement filings will include the appropriate reconciliation to a U.S. GAAP basis, as indicated above.</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>e.b.</strong> A copy of the Actuarial Opinion and other regulatory filings, as filed with the applicant’s reinsurer’s domiciliary jurisdiction supervisor. [NOTE: Reinsurance-FAWG requires a stand-alone Actuarial Opinion for passporting purposes, or the functional equivalent under the Supervisor’s applicable Actuarial Function Holder Regime.]</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Solvent Schemes of Arrangement:</strong> The applicant must provide:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>a.</strong> A description of any past, present or proposed future participation in any solvent scheme of arrangement, or similar procedure, involving U.S. ceding insurers.</td>
</tr>
<tr>
<td><strong>b.</strong> A statement that the applicant commits to notify the commissioner of any future proposed participation in any solvent scheme of arrangement, or similar procedure, as soon as practicable.</td>
</tr>
</tbody>
</table>

| **Form CR-1 (For Initial and Renewal Applications):** The applicant must provide [insert name of state] Form CR-1, which must be properly executed by an officer authorized to bind the applicant to the commitments set forth in the form. [Insert link to copy of form on state web site.] |

| **Fee:** [Insert $ amount of the fee applicable in this state.] |
### Other Requirements:
The applicant must:

- **a.** Commit to comply with other reasonable requirements deemed necessary for certification by the certifying state.

- **b.** Provide a statement that the applicant agrees to post 100% security upon the entry of an order of rehabilitation or conservation against the ceding insurer or its estate.

### Public Notice Requirement:
The [Commissioner] is required to post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The [Commissioner] may not take final action on the application until at least [insert number of days required in the specific state] days after posting such notice. The [Commissioner] will consider any comments received during the public notice period with respect to this application.

---

1 Protocol for Considering a Group Rating

Section 8B(4) of the NAIC Credit for Reinsurance Model Regulation (#786) provides, in relevant part: “Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate.” Understanding the rating agency basis for utilizing a group rating is a key factor in determining whether an applicant’s group rating may be considered appropriate. The recommended protocol for understanding the rationale involves one or more of the following protocol steps:

- For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency utilizes the group rating as a consequence of finding that the company had sufficient interconnectivity with the group;
- For reasons set forth in the rating agency report or its published ratings standards or guidelines, the rating agency enhances the group rating due to the subsidiary’s potential benefit of capital support from one or more affiliated companies;
- The group rating was utilized because the subsidiary derives benefit from its inclusion within a financially strong and well-capitalized insurance group;
- The lead state has contacted the rating agency and was provided a written explanation for the use of the group rating;
- Other factors deemed appropriate by the Reinsurance Financial Analysis (E) Working Group; or
- To assist the Lead State in the assessment of the appropriateness of the use of a group rating, applicants are encouraged to provide their rationale for the use of a group rating.

II. Filing Requirements for “Passporting State” of Reciprocal Jurisdiction Reinsurer

In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

If an NAIC accredited jurisdiction has determined that the conditions set forth under the Filing Requirements for Lead States have been met, the commissioner has the discretion to defer to that jurisdiction’s determination, and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC.

The following documentation must be filed with the Passporting State:

<table>
<thead>
<tr>
<th>Citation to State Law / Regulation</th>
<th>Requirements</th>
<th>Y or N</th>
<th>Reference and Supporting Documents</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model #786 § 9E(2)</td>
<td>Form RJ-1: An assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require, except to the extent that they conflict with a Covered Agreement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Model #785 §2F(3)</td>
<td>Lead State: If an NAIC accredited jurisdiction has determined that the required conditions have been met, the commissioner has the discretion to defer to that jurisdiction’s determination. The commissioner may accept financial</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
III. Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

Under Section 8A(5) of the Credit for Reinsurance Model Regulation (#786), credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the Credit for Reinsurance Model Law (#785), credit may be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC blanks will be amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

Response submitted via -email

IUA Response to NAIC Uniform Checklist for Reciprocal Jurisdiction Reinsurers and the Uniform Application Checklist for Certified Reinsurers

Dear Mr Rehagen,

We are pleased to be able to provide comments to the National Association of Insurance Commissioners (NAIC) in relation to the above checklists.

The International Underwriting Association of London (IUA) represents international and wholesale insurance and reinsurance companies operating in or through London. It exists to promote and enhance the business environment for its members. The IUA’s London Company Market Statistics Report shows that overall premium income for the company market in 2018 was £28.4376bn. Gross premium written in London totalled $19,559bn, while a further £8.877bn was identified as written in other locations, but managed and overseen by London operations. For further information about our organization and membership, please visit our web site, www.iua.co.uk, under the section “About the IUA.”

While we do not have any general comments on the proposals, we do propose to request further clarification to specific questions.

Specific Questions

The comments on the Uniform Checklist for Reciprocal Jurisdiction Reinsurers are as follows.

1. We would appreciate further clarification on who is required to evidence the criteria under section “Prompt Payment of Claims.” It is understood that the first and second criteria may require the US ceding insurance company to provide evidence. In respect of the third criteria, does the criterion response need to be confirmed by the reciprocal reinsurer?

2. We would also appreciate further clarification on the format and details required by the fourth criteria under section “Financial/Regulatory Filings.” It would be helpful, perhaps, to define the requirements in a similar way to the corresponding requirement in the checklist for certified reinsurers, under “Schedules for Reinsurance Assumed and Reinsurance Ceded.”

We have no comments on the changes to the Uniform Application Checklist for Certified Reinsurers.
We hope that our comments will help NAIC officials to add clarity in those areas in which we feel could assist the market. We would be pleased to clarify or expand on our comments as required.

Yours sincerely,

Helen Dalziel BSc(Hons), Dip CII

Re: NAIC Request for Comments on NAIC Exposure Draft Uniform Checklist for Reciprocal Reinsurers

Dear Director Lindley-Myers:

The Reinsurance Association of America (RAA) and the Lloyd’s market appreciate the opportunity to submit comments on the NAIC’s Exposure Draft of the Uniform Checklist for Reciprocal Reinsurers. The Reinsurance Association of America (RAA) is a national trade association representing reinsurance companies doing business in the United States. RAA membership is diverse, including reinsurance underwriters and intermediaries licensed in the U.S. and those that conduct business on a cross-border basis. The RAA also has life reinsurance affiliates. The Lloyd’s market is one of the largest non-U.S. domiciled sources of reinsurance capacity to the U.S. insurance industry. In 2019, Lloyd’s underwriters assumed over $5.96 billion in reinsurance premiums from U.S. cedants.

We appreciate the continued work of the Task Force to implement the 2019 changes to the NAIC Credit for Reinsurance Model Law and Regulation. This process is critical to honoring the U.S.’s commitments under the U.S./EU and U.S./UK covered agreements, as well as to providing the opportunity to extend equal treatment to other reinsurers from other jurisdictions that meet the requirements specified in the revised Model Law/Regulation.

Section I: Filing Requirements for “Lead State” of Reciprocal Jurisdiction Reinsurer

The use of the term “lead state” in this context may cause confusion, as the model and state holding company acts use a lead state concept that is different than the concept reflected here. Perhaps the phrase “Primary State” or “Lead Submission State” could be used to differentiate this term from the lead state concept in other contexts.

Status of Reciprocal Jurisdiction: It would be helpful if the checklist could make clear what reference and supporting documents would be required for this element. Would it be sufficient for the applicant to submit a statement that it is domiciled in a reciprocal jurisdiction? Would the applicant be required to submit a copy of the covered agreement? Would the reference to the applicant’s domiciliary jurisdiction on the top of the checklist be sufficient?

Form RJ-1: To the extent that this form will resemble Form CR-1, our members may have some comments. We respectfully request that a draft of the form be released for public comment.
Financial Regulatory Filings: As drafted, the checklist appears to take language from the model regulation that gives a commissioner the discretion to ask for more information and elevate those items to regulatory requirements. The model regulation indicates that the reinsurer must provide the information in Model #786 9C(5) “if requested by the commissioner.” The checklist should be amended to reflect the “only on request” nature of these items. In general, regulators are unlikely to need the “on request” information for most applicants. The discretion to request additional information would allow a regulator to dig deeper into applicants where there is a question or concern. This provision should not be converted to a requirement that applies broadly.

In addition, the reference on page 3 to “prior to entry into the reinsurance agreement” is confusing when considered in reference to large global reinsurers that enter into many reinsurance agreements and make annual reciprocal jurisdiction reinsurer filings. We suggest removing that phrase from the uniform checklist.

Section III: Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers.

In addition to the information contained in this section, it is clear that some states will adopt the revised model laws and regulations before other states adopt them. This has already occurred. The checklist should include information about how passporting will work if the “Lead State” (proposed “Primary State”) has adopted the revised model law and regulation and other passporting states have not adopted it.

Lastly, in conjunction with the release of the final version of the uniform checklist, we urge the NAIC to develop and host training sessions for state reviewers so that we can achieve more operational uniformity. Uniform implementation of these rules is crucial to assure that all parties receive equal treatment and equal benefits from their application.

Conclusion

We appreciate the opportunity to offer comments and work with the NAIC on the Exposure Draft of the Uniform Checklist for Reciprocal Reinsurers. Please do not hesitate to contact us with any questions or concerns.

Sincerely,

Karalee C. Morell

II. **Filing Requirements for “Passporting State” of Reciprocal Jurisdiction Reinsurer**

In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

If an NAIC accredited jurisdiction has determined that the conditions set forth under the *Filing Requirements for Lead States* have been met, the commissioner has the discretion to defer to that jurisdiction’s determination, and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC.

The following documentation must be filed with the Passporting State:

III. Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

Under Section 8A(5) of the Credit for Reinsurance Model Regulation (#786), credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the Credit for Reinsurance Model Law (#785), credit may be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC blanks will be amended to reflect the status of these reinsurers with respect to each type of insurance assumed.
2021 Proposed Charges
Reinsurance (E) Task Force

202120 Charges

The Reinsurance (E) Task Force will:
A. Provide a forum for the consideration of reinsurance-related issues of public policy.
C. Oversee the activities of the Qualified Jurisdiction (E) Working Group.
D. Monitor the implementation of the 2011, 2016 and 2019 revisions to the Credit for Reinsurance Model Law (#785), the 2011 and 2019 revisions to the Credit for Reinsurance Model Regulation (#786), and the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).
E. Communicate and coordinate with the Federal Insurance Office (FIO), and other federal authorities and international regulators and authorities on matters pertaining to reinsurance.
F. Consider any other issues related to the revised Model #785, Model #786 and Model #787.
G. Monitor the development of international principles, standards and guidance with respect to reinsurance. This includes, but is not limited to, monitoring the activities of various groups within the International Association of Insurance Supervisors (IAIS), including the Reinsurance and Other Forms of Risk Transfer Subcommittee, the Reinsurance Mutual Recognition Subgroup and the Reinsurance Transparency Group.
H. Consider the impact of reinsurance-related federal legislation, including, but not limited to, the federal Nonadmitted and Reinsurance Reform Act (NRRA) and the Federal Insurance Office Act, and coordinate any appropriate NAIC action.
I. Continue to monitor the impact of reinsurance-related international agreements, including the "Bilateral Agreement Between the European Union and U.S. on Prudential Measures Regarding Insurance and Reinsurance" (Covered Agreement), and the Covered Agreement between the U.S. and the United Kingdom.

The Qualified Jurisdiction (E) Working Group will:
A. Maintain the NAIC List of Qualified Jurisdictions and the NAIC List of Reciprocal Jurisdictions in accordance with the Process for Evaluating Qualified and Reciprocal Jurisdictions.
B. Perform a yearly due diligence review of Qualified Jurisdictions to determine whether there have been any significant changes over the prior year that might affect their status as Qualified Jurisdictions.
C. Consider evaluations of any additional jurisdictions for inclusion on the NAIC List of Qualified Jurisdictions.

The Reinsurance Financial Analysis (E) Working Group will:
A. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing certified reinsurance topics and policy issues, such as amendments to the Uniform Application for Certified Reinsurers.
B. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.
C. Provide a forum for discussion among NAIC jurisdictions of reinsurance issues related to specific companies, entities or individuals.
D. Support, encourage, promote and coordinate multistate efforts in addressing issues related to certified reinsurers, including, but not limited to, multistate recognition of certified reinsurers.
E. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.
F. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.
G. Ensure the public passorting website remains current.
H. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.
Implementation of the 2019 Revisions to the Credit for Reinsurance Model Law #785
[status as of July 7, 2020]

Disclaimer: This map represents state action or pending state action regarding NAIC amendments to the model(s). This map does not reflect a determination as to whether the pending or enacted legislation contains all elements of NAIC amendments to the model(s) or whether a state meets any applicable accreditation standards.

Implementation of the 2019 Revisions to the Credit for Reinsurance Model Regulation #786 [status as of July 7, 2020]
RISK RETENTION GROUP (E) TASK FORCE

The Risk Retention Group (E) Task Force did not meet at the Summer National Meeting.
VALUATION OF SECURITIES (E) TASK FORCE

Valuation of Securities (E) Task Force Aug. 7, 2020, Minutes ........................................................................................ 10-1514
Valuation of Securities (E) Task Force July 1, 2020, Minutes (Attachment One) ............................................................. 10-1518

Amendment for Technical NAIC Designation Category Corrections (Attachment One-A) ....................................................... 10-1522
P&P Manual Amendment to Rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S. Government Money Market Fund List and Discontinue the NAIC Bond Fund List (Attachment One-B) .................................................................................................................................. 10-1534
Valuation of Securities (E) Task Force May 14, 2020, Minutes (Attachment Two) ............................................................... 10-1538
Valuation of Securities (E) Task Force Feb. 4, 2020, Minutes (Attachment Two-A) .............................................................. 10-1546

P&P Manual Amendment to Reflect the U.S. Securities and Exchange Commission’s (SEC) Adoption of a New Rule to Modernize the Regulation of Exchange-Traded Funds (ETFs) (Attachment Two-A1) .................................................................................................................................. 10-1550
P&P Manual Amendment to Map Financial Modeled Residential Mortgage-Back Securities (RMBS)/Commercial Mortgage-Backed Securities (CMBS) Designations to NAIC Designation Categories (Attachment Two-B) .................................................................................................................. 10-1553
P&P Manual Amendment for Principal Protected Securities (PPS) with an Updated Definition and Instructions (Attachment Two-C) .................................................................................................................................. 10-1556
P&P Manual Amendment to Map Short-Term Credit Rating Provider (CRP) Ratings to NAIC Designation Categories (Attachment Three) .................................................................................................................................. 10-1565
P&P Manual Amendment to Add Supranational Entities Filed with the NAIC Securities Valuation Office (SVO) to the Sovereign NAIC Designation Equivalent List (Attachment Four) .................................................................................................................................. 10-1570
The Valuation of Securities (E) Task Force met via conference call Aug. 7, 2020. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by William Arfanis (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA); Mike Kreidler represented by Tim Hays (WA); and Mark Afable represented by Randy Milquet (WI).

1. Adopted its July 1 and May 14 Minutes

Mr. Fry said he is representing Director Muriel for the Illinois Department of Insurance, serving as the chair of the Task Force. The first item on the agenda was the adoption of its July 1 and May 14 minutes.

Mr. Fletcher made a motion, seconded by Ms. Clements, to adopt the Task Force’s July 1 (Attachment One) and May 14 (Attachment Two) minutes. The motion passed unanimously.

2. Adopted a P&P Manual Amendment to Map Short-Term CRP Ratings to NAIC Designation Categories

Mr. Fry said that during the Task Force’s May 14 conference call, the National American Securities Valuation Association (NASVA) requested that the table in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)* mapping credit rating provider (CRP) ratings for short-term instruments be updated to also map them to NAIC designation categories. The Task Force directed the Securities Valuation Office (SVO) staff to make this update, and during its July 1 conference call, the Task Force received this amendment updating the table to map short-term CRP ratings to NAIC designation equivalents, along with updated references to policies related to the use of credit ratings in the P&P Manual and a new footnote.

Mr. Fry said the amendment was exposed for a 25-day public comment period ending July 27. The Task Force did not receive any comments from the industry.

Mr. Kozak made a motion, seconded by Ms. Doggett, to adopt this proposed P&P Manual amendment to map short-term CRP ratings to NAIC designation categories (Attachment Three). The motion passed unanimously.

3. Adopted a P&P Manual Amendment to Add Supranational Entities Filed with the SVO to the Sovereign NAIC Designation Equivalent List

Mr. Fry said the SVO staff reported that they had received several requests from insurers for an NAIC designation equivalent for supranational entities. The SVO publishes a list of Sovereign NAIC Designation Equivalents, and insurers use that list when reporting on the Supplemental Investment Risk Interrogatories (SIRI). Lines 5–10 of the SIRI requires insurers to list foreign investments by country sovereign rating. The guidance indicates that a country not on the SVO’s Sovereign NAIC Designation Equivalents list should be reported as an NAIC 3 or below. Supranational entities like the European Union (EU) and the World Trade Organization (WTO) are international groups or unions that share decision making and vote on issues concerning the collective body; however, they are not controlled by a single sovereign country, and they do not currently get added to Sovereign NAIC Designation Equivalents list.

Mr. Fry said this proposed amendment would permit the SVO to include supranational entities on the Sovereign NAIC Designation Equivalents list if they were submitted to it for review by an insurer and the SVO is able to determine an appropriate NAIC designation equivalent. The Task Force did not receive any comments from industry.
Ms. Mears made a motion, seconded by Ms. Crawford, to adopt this proposed P&P Manual amendment to include supranational entities filed with the SVO to the Sovereign NAIC Designation Equivalents list if the SVO can determine an appropriate NAIC designation (Attachment Four). The motion passed unanimously.

4. Exposed a Proposed P&P Manual Amendment to Add Instructions for ETFs that Contain a Combination of Preferred Stocks and Bonds

Mr. Fry said this item on the agenda is a proposed amendment to add instructions for exchange-traded funds (ETFs) that contain both preferred stocks and bonds—two security types that the SVO designates. This amendment was first discussed during the Task Force’s Oct. 31, 2019, conference call, but action on it was deferred. Current instructions permit the SVO to consider for inclusion on the bond or preferred stock ETF list only those that predominantly invest in one or another of the security types, but not both.

Mr. Fry said the SVO brought this proposal before the Task Force because no preferred stock ETFs currently qualify to be on the preferred stock ETF list. This is because preferred stock ETFs have had to include, because of availability, other security types such as hybrids—a security that contains both debt and equity characteristics—and these other securities are considered bonds under the Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds. To alleviate this limitation, the SVO is recommending that ETFs that predominately invest in both preferred stocks and bonds, both of which are security types already permitted to receive NAIC designations, be allowed on the preferred stock ETF list.

Mr. Fry said the SVO would still be responsible for determining if such ETFs would generate predictable and periodic cash flows in a manner broadly similar to a situation in which the holdings were of preferred stock and qualify as fixed income like. This will enable the ETFs that have preferred stock that are mixed with a lot of hybrid principally and are still more like a preferred stock that will give the SVO the policy to include those as a preferred stock on the list. The SVO recommends exposing this for a 30-day public comment period.

Mr. Fry directed the SVO staff to expose this proposed P&P Manual amendment, adding instructions for ETFs that contain a combination of preferred stocks and bonds onto the preferred stock ETF list, for a 30-day public comment period ending Sept. 6.

5. Exposed a Proposed P&P Manual Amendment to Update Guidance on Initial and Subsequent Annual Filings and Methodologies and Documentation

Mr. Fry said the next item is a proposed amendment to the P&P Manual to update guidance on initial and subsequent annual filings, methodologies and documentation.

Charles Therriault (NAIC) said the SVO staff have recently experienced a few insurers declining to provide the documents necessary to analyze the investment filed. The refusal has been accompanied by an unusual challenge, asking where in the P&P Manual it requires these documents to be submitted. This amendment is intended to clarify and fill in any gaps that may exist in the P&P Manual. The amendment reflects a longstanding expectation by the Task Force that insurers will provide the SVO staff with the materials required to analyze investments submitted for review. In the absence of the SVO being specifically named as a party to the transaction, it falls upon insurers to provide the documentation necessary for the SVO analysts to perform their work. The clarifications in this amendment are just that, clarifications of existing guidance requiring insurers to provide items such as financial statements, internal analysis, legal agreements, and any applicable forms. Without this required information and authority to request it, the SVO will not be able to fulfill its analytical responsibilities. This is just a clarification of existing instructions. It should help clarify the SVO’s expectations on what information it will be looking for.

Mr. Fry directed the SVO staff to expose this proposed P&P Manual amendment to update guidance on initial and subsequent annual filings, methodologies and documentation for a 30-day public comment period ending Sept. 6.

Julie Gann (NAIC) first provided an update on four adoptions of the Statutory Accounting Principles (E) Working Group.

a. SSAP No. 32R—Preferred Stock – The Working Group adopted a substantively revised preferred stock SSAP to revise the definitions, measurement and impairment guidance pursuant to the investment classification project. The effective date of the new SSAP is Jan. 1, 2021. There was a question about early adoption, and the Working Group is looking into it.
b. Bond Tender Offers – The Working Group adopted nonsubstantive revisions to clarify that bond tender offers, which function similarly to a call but the holder has to accept the offer, shall follow the guidance in SSAP No. 26R for the recognition of investment income or capital gain/loss when a bond is liquidated prior to its scheduled maturity date. Although reporting entities that historically applied this practice shall not change past practices, an effective date of Jan. 1, 2021, with early application permitted, was provided for the companies that need to make system changes.

c. Financing Derivatives – The Working Group adopted nonsubstantive revisions to SSAP No. 86—Derivatives to require the gross reporting of derivatives, without the inclusion of financing components. Furthermore, amounts owed to or from the reporting entity from the acquisition or writing of derivatives shall be separately recognized. Revisions are being incorporated into the Blanks to clarify that financing premiums will be factored into the determination of derivative net exposure.

d. Update SVO Listings – The Working Group adopted revisions to eliminate references to the “NAIC Bond Fund List” from SSAP No. 26R and include reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R—Unaffiliated Common Stock. This action was in response to a referral received from the Task Force. Corresponding Blanks revisions will be proposed; but due to the timing of the adoption, they will not be reflected in the year-end 2020 annual statement instructions. These revisions will be reflected in the instructions for 2020. Reporting entities shall follow the adopted SSAP guidance.

Ms. Gann said the following items were exposed by the Working Group:

e. Related Party Transactions – The Working Group exposed revisions to SSAP No. 25—Affiliates and Other Related Parties to clarify the type of relationships that should be reflected as related parties, that non-controlling ownership interest greater than 10% is a related party subject to related party disclosures, and guidance for disclaimers of affiliation and control for statutory accounting. This item was previously exposed, and the current version reflects consideration of interested party comments, as well as an additional disclosure to capture all owners that hold more than 10% of an ownership interest in an insurance reporting entity.

f. Participation Mortgages – The Working Group exposed clarifying provisions to assist in identifying the rights that need to be present for a mortgage loan participation agreement to be in scope of SSAP No. 37—Mortgage Loans. With the exposed edits, it is clarified that a participation agreement does not require an insurer to have the right to solely initiate legal action; foreclosure; or under normal circumstances, require the ability to communicate directly with the borrower.

g. Residential Mortgage-Backed Securities (RMBS)/Commercial Mortgage-Backed Securities (CMBS) Designations – The Working Group exposed revisions to SSAP No. 43R—Loan-Backed and Structured Securities to reflect the revisions adopted by the Task Force for the mapping of RMBS and CMBS securities to a final NAIC designation category under the financial modeling process.

h. Perpetual Bonds – The Working Group exposed revisions to specify that perpetual bonds, which do not have a maturity date and therefore do not amortize, shall be reported at fair value. These revisions are in SSAP No. 26R, and they would be in line with the recent revisions adopted to SSAP No. 32R for perpetual preferred stock.

i. Credit Tenant Loans (CTLs) – The Working Group received the CTL referral from the Task Force and exposed an agenda item addressing CTLs for statutory accounting. This agenda item provides detail of CTLs, as well as some of the recent issues with how non-conforming CTLs were reported in scope of SSAP No. 43R and on Schedule D. This agenda item provides options to clarify the accounting and reporting of CTLs for statutory accounting. The first option is to clarify that CTLs will continue to be in scope of SSAP No. 43R, but only if they are on an SVO identified list. That option will require scope revisions to SSAP No. 43R and reference to an SVO list similar to “SVO Identified Bond ETFs.” CTLs that are not on the list would then be required to be specified in either SSAP No. 37 or SSAP No. 21R—Other Admitted Assets. The second option is to incorporate all CTLs in scope of SSAP No. 21R and report them on Schedule BA, with the CTLs reviewed by the SVO reported with an NAIC designation for risk-based capital (RBC) purposes. The agenda item was exposed with the two options. After comments are considered, the Working Group will be asked to provide direction to NAIC staff on which option is preferred for drafting accounting revisions. The Working Group also directed a referral back to the Task Force, informing them of this action.
j. SSAP No. 43R – The Working Group, which met July 30, received notice that comment letters for the exposed SSAP No. 43R issue paper were due July 31. Since then, one comment letter (67 pages) has been received from interested parties. This comment letter has been posted with the exposed issue paper. It is anticipated that the Working Group will schedule subsequent calls to discuss this.

Ms. Gann said the comment deadline for current exposures is Sept. 18.

7. **Heard an NAIC Staff Report on RMBS/CMBS Modeling**

Eric Kolchinsky (NAIC) said he will be discussing the process for year-end 2020. The NAIC Structured Securities Group (SSG) has started discussions with BlackRock on this year’s modeling assumptions. It was hoped that there would be something clear to work with in terms of the cycle resolution. Unfortunately, the aftershocks from the pandemic are still going on. Some of the uncertainty will be incorporated in the scenarios that will be proposed this year. The plan is to provide proforma breakpoints for insurance companies to see where their portfolios would do at year end, possibly in late October or early November. The timing of the whole process is working slightly against us because there is a deadline for publishing and quality assurance. The SSG will provide those numbers to insurance companies, and a data set will be available for those who would like to purchase it.

8. **Discussed its 2021 Proposed Charges**

Mr. Fry said the Task Force’s 2021 proposed charges are identical to the Task Force’s 2020 charges. The charges do not have to be adopted today, but they will be considered for adoption during an interim meeting.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
The Valuation of Securities (E) Task Force met via conference call July 1, 2020. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); David Altmaier represented by Ray Spudeck (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Jessica K. Altman represented by Doug Stolte (VA); and Mark Afable represented by Randy Milquet (WI).

1. **Adopted a P&P Manual Amendment for Technical NAIC Designation Category Corrections**

Mr. Fry said this proposed nonsubstantive amendment was received during the Task Force’s May 14 conference call and was exposed for a 30-day public comment period that ended on June 17. The amendment makes several technical updates that are needed prior to year-end, related to the implementation of NAIC designation categories. The NAIC Securities Valuation Office (SVO) identified 14 policy-based instructions that assign NAIC designations. In this case, the SVO is only assigning one through six, and under the new NAIC designation category, the Task Force has to break that down in 20 of either 1.A. or 1.B. or 2.A. B, C. There are 14 policy-based decisions that needed to be corrected in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual). One example of these are the U.S. government securities that were assigned an NAIC 1 and now are an NAIC 1.A under the new policy.

Charles A. Therriault (NAIC) said the SVO had permitted some proposals when this was originally considered in December 2017 when it first came up with the concept of NAIC designation categories. He said the SVO had put some ideas out there about administrative symbols for the U.S. Government Full Faith and Credit and other government entities, but the Task Force directed the SVO not to proceed with it in 2018. This is why the NAIC has the category symbols it has today. Mr. Therriault said the SVO is happy to initiate a second project to look at that in conjunction with Capital Adequacy (E) Task Force and believes it to be beneficial for that purpose.

Mr. Everett said he had received comments from a couple of companies that suggested this will be helpful because some companies have the securities in and have to pull out for asset valuation reserve (AVR) and interest maintenance reserve (IMR). Using this will prevent the necessity of two calculations when just being able to identify them through designation will enable them to pull them out easily.

Mr. Thomas made a motion, seconded by Mr. Milquet, to adopt the proposed P&P Manual amendment for technical NAIC designation category correction (Attachment One-A). The motion passed unanimously.

2. **Adopted a P&P Manual Amendment to Rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S. Government Money Market Fund List and Discontinue the NAIC Bond Fund List**

Mr. Fry said the next item on the Task Force’s agenda is to consider adoption of an amendment to rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S. Government Money Market Fund List and discontinue the NAIC Bond Fund List. This was first discussed by the Task Force during its Oct. 31, 2019, conference call. The proposal was exposed for a 45-day public comment period that ended on Dec. 16, 2019. It was also referred to the Statutory Accounting Principles (E) Working Group.

Mr. Fry said, as mentioned in the staff memorandum dated Sept. 30, 2019, the first proposed change is to rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the much simpler description, and the second is to eliminate the NAIC U.S. Government Money Market Fund List.
Mr. Fry said there were only four funds on this list for 2019; only one of those four was owned by an insurance company. Part of the criteria to be on the list is to maintain the highest market risk rating. Market risk ratings is going to go away, and this will not be a criterion anymore. This is another reason why this list should go away, and there is still the exchange-traded fund’s (ETF) approved route.

Mr. Everett asked what will be replacing the risk rating. Mr. Therriault said there is no replacement for the market risk rating.

Ms. Mears made a motion, seconded by Mr. Kozak, to adopt the proposed P&P Manual amendment to rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S. Government Money Market Fund List and discontinue the NAIC Bond Fund List (Attachment One-B). The motion passed unanimously.

3. Exposed a Proposed P&P Manual Amendment to Map Short-term CRP Ratings to NAIC Designation Categories

Mr. Fry said that during the Task Force’s May 14 conference call, the North American Securities Valuation Association (NASVA) requested the table in the P&P Manual mapping credit rating provider ratings for short-term instruments be updated to also map them to NAIC designation categories. The Task Force directed SVO staff to draft that update, now reflected in this amendment. He asked Mr. Therriault to provide a summary of this change.

Mr. Therriault said short-term ratings do not have a one-for-one mapping to long-term credit ratings. The short-term ratings cover a range of long-term ratings. Moody’s Prime-1 (P1) short-term rating covers the long-term rating range that includes: Aaa, Aa1, Aa2, Aa3, A1, A2 and A3. The SVO recommends mapping the NAIC designation category to the mid-point of these long-term rating ranges. In this instance, the P1 short-term rating would be mapped to the NAIC designation category of 1.D or a Moody’s long-term rating equivalent of Aa3. This approach was applied to each short-term rating mapping.

Mr. Therriault said there were also updated references to policies related to the use of credit ratings in the P&P Manual along with a footnote to identify that there are many more ratings symbols than those displayed on the this generic list when the various combinations of prefixes and suffixes are included. There was also one previous erratum in the long-term ratings table that was identified; the AM Best rating symbol bbb+ was mapped to both NAIC designation category 2.A and 2.B. The table was missing the AM Best rating symbol bbb, which has now been added and mapped to 2.B. This was only an issue in the P&P Manual and did not affect any NAIC system.

Mr. Therriault said the SVO does not currently translate, compile or publish short-term security ratings into NAIC designations in the Automated Valuation Service (AVS+) system. If the Task Force would like the SVO to do so, it would need to be a separate initiative. The SVO recommends the Task Force expose this nonsubstantive update for public comment.

Mr. Monahan (American Council of Life Insurers—ACLI) said the ACLI supports an expedited 25-day exposure period for this item. Mr. Fry directed the SVO to expose this P&P Manual amendment for a 25-day public comment period ending July 27.

4. Exposed a Proposed P&P Manual Amendment to Add Supranational Entities Filed with the SVO to the Sovereign NAIC Designation Equivalent List

Mr. Fry introduced the next item to add supranational entities filed with the SVO to the Sovereign NAIC Designation Equivalent List. He asked Mr. Therriault to provide a summary.

Mr. Therriault said the SVO publishes a list of sovereign NAIC designation equivalents that are used to cap the NAIC designation and NAIC designation category that can be assigned by the SVO. This amendment refers to that list but is unrelated to the proposal the Task Force discussed earlier this year on constraining all NAIC designations to the Sovereign NAIC Designation Equivalent List. Instead, this proposal is being recommended to address insurer reporting issues on the Supplemental Investment Risk Interrogatories (SIRI) reports. Lines 5–10 of that report require insurers to list foreign investments by country sovereign rating. The guidance indicates that a country not on the SVO’s Sovereign NAIC Designation Equivalent List should be reported as an NAIC 3 or below. Supranational entities are international groups or unions that share decision making and vote on issues concerning the collective body. The European Union (EU) and the World Trade Organization (WTO) are both supranational entities. Operating in multiple countries, supranational entities are not controlled by a single sovereign country and, in this context, it is only being used for governmental entities.
Mr. Therriault said the proposed amendment would permit the SVO to include on the Sovereign NAIC Designation Equivalent List supranational entities, submitted to it for review by insurers, for which the SVO is able to determine an appropriate NAIC designation equivalent. The SVO recommends the Task Force expose the amendment for a public comment period. If adopted by the Task Force, the SVO would recommend this being referred to the Blanks (E) Working Group to request updates to the Supplemental Investment Risk Interrogatory instructions to reference the Sovereign NAIC Designation Equivalent List for both sovereign countries and supranational entities and to remove direct references to rating agency ratings (e.g., Moody’s and Standard & Poor’s [S&P]) on the report.

Mr. Monahan said the ACLI supports an expedited 25-day exposure period for this item also.

Mr. Fry directed SVO staff to expose this proposed P&P Manual amendment adding instructions to include supranational entities filed with the SVO to the Sovereign NAIC Designation Equivalent List if the SVO can determine an appropriate NAIC designation for a 25-day public comment period ending July 27.

Mr. Fry said the next item on the agenda is the proposed amendment to the P&P Manual to incorporate updates made to Statement of Statutory Accounting Principles (SSAP) No. 105R—Working Capital Finance Investments, which the Statutory Accounting Principles (E) Working Group adopted on May 20. He asked Marc Perlman (NAIC) to explain the amendment.

Mr. Perlman said early last year, industry requested modifications to the working capital finance investments (WCFI) requirements in SSAP No. 105. SSAP No. 105 took a fixed approach to a number of legal and structural issues in WCFI transactions, which are routinely handled differently, and thereby prevented the SVO from exercising proper analytical discretion. The Task Force referred industry’s request to the Statutory Accounting Principles (E) Working Group in March 2019. The Working Group incorporated seven of the industry-requested modifications to the WCFI program requirements in what is now SSAP No. 105R, which became effective June 30.

Mr. Perlman said the SVO is proposing amending the WCFI section of the P&P Manual to remove certain requirements that were removed from SSAP No. 105 and thereby make it consistent with the new version, SSAP No. 105R. These amendments include removing the requirement that the SVO determine if the international finance agent is the functional equivalent of the U.S. regulator. Removing the finance agent prohibitions on commingling and broadening the independent review requirements allow independent review of the finance agent by either audit or through an internal control report.

Mr. Fry said that this would need more time for consideration and suggested a 45-day public comment period. Mr. Monahan said the ACLI supports a 45-day public comment period. Mr. Everett also recommended a 45-day public comment period.

Mr. Fry directed the SVO staff to expose this proposed P&P Manual amendment to update guidance for WCFI consistent with the Statutory Accounting Principles (E) Working Group adoption of changes to SSAP No. 105R for a 45-day public comment period ending Aug. 17.

6. Exposed an SVO Staff Report on the Use and Regulation of Derivatives in ETFs

Mr. Fry said the next item on the agenda is to receive a memorandum from the SVO on the use and regulation of derivatives in ETFs. Mr. Fry asked Mr. Perlman to provide a summary

Mr. Perlman said that, at the instruction of the Task Force, the SVO drafted this memorandum so that the Task Force can better understand: 1) how ETFs currently use derivatives; 2) how that use is currently regulated; 3) how that regulation might change; and 4) how all this affects the SVO’s analysis of ETFs that use derivatives.

Mr. Perlman said ETFs, like other U.S. Securities and Exchange Commission (SEC)-registered fund types, use derivatives to manage exposure to specific investments and risks as part of their investment strategies. Derivatives involve leverage, which can magnify an ETF’s gains and losses, and obligate the ETF to make a future payment or deliver assets to a counterparty. Losses on derivatives, therefore, can result in counterparty payment obligations that directly affect the capital structure of an ETF and the relative rights of the ETF’s counterparties and shareholders.
Mr. Perlman said Section 18 of the federal Investment Company Act of 1940 was designed to limit the leverage a fund can incur. In a subsequent Policy Release and several no-action letters, the SEC has taken the position that “evidence of indebtedness” would include all contractual obligations to pay in the future, including commonly used derivatives. Funds, however, were permitted to use “segregated accounts” to cover their senior securities. The SEC has commented, though, that asset segregation may not be providing the intended protections and may not address undue speculation and asset sufficiency concerns.

Mr. Perlman said that in November 2019, the SEC proposed Rule 18f-4 to “provide an updated and more comprehensive approach to the regulation of funds’ use of derivatives.” The rule would generally permit funds, including ETFs, to enter into “derivative transactions” so long as the fund complies with certain conditions and disclosures. These include compliance with an outer limit on fund leverage based on the fund’s value-at-risk (VaR) when compared with a designated reference index, which would approximate the VaR of the fund’s unleveraged portfolio. The board of directors would need to create a new role of derivatives risk manager to administer a derivatives risk management program, which would include all policies and procedures designed to manage the fund’s derivative risks, including: 1) risk identification and assessment; 2) guidelines; 3) stress testing; 4) backtesting; 5) internal reporting; and 6) periodic review.

Mr. Perlman said, importantly, the proposed rule would create an exception for limited users of derivatives, which would not need to comply with many of the requirements like the VaR and the derivatives risk management program. Funds with derivative exposure of less than 10% of its assets and those that solely hedge currency risk would be considered limited users.

Mr. Perlman said the comment period for Rule 18f-4 ended in March, and the final rule has not been published.

Mr. Perlman said the SVO does not expect the rule to affect how it analyzes derivatives in ETFs. According to the P&P Manual, the purpose of a fund derivative (or speculative characteristics) analysis is to determine whether the cash flow is fixed income (or bond)-like. The SVO’s primary analytic focus will remain the determination of whether an ETF’s cash flows, accounting for its use of derivatives, is fixed income-like. It is possible that derivatives risk management programs and VaR limits testing could provide increased transparency about an ETF’s use of derivatives, which could instruct the SVO’s determination of whether an ETF’s cash flow is fixed income-like. However, because ETFs on the SVO-Identified Bond ETF List and SVO-Identified Preferred Stock ETF List should “predominantly hold” bonds or preferred stock, respectively, pursuant to the P&P Manual, most eligible ETFs likely already fall under the exception for limited users of derivatives and may not need to comply with all requirements of the rule.

Mr. Monahan requested that the SVO staff report be exposed for a 45-day public comment period.

Mr. Fry directed the SVO staff to expose the SVO report on the use and regulation of derivatives in ETFs for a 45-day public comment period ending Aug. 17.

7. Discussed Other Matters

Mr. Monahan mentioned that there was a discussion by the Capital Adequacy (E) Task Force on hybrid securities.

Mr. Therriault explained that there was a discussion about assigning only NAIC designations and not NAIC designation categories to hybrid securities. He said any securities that would be translated by the SVO would follow the Valuation of Securities (E) Task Force instructions to produce NAIC designation categories. He said he recommends using the greater granularity provided by the NAIC designation categories. He also said he is uncertain if a referral would be made from the Capital Adequacy (E) Task Force to the Valuation of Securities Task (E) Force requesting its opinion and recommendation on this issue.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

© 2020 National Association of Insurance Commissioners
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
   Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
       Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

DATE: April 30, 2020

1. **Summary** – With the introduction of NAIC Designation Categories, the 20 granular delineations of credit risks adopted by the Task Force on Jun. 11, 2018, several policy-based assignments of NAIC Designations did not receive a mapping. This amendment identifies the appropriate NAIC Designation Category to be assigned for these policy-based assignments.

2. **Recommendation** – The SVO recommends that the Task Force update the guidance in the P&P Manual to reflect these policy-based assignments of an NAIC Designation Category.

3. **Proposed Amendment** – The following text in red shows the proposed revisions in Part One, Part Two, Part Three and Part Four.
PART ONE

POLICIES OF THE NAIC

VALUATION OF SECURITIES (E) TASK FORCE

FILING EXEMPTION FOR CERTIFICATES OF DEPOSIT
REPORTED AS BONDS UNDER SSAP NO. 26R

65. The NAIC Designation for Certificates of Deposit described above shall be **NAIC 1** and the NAIC Designation Category shall be **NAIC 1.A**. The NAIC Designation for Certificates of Deposit described above shall be derived by application of the filing exempt conversion process.

... FILING EXEMPTION FOR U.S. GOVERNMENT SECURITIES

SVO Publishing Conventions for Filing Exempt U.S. Government Securities

67. **U.S. Treasury Obligations** – U.S. Treasury Obligations are added to the VOS Process automatically, and they appear in the VOS Product. The NAIC Designation is **NAIC 1** and the NAIC Designation Category is **NAIC 1.A**.

Other Filing Exempt U.S. Government Securities

68. A single entry is in the AVS+ Products in its normal CUSIP sequence, followed by the description “All Issues” for the securities listed below.

69. Because these securities are Filing Exempt, CUSIP numbers are not published in the AVS+ Products. The securities should, however, be reported with a CUSIP in the appropriate section of Schedule D. The NAIC Designation is **NAIC 1** and the NAIC Designation Category is **NAIC 1.A**.

...
Filing Exemption for Other U.S. Government Obligations

79. Obligations issued and either guaranteed or insured, as to the timely payment of principal and interest, by the government agencies or government-sponsored enterprises listed below are filing exempt. They are not backed by the full faith and credit of the U.S. Government. The filing exemption here is based on an analytical judgment that the combined creditworthiness of the entity itself and U.S. government support for that entity provides confidence that the issuer will be able to pay its obligation on a full and timely basis at the level of an NAIC 1 quality designation and an NAIC Designation Category of NAIC 1.A. For the avoidance of doubt, preferred stock or similar securities of the government agencies or government-sponsored enterprises listed below are not considered guaranteed or insured and hence are not subject of this section.
NAIC Designations

…

NAIC General Interrogatory

66. **NAIC 5GI** and **NAIC Designation Category NAIC 5.B GI** is assigned by an insurance company to certain obligations that **meet all of the following criteria:**

- Documentation necessary to permit a full credit analysis of a security by the SVO does not exist or an NAIC CRP credit rating for an FE or PL security is not available.
- The issuer or obligor is current on all contracted interest and principal payments.
- The insurer has an actual expectation of ultimate payment of all contracted interest and principal.

…
PART TWO
OPERATIONAL AND ADMINISTRATIVE INSTRUCTIONS
APPLICABLE TO THE SVO
COMPILATION AND PUBLICATION OF THE SVO LIST OF INVESTMENT SECURITIES

U.S. Treasury Securities Process

Exempt U.S. Government Securities Process

137. The SVO will convert the counterparty’s or the guarantor’s financial strength ratings as assigned by an NAIC CRP (e.g., S&P Financial Programs Ratings, Moody’s Counterparty’s Ratings or Fitch Counterparty Risk Ratings) into an equivalent NAIC Designation. In the absence of an NAIC CRP counterparty financial strength rating, the SVO may convert the counterparty’s senior unsecured rating, as assigned by an NAIC CRP, into the equivalent NAIC Designation. In the absence of an NAIC CRP counterparty financial strength or senior unsecured rating, the SVO will conduct a review of the counterparty’s financial statements to assign an NAIC Designation. For purposes of the application of this section, all U.S. domiciled exchanges are assigned an NAIC 1 Designation and an NAIC Designation Category of NAIC 1.A.
PART THREE
SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION
OF NAIC DESIGNATIONS
PROCEDURE APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES

Conditions to Filing Exemption for PL Securities Issued on or After January 1, 2018

14. An insurer that owns a PL security that is not filing exempt shall either: (a) file the security with the necessary documentation with the SVO for an analytically determined NAIC Designation; or (b) self-assign an NAIC 5GI and an NAIC Designation Category of NAIC 5.B GI to the security and report using the Interrogatory procedure; in either case within 120 days of purchase.

20. If the SVO verifies that the security:
   - Has been assigned a credit rating but that the credit rating is not an Eligible NAIC CRP Credit Rating; or
   - Has not been rated by an NAIC CRP; or
   - Is no longer subject to a private letter rating
The SVO shall notify the insurer that the security is not eligible for filing exemption. The insurance company shall then either file that security and necessary documentation with the SVO for an independent credit assessment or assign an NAIC 5GI Regulatory Designation and an NAIC Designation Category of NAIC 5.B GI to the security in the related Interrogatory.

21. An NAIC 5GI Designation and an NAIC Designation Category of NAIC 5.B GI may also be used in connection with the designation of PL securities rated by an NAIC CRP (i.e., for private letter ratings issued on or after January 1, 2018) when the documentation is not available for the SVO to assign an NAIC Designation. For purposes of this section, the documentation is not available for the SVO to assign an NAIC Designation if the NAIC CRP credit rating is not included in the applicable CRP credit rating feed (or other form of direct delivery from the NAIC CRP) and the insurer is unable to provide a copy of the private letter rating documentation necessary for the SVO to assign an NAIC Designation.
The NAIC Bond Mutual Fund List

Regulatory Treatment of Eligible Funds

263. A bond mutual fund on the NAIC Bond Mutual Fund List is in scope of SSAP No. 26R—Bonds, reported with an **NAIC 1** designation and **NAIC 1.A Designation Category** on Schedule D, Part 1 – Long-Term Bonds on the “SVO Identified Funds – Bond Mutual Funds” line. The insurance company reports an **NAIC 1** Designation and **NAIC 1.A Designation Category** in accordance with Annual Statement Instructions. These investments are reported at fair value unless the investment qualifies for and the reporting entity elects systematic value.
PART FOUR
THE NAIC STRUCTURED SECURITIES GROUP

...
### ANALYTICAL ASSIGNMENTS

28. Securities subject to *SSAP No. 43R—Loan-Backed and Structured Securities* that cannot be modeled by the SSG and are not rated by an NAIC CRP or designated by the SVO are either: (a) assigned the NAIC administrative symbol **ND** (not designated), requiring subsequent filing with the SVO; or (b) assigned the NAIC Designation for Special Reporting Instruction [i.e., an **NAIC 5GI**, **NAIC Designation Category NAIC 5.B GI** or **NAIC 6* (six-star)**].
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)

CC: Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)
    Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office
    (P&P Manual) to Rename the U.S. Direct Obligations/Full Faith and Credit Exempt List to the NAIC U.S.
    Government Money Market Fund List and Discontinue the NAIC Bond Fund List

DATE: September 30, 2019

1. Summary – The P&P Manual authorizes the SVO to maintain two special fund list. The first is the NAIC
    U.S. Direct Obligations/Full Faith and Credit Exempt Money Market Funds List. This list of Money Market Funds
    (MMF) gets special treatment because they can be reported as a cash equivalent on Schedule E, Part 2. The SVO
    proposes simplifying the title of this list to “NAIC U.S. Government Money Market Fund List.” This is only a title
    change to simplify the title of the list.

    The second is the NAIC Bond Fund List, where the SVO reviews that a fund maintains the highest credit quality
    rating, maintains the highest market risk rating (this rating type that is no longer assigned), and invests 100% of its
    total assets in U.S. Government securities along with several other restrictive criteria. Only four funds qualify for
    this list and the four insurers invested in the fund have a combined exposure of $11.8 million BACV in one of the
    four qualify funds as of December 31, 2018. With the adoption of the Comprehensive Instructions for Fund
    Investments on April 7th that provided new instructions for Fixed Income-Like SEC Registered Funds and given the
    limited number of insurers investing in the funds on the NAIC Bond Fund List, the SVO proposes eliminating this
    list when the four funds come up for renewal in 2020. The funds on the NAIC Bond Fund List would be eligible for
    NAIC Fixed Income-Like SEC Registered Funds List and the SVO would be willing to allow these fund issuers to
    apply to be on this new list at their renewal, if they were so interested. This change would require a referral to the
    Statutory Accounting Principles (E) Working Group as the NAIC Bond Fund List is referenced in SSAP No. 26R –
    Bonds.

2. Proposed Amendment – The text referencing these instructions for U.S. Direct Obligations/Full Faith and
    Credit Exempt Money Market Funds List and NAIC Bond Fund List is shown below, edits in red-underline, as it will
2019 P&P Manual

Part Three – SVO Procedures and Methodology for Production of NAIC Designations

Investment in Funds

The NAIC U.S. Government Money Market Fund List U.S. Direct Obligations/Full Faith and Credit Exempt Money Market Funds List

247. **Regulatory Treatment of Eligible Funds** – A money market mutual fund on the NAIC U.S. Government Money Market Fund List U.S. Direct Obligations/Full Faith and Credit Exempt List is reported as a cash equivalent on Schedule E, Part 2 on the “Exempt Money Market Mutual Funds – as Identified by the SVO” line. These “exempt” money market mutual funds are reported at fair value and incur a zero percent (0%) risk-based-capital (RBC) charge. Other money market mutual funds are also reported as cash equivalents on Schedule E, Part 2 on the “All Other Money Market Mutual Funds” line. The “all other” money market mutual funds are also reported at fair value but incur an RBC charge similar to other cash equivalents.

248. **Required Documentation** – An insurance company or the sponsor of a money market mutual fund requests an SVO evaluation that a money market mutual fund is eligible to be listed on the NAIC U.S. Government Money Market Fund List U.S. Direct Obligations/Full Faith and Credit Exempt List by submitting the following documentation to the SVO:

- The money market mutual fund application form.
- Authorization letter requesting review of the fund for the purpose of being added to the List.
- The most recent fund:
  - Prospectus;
  - Statement of Additional Information (SAI); and
  - Annual, and if available, the semi-annual report.
- Rating letter from an NAIC CRP dated in the year of the filing.

249. **Eligibility Criteria** – A money market mutual fund is eligible for inclusion on the NAIC U.S. Government Money Market Fund List U.S. Direct Obligations/Full Faith and Credit Exempt List if the fund meets the following conditions:

- The fund maintains a money market mutual fund rating of AAAm from Standard & Poor’s or Aaa-mf from Moody’s Investor Services or an equivalent money market mutual fund rating from any NAIC CRP.
- The fund maintains a stable net asset value per share of $1.00.
- The fund allows a maximum of seven-day redemption of proceeds.
- The fund invests 100% of its total assets in securities that are direct obligations of the U.S. Government and/or in securities that are backed by the full faith and credit of the U.S. Government or collateralized repurchase agreements comprised of such obligations at all times.

**NOTE:** Please refer to text below for a list of securities considered to be direct obligations of the U.S. Government and entities that are entitled to the full faith and credit of the U.S. Government.

250. **Verification Procedure** – Upon receipt of the documentation, the SVO examines the prospectus, schedule of fund portfolio holdings and related materials to verify that the fund meets the established criteria.
The NAIC Bond Mutual Fund List

251. Regulatory Treatment of Eligible Funds — A bond mutual fund on the NAIC Bond Mutual Fund List is in scope of SSAP No. 26R — Bonds, reported with an NAIC 1 designation on Schedule D, Part I — Long-Term Bonds on the “SVO Identified Funds — Bond Mutual Funds” line. The insurance company reports an NAIC 1 Designation in accordance with Annual Statement Instructions. These investments are reported at fair value unless the investment qualifies for and the reporting entity elects systematic value.

252. Required Documentation — An insurance company or the sponsor of a bond mutual fund requests an SVO evaluation that a bond mutual fund is eligible for inclusion on the Bond Mutual Fund List by submitting the following documentation to the SVO:

- The bond fund application form.
- Authorization letter requesting review of the fund for the purpose of inclusion on the Bond Mutual Fund List.
- The most recent fund:
  - Prospectus;
  - Statement of Additional Information (SAI); and
  - Annual, and if available, the semi-annual report.
- Rating letter from an NAIC CRP dated in the year of the filing.

253. Eligibility Criteria — A bond mutual fund is eligible for inclusion on the Bond List if the fund meets the following conditions:

- The fund shall maintain the highest credit quality rating given by an NAIC CRP.
- The fund shall maintain at least the highest market risk rating given by an NAIC CRP to a fund that invests in class 1 bonds that are issued or guaranteed as to payment of principal and interest by agencies and instrumentalities of the U.S. Government, including loan-backed bonds and collateralized mortgage obligations, and collateralized repurchase agreements comprised of those obligations.
- The fund shall allow a maximum of seven-day redemption of proceeds.
- The fund shall invest 100% of its total assets in the U.S. Government securities listed in the section below, class 1 bonds that are issued or guaranteed as to payment of principal and interest by agencies and instrumentalities of the U.S. Government, including loan-backed bonds and collateralized mortgage obligations, and collateralized repurchase agreements comprised of those obligations at all times.
- The fund shall declare a dividend of its net investment income each day prior to calculating its net asset value per share.
- The fund shall not invest in any derivative instruments, as that term is defined in the NAIC Accounting Practices and Procedures Manual.
- The fund shall not invest in any bonds that receive some or all of the interest portion of the underlying collateral and little or no principal, or in any bonds with coupons which reset periodically based on an index and which vary inversely with changes in the index.
- The fund shall not invest in the following types of securities: (a) leveraged or deleveraged notes that pay a multiple or fraction of an index or indices; (b) notes that pay principal or interest linked to foreign currencies, non-U.S. dollar interest rates, equity or commodities indices or any other index that is not composed of U.S. dollar denominated fixed-income instruments; or (c) notes that pay principal or interest linked to more than one index.
Verification Procedure—Upon receipt of the documentation, the SVO examines the prospectus, schedule of fund portfolio holdings and related materials to verify that the fund meets the established criteria.

...
The Valuation of Securities (E) Task Force met via conference call May 14, 2020. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); David Altmaier represented by Ray Spudeck (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Al Redmer Jr. represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Linda A. Lacewell represented by Jim Everett (NY); Jessica K. Altman represented by Randy Milquet (WI).

1. **Adopted its Feb. 4, 2020, and 2019 Fall National Meeting Minutes**

Mr. Fry said the Task Force met Feb. 4, 2020, and Dec. 8, 2019. During its Feb. 4, 2020, meeting, the Task Force took the following action: 1) discussed amendments to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to: a) remove the financial modeling instructions for residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS); and b) clarify that the sovereign rating limitation applies to filing exemption (FE); 2) received an updated amendment to the P&P Manual for the definition and instructions for principal protected notes (PPNs); and 3) adopted an amendment to reflect the U.S. Securities and Exchange Commission’s (SEC) adoption of a new rule to modernize the regulation of exchange-traded funds (ETFs).

Mr. Thomas made a motion, seconded by Ms. Clements, to adopt the Task Force’s Feb. 4, 2020 (Attachment Two-A) and Dec. 8, 2019 (see *NAIC Proceedings – Fall 2019, Valuation of Securities (E) Task Force*) minutes. The motion passed unanimously.

2. **Adopted a Revised P&P Manual Amendment to Map Financial Modeled RMBS/CMBS Designations to NAIC Designation Categories**

Mr. Fry said the next item is to discuss the amendment to map the financially modeled RMBS/CMBS securities to NAIC designation categories. This amendment was received at the 2019 Fall National Meeting, and its purpose is for year-end 2020 to have an electronic-only column that will capture the 20 new NAIC designation categories. The existing NAIC designation 1 through designation 6 will still apply for RBC, but the NAIC designation categories will be captured to study that data. This amendment will map into that electronic-only NAIC designation category column.

Comments were received from the industry about mapping zero loss securities, and in talking with NAIC staff, the mapping was made to the midpoint of the NAIC designation category. NAIC staff agreed that, with zero loss securities, it may make sense to consider mapping them to the NAIC 1.A designation, which is the strongest result through the modeling process where there are no losses through the most extreme scenarios. The Task Force did look at the policy issue of whether it should continue to use price break points in the future, and it talked about using a single NAIC designation, as was done in the past before modeling. The Task Force received comments from different stakeholders that it was not the direction that many wanted to go; that option is not being considered at this time.

Josh Bean (Transamerica Capital Strategy), representing the American Council of Life Insurers (ACLI), said the ACLI and the North American Securities Valuation Association (NASVA) joint comment letter expressed support for the proposal but did request the maintenance of the standard for mapping RMBS and CMBS tranches that have no expected loss under any of the modeling scenarios to the highest grade of NAIC designation categories.

Steve Broadie (American Property Casualty Insurance Association—APCIA) said he also supports the amendment, as revised.
Mr. Kozak made a motion, seconded by Ms. Crawford, to adopt the revised P&P Manual amendment to map financially modeled NAIC designations for RMBS/CMBS to NAIC designation categories, including mapping the zero-loss bonds to the NAIC 1.A designation category (Attachment Two-B). The motion passed unanimously.

3. Adopted a P&P Manual Amendment for PPNs with an Updated Definition and Instructions

Mr. Fry said this agenda item is to consider adoption of the updated amendment defining principal protected securities. The Task Force began discussing this agenda item at the 2019 Summer National Meeting. NAIC staff identified certain classes of securities where the credit ratings did not reflect a state insurance regulator’s view of risk. NAIC staff recommended that those securities no longer be eligible for FE and should be filed with the NAIC Securities Valuation Office (SVO). The Task Force asked NAIC staff to work with the industry and other interested parties on the definition to create language that would not create any unintended consequences but still achieve the objective of the Task Force.

Charles Therriault (NAIC) said, as mentioned, NAIC Investment Analysis Office (IAO) staff met with the industry many times to exchange ideas on this proposal and hear each other’s concerns on the definition of principal protected securities. The updated definition in this amendment, which was previously exposed, is the culmination of those discussions and provides an excellent outline of the regulatory and analytical issues presented by these securities. The framework identifies principal protected securities (PPS) as a type of security that repackages one or more underlying investments for which contractually promised payments according to a fixed schedule (principal and, if applicable, interest, make whole payments and fees) are satisfied by proceeds from an underlying bond(s) and that if purchased by an insurance company on a stand-alone basis would be eligible for FE, but for which the repackaged security structure enables potential returns from other underlying investments. Also, the insurer would obtain a more favorable risk-based capital (RBC) charge or regulatory treatment for the PPS through FE than it would were it to separately file the underlying investments. Investments meeting these criteria will need to be filed with the SVO to determine if the security possesses other non-payment risks, something that only the SVO can assess under its Subscript S authority. There were a few noted exclusions, such as defeased or pre-refunded securities, and broadly syndicated securitizations.

Mr. Therriault said NAIC staff believe this criteria, which was discussed exhaustively with interested parties, hit upon the core issue: restructuring an investment to receive a more favorable RBC charge without a commensurate change to the risk profile. The SVO would also have adequate analytical discretion necessary to make those determinations. At the industry’s request, included in the definition are examples of these transactions. The goal of adding the examples was to provide additional clarity as to the regulatory concern. However, the examples are only meant to be examples and do not reflect all possible variants. The current stressed credit markets only reinforce how critically important it is to accurately reflect the investment risk. He said IAO staff recommend that the Task Force adopt this amendment but consider an adequate time for insurers to transition to this new requirement.

Mr. Fry said one message that is clear is that if the Task Force were to adopt this amendment and make these securities ineligible for FE, there is still a route to assign an NAIC designation. The NAIC designation might be different, but it is likely that most of these could be assigned an NAIC designation. One thing for the Task Force to consider is how it will implement this change and give time to those insurers that have exposure to these investments. An effective implementation date of Jan. 1, 2021, would mean that for year-end 2020, there would not be an RBC impact and give insurers time in year 2021. There should be a date by which they should be filed with the SVO in 2021 to give the SVO time to review them, if the Task Force took that approach instead of an immediate adoption.

Ms. Belfi, Mr. Thomas, Mr. Sirovetz, Mr. Milquet, Ms. Becker and Ms. Mears all agreed to extend the effective date for the amendment to Jan. 1, 2021, with a mid-year 2021 filing deadline.

Mr. Fry said there were three comment letters. One was from Connie Jasper Woodroof (Sapiens), which requested the amendment title be changed from “principal protected notes” to avoid confusion with the abbreviation “PPN,” which has another meaning. These securities could instead be called “principal protected securities.”

Mr. Bean said the joint ACLI and NASVA comment letter supports the adoption of the scope guidance and also supports the discussion by the members of the Task Force on the effective date. The comment letter did request some continuing engagement by the IAO as this advances into the implementation phase with an illustrated walkthrough of the weighted average rating factor (WARF) methodology specially using a transaction type example that was provided in the proposed amendment and some additional discussion around the new administrative filing process.
John Guyot (Security Benefit Life Insurance Company) said there were no additional comments other than what was provide in their comment letter and that he appreciates the direction in delaying the implementation effective date.

Mr. Milquet asked what the procedure would be for securities purchased after the Jan. 1, 2021, implementation effective date. Mr. Therriault said it would only be the securities acquired prior to the Jan. 1, 2021, implementation effective date that would need to be filed by the suggested July 1, 2021, deadline and any PPS acquired after the implementation effective date would follow the existing filing deadline instructions.

Ms. Belfi made a motion, seconded by Mr. Sirovetz, to adopt the proposed P&P Manual amendment, with the title and text revised to call them principal protected securities (PPS), removing these securities from FE eligibility and requiring all PPS, including those currently designated under the FE process, to be submitted to the SVO for review under the Subscript S authority beginning Jan. 1, 2021, and filed with the SVO by July 1, 2021, if previously owned (Attachment Two-C). The motion passed unanimously.

4. Received and Exposed an IAO Issue Paper on NAIC Staff Concerns about Bespoke Securities and Reliance on CRP Ratings

Mr. Fry said item four on the agenda is to receive an IAO issue paper on bespoke securities and reliance on credit ratings provider (CRP) ratings. This item was discussed at the 2019 Summer National Meeting, where the Task Force began talking about this concept of certain securities that were not broadly marketed and with one rating or a private rating. The Task Force has tried to develop a process for state insurance regulators to better understand these risks and, after hearing that report, directed NAIC staff to work on recommendations along those lines.

Mr. Therriault said NAIC staff have been raising their concerns about bespoke securities and the excessive reliance upon rating agency ratings to the Task Force for some time. The paper mentions the discussion that occurred during the Task Force’s May 2019 educational seminar, but these concerns go back much further. During the 2019 Summer National Meeting, the Task Force requested NAIC staff to summarize these concerns and make recommendations to remediate them in an issue paper, which was done with this memorandum. Two primary but interrelated concerns were identified:

a) Bespoke securities: These are securities that are not broadly syndicated, created for one or a few investors, and assigned a rating—often private—by only one ratings provider, and the participants often deliberately keep the terms of structure private.

b) Reliance on CRP ratings: The Task Force uses ratings to determine NAIC designations under the FE policy, which includes recognizing private ratings, but there is no explicit oversight assigned to the NAIC staff to monitor CRP rating use or their analytical basis despite this extensive reliance.

As requested by the Task Force, NAIC staff have made several recommendations in this issue paper that they believe will remediate many of these issues. In preparing these recommendations, NAIC staff also considered the recommendations made in response to the 2008 Great Recession by the Ratings Agency (E) Working Group in its memorandum, dated April 28, 2010, to the Financial Condition (E) Committee. Those recommendations were subsequently adopted by that Committee and the NAIC membership. A few of the Ratings Agency (E) Working Group’s recommendations are included in the issue paper, and its full report to the Financial Condition (E) Committee is included as an attachment to the issue paper. Many of the recommendations by the Working Group are consistent with the recommendations in this issue paper, including:

a) Explore how to reduce reliance on ratings.

b) Consider alternatives to assess insurers’ investment risk, including expanding the role of and state insurance regulator reliance on the SVO.

c) When considering continuing to use ratings in insurance regulation, take into account steps taken to correct the prior ratings shortfalls.

d) Establish a process to monitor and evaluate rating agency activities, including permitting timely intervention to set regulatory treatment of risk securities.

e) Modify the FE rule, including developing alternative methodologies for assessing structured security risks.

Mr. Therriault said these recommendations were approved by the Financial Condition (E) Committee in 2010, but they were not fully implemented, and many are being recommended again in this issue paper, as they are still relevant today. The IAO staff recommend that the issue paper be exposed for a lengthy comment period. There are no actionable items in the issue paper, but
the Task Force is requested to authorize the SVO to begin developing proposals to remediate these long-standing issues identified in the issue paper and by the Ratings Agency (E) Working Group.

Mr. Fry said he believes a long exposure period would be appropriate. The Task Force is not looking to make changes in the middle of this current financial situation and is aware of work going on with other groups. It is important to expose this and continue the discussion. He said he recalls the work in 2010 of the Ratings Agency (E) Working Group. That report did not say the Task Force would not use ratings; it said the Task Force should not blindly rely on ratings. In certain situations, RMBS and CMBS, the Task Force no longer uses ratings and models those securities. There was a similar decision today with PPS. The purpose of this paper is to identify areas where ratings are not working for regulatory purposes, and the Task Force encourages the SVO to make incremental recommendations to address these situations.

Mike Reis (Northwestern Mutual), representing the ACLI, said the ACLI supports a long exposure due to the COVID-19 pandemic and what it is doing to the ACLI’s capability to address these issues. He also said he thinks there is overlap with what is occurring at the Statutory Accounting Principles (E) Working Group.

Mr. Everett made a motion, seconded by Mr. Guerin, to expose the issue paper for a 90-day public comment period ending Aug. 16 and to begin drafting incremental recommendations for the Task Force to consider addressing these risks. The motion passed unanimously.

5. Received and Exposed a Proposed P&P Manual Amendment with Updated Instructions for Nonconforming CTL Transactions that Relied on Credit Ratings

Mr. Fry said the next item relates to P&P Manual instructions for nonconforming credit tenant loan (CTL) transactions. All CTL transactions need to be filed and designated by the SVO, rating agency ratings cannot be used, and CTLs are not eligible for FE. There is a set of securities that do not meet the criteria for CTL but have been rated by rating agencies. The industry made the assumption that these transactions were eligible for FE, which the Task Force has now said they are not. In 2019, the Task Force agreed to try to find a solution for these securities and not take any immediate action. Part of this was worked out for some of these nonconforming CTLs with the recent adoption of guidance for ground lease financing transactions.

Mr. Fry said Marc Perlman (NAIC) will summarize this amendment to address this additional group of securities.

Mr. Perlman said the Task Force and NAIC staff heard from the industry on a few occasions that they are very concerned about this population of securities that have the basic legal and structural characteristics of a CTL but have a variation or deviation that does not conform to the existing guidance. Included with this CTL amendment, there is an update to the Task Force policy on “The Use of Credit Ratings of NRSROs in NAIC Processes.”

The policy currently states, “The sole NAIC objective in obtaining and using publicly available credit ratings is to conserve limited regulatory resources; e.g., the resources of the SVO.” The policy then clarifies that in its use of CRP ratings, the NAIC is not “endorsing the credit rating or analytical product of any CRP.” Nothing about the policies related to the use of CRP ratings should be interpreted, as was seemingly the case with the nonconforming CTLs and certain other investments, that the Task Force has approved the use of CRP ratings for the determination of NAIC designations or for any other purpose, other than conserving SVO staff resources. The updates to this policy guidance affirm the Task Force’s role in making all decisions on the use of CRP ratings and provides additional guidance to insurance company filers on what to do if they are uncertain about the filing procedure to avoid this situation in the future.

The SVO further recommends a “grandfathering” provision for previously owned nonconforming CTLs by filing them with the SVO for assessment. It will also authorize the SVO to use its judgement in assessing eligibility and assignment of an NAIC designation. SVO staff recommend exposing this amendment and simultaneously referring it to the Statutory Accounting Principles (E) Working Group requesting it to affirm that it would consider these nonconforming CTLs to have the characteristics of a bond if assigned an NAIC designation by the SVO staff.

Mr. Everett asked if SVO staff know how far back these deals go and what the documentation is going to entail. Mr. Therriault said they do go back some time and expects that documentation will be available. The SVO would be looking for the transaction legal agreements and the rating agency analysis and expects that the industry will still have those documents for investments they own.
Mr. Reis said there is a meaningful number of these securities that currently do not have a home and need to be addressed. He said the ACLI appreciates this issue being brought forward along with the referral to Statutory Accounting Principles (E) Working Group.

John Garrison (Lease-Backed Securities Working Group) said the Lease-Backed Securities Working Group has been working with the SVO over the past few years on several types of securities not explicitly covered in the P&P Manual, such as ground lease financing transactions and other lease-based securities that do not meet the P&P Manual’s definition of a CTL. The group is committed to working closely with the SVO, the Task Force, the Private Placement Investors Association (PPIA), the ACLI, NASVA and other key parties to develop clear and consistent guidelines for all real estate and lease-backed securities. Mr. Garrison said the collective goal should be to avoid using terms such as “nonconforming CTLs,” which may create confusion and complexity to investors, state insurance regulators and the industry alike.

In December 2019, the Task Force adopted guidance for ground lease financing transactions, and Mr. Fry complimented this work as “the best of what the Task Force does when it works with the industry,” noting that the SVO worked closely with the industry to come to a solution. It was also noted at that meeting that the Task Force will need to do additional work to determine a solution for these other types of lease-backed securities that do not meet the strict definitions of either CTLs or ground lease financing (GLF) transactions. The framework for GLF transactions could be used for this effort. The first few months of this year have been devoted to filing the new GLF transactions through the Regulatory Treatment Analysis Service (RTAS) process, and these efforts have resulted in appropriate outcomes and facilitated ongoing refinements to the submission process.

Mr. Fry said the April 30 memorandum from the SVO notes that “nonconforming CTL transactions acquired by insurers after Dec. 31, 2019, shall not be reported as bonds,” and the Lease-Backed Securities Working Group believes this guidance would be a mistake. He thanked Mr. Garrison for his comments. Mr. Fry said this was just an exposure and that the Task Force would strive for a solution by the end of the year.

Ms. Thomas made a motion, seconded by Ms. Rankin, to expose the proposed P&P Manual amendment updating the Task Force policy on “The Use of Credit Ratings of NRSROs in NAIC Processes” and instructions for nonconforming CTL transactions that relied upon credit ratings for a 30-day public comment period ending June 17 and send a referral to the Statutory Accounting Principles (E) Working Group.

6. Received and Exposed a Proposed P&P Manual Amendment for Technical NAIC Designation Category Corrections

Mr. Fry said the agenda item is to receive an amendment for technical NAIC designation category corrections. This agenda item is similar to what the Task Force did earlier when preparing to create an electronic-only column that will have 20 designations, and there were some decisions that had to be made with where on the scale does the 1 fall—1.A or 1.F. A few recommendations have been made about this exposure for some securities to receive a 1.A, which is the strongest of the seven categories of an NAIC 1. There are also recommendations for the 5 GI process to set them to a 5.B GI. This guidance needs to be updated in the P&P Manual.

Mr. Everett said in the RBC instructions, there are no lines for these. He asked what the use of the designation would be here.

Mr. Therriault said every security on schedule D requires an NAIC designation and an accompanying NAIC designation category. This is a technical correction to give reporting instructions for NAIC designations assigned by policy to also have an NAIC designation category.

Mr. Everett asked if any of these anticipated changes or identified securities might be adjusted for more than an administrative adjustment.

Mr. Therriault said the recommendations in the amendment were for NAIC designations set by policy, such as the 5GI being set to 5.B GI, in NAIC staff’s recommendation, to accommodate the NAIC designation category using the midpoint NAIC designation modifier, in this instance.

Nancy Bennett (American Academy of Actuaries—Academy) said the exposure appears to be putting U.S. government Treasury securities in category 1.A, which means that those types of securities will get an RBC factor assigned to them. She said U.S. Treasury securities have always gotten a zero RBC and asked if that was intentional or a mistake.
Mr. Therriault said this amendment is for a production of an NAIC designation, and there are separate instructions for RBC purposes.

Ms. Bennett suggested that what is being proposed looks different from what was adopted a couple of weeks ago.

Mr. Fry said he believes there is a category that is different from a 1.A for RBC reporting, but that can be sorted out in the exposure period.

Chris Anderson (Anderson Insights LLC) said there are seven designations—zero through six. He said if the full faith and credit Treasury is listed in the P&P Manual and picks up an NAIC 1, it will pick up an RBC factor. In order to avoid that, it will have to be zero. If an NAIC 1 is assigned to these exempt securities, they will pick up RBC factors in the calculations.

Mr. Therriault said the text in the amendment is an existing instruction in the P&P Manual to assign these securities an NAIC designation by policy. The only new instruction in this amendment is the addition of the NAIC designation category; all the other declarations for NAIC designation treatment by policy remain the same.

Julie Gann (NAIC) said NAIC staff have been working with RBC staff regarding the mapping. The additional category that separated out these securities would be 1.A for reporting and would be divided in the RBC calculations. Ms. Gann said she would work with the RBC team to make sure that is clear and, if need be, to revise the RBC guidance during the exposure period.

John Dubois (MassMutual) said for an extension of this, it will also need to apply to the asset valuation reserve (AVR), as well as RBC. He said the exempt are also getting a zero factor for AVR.

Mr. Anderson said while this is an update of the language that is in the P&P, as it exists today, it does not provide for zero factor.

Karla Streeter (MetLife) said at the last NASVA meeting in March, the need to include an NAIC designation category grid for short-term securities in the P&P Manual was discussed with Mr. Therriault. The long-term securities have the NAIC designation modifier, but there is not one for the short-term investments. She said insurance companies need those because it is required for the schedules at year-end.

Mr. Therriault said he had asked NASVA to bring it up so the Task Force can consider adding those to the P&P Manual grid. He said a separate amendment to address this can be drafted.

Mr. Milquet made a motion, second by Mr. Sirovetz, to receive the proposed P&P Manual amendment for technical NAIC designation category corrections and expose it for a 30-day public comment period ending June 17.

7. Heard a Report from the SSG on RMBS and CMBS

Mr. Fry said the next item on the agenda is to hear a report from Eric Kolchinsky (NAIC) on RMBS and CMBS.

Mr. Kolchinsky said that as a result of the fallout from COVID-19, as well as the various shutdowns and disruptions in business activities, there has been a number of questions on how the NAIC Structured Securities Group (SSG) will respond with year-end modeling, given these developments. The first way this can be addressed is through the economic scenarios. Starting in 2016, interested parties requested that the NAIC to explore “through the cycle” (TTC) modeling, meaning the models for real estate would not change depending upon what part of the cycle you were in. The current models are pro-cyclical (depend upon what part of the cycle you are in). As year-end approaches, there is a good chance that there will be downward economic scenarios that may not be the best alternative.

Mr. Kolchinsky said NAIC staff was, and continues to be, supportive of TTC modeling. A set of RMBS TTC economic scenario models was exposed in 2017, including R code, that could be used to generate those scenarios. However, due to time constraints, corresponding CMBS scenarios were never developed. Developing these TTC models is within the Task Force’s discretion. Mr. Kolchinsky said if this is something that the Task Force would like the SSG to pursue, the TTC models can be re-exposed, and the SSG can begin working on a CMBS TTC model.
Mr. Kolchinsky said the SSG has also been asked to consider adjustments for collateral. In many cases, there is an increase in forbearances in mortgages. It is difficult to determine how much is going through the system because of the lag in reporting on the residential and commercial loan side. Lodging, retail and office space seem to have been affected the greatest in the medium-to-long term. SSG staff believe that considering that our analysis will take place at year-end, it is too early to make these decisions. With the benefit of time, a better understanding of the permanence of the effects of the COVID-19 non-payments will emerge. He said the SSG would like guidance from the Task Force on the development of the TTC models.

Mr. Kolchinsky said SSG staff will come back to the Task Force with any recommendation on collateral adjustments and hope to produce mid-year analysis this year, most likely in early fall.

Mr. Fry said the Task Force has looked at the TTC models before, but they received a lukewarm reception by the industry. Given the current environment, he said the Task Force would appreciate feedback on these models.

8. Temporarily Extended Insurers’ 2020 Initial Filing Deadline from 120 Days to 165 Days for Newly Acquired or Securities in Transition

Mr. Fry said the next item to discuss is to temporarily extend the 2020 initial filing deadline from 120 days to 165 days for newly acquired or in-transition securities. NAIC staff recommended this because of the challenges of working from home due to COVID-19.

Tracey Lindsey (Nationwide), representing NASVA, and Michael Monahan (ACLI) said they appreciate and fully support the initial filing extension for this year, as there will likely be additional work filing material credit events and providing additional information on annual updates.

Mr. Fry asked if there were any objections to this filing deadline extension by the Task Force members, and no members objected. Mr. Fry directed NAIC staff to include in the minutes that the filing deadline for the initial filing of newly acquired or in-transition securities in 2020 would be 165-days instead of the usual 120-days.

9. Heard an NAIC Staff Report on Rating Agency Actions YTD

Michele Wong (NAIC) said the global economic impact of the COVID-19 pandemic and the sharp decline in oil prices have contributed to significant pressure on credit quality. Many companies are experiencing a decline of revenue and cash flow. Rating agencies have taken a record number of negative rating actions. The credit impact has been broad-based, touching all sectors. The sectors experiencing the most rating actions are autos, transportation, travel and leisure, hotel and gaming, media and entertainment, retail and restaurants, and oil and gas. Highly leveraged companies account for the majority of rating action, as they tend to have weaker liquidity and refinancing profiles.

Moody’s took approximately 1,200 rating actions in March and April, with approximately half resulting in downgrades. About 18% of Moody’s global corporate rated universe, with 90% of that high yield and 10% investment grade. Moody’s downgraded 23% of high yield companies, but only about 6% of investment grade companies. About one-third of Moody’s rated portfolio has a negative bias reflecting the high level of uncertainty surrounding the end of the health crisis and the speed and shape of economic recovery. At the end of April, about 8% of companies across all rating categories were on review for downgrade, and 27% carried a negative outlook. Fallen angels are issuers that have been downgraded from investment grade to high yield. Moody’s had 27 fallen angels. Oil, gas, auto and retail sectors account for 85% of that “fallen angel” debt. The number of potential fallen angels, or issuers that are currently rated and either under review for downgrade or have a negative outlook, has increased to 75 issuers from about 35 at the beginning of 2020.

Standard & Poor’s (S&P) took almost 1,700 rating actions as of May 8 with almost half resulting in downgrades, 10% credit watch negative placement and the rest negative outlook revisions. S&P downgrades represented 18% of rated issuer universe, and 4.5% of rated issuers were downgraded more than one notch. High-yield issuers represented about 70% of S&P’s rating actions, with 60% of them at the single-B and below ratings level. More than two-thirds of issuers in the auto, oil and gas, retail, and leisure sectors are on CreditWatch negative or have a negative outlook, so further downgrades are possible. At S&P, fallen angels totaled 23 as of mid-April. The midstream energy, oil and gas, autos, and retail and restaurants sectors have had the largest number of fallen angels.

Ms. Wong said this information is being shared with members of the Task Force in a “Rating Agency Newsletter.”
Mr. Kolchinsky responded that this information is publicly available to subscribers to those rating agency services but that the NAIC is not permitted to share that information with outside parties.

10. Heard an NAIC Staff Report on Requirements for Material Credit Events and Issuer Amendments or Refinancing an Existing Issue

Linda Phelps (NAIC) said business disruptions related to COVID-19 are obviously affecting many of the companies that insurers have invested in. The SVO would like to remind insurers to remain vigilant in their surveillance activities and remember to promptly file material change statements with the SVO. An insurance company is obligated to report any “material change” of an investment that could affect the assessment of credit quality. Guidance on what is considered a “change in credit characteristics” or a “material change” can be found in the P&P Manual and can include the following:

- Any material changes in business or financial characteristics.
- A bankruptcy, insolvency or court-ordered reorganization.
- A payment default or an uncured and unaunched covenant default.
- A workout or restructuring resulting in modification of terms (e.g., interest rate, extension of the time for the payment of any amount due).
- A determination that an issue is impaired.

Material change filings are the responsibility of all holders of the investment, not just the lead lender.

- Filing should include any relevant business or financial information and/or legal documentation relating to loan modification or forbearance activity.

For 2020 filings, the SVO’s overall measured and thoughtful approach to assessing credit quality has not changed and is in line with the approach taken by many rating agencies.

- Continue to consider the business and financial positions of the companies.
- Look at both historical financial information along with more recent performance based on information provided by filers and publicly available sources.
- Liquidity will be an important consideration.
- The impact to designations as a result of COVID-19 disruptions will vary by industry and for individual participants. The SVO anticipates outcomes will range from no change at all to multi-notch downgrades to defaults.
- The impact of business disruptions is expected to be greater for speculative grade companies as compared to better positioned investment grade companies.

The SVO expects the evaluation of credit risk to be a fluid process throughout the year, given the many unknowns at this point. While the SVO does not typically receive many material change filings, they will be important this year, and the SVO encourages insurers to file them promptly.

11. Heard an NAIC Staff Report on the Year-End Process and Carry-Over

Mr. Therriault said as of Dec. 31, 2019, the SVO had completed 11,060 filings for the year and had a total backlog of 869 security filings. This security filings backlog was down 241 filings versus the Dec. 31, 2018, backlog of 1,110 security filings. This was the first year-end using the carry-over administrative symbols. There were 354 year-end (symbol “YE”), carry-over filings that had their previous NAIC designation extended over year-end. There were 514 initial-filing (symbol “IF”) carry-over filings that permitted self-reporting of an NAIC designation, reflecting that it was properly filed with the SVO. There was only one filing that the SVO was unable to accept for year-end carry-over processing. As of April 30, 2020, there were only six remaining filings from the prior filing year. From the SVO perspective, the 2019 backlog was manageable, and the new carry-over administrative process worked as expected.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
The Valuation of Securities (E) Task Force met via conference call February 4, 2020. The following Task Force members participated: Robert H. Muriel, Chair, represented by Kevin Fry (IL); Doug Ommen, Vice Chair, represented by Carrie Mears (IA); Lori K. Wing-Heier represented by Wally Thomas (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kathy Belfi (CT); David Altmaier represented by Ray Spudeck (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary Anderson represented by John Turchi (MA); Al Redmer Jr. represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Bruce R. Ramge represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Linda A. Lacewell represented by Jim Everett (NY); Jessica K. Altman represented by Kimberly Rankin (PA); Kent Sullivan represented by Jamie Walker (TX); Todd E. Kiser represented by Jake Garn (UT); Scott A. White represented by Doug Stolte (VA).

1. **Discussed a Proposed P&P Manual Amendment to Remove the Financial Modeling Instruction for RMBS/CMBS Securities and Direct IAO Staff to Produce NAIC Designations and NAIC Designation Categories for these Securities**

Mr. Fry said the first item on the agenda is to discuss the amendment to remove financial modeling instructions for residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) securities. This proposed amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) was received at the 2019 Fall National Meeting, where NAIC staff recommended moving to a single NAIC designation and NAIC designation category for the modeled assessment of credit risk for RMBS/CMBS to simplify NAIC and insurer operational processes, along with improving uniformity.

The Task Force has discussed moving away from price-break points and towards determining a single NAIC designation. There have been some concerns expressed by industry that there will be significant adverse risk-based capital (RBC) consequences from making such a change now.

Mr. Fry said he has also had discussion with the NAIC Securities Valuation Office (SVO) and the NAIC Structured Securities Group (SSG) staff, and they believe that they could produce a mapping process between the NAIC designations based on the current price-break points and the NAIC designation categories until new RBC factors are adopted. Once those new RBC factors are adopted, additional price-break points would be needed. This does not prevent the Task Force from possibly eliminating price-break points in the future, but it should eliminate these immediate concerns.

Mr. Fry said that if Task Force members do not object, SVO staff are directed to draft a new proposed P&P Manual amendment mapping the current NAIC designations derived from price-break points to an NAIC designation category and to expose that proposed amendment for a 30-day public comment period. There were no objections.

2. **Discussed a Proposed P&P Manual Amendment to Clarify That the Sovereign Rating Limitation Applies to FE**

Mr. Fry said the next item is to discuss a proposed P&P Manual amendment to clarify that the sovereign rating limitation applies to filing exemption (FE). He said this amendment was exposed during the Task Force’s Oct. 31, 2019, conference call. This change was proposed because the current limitation could be interpreted to mean that only NAIC designations assigned by the SVO (as opposed to those produced through the FE process) are capped at the NAIC Foreign Sovereign Designation Equivalent List. The amendment addressed that potential interpretation inconsistency by clarifying that all NAIC designations for foreign securities will be capped according to the NAIC Foreign Sovereign Designation Equivalent List published on the SVO’s web page.

Mr. Fry said the industry has expressed to him that there can be legitimate reasons why a rating should be allowed to be higher than the sovereign rating and that limiting it may negatively affect them. The SVO mentioned that the methodologies permitting sovereign rating exceptions can vary greatly.
Mr. Fry asked Charles Therriault (NAIC) if SVO staff could look at developing criteria for an acceptable sovereign rating exception methodology. Mr. Therriault said the SVO staff could review sovereign rating exception methodologies and propose an updated P&P Manual amendment. A few of the possible criteria could include: 1) assets of the issuer located outside of the domicile of the issuer; 2) collateral or other structural protections; 3) lockbox and escrow payment provisions; and 4) parent company or ownership interests of the issuer located outside of the domicile of the issuer.

John Petchler (Conning), representing the Private Placement Investors Association (PPIA), thanked the Task Force for listening to the PPIA’s comments and said they look forward to working constructively on this issue.

Eric Hovey (Payden & Rygel) said they appreciate the opportunity to comment on this issue and that they also look forward to working with the SVO.

Mr. Fry directed SVO staff to work on updating the proposed P&P Manual amendment.

3. Exposed a Revised P&P Manual Amendment to Update the Definition and Instructions for PPNs

Mr. Fry said this agenda item was discussed at the 2019 Summer National Meeting, where the Task Force’s observation was that certain classes of structured securities received ratings that may not reflect a state insurance regulator’s view of the risk. A proposed P&P Manual amendment was exposed that would effectively take securities that were defined as principal protected notes (PPNs) out of the FE space, and they would need to be filed with the SVO. Comments were received on that proposal, and it became clear that the scope of the definition would need to be refined to cover just this class of securities. The Task Force directed the SVO staff to work with the American Council of Life Insurers (ACLI) and others to develop this refined definition of a PPNs. Mr. Fry asked Mr. Therriault to review that update.

Mr. Therriault said there were many conversations with the industry working group along with multiple versions of the definition. The resulting product in this updated amendment reflects that collaboration. The amendment needed to be expanded beyond just a simple definition and into a full new section of the P&P Manual. The definition framework described at the 2019 Fall National Meeting is still consistent. The identifying characteristics of a PPN is a type of security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule (principal and, if applicable, interest, make whole payments and fees thereon) are satisfied by proceeds from an underlying bond(s) that, if purchased by an insurance company on a stand-alone basis, would be eligible for FE, but for which the repackaged security structure enables potential returns from the underlying investments in addition to the contractually promised cash flows paid to such repackaged security according to a fixed schedule; or the contractual interest rate paid by the PPN is zero, below market or, in any case, equal to or below the comparable risk-free rate. Given those two provisions, the insurer would also obtain a more favorable RBC charge or regulatory treatment for the PPN through FE than it would were it to separately file the underlying investments in accordance with the policies in the P&P Manual.

Mr. Therriault said this criteria really focuses on the core regulatory issue and identifies these other non-payment risks. Assessing the other non-payment risk aspects, which the SVO believes these securities possess, is a function uniquely assigned to the SVO for evaluation under its Subscript S identification authority. The restructuring an investment to receive a more favorable RBC treatment is really the core issue. Industry requested that examples be include in the definition. Some have been added, but they do not encompass all variants. Mr. Therriault recommended exposing this proposed update for a 30-day public comment period.

Ms. Becker said she would like more information on the proposed timeline for this. If exposed today for a 30-day public comment period, she asked how the Task Force would anticipate it will move forward from that point. Mr. Fry explained that the Task Force process of exposing for 30 days would permit the Task Force to review all the comment letters and then consider the proposed amendment at the Spring National Meeting.

Josh Bean (Aegon), representing the ACLI, said that the ACLI supports the exposure and that it was difficult to come up with a mosaic that captures all potential items in the definition. By working together and not letting perfect get in the way of the good, an appropriate level of guidance was able to be drafted and support this exposure.

Michelle Werner (American International Group—AIG) said she participated on drafting the proposed definition. She said it was a great coordinated team approach and resulted in a definition that provides more clarity around the specific structure that the SVO was concerned about. This would permit the SVO to review these investments and allow for further evaluation of them. She asked about having an opportunity to collaborate with them on a methodology that ensures the risks, structures and
the cash flow are appropriately analyzed. The goal is to achieve the least amount of market disruption as possible by working together to develop a meaningful methodology that clearly addresses the risk. She said she was concerned that the wrong methodology could make these investments prohibitively expensive and, therefore, uneconomical if the risk factors as identified by the SVO are not analyzed with the appropriate methodology.

Mr. Fry said it is worth pointing out that these securities will still likely be classified as bonds even after the SVO review. The methodology may lower the designation, but the securities is not be removed from schedule D. As far as looking at the methodology, Mr. Fry asked Mr. Therriault to comment.

Mr. Therriault said that, in looking at the P&P Manual, there is little, if any, prescriptive or formulaic methodologies, as being requested, for any of the SVO’s analytic work. It is intentional that the Task Force has empowered the SVO to have wide analytical discretion on the securities it reviews, and the SVO requests the Task Force continue granting that discretion for these securities too. Analytical discretion is very necessary for the SVO in reviewing these transactions given the wide variety of structures and the nature of these risks.

Mr. Nablach (Security Benefit) said the new definition of PPN explicitly includes scoping in collateralized loan obligation (CLO) combination notes. The inclusion of CLO combination notes may have been influenced by a report published in December 2019 by the NAIC Capital Markets Bureau (CMB) relating to CLOs and stress tests. Security Benefit and other market participants have serious concerns related to the methodology and analytical outcomes of this stress test, specifically, but no limited to:

- The methodology by which defaults are measured.
- The results failed to include post global financial crisis data, including loan losses, as well as structural changes that have been made to CLOs and changes that have been made to the investment guidelines governing the assets of CLOs, which made them a lot more robust prior to the global financial crisis.
- The stress recovery assumptions that were used in the analysis.
- The lack of clarity or insight on how losses on CLO notes were derived.

Mr. Nablach suggested that the Task Force engage an independent expert to conduct, factually and analytically correct, analysis on the asset class. There is good precedence for engaging an independent expert to resolve factual differences, and this independent study is something that should take a fairly limited amount of time and result in the best outcome for the NAIC and industry participants.

Eric Kolchinsky (NAIC) said research was recently published with some of these concerns and that he can discuss any of these points. He said he looks forward to any comment submissions that may occur as part of this process and respond to them in the context of a regulatory perspective versus somebody who is a holder of an equity piece who will analyze them. He said he does not believe there is a need for an independent expert. These combination notes have been looked at for a long time, and this research was merely something that could bolster a case. These securities are not being prohibited; they are merely being looked at in a way that is consistent with other products. Mr. Kolchinsky said he looks forward to receiving the written comments and will prepare a response to them.

Mr. Therriault said his recollection of the research that was done from the Capital Markets Bureau, CLOs as an asset class, was affirmed as performing quite well. It was really the restructuring of CLOs into a CLO combination note, which is a completely different structure, that was actually identified as a problem. He said that the PPN recommendation before the Task Force is on the repackaged investment, the CLO combination note, that is a completely different security from a CLO.

Mr. Kolchinsky said they did find that CLOs, as an asset class, especially where most insurance invested—at the top of the capital structure—were extremely robust. They found that the CLO combination notes, which rely on a large portion of the principal return to the equity or residual portion of CLO, were sensitive to default assumptions, and if things did not go very well, the result is a large loss.

Mr. Fry directed SVO staff to expose this proposed P&P Manual amendment for 30-day public comment period ending March 5.
4. **Adopted a P&P Manual Amendment to Reflect the SEC’s Adoption of a New Rule to Modernize Regulation of ETFs**

Mr. Fry said item four on the agenda is a proposed P&P Manual amendment to reflect the U.S. Securities and Exchange Commission’s (SEC’s) adoption of a new rule to modernize regulation of exchange-traded funds (ETFs). At the 2019 Fall National Meeting, the SVO proposed a nonsubstantive P&P Manual amendment to reflect updates adopted by this. He asked Marc Perlman (NAIC) to give a brief update on this change and the proposed amendment to incorporate this change in the P&P Manual.

Mr. Perlman said the rule became effective Dec. 23, 2019, and, as discussed at the 2019 Fall National Meeting, the rule permit ETFs that satisfy certain conditions to operate without first obtaining an exemptive order from the SEC under the federal Investment Company Act of 1940 (the “Act”). The SEC has stated that the intent of the rule is to modernize the regulatory framework for ETFs by reducing expenses and delays in creating new ETFs, promoting greater consistency, transparency and efficiency for ETFs and facilitating greater competition among ETFs.

Mr. Perlman said ETFs contain certain features that distinguish them from the types of investment companies originally contemplated by the Act and its rules and, therefore, have needed to rely on SEC exemptive orders to operate as investment companies under the Act. The new rule will end the need for most exemptive relief. Additionally, the rule permits ETFs to use “custom baskets,” which do not reflect a pro rata representation or representative sampling of the ETF’s portfolio holdings, and the SEC is rescinding current ETF marketing restrictions.

Mr. Perlman said that in order to rely on the new rule, an ETF must satisfy a new definition of ETF and various conditions including: 1) updated website disclosures (such as historical net asset value [NAV], premium and discount, and bid-ask spread information) and adoption of policies and procedures that govern the construction and acceptance of baskets. The new rule will rescind the exemptive orders from existing ETFs, which will be able to rely on the rule going forward. However, certain categories of ETF will not be covered by the rule.

Mr. Perlman said the SVO takes the position that since the new rule primarily affects SEC exemptive relief and ETF reporting and disclosure, it will not affect the quantitative and qualitative factors the SVO considers when analyzing ETFs. As such, the SVO recommends nonsubstantive P&P Manual amendments to remove references to SEC exemptive orders from descriptions of ETFs and clarification that Regulatory Treatment Analysis Service (RTAS) application filers only need to provide SEC exemptive orders to the SVO to the extent they are applicable.

Mr. Bean said the ACLI does not have any concerns with these updates to align the P&P Manual terminology with SEC guidance.

Mr. Thomas made a motion, seconded by Ms. Cross, to adopt the P&P Manual amendment to remove references to SEC exemptive orders from descriptions of ETFs and clarification that Regulatory Treatment Analysis Service (or RTAS) application filers only need to provide SEC exemptive orders to the SVO to the extent they are applicable (Attachment Two-A1). The motion passed unanimously.

5. **Discussed Other Matters**

Mr. Therriault said it has come to the SVO’s attention that there has been some confusion regarding the new NAIC Fixed Income-Like SEC Registered Funds List. Funds on this list are permitted to be reported on the common stock schedule, Schedule D-2, Part 2, with an NAIC designation. The SVO did not have any funds on this list as of Dec. 31, 2019, so there are no funds to report on the common stock schedule with an NAIC designation for year-end 2019. This list is maintained similarly to the ETF list. The SVO will add the fund’s security ID to the list on the SVO’s web page after it has been reviewed. Insurers must still file the fund it owns in the NAIC’s VISION application, so that it is reviewed by the SVO for the current year. After the security has been reviewed, the SVO assigns it an NAIC designation, which is then published in the Automated Valuation Service (AVS+). The SVO does not publish NAIC designations on its web page on the fund lists, only in AVS+. Again, there were no funds on this list for 2019, so there is nothing for insurers to report for 2019. Some vendors made this a required field in their systems; it only needs to be reported if an NAIC designation was assigned to the fund and published in AVS+.

Having no further business, the Valuation of Securities (E) Task Force adjourned.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
     Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office

CC: Marc Perlman, Investment Counsel, NAIC Securities Valuation Office
    Eric Kolchinsky, Director, NAIC Structured Securities Group and Capital Markets Bureau

DATE: November 15, 2019

1. Introduction – On September 26, 2019, the SEC adopted rule 6c-11 (the “Rule”) under the Investment Company Act of 1940 (the “Act”) which will permit exchange-traded funds (“ETFs”) that satisfy certain conditions to operate without first obtaining an exemptive order from the SEC under the Act. The SEC has stated that the intent of the rule is to modernize the regulatory framework for ETFs by reducing expenses and delays in creating new ETFs, to promote greater consistency, transparency and efficiency for ETFs and to facilitate greater competition among ETFs. The Rule becomes effective December 23, 2019, followed by a one year transition period for compliance.

ETFs contain certain features that distinguish them from the types of investment companies originally contemplated by the Act and its rules and, therefore, have needed to rely on SEC exemptive orders to operate as investment companies under the Act. Current ETF exemptive orders provide relief from: (i) Sections 2(a)(32) and 5(a)(1) which require shares to be redeemable; (ii) Section 22(d) and Rule 22c-1 which require sales of redeemable securities to be at the public offering price and the redemption price to be at current net asset value (“NAV”); (iii) Section 22(e) which requires redemption proceeds to be delivered within seven days; (iv) Sections 17(a)(1) and (2) which prohibit affiliates from selling to, or purchasing from, an ETF; and (v) Section 12(d)(1) which places limits on funds of funds. The new Rule will end the need for exemptive relief for each of these requirements except item (v). Additionally, the Rule permits ETFs to use “custom baskets” which do not reflect a pro rata representation or representative sampling of the ETF’s portfolio holdings and the SEC is rescinding current ETF marketing restrictions.

In order to rely on the new Rule, an ETF must satisfy (i) the new definition of ETF as (a) an open-end management company that issues and redeems creation units to and from authorized participants in exchange for baskets and cash balancing, if any, and (b) which issues shares that are listed on a national securities exchange and traded at market determined prices and (ii) various conditions including: (a) updated website disclosure of holdings and baskets, NAV per share, market price, premiums or discounts, median bid-ask spread, and (b) adoption of policies and procedures that govern the construction and acceptance of baskets, including custom baskets.

The Rule will rescind the exemptive orders from existing ETFs which will be able to rely on the Rule, going forward. However, certain categories of ETF will not be covered by the Rule, including leveraged ETFs, inverse ETFs, ETFs...
organized as Unit Investment Trusts (UITs), share class ETFs and non-transparent active ETFs. The SEC expects most ETFs to be covered by the Rule.

2. **Recommendations** – The SVO takes the position that since the Rule primarily affects SEC exemptive relief and ETF reporting and disclosure, it will not impact the quantitative and qualitative factors the SVO considers, in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (“P&P Manual”), when analyzing ETFs. As such, the SVO recommends the following non-substantive changes (shown below with strikethrough and underline) to the P&P Manual to remove references to SEC exemptive orders from descriptions of ETFs and clarify that Regulatory Treatment Analysis Service application filers only need to provide SEC exemptive orders to the SVO when applicable.

---

**2019 P&P MANUAL**

Part Three – SVO Procedures and Methodology for Production of NAIC Designations

...:

**Investments in Funds**

...:

**Directive**

246. The VOS/TF directs that the SVO establish and maintain: the various NAIC Lists of fund investments or compilation processes hereinafter identified; administrative procedures to receive applications of insurance companies and of fund sponsors; procedures to disseminate the Lists to insurance companies and state insurance regulators and analytical criteria and methodology to evaluate fund eligibility. The SVO shall evaluate:

...:

* Exchange Traded Funds (ETFs) registered with the SEC and operating under Exemptive Orders under the Act that predominantly hold bonds (or preferred stock) (as more fully described below) to determine if they are eligible for inclusion on the SVO-Identified Bond ETF list (reported on Schedule D, Part 1) [or SVO-Identified Preferred Stock ETF List (reported on Schedule D, Part 2, Section 1)].

---

**NAIC FUND LISTS**

...:

**The SVO-Identified Bond ETF List and the SVO-Identified Preferred Stock ETF List**

255. **Description** – At this time, ETFs operate under an Exemptive Order granted by the SEC that provides relief from the application of provisions of the Investment Company Act of 1940 that would otherwise apply. ETFs issue creation units to initial investors in exchange for a specified portfolio of bonds. The initial investor can hold the creation units or sell the ETF shares that constitute the creation unit on the exchange on which the ETF is registered. Other investors may purchase ETF shares; including to reconstitute and redeem a creation unit. Shares of ETF are not redeemable to the fund but are traded on registered exchanges at a price set by the market. Shares of ETFs are expected to trade at or near par because of arbitrage related to the value of the portfolio or of the ETF shares. For inclusion on the SVO-Identified bond ETF list, the ETF must hold a portfolio of bonds (or preferred stock) that tracks a specified bond index (a passive investment) or it a portfolio of bonds (or of preferred stock) that it actively manages pursuant to a specified investment objective.
277. An insurance company or the sponsor of a bond or preferred stock fund that request that the SVO conduct the look through and credit assessment submits the following required documentation to the SVO:

- In the case of an ETF, copies of the Application, Notice and Order associated with the fund sponsor’s request for Exemptive Relief from the SEC or a link to the SEC’s EDGAR where the SVO can obtain the documents if applicable.

RE: Updated Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Include Instructions for Financial Modeled RMBS/CMBS Securities to Map NAIC Designations to NAIC Designation Categories

DATE: February 10, 2020

1. Summary – On the Feb. 4, 2020 interim meeting of the Valuation of Securities (E) Task Force NAIC staff were directed to draft and expose a P&P Manual amendment retaining the Financial Modeling and book/adjusted carrying value price ranges for modeled RMBS/CMBS securities but add mapping instructions from the resulting NAIC Designation to produce an NAIC Designation Category so that insurers can report an NAIC Designation Category. This mapping from an NAIC Designation to the NAIC Designation Category midpoint would be a temporary measure until new Risk Based Capital factors are adopted for each NAIC Designation Category and new price ranges can be developed. As requested by the Task Force, there would be no regulatory capital impact from this proposed change.

2. Recommendation – The IAO staff recommend these updated instructions be adopted by the Task Force to provide insurers and their system vendors guidance for year-end. It also recommends referring this amendment, if adopted, to the Statutory Accounting Principles (E) Working Group to inform them that there would be no change to SSAP 43R - Loan-Backed and Structured Securities, at this time.

3. Proposed Amendment – The following text shows the revisions needed in Part Four with edits in red-underline.
PART FOUR
THE NAIC STRUCTURED SECURITIES GROUP
27. The NAIC Designation and NAIC Designation Category for a given modeled RMBS or CMBS CUSIP owned by a given insurance company depends on the insurer’s book/adjusted carrying value of each RMBS or CMBS, whether that carrying value, in accordance with SSAP No. 43R—Loan-Backed and Structured Securities, paragraphs 25 through 26a, is the amortized cost or fair value, and where the book/adjusted carrying value matches the price ranges provided in the model output for each NAIC Designation and the mapped NAIC Designation Category, reflected in the table below, to be used for reporting an NAIC Designation Category until new Risk Based Capital factors are adopted for each NAIC Designation Category and new prices ranges developed; except that an RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios and that would be equivalent to an NAIC 1 Designation and NAIC 1.A Designation Category if the filing exempt process were used, would be assigned an NAIC 1 Designation and NAIC 1.A Designation Category regardless of the insurer’s book/adjusted carrying value.

**NOTE:** Please refer to the detailed instructions provided in SSAP No. 43R.

MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group
Marc Perlman, Investment Counsel, NAIC Securities Valuation Office

DATE: January 27, 2020 (Updated per the May 14, 2020 meeting)

RE: Updated - Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Update the Definition and Instructions for Principal Protected Securities

1. **Summary** – The Task Force on the Oct. 31 call directed NAIC staff to work with industry on the definition for Principal Protected Securities. NAIC staff reported at the Fall National Meeting that it had met with industry representatives on Dec. 3, Nov. 22, Nov. 15 and Nov. 8. The attached updated amendment reflects the discussions to date and staff’s recommendation for a definition of this security; including, expanding this to a new P&P Manual section that provides examples. The update is consistent with the general framework that was outlined at the Fall National Meeting.

2. **Recommendation** – NAIC staff recommends exposing this updated amendment for comment (new text is identified in red).
PART ONE
POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK FORCE
POLICIES APPLICABLE TO SPECIFIC ASSET CLASSES

PRINCIPAL PROTECTED SECURITIES

Defined

115. Principal Protected Securities (PPS) are a type of security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule are satisfied by proceeds from an underlying bond(s) but for which the repackaged security generates potential additional returns as described in the detail criteria for PPSs, along with examples, in Part Three of this Manual.

Intent

116. Transactions meeting the criteria of a PPS as defined this Manual may possess Other Non-Payment Risks and must be submitted to the SVO for review under its Subscript S authority.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION
OF NAIC DESIGNATIONS
PROCEDURE APPLICABLE TO FILING EXEMPT (FE) SECURITIES AND PRIVATE LETTER (PL) RATING SECURITIES

FE SECURITIES

Filing Exemption

3. Bonds, within the scope of SSAP No. 26R and SSAP No. 43R (excluding RMBS and CMBS subject to financial modeling) and Preferred Stock within scope of SSAP No. 32, that have been assigned an Eligible NAIC CRP Rating, as described in this Manual, are exempt from filing with the SVO (FE securities) with the exception of Bonds and or Preferred Stock explicitly excluded below.

Specific Populations of Securities Not Eligible for Filing Exemption

4. The filing exemption procedure does not apply to:

- **Principal Protected Securities (PPS)** - Transactions meeting the criteria of a PPS as specified in this Manual may possess Other Non-Payment Risks and must be submitted to the SVO for review under its Subscript S authority.

  *(NOTE: This change is effective as of Jan. 1, 2021. PPS acquired prior to Jan. 1, 2021 must be filed with the SVO by Jul. 1, 2021.)*
Principal Protected Securities

( NOTE: This change is effective as of Jan. 1, 2021. PPS acquired prior to Jan. 1, 2021 must be filed with the SVO by Jul. 1, 2021.)

Definition

324. Principal Protected Securities (PPSs) are a type of security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule are satisfied by proceeds from an underlying bond(s) (including principal and, if applicable, interest, make whole payments and fees thereon) that if purchased by an insurance company on a stand-alone basis would be eligible for Filing Exemption, but for which:

(i) the repackaged security structure enables potential returns from the underlying investments in addition to the contractually promised cash flows paid to such repackaged security according to a fixed schedule;

OR

b. the contractual interest rate paid by the PPS is zero, below market or, in any case, equal to or below the comparable risk-free rate;

AND

(ii) the insurer would obtain a more favorable Risk Based Capital charge or regulatory treatment for the PPS through Filing Exemption than it would were it to separately file the underlying investments in accordance with the policies in this Manual.

Exclusions

325. For the avoidance of doubt, PPSs shall not include defeased or pre-refunded securities which have separate instructions in this Manual; broadly syndicated securitizations, such as collateralized loan obligations (CLOs) (including middle market CLOs) and asset backed securities (ABS), except as described in the examples in this section; or CLO or ABS issuances held for purposes of risk retention as required by a governing law or regulation.
Filing Requirements

326. Investments in PPSs must be submitted to the SVO for review because they may possess Other Non-Payment Risks that the SVO must assess under its Subscript S authority. If the SVO determines in its judgement that there are not any Other Non-Payment Risks, the SVO will permit the security to benefit from Filing Exemption, if it is otherwise eligible.

327. In addition to Filing Process and Required Documents outlined in Part Two of this manual, the following additional information is required for PPSs:

- Disclosure of any Subsidiary, Controlled or Affiliated relationship between the PPS or any of the underlying investments and the insurer; including, how the underlying investments were acquired.

- Prior four quarterly financial statements, if produced, trustee or collateral agent reports from the entity issuing the PPS sufficient to identify: security specific details of each underlying investment (security identifier, descriptive information, all Eligible NAIC CRP Credit Ratings (if any), par value, market value, and explanation as to how the market value was determined).

Example Transactions

328. The following transaction examples are included for demonstrative purposes only, to highlight the core regulatory concern (that there are Other Non-payments Risks associated with PPSs beyond the contractually promised payments that may not be reflected in a CRP rating) but are not intended to encompass all possible PPS variants. Each of these examples meets the definition of a PPS.

329. In this initial example there are only two components: 1) a $10 million par United States Treasury (UST) zero-coupon bond sold at discount (ex. $70) from par ($100) that will pay par ($100) at maturity and 2) a return linked to any positive performance of call options on the S&P 500 Index (if the S&P 500 Index has a negative performance, investors will only receive an amount equal to their initial investment). The CRP rating would be AAA/AA+ or an NAIC 1.A, based solely on the risk of the UST security; whereas, the Weighted Average Ratings Factors (WARF) applied by the SVO would result in an NAIC 4.B when it includes the exposure to the call options on the S&P 500 Index.
330. In the second example there are multiple components: 1) a $22 million corporate bond paying a fixed coupon (ex. 4.50%) with a stated maturity date (ex. 9/30/2049), 2) the corporate bond has two CRP ratings (Moody’s Baa2, S&P BBB+), 3) the Special Purpose Vehicle (SPV) also invests $25 million in additional undisclosed and unrated assets, 4) the SPV pays a below market semi-annual coupon of 0.80%, 5) the excess coupon difference (4.50% - 0.80% = 3.70%) is used to accumulate into the required principal to pay at maturity, and 6) a CRP rated the PPS a BBB or NAIC 2.B. Again, the PPS rating is based solely on the corporate bonds that represent less than 50% of the total investment in this example, whereas, the WARF methodology would result in an NAIC 4.C when the exposure to all of the underlying investments are included.
The third example is a repackaging of collateralized loan obligation (CLO) notes into a CLO Combination Note (Combo Note). The initial CLO holds $250 million of syndicated loans and issues $255 million of notes (the CRP rating for each tranche is listed before the Class, ranging from AAA to B-) and Equity / Subordinated Notes. The Combo Note is formed in this example by re-packing the Class B, C, D, and Equity / Subordinated Note tranches together. The total notional amount of all the tranches in the Combo Note is $52.25 million. The Combo Note raises proceeds by issuing a single $50 million notional tranche of debt through an SPV. The cashflows from the Class B and C notes are sufficient to repay the $50 million Combo Note principal and interest, if any; which, may constitute a reclassification of the Class B and C tranche interest to repay principal on the Combo Note. Payments from the underlying investments in the Class D and Equity / Subordinated Note tranches provide returns to the repackaged security in addition to the contractually promised cash flows according to a fixed schedule that are based upon the payments from the Class B and Class C Notes. The Combo Note receives a BBB- rating or NAIC 2.C on the notional of $50 million based upon payments from the Class B and Class C Notes. The Combo Note receives a BBB- rating or NAIC 2.C on the notional of $50 million based upon payments from the Class B and C tranches even though $29.5 million or 57% of the underlying investments are rated BB- or unrated, whereas, the WARF would result in an NAIC 4.B when the exposure to all of the underlying investments are included.
MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
    Marc Perlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Proposed Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) with Update to the General Mapping of Credit Rating Provider Ratings, Long and Short-term, to NAIC Designations and NAIC Designation Categories

DATE: April 30, 2020

1. Summary – On the Task Force call of May 14, 2020 the North American Securities Valuation Association (NASVA) requested that the table mapping Credit Rating Provider (CRP) ratings for short-term instruments be updated to also map them to NAIC Designation Categories. The Task Force directed the SVO to draft an update to this general mapping table. Unlike long term ratings, there is not a direct one-for-one set of rating symbols for short-term investments that map to every NAIC Designation Category. Because there is not a direct one-for-one mapping, SVO staff have used their judgement to map the NAIC Designation Category to the mid-point of the range of long term ratings covered by each short-term rating. As an example, Moody’s Prime-1 or P1 short-term rating covers the long-term rating range consisting of Aaa, Aa1, Aa2, Aa3, A1, A2 and A3 (Moody’s - Rating Symbols and Definitions, June 2018). The SVO staff has recommended mapping the Moody’s short-term P1 rating symbol to the mid-point of this range or an NAIC Designation Category 1.D. The SVO staff applied this mid-point approach to each short-term rating mapping.

The SVO staff also updated the description of the mappings for both long-term and short-term rating symbols to reflect that these are “Generic Rating Symbols.” CRPs use a variety of symbols; including, combinations of prefixes and suffixes that provide additional information about the rating symbol which are described in the CRP’s documentation. There are over 2,000+ unique rating symbols used by CRPs to describe long-term securities. The SVO webpage (https://www.naic.org/svo.htm) maintains a master list of Credit Ratings Eligible for Translation to NAIC Designations.

The SVO does not currently translate short-term security ratings as part of its Compilation and Publication of the SVO List of Investment Securities to produce the NAIC designations incorporated into the NAIC’s AVS+ product. If the Task Force would like the SVO to also produce, compile and publish translations for the short-term securities, a separate project will need to be initiated.
2. **Recommendation** – The SVO staff recommends mapping the short-term CRP rating symbols to the NAIC Designation Category which is equivalent to the mid-point of the range of long term ratings covered by the short term rating. The SVO staff also recommends updating the title of the mapping tables to reflect that these are “generic” rating symbols, referencing additional sections of the P&P Manual pertinent to the use of CRP ratings and Filing Exemption and adding a footnote describing where to locate the master list of Credit Ratings Eligible for Translation to NAIC Designations on the SVO webpage.

3. **Proposed Amendment** – The following shows the proposed revisions in Part Three with *drafting notes* identifying the changes.

MEMORANDUM

TO: Kevin Fry, Chair, Valuation of Securities (E) Task Force
    Members of the Valuation of Securities (E) Task Force

FROM: Charles A. Therriault, Director, NAIC Securities Valuation Office (SVO)
       MarcPerlman, Investment Counsel, NAIC Securities Valuation Office (SVO)

CC: Eric Kolchinsky, Director, NAIC Structured Securities Group (SSG) and Capital Markets Bureau

RE: Proposed Amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to Permit Supranational Entities Filed with the SVO to be Added to the Sovereign NAIC Designation Equivalent List

DATE: April 30, 2020

1. Summary – The SVO maintains the Sovereign NAIC Designation Equivalent list and publishes it on its webpage (https://www.naic.org/svo.htm). This list is used to cap the NAIC Designation that can be assigned by the SVO to an investment at the Sovereign Designation Equivalent. The SVO discussed this list with the Task Force at its February 4, 2020 meeting and received instructions from the Task Force to research and develop criteria for an acceptable sovereign rating exception methodology, the SVO is still working on that separate issue. Insurers have been using this list to assist them in their reporting of Sovereign NAIC Designation Equivalents on the Supplemental Investment Risks Interrogatories (SIRI). The SVO has received requests from insurers to include supranational organizations or entities on the Sovereign NAIC Designation Equivalent list to assist with this SIRI reporting. This amendment proposes adding supranational entities to the Sovereign NAIC Designation Equivalent list if an insurer files a request with the SVO and the SVO can determine an appropriate NAIC designation equivalent.

2. Description - A supranational organization is an international group or union in which the power and influence of member states transcend national boundaries or interests to share in decision making and vote on issues concerning the collective body. The European Union and the World Trade Organization are both supranational entities. In the EU, each member votes on policies that will affect all member nations. The benefits of this construct are the synergies derived from social and economic policies and a stronger presence on the international stage.

For an organization to be supranational, it must operate in multiple countries. While applicable to multinational corporations, the term in this context is being used only for government entities because they often have regulatory responsibilities within their standard operations. These responsibilities can include the creation of international treaties and standards for international trade. As an entity that operates in multiple countries, a supranational organization is not controlled by a single sovereign country.

3. Recommendation – The SVO staff recommends permitting it to include supranational entities on the Sovereign NAIC Designation Equivalent list if an insurer files the supranational entity with the SVO and the SVO can determine an appropriate NAIC designation equivalent.

4. Proposed Amendment – The following shows the proposed revisions in Part Three with text in red identifying the changes.
PART THREE

SVO PROCEDURES AND METHODOLOGY FOR PRODUCTION OF NAIC DESIGNATIONS
FOREIGN SECURITIES

Foreign Sovereign Government and Supranational Entities

34. A reporting insurance company that owns a security issued by a foreign sovereign government, an agency or political subdivision of a foreign sovereign government or a supranational entity (entities with more than one sovereign government as a member), or that is guaranteed directly or indirectly by such an entity, must file such security with the SVO accompanied by a prospectus and investment committee memorandum.

35. Insurance companies shall not file issues with the SVO if the issuer does not have a sovereign rating from an NAIC CRP. If the issuer is not rated by an NAIC CRP, proof of a guarantee from an NAIC CRP-rated foreign sovereign government may be submitted. Where a reporting insurance company has filed a foreign security accompanied by an Audited Financial Statement, in English, the SVO will assess the security in accordance with the applicable corporate methodology, but the NAIC Designation it may assign shall be limited by the sovereign rating of the issuer's country of origin, or the issuing supranational entity, as applicable, as reflected in the Sovereign NAIC Designation Equivalent list. This section should not be read as prohibiting the presentation of transactions structured to eliminate foreign sovereign risk.

36. The insurance company must file all foreign securities for which the information required by this Manual is available. For those foreign securities held by a “Sub-paragraph D Company” as defined in Part One, where the required information is not available for the SVO to value the security, the NAIC Designation may be determined by the reporting insurance company. This determination shall carry an F suffix. In no case shall the NAIC Designation exceed the sovereign rating of the issuer’s country of origin, or the issuing supranational entity, as applicable, as reflected in the Sovereign NAIC Designation Equivalent list. The company shall provide its domestic regulator with a description of the procedure it used to evaluate and assign ratings to these foreign securities. In addition, the company shall retain the documentation supporting each designation assigned by it until the next domestic insurance department examination.

37. The SVO shall maintain and publish a list of Sovereign NAIC Designation Equivalents on its webpage (https://www.naic.org/svo.htm) and may include on that list the NAIC Designation equivalent for supranational entities submitted to it for review by insurers if, in its sole discretion, it is able to determine an appropriate NAIC Designation equivalent.

The Financial Regulation Standards and Accreditation (F) Committee met via conference call Aug. 12, 2020. The following Committee members participated: Todd E. Kiser, Chair (UT); Elizabeth Kelleher Dwyer, Vice Chair, (RI); Lori K. Wing-Heier represented by David Phifer (AK); Jim L. Ridling (AL); Andrew N. Mais (CT); Sharon P. Clark (KY); Gary Anderson (MA); Eric A Cioppa (ME); Mike Causey represented by Jackie Obusek (NC); Bruce R. Ramge (NE); Jillian Froment (OH); Larry D. Deiter (SD); Scott A. White (VA); Michael S. Pieciak represented by Kevin Gaffney (VT); and Jeff Rude (WY). Also participating were: Justin Schrader (NE); and Sandra Bigglestone (VT).

1. **Adopted its 2019 Fall National Meeting Minutes**

Commissioner White made a motion, seconded by Superintendent Dwyer, to adopt the Committee’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Financial Regulation Standards and Accreditation (F) Committee). The motion passed unanimously.

Commissioner Kiser said the Committee also met Aug. 10, July 21 and June 23 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During its June 23 meeting, the Committee voted to award continued accreditation to Delaware, Louisiana and Rhode Island. During its Aug. 10 meeting, the Committee voted to award continued accreditation to Maryland, Oregon and Washington.

2. **Adopted Revisions to the 2019 NAIC Publications Referenced in the Accreditation Standards**

Commissioner Kiser said there are several NAIC publications currently included in the accreditation standards by reference. Each year, the Committee is to review revisions made to these publications in the prior year. Each of the applicable groups that developed revisions to the publications in 2019 have provided the Committee with a memorandum discussing the revisions, and they indicated whether the revisions should be considered significant or insignificant for accreditation purposes. This included the following publications: Accounting Practices and Procedures Manual (AP&P Manual) (Attachment One); Annual and Quarterly Statement Blanks and Instructions (Attachment Two); Risk-Based Capital (RBC) Formulas and Instructions for Life and Property/Casualty (P/C) Insurers (Attachment Three); Financial Condition Examiners Handbook (Attachment Four); and Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) (Attachment Five). The working group or task force responsible for each of these publications has deemed their 2019 changes as insignificant to the accreditation process.

Commissioner Clark made a motion, seconded by Superintendent Cioppa, to adopt the revisions to each of the publications immediately by reference to the accreditation standards. The motion passed unanimously.

3. **Adopted 2019 Revisions to Model #785 and Model #786 as an Accreditation Standard Applicable to RRGs**

Commissioner Kiser stated that on June 25, 2019, the Executive (EX) Committee and Plenary unanimously adopted revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786), which incorporate relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement). Subsequently, at the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the revisions as an update to the Credit for Reinsurance accreditation standard effective Sept. 1, 2022, with enforcement to begin Jan 1, 2023. Due to the relationship of these new provisions to the EU Covered Agreement, this was done on an expedited basis through the waiver process for adoption of accreditation standards. However, applicability of the standards to risk retention groups (RRGs) licensed as captives was not specifically addressed.

Dan Schelp (NAIC) summarized the memorandum (Attachment Six), recommending that both the 2011 and 2019 revisions to Model #785 and Model #786 apply to RRGs.
Commissioner Mais made a motion, seconded by Commissioner Ridling, to adopt the March 3 referral to update the Credit for Reinsurance accreditation standard for RRGs to include the 2011 and 2019 revisions to Model #785 and Model #786, effective Sept. 1, 2022, with enforcement to begin Jan. 1, 2023. The motion passed unanimously.

4. **Adopted Technical Changes to Model #787 as an Update to the Accreditation Standards**

Commissioner Kiser stated that at the 2019 Fall National Meeting, the Committee adopted the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787), more commonly referred to as the XXX/AXXX Model Regulation, as a new accreditation standard. This model establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees. Model #787 also includes provisions to ensure that funds backing these captive reinsurance transactions, which consist of primary security and other security, are held in the forms and amounts that are appropriate. Following adoption of the new standard, technical changes were adopted to the model itself. The changes directly affect the significant elements adopted as part of the accreditation standard.

Becky Meyer (NAIC) summarized the memorandum (Attachment Seven), recommending that the new accreditation standard for Model #787 be updated to include technical revisions adopted earlier in 2020. These changes are not considered substantive, but they will ensure accuracy of the accreditation standard.

Commissioner White made a motion, seconded by Commissioner Clark, to adopt the technical change to the accreditation standard for Model #787 as described in the referral dated March 3. The motion passed unanimously.

Mr. Schrader stated that in 2017 the Risk-Focused Surveillance (E) Working Group formed a Compensation Drafting Group to study state insurance regulator resources and review existing salary recommendations. After reviewing job requirements for state insurance regulators conducting risk-focused surveillance, completing a detailed salary survey of over 40 states, and comparing the results against other similar regulatory and industry positions, the Drafting Group presented its recommendations to the Working Group at the 2018 Fall National Meeting. These recommendations included new salary ranges, as well as supporting guidance for inclusion in the *Financial Analysis Handbook* and the *Financial Condition Examination Handbook*. In addition, they outlined a process for the Working Group to maintain and update this guidance on an ongoing basis. Both groups adopted the proposed changes, and they were published in the 2020 editions of the handbooks.

One final task for this project was to consider how the new salary range recommendations and supporting guidance should affect accreditation standards and guidelines. Therefore, the Working Group adopted a referral (Attachment Eight) to recommend proposed revisions to the accreditation guidelines in Part C: Organizational and Personnel Practices. The Working Group recommends that the new salary ranges and supporting guidance be referenced in this section of the *Accreditation Program Manual* since it already addresses issues related to resources and compensation. In addition, this section of the accreditation standards is not taken into consideration by the review team in making a recommendation regarding the department’s overall accreditation standing. Therefore, placing references to the new handbook guidance and salary ranges in this section allows for a review of department practices in this area, without directly affecting a state’s accreditation standing if they cannot compensate state insurance regulators within the established ranges. It should also be noted that other standards relating to the sufficiency and qualifications of staff are already included in Part B of the accreditation standards, which are taken into consideration in making a recommendation on a department’s overall accreditation standing.

Director Ramge made a motion, seconded by Superintendent Dwyer, to expose the referral for a 30-day public comment period ending Sept. 11. The motion passed unanimously.

6. **Exposed a Referral from the Risk Retention Group (E) Task Force Regarding the RRG Analysis Guideline**

Ms. Bigglestone summarized the referral from the Risk Retention Group (E) Task Force (Attachment Nine), and she stated that the accreditation Review Team Guidelines include a guideline specifically related to RRGs within the financial analysis section (Part B1). This guideline was originally drafted by the Task Force and adopted by the Committee. It is the intention of the Task Force that this guideline is applied to all RRGs regardless of accounting treatment—U.S. generally accepted accounting principles (GAAP)/statutory accounting principles (SAP)—or organizational structure—captive/traditional laws. In 2017, several revisions were made to the accreditation guidelines to incorporate risk-focused analysis. In conjunction with
those revisions, a reference to the “Captives and/or Insurers Filing on a U.S. GAAP Basis Worksheet” in the Financial Analysis Handbook was added to the analysis guideline specific to RRGs. This worksheet can be a helpful tool; however, it applies only to U.S. GAAP filers with an emphasis on a review of accounting differences. Adding this reference implies that the accreditation guideline is only applicable to GAAP filers, which is inconsistent with the Task Force’s position that the guideline applies to all RRGs. Therefore, the Task Force asks the Committee to consider deleting the reference to the “U.S. GAAP Basis Worksheet.” In addition, the referral recommends changing “business plan” to “plan of operations” for consistency with terminology used in the federal Liability Risk Retention Act (LRRA).

Commissioner Mais made a motion, seconded by Commissioner Rude, to expose the referral for a 30-day public comment period ending Sept. 11. The motion passed unanimously.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.
MEMORANDUM

TO: Commissioner Todd E. Kiser (UT), Chair, Financial Regulations Standards and Accreditation (F) Committee
    Elizabeth Kelleher Dwyer (RI), Vice Chair, Financial Regulations Standards and Accreditation (F) Committee

FROM: Dale Bruggeman (OH), Chair, Statutory Accounting Principles (E) Working Group
       Carrie Mears (IA), Vice Chair, Statutory Accounting Principles (E) Working Group

DATE: February 12, 2020

In 2001, the Financial Regulation Standards and Accreditation (F) Committee adopted a motion to adopt the Accounting Practices and Procedures Manual – Effective January 1, 2001, Version 1999 (AP&P Manual) as an accreditation standard. The intention of this memorandum is to update the Committee on changes the Statutory Accounting Principles (E) Working Group has made to the AP&P Manual in 2019. This memo is to provide the customary annual update regarding changes to the AP&P Manual.

Appendix A to this memo includes a detailed listing of the changes made to the AP&P Manual in 2019. On behalf of the Working Group, it is our opinion that none of these items, either individually or collectively, should be considered “significant” as defined by the financial solvency accreditation standards. Although some of the changes have been categorized as “substantive” by the Working Group, this is not meant to suggest the modifications are synonymous with the term “significant” within the Committee’s context.

As outlined in the NAIC Policy Statement on Maintenance of Statutory Accounting Principles (SAP Policy Statement), modifications will be made to the AP&P Manual each year. As such, it will be reprinted with an “as of” date associated with it. For example, the next printing of the AP&P Manual, which encompasses the attached modifications, will be titled Accounting Practices and Procedures Manual – as of March 2020. This process allows for an efficient way to update the AP&P Manual and virtually guarantees that users have the latest version. Reprints and updates are necessary because of the evolutionary nature of accounting—in both the statutory accounting principles and the generally accepted accounting principles arenas—and are positive for users of the AP&P Manual.

The Working Group sincerely requests that the Committee consider the items listed in Appendix A as “insignificant” changes to the AP&P Manual. We will continue to notify the Committee of any changes to the AP&P Manual and to advise if, in our opinion, those changes are “significant” by financial solvency accreditation standards.

Summary of Changes to the

As of March 2019 Accounting Practices and Procedures Manual
included in the As of March 2020 Manual

The following summarizes changes made to the As of March 2019 Accounting Practices and Procedures Manual (Manual) to create the As of March 2020 version.

Section 1 summarizes substantive revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles and can be reflected in an existing or new SSAP. When substantive revisions are made to an existing SSAP, the effective date is identified in the Status section, and the revised text within is depicted by underlines (new language) and strikethroughs (removed language). This tracking will not be shown in subsequent manuals. New and substantively revised SSAPs are commonly accompanied by a corresponding issue paper that reflects the revisions for historical purposes. If language in an existing SSAP is superseded, that language is shaded and the new or substantively revised SSAP is referenced. Completely superseded SSAPs and nullified interpretations are included in Appendix H.

Section 2 summarizes the nonsubstantive revisions to statutory accounting principles. Nonsubstantive revisions are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive revisions are depicted by underlines (new language) and strikethroughs (removed language) and will not be tracked in subsequent manuals. Nonsubstantive revisions are effective when adopted unless a specific effective date is noted.

Section 3 summarizes revisions to the Manual appendices.

TO: Honorable Todd E. Kiser, Chair  
Financial Regulation Standards & Accreditation (F) Committee

FROM: Jake Garn, Utah Chief Financial Examiner, Chair  
Blanks (E) Working Group

DATE: January 24, 2020

RE: Items Impacting Current Accreditation Standard

Please find attached a list of items adopted by the Blanks (E) Working Group during 2019. The Blanks Working Group adopts numerous changes to the Annual Statement Blanks and Instructions each year. Most of the changes are made to clarify current requirements or are considered enhancements to existing reporting. The changes adopted in 2019 do not represent a substantive change to any reporting requirements.

I am planning to be present when the Financial Regulation Standards & Accreditation (F) Committee meets in Phoenix, AZ in the event any member of the committee wishes to discuss these issues.
Changes to blanks and instructions adopted during 2019

1. Add question 34.1 and question 34.2 to the General Interrogatories, Part 2 for fraternal benefit societies only, along with instructions regarding question 34.2 (2018-23BWG) Effective 12/31/2019.

4. Add reference to reporting separate account or protected cell to the instructions for Note 5L(4). Modify the illustrations to include additional lines for separate accounts or protected cells in addition to the general account, with a notation indicating which lines apply to the general account and which lines apply to separate accounts or protected cells (2018-27BWG) Effective 12/31/2019.

5. Add instructions to Note 9, Income Taxes for new disclosures; Note 9H, Repatriation Transition Tax (RTT); and Note 9I, Alternative Minimum Tax (AMT) Credit. An illustration will be added for Note 9I and will be data-captured (2018-28BWG) Effective 12/31/2019.

6. In the separate accounts blank, remove line 5, Contract Loans, from the separate accounts asset page and renumber the remaining lines (2018-29BWG) Effective 12/31/2019.

7. Modify instructions and illustration Note 100, Subsidiary, Controlled or Affiliated (SCA) Loss Tracking to include references to Statement of Statutory Accounting Principles (SSAP) No. 48—Joint Ventures, Partnerships and Limited Liability Companies and SSAP No. 48 entities (2018-30BWG) Effective 12/31/2019.

8. Add two new categories (unit investment trusts and closed-end funds) to the common stock categories on Schedule D. Add the new categories to the Summary Investment Schedule. Add definitions of “unit investment trusts” and “closed-end funds” to the Investment Schedules General Instructions and modify the definition of “mutual fund.” Add categories for “unit investment trusts” and “closed-end funds” to Schedule DL, Part 1 and Part 2 (2018-31BWG) Effective 12/31/2019.

9. For the VM-20 Reserves Supplement, Part 1, match the title under Part 1 to the title used in the blank. Add instructions to clarify the line reporting for the three product group types: term insurance; universal life with secondary guarantees; and all other. Add clarifying column instructions to indicate that the due and deferred premium asset should be reported in accordance with VM-20 (2019-02BWG) Effective 12/31/2019.

10. Add NAIC Designation column for use with mutual funds to the annual Schedule D, Part 2, Section 2 and modify the instructions to reflect the addition. Modify the instructions for the NAIC Designation and Administrative Symbol column for the quarterly Schedule D, Part 3 and Part 4 to reflect capturing designations for mutual funds (2019-03BWG) Effective 12/31/2019.

11. Remove the reference to “life and fraternal only” in the General Instructions for Schedule BA regarding investments that have the underlying characteristics of bonds or fixed instruments. Also remove the reference from the instructions for Schedule BA regarding the CUSIP Identification column and the NAIC Designation column. Add additional lines to the “Fixed or Variable Interest Rate Investments that Have the Underlying Characteristics of a Bond, Mortgage Loan or Other Fixed Income Instrument” and “Joint Ventures or Partnership Interests for Which the Primary Underlying Investments are Considered to Be Fixed Income Instruments” categories to distinguish between those that have been reviewed and approved by the Securities Valuation Office (SVO) and those that have not (2019-04BWG) Effective 12/31/2019.

12. Add new instructions and illustration (to be data-captured) to Note 21, Other Items for life policies where the reporting entity is owner and beneficiary or has otherwise obtained rights to control the policy. The new disclosure will be Note 21I for life/fraternal and health and Note 21H for property and title (2019-05BWG) Effective 12/31/2019.

13. Add a reference for structured settlements acquired by a reporting entity as an investment (where the company has acquired the legal right to receive payments) to the Schedule BA General Instructions in the “any other class of assets” definition (2019-06BWG) Effective 12/31/2019.

14. Modify the instructions for Note 20, Fair Value to reflect changes adopted for SSAP No. 100R—Fair Value. These changes reflect disclosure modifications adopted from U.S. generally accepted accounting principles (GAAP)

16. Add a reference to include mortgage-referenced securities in the “U.S. Special Revenue and Special Assessment Obligations and All Non-Guaranteed Obligations of Agencies and Authorities of Governments and Their Political Subdivisions” category in the Investment Schedules General Instructions. Also delete Note 5O, Structured Notes and modify the bond characteristics definition for Schedule D, Part 1 (2019-09BWG) Effective 12/31/2019.

17. Add instructions for determining the gain (loss) reported in column 18 and the prepayment penalty and/or acceleration fee amount in column 20 on Schedule D, Parts 4 and 5 for called bonds where consideration received is less than par (2019-10BWG) Effective 12/31/2019.

18. Modify the instructions and table illustrations for Note 5F, Note 5G, Note 5H and Note 5I to reflect changes to SSAP No. 103R—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities. In addition, the presentation of some tables in the illustrations were changed to ensure they would fit on the page (2019-11BWG) Effective 12/31/2019.

19. Add a code for foreign mutual funds to Schedule D, Part 2, Section 2, Column 3. Add instruction for foreign open-end investment funds to be included as mutual funds in the Investment Schedules General Instructions (2019-12BWG) Effective 12/31/2019.

22. Modify the instructions for the Actual Cost column for Schedule D (Part 1, Part 3, Part 4 and Part 5) and Schedule DA to provide guidance for the amount to enter when bonds are received as a property dividend or capital contribution (2019-15BWG) Effective 12/31/2019.

23. Add new column “YRT Mortality Risk Only” to the Analysis of Operations by Lines of Business (Summary, Individual Life and Group Life) and Analysis of Increase in Reserves During Year (Individual Life and Group Life) blank pages and instructions for yearly-renewable-term reinsurance business where the only risk included is mortality (2019-16BWG) Effective 12/31/2019.

24. Add two new lines for affiliated bank loans to the parent, subsidiaries and affiliates category and modify the existing lines for bank loans to reference unaffiliated for Schedule D, Part 1; Schedule DA; Schedule DL, Parts 1 and 2; and Schedule E, Part 2. The subtotal line for bank loans under the total bond category will be the sum of the affiliated and unaffiliated lines. Change line description for Schedule D, Parts 3, 4 and 5 for Line 8299999 to say Unaffiliated Bank Loans (2019-17BWG) Effective 12/31/2019.

26. The Casualty Actuarial and Statistical (C) Task Force proposes addition of “Qualification Documentation” so the Appointed Actuary would be required to maintain workpapers explaining how the actuary meets the definition of “Qualified Actuary.” These proposed changes were adopted by the Task Force on June 11, 2019. The Executive (EX) Committee proposes the remainder of the changes, including a new objective definition of “qualified actuary” and the results of an assessment of actuarial educational syllabi in a “Accepted Actuarial Designation” section. These proposed changes were adopted by the Committee on June 25, 2019 (2019-20BWG) Effective 12/31/2019.

27. For Note 33, modify the illustration to disclosure individually Separate Account with Guarantees products and Separate Account Nonguaranteed products (2019-21BWG) Effective 12/31/2019.

30. Add a Life Experience Data Contact to the Electronic Jurat page for Life/Fraternal companies only. Health, Property and Title are included in the proposal due to the Jurat instructions being uniform for all statement types (2019-24BWG) Effective 1/1/2020.

MEMORANDUM

TO: Todd E. Kiser, Chair
   Financial Regulation Standards and Accreditation (F) Committee

FROM: Tom Botsko, Chair
       Capital Adequacy (E) Task Force

DATE: March 3, 2020

RE: Accreditation Standards – Changes to the RBC Formulas and Instructions for Life and P/C

Attached please find a brief description of changes to the 2019 Risk-Based Capital Report Including Overview and Instructions for health, life and property/casualty (P/C). These changes were adopted by the Capital Adequacy (E) Task Force and Executive (EX) Committee and Plenary in 2019. Significance of these changes was viewed as it relates to the overall risk-based capital (RBC) standard.

No changes to the RBC formulas or instructions were deemed to be significant for health, life or P/C.

Any questions can be directed to NAIC staff:
P/C – Eva Yeung
Life – Dave Fleming
Health — Crystal Brown

Health RBC Formula

Not Significant  The Operational Risk Informational Only Growth Risk page was removed from the health RBC formula.

Not Significant  The label for the H0 component was modified to be more accurate and to prevent confusion and misunderstanding.

Not Significant  The electronic-only stop-loss table 2 was split out between specific stop loss and aggregate stop loss.

Not Significant  The instructions and labels for bonds and preferred stock of Asset Concentration (XR011) were updated.

Life RBC Formula

Not Significant  Due to the elimination of the fraternal annual statement beginning with year-end 2019, the life RBC formula was modified to incorporate fraternals. This entailed minor changes to address items that are not applicable to fraternals and references to the fraternal annual statement blank.

Not Significant  Changes developed by the Variable Annuities Capital and Reserve (E/A) Subgroup and recommended to the Life Risk-Based Capital (E) Working Group to implement the Variable Annuities Framework were incorporated into the life RBC instructions.

Not Significant  The Operational Risk Informational Only Growth Risk page was removed from the life RBC formula.
Not Significant  The label for the C-0 component was modified to be more accurate and to prevent confusion and misunderstanding.

Not Significant  The electronic-only stop-loss table 2 was split out between specific stop loss and aggregate stop loss.

**P/C RBC Formula**

Not Significant  The RBC Instructions and Footnotes in PR027A and PR027B were modified to allow accepted internal catastrophe models as the basis for the catastrophe risk charge.

Not Significant  The label for the R0 component was modified to be more accurate and to prevent confusion and misunderstanding.

Not Significant  The electronic only stop loss tables were split out between specific stop loss and aggregate stop loss.

Not Significant  The labels of preferred stock and hybrid of Asset Concentration (PR011) were updated in the blanks and instructions.

Not Significant  The PR016 instructions were modified to address the inconsistencies between the instructions and the formula for the computation of the selected average growth rate.

Not Significant  The PR003 through PR005 instructions were modified to address the inconsistencies between the instructions and the formula for the computation of the affiliated stocks.

Not Significant  The Schedule BA Annual Statement line references were updated in PR008 and PR009.

Not Significant  The Line 4 Underwriting Risk Reserves and Premiums factors in PR017 and PR018 were updated based on the 2017 American Academy of Actuaries Report for Property and Casualty Risk-Based Capital Underwriting Line 4 Factors.

Not Significant  The PR017 and PR018 Line 1 industry average development factors were updated.

Subject: Consideration for Financial Accreditation Standards  
2020 Financial Condition Examiners Handbook

The Accreditation Program Manual includes Review Team Guidelines to be used for financial examinations performed using the risk-focused surveillance approach that is found in the NAIC Financial Condition Examiners Handbook (the Handbook). This memorandum is to update the FRSAC on changes that the Financial Examiners Handbook Technical Group (FEHTG) has made to the Handbook during 2019.

Modifications are made to the Handbook each year, and a new edition is printed annually. This process allows for an efficient way to update the Handbook and ensures that users have the latest version. The FEHTG made several changes to the Handbook in 2019. It is the FEHTG’s opinion that none of these changes should be considered “significant” for accreditation purposes. FEHTG defined “significant” as a change that may immediately warrant a change to at least one accreditation standard or the Review Team Guideline(s) for said standard. Although some changes may be categorized as “significant” by the FEHTG, this is not meant to suggest the modifications are synonymous with the term “significant” within the FRSAC context.

During 2019, the FEHTG made the following changes:

- Revised the format of Exhibit V – Overarching Prospective Risk Assessment to encourage a more in-depth review and assessment of prospective risks during an examination. Related changes were made to Exhibit AA – Summary Review Memorandum to incorporate definitions for Risk Assessment Level and Trend.

- Revised guidance related to C-Level interviews, including the following:
  - Narrative guidance to encourage meeting with the department analyst prior to conducting interviews to gain an understanding of analyst concerns as well as what information the department has already obtained
  - Narrative guidance recommending that exam teams interview the Chief Risk Officer as early in the interview process as possible due to the broad perspective this individual can have. Information gathered from an interview with the CRO can be used to inform subsequent interviews.
  - Creation of a new interview template for interviewing a Chief Marketing Officer.

- Revised guidance related to management letters. This guidance provides clarity regarding what information should be communicated via a management letter, as well as to whom within a holding company structure the letter should be provided. The guidance also clarifies that in some cases the significance and severity of issues to be communicated may necessitate preparation two different management letters; one to be
delivered to the management and/or board of directors at the legal entity level and one to a level of the organization above the legal entity.

- Added narrative guidance referencing the NAIC Troubled Insurance Company Handbook. The revisions provide expectations for various communication that should occur when a company is designated a priority one (troubled) or priority two (potentially troubled). Guidance revisions also include possible areas for review and testing during an examination of a troubled or potentially troubled insurance company.

- Revised guidance related to Information Technology (IT) in the following areas:
  - Revisions to clarify IT review conclusions
  - Revisions to clarify different types of third-party work that may be considered and how to use that work to supplement the IT review
  - Narrative guidance regarding how an IT examination may utilize the results of a company’s IT self-assessment.

- Added narrative guidance describing roles and responsibilities for commonly held regulatory positions as well as recommended salary ranges for those positions. Note, these changes are consistent with revisions adopted by the Financial Analysis Solvency Tools (E) Working Group for inclusion in the 2020 Financial Analysis Handbook. Additionally, the FEHTG is supportive of the proposed revisions referred to FRSAC by the Risk-Focused Surveillance (E) Working Group on this matter.

The FEHTG sincerely requests that the FRSAC consider the items listed above as insignificant changes to the Handbook. We will continue to notify the FRSAC of any changes to the Handbook and advise if, in our opinion, those changes are “significant” by accreditation expectations.

MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Kevin Fry (Ill), Chair Valuation of Securities (E) Task Force
       Charles Therriault, Director, NAIC Securities Valuation Office

CC: Dan Daveline, Director, NAIC Financial Regulatory Services
    Mark Perlman, Managing Investment Counsel, NAIC Securities Valuation Office

DATE: March 3, 2020

RE: Report of the Valuation of Securities (E) Task Force

A. Purpose – This report is presented to assist the Financial Regulation Standards and Accreditation (F) Committee to determine if amendments to the Purposes and Procedures Manual of the NAIC Investment Analysis Office adopted by the Valuation of Securities (E) Task Force in 2019 require corresponding changes in either the Financial Regulation Standards (defined below) or state laws or regulations adopted in conformity with Part A: Laws and Regulations of the Financial Regulation Standards.

B. Financial Regulation Standards – The NAIC Policy Statement on Financial Regulation Standards (SFRS) in the 2020 Accreditation Program Manual consists of four parts: Part A identifies laws and regulations deemed necessary to financial solvency regulation;1 Part B identifies regulatory practices and procedures that supplement and support enforcement of the financial solvency laws and regulations discussed in Part A;2 Part C contains three standards related to an insurance department’s organizational and personnel policies; and Part D focuses on Organization, licensing and change of control of domestic insurers. This report is concerned with the financial solvency standards in Part A. Those standards relevant to this report are shown immediately below and can be characterized as NAIC model legislation, codified NAIC guidance (i.e., the Accounting Practices and Procedures Manual): analytical work product of the NAIC staff (including the NAIC Investment Analysis Office) and state laws and regulations that contain substantially the same standards as NAIC model legislation or guidance. A review indicates that the work product of the NAIC Investment Analysis Office is directly or indirectly incorporated into the following Part A standards. For example:

- **Standard 5** requires that insurer owned securities be valued in accordance with the standards promulgated by the NAIC Investment Analysis Office;3
- **Standard 2**, the Risk-Based Capital (RBC) for Insurers Model Act (#312)4 assigns RBC factors for securities based on their credit risk as measured by NAIC Designations;
- **Standard 3**, the Accounting Practices and Procedures Manual5 uses NAIC Designations produced by the SVO or by insurers through the filing exempt process and or Price Grids produced by the SSG to identify valuation rules applicable to an investment and the reserved capital amount the insurer must report;
Standard 8, pertaining to state investment regulations often incorporate NAIC mechanisms that relate asset allocations to credit risk expressed in the form of NAIC Designations; and

Standard 10, the Credit for Reinsurance Model Act (#785) identifies insurer owned securities compiled by the SVO into a List of Investment Securities published quarterly in the NAIC AVS + Plus product, and letters of credits issued by the banks on the NAIC Bank List administered by the SVO, as eligible for use as collateral in reinsurance transactions.

C. Investment Analysis Office Standards Identified in the Purposes and Procedures Manual – All SVO and SSG standards related to the assessment of credit risk in insurer owned securities, identification of additional non-payment risk in securities, classification of certain assets as bonds or as bond-like for reporting purposes, the valuation of insurer owned securities, and other activities conducted by the SVO or the SSG in support of state insurance regulatory objectives, are determined and promulgated by the Valuation of Securities (E) Task Force and published in the Purposes and Procedures Manual. In 2019, the Purposes and Procedures Manual was revised once, in December, with all policies, analytical procedures and instructions adopted during 2019 effective for year-end financial reporting. Amendments to the Purposes and Procedures Manual would automatically be reflected in the SFRS if any or all of the SFRS Standards identified in paragraph A of this memorandum have been adopted by an accredited state or incorporated by reference into the laws or regulations of an accredited state. For example, amendments to the Purposes and Procedures Manual would be directly incorporated by reference if the laws or regulations of an accredited state refer to or incorporate Standard 5 on valuation. Amendments to the Purposes and Procedures Manual would be indirectly incorporated by reference if the law or regulations of a state refers to or incorporates any other Standard that itself uses NAIC Designations or other analytical products of the Investment Analysis Office as a component; for example, Standard 2 in the case of RBC and/or Standard 3 in the case of statutory accounting.

D. Conclusion – In our opinion, reasoning as discussed above, amendments to the Purposes and Procedures Manual adopted by the Valuation of Securities (E) Task Force in 2019 can be characterized as maintenance items consistent with the existing regulatory framework and automatically incorporated into the Part A Standards identified above. The amendments identified in Appendix One did not create processes or practices external to the Purposes and Procedures Manual or other NAIC model legislation, guidance or analysis of NAIC staff that would suggest the need to consider an amendment to NAIC model legislation or guidance or legislative action on the part of an accredited state.

We hope this is responsive to the issues and concerns before the Committee.
Appendix One

RECENT CHANGES TO THE PURPOSES AND PROCEDURES MANUAL
Published in the December 31, 2019 Publication

- **Adopted a comprehensive framework for funds that hold a portfolio of bonds** – The framework consolidates and modernizes long existing VOS/TF policies and practices applicable to investments in funds that hold bond portfolios and expands that policy to funds issued by closed end management companies and unit investments trusts registered and regulated by the U.S. Securities and Exchange Commission. The guidance encompasses the two verification procedures, exchange traded funds (ETFs), bond mutual funds and private funds reported on Schedule BA. The amendment adds definitions, documentation requirements and a transparent analytical framework. The Blanks Working Group will consider adding a column to Schedule D, Part 2, Section 2 so insurers can report an NAIC Designation for funds designated by the SVO and the Capital Adequacy (E) Task Force has been asked to consider how to include such NAIC Designations into the RBC calculation once NAIC Designations are added to Schedule D, Part 2, Section 2. The Valuation of Securities (E) Task Force adopted this amendment on April 7, 2019.

**Improved Disclosure on Securities Not Eligible for Filing Exemption** – The VOS/TF may exclude certain securities from filing exemption and this amendment modernized this by compiling these exclusions into a list of securities not eligible for Filing Exemption. Although this disclosure did not modify or delete the term Bond in the 2018 P&P Manual, the term was not included in the 2019 reformatted P&P Manual because the adoption of policy statements requiring coordination between the VOS/TF and the Statutory Accounting Principles (E) Working Group meant that the term “Bond” could only be defined by reference to statutory accounting guidance. The operative term for VOS/TF operations (i.e., the term Obligations, which is broader than the term Bonds) was retained. The Valuation of Securities (E) Task Force adopted this amendment on April 7, 2019.

**Modified Guidance for Regulatory Transactions** – This P&P Manual amendment clarified the status of an Investment Security that is used as a component in a Regulatory Transaction. Insurance companies shall not report a Regulatory Transaction as a Filing Exempt security, and the NAIC staff shall not assign an NAIC Designation to a Regulatory Transaction or add them to the Filing Exempt Securities Process of the SVO List of Investment Securities. This does not preclude the SVO from working directly with a state insurance department and issuing an opinion to the department consistent with the instructions outlined in this Manual. The Valuation of Securities (E) Task Force adopted this amendment on April 7, 2019.

• **Deleted the Definition of “Structured Notes” and Made Related Modifications** – The Statutory Accounting Principles (E) Working Group advised the VOS/TF that it had adopted, with a Dec. 31, 2019, effective date, a definition for “structured notes” that brings that financial activity in scope of the *Statement of Statutory Accounting Principles (SSAP) No. 86—Derivatives*. The new guidance defines structured notes as “an investment that is structured to resemble a debt instrument, where the contractual amount of the instrument to be paid at maturity is at risk for other than the failure of the borrower to pay the contractual amount due.” That determination removes these instruments from being in scope of SSAP No. 26R—*Bonds* and (with the exception of mortgage-referenced securities) SSAP No. 43R—*Loan-Backed and Structured Securities*. This amendment deletes the definition and adds a reference to the description of a structured notes SSAP No. 26R and SSAP No. 86. A note on the guidance on mortgage-referenced securities was also added clarifying that it is subject to assessment by SSG. The Valuation of Securities (E) Task Force adopted this amendment on August 4, 2019.
Added Instructions for Referencing Administrative Codes Used to Report Regulatory Transactions – The P&P Manual defines the term “regulatory transactions” and provides that such transactions: (a) are not eligible for credit assessment by the SVO; (b) are not eligible for filing exemption (FE); (c) cannot be self-assigned the administrative symbol Z under the 120 rule; (d) cannot be self-assigned as 5GI securities; and (e) cannot be entered into NAIC systems maintained for the VOS/TF. The P&P Manual also provides that a domiciliary state insurance department may request SVO or SSG assistance in the assessment of a regulatory transaction, with the understanding that the state can adopt the SVO or SSG work product as its own, but the determination is a state determination and not an NAIC work product. Despite this specified treatment, there was no specific instruction for reporting regulatory transactions, and reporting entities did not have any available reporting options when investment schedules require an NAIC Designation. This amendment addressed the reporting for regulatory transactions. A reporting entity would use the code “RTS” when the domiciliary state has received assistance from the SVO (or SSG) in reviewing a regulatory transaction. In those cases, the code would be reported with the “analytical value” (a new term defined below) assigned by the SVO and given to the state. The code “RT” would be used for all other regulatory transactions; i.e., those in which the domiciliary state did not ask the SVO for assistance or those where the SVO was unable to determine an analytical value for the transaction for the state and the “RT” code would be reported with an NAIC 6 Designation for measurement and risk-based capital (RBC) assessments. The Valuation of Securities (E) Task Force adopted this amendment on September 5, 2019.

Updated the Interim Instructions for Mortgage Reference Securities – This amendment to the P&P Manual updated guidance for Mortgage Reference Securities. The Structured Securities Group (SSG) is responsible to financially model this group of securities; however, they only review them during their annual surveillance process. Insurers did not have instructions to assign an NAIC Designation to a newly issued or newly acquired mortgage reference security prior to the publication of the annual surveillance data. This amendment provides that interim guidance. The Valuation of Securities (E) Task Force adopted this amendment on October 31, 2019.

Added Ground Lease Financing Transactions as New Asset Class – This amendment to the P&P Manual adds new instructions and guidance for Ground Lease Financing (GLF) Transactions. A GLF transaction typically has two components: (a) a ground lease for a long period (e.g., 99 years) between a ground lessor who owns the land and a ground lessee who attains a leasehold for the purpose of developing the land; and (b) the subleasing of space or operation of a business such as a hotel, warehouse, intermodal facility, etc., in an existing or to-be-constructed building to one or more tenants (space tenants) under shorter (e.g., 5–15 year) leases (space leases) or to the operator of a business such as a hotel, warehouse, intermodal facility, etc., under a franchise agreement or other arrangement. This amendment provides filing, structure and analysis guidance for GLFs. The Valuation of Securities (E) Task Force adopted this amendment on December 8, 2019.
Deleted the Administrative Symbols RP or P and a related methodology – The deletion of these symbols align the P&P Manual with changes to the Blanks introduced by a February 28, 2018, Blanks Proposal and Interrogatory. The Proposal replaced the use of the SVO assigned symbols with new lines and an instruction that the insurer aggregate the amount of such securities on the specified line. This amendment—effective December 31, 2019—deletes the SVO methodology and the Administrative Symbols from the P&P Manual. The Valuation of Securities (E) Task Force adopted this amendment on August 5, 2018, with an effective date of December 31, 2019.

Deleted Valuation Procedures but retained Administrative Symbols – The Administrative Symbols A, V, L, U and UP were used by the SVO in connection with the Valuation Procedures for common stock. The Valuation Procedures were deleted effective for year-end 2018 but the identified Administrative Symbols were retained until December 31, 2019, to align their deletion with the elimination of the same symbols from the Blanks process. The Valuation of Securities (E) Task Force adopted this amendment on September 4, 2018, with an effective date of December 31, 2019.

Modified the Administrative Symbol NR to ND – The Administrative Symbol NR means Not Rated. It was changed to ND, which means Not Designated, to align it with NAIC terminology and to avoid the technical and legal meaning of “rating” under federal securities law. The need to modify NAIC electronic platforms that use the system means it will not be possible to implement this change until year-end 2019. The Valuation of Securities (E) Task Force adopted this amendment on November 16, 2018 and was implemented for December 31, 2019.
The SFRS requires the use of the codified version of the Accounting Practices and Procedures Manual. Valuation procedures applicable to long-term invested assets are determined by the nature of the insurer (life or property/casualty) and the NAIC designation assigned to the security by the SVO or SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…To satisfy this standard, …specific adoption of the NAIC Annual Statement Blank, NAIC Annual Statement Instructions, and the NAIC Accounting Practices and Procedures Manual [is required].…”

The SFRS requires a diversified investment portfolio. Although the Investment of Insurers Model Act (Defined Limits or Defined Standards) is not specifically identified, portions of one or the other model acts have been adopted by many of the states and these relate specific asset allocations to NAIC designations provided by the SVO or in some cases by the SSG; NAIC Designations assigned by insurance companies pursuant to the filing exempt rule contained in the Purposes and Procedures Manual or NAIC Designations derived by insurance companies for RMBS and CMBS from Price Grids produced by the SSG pursuant to SSAP No. 43R. “…This standard …[will require] that statutes, together with related regulations and administrative practices, provide adequate basis …to prevent, or correct, undue concentration of investment by type and issue and unreasonable mismatching of maturities of assets and liabilities. The standard is not interpreted to require an investment statute that automatically leads to a fully diversified portfolio of investments.”

The NAIC Investment of Insurers Model Act (Defined Limits Version) (#280) imposes a 3% limit on the amount an insurer can invest in a single person (the threshold diversification limit) and also imposes a percentage limit on total investments of a defined credit quality, expressed by reference to NAIC Designation categories (the threshold credit quality limit). An additional percentage limit is then assigned to specific asset categories, which may or may not be subject to adjustment with the two threshold requirements. The limits identified in the Model Act are what would guide portfolio allocation decisions. Once made, the insurer would shift to monitoring changes in the portfolio and rebalancing the allocations accordingly. Assuming a process for the identification of concentrations caused by indirect exposures, the insurer would aggregate such exposures with similar risks across all activities.

The SFRS requires the adoption of the Credit for Reinsurance Model Act (#785), Credit for Reinsurance Model Regulation (#786) and Life and Health Reinsurance Agreement Model Regulation (#791) or substantially similar laws. The SVO maintains a list of banks that meet defined eligibility criteria to issue letters of credit in support of reinsurance obligations or that are eligible to serve as trustees under various arrangements required by state insurance law.
MEMORANDUM

To: Financial Regulation Standards and Accreditation (F) Committee
From: NAIC Staff
Date: March 3, 2020
Re: 2011 & 2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786)—Applicability to Risk Retention Groups (RRGs)

Executive Summary

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). These revisions were intended to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted these revisions to the Reinsurance Ceded accreditation standard effective Sept. 1, 2022, for consideration by the Executive (EX) Committee and Plenary for final adoption at the Spring National Meeting.

The purpose of this memorandum is to clarify the applicability of these revisions to risk retention groups (RRGs) organized as captives. The recommendation to this Committee is that the 2019 revisions to Model #785 and Model #786, as well as the 2011 revisions establishing certified reinsurers and qualified jurisdictions (which became applicable as an accreditation standard Jan. 1, 2019), also should be made applicable to RRGs.

Risk Retention Groups Organized as Captives

Article 3 (Reinsurance) of the Covered Agreement is applicable to ceding insurers, which Article 2(j) defines as “an undertaking which is authorized or licensed to take up or engage in the business of direct or primary insurance.” This would arguably include RRGs that are organized or incorporated by states as captive insurers. Reinsurance Ceded is part of the Part A accreditation requirements for RRGs, and requires that state law should contain Model #785 and Model #786, or substantially similar laws. The primary difference between the current reinsurance accreditation standard for RRGs is that “a state’s laws and regulations may allow RRGs to take credit for reinsurance without posting collateral in circumstances not contemplated by the Credit for Reinsurance Model Law and Regulation. For such cases, the Accreditation Interlineations include Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers” and a state’s laws and regulations must comply with the guidelines in order to be considered substantially similar with this standard.”
NAIC staff has reviewed the laws and regulations with respect to the fifteen (15) NAIC jurisdictions which currently license multi-state RRGs as captive insurers (AL, AZ, CO, DE, DC, HI, KY, ME, MT, NV, NC, OK, SC, TN and VT), and each meets the current Reinsurance Ceded accreditation standard in a very similar manner. First, each states’ laws require that an RRG must be licensed as a captive insurer (and in some instances, a specific type of captive insurer) subject to its captive insurance laws. Second, the captive insurance laws generally exempt captive insurers from the general laws with respect to traditional insurers, except as is otherwise specified in statute. Finally, the statutes make RRGs that are licensed as captive insurers subject to the state’s credit for reinsurance laws, either generally (e.g., an RRG licensed as a captive insurer must comply with all of the laws, rules, regulations and requirements applicable to insurers chartered and licensed in the state) or specifically (e.g., an RRG licensed as a captive insurer must comply with the laws specified in this chapter, including specifically the credit for reinsurance laws). We also reviewed the proposed legislation of the five states currently considering adoption of the 2019 revisions to the models (ME, OK, SC, TN & VT), and the proposed legislation would not change this outcome.

Recommendation

NAIC staff recommends that the Committee consider making the 2019 revisions to Model #785 and Model #786 an accreditation standard for RRGs effective Sept. 1, 2022, with enforcement of the standard to commence Jan. 1, 2023. Staff further recommends that the 2011 revisions to the models relating to certified reinsurers and qualified jurisdictions also be made a part of the accreditation standard, because the 2019 revisions are in large part based on these earlier revisions. Finally, we recommend that the changes in the attached redlined accreditation standard be adopted as the new accreditation standard for reinsurance ceded to RRGs.

Note: The Risk Retention Group (E) Task Force met on March 2, and approved these recommendations. The Reinsurance (E) Task Force will meet March 11 to consider approval of the recommendations.
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) or substantially similar laws.

Complete the following question only if this is an interim annual review:

Have there been any changes to the department’s ceded reinsurance requirements since last year’s review?  

YES  NO

If the response is NO, there is no further information needed regarding this standard, please proceed to the next standard.

If the response is YES, in the reference column please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that had a change and ensure that they are clearly marked for the changes that have been made (i.e., highlight the changes, redlined version, etc.) Please place an asterisk (*) in the reference column on the right-hand side of the page by each citation that has been changed. Also, please include below a brief description of the nature or reason for the change.

If the department is completing the self-evaluation guide due to an upcoming full review, please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that are listed in the reference column.

**REFERENCE**

*Credit for Reinsurance Model Law (#785)*

a. Credit allowed for reinsurance ceded to a licensed insurer? If the reinsurer is licensed as a RRG, then the ceding RRG or its members must qualify for membership with the reinsurer.

b. Credit allowed for reinsurance ceded to an accredited insurer who meets requirements similar to those in Section 2B of the model law?

c. Credit allowed for reinsurance ceded to an insurer domiciled and licensed in a state which employs substantially similar standards regarding credit for reinsurance and who maintains capital and surplus of at least $20,000,000 and submits to this state’s authority to examine its books and records?

d. Credit allowed for reinsurance ceded to an insurer who maintains a trust fund, established in a form approved by the Commissioner, in a qualified U.S. financial institution for the payment of the valid claims of its U.S. policyholders and ceding insurers, their assigns and successors in interest and who reports financial information annually to the Commissioner to determine the sufficiency of the trust fund?

e. In instances where reinsurance is ceded to insurers maintaining a trust fund, trustees of the trust required to report to the department annually, on or before February 28, the balance of the trust and a listing of the trust’s assets as of the end of the year and a certification of the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the next following December 31?
f. Credit for reinsurance allowed under c. or d. above only permitted where assuming insurer agrees in the reinsurance agreements: 1) that in the event of a failure of the assuming insurer to perform its obligations, the assuming insurer shall submit to the jurisdiction of any court of competent jurisdiction in any state of the U.S.; and 2) to designate the Commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process instituted by or on behalf of the ceding company?

g. Credit allowed for reinsurance ceded to an insurer meeting requirements similar to those in Section 2E (Certified Reinsurers) of the model law?

h. Credit allowed for reinsurance ceded to an insurer meeting requirements similar to those in Section 2F (Reciprocal Jurisdictions) of the model law?

i. Although not required for accreditation, a state’s laws and regulations may allow RRGs to take credit for reinsurance without posting collateral in circumstances not contemplated by the Credit for Reinsurance Model Law and Regulation. For such cases, the Accreditation Interlineations include “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers” and a state’s laws and regulations must comply with the guidelines in order to be considered substantially similar with this standard. If your state’s laws and regulations do allow credit for reinsurance without collateral as discussed in the Accreditation Interlineations, please include the citation.

Note: An RRG’s reinsurers as of Jan. 1, 2011, are grandfathered in as acceptable without meeting the requirements in the Reinsurance Guidelines. The requirements in the Reinsurance Guidelines should be used for new reinsurers with which business is placed after Jan. 1, 2011.

j. Credit allowed for reinsurance ceded to an insurer not meeting the requirements of a., b., c., d., g., h. or i. above in an amount not exceeding the liabilities carried by the ceding insurer and only in the amount of funds held by or on behalf of the ceding insurer in the form of cash, securities listed by the Securities Valuation Office of the NAIC and qualifying as admitted assets, clean, irrevocable, unconditional letters of credit, and other forms of security acceptable to the Commissioner?

k. Credit for reinsurance allowed for reinsurance ceded by domestic reinsurers to assuming insurers that were licensed in the state as of the last date of the ceding insurers’ statutory financial statement? If the reinsurer is licensed as a RRG, then the ceding RRG or its members must qualify for membership with the reinsurer.

l. Credit for reinsurance provisions for accredited reinsurer similar to Section 5?

m. Credit for reinsurance provisions for reinsurers licensed and domiciled in other states similar to Section 6?
n. Credit for reinsurance provisions for reinsurers maintaining trust funds similar to Section 7?

o. Credit for reinsurance required by law similar to Section 9, to the extent permitted by 15 USC 3902(a)?

p. Reduction from liability for reinsurance ceded to an unauthorized assuming insurer similar to Section 10? Note: See significant element g. above regarding allowance of credit for reinsurance in certain situations not contemplated by the Model Law.

q. Provisions for trust agreements similar to Section 11?

r. Provisions for letters of credit similar to Section 12?

s. Provisions for unencumbered funds similar to Section 13?

t. Provisions for reinsurance contracts similar to Section 14? Note: For those reinsurance contracts for which credit is allowed under significant element g. above, the reinsurance contract should contain language similar to Section II of the “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers.”

u. The adoption of Form AR-1—Certificate of Assuming Insurer. Note: For situations in which credit for reinsurance is taken under significant element g. above, the reinsurance contract should contain language similar to Section II of the “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers.”

v. Credit for reinsurance provisions for certified reinsurers similar to Section 8?

w. Credit for reinsurance provisions for reciprocal jurisdictions similar to Section 9?
TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: NAIC Staff

DATE: March 3, 2020

RE: Technical Revisions to the Term and Universal Life insurance Reserve Financing Model Regulation (#787) as an Accreditation Standard

At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787), commonly known as the XXX/AXXX model, as a new accreditation standard. The decision is pending approval by Plenary.

Following adoption by the Committee, the Reinsurance (E) Task Force adopted technical changes to Model #787, which included Section 4E as follows:

   E. Reinsurance ceded to an assuming insurer that meets the requirements of [insert provision of state law equivalent to Section 5B(4) of the Credit for Reinsurance Model Law]; or

The technical changes were due to revisions to the Credit for Reinsurance Model Law (#785) adopted by the NAIC in June 2019, which impacted sections referenced in Model #787. The referenced Section 5B(4) provides an exemption to Model #787 for what is commonly referred to as “professional reinsurers.” As defined in the 2016 version of Model #785 Section 5B(4)(a) and (b), these professional reinsurers are reinsurers that meet certain minimum capital requirements and are certified reinsurers in a certain minimum number of states. The 2019 revisions to Model #785 add a new Section 5B(4)(a) to provide a similar exemption for reinsurers domiciled in reciprocal jurisdictions, as defined in Section 2F of Model #785. This shifted the original (a) and (b) to (b) and (c).

A copy of the revised Section 5 is attached. To accurately reflect the exemption intended by the reference in Model #787, the entire Section 5B(4) is now referenced in Model #787.

NAIC staff therefore recommend that an equivalent change also be made to the accreditation standard. The proposed change affects significant element “b” as follows:

   b. Provides that Model #787 does not apply to reinsurance exempt by the provisions of Section 4 of Model #787, including reinsurance ceded to an assuming insurer that meets the requirements of Section 5B(4) of the Credit for Reinsurance Model Law (#785)?

The original referral from the Reinsurance (E) Task Force with the recommendation to the Committee regarding Model #787 as an accreditation standard, including the accreditation significant elements, is attached for reference.
CREDIT FOR REINSURANCE MODEL LAW

Table of Contents

Section 1. Purpose
Section 2. Credit Allowed a Domestic Ceding Insurer
Section 3. Asset or Reduction from Liability for Reinsurance Ceded by a Domestic Insurer to an Assuming Insurer not Meeting the Requirements of Section 2
Section 4. Qualified U.S. Financial Institutions
Section 5. Rules and Regulations
Section 6. Reinsurance Agreements Affected

****************

Section 5. Rules and Regulations

A. The commissioner may adopt rules and regulations implementing the provisions of this law.

Drafting Note: It is recognized that credit for reinsurance also can be affected by other sections of the enacting state’s code, e.g., a statutory insolvency clause or an intermediary clause. It is recommended that states that do not have a statutory insolvency clause or an intermediary clause consider incorporating such clauses in their legislation.

B. The commissioner is further authorized to adopt rules and regulations applicable to reinsurance arrangements described in Paragraph (1) of this Section 5B.

Drafting Note: This new regulatory authority is being added in response to reinsurance arrangements entered into, directly or indirectly, with life/health insurer-affiliated captives, special purpose vehicles or similar entities that may not have the same statutory accounting requirements or solvency requirements as US-based multi-state life/health insurers. To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are substantially similar in all material respects to NAIC adopted model regulations in the handling and treatment of such policies and reinsurance arrangements.

(1) A regulation adopted pursuant to this Section 5B, may apply only to reinsurance relating to:

(a) Life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits;

(b) Universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period;

(c) Variable annuities with guaranteed death or living benefits;

(d) Long-term care insurance policies; or

(e) Such other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance.

(2) A regulation adopted pursuant to Paragraph 1(a) or 1(b) of this Section 5B, may apply to any treaty containing (i) policies issued on or after January 1, 2015, and/or (ii) policies issued prior to January 1, 2015, if risk pertaining to such pre-2015 policies is ceded in connection with the treaty, in whole or in part, on or after January 1, 2015.

Drafting Note: The NAIC’s Actuarial Guideline XLVIII (AG 48) became effective January 1, 2015, and covers policies ceded on or after this date unless they were ceded as part of a reserve financing arrangement as of December 31, 2014. One regulation contemplated by this revision to the NAIC Credit for Reinsurance Model Law (#785) is intended to substantially replicate the requirements for the amounts and forms of security held under the rules provided in AG 48. AG 48 was written to sunset upon a state’s adoption (pursuant to the enabling authority of the preceding paragraph) of a regulation with terms substantially similar to AG 48. The preceding paragraph is intended to provide continuity of rules applicable to those policies and reinsurance arrangements, including continuity as to the policies covered by such rules. The preceding paragraph is not intended to change the scope of, or collateral requirements for policies and treaties covered under AG 48.
(3) A regulation adopted pursuant to this Section 5B may require the ceding insurer, in calculating the amounts or forms of security required to be held under regulations promulgated under this authority, to use the Valuation Manual adopted by the NAIC under Section 11B(1) of the NAIC Standard Valuation Law, including all amendments adopted by the NAIC and in effect on the date as of which the calculation is made, to the extent applicable.

(4) A regulation adopted pursuant to this Section 5B shall not apply to cessions to an assuming insurer that:

(a) Meets the conditions set forth in Section 2F of the Credit for Reinsurance Model Law (#785) in this state or, if this state has not adopted provisions substantially equivalent to Section 2F of the Credit for Reinsurance Model Law (#785), the assuming insurer is operating in accordance with provisions substantially equivalent to Section 2F of the Credit for Reinsurance Model Law (#785) in a minimum of five (5) other states; or

(b) Is certified in this state or, if this state has not adopted provisions substantially equivalent to Section 2E of the Credit for Reinsurance Model Law (#785), certified in a minimum of five (5) other states; or

(c) Maintains at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is

(i) licensed in at least 26 states; or

(ii) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

(5) The authority to adopt regulations pursuant to this Section 5B does not limit the commissioner’s general authority to adopt regulations pursuant to Section 5A of this law.
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee
FROM: Reinsurance (E) Task Force
DATE: August 24, 2017
RE: Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

The NAIC membership adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the 2016 Fall National Meeting on Dec. 13, 2016. At that same time, the NAIC membership also adopted revisions to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) to conform with the provisions of Model #787, effective Jan. 1, 2017. Model #787 establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees, and ensures that funds consisting of primary security and other security are held in the forms and amounts required.

At its meeting on Aug. 7, 2017, the Reinsurance (E) Task Force agreed to submit the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. Model #787 should be adopted as a new accreditation standard by the NAIC, with significant elements as outlined in Appendix A.

2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Jan. 1, 2020. The Task Force further recommends that a state’s adoption of AG 48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787.

3. The 2016 revisions to the Credit for Reinsurance Model Law (#785) should be considered acceptable but not required by the states.

In addition to the preceding recommendations, the Task Force is offering the following additional information in order to assist the Financial Regulation Standards and Accreditation (F) Committee in reviewing the proposed accreditation standard for Model #787.
Substantially Similar

The Task Force has recommended in the draft accreditation standard that the “substantially similar” standard be utilized to meet the minimum requirements of the standard. However, the Task Force did note that Drafting Notes to Section 2, Section 3 and Section 5 of Model #785 might suggest a stronger standard of review than “substantially similar.” The Drafting Notes provide, as follows: “To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are substantially similar in all material respects to NAIC adopted model regulations in the handling and treatment of such reinsurance arrangements.” [Emphasis added]. In recognition of this, and to assist in review of the actuarial method used to determine the required level of primary security as described in Section 6 of Model #787, the Task Force recommends that the NAIC Legal Division specifically note any material changes in a state’s regulation during an accreditation review for consideration by the Financial Regulation Standards and Accreditation (F) Committee.

State Adoption of AG 48

The Task Force recommends that the accreditation standard become effective on an expedited basis beginning Jan. 1, 2020. However, the Task Force further recognizes that meeting the expedited date may not be feasible for some states in instances due, in whole or part, to other legislative priorities of the states. It is the recommendation of the Task Force that, in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Financial Regulation Standards and Accreditation (F) Committee as substantial compliance with Model #787. AG 48 became effective Jan. 1, 2015, and became part of the Accounting Practices and Procedures Manual through its inclusion in Appendix C, and has been amended to conform with Model #787 effective Jan. 1, 2017.

2016 Revisions to Model #785

The Task Force does not recommend that the 2016 revisions to Model #785 be included in the proposed accreditation standard. These revisions provide that the commissioner may adopt regulations with respect to: 1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; 2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; 3) variable annuities with guaranteed death or living benefits; 4) long-term care insurance policies; and 5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices, and is: 1) licensed in at least 26 states; or 2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

The reasoning of the Task Force is that Model #787 only applies to term life and universal life with secondary guarantees (XXX/AXXX) captive reinsurance transactions, and that variable annuities, long-term care insurance and other life and health insurance and annuity products are not currently addressed. Therefore, it would be considered to be premature to require the states to adopt these provisions. In addition, the professional reinsurer exemption of Section 5B(4) of Model #785 is specifically referenced in the draft accreditation standard. Therefore, it is the recommendation of the Task Force that the 2016 revisions to Model #785 are optional, and should be considered as acceptable but not required by the states.
Appendix A

Proposed Accreditation Standard

Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

State statute and/or regulation should be substantially similar to uniform, national standards that govern reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees, to ensure that both the total security and the primary security are provided in forms and amounts that are in compliance with the requirements set forth in the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

a. Provides that the Credit for Reinsurance Model Regulation (#786) and Model #787 shall both apply to reinsurance treaties that cede liabilities pertaining to Covered Policies; provided, that in the event of a direct conflict between the provisions of Model #787 and the provisions of Model #786, the provisions of Model #787 shall apply, but only to the extent of the conflict, substantially similar to Section 3 of Model #787?

b. Provides that Model #787 does not apply to reinsurance exempt by the provisions of Section 4 of Model #787, including reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of the Credit for Reinsurance Model Law (#785), which pertains to certain certified reinsurers, or Section 5B(4)(b) of Model #785, which pertains to reinsurers meeting certain threshold size and licensing requirements?

c. Provides definitions of “Covered Policies,” “Grandfathered Policies,” “Required Level of Primary Security,” “Actuarial Method,” “Primary Security,” “Other Security” and “Valuation Manual” that are substantially similar to such terms as defined in Section 5 of Model #787?

d. Provides for an Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation that is substantially similar to the methodology as set forth in Section 6A of Model #787?

e. Provides for valuations to be used 1) in calculating the Required Level of Primary Security pursuant to the Actuarial Method; and 2) in determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, that are substantially similar to the valuations set out in Section 6B of Model #787?

f. Provides for requirements to obtain credit for reinsurance with respect to ceded liabilities pertaining to Covered Policies that are substantially similar to the requirements set out in Section 7A of Model #787?

g. Provides for requirements at inception date and on an ongoing basis substantially similar to Section 7B(1) of Model #787?

h. Provides that if the requirements to hold Primary Security and total security are not both satisfied, the ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held, unless any deficiency has been eliminated pursuant to remediation provisions substantially similar to Section 7B(2) of Model #787?

i. Includes a prohibition against avoidance provision similar to Section 9 of Model #787?
MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: John F. Finston (CA)
Chair, Reinsurance (E) Task Force

DATE: March 20, 2017

RE: 2016 Revisions to Credit for Reinsurance Model Law (#785)
Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

On June 30, 2014, the Principle-Based Reserving Implementation (EX) Task Force adopted the recommendations in the report of Rector & Associates, Inc. dated June 4, 2014, regarding a proposal for the XXX/AXXX Reinsurance Framework. The Framework sought to address concerns regarding reserve financing transactions and to do so without encouraging them to move offshore. The changes would be prospective and apply only to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life with secondary guarantees business (XXX/AXXX). The NAIC Executive (EX) Committee adopted the Framework (in concept) on Aug. 17, 2014. As an interim step to implementing the Framework, the NAIC adopted Actuarial Guideline XLVIII Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) on Dec. 16, 2014. It was expected that AG 48 would eventually be replaced by effective codification through the Credit for Reinsurance Model Law (#785) and creation of a new model regulation to establish requirements regarding the reinsurance of XXX/AXXX policies.

The NAIC adopted revisions to Model #785 on Jan. 8, 2016, which give insurance commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework. The Reinsurance (E) Task Force adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the Summer National Meeting on Aug. 27, 2016, and it was adopted by the Financial Condition (E) Committee with slight revisions via conference call on Sept. 30, 2016. Model #787 was then adopted by the Executive (EX) Committee and Plenary on Dec. 13, 2016. At that same time, the NAIC also revised AG 48 to conform with the provisions of Model #787, effective Jan. 1, 2017.

The Reinsurance (E) Task Force hereby submits the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. The 2016 revisions to Model #785 and new Model #787 should be adopted as a new accreditation standard by the NAIC.
2. The F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force would recommend that the accreditation standard become effective January 1, 2020.

A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The 2016 revisions to Model #785 provide that the commissioner may adopt regulations with respect to (1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; (2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; (3) variable annuities with guaranteed death or living benefits; (4) long-term care insurance policies; and (5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is (1) licensed in at least 26 states; or (2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

Model #787 does not materially change the ability of insurers to obtain credit for reinsurance ceded to “certified” reinsurers or to obtain credit for reinsurance ceded to “licensed” or “accredited” reinsurers that follow statutory accounting and risk-based capital (RBC) rules. As a practical matter, the Model #787 requirements apply to reinsurance ceded to captive insurers, SPVs, reinsurers that are not eligible to become “certified” reinsurers, or reinsurers that materially deviate from statutory accounting and/or RBC rules. In those situations, subject to certain exemptions and grandfathering provisions, the ceding insurer may receive credit for reinsurance if:

- The ceding insurer continues to establish gross reserves, in full, using applicable reserving guidance;
- Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis;
- The Actuarial Method used to establish the Required Level of Primary Security for each reinsurance treaty subject to Model #787 is based on VM-20, applied on a treaty-by-treaty basis;
- Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held are held by or on behalf of the ceding insurer as security under the reinsurance contract; and
- The reinsurance arrangement is approved by the ceding insurer’s domestic regulator.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The NAIC Principle-Based Reserving Implementation (EX) Task Force serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. This Task Force was also charged with further assessing, and making recommendations regarding the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013, NAIC White Paper Captives and Special Purpose Vehicles, which provides in relevant part:

The Captive and Special Purpose Vehicle (SPV) Use (E) Subgroup studied the use of captives and SPVs formed by commercial insurers. The Subgroup concluded that commercial insurers cede business to
captives for a variety of business purposes. The Subgroup determined that the main use of captives and SPVs by commercial insurers was related to the financing of XXX and AXXX perceived reserve redundancies. The implementation of principle-based reserving (PBR) could reduce the need for commercial insurers to create new captives and SPVs to address perceived reserve redundancies; however, existing captives and SPVs are likely to remain in existence for several years or decades, until the existing blocks of business are run-off. Regulators need to be able to assess and monitor the risks that captives and SPVs may pose to the holding company system, and the current regulatory process should be enhanced to provide standardized tools and processes to be used by all regulators when reviewing such transactions. Commercial insurer-owned captives and SPVs should not be used to avoid statutory accounting. To the extent that insurer-affiliated captives and SPVs may be created in the future for unforeseen purposes, additional guidance should be developed by the NAIC to assist the states in a uniform review of transactions. [Emphasis added].

In addition, in coordination with the adoption in principle of the XXX/AXXX Reinsurance Framework, the Financial Regulation Standards and Accreditation (F) Committee was given the following charge: “As the various work products are adopted by the Principle-Based Reserving (EX) Task Force, Executive Committee, and Plenary, consider them for inclusion in the Part A and Part B Accreditation Standards.”

Finally, effective Jan. 1, 2016, the NAIC amended the Preamble for Part A: Laws and Regulations of the NAIC Policy Statement on Financial Regulation Standards to apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct with respect to XXX/AXXX business, which is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction satisfies the XXX/AXXX Reinsurance Framework requirements adopted by the NAIC. Further, the revised Preamble provided, as follows: “The revisions to the Credit for Reinsurance Model Act (#785) and the new XXX/AXXX Model Regulation will need to be specifically considered for accreditation purposes once adopted by the NAIC.”

A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

AG 48 became effective Jan. 1, 2015, and became part of the NAIC Accounting Practices and Procedures Manual through its inclusion in Appendix C. As such, provisions similar to the proposal have been effective in all states since that date.

As of this date, three states (Louisiana, Oklahoma and Utah) have gone beyond AG 48 and have adopted the 2016 revisions to Model #785 giving commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework, with several other states currently considering such revisions.

The new Part A Preamble became effective Jan. 1, 2016, with regard to XXX/AXXX reinsurance captives. NAIC staff worked with necessary state insurance departments to assess compliance with the new Part A Preamble related to captives that assume XXX/AXXX business, and reported its findings at the 2016 Fall National Meeting to the Financial Regulation Standards and Accreditation (F) Committee. NAIC staff reviewed all of the Dec. 31, 2015, XXX/AXXX Reinsurance Supplements that were filed with the NAIC to first ascertain whether the appropriate level of primary and other securities was being held to back the non-exempt XXX/AXXX reinsurance transactions. NAIC staff reported that all of the transactions held the required amount of securities, and therefore, all of the transactions satisfied the new Part A requirements.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring
committee, task force or working group shall recommend those items that should be considered significant elements:

Regulators needed to be able to assess and monitor the risks posed with respect to XXX/AXXX captive reinsurance transactions, and the regulatory process was enhanced through the adoption of the XXX/AXXX Reinsurance Framework, AG 48 and Model #787 to provide standardized tools and processes to be used by all regulators when reviewing such transactions. However, these new tools are complex and technical in nature, requiring the use of a new actuarial methodology to achieve the desired financial solvency results. Therefore, the Reinsurance (E) Task Force recommends that any new accreditation standard developed for Model #787 be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program.

In addition, all of the elements of the XXX/AXXX Reinsurance Framework have been put into place, with the exception of the new accreditation standard. Therefore, F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this new standard effective as of January 1, 2020.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to Model #787, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, it should be noted that Model #787 does not require dramatic changes from how insurance companies have been financing XXX/AXXX captive reinsurance transactions since the NAIC’s adoption of AG 48. As with AG 48, Model #787 provides “standardized tools and processes to be used by all regulators when reviewing such transactions.” Prior to the adoption of AG 48, insurers would enter into various captive reinsurance transactions to “finance” different portions of the statutory reserve differently—i.e., to fund different portions of the reserve using different kinds of assets—based on what insurers believed to be a better correlation between the kind of asset used and the probability that it would be needed. Many state regulators were comfortable with these transactions in theory, but there was significant unease regarding how these transactions were being implemented, and especially as to the lack of consistency from insurer to insurer and regulator to regulator regarding key aspects as to how these transactions may have been approved. Such transactions are still permitted under Model #787, but now a clear and consistent process has been implemented to ensure that the proper amount and type of assets have been applied with respect to these transactions in order to ensure that they continue to meet strong financial solvency standards.
MEMORANDUM

TO: Commissioner Todd Kiser, Chair, Financial Regulation Standards and Accreditation (E) Committee

FROM: Justin Schrader, Chair, Risk-Focused Surveillance (E) Working Group

DATE: April 6, 2019

RE: Proposed Revisions to Accreditation Program Manual to Reference Salary Ranges

In 2017, the Risk-Focused Surveillance Working Group began work on a project to study regulator resources and review salary recommendations for financial regulators. After reviewing job requirements for financial regulators conducting risk-focused surveillance, completing a detailed salary survey of 40+ states and comparing the results against other similar regulatory and industry positions, the Working Group developed new salary range recommendations and supporting guidance for financial analyst and examiner compensation.

On Feb. 15, 2019, updated salary ranges and supporting guidance were referred to the Financial Analysis Solvency Tools (E) Working Group and the Financial Examiners Handbook (E) Technical Group for consideration of adoption into the NAIC’s Financial Analysis Handbook and Financial Condition Examiners Handbook respectively. It is expected that the updated salary ranges and supporting guidance will be included in the 2020 publication of these handbooks.

In addition to developing salary range recommendations, the Working Group was asked to consider how its work should impact the NAIC accreditation standards and guidelines, as outlined in the following charge:

Consider recommendations to the Financial Regulation Standards and Accreditation (F) Committee for the purpose of evaluating the suitability of insurance department staffing in relation to the necessary skillsets.

In fulfillment of this charge, the Working Group is referring proposed revisions to Part C: Organizational and Personnel Practices, as well as the Self-Evaluation Guide/Interim Annual Review Form of the NAIC’s Accreditation Program Manual to the Committee for consideration of adoption. We recognize that Part C is reviewed by the accreditation team members but is not included in the Recommendation A or B and therefore does not impact a state’s accredited status. Because of this assessment structure and because Part C already includes questions related to competitive pay structures, we feel this is a logical place to reference the updated salary ranges being incorporated into NAIC handbooks. In addition, we believe the proposed questions in the Self-Evaluation Guide/Interim Annual Review Form related to whether the state is paying below the recommended salary ranges would provide beneficial information to the accreditation team and the Committee. Therefore, we request that you consider adoption of the proposed additions/revisions to the Accreditation Program Manual, as shown in tracked-change format in Appendix A.

If there are any questions regarding the proposed revisions, please contact me or NAIC staff (Bruce Jenson at bjenson@naic.org) for clarification. Thank you for your consideration of this referral.
Appendix A – Proposed Revisions to the Accreditation Program Manual

Part C: Organizational and Personnel Practices

a. Professional Development

Standard: The department should recognize and provide necessary training needs for staff involved with financial surveillance and regulation. The department should also have a policy that encourages professional development through job-related college courses, professional programs and/or other training programs.

Results-Oriented Guidelines:

1. The department should have the ability to provide adequate training for staff involved in financial surveillance and regulation commensurate with the needs of the department. When assessing compliance with this guideline, consideration should be given to the following:
   - The department’s recognition of when financial surveillance personnel may require additional training.
   - Whether appropriate training is provided.
   - The effectiveness of training programs, including how the department assesses effectiveness.
   - The use of on-the-job training.
   - Sufficiency of budgeted hours and finances to support training needs of the department.

Process-Oriented Guidelines:

1. The department should have a policy that focuses on training and developing staff involved with financial surveillance and regulation—in particular, staff that is new to financial surveillance and regulation.

2. The department should have a continuing education policy that encourages professional development in place for staff involved with financial surveillance and regulation.

b. Minimum Educational and Experience Requirements

Standard: The department should establish minimum educational and experience requirements for all professional employees and contractual staff positions in the financial regulation and surveillance area, which are commensurate with the duties and responsibilities of the position.

Results-Oriented Guidelines:

1. Financial surveillance staff should have the ability to perform the necessary duties and responsibilities, as well as meet the minimum educational and experience requirements commensurate with each position’s role in financial surveillance.

Process-Oriented Guidelines:

1. The department should establish minimum educational and experience requirements for staff positions in the financial surveillance and regulation area.

2. The department should maintain current and relevant job descriptions for staff positions in the financial surveillance and regulation area.
c. Retention of Personnel

**Standard:** The department should have the ability to attract and retain qualified personnel for those positions involved with financial surveillance and regulation.

**Results-Oriented Guidelines:**
1. The department should demonstrate the ability to attract and retain qualified personnel for those positions involved with financial surveillance and regulation. When assessing compliance with this guideline, consideration should be given to the following:
   - The department’s hiring policy.
   - The overall retention of personnel in key financial surveillance regulation areas.
   - The performance appraisal, the review process and/or coaching programs.
   - The ability to provide promotional opportunities and/or career paths.
   - The ability to provide a competitive pay structure commensurate with the job duties and responsibilities, including whether average salaries fall below the ranges defined in the Examiners Handbook and Analysis Handbook.

**Process-Oriented Guidelines:**
1. The department should have a hiring policy that allows for personnel needs to be addressed.

2. The department should compare employee salaries to the suggested salary ranges defined in the Examiners Handbook and Analysis Handbook and identify how it determines that pay structures are or are not competitive for positions involved with financial surveillance and regulation.

3. The department should have a performance appraisal and/or coaching program for staff.

d. Use of Contract Personnel

**Standard:** A department that utilizes contract personnel to assist in financial surveillance and regulation should ensure that those hired in the capacity of a contractor are subject to standards that are comparable to or exceed those standards applicable to employees of the state.

**Results-Oriented Guidelines:**
1. The department should assess contractors used in performing financial surveillance and regulation activities to ensure the work being performed is commensurate with the department’s processes and procedures.

**Process-Oriented Guidelines:**
1. The department should have a process in place to consider qualifications, training and professional development of contractors performing financial surveillance and regulation activities.

2. The department should have the authority to terminate a contract for services related to financial surveillance and regulation on the basis of poor performance.
c) **Retention of Personnel**

The department should have the ability to attract and retain qualified personnel for those positions involved with financial surveillance and regulation.

4. In a separate attachment, discuss the level of turnover that occurred during the past year and the reason for the turnover within the financial solvency monitoring staff, including the financial solvency senior management.

5. In a separate attachment, please discuss the department’s hiring policy that allows for addressing personnel needs.
   *If this is an interim annual review, only provide the department’s hiring policy that allows for addressing personnel needs if there have been substantial changes from the previous submission of this information, otherwise note “no changes”.

6. Does the department have a performance appraisal and/or coaching program for financial solvency monitoring staff?

7. If the answer to #5 above is yes, please briefly describe the department’s performance appraisal and/or coaching program for financial solvency monitoring staff.
   *If this is an interim annual review, only provide the department’s performance appraisal and/or coaching program for the financial solvency monitoring staff if there have been substantial changes from the previous submission of this information, otherwise note “no changes”.

TO: Financial Regulation Standards and Accreditation (F) Committee
FROM: Risk Retention Group (E) Task Force
DATE: August 3, 2019
RE: Part B1: Analysis Guidelines for Risk Retention Groups

The accreditation Review Team Guidelines include a guideline specifically related to risk retention groups (RRGs) within the financial analysis section (Part B1). This guideline was originally drafted by the Risk Retention Group (E) Task Force and adopted by the Financial Regulation Standards and Accreditation (F) Committee. It is the intention of the Task Force that this guideline is applied to all RRGs regardless of accounting treatment (GAAP/SAP) or organizational structure (captive/traditional laws).

In 2017, a number of revisions were made to the accreditation guidelines to incorporate risk-focused analysis. In conjunction with those revisions, a reference to the “Captive and/or Insurers Filing on a U.S. GAAP Basis Worksheet” in the NAIC Financial Analysis Handbook was added to the analysis guideline specific to RRGs. This worksheet can be a helpful tool, however, it applies only to GAAP filers with an emphasis on a review of accounting differences. Adding this reference implies the accreditation guideline is only applicable to GAAP filers, which is inconsistent with the Task Force’s position that the guideline applies to all RRGs.

The Task Force therefore asks the Committee to consider the following revision to B1(e), process-oriented guideline #8 to return to the language used prior to 2017 and clarify the guideline applies to all RRGs.

If the company is a risk retention group (RRG), the following procedures should be performed and documented within the analysis file, as applicable:

- Annual review of the plan of operation to ensure that it is unchanged from the prior year.
- Ensure that all changes in the plan of operations have been approved.
- Review of the Note 1 reconciliation to ensure that it appears accurate and can be relied upon by others.
- Review of the General Interrogatory, Part 2 question 13.1 and ensure that the amount agrees with the approved plan of operations.
- Ensure that the financial projections on file accurately reflect the operations as presently conducted.
- Ensure that the “Notes” relating to the operation of the company agree with the approved plan of operation.
INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

International Insurance Relations (G) Committee Aug. 12, 2020, Minutes ................................................................. 12-2
International Insurance Relations (G) Committee June 3, 2020, Minutes (Attachment One) .................................................. 12-8

NAIC Comments on the International Association of Insurance Supervisors (IAIS)
of the Recommendations of the Task Force on Climate-related Financial Disclosures
(Attachment Two-A) .................................................................................................................................................. 12-12
International Insurance Relations (G) Committee Jan. 30, 2020, Minutes (Attachment Three) ........................................... 12-13
International Insurance Relations (G) Committee Jan. 15, 2020, Minutes (Attachment Four) .................................................. 12-16
NAIC Comments on the IAIS Draft Application Paper on Liquidity Risk Management
(Attachment Four-A) .................................................................................................................................................. 12-17
The International Insurance Relations (G) Committee met via conference call Aug. 12, 2020. The following Committee members participated: Gary Anderson, Chair (MA); Bruce R. Ramege, Vice Chair (NE); Ricardo Lara (CA); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Hodgen Mainda (TN). Also participating was: Michael Powers (MA); and Justin Schrader (NE).

1. **Adopted its June 3, Feb. 3, Jan. 30, Jan. 15, and 2019 Fall National Meeting Minutes**

The Committee met June 3, Feb. 3, Jan. 30, Jan. 15, and Dec. 7, 2019, and took the following action: 1) heard an update on upcoming International Association of Insurance Supervisors (IAIS) committee meetings and activities; 2) heard an update on the Organisation for Economic Co-operation and Development (OECD) and other supervisory cooperation activities; 3) heard an update on the International Monetary Fund (IMF) Financial Sector Assessment Program (FSAP); 4) heard an update on international-related NAIC events; 5) approved submission of NAIC comments on the IAIS and Sustainable Insurance Forum (SIF) draft *Issues Paper on the Implementation of the Recommendations of the Task Force on Climate-related Financial Disclosures*; 6) heard a recap of IAIS committee meetings and an update on the insurance capital standard (ICS), including the aggregation method (AM) and comparability; 7) approved submission of NAIC comments on the IAIS draft *Application Paper on Liquidity Risk Management*; 8) adopted the report of the ComFrame Development and Analysis (G) Working Group; 9) adopted its 2020 proposed charges; 10) heard an update on key 2019 projects of the IAIS; 11) heard an update on international activities; and 12) heard an update on the FSAP.

Commissioner Caride made a motion, seconded by Commissioner Mais, to adopt the Committee’s June 3 (Attachment One), Feb. 3 (Attachment Two), Jan. 30 (Attachment Three), Jan. 15 (Attachment Four), and Dec. 7, 2019, (see NAIC Proceedings – Fall 2019, International Insurance Relations (G) Committee) minutes. The motion passed unanimously.

2. **Heard an Update on Key 2020 Projects of the IAIS**

Commissioner Anderson announced that the Louisiana Department of Insurance (DOI) has become a member of the IAIS Multilateral Memorandum of Understanding (MMoU), which strengthens supervisors’ ability to work cooperatively with other supervisors and monitor large cross-border insurers, which is critically important to promoting effective supervision and protecting consumers. He said since the first jurisdiction was admitted in June 2009, the number of MMoU members has grown significantly to now include 74 signatories, representing approximately 76% of worldwide premium volume, and Louisiana is the twentieth U.S. state to sign the MMoU.

   a. **Holistic Framework**

   Commissioner Anderson said with regard to the holistic framework, the IAIS decided to focus this year’s global monitoring exercise, both the individual insurance assessment and the sector-wide monitoring, on COVID-19-related information. He said during the June conference calls of the IAIS’s Macroprudential and Executive committees, initial results of the data analysis were provided, focusing on the areas of solvency, profitability, liquidity, assets and liabilities. He noted that given the limited data coverage and early stage of data validation work, these results were preliminary in nature, so further work will be done over the summer, which will be discussed at the next set of IAIS committee conference calls in September.

   Commissioner Anderson said on the recent Financial Stability (EX) Task Force conference call, there was a question about whether the IAIS would collect COVID-19-related data for the third and fourth quarters of 2020. He clarified what was said on the conference call, noting that a proposal to collect information on additional quarters was discussed during the IAIS committee calls in June; however, this has not yet been decided. He explained that IAIS members first want to assess how useful and complete the data for the first and second quarters is before agreeing to collect additional COVID-19-related data, which reflects the IAIS’s recognition of the need for operational relief during this time.

   Regarding implementation of the holistic framework, Commissioner Anderson said the IAIS is currently conducting a baseline assessment using a questionnaire that focuses on the relevant Insurance Core Principle (ICP) and Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) standards adopted in November 2019, and it is designed
to help the IAIS assess the level and means of implementation by jurisdictions. He said this assessment forms the first part of the IAIS process so that in November 2022, the Financial Stability Board (FSB) can review, based on the initial years of implementation of the holistic framework, the need to either discontinue or re-establish the annual identification of global systemically important insurers (G-SIIs). He said once the baseline assessment is finalized, the IAIS will share the outcomes of it with the broader IAIS membership, the FSB, and the general public in March 2021. He said following the conclusion of the baseline assessment, the IAIS will undertake targeted jurisdictional assessments to determine the consistency of implementation of holistic framework material in 2021 and 2022 with the objective to determine whether the supervisor has and exercises, when required, the legal authority and supervisory practices to effectively perform the requirements of the relevant holistic framework supervisory material. He said the IAIS is still working through the details of the targeted jurisdictional phase, such as scope of the assessment, jurisdictions involved, and how it will be operationalized; these topics will be discussed in September, and more information will be made publicly available in the future.

b. **ICS and Monitoring Period**

With regard to the ICS, Commissioner Anderson explained that the IAIS has begun a five-year monitoring period for the ICS for internationally active insurance groups (IAIGs). He said during this period, data will also be collected on the AM, and a decision will be made on whether the AM delivers comparable outcomes to the ICS, thereby being an “outcome-equivalent” implementation to the ICS.

Commissioner Anderson said on April 23, the IAIS released ICS and AM data collection packages to volunteer groups, it will be holding regular calls with volunteers, and it has a “question and answer” process for addressing issues that come up during the reporting process. He said because of the pandemic, the due date for ICS and AM reporting was moved from Aug. 31 to Oct. 31.

On comparability, Commissioner Anderson said work continues at the IAIS by the ICS and Comparability Task Force, and while the plan was to have a document on principles for developing the assessment criteria ready for consultation this summer, the timeline for this work has been adjusted with the consultation to take place later this year. He said as work continues towards developing an AM that delivers comparable outcomes to the ICS, one open issue is scalars, which are percentages that will be applied to each local capital requirement to bring them to a globally comparable level. He noted that scalars will be used in both the NAIC Group Capital Calculation (GCC) and the AM, though they are of particular importance for IAIGs. He said academic research in this area would be helpful, as there are many possible scalar methodologies that can be used.

Steve Jackson (American Academy of Actuaries—Academy) outlined a project that the Academy is undertaking on the scaling of regulatory capital requirements across jurisdictions, looking at theoretical and practical considerations of various methodologies. He explained that this project is being done in four stages: 1) clarifying objectives; 2) assembling an inventory of possible methodologies; 3) deriving a set of criteria for evaluation of methodologies; and 4) developing an annotated bibliography. He said by a targeted completion date of March 1, 2021, the Academy will offer assessments of major possible methods, but it will not recommend a method of scalars. He said the project is designed to assist state insurance regulators as they develop scalars for the AM and to educate the actuarial community.

Jeffrey L. Johnson (John Hancock) asked for clarification regarding the objectives of scalars and whether comparability would be part of the scope. Mr. Jackson responded that the Academy would be looking at how different scalar methodologies provide comparability between various regulatory capital requirements across jurisdictions, not comparability as it relates to the AM and the ICS.

c. **Responses to COVID-19**

Jonathan Dixon (IAIS) provided an overview of the IAIS’ work to date on COVID-19 and what it will be looking at going forward. He explained that over the past several months, the IAIS has pivoted to COVID-19-related projects, including: 1) refocusing the 2020 Holistic Framework Global Monitoring Exercise; 2) gathering information on supervisors’ COVID-19 supervisory responses; 3) collaboration with the FSB and other standard-setting bodies; and 4) stakeholder engagement. He noted that as a result of providing operational relief to both IAIS members and stakeholders, the IAIS has extended deadlines or postponed the work of some projects.

Commissioner Anderson noted that NAIC representatives to the IAIS have been sharing the input and experiences of state insurance regulators in responding to COVID-19, and many of the discussions at the IAIS mirror those at the NAIC.
Commissioner Lara asked if the IAIS is looking at solutions to the issue of pandemic coverage in business interruption policies for businesses affected by the pandemic, including using innovation. Mr. Dixon responded that the IAIS is gathering information on business interruption coverage on an ongoing basis, including looking at conduct of business issues. He said given different jurisdictional issues, legal environments, and mandates of supervisors, it is difficult to identify common practices; although, the IAIS is trying to collect as many examples as possible of business interruption coverage to share with supervisors. He also said the IAIS Executive Committee was interested in conducting a business interruption coverage stocktake regarding the pandemic, and he noted that there are discussions around the world regarding potential supervisory solutions, including risk-sharing between the public and private sectors. He added that he expects this work to progress during the second half of the year. Commissioner Anderson noted that, similar to the NAIC statement on pandemic coverage in business interruption, the IAIS also released such a statement in May 2020.

Mr. Powers asked Mr. Dixon for examples of supervisory responses to COVID-19. Mr. Dixon responded that collected responses from various jurisdictions have focused primarily on strengthening operational resilience of supervisors and insurers, business continuity, providing operational relief for insurers to facilitate uninterrupted services, insurer solvency, and market conduct issues.

Robert Neill (American Council of Life Insurers—ACLI) asked if there has been any thought to extending the ICS monitoring period, given the interruptions caused by COVID-19. Mr. Dixon said the IAIS made adjustments to the timeline for IAIS data collection and increased engagement with volunteer groups. Romain Paserot (IAIS) added that while the IAIS has extended the data submission deadline for this year, it is unclear how long the pandemic will cause operational stress to insurers, but the IAIS has good ongoing dialogue with the volunteers.

3. **Heard an Update on the FSAP**

Mr. Schrader explained that the 2020 U.S. FSAP concluded earlier in the week with publication of final documents describing the IMF’s findings and opinions on the U.S. financial regulatory system. He said reports related to the 2020 U.S. FSAP, including those relevant to insurance, are posted to the IMF’s website, as well as the U.S. Department of the Treasury (Treasury Department) website.

Mr. Schrader said the FSAP was established by the IMF in 1999 to examine a jurisdiction’s financial regulatory system, assess its observance with current international standards in all three major financial sectors—banking, insurance and securities—and offer recommendations for improvement. He said last year, the IMF and U.S. authorities, including the Treasury Department, the Federal Reserve, state insurance regulators, and others began the process for the third IMF assessment of the U.S. financial regulatory system.

Mr. Schrader explained that the 2020 FSAP included two “missions” with separate workstreams, with Mission 1 focusing on many aspects of insurance supervision, as well as stress testing, and Mission 2 focusing on climate risk and resilience, the incidence of natural catastrophes, and mortgage insurance. He said Mission 1 took place during the fall of 2019 with meetings at all the NAIC offices and four states, and Mission 2 took place in February and March of this year, with meetings at the NAIC with leadership of certain NAIC working groups and two states. He added that the IMF met with insurance trades and companies in many of these states as part of their review.

Mr. Schrader said the main documents of relevance for the insurance sector that were recently released by the IMF include: 1) Insurance Technical Note, which provides the IMF’s views of the strengths and weaknesses of solvency and market conduct supervision in the U.S.; 2) Risk Analysis and Stress Testing the Financial Sector Technical Note (Stress Testing Note); and 3) Financial System Stability Assessment (FSSA), which provides the IMF’s overall assessment of the whole U.S. financial sector, including insurance. He said while there is an appendix addressing the impact of COVID-19 in both the Stress Testing Note and the FSSA, the FSAP was largely completed prior to the start of the pandemic.

Mr. Schrader explained that in contrast to the two earlier U.S. FSAPs, there are no ratings of observance of specific ICPs, the international insurance standards established by the IAIS. Instead, the IMF performed a targeted review of cross-cutting themes, building on the detailed assessment of the ICPs conducted in 2015, resulting in recommendations relative to these topics that, in the IMF’s opinion, would help to improve insurance supervision in the U.S.

Mr. Schrader said while there are several findings and conclusions drawn by IMF staff that state insurance regulators may ultimately disagree with, their view that the U.S. insurance system is in line with the ICPs and that key 2015 FSAP recommendations are being addressed is welcomed.
Mr. Schrader noted that in the published reports, the IMF highlighted enhancements and strengths of the U.S. state-based system, including:

- Implementation of principle-based reserving (PBR) in the life insurance industry is a step toward addressing the issues found on valuation in the 2015 FSAP.
- Implementation of risk-focused surveillance in financial analysis and financial examinations is another key step forward.
- The NAIC’s framework for monitoring individual asset-side risks is quite advanced.
- The financial stability risks stemming from the insurance sector appear contained for now.

Mr. Schrader highlighted some of the IMF’s recommendations, including: 1) further development of risk-based supervision; 2) consistency of life insurer liability valuation methods; 3) further regulatory requirements in corporate governance; and 4) enhancing regulatory responses to the increasing risk and severity of natural catastrophes. He said state insurance regulators believe some of the IMF’s statements regarding the ICS, including recommending “developing the Generally Accepted Accounting Principles (GAAP) Plus Global Risk based ICS based on U.S. GAAP” as an “internationally consistent way forward to addressing the current gap in insurance group capital requirements in the United States” are inconsistent with the current discussions at the IAIS, which recognize the potential of the AM to provide comparable outcomes to the ICS. He said the IMF also recommends that if the “NAIC’s proposed GCC is adopted, it should be made into a requirement not merely a calculation.” He noted that the NAIC questions the certainty with which the IMF speaks when suggesting, before the GCC has even been adopted and implemented, that a calculation cannot be as equally useful as something that is deemed a requirement.

Mr. Schrader stated that, as with the previous U.S. FSAPs, state insurance regulators and NAIC staff will review all the IMF recommendations and allocate, where appropriate, such recommendations to the relevant NAIC committees and working groups for further consideration. He also thanked participating states for their significant time and commitment to this project, as well as NAIC staff.

Andrew T. Vedder (Northwestern Mutual) asked whether the IMF’s decision not to include ratings on observance of ICPs represents a decision by the IMF that jurisdictions will not be rated in this way going forward. Gita Timmerman (NAIC) responded that conducting more thematic reviews without ratings reflects a general trend seen with FSAPs for other jurisdictions as well.

Commissioner Anderson thanked Mr. Schrader for his time and effort as the lead U.S. state insurance regulator for the project, and he thanked the involved states and NAIC staff for their hard work, in particular Ms. Timmerman and Rashmi Sutton.

4. **Heard an Update on International Activities**

   a. **Regional Supervisory Cooperation**

Director Ramge said during the pandemic, state insurance regulators have continued to stay in touch with regulatory counterparts overseas, as it is even more critical in times of crisis to discuss issues in a frank and candid manner.

Director Ramge said in late June, the NAIC officers held a principal-level discussion with the Bermuda Monetary Authority (BMA) in order to: 1) update the BMA on the high-level observations from the NAIC’s first business interruption data call; 2) discuss the overall strength and capacity of Bermudan reinsurers and any possible impact COVID-19 may have on any potential claims handling resulting from the 2020 hurricane season or other U.S. natural catastrophe events; and 3) continue to share lessons learned with the BMA regarding remote supervision, COVID-19 response measures, and industry engagement.

Director Ramge said in mid-July, Director Cameron participated in a high-level virtual session on regulatory responses to COVID-19 organized jointly by the Financial Stability Institute (FSI), the Association of Insurance Supervisors of Latin America (ASSAL), and the IAIS. Director Ramge said this webinar included participation by a number of Latin American authorities. It provided a platform in which to exchange views on the various regulatory responses to COVID-19; trade-offs, including prudential approaches to soften implications related to COVID-19; and the challenges in the post-pandemic phase. Director Ramge added that this event replaced the ASSAL High-Level Meeting that was scheduled for this past April in Costa Rica.
Director Ramge said in late July, NAIC staff held a bilateral training session for the Superintendent of Brazil’s insurance regulator, who wanted to learn more about the U.S. system of regulation, and this was the first in a series of meetings for the Brazilian regulators, who also requested additional training in the future through the NAIC’s online education courses.

Director Ramge noted that the NAIC is exploring principal-level calls later in the year with Asian colleagues, such as Taiwan and Japan that have new commissioners leading their authorities, to discuss issues of mutual interest, including COVID-19.

Director Ramge said with regard to the U.S.-European Union (EU) Project, after the cancellation of the March public event and since the Committee’s last call in June, there have been several working group calls relating to the various workstreams of the Project. He said it is expected that the working groups on cybersecurity, cyberinsurance and big data will continue to meet virtually to discuss the next steps, as contained in the Project’s papers published in February 2020.

Director Ramge said, as reported previously, in light of COVID-19-related travel restrictions and office reopening policies, the fall session of the NAIC’s International Fellows Program will take the form of a virtual session in October. He said the application for participation is available on the NAIC website, and a number of applications for the session have already been received from international regulators from several regions around the world. He said while there is no substitute for the hands-on experience that fellows receive during the weeks they spend hosted by state insurance departments and meeting with NAIC staff, the NAIC is grateful to be able to offer international colleagues an opportunity for technical growth and relationship building during this difficult time.

Director Ramge said for the foreseeable future, the NAIC’s bilateral dialogues will continue to be held virtually, and state insurance regulators will continue to work closely with international counterparts, ensuring that lines of communication remain open, as ongoing communication with our international partners remains the utmost importance, especially in these challenging times.

b. **OECD**

Director Ramge said with regard to the OECD, its Insurance and Private Pensions Committee (IPPC) met virtually in June and discussed topics including: 1) supervisory, regulatory and industry responses taken on COVID-19; 2) the role of public-private partnerships to address the insurability of perils that are or are increasingly becoming uninsurable, such as pandemic/epidemics, as well as perils such as floods, wildfires and cyclones whose severity and frequency is being affected by a changing climate; 3) a draft preliminary report on the relationship between public and private sectors in the area of long-term care (LTC) and health care; and 4) a revised draft Recommendation of the Council on Financial Literacy.

Director Ramge said in early July, the OECD released a comprehensive report on COVID-19-related actions taken by supervisors, policymakers and industry in the insurance sector, and the paper can be found on the OECD’s website. He reported that the OECD has also published its mid-year report on insurance market trends, which shows gross premiums still rising in 2019; although, COVID-19 may curb the positive premium and investment income growth of insurers. He said this report is available on the OECD IPPC website, and a more detailed report on insurance market trends will be published later this year.

c. **SIF**

With regard to the SIF, Director Ramge said, as previously reported, the NAIC became a member of the SIF in February 2020, and it has participated in several virtual meetings this summer discussing topics such as member initiatives in the area of climate risk and sustainability and joint work with the IAIS on drafting an *Application Paper on the Supervision of Climate-related Risks in the Insurance Sector*. He said this paper will be out for public consultation later this fall, and it is scheduled to be published in early 2021. He said the strategic focus for the SIF for 2021 and beyond has also been discussed during the virtual meetings.

Director Ramge said examining the issue of climate and natural catastrophe risks and resiliency is central to state insurance regulators’ mission of protecting policyholders, and it is the focus of a newly created executive-level NAIC task force, which will help inform state insurance regulators’ contributions to the SIF going forward.
5. **Discussed Other Matters**

Commissioner Anderson said the Committee’s next conference call has not been scheduled; however, there are some upcoming activities and events that will merit a call, such as updates on the September IAIS meetings, the public consultation on the joint IAIS-SIF application paper, and addressing recommendations from the FSAP. He said once the timing on these items is better understood, a save-the-date will be sent.

Having no further business, the International Insurance Relations (G) Committee adjourned.

W:\National Meetings\2020\Summer\Cmte\G\Gmin Summer2020.docx
The International Insurance Relations (G) Committee met via conference call June 3, 2020. The following Committee members participated: Gary Anderson, Chair (MA); Bruce R. Ramge, Vice Chair (NE); Ricardo Lara (CA); Andrew N. Mais (CT); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman (PA); Hodgen Mainda (TN); and Tregenza A. Roach (VI). Also participating was Justin Schrader (NE).

1. Heard an Update on International Activities
   a. IAIS

Commissioner Anderson said from an operational perspective, the International Association of Insurance Supervisors (IAIS) has suspended in-person meetings until the end of August. He noted that this includes the June Committee Meetings and Global Seminar the NAIC planned to host in Seattle, WA. Instead, the NAIC will host the Global Seminar in June 2023. Commissioner Anderson said the IAIS Executive Committee recently decided to cancel the Committee Meetings, Annual General Meeting and Annual Conference scheduled for November in Santiago, Chile. He said for both the June and November meetings, stakeholder events will be held virtually. He said as part of the June Committee Meetings, the IAIS will discuss whether it will resume other in-person meetings, such as at the subcommittee level, starting in September.

Commissioner Anderson explained that at the end of 2019, the IAIS finalized some key projects; i.e., the holistic framework for systemic risk in the insurance sector and moving into the global insurance capital standard (ICS) monitoring period. He said both projects involve a year-long process that had to be adjusted given the impact of COVID-19.

Regarding the holistic framework, Commissioner Anderson said it was decided to focus the global monitoring exercise, both the individual insurance assessment and the sector-wide monitoring, on COVID-19 related information. He said the results should help provide a global perspective regarding the impact of COVID-19 on the insurance sector. He noted that while this may not be the plan as envisioned going into 2020, this refocusing will hopefully show the value of moving to a more holistic approach that can look at risks and potential systemic impact regardless of the source.

Regarding the ICS, Commissioner Anderson said the monitoring period is underway with data collection for both the ICS and Aggregation Method having started around the end of April and the deadline extended until the end of October. He said work continues within the IAIS ICS Task Force to discuss comparability. He said while the plan was to have a document ready for consultation this summer, the timeline for this work has been adjusted too, with the consultation to take place later this year, likely in November.

Commissioner Anderson said the IAIS currently has two assessment activities underway. The first is a peer review of Insurance Core Principle (ICP) 19 (Conduct of Business) launched at the end of February. Commissioner Anderson said as with prior reviews, the plan was to give IAIS members a month to respond, but with the outbreak of COVID-19, an extension to June 15 has been given to allow jurisdictions more time to respond. He said per usual NAIC practice, about a handful of states have volunteered to participate in responding to this peer review. Second is the holistic framework baseline assessment (BLA) that launched May 1. Commissioner Anderson said Team USA will be coordinating the response to the BLA from a U.S. perspective, given that this assessment covers jurisdictions as a whole. He said the BLA results will be shared with relevant stakeholders, such as the Financial Stability Board (FSB) and the general public, once finalized in March 2021. He said in 2021, the IAIS will build on the BLA in undertaking targeted jurisdictional assessments to determine the consistency of the implementation of the holistic framework supervisory material, and it will deliver a final report to the FSB in 2022.

Commissioner Anderson said since mid-March, the IAIS Secretariat has been collecting information from IAIS members on supervisory measures related to COVID-19, and it has facilitated discussions on the situation in various jurisdictions on biweekly Executive Committee calls. He said a number of considerations on future IAIS work, as well as how the association operates, have arisen from these survey results and discussions. He noted that the IAIS recently formed a small, virtual group to help analyze the variety of COVID-19 supervisory measures and serve as a sounding board, providing recommendations to the Executive Committee as it starts to consider strategic implications. He said the small group’s first call was May 28, and it
focused on brainstorming possible areas that the IAIS may want to focus on to help IAIS members responding to the pandemic. He said state insurance regulators and the NAIC have been active in providing and updating input on the IAIS survey and on the Executive Committee calls to help share the experiences in the U.S. insurance sector and what supervisors have been doing in response to COVID-19. He said while this pandemic has caused challenges, it could also provide an opportunity for the IAIS to assess its current and future workstreams and how it operates, noting that the current crisis has highlighted the need to be responsive to new and emerging risks, to react in ways that are helpful for supervisors around the globe, and to be able to operate even outside of normal circumstances. He added that state insurance regulators and the NAIC have been learning lessons on these points, and they look forward to sharing them with the IAIS and other supervisors.

Robert Neill (American Council of Life Insurers—ACLI) said the ACLI hoped to work with members of the Committee on ICS comparability work to supplement what is being done through Team USA, and he asked if there are timelines that interested parties should be aware of in order to feed into the work. Commissioner Anderson responded that while there are not necessarily concrete deadlines for sharing information as the document is developed, it would be helpful if feedback on the work could be shared with the Committee before November. Ryan Workman (NAIC) said many IAIS workstreams have been adjusted in light of COVID-19, and discussions have slowed down as well, but there could be an update on the status of this document for the Committee at the NAIC Summer National Meeting.

d. **OECD**

Ekrem Sarper (NAIC) said the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee (IPPC) quickly pivoted earlier this year to focus on COVID-19 responses and the discussions and policy considerations of governments and state insurance regulators. He said in early April, the IPPC released a paper, “Initial Assessment of Insurance Coverage and Gaps for Tackling COVID-19 Impacts.” He said recently, the IPPC followed up with a paper, “Responding to the COVID-19 and Pandemic Protection Gap in Insurance,” which can be found on the OECD’s website. He said the focus of this policy paper is on how business interruption insurance against pandemic risk could be provided with support from governments and some of the challenges and considerations necessary for establishing such a program.

Mr. Sarper said similar to other organizations, the IPPC’s June in-person meeting has been canceled and instead will be held virtually. The virtual meeting will discuss policy responses to COVID-19 and future work for the IPPC; the insurability of perils, which are or are increasingly becoming uninsurable; and a draft preliminary report on the relationship between public and private sectors in the area of long-term care (LTC) and health care.

Mr. Neill asked whether any commissioners or states would be participating in the virtual IPPC meeting along with NAIC staff. Mr. Sarper responded that it would likely just be NAIC staff participating.

c. **FSAP**

Mr. Schrader explained that the International Monetary Fund (IMF) is about to conclude its third Financial Sector Assessment Program (FSAP) of the U.S. financial regulatory system. He said the FSAP includes Mission 1 and Mission 2. He said meetings for Mission 1 took place last fall with meetings at all the NAIC offices and four states, and Mission 2 took place in February and March with meetings both at the NAIC and several other states. He said relevant to the insurance sector, the IMF is expected to publish the Financial System Stability Assessment (FSSA) and technical notes on insurance and stress testing in July 2020. He said as with previous FSAPs, there will likely be areas in which the NAIC and state insurance regulators will continue to disagree with the IMF’s approach and recommendations, as well as areas in which constructive feedback will be provided to the IMF regarding inaccuracies or particular characterizations of the U.S. system of state-based insurance regulation in the documents before they are published. He thanked the participating states for the time they took to present to the IMF on the state-based system, as well as NAIC staff. He said he would provide an update and summary of the FSAP documents once they are published.

d. **Bilateral Supervisory Cooperation**

Commissioner Anderson said while the NAIC’s priorities have shifted to focus on COVID-19, so have the priorities for our regulatory counterparts overseas. He said over the years, the NAIC has been improving relationships with foreign regulators, so that in times of crisis, regulators would know how to reach each other. He added that these relationships are built through work at the IAIS and other standard-setting bodies, but more importantly through consistent bilateral outreach.
Commissioner Anderson said since early March, the NAIC and state insurance regulators have been in regular contact with supervisors and finance ministries throughout Asia, Latin America and Europe. He said many jurisdictions are facing the same challenges as the U.S., and in the past month, the NAIC has had several calls at the staff level with supervisors in Bermuda, the European Union (EU), Japan, and the United Kingdom (UK).

Commissioner Anderson said during these discussions, the NAIC shared information about the prudential measures taken by state insurance regulators, including heightened monitoring of insurers through uniform data calls on solvency impact and regulatory relief and forbearance in a number of critical areas, particularly in regard to various statutory accounting exceptions. He said the numerous market conduct related measures taken in response to COVID-19 were also discussed. He said international counterparts shared information about primary challenges that their jurisdictions are facing in responding to COVID-19 and measures they have taken on a prudential and market conduct basis.

Commissioner Anderson said for the foreseeable future, the NAIC’s bilateral dialogues will be held virtually; although, state insurance regulators will continue to work closely with international counterparts, ensuring that lines of communication remain open. He said it is important that the sharing of information continues relating to insurers jointly supervised across those jurisdictions, as well as various policy responses to COVID-19 and beyond.

e. NAIC Events

Commissioner Anderson said as previously announced, the NAIC decided to cancel this year’s International Insurance Forum. He said a good program was planned for the NAIC’s annual flagship international event, so it is unfortunate that it was canceled, but he noted that next year’s Forum will be held May 24–25, 2021.

Commissioner Anderson said going into 2020, it was decided not to hold the spring session of the NAIC International Fellows Program due to resource constraints associated with the FSAP. He said in light of COVID-19 and related travel restrictions and resource strains, the NAIC has decided to also cancel the fall session of the Fellows Program, and NAIC staff are exploring virtual alternatives to the fall session in order to continue to provide training opportunities for foreign insurance regulators interested in learning about the U.S. system of insurance regulation, including sessions prerecorded by NAIC technical experts, should resources allow.

Having no further business, the International Insurance Relations (G) Committee adjourned.
The International Insurance Relations (G) Committee met via conference call Feb. 3, 2020. The following Committee members participated: Gary Anderson, Chair (MA); Bruce R. Ramege, Vice Chair (NE); Ricardo Lara represented by Emma Hirschhorn (CA); Andrew N. Mais (CT); David Altmaier (FL); Doug Ommen (IA); James J. Donelon represented by Tom Travis (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers (MO); Marlene Caride (NJ); Jessica K. Altman (PA); and Hodgen Mainda (TN).

1. Approved Submission of NAIC Comments on IAIS and SIF Draft Issues Paper on Implementation of the TCFD Recommendations

Commissioner Anderson explained the purpose of the conference call is to discuss and approve the submission of NAIC comments on the joint International Association of Insurance Supervisors (IAIS) and Sustainable Insurance Forum (SIF) draft Issues Paper on the Implementation of the Recommendations of the Task Force on Climate-related Financial Disclosures (TCFD Recommendations), which is out for public consultation.

Commissioner Anderson said that in June 2018, the IAIS and SIF released a joint Issues Paper on Climate Change Risks to the Insurance Sector. He said the draft issues paper serves as a follow-up to the 2018 paper and describes the role of the Financial Stability Board’s (FSB) TCFD Recommendations in establishing a framework for climate risk-related disclosures for the insurance sector. Commissioner Anderson said the draft issues paper draws on the results of an SIF survey conducted during the first half of 2019 on implementation of the TCFD Recommendations and provides examples of related supervisory practices from around the world.

Commissioner Anderson explained that, per the usual process, the draft issues paper was reviewed internally, including by the NAIC’s Climate Risk and Resilience (C) Working Group, which resulted in the initial draft NAIC comments that were circulated Jan. 21 in advance of the conference call. He said no additional input was received from state insurance regulators or interested parties in advance of the conference call.

Ryan Workman (NAIC) provided an overview of the draft NAIC comments on the draft issues paper, focusing on substantive comments.

David Snyder (American Property Casualty Insurance Association—APCIA) said that while the TCFD Recommendations have value, their implementation should be a voluntary process. He said the APCIA hopes the disclosure will be accepted as reporting in places where reporting is mandatory and noted that the APCIA looks forward to working with the NAIC on these issues.

Commissioner Caride made a motion, seconded by Commissioner Altmaier, to approve submission of the NAIC comments (Attachment Two-A). The motion passed.

Commissioner Anderson said the NAIC comments on the draft issues paper would be submitted in advance of the Feb. 5 deadline and urged interested parties to submit comments as well.

2. Discussed Other Matters

Commissioner Anderson thanked Committee members and interested parties for their participation during the recent Committee meeting and conference call held Jan. 30 in Washington, DC, on the aggregation method and comparability. He said it was a productive discussion and that the Committee looks forward to this ongoing dialogue over the course of 2020.

Having no further business, the International Insurance Relations (G) Committee adjourned.
<table>
<thead>
<tr>
<th>Section/Paragraph</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>The paper refers to “TCFD Recommendations”, “TCFD Framework” and sometimes simply “TCFD”. As in most places it seems these are referring to the same thing, it would be helpful if one term was used consistently throughout so as to avoid potential confusion.</td>
</tr>
<tr>
<td>Para 8</td>
<td>In the fifth sentence, it is not clear what or who these “coalitions” are; suggest rewording with the same intention to: “…both within individual jurisdictions and through collective activities,…”</td>
</tr>
<tr>
<td>Para 18</td>
<td>In the first sentence, it is not clear what or who these “coalitions” are; suggest rewording with the same intention to: “Supervisors collectively are developing…”</td>
</tr>
<tr>
<td>Para 34</td>
<td>Suggest some minor changes to be clearer that this paragraph is describing the results of the survey: “The majority of insurers surveyed that expect to be affected by climate change are non-life insurers, primarily those concerned with risks to underwriting liabilities, with some life insurers primarily concerned with investment activities. Insurers that reported they do not expect to be affected by climate change in any respect are predominately life insurers.”</td>
</tr>
<tr>
<td>Para 46</td>
<td>As Section 4 describes a variety of options to strengthen disclosures based on TCFD Recommendations, it is odd that this introductory paragraph starts off with the view of some that such disclosures should be made mandatory, which is one of the options described later. Suggest the first sentence be moved to become the first sentence of para 56 and the second sentence moved to become the first sentence of para 47 which would then provide a more general and broader introduction to this section.</td>
</tr>
<tr>
<td>Para 47</td>
<td>As Annex 1 only describes practices of individual jurisdictions, delete “and other relevant supervisory coalitions”.</td>
</tr>
<tr>
<td>Para 52</td>
<td>First sentence, suggest more appropriate wording describing a survey would be: “Analysis of the SIF Survey responses suggest that…”</td>
</tr>
<tr>
<td>Subsection 4.1.6</td>
<td>As paragraphs 53 and 54 focus on scenario analysis rather than multiple activities and para 54 says there are divergent perspectives on standardization, suggest the subheading would be more appropriate as: “Supporting TCFD-related scenario analysis”</td>
</tr>
<tr>
<td>Para 56</td>
<td>Suggest moving the first sentence to become a new first paragraph under 4.1.7 as this provides a more general and broader introduction to this subsection.</td>
</tr>
</tbody>
</table>
The International Insurance Relations (G) Committee met in Washington, DC, and via conference call Jan. 30, 2020. The following Committee members participated: Gary Anderson, Chair (MA); Bruce R. Ramge, Vice Chair, represented by Justin Schrader (NE); Ricardo Lara represented by Emma Hirschhorn (CA); Andrew N. Mais (CT); David Altmaier (FL); Doug Ommen (IA); James J. Donelon (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by John Rehagen (MO); Marlene Caride (NJ); Andrew R. Stolfi (OR); Jessica K. Altman (PA); and Hodgen Mainda (TN).

1. **Heard an Introduction**

Commissioner Anderson gave an overview of the agenda and said it would start with a recap of the agreements coming out of last year’s International Association of Insurance Supervisors (IAIS) meetings in Abu Dhabi, United Arab Emirates. He said there would then be a short overview of the aggregation method (AM) along with some discussion on its ongoing development, as well as how the NAIC can further help with the understanding and education of the AM. Finally, he said there will be a discussion on comparability, in particular looking at the definition of comparability and overarching approach and moving towards developing criteria and the overall assessment process.

Commissioner Anderson noted the IAIS is looking at these issues and that state insurance regulators are in the process of thinking through them as well. He said today’s meeting would consider a variety of points that will be part of further developing the AM and the comparability assessment. He said there may not be answers to every question, but that is in part due to the nature of the insurance capital standard (ICS) project. He added that there are a number of moving parts that will continue to evolve over the monitoring period.

2. **Heard a Recap of Abu Dhabi Agreements**

Ryan Workman (NAIC) provided an overview of the agreement reached at the IAIS meetings in Abu Dhabi, United Arab Emirates, in November 2019. This included the definition of comparable outcomes and the overarching approach to developing high-level principles and criteria for the comparability assessment that are to be done in such a manner that the AM is neither precluded at the outset as an outcome equivalent approach to the ICS for measuring group capital, nor given a free pass. Mr. Workman also walked through the work plan and timeline for the ICS project and the comparability assessment.

3. **Heard an Update on the AM Status**

Ned Tyrrell (NAIC) provided an overview of the AM, which is designed around the concept that group capital resources and requirements are derived from the aggregation of entity-level reporting. He described five components of the AM: 1) group financials and inventory; 2) adjustments for double-counting; 3) scaling; 4) capital instruments; and 5) aggregation. Mr. Tyrrell also provided an update on the status of each of these five design components.

Commissioner Anderson noted that while there is a relationship between the AM and the domestic group capital work, there is a difference. Commissioner Altmaier provided an update on the status of the NAIC’s group capital calculation (GCC) that is intended to be a regulatory tool for supervisors of U.S.-based groups. Thomas Sullivan (Federal Reserve Board—FRB) provided an update on the development of the FRB’s building-block approach capital standard for insurers it supervises.

Comments made on the development of and education on the AM included the following:

- While there may be questions about scalars and how they will work, it is a mechanism that is part art and part science, and there is no need to be defensive about their use and how the AM aggregates risk.
- Having regular workshops and educational sessions about the AM would be helpful, as well as having documents that explain its design and provide responses to frequently asked questions (FAQ). Such information would help educate people on how the AM meets the same goals as the ICS and to give input on the comparability assessment criteria.
- There is a need to distinguish between the AM and jurisdictional implementations of the AM; the AM is not simply risk-based capital (RBC). The more information that is available on the GCC, the more tangible the AM becomes, so having an exposure draft of the GCC by mid-2020 would be helpful.
• Problems can be hidden in a consolidation approach, whereas the AM can be more regionally reflective and provides the right level of information at the right level.
• Volatility is a concern with the ICS. There is a need to avoid false positives, which could be demonstrated by linking the AM to the economic impact assessment.

Commissioner Anderson said that while there will be “stability” with the AM, just as there is with the ICS over the monitoring period, similarly the NAIC hopes the data received over this period helps inform the AM and any improvements. He said there are some outstanding points to be decided, such as scalars, so there will be some additional changes as work progresses on the version that will be assessed for comparability.

4. Discussed Comparability

Commissioner Anderson opened the discussion on comparability by looking at the definition approved at the IAIS meetings in Abu Dhabi, United Arab Emirates, how to go from the overarching approach to principles on comparability and what the actual assessment process could look like.

Comments on the definition of comparable outcomes included the following:

• The definition should not be reopened as it would lead to a different outcome on the way forward on comparability. The definition emphasizes that while the ICS and AM have similar elements, they are done differently.
• The assessment would need to involve both quantitative and qualitative aspects. There is an opportunity for the AM if it can demonstrate quantitatively that the AM produces fewer false positives. The qualitative side is more about how supervisors use different supervisory action to get an outcome.
• Regardless of how quantitative or qualitative the assessment is, it needs to avoid being granular.
• In considering what is an appropriate scope and form of supervisory action, hard wiring specific triggers needs to be avoided.
• Consideration should be given to how useful the approach is to the internationally active insurance group’s (IAIG’s) supervisory college. However there also needs to be education on how colleges in the U.S. operate and what is done within them.

Comments on going from an overarching approach on comparability to principles included the following:

• For the overarching approach that addresses the prudence of the AM in relation to the ICS, the notion of prudence suggests consideration of the level of calibration, but it should also consider the prudent supervisory actions.
• The overarching approach that notes the scope of group under the AM and ICS should be consistent with that set out in the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) shows that not everything about the comparability assessment needs to be based on the ICS.
• The assessment of comparable outcomes could also look at the utility of the supervisory action taken to an end user, especially the supervisor.
• In moving from principles to criteria for the assessment, the ICS principles could be a good basis, minus those principles that are irrelevant.

Comments on the approach and work plan for the assessment process included the following:

• The economic impact assessment should take place midway through the monitoring period, not at the end. Otherwise, the results produced will not have any actual impact. The economic impact assessment should be performed by the IAIS.
• Some IAIS members interpret “level playing field” as everyone having to adopt a market adjusted valuation ICS. However, if a level playing field is only concerned with competition, the competition is not IAIG versus IAIG but rather an IAIG versus non-IAIGs in its jurisdiction. In this respect, the AM is better at delivering such a level playing field as it shows more of what is happening at the local levels.

Regarding next steps on comparability, Commissioner Anderson said that part of moving into the monitoring period is the data collection, a process that should be getting underway shortly. He said the NAIC appreciates the participation of our IAIGs who will be providing the ICS and/or AM data. Commissioner Anderson added that the IAIS has its first committee meetings at the...
end of February and as part of those meetings, members will be looking at how to go from the overarching approach to the principles that will be out for consultation later in July.

Commissioner Anderson commented that it has been helpful to get interested party views on the number of steps that will be part of the monitoring period and comparability assessment. As part of thinking into the future, he asked whether after the monitoring period when ComFrame is revised to reflect the ICS, should the AM also be integrated into ComFrame. Ian Adamczyk (Prudential) replied that if the AM is found to provide comparable outcomes, it should be included in ComFrame.

5. **Discussed Other Matters**

Commissioner Anderson reminded participants of the next Committee conference call planned on Feb. 3 to review and approve submission of NAIC comments on a draft joint issues paper by the IAIS and Sustainable Insurance Forum (SIF) on the implementation of the Task Force on Climate-related Financial Disclosures (TCFD) recommendations that is currently out for public consultation.

Having no further business, the International Insurance Relations (G) Committee adjourned.
The International Insurance Relations (G) Committee met via conference call Jan. 15, 2020. The following Committee members participated: Gary Anderson, Chair (MA); Bruce R. Ramge, Vice Chair (NE); Ricardo Lara represented by Emma Hirschhorn (CA); Andrew N. Mais (CT); David Altmaier represented by Ray Spudeck (FL); Doug Ommen represented by Carrie Mears (IA); James J. Donelon (LA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by John Rehagen (MO); Marlene Caride (NJ); Andrew Stolfi (OR); Jessica K. Altman (PA); and Hodgen Mainda represented by Trey Hancock (TN).

1. **Approved Submission of NAIC Comments on IAIS Draft Application Paper on Liquidity Risk Management**

Commissioner Anderson explained that the purpose of the conference call is to discuss and approve the submission of NAIC comments on the International Association of Insurance Supervisors (IAIS) draft Application Paper on Liquidity Risk Management, which is out for public consultation.

Commissioner Anderson noted that the IAIS recently revised certain Insurance Core Principles (ICPs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) material as part of the development of the holistic framework for systemic risk in the insurance sector. He said that during this process, the IAIS enhanced the enterprise risk management (ERM) requirements in ICP 16, ERM for Solvency Purposes, to more explicitly address liquidity risk. He added that the IAIS developed this application paper to help provide further guidance on the relevant supervisory material related to liquidity risk management.

Commissioner Anderson said that per the usual NAIC process, the paper was reviewed internally, including by the NAIC’s Financial Stability (EX) Task Force, which resulted in the initial draft NAIC comments that were circulated Dec. 31, 2019, in advance of the conference call. He said no additional input was received from state insurance regulators or interested parties in advance of the conference call.

Ryan Workman (NAIC) provided an overview of the draft NAIC comments on the draft application paper, focusing on substantive comments.

Robert Neill (American Council of Life Insurers—ACLI) said he appreciates the NAIC comments, noting that the ACLI is supportive of the holistic framework overall and hopes it succeeds. However, he said the ACLI views the draft application paper as overly prescriptive in certain areas and plans to submit its own comments to the paper.

Commissioner Caride made a motion, seconded by Commissioner Mais, to approve submission of the NAIC comments (Attachment Four-A). The motion passed.

Commissioner Anderson said the NAIC comments on the draft application paper would be submitted in advance of the Jan. 20 deadline and urged interested parties to submit comments, as well.

2. **Discussed Other Matters**

Commissioner Anderson noted two upcoming Committee conference calls. He said there will be a conference call and in-person meeting Jan. 30 to discuss the aggregation method and the process for assessing comparable outcomes. He said there will be a conference call held Feb. 3 to review and approve submission of NAIC comments on a draft joint issues paper by the IAIS and the Sustainable Insurance Forum (SIF) on the implementation of the Task Force on Climate-related Financial Disclosures (TCFD) recommendations, which is currently out for public consultation. He said registration information and other details for both conference calls would be circulated shortly.

Having no further business, the International Insurance Relations (G) Committee adjourned.
### IAIS Draft Application Paper on Liquidity Risk Management - NAIC Approved Comments

<table>
<thead>
<tr>
<th>Section/Paragraph</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>Before finalizing, formatting and wording of the paper should be reviewed to ensure consistency with other IAIS material and style guides. In various parts of the paper, it needs to be clearer when the text is focusing on groups only versus all insurers. Some specific comments provided address this. Suggest reviewing the use of “any” and “all” as in some instances it may not be feasible or helpful to assess/review/consider/report/etc. any or all things. It may work to simply delete these words in certain places without changing the intended meaning.</td>
</tr>
<tr>
<td>Para 2</td>
<td>Suggest deleting the first sentence as it repeats the first paragraph. Start the second sentence with, “This Paper does not…”</td>
</tr>
<tr>
<td>Para 6</td>
<td>As readers of this paper are not necessarily native English speakers, suggest finding other wording to replace “sudden death” that may better describe the intended point.</td>
</tr>
<tr>
<td>Para 7</td>
<td>Last sentence, to be clearer on what “this” refers to, suggest rewording to: “Having such a view may assist the supervisor…”</td>
</tr>
<tr>
<td>Para 15</td>
<td>Editorial suggestion: “…presented in the this Paper can support the supervisor’s review of the insurers’ frameworks an insurer’s framework.”</td>
</tr>
<tr>
<td>Para 16</td>
<td>First sentence, it is unclear what “general guidelines” refers to. Is the intention more “the supervisor may follow its usual approach for the review of ERM.” Second sentence, as it is not the role of the supervisor to “ensure” the insurer does something itself, suggest: “…the supervisor should assess whether the insurer’s framework adequately considers…”</td>
</tr>
<tr>
<td>Para 17</td>
<td>Suggest making the last sentence a new paragraph as it is not related to the rest of the paragraph.</td>
</tr>
<tr>
<td>Para 18</td>
<td>Use dot bullets and add “whether” to the chapeau so the repetition can be deleted from each bullet.</td>
</tr>
<tr>
<td>Para 20</td>
<td>Penultimate sentence, as it is not the role of the supervisor to “ensure” the insurer does something itself, suggest “The supervisor should assess whether the insurer…” Last sentence, what type of coordination and which stakeholders should be included in testing aspects of the plan? Assume these would be relevant stakeholders, not all. Suggest clarifying.</td>
</tr>
<tr>
<td>Para 22</td>
<td>For consistency with other IAIS material, suggest: “…it should use the powers at its disposal to intervene and require the insurer to take effective and timely remedial action.”</td>
</tr>
<tr>
<td>Section 2</td>
<td>To the extent the guidance in this section refers to governance in general and points covered in existing standards or guidance, it would be helpful to include cross references. Otherwise this paper on liquidity risk management should not provide new or potentially contradictory guidance on governance in general.</td>
</tr>
<tr>
<td>Para 25</td>
<td>Last sentence, as it may not necessarily be the Board that does such a review, suggest: “The Board of the insurer should also periodically review the insurer’s liquidity risk practices…”</td>
</tr>
<tr>
<td>Para 26</td>
<td>As this is an Application Paper, appropriate wording should be used: “The insurer’s Senior Management is responsible for applying the insurer’s risk appetite in pursuit of its strategic objectives. In doing so, Senior Management is”</td>
</tr>
</tbody>
</table>
should be responsible for several key liquidity risk management functions. Most importantly, Senior Management is should be responsible for integrating the insurer’s risk appetite into day-to-day operations.”

Suggest making the two sentences in the middle of the paragraph on groups a separate paragraph: “In a group situation, As such, group-wide level Senior Management should receive clear and timely information from all material legal entities on the entities’ liquidity position and emerging liquidity stress events. The group-wide Senior Management should report periodically to the group Board of Directors or the relevant Board committee on the insurer’s group’s current liquidity risk profile both at a group level and for material legal entities.”

Para 27 For consistency with other IAIS material, suggest: “…the insurer’s Board of Directors or relevant Board Committee, Senior Management and other appropriate personnel. Reports to the insurer’s Board of Directors or relevant Board Committee…”

Para 29 Third sentence, to better distinguish that this is group related: “In a group situation, for material legal entities, this includes, where appropriate, locally developed stresses that reflect local business vulnerabilities and market conditions.”

Para 30 The first sentence is group-specific but it is not clear if the rest of the sentences in this paragraph are as well or else relevant to all insurers. Suggest clarifying.

Para 33 First sentence, it is not clear what an “insurer’s franchise” refers to. Second sentence, it is not clear what assumption is being referred to. Suggest clarifying both.

Para 38 Suggest including “borrowing costs” in the list of features to be taken into account since this may influence policyholders in their decision whether to take a policy loan.

Para 41 If this paragraph is addressing intragroup fungibility, assume the use of “insurer” should be “group”.

Last sentence, to avoid confusion with too many assumptions, suggest: “…will demonstrate that its approach to the assumptions it makes regarding fungibility is are realistic.”

Para 42 Footnote 2, as “closed blocks” can also refer to closed blocks of business, suggest making the footnote less definitional: “Here, “closed blocks” refers to discreet pools of assets…”

Para 43 Last sentence, for clarity, “…includes in the liquidity portfolio…”

Para 49 First sentence, for clarity, “…inclusion in the liquidity portfolio include…”

Para 53 First sentence, suggest deleting “and supervisors” as the supervisor does not decide what is in an insurer’s liquidity portfolio. Additionally, is this paragraph supposed to be under subheading 4.3? The first sentence says there are a number of additional considerations” but then only mentions double counting. It seems this would make more sense starting off the subsection on “Other portfolio considerations”.

Para 54 The second sentence is quite long and rather complex so it is hard to follow. Suggest revising to make it easier to understand.

Para 57 Penultimate sentence, additional amounts could be available for transfer to some entities, but transfer to all entities may not necessarily be helpful – suggest deleting “all”.

Para 60 As the guidance under Section 5 could suggest a rather complex and complicated contingency funding plan, suggest moving up the first sentence of para 60 that notes the use of proportionality given its importance. Suggest to add this sentence after the sentence in para 59 beginning “Such a plan should describe all existing strategies…” and then the subsequent existing sentences remain in para 60.
| Para 61 | To help with readability and clarity, suggest splitting the last sentence into two: “…liquidity stress. For instance, with an idiosyncratic liquidity stress the insurer…” |
| Para 66 | Second sentence, for consistency, “The report should set out…” Third sentence, if the report is for the insurer and supervisor, suggest “…so that any outside person familiar with the subject…” |
| Para 67 | For consistency, “…approved by the Board of Directors or the relevant Board Committee.” |
| Section 6.1 | In the paragraphs in this section, it is sometimes unclear whether it is the insurer’s overall risk appetite statement or the liquidity risk appetite statement that is being referred to. Suggest reviewing and revising as appropriate to clarify. |
| Para 71 | “liquidity risk guidelines” is not used or described elsewhere – assume this is supposed to say “liquidity risk appetite statement”? Similarly, should “liquidity risk management policies” be “liquidity risk management framework”? |
| Section 6.2 | The paragraphs under this subheading do not really address the framework – suggest considering a different subheading that would be more accurate. |
| Para 76 | For consistency with other IAIS material: “Insurance legal entities insurers that are part of a group…”. Additionally, need to review the use of “insurer” in the rest of this paragraph to be clear whether it is actually referring to a group, insurance legal entities or insurers overall. |
| Para 77 | Third bullet, suggest deleting “all” and using “material” as is done in the fourth bullet. |
| Para 81 | Editorial: “To the extent, however, to the extent that elements of the report are incorporated in other material, the supervisor may allow the insurer to satisfy the reporting requirement by reference to those other risk management materials policies and/or the ORSA.” |
| Para 83 | It is not clear why the text following this paragraph is in a blue box. As there are no other blue boxes in the paper, suggest this just be numbered para 84 and formatted normally. |
NAIC/CONSUMER LIAISON COMMITTEE

NAIC/Consumer Liaison Committee Aug. 14, 2020, Minutes ...................................................................................... 13-2
NAIC/Consumer Liaison Committee June 19, 2020, Minutes (Attachment One) .............................................................. 13-7

NAIC/American Indian and Alaska Native Liaison Committee April 29, 2020, Minutes (Attachment Two-A) ...................................... 13-15
The NAIC/Consumer Liaison Committee met via conference call Aug. 14, 2020. The following Liaison Committee members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair (OR); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling (AL); Ricardo Lara (CA); Andrew N. Mais represented by Kurt Swan (CT); Karima M. Woods (DC); Trinidad Navarro represented by Frank Pyle (DE); David Altmaier (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen (IA); Dean L. Cameron (ID); Robert H. Muriel represented by Sara Stanberry (IL); Stephen W. Robertson (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon represented by Ron Henderson (LA); Kathleen A. Birrane (MD); Steve Kelley (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Kathy Shortt (NC); Jon Godfread represented by John Arnold (ND); Bruce R. Ramge (NE); Russel Toal represented by Robert Doucette (NM); Barbara D. Richardson (NV); Jillian Froment represented by Jana Jarrett (OH); Glen Mulready represented by Ron Kreiter (OK); Jessica K. Altman (PA); Raymond G. Farmer represented by Joe Cregan (SC); Kent Sullivan represented by Dan Danzeiser (TX); Scott A. White represented by Don Beatty (VA); Mike Kreidler (WA); and James A. Dodrill (WV). Also participating were: Elizabeth Kelleher Dwyer (RI); Larry D. Dieter (SD); Todd E. Kiser (UT); and Jeff Rude (WY).

1. **Adopted its June 19 and 2019 Fall National Meeting Minutes**

Commissioner Stolfi made a motion, seconded by Commissioner Altman, to adopt the Committee’s June 19 (Attachment One) and Dec. 9, 2019, minutes. The motion passed unanimously.

2. **Heard a Presentation on COVID-19-Related Business Interruption Claims, Coverage Issues, Disputes and Litigation**

Amy Bach (United Policyholders—UP) said Part 1 of the NAIC Property and Casualty Insurance Business Interruption Data Call on premiums and policy information related to COVID-19 was completed in June. She said companies were asked about: 1) whether forced closure orders, infiltration of insured premises, and/or imminent risk of grave harm met the common requirement of direct physical loss of, or damage to, insured property; 2) whether losses due to mandatory closure were covered under civil authority; 3) speculative, yet unknown loss projections or losses in progress possibly leading to trillion dollar loss projections and solvency fears; 4) the number of actual claims filed; 5) the volume of litigation; 6) the number of claims accepted or being processed; 7) the number of claims denied; and 8) litigation outcomes or forums. She said many, if not most, small businesses, especially restaurants, bars, and concert venues that were mandatorily closed by public safety orders, either do not have Business Interruption (BI) coverage or have BI coverage with virus exclusion. She said some higher education institutions have coverage for losses related to communicable diseases, and some large businesses have BI coverage without virus exclusions. She said the current administration has been quoted as saying insurance companies should pay for BI claims. She said one insurer reported spending $19 million in legal expenses defending BI claims. She said the company posted a $41 million underwriting loss, compared with a $48 million profit, which was attributed to $231 million of catastrophe and $65 million of pandemic-related losses and expenses according to Best’s News, July 27, 2020. She said the company’s net income more than doubled to $909 million in the second quarter after the company recognized an $825 million increase in the fair value of equity securities held. However, she said in 2003, Mandarin Oriental hotels in Hong Kong, Malaysia, Singapore and Thailand all lost business due to cancellations and reduced local food and beverage sales stemming from the severe acute respiratory syndrome (SARS) outbreak; and Mandarin Oriental International Limited received $16 million from its insurers to pay for business interruption losses suffered by the group’s hotels in Asia as a result of the SARS outbreak. She asked: 1) what regulators were told by insurers at the time that the 2006 Insurance Services Office (ISO) virus exclusion was added; 2) whether there should have been a rate decrease when the virus exclusion was adopted if insurers paid out on SARS claims; and 3) whether current assertions by insurers that pandemic losses were never covered are contradicted by the fact that SARS claims were paid in 2003. She also asked what insurers told business policyholders when policies were renewed with this new exclusion, but without any rate reduction. She said most policies do not mention pandemics nor government closures via public safety orders. She said the COVID-19 Coverage Litigation Tracker at [https://cclt.law.upenn.edu](https://cclt.law.upenn.edu/) indicated that filings peaked the week of May 4, with a cumulative total on July 31 of 312 cases being brought against three insurers with business income, extra expense and civil authority being the relief most frequently sought.
Commissioner Conway said COVID-19 is probably not going to be the last pandemic seen. He asked how the industry can make sure that coverage is available when the next one hits. Ms. Bach said her hope is that the entrepreneurial spirit would kick in to make that happen. She said some businesses will request full coverage, but most will want at least some coverage.

3. **Heard a Presentation on Digital Claims Handling and Photo Estimating**

Erica Eversman (Automotive Education & Policy Institute—AEPI) said photo estimating has serious side effects. She said the advantages are that it is fast and easy, putting the insurer on notice of claim immediately and giving the company the opportunity to provide consumers with assistance, should the need arise. Another advantage is that it allows the consumer to file a claim without personal contact, as required during a pandemic. Ms. Eversman said the disadvantages are that it is substantially under-reserving because photos only show what the consumer thinks looks damaged. She said consumers do not know what is important to capture in a photo. She said insurers are using desk reviewers to evaluate such claims, and only the insurer knows if the initial claim payment is being underestimated; the consumer does not. She said many consumers do not have their vehicles repaired, so they are not receiving the full benefits owed to them under the final claim settlement. She said this creates windfall profits for insurers because consumers just do not have the ability to protect themselves. She said there is confusion regarding the remedy elected because auto insurers do not inform consumers of the remedy elected under the policy. She said photo estimating suggests payment of loss in money remedy; but once a vehicle is in repair, the insurer wants involvement in the repair decisions being made. She said there is also insurer confusion over what election to repair truly means; however, there is nothing in an auto policy that allows an insurer to blend remedies or change a remedy election mid-claim. She said state laws may preclude photo estimating; and due to the pandemic, states have suspended requirements of in-person adjustment. She said consumers are entitled to have in-person claims adjustment, unless the insurer agrees that it is only paying the full loss in money and has no need or right to review the damage. She said digital claims handling makes it is easy to transfer adjustment activity to an adjuster or appraiser not licensed in the state. She said out-sourcing adjustments to third-party adjusters (TPAs) not licensed in the state leads to cross-border claims adjusting and a lack of accountability. She said consumers are told by TPAs that only insurers can provide estimates. She said when the consumer contacts the insurer, the consumer is told that only the TPA can provide such an estimate. She recommended that state insurance regulators: 1) require insurers to notify consumers that photo estimating will likely lead to them missing substantial damage that needs to be repaired; 2) alert consumers that even if the consumer chooses not to repair the vehicle now, the consumer can still have it repaired at later date; and 3) insurers offering photo estimating are required to over-reserve the claim by a specific percentage (e.g., 100–1,000%).

Commissioner Conway asked under what circumstances over-reserving of 50%, 100% or 1,000% would be appropriate over a photo estimate. Ms. Eversman said these percentages were derived from national surveys of actual consumer auto claims and payments. Commissioner Dodrill asked how additional damage, such as rust, might be addressed if a consumer decided not to have their vehicle repaired immediately following an accident, but to have it repaired later. Ms. Eversman said if the wait was desired due to the COVID-19 pandemic, the insurer and the consumer would have to address it later, with the insurer required to let consumers know that the initial payment check would not mean that the consumer cannot bring the vehicle in for a full estimate at a later date and receive more money over the initial claim amount received.

4. **Heard a Presentation Proposing a Model Law to Modernize Insurance Rate and Form Regulation that Would Address Algorithmic Bias Plans Used on Patients and Markets**

Birny Birnbaum (Center for Economic Justice—CEJ) said following the murder of George Floyd, insurers and state insurance regulators pledged to fight systemic racism and inherent bias in insurance. He said understanding the history of such bias would help industry to identify the actions needed to address this issue in insurance going forward. He said there has been a lack of minority voices and experience in insurer and state insurance regulator leadership, as well as an imbalance between consumer and insurer or producer access to critical regulatory and legislative processes. He said trade associations have been fighting to protect practices that reflect and perpetuate systemic racism in insurance. He also said regulatory authorities and infrastructure had been failing to keep up with seismic changes in insurer practices. He said to address systemic racism and modernize insurance market regulation, a model law should include: 1) reinforcement of risk pooling and cost-based practices as the foundation of insurance; 2) ensuring that consumers, generally, and minority consumers, particularly, have a strong voice in regulatory processes; 3) defining fair and unfair discrimination in insurance, including proxy discrimination against protected classes; 4) requiring insurers and state insurance regulators to proactively identify and minimize proxy discrimination against protected classes and provide safe harbors for insurers for such actions; 5) providing meaningful oversight by state insurance regulators of insurers’ use of data, algorithms and artificial intelligence (AI), including modernizing the definition and oversight of advisory organizations and statistical agents; 6) improving consumer control over their data, including Fair Credit Reporting Act (FCRA)-type protections for all personal consumer information used by insurers; and 7) improving competition in insurance markets with more accessible and actionable information to consumers. He said intentional discrimination is that which leads to disparate treatment, and proxy discrimination is that which leads to disparate impact. He also said intentional
discrimination and proxy discrimination can be addressed by regulatory oversight and statistical or technical treatment within the cost-based framework of insurance. He said systemic injustice means that systemic racism and inherent bias have so pervaded a particular community, that insurance costs are inseparable from the class characteristic. He said addressing this type of unfair discrimination by prohibiting racial discrimination is the role of legislators. He said fair discrimination means adherence to cost-based practices for pricing, claims settlement, and other aspects of insurer operations so consumers who are similarly situated are treated in a like manner. He said for pricing, including underwriting, rating, and payment plan eligibility, fair discrimination means charging the same rates and payment options to consumers posing similar expected costs for the period of coverage. He said rates should also not be excessive or inadequate. He said fair discrimination in claim settlement means similar claims outcomes for similar claims.

Mr. Birnbaum said unfair discrimination means treating similarly situated consumers differently without a justification based on expected claim costs or expenses associated with the transfer of risk for the period of coverage provided or claim presented to the insurer; based on a protected class; or the use of any data or characteristic of the consumer, vehicle, property, or natural or built environment unless approved by the commissioner. He said a protected class is consumers grouped together based on race, religion, national origin or another characteristic. He said discriminating on the basis of disparate treatment means that the outcomes are determined by the explicit application of a protected class characteristic. He said disparate impact or proxy discrimination means that the outcomes have a disproportionate impact on a protected class or practices that serve as a proxy for disparate treatment. He recommended that state insurance regulators strengthen consumer voices within the regulatory processes by establishing a public agency dedicated to representing insurance consumers before the department of insurance (DOI) and legislature and fund the Bureau of the Insurance Consumer Advocate (BICA) through a $0.10 to $0.25 process by establishing a public agency dedicated to representing insurance consumers before the department of insurance (DOI) and legislature and fund the Bureau of the Insurance Consumer Advocate (BICA) through a $0.10 to $0.25—depending on size of the state—assessment on every individual policy and certificate under a group or master policy issued in the state. He said BICA has standing to intervene on behalf of consumers in any insurance regulatory proceeding, including rulemaking and review of rate and form filings. He said BICA has access to non-public information received by the DOI subject to the same confidentiality as the DOI and related to the purposes of BICA. He said the Director of BICA would be selected by the Governor from a list of candidates prepared by an advisory committee of individuals engaged in consumer advocacy and would have a five-year term. He also recommended additional oversight of data, algorithms and advisory organizations via routine reporting by insurers of data sources, data uses, data vendors, and providers of algorithms. He said the definitions of advisory organization, statistical agent and statistical plan should be modernized to create a level playing field for the providers of algorithms used by insurers for marketing, pricing, claims settlement and anti-fraud prevention. He said advisory organization should be required to file algorithms so commissioners will have the authority to permit use of new data sources, algorithms and AI within a controlled environment for the purposes of data creation, data collection and evaluation. He recommended FCRA-type consumer protections for all consumer data used by insurers, such as the disclosure of data to be used, the source of data, the uses of data permission, consumer consent, notice of adverse action, consumer access to their own data, the ability to dispute and correct incorrect data, and the ability to request reconsideration based on corrected data; requiring the destruction of consumer data by the insurer when the insurer no longer needs it for business purposes; limiting the use of consumer data to stated and disclosed purposes; opt-in or consent for any purpose, with particular attention to consumer-generated data from devices used for insurance exposure and loss assessment and prevention.

Commissioner Conway asked if stress testing would be used to determine how the safe harbor would play into his recommendations. Mr. Birnbaum said he was looking for a more holistic approach, and it would be determined by responses to advisory organization examinations via proxy discrimination because the test is on the algorithm. Commissioner Conway asked if a penalty or restitution is a concern, but he said he would address his other questions with Mr. Birnbaum offline. Commissioner Ommen said state insurance regulators in Iowa and other states already had the authority and tools, such as the Unfair Trade Law and Federal Trade Commission, to regulate discrimination and account for the balance of injury. He asked Mr. Birnbaum why he thought that state insurance regulators need a new model to do it. Mr. Birnbaum said he was not recommending a trade-off of racism for risk pricing, and a model is needed because so many laws exist that a holistic approach is needed to address them all in the same model.

5. Heard a Presentation on Improving Equity in Health Care Access

Deborah Darcy (American Kidney Fund—AKF) said data from the U.S. Centers for Disease Control and Prevention (CDC) shows a disparate impact of COVID-19 among cases with known ethnicity and race. She said Hispanic persons represent 18% of the U.S. population but 33% of COVID-19 cases; black persons represent 13% of the population but 22% of COVID-19 cases; American Indian and Alaska Native persons represent 0.7% of the population but 1.3% of COVID-19 cases. She said there is also evidence of health disparities due to COVID-19 related to underlying illnesses, such as hypertension. She said hypertension is higher also with 40.3% of black persons, 27.8% of white persons, 25% of Asian persons, and 27.8% of Hispanic persons reported as having it. She said 21% of COVID-19 fatalities were individuals with hypertension, and 67% had circulatory diseases. In a nutshell, she said equitable access to coverage and care for people of color, people with disabilities,
people who are LGBTQ+, and people for whom English is not the first language means: 1) access to health insurance coverage with affordable premiums and cost sharing; and 2) access to providers within reasonable geographic proximity, without physical or language barriers, and who are able to provide culturally competent care.

Ashley Blackburn (Community Catalyst—CC) said the closing of rural hospitals left many geographic areas, most of them in the south and in lower income areas, without specialty care or other languages spoken, and it has rendered access to care nearly impossible. She said this problem was compounded during the pandemic due to the remaining hospitals at or over capacity with COVID-19 cases for weeks.

Wayne Turner (National Health Law Program—NHLP) said Section 1557 is the nondiscrimination portion of the federal Affordable Care Act (ACA) that applies to all health care plans. He said the current administration removed this section in June, exempting most of the nondiscrimination language via rule change. He said this did not change the law, and there are currently many lawsuits pending. He said the states that have taken positive actions to date include California, Colorado and Illinois. He also said America’s Health Insurance Plans (AHIP) has also helped to fill the gap. He said telehealth can help fill the gap in health inequity by increasing access for underserved communities and providing a convenient form of care, particularly for those with limited transportation access, work obligations and childcare responsibilities. However, he said there are still barriers to telehealth due to a lack of internet and broadband access. He said the best practices of some states include: 1) reimbursing telehealth service at the same rate as comparable in-person services (Colorado); 2) no cost-sharing for telehealth services during COVID-19 (Colorado); 3) requiring health insurers to allow all in-network providers to deliver clinically appropriate, medically necessary covered services via telehealth (New Hampshire); 4) allowing the home or any place to be the originating site—i.e., where the patient is located—(NC) or the distant site—i.e., where provider is located—(Colorado); 5) reimbursing for audio-only phone services (Arizona, Colorado, Connecticut and Kansas); 6) expanding the list of services or providers who can participate in telehealth and be reimbursed (Alabama, Colorado and Mississippi); and 7) enrolling consumers in Medicaid via telehealth (California).

Commissioner Lara said California offers health care coverage to everyone, including immigrants. He said it is discriminatory to forbid immigrants from paying into the ACA. He also said innovation under a Section 1332 Waiver is needed to allow such payment, as it could save the states money because immigrants have the money and are willing to pay into the ACA. Immigrants are keeping the economy going and making money delivering goods, picking produce, etc. Commissioner Altman asked about the role of network adequacy and culturally competent care. Ms. Blackburn said in past years, NAIC consumer representatives have done lots of work on best practices for the states on network adequacy, and she does not know how to include this other than to look at each state. Mr. Turner recommended looking at what California had done as a starting point. Commissioner Stolfi said Oregon is working on this issue now, but it has not found much on it, so it wants to do more offline.

6. Heard a Presentation on Addressing the Needs of Patients and Consumers in the COVID-19 Pandemic

Amy Killelea (National Alliance of State and Territorial AIDS Directors—NASTAD) said there are many ways to address the needs of patients and consumers, but she will focus on utilization management (UM). She said UM techniques include step therapy, prior authorization, cost-sharing tiers, quantity limits and pharmacy restrictions. She said the principles used to govern UM regulation are to: 1) ground UM decisions in clinical guidelines or evidence; 2) streamline and make transparent UM clinical reviews and appeals processes; 3) promote market competition through access to cost-effective medications; 4) create safeguards for affordable access in the case of market failure (e.g., limited competition); and 5) ensure uninterrupted access to treatment. She said patient protections have been critical to ensure uninterrupted access to medications during the pandemic. She said a deep dive into human immunodeficiency virus (HIV) pre-exposure prophylaxis (PrEP) indicated that UM can be arbitrary or clinically based depending on which state is selected with higher incidents of prior authorization required in the southeast and midwest. She said different levels of prior authorization are used for different PREP medications with a lighter prior authorization required for generic brands when they are available. She said she is not advocating for free and open access to name brand PREP medications, but rather for reasonable prior authorization. She said reasonable prior authorization would mean no prior authorization on TRUVADA or tenofovir/emtricitabine (TDF/FTC); no prior authorization to identify risk for HIV; and light prior authorization on DESCOVY to ensure that the individual has the clinical markers making TDF/FTC not clinically indicated (e.g., bone and kidney disease). She said considerations for state insurance regulators would be to engage a range of stakeholders on solutions to cost and access; collect data from issuers on prior authorization, including frequency and timing of approvals and denials; require regular review of prior authorization criteria and issue guidance for issuers, particularly for conditions that are vulnerable to discriminatory plan design (e.g., PrEP U.S. Preventive Services Task Force [USPSTF] Bulletins); and ensure continued access to medications during public health emergencies (e.g., waive certain issuer restrictions for the duration of the emergency). She said recommendations for state insurance regulators and lawmakers to protect consumers during the COVID-19 pandemic include uninterrupted access to affordable insurance coverage, affordable COVID-19 and non-COVID-19 services, forward policies that mitigate health disparities and recognize the disproportionate
impact of COVID-19 on communities of color, and affordable access to LTC and supports; and developing comprehensive consumer education materials about COVID-19.

Commissioner Conway said a study done in late 2019 by New York on case management and health equity indicated that disparate racial impact for one group might be of value in a study of this issue. Ms. Killelea said she would look into it, and she noted that in the south, the group most discriminated against was young black and Latino gay men. She said prioritizing generic medications would help alleviate discrimination and disparate access to care.

7. Heard a Presentation on COBRA, Medicare and Model #120

Bonnie Burns (California Health Advocates—CHA) said the Coordination of Benefits Model Regulation (#120) unfairly penalizes Medicare beneficiaries, and only Medicare beneficiaries, by allowing and facilitating phantom benefits. She said the Medicare Part B exception to coordination of benefits within this act should be changed to “[a] person is eligible but not enrolled for benefits in Part B of Medicare.” She said state insurance regulators should: 1) remove unfair Medicare penalties from Model #120 by deleting phantom benefit language so it does not allow the same application to any other existing health benefits; 2) encourage the federal Centers for Medicare & Medicaid Services (CMS) to revise Medicare materials to include a clear explanation of Medicare and Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA) decisions; 3) encourage COBRA carriers to use updated COBRA notices; and 4) coordinate anti-fraud efforts with state Senior Health Insurance Information Programs (SHIIPs) and Senior Medicare Patrols (SMPs).

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The NAIC/Consumer Liaison Committee met via conference call June 19, 2020. The following Liaison Committee members participated: Michael Conway, Chair (CO); Andrew R. Stolfi, Vice Chair (OR); Lori K. Wing-Heier represented by Anna Latham (AK); Jim L. Ridling represented by Mark Fowler (AL); Ricardo Lara (CA); Andrew N. Mais (CT); Karima M. Woods (DC); Trinidad Navarro represented by Frank Pyle (DE); David Altmaier (FL); Doug Ommen (IA); Robert H. Muriel represented by Lauren Peters (IL); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon represented by Ron Henderson (LA); Kathleen A. Birrane represented by Joy Hatchette (MD); Steve Kelley (MN); Chlora Lindley-Myers (MO); Mike Chaney represented by Ryan Blakeney (MS); Mike Causey represented by Tracy Beihm and Kathy Shortt (NC); Jon Godfrey (ND); Bruce R. Ramge (NE); Russel Toal represented by Paige Duhameel (NM); Linda A. Lacey represented by Sumit Sud (NY); Jillian Froment represented by Jana Jarrett (OH); Glen Mulready (OK); Jessica K. Altman (PA); Kent Sullivan (TX); Scott A. White represented by Don Beatty (VA); Mike Kreidler (WA); and James A. Dodrill (WV). Also participating were: Yada Horace, Gina Hunt and Steve Ostlund (AL); Alan McClain (AR); Vanessa Darrah and Tom Zuppan (AZ); Natalie Brutton-Yenovkian, Bryant Henley, Lucy Jabourian and Camilo Pizarro (CA); Peg Brown, Kate Harris and Debra Judy (CO); Kurt Swan (CT); Howard Liebers, Flavian Marwa and Sharon Shipp (DC); Janice Davis, Carolyn Diggins, Becky Griffith, John Reilly and Chris Struk (FL); Chance McElhaney (IA); LeAnn Crow (KS); Shawn Boggs (KY); Jackie Horgan (MA); Renee Campbell (MI); Grace Arnold, Peter Brickwedge, Martin Fleischhacker, Jonathan Kelly, T.J. Patton and Matthew Vatter (MN); Carrie Couch (MO); John Arnold, Janelle Middlestead and Johnny Palsgaaef (ND); Martin Swanson (NE); Denise Lamy and Christopher Nicolopoulos (NH); Vienna Janakieva (NM); Winston Berkman-Breen, Avani Shah, and My Chi To (NY); Tynesia Dorsey (OH); Jim Marshall and Mike Rhoads (OK); Larry D. Deiter (SD); Jennifer Ramcharan and Vickie Trice (TN); Doug Danzeiser (TX); Todd E. Kiser (UT); Mike Beavers, Julie Blauvelt, Katie C. Johnson and Rebecca Nichols (VA); Todd Dixon and Hailey Hamilton (WA); and Mark Afable (WI).

1. **Heard Opening Remarks**

Commissioner Conway said in acknowledgement of Juneteenth and the death of George Floyd, he and Commissioner Stolfi have given considerable thought toward cancelling or postponing this meeting. In the end, Commissioner Conway said they decided to move forward with the meeting due to the critical nature of the COVID-19 subject matter during the global pandemic. He said some insurers voluntarily reduced their premiums and gave consumers premium refunds; however, he said not all insurers are acting so responsibly.

2. **Observed a Presentation on Consumer Protection Issues Resulting from, or Heightened by, COVID-19 and Measures to Reduce or Flatten Infections**

Birnbaum (Center for Economic Justice—CEJ) said state insurance regulators have responded to the pandemic with many important pro-consumer actions. However, he said personal auto insurance rates went from meeting statutory standards to becoming extremely excessive overnight due to quarantines. He said when vehicle miles traveled declined by 50–90% from late March through April, personal auto claims dropped dramatically because such claims are directly related to the number of vehicles on the road. He said empty roads meant far fewer claims. He said while some state insurance regulators encouraged insurers to provide relief, only three states have ordered relief to date. He also said state insurance regulators have not provided any guidance on the amount or method of relief. For example, the promise of relief upon policy renewal made by a few insurers does not provide relief for current premiums, and it does not get relief to consumers now when they need it most. Mr. Birnbaum said the pandemic has revealed the inadequacy of routine insurance regulatory data collection for market monitoring and market analysis. He said the most recent independent personal auto insurance data available to state insurance regulators is 2017 data, as published in the 2020 Auto Insurance Database. He said the absence of timely market regulation data contrasts sharply with detailed financial data that is reported frequently. He said the rapid transition to digital business in insurance has generally not resulted in consumer protection safeguards in two key areas—Algorithmic Bias and Dark Patterns—which are digital designs created to benefit the business, not the user. He said state insurance regulators believe they have the authority to address proxy discrimination against protected classes, NAIC model laws, and state statutes that do not explicitly recognize disparate impact against protected classes as unfair discrimination. He said there are no requirements for state insurance regulators and insurers to identify and minimize such proxy discrimination within the overall cost-based pricing framework. He said the time to
explicitly recognize disparate impact against protected classes as unfair discrimination in insurance is long past due. He said regulatory modernization requires this recognition plus guidance for state insurance regulators and insurers on how to identify and minimize such disparate impact and safe harbors for insurers who follow best practices. He said paper disclosures are not effective when digitalized, and they promote misleading marketing in volatile markets like a pandemic. He said the pandemic has brought volatility to financial markets, causing rapid swings in the price of financial instruments, which is challenging to consumers because it leaves consumers vulnerable to misleading promises about the cost and performance of financial products. He said life insurers have moved their focus from death benefit products to investment type products, which are sold with illustrations that are used to show applicants and policyholders how the products they are considering purchasing operate. He said misleading illustrations have been a long-standing problem in the life insurance and annuity markets. He also said NAIC model revisions continue to permit illustrations of risky investments without risk and the ability to borrow money from the policy without having to pay it back because the policy accumulates such great returns. He said significant re-engineering of the illustration regime for annuities and life insurance is needed. He said the design of illustrations must be consumer-driven, utilizing best practices in consumer information, education and disclosure, including consumer testing. He said the rapid completion and state implementation of the Lender-Placed Insurance Home Model Law, along with increased scrutiny of credit-related insurance market outcomes for consumers, is urgently needed. He said states insurance regulators need to identify risk classifications rendered unreliable by the pandemic and prohibit adverse actions until the reliability can be established.

Brendan Bridgeland (Center for Insurance Research—CIR) said life insurance applications containing questions related to COVID-19 are being filed with state insurance regulators. He said these questions are not uniform; many are vague and unlikely to solicit useful information. He said some of these questions inquire about antibody tests, despite these tests being shown to be unreliable. He said questions are also being asked about COVID-19 diagnosis in extended family members, regardless of whether they reside in the same household or country. He said coverage may be denied based on the answers to these extremely vague questions, leading to unfair and arbitrary underwriting. He said consumers may be restricted to Temporary Life Insurance Agreements instead of full coverage and permitting vague and irrelevant questions may invite post-claims underwriting, which is particularly problematic when the applicant is deceased and surviving partners or children are under duress. He said state insurance regulators should be evaluating COVID-19-related insurance questions, especially those for long-term care insurance (LTCI), and making them more uniform.

Commissioner Conway asked how stress tests should be done. Mr. Birnbaum said consumer outcome should be monitored using timely data on a granular level to determine its accuracy. He said NAIC data is from 2017, so it is not timely, leading to proxy discrimination in algorithms. He also said state insurance regulators need to act to minimize the effect of negative factors, especially those related to criminal history or biased data, used in correlation to data on consumers in a protected class set.

Commissioner Mais thanked Mr. Birnbaum for keeping these issues in the forefront for regulators. He suggested many states had attempted to address these issues on an individual basis. He said New York Circular No. 1 tried to address the issue of disparate impact last year. However, Commissioner Mais said perhaps not relying on individual states, but rather a NAIC model could be created as an application to address disparate impact; or perhaps a general data pool. Mr. Birnbaum suggested the NAIC develop a model law or revise existing procedures that insurers use to demonstrate compliance with a safe harbor for companies using the guidelines and additional data collection to determine if disparate impact is occurring. He said the most robust data collection, much like financial regulation, should be used for market regulation. Commissioner Conway said a couple of workstreams are already in place within the NAIC framework into which this issue would naturally fall. He said the NAIC develop a model law or revise existing procedures that insurers use to demonstrate compliance with a safe harbor for insurers who follow best practices. He said paper disclosures are not effective when digitalized, and they promote misleading marketing in volatile markets like a pandemic. He said the pandemic has brought volatility to financial markets, causing rapid swings in the price of financial instruments, which is challenging to consumers because it leaves consumers vulnerable to misleading promises about the cost and performance of financial products. He said life insurers have moved their focus from death benefit products to investment type products, which are sold with illustrations that are used to show applicants and policyholders how the products they are considering purchasing operate. He said misleading illustrations have been a long-standing problem in the life insurance and annuity markets. He also said NAIC model revisions continue to permit illustrations of risky investments without risk and the ability to borrow money from the policy without having to pay it back because the policy accumulates such great returns. He said significant re-engineering of the illustration regime for annuities and life insurance is needed. He said the design of illustrations must be consumer-driven, utilizing best practices in consumer information, education and disclosure, including consumer testing. He said the rapid completion and state implementation of the Lender-Placed Insurance Home Model Law, along with increased scrutiny of credit-related insurance market outcomes for consumers, is urgently needed. He said states insurance regulators need to identify risk classifications rendered unreliable by the pandemic and prohibit adverse actions until the reliability can be established.

3. Heard a Presentation on the Importance of High-Quality, Affordable Coverage During the Crisis: COVID-19 Testing

Amy Killelea (National Alliance of State and Territorial AIDS Directors—NASTAD) said COVID-19 testing is a rapidly evolving landscape wherein categorization is still underway. She said there are four types of diagnostic tests that detect active infection—Polymerase Chain Reaction (PCR), which is the most accurate; PCR rapid; PCR home; and Antigen—and one type of serologic, or antibody, test that has limited accuracy. She said COVID-19 testing guidelines by the U.S. Centers for Disease Control and Protection (CDC) are also evolving as a high priority for hospitalized patients with symptoms; healthcare facility workers, workers in congregate living settings, and first responders with symptoms; residents in long-term care (LTC) facilities or other congregate living settings, including prisons and shelters, with symptoms; persons with symptoms of potential COVID-19 infection; and persons without symptoms who are prioritized by health departments or clinicians, for any reason (e.g., public health monitoring, sentinel surveillance, etc.). She said many questions about testing remain unanswered, such as what the criteria for asymptomatic testing are, what recommendations employers should follow to safely reopen workplaces (e.g.,
frequency of serial testing), and what constitutes “medically necessary” testing. She said the COVID-19 crisis highlights another important question of who pays for testing—private insurance or public health—which usually brings the issue of medically necessary diagnoses used by private insurance carriers versus surveillance used by public health authorities into question. She said there is no such thing as surveillance testing in the payor system. She said insurance coverage mandates include the Families First Coronavirus Response Act (FFCRA) and the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) requirements for Medicaid, Medicare and private insurance to cover diagnostic COVID-19 testing, including serologic tests, without cost sharing. She said government public health funding includes $10 billion in Epidemiology and Laboratory Capacity (ELC) funding to health departments to ramp up testing, contact tracing and surveillance. She said uninsured provider compensation includes $3 billion across several stimulus packages to reimburse providers for COVID-19 testing for uninsured individuals. She said the human immunodeficiency virus (HIV) and hepatitis testing case study should be used as a lens to look at COVID-19 testing issues. She said routine HIV and hepatitis C testing must be covered without cost sharing—U.S. Preventive Services Task Force (USPSTF) Grade A and B, respectively—where coverage is not based on risk, but on age cohorts. She said antibody testing is generally covered, as it helps to guide treatment decisions. She said health department HIV and hepatitis programs: 1) are encouraged to bill third parties for testing built from the immunization “Billables Project”; 2) are focused on billing in clinical settings; and 3) allow health departments to target resources by focusing on population testing in community-based settings. She said considerations for state insurance regulators are to: 1) issue guidance for issuers to apply transparent “medically necessary” criteria to testing coverage; 2) protect consumers from surprise out-of-network lab bills by prohibiting balance billing; and 3) work with public health programs in their state to ensure coordinated response across agencies.

Commissioner Conway asked about pop-up testing for which cities could split the cost of set up without a payment infrastructure. Ms. Killelea said drive through testing had been set up by public health and the federal government. She said urgent care in parking lots is more difficult to determine, but it should be paid by insurance coverage. Commissioner Conway asked how Medicaid would determine who pays. Ms. Killelea said there should be extra flexibility under the federal Centers for Medicare & Medicaid Services (CMS) to cover the uninsured in the same way as Medicaid. Harold Ting (Healthcare Consumer Advocate) said a change should be made to nursing home coverage to address testing due to the COVID-19 crisis. Katie Keith (Out2Enroll) asked if companies had asked for more public coverage. Ms. Killelea said she was not aware of any instances where that had occurred.

4. Heard a Presentation on the Impact of COVID-19 on Vulnerable Populations and Specific Issues for Older Adults

Ashley Blackburn (Community Catalyst) said according to the COVID-19 Tracking Project, there is a disproportionate impact due to the COVID-19 pandemic in the more vulnerable black and Native American communities where 23,251 black lives have been lost. She said black people account for 13% of the population and 24% of the deaths where race is known, which means the percentage of cases are two times higher than their population share. She said American Indian Studies at the University of California, Los Angeles (UCLA) illustrated a disparate impact in tribal nations and states with a total of 200 or more reported cases per 100,000 in population. She said the framework for solutions should include: 1) data collection disaggregated by race, ethnicity, gender identity, sexual orientation, age, socioeconomic status, disability status and county; 2) coverage and affordability with coverage expansion for the uninsured and coverage for treatment without cost sharing; 3) access and quality with equal access to testing/treatment, public health information provided in their primary language, and expanded access to telehealth services; and 4) Social Determinants of Health (SDOH) to address food and housing security and reduce incarceration. She said state insurance regulators should coordinate with state commissions or workgroups charged with centering equity in COVID-19 response efforts like Michigan, New Jersey and Washington; evaluate their community connections; create feedback loops to help them understand problems; and improve data collection and transparency by ensuring that the data being collected informs a more equitable response in their state.

Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) said due to COVID-19, there has been a decline in cancer screenings since March due to the public delaying most of their regular screening appointments. She said delayed cancer screenings equals undiagnosed cancer, which leads to more deaths attributable to cancer. She said colorectal cancer is the second leading cause of death for men and women combined. She said between mid-March and mid-April, the number of colonoscopies fell by nearly 90%. She said the United States Preventive Services Task Force- USPSTF, which is an independent panel of experts in primary care and prevention that systematically reviews the evidence of effectiveness and develops recommendations for clinical preventive services, recommends colonoscopy and at-home non-invasive screening tests for colorectal cancer. She said patients who receive a positive result from a non-invasive home test should receive a follow-up colonoscopy to complete the colon cancer screening colonoscopy. She said the problem is that patients can face cost sharing
associated with the follow-up colonoscopy that could prohibit them from completing the screening process. As a solution, she recommends that state insurance departments should make it clear to the public and industry through regulations or bulletins that insurers should waive cost sharing for invasive follow-up colonoscopies.

Bonnie Burns (California Health Advocates) said there has been a significant increase in the number of employed elders. In fact, she said 2019 recorded the highest number of working elders in the last 55 years, with pre-COVID-19 employment projections indicating that one-third of Americans age 65–70 would be employed by 2024. She said the employment numbers after COVID-19 resembled those in 2008 with Americans age 55 and over being the last hired and the first losing their jobs or being furloughed. She said while this segment of the population is eligible for Medicare, there is widespread ignorance about it due to no federal notice, which led to failure to enroll. She said there is also a disconnect between Social Security and Medicare, because Medicare eligibility is automatic at age 65, but there is no federal notice or automatic Medicare enrollment. However, full retirement for Social Security is roughly age 67 and may be higher or lower depending on the person’s date of birth. Ms. Burns said those who are disabled are automatically enrolled after receiving 24 months of Social Security Disability Income payments.

Ms. Burns said the reason why employed seniors are ignoring Medicare while they are working is because they do not know that their eligibility began at age 65, so they are waiting until they are eligible for Social Security retirement benefits. She said many consumers think that since they already have health coverage through their employer, they should wait until their employment ends so they do not duplicate employer costs or benefits and do not incur additional premium payments. They are completely unaware of Medicare eligibility rules. Ms. Burns said when it comes to employer health benefits and Medicare, Medicare Secondary Payer (MSP) rules apply to Employer Group Health Plans (EGHP) in that employer health benefits are primary: 1) at the employee’s age 65+ if the employer has 20 or more employees; 2) if the employee is disabled and the employer has 100 or more employees; and 3) for the first 30 months of End Stage Renal Disease (ESRD), regardless of the employer’s size. She said Medicare is secondary only while someone is actively employed according to the Internal Revenue Service (IRS) rules; and for smaller employers, MSP rules do not apply, so Medicare is the primary payor and the employer health plan is secondary.

Ms. Burns said MSP rules also do not apply to the continuation of benefits under the Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA), except during a 30-month coordination period for people with ESRD when COBRA is primary. She said MSP only applies to those actively employed, and Medicare is always primary to COBRA benefits, even if the person is not enrolled for Medicare Part B benefits; i.e., phantom benefits. She also said such mistakenly paid primary benefits are recoverable by a COBRA carrier.

Ms. Burns said the Coordination of Benefits Model Regulation (#120) unfairly penalizes Medicare beneficiaries, and only Medicare beneficiaries, by allowing and facilitating phantom benefits. She said the Medicare Part B exception to coordination of benefits within this act should be changed to, “A person is eligible but not enrolled for benefits in Part B of Medicare.” She said state insurance regulators should: 1) remove unfair Medicare penalties from Model #120 by deleting phantom benefit language so it does not allow the same application to any other existing health benefits; 2) encourage CMS to revise Medicare materials to include a clear explanation of Medicare and COBRA decisions; 3) encourage COBRA carriers to use updated COBRA notices; and 4) coordinate anti-fraud efforts with state Senior Health Insurance Information Programs (SHIIPs) and Senior Medicare Patrols (SMPs).

Thomas Callahan (Massachusetts Affordable Housing Alliance) asked Ms. Blackburn if companies should be using their reserves for investments that address racial equity, such as affordable housing. Ms. Blackburn said UnitedHealthcare is providing affordable housing with onsite healthcare and treatment at this time.

5. **Heard a Presentation on Additional Areas for State Leadership and Consumer Protection**

Lucy Culp (Leukemia & Lymphoma Society) said the COVID-19 pandemic has served to highlight the importance of comprehensive health care plans and emphasize the lack of coverage provided along with the extremely high cost sharing evidenced in short-term limited-duration (STLD) plans—i.e., $45,000 versus $6,000 for comprehensive plans—in the first six months of lymphoma treatment. She said the marketing and misrepresentation of the benefits provided by such plans via cold calls and the re-routing of online consumer searches to STLD plans from HealthCare.gov continuing despite regulatory actions in some states intended to stop it. She said state insurance regulators need to ensure that consumers can afford the coverage
and the care they need by banning surprise medical bills, not just through COVID-19 but on an ongoing basis, and improving premium affordability through reinsurance, additional subsidies, and more premium support.

Ms. Keith said there is a need for permanent solutions, such as providing companies with the flexibility to meet consumers’ needs through special enrollment periods, premium grace periods, expanded access to telehealth, waiving prior authorization requirements, and ensuring access to medications. She said in looking to the 2021 rate review process, state insurance regulators should look at the record-high minimum loss ratio (MLR) rebates in the past two years, be concerned about the impact of COVID-19 on rates, and remember that rates should be informed by real-world experience. She said there is a need for more consumer education and support. She said insurance departments and other state officials, as trusted sources of information, should do more outreach and education, as it is even more critical now than ever before considering the increase in fraudulent activity surrounding COVID-19.

Commissioner Conway said Caitlin Westerson had successfully led the consumer outreach and education efforts in Colorado about STLD plans and surprise billing. Commissioner Altman said several good points were made with telehealth spurring the conversation, and she asked how they would recommend working with legislators on it long-term. Ms. Keith said the Health Insurance Portability and Accessibility Act of 1996 (HIPAA) is a big part of the question, especially in rural areas where issues it will address. She said the real concern is that those who are immune compromised still desperately need telehealth due to the pandemic. Commissioner Conway said he is hopeful that CMS will expand it as needed.

6. **Heard a Presentation on Stop the Spread—COVID-19 and Insurance Fraud**

Matthew J. Smith (Coalition Against Insurance Fraud—CAIF) said the full impact of COVID-19 on fraud has yet to be seen, but based on historical data, early indicators seem to point to it being the largest spike in insurance fraud ever seen, surpassing that during the Great Depression and catastrophic natural disasters. He said Goggle statistics show internet searches on arson have increased 125% since the pandemic began with questions like, “How do I burn my [home, vehicle, etc.]?” topping the list and other searches like email scams up 600% and auto disappearance and theft up 67%. He said life and health insurance scams such as fake plans and endorsements, vaccine scams, tele-medicine, cargo theft, and life insurance “incentives” are all on the rise. He said popular auto scams-rate rebate refusals; sanitizing scams by repair, towing and storage companies; staged accidents; “jump-ins”; vehicle arsons; and caregivers’ auto break-ins—are also on the rise. He said workers’ compensation scams are up as quarantining is redefining the workplace, so providing owed coverage has become increasingly difficult for claim investigations because there are no witnesses to interview and the only verifications are via tele-medicine, which is not optimal for the determination of claim authorization. He said property and commercial scams include business interruption, inventory losses, arsons, thefts and mysterious disappearances with their own set of investigation limitations. He said this all leads to a litigation explosion of coverage issues like business income and virus or pandemic exclusions; COVID-19 lawsuits regarding liability limits; and the public’s perception about the impact of fraud. He said state insurance regulators who ask what can be done about the approaching tide of insurance fraud can saturate department of insurance websites with current fraud data and tools that insurance consumers can use to help them detect and prevent fraudulent scams before those consumers become victims of it. He said bumping up media relations via free educational webinars and podcasts with live interviews and infographics would also be helpful as a line of defense and protection for consumers. He said states could more actively monitor insurers, expedite prosecutions, and work with the federal government to pass the Stop Senior Scam Act. He said state insurance regulators could also issue emergency orders, actively participate in the Antifraud (D) Task Force and seek to update state laws to address insurance fraud, especially that due to COVID-19. He said the CAIF is a valuable resource and ally in the fight against insurance fraud. He invited state insurance regulators to become partners with the CAIF, the National Insurance Crime Bureau (NICB), the Senior Medicare Patrol-SMP, and the Federal Trade Commission (FTC) in this battle.

7. **Observed a Tour of the United Policyholders COVID-19 Loss Recovery Library**

Amy Bach (United Policyholders—UP) said due to public safety orders and layoffs of employees, thousands of businesses need insurance benefits to cover losses brought about by required compliance with such orders. She said companies have paid hundreds of thousands of dollars in premium for this type of insurance only to find that the policies have exclusions for viruses and pandemics. To be clear, she said some policies have such exclusions and some do not; however, she said rumors are rampant about no coverage leading to insolvency. She said the sheer volume of claims being triggered by the COVID-19 pandemic has led insurance companies to clamp down on such claims and actively campaign against any such claims being
covered, even under policies without exclusions for viruses or pandemics. She said state insurance regulators need to go on facts such as the hard data on claims that is pending with the NAIC and state data calls to be reported to the U.S. Congress (Congress) on July 22. She said reinsurance is intended for catastrophic losses like this, and 30-day maximum benefits for Civil Authority losses is common in the industry. She said insurance benefits that businesses have already paid for need to be honored along with Paycheck Protection Program (PPP) funds needed to restore economic health, jobs and consumer confidence in the value of insurance as a viable consumer product. She said to assist policyholders, UP established a COVID-19 Loss Recovery initiative, a national advisory team, a searchable library, and Amicus briefs promoting fair and efficient resolution of claims disputes via a new Website at www.werbig.org. She encouraged everyone to contact UP for help or other questions and see www.uphelp.org/COVID to track the battle against COVID-19.

Having no further business, the NAIC/Consumer Liaison Committee adjourned.
The NAIC/American Indian and Alaska Native Liaison Committee met via conference call Aug. 3, 2020. The following Liaison Committee members participated: Michael Conway, Vice Chair (CO); Trinidad Navarro (DE); Dean L. Cameron (ID); Steve Kelley (MN); Matthew Rosendale represented by Bob Biskupiak (MT); Mike Causey (NC); Jon Godfread (ND); Russel Toal represented by Paige Duhamel (NM); Andrew R. Stolfi (OR); Larry D. Deiter (SD); and Mike Kreidler (WA).

1. **Adopted its April 29 Minutes**

Commissioner Conway said the Liaison Committee met April 29 to discuss COVID-19-related state outreach to Native Americans regarding federal Affordable Care Act (ACA) coverage.

Commissioner Godfread made a motion, seconded by Commissioner Navarro, to adopt the Liaison Committee’s April 29 minutes (Attachment Two-A). The motion passed unanimously.

2. **Discussed the Significant Impact of COVID-19 on the Health and Economies of American Indian and Alaska Native Populations**

Commissioner Conway said the Navajo Nation in Colorado is comprised of two tribes. He said they were able to shut down quickly, so they were able to keep tribal infection and death rates down. However, their economy took a heavy hit. He said last year, Colorado passed internet gaming, so that also helped tribal nations. Mr. Biskupiak said a substantial amount of the federal stimulus dollars Montana received was committed to native tribes with mixed results. He said infection and death rates were kept low throughout the state except in the southeastern part of the state, where the Crow and Northern Cheyenne (especially assisted living and nursing homes) were hit hard. Ms. Duhamel said when the governor put half of the Navajo in New Mexico on lock down, especially over weekends when infection and death rates hit their peak, the numbers went down significantly. However, she said the numbers jumped up again following the July 4 holiday weekend.

3. **Discussed Coverage Available Through the ACA Plans and Tribal Programs**

Ms. Duhamel said the Exchange has done its outreach to tribal communities primarily through newspapers and that it has not been particularly effective. She said the numbers via commercial and Exchange coverage have not been coming in either, partially due to many of the protests in Albuquerque, NM, being led by tribal youth. Commissioner Conway said their Medicaid numbers were like those in New Mexico, but not too high yet. However, he thought the numbers would go up now that the $600 income stimulus was gone. Ms. Duhamel said New Mexico had started to include health care coverage flyers in the care packages being distributed to tribes, which is generating additional leads. She said she has heard that the best Boots on the Ground care has been delivered with food even though it is not specified in the flyer, but that the flyer does have the insurance department’s contact information in it. Ms. Duhamel said the “no wrong door” approach is being taken, offering a variety of coverages through brokers, high-risk pools and government ACA/ACA Exchanges with a warm handoff if the consumer is not eligible for other plans.

4. **Heard a General Overview on What the Recent U.S. Supreme Court Decision Means to the Insurance Industry, Health Care, Etc.**

Ron Kreiter (Oklahoma Insurance Department) said that what the recent U.S. Supreme Court decision, *McGirt v. Oklahoma*, U.S. Supreme Court, October Term, 2019, decided on July 9 means or could mean to the insurance industry, health care, etc. is yet to be seen. However, he said at this time any American Indian who commits an offense will argue that the definitions of “Indian reservation” in ancient cases applies, which means that the state lacks authority to prosecute the offense. Oklahoma maintained that land grants overruled the old definitions, but the Court said they did not when the tribes appealed the decision. Mr. Kreiter said the state was still looking into the possible effect on insurance but thought that it only applied to criminal offenses for now. Commissioner Conway said the main takeaway was that the treaty was still in effect, so state law could not apply. He said the potential overlap into insurance is yet to be seen. Ms. Duhamel asked if other states recognized tribal licenses for producers. Commissioner Conway said he did not know what Colorado does, but he would check. Mr. Kreiter said in
Oklahoma, tribal members must get a license through the state department of insurance (DOI) if the producers are to sell to nontribal consumers. Erica Eversman (Consumer Representative) asked when state DOI laws do not apply, are tribes to participate in state-based or federal ACA plans, or do the tribes set up their own Exchanges. Commissioner Conway said some states have open enrollment year-round, but he said he is not sure about what a tribal ACA would do. He said they probably would not have open enrollment year-round. Mr. Kreiter agreed with Commissioner Conway that if American Indian territorial rules apply for crime, then what about insurance and a myriad of other legal issues. Commissioner Conway said this decision will produce a host of questions searching for an answer. Ms. Alexander said the documents submitted by Oklahoma on this case would be posted to the NAIC website after the meeting.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
The NAIC/American Indian and Alaska Native Liaison Committee met via conference call April 29, 2020. The following Liaison Committee members participated: Lori K. Wing-Heier, Chair, Sarah Bailey and Anna Latham (AK); Michael Conway, Vice Chair, Kate Harris and Debra Judy (CO); Trinidad Navarro and Leslie Ledogar (DE); Dean L. Cameron represented by Kathy McGill (ID); Steve Kelley represented by Grace Arnold, Mary Otto and Sergio Valle (MN); Mike Causey represented by Tracy Biehn, Ted Hamby and Kathy Shortt (NC); Jon Godfread represented by John Arnold (ND); Russel Toal, Colin Baillio, Leatrice Geckler and Paige Duhamel (NM); Larry D. Deiter and Maggie Dell (SD); Mike Kreidler represented by Jane Beyer and Steve Valandra (WA); and Jeff Rude (WY). Also participating were: Mary Boatright (AZ); Stephen Kim (CA); Angela Burke Boston (IA); Karen Dennis (MI); Rebecca Ross (OK); Courtney Bullard (UT); and Julie Walsh (WI).

1. Adopted its 2019 Fall National Meeting Minutes

Director Wing-Heier said the Liaison Committee met Dec. 8, 2019. Commissioner Conway made a motion, seconded by Director Cameron, to adopt the Liaison Committee’s Dec. 8, 2019, minutes (see NAIC Proceedings – Fall 2019, NAIC/Consumer Liaison Committee, Attachment One). The motion passed unanimously.

2. Discussed How the States Are Conducting Outreach to Native Americans Regarding ACA Coverage Opportunities

Director Wing-Heier asked the Liaison Committee vice chair to kick off the discussion of how the states are conducting outreach to Native Americans about the federal Affordable Care Act (ACA), specifically regarding COVID-19. Commissioner Conway said the biggest concern was with the unhoused in Denver, and he said he had been working with hotel partners to create more non-congregate housing for Native Americans. He said Colorado is looking into the best way to handle transitional housing for Native Americans in urban settings like Denver, as well as those in rural settings like those around Durango, which is in the southwest corner of the state and in close proximity to New Mexico, sharing the concerns of the Navajo nation with other states.

Ms. Duhamel said the Navajo nation is spread over Arizona, Colorado, New Mexico and Utah. She said the New Mexico Department of Health is doing COVID-19 contact tracing, and it has learned that the Native American community is at extremely high risk due to current living conditions with several family members living together in a limited amount of space—often one room—with no water and no access to health care or testing. She said that is why all casinos in Gallup and Farmington are closed at this time, with one of those casinos having been converted into transitional quarantine housing for those just out of the ICU and those testing positive. She said the insurance superintendent is leading the effort particularly with out-of-network air ambulance carriers airlifting COVID-19 patients to access care. She said one hospital has been designated as responsible for all medical billing.

Director Wing-Heier said most Alaska natives are enrolled at a health care facility only when the person comes in for an appointment. Like Colorado, she said Alaska has concerns about housing and access to health care, as this population is unable to get intensive health care where they are sheltering in place, with most patients needing this type of care having to be flown out because the limited number of ventilators sent out into communities could not handle the number of cases. She said one would think that a population spread out in as large an area as Alaska would not have social distancing concerns, except in the larger metropolitan areas. However, she said COVID-19 has been spreading to rural areas, surprising government officials who locked villages immediately to avoid a repeat of the 1918 pandemic, which decimated many native villages. She said government officials worked extensively with the Alaska Native Tribal Health Consortium (ANTHC) and Indian Health Service (IHS) in trying to keep “foreigners” out of villages by using media to note that villages do not want tourism or commercial fishing during the pandemic. She said the Alaska National Guard was instrumental in air lifting critical patients because half of the plans exclude government alternative sites from covered sites.

Ms. Duhamel said the Native American population in New Mexico was decreasing, so the Housing Commission declined requests for additional outreach assistance. She said enrollment into the exchange had slowed, so the Housing Commission did not see any need to promote year-round enrollment. She said the department of insurance (DOI) was putting pressure on the
exchange to do more outreach because the feedback that was received indicated that lots of Native American’s were eligible for Medicaid due to New Mexico enacting Medicaid expansion and Medicaid having retroactive coverage. However, she said there was a lot of confusion amongst Native Americans about how tribal members could access benefits through the U.S Department of Health and Human Services (HHS). She asked if New Mexico could get open enrollment and participation numbers for Native Americans separated by Medicare, the New Mexico Health Insurance Exchange, and tribal coverage. She asked Oklahoma if it would share information about outreach vehicles it used, as both states have similar numbers of tribal members who are eligible for open enrollment, yet the federal Centers for Medicare & Medicaid Services (CMS) reports indicated that New Mexico enrollment was in the hundreds and Oklahoma enrollment was in the thousands. She asked NAIC staff to obtain issuers’ enrollment data numbers for tribes, especially on 100% cost sharing and for those under 300% of the poverty level from the CMS, and then distribute this information to Liaison Committee members.

Superintendent Toal said an open enrollment flyer developed with the Oklahoma state high risk pool was sent to recipients of Medicaid and unemployment benefits, Native American groups, and two alternative care sites that had been opened with all participating carriers for plans covered. He said information sharing about billing instructions, claims filing and premium payments was completed with these groups within a 24-hour period. It was also shared through radio stations. Ms. Ross said she could not speak to this issue until the CMS releases the information. She said she spoke to the tribal chief about getting enrollment and other health information to tribal members. The tribes utilized television and radio to spread this information. She said the Oklahoma DOI staff went to tribal health provider locations to provide education about enrollment. As a result, she said thousands of children were enrolled who previously were not due to this proactive outreach to increase tribal enrollment. She said agents and brokers were active in this outreach effort, which was also successful because enrollees can join monthly rather than just during a limited open enrollment period. She said the hope is that other states will take similar action, but she said it does take a lot of time for DOI staff to do the outreach and build the trust amongst tribal chiefs and members. She said Oklahoma only saw a handful of zero cost sharing and zero premium during the outreach. She said it was seeing fewer now, and it wondered what effect this would have on the ratings for 2021. She said she will release Oklahoma information to other states if she can.

3. Discussed Retroactive Coverage Through ACA Plans and Tribal Coverage Programs

Ms. Duhamel said New Mexico is interested in how Alaska set up its retroactive coverage, and it would like to see if the CMS would allow other states to use similar practices under certain circumstances. Mr. Bailiò said his background is in consumer advocacy, and he has heard that tribal members who signed up for health coverage in a provider’s office could not get the care they needed until a later date when the coverage became effective. He said what tribal members really need now is for DOIs to guarantee part of the premium for consumers to ensure that services are available immediately and paid for retroactively. He said a federal change may be required to allow this to happen. He asked if anyone knows of a way that states could set up coverage like Alaska in order to get retroactive coverage.

Ms. Ross said Oklahoma did not expand Medicaid under the ACA, but it did establish rules in 2019 to not provide coverage retroactively, so their hands are tied with all coverage effective the first of the month following enrollment.

Director Wing-Heier said Alaska is on the federal exchange, but it wishes it had a state exchange. It is not perfect though, as natives enroll at their provider when they come in for care, then drop the coverage after two or three months when they no longer need care. She said tribal members go without coverage until the next time they need care, when the cycle starts all over again and repeats itself continually. She said her office pushed the CMS hard for open enrollment for all, but they were not successful. Commissioner Conway said Colorado recently opened a special enrollment for a month and a half, which will end soon. He said Colorado has seen a 7–8% increase to date, and it expects the final increase in enrollment to be even higher. Ms. Beyer said 10,000 individuals were enrolled when Washington opened enrollment for 60 days recently. She said Washington has 29 tribes and a tribal navigator program, so most tribes have their own navigator to assist with enrollment. She said American Indians account for 1.8% of the population in Washington, but only 1% of the exchange, so enrollment is still low.

4. Discussed Other Matters

Ms. Duhamel asked if other states were seeing junk insurance plans being sold to this segment of the population. Director Wing-Heier said Alaska is seeing some but not a lot, as the state is shutting them down quickly. Commissioner Conway said Colorado has generally not seen many, as it does not allow short-term health plans at all, which may have helped keep the
numbers down. Ms. Duhamel said New Mexico does not allow short-term health plans either, but it has had lots of junk plans to deal with.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) asked if the states are gathering granular information on discriminatory practices that are specific to the tribes as a subgroup. Director Wing-Heier said the NAIC issued a data call, but it is too early for credible information about trends regarding who and where to be available. She said Alaska is planning to review it closely, especially the data on individual surgeries, and it has reached out to Washington regarding how it is being coded so she can run its own data. She asked if the data call included the number of the American Indian and Alaska native population enrolled and how that number was determined. Ms. Duhamel said New Mexico’s tool requires self-declaration for the CMS to list it, but some states require more categories. Director Wing-Heier said it is on the CMS form for states that use the federal exchange, but states with their own exchanges have their own requirements. Ms. Beyer said Washington’s state exchange form uses self-reporting. Commissioner Conway said Colorado’s does as well.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
