2020 PROCEEDINGS
OF THE
National Association of Insurance Commissioners

2020 Virtual Summer National Meeting

July 27 – August 14, 2020

Concerning Business Conducted

December 11, 2019 to August 14, 2020
The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

**Accounting & Reporting**
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

**Special Studies**
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

**Consumer Information**
Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

**Statistical Reports**
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

**Financial Regulation**
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

**Supplementary Products**
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

**Legal**
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

**Capital Markets & Investment Analysis**
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

**Market Regulation**
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

**White Papers**
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

**NAIC Activities**
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

CERTIFICATE OF INCORPORATION OF
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
a Nonstock Corporation

I. Name
The name of the Corporation is: National Association of Insurance Commissioners (NAIC).

II. Duration
The period of duration of the NAIC is perpetual.

III. Registered Office and Agent
The NAIC’s Registered Office in the State of Delaware is to be located at: 1209 Orange St., in the City of Wilmington, Zip Code 19801. The registered agent in charge thereof is The Corporation Trust Company.

IV. Authority to Issue Stock
The NAIC shall have no authority to issue capital stock.

V. Incorporators
The name and address of the incorporator are as follows:
Catherine J. Weatherford
National Association of Insurance Commissioners
120 W. 12th St., Suite 1100
Kansas City, MO 64106

VI. Purpose
The NAIC is organized exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), including without limitation, to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:
(a) Protect the public interest, promote competitive markets and facilitate the fair and equitable treatment of insurance consumers;
(b) Promote, in the public interest, the reliability, solvency and financial solidity of insurance institutions; and
(c) Support and improve state regulation of insurance.

VII. Restrictions
A. No substantial part of the activities of the Corporation shall be the carrying of propaganda, or otherwise attempting to influence legislation except as otherwise permitted by Section 501(h) of the Code and in any corresponding laws of the State of Delaware, and the Corporation shall not participate in or intervene in including the publishing or distribution of statements concerning any political campaign on behalf of or in opposition to any candidate for public office.

B. For any period for which the Corporation may be considered a private foundation, as defined in Section 509(a), the Corporation shall be subject to the following restrictions and prohibitions:
1. The Corporation shall not engage in any act of self-dealing as defined in section 4941(d) of the Code.
2. The Corporations shall make distributions for each taxable year at such time and in such manner so as not to become subject to the tax on undistributed income imposed by section 4942 of the Code.
3. The Corporation shall not retain any excess business holdings as defined in section 4943(c) of the Code.
4. The Corporation shall not make any investments in such manner as to subject it to tax under section 4944 of the Code.
5. The Corporation shall not make any taxable expenditures as defined in section 4945(d) of the Code.

© 2020 National Association of Insurance Commissioners
VIII. Membership

The NAIC shall have one class of members consisting of the Commissioners, Directors, Superintendents, or other officials who by law are charged with the principal responsibility of supervising the business of insurance within each State, territory, or insular possession of the United States. Members only shall be eligible to hold office in and serve on the Executive Committee, Committees and Subcommittees of the NAIC. However, a member may be represented on a Committee or Subcommittee by the member’s duly authorized representative as defined in the Bylaws. Only one official from each State, territory or insular possession shall be a member and each member shall be limited to one vote. Any insurance supervisory official of a foreign government or any subdivision thereof, which has been diplomatically recognized by the United States government, may attend and participate in all meetings of this Congress but shall not be a member and shall not have the power to vote.

IX. Activities

The NAIC is a nonprofit charitable and educational organization and no part of the net earnings or property for the corporation will inure to the benefit of, or be distributable to its members, directors, officers or other private individuals, except that the NAIC shall be authorized and empowered to pay reasonable compensation for services rendered by employees and contractors, and to make payments and distributions in furtherance of the purposes set forth in Article VI hereof.

X. Powers

The NAIC shall have all of the powers conferred by the Delaware General Corporation Law for non-profit corporations, except that, any other provision of the Certificate to the contrary notwithstanding, the NAIC shall neither have nor exercise any power, nor carry on any other activities not permitted: (a) by a corporation exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); or (b) by a corporation contributions to which are deductible under Section 170(c)(2) of the Internal Revenue Code of 1986, as amended, (or the corresponding provision of any future United States Internal Revenue law).

XI. Immunity

All officers and members of the Executive Committee shall be immune from personal liability for any civil damages arising from acts performed in their official capacity, and shall not be compensated for their services as an officer or member of the Executive Committee on a salary or a prorated equivalent basis. The immunity shall extend to such actions for which the member of the Executive Committee or officer would not otherwise be liable, but for the Executive Committee member’s or officer’s affiliation with the NAIC. This immunity shall not apply to intentional conduct, wanton or willful conduct or gross negligence. Nothing herein shall be construed to create or abolish an immunity in favor of the NAIC itself. Nothing herein shall be construed to abolish any immunities held by the state officials pursuant to their individual state’s law.

XII. Exculpation and Indemnification

A member of the Executive Committee shall not be liable to the NAIC or its members for monetary damages for breach of fiduciary duty as a member of the Executive Committee, provided that this provision shall not eliminate or limit the liability of a member of the Executive Committee for any breach of the duty of loyalty to the NAIC or its members, for acts or omissions not in good faith, or which involve intentional misconduct or a knowing violation of law, or for any transaction from which the member of the Executive Committee involved derived an improper personal benefit. Any amendment, modification or repeal of the foregoing sentence shall not adversely affect any right or protection of a member of the Executive Committee of the Corporation hereunder in respect of any act or omission occurring prior to the time of such amendment, modification, or repeal. If the Delaware General Corporation Law hereafter is amended to authorize the further elimination or limitation of the liability of the members of the Executive Committee, then the liability of a member of the Executive Committee, in addition to the limitation provided herein, shall be limited to the fullest extent permitted by the amended Delaware General Corporation Law.

The NAIC shall indemnify to the full extent authorized or permitted by the laws of the State of Delaware, as now in effect or as hereafter amended, any person made or threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative, including an action by or in the right of the NAIC) by reason of the fact that the person is or was a member of the Executive Committee, officer, member, committee member, employee or agent of the NAIC or serves any other enterprise as such at the request of the NAIC.
The foregoing right of indemnification shall not be deemed exclusive of any other rights to which such person may be entitled apart from this Article XII. The foregoing right of indemnification shall continue as to a person who has ceased to be a member of the Executive Committee, officer, member, committee member, employee or agent and shall inure to the benefit of the heirs, the executors and administrators of such a person.

XIII. Dissolution

In the event of the dissolution of the NAIC, the Executive Committee shall, after paying or making provision for the payment of all of the liabilities of the NAIC, dispose of all the assets of the NAIC equitably to any state government which is represented as a member of the NAIC at the time of dissolution, provided that the assets are distributed upon the condition that they be used primarily and effectively to implement the public purpose of the NAIC, or to one or more such organizations organized and operated exclusively for religious, charitable, education, scientific, or literary purposes or similar purposes as shall at the time qualify: (a) as an exempt organization under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); and (b) as an organization contributions to which are deductible under Section 170(c) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), as the Executive Committee shall determine.

XIV. Bylaws

The Bylaws of the NAIC may prescribe the powers and duties of the several officers, members of the Executive Committee and members and such rules as may be necessary for the work of the NAIC provided they are in conformity with the Certificate of Incorporation.

XV. Amendments

This Certificate of Incorporation may be altered or amended at any meeting of the full membership (Plenary Session) of the NAIC by an affirmative vote of two-thirds of the members qualified to vote, or their authorized representatives, provided that previous notice of the proposed amendment has been mailed to all members by direction of the Executive Committee at least thirty (30) days prior to the meeting.

IN WITNESS WHEREOF, this Certificate of Incorporation has been signed this 4th day of October 1999.

/Signature/

Catherine J. Weatherford, Incorporator

ADOPTED 1999, Proc. Third Quarter
BYLAWS OF THE
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

ARTICLE I Name, Organization and Location

The name of this corporation is NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS (NAIC). The NAIC is organized under the General Corporation Law of the State of Delaware. The NAIC may have one (1) or more office locations within or without the State of Delaware as the Executive Committee may from time to time determine.

ARTICLE II Membership

The Membership of the NAIC shall be comprised of those persons designated as members in the Certificate of Incorporation. Each member of the NAIC shall have the power to vote and otherwise participate in the affairs of the NAIC as set forth herein or as required by applicable law. This power may be exercised through a duly authorized representative who shall be a person officially affiliated with the member’s department and who is wholly or principally employed by said department.

The organization may charge members an annual assessment, the amount of which shall be determined by the Executive Committee. Members failing to pay all NAIC assessments on a timely basis shall be placed in an inactive status. Members in an inactive status shall not have any voting rights and shall be denied membership on NAIC committees and task forces, access to mailings and services of the NAIC Offices, as well as access to zone examination processes and other benefits of membership in the NAIC.

The NAIC’s receipt of full payment from the inactive member of all current and past due assessments shall serve to immediately remove them from inactive status.

The Membership of the NAIC shall be subject to a conflict of interest policy and disclosure form as adopted by the members.

The Executive Committee is empowered to reinstate, in part or in whole, an inactive member’s participation on the committees and task forces, access to mailings and services of the NAIC Offices and satellite offices, as well as access to zone examination processes, and other benefits of membership in the NAIC upon good cause shown as determined by the Executive Committee.

ARTICLE III Officers

The officers of the NAIC shall be a President, a President-Elect, a Vice President, and a Secretary-Treasurer. Annual officer elections shall be held at the last regular National Meeting of each calendar year or at such other plenary session as agreed to by the members. The voting membership, by secret ballot, shall elect officers as provided in these Bylaws. Officers’ terms shall be for one year, beginning on January 1 following their election. The officers shall hold office until their death, resignation, removal or the election and qualification of their successors, whichever occurs first. Any Officer may resign at any time by giving notice thereof in writing to the President of the NAIC. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

If an interim vacancy occurs in the office of President, the President-Elect shall cease to hold his or her office effective immediately and shall assume the office of President. If an interim vacancy occurs in any one or more of the other officer positions, an interim election shall be held to fill the vacancy. No member may hold any office for more than two consecutive years. Notwithstanding the foregoing, at no time shall more than two officer positions be filled by members of the same Zone during the same term. Any officer may be removed from office by the affirmative vote of two-thirds (2/3) of the members, but only after a resolution for removal is adopted by two-thirds (2/3) of the Executive Committee whenever, in their judgment, the best interests of the NAIC would be served thereby.

The President shall serve as Chairperson of the Executive Committee and shall preside at all special and regular meetings of the members. The President shall serve as the leader of the organization and its principal spokesperson. The President shall work closely with the Executive Committee to establish and achieve the strategic, business and operational goals of the organization; ensure appropriate policies and procedures for the organization are implemented and followed; and protect the integrity as well as the resources of the organization. After a member completes his or her term or terms as President, he or she shall not be able to hold another officer position for a period of twelve (12) months from the date such member completes his or her term or terms as President, which shall be referred to as a "waiting period"; provided however, the Executive Committee may waive the twelve month waiting period if warranted by exigent circumstances.

© 2020 National Association of Insurance Commissioners
The President-Elect shall serve as Vice-Chairman of the Executive Committee. In the absence of the President at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, the President-Elect shall preside over such meeting to the extent of the President’s absence. The President-Elect shall perform such other duties and tasks as may be assigned by the President. Where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office.

The Vice President, in the absence of the President and President-Elect at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, shall preside over such meeting to the extent of the President’s and the President-Elect’s absence; and shall perform such other duties as may be assigned by the President or President-Elect, or in the absence thereof, by the Executive Committee.

The Secretary-Treasurer shall assist the President and, as applicable, the President-Elect or the Vice President in the conduct of meetings of the Executive Committee and members. For member meetings, the Secretary-Treasurer shall call the roll of the membership and certify the presence of a quorum and shall receive, validate and maintain all proxies for elections held at member meetings. The Secretary-Treasurer shall also recommend to the Executive Committee such policies and procedures to maintain the history and continuity of the NAIC. The Secretary-Treasurer shall also assist the President and President-Elect in all matters relating to the budget, accounting, expenditure and revenue practices of the NAIC; including, but not limited to reviewing the financial information of the organization and consulting with NAIC management, independent auditors, and other necessary parties regarding the financial operations and condition of the organization.

**ARTICLE IV Executive Committee**

The business and affairs of the NAIC shall be managed by and under the direction of the Executive Committee. The Executive Committee shall be made up entirely of members of the NAIC. The Executive Committee shall consist of the following members: the officers of the NAIC; the most recent past president; the twelve (12) members of the zones as provided for in Article V of these Bylaws. The members of the Executive Committee shall be subject to a conflict of interest policy as adopted by the members. Any Executive Committee member may resign at any time by giving notice thereof in writing to the members of the NAIC. Resignation as an Executive Committee member also operates as resignation as a Zone officer. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

1. The Executive Committee shall have the authority and responsibility to:

   (a) manage the affairs of the NAIC in a manner consistent with the Certificate of Incorporation and Bylaws;

   (b) make recommendations to achieve the goals of the NAIC based upon either its own initiative or the recommendations of the Standing Committees or Subcommittees reporting to it, for consideration and action by the members at any NAIC Plenary Session;

   (c) create and terminate one or more Task Forces reporting to it to the extent needed and appropriate;

   (d) establish and allocate, from time to time, functions and responsibilities to be performed by each Zone;

   (e) to the extent needed and appropriate, oversee NAIC Offices to assist the NAIC and the individual members in achieving the goals of the NAIC;

   (f) submit to the NAIC at each National Meeting, during which a Plenary Session is held, its report and recommendations concerning the reports of the Standing Committees. All Standing Committee reports shall be included as part of the Executive Committee report;

   (g) plan, implement and coordinate communications and activities with other state, federal and local government organizations in order to advance the goals of the NAIC and promote understanding of state insurance regulation.
2. Duties and Operations of the Executive Committee.

(a) The Executive Committee shall hold at least two (2) regular meetings annually at a designated time and place. Special meetings may be held when called by the President, or by at least three (3) members of the Executive Committee in writing. In any case, the Executive Committee shall meet at least once per calendar month. At least five (5) days notice shall be given of all regular and special meetings. Meetings may be held in person or by means of conference telephone or other communication equipment by means of which all persons participating in the meeting can hear each other, and such participation in a meeting shall constitute presence in person at such meeting in accordance with applicable laws. The presiding member of the Executive Committee shall only cast his or her vote in order to break a tie vote. In addition, the Executive Committee may act by written consent as provided by law.

(b) The Executive Committee may, with the concurrence of two-thirds of the members of the Executive Committee, establish rules for its conduct that shall not conflict with the Certificate of Incorporation and Bylaws. Such rules may be changed only by a concurrence of two-thirds of the members of the Executive Committee after twenty-four (24) hours notice to all members of the Executive Committee.

(c) Any action required or permitted to be taken at any meeting of the Executive Committee or any committee thereof may be taken without a meeting if all members of the Executive Committee or such committee, as the case may be, consent thereto in writing in accordance with applicable law.

(d) The Executive Committee shall cause to be kept minutes of its meeting and have information of any action of a general character taken by it published to members qualified to vote.

(e) NAIC OFFICES

(i) The Executive Committee shall oversee an Executive Office and a Central Office with management and staff personnel and appropriate resources for performance of duties and assigned responsibilities. Additional satellite offices may be established as needed. The Executive Committee shall have the authority to select, employ and terminate a Chief Executive Officer who shall not be a member of the NAIC and who shall have the primary responsibility for the internal management and functioning of the NAIC Offices within the direction of the Executive Committee, as well as other duties assigned by the Executive Committee through execution of an Employment Agreement or other authorization. The Chief Executive Officer appointed by the Executive Committee pursuant to this section shall not be considered an officer for purposes of Article III hereof and shall not be a member of the Executive Committee. The Executive Committee, through the Internal Administration (EX1) Subcommittee, shall provide oversight and direction to the Chief Executive Officer regarding Office operations.

(ii) Consistent with the purposes of the NAIC, the role of the NAIC Offices is to: (1) provide services to the NAIC through support to the NAIC Committees, Subcommittees, Task Forces or otherwise; (2) provide services to individual State insurance departments; and (3) develop recommendations for consideration as to NAIC policy and administrative decisions of the NAIC.

(iii) In performing its role, subject to the oversight and direction specified in (paragraph i) the NAIC Offices may engage in a variety of functions including but not limited to the following: research; analysis; information gathering and dissemination; library services; data collection; data base building and maintenance; report generation and dissemination; government liaison; non-regulatory liaison; securities valuation; administration; litigation; legislative and regulatory drafting; and educational development.

(iv) The Chief Executive Officer shall prepare an annual budget, related to the priorities of the NAIC, for the NAIC Offices to be submitted through the EX1 Subcommittee to the Executive Committee, which shall make its recommendations to the members of the NAIC for action at the next Plenary Session of the NAIC.
3. Internal Administration (EX1) Subcommittee

The Internal Administration (EX1) Subcommittee shall be a Subcommittee reporting to the Executive Committee. Appointments of the Chair and Vice Chair of the Executive Subcommittee and members other than those specifically designated herein shall be made by the President and President-Elect.

This Subcommittee shall be comprised of the President, President-Elect, Vice President, the Secretary-Treasurer, the most recent past President, and three (3) other members of the Executive Committee. The presiding member of the Subcommittee shall only cast his or her vote in order to break a tie vote.

The Internal Administration (EX1) Subcommittee shall:

(a) Exercise such powers and authority as may be delegated to it by the Executive Committee.

(b) Generally oversee the NAIC Offices including, without limitation: (i) periodically monitor operations of the NAIC Offices, (ii) review and revise the budget of the NAIC, hold an annual hearing to receive public comments on the budget of the NAIC, and submit the revised budget to the Executive Committee, (iii) approve emergency expenditures which vary from the adopted budget and promptly certify its action in writing to the Executive Committee, (iv) evaluate the Chief Executive Officer and make appropriate recommendations to the Executive Committee, (v) assist the Chief Executive Officer in resolving competing demands for NAIC resources, (vi) review compensation of all senior management and (vii) quarterly prepare a report containing the current budget and expenditures which the Secretary-Treasurer shall present to the Executive Committee.

4. Audit Committee

The Executive Committee shall appoint an Audit Committee made up of at least four (4) members of the NAIC, including at least one member from each zone, in addition to the NAIC Secretary-Treasurer. The NAIC Secretary-Treasurer shall chair the Audit Committee. The Audit Committee shall report to the Executive Committee without any NAIC employees being present. The Audit Committee shall be directly responsible for the appointment, compensation, and oversight of the independent certified public accountant employed to conduct the audit. The Audit Committee shall also have the power, to the extent permitted by law, to: (i) initiate or review the results of an audit or investigation into the business affairs of the NAIC; (ii) review the NAIC’s financial accounts and reports; (iii) conduct pre-audit and post-audit reviews with NAIC staff, members and independent auditors; and (iv) exercise such other powers and authority as delegated to it by the Executive Committee.

ARTICLE V Zones

To accomplish the purposes of the NAIC in a timely and efficient manner, the United States, its territories and insular possessions shall be divided into four Zones. Each Zone shall consist of a group of at least eight States, located in the same geographical area, with each State being contiguous to at least one other State in the group so far as practicable, plus any territory or insular possession that may be deemed expedient, all as determined by majority of the Executive Committee. Members of each Zone shall annually elect a Chairman, a Vice Chairman and a Secretary from among themselves prior to or during the last regular National Meeting of each calendar year or at such time as agreed to by the Zone members. The Chairman, Vice Chairman and Secretary of each Zone shall be members of the Executive Committee with terms of office corresponding to that of the officers. Each Zone shall perform such functions as are designated by the Executive Committee of the NAIC or by the members of the NAIC as a whole or by the members of the Zone. Each Zone may hold Zone Meetings for such purposes as may be deemed appropriate by members of the Zone.

ARTICLE VI Standing Committees and Task Forces

1. General

The Standing Committees shall not be subcommittees of the Executive Committee and shall have no power or authority for the management of the business and affairs of the NAIC. Each Standing Committee shall be composed of not more than 15 members, including a Chair and one or more Vice Chairs, appointed by the President and President-Elect, and such appointments shall remain effective until the succeeding President and President-Elect appoint members for the following year. Standing Committees shall meet at least twice a year at National Meetings and may meet more often at the call of the Chair as required to complete its assignments from the Executive Committee in a timely manner.
The Executive Committee shall make all assignments of subject matter to the Standing Committees and shall require coordination between Committees and Task Forces of the subject matter if more than one Committee or Task Force is affected. The format of the Committee reports shall be prescribed by the Executive Committee. All appointments or elections of members of the NAIC to any office or Committee of the NAIC shall be deemed the appointment or election of a particular member and shall not automatically pass to a successor in office.

2. Specific Duties

The Standing Committees of the NAIC, their duties and responsibilities shall be as follows:

(a) Life Insurance and Annuities (A) Committee: This Standing Committee shall consider issues relating to life insurance and annuities.

(b) Health Insurance and Managed Care (B) Committee: This Standing Committee shall consider issues relating to health and accident insurance and managed care.

(c) Property and Casualty Insurance (C) Committee: This Standing Committee shall consider issues relating to personal and commercial lines of property and casualty insurance, worker’s compensation insurance, statistical information, surplus lines, and casualty actuarial matters.

(d) Market Regulation and Consumer Affairs (D) Committee: This Standing Committee shall consider issues involving market conduct in the insurance industry; competition in insurance markets; the qualifications and conduct of agents and brokers; market conduct examination practices; the control and management of insurance institutions; consumer services of State insurance departments; and consumer participation in NAIC activities.

(e) Financial Condition (E) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to accounting practices and procedures; blanks; valuation of securities; the Insurance Regulatory Information System (IRIS), as it relates to solvency and profitability; the call, monitoring and concluding report of Zone Examinations; and financial examinations and examiner training.

(f) Financial Regulation Standards and Accreditation (F) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to administration and enforcement of the NAIC Accreditation Program, including without limitation, consideration of standards and revisions of standards for accreditation, interpretation of standards, evaluation and interpretation of states’ laws and regulations, and departments’ practices, procedures and organizations as they relate to compliance with standards, examination of members for compliance with standards, development and oversight of procedures for examination of members for compliance with standards, qualification and selection of individuals to perform the examination of members for compliance with standards, and decisions regarding whether to accredit members.

(g) International Insurance Relations (G) Committee. This Standing Committee shall have the responsibility for issues relating to international insurance.

3. Task Forces

The Executive Committee, its Subcommittee and the Standing Committees may establish one or more Task Forces, subject to approval of the Executive Committee. The parent Committee or Subcommittee, subject to approval of the Executive Committee, may vote to discontinue a Task Force once its charge has been completed.

Vacancies in the positions of Chair or Vice Chair of any Task Force shall be filled by the parent Committee or Subcommittee from within or outside the present Task Force membership; provided, however, that the chief insurance regulatory official of the state of the former Chair or Vice Chair shall become a member of the Task Force. A vacancy in the position of member shall be filled by the chief insurance regulatory official of the vacating member’s state.

If an existing Task Force is dealing with insurance issues that require continuing study, the Executive Committee may adopt the recommendation of the parent Committee or Subcommittee that the Task Force be designated a Standing Task Force. A Standing Task Force shall continue in effect until terminated by the Executive Committee.
ARTICLE VII Meetings of the Membership

1. Regular Meetings.

The NAIC shall hold at least two (2) regular meetings of the members (“National Meetings”) each calendar year. Notice, stating the place, day and hour and any special purposes of the National Meeting, shall be delivered by the Executive Committee not less than ten (10) calendar days nor more than sixty (60) calendar days before the date on which the National Meeting is to be held, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

2. Special Meetings.

Special meetings of the members may be called by any five (5) members of the Executive Committee by giving all members notice of such meeting at least ten (10) but not more than sixty (60) days prior thereto, or by any twenty (20) members of the NAIC by giving all members notice of such meeting at least thirty (30) but not more than sixty (60) days prior thereto. Notice of the special meeting shall state the place, day and hour of the special meeting and the purpose or purposes for which the special meeting is called, and shall be delivered by the persons calling the meeting within the applicable time period set forth herein, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

3. Waiver of Notice; Postponement.

Member meetings may be held without notice if all members entitled to notice are present (except when members entitled to notice attend the meeting for the express purpose of objecting, at the beginning of the meeting, because the meeting is allegedly not lawfully called or convened), or if notice is waived by those not present. Any previously scheduled meeting of the members may be postponed by the Executive Committee (or members calling a special meeting, as the case may be) upon notice to members, in person or writing, given at least two (2) days prior to the date previously scheduled for such meeting.

4. Quorum.

Except as otherwise provided by law or by the Certificate of Incorporation, the presence, by person or proxy, of a majority of the members shall constitute a quorum at a member meeting, a meeting of a Standing Committee, Task Force or a working group. The chairman of the meeting may adjourn the meeting from time to time, whether or not there is such a quorum. The members present at a duly called member meeting at which a quorum is present may continue to transact business until adjournment, notwithstanding the withdrawal of enough members to leave less than a quorum.

5. Any meeting of the NAIC may be held in executive session as defined in the NAIC policy on open meetings. Any member may attend and participate in any meeting of the NAIC or any meeting of a Standing Committee or Task Force whether or not such member has the right to vote. All National Meetings shall provide for a Plenary Session of the NAIC as a whole in order to consider and take action upon the matters submitted to the NAIC.

ARTICLE VIII Elections

1. The election of officers of the NAIC shall be scheduled for the plenary session of the last National Meeting of the calendar year or at such other plenary session as agreed to by the members.

2. At the beginning of such Plenary Session, the Secretary-Treasurer shall ascertain and announce the presence of a quorum.

3. Upon the determination of a quorum, the chair shall briefly review the provisions of the Certificate of Incorporation and Bylaws in regard to voting.

4. The President shall ask for and announce all proxies. Proxies shall be held by the Secretary-Treasurer or a designee throughout the election session. Proxies shall be valid, subject to their term, until superseded by the member and shall be governed by ARTICLE IX of the Bylaws.

5. Every individual voting by proxy must meet the requirements of Article II of the Bylaws of the NAIC which requires that such a person be “…officially affiliated with the member’s (the member delegating authority to vote) department, and is wholly or principally employed by said department.”
6. Prior to opening the nominations for office, the Chair shall appoint three (3) members of the NAIC to act as voting inspectors. The voting inspectors shall distribute, collect, count and/or verify ballots, and report their findings to the Secretary-Treasurer. If a voting inspector is nominated for an office and does not withdraw as a candidate, he or she shall not be a voting inspector for the election of the office to which he or she is nominated and the chair shall appoint another voting inspector in his or her place.

7. The Chair shall announce the opening of nominations for offices in the following order:

   (a) President. Provided, however, where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President’s term of office. In those cases where the President runs for re-election or where a vacancy exists because the President-Elect fails or is otherwise unable to assume the Presidency, this office will be subject to an election.

   (b) President-Elect.

   (c) Vice President.

   (d) Secretary-Treasurer.

8. Only members or duly authorized proxyholders may make nominations.

9. One nominating speech, not to exceed three (3) minutes in duration, shall be allowed for each nominee.

10. After nominations are closed for each office, each nominee must indicate whether he or she accepts the nomination and, if he or she accepts, shall be permitted to address the membership for a period of up to seven (7) minutes. Such addresses shall be given in the order by which the nominations were made.

11. The votes of members, in person or by proxy, constituting a majority of the quorum present at the meeting shall be necessary for election to such office. If no candidate receives a majority, the two candidates with the most votes will participate in a run-off election. The candidate with the most votes in the run-off election shall win such election.

12. Voting need not be by written ballot, unless otherwise required by these Bylaws, the Certificate of Incorporation, or applicable law.

**ARTICLE IX Proxies; Waiver of Notice**

Where the delegation of power to vote or participate in the membership of the NAIC is required by ARTICLE II of these Bylaws to be in writing, such delegation must be effected by proxy. All proxies must be dated, give specific authority to a named individual who meets the requirements of ARTICLE II for duly authorized representatives, and meet any other applicable legal requirement. Documents such as electronic transmission, telegrams, mailgrams, etc. are acceptable as proxies if they otherwise meet the requirements contained herein and applicable law. Proxies should be maintained by NAIC Central Office staff. Notwithstanding the foregoing, a member may not vote by proxy in a meeting of the Executive Committee, Financial Regulation Standards and Accreditation (F) Committee in a vote concerning a state-specific item, Government Relations Leadership Council, or International Insurance Relations Leadership Group, or any respective subcommittees.

Whenever any notice is required to be given to any member (for a meeting of members or the Executive Committee) under the provisions of the Certificate of Incorporation, these Bylaws or applicable law, a written waiver, signed by the person entitled to notice, or a waiver by electronic transmission by person entitled to notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice. Neither the business to be transacted at, nor the purpose of, any annual or special meeting of the members or any committee, subcommittee or task force need be specified in any waiver of notice of such meeting.

Unless otherwise restricted by the Certificate of Incorporation or these Bylaws, Members may participate in a meeting by means of conference telephone or by any means by which all persons participating in the meeting are able to communicate with one another, and such participation shall constitute presence in person at the meeting.

Any notice required under these Bylaws may be provided by mail, facsimile, or electronic transmission.
ARTICLE X Procedures; Books and Records

The Executive Committee shall adopt policies and procedures for the conduct of meetings. In the event such policies and procedures conflict with the NAIC’s Certificate of Incorporation or Bylaws, the Certificate of Incorporation and Bylaws shall govern.

The books and records of the NAIC may be kept outside the State of Delaware at such place or places as may from time to time be designated by the Internal Administration Subcommittee (EX1) of the Executive Committee.

ARTICLE XI Amendments

These Bylaws may be altered or repealed and new Bylaws may be adopted at any regular or special meeting of the members by an affirmative vote, in person or by proxy, of a majority of the members entitled to vote at such meeting; provided, however, that any proposed alteration (except to correct typographical or grammatical errors or article, section or paragraph cross-references caused by other alterations, repeals, or adoptions) or repeal of, or the adoption of any Bylaw inconsistent with, Article II [Membership], Article VII, Paragraph 2 [Special Meetings of Members] and Paragraph 4 [Quorum], Article VIII [Elections], or this Article XI [Amendments] of these Bylaws (the “Supermajority Bylaws”) by the members shall require the affirmative vote, in person or by proxy, of at least two-thirds (2/3) of the members entitled to vote at such meeting and provided, further, that in the case of any such member action at a special meeting of members, notice of the proposed alteration, repeal or adoption of the new Bylaw or Bylaws must be contained in the notice of such special meeting. Corrections for typographical or grammatical errors or to article, section or paragraph cross-references caused by other alterations, repeals or adoption, shall only be made if approved by the affirmative vote of at least two-thirds (2/3) of the Executive Committee.

Adopted October 1999, see 1999 Proc., Third Quarter page 7
Amended November 2002, see 2002 Proc., Fourth Quarter page 25
Amended June 2003, see 2003 Proc., Second Quarter page 28
Amended March 2004, see 2004 Proc., First Quarter page 119
Amended December 2004, see 2004 Proc., Fourth Quarter page 58
Amended March 2009, see 2009 Proc., First Quarter pages 3–67
Amended September 2009, see 2009 Proc., Third Quarter
Amended October 2011, see Proc., Summer 2011
Amended December 2015, see Proc., Spring 2016
The NAIC is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. NAIC members are the elected and appointed state government officials who, along with their departments and staff, regulate the conduct of insurance companies and agents in their respective state or territory. The NAIC is committed to conducting its business openly. This policy statement applies to meetings of NAIC committees, subcommittees, task forces and working groups. It does not apply to Roundtable discussions, zone meetings, commissioners’ conferences, and other like meetings of the members. Applicable meetings will be open unless the discussion or action contemplated will include:

1. Potential or pending litigation or administrative proceedings which may involve the NAIC, any NAIC member, or their staffs, in any capacity involving their official or prescribed duties, requests for briefs of amicus curiae, or legal advice;

2. Pending investigations which may involve either the NAIC or any member in any capacity;

3. Specific companies, entities or individuals, including, but not limited to, collaborative financial and market conduct examinations and analysis;

4. Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder;

5. Voting on the election of officers of the NAIC;

6. Consultations with NAIC staff members related to NAIC technical guidance, including, but not limited to, Annual and Quarterly Statement Blanks and Instructions, the Accounting Practices and Procedures Manual, and similar materials;

7. Consideration of individual state insurance department’s compliance with NAIC financial regulation standards by the Financial Regulation Standards and Accreditation (F) Committee or any subgroup appointed thereunder;

8. Consideration of strategic planning issues relating to federal legislative and regulatory matters or international regulatory matters; or

9. Any other subject required to be kept confidential under any Memorandum of Understanding or other agreement, state or federal law or under any judicial or administrative order.

Because not all situations requiring a regulator to regulator discussion can be anticipated at the time a meeting is scheduled, a meeting convened in open session can move into regulator to regulator session on motion by the chair or other member approved by a majority of the members present. Public notice will be provided of all applicable meetings. The reason for holding a meeting in regulator only session will be announced when the meeting notice is published, at the beginning of any regulator only session, and when an open meeting goes into regulator only session.

This revised policy statement shall take effect upon adoption by the membership.

[NOTE: (Effective Jan. 1, 1996, conference call meetings are included in the application of the policy statement, by action of the NAIC on June 4, 1995). This policy statement was originally adopted by the NAIC membership during the 1994 Fall National Meeting in Minneapolis, Minnesota, Sept. 18–20, 1994.]

Revisions Adopted by the NAIC Membership, April 1, 2014

</table>
1. Sept. 23, 1886: John K. Tarbox (MA) was elected President for the 1887 Convention; Samuel H. Cross (RI) was elected Vice-President; and Robert B. Brinkerhoff (Ohio chief clerk) was elected Secretary. Commissioner Tarbox died May 28, 1887. Auditor Cross was out of office effective June 1, 1887. Mr. Brinkerhoff was out of office effective June 3, 1887. Oliver Pillsbury (NH) was chosen to preside over the 1887 Convention. It is unknown who acted as Vice-President. Jacob A. McEwen (Ohio chief clerk) was chosen to act as Secretary.

2. Aug. 21, 1890: Charles B. Allan (Nebraska deputy auditor) was elected Secretary for the 1891 Convention; however, he resigned before the Convention assembled. Sept. 30, 1891: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1891 Convention.

3. Sept. 18, 1895: William M. Hahn (OH) was elected President for the 1896 Convention and James R. Waddill (MO) was elected Vice-President; however, Superintendent Hahn was out of office effective June 3, 1886. Sept. 22, 1896: Superintendent Waddill was elected President for the 1896 Convention and Stephen W. Carr (ME) was chosen to act as Vice-President.
4. Sept. 23, 1896: James R. Waddill (MO) was elected President for the 1897 Convention and Stephen W. Carr (ME) was elected Vice-President; however, Mr. Waddill was out of office effective March 1, 1897. Sept. 7, 1897: Commissioner Carr was elected President for the 1897 Convention. It is unknown who acted as Vice-President.

5. Sept. 23, 1896: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1897 Convention; however, he was out of office at the date of the Convention. Sept. 7, 1897: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1897 Convention.

6. Sept. 7, 1897: Frederick L. ‘Fred’ Cutting (MA) was elected Secretary for the 1898 Convention; however, he declined the offer. Sept. 13, 1898: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1898 Convention.

7. Sept. 20, 1900: John A. O’Shaughnessy (MN) was elected President for the 1901 Convention; however, he was out of office at the date of the Convention. Sept. 5, 1899: Edward T. Orear (MO) was elected President for the 1899 Convention.

8. Sept. 29, 1910: Theodore H. Macdonald (CT) was elected Vice-President for the 1911 Convention; however, he was out of office at the date of the Convention. It is unknown who acted as Vice-President.

9. Aug. 25, 1911: Harry R. Cunningham (MT) was elected Secretary for the 1912 Convention; however, he resigned before the Convention assembled. March 1912: Fitz Hugh McMaster (SC) was elected Secretary for the 1912 Convention.

10. Aug. 1, 1913: Willard Done (UT) was elected First Vice-President for the 1914 Convention; however, he resigned before the Convention assembled. It is unknown who acted as First Vice-President.

11. Aug. 31, 1917: Emory H. English (IA) was elected President for the 1918 Convention; Robert J. Merrill (NH) was elected First Vice-President; and Michael J. Cleary (WI) was elected Second Vice-President. November 1917: Mr. Merrill resigned as First Vice-President. Dec. 6, 1917: Mr. Cleary was elected First Vice-President for the 1918 Convention and Walter K. Chorn (MO) was elected Second Vice-President. Jan. 1, 1918: Mr. English resigned as President and Mr. Cleary was elected President for the 1918 Convention by the Executive (EX) Committee. It is unknown who acted as First Vice-President.

12. Aug. 31, 1917: Fitz Hugh McMaster (SC) was elected Secretary for the 1918 Convention; however, he resigned before the Convention assembled. Dec. 6, 1917: Joseph L. Button (VA) was elected Secretary for the 1918 Convention.

13. Sept. 3, 1920: Frank H. Ellsworth (MI) was elected President for the 1921 Convention; Alfred L. Harty (MO) was elected First Vice-President; and Thomas B. Donaldson (PA) was elected Second Vice-President. Commissioner Ellsworth resigned effective April 30, 1921, as NAIC President and Michigan Insurance Commissioner. June 27, 1921: Superintendent Harty was elected President for the 1921 Convention by the Executive (EX) Committee; Commissioner Donaldson was elected First Vice-President; and Platt Whitman (WI) was elected Second Vice-President.

14. Sept. 8, 1922: Platt Whitman (WI) was elected President for the 1923 Convention; Herbert O. Fishback (WA) was elected First Vice-President; and John C. Luning (FL) was elected Second Vice-President. July 1, 1923: Commissioner Whitman resigned as President; Commissioner Fishback was elected President for the 1923 Convention by the Executive (EX) Committee; and Mr. Luning was elected First Vice-President by the Executive (EX) Committee. It is unknown who acted as Second Vice-President.

15. Sept. 15, 1898: Elmer H. Dearth (MN) was elected President for the 1899 Convention; however, he was out of office at the date of the Convention. September 1901: William H. Hart (IN) was elected President for the 1901 Convention.

16. Sept. 12, 1919: John B. Sanborn (MN) was elected Second Vice-President for the 1920 Convention; however, he resigned before the Convention assembled. June 1920: Alfred L. Harty (MO) was chosen to act as Second Vice-President for the 1920 Convention.

17. Sept. 18, 1925: William R. C. Kendrick (IA) was elected President for the 1926 Convention. January 1926: Commissioner Kendrick resigned as NAIC President and Harry L. Conn (OH) was elected President for the 1926 Convention. Commissioner Kendrick remained as Iowa Insurance Commissioner until March 1, 1926.

18. Nov. 19, 1926: Harry L. Conn (OH) was elected President for the 1927 Convention and Albert S. Caldwell (TN) was elected First Vice-President. April 15, 1927: Superintendent Conn resigned as NAIC President and Ohio Insurance Superintendent. May 3, 1927: Commissioner Caldwell was elected President for the 1927 Convention and James A. Beha (NY) was elected First Vice-President.
19. Sept. 26, 1928: Charles R. Detrick (CA) was elected President for the 1929 Convention; James A. Beha (NY) was elected First Vice-President; and Howard P. Dunham (CT) was elected Second Vice-President. Jan. 1, 1929: Superintendent Beha resigned as NAIC First Vice-President and New York Insurance Superintendent. Commissioner Dunham was elected First Vice-President for the 1929 Convention. April 24, 1929: Commissioner Detrick resigned as NAIC President and California Insurance Commissioner. Commissioner Dunham was elected President for the 1929 Convention; Clarence C. Wysong (IN) was elected First Vice-President; and Jess G. Read (OK) was elected Second Vice-President.

20. Sept. 19, 1929: Joseph L. Button (VA) was elected Secretary for the 1930 Convention; however, he resigned effective Oct. 15, 1929, as NAIC Secretary and Virginia Commissioner of Insurance and Banking. Dec. 10, 1929: Albert S. Caldwell (TN) was elected Secretary for the 1930 Convention.

21. Sept. 9, 1930: Clarence C. Wysong (IN) was elected President for the 1931 Convention; Jess G. Read (OK) was elected First Vice-President; and Clare A. Lee (OR) was elected Second Vice-President. January 1931: Commissioner Wysong resigned effective Jan. 1, 1931, as NAIC President and Indiana Insurance Commissioner; Commissioner Lee was no longer serving as Second Vice-President; and Commissioner Read was elected President by the Executive (EX) Committee for the 1931 Convention. June 17, 1931: Charles D. Livingston (MI) was elected First Vice-President by the Executive (EX) Committee for the 1931 Convention and William A. Tarver (TX) was elected Second Vice-President by the Executive (EX) Committee.

22. Oct. 20, 1932: William A. Tarver (TX) was elected President for the 1933 Convention; Garfield W. Brown (MN) was elected First Vice-President; and Daniel C. ‘Dan’ Boney (NC) was elected Second Vice-President. Commissioner Tarver resigned effective Feb. 10, 1933, as NAIC President and Texas Life Insurance Commissioner. Commissioner Brown was elected President for the 1933 Convention; Commissioner Boney was chosen to act as First Vice-President and George S. Van Schaick (NY) was chosen to act as Second Vice-President.

23. July 1935: It is unclear why no one acted as First Vice-President or Second Vice-President for the 1935 Convention.

24. June 23, 1939: J. Balch Moor (DC) was elected Vice-President; however, he died July 22, 1939, before the 1940 Convention assembled. John C. Blackall (CT) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

25. June 6, 1945: Edward L. Scheufler (MO) was elected Vice-President for the 1946 Convention; however, he resigned effective Oct. 15, 1945, as NAIC Vice-President and Missouri Insurance Commissioner. Dec. 3, 1945: Robert E. Dineen (NY) was elected Vice-President by the Executive (EX) Committee for the 1946 Convention.

26. June 11, 1946: Jess G. Read (OK) was elected Secretary for the 1947 Convention; however, he died July 20, 1946. Sept. 4, 1946: Nellis P. Parkinson (IL) was elected Secretary by the Executive (EX) Committee to fill the unexpired term.

27. June 1953: George B. Butler (TX) was elected Vice-President; however, he died Sept. 28, 1953. It is unknown who acted as Vice-President for the November 1953 Convention. Nov. 30, 1953: Donald Knowlton (NH) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

28. May 1956: George A. Bowles (VA) was elected Secretary; however, he died June 1, 1956. Paul A. Hammel (NV) was elected Secretary to fill the unexpired term.

29. June 1958: Arch E. Northington (TN) was elected President; however, he resigned effective Dec. 23, 1958, as NAIC President and Tennessee Insurance Commissioner. January 1959: Paul A. Hammel (NV) was elected President and Sam N. Beery (CO) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.

30. June 1962: Joseph S. Gerber (IL) was elected Vice-President; however, he resigned effective Jan. 29, 1963, as NAIC Vice-President and Illinois Insurance Director. The office of Vice-President was vacant for the June 1963 Convention.

31. June 1968: Charles R. Howell (NJ) was elected President; however, he resigned effective Feb. 28, 1969, as NAIC President and New Jersey Commissioner of Banking and Insurance. Ned Price (TX) was elected by the Executive (EX) Committee to fill the unexpired term.

33. A constitutional amendment moved NAIC officer elections from June to December (commencing December 1974), President Johnnie L. Caldwell (GA) served a six-month term.
34. Kenneth E. ‘Ken’ DeShetler (OH) was elected President; however, he resigned effective Jan. 13, 1975, as NAIC President and Ohio Insurance Director. William H. Huff, III (IA) was elected by the Executive (EX) Committee to fill the unexpired term.

35. H. Peter ‘Pete’ Hudson (IN) was elected President; however, he resigned as NAIC President and Indiana Insurance Commissioner effective Nov. 15, 1979. It is unknown who presided over the December 1979 Convention.

36. John W. Lindsay resigned effective Sept. 3, 1981, as NAIC Vice-President and South Carolina Insurance Commissioner. Johnnie L. Caldwell (GA) was elected by the Executive (EX) Committee to fill the unexpired term.

37. David J. Lyons resigned effective June 17, 1994, as NAIC Vice President but remained as Iowa Insurance Commissioner until July 31, 1994. A special interim Plenary election was held June 12, 1994: Arkansas Insurance Commissioner Lee Douglass was elected Vice President to serve June 17, 1994, to Dec. 31, 1994.

38. September 2001: NAIC members unanimously agreed that the 2001 Fall National Meeting should be canceled in the wake of the tragic events that occurred Sept. 11, 2001. The meeting had been scheduled for Sept. 22–25, 2001, at the Marriott and Westin Copley Place hotels in Boston, Massachusetts.

39. Ernst N. ‘Ernie’ Csiszar resigned effective Aug. 18, 2004, as NAIC President and South Carolina Director of Insurance. Approximately two weeks later, James A. ‘Jim’ Poolman resigned as NAIC Vice President but remained as North Dakota Insurance Commissioner. A special interim Plenary election was held Sept. 13, 2004, during the Fall National Meeting in Anchorage, Alaska: Pennsylvania Insurance Commissioner M. Diane Koken was elected President; Oregon Insurance Administrator Joel S. Ario was elected Vice President; and Maine Insurance Superintendent Alessandro A. ‘Al’ Iuppa was elected Secretary-Treasurer to serve from Sept. 13, 2004, to Dec. 31, 2004.

40. December 2004: NAIC members voted at its 2004 Winter National Meeting to adopt amendments to the NAIC Bylaws, which included the creation of a President-Elect position as an NAIC officer.

41. September 2005: NAIC members agreed to cancel the 2005 Fall National Meeting due to the devastation caused by Hurricane Katrina on Aug. 29, 2005. The meeting had been scheduled for Sept. 10–13, 2005, at the Sheraton hotel in New Orleans, Louisiana.

42. Eric P. Serna resigned effective June 14, 2006, as NAIC Secretary-Treasurer and New Mexico Superintendent of Insurance. A special Plenary interim election was held during the 2006 Summer National Meeting: New Hampshire Insurance Commissioner Roger A. Sevigny was elected Secretary-Treasurer to serve from June 14, 2006, to Dec. 31, 2006.

43. Michael T. McRaith resigned effective May 31, 2011, as NAIC Secretary-Treasurer and Illinois Director of Insurance. A special Plenary interim election was held via conference call May 16, 2011: North Dakota Insurance Commissioner Adam Hamm was elected Secretary-Treasurer to serve from May 31, 2011, to Dec. 31, 2011.

45. Michael F. ‘Mike’ Consedine resigned effective Jan. 20, 2015, as NAIC President-Elect and Pennsylvania Insurance Commissioner. A special Plenary interim election was held via conference call Feb. 8, 2015: Missouri Insurance Director John M. Huff was elected President-Elect to serve from Feb. 8, 2015, to Dec. 31, 2015.

46. Sharon P. Clark resigned effective Jan. 11, 2016, as NAIC President-Elect and Kentucky Insurance Commissioner. A special Plenary interim election was held in Bonita Springs, Florida, on Feb. 7, 2016: Wisconsin Insurance Commissioner Theodore K. ‘Ted’ Nickel was elected President-Elect; Tennessee Insurance Commissioner Julie Mix McPeak was elected Vice President; and Maine Insurance Superintendent Eric A. Cioppa was elected Secretary-Treasurer to serve from Feb. 7, 2016, to Dec. 31, 2017.

47. David C. Mattax, NAIC Secretary-Treasurer and Texas Insurance Commissioner died in office April 13, 2017. A special Plenary interim election was held via conference call on May 12, 2017: South Carolina Insurance Director Raymond G. Farmer was elected Secretary-Treasurer to serve from May 12, 2017, to Dec. 31, 2017.

48. Gordon I. Ito resigned effective Dec. 31, 2018, as NAIC Vice President and Hawaii Insurance Commissioner. A special Plenary interim election was held in La Quinta, California, on Feb. 4, 2019: Florida Insurance Commissioner David Altmaier was elected Vice President to serve from Feb. 4, 2019, to Dec. 31, 2019.
49. March 11, 2020: Due to concerns about the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Spring National Meeting in a virtual format. However, on March 23, 2020, the NAIC officers decided to suspend holding any further sessions of the virtual Spring National Meeting to allow NAIC members and staff more time to focus on the health emergency. The meeting had been scheduled for March 21–24, 2020, at the Phoenix Convention Center and the Sheraton Grand and Hyatt Regency hotels in Phoenix, Arizona.

50. June 10, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Summer National Meeting in a virtual format. The meeting had been scheduled for Aug. 8–11, 2020, at the Minneapolis Convention Center and the Hilton and Hyatt Regency hotels in Minneapolis, Minnesota.

CALL TO ORDER

Welcome to the 229th session of the National Association of Insurance Commissioners (NAIC). This meeting will now come to order.

INTRODUCTION OF HEAD TABLE

Honorable James J. Donelon, NAIC Past President and Louisiana Insurance Commissioner
Honorable Eric A. Cioppa, NAIC Past President and Maine Insurance Superintendent
Honorable David Altmaier, NAIC President-Elect and Florida Insurance Commissioner
Honorable Dean L. Cameron, NAIC Vice President and Idaho Insurance Director
Honorable Chlora Lindley-Myers, NAIC Secretary-Treasurer and Missouri Insurance Director
Honorable Steve Kelley, Minnesota Insurance Commissioner
Andrew J. Beal, NAIC Chief Operating Officer (COO) and Chief Legal Officer (CLO)
Michael F. Consedine, NAIC Chief Executive Officer (CEO)

INTRODUCTION OF VIRTUAL HOST

It’s my great pleasure to introduce our Virtual Summer National Meeting host to speak for a few moments.

VIRTUAL HOST WELCOME

Thank you, Director Farmer!

Hello and welcome to the NAIC’s 2020 Virtual Summer National Meeting. I bring you greetings from Minneapolis, Minnesota. Minneapolis, as you all know was the location for this Summer National Meeting. Minnesota Gov. Tim Walz, Lieutenant Gov. Peggy Flanagan and I were excited about the opportunity to share our city and state with you; however, due to the COVID-19 pandemic, all of our event plans, like many of our summer plans, were changed. Of course, I was disappointed, but the health and safety of our colleagues and attendees is the most important thing, and we are all doing our parts to mitigate the risks of contracting and spreading the coronavirus.

Regardless of whether you’ve visited before, Minneapolis has a lot to offer. As a twin city to St. Paul, Minnesota, and being the largest city in the “Land of 10,000 Lakes,” Minneapolis is known for the Mississippi River, the flour milling heritage that developed from it, and for its beautiful lakes and parks.

Like many other cities though, Minneapolis is still reckoning with the effects of the death of George Floyd on one of its streets. We, like many of you, have seen protests, civil unrest and the long overdue, broad recognition of systemic racism. That’s why I am pleased that the NAIC has appointed the Special (EX) Committee on Race and Insurance and set aside time for the “Special Session on Race and Insurance” being held Aug. 13.

I am confident that these initiatives will have a lasting effect. I’m eager to engage with colleagues in the work of the Special (EX) Committee on Race and Insurance and support the effort to address racial inequities across the insurance industry. Doing our part to effect change as it relates to racial bias is one step toward making a difference. I applaud the NAIC and my colleagues for their commitment to achieving racial equality throughout the industry.

The other important initiative being launched with this national meeting is the Climate and Resiliency (EX) Task Force. The forecast is that you would have experienced some of the best weather Minnesota has to offer if we had been able to proceed with the meeting here. Yet we all recognize that a hotter and more variable climate is with us now and will be in the future, and it poses challenges for insurers and regulators. I am glad we will be discussing this topic along with all the other issues that our meetings typically cover.
I’m certain that if you were here for this summer’s meeting, you would have experienced the best hospitality Minneapolis has to offer! I hope we’ll get the chance to host you again, next time in person.

I am grateful to the NAIC staff for their amazing work in converting this meeting to a virtual meeting and to all of you for joining us. Everyone involved with the planning of this Summer National Meeting should be commended for the role they have played to make this event possible.

As we kick off day one, I hope you are as eager as I am to participate in the meetings and sessions. We will all remember 2020 as the year when many things changed. Through our discussions together, we have the opportunity to be active changemakers to better protect consumers, ensure a healthy insurance marketplace, make our communities more resilient, and eliminate systemic racism.

We have a lot of work to do this week! Enjoy the Summer National Meeting.

PRESIDENTIAL ADDRESS

Welcome to the NAIC Virtual Summer National Meeting. I think it’s fair to say that 2020 is not the year any of us thought it would be. So much has happened in the past eight months, that it is hard to even know where to begin.

Over the past few months, we’ve seen the deaths of Ahmaud Arbery, Breonna Taylor and George Floyd and felt the pain the country is feeling over the loss of their lives. Also, we’re saddened by the profound recent loss of two icons of the civil rights movement, Congressman John Lewis and the Reverend C.T. Vivian. Both men worked alongside Dr. Martin Luther King Jr., standing against racial injustice. The renewed focus on racial equality in society has generated a lot of discussions between our members and stakeholders.

We understand the need to address discrimination and its impact on insurance products and to promote diversity in the insurance sector, particularly in senior leadership roles. On these issues, we will work to honor the legacies of those great civil rights leaders and others, by continuing to push for equal treatment and opportunity for all. We hope this endeavor will engage willing participants across the sector. Moments of historical reflection like this are rare, and none of us should want to be remembered as having taken a pass at doing the right thing and creating a lasting positive change.

We’ve heard from insurance CEOs, and they are committed to making this change. My fellow commissioners and I welcome those words and are going to hold them to it. We are looking at the regulatory side, as well. I promise that we are going to hold a mirror up to ourselves just as we hold it up to the insurance sector.

We expect the NAIC to lead by example. The NAIC as an organization has taken the first of many steps forward. The NAIC is currently recruiting for a diversity officer. They have restructured their operations to create an organization that is focused on culture and leadership—having formed a Diversity, Equity and Inclusion Council, among other action steps—demonstrating an organizational commitment to diversity. It is our duty as commissioners to not only promote diversity within the insurance sector, but to address racial inequality in the development and access of insurance products.

I encourage all of you to attend the “Special Session on Race and Insurance,” Aug. 13 from 3 p.m. to 5 p.m., where we will look at the history of insurance, examine what the NAIC and state insurance regulators can do to identify and address any potentially ongoing racial discriminatory practices. This session will operate primarily as a listening session designed to help inform further targeted NAIC activity. My hope, one shared by my fellow officers, is this initiative will unite us all across the sector in common cause.

Unfair discrimination against a protected class in any form, whether intentional or not, should not stand. A regulatory system, and insurance in general, is a reflection of the society it aims to protect. And while state insurance regulators have worked to eliminate overt discrimination and racism, we all have been increasingly aware that unconscious bias is just as damaging to society.

For that and other reasons, the Executive (EX) Committee appointed the Special (EX) Committee on Race and Insurance. The Special Committee is co-chaired by me and NAIC President-Elect David Altmaier; Vice President Dean L. Cameron and Secretary-Treasurer Chlora Lindley-Myers serve as co-vice chairs for the Special Committee. The Special Committee has the engagement of the vast majority of members, and their passion for this issue is undeniable. I know my colleagues have been moved by other members’ personal stories and struggles with discrimination and prejudice. The Special Committee will engage with a broad group of stakeholders on issues related to race, equity, diversity and inclusion.
By year-end, the Special Committee will report its findings and develop steps that insurance regulators and the insurance industry can take to increase diversity and inclusion and address practices that potentially disadvantage minorities to ensure ongoing engagement of the NAIC on these issues charged to the existing committees, task forces and working groups.

One of the areas the NAIC has already taken a stand on is proxy discrimination. The Artificial Intelligence (EX) Working Group adopted guiding principles to inform an established general expectation for artificial intelligence (AI) actors and systems that emphasize the importance of accountability, compliance and transparency while providing safe, secure and robust outputs. These principles will be used to assist regulators in NAIC committees addressing insurance specific AI applications. We anticipate these principles will be interpreted and applied in a manner that promotes innovation and protects the consumer from harm, while accommodating the nature and pace of change in the use of AI by the insurance industry.

I assure you that my fellow commissioners are committed to addressing these important subjects, and I hope you will engage with us as part of this historic opportunity to make a difference.

It’s a telling sign of the tumultuous year we’ve had thus far that my second topic for today is a historic global pandemic. I don’t think it’s a stretch to say this is the health crisis of our lifetime in terms of its impact on people’s lives, finances and futures. I’m proud to say that when confronted with this crisis, this organization, the sector did not blink, did not break and once again showed strength and resiliency. The pandemic has forced us to think “outside the box” and come up with creative solutions for meetings and work.

After we decided not to meet in person for the Spring National Meeting, the NAIC put together a virtual session on the potential impact of COVID-19. On March 20, experts from government, the industry and consumer advocate groups—as well as nearly 3,000 participants—joined us for what would be the first of many discussions about the impact of the pandemic.

Since that time, the NAIC fielded multiple requests for relief from 22 different industry, consumer and health provider associations. Collectively, insurance commissioners issued more than 1,000 different bulletins, requests and actions, all focused on protecting consumers. The states acted quickly to remove consumer cost-sharing for COVID-19 testing and continue to work with federal officials to implement similar measures approved by the U.S. Congress. In addition, most states issued bulletins to clarify that insurers must cover early prescription drug refills, suspend prior authorization and expand coverage of telemedicine.

They also took steps to ease the administrative burden on carriers and agents by expanding the pool of providers during the outbreak. As with other lines of insurance, several states required life insurers to defer premium payments and suspend cancellations and nonrenewals. Life insurers were also instructed to waive fees and penalties and allow payment plans for premiums to avoid a lapse in coverage.

Insurance producers are in direct contact every day with Americans, helping them to make important financial decisions. Ensuring those producers had the knowledge and personal integrity to fulfill their obligations was critical. The NAIC worked with the National Insurance Producer Registry (NIPR) on recommended best practices and a bulletin template for guidance on the implementation of a temporary license class was distributed to the states. Together, we will continue to do the technical work required for the states to extend renewal deadlines or offer temporary licenses electronically through NIPR.

To help consumers, legislators and business owners understand the impacts of COVID-19, the NAIC created the “Coronavirus Resource Center.” This page on the NAIC website provides access to third-party resources, searchable information on state actions and content specifically created by the NAIC, including archived research from past pandemics. Academics from the Wisconsin School of Business have also weighed in on business interruption insurance and special enrollment periods.

The NAIC Communications Division worked with the states and subject-matter experts to create consumer bulletins on coverage information related to all lines of insurance. As with many crises, fraud remains a major concern. State insurance regulators and the NAIC have also issued warnings to consumers about potential COVID-19-related scams, such as robocalls and text messages advertising bogus miracle cures, free at-home test kits and scams claiming assistance with obtaining federal government stimulus checks.

Throughout this crisis, the NAIC has worked to keep the insurance sector financially strong by assisting state insurance regulators who are monitoring the financial health of insurers. These efforts include finding and evaluating company exposures to COVID-19 related risks.
The NAIC has provided reports to the states for their use in evaluating the potential impact of the market downturn on insurance company assets. Evaluating company exposures has involved identifying those companies whose products put them at the greatest risk of being impacted, as well as those companies that are at great risk due to interest rate cuts.

State insurance regulators, working together through the NAIC, developed a national information request template that gathers data from insurers of their exposure to potential COVID-19 claims and the impact of the related economic downturn on their assets. The NAIC has also completed a resource and guidance document of COVID-19 assumptions that state insurance regulators may use when reviewing carrier rights submissions for 2021. The Statutory Accounting Principles (E) Working Group issued new accounting and reporting guidance for treatment of overdue mortgages and due dates of quarterly filings to allow more time for the insurers to collect premiums before reporting the receivables is not admitted in their statutory financial statements.

I’m proud to say our efforts in this crisis and leading up to it have resulted in the U.S. insurance market being recognized as the most financially secure of any global market in the pandemic.

One of the most talked about insurance lines during this pandemic has been business interruption insurance. My fellow commissioners and I have reviewed hundreds of policies on behalf of our constituents. Not surprisingly, our informal findings mirror the recent industry data call, which found that 83% of all policies included an exclusion for viral contamination or pandemic, and 98% of all policies had a requirement for physical loss. If insurance policies cover claims related to pandemics, insurance companies should pay those claims for the insurance contract.

However, it is not a good idea to apply coverage retroactively. That is why the NAIC issued a statement and submitted written testimony letting Congress know of our concern about requiring insurance companies to retroactively alter contracts to provide coverage that was not contemplated or funded and, in many cases, specifically excluded by the policy.

We believe altering these insurance contracts could jeopardize the financial health of insurance companies or affect their ability to pay other claims and, ultimately, impact the availability of needed coverages in the marketplace. This would undermine the ability of insurance regulators to protect consumers or ensure the solvency and stability of the insurance industry. As Congress considers what to do about the impact of this pandemic, future pandemics and the role insurance might play, the NAIC will remain actively involved in those discussions as a vital and objective resource.

The impact of COVID-19 has been truly global and so has our international engagement. In-person, international meetings have been suspended for the time being, but we have held regular calls to share experiences in dealing with the current situation and responded to a survey to collect informational jurisdictional responses.

Already this year, we’ve had virtual bilateral discussions with key markets like the European Union (EU) and Bermuda, and we are nearing completion of months-long work on the latest International Monetary Fund (IMF) assessment of our system with a number of you. Our work on comparability between the insurance capital standard and the aggregation method has continued. However, the International Association of Insurance Supervisors’ (IAIS) consultation on principles for assessment criteria will be delayed from July to later in 2020.

Turning to some of our financial priorities, work on the group capital calculation (GCC) and the Macroprudential Initiative (MPI) remain important to ensure our system is prepared for the shocks and market disruptions of the future. COVID-19 provided a stark example of not only how financial markets can deteriorate, but also how quickly they can recover. Our system, which incentivizes a buy-and-hold approach to assets, is well suited to insurance liabilities. But we must not become complacent. Adding GCC and MPI tools to our toolbelt is important for regulation here and to support our commitment to strong group supervision internationally.

In short, our approach has been both flexible and focused in dealing with the pandemic. As the pandemic continues to evolve, we will continue to take the actions needed to protect consumers and ensure the ongoing stability of the nation’s insurance sector.

Because the forces of nature do not really care if we’re in the middle of a pandemic, we have continued our efforts to make sure our consumers are prepared for any natural disaster. We are working with Congress, weighing in on proposals on the National Flood Insurance Program (NFIP) and expanding private flood options. The NFIP is set to expire in less than three months, but we cannot let that happen and will continue this critical work.
The NAIC Communications Division, in conjunction with several NAIC working groups, has produced materials on flooding, hurricanes, tornadoes and wildfires. In May, I was interviewed by nearly 30 television and radio stations about natural disaster preparedness and resilience. I offered tips on how to prepare for hurricane season and reminded everyone about the importance of flood insurance. In June, the NAIC hosted a Twitter chat—along with insurance departments across the country, the Federal Emergency Management Association (FEMA) and a number of other stakeholders—stressing the importance of preparedness.

At the beginning of this year, I had two top priorities for my year as president. The first which we just discussed, was resiliency of consumers and their properties in the event of a natural disaster. The second is long-term care insurance. Both issues remain high priorities, even in the midst of COVID-19 and the quest for social justice.

Long-term care insurance provides one of the most significant examples of tension between solvency, regulation and consumer protection. Elderly consumers are experiencing significant premium increases because carriers believe they are necessary to maintain reserves. Our Long-Term Care Insurance (EX) Task Force continues its important work. They have been reviewing various approaches to address actuarially appropriate rate increases for long-term care coverage.

Last month, the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup released a document for public comment that identifies benefit options that can be offered to consumers who cannot afford great increases. The principles were developed by 17 state insurance departments and are designed to offer guidance on how to provide consumers with choices about changes to long-term care contract benefits.

Addressing the many issues within this product line is still a priority for us. All the challenges we face in 2020 are new and ever-evolving. Our aim remains the same as they were almost 150 years ago: Protect the consumers in each of our jurisdictions and ensure the safety and stability of the markets we oversee. We will make sure the citizens of our states and territories are treated equitably and without prejudice, and we will keep pace with changing technologies and economic realities to ensure the insurance markets of the United States remain strong and vibrant and are helping people manage the risk of everyday life for another 150 years and beyond.

In closing, 2020 is certainly not the year we expected, but it is the year that we got. I could not be prouder to have the honor of serving this organization with my colleagues across the country. During these trying times, we have tirelessly worked to protect the lives and livelihoods of Americans and ensure that a vibrant insurance sector continues to be there for consumers when it’s needed most.

It has been said of the NAIC and its members, we are at our best when things are at their worst. That has never been truer. These days will pass, and I look forward to when we can meet face-to-face again. Until then, I wish each of you and your families health, happiness and the hope of better days to come. Stay well and God bless.

ADJOURNMENT

Raymond G. Farmer, NAIC President

With that, I officially conclude this Opening Session of the 229th meeting of the National Association of Insurance Commissioners.
Synopsis of the NAIC Committee, Subcommittee and Task Force Meetings
2020 Virtual Summer National Meeting
July 27 – August 14, 2020

TO: Members of the NAIC and Interested Parties
FROM: The Staff of the NAIC

Committee Action
NAIC staff have reviewed the committee, subcommittee and task force reports and highlighted the actions taken by the committee groups during the 2020 Virtual Summer National Meeting. The purpose of this report is to provide NAIC members, state insurance regulators and interested parties with a summary of these meeting reports.

EXECUTIVE (EX) COMMITTEE AND PLENARY (Joint Session)
Aug. 14, 2020
1. Adopted the report of the Executive (EX) Committee. See the Committee listing for details.
2. Adopted the “NAIC Principles on Artificial Intelligence (AI)” (AI Principles).
3. Adopted by consent the committee, subcommittee and task force minutes of the 2019 Fall National Meeting.
4. Adopted its Feb. 13 minutes, which included the following action:
   a. Adopted revisions to the *Suitability in Annuity Transactions Model Regulation (#275).*
5. Received the report of the Life Insurance and Annuities (A) Committee. See the Committee listing for details.
6. Received the report of the Health Insurance and Managed Care (B) Committee. See the Committee listing for details.
7.Received the report of the Property and Casualty Insurance (C) Committee. See the Committee listing for details.
8. Received the report of the Market Regulation and Consumer Affairs (D) Committee. See the Committee listing for details.
9. Received the report of the Financial Condition (E) Committee. See the Committee listing for details.
10. Received the report of the Financial Regulation Standards and Accreditation (F) Committee. See the Committee listing for details.
11. Received the report of the International Insurance Relations (G) Committee. See the Committee listing for details.
12. Adopted technical revisions to the *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48).*
17. Adopted the 2019 revisions to the *Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) as an addition to the Part A Accreditation Standards.*
19. Received a status report on state implementation of NAIC-adopted model laws and regulations.

EXECUTIVE (EX) COMMITTEE
Aug. 13, 2020
1. Adopted the report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee, which met July 14 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee and Subcommittee took the following action:
   a. Adopted its May 12 minutes.
   b. Adopted the Internal Administration (EX1) Subcommittee’s May 20 minutes, which included the following action:
      1. Received an update on the defined benefit plan portfolio as of March 31.
      2. Received an update on the NAIC long-term investment plan portfolio as of March 31.
      3. Approved a recommendation to replace one of the NAIC’s fund managers responsible for short-term bond funds.
   c. Adopted the report of the Audit Committee, which met June 2 via conference call and received the 2019/2020 Service Organization Control (SOC) 1 and SOC 2 reports.
   d. Received an update on the 2020 financial results and preliminary 2021 budget assumptions and approved an extension of unused 2020 grant funds to the end of 2021.
e. Appointed the Special (EX) Committee on Race and Insurance.

f. Appointed the Climate and Resiliency (EX) Task Force and adopted its draft charges.

g. Received a System for Electronic Rate and Form Filing (SERFF) assessment and directed NAIC staff to prepare and issue a request for proposal (RFP) to solicit proposals to help complete a “modernization pilot” and “Wave One” as recommended in the SERFF assessment.

h. Approved the NAIC staff recommendation to extend the residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) modeling contract with BlackRock for another year.

i. Approved the release of the economic scenario generator (ESG) fiscal for a two-week public comment period prior to a final vote of the Executive (EX) Committee during a future meeting.

j. Approved an information-sharing agreement with the U.S. Department of Labor (DOL).

k. Selected the meeting locations for the 2024 summer and fall national meetings: 1) the 2024 Summer National Meeting will be held in Chicago, IL; and 2) the 2024 Fall National Meeting will be held in Denver, CO.

l. Received the joint chief executive officer (CEO)/chief operating officer (COO) report.

2. Adopted the report of the Executive (EX) Committee, which met May 12, April 2, Feb. 13 and Jan. 10 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee took the following action:

a. Adopted the 2019 Fall National Meeting minutes of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

b. Adopted its April 2, Feb. 13 and Jan. 10 minutes.

c. Adopted the report of the Audit Committee.

d. Adopted the report of the Investment Committee.

e. Adopted the recommendation of the Life Actuarial (A) Task Force to delay the start of principle-based reserving (PBR) experience data reporting from 2020 to 2021.

f. Appointed Commissioner Vicki Schmidt (KS) and Director Bruce R. Ramge (NE) to serve on the National Insurance Producer Registry (NIPR) Board of Directors effective May 12.

g. Heard a report on a change in membership for the SERFF Advisory Board. Andrea Davey (Athene Annuity and Life Company) will serve as the life insurance representative on the SERFF Advisory Board.

h. Discussed the National Association of Registered Agents and Brokers (NARAB) board recommendations.

i. Heard an update on the ESG RFP.

j. Heard an update on the SERFF Assessment.

k. Heard an update on NAIC cybersecurity.

l. Discussed the status of the Mid-Year Roundtable and the Summer National Meeting.

m. Heard a joint CEO/COO report.

o. Received an update on the 2019 year-end financial results.

p. Approved the fiscal impact statement for the Long-Term Care Insurance Data Call and authorized NAIC staff to contract with a selected vendor.

q. Approved the fiscal impact statement for the SERFF Filing Review Tools Pilot.

r. Approved the following non-regulator appointments to the SERFF Advisory Board: Birny Birnbaum (Center for Economic Justice—CEJ) as the consumer representative; Theresa Boyce (Chubb Group) as a property/casualty (P/C) representative; Amanda Wheeler (LifeSecure Insurance Company) as a life insurance representative; and Rachel Benton (Bright Health) as a health insurance representative and vice chair.

s. Appointed Director Chlora Lindley-Myers (MO) as vice chair of the 2020 Consumer Participation Board of Trustees.

t. Appointed Commissioner Mark Afable (WI) to serve on the NIPR Board of Directors effective Feb. 13.

u. Disbanded the Long-Term Care Insurance (B/E) Task Force, the NAIC/State Government Liaison Committee and the NAIC/Industry Liaison Committee.

v. Removed the membership limit on the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force.

w. Approved the fiscal impact statement for the PBR Yearly Renewable Term Reinsurance Study.

x. Voted to release for public review and comment the Long-Term Care Insurance Data Call and Analysis fiscal impact statement.

y. Approved the debt restructure terms between the NAIC and Interstate Insurance Product Regulation Commission (Compact).

z. Appointed Florida, Idaho, Kentucky, Massachusetts, Missouri, Nebraska, Nevada, Ohio and Oklahoma as members of the NAIC 2020 Audit Committee.

3. Adopted the report of the Financial Stability (EX) Task Force. See the Task Force listing for details.

5. Adopted the report of the Innovation and Technology (EX) Task Force, including the AI Principles. See the Task Force listing for details.
6. Adopted the report of the Long-Term Care Insurance (EX) Task Force, including charges for its three new subgroups: Long-Term Care Insurance (LTCI) Multi-state Rate Review (EX) Subgroup; LTCI Reduced Benefit Options (EX) Subgroup; and LTCI Financial Solvency (EX) Subgroup. See the Task Force listing for details.

8. Received the 2019 annual report of the NAIC Designation Program Advisory Board.

9. Received a status report on implementation of the NAIC State Ahead strategic plan.

10. Received a status report on model law development efforts for amendments to: Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); Annuity Disclosure Model Regulation (#245); Health Maintenance Organization Model Act (#430); Model #440; Model #450; Life Insurance Disclosure Model Regulation (#580); Mortgage Guaranty Insurance Model Act (#630); Unfair Trade Practices Act (#880); and new models, including the Real Property Lender-Placed Insurance Model Act, the Pet Insurance Model Act and the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (PBM Model Act).

11. Heard a report from the Compact.

**Financial Stability (EX) Task Force**

**Aug. 5, 2020**

1. Adopted its Feb. 26 and 2019 Fall National Meeting minutes, which included the following action:
   a. Announced the reappointment of the Liquidity Assessment (EX) Subgroup.
   b. Discussed comments received on the draft 2019 liquidity stress test framework.
   c. Discussed comments received on a request to join the Financial Condition (E) Committee in opening Model #440 and Model #450 for amendments.

2. Heard an update on Financial Stability Oversight Council (FSOC) developments.

3. Received an update from the Liquidity Assessment (EX) Subgroup on its progress toward achieving its deliverables related to liquidity stress testing.

4. Received an update from the Receivership and Insolvency (E) Task Force on its work to address the Financial Stability (EX) Task Force’s referral letter to undertake analysis relevant to the Macroprudential Surveillance Initiative.

5. Heard an update on collateralized loan obligation (CLO) stress tests.

6. Heard an update on the International Association of Insurance Supervisors (IAIS)

7. Heard an update on the London Interbank Offered Rate (LIBOR).

8. Discussed exposure comments on the draft revisions to Model #440.

**Government Relations (EX) Leadership Council**

The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting.

**Innovation and Technology (EX) Task Force**

**Aug. 7, 2020**

1. Adopted its July 23 and 2019 Fall National Meeting minutes, which included the following action:
   a. Discussed comments regarding the AI Principles as adopted by the Artificial Intelligence (EX) Working Group during its June 30 conference call.
   b. Discussed comments regarding the anti-rebating draft amendments to Section 4H of Model #880.

2. Adopted the report of the Big Data (EX) Working Group, which met Aug. 4 and took the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Received an update from the Casualty Actuarial and Statistical (C) Task Force on its progress drafting a white paper, Regulatory Review of Predictive Models, to provide best practices for the review of predictive models and analytics filed by insurers to justify rates.
   c. Received an update from the Accelerated Underwriting (A) Working Group. The Working Group plans to circulate a first draft of its work product by the end of 2020 and complete its work by the 2021 Summer National Meeting.
d. Received an update on NAIC technical and nontechnical rate review trainings. Starting Nov. 13, 2019, and ending in June 2020, the NAIC Education and Training Department hosted biweekly statistical training for regulatory review of P/C rate models (technical training). State insurance regulators received technical training in exploratory data analysis and statistical techniques insurers are using to develop P/C risk classification and rating plans. The next phase of training was devoted to specific advanced statistical techniques. Course topics included generalized linear models (GLMs), generalized additive models (GAMs), gradient boosted trees, random forest ensembles and decision tree models. Model validation techniques were also covered. The NAIC also sponsored two non-theoretical, practical webinars, designated as “nontechnical webinars.” The NAIC plans to provide training targeted specifically to market conduct examiners.

e. Received an update on NAIC technical services to state insurance regulators for the review of P/C rate models. State insurance regulators will be able to share information through a confidential model database and obtain NAIC technical assistance when reviewing a specific company’s filed P/C rate model.

3. Adopted the report of the Speed to Market (EX) Working Group, including its July 31 minutes. During this meeting, the Working Group took the following action:

a. Adopted its July 15 minutes, which included the following action:
   1. Adopted its June 15 minutes, which included the following action:
      a. Received an update on the SERFF Advisory Board and SERFF metrics.
      b. Received an update from the Compact.
      c. Adopted a suggestion to create a SERFF canned report for rate changes.
      d. Discussed the SERFF State Reports document.
   2. Discussed suggestions for changes to the Uniform Property & Casualty Product Coding Matrix and Uniform Transmittal Document. None of the suggested changes were adopted.

b. Adopted its June 30 minutes, which included the following action:

4. Adopted the report of the Artificial Intelligence (EX) Working Group, including its June 30 minutes. During this meeting, the Working Group took the following action:

a. Adopted its June 3 minutes, which included the following action:
   1. Adopted its May 5 minutes, which included the following action:
      a. Reviewed and discussed comments regarding Version 2 of the draft AI Principles.
      b. Reviewed a proposed timeline for adoption of the AI Principles.
      c. Reviewed a proposed timeline for adoption of the AI Principles.
   2. Reviewed and discussed comments regarding Version 4 of the draft AI Principles.
   3. Reviewed a proposed timeline for adoption of the AI Principles.

b. Reviewed and discussed comments regarding Version 5 of the draft AI Principles.

c. Adopted the AI Principles, which were referred to the Innovation and Technology (EX) Task Force for consideration.

5. Discussed and adopted the AI Principles as amended during the meeting. Amendments to the version adopted by the Artificial Intelligence (EX) Working Group include:

a. Adding “data providers” to the list of entities included as playing an active role in the AI system life cycle.

b. Adding “Consistent with the risk-based foundation of insurance” to the beginning of the Fair and Ethical part b.

c. Adding “and corrects and remediates such consequences when they occur” to the end of Fair and Ethical part b.

d. Deleting the last sentence in the Accountable and Compliant sections.

e. Deleting “including consumers” and adding “can be demonstrated” to the first and second sentences in the Transparent section part a.

f. Making several other “clean up” type changes.

6. Heard presentations from Director Robert Muriel (IL), Chris Stehno (Deloitte) and Patricia Matson (Risk and Regulatory Consulting) on the topic of accelerated underwriting in life insurance and algorithmic auditing.

7. Received an update on the latest draft of the anti-rebating amendments to Section 4H of Model #880 and exposed it for a public comment period ending Aug. 28. Any comments received will be discussed by the Task Force during an interim meeting prior to the Fall National Meeting.
Long-Term Care Insurance (EX) Task Force
Aug. 7, 2020

1. Adopted its July 2 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Received progress reports on the current activities for the Task Force’s six workstreams.
   c. Exposed a draft reduced benefit option principles document for a 30-day public comment period ending Aug. 3.
   d. Exposed draft 2020 subgroup charges for a 14-day public comment period ending July 17.

2. Appointed three subgroups and related 2020 charges: LTCI Multi-state Rate Review (EX) Subgroup; LTCI Reduced Benefit Options (EX) Subgroup; and LTCI Financial Solvency (EX) Subgroup.

3. Received progress reports on the current activities for two of the Task Force’s workstreams:
   a. The Multi-State Rate Review Practices workstream continues to make progress in conducting a pilot project to perform multi-state rate reviews.
   b. The Reduced Benefit Options and Consumer Notices workstream received comments on a draft principles document outlining the states’ practices in reviewing and approving reduced benefit options. Further discussions of comments received will be held on future conference calls of the LTCI Reduced Benefit Options (EX) Subgroup. The Subgroup also plans to begin development of principles for consumer notices.

4. Received comments from interested parties on the draft reduced benefit options principles document.

INTERNAL ADMINISTRATION (EX1) SUBCOMMITTEE
See the Executive (EX) Committee listing for details.

Information Systems (EX1) Task Force
Aug. 5, 2020

1. Adopted its Fall 2019 National Meeting minutes.
2. Adopted its 2021 proposed charges, which remain unchanged from 2020.
3. Received an information technology (IT) operational report on the NAIC’s IT activities, including: 1) product highlights; 2) innovation and technology; 3) service and support; 4) data collection metrics; 5) team; 6) project portfolio summary; and 7) technology adoption and system usage. The report provides updates for upcoming improvements, impacts to new state technology offerings from the NAIC and general updates on the activities of the NAIC technology team.

4. Received a project portfolio update, including project status reports for 23 active technical projects and a summary of two projects recently completed.

5. Adjourned into regulator-to-regulator session pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE
Aug. 11, 2020

1. Adopted its July 10 minutes, which included the following action:
   a. Adopted its Dec. 30, 2019, and 2019 Fall National Meeting minutes, which included the following action:
      1. Adopted revisions to the appendices of Model #275, as referred by the Annuity Suitability (A) Working Group.
   b. Adopted technical revisions to AG 48.
   d. Adopted AG 49-A.

2. Adopted the report of the Annuity Disclosure (A) Working Group, including its March 13 minutes. During this meeting, the Working Group took the following action:
   a. Adopted revisions to Section 6F(9)(b)(i) of Model #245 clarifying what financial instruments are included in an index, each of which has to have been in existence for at least 15 years.

3. Adopted an extension of the Annuity Disclosure (A) Working Group’s Request for NAIC Model Law Development to amend Model #245.

4. Adopted the report of the Accelerated Underwriting (A) Working Group, which met July 31 and took the following action:
   a. Adopted its March 12, Feb. 20, Feb. 2, Jan. 23, and 2019 Fall National Meeting minutes, which included the following action:
      1. Discussed its work plan.
      2. Heard presentations from consulting firms, lawyers, consumer representative organizations, and the American Academy of Actuaries (Academy).
   b. Heard a presentation on the work of the Working Group, including the process that has been followed, some of the lessons learned, and the timeline for completion of its charge.
5. Adopted the report of the Annuity Suitability (A) Working Group, which met July 29 and took the following action:
   a. Adopted its Dec. 19, 2019, and 2019 Fall National Meeting minutes, which included the following action:
      1. As directed by the Life Insurance and Annuities (A) Committee, reviewed and discussed the comments received on the draft of proposed revisions to Model #275 related to the proposed appendices.
      2. Revised the appendices based on the comments received and forwarded the revised draft to the Committee for consideration during a Dec. 30, 2019, conference call.
   b. Agreed to work on a draft frequently asked questions (FAQ) document to complete the second half of its charge to “consider how to promote greater uniformity across NAIC-member jurisdictions.”
6. Adopted the report of the Life Insurance Illustration Issues (A) Working Group, including its July 24 minutes. During this meeting, the Working Group took the following action:
   a. Continued making progress in the development of a one- to two-page consumer-oriented policy overview document in order to achieve its charge of improving the understandability of the life insurance policy summaries already required in Section 7B of the Life Insurance Illustrations Model Regulation (#582) and Section 5A(2) of Model #580.
   b. Reviewed two alternative draft revisions to Model #580. One version retains the current time frame for delivery of the policy overview at the same time as the buyer’s guide (either at the time of application or at the time of policy delivery if there is a “free look” period.) The other version has the policy overview delivered at the time of application.
   c. Reviewed two alternative versions of the policy overview sample for term life insurance policies. One version shows the sample pre-underwriting, the other after underwriting.
   d. Exposed the policy overview documents for a public comment period ending Aug. 28.
   e. Agreed to request an extension of the Request for NAIC Model Law Development from the Life Insurance and Annuities (A) Committee in order to make progress on draft revisions to Model #580 creating a policy overview and sample templates.
8. Adopted the report of the Life Actuarial (A) Task Force. See the Task Force listing for details.
9. Discussed next steps for the Life Insurance Online Guide (A) Working Group and agreed that NAIC staff would send an email to Committee members:
   a. Describing its planned process to have the Working Group focus on the substance of a guide and have the NAIC Communications Division work on an online design.
   b. Seeking additional state insurance regulator members to be on the Working Group.
10. Discussed next steps for the Retirement Security (A) Working Group and agreed that NAIC staff would send an email to Committee members:
   a. Asking for comments on a revised work plan focusing on areas where state insurance regulators have expertise while leveraging the existing work of other organizations to avoid duplication of efforts.
   b. Seeking additional state insurance regulator members to be on the Working Group.
11. Agreed to discuss on a future conference call whether the Committee should review the design and regulation of life insurance and annuity illustrations and discuss what, if any, changes or additions might be needed.

Life Actuarial (A) Task Force
Aug. 3–6, 2020
1. Adopted its June 25, June 18, June 11, June 4, May 28, May 21, May 14 and May 7 minutes, which included the following action:
   a. Adopted its Feb. 27, Feb. 20, Feb. 13, Feb. 6, Jan. 30 and Jan. 23 minutes, which included the following action:
      1. Adopted its 2019 Fall National Meeting minutes.
      2. Agreed to distribute an RFP for a replacement ESG.
      4. Exposed amendment proposal 2020-03.
      6. Adopted revisions to AG 48.
      7. Agreed to refer proposed revisions to the VM-20 Reserve Supplement Blank to the Blanks (E) Working Group.
      14. Accepted amendment proposal 2020-01 as an editorial change to the Valuation Manual.
      15. Discussed the Oliver Wyman yearly renewable term (YRT) reinsurance reserve credit long-term solution.
      16. Heard a status update on the YRT field test.
b. Adopted changes to Model #805.
c. Adopted amendment proposal 2020-05.
d. Adopted AG 49-A.
e. Adopted amendment proposal 2020-06.
f. Adopted amendment proposal 2020-07.

2. Heard an update on the results of the YRT field test modeling and range of interpretation survey from the Academy YRT Field Test Project Oversight Work Group, Oliver Wyman and NAIC staff.

3. Discussed proposed changes to Model #805 nonforfeiture interest rate floor. The Task Force agreed to expose Section 4B with various nonforfeiture rate floor options between one-half of one percent (0.5%) and zero percent, inclusive.

4. Heard an update from the Academy Annuity Reserves Work Group on the proposed timeline and approach for the development of a PBR framework for non-variable annuities.

5. Adopted the report of the VM-22 (A) Subgroup, including its July 15, July 1, June 11 and May 20 minutes. During these meetings, the Subgroup took the following action:
   a. Discussed developing a standard projection amount (SPA) for VM-22, Statutory Maximum Valuation Interest Rate for Income Annuities.

6. Heard an update from the Compact.

7. Adopted the report of the Longevity Risk (E/A) Subgroup.

8. Adopted the report of the GI Life Valuation (A) Subgroup.

9. Adopted the report of the Experience Reporting (A) Subgroup.

10. Adopted the report of the IUL Illustration (A) Subgroup, including its June 2 and May 26 minutes. During these meetings, the Subgroup took the following action:
    a. Discussed proposed revisions to Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49).

12. Exposed amendment proposal 2020-03.

14. Exposed the 2021 Generally Recognized Expense Table (GRET) recommendation.

15. Heard an update from the Society of Actuaries (SOA) on research and education.

17. Heard an update from the Academy PBR Governance Work Group.

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Aug. 11, 2020

1. Adopted its April 28, Feb. 26, and 2019 Fall National Meeting minutes, which included the following action:
   a. Received a report from the Health Actuarial (B) Task Force on its work to develop an outline and eventual 2021 rate pricing resource and guidance document for the states to consider when reviewing initial 2021 rates in light of the COVID-19 pandemic.
   b. Discussed and heard comments from stakeholders on areas, such as telehealth requirements and form filing requirements, in which state insurance regulators can provide regulatory flexibility due to the COVID-19 pandemic.
   c. Adopted the Regulatory Framework (B) Task Force’s revised 2020 charges, which added a charge for the newly appointed MHPAEA (B) Working Group. This new Working Group will monitor, report and analyze developments related to the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA), and make recommendations regarding NAIC strategy and policy with respect to those developments.

2. Adopted the report of the Health Actuarial (B) Task Force. See the Task Force listing for details.

3. Adopted the report of the Regulatory Framework (B) Task Force. See the Task Force listing for details.

4. Adopted the report of the Senior Issues (B) Task Force. See the Task Force listing for details.

5. Adopted the report of the Consumer Information (B) Subgroup, including its July 9, Jan. 21 and Jan. 7 minutes. During these meetings, the Subgroup took the following action:
   a. Discussed and adopted the revised consumer guide, “Using Your Health Coverage.” The guide helps consumers better understand health coverage they are enrolled in by providing guidance on cost-sharing, provider networks, referrals, coordination of benefits, life changes and other topics.
   b. Discussed its work plan for 2020, including completing its work on a new consumer guide to the claims process, developing materials related to the COVID-19 pandemic and updating its “Frequently Asked Questions About Health Care Reform” document for the plan year 2021.
6. Adopted the report of the Health Innovations (B) Working Group, which met July 30 and took the following action:
   a. Adopted its June 23 minutes, which included the following action:
      1. Discussed the regulation of coverage for telehealth services.
      2. Discussed potential topics for the Working Group’s meeting during the Summer National Meeting.
   b. Heard a presentation on privacy requirements for telehealth communications under the federal Health Insurance Portability and Accountability Act (HIPAA). An attorney with Manatt Health reviewed which HIPAA standards are required versus addressable, the flexibility established under the COVID-19 pandemic, and other considerations for covered entities in complying with privacy requirements.
   c. Heard a panel discussion on telemedicine from representatives of stakeholder groups. The National Alliance on Mental Illness (NAMI) shared poll results and concerns from patients and mental health providers. America’s Health Insurance Plans (AHIP) reviewed the growth in telehealth services, ongoing challenges, and what the states can do to further promote telehealth. The American Academy of Family Physicians (AAFP) discussed changes to provider workflows, regulatory flexibilities and ongoing challenges, including the lack of alignment across payers.
   d. Heard a presentation from the Milbank Memorial Fund on strategies for cost control. It suggested five areas in which state insurance regulators can incentivize and encourage greater health care system affordability.
7. Heard a presentation on health equity and disparities in health care and coverage. The presentation explained what health and health care disparities are, their origin, and why health and health care disparities are a persistent and longstanding issue. The presentation also highlighted how the disparate impacts of COVID-19 mirror and compound underlying health disparities and how progress to address the problem will require long-term efforts across sectors to prioritize equity and address systemic and structural barriers, including racism and discrimination.
8. Heard a presentation on how the COVID-19 pandemic and the resulting recession has affected employer-sponsored insurance coverage. The presentation also discussed consumer considerations and choices after the loss of employer-sponsored insurance coverage. The presentation outlined several policy opportunities and lessons that state and federal regulators could consider when dealing with this issue, such as considering the impact of Medicaid expansion, the timing of enrollment and outreach, and expanded outreach efforts.
9. Heard a presentation on COVID-19 testing and costs. The presentation provided an overview of COVID-19 testing, its essential components and purpose. The presentation also discussed the current framework for COVID-19 testing and how each stakeholder involved—insurers, government, public health entities, and employers—plays a leadership role in ensuring access to such testing for those who need it. The presentation discussed the current costs of COVID-19 tests for diagnostic purposes and antibody testing and the potential impact of the cost of testing on premium rates. The presentation suggested several recommendations, including ensuring that all consumers are able to access COVID-19 testing regardless of coverage status, solidifying comprehensive strategies that incorporate testing to achieve occupational and public health goals, ensuring that testing does not lead to premium spikes in 2021 and protecting against testing fraud.
10. Heard an update on legal actions related to the federal Affordable Care Act (ACA), including U.S. Supreme Court cases from its recent 2019 term, such as the 8-1 decision in favor of insurers challenging the legality of the federal government’s refusal to pay participants for full risk corridor amounts. The update also discussed what to expect from the U.S. Supreme Court in its 2020 term, including oral arguments in a case challenging the constitutionality of the individual mandate and its potential impact on other key ACA provisions and a case challenging the authority of the states to regulate pharmacy benefit managers (PBMs).
11. Received an update on the work of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup in completing its charge to develop a new NAIC model regulating PBMs. The Subgroup exposed a draft PBM Model Act for a public comment period ending Sept. 1. Following the end of the public comment period, the Subgroup will meet via conference call to discuss and consider revisions to the draft based on the comments received.
12. Heard a federal legislative update on congressional legislation and administrative actions of interest to the Committee.

Health Actuarial (B) Task Force

Aug. 4, 2020

1. Adopted its May 27, April 23 and Feb. 14 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Adopted the ACA 2021 coronavirus (COVID-19) rate review guideline Excel template. The guideline was referred to the Health Insurance and Managed Care (B) Committee for consideration.
   c. Discussed the impact of COVID-19 on 2021 ACA rates.
   d. Adopted revisions to the Long-Term Care Experience Reporting Forms, as referred by the Long-Term Care Actuarial (B) Working Group. The forms were referred to the Senior Issues (B) Task Force and the Health Insurance and Managed Care Committee for their consideration.
2. Adopted the report of the Health Care Reform Actuarial (B) Working Group, which has not met in 2020. The Working Group plans to meet as needed via conference call to review any work by the State Rate Review (B) Subgroup pertaining to ACA rating regulations.
3. Adopted the report of the Long-Term Care Actuarial (B) Working Group, which met Aug. 4 and took the following action:
   a. Adopted its Jan. 23 and 2019 Fall National Meeting minutes, which included the following action:
      1. Adopted revisions to the Long-Term Care Experience Reporting Forms. The forms were referred to the Health Actuarial (B) Task Force for consideration.
   b. Adopted the report of the Long-Term Care Valuation (B) Subgroup, which has not met since the 2019 Fall National Meeting. A review group composed of Subgroup members continues to review Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) year-end 2019 filings.
   c. Adopted the report of the Long-Term Care Pricing (B) Subgroup, including its Feb. 6 and Jan. 6 minutes. During these meetings, the Subgroup took the following action:
      1. Discussed LTIC cash value buyouts to policyholders in lieu of rate increases.
      2. Discussed LTIC hybrid products.
   d. Heard an update from the Academy Long-Term Care Valuation Work Group.
   e. Heard an update on SOA on its Long-Term Care (LTC) Experience Study.
   f. Heard an update from the federal Center for Consumer Information and Insurance Oversight (CCIIO) on 2021 ACA rate filings.
   g. Heard an update from the SOA on health insurance research.
   h. Heard an update from the Academy Council on Professionalism.
   i. Heard an update from the Academy Health Practice Council.

Regulatory Framework (B) Task Force
Aug. 4, 2020
1. Adopted its Feb. 20 and 2019 Fall National Meeting minutes, which included the following action:
   a. Appointed the MHPAEA (B) Working Group and adopted its 2020 proposed charges.
2. Adopted the report of the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its Dec. 19, 2019, minutes. During this meeting, the Subgroup took the following action:
   a. Continued its discussion of the comments received on Section 1 through Section 5 of Model #171.
   b. Exposed Section 6 and Section 7 of Model #171 for a public comment period ending Feb. 7. The Subgroup had planned to begin meeting via conference call in February to complete its discussion of the comments received on Section 1 through Section 5 and begin discussion of the comments received on Section 6 and Section 7; however, due to the COVID-19 public health emergency and the loss of one of its co-chairs, the Subgroup has not met since December 2019.
3. Adopted the report of the ERISA (B) Working Group, which met July 31 minutes and took the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Discussed what the Working Group should focus on in 2021, including reviewing the Prevention of Illegal Multiple Employer Welfare Arrangements (MEWAs) and Other Illegal Health Insurers Model Regulation (#220) to consider its continuing relevance.
   c. Reported that it met July 28 in regulator-to-regulator session pursuant to paragraph 2 (pending investigations which may involve either the NAIC or any member in any capacity), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.
4. Adopted the report of the HMO Issues (B) Subgroup, including its July 13 minutes, but not including adoption of the proposed revisions to Model #430. During this meeting, the Subgroup took the following action:
   a. Adopted its June 11 minutes, which included the following action:
      1. Discussed the comments received by the public comment period ending March 18 on proposed revisions to Model #430 to address inconsistencies and redundancies in the model with the provisions in the Life and Health Insurance Guaranty Association Model Act (#520), which added health maintenance organizations (HMOs) as members of the guaranty association.
   b. Adopted proposed revisions to Model #430. The proposed revisions were referred to the Regulatory Framework (B) Task Force for consideration.
5. Adopted the report of the MHPAEA (B) Working Group, including its July 28 minutes. During this meeting, the Working Group took the following action:
   a. Adopted its June 24 minutes, which included the following action:
      1. Adopted its June 5 minutes, which included the following action:
         a. Adopted its March 19 and March 9 minutes, which included the following action:
            1. Discussed current and potential compliance tools available to the states related to the MHPAEA.
            2. Discussed its plan to operate similar to the ERISA (B) Working Group.
            3. Discussed its anticipated work for 2020 consistent with its 2020 charges.
         b. Discussed a draft quantitative treatment limitation/financial requirement (QTL/FR) template.
      2. Discussed the draft Working Group work plan.
3. Discussed the comments received on the draft QTL/FR template received by the June 18 public comment deadline.
   b. Heard a presentation on activities and work being done to assist self-funded group health plans and private employers to comply with mental health parity requirements under the MHPAEA.
   c. Heard a presentation from the American Psychiatric Association (APA) on state activities and legislation related to MHPAEA parity data reporting requirements.
   d. Discussed current parity compliance resources and tools available to the states to determine plan compliance with the MHPAEA parity requirements and potential resources and tools the Working Group developed to supplement, but not supplant, these existing tools and resources.
   e. Discussed next steps in developing supplemental MHPAEA parity compliance resources and tools for the states related to non-quantitative treatment limitations (NQTLs).
   f. Reported that it will meet July 29 in regulator-to-regulator session pursuant to paragraph 2 (pending investigations which may involve either the NAIC or any member in any capacity), paragraph 3 (specific companies, entities or individuals), and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.

6. Adopted the report of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its July 16 minutes. During this meeting, the Subgroup took the following action:
   a. Discussed the ad hoc drafting group’s draft of a proposed new NAIC model regulating PBMs.
   b. Exposed the draft PBM Model Act for a public comment period ending Sept. 1. The Subgroup plans to meet via conference call in September to begin discussing any comments received.

7. Heard an update from the Center on Health Insurance Reforms’ (CHIR) work related to implementation of the ACA and other issues of interest to state insurance regulators. The update included a discussion of the CHIR’s efforts to track state activity related to COVID-19’s effect on private coverage of critical services. The CHIR is continuing to track and analyze developments under the ACA’s Section 1332 waiver program and state regulatory approaches to short-term, limited duration (STLD) plans. The CHIR is also continuing its work to track state reforms affecting the individual market and the affordability of comprehensive coverage. The presentation also highlighted the CHIR’s ongoing technical assistance regarding insurance regulatory matters, including state COVID-19 responses through the State Health and Value Strategies Program (SHVSP) and assistance provided to state and federal policymakers regarding regulatory approaches to balance billing.

8. Heard a panel presentation on health care sharing ministries (HCSMs). The CHIR discussed consumer confusion with HCSMs because of how they are marketed by some HCSMs and their similarity in many aspects to traditional health insurance plans, such as defined benefit packages, cost-sharing and premium-like payment requirements. A representative from Samaritan Ministries discussed suggestions for best practices for HCSMs to provide transparency and potentially reduce consumer confusion between HCSMs and traditional health insurance plans.

9. Heard a discussion on premium holidays, early medical loss ratio (MLR) rebate payments, and adjustments to cost-sharing benefits due to fewer claim filings in 2020 because of COVID-19. As part of this discussion, the federal Centers for Medicare & Medicaid Services (CMS) announced that it had just released guidance on a new temporary policy that will allow issuers to offer temporary premium reductions for individuals with 2020 coverage in the individual and small group markets. The guidance can be found at this link: https://www.cms.gov/CCIIO/Programs-and-Initiatives/Health-Insurance-Markets/Downloads/Premium-Credit-Guidance.pdf.

Senior Issues (B) Task Force

Aug. 3, 2020

1. Adopted its March 3 and 2019 Fall National Meeting minutes, which included the following action:
   a. Discussed its 2020 agenda.
   b. Appointed the LTCI Model Update (B) Working Group, with a charge of determining whether the Long-Term Care Insurance Model Act (#640) and the Long-Term Care Insurance Model Regulation (#641) need to be updated.

2. Heard a federal legislative update, including an update on federal funding for the State Health Insurance Assistance Program (SHIP), as well as the work of the federal task force and its final report.

3. Discussed seniors and COVID-19; specifically, what the states are experiencing in regard to seniors putting off health care needs due to the pandemic.

4. Discussed misleading advertisements that have led seniors unknowingly off their current plan and into Medicare Advantage plans they did not ask for and, in most cases, do not need.

5. Discussed the federal Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA) and Medicare. It was reported that too many seniors do not know that they must enroll in Medicare even if they are continuing to work past the age 65. A request was made for amendments to the Coordination of Benefits Model Regulation (#120) to help address this issue.
PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE
Aug. 12, 2020

1. Adopted its June 10 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   c. Discussed regulatory actions related to COVID-19.
   d. Adopted the Private Passenger Auto Insurance Study.

2. Adopted the report of the Casualty Actuarial and Statistical (C) Task Force. See the Task Force listing for details.

3. Adopted the report of the Surplus Lines (C) Task Force. See the Task Force listing for details.

4. Adopted the report of the Title Insurance (C) Task Force. See the Task Force listing for details.

5. Adopted the report of the Workers’ Compensation (C) Task Force. See the Task Force listing for details.

6. Adopted the report of the Cannabis Insurance (C) Working Group, which has not met in 2020. Due to the prioritization of COVID-19 issues, it is unclear when the Working Group will next meet.

7. Adopted the report of the Catastrophe Insurance (C) Working Group, which met July 31 and took the following action:
   a. Adopted its May 29 minutes, which included the following action:
      1. Adopted its 2019 Fall National Meeting minutes.
      2. Adopted the NAIC State Disaster Response Plan.
   b. Heard an update regarding federal flood insurance. The National Flood Insurance Program (NFIP) is under its 15th short-term extension, which will expire at the end of September. The NAIC sent a letter to U.S. House of Representatives and U.S. Senate leaders urging action on a long-term reauthorization. Additionally, the Federal Emergency Management Agency (FEMA) released a guide to help emergency managers and public health officials prepare for disasters while continuing to respond to the coronavirus pandemic.
   c. Heard a presentation from Milliman on the concept of a catastrophe modeling clearinghouse.
   d. Heard a presentation from the Reinsurance Association of America (RAA) on catastrophe modeling.
   e. Heard a presentation from the American Property Casualty Insurance Association (APCIA) on catastrophe modeling.
   f. Heard a presentation from the NAIC Center for Insurance Policy and Research (CIPR) regarding the CIPR wildfire catastrophe modeling project.

8. Adopted the report of the Climate Risk and Resilience (C) Working Group, which met July 31 and took the following action:
   a. Adopted its June 18 minutes, which included the following action:
      1. Received an update on the drafting of the “Insurance Regulatory Discussion Points on Catastrophic Events” document.
      2. Heard an update on California’s development of a sustainable insurance roadmap.
   c. Heard an update on California’s Climate Smart Insurance Product Database. The database lists more than 400 internationally available products that address climate risks, harness new technologies and build resilience.
   d. Heard a presentation on Swiss Re’s approach to climate change and sustainable insurance products. Swiss Re uses an Insurance Resilience Index to measure the contribution to the financial stability of households and organizations. The index indicates the insurance gap has been increasing from 2000 to 2018, with the largest growing protection gap being health.
   e. Heard a presentation on Allianz’s approach to climate change and sustainable insurance products. Allianz views climate change as a risk driver to be managed as part of overarching risk governance architecture. With a focus on decarbonizing investments and strengthening its climate risk disclosure, Allianz uses six criteria to identify sustainable products with a specific environmental and social added value.
   f. Heard a presentation on the APCIA’s domestic and international climate risk-related activities.

9. Adopted the report of the Lender-Placed Insurance Model Act (C) Working Group, which has not met in 2020. The Working Group plans to meet via conference call to complete the drafting of a new model law concerning lender-placed insurance as it relates to mortgages.
10. Adopted the report of the Pet Insurance (C) Working Group, including its July 16 minutes. During this meeting, the Working Group took the following action:
   a. Adopted its March 5 minutes, which included the following action:
      1. Adopted its Feb. 19 minutes, which included the following action:
         a. Adopted its Dec. 19, 2019, minutes, which included the following action:
            1. Discussed Section 3 of the draft Pet Insurance Model Act.
            2. Discussed Section 2 and Section 3 of the draft Pet Insurance Model Act.
      2. Discussed draft referrals for data collection.
      3. Discussed a draft supplement for the annual financial statement.
   b. Discussed Section 4 of the draft Pet Insurance Model Act.

11. Adopted the report of the Terrorism Insurance Implementation (C) Working Group, which met July 30 and took the following action:
   a. Adopted its March 12 minutes, which included the following action:
      1. Adopted its Feb. 11 minutes, which included the following action:
         a. Adopted its 2019 Fall National Meeting minutes.
         b. Discussed the status of the 2020 data call.
         c. Discussed updates to the model bulletin and policyholder disclosures.
      2. Adopted the model bulletin and policyholder disclosures.
   b. Received an update on the 2020 joint state insurance regulator/U.S. Department of the Treasury terrorism risk insurance data call, with data due to both entities by May 15, and the state supplement, which collects ZIP code-level data, with data due Sept. 30.
   c. Heard an overview of the workers’ compensation terrorism risk insurance market, including state-level data on average premiums and take-up rates from 2011 to 2017.
   d. Heard a presentation from NAIC staff regarding results from the state supplement portion of the terrorism risk insurance data call, including take-up rates, average premium rates, portions of premium allocated to terrorism risk and percent of exposures covered by terrorism insurance, at a ZIP code level.

12. Adopted the report of the Transparency and Readability of Consumer Information (C) Working Group, which met July 30 and took the following action:
   a. Adopted its July 16 and June 16 minutes, which included the following action:
      1. Discussed creating social media content and the best formats to use to communicate with consumers.
      2. Discussed flood insurance disclosures.
      3. Heard a presentation from the APCIA, the NAIC Communications Division and consumer representatives regarding best practices each have discovered when using social media to communicate with consumers.
   b. Discussed the need for consumer disclosures regarding significant premium increases on P/C insurance products. States discussed their concerns and solutions for communicating information to consumers regarding premium increases. The Working Group plans to collect and compile information from the states regarding processes that are already in place.

14. Adopted the white paper, Workers’ Compensation Policy and the Changing Workforce, which explores how changes in work and the evolving landscape of legal employment are shifting responsibility for coverage and benefits for occupational injuries, illnesses and fatalities.

15. Adopted the NAIC State Disaster Response Plan, which provides a template for state departments of insurance (DOIs) to use when assisting consumers before, during and after a disaster.

16. Received a recap of the FEMA and DOI disaster workshops.

17. Received a preview of the Southeast Zone flood workshop.

18. Heard a presentation on building codes from the International Code Council (ICC).

20. Heard a proposal from the CEJ to collect additional homeowners and auto insurance data within the annual financial statement.

21. Heard a presentation on race and P/C insurance, including an overview of historical studies related to the issue.
Casualty Actuarial and Statistical (C) Task Force
Aug. 5, 2020

1. Adopted its July 14, May 19, Feb. 18 and Jan. 28 and 2019 Fall National Meeting minutes, which included the following action:
   a. Adopted the report of the Actuarial Opinion (C) Working Group, including its June 11 minutes. During this meeting, the Working Group took the following action:
      1. Discussed potential revisions to the risk repository in the Financial Condition Examiners Handbook.
   b. Discussed a proposed COVID-19 data call.
   c. Adopted a recommendation to the Casualty Actuarial Society (CAS)/SOA task force to defer implementation of the CAS/ SOA continuing education (CE) log for 2020 and allow appointed actuaries to add a column to their existing CE log, indicating the categorization approved by the Task Force (“Appointed Actuary CE Log Categories”).
   e. Discussed the white paper, Regulatory Review of Predictive Analytics.
   g. Adopted a response to the Actuarial Standards Board (ASB) request for input on a potential Actuarial Standard of Practice (ASOP) on P/C rate filings.
   h. Discussed letters the state insurance departments have received from the SOA regarding the definition of “qualified actuary” in state law.
   i. Adopted proposed revisions to the 2020 Annual Statement Instructions to implement the CAS/SOA Appointed Actuary Continuing Education Verification Process. The proposed revisions were referred to the Blanks (E) Working Group for consideration.

2. Adopted the report of the Actuarial Opinion (C) Working Group, which has met in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss examination procedures and other related issues. On July 13, the Working Group exposed, for a 45-day public comment period ending Aug. 27, proposed revisions to the Financial Analysis Handbook and the Financial Condition Examiners Handbook.

3. Adopted the report of the Statistical Data (C) Working Group, which has not met in 2020. The Working Group will begin its work in September.

5. Discussed comments on the white paper, Regulatory Review of Predictive Analytics.

7. Heard reports from the Academy regarding the activities of its Committee on Property and Liability Financial Reporting (COPLFR) and its Casualty Practice Council.

8. Heard reports on actuarial professionalism from the Academy, the Actuarial Board for Counseling and Discipline (ABCD) and the ASB.

9. Heard reports from the CAS and the SOA on P/C actuarial research.

10. Discussed COVID-19 data calls for multiple lines of insurance.

Surplus Lines (C) Task Force
Aug. 5, 2020

1. Adopted its 2019 Fall National Meeting minutes.

2. Adopted the report of the Surplus Lines (C) Working Group, which met June 29, 2020, March 10, 2020, and Dec. 18, 2019, in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities and individuals) of the NAIC Policy Statement on Open Meetings. During these meetings, the Working Group approved seven applications for the Quarterly Listing of Alien Insurers.

3. Adopted its 2021 proposed charges. No substantive changes were proposed for the charges.

4. Discussed a memorandum that outlined three potential courses of action regarding modifications to the Nonadmitted Insurance Model Act (#870). The Task Force chair directed NAIC staff to develop a drafting group to produce a summary document that outlines the significant updates needed to modernize Model #870.

5. Discussed comments received regarding a 2021 annual blanks proposal regarding the modification of Schedule T to include a new Part 3 that would add details on “home state” direct premiums written. Following a lengthy discussion, the Task Force tabled the proposal.
Title Insurance (C) Task Force
Aug. 5, 2020
1. Heard a presentation from Veritable Data Solutions on its new smartphone app created to help notaries serve as gatekeepers against identity theft, forgery and title fraud. The app, called Veri-Lock, uses blockchain to ensure the authenticity of notarized documents.
2. Heard a panel discussion on the effectiveness of closing protection letters (CPLs). The American Land Title Association (ALTA) discussed industry safety practices that were reported in its May survey. Old Republic National Title Insurance Company discussed closing protection benefits to insureds and the marketplace. Land Title Guarantee Company discussed market practices from an agent perspective, including changes made to adjust to the pandemic.

Workers’ Compensation (C) Task Force
Aug. 5, 2020
1. Adopted its July 22 and June 2 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Adopted the white paper, *Workers’ Compensation Policy and the Changing Workforce*.
   d. Discussed key topics and future work product regarding workers’ compensation issues related to COVID-19.
2. Heard a presentation from the Reed Group, which is the owner and publisher of MDGuidelines, on workers’ compensation treatment guidelines and formularies. The Reed Group discussed what it learned from applying these guidelines to California’s workers’ compensation system, in addition to discussing the remaining challenges.
3. Heard a presentation from the National Council on Compensation Insurance (NCCI) regarding issues related to COVID-19 and the NCCI’s Atlas initiative. The NCCI discussed the actions it took regarding the COVID-19 pandemic, as well as discussed some of the presumptions and legislative actions occurring in various states.

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE
Aug. 11, 2020
1. Adopted its July 27 minutes, which included the following action:
   a. Adopted a farmowners claims standardized data request (SDR).
   b. Adopted revisions to the Market Conduct Annual Statement (MCAS) blanks for the life and annuities, homeowners, private passenger automobile, and lender-placed auto and homeowners lines of business.
   c. Adopted an “Limited Long-Term Care Examination Standards” chapter to be included in the Market Regulation Handbook.
2. Adopted an inland marine in force SDR and an inland marine claims SDR to be included in the Market Regulation Handbook. These data requests may be used by a state to determine if a company follows appropriate procedures with respect to the issuance and/or termination of inland marine policies and the processing of inland marine claims.
3. Adopted the report of the Antifraud (D) Task Force. See the Task Force listing for details.
5. Adopted the report of the Producer Licensing (D) Task Force. See the Task Force listing for details.
6. Adopted the report of the Advisory Organization Examination Oversight (D) Working Group, which met July 28 in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
7. Adopted the report of the Market Actions (D) Working Group, which meets regularly in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
8. Adopted the report of the Market Conduct Annual Statement Blanks (D) Working Group, which met July 31 and took the following action:
   a. Adopted its June 24 minutes, which included the following action:
      1. Adopted its May 28, May 27, May 21 and May 20 minutes, which included the following action:
         a. Adopted its May 6 minutes, which included the following action:
            1. Adopted its Dec. 17, 2019, minutes, which included the following action:
               1. Adopted its Nov. 21, 2019, minutes.
               2. Discussed the review of the MCAS for the life and annuities lines of business.
               3. Discussed the review of the MCAS for the homeowners and private passenger automobile lines of business.
               4. Discussed vendor single-interest concerns for the lender-placed MCAS.
               5. Discussed the MCAS data call for the “other health” lines of business, as adopted by the Market Analysis Procedures (D) Working Group.
f. Discussed the extraordinary circumstance definition for health extension requests.
b. Discussed the review of the MCAS for the life and annuities lines of business.
c. Discussed the review of the MCAS for the homeowners and private passenger auto lines of business.
d. Discussed vendor single-interest concerns for the lender-placed MCAS.
e. Discussed the MCAS data call for the “other health” line of business, as adopted by the Market Analysis Procedures (D) Working Group.

2. Received an update on existing MCAS reviews and the other health MCAS development.
3. Adopted a $50,000 premium threshold for the private flood MCAS reporting.
   a. Discussed survey results and adopted various changes to the MCAS blanks and Data Call and Definitions for the life and annuities, homeowners and private passenger auto MCAS lines of business.
   b. Adopted edits to the lender-placed insurance MCAS regarding blanket vendor single-interest.
   c. Adopted a motion to add an interrogatory for the homeowners and private passenger auto MCAS.

2. Discussed and approved needed clarifications to several MCAS blanks and Data Call and Definitions following the adoption of edits to the life and annuities, homeowners and private passenger auto lines of business.
   a. Discussed homeowners MCAS clarifications related to newly added underwriting data elements.
   b. Discussed possible MCAS updates previously tabled for further discussion.
   c. Heard and discussed industry concerns with addition of newly adopted data element to collect claims closed without payment below the deductible for the private passenger auto MCAS.

10. Adopted the report of the Market Conduct Examination Standards (D) Working Group, including its July 23 minutes. During this meeting, the Working Group took the following action:
   a. Adopted its March 4 minutes, which included the following action:
      1. Adopted its Dec. 18, 2019, minutes, which included the following action:
         b. Discussed a new chapter of limited LTCI examination standards for inclusion in the Handbook. The new examiner guidance is based on the Limited Long-Term Care Insurance Model Act (#642) and the Limited Long-Term Care Insurance Model Regulation (#643).
      2. Discussed draft limited LTCI examination standards for inclusion in the Handbook, which was a carryover item from 2019.
      3. Discussed a new inland marine in force policies SDR and an inland marine claims SDR for incorporation into the reference documents of the Handbook.
      4. Discussed its 2020 charges and potential tasks.
   b. Adopted the Dec. 11, 2019, draft of new “Conducting the Limited Long-Term Care Examination” chapter for inclusion in the Handbook.

11. Adopted the report of the Market Analysis Procedures (D) Working Group, which met July 30 and took the following action:
   a. Adopted its March 23 minutes, which included the following action:
      1. Adopted its Feb. 20 minutes, which included the following action:
         a. Adopted its Jan. 30 minutes, which included the following action:
            1. Adopted its 2019 Fall National Meeting minutes.
            2. Discussed revisions to the MCAS Best Practices Guide.
            3. Discussed a proposal to add travel insurance as the next MCAS line of business.
         b. Discussed revisions to the MCAS Best Practices Guide.
         c. Discussed a proposal to add travel insurance as the next MCAS line of business.
         d. Discussed private flood MCAS scorecard ratios.
      2. Discussed revisions to the MCAS Best Practices Guide. When the revisions are completed, the drafting group will move on to other MCAS documents.
      3. Discussed potential MCAS filing issues arising from work adjustments due to COVID-19. The Working Group agreed to a blanket extension of all lines of business due dates of 60 days. NAIC staff will send each jurisdiction’s MCAS contact a confirming email regarding the extension of the due date.
      4. Adopted travel insurance as the next MCAS line of business.
   b. Discussed the revisions to the MCAS Best Practices Guide. The updates to date were reviewed, and the drafting group will resume its work on the revisions.
   c. Discussed the Market Analysis Framework and asked for comments to be reviewed by the Working Group at its next meeting.
d. Adopted scorecard ratios for the private flood MCAS blank. The ratios closely match the homeowners and private passenger auto MCAS scorecard ratios, with the addition of a ratio to measure lawsuits closed with consideration for the consumer.
e. Discussed the MCAS attestation process. No changes to the current process were made.

12. Adopted the report of the Market Regulation Certification (D) Working Group, including its Feb. 20 minutes. During this meeting, the Working Group took the following action:
a. Adopted its Jan. 30 minutes, which included the following action:
   1. Adopted its Nov. 20, 2019, minutes.
   2. Discussed the pilot volunteers’ suggested revisions to the Voluntary Market Regulation Certification Program.
b. Discussed the pilot volunteers’ suggested revisions to the Voluntary Market Regulation Certification Program.
c. Discussed pass and fail metrics.

13. Adopted the report of the Privacy Protections (D) Working Group, which met July 30 and took the following action:
a. Adopted its May 5 minutes, which included the following action:
   1. Adopted its Feb. 19 minutes, which included the following action:
      a. Adopted its 2019 Fall National Meeting minutes.
      b. Heard an update on state and federal privacy legislation.
      c. Discussed its next steps.
   2. Heard an update on state and federal privacy legislation.
   3. Discussed comments received on the *NAIC Insurance Information and Privacy Protection Model Act (#670)*.
b. Heard an update on state and federal privacy legislation.
c. Heard a presentation that included a comparative analysis and comments from the Blue Cross and Blue Shield Association (BCBSA) and Arbor Strategies LLC on behalf of the Health Coalition.
d. Reviewed plans to begin a gap analysis discussion by Working Group members, interested state insurance regulators and interested parties using the *Privacy of Consumer Financial and Health Information Regulation (#672)* as a baseline model.

14. Adopted the Market Information Systems (D) Task Force’s recommendation to add a “pandemic” subject code and the coverage codes for “business interruptions,” “lender-placed insurance” and “pet insurance” to the NAIC’s Complaint Database System.

15. Adopted the Market Analysis Procedures (D) Working Group’s recommendation to add travel insurance as the next line of business for the MCAS and implement new scorecard ratios for the private flood MCAS blank.

16. Adopted the Market Conduct Annual Statement Blanks (D) Working Group’s recommended clarification to the definition of “individual indexed variable annuity” for the MCAS blank.

17. Heard a presentation from the Alliance of Health Care Sharing Ministries (Alliance). This presentation addressed the background of the Alliance, its history and features, statistics on the number and size of health care sharing ministries (HCSMs), challenges for HCSMs, and the development of an accreditation program for oversight of HCSMs by an independent board of directors.

18. Discussed a template bulletin for state insurance departments to advise insurance companies regarding the waiver of on-site review requirements of managing general agents (MGAs) and third-party administrators (TPAs) during the COVID-19 public health emergency.

**Antifraud (D) Task Force**

*Aug. 3, 2020*

1. Adopted its May 20 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Received updates concerning antifraud activity specific to COVID-19 from California, Delaware, Florida and Ohio.
   c. Heard updates concerning antifraud activity specific to COVID-19 from the Coalition Against Insurance Fraud (CAIF), the Healthcare Fraud Prevention Partnership (HFPP), the National Healthcare Antifraud Association (NHCAA) and the National Insurance Crime Bureau (NICB).

2. Received updates concerning antifraud activity specific to COVID-19 from California, Florida and Texas.

3. Heard an update concerning antifraud activity specific to COVID-19 from the CAIF.

4. Received an update from the Antifraud Education Enhancement (D) Working Group. The Working Group updated and finalized the content of the “Safety Training for Private Sector Field Employees,” which will be held Aug. 26. The Working Group also updated and finalized the content of the Investigator Safety Training program, which will be held Sept. 30.

5. Received an update from the Antifraud Technology (D) Working Group. The Working Group has worked with NAIC staff to update a revised draft of the *Antifraud Plan Guideline (#1690)*. The Working Group will expose the draft for a public comment period, with conference calls scheduled for September and October to discuss any comments received.

6. Heard reports on antifraud activity from the NICB and the CAIF.
Market Information Systems (D) Task Force
Aug. 4, 2020
1. Adopted its 2019 Fall National Meeting minutes.

2. Adopted the report of the Market Information Systems Research and Development (D) Working Group, which met July 22 and July 8 in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings.

3. Heard a report on the following Uniform System Enhancement Request (USER) forms: USER form 10051; USER form 10053; USER form 10069A; USER form 10080; USER form 10072; USER form 10069B; and USER form 10082.

4. Adopted USER Form 10069B and USER form 10082 to add an NAIC Complaints Database System (CDS) subject code of “pandemic” and coverage codes for “lender-placed insurance” and “pet insurance.”

5. Heard a presentation on the use of artificial intelligence (AI) in market information.

Producer Licensing (D) Task Force
Aug. 3, 2020
1. Adopted its May 6 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Discussed producer licensing issues arising from COVID-19, which included a review of suggested practices for the issuance of temporary producer licenses and state implementation of online, proctored examinations.
   c. Discussed uniform and reciprocal licensing of independent adjusters.

2. Discussed producer licensing issues arising from COVID-19. This discussion primarily focused the state implementation of online, proctored examinations. It was reported that 15 states have implemented online, proctored examinations. State insurance regulators generally indicated that approximately 50%-60% of all examinations are now online, proctored examinations. Industry representatives encouraged additional state implementation of online, proctored examinations. The industry all requested that the states continue to work with the industry to convert temporary licenses to permanent licenses. Examination vendors reported that they continue to work with the states to implement online examinations. The examination vendors said they can generally implement online examinations for a state in less than 60 days, and it could be as short as one week.

3. Received an update from the Producer Licensing Uniformity (D) Working Group. The activity of this Working Group has been on hold during the COVID-19 crisis, but it will resume its work in the second half of 2020.

4. Received an update from the Uniform Education (D) Working Group. The activity of this Working Group has been on hold during the COVID-19 crisis, but it will resume its work in the second half of 2020.

5. Received a report from the NIPR Board of Directors. Since the onset of the COVID-19 crisis, 48 states have issued more than 100 separate bulletins regarding producer licensing. Thirty-three bulletins specifically address license renewal extensions, and 30 states issued bulletins offering temporary licensing. These bulletins and state changes required NIPR to complete significant coding work to move the states’ license expiration dates and provide an electronic solution for a new temporary producer license class through NIPR. NIPR has also been developing enhancements to its Attachments Warehouse product, which allows insurance producers and other licensees to upload licensing related documents for review by state insurance regulators.

FINANCIAL CONDITION (E) COMMITTEE
Aug. 11, 2020
1. Adopted its July 1, June 12, May 15 and March 26 minutes, which included the following action:
   a. Adopted its Feb. 27 and 2019 Fall National Meeting minutes, which included the following action:
      1. Adopted a Request for NAIC Model Law Development from the Receivership and Insolvency (E) Task Force to amend Model #440 and Model #450 to address issues regarding continuity of essential services.
      2. Adopted a request for extension from the Mortgage Guaranty Insurance (E) Working Group to amend Model #630.
      3. Adopted a request from the Financial Stability (EX) Task Force to amend Model #440 and Model #450 to establish regulatory authority to require liquidity stress testing processes and confidentiality protections for the data reported from the liquidity stress tests.
   b. Adopted technical revisions to Model #787 and acknowledged the similar technical revisions made to AG 48 by the Life Insurance and Annuities (A) Committee.
   c. Adopted actions from the Capital Adequacy (E) Task Force, the Valuation of Securities (E) Task Force, and the Accounting Practices and Procedures (E) Task Force, with the exception of Interpretation (INT) 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends, which was rejected and sent back to the Accounting Practices and Procedures (E) Task Force.
d. Discussed INT 20-08 and agreed to send it back to the Accounting Practices and Procedures (E) Task Force for additional revision.

e. Adopted a memorandum from the Committee to all NAIC members regarding the treatment of the LIBOR under state investment laws.

f. Adopted guidance for troubled debt restructurings for March 31 – Sept. 30 statutory financial statements and related interim risk-based capital (RBC) filings (where required).

g. Adopted guidance for troubled debt restructurings for March 31 – June 30 statutory financial statements and related interim RBC filings (where required).

3. Adopted the report of the Capital Adequacy (E) Task Force. See the Task Force listing for details.

4. Adopted the report of the Receivership and Insolvency (E) Task Force. See the Task Force listing for details.

5. Adopted the report of the Reinsurance (E) Task Force. See the Task Force listing for details.

6. Adopted the report of the Valuation of Securities (E) Task Force. See the Task Force listing for details.

7. Adopted the report of the Group Capital Calculation (E) Working Group, which met July 29 and took the following action:
   a. Adopted its July 21, June 2 and May 19 minutes, which included the following action:
      1. Adopted its 2019 Fall National Meeting minutes.
      2. Continued to make decisions on previously exposed aspects of the group capital calculation (GCC), including the template, instructions and legislation authority.
   b. Discussed comments received on exposed revised template and instructions and directed NAIC staff to make various changes as discussed during the meeting. Further discussion is expected.

8. Adopted the report of the Group Solvency Issues (E) Working Group, which met July 29 and took the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Reported that it met Feb. 11 in regulator-to-regulator pursuant to paragraph 6 (consultations NAIC with staff on technical guidance) of the NAIC Policy Statement on Open Meetings.
   c. Heard an update on the ongoing work of the ORSA Implementation (E) Subgroup, which met July 13 in joint session with the Risk-Focused Surveillance (E) Working Group. The meeting was held in regulator-to-regulator session pursuant to paragraph 3 (discussions of specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings. During this meeting, the Working Groups took the following action:
      2. Discussed scheduling a conference call to discuss the impact of COVID-19 on ORSA filings.
   d. Heard an update on recent group-related activities of the IAIS, including the status of ongoing projects of the IAIS Insurance Groups Working Group.
   e. Discussed a request from the Group Capital Calculation (E) Working Group to quantify and evaluate the impact of XXX/AXXX reserves held by grandfathered captives on an insurance groups’ overall capital positions. Noted that a drafting group of state insurance regulators has been appointed to address the request and present its results to the full Working Group.
   f. Discussed comments received on the exposure of a gap analysis conducted by NAIC staff to compare elements of the IAIS’ Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) against existing practices in state solvency regulation. As a result of the discussions, the Working Group agreed to appoint drafting groups to develop targeted enhancements to NAIC handbooks and the NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual for further consideration by the Working Group in ComFrame implementation.

9. Adopted the report of the Financial Analysis (E) Working Group, which met July 15, June 17, May 13, May 12, May 6 and May 5 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss letter responses related to second-quarter 2019 financial results.

10. Adopted the report of the Valuation Analysis (E) Working Group, which met in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to discuss valuation items related to specific companies.

11. Adopted a revised INT 20-08, as referred by the Accounting Practices and Procedures (E) Task Force.

Accounting Practices and Procedures (E) Task Force

Aug. 3, 2020

1. Adopted its July 22, June 22, and 2019 Fall National Meeting minutes, which included the following action:
   a. Adopted revisions to INT 20-08. These revisions were requested by the Financial Condition (E) Committee to add flexibility, which allows a limited-time exception to apply other underwriting expense treatment for certain policies.
c. Adopted INT 20-08 as adopted by the Statutory Accounting Principles (E) Working Group on June 15. This was adopted by a separate vote of the Task Force.

d. Adopted the report of the Blanks (E) Working Group, including its May 28 minutes. During this meeting, the Working Group took the following action:

1. Adopted its Dec. 17, 2019, minutes, which included the following action:
   b. Adopted two items previously exposed:
      2. 2019-27BWG – Remove the alphabetic index from inclusion at the back of the annual financial statement blank, instructions and Blanks (E) Working Group page on the NAIC website.
   c. Adopted its procedures.
   d. Exposed four proposals:
      1. 2019-25BWG – Modify the instruction for Column 10 (Schedule F, Part 3 – Property and Schedule F, Part 2 – Life/Fraternal Workers’ Compensation Carve-out supplement) to remove instruction to exclude adjusting and other reserves from the column and add instruction to include those reserves with the defense and cost containment reserves. Add a new instruction for Column 12 for the same schedules. Add crosschecks to Schedule P, Part 1.
      2. 2019-28BWG – Modify the instruction for Supplemental Investment Risk Interrogatories Line 13.02 through Line 13.11 clarifying when to identify the actual equity interests within a fund and aggregate those equity interests for determination of the 10 largest equity interests.
      4. 2019-30BWG – Add a category and instructions for Reciprocal Jurisdiction Companies in Schedule S for the life/fraternal and health blanks and to Schedule F for the property and title blanks. Add a list of identification numbers in instruction to Schedule Y, Part 1A; Schedule Y, Part 2; and Schedule D, Part 6, Section 1 for reciprocal jurisdiction companies. Add a reference to reciprocal jurisdiction companies in the Trusteed Surplus Statement instructions for life/fraternal, health and property financial statements.
   e. Adopted its editorial listing.

2. Adopted 24 proposals:

   a. 2019-25BWG – Modify the instruction for Column 10 (Schedule F, Part 3 – Property and Schedule F, Part 2 – Life/Fraternal Workers’ Compensation Carve-out supplement) to remove instruction to exclude adjusting and other reserves from the column and add instruction to include those reserves with the defense and cost containment reserves. Add a new instruction for Column 12 for the same schedules. Add crosschecks to Schedule P, Part 1.
   b. 2019-28BWG – Modify the instruction for Supplemental Investment Risk Interrogatories Line 13.02 through Line 13.11 clarifying when to identify the actual equity interests within a fund and aggregate those equity interests for determination of the 10 largest equity interests.
   c. 2019-29BWG – Modify the instruction and blank for Supplemental Investment Risk Interrogatories Question 14.01.
   d. 2019-30BWG – Add a category and instructions for Reciprocal Jurisdiction Companies in Schedule S for the life/fraternal and health blanks and to Schedule F for the property and title blanks. Add a list of identification numbers in instruction to Schedule Y, Part 1A; Schedule Y, Part 2; and Schedule D, Part 6, Section 1 for reciprocal jurisdiction companies. Add a reference to reciprocal jurisdiction companies in the Trusteed Surplus Statement instructions for life/fraternal, health and property financial statements.
   f. 2020-03BWG – Modify the instruction and illustration for 13(11) to the Notes to Financial Statement. Change the numbering from 1 through 13 to A through M to reflect the disclosure addition for Statement of Statutory Accounting Principles (SSAP) No. 41R—Surplus Notes being adopted by the Statutory Accounting Principles (E) Working Group and correct the instruction.
   g. 2020-04BWG – Modify the instruction and illustration for Note 23A – Unsecured Reinsurance Recoverables to reflect the disclosure addition for SSAP No. 62R—Property and Casualty Reinsurance being adopted by the Statutory Accounting Principles (E) Working Group.
h. 2020-05BWG – Modify the instruction and illustration for Note 2 – Accounting Changes and Correction of Errors to reflect the disclosure addition for SSAP No. 3—Accounting Changes and SSAP No. 51R—Life Contracts being adopted by the Statutory Accounting Principles (E) Working Group.

i. 2020-07BWG – Add new disclosure Note 23 – Reinsurance for reinsurance credit (Note 23H – Life/Fraternal, Note 23E – Health and Note 23K – Property) to reflect the disclosure additions for SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance being adopted by the Statutory Accounting Principles (E) Working Group.

j. 2020-08BWG – Add a disclosure instruction for 10C to the Notes to Financial Statement for related party transactions not captured on Schedule Y to reflect the disclosure addition for SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties being adopted by the Statutory Accounting Principles (E) Working Group. Combine existing 10C into 1B instructions and illustration narrative.

k. 2020-09BWG – Modify the Annual Statement Instructions for Schedule F, Part 3 to reflect the factors for all uncollateralized reinsurance recoverable from unrated reinsurers be the same for authorized, unauthorized, certified and reciprocal reinsurance.

l. 2020-10BWG – Revise the column 10 header in the Variables Annuities Supplement Blank to be Contract Level Reserves Less Cash Surrender Value. Revise the line descriptions in Lines 1 through 3 in the footer and add a line for the Reserve Credit from Other Reinsurance and for Post-Reinsurance Ceded Aggregate Reserve. Adjust the instructions to correspond with changes made to the blanks, as well as changes in the 2020 Valuation Manual for the new Variable Annuities Framework.

m. 2020-11BWG – For the VM-20 Reserves Supplement Blank, split Part 1 into Part 1A and Part 1B.

n. 2020-12BWG – The proposal will require appointed actuaries to attest to meeting CE requirements and participate in the CAS/SoA CE review procedures, if requested.

o. 2020-13BWG – Remove Line 24.04 from the General Interrogatories, Part 1 and renumber remaining lines for Interrogatory Question 24. Modify Lines 24.05 and 24.06 to require reporting amounts for conforming and nonconforming collateral programs.

p. 2020-14BWG – Modify the columns and rows on the blank pages for the Long-Term Care Experience Reporting Form 1 through Form 5 and make appropriate changes to the instructions for those forms.

q. 2020-15BWG – Contains a new Private Flood Insurance Supplement collecting residential and commercial private flood insurance data and revisions to the Credit Insurance Experience Exhibit (CIEE) to collect lender-placed flood coverages.

r. 2020-16BWG – Modify Question 3.1 and Question 3.2 of General Interrogatories Part 2 and provide instructions.

s. 2020-17BWG – Adjust the asset valuation reserve (AVR) presentation to include separate lines for each of the expanded bond designation categories.

t. 2020-18BWG Modified – Clarify the instructions to indicate which funds reported on Schedule D, Part 2, Section 2 (annual filing) and Schedule D, Part 3 and Part 4 (quarterly filing) must have an NAIC designation, NAIC designation modifier, and SVO administrative symbol. Modify the reference to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) found in the following investment instructions.

u. 2020-19BWG – Add a code of “%” to the code column for all investments which have been reported on Schedule DA, Part 1 and Schedule E, Part 2 for more than one consecutive year. Add certification to the General Interrogatories, Part 1 inclusion of these investments on Schedule DA, Part 1 and Schedule E, Part 2 (SAPWG 2019-20).

v. 2020-20BWG – For Schedule D, Part 1, add code “10” to Column 26 – Collateral Type for ground lease financing. Renumber “Other” code to “11.”

w. 2020-21BWG – Add a new line 4.05 for valuation allowance for mortgage loans to the Summary Investment Schedule and renumber existing line 4.05 to 4.06. Modify the instructions to include a crosscheck for new line 4.05 back to Schedule B – Verification Between Years. Clarify the instructions for 4.01–4.04 to explicitly show crosschecking to Column 8 of Schedule B, Part 1.

x. 2020-23BWG – Add footnote to Exhibit 5 (life/fraternal & health – life supplement) and Exhibit 3 separate accounts to disclose cases when a mortality risk is no longer present or a significant factor; i.e., due to a policyholder electing a payout benefit (SAPWG 2019-08).

3. Adopted its editorial listing.

2. Adopted its 2021 proposed charges, which include one change to the charges for each Working Group:
   a. For the Blanks (E) Working Group, a charge regarding changes to the investment schedules was updated to reference that Capital Adequacy (E) Task Force and all of its working groups instead of a single working group.
   b. For the Statutory Accounting Principles (E) Working Group, a charge to update accounting and reporting to reflect the changes to Model #785 and Model #786 is complete and was deleted.
3. Adopted the report of the Statutory Accounting Principles (E) Working Group, which met July 30 and took the following action:
   a. Adopted its July 15, June 15, May 20, May 5, April 17, April 15, March 26 and March 18 minutes, which included the following action:
      1. Exposed INT 20-09: Basis Swaps as a Result of the LIBOR Transition.
      2. Adopted the consensus in INT 20-08 with modifications.
      3. Exposed agenda item 2020-16EP.
      4. Discussed ACA risk corridors and actions by the U.S. Supreme Court.
   b. Adopted the following substantive revisions to statutory accounting guidance:
      1. Revisions update the reporting line for qualifying cash pools and make clarifying edits.
      2. Revisions eliminate references to the NAIC Bond Fund List in SSAP No. 26R—Bonds and add reference to the “NAIC Fixed Income-Like SEC Registered Funds List” in SSAP No. 30R—Unaffiliated Common Stock.
      3. Revisions clarify that the accounting and reporting of investment income and capital gain/loss, due to early liquidation either through a called bond or a tender offer, shall be similarly applied. This adoption has a Jan. 1, 2021, effective date with early adoption permitted.
      4. Revisions specify that voluntary decisions to choose one allowable reserving methodology over another, which requires commissioner approval under the Valuation Manual, shall be reported as a change in valuation basis.
      5. Revisions add disclosure elements for reported goodwill. The additional disclosures will improve the validity and accuracy of the financial statements, and they will assist with state insurance regulators’ review of reported assets that are not readily available for policyholder claims. These disclosure revisions will be effective for the 2021.
      6. Revisions ensure reporting consistency in that derivatives are reported “gross”; i.e., without the inclusion of financing components. Additionally, amounts owed to/from the reporting entity from the acquisition or writing of derivatives shall be separately reflected. The revisions are effective of Jan. 1, 2021.
      7. INT 20-09. Basis swaps are compulsory derivatives issued by central clearing parties (CCPs) in response to the market-wide transition away from the LIBOR. The interpretation directs that the basis swaps be reported as “hedging - other” and at fair value, thus qualifying for admittance. To be considered or reported as an “effective” hedging, the instrument must qualify as a highly effective hedge under SSAP No. 86—Derivatives.
   c. Adopted the following nonsubstantive revisions to statutory accounting guidance:
      1. Revisions require the identification/disclosure of cash equivalents, or substantially similar investments, that remain on the same reporting schedule for more than one consecutive reporting period. This is an expansion of the current disclosure requirements that only referenced short-term investments and to clarify that the disclosure is satisfied through the use of the code on the investment schedules.
      2. Revisions update the amortization guidance for leasehold improvements. The updated language will allow leasehold improvements to have lives that match the associated lease term, which agrees with U.S. generally accepted accounting principles (GAAP).
      3. Revisions clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation, a disclaimer of control does not eliminate the classification as a related party, and disclosure of material transactions are required under SSAP No. 25. The revisions also propose rejection of several U.S. GAAP standards addressing variable interest entities and update disclosures.
      4. Revisions clarify that perpetual bonds shall be reported at fair value, not to exceed any currently effective call price, with a proposed effective date of Jan. 1, 2021, with early application permitted.
      5. Revisions clarify that a participant’s financial rights in a mortgage participation agreement may include the right to take legal action against the borrower or participate in the determination of legal action, but they do not require that the participant has the right to solely initiate legal action; foreclosure; or to communicate with the borrower.
      7. Exposed agenda item to solicit comments on two options for the accounting of credit tenant loans (CTLs). The Valuation of Securities (E) Task Force will be notified of this exposure with a request for further confirmation that an SVO listing could be developed to capture the CTLs that meet the SVO’s structural and legal analysis and possess bond characteristics.
8. Exposed agenda item to solicit comments on the development of more explicit guidance for policyholder refunds and other premium adjustments. Assistance from industry was requested in developing principles-based guidance, particularly for the varieties of data-telematics policies.

9. Revisions clarify existing levelized commissions guidance in SSAP No. 71—Policy Acquisition Costs and Commissions, which requires full recognition of the funding liabilities incurred to date for commission expenses prepaid on behalf of an insurer. The revisions also clarify that the recognition of commission expense is based on experience to date. The exposed revisions are consistent with the 2019 Fall National Meeting exposure, with the inclusion of guidance to clarify that reporting entities that have not complied with the original intent shall reflect the change as a correction of an error, in accordance with SSAP No. 3, in the year-end 2020 financial statements.

10. Revisions update the subsidiary, controlled and affiliated entities (SCA) review process descriptive language and the procedures for availability and delivery of completed SCA reviews.

11. Revisions remove the statement that guarantees or commitments from the insurance reporting entity to the SCA can result in a negative equity valuation of the SCA.

12. Revisions extend the following interpretations issued in response to COVID-19 to the third quarter 2020 financial statements. With these revisions, these interpretations will expire Dec. 30, 2020; therefore, they will not be applicable for year-end 2020. The exposure has a shortened comment period ending Aug. 14. Adoption of these extensions may be considered via e-vote if there are no concerns with the extensions received:
   b. INT 20-04: Mortgage Loan Impairment Assessment Due to COVID-19.
   c. INT 20-05: Investment Income Due and Accrued.

13. The following U.S. GAAP standards were rejected as not applicable to statutory accounting:
   a. ASU 2015-10, Technical Corrections and Improvements.
   b. ASU 2019-09, Financial Services—Insurance (Topic 944): Effective Date.
   c. ASU 2020-01, Investments—Equity Securities (Topic 321), Investments—Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815), Clarifying the Interactions between Topic 321, Topic 323, and Topic 815.
   d. ASU 2020-05—Effective Dates for Certain Entities.

14. Exposed the following editorial revisions to statutory accounting:
   a. Deleted redundant paragraph references in SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.
   b. Added a table that lists the questions addressed in Exhibit A - Implementation Questions and Answers in SSAP No. 62R.

15. Rejected agenda item 2020-13: Health Industry Request on 2020 Health Insurance Assessment without statutory revisions. (Note that the sponsor requested withdrawal.)

16. Received an update on the following projects and referrals:
   1. Determined that the following two interpretations, issued in response to COVID-19, are specifically tied to the timeframes described in the Coronavirus Aid, Relief, and Economic Security Act (CARES Act). As such, an extension was not deemed necessary at this time.
     a. INT 20-03: Troubled Debt Restructuring Due to COVID-19.
   2. Ref #2019-21: Received an update that the issue paper to consider substantive revisions to SSAP No. 43R—Loan-Back and Structured Securities was exposed through July 31, and a subsequent conference call will be scheduled to consider comments and continue the discussion. It was also noted that NAIC staff have had ongoing conversations with industry representatives and investment providers to discuss differing structures during the exposure period.
   3. Deferred discussion of the following agenda items for a subsequent call or meeting:
   4. Received a referral from the Valuation of Securities (E) Task Force regarding the accounting and reporting treatment of CTLs is being addressed in agenda item Ref #2020-24.
   5. Received a referral from the Financial Condition (E) Committee regarding an American Council of Life Insurers (ACLI) request relative to the accounting treatment of certain “basis swaps” permitted under state law, as a result of the transition away from LIBOR. This referral was addressed with the adoption of INT 20-09.
   6. Received an update on current U.S. GAAP Exposures / Invitations to Comment, noting that no comments by the Working Group are planned during the exposure periods.
   g. Reported that the comment deadline for new and exposed agenda items is Sept. 18, except for INT 20-02, INT 20-04 and INT 20-05, which have a comment deadline of Aug. 14.
Capital Adequacy (E) Task Force
Aug. 5, 2020

1. Adopted its June 30 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Adopted its April 30 and Jan. 27 minutes, which included the following action:
   c. Adopted its working group proposals:
      1. Proposal 2020-05-CA (Table of Contents).

2. Adopted the report of the Health Risk-Based Capital (E) Working Group, which met July 30 and took the following action:
   a. Adopted its Dec. 17, 2019 minutes, which included the following action:
      1. Adopted its 2019 Fall National Meeting minutes.
      2. Discussed the draft health bond structure; specifically, the bond portfolio adjustment, the investment grade bond factors, the investment income and the time horizon.
   b. Approved the 2019 health RBC statistics to be posted on the Working Group’s page on the NAIC website.
   c. Discussed and referred the ACA Fee Sensitivity Test proposal to the Capital Adequacy (E) Task Force for exposure for all formulas.
   d. Adopted proposal 2020-04-H to add the MAX Function to the formula included in the RBC forecasting file for Line 17 of the excessive growth charge on page XR021 of the health RBC formula.
   e. Heard comments on the health bond factors from the Academy to address questions raised regarding investment income and the time horizon used in the development of the factors.
   f. Adopted updates to the 2020 health RBC working agenda.
   g. Discussed the impact of COVID-19 and pandemic risk in the health RBC formula.
   h. Heard comments on the health care receivable guidance.
   i. Heard an update on the Health Test Ad Hoc Group.

3. Adopted the report of the Life Risk-Based Capital (E) Working Group, which met July 30 and took the following action:
   a. Adopted its July 10, June 30 and June 11 minutes, which included the following action:
      1. Adopted industry-requested RBC mortgage reporting guidance for construction loans; origination and valuation dates, property values and 90 days past due; and contemporaneous property values.
      2. Deferred industry-requested RBC mortgage reporting guidance for net operating income (NOI).
      3. Adopted the instruction and factors for 2020 longevity risk.
   b. Adopted its Feb. 14 and 2019 Fall National Meeting minutes, which included the following action:
      b. Adopted proposal 2020-03-L (C-3 Instructional Changes and C-3 Guidance).
      c. Discussed the life RBC treatment of alien affiliates.
   b. Adopted the life RBC newsletter.
   c. Discussed the 2019 RBC statistics.
   d. Heard an update from the industry on their request for RBC reporting guidance for NOI.
   e. Discussed the Working Group’s working agenda and upcoming conference calls.

4. Adopted the report of the Investment Risk-Based Capital (E) Working Group, including its Feb. 25 minutes. During this meeting, the Working Group took the following action:
   a. Discussed comments received on the bond proposal.
   b. Re-exposed the bond proposal to include updates to the 2020 annual financial statement blanks.

5. Adopted the report of the Property and Casualty Risk-Based Capital (E) Working Group, which met July 30 and took the following action:
   a. Adopted its June 12 and Feb. 3 minutes, which included the following action:
      1. Adopted its 2019 Fall National Meeting minutes.
      2. Adopted its Jan. 22 minutes, which included the following action:
         4. Agreed to refer the Schedule F proposal to the Blanks (E) Working Group.
         5. Received referrals from the Statutory Accounting Principles (E) Working Group and the Restructuring Mechanisms (E) Subgroup.

© 2020 National Association of Insurance Commissioners 23
b. Adopted the report of the Catastrophe Risk (E) Subgroup, which met July 29 and took the following action:
   1. Adopted its Feb. 3 minutes, which included the following action:
      a. Adopted its 2019 Fall National Meeting minutes.
      b. Adopted its Jan. 22 minutes, which included the following action:
         ii. Adopted proposal 2019-19-P (Vulnerable 6 or Unrated Risk Charge).
         iii. Agreed to refer the Schedule F proposal to the Blanks (E) Working Group.
      c. Received referrals from the Statutory Accounting Principles (E) Working Group and the Restructuring Mechanisms (E) Subgroup.
   2. Heard a presentation from Karen Clark & Company on its catastrophe model.
   3. Discussed the possibility of allowing additional third-party commercial vendor models.
   4. Discussed the internal catastrophe model evaluation process.
   c. Adopted the 2020 P/C RBC newsletter.
   d. Discussed 2020 P/C RBC statistics.
   e. Discussed the possibility of using the NAIC as a centralized location for reinsurer designations.
   f. Discussed the R3 credit risk and Rcat contingent credit risk charges.
   h. Forwarded the request for extension to the Restructuring Mechanisms (E) Subgroup.
   i. Heard updates on current P/C RBC projects from the Academy.
   j. Discussed Line 1 underwriting risk reserves and premium methodology.
6. Adopted its working agenda.
8. Exposed proposal 2020-02-CA (ACA Fee Sensitivity Test Removal) for a 30-day public comment period ending Sept. 4.
9. Exposed its 2021 proposed charges for a 30-day public comment period ending Sept. 4.
10. Adopted proposal 2020-03-L (C-3 Instructional Changes and C-3 Guidance).

Examination Oversight (E) Task Force
The Examination Oversight (E) Task Force did not meet at the Summer National Meeting.

Receivership and Insolvency (E) Task Force
Aug. 7, 2020
1. Adopted its March 4, Jan. 8 and 2019 Fall National Meeting minutes, which included the following action:
   a. Adopted a referral to the Financial Condition (E) Committee to request opening Model #440 and Model #450 related to essential services provided by affiliates in receivership.
   b. Discussed comments received regarding key provisions the states should have in their laws to promote effectiveness and consistency in receiverships affecting multiple states.
3. Adopted the report of the Receivership Financial Analysis (E) Working Group, which met Aug. 4 in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings.
4. Adopted the report of the Receivership Large Deductible Workers’ Compensation (E) Working Group, including its March 2 minutes. During this meeting, the Working took the following action:
   a. Received comments on a draft model guideline that provides alternative language for the Insurer Receivership Model Act (#555), Section 712—Administration of Loss Reimbursement Policies.
   b. Appointed a drafting group to address comments received.
5. Exposed, for a 30-day public comment period, a request for feedback on key provisions of receivership and guaranty fund laws. For each provision, the request asks: 1) if it is critical for all states to have in receivership and guaranty fund law in a receivership affecting multiple states; 2) if it should be considered for a limited scope accreditation standard; 3) if other methods should be used to encourage its adoption; and 4) if there are impediments to its adoption.
6. Heard a presentation from representatives of the National Conference of Insurance Guaranty Funds (NCIGF), the Western Guaranty Fund Services (WGFS) and the Illinois Insurance Guaranty Fund (IIGF) on the NCIGF’s white paper, Insurance Resolution: Preparing for Cyber Claims. The presenters requested that state insurance regulators acknowledge potential issues with cyber claims in a receivership and engage in early communication with guaranty funds when an insurer that writes cyber policies becomes troubled.
7. Heard an update on activities of the IAIS Resolution Working Group (ReWG). The ReWG met via conference call in April to continue development of the Application Paper on Resolution Planning. The ReWG expects to finalize the draft during a conference call in September. A draft for consultation is expected to be available in November.

Reinsurance (E) Task Force

Aug. 6, 2020

1. Adopted its June 9 minutes, which included the following action:
   a. Adopted its March 11, Jan. 29 and 2019 Fall National Meeting minutes, which included the following action:
      1. Adopted a recommendation to the Financial Regulation Standards and Accreditation (F) Committee that the 2019 revisions to Model #785 and Model #786 be an accreditation standard for risk retention groups (RRGs).
      2. Discussed whether compliance with AG 48 should be considered “substantially similar” to Model #787 for purposes of accreditation.
      3. Adopted technical revisions to Model #787.
   b. Discussed whether compliance with AG 48 should be considered “substantially similar” to Model #787 for purposes of accreditation.
   c. Adopted the Uniform Checklist for Reciprocal Jurisdiction Reinsurers and updates to the Uniform Application Checklist for Certified Reinsurers.

2. Adopted its 2021 proposed charges.

3. Adopted the report of the Reinsurance Financial Analysis (E) Working Group, which met March 11 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings, to adopt the new Uniform Checklist for Reciprocal Jurisdiction Reinsurers and updates to the Uniform Application Checklist for Certified Reinsurers.

4. Adopted the report of the Qualified Jurisdiction (E) Working Group, which has not met since the 2019 Fall National Meeting. The Working Group has been approached by three countries about becoming qualified jurisdictions and will begin initial reviews in the next several months.

5. Received a status report on the states’ implementation of the 2019 revisions to Model #785 and Model #786.

Risk Retention Group (E) Task Force

The Risk Retention Group (E) Task Force did not meet at the Summer National Meeting.

Valuation of Securities (E) Task Force

Aug. 7, 2020

1. Adopted its July 1 and May 14 minutes, which included the following action:
   a. Adopted its Feb. 4 and 2019 Fall National Meeting minutes, which included the following action:
      1. Discussed proposed amendments to the P&P Manual to:
         a. Remove the financial modeling instructions for RMBS/CMBS.
         b. Clarify that the sovereign rating limitation applies to filing exemption (FE).
      2. Exposed an updated amendment to the P&P Manual for the definition and instructions for principal protected notes (PPNs).
      3. Adopted an amendment to the P&P Manual to reflect the U.S. Securities and Exchange Commission’s (SEC) adoption of a new rule to modernize the regulation of exchange-traded funds (ETFs).
   b. Adopted an updated amendment to the P&P Manual to map financially modeled RMBS/CMBS designations to NAIC designation categories, including mapping the zero-loss bonds to the 1.A NAIC designation category.
   c. Adopted an amendment to the P&P Manual for PPNs, with an updated description, definition and instructions. This amendment removes PPNs from FE eligibility and requires all PPNs, including those currently designated under the FE process, to be submitted to the Securities Valuation Office (SVO) for review under their Subscript S authority beginning Jan. 1, 2021, and filed with the SVO by July 1, 2021, if previously owned.
   d. Exposed an NAIC Investment Analysis Office (IAO) issue paper on NAIC staff concerns about bespoke securities and reliance on credit rating provider (CRP) ratings. The issue paper, along with the April 28, 2010, adopted recommendations of the Ratings Agency (E) Working Group, were exposed for a 90-day public comment period ending Aug. 16. The Task Force directed IAO staff to begin drafting incremental recommendations for the Task Force to consider addressing the risks identified in the issue paper.
   e. Exposed a proposed amendment to the P&P Manual with updated instructions for nonconforming credit tenant loan (CTL) transactions that relied on credit ratings, along with an update to the Task Force policy on “The Use of Credit Ratings of NRSROs in NAIC Processes.” The amendment was exposed for a 30-day public comment period ending June 17, and it was referred to the Statutory Accounting Principles (E) Working Group for its consideration.
Discussed temporarily extending insurers’ 2020 initial filing deadline from 120 days to 165 days for newly acquired or in-transition securities. The Task Force decided this was a temporary change, and it directed SVO staff to include in the minutes instructions that the filing deadline for the initial filing of newly acquired or in-transition securities for 2020 would be 165 days instead of the usual 120 days.

Heard reports from NAIC staff on: RMBS/CMBS; rating agency actions year-to-date (YTD); requirements for material credit events and issuer amendments or refinancing an existing issue; and SVO year-end process and carryover filings.

Adopted an amendment to the P&P Manual to rename the “U.S. Direct Obligations/Full Faith and Credit Exempt List” as the “NAIC U.S. Government Money Market Fund List” and discontinue the “NAIC Bond Fund List.”

Exposed a proposed amendment to the P&P Manual to map short-term CRP ratings to NAIC designation categories. This amendment was exposed for a 25-day public comment period ending July 27.

Exposed a proposed amendment to the P&P Manual to add supranational entities filed with the SVO to the “Sovereign NAIC Designation Equivalent List.” This amendment was exposed for a 25-day public comment period ending July 27.

Exposed a proposed amendment to the P&P Manual to update guidance for working capital finance investments (WCFIs) consistent with the Statutory Accounting Principles (E) Working Group adoption of changes to SSAP No. 105R—Working Capital Finance Investments. This amendment was exposed for a 45-day public comment period ending Aug. 17.

Exposed an NAIC SVO staff report on the use and regulation of derivatives in ETFs. This report was exposed for a 45-day public comment period ending Aug. 17.

Adopted an amendment to the P&P Manual to map short-term CRP ratings to NAIC designation categories.

Adopted an amendment to the P&P Manual to add supranational entities filed with the SVO to the Sovereign NAIC Designation Equivalent List.

Received a proposed amendment to the P&P Manual to add instructions for ETFs that contain a combination of preferred stocks and bonds. This amendment was exposed for a 30-day public comment period ending Sept. 6.

Received a proposed amendment to the P&P Manual to update guidance on initial and subsequent annual filings, methodologies and documentation. This amendment was expose for a 30-day public comment period ending Sept. 6.

Heard a report from NAIC staff regarding projects before the Statutory Accounting Principles (E) Working Group.

Received its 2021 proposed charges and agreed to discuss and consider adoption during a future meeting.

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEE

August 12, 2020

1. Adopted its 2019 Fall National Meeting minutes.

2. Adopted, immediately by reference, revisions made during 2019 to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual) and were deemed insignificant.

3. Adopted a referral to confirm that the 2019 and 2011 revisions to Model #785 and Model #786 are applicable to RRGs as an accreditation standard. The revisions address the reinsurance collateral requirements necessary for U.S. ceding companies to take credit for certain reinsurance transactions. The adopted effective date is Sept. 1, 2022, with enforcement to begin Jan. 1, 2023.

4. Adopted technical changes to the new accreditation standard for Model #787 to update a reference that was revised in 2020.

6. Exposed proposed revisions to the Review Team Guidelines for Part B1: Financial Analysis for a 30-day public comment period ending Sept. 11. The proposed revisions consist of a technical clarification related to RRGs and the use of the “Captives and/or Insurers Filing on a U.S. GAAP Basis Worksheet.”

7. Reported that it met Aug. 10, July 21 and June 23 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, and took the following action:
   a. Discussed state-specific accreditation issues.
   b. Voted to award continued accreditation to the insurance departments of Delaware, Louisiana, Maryland, Oregon, Rhode Island and Washington.
INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

Aug. 12, 2020

1. Adopted its June 3, Feb. 3, Jan. 30 and Jan. 15 and 2019 Fall National Meeting minutes, which included the following action:
   a. Heard an update on upcoming IAIS committee meetings and activities.
   b. Heard an update on the Organisation for Economic Co-operation and Development (OECD) and other supervisory cooperation activities.
   c. Heard an update on the International Monetary Fund (IMF) Financial Sector Assessment Program (FSAP).
   d. Heard an update on NAIC events.
   f. Heard a recap of IAIS committee meetings and an update on the insurance capital standard (ICS), including the aggregation method (AM) and comparability.
   g. Approved submission of NAIC comments on the IAIS draft Application Paper on Liquidity Risk Management.

2. Heard an update on key 2020 projects of the IAIS, including: 1) the Louisiana Department of Insurance became the latest U.S. member of the IAIS Multilateral Memorandum of Understanding (MMoU); 2) implementation of the holistic framework for systemic risk in the insurance sector; 3) ICS data collection and comparability; 4) and the responses to COVID-19.

3. Heard an update on the 2020 U.S. FSAP, which concluded earlier in the week with the publication of final documents describing the IMF’s findings and opinions on the U.S. financial regulatory system. While there are several findings and conclusions drawn by IMF staff that state insurance regulators may ultimately disagree with, their view that the U.S. insurance system is in line with the IAIS Insurance Core Principles (ICPs) and that key 2015 FSAP recommendations are being addressed is welcomed. As these reports have just been made public, state insurance regulators and NAIC staff will review all of the IMF recommendations and allocate, where appropriate, such recommendations to appropriate NAIC committees and working groups for further consideration.

4. Heard an update on international activities, including recent virtual meetings and events with international colleagues, plans for a virtual NAIC International Fellows Program session this fall, recent meetings of the OECD Insurance and Private Pensions Committee, and recent meetings of the SIF.

NAIC/CONSUMER LIAISON COMMITTEE

Aug. 14, 2020

1. Adopted its June 19 and 2019 Fall National Meeting minutes, which included the following action:
   a. Heard a presentation on consumer protection issues resulting from, or heightened by, COVID-19 and measures to reduce or flatten infection rates.
   b. Heard a presentation on the importance of high-quality, affordable coverage for COVID-19 testing.
   c. Heard a presentation on additional areas for state leadership and consumer protection related to COVID-19.
   e. Heard a presentation regarding United Policyholders’ COVID-19 loss recovery library.

2. Heard a presentation from United Policyholders on COVID-19-related business interruption claims, coverage issues, disputes and litigation. This presentation highlighted the lack of and need for pandemic coverage for business interruption.

3. Heard a presentation from the Automotive Education & Policy Institute (AEPI) on digital claims handling and photo-estimating. This presentation focused on the need for additional consumer education and consumer protection in the form of advance notifications regarding initial claim payments and follow up claim payments, especially during the COVID-19 pandemic.

4. Heard a presentation from the CEJ proposing a model law to modernize insurance rate and form regulation that would address algorithmic bias plans used on patients and markets. This presentation explained how some algorithmic plans have a built-in bias based on discriminatory data points being used. A new model law was proposed to alleviate the inconsistencies currently noted from state to state.

5. Heard a presentation from the National Health Law Program (NHLP), Community Catalyst (CC) and the American Kidney Fund (AKF) on improving equity in health care access. This presentation discussed how the pandemic highlighted the problem of inequity and discrimination in the equal and adequate access to health care for consumers.

6. Heard a presentation from the National Alliance of State and Territorial AIDS Directors (NASTAD) on addressing the needs of patients and consumers in the COVID-19 pandemic. This presentation discussed the importance of reasonable preauthorization standards for the utilization management of formulary medications, especially those used for pre-exposure prophylaxis (PrEP).
7. Heard a presentation from California Health Advocates (CHA) on the federal Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA), Medicare and Model #120. This presentation recommended that state insurance regulators revise Model #120, so it no longer allows insurers to avoid paying for medical treatment when an insured person is eligible for Medicare but not enrolled in Medicare Part B because they are still covered by their employer.

NAIC/AMERICAN INDIAN AND ALASKA NATIVE LIAISON COMMITTEE
Aug. 3, 2020

1. Adopted its April 29 minutes, which included the following action:
   a. Adopted its 2019 Fall National Meeting minutes.
   b. Discussed how the states are conducting outreach to Native Americans regarding ACA coverage opportunities.
   c. Discussed retroactive coverage through ACA plans and tribal coverage programs.

2. Discussed the significant impact of COVID-19 on the health and economies of American Indian and Alaska Native populations.

3. Discussed coverage available through the ACA plans and tribal programs.

4. Received and discussed a general overview from Ron Kreiter (OK) regarding what the recent U.S. Supreme Court decision, *McGirt v. Oklahoma*, U.S. Supreme Court, October Term, 2019, decided July 9, 2020, means (or could mean) to the insurance industry, health care, etc.

NAIC/INDUSTRY LIAISON COMMITTEE
The NAIC/Industry Liaison Committee did not meet at the Summer National Meeting.

NAIC/STATE GOVERNMENT LIAISON COMMITTEE
The NAIC/State Government Liaison Committee did not meet at the Summer National Meeting.

Executive (EX) Committee and Plenary
Virtual Summer National Meeting
August 14, 2020

The Executive (EX) Committee and Plenary met via conference call Aug. 14, 2020. The following members participated: Raymond G. Farmer, Chair (SC); David Altmaier, Vice Chair (FL); Dean L. Cameron, Vice President (ID); Chlora Lindley-Myers, Secretary-Treasurer (MO); Eric A. Cioppa, Most Recent Past President, represented by Timothy Schott (ME); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain (AR); Elizabeth Perri (AS); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais (CT); Karima M. Woods (DC); Trinidad Navarro (DE); John F. King represented by Martin Sullivan (GA); Colin M. Hayashida (HI); Doug Ommen (IA); Robert H. Muriel represented by Kevin Fry (IL); Stephen W. Robertson (IN); Vicki Schmidt represented by Barb Rankin (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary Anderson (MA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Steve Kelley (MN); Mike Chaney (MS); Matthew Rosendale represented by Bob Biskupiak (MT); Mike Causey (NC); Jon Godfried (ND); Bruce R. Ramge (NE); Chris Nicolopoulos (NH); Marlene Caride (NJ); Russell Toal (NM); Barbara D. Richardson (NV); Linda A. Lacewell represented by My Chi To (NY); Jillian Froment (OH); Glen Mulready represented by Brian Downs (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Rafael Cester-Lopategui (PR); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Hodgen Mainda (TN); Kent Sullivan represented by Doug Slape (TX); Todd E. Kiser (UT); Scott A. White (VA); Tregenza A. Roach (VI); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill (WV); and Jeff Rude (WY).

1. **Adopted the Report of the Executive (EX) Committee**

Director Farmer reported that the Executive (EX) Committee met Aug. 13 and adopted the July 14 report from the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

The Executive (EX) Committee also adopted its interim meeting report from May 12, April 2, Feb. 13 and Jan. 10, which included the following action: 1) adopted the 2019 Fall National Meeting minutes of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee; 2) adopted its April 2, Feb. 13 and Jan. 10 minutes; 3) adopted the report of the Audit Committee; 4) adopted the report of the Investment Committee; 5) adopted the recommendation of the Life Actuarial (A) Task Force to delay the start of Principle-Based Reserving (PBR) Experience Data Reporting from 2020 to 2021; 6) appointed Commissioner Schmidt and Director Ramge to serve on the National Insurance Producer Registry (NIPR) Board of Directors effective May 12; 7) heard a report on a change in membership for the System for Electronic Rate and Form Filing (SERFF) Advisory Board, as Andrea Davey (Athene Annuity and Life Company) will serve as the Life Insurance Representative; 8) discussed the National Association of Registered Agents and Brokers (NARAB) Board recommendations; 9) heard an update on the Economic Scenario Generator (ESG) request for proposal (RFP); 10) heard an update on the SERFF Assessment; 11) heard an update on NAIC cybersecurity; 12) discussed the status of the Mid-Year Roundtable and the Summer National Meeting; 13) heard a joint chief executive officer (CEO)/chief operating officer (COO) report; 14) discussed 2020 NAIC Strategic Priorities in light of COVID-19; 15) received an update on the 2019 Year-End Financial Results; 16) approved the fiscal impact statement for the Long-Term Care Insurance Data Call and authorized Management to contract with a selected vendor; 17) approved the fiscal impact statement for the SERFF Filing Review Tools Pilot; 18) approved the following non-regulator appointments to the SERFF Advisory Board: Birny Birnbaum (Center for Economic Justice—CEJ) as the Consumer Representative; Theresa Boyce (Chubb Group) for Property & Casualty (P&C); Amanda Wheeler (Life Secure Insurance Company) for life insurance; and Rachel Benton (Bright Health) for health insurance and vice chair; 19) appointed Director Lindley-Myers as vice chair of the 2020 Consumer Participation Board of Trustees; 20) appointed Commissioner Afable to serve on the NIPR Board of Directors effective Feb. 13; 21) received an update confirming the committee structure changes: the Executive (EX) Committee disbanded the joint Long-Term Care Insurance (E/B) Task Force, the NAIC/State Government Liaison Committee, and the NAIC/Industry Liaison Committee and removed the membership limit on the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force; 22) approved the fiscal impact statement for the PBR Yearly Renewable Term (YRT) Reinsurance Study; 23) voted to release for public review and comment the Long-Term Care Insurance Data Call and Analysis fiscal impact statement; 24) approved the debt restructuring terms between the NAIC and the Interstate Insurance Product Regulation Commission (Compact); and 25) appointed Florida, Idaho, Kentucky, Massachusetts, Missouri, Nebraska, Nevada, Ohio and Oklahoma as members of the NAIC 2020 Audit Committee.
The Executive (EX) Committee adopted the reports of its task forces: 1) the Financial Stability (EX) Task Force; 2) the Government Relations (EX) Leadership Council; 3) the Innovation and Technology (EX) Task Force, including the Artificial Intelligence (AI) Principles; and 4) the Long-Term Care Insurance (EX) Task Force, including its three new subgroup charges.

The Executive (EX) Committee adopted Requests for NAIC Model Law Development to amend: the Insurance Holding Company System Regulatory Act (#440); the Insurance Holding Company System Regulation with Reporting Forms and Instructions (#450); and the Standard Nonforfeiture Law for Individual Deferred Annuities (#805).

The Executive (EX) Committee received the 2019 Annual Report of the NAIC Designation Program Advisory Board.

The Executive (EX) Committee received a status report on the NAIC State Ahead strategic plan implementation.

The Executive (EX) Committee received a status report on model law development efforts for amendments to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171); the Annuity Disclosure Model Regulation (#245); the Health Maintenance Organization Model Act (#430); Model #440; Model #450; the Life Insurance Disclosure Model Regulation (#580); the Mortgage Guaranty Insurance Model Act (#630); the Unfair Trade Practices Act (#880); and new models, including the Real Property Lender-Placed Insurance Model Act, the Pet Insurance Model Law, and the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act.

The Executive (EX) Committee heard a report from the Interstate Insurance Product Regulation Commission.

Director Ramge made a motion, seconded by Director Cameron, to adopt the Aug. 13 report of the Executive (EX) Committee. The motion passed.

2. **Adopted the Artificial Intelligence Guiding Principles**

Commissioner Godfread reported that the Artificial Intelligence (EX) Working Group was constituted during the 2019 Summer National Meeting, and it was formally charged to: 1) study the development of artificial intelligence, its use in the insurance sector, and its impact on consumer protection and privacy, marketplace dynamics, and the state-based insurance regulatory framework; 2) develop regulatory guidance, beginning with guiding principles; and 3) make other recommendations by the Summer National Meeting.

The first meeting of the Working Group was held on Sept. 5 when members heard an overview on AI that covered AI principles generally and the Organisation for Economic Co-operation and Development’s (OECD) AI principles, which have been adopted by 42 countries, including the U.S.

During the 2019 Fall National Meeting, the Working Group discussed comments related to this approach and decided to use the OECD Principles as a basis for developing AI principles for the insurance industry.

The Working Group held calls on June 3 and May 5 and adopted the AI Principles on June 30. Comments were accepted and then discussed during the Innovation and Technology (EX) Task Force’s meeting on July 23. The Task Force decided to take some time to consider those and an appropriate response and re-visit them during its Aug. 7 meeting.

Details regarding those comments and how each was ultimately handled in the Principles can be found in the minutes from the Working Group meetings and the July 23 Task Force meeting. Commissioner Godfread stated, “it was agreed that memorializing the intent of the document would be important. That is covered in the introductory section, but of note is clarifying to whom these Principles pertain (AI Actors – which was determined to include third parties), that it is intended to be high level guidelines or ‘aspirational guideposts’; therefore, it does not carry the weight of law and should be used to promote innovation while protecting consumers.” The Fair and Ethical section emphasizes expectations regarding compliance with laws and regulations, and in an effort to accommodate concerns regarding language related to AI actors being expected to proactively avoid proxy discrimination, it notes, “consistent with the risk-based foundation of insurance” to provide context. Additionally, in the Fair and Ethical section, it is noted that while unintentional consequences may occur, the expectation is they must be corrected and remediated when they do. Care was given to acknowledge balancing both the requirement to be compliant with existing laws and regulations while noting that some may not exist today but will in the future as this space evolves. Transparency by AI actors to all relevant stakeholders while maintaining the ability to protect confidentiality of proprietary algorithms, including revealing the kind of data being used and the purposes and consequences included, as well as providing a way to inquire, review and seek recourse for AI decisions made. Language covering the need for AI systems to be secure, safe and robust is also included.
The NAIC Principles on AI, or the AI “FACTS” include Fair and Ethical, Accountable, Compliant, Transparent and Secure.Safe.Robust as the key tenets of the Principles.

Deputy Commissioner To commented that New York applauds the leadership of Commissioner Godfread and all the others involved in this effort. New York issued Circular Letter #1 last year on this topic, making it clear that insurers are responsible for the external data and models they use even when supplied by third-party vendors. Ms. To said, “[w]e see these principles that are about to be adopted as consistent with that. We applaud this step that we are taking collectively. This is a very good foundation for the future. As we look ahead and tying this with the race discussion from yesterday, we have an opportunity to do this right with a new regulatory framework to deal with these new practices and models. I would encourage all of us to be laser focused to make sure consumers are protected and that the market innovates responsibly.”

Commissioner Ommen also applauded Commissioner Godfread and the work that has gone into this. Specifically, he addressed the fact that these principles should guide AI actors to implement systems to avoid unintended consequences. One of his concerns is that rates should not be going into the market with unintended consequences. He said, “[n]othing in this document should relieve regulators from having our eyes open and standing in our place as consumer protectors. Our duty is to make sure these unintended consequences are well thought out prior to reviewing rates.”

Director Fox offered that “unintended consequences” should be changed to “discriminatory,” as the goal is to avoid discriminatory, not necessarily unintended consequences. She said, “[s]ome unintended consequence may be innocuous and some may be good and what we want to say is, we do not want you to do anything harmful to consumers. We do not want an unintended consequence to have a discriminatory effect.”

Commissioner Godfread made a motion, seconded by Commissioner Altman, to adopt the NAIC AI Guiding Principles (Attachment One). The motion passed.

3. **Adopted by Consent the Committee, Subcommittee and Task Force Minutes of the 2019 Fall National Meeting**

Commissioner Chaney made a motion, seconded by Commissioner Navarro, to adopt by consent the committee, subcommittee and task force minutes of the 2019 Fall National Meeting. The motion passed.

4. **Adopted its Feb. 13 Minutes**

The Executive (EX) Committee and Plenary conducted an interim meeting Feb. 13 to adopt revisions to the *Suitability in Annuity Transactions Model Regulation* (#275). Director Froment made a motion, seconded by Commissioner Roach, to adopt the Executive (EX) Committee and Plenary’s Feb. 13 minutes (Attachment Two). The motion passed.

5. **Received the Report of the Life Insurance and Annuities (A) Committee**

Director Froment reported that the Life Insurance and Annuities (A) Committee met Aug. 11 and adopted its July 10 minutes, which included the following action: 1) adopted its Dec. 30, 2019, and 2019 Fall National Meeting minutes; 2) adopted technical revisions to *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830)* (AG 48); 3) adopted *Valuation Manual* amendments; and 4) adopted *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49-A)*.

The Committee adopted the following working group and task force reports: the Annuity Disclosure (A) Working Group, including its March 12 minutes and an extension of the Request for NAIC Model Law Development; the Accelerated Underwriting (A) Working Group, which met July 31 and heard an update presentation on its work and adopted its March 12, Feb. 20, Feb. 2, Jan. 23, and 2019 Fall National Meeting minutes; the Annuity Suitability (A) Working Group, which met July 29 and adopted its Dec. 19, 2019, and 2019 Fall National Meeting minutes and agreed to draft a “frequently asked questions” (FAQ) document to complete the second half of its charge to “consider how to promote greater uniformity across NAIC-member jurisdictions”; the Life Insurance Illustration Issues (A) Working Group, including its July 30 minutes and an extension of the Request for NAIC Model Law Development; and the Life Actuarial (A) Task Force.

The Committee discussed next steps for the Life Insurance Online Guide (A) Working Group and agreed that NAIC staff would send an email to Committee members: 1) to describe its plan to have the Working Group focus on the substance of a guide and have the NAIC Communications Division work on an online design; and 2) to seek additional state insurance regulator members to be on the Working Group.
The Committee discussed next steps for the Retirement Security (A) Working Group and agreed that NAIC staff would email Committee members: 1) asking for comments on a revised work plan focusing on areas where state insurance regulators have expertise while leveraging the existing work of other organizations to avoid duplication of efforts; and 2) seeking additional state insurance regulator members to be on the Working Group.

The Committee agreed to discuss on a future conference call whether the Committee should review the design and regulation of life insurance and annuity illustrations and discuss what, if any, changes or additions might be needed.

6. Adopted the Technical Revisions to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48)

Director Froment reported that the technical edits to AG 48 have been made to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787). AG 48 needs to remain in sync with Model #787, as there are situations in which both are needed for some period of time to cover their portion of XXX financing arrangements. Of note is a reference change to the Credit for Reinsurance Model Law (#785) and another reference change to the Credit for Reinsurance Model Regulation (#786).

Director Froment made a motion, seconded by Director Cameron, to adopt the technical revisions to AG 48 (Attachment Three). The motion passed.

7. Adopted Amendments to the Valuation Manual

Director Froment reported that there are seven Valuation Manual amendments for consideration, primarily technical in nature. One example is amendment 2020-06, which revises a reference to the London Interbank Offered Rate (LIBOR), which is scheduled to go away in 2021.

Another example is amendment 2020-07, which replaces the 4% floor for the minimum nonforfeiture interest rates with a reference to Internal Revenue Service (IRS) §7702, with which it was originally intended to coordinate.

Director Froment made a motion, seconded by Commissioner Donelon, to adopt the amendments to the Valuation Manual (Attachment Four). The motion was adopted by 54 jurisdictions representing 99.98% of the applicable premiums written. Director Farmer confirmed that the vote satisfied the requirements to amend the Valuation Manual. The motion passed.

8. Adopted the Actuarial Guideline XLVIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49-A)

Director Froment reported that in 2018, commissioners became aware of product innovations that were leading to the illustration of higher credited rates than was contemplated when AG 49 was initially developed. The biggest innovation was the multiplier, which results in more upside than previously seen in related indexed products. The Life Insurance and Annuities (A) Committee charged the Life Actuarial (A) Task Force to address any concerns with these products.

Director Froment reported the Committee adopted AG 49-A during its July 10 conference call. Mr. Birnbaum submitted a comment letter to suggest two changes to AG 49-A: 1) apply AG 49-A to all new illustrations, whether for new policies or for new illustrations on in-force policies regardless of date of issue, on and after the effective date; and 2) prohibit the illustration of crediting rates greater than policy loan rates.

The Task Force discussed and considered these comments along with many other key decision points during the development of AG 49-A. Ultimately, the Task Force decided to apply AG 49-A to new and in force illustrations sold after the effective date of the guideline.

The Task Force considered several approaches and decided that an illustrated Policy Loan Interest Credited Rate should not exceed the illustrated Policy Loan Interest Rate by more than 50 basis points.

This keeps the Guideline consistent with the model regulation and non-indexed universal life (IUL) products, which allows some of this concept to be reflected in illustrations.
The Life Insurance and Annuities (A) Committee plans to hold a call in the near future to discuss the broader issues surrounding the design and regulation of life and annuity illustrations and consider what changes, if any, might be needed.

Deputy Commissioner To said New York would vote “No” on this guideline. “We acknowledge this is a small step in the right direction but feel it falls short of the standard we should impose to ensure consumers are protected. We believe this proposal continues to allow the use of unrealistic and unreasonable crediting rates. Illustrations are supposed to show consumers how an insurance product works and is expected to perform in the future. We know insurers have used these illustrations to compete with each other and to sell equity indexed life insurance products by using unrealistic growth cash values. This misleads consumers. This causes consumers harm. We feel it is critically important for the NAIC to advocate for more realistic and reasonable credit rates and we don’t believe this proposal achieves that.”

Director Froment made a motion, seconded by Director Lindley-Myers, to adopt AG 49-A (Attachment Five). The motion passed with New York voting against the motion.

9. Received the Report of the Health Insurance and Managed Care (B) Committee

Commissioner Altman reported that the Health Insurance and Managed Care (B) Committee met Aug. 11. During this meeting, the Committee adopted its April 28, Feb. 26, and 2019 Fall National Meeting minutes, which included the following action: 1) received a report from the Health Actuarial (B) Task Force on its work to develop an outline and eventual 2021 rate pricing resource and guidance document for the states to consider when reviewing initial 2021 rates in light of the COVID-19 pandemic; 2) discussed and heard comments from stakeholders on areas, such as telehealth requirements and form filing requirements, in which state insurance regulators can provide regulatory flexibility due to the COVID-19 pandemic; and 3) adopted the Regulatory Framework (B) Task Force’s revised 2020 charges, which added a charge for the newly appointed Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group.

The Committee adopted the following subgroup, working group and task force reports: the Consumer Information (B) Subgroup, including its July 9, Jan. 21 and Jan. 7 minutes; the Health Innovations (B) Working Group; the Health Actuarial (B) Task Force; the Regulatory Framework (B) Task Force; and the Senior Issues (B) Task Force.

The Committee heard a presentation on health equity and disparities in health care and coverage. The presentation highlighted how the disparate impacts of COVID-19 mirror and compound underlying health disparities and how progress to address the problem will require long-term efforts across sectors to prioritize equity and address systemic and structural barriers, including racism and discrimination.

The Committee heard a presentation on how the COVID-19 pandemic and the resulting recession has affected employer-sponsored insurance coverage. The presentation also discussed consumer considerations and choices after the loss of employer-sponsored insurance coverage. The presentation outlined several policy opportunities and lessons that state and federal regulators could consider when dealing with this issue, such as considering the impact of Medicaid expansion, the timing of enrollment and outreach, and expanded outreach efforts.

The Committee heard a presentation on COVID-19 testing and costs. The presentation provided an overview of COVID-19 testing and its essential components and purpose. The presentation also discussed the current framework for COVID-19 testing and how each stakeholder involved—insurers, government, public health entities, and employers—plays a leadership role in ensuring access to such testing for those who need it. The presentation discussed the current costs of COVID-19 tests for diagnostic purposes and antibody testing and the potential impact of the cost of testing on premium rates. The presentation suggested several recommendations, including ensuring that all consumers are able to access COVID-19 testing regardless of coverage status, solidifying comprehensive strategies that incorporate testing to achieve occupational and public health goals, ensuring that testing does not lead to premium spikes in 2021 and protecting against testing fraud.

The Committee heard an update on legal actions related to the federal Affordable Care Act (ACA), including U.S. Supreme Court cases from its recent 2019 term, including Maine Community Health Options v. U.S. (140 S. Ct. 1408), an 8-1 decision in favor of insurers challenging the legality of the federal government’s refusal to pay participants for full risk corridor amounts. The update also discussed what to expect from the U.S. Supreme Court in its 2020 term, including oral arguments in a case challenging the constitutionality of the individual mandate and its potential impact on other key ACA provisions and a case challenging the authority of the states to regulate PBMs.

The Committee received an update on the work of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup in completing its charge to develop a new NAIC model regulating PBMs. The Subgroup exposed a draft PBM model for a public
comment period ending Sept. 1. Following the end of the public comment period, the Subgroup will meet via conference call to discuss and consider revisions to the draft based on the comments received.

10. Received the Report of the Property and Casualty Insurance (C) Committee

Commissioner Chaney reported the Property and Casualty Insurance (C) Committee met Aug. 12 and adopted its June 10 minutes, which included the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted edits to the NAIC Uniform Risk Retention Group (RRG) Registration Form for inclusion in the Risk Retention and Purchasing Group Handbook; 3) discussed regulatory actions related to COVID-19; and 4) adopted the Private Passenger Auto Insurance Study.

The Committee adopted the reports of its task forces and working groups: the Casualty Actuarial and Statistical (C) Task Force; the Surplus Lines (C) Task Force; the Title Insurance (C) Task Force; the Workers’ Compensation (C) Task Force; the Cannabis Insurance (C) Working Group; the Catastrophe Insurance (C) Working Group; the Climate Risk and Resilience (C) Working Group; the Lender-Placed Insurance Model Act (C) Working Group; the Pet Insurance (C) Working Group; the Terrorism Insurance Implementation (C) Working Group; and the Transparency and Readability of Consumer Information (C) Working Group.

The Committee adopted an extension for development of the new Real Property Lender-Placed Insurance Model Act.

The Committee adopted the Workers’ Compensation Policy and the Changing Workforce white paper, which explores how changes in work and the evolving landscape of legal employment are shifting responsibility for coverage and benefits for occupational injuries, illnesses and fatalities.

The Committee adopted the State Disaster Response Plan, which provides a template for state departments of insurance (DOIs) to use when assisting consumers before, during and after a disaster.

The Committee also: 1) received a recap of the Federal Emergency Management Agency (FEMA) and DOI disaster workshops; 2) received a preview of the Southeast Zone flood workshop; 3) heard a presentation on building codes from the International Code Council (ICC); 4) heard a report on results from the state insurance regulator business interruption data call and other issues regarding business interruption claims related to COVID-19; 5) heard a proposal from the CEJ to collect additional homeowners and auto insurance data within the Annual Statement; and 6) heard a presentation on race and P&C insurance, including an overview of historical studies related to the issue.

11. Adopted the Considerations for State Insurance Regulators in Building the Private Flood Insurance Market

Commissioner Chaney reported that a drafting group under the Catastrophe Insurance (C) Working Group began drafting a “Considerations for State Insurance Regulators in Building the Private Flood Insurance Market” document in 2018, as state insurance regulators wanted additional strategies to encourage the development of the private flood insurance market within their states. The Working Group took comments on a draft document and ultimately passed it to the Property and Casualty Insurance (C) Committee on Dec. 9, 2019, where the Committee adopted the document.

The document is meant to be used by state insurance regulators to help build the private flood insurance market in their state. The considerations document provides information regarding state actions that can be taken, including: 1) supporting private flood insurance legislation; 2) approving private flood insurance products; 3) tailoring rate and form requirements for private flood insurance coverage; 4) allowing private flood insurers to submit rates on an informational basis; 5) removing diligent search requirements; 6) conducting consumer outreach; 7) listing private flood insurance products on a DOI website; 8) conducting agent education; 9) implementing specific continuing education (CE) requirements for producers; 10) increasing the weight of flood insurance questions on producer licensing exams; and 11) conducting agent education.

The considerations document provides detailed information regarding ways in which state DOIs can apply the information described to enhance the private flood insurance market in their state. The Catastrophe Insurance (C) Working Group plans to continue building on this document by including information in a “living” Appendix showing additional steps that states have taken to grow the private flood insurance market.

Commissioner Chaney noted that work on this document ultimately led to the Committee recommending Annual Statement changes to collect private flood data on a Supplement, as well as a data call that is currently being conducted by all states that will collect 2018 and 2019 data in September.
Deputy Commissioner To stated that “New York supports this initiative as flood insurance is more important than ever as we see climate changes across the country. We support anything that would develop the private flood insurance market and consider this considerations document as a step in the right direction. We consider it helpful as a whole. We don’t agree with all items. We feel consumers would be better served if all flood insurance products were subject to regulatory review. Flood insurance should not be placed on the export list to facilitate flood insurance being written on the excess lines market as opposed to the admitted market.”

Commissioner Chaney made a motion, seconded by Superintendent Toal, to adopt the “Considerations for State Insurance Regulators in Building the Private Flood Insurance Market” document (Attachment Six). The motion passed.

12. Received the Report of the Market Regulation and Consumer Affairs (D) Committee

Commissioner Richardson reported the Market Regulation and Consumer Affairs (D) Committee met Aug. 11 and adopted its July 27 minutes, which included the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted a Farm Owners Claims Standardized Data Request; and 3) adopted revisions to the Market Conduct Annual Statement (MCAS) Blanks for Life and Annuities, Homeowners Insurance, Private Passenger Automobile, and Lender-Placed Auto and Homeowners insurance.

The Committee adopted a Limited Long-Term Care Examination Standards Chapter to be included in the NAIC Market Regulation Handbook for state reference.

The Committee adopted an Inland Marine In Force Standardized Data Request and an Inland Marine Claims Standardized Data Request to be included in the NAIC Market Regulation Handbook. These data requests may be used by a state to determine if a company follows appropriate procedures with respect to the issuance and/or termination of inland marine policies and the processing of inland marine claims.

The Committee adopted the reports of its task forces and working groups: the Antifraud (D) Task Force, the Market Information Systems (D) Task Force, the Producer Licensing (D) Task Force, the Advisory Organization Examination Oversight (D) Working Group, the Market Actions (D) Working Group, the Market Conduct Annual Statement Blanks (D) Working Group, the Market Conduct Examination Standards (D) Working Group, the Market Analysis Procedures (D) Working Group, the Market Regulation Certification (D) Working Group, and the Privacy Protections (D) Working Group. The adoption of the reports included adoption of the following: 1) the Market Information Systems (D) Task Force recommendation to add a “pandemic” subject code and the coverage codes for “business interruptions,” “lender-placed insurance,” and “pet insurance” to the NAIC’s Complaints Database System (CDS); 2) the Market Analysis Procedures (D) Working Group’s recommendation to add Travel Insurance as the next line of business for the MCAS and implement new scorecard ratios for the Private Flood MCAS blank; and 3) the Market Conduct Annual Statement Blanks (D) Working Group’s recommended clarification to the definition of Individual Indexed Variable Annuity for the MCAS blank.

The Committee heard a presentation from the Alliance of Health Care Sharing Ministries (AHCSM). This presentation addressed the background of the AHCSM, its history and features, statistics on the number and size of HCSMs, challenges for HCSMs, and the development of an accreditation program for oversight of HCSMs by an independent Board of Directors.

The Committee discussed a template bulletin for state insurance departments to advise insurance companies regarding the waiver of on-site review requirements of managing general agents (MGAs) and third-party administrators (TPAs) during the COVID-19 public health emergency.

13. Adopted the NAIC Continuing Education Reciprocity (CER) Agreement – 2019 Version

Commissioner Richardson reported the Market Regulation and Consumer Affairs (D) Committee and Producer Licensing (D) Task Force adopted the 2019 Continuing Education Reciprocity (CER) Agreement during the 2019 Fall National Meeting. The CER Agreement supports the use of the Uniform Continuing Education Reciprocity Course Filing Form, which continuing education (CE) providers and states use to streamline the course-approval process in multiple states. Through the reciprocal approval process, which this Agreement supports, a CE provider’s home state conducts a substantive review of a CE course, which eliminates the need for a non-resident state to perform a similar course review.

Commissioner Richardson reported that the CER Agreement is intended to facilitate the affirmative commitment of each NAIC member to reciprocal CE course approval. Each NAIC member, through coordination with their Producer Licensing Director, will receive a communication from NAIC staff to formally sign the CER Agreement.

© 2020 National Association of Insurance Commissioners
Commissioner Richardson made a motion, seconded by Commissioner Clark, to adopt the NAIC CER Agreement – 2019 Version (Attachment Seven). The motion passed.

14. Received the Report of the Financial Condition (E) Committee

Commissioner White reported that the Financial Condition (E) Committee met Aug. 11 and adopted its July 1, June 12, May 15 and March 26 minutes, which included the following action: 1) adopted its Feb. 27 and 2019 Fall National Meeting minutes and the Feb. 27 minutes, which included the following action: a) adopted a Request for NAIC Model Law Development from the Receivership and Insolvency (E) Task Force; b) adopted a Request for NAIC Model Law Development from the Financial Stability (EX) Task Force; and c) adopted a request for extension from the Mortgage Guaranty Insurance (E) Working Group regarding ongoing work on an NAIC model; 2) adopted technical revisions to Model #787 and acknowledged the similar technical revisions made to AG 48 by the Life Insurance and Annuities (A) Committee; 3) adopted actions from the Capital Adequacy (E) Task Force, the Valuation of Securities (E) Task Force, and the Accounting Practices and Procedures (E) Task Force, with the exception of Interpretation (INT) 20-08: COVID-19 Premium Refunds, Limited-Time Exception, Rate Reductions and Policyholder Dividends, which was rejected and sent back to the Accounting Practices and Procedures (E) Task Force; 4) adopted a memorandum from the Financial Condition (E) Committee to all commissioners regarding the treatment of LIBOR under state investment laws; 5) adopted an extension of mortgage forbearance previously adopted by the Committee through Sept. 30, 2019; and 6) adopted mortgage forbearance through June 30.

The Committee adopted the reports of the following task forces and working groups: the Accounting Practices and Procedures (E) Task Force, the Capital Adequacy (E) Task Force, the Receivership and Insolvency (E) Task Force, the Reinsurance (E) Task Force, the Valuation of Securities (E) Task Force, the Accounting Practices and Procedures (E) Task Force, and the Group Solvency Issues (E) Working Group.

The Committee adopted the revised INT 20-08.

Note: Items adopted within the Financial Condition (E) Committee’s task force and working group reports that are considered technical, non-controversial and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to the NAIC members shortly after completion of the Summer National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to a particular item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

15. Received the Report of the Financial Regulation Standards and Accreditation (F) Committee

Commissioner Kiser reported the Financial Regulation Standards and Accreditation (F) Committee met Aug. 10, July 21 and June 23 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to: 1) discuss state-specific accreditation issues; and 2) vote to award continued accreditation to the insurance departments of Delaware, Louisiana, Maryland, Oregon, Rhode Island and Washington.

The Committee met Aug. 12 and adopted its 2019 Fall National Meeting minutes.

The Committee adopted, immediately by reference, revisions made during 2019 to NAIC publications that are required for accreditation purposes (e.g., the Accounting Practices and Procedures Manual [AP&P Manual]) and were deemed insignificant.

The Committee adopted a referral to confirm that the 2019 and 2011 revisions to Model #785 and Model #786 are applicable to RRGs as an accreditation standard. The revisions address the reinsurance collateral requirements necessary for U.S. ceding companies to take credit for certain reinsurance transactions. The adopted effective date is Sept. 1, 2022, with enforcement to begin Jan. 1, 2023.

The Committee adopted technical changes to the new accreditation standard for Model #787 to update a reference that was revised in 2020.
The Committee exposed proposed revisions to the Review Team Guidelines and the Self-Evaluation Guide for Part C: Organizational and Personnel Practices, for a 30-day public comment period ending Sept. 11. The revisions incorporate consideration of where each department’s average salaries fall in relation to the range, as defined in the Financial Analysis Handbook and the Financial Condition Examiners Handbook.

The Committee exposed proposed revisions to the Review Team Guidelines for Part B1: Financial Analysis for a 30-day public comment period ending Sept. 11. The proposed revisions consist of a technical clarification related to RRGs and the use of the “Captives and/or Insurers Filing on a U.S. GAAP Basis Worksheet.”

16. Adopted the 2019 Revisions to the Credit for Reinsurance Model Law (#785) and the Credit for Reinsurance Model Regulation (#786) as an Addition to the Part A Accreditation Standards

Commissioner Kiser reported that at the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the 2019 revisions to Model #785 and Model #786 as an update to the Reinsurance Ceded accreditation standard. These revisions outline the requirements for companies to take credit for reinsurance when ceded to a Reciprocal Jurisdiction, and they are designed to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement). States are required to adopt these revisions within 60 months of the signing of the Covered Agreements to avoid potential federal preemption of state credit for reinsurance laws.

The model revisions were adopted by the NAIC in June 2019. The Reinsurance (E) Task Force then drafted the significant elements for the accreditation standard, which were exposed for a 30-day public comment period before being referred to the Committee.

Part of the referral was for a waiver of process to adopt the accreditation standard on an expedited basis. This allows the effective date of the accreditation standard to align with the end of the review period for federal preemption determinations related to the Covered Agreements, which is Sept. 1, 2022. All states are encouraged to adopt the models in the set timeframe to reduce the potential for federal preemption.

In addition, following adoption of the revisions to the accreditation standard, state insurance regulators recognized the need to clarify applicability to risk retention groups (RRGs). This question was vetted by both the Reinsurance (E) Task Force and the Risk Retention Group (E) Task Force. Both concluded that the revisions to the standard, as well as the previously adopted 2011 revisions to the standard for both models should apply to RRGs, and the Committee adopted a referral from NAIC staff confirming this stance during its Aug. 12 meeting.

Commissioner Kiser made a motion, seconded by Commissioner Pieciak, to adopt the Financial Regulation Standards and Accreditation (F) Committee’s decision to adopt the following: 1) the 2019 revisions to Model #785 and Model #786 as an addition to the Part A accreditation standards for both traditional insurers and RRGs; 2) a waiver of procedure, as provided for in the Accreditation Program Manual to expeditiously adopt the revisions to this standard; and 3) an effective date of Sept. 1, 2022, the end of the 60-month period when federal preemption determinations must be completed, with enforcement of the standard to commence Jan. 1, 2023 (Attachment Eight). The motion passed.

17. Adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) as a New Part A Accreditation Standard

Commissioner Kiser reported the Financial Regulation Standards and Accreditation (F) Committee adopted Model #787 as a new Part A accreditation standard during the 2019 Fall National Meeting. This model establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees. Model #787 also includes provisions to ensure that funds backing these captive reinsurance transactions, which consist of primary security and other security, are held in the forms and amounts that are appropriate.

The recommendation for accreditation, which includes that significant elements of Model #787 be adopted in a substantially similar manner and that related revisions to Model #785 be considered acceptable but not required for accreditation, was initially exposed and up for adoption at the 2017 Fall National Meeting. However, the Covered Agreements had recently been signed, and the Committee agreed to defer a decision on Model #787 until the effect of the Covered Agreements was known.
With the adoption of the revisions to the credit for reinsurance models last year, Model #787 was brought back before the Committee and it was adopted by the Committee as a new accreditation standard, also effective Sept. 1, 2022.

Subsequently, in the Spring of 2020, the Reinsurance (E) Task Force adopted technical revisions to Model #787 to update references to a section in Model #785, which were renumbered as part of the 2019 revisions. The renumbered section was also referenced by the significant elements of the accreditation standard that we are considering here today. During its Aug. 12 meeting, the Committee adopted technical revisions to the standard to account for the renumbering that occurred. The referral is included in your materials, along with the original referral containing the accreditation significant elements.

Commissioner Kiser made a motion, seconded by Commissioner Mais, to adopt the Financial Regulation Standards and Accreditation (F) Committee’s decision to adopt the following: 1) Model #787 as a new Part A accreditation standard; 2) the 2016 revisions to Model #785 should be considered acceptable but not required; 3) a waiver of procedure, as provided for in the Accreditation Program Manual to expeditiously adopt the revisions to this standard; and 4) an effective date of Sept. 1, 2022, with enforcement of the standard to commence Jan. 1, 2023 (Attachment Nine). The motion passed.

18. Received the Report of the International Insurance Relations (G) Committee

Commissioner Anderson reported that the International Insurance Relations (G) Committee met Aug. 12 and adopted its June 3, Feb. 3, Jan. 30, Jan. 15, and 2019 Fall National Meeting minutes, which included the following action: 1) heard an update on upcoming International Association of Insurance Supervisors (IAIS) committee meetings and activities; 2) heard an update on the OECD and other supervisory cooperation activities; 3) heard an update on the International Monetary Fund (IMF) Financial Sector Assessment Program (FSAP); 4) heard an update on NAIC international-related events; 5) approved submission of NAIC comments on the IAIS and Sustainable Insurance Forum (SIF) draft Issues Paper on the Implementation of the Recommendations of the Task Force on Climate-related Financial Disclosures; 6) heard a recap of IAIS committee meetings and an update on the insurance capital standard (ICS), including the aggregation method (AM) and comparability; 7) approved submission of NAIC comments on the IAIS draft Application Paper on Liquidity Risk Management; 8) adopted the report of the ComFrame Development and Analysis (G) Working Group; 9) adopted its 2020 proposed charges; 10) heard an update on key 2019 projects of the IAIS; 11) heard an update on international activities; and 12) heard an update on the FSAP.

The Committee heard an update on key 2020 projects of the IAIS, including: 1) the Louisiana DOI became the latest U.S. member of the IAIS Multilateral Memorandum of Understanding (MMoU); 2) implementation of the holistic framework for systemic risk in the insurance sector; 3) ICS data collection and comparability; and 4) the responses to COVID-19.

The Committee heard an update on the 2020 U.S. FSAP, which concluded earlier in the week with the publication of final documents describing the IMF’s findings and opinions on the U.S. financial regulatory system. While there are several findings and conclusions drawn by IMF staff that state insurance regulators may ultimately disagree with, their view that the U.S. insurance system is in line with the Insurance Core Principles (ICPs) and that key 2015 FSAP recommendations are being addressed is welcomed. As these reports have just been made public, state insurance regulators and NAIC staff will review the IMF recommendations and allocate, where appropriate, such recommendations to relevant NAIC committees and working groups for further consideration.

The Committee heard an update on regional supervisory cooperation and other international activities, including recent virtual meetings and events with international colleagues, plans for a virtual NAIC International Fellows Program session this fall, recent meetings of the OECD Insurance and Private Pensions Committee, and recent meetings of the SIF.

19. Received a Report on the States’ Implementation of NAIC Adopted Model Laws and Regulations

Director Farmer referred to the written report for updates on the states’ implementation of NAIC-adopted model laws and regulations (Attachment Ten).

Having no further business, the Executive (EX) Committee and Plenary adjourned.
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)

RECOMMENDS that insurance companies and all persons or entities facilitating the business of insurance that play an active role in the AI system life cycle, including third parties such as rating, data providers and advisory organizations (hereafter referred to as “AI actors”) promote, consider, monitor and uphold the following principles according to their respective roles; and

THIS DOCUMENT is intended to establish consistent high-level guiding principles for AI actors. These principles are guidance and do not carry the weight of law or impose any legal liability. This guidance can serve to inform and establish general expectations for AI actors and systems emphasizing the importance of accountability, compliance, transparency, and safe, secure, fair and robust outputs.

Further, THIS DOCUMENT

Should be used to assist regulators and NAIC committees addressing insurance-specific AI applications. The level of regulatory oversight may vary based on the risk and impact to the consumer. These principles should be interpreted and applied in a manner that accommodates the nature and pace of change in the use of AI by the insurance industry and promotes innovation, while protecting the consumer.

Fair and Ethical

a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, ratemaking standards, advertising decisions, claims practices, and solvency.

b. Consistent with the risk-based foundation of insurance, AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and remediates for such consequences when they occur.
**Accountable**

a. AI actors should be accountable for ensuring that AI systems operate in compliance with these principles consistent with the actors’ roles, within the appropriate context and evolving technologies. Any AI system should be compliant with legal requirements governing its use of data and algorithms during its phase of the insurance life cycle. Data supporting the final outcome of an AI application should be retained and be able to be produced in accordance with applicable insurance laws and regulations in each jurisdiction. AI actors should be responsible for the creation, implementation and impacts of any AI system, even if the impacts are unintended. AI actors should implement mechanisms and safeguards consistent with the degree and nature of the risks posed by AI to ensure all applicable laws and regulations are followed, including ongoing (human or otherwise) monitoring and, when appropriate, human intervention.

**Compliant**

a. AI actors must have the knowledge and resources in place to comply with all applicable insurance laws and regulations. AI actors must recognize that insurance is primarily regulated by the individual states and territories of the United States as well as by the federal government, and that AI systems must comply with the insurance laws and regulations within each individual jurisdiction. Compliance is required whether the violation is intentional or unintentional. Compliance with legal requirements is an ongoing process. Thus, any AI system that is deployed must be consistent with applicable laws and safeguards against outcomes that are either unfairly discriminatory or otherwise violate legal standards, including privacy and data security laws and regulations.

**Transparent**

a. For the purpose of improving the public’s confidence in AI, AI actors should commit to transparency and responsible disclosures regarding AI systems to relevant stakeholders. AI actors must have the ability to protect confidentiality of proprietary algorithms, provided adherence to individual state law and regulations in all states where AI is deployed can be demonstrated. These proactive disclosures include revealing the kind of data being used, the purpose of the data in the AI system and consequences for all stakeholders.

b. Consistent with applicable laws and regulations, stakeholders (which includes regulators and consumers) should have a way to inquire about, review and seek recourse for AI-driven insurance decisions. This information should be easy-to-understand and describe the factors that lead to the prediction, recommendation or decision. This information may be presented differently and should be appropriate for applicable stakeholders.
Secure, Safe and Robust

a. AI systems should be robust, secure and safe throughout the entire life cycle so that in conditions of normal or reasonably foreseeable use, or adverse conditions, they can function in compliance with applicable laws and regulations. To this end, AI actors should ensure a reasonable level of traceability in relation to datasets, processes and decisions made during the AI system life cycle. AI actors should enable analysis of the AI system’s outcomes, responses and other insurance-related inquiries, as appropriate in keeping with applicable industry best practices and legal requirements.

b. AI actors should, based on their roles, the situational context and their ability to act, apply a systematic risk management approach to each phase of the AI system life cycle on a continuous basis to address risks related to AI systems, including privacy, digital security and unfair discrimination as defined by applicable laws and regulations.
Executive (EX) Committee and Plenary
Orlando, Florida
February 13, 2020

The Executive (EX) Committee and Plenary met in joint session in Orlando, FL, Feb. 13, 2020. The following members participated: Raymond G. Farmer, Chair (SC); David Altmaier, Vice Chair (FL); Dean L. Cameron, Vice President (ID); Chlora Lindley-Myers, Secretary-Treasurer (MO); Eric A. Cioppa, Most Recent Past President (ME); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Allen W. Kerr (AR); Ricardo Lara (CA); Michael Conway (CO); Andrew N. Mais (CT); Karima M. Woods (DC); John F. King (GA); Dafne M. Shimizu (GU); Colin M. Hayashida represented by Martha Im (HI); Doug Ommen (IA); Robert H. Muriel (IL); Stephen W. Robertson (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary Anderson (MA); Al Redmer Jr. (MD); Anita G. Fox (MI); Mike Chaney (MS); Mike Causey (NC); Jon Godfried (ND); Bruce R. Ramge (NE); Marlene Caride (NJ); Barbara D. Richardson (NV); Linda A. Lacewell (NY); Jillian Froment (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Rafael Cestero-Lopategui (PR); Elizabeth Kelleher Dwyer (RI); Larry D. Deiter (SD); Hodgen Mainda (TN); Kent Sullivan (TX); Todd E. Kiser (UT); Scott A. White (VA); Tregenza A. Roach (VI); Michael S. Pieciak (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill represented by Tonya Gillespie (WV); and Jeff Rude (WY).

1. Adopted Revisions to the Suitability in Annuity Transactions Model Regulation (#275)

Director Froment presented draft revisions to the Suitability in Annuity Transactions Model Regulation (#275) that will enhance the model in protecting consumers by requiring a heightened standard of conduct for producer recommendations of an annuity to be made in “the best interest” of the consumer, and it will require insurers to develop procedures to comply with these requirements.

Director Froment noted that the model has been protecting consumers since it was adopted in 2003. The Annuity Suitability (A) Working Group sent draft revisions to the Life Insurance and Annuities (A) Committee for its consideration at the 2019 Fall National Meeting. The Committee gave preliminary approval to the proposed revisions, but it tasked the Working Group to complete additional revisions to the appendices. The Working Group revised the appendices and sent them to the Committee for consideration.

The Committee met Dec. 30, 2019, to discuss the revisions to the model, including the revised appendices, and adopted the revisions.

The resulting revisions establish a “best interest” standard of conduct and require producers and insurers to satisfy the requirements outlined in four obligations: 1) a care obligation; 2) a disclosure obligation; 3) a conflict of interest obligation; and 4) a documentation obligation. The revisions also include enhancements to the current model’s insurer supervision system to assist in compliance.

The revisions make it clear that all recommendations by producers and insurers must be “in the best interest of the consumer,” and producers and insurers may not place their financial interests ahead of the consumer’s interest in making a recommendation. The revisions also require producers and insurers to act with “reasonable diligence, care and skill” in making a recommendation.

The revisions require producers to: 1) know the consumer’s financial situation, insurance needs and financial objectives; 2) understand the available recommendation options; 3) have a reasonable basis to believe the recommended option effectively addresses the consumer’s financial situation, insurance needs and financial objectives, and communicate the basis of the recommendation to the consumer; 4) disclose their role in the transaction, their compensation and any material conflicts of interest; and 5) document, in writing, any recommendation and the justification for such recommendation.

The revisions also include heightened supervision requirements for insurers to achieve compliance with this regulation. This includes procedures to review recommendations by producers to ensure that the recommended annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives.
The insurer is also required to establish systems for complying with all four obligations outlined in this regulation. Additionally, insurers must eliminate any sales contests, sales quota, bonuses and non-cash compensation that are based on the sales of specific annuities within a limited period of time.

Recognizing that the sale of annuities and those who sell annuities can be subject to multiple regulatory authorities, the Working Group made significant efforts to remain cognizant of the work being done by these state insurance regulators. As a result, these revisions also align well with the U.S. Securities and Exchange Commission’s (SEC’s) Regulation Best Interest.

Additionally, the revisions expand the model’s current safe harbor provisions to apply the safe harbor to any producer that is regulated as a broker-dealer, investment adviser or plan fiduciary. The producer must be in compliance with business rules, controls and procedures that satisfy a “comparable standard” to this model’s new standard of conduct. This could include the SEC’s Regulation Best Interest.

Superintendent Lacewell stated that New York recognizes this proposal as better than what existed before and that some states would like to go further but face obstacles that do not allow them individually to get there. She stated that she believes the role of the NAIC should be to “lift up” all states and not use “the common denominator of what can be agreed to by 50-plus jurisdictions.” New York’s standard is the “best interest of the consumer without consideration of the producer’s financial or other interest in the matter.” Superintendent Lacewell stated that she believes this is not the standard applied in the model. New York standards also apply to life insurance, not just annuities, and apply to in-force transactions and decisions made under the in-force transaction.

Superintendent Lacewell stated:

New York’s view is that we regulate industry, and it is our obligation to facilitate the safety and soundness of the industry, but a large component of safety and soundness of industry is the integrity of the industry and the impact on the millions of people served and protected by the products and services of industry. The consumer should have access to all the information that they need and accurate information before they part with their money or make financial decisions in their lives. That is not achieved here because if the producer is going to make a recommendation and say, ‘Here is what I think you should do …,’ implicit in that recommendation is ‘Trust me.’ I would like us to find ways of communicating and helping states who want to get there and cannot do it on their own.

Commissioner Ommen stated that supporting this model is supporting a framework to go back to your states and find out through your own constituency what is good for your states. He stated, “We think that this rule as a model does reach where we need to be in Iowa, and it is very reflective of additional consumer protection that we believe does achieve best interest.”

Superintendent Cioppa stated, “Maine supports the model as a step forward from the current ‘suitability’ model we have and respects other states’ opinions, but it achieves a good consensus. I think the harmonization is important, but most importantly, I think it steps up our game in protecting consumers. The requirements of the model will help consumers in the end and benefit them.”

Commissioner Lara stated that California has been an active participant in promoting the strongest standards possible to protect consumers when purchasing annuities. He stated, “In California, some of our standards are stronger, including a provision that requires that any annuity be in the best interest of the consumers overall. California does support, and would prefer, a standard that establishes a fiduciary duty that producers sell products that put consumers first instead of commissions or other producer incentives. I believe this model is not perfect. I will be voting in favor of the draft amendments to the model regulation because they do contain significant amendments that afford increased consumer protections over the existing protections. Although some of the draft amendments are problematic for California, it would be better for consumers than the existing model regulation.”

Commissioner Redmer requested a clarification to the safe harbor provisions allowing satisfaction by a “comparable standard even if that standard does not otherwise apply to that product.” Commissioner Ommen stated that some producers are licensed in both securities and insurance. He stated:
Historically, and what is in our current model, is a safe harbor for those agencies (broker dealers/agents) registered under the Financial Industry Regulatory Authority (FINRA) and subject to the FINRA suitability and supervision regiment applied also in the sales and recommendation surrounding fixed index products. This language in the model extends that safe harbor to true fiduciaries, which would include the investment advisors that are in the securities side of the business.

Commissioner Ommen also stated:

If the supervision and suitability structure, which now has been raised to a best interest and supervision structure, is comparable to what we require here under this rule, that would be deemed compliant. It also should be noted that the insurance regulator does not lose its authority to go in and actually determine whether or not they are comparable; we still have oversight, and there is additional language that does not relieve the insurance company of using their oversight in order to ensure compliance.

Superintendent Dwyer stated that Rhode Island has taken action against companies that had not dealt appropriately with consumers in Rhode Island in the sales of annuities under the old NAIC model act and have been successful. She states, “To me, this is a step up, and we can take action against bad actors to protect consumers.”

Director Fox expressed support for the revised standard and also the amendments that were made to the safe harbor. She stated, “We recognize fiduciary duties from other contexts and make sure that we have continuity of regulation, but, like Commissioner Ommen stated, it did not detract in any way from our ability to make things comparable.”

Commissioner Richardson stated that she will support the amendment, “but, like California and Rhode Island, we believe that there are already some protections in place, and in Nevada, specifically, we have a fiduciary standard in place. For us, this is raising the water.”

Director Froment made a motion, seconded by Commissioner Chaney, to adopt the revisions to the Suitability in Annuity Transactions Model Regulation (#275) (Attachment Two-A). The motion passed, with New York opposing.

Having no further business, the Executive (EX) Committee and Plenary adjourned.
SUITABILITY IN ANNUITY TRANSACTIONS
MODEL REGULATION

Section 1. Purpose
Section 2. Scope
Section 3. Authority
Section 4. Exemptions
Section 5. Definitions
Section 6. Duties of Insurers and Insurance Producers
Section 7. Insurance Producer Training
Section 8. Compliance Mitigation; Penalties; Enforcement
Section 9. [Optional] Recordkeeping
Section 10. Effective Date
Appendix A. Insurance Agent (Producer) Disclosure For Annuities
Appendix B. Consumer Refusal to Provide Information
Appendix C. Consumer Decision to Purchase an Annuity Not Based on a Recommendation

Section 1. Purpose
A. The purpose of this regulation is to require producers, as defined in this regulation, to act in the best interest of the consumer when making a recommendation of an annuity and to require insurers to establish and maintain a system to supervise recommendations and to set forth standards and procedures for recommendations to consumers that result in transactions involving annuity products so that the insurance needs and financial objectives of consumers at the time of the transaction are appropriately and effectively addressed.

B. Nothing herein shall be construed to create a private cause of action for a violation of this regulation or to subject a producer to civil liability under the best interest standard of care outlined in Section 6 of this regulation or under standards governing the conduct of a fiduciary or a fiduciary relationship.

Drafting Note: The language of subsection B comes from the NAIC Unfair Trade Practices Act. If a State has adopted different language, it should be substituted for subsection B.

Drafting Note: Section 989J of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (“Dodd-Frank Act”) specifically refers to this model regulation as the “Suitability in Annuity Transactions Model Regulation.” Section 989J of the Dodd-Frank Act confirmed this exemption of certain annuities from the Securities Act of 1933 and confirmed state regulatory authority. This regulation is a successor regulation that exceeds the requirements of the 2010 model regulation.

Section 2. Scope

This regulation shall apply to any sale or recommendation to purchase, exchange or replace an annuity made to a consumer by an insurance producer, or an insurer where no producer is involved, that results in the purchase, exchange or replacement recommended.

Section 3. Authority

This regulation is issued under the authority of [insert reference to enabling legislation].

© 2020 National Association of Insurance Commissioners
Drafting Note: States may wish to use the Unfair Trade Practices Act as enabling legislation or may pass a law with specific authority to adopt this regulation.

Section 4. Exemptions

Unless otherwise specifically included, this regulation shall not apply to transactions involving:

A. Direct response solicitations where there is no recommendation based on information collected from the consumer pursuant to this regulation;

B. Contracts used to fund:

(1) An employee pension or welfare benefit plan that is covered by the Employee Retirement and Income Security Act (ERISA);

(2) A plan described by sections 401(a), 401(k), 403(b), 408(k) or 408(p) of the Internal Revenue Code (IRC), as amended, if established or maintained by an employer;

(3) A government or church plan defined in section 414 of the IRC, a government or church welfare benefit plan, or a deferred compensation plan of a state or local government or tax-exempt organization under section 457 of the IRC; or

(4) A nonqualified deferred compensation arrangement established or maintained by an employer or plan sponsor;

C. Settlements of or assumptions of liabilities associated with personal injury litigation or any dispute or claim resolution process; or

D. Formal prepaid funeral contracts.

Section 5. Definitions

A. “Annuity” means an annuity that is an insurance product under State law that is individually solicited, whether the product is classified as an individual or group annuity.

B. “Cash compensation” means any discount, concession, fee, service fee, commission, sales charge, loan, override, or cash benefit received by a producer in connection with the recommendation or sale of an annuity from an insurer, intermediary, or directly from the consumer.

C. “Consumer profile information” means information that is reasonably appropriate to determine whether a recommendation addresses the consumer’s financial situation, insurance needs and financial objectives, including, at a minimum, the following:

(1) Age;

(2) Annual income;

(3) Financial situation and needs, including debts and other obligations;

(4) Financial experience;

(5) Insurance needs;

(6) Financial objectives;

(7) Intended use of the annuity;
(8) Financial time horizon;
(9) Existing assets or financial products, including investment, annuity and insurance holdings;
(10) Liquidity needs;
(11) Liquid net worth;
(12) Risk tolerance, including but not limited to, willingness to accept non-guaranteed elements in the annuity;
(13) Financial resources used to fund the annuity; and
(14) Tax status.

BD. “Continuing education credit” or “CE credit” means one continuing education credit as defined in [insert reference in State law or regulations governing producer continuing education course approval].

CE. “Continuing education provider” or “CE provider” means an individual or entity that is approved to offer continuing education courses pursuant to [insert reference in State law or regulations governing producer continuing education course approval].

DEF. “FINRA” means the Financial Industry Regulatory Authority or a succeeding agency.

EG. “Insurer” means a company required to be licensed under the laws of this state to provide insurance products, including annuities.

F. “Insurance producer” means a person required to be licensed under the laws of this state to sell, solicit or negotiate insurance, including annuities.

H. “Intermediary” means an entity contracted directly with an insurer or with another entity contracted with an insurer to facilitate the sale of the insurer’s annuities by producers.

I. (1) “Material conflict of interest” means a financial interest of the producer in the sale of an annuity that a reasonable person would expect to influence the impartiality of a recommendation.
(2) “Material conflict of interest” does not include cash compensation or non-cash compensation.

J. “Non-cash compensation” means any form of compensation that is not cash compensation, including, but not limited to, health insurance, office rent, office support and retirement benefits.

K. “Non-guaranteed elements” means the premiums, credited interest rates (including any bonus), benefits, values, dividends, non-interest based credits, charges or elements of formulas used to determine any of these, that are subject to company discretion and are not guaranteed at issue. An element is considered non-guaranteed if any of the underlying non-guaranteed elements are used in its calculation.

L. “Producer” means a person or entity required to be licensed under the laws of this state to sell, solicit or negotiate insurance, including annuities. For purposes of this regulation, “producer” includes an insurer where no producer is involved.

GM. (1) “Recommendation” means advice provided by an insurance producer, or an insurer where no producer is involved, to an individual consumer that was intended to result or does result in a purchase, an exchange or a replacement of an annuity in accordance with that advice.
**Attachment Two-A**

**Executive (EX) Committee and Plenary**

8/14/20

---

(2) Recommendation does not include general communication to the public, generalized customer services assistance or administrative support, general educational information and tools, prospectuses, or other product and sales material.

**HN.** “Replacement” means a transaction in which a new policy or contract annuity is to be purchased, and it is known or should be known to the proposing producer, or to the proposing insurer if there is whether or not a producer is involved, that by reason of the transaction, an existing annuity or other insurance policy or contract has been or is to be any of the following:

1. Lapsed, forfeited, surrendered or partially surrendered, assigned to the replacing insurer or otherwise terminated;
2. Converted to reduced paid-up insurance, continued as extended term insurance, or otherwise reduced in value by the use of nonforfeiture benefits or other policy values;
3. Amended so as to effect either a reduction in benefits or in the term for which coverage would otherwise remain in force or for which benefits would be paid;
4. Reissued with any reduction in cash value; or
5. Used in a financed purchase.

**Drafting Note:** The definition of “replacement” above is derived from the NAIC Life Insurance and Annuities Replacement Model Regulation. If a State has a different definition for “replacement,” the State should either insert the text of that definition in place of the definition above or modify the definition above to provide a cross-reference to the definition of “replacement” that is in State law or regulation.

**I.** “Suitability information” means information that is reasonably appropriate to determine the suitability of a recommendation, including the following:

1. Age;
2. Annual income;
3. Financial situation and needs, including the financial resources used for the funding of the annuity;
4. Financial experience;
5. Financial objectives;
6. Intended use of the annuity;
7. Financial time horizon;
8. Existing assets, including investment and life insurance holdings;
9. Liquidity needs;
10. Liquid net worth;
11. Risk tolerance; and
12. Tax status.

**O.** “SEC” means the United States Securities and Exchange Commission.

Section 6. Duties of Insurers and of Insurance Producers

A. Best Interest Obligations. A producer, when making a recommendation of an annuity, shall act in the best interest of the consumer under the circumstances known at the time the recommendation is made, without placing the producer’s or the insurer’s financial interest ahead of the consumer’s interest. A producer has acted in the best interest of the consumer if they have satisfied the following obligations regarding care, disclosure, conflict of interest and documentation:

A. In recommending to a consumer the purchase of an annuity, or the exchange of an annuity that results in another insurance transaction or series of insurance transactions, the insurance producer, or the insurer where no producer is involved, shall have reasonable grounds for believing that the recommendation is suitable for the consumer on the basis of the facts disclosed by the consumer as to his or her investments and other insurance products and as to his or her financial situation and needs, including the consumer’s suitability information, and that there is a reasonable basis to believe all of the following:

(1) (a) Care Obligation. The producer, in making a recommendation shall exercise reasonable diligence, care and skill to:

(i) Know the consumer’s financial situation, insurance needs and financial objectives;

(ii) Understand the available recommendation options after making a reasonable inquiry into options available to the producer;

(iii) Have a reasonable basis to believe the recommended option effectively addresses the consumer’s financial situation, insurance needs and financial objectives over the life of the product, as evaluated in light of the consumer profile information; and

(iv) Communicate the basis or bases of the recommendation.

(b) The requirements under subparagraph (a) of this paragraph include making reasonable efforts to obtain consumer profile information from the consumer prior to the recommendation of an annuity.

(c) The requirements under subparagraph (a) of this paragraph require a producer to consider the types of products the producer is authorized and licensed to recommend or sell that address the consumer’s financial situation, insurance needs and financial objectives. This does not require analysis or consideration of any products outside the authority and license of the producer or other possible alternative products or strategies available in the market at the time of the recommendation. Producers shall be held to standards applicable to producers with similar authority and licensure.

(d) The requirements under this subsection do not create a fiduciary obligation or relationship and only create a regulatory obligation as established in this regulation.

(e) The consumer profile information, characteristics of the insurer, and product costs, rates, benefits and features are those factors generally relevant in making a determination whether an annuity effectively addresses the consumer’s financial situation, insurance needs and financial objectives, but the level of importance of each factor under the care obligation of this paragraph may vary depending on the facts and circumstances of a particular case. However, each factor may not be considered in isolation.

(f) The requirements under subparagraph (a) of this paragraph include having a reasonable basis to believe the consumer would benefit from certain features of the annuity, such as annuitization, death or living benefit or other insurance-related features.
(g) The requirements under subparagraph (a) of this paragraph apply to the particular annuity as a whole and the underlying subaccounts to which funds are allocated at the time of purchase or exchange of an annuity, and riders and similar producer enhancements, if any.

(h) The requirements under subparagraph (a) of this paragraph do not mean the annuity with the lowest one-time or multiple occurrence compensation structure shall necessarily be recommended.

(i) The requirements under subparagraph (a) of this paragraph do not mean the producer has ongoing monitoring obligations under the care obligation under this paragraph, although such an obligation may be separately owed under the terms of a fiduciary, consulting, investment advising or financial planning agreement between the consumer and the producer.

(j) In the case of an exchange or replacement of an annuity, the producer shall consider the whole transaction, which includes taking into consideration whether:

(i) The consumer will incur a surrender charge, be subject to the commencement of a new surrender period, lose existing benefits, such as death, living or other contractual benefits, or be subject to increased fees, investment advisory fees or charges for riders and similar product enhancements;

(ii) The replacing product would substantially benefit the consumer in comparison to the replaced product over the life of the product; and

(iii) The consumer has had another annuity exchange or replacement and, in particular, an exchange or replacement within the preceding 60 months.

(k) Nothing in this regulation should be construed to require a producer to obtain any license other than a producer license with the appropriate line of authority to sell, solicit or negotiate insurance in this state, including but not limited to any securities license, in order to fulfill the duties and obligations contained in this regulation; provided the producer does not give advice or provide services that are otherwise subject to securities laws or engage in any other activity requiring other professional licenses.

(2) Disclosure obligation.

(a) Prior to the recommendation or sale of an annuity, the producer shall prominently disclose to the consumer on a form substantially similar to Appendix A:

(i) A description of the scope and terms of the relationship with the consumer and the role of the producer in the transaction;

(ii) An affirmative statement on whether the producer is licensed and authorized to sell the following products:

(I) Fixed annuities;

(II) Fixed indexed annuities;

(III) Variable annuities;

(IV) Life insurance;

(V) Mutual funds;
(VI) Stocks and bonds; and

(VII) Certificates of deposit;

(iii) An affirmative statement describing the insurers the producer is authorized, contracted (or appointed), or otherwise able to sell insurance products for, using the following descriptions:

(I) One insurer;

(II) From two or more insurers; or

(III) From two or more insurers although primarily contracted with one insurer.

(iv) A description of the sources and types of cash compensation and non-cash compensation to be received by the producer, including whether the producer is to be compensated for the sale of a recommended annuity by commission as part of premium or other remuneration received from the insurer, intermediary or other producer or by fee as a result of a contract for advice or consulting services; and

(v) A notice of the consumer’s right to request additional information regarding cash compensation described in subparagraph (b) of this paragraph;

Drafting Note: If a state approves forms, a state should add language to subparagraph (a) reflecting such approvals.

(b) Upon request of the consumer or the consumer’s designated representative, the producer shall disclose:

(i) A reasonable estimate of the amount of cash compensation to be received by the producer, which may be stated as a range of amounts or percentages; and

(ii) Whether the cash compensation is a one-time or multiple occurrence amount, and if a multiple occurrence amount, the frequency and amount of the occurrence, which may be stated as a range of amounts or percentages; and

Drafting Note: If a State has adopted the NAIC Annuity Disclosure Model Regulation, the State should insert an additional phrase in paragraph (1) subparagraph (c) above to explain that the requirements of this section are intended to supplement and not replace the disclosure requirements of the NAIC Annuity Disclosure Model Regulation.

(c) Prior to or at the time of the recommendation or sale of an annuity, the producer shall have a reasonable basis to believe the consumer has been reasonably informed of various features of the annuity, such as the potential surrender period and surrender charge, potential tax penalty if the consumer sells, exchanges, surrenders or annuitizes the annuity, mortality and expense fees, investment advisory fees, any annual fees, potential charges for and features of riders or other options of the annuity, limitations on interest returns, potential changes in non-guaranteed elements of the annuity, insurance and investment components and market risk.

Drafting Note: If a State has adopted the NAIC Annuity Disclosure Model Regulation, the State should insert an additional phrase in paragraph (1) subparagraph (c) above to explain that the requirements of this section are intended to supplement and not replace the disclosure requirements of the NAIC Annuity Disclosure Model Regulation.

(2) The consumer would benefit from certain features of the annuity, such as tax deferred growth, annuitization or death or living benefit;

(3) The particular annuity as a whole, the underlying subaccounts to which funds are allocated at the time of purchase or exchange of the annuity, and riders and similar product enhancements, if any, are suitable (and in the case of an exchange or replacement, the transaction as a whole is suitable) for the particular consumer based on his or her suitability information; and
(4) In the case of an exchange or replacement of an annuity, the exchange or replacement is suitable including taking into consideration whether:

(a) The consumer will incur a surrender charge, be subject to the commencement of a new surrender period, lose existing benefits (such as death, living or other contractual benefits), or be subject to increased fees, investment advisory fees or charges for riders and similar product enhancements;

(b) The consumer would benefit from product enhancements and improvements; and

(c) The consumer has had another annuity exchange or replacement and, in particular, an exchange or replacement within the preceding 36 months.

(3) Conflict of interest obligation. A producer shall identify and avoid or reasonably manage and disclose material conflicts of interest, including material conflicts of interest related to an ownership interest.

(4) Documentation obligation. A producer shall at the time of recommendation or sale:

(a) Make a written record of any recommendation and the basis for the recommendation subject to this regulation;

(b) Obtain a consumer signed statement on a form substantially similar to Appendix B documenting:

(i) A customer’s refusal to provide the consumer profile information, if any; and

(ii) A customer’s understanding of the ramifications of not providing his or her consumer profile information or providing insufficient consumer profile information; and

(c) Obtain a consumer signed statement on a form substantially similar to Appendix C acknowledging the annuity transaction is not recommended if a customer decides to enter into an annuity transaction that is not based on the producer’s recommendation.

Drafting Note: If a state approves forms, a state should add language to subparagraphs (b) and (c) of this paragraph reflecting such approvals.

B. Prior to the execution of a purchase, exchange or replacement of an annuity resulting from a recommendation, an insurance producer, or an insurer where no producer is involved, shall make reasonable efforts to obtain the consumer’s suitability information.

C. Except as permitted under subsection D, an insurer shall not issue an annuity recommended to a consumer unless there is a reasonable basis to believe the annuity is suitable based on the consumer’s suitability information.

(5) Application of the best interest obligation. Any requirement applicable to a producer under this subsection shall apply to every producer who has exercised material control or influence in the making of a recommendation and has received direct compensation as a result of the recommendation or sale, regardless of whether the producer has had any direct contact with the consumer. Activities such as providing or delivering marketing or educational materials, product wholesaling or other back office product support, and general supervision of a producer do not, in and of themselves, constitute material control or influence.

DB. Transactions not based on a recommendation.
(1) Except as provided under paragraph (2) of this subsection, neither an insurance producer, nor an insurer, shall have any obligation to a consumer under subsection A(1) or C related to any annuity transaction if:

(a) No recommendation is made;

(b) A recommendation was made and was later found to have been prepared based on materially inaccurate information provided by the consumer;

(c) A consumer refuses to provide relevant suitability consumer profile information and the annuity transaction is not recommended; or

(d) A consumer decides to enter into an annuity transaction that is not based on a recommendation of the insurer or the insurance producer.

(2) An insurer’s issuance of an annuity subject to paragraph (1) shall be reasonable under all the circumstances actually known to the insurer at the time the annuity is issued.

C. Supervision system.

(1) Except as permitted under subsection B, an insurer may not issue an annuity recommended to a consumer unless there is a reasonable basis to believe the annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives based on the consumer’s consumer profile information.

E. An insurance producer or, where no insurance producer is involved, the responsible insurer representative, shall at the time of sale:

(1) Make a record of any recommendation subject to section 6A of this regulation;

(2) Obtain a customer signed statement documenting a customer’s refusal to provide suitability information, if any; and

(3) Obtain a customer signed statement acknowledging that an annuity transaction is not recommended if a customer decides to enter into an annuity transaction that is not based on the insurance producer’s or insurer’s recommendation.

F. An insurer shall establish and maintain a supervision system that is reasonably designed to achieve the insurer’s and its insurance producers’ compliance with this regulation, including, but not limited to, the following:

(a) The insurer shall establish and maintain reasonable procedures to inform its insurance producers of the requirements of this regulation and shall incorporate the requirements of this regulation into relevant insurance-producer training manuals;

(b) The insurer shall establish and maintain standards for insurance-producer product training and shall establish and maintain reasonable procedures to require its insurance producers to comply with the requirements of section 7 of this regulation;

(c) The insurer shall provide product-specific training and training materials which explain all material features of its annuity products to its insurance producers;

(d) The insurer shall establish and maintain procedures for the review of each recommendation prior to issuance of an annuity that are designed to ensure that there is a reasonable basis to determine that a recommended annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives. Such review procedures may apply a screening system for the purpose of
identifying selected transactions for additional review and may be accomplished electronically or through other means including, but not limited to, physical review. Such an electronic or other system may be designed to require additional review only of those transactions identified for additional review by the selection criteria;

(e) The insurer shall establish and maintain reasonable procedures to detect recommendations that are not suitable in compliance with subsections A, B, D and E. This may include, but is not limited to, confirmation of the consumer’s suitability, consumer profile information, systematic customer surveys, producer and consumer interviews, confirmation letters, producer statements or attestations and programs of internal monitoring. Nothing in this subparagraph prevents an insurer from complying with this subparagraph by applying sampling procedures, or by confirming the suitability, consumer profile information or other required information under this section after issuance or delivery of the annuity; and

(f) The insurer shall establish and maintain reasonable procedures to assess, prior to or upon issuance or delivery of an annuity, whether a producer has provided to the consumer the information required to be provided under this section;

(g) The insurer shall establish and maintain reasonable procedures to identify and address suspicious consumer refusals to provide consumer profile information;

(h) The insurer shall establish and maintain reasonable procedures to identify and eliminate any sales contests, sales quotas, bonuses, and non-cash compensation that are based on the sales of specific annuities within a limited period of time. The requirements of this subparagraph are not intended to prohibit the receipt of health insurance, office rent, office support, retirement benefits or other employee benefits by employees as long as those benefits are not based upon the volume of sales of a specific annuity within a limited period of time; and

Drafting Note: The intent of this subparagraph (h) is to prohibit sales contests, sales quotas, bonuses and non-cash compensation based on the sale of a particular product within a limited period of time, but not to prohibit general incentives regarding the sales of a company’s products with no emphasis on any particular product.

(4) (i) The insurer shall annually provide a written report to senior management, including to the senior manager responsible for audit functions, which details a review, with appropriate testing, reasonably designed to determine the effectiveness of the supervision system, the exceptions found, and corrective action taken or recommended, if any.

(2)(3) (a) Nothing in this subsection restricts an insurer from contracting for performance of a function (including maintenance of procedures) required under paragraph (1) this subsection. An insurer is responsible for taking appropriate corrective action and may be subject to sanctions and penalties pursuant to section 8 of this regulation regardless of whether the insurer contracts for performance of a function and regardless of the insurer’s compliance with subparagraph (b) of this paragraph.

(b) An insurer’s supervision system under paragraph (1) this subsection shall include supervision of contractual performance under this subsection. This includes, but is not limited to, the following:

(i) Monitoring and, as appropriate, conducting audits to assure that the contracted function is properly performed; and

(ii) Annually obtaining a certification from a senior manager who has responsibility for the contracted function that the manager has a reasonable basis to represent, and does represent, that the function is properly performed.
(a) A producer’s recommendations to consumers of products other than the annuities offered by the insurer; or

(b) Include consideration of or comparison to options available to the producer or compensation relating to those options other than annuities or other products offered by the insurer.

GD. Prohibited Practices. Neither a producer nor an insurer shall An insurance producer shall not dissuade, or attempt to dissuade, a consumer from:

(1) Truthfully responding to an insurer’s request for confirmation of the suitability consumer profile information;

(2) Filing a complaint; or

(3) Cooperating with the investigation of a complaint.

HE. Safe harbor.

(1) Recommendations and sales of annuities Sales made in compliance with comparable standards FINRA requirements pertaining to suitability and supervision of annuity transactions shall satisfy the requirements under this regulation. This subsection applies to FINRA broker-dealer all recommendations and sales of annuities made by financial professionals in compliance with business rules, controls and procedures that satisfy a comparable standard even if such standard would not otherwise apply to the product or recommendation at issue if the suitability and supervision is similar to those applied to variable annuity sales. However, nothing in this subsection shall limit the insurance commissioner’s ability to investigate and enforce (including investigate) the provisions of this regulation.

Drafting Note: Non-compliance with comparable standards FINRA requirements means that the broker-dealer transaction recommendation or sale is subject to compliance with the suitability requirements of this regulation.

(2) Nothing in paragraph (1) shall limit the insurer’s obligation to comply with Section 6C(1) of this regulation, although the insurer may base its analysis on information received from either the financial professional or the entity supervising the financial professional.

(2)(3) For paragraph (1) to apply, an insurer shall:

(a) Monitor the FINRA member broker dealer relevant conduct of the financial professional seeking to rely on paragraph (1) or the entity responsible for supervising the financial professional, such as the financial professional’s broker-dealer or an investment adviser registered under federal [or state] securities laws using information collected in the normal course of an insurer’s business; and

(b) Provide to the FINRA member broker dealer entity responsible for supervising the financial professional seeking to rely on paragraph (1), such as the financial professional’s broker-dealer or investment adviser registered under federal [or state] securities laws, information and reports that are reasonably appropriate to assist the FINRA member broker dealer such entity to maintain its supervision system.

(4) For purposes of this subsection, “financial professional” means a producer that is regulated and acting as:

(a) A broker-dealer registered under federal [or state] securities laws or a registered representative of a broker-dealer;
(b) An investment adviser registered under federal [or state] securities laws or an investment adviser representative associated with the federal [or state] registered investment adviser; or

(c) A plan fiduciary under Section 3(21) of the Employee Retirement Income Security Act of 1974 (ERISA) or fiduciary under Section 4975(e)(3) of the Internal Revenue Code (IRC) or any amendments or successor statutes thereto.

Drafting Note: The requirement that a producer be “regulated and acting” as a broker-dealer, an registered representative of a broker-dealer, an investment adviser, an investment adviser representative or a plan fiduciary means that a producer who is not explicitly acting in compliance with the relevant comparable standards, as specified in paragraph (4) below, is not eligible for this safe harbor and is subject to compliance with the requirements of this regulation.

(5) For purposes of this subsection, “comparable standards” means:

(a) With respect to broker-dealers and registered representatives of broker-dealers, applicable SEC and FINRA rules pertaining to best interest obligations and supervision of annuity recommendations and sales, including, but not limited to, Regulation Best Interest and any amendments or successor regulations thereto;

(b) With respect to investment advisers registered under federal [or state] securities laws or investment adviser representatives, the fiduciary duties and all other requirements imposed on such investment advisers or investment adviser representatives by contract or under the Investment Advisers Act of 1940 [or applicable state securities law], including but not limited to, the Form ADV and interpretations; and

Drafting Note: State-registered investment advisers in this safe harbor are included in brackets so that each individual state that implements this model regulation may determine whether to include the state-registered investment advisers. Given the varying treatment of annuities, particularly variable annuities, under state law, the varying structures of state securities and insurance departments, and the varying levels of cooperation between the two agencies, this is a decision best made in each individual state.

(c) With respect to plan fiduciaries or fiduciaries, means the duties, obligations, prohibitions and all other requirements attendant to such status under ERISA or the IRC and any amendments or successor statutes thereto.

Section 7. Insurance Producer Training

A. An insurance producer shall not solicit the sale of an annuity product unless the insurance producer has adequate knowledge of the product to recommend the annuity and the insurance producer is in compliance with the insurer’s standards for product training. An insurance producer may rely on insurer-provided product-specific training standards and materials to comply with this subsection.

B. (1) (a) An insurance producer who engages in the sale of annuity products shall complete a one-time four (4) credit training course approved by the department of insurance and provided by the department of insurance-approved education provider.

(b) Insurance producers who hold a life insurance line of authority on the effective date of this regulation and who desire to sell annuities shall complete the requirements of this subsection within six (6) months after the effective date of this regulation. Individuals who obtain a life insurance line of authority on or after the effective date of this regulation may not engage in the sale of annuities until the annuity training course required under this subsection has been completed.

(2) The minimum length of the training required under this subsection shall be sufficient to qualify for at least four (4) CE credits, but may be longer.
(3) The training required under this subsection shall include information on the following topics:

(a) The types of annuities and various classifications of annuities;

(b) Identification of the parties to an annuity;

(c) How product specific annuity contract features affect consumers;

(d) The application of income taxation of qualified and non-qualified annuities;

(e) The primary uses of annuities; and

(f) Appropriate standard of conduct, sales practices, replacement and disclosure requirements.

(4) Providers of courses intended to comply with this subsection shall cover all topics listed in the prescribed outline and shall not present any marketing information or provide training on sales techniques or provide specific information about a particular insurer’s products. Additional topics may be offered in conjunction with and in addition to the required outline.

(5) A provider of an annuity training course intended to comply with this subsection shall register as a CE provider in this State and comply with the rules and guidelines applicable to producer continuing education courses as set forth in [insert reference to State law or regulations governing producer continuing education course approval].

(6) A producer who has completed an annuity training course approved by the department of insurance prior to [insert effective date of amended regulation] shall, within six (6) months after [insert effective date of amended regulation], complete either:

(a) A new four (4) credit training course approved by the department of insurance after [insert effective date of amended regulation]; or

(b) An additional one-time one (1) credit training course approved by the department of insurance and provided by the department of insurance-approved education provider on appropriate sales practices, replacement and disclosure requirements under this amended regulation.

(7) Annuity training courses may be conducted and completed by classroom or self-study methods in accordance with [insert reference to State law or regulations governing producer continuing education course approval].

(8) Providers of annuity training shall comply with the reporting requirements and shall issue certificates of completion in accordance with [insert reference to State law or regulations governing producer continuing education course approval].

(9) The satisfaction of the training requirements of another State that are substantially similar to the provisions of this subsection shall be deemed to satisfy the training requirements of this subsection in this State.

(10) The satisfaction of the components of the training requirements of any course or courses with components substantially similar to the provisions of this subsection shall be deemed to satisfy the training requirements of this subsection in this state.

(11) An insurer shall verify that an insurance producer has completed the annuity training course required under this subsection before allowing the producer to sell an annuity product for that insurer. An insurer may satisfy its responsibility under this subsection by obtaining certificates of completion of the training course or obtaining reports provided by commissioner-sponsored
database systems or vendors or from a reasonably reliable commercial database vendor that has a reporting arrangement with approved insurance education providers.

Section 8. Compliance Mitigation; Penalties: Enforcement

A. An insurer is responsible for compliance with this regulation. If a violation occurs, either because of the action or inaction of the insurer or its insurance producer, the commissioner may order:

(1) An insurer to take reasonably appropriate corrective action for any consumer harmed by a failure to comply with this regulation by the insurer’s supervisory duties or by its insurance producer’s violation of this regulation;

(2) A general agency, independent agency or the insurance producer to take reasonably appropriate corrective action for any consumer harmed by the insurance producer’s violation of this regulation; and

(3) Appropriate penalties and sanctions.

B. Any applicable penalty under [insert statutory citation] for a violation of this regulation may be reduced or eliminated [according to a schedule adopted by the commissioner] if corrective action for the consumer was taken promptly after a violation was discovered or the violation was not part of a pattern or practice.

Drafting Note: Subsection B above is intended to be consistent with the commissioner’s discretionary authority to determine the appropriate penalty for a violation of this regulation. The language of subsection B is not intended to require that a commissioner impose a penalty on an insurer for a single violation of this regulation if the commissioner has determined that such a penalty is not appropriate.

Drafting Note: A State that has authority to adopt a schedule of penalties may wish to include the words in brackets. In that case, “shall” should be substituted for “may” in the same sentence. States should consider inserting a reference to the NAIC Unfair Trade Practices Act or the State’s statute that authorizes the commissioner to impose penalties and fines.

C. The authority to enforce compliance with this regulation is vested exclusively with the commissioner.

Section 9. [Optional] Recordkeeping

A. Insurers, general agents, independent agencies and insurance producers shall maintain or be able to make available to the commissioner records of the information collected from the consumer, disclosures made to the consumer, including summaries of oral disclosures, and other information used in making the recommendations that were the basis for insurance transactions for [insert number] years after the insurance transaction is completed by the insurer. An insurer is permitted, but shall not be required, to maintain documentation on behalf of an insurance producer.

Drafting Note: States should review their current record retention laws and specify a time period that is consistent with those laws. For some States this time period may be five (5) years.

B. Records required to be maintained by this regulation may be maintained in paper, photographic, micro-process, magnetic, mechanical or electronic media or by any process that accurately reproduces the actual document.

Drafting Note: This section may be unnecessary in States that have a comprehensive recordkeeping law or regulation.

Section 10. Effective Date

The amendments to this regulation shall take effect [six (6)X] months after the date the regulation is adopted or on [insert date], whichever is later.

What Types of Products Can I Sell You?

I am licensed to sell annuities to you in accordance with state law. If I recommend that You buy an annuity, it means I believe that it effectively meets Your financial situation, insurance needs, and financial objectives. Other financial products, such as life insurance or stocks, bonds and mutual funds, also may meet Your needs.

I offer the following products:

- [ ] Fixed or Fixed Indexed Annuities
- [ ] Variable Annuities
- [ ] Life Insurance

I need a separate license to provide advice about or to sell non-insurance financial products. I have checked below any non-insurance financial products that I am licensed and authorized to provide advice about or to sell.

- [ ] Mutual Funds
- [ ] Stocks/Bonds
- [ ] Certificates of Deposits

Whose Annuities Can I Sell to You?

I am authorized to sell:

<table>
<thead>
<tr>
<th>Annuities from Only One (1) Insurer</th>
<th>Annuities from Two or More Insurers</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ]</td>
<td>[ ]</td>
</tr>
</tbody>
</table>

[ ] Annuities from Two or More Insurers
although I primarily sell annuities from:

How I’m Paid for My Work:

It’s important for You to understand how I’m paid for my work. Depending on the particular annuity You purchase, I may be paid a commission or a fee. Commissions are generally paid to Me by the insurance company while fees are generally paid to Me by the consumer. If You have questions about how I’m paid, please ask Me.

Depending on the particular annuity You buy, I will or may be paid cash compensation as follows:

- Commission, which is usually paid by the insurance company or other sources. If other sources, describe:
  ____________________.
- Fees (such as a fixed amount, an hourly rate, or a percentage of your payment), which are usually paid directly by the customer,
  Other (Describe): ____________________.

If you have questions about the above compensation I will be paid for this transaction, please ask me.

I may also receive other indirect compensation resulting from this transaction (sometimes called “non-cash” compensation), such as health or retirement benefits, office rent and support, or other incentives from the insurance company or other sources.

**Drafting Note:** This disclosure may be adapted to fit the particular business model of the producer. As an example, if the producer only receives commission or only receives a fee from the consumer, the disclosure may be refined to fit that particular situation. This form is intended to provide an example of how to communicate producer compensation, but compliance with the regulation may also be achieved with more precise disclosure, including a written consulting, advising or financial planning agreement.

**Drafting Note:** The acknowledgement and signature should be in immediate proximity to the disclosure language.

By signing below, you acknowledge that you have read and understand the information provided to you in this document.

CONSUMER REFUSAL TO PROVIDE INFORMATION

Do Not Sign Unless You Have Read and Understand the Information in this Form

Why are you being given this form?

You're buying a financial product – an annuity.

To recommend a product that effectively meets your needs, objectives and situation, the agent, broker, or company needs information about you, your financial situation, insurance needs and financial objectives.

If you sign this form, it means you have not given the agent, broker, or company some or all the information needed to decide if the annuity effectively meets your needs, objectives and situation. You may lose protections under the Insurance Code of [this state] if you sign this form or provide inaccurate information.

Statement of Purchaser:

I REFUSE to provide this information at this time.

I have chosen to provide LIMITED information at this time.

Consumer Decision to Purchase an Annuity NOT Based on a Recommendation

Do Not Sign This Form Unless You Have Read and Understand It.

Why are you being given this form? You are buying a financial product – an annuity.

To recommend a product that effectively meets your needs, objectives and situation, the agent, broker, or company has the responsibility to learn about you, your financial situation, insurance needs and financial objectives.

If you sign this form, it means you know that you’re buying an annuity that was not recommended.

Statement of Purchaser:

I understand that I am buying an annuity, but the agent, broker or company did not recommend that I buy it. If I buy it without a recommendation, I understand I may lose protections under the Insurance Code of [this state].

Project History

SUITABILITY IN ANNUITY TRANSACTIONS MODEL REGULATION (#275)

1. Description of the Project, Issues Addressed, etc.

In 2017, the Life Insurance and Annuities (A) Committee established the Annuity Suitability (A) Working Group and charged the Working Group to review and revise, as necessary, the Suitability in Annuity Transactions Model Regulation (#275) and as part of that charge, consider how to promote greater uniformity across NAIC-member jurisdictions. The Committee adopted the charge and established the Working Group, in part, in response to the U.S. Department of Labor’s (DOL) fiduciary rule, which was finalized in April 2016 but vacated in its entirety in March 2018. The DOL fiduciary rule would have expanded the scope of who is considered a fiduciary to federal Employee Retirement Income Security Act of 1974 (ERISA) retirement plans and individual retirement accounts (IRAs) to include a broader set of insurance agents, insurance brokers and insurers. Separately, the U.S. Securities and Exchange Commission (SEC) released a proposed rule package in May 2018, which included Regulation Best Interest (Reg BI). The SEC finalized Reg BI in June 2019. The final Reg BI establishes a best interest standard of conduct for broker-dealers beyond the existing suitability obligation. The new standard of conduct requires a broker-dealer when making a recommendation of any securities transaction or investment strategy involving securities to a retail customer to act in the best interest of the retail customer at the time a recommendation is made without placing the financial or other interest of the broker-dealer or associated persons ahead of the interest of the retail customers.

While acknowledging the SEC’s and the DOL’s role in the regulatory landscape and believing that consumers are better protected when, to the extent possible, there is harmonization of the regulations enforced by the states, the SEC and the DOL, the Working Group continued its work to draft revisions to Model #275 to establish a framework for an enhanced standard of conduct that is more than the model’s current suitability standard but not a fiduciary standard.

In 2018, the Working Group held two two-day interim meetings—one in June in Kansas City, MO, and one in October in Chicago—to discuss drafts of proposed revisions to Model #275. Additionally, the Working Group held several conference calls and additional in-person meetings at each national meeting.

After the SEC finalized its Reg BI in June 2019, as directed by the Life Insurance and Annuities (A) Committee at the 2019 Spring National Meeting, the Working Group met soon after in mid-June during an in-person interim meeting in Columbus, OH, to level set and work toward its goal of fleshing out the meaning of “best interest” and incorporating a best interest standard of conduct into the Model #275 revisions. During its June meeting, the Working Group discussed and agreed on a framework for the model revisions to include a best interest standard and a path forward for completing its work as soon as possible.

Based on this framework, the Working Group developed a draft of proposed model revisions including a best interest standard of care a producer or insurer can meet if the producer or insurer satisfies the four obligations under this standard of care: 1) the care obligation; 2) disclosure obligation; 3) material conflict of interest obligation; and 4) documentation obligation. The Working Group exposed the draft for public comment until Sept. 30, 2019.

The Working Group met Oct. 8, Oct. 15, Oct. 29 and Nov. 5, 2019, via conference call to discuss the comments received. The Working Group received comments from many stakeholders, including industry, consumers and producers. More than 100 interested parties and state insurance regulators participated in each of the conference calls. The Working Group adopted the proposed revisions to Model #275 on Nov. 5, 2019, via conference call. The Working Group agreed that it had completed its work as directed by the Life Insurance and Annuities (A) Committee during the 2019 Spring National Meeting and forwarded the draft to the Committee for its consideration. The Committee chair exposed the draft for a public comment period ending Nov. 26, 2019. At the 2019 Fall National Meeting, the Committee discussed the comments received and made some revisions to the Working Group’s draft of proposed revisions to Model #275. During this meeting, the Committee provided preliminary approval to the proposed Model #275 revisions. The Committee also directed the Working Group to discuss the comments received on the proposed appendices during a meeting following the 2019 Fall National Meeting. The Working Group met Dec. 19, 2019, via conference call to discuss the Nov. 26, 2019, comments received on the proposed appendices. During this meeting, the Working Group revised the appendices and forwarded its work to the Committee for its consideration. The Committee met Dec. 30, 2019, via conference call to consider adoption of the proposed revisions to Model #275. The Committee adopted the proposed revisions to Model #275 by a vote of 11 to 1.
The proposed revisions establish a best interest standard of conduct for producers and insurers. This new standard of conduct is more than the model’s current suitability standard, but it is not a fiduciary standard. Under this new standard of conduct, when making a recommendation of an annuity, a producer or insurer shall act in the best interest of the consumer under the circumstances known at the time the recommendation is made, without placing the producer’s or the insurer’s financial interest ahead of the consumer’s financial interest. To satisfy this best interest obligation, a producer or an insurer must satisfy the four obligations: 1) care; 2) disclosure; 3) conflict of interest; and 4) documentation. The proposed revisions also revise the model’s current insurer supervision requirements, including a new supervision requirement for the insurer to establish and maintain reasonable procedures to identify and eliminate certain sales incentives that are based on sales of specific annuities within a limited period of time. The proposed revisions also include new appendices to provide guidance to producers and insurers in satisfying the new disclosure and documentation obligations.

2. Name of Group Responsible for Drafting the Model and States Participating

The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee drafted the proposed revisions to Model #275. The members of the Working Group were: Alabama, California, Delaware, Idaho, Iowa, Kansas, Nebraska, New Hampshire, New York, Ohio, Oklahoma, Rhode Island, Tennessee and Wisconsin. Idaho chaired the Working Group in 2017 and 2018, and Ohio chaired the Working Group in 2019. The Life Insurance and Annuities (A) Committee also discussed and drafted proposed revisions to Model #275 after the Working Group completed its work. The members of the Committee were: Alabama, Arizona, Delaware, District of Columbia, Idaho, Iowa, Louisiana, Nebraska, Nevada, New York, North Dakota, Ohio, Puerto Rico, Tennessee and Wisconsin.

3. Project Authorized by What Charge and Date First Given to the Group

The Life Insurance and Annuities (A) Committee established the Annuity Suitability (A) Working Group in 2017 to carry out the charge below:

“Review and revise, as necessary, the Suitability in Annuity Transactions Model Regulation (#275) and consider how to promote greater uniformity across NAIC-member jurisdictions.”

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc.; include any parties outside the members that participated)

Beginning in March 2017 and ending in December 2019, the Working Group reviewed and discussed all of the comments received as part of the drafting process. Numerous interested parties participated in the process. The interested parties represented all stakeholder groups, including consumers, insurers and producer representatives. Each draft of proposed revisions was posted to the Working Group’s web page and the Committee’s web page on the NAIC website. All comment letters received also were posted. The Working Group held open in-person interim meetings and met via conference call during the drafting process. The Working Group also met in person at each NAIC national meeting.

5. A General Description of the Due Process (e.g., exposure periods, public hearings or any other means by which widespread input from industry, consumers and legislators was solicited)

Beginning in March 2017 and ending in December 2019, the Working Group reviewed and discussed all of the comments received. Numerous interested parties participated in the drafting process. The interested parties represented all stakeholder groups, including consumers, insurers and producer representatives. Each draft of proposed revisions was posted to the Working Group’s web page and the Committee’s web page on the NAIC website. All comment letters received also were posted. The Working Group held open in-person interim meetings and met via conference call during the drafting process. The Working Group also met in person at each NAIC national meeting.
6. A Discussion of the Significant Issues (items of some controversy raised during the drafting process and the group’s response)

Several significant issues were raised throughout the drafting process. Those issues included: 1) expanding Model #275 to include investment-type life insurance products; 2) specifically applying the proposed revisions to in-force annuity products; 3) applying the proposed revisions to producers who may not have direct contact with the consumer, but participated in a material way to developing and making the recommendation purchase an annuity; and 4) including the drafting note stating that the proposed model revisions are a successor to the 2010 model revisions.

With respect to expanding Model #275 to include investment-type life insurance products, the Working Group discussed this issue during one of its first in-person interim meetings. The Working Group decided that given its charge to “review and revise, as necessary, the Suitability in Annuity Transactions Model Regulation (#275) and consider how to promote greater uniformity across NAIC-member jurisdictions,” expanding Model #275 to include investment-type life insurance products was beyond the scope of its charge. The Working Group concluded that the Life Insurance and Annuities (A) Committee was the appropriate forum for raising and considering this issue.

Another significant issue discussed was whether the model revisions should specifically apply to in-force annuity contracts. The Working Group discussed this issue extensively during multiple meetings. It decided ultimately not to include language in the proposed revisions specifically applying to in-force annuity contracts. However, during these discussions, it was suggested that in certain situations, in making a recommendation, a producer or insurer would have to and would be expected to consider a consumer’s existing insurance products, including annuities, to determine whether the recommended option effectively addresses the consumer’s financial situation, insurance needs and financial objectives as part of satisfying the best interest standard of conduct.

The Working Group also extensively discussed whether the model revisions should apply to producers not having direct contact with a consumer, but exercised material control or influence in the making of the recommendation. The Working Group decided to add language applying the model revisions to such producers under certain circumstances. Specifically, in Section 6A(5), the model revisions provide that any requirement applicable to a producer under Section 6—Duties of Insurers and Producers applies to every producer who has exercised material control or influence in the making of a recommendation and has received direct compensation as a result of the recommendation or sale regardless of whether the producer has had any direct contact with the consumer.

Another issue the Working Group discussed was whether the revised model establishing the new best interest standard of conduct would be considered for purposes of Section 989J of the federal Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) a successor to the 2010 model revisions, which established the suitability standard of conduct. The proposed revisions include a drafting note in Section 1—Purpose expressly stating the proposed revisions are a successor to the 2010 model revisions. The Working Group deferred the issue to the NAIC Legal Division for additional research. The NAIC Legal Division did not expressly provide an opinion, but initial research found that with or without the Section 1 drafting note, the revised model most likely would be considered a successor to the 2010 model. The Working Group determined that this was a policy issue for the Committee, the Executive (EX) Committee and Plenary to decide. The model revisions, as adopted by the Committee, retain the proposed drafting note.

7. Any Other Important Information (e.g., amending an accreditation standard)

None.
Actuarial Guideline XLVIII
(Appplies to 2017 and Subsequent Year Valuations)

ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL #830)

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force (“PBRI Task Force”) serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as “XXX/AXXX Captive arrangements,” although not all such arrangements actually involve reinsurers organized as captives. In this connotation, XXX denotes the reserves prescribed by Section 6 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model #830) while AXXX denotes the reserves prescribed by Section 7 of Model #830, and by Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation (AG 38). On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the “June 2014 Rector Report”). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the “Required Level of Primary Security”) that must be supported by certain defined assets (“Primary Security”). The level of reserves is to be calculated by a method referred to as the “Actuarial Method.” Another charge to LATF was to promulgate an actuarial guideline specifying that, in order to comply with the NAIC Actuarial Opinion and Memorandum Regulation, Model 822 (“AOMR”) as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer’s reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. The initial version of Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) was developed in response to that charge, with an effective date of January 1, 2015.

Coordination between this Actuarial Guideline and the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)

Subsequently, on January 8, 2016, the NAIC adopted revisions to the Credit for Reinsurance Model Law (Model #785). Among other things, the revisions to Model #785 provide commissioners with the authority to enact, by regulation, additional requirements for ceding insurers to claim credit for reinsurance with respect to certain XXX/AXXX financing arrangements. On December 13, 2016, the NAIC adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787) as the regulation permitted by Model #785. LATF subsequently received a charge to redraft AG 48 to make it as consistent as possible with the provisions of Model #787. The current version of this actuarial guideline is the result.

The following is an overview of the interrelationship between this actuarial guideline and Model #787, and the regulatory strategy that led to the adoption of each:

1. The initial version of this actuarial guideline immediately established national standards for the use of XXX/AXXX financing arrangements in an attempt to quickly set minimum standards based on the framework adopted by the PBRI Task Force on June 30, 2014. This initial version applied to such reinsurance arrangements entered into on or after 1/1/2015.

2. The revised statute (the NAIC Credit for Reinsurance Model Law (Model #785)) and a new regulation (the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)) were then developed and adopted by the NAIC.
3. Except as noted in #4 below, this actuarial guideline will cease to be effective, on a state by state basis, as individual states enact Model #785 and adopt Model #787 to replace it.

4. Notwithstanding, it is anticipated that in a small number of states, Model #787 will need to be adopted on a “prospective” basis only (that is, it will only apply to ceded policies issued on or after the effective date thereof). In those cases, this actuarial guideline will remain as the authority for ceded policies subject to this actuarial guideline but to which Model #787, as adopted in a given state, does not apply. So although its role might diminish, this actuarial guideline will remain an essential part of the regulatory framework for a small number of states for many years to come.

5. To ensure uniformity of treatment between states, companies, and ceded policies (whether governed by this actuarial guideline or by Model #787) and to avoid confusion, this actuarial guideline is being updated, effective as of January 1, 2017, to make it as substantively identical to Model #787 as possible.

Authority, Avoidance, and Purpose

The requirements in this actuarial guideline derive authority from Section 3 of the AOMR, or, after the Operative Date of the Valuation Manual, from Section 1 of VM-30 of the Valuation Manual. Both Section 3 of the AOMR and Section 1 of VM-30 provide that the commissioner has the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items. As contained in the framework adopted by the PBRI Task Force on June 30, 2014, this actuarial guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this actuarial guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this actuarial guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer's domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this actuarial guideline.

The purpose and intent of this actuarial guideline is to establish uniform, national standards governing XXX or AXXX reserve financing arrangements in conformity with the PBRI Task Force framework and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in Section 4.B., the provisions of this actuarial guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this actuarial guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this actuarial guideline if the facts and circumstances warrant such action.

Text

1. Authority

Pursuant to Section 3 of the AOMR or, after the Operative Date of the Valuation Manual, to Section 1 of VM-30 of the Valuation Manual, the commissioner shall have the authority to specify specific methods of actuarial analysis and

---

3 In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any if its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).
actuarial assumptions when, in the commissioner’s judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

This actuarial guideline applies to reinsurance contracts that cede liabilities pertaining to Covered Policies as that term is defined in Section 4.

3. Exemptions

This actuarial guideline does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

(1) Policies that satisfy the criteria for exemption set forth in Section 6F or Section 6G of Model #830; and which are issued before the later of:

(a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in Section 6E of Model #830 and which are issued before the later of:

(a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(3) Any universal life policy that meets all of the following requirements:

(a) Secondary guarantee period, if any, is five (5) years or less;

(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables and valuation interest rate applicable to the issue year of the policy; and

(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; or

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year; or

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Section 2D of Model #785; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:
AG XLVIII

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer’s reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures (“SSAP No. 1”); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC Risk-Based Capital (RBC) for Insurers Model Act (Model #312) when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Is not an affiliate, as that term is defined in Section 1A of the NAIC Insurance Holding Company System Regulatory Model Act (Model #440), of:

   (a) The insurer ceding the business to the assuming insurer; or

   (b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;

(3) Is both:

   (a) Licensed or accredited in at least 10 states (including its state of domicile), and

   (b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in Model #312 when its risk-based capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus; or

E. Reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of Model #785, pertaining to certain certified reinsurers or Section 5B(4)(b) of Model #785, pertaining to reinsurers meeting certain threshold size and licensing requirements; or

F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this actuarial guideline (as described in the Authority, Avoidance and Purpose section above);

(2) The risks are included within the scope of this actuarial guideline only as a technicality; and

(3) The application of this actuarial guideline to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant
to this Section 3F to exempt a reinsurance treaty from this actuarial guideline, as well as the general basis therefor (including a summary description of the treaty).

**Drafting Note:** The exemption set forth in Section 3F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this actuarial guideline purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 3A, B, C, D, or E or meet the substantive requirements of this actuarial guideline.

4. **Definitions**

   A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 5.

   B. “Covered Policies” means the following: Subject to the exemptions described in Section 3, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:

   (1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,

   (2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

   **Note:** Although “Covered Policies” is defined to include all the policies described in Subsections B1 and B2 above, it is noted that whether a given “Covered Policy” is subject to this actuarial guideline or, instead, to Model #787 should be determined under Section 8 (Sunset).

   C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:

   (1) Issued prior to January 1, 2015; and

   (2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 3 had that section then been in effect.

   D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

   E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

   F. “Primary Security” means the following forms of security:

   (1) Cash meeting the requirements of Section 3A of Model #785;

   (2) Securities listed by the Securities Valuation Office meeting the requirements of Section 3B of Model #785, but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and
AG XLVIII

(3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:
   
   (a) Commercial loans in good standing of CM3 quality and higher;
   
   (b) Policy Loans; and
   
   (c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

5. The Actuarial Method

A. Description of Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this actuarial guideline shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 4B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 4B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(2) For Covered Policies described in Section 4B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

   (a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;
(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed \[\frac{c_x}{2 * \text{number of reinsurance premiums per year}}\] where \(c_x\) is calculated using the same mortality table used in calculating the Net Premium Reserve; and

(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this actuarial guideline, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this actuarial guideline.

(7) If a reinsurance treaty subject to this actuarial guideline cedes risk on both Covered and Non-Covered Policies:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies; and

(b) Any Primary Security and/or Other Security used to meet any requirements pertaining to the Non-Covered Policies may not be used to satisfy any requirements related to the Required Level of Primary Security and/or Other Security for the Covered Policies.
AG XLVIII

B. Valuation Used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

1. For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

2. For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the NAIC’s Life Actuarial (A) Task Force no later than the December 31st on or immediately preceding the valuation date for which the Required Level of Primary Security is being calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

6. Required Actuarial Analysis and Actuarial Opinion and Memorandum Requirements

A. Required Actuarial Analysis

Before the due date of each actuarial opinion, as to each reinsurance treaty in which Covered Policies have been ceded, the appointed actuary of each ceding insurer must perform an analysis on a treaty by treaty basis, of such Covered Policies to determine whether, as of the immediately preceding December 31st (the valuation date):

1. Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of Section 3 of Model #785, on a funds withheld, trust, or modified coinsurance basis; and

2. Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (1) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of Section 3 of Model #785; and

Note: For the sake of clarity, funds consisting of Primary Security pursuant to Paragraphs (1) may exceed the Required Level of Primary Security, and Other Security is only required under Paragraph (2) to the extent that there is any portion of the statutory reserves as to which Primary Security is not so held. For example, if a ceding insurer’s statutory reserves equal $1 Billion, its Required Level of Primary Security is $600 Million, and it holds $1 Billion in Primary Security pursuant to Paragraph (1), no Other Security is required under Paragraph (2).

3. Any trust used to satisfy the requirements of this Section 6 complies with all of the conditions and qualifications of Section 1244 of the NAIC Credit for Reinsurance Model Regulation (Model #786), except that:

(a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5B, be valued according to the valuation rules set forth in Section 5B, as applicable; and

(b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 6A(1); and
AG XLVIII

(c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 6A(1)) below 102% of the level required by Section 6A(1) at the time of the withdrawal or substitution.

B. Qualified Actuarial Opinion; Remediation

(1) The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, unless:

(a) The requirements of Section 6A(1) and 6A(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or

(c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).

(2) In addition to the requirement set forth in Section 6B(1) above, the appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, if the appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such affiliated reinsurer where (a) the affiliate reinsures Covered Policies of the ceding insurer and (b) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this actuarial guideline.

Note: The remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787. Under this option, a ceding company may choose to avoid the consequence (a qualified opinion under this actuarial guideline) by establishing a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held. For example, suppose a ceding insurer has established statutory reserves of $1 Billion and has Primary Security of $550 Million and Other Security of $450 Million. Suppose further that the actuary determines that the insurer’s Required Level of Primary Security is $600 Million. Under Section 6B(1)(c), the insurer may avoid a qualified opinion by establishing a liability equal to $450 Million (the difference between the statutory reserve of $1 Billion and the $550 Million amount of Primary Security actually held).

C. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this actuarial guideline

(1) In the statement of actuarial opinion, the appointed actuary of the ceding insurer must state whether (i) he has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.
AG XLVIII

(2) In the actuarial memorandum as described by Section 7 of the AOMR or Section 3B of VM-30 of the Valuation Manual, as applicable, the appointed actuary of the ceding insurer must document the analysis and requirements applied by this actuarial guideline as to each reinsurance arrangement under which Covered Policies are ceded.

(3) In the event that a reinsurance treaty contains both (1) Covered Policies subject to this actuarial guideline rather than to Model #787, and (2) Covered Policies subject to Model #787 rather than to this actuarial guideline, the treaty shall be tested as a whole for purposes of a ceding insurer’s compliance with both (a) the requirements of Section 6A(1) and Section 6A(2) of this actuarial guideline and (b) the requirements of Section 7A(3) and Section 7A(4) of Model #787; provided further, that:

(a) If funds consisting of Primary Security are held in amounts less than the Required Level of Primary Security, such funds consisting of Primary Security shall be allocated first to fulfill the Required Level of Primary Security for the Covered Policies subject to this actuarial guideline, with any remainder allocated to those Covered Policies subject to Model #787; and

(b) If funds consisting of Other Security are held in amounts less than the requirements of Section 6A(2), such funds consisting of Other Security shall be allocated first to fulfill the Other Security requirements for the Covered Policies subject to this actuarial guideline, and any remainder shall be allocated to those Covered Policies subject to Model #787.

7. Effective Date

This actuarial guideline shall become effective as of January 1, 2017 with respect to all Covered Policies. This actuarial guideline supersedes and replaces all previous versions thereof with respect to actuarial opinions rendered as to valuation periods ending on or after January 1, 2017.

Note: For the avoidance of doubt, actuarial opinions issued with respect to the year ended December 31, 2016, shall be governed by the version of AG 48 in effect on December 31, 2016, as included in the Accounting Practices and Procedures Manual.

8. Sunset Provision

This actuarial guideline shall cease to apply as to Covered Policies that are both (a) issued by ceding insurers domiciled in a jurisdiction that has in effect, as of December 31st of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a regulation substantially similar to Model #787 adopted by the NAIC on December 13, 2016; and (b) subject to Model #787 as so adopted by the ceding insurer’s jurisdiction of domicile. This Actuarial Guideline shall continue to apply, without interruption, to any and all Covered Policies not included in both (a) and (b) of the immediate preceding sentence.

Note: It is anticipated that, for most states, this actuarial guideline will sunset pursuant to (a) and (b) of Section 8 and will continue only with respect to the limited number of states in which their version of Model #787 applies prospectively only, i.e., applies only to Covered Policies issued on or after the effective date of their version of Model #787. It is anticipated, however, that most states will be able to adopt a version of Model #787 that, like the Model itself, applies to all Covered Policies (subject to the applicable exemptions and grandfathering provisions) that are “in force” on or after the effective date, even if the policies were originally issued prior to that effective date. The goal of Section 8 is to ensure that all Covered Policies ceded in reinsurance transactions within the scope of this actuarial guideline continue to be subject to this actuarial guideline unless and until they become subject to Model #787.

ISSUE:

Now that the concept of a prescribed template has been introduced into VM-31, it should be made clear what the rules are surrounding making changes to such templates.

SECTIONS:

Introduction, Section I, Process for Updating the Valuation Manual, Section A.1

REDLINE:

1. Substantive Items

Substantive changes to the Valuation Manual are proposed amendments to the Valuation Manual that would change or alter the meaning, application or interpretation of a provision. All changes to the Valuation Manual (or to templates prescribed for use by the Valuation Manual) will be considered substantive, unless specifically identified as either a nonsubstantive item or an update to a table by simple majority vote of the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force. Any item placed on the Active List as substantive will be exposed by the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force for a public comment period commensurate with the length of the draft and the complexities of the issue, but for no less than 21 days. The comment period will be deemed to have begun when the draft has been placed on the appropriate public NAIC web page. The Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will hold at least one open meeting (in person or via conference call) to consider comments before holding a final vote on any substantive items. Subsequent exposures of substantive items will be for a minimum of seven days. Meeting notices for Life Actuarial (A) Task Force/Health Actuarial (B) Task Force meetings will indicate if a vote is anticipated on any substantive items. Adoption of all changes at the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will be by simple majority.

REASONING:

Help assure readers that there no back doors through which to create new requirements.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   Rachel Hemphill, Texas Department of Insurance
   Mary Bahna-Nolan, Pacific Life
   VM-20 restriction on using different credibility methods for significantly different blocks of business

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
   VM-20 Sections 9.C.5.a and 9.C.7.b.ii
   January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)
   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
   Currently, a company must select a single credibility methodology, Limited Fluctuation or Bühlmann, for all business that company has that is subject to VM-20 and requires credibility percentages. The Bühlmann methodology is technically allowed for Simplified Issue business within the Valuation Manual; however, at present, it is not practically possible since there are no industry factors available for Simplified Issue. Therefore, only the Limited Fluctuation method can currently be used for determining credibility for Simplified Issue business. The factors in VM-20 for the Bühlmann were developed to only be used in conjunction with the 2015 VBT. Thus, currently, a company with any Simplified Issue business subject to VM-20 that requires credibility calculations must use the Limited Fluctuation method for all of their business subject to VM-20 that requires credibility calculations, including the fully underwritten business. We do not see this as a reasonable restriction. VM-20 already requires that companies not change their credibility method once selected unless they receive commissioner approval for the change, and we believe that that constraint is sufficient to avoid any significant gaming of the credibility method selection.

Notes: APF 2019-60
VM-20 Section 9.C.5.a

5. Credibility of Company Experience

a. For valuations in which the industry basic mortality table is the 2008 VBT, determine an aggregate level of credibility over the entire exposure period using a methodology to determine the level of credibility that follows common actuarial practice as published in actuarial literature (for example, but not limited to, the Limited Fluctuation Method or Bühlmann Empirical Bayesian Method).

For valuations in which the industry basic mortality table is the 2015 VBT, determine an aggregate level of credibility following either the Limited Fluctuation Method by amount, such that the minimum probability is at least 95% with an error margin of no more than 5% or Bühlmann Empirical Bayesian Method by amount. Once chosen, the credibility method must be applied to all business subject to VM20 and requiring credibility percentages.

Not all blocks of a company’s business subject to VM-20 necessarily need to use the same credibility method. However, a company seeking to change the credibility methods for a given block of business must request and subsequently receive the approval of the insurance commissioner. The request must include the justification for the change and a demonstration of the rationale supporting the change.

VM-20 Section 9.C.7.b.ii

7. Process to Determine Prudent Estimate Assumptions

a. If applicable industry basic tables are used in lieu of company experience as the anticipated experience assumptions, or if the level of credibility of the data as provided in Section 9.C.5 is less than 20%, the prudent estimate assumptions for each mortality segment shall equal the respective mortality rates in the applicable industry basic tables as provided in Section 9.C.3, including any applicable improvement pursuant to Section 9.C.3.g, plus the prescribed margin as provided in Section 9.C.6.c, plus any applicable additional margin pursuant to Section 9.C.6.d.v and/or Section 9.C.6.d.vi.

b. If the company uses company experience mortality rates as the anticipated experience assumptions, the following process shall be used to develop prudent estimate assumptions:

i. Determine the values of A, B and C from the Grading Table below, based on the level of credibility of the data as provided in Section 9.C.5.

<table>

</table>
ii. Determine the value of D, which represents the last policy duration that has a substantial volume of claims, using the chosen data source(s) as specified in Section 9.C.2.b. D is defined as the last policy duration at which there are 50 or more claims (not the first policy duration in which there are fewer than 50 claims), not counting riders. This may be determined at either the mortality segment level or at a more aggregate level if the mortality for the individual mortality segments was determined using an aggregate level of mortality experience pursuant to Section 9.C.2.d.
Guidance Note: The same level of aggregation is used in Section 9.C.2.d for determining company experience mortality rates, Section 9.C.5.b for determining credibility, and Section 9.C.7.b.ii for determining the value of D. Thus, when determining the value of D, all claims being aggregated will have used the same credibility method in Section 9.C.5.
1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
The Life PBR Exemption restriction is intended to apply to ULSG with material secondary guarantees regardless of whether the secondary guarantee is an embedded guarantee or is a separate rider.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM Section II, Subsection 1.D.3
January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

ULSG policies with material secondary guarantees are intended to be excluded from the Life PBR Exemption, regardless of whether the secondary guarantee is embedded in the base policy or is a separate rider. The VM does say that non-ULSG base policies with secondary guarantee riders follow the reserving requirements for ULSG policies in Section II, Subsection 6.C: “ULSG and other secondary guarantee riders shall be valued with the base policy and follow the reserve requirements for ULSG policies under VM-20, VM-A and/or VM-C, as applicable.” It should be made clear that following the reserve requirements for ULSG includes exclusion from the Life PBR Exemption, when the secondary guarantee is material.

Notes: APF 2019-61
VM Section II, Subsection 1.D.3

3. Policies Excluded from the Life PBR Exemption:
a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee, or policies – other than ULSG – that contain a rider with a secondary guarantee, in which the secondary guarantee does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
American Academy of Actuaries’ Life Reserves Work Group.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
January 1, 2020, edition of the Valuation Manual with NAIC adoptions through August 6, 2019 Locations with proposed changes: VM-20 and VM-31

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.):
See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
The Valuation Manual already requires that if there is additional risk arising from the conversion of term life insurance, whether group or individual, it must be reserved for. The purpose of this APF is to emphasize this requirement and to provide guidance on what must be included in the Life PBR Actuarial Report with respect to conversions.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

| Notes: VM APF 2019-62 rev.02-10-20; 14-day re-exposure through 2/26/20; Adopted 2/27/20 |
VM-20 Section 9.C.4 - Add Section 9.C.4.d

c. The mortality rates from the resulting anticipated experience assumptions must be no lower than the mortality rates that are actually expected to emerge and that the company can justify.

d. In satisfying Section 9.C.4.c, the company must ensure that any excess mortality is appropriately reflected in the anticipated experience mortality rates. This includes but is not limited to excess mortality associated with policies issued via conversion from term policies or from group life contracts.

Exposure of the proposed section 9.C.4.c includes the following changes which have been reviewed and accepted by the Task Force:

VM-31 Section 3.B.3 [Executive Summary – policy overview]

3. Policies – A summary of the base policies within each VM-20 reserving category. Include information necessary to fully describe the company’s distribution of business. For direct business, use PBR Actuarial Report Template A located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3) to provide descriptions of each base policy product type and underwriting process (including a description of the process, the time period in which it was used, and the level of any additional margin), with a breakdown of policy count and face amount by base policy product type and underwriting process. Also include the target market, primary distribution system, and key product features that affect risk, including conversion privileges.

d. Assumption and Margin Development – The following information for each risk factor: description of the methods used to determine anticipated experience assumptions and margins, including the sources of experience (e.g., company experience, industry experience, or other data); how changes in such experience are monitored; any adjustments made to increase mortality margins above the prescribed margin (such as to reflect increased uncertainty with due to newer underwriting approaches; and any other considerations, such as conversion features, helpful in or necessary to understanding the rationale behind the development of assumptions and margins, even if such considerations are not explicitly mentioned in the Valuation Manual.

VM-31 Section 3.D.3.x-[new section] [Life Report – Mortality]

(We suggest placing after Adjustments for Mortality Improvement and before Mortality for Impaired Lives)

j. Mortality for Converted Policies – Description of the treatment of mortality for Mortality policies issued under group or term conversion privileges including:

i. A description of the method(s) by which any excess conversion mortality was taken into account in the development of company experience mortality rates (e.g., through the use of separate mortality segments for policies issued upon conversion, through aggregation of claim experience, or through use of other methods), the rationale for the method(s) used, and any changes in the method(s) from those used in previous years.

ii. The source(s) of the data used in the method(s) employed.
Mortality for Impaired Lives or Policyholder Behavior – Disclosure of:

i. the percentage of business that is on impaired lives;

ii. whether impaired lives were included or excluded from the mortality study upon which company experience mortality was based; and

iii. whether any adjustments to mortality assumptions for impaired lives or policyholder behavior were found to be necessary and, if so, the rationale for the adjustments that were used.

Item (iii) above is a required disclosure for post-level term mortality assumptions even if the company uses a 100% shock lapse assumption, since it pertains to the analysis demonstrating whether there are post-level term profits.

k. Post-Level Term Testing – For products with a level term period:

i. Summary results of the seriatim comparison of the present value of postlevel term cash inflows and outflows for the DR as required by VM-20 Section 9.D.6.

ii. If this comparison showed that there were post-level term profits, describe how anti-selection was handled in the post-level term period, including the prudent estimate premium, mortality and lapse assumptions used.

iii. If the comparison showed that there were post-level term losses, confirm that the prudent estimate premium, mortality and lapse assumptions for the post-level period were addressed in Section 3.D.1.a and were used in the reserve calculation.

l. Term Conversions – Description of how the company reflects the impact of any term conversions privilege contained in the policy.

m. Lapse Rates for Converted Policies – Description of and rationale for lapse rates used for policies issued under any group or term conversion privilege.

a. Agreements – For those reinsurance agreements included in the calculation of the minimum reserve as per VM-20 Section 8.A, a description of each reinsurance agreement, including, but not limited to, the type of agreement, the counterparty, the risks reinsured, any provisions related to converted policies, the portion of business reinsured, identification of both affiliated and non-affiliated, as well as captive and non-captive, or similar relationships, and whether the agreement complies with the requirements of the credit for reinsurance under the terms of the AP&P Manual.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   Jason Kehrberg, Vice President, PolySystems, Inc.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   4. The NPR shall reflect the immediate payment of claims.

   Proposed VM-20 3.C.4 (revised):
   4. The NPR shall reflect continuous deaths and the immediate payment of death claims, including death claims on any riders or supplemental benefits for which the NPR is being calculated.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
   I believe the intent was that 3.C.4 apply to death claims, e.g. not to payment of positive cash surrender values upon lapse, and that on a present value basis the calculated periodic death claim payments equate to immediate claim payment on deaths assumed to occur continuously.

Notes: VM APF 2020-05R
Re-Exposure of APF 2020-06  Updated 6/11/20 v.2
This version of APF is the same as the initial version exposed after the June 11 LATF call with the exception that the following sentences

“When LIBOR is terminated or its use becomes de minimis, the LIBOR rates will be replaced with the most appropriate replacement rates for the specified purpose. The NAIC will monitor these market observable values and, in the event the then current values are discontinued or replaced, will recommend an appropriate replacement to the Life Actuarial (A) Task Force.”

have been replaced by the sentence below

When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to LATF which shall be effective upon adoption by Life Actuarial (A) Task Force.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force**

**Amendment Proposal Form**

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   
   Brian Bayerle, ACLI – Interest Rate Swap Spread Determination

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   Interest Rate Swap Spreads are currently being calculated by the NAIC under methodology outlined in the Valuation Manual. This APF changes the methodology for calculation of the 3-month and 6-month swap spreads to use market observable values for Treasury rates and LIBOR, rather than the average of these values from JP Morgan and Bank of America.

   With the forthcoming termination of LIBOR, the requirements of the Valuation Manual will need to change. This APF provides broad guidance allowing for one or more currently unnamed rate to replace LIBOR in these calculations.

   Additionally, this APF allows the company to calculate its own current swap spreads based on market observable values. The spread requirements are currently included in VM-20, with VM-21 referencing the applicable sections. With the potential of VM-22 likely having similar references, LATF may want to consider moving these and other asset requirements to their own section.

Notes: VM APF 2020-06
Options for LATF consideration: Per the 6/11 LATF discussion, in addition to adopting the full text of the APF, regulators wanted to consider not allowing for companies to produce their own current swap spreads. This option would be to retain “prescribed” instead of “calculated”, would strike the paragraph beginning “The company may elect to produce their own current swap curves...”, and would remove the VM-31 Section 3.D.6.v and VM-31 Section 3.F.4.h language.

**VM-20 Section 9.F.8.d**

Interest rate swap spreads over Treasuries shall be prescribed/calculated by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed/calculated for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries, shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When LIBOR is terminated or its use becomes de minimis, the LIBOR rates will be replaced with the most appropriate replacement rates for the specified purpose. The NAIC will monitor these market-observable values and, in the event the then-current values are discontinued or replaced, will recommend an appropriate replacement to the Life Actuarial (A) Task Force. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to LATF which shall be effective upon adoption by LATF.

The company may elect to produce their own current swap spread curves based on current observable rates. The company will document the data source(s) of the observable rates and the methodology of interpolation of non-published rates in the VM-31 report.

**VM-20 Appendix 2.F.1**

**F. Current Benchmark Swap Spreads**

1. For tenors of one-year to thirty-years, extract swap spread data determined as of the last business day of the month by maturity. For Bank of America data, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.

**VM-31 Section 3.D.6.v (additional bullet):**

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads, and the methodology used to determine the non-published tenors.

**VM-31 Section 3.F.4.h (additional bullet):**
v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads, and the methodology used to determine the non-published tenors.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force  
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Brian Bayerle, ACLI

Title of the Issue:
Remove 4% Floor from Life Standard Nonforfeiture Rate.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 NAIC Valuation Manual – VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Upon any possible tax code (IRC, S. 7702) modifications to remove the hardcoded interest rate floor starting in 1/1/2021, the life standard nonforfeiture rate is being updated to ensure the minimum funding under state requirements does not exceed the maximum funding under federal requirements for life insurance contracts issued starting in 1/1/2021.

Notes: VM APF 2020-07
VM-02

Version 1: Remove floor

Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the Valuation Manual shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the Valuation Manual for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the applicable interest rate used prescribed to meet the definition of life insurance in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code 4%. 

Guidance Note: For flexible premium universal life insurance policies as defined in Section 3.D of the Universal Life Insurance Model Regulation (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.

Actuarial Guideline XLIX-A
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements that are linked to an index or indices should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. The policy offers Indexed Credits.
3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum Annual Rate of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum Annual Rate of Indexed Credits for the illustrated scale and the guaranteed Annual Rate of Indexed Credits for that account. However, the Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.

C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. The Hedge Budget used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.

vii. There are no enhancements or similar features that provide additional Indexed Credits in excess of the interest provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

E. Fixed Account: An account where there are no Indexed Credits.
F. **Hedge Budget:** For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

G. **Index Account:** An account where some or all of the amounts credited are Indexed Credits.

H. **Indexed Credits:** Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an account with any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices are included.

I. **Loan Balance:** Any outstanding policy loan and loan interest, as defined in the policy.

J. **Policy Loan Interest Rate:** The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

K. **Policy Loan Interest Credited Rate:** The annualized interest rate credited that applies to the portion of the account value backing the Loan Balance:

   i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate.

   ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.

L. **Supplemental Hedge Budget:** For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. **Illustrated Scale**

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

   i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).

   ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For the Benchmark Index Account the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):

   i. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

   ii. 145% of the Annual Net Investment Earnings Rate.
C. For any other Index Account that is not the Benchmark Index Account in 3 (D), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For the purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the Annual Rate of Indexed Credits before comparing to the earned interest rate underlying the disciplined current scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale for that account, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed the lesser of (i) and (ii):

i. the Annual Net Investment Earnings Rate, plus 45% of the lesser of (1) and (2):

1. Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

ii. the Annual Rate of Indexed Credits plus the Annual Net Investment Earnings Rate minus the Hedge Budget.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a policy with multiple Index Accounts, a maximum rate in 5 (A) should be calculated for each account. All accounts, fixed and indexed, within a policy can be tested in aggregate.

B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.
6. Policy Loans

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.50%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.
Comments for the Center for Economic Justice

To the NAIC Executive Committee and Plenary

Regarding Proposed Revisions to Actuarial Guideline XLIX (“Proposed AG49-A”) for Indexed Universal Life Illustrations

August 5, 2020

The Center for Economic Justice (CEJ) urges the NAIC Executive Committee and Plenary to fix two critical problems with the proposed revisions to Actuarial Guideline 49 forwarded by the Life and Annuities (A) Committee.

1. Protect all consumers by applying the revised AG49 to all new illustrations – whether for new policies or for new illustrations on in-force policies regardless of date of issue – on and after the effective date. This requested change is:

   1. Effective Date

   This Actuarial Guideline shall be effective for all new business and in force illustrations on policies regardless of the date the policy was sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption]

2. Eliminate misleading and deceptive loan arbitrage by prohibiting illustration of crediting rates greater than policy loan rates. This requested change is:

   6. Policy Loans

   If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.0050%.

   It is important to point out that these two issues are not technical issues, but core policy decisions regarding protection of consumers from misleading and deceptive marketing information. And these policy issues received no discussion during the A Committee meeting in which proposed AG49-A was accepted.
CEJ Comments to NAIC Executive Committee and Plenary: Amend Proposed AG49-A
August 5, 2020
Page 2

Background – What is AG49?

AG49 is an actuarial guideline that, once effective, has the force of law in the states. AG49 was originally developed in 2015 to rein in unrealistic and misleading illustrations for indexed universal life (IUL) products. Insurers promptly started to game AG49 with new product designs that avoided the caps on the illustrated credits for the products. These so-called “innovations” – complex product designs requested by no consumers – included “multipliers,” “bonuses,” and “cap buy-ups”. The result was even more unrealistic projected policy value accumulations despite lower crediting rates and much higher policy fees. The proposal before you is an attempt to stop this some of the abuses in IUL illustrations.

Why are the AG49 consumer protections so important?

IUL products are marketed as safe investments that allow policyholders to achieve high returns without the market risk associated with the higher-return, higher-risk investments. Illustrations showing how much the policy value will grow over time are the principal marketing tool and the competition among insurers is to design products – including complex crediting schemes and indexes – that maximize the illustrated accumulation amount.

Consumers purchasing IUL are led to believe that these products will provide income for retirement. In volatile economic times, consumers are particularly susceptible to promises about safe and high returns on investments. Yet, the IUL illustrations are profoundly misleading and set unrealistic expectations for consumers about product performance.

The problems with IUL illustrations have been an ongoing issue and the proposal before you – AG49A – is the latest attempt to rein in the unrealistic and misleading illustrations.

The AG49A proposal fails to protect all current IUL policyholders.

The AG49A proposal before you addresses some of the abuses in IUL illustrations – but only for illustrations on new policies issued on or after the effective date of the guideline. It continues to permit the same unrealistic and misleading illustrations for new illustrations on policies issued before the effective date. As a result, those consumers who were the victims of misleading illustrations will continue to see misleading illustrations and are excluded from the protections in the revised AG49.

The failure to protect current policyholders from ongoing deception is both inexplicable and contrary to your past decisions about AG49. In 2018, you revised AG49 specifically to apply to all new illustrations – for new and existing policies – on and after the effective date.

The purpose of the AG49 revision exercise is to stop unrealistic illustrations and provide consumers with better information and expectations about how the IUL product will operate and perform. Logic dictates that the consumer protections in a revised AG49 should be available to all consumers – whether they are consumers receiving an illustration as part of a new policy purchase or as a new, updated illustration for an in-force policy.
What was the rationale for denying consumers of in-force policies with the new consumer protections? Industry offered two arguments – it would be a “retroactive” change to the policy and it would confuse the consumer. The “retroactive” claim is without merit because application of revised AG49 to new illustrations after the effective date does not change any contract provisions or features. It merely gives the consumer of an in-force policy who gets a new illustration a better illustration – better by definition of the purpose of the revisions to AG49.

Claims about consumer confusion with application to all new illustrations are without any empirical support and given current illustrations, the claims about consumer confusion by getting a more realistic illustration are insulting. It makes no sense to permit insurers to continue with an illustration methodology that regulators have acknowledged as failing to protect consumers. There is absolutely no logic to the argument that because insurers used unrealistic illustrations for a product in the past they should be permitted to continue to use a methodology that perpetuates unrealistic and misleading illustrations.

If this point wasn’t already clear, Mr. Sanders of NAIFA drove it home with his comments that giving a consumer a more realistic new illustration on an in-force policy would erode the producer-client relationship because the client might ask the producer why the illustration has changed and not be satisfied with the answer – perhaps becoming unhappy with the product.

According to Mr. Sanders’ logic, the consumer should continue to get illustrations that are now unrealistic because providing the consumer with more realistic expectations about the performance of the product might reduce the client’s confidence in the producer and that this client is better off not learning that the illustrations they had been receiving were unrealistic until years later when it may be too late to take any action to protect their retirement savings or after the producer has retired. This logic may make sense in the world of insurer or insurance producer trade associations, but it is insane from the perspective of consumer protection.

To ensure all consumers received the protections of proposed AG49-A, the following change is needed.

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies regardless of the date the policy was sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption]
The proposed AG49-A fails to rein in deceptive loan arbitrage.

A fundamental flaw in the life insurance illustration regime is the presentation of account values accumulating at the same amount year after year with no demonstration of the risk or impact of the volatility of returns. If policy loan interest rates can be illustrated at values less than the account crediting rates, the IUL will illustrate like a riskless ATM.

Current AG49 and proposed AG49-A permit policy loans to be illustrated with a policy loan interest rate less than the crediting rate for illustrating account value accumulation. Stated differently, if you illustrate account value credits at 6.5% every year, you can illustrate a policy loan cost at 6%. This is an example of illustrating riskless arbitrage – the consumer can borrow money at one rate and use it earn a higher rate of return without any risk. This is analogous to taking out a mortgage on your home and using that money to invest in the stock market – because the market has averaged returns of, say, 8%, while your mortgage loan rate is 3%. Of course this would be terrible financial advice because the loan cost is fixed – you have to pay the interest regardless of what your investment returns might be and the investment returns are erratic and may be negative in several years.

By being able to illustrate riskless loan arbitrage, IUL illustrations are used to present future loans on the policy as cash disbursements that never need to be paid back because the policy is continuing to earn the constant better-than-loan-interest-rate returns. Does anyone recall the vanishing premium illustration debacle?

By being able to illustrate riskless loan arbitrage, IUL products are sold in connection with premium finance loans, in which a consumer borrows money to buy an IUL policy.

If the NAIC’s stated commitment to ensuring retirement security for consumers is to have any meaning at all, loan arbitrage in AG49 must be eliminated. The following change to proposed AG49-A is needed.

6. Policy Loans

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.0050%.

STATE INSURANCE REGULATORS HAVE FIRST-HAND EXPERIENCE WITH THE DEVASTATING EFFECTS THAT FLOODS HAVE ON THE CONSTITUENTS IN THEIR STATES, AND THEY BELIEVE IT IS CRITICAL THAT FLOOD INSURANCE IS BOTH AVAILABLE AND AFFORDABLE IN ORDER TO ENCOURAGE PURCHASES THAT THEREBY PROTECT HOMES, BUSINESSES AND PERSONAL PROPERTY. ALTHOUGH PRIVATE FLOOD INSURANCE IS BEING WRITTEN LARGELY IN THE COMMERCIAL MARKET, THIS PAPER WILL FOCUS ON THE RESIDENTIAL FLOOD INSURANCE MARKET.

FOR MORE THAN A HALF-CENTURY, THE FEDERAL GOVERNMENT’S NATIONAL FLOOD INSURANCE PROGRAM (NFIP) HAS BEEN THE PRIMARY PLAYER IN THE RESIDENTIAL FLOOD INSURANCE MARKET, UNDERWRITING MOST POLICIES WHILE PRIVATE INSURERS HAVE LARGELY FOCUSED ON A RELATIVELY SMALL RESIDENTIAL SUPPLEMENTAL MARKET. WHILE THE NFIP HAS DONE A LAUDABLE JOB IN MAKING FLOOD INSURANCE AVAILABLE FOR MILLIONS OF RESIDENTIAL PROPERTIES, A SIGNIFICANT FLOOD INSURANCE GAP EXISTS ACROSS THE U.S. WITH FLOOD EVENT AFTER FLOOD EVENT REVEALING A SUBSTANTIAL NUMBER OF DAMAGED PROPERTIES BEING UNINSURED. A FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) ANALYSIS FROM 2018 INDICATES THAT 69% OF AMERICAN HOMES IN HIGH-RISK FLOOD ZONES DO NOT HAVE FLOOD INSURANCE. CONCURRENTLY, THERE HAS BEEN A HEIGHTENED INTEREST AMONGST PRIVATE CARRIERS TO EXPAND THEIR RESIDENTIAL FLOOD INSURANCE OFFERINGS, GREATLY ASSISTED BY THE DEVELOPMENT OF MORE SOPHISTICATED FLOOD MAPPING AND RISK MODELING TECHNOLOGIES.

STATE INSURANCE REGULATORS AND THE NAIC SUPPORT A LONG-TERM NFIP REAUTHORIZATION, AS WELL AS THE FACILITATION OF INCREASED PRIVATE SECTOR INVOLVEMENT IN THE SALE OF FLOOD INSURANCE, WHICH CAN HELP ENSURE THAT CONSUMERS HAVE ACCESS TO MULTIPLE OPTIONS. IN 2016, THE NAIC DEVELOPED THE “NAIC PRINCIPLES FOR NATIONAL FLOOD INSURANCE PROGRAM (NFIP) REAUTHORIZATION” AND HAS TESTIFIED IN CONGRESS ON THE IMPORTANCE OF ENSURING A VIABLE PRIVATE FLOOD INSURANCE MARKET AS AN ALTERNATIVE TO THE NFIP.

© 2020 National Association of Insurance Commissioners
Following from this NAIC action, the purpose of this document is to provide state insurance regulators with concrete actions that can be and/or have been taken to assist with the development of the burgeoning private insurance market for residential flood insurance.
OVERALL STATE OF THE FLOOD INSURANCE MARKET

According to the most recent data collected by the NAIC (Table 1), approximately $644 million of direct premium was written in the private flood insurance market in 2018 throughout the U.S. In 2018, the private flood insurance market represented 15% of the total flood insurance market ($4.2 billion). The private flood insurance market has been growing over the past few years, with the $644 million in direct premium written in 2018 being an increase of 9% from 2017 direct written premiums, and an increase of 71% since 2016. In 2018, California, Florida, Louisiana, New Jersey, New York, Pennsylvania, Puerto Rico and Texas each had $20 million or more of private flood insurance direct written premium (Table 1), with these eight states/jurisdictions representing nearly 60% of the total private flood insurance market.

It is important to note that the NAIC Annual Statement data used in Table 1 and Table 2 does not differentiate between residential private flood insurance premium and commercial private flood insurance premium. The NAIC is exploring data collection via a supplement and/or data call to collect data for residential private flood insurance and commercial private flood insurance separately.

Beyond this aggregate view of premium being written by state, for a relative sense of market penetration and growth of the private flood market, two other views of the NAIC data are presented: 1) private flood as a percentage of total flood written per state in 2018 (Table 1); and 2) private flood growth by state from 2016 to 2018 (Table 2).

</tbody>
</table>

Clearly, this data suggests that there are considerable opportunities for private flood insurance placement and market development. However, it is important to note that in 2018, the majority of growth occurred in the private commercial flood insurance market. The residential private flood insurance market showed a slight decline from 2017.7

As insurers’ familiarity with flood catastrophe models grows, as underwriting experience develops and as state regulatory structures evolve, the number of private flood insurance policies in force could continue to grow, including among admitted carriers. Therefore, it is important to understand what the states have done (or not done) to enhance this growth.

---

STATE ACTION

During the six years of uncertainty regarding the federal banking rules for private flood insurance, a number of states began undertaking efforts to encourage the growth of a private flood insurance market in their state. Florida’s efforts to establish a private flood insurance market have been applauded as a potential model to be used in other states looking to expand their residential private flood insurance offerings. Florida has the largest flood insurance market in the country; approximately 35% of NFIP policies are written there. Florida has enacted legislation to create a statutory framework, allowing private insurers to offer multiple types of flood coverage ranging from standard coverage, which mirrors the NFIP, to other enhanced coverages. This legislation includes: 1) streamlining the rate filing process for private flood insurers; 2) eliminating the diligent search requirement for flood policies issued by surplus lines carriers until July 2019; and 3) providing a process by which the Office of Insurance Regulation (OIR) will certify that a private insurer’s policy equals or exceeds coverage provided by the NFIP. Florida’s OIR issued an informational memorandum providing guidance on how private insurers will need to demonstrate the financial capacity to assume this risk, as well as options for developing private flood rates and policy forms.

In addition to Florida, we can draw upon the existing experiences from other states in developing a robust flood insurance market along the key aspects of insurance regulation.

The NAIC reached out to the states on the drafting group to provide information that was not readily available on the states’ websites, as well as to gather information from other resources, including: 1) the Wharton School of the University of Pennsylvania study *The Emerging Private Residential Flood Insurance Market in the United States*; 2) Government Accountability Office (GAO) reports; and 3) a recently updated Congressional Research Service (CRS) report regarding private flood insurance and the NFIP. In the future, the NAIC might want to consider sending a more detailed questionnaire to the states to gather more information regarding the developing private flood insurance market.

State efforts to grow a viable private flood insurance market include:

**Legislative and Regulatory Changes**
- Supporting private flood insurance legislation.
- Approving private flood insurance products.
- Tailoring rate and form requirements for private flood insurance coverage.
- Allowing private flood insurers to submit rates on an informational basis.
- Removing diligent search requirements.

**Consumer Information**
- Conducting consumer outreach.
- Listing private flood insurance products on a department of insurance’s (DOI) website.
- Collecting residential private flood insurance data.

**Agent and Lender Actions**
- Implementing specific continuing education (CE) requirements for producers.
- Increasing the weighting of flood insurance questions on producer licensing exams.
- Conducting agent education.
- Conducting lender education.

---

LEGISLATIVE AND REGULATORY CHANGES

Supporting Private Flood Insurance Legislation
In addition to Florida's legislation, West Virginia has passed legislation requiring insurers to file their private flood insurance plan of operation with the insurance commissioner and authorizing expedited processing of surplus lines policies for flood insurance.

Approving Private Flood Insurance Products
Personal lines private flood insurance products are being approved by a number of states. Currently, Alabama, California, Mississippi and Pennsylvania are among states approving new personal lines private flood insurance products for entry into the market.

In January 2018, the Insurance Services Office (ISO) developed a new private flood insurance form, for both personal and commercial flood insurance. The ISO forms are similar to a homeowner’s policy form. However, the damage to the property must be caused by flooding. As of March 2018, ISO personal flood insurance forms have been filed in 43 jurisdictions, and commercial flood insurance forms have been filed in 45 jurisdictions. The states with independent rating bureaus are not reflected in these numbers.

TAILORING RATE AND FORM REQUIREMENTS FOR PRIVATE FLOOD INSURANCE COVERAGE

The states might want to consider permitting insurers to file private flood insurance products without a prior approval requirement. For example, Florida law permits private flood insurance rates to be implemented without prior approval at the time of filing. However, insurers are required to keep supporting actuarial data for two years. Furthermore, Florida law allows insurers to request the state to certify that a private policy provides flood coverage that equals or exceeds that offered by NFIP. (See Appendix I for information on Florida’s process.)

Maryland, South Carolina and Pennsylvania have not relaxed the rate and form filing requirements. However, they are committed to an efficient and swift overview of private flood insurance filings, and they will work with insurers to make the filing and approval process as smooth as possible.

EXPORT LIST / WAIVING DILIGENT SEARCH REQUIREMENTS

Insurance generally must be sold in the admitted market. Only after a “diligent search” of the admitted market is performed and coverage is denied can insurance be placed in the surplus lines market. However, states make exceptions for those types of insurance that are known to not be available in the admitted market. These insurance products are listed on what is known as an “Export list.” When a type of insurance is listed on an Export list, the applicant can go straight to the surplus lines market without the need for the diligent search, thereby obtaining coverage more easily and quickly. At least 14 states have placed flood insurance on their “Export list,” including: Alaska, Arizona, Connecticut, Idaho, Louisiana, New Jersey, Oklahoma, Oregon, Pennsylvania, Rhode Island, Texas, Virginia, West Virginia and Wisconsin.

Allowing Private Flood Insurers to Submit Rates on an Informational Basis
Allowing insurers to submit rates on an informational basis in states with prior approval rate filing laws is another way to encourage the growth of the private flood insurance market. Two states that have taken this approach include Florida and New Jersey. (See Appendix I for information on Florida’s process.)
CONSUMER INFORMATION

Consumer Outreach

It is important to understand that everyone lives in a flood zone. Some people live in higher-risk flood zones than others, but we all live in a flood zone.

When people say they live or do not live in a flood zone, they typically mean what is known as a “special flood hazard area”. A “special flood hazard area” is an area within FEMA’s 100-year flood plain. This is where flood insurance is typically mandatory as a condition of obtaining a property loan. But there are flood zones outside of the 100-year flood plain as well. For example, there is also what FEMA classifies as moderate risk flood zones. These are the properties in the 500-year flood plain. By definition, and according to FEMA, these properties have between a 0.2% and a 1% chance of flooding in any given year. That might sound small, but over the course of a 30-year mortgage, these properties, according to FEMA, have between a 6% and 26% chance of being inundated by a flood. And flood insurance is not mandatory as a condition of obtaining a property loan in these moderate-risk flood zones.

Consumers need to understand that their property may still be at risk for flooding even if they do not live in a special flood hazard area and are not required to purchase it. They also need to understand that flood insurance can be relatively inexpensive, especially when the property is not in the highest-risk flood zones. There are options available to them, from both the NFIP and the private flood insurance market. And they can purchase lower limits of coverage; they do not need to insure the full replacement cost of their home if they do not wish to do so. Purchasing just $20,000 of coverage, for example, might go a long way in the event of a flood and may be cheaper to purchase than believed. Further, renters can buy policies that cover only their personal property and not the dwelling that they rent.

There are also many consumers under the misconception that flood damage will be covered by their homeowners insurance policy or rental insurance policy. Therefore, they are unaware of their actual flood risk, and they learn that they are uninsured for this catastrophic peril only after a flood event for which they have no coverage.

State DOIs, as well as the NAIC, are launching consumer outreach programs to help address this coverage gap.

Some states now require a flood disclosure with homeowners policies. For example, Texas recently passed a law requiring a conspicuous disclosure when homeowners policies do not include flood coverage.

The NAIC Communications Department has also launched a flood campaign this year to inform consumers of the importance of purchasing flood insurance, either private flood insurance or flood insurance provided by the NFIP. Additionally, the NAIC recently released a special section of its website dedicated to educating consumers about the risks of flooding and what kinds of coverage options are available to protect against those risks.

Finally, the NAIC’s Transparency and Readability of Consumer Information (C) Working Group has created both a basic flood insurance document and several graphic materials containing flood facts, to be used by DOIs for consumer outreach via social media.

Listing Private Flood Insurance Writers on a DOI Website

While many DOIs include information regarding NFIP policies on their websites, some states, including Florida, Louisiana, New Jersey and Pennsylvania, provide a list of private flood insurance writers and their contact information on their websites.

It is worthwhile to note that surplus lines writers are generally not listed by the line of business they write. However, it has been suggested that there would be value for the states to provide information regarding which surplus lines writers are writing residential private flood insurance. Pennsylvania lists the surplus lines producers placing residential flood insurance on its website.

Collecting Residential Private Flood Insurance Data

Florida and Texas both collect comprehensive data regarding residential private flood insurance. As described previously, the NAIC has been collecting private flood insurance data since the data year 2016. Before that, the private flood insurance line was not a separate entry in the annual statement. While residential and commercial private flood insurance are not separated in the property/casualty (P/C) annual statement blank, the NAIC, through its Property and Casualty Insurance (C) Committee, is considering enhancements to the annual statement that would require insurers to report the residential private flood insurance premiums and commercial private flood insurance premiums independently. The Surplus Lines (C) Task Force is considering similar changes to alien surplus lines private flood insurance data that is reported to the International Insurers Department (IID).

The Wholesale & Specialty Insurance Association (WSIA) is also providing the Reinsurance Association of America (RAA) with data regarding surplus lines insurance. The RAA is working on an open source database that provides information regarding private flood insurance.

These changes would allow state insurance regulators and FEMA to better measure the growth of the private residential flood insurance market.

AGENT AND LENDER ACTIONS

Continuing Education and Producer Licensing Requirements

FEMA requires all insurance producers licensed in property, casualty or personal lines of authority who sell flood insurance through the NFIP to complete a one-time course, as required by the federal Flood Insurance Reform Act of 2004. This is also the only educational requirement in many states.

At least one state has increased the weighting of the flood insurance questions on their producer licensing exam.

Agent Education

Selling flood insurance requires an agent to understand the intricacies of NFIP and private flood insurance policies. When purchasing insurance, many times the insurance agent is the consumer’s first point of contact. Therefore, it would be valuable if an agent could explain the risks of flooding, even if a consumer does not own or rent property in a high-risk flood zone. Recent flood events remind us that where it can rain, it can flood, and many floods occur outside of a high-risk flood zone. If agents help to educate the consumer, it will help eliminate the cost of inaction, as the occurrence of a flood event could be financially unbearable for homeowners or renters if they are not insured or are underinsured. It is critical

for agents to make a special effort to educate homeowners regarding the need for flood insurance, even if a business or home is not located in a high-risk flood zone.

DOIs can provide agents with information that they have learned as a result of a flood event, and they can foster agent education by requiring CE requirements to improve an agent’s knowledge of flood insurance.

Other states’ adoption of such practices would likely improve agents’ knowledge of flood insurance, therefore helping their clients to obtain more effective flood coverage, whether through the NFIP or the private market.

**Lender Education**

A large percentage of Americans have a mortgage on their home. Therefore, lender education is another opportunity for consumer flood insurance education. Recent catastrophic flooding events have illustrated that floods can happen anywhere. Therefore, it may be in the best interest of homeowners to purchase flood insurance even if they do not live in a high-risk flood zone.

While state insurance regulators do not have the authority to regulate lenders, lenders should still be educated regarding the importance of flood insurance. When navigating the loan process, lenders do not always discuss purchasing flood insurance unless the borrower’s home is in a high-risk flood zone. A discussion about purchasing flood insurance even if the homeowner does not live in a high-risk flood zone should ideally be addressed with the borrower.

DOIs can raise awareness regarding flood insurance by bringing agents, consumers, lenders, FEMA, private flood insurance writers, etc. together in communities to discuss the importance of a homeowner purchasing flood insurance.

**MARKET UNCERTAINTY AND THE DEVELOPMENT OF A PRIVATE FLOOD INSURANCE MARKET**

The May 2019 CRS report, “Private Flood Insurance and the National Flood Insurance Program,” identified some of the barriers to the development of a private flood insurance market. Some of the barriers identified in the report include: 1) regulatory uncertainty; and 2) continuous coverage.

Most directly relevant for the NAIC members is the notion of regulatory uncertainty, which is covered below. The remaining topics will be addressed in Appendix II.

In 2016, the U.S. experienced several major flood catastrophes, causing billions of dollars in property losses. Following these storms, it was found that somewhere between 50% and 80% of these losses were not insured, which implies that communities are unable to bounce back quickly following large catastrophic events.

Floods are expected to cost U.S. households $20 billion each year. An Insurance Information Institute (I.I.I.) survey indicated that 15% of American homeowners had a flood insurance policy in 2018 and that there were approximately 5.18 million flood insurance policies held by the NFIP. Milliman estimates the potential private residential flood insurance market to represent between $34 billion and

---

13 Milliman
14 https://www.iii.org/fact-statistic/facts-statistics-flood-insurance
15 https://www.fema.gov/total-policies-force-calendar-year
$48 billion in direct written premium.\textsuperscript{16} This data clearly indicates an opportunity for growth in the residential private flood insurance market in the U.S.

Recently, comments have surfaced regarding the possibility of the residential private flood insurance market cherry-picking their risks. It is important to remember the NFIP was meant to be a temporary solution that was put into place 50 years ago due to private insurers not insuring flood. While the NFIP is important, every state has some type of residual market that aids in insuring and providing insurance coverage for those who are unable to obtain insurance coverage available in the market. While not directly related to flood insurance, two good examples of successful residual markets are Florida Citizens and Louisiana Citizens. As the market has grown and shrunk in both Florida and Louisiana, both Florida Citizens and Louisiana Citizens needed to and provided a safe and reliable source of insurance for consumers. The NFIP can continue to evolve and do the same thing. Milliman believes Risk Rating 2.0 will help the NFIP and provide helpful information regarding the actual risk of a flood insurance policy; however, it was recently announced that the implementation of Risk Rating 2.0 will be delayed until Oct. 1, 2021 to allow for more analysis of its impact.

Milliman is of the opinion that a private market can coexist alongside the NFIP. Private flood insurance can be written in the admitted and non-admitted market. However, it needs to be determined if the guaranty funds will cover flood insurance in the admitted market, as flood may be excluded in many states.

Many private insurers have not serviced or written flood insurance policies. Additionally, private insurers do not have access to historical data; this poses a problem. It will be important to balance the need to protect consumers against the need to promote the private flood insurance market.

New entrants to the private flood insurance market are likely to purchase significant amounts of reinsurance. Flood insurance is inherently high-risk and volatile, so insurers may require higher amounts of profit and contingencies built into rates than for a typical homeowner’s insurance product. States allowing these options might make it easier for an insurer to offer private flood insurance. For example, Wisconsin has no limitations or requirements for reinsurance cost and profit provision assumptions.

The issue of continuous coverage is problematic. In order for an NFIP policyholder to preserve any subsidies provided by the NFIP, a policyholder is required to have continuous flood insurance coverage. Currently, a policyholder loses subsidies or cross-subsidies when private flood insurance is purchased, if the policyholder chooses to return to the NFIP.

Unless there is legislation in place allowing private flood insurance to be deemed as continuous coverage, homeowners may be averse to purchasing private flood insurance. Homeowners do not want to find themselves in a situation causing them to lose their subsidy should they elect to return to the NFIP for flood insurance coverage. While legislation has been introduced in the U.S. House of Representatives allowing private flood insurance to count towards continuous coverage, legislation has yet to be passed.

The availability of private flood insurance provides the added benefit of increasing consumer choice. As private insurers are entering the flood insurance market, some of the policies offered are providing broader coverage than that provided by the NFIP. Additionally, some policyholders are finding private flood insurance policies to be less expensive than those offered by the NFIP.\textsuperscript{17}

\textsuperscript{16} Milliman
\textsuperscript{17} Congressional Research Service report, “Private Flood Insurance and the National Flood Insurance Program, May 7, 2019
SUMMARY

In the past few years, many states have experienced catastrophic flooding. Following the flood events, it has become even more apparent that a significant number of consumers are either uninsured or underinsured for the flood peril.

While the NFIP still writes a majority of the residential flood insurance policies, there are considerable opportunities for the development of the residential private flood insurance market.

This document provides details about how a few states have put procedures in place to enhance the private flood insurance market in a state. These procedures include: 1) supporting private flood insurance legislation and initiatives; 2) tailoring rate and form requirements for residential private flood insurance products; and 3) consumer, agent and lender education.

It is noteworthy to say that the states experiencing large flooding events have seen growth in the private flood insurance market regardless of any other actions. For example, following Hurricane Harvey, Texas saw growth in its residential private flood insurance market. Catastrophic events are a reminder to consumers of the devastation caused by flooding.

While there are several barriers for the residential private flood insurance market, the most significant barrier for private insurers may be uncertainty about the state regulatory environment.

To avoid unintended consequences policymakers interested in facilitating a private flood insurance market should familiarize themselves with the requirements for residential customers with a federally backed mortgage to purchase flood insurance coverage and with the existing private insurance markets that provide coverage for flood damage, including coverage provided under: (a) commercial policies, (b) residential policies providing coverage in excess of required flood insurance coverage limits, (c) residential policies for those not mandated to purchase flood insurance, and (d) comprehensive auto coverages. With such knowledge, legislative and regulatory changes can be tailored to accomplish the policy objectives without adversely impacting existing flood insurance markets.

The attached appendices discuss steps that Florida has taken in its approach to cultivate the private residential flood insurance market and discussion of other barriers to the entrance of residential private flood insurers.
Appendix I — Actions Florida Has Taken

FLORIDA’S FORM FILING PROCESS EXAMPLE
Florida reviews form filings, providing flood coverage differently based on the type of flood coverage being provided.

Subject to the Requirements of Florida’s Flood Statute
The coverage provided under the policy must meet one of the definitions of type of flood coverage, as defined by S. 627.715, F.S. Of the five defined types, "standard," "preferred" and "customized" are defined to meet or exceed the coverage provided by the standard NFIP policy. "Flexible" flood insurance must cover losses from the peril of "flood" as defined by the statute, but it does not have to provide coverage comparable to the entire NFIP policy. "Supplemental" flood coverage is meant to supplement an NFIP or private flood policy. Policies that fall under these definitions may have certain provisions that differ from that which would otherwise be required if not written under the flood statute.

Items Not Subject to the Requirements of Florida’s Flood Statute
The coverage does not have to meet or exceed the coverage provided by the standard NFIP policy. However, the provisions of the flood statute that allow changes to the form and rate requirements, as well as allowing for a certification provided by the Florida OIR, do not apply. This means that forms and rates would be subject to all the requirements of Florida law, and the coverage does not have to meet the definition of "flood" under the statute.

Florida’s private flood insurance statute, S. 627.715 F.S., does not apply to the commercial lines market. Forms providing commercial flood coverage must comply with all applicable Florida laws.

REVIEW OF FLORIDA’S FORM FILING PROCESS
How the Florida OIR Reviews Form Filings Subject to its Flood Statute
The Florida OIR coordinates with FEMA about training to educate forms analysts about the details and nuances of a federal NFIP policy. Forms analysts:

- Review the policy or endorsement and compare it to the NFIP policy.
- Review the provisions of the underlying policy that are not superseded by changes made in the endorsement.
- Make sure that the flood coverage in total (including definitions, deductibles, limits, conditions, property not covered, exclusions, etc.) are as broad as that provided under the NFIP policy.
- Exclude provisions, specific to the NFIP, that would not make sense to be in a private company’s policy.

State Law Conflict
There are certain provisions in the federal private flood definition that may conflict with a state’s law.

For example, the statute of limitations under the standard NFIP policy is one year after the date of denial. In Florida, the statute of limitations for most claims is five years from the date of loss. The insurer could use the standard NFIP provision, or the insurer could use a provision such as one year after the date of denial of a claim or five years from the date of the loss, whichever is greater. The modified provision would be considered as providing better coverage.

Another potential area in which there could be conflict between the standard NFIP policy and state law is the requirement for notice of cancellation. The NFIP requires 45 days, which may be more or less than state provisions.
In Florida, to comply with the flood statute or other than Flexible or Supplement flood insurance, the insurer would have to give at least 45 days notice.

```
The general filing requirement for forms is found in S. 627.410, F.S., which requires the Florida OIR to approve forms before use.

For commercial flood coverage, the insurer has the option to file the forms as informational pursuant to S. 627.4102, F.S.
```

**FLORIDA RATE PROCESS EXAMPLE**

Florida allows insurers to offer personal residential flood insurance coverage that meets the requirements of the flood statute. Insurers may decide to either submit the rate filings subject to the normal filing requirements of review and approval or (until Oct. 1, 2025) submit the filing for informational purposes.

Personal residential flood insurance rates submitted for informational purposes are subject to examination by the Florida OIR for a period of two years from the effective date to determine if the rates are excessive, inadequate or unfairly discriminatory.

If the coverage does not meet the requirements of the “flood statute,” the rate filing is subject to the normal filing requirements of review and approval. Commercial non-residential property rates (including that for flood coverage) are informational due to a separate provision of Florida laws, and they are an exception to these filing requirements.

**FLORIDA FLOOD STATUTE – FLOOD POLICY TYPES**

Florida’s flood statute (S. 627.715, F.S.) sets up five types of flood coverage that may be written using the special deviations allowed for flood insurance.

- Standard flood insurance (equivalent to coverage provided under the standard flood policy under the NFIP).
- Preferred flood insurance.
- Customized flood insurance.
- Flexible flood insurance.
- Supplemental flood insurance.

Flexible and supplemental coverage are the only flood coverage types under the statute that do not require flood insurance coverage to meet or exceed what is provided under the standard NFIP policy. Flexible coverage must provide coverage for the peril of flood as defined by the statute (which mirrors that of the NFIP). However, there are ancillary coverages that are not required to be provided.
APPENDIX II – BARRIERS TO THE RESIDENTIAL PRIVATE FLOOD INSURANCE MARKET

Flood Coverage Being “At Least as Broad as” the NFIP

Biggert-Waters specifies that private flood insurance satisfies the mandatory purchase mortgage requirement when a private flood insurance policy affords coverage that is “at least as broad as” the coverage offered by an NFIP flood insurance policy.18

Since there was not a federal banking rule in place regarding private flood insurance following the passage of Biggert-Waters, it was challenging to implement the use of private flood insurance for the mandatory purchase mortgage requirement. Some lending institutions thought that they did not have the knowledge necessary to assess whether a flood insurance policy met the definition of private flood insurance set forth in Biggert-Waters.

The federal banking rule became effective July 1, 2019. The rule fulfills the condition in Biggert-Waters that regulated lending institutions accept private flood insurance policies satisfying the conditions specified in the Act. Furthermore, the federal banking rule allows lending institutions to accept an insurer’s written assurances stated in a private flood insurance policy that the appropriate criteria is met. The rule also permits lending institutions to accept some flood insurance coverage plans provided by mutual aid societies.

Theoretically, the federal banking rule removes the acceptance of private flood insurance as a barrier to the private flood insurance market. However, educating the banking industry is clearly still needed as state insurance regulators are still hearing that lenders are telling borrowers that the only flood insurance policy that is acceptable is an NFIP flood policy. Thus, further education regarding the federal banking rule needs to be done. States may want to consider drafting a bulletin that can be used for these purposes.

Lenders may accept private flood insurance that meets the “discretionary acceptance” definition, which states that lending institutions may accept private flood insurance policies that do not meet the “mandatory acceptance” requirements, provided that certain conditions are met, such as that the policy provides sufficient protection of the loan, consistent with general safety and soundness principles.19 This distinction may be important for insurers with a product designed with higher-deductible options and/or a shorter cancellation notice for nonpayment of premiums.

Finally, many property owners are not required to purchase flood insurance because their home is outside of a Special Flood Hazard Area (SFHA) or because they do not have a federally backed mortgage. As a result, any flood insurance policy covering such properties is not required to be as broad as the NFIP policy.

Continuous Coverage

If an NFIP policy holder lets an NFIP policy lapse, by either not paying premium or going to a private flood insurer, any subsidy the NFIP policy holder would have received is immediately eliminated.20 Legislation currently being considered by Congress to reauthorize the NFIP includes the ability of policyholders to leave the NFIP in order to purchase a private flood insurance policy and then return to the NFIP without penalty.

---

18 42 U.S.C §4012a(b).
19 Ibid
20 As required by §100205(a)(1)(B) of Biggert-Waters (P.L. 112-141, 126 Stat. 917), only for NFIP policies that lapsed in coverage as a result of the deliberate choice of the policyholder.
Non-Compete Clause
FEMA dropped its non-compete clause in 2018. FEMA now allows Write Your Own (WYO) companies to sell NFIP policies. Therefore, this is no longer a barrier.

NFIP Subsidized Rates
One of the hurdles facing private flood insurance growth involves the NFIP’s subsidized rates, as NFIP premiums do not always reflect the full risk of flooding. NFIP rates allow certain policyholders to have more affordable premiums. Additionally, NFIP rates do not incorporate profit, which is an important element for private flood insurers. Private flood insurers need to charge rates that represent the full risk of the peril.

If the NFIP were to reform its rate structure to collect full-risk rates, it might result in the encouragement of more private insurers to write policies in the private flood insurance market. Full-risk NFIP rates would fall closer to what a private insurer would charge. It is important to note that full-risk rates would likely lead to higher rates than those that currently exist.

Presently, FEMA is in the process of redesigning its rating system. The new NFIP rating system will be known as Risk Rating 2.0. This new rating structure will add replacement cost value and consider the distance between a property and a source of water. Additionally, Risk Rating 2.0 takes into consideration things that are not reflected in the current rating structure, such as intense rainfall. As stated previously it was recently announced that Risk Rating 2.0 will be delayed until Oct. 1, 2021 to allow for more analysis on its impact.

Ability to Assess Flood Risk Accurately
On June 11, 2019, the NFIP released data on flood losses and claims. Prior to the release of this data, insurers viewed the lack of access to NFIP data on flood losses and claims as a barrier for private companies offering flood insurance.

For private flood insurers to manage and diversify their risk exposure, consumer participation to manage and diversify their risk exposure is required. Many private insurers have expressed the view that broader participation in the flood insurance market would be necessary to address adverse selection and maintain a sufficiently large risk pool.

An established goal of the NFIP is to increase the number of flood insurance policies in force. Even though there is a mandatory purchase requirement for homeowners to purchase flood insurance in certain flood zones, this does not always occur.

As more insurers begin to write private flood insurance, it is likely that consumers will be offered more choices. Private flood insurers may also offer coverages not available through the NFIP. These coverages might include coverage such as basement coverage, business interruption, additional living expenses, etc. Private insurers might also be able to offer higher coverage limits than those offered by the NFIP.

Private flood insurance offered as an endorsement to a standard homeowners insurance policy could possibly eliminate instances where it is necessary to differentiate between flood and wind damage.

PROJECT HISTORY

Catastrophe Insurance (C) Working Group’s
Considerations for State Insurance Regulators in Building the Private Flood Insurance Market

1. Description of the project, issues addressed, etc.

The Property and Casualty Insurance (C) Committee referred the charge of writing a document to discuss things state insurance regulators could do to build the private flood insurance market to the Catastrophe Insurance (C) Working Group.

The considerations document is a document the state insurance departments can use to provide state insurance regulators with things their department of insurance (DOI) can do to help build the private flood insurance market in their state. The considerations document provides information regarding state actions that can be taken, including: 1) supporting private flood insurance legislation; 2) approving private flood insurance products; 3) tailoring rate and form requirements for private flood insurance coverage; 4) allowing private flood insurers to submit rates on an informational basis; 5) removing diligent search requirements; 6) conducting consumer outreach; 7) listing private flood insurance products on a DOI website; 8) conducting agent education; 9) implementing specific continuing education (CE) requirements for producers; 9) increasing the weighing of flood insurance questions on producer licensing exams; and 10) conducting agent education.

The considerations document provides detailed information regarding ways in which state DOIs can apply the information listed above to enhance the private flood insurance market in their state. The Catastrophe Insurance (C) Working Group plans to continue building on this document by including information used by additional states as the private flood insurance market grows.

2. Name of group responsible for drafting the model and states participating.

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee was responsible for drafting the considerations document and formed a drafting group to draft the document. Participating states included: Alabama; Connecticut; Florida; Illinois; Louisiana; Mississippi; Missouri; Pennsylvania; Rhode Island; South Carolina; and Texas.

3. Project authorized by what charge and date first given to the group.

The project was authorized by the charges of the Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee to: “Continue to examine ways to help state insurance regulators facilitate the private flood insurance market.”

4. A general description of the drafting process (e.g., drafted by a subgroup, interested parties, the full group, etc.). Include any parties outside the members that participated.

In 2018, the Catastrophe Insurance (C) Working Group began discussing items to be included in a private flood document to aid state insurance regulators regarding helping states enhance and/or develop a private flood insurance market in their states. The Working Group formed a drafting group to work on the document. The drafting group met via conference call on a frequent basis to complete the drafting of the document.

5. A general description of the due process (e.g., exposure periods, public hearings or any other means by which widespread input from industry, consumers and legislators was solicited).

The drafting group of the Catastrophe Insurance (C) Working Group met regularly via conference call, during which the Working Group heard comments and discussed suggested revisions from state insurance regulators. Following the drafting of the document, the document was exposed on July 10, 2019, for a 30-day public comment period. The considerations document was adopted by the Catastrophe Insurance (C) Working Group on Aug. 3, 2019. The considerations document was then adopted by the Property and Casualty Insurance (C) Committee during its Aug. 5, 2019, meeting at the 2019 Summer National Meeting.
6. A discussion of the significant issues (items of some controversy raised during the due process and the group's response).

There were no items of controversy raised during the due process.

7. Any other important information (e.g., amending an accreditation standard).

Not applicable.

W:\National Meetings\2020\Summer\Plenary\Att 6 ConsiderationsofPrivateFlood_Final 2-7-20.pdf
NAIC CONTINUING EDUCATION RECIPROCITY (CER) AGREEMENT - 2019 VERSION
Adopted by the Market Regulation and Consumer Affairs (D) Committee Dec. 9, 2019
Adopted by the Producer Licensing (D) Task Force Dec. 7, 2019

Whereas, the Commissioners find that it is in the best interest of each of their states and insurance producers to simplify the CER course approval process and reduce barriers to non-resident continuing education (CE) providers.

Whereas, the undersigned Insurance Commissioners of the NAIC, hereafter the Commissioners, have determined that it is redundant for each state to perform a substantive review of CE courses or individual instructors that have previously been approved by another state.

Definitions:

Home State: the state in which the CE provider organization maintains his, her or its principal place of residence or principal place of business.

Home State Course Approval: approval of a course that has had a substantive review in a home state.

Reciprocal State: state other than the home state and a party to this CER agreement.

Substantive Review: a thorough review of the course to confirm compliance with the home state’s applicable laws and regulations for the approval of insurance CE. The review includes a determination of whether the:

i. Subject matter meets the criteria for insurance education, to include approvable and non-approvable topic guidelines.

ii. Provider has procedures for reviewing course material in order to keep it up to date and timely.

iii. Course design and instructional strategies are appropriate for the method of delivery.

iv. Credit hours are properly calculated based on the instruction method.

v. Criteria for completing the course meets the standards applicable to the instruction method.

The Commissioners agree as follows:

1. Each state will conduct a substantive review of CE courses submitted for home state approval. When a CE provider has received a home state course approval, a reciprocal state will not conduct a substantive review of that same course as a condition of approval. A CE provider’s home state means the state in which the CE provider organization maintains his, her or its principal place of residence or principal place of business. If the laws or regulations of the home state restrict or limit the minimum or maximum number of credit hours for which a course may be approved for in that state, or restricts certain course topics, the CE provider may elect to recognize another home state in order to obtain a home state course approval.

2. Unless specifically limited by state laws and regulations, a reciprocal state will award a course the same number of credits as approved by the CE provider’s home state.

3. A reciprocal state agrees to approve a course submission within 30 days of receipt, provided that the course is filed using the NAIC Uniform CER Course Filing Form (Appendix A) or an equivalent electronic submission method and contains a home state course approval.

4. Each state will accept the NAIC Uniform CER Course Filing Form (Appendix A), or a substantially similar form, including an equivalent electronic submission method, and the required home state course approval document as the sole requirement for a reciprocal course submission.
5. Each state accepts and will use the following standards for substantive course reviews:
   
   a. For classroom and webinar courses, one credit will be awarded for every 50 minutes of contact instruction.
   
   b. For self-study/online courses, credit will be awarded based on the NAIC’s Recommended Continuing Education Guidelines for Online Courses and Course Guidelines for Classroom Webinar/Webcase Delivery (Appendix B and Appendix C).
   
   c. The minimum number of credits that will be awarded is one credit; no partial credits will be awarded, and there is no maximum number of credits.
   
   d. Credits will only be awarded for courses whose subject matter will increase technical knowledge of insurance principles, coverages, ethics, laws or regulations and will not be awarded for topics such as personal improvement, motivation, time management, supportive office skills or other matters not related to technical insurance knowledge. If any credits are awarded for sales and/or marketing, those credits will be separately noted on the course approval document. Credits for sales and/or marketing will only be awarded in states that are permitted by law or regulation to accept credit for those topics. Additional guidance can be found in the NAIC’s Recommended Approved/Not Approved Course Topics (Appendix D).
   
   e. Each state will use its own method to determine if an instructor is qualified, and no instructor will be approved unless the CE provider has provided sufficient information to demonstrate that the instructor is qualified, according to that state’s laws and regulations, to teach the topics covered in the outline.
   
6. A state’s course approval document or approved course application will include, at a minimum, the following information: course title, credit hours, credit category, method of instruction, and if it is a home state approval.

7. Each state reserves the right to disapprove individual instructors or CE providers who have been the subject of disciplinary proceedings or have otherwise failed to comply with a state’s laws and regulations.

8. Each state agrees that it will notify other states when a CE provider or instructor has been the subject of a formal administrative action or other disciplinary action by that state.

Information Below is for Regulator Use Only

- Approval Date
- Course Number assigned
- Course approval expiration date
- Signature of Home State Regulator/Representative
  - **OR ATTACH** Provider Home State Approval Form
- Signature of Reciprocal State Regulator/Representative
  - **OR ATTACH** Reciprocal State Approval Form

Difficulty (Check): □ Basic □ Intermediate □ Advanced
**INSTRUCTION SHEET**

**NOTE:** This course may NOT be advertised or offered as approved in the state to which application has been made until approval has been received from the insurance department.

1. **If you are a PROVIDER filing for approval from the Home State:**
   1.1 Complete all the fields in the “Provider Information” section except “Reciprocal State” and the adjacent “Provider #” fields.
   1.2 Complete the Course Information Section.
   1.3 In the “Credit Hours Requested and Course/Hours Decision” section, complete the “Hrs. Requested by Provider” columns, detailing in the respective columns the number of hours for sales – and marketing-related instruction and the number of hours for other insurance-related instruction. Please note the following:
      1.3.1 When using this application, which is governed by the NAIC CE Reciprocity Agreement in conjunction with ‘states’ laws, only whole numbers of credit hours will be approved – partial hours will be eliminated.
      1.3.2 States that approve sales/marketing topics will consider the hours in the “sales/Mktg” column and the hours in the “Insurance” column when deciding the number of hours to approve. States that do not permit sales/marketing topics as part of continuing education credit hours will only consider the hours shown in the “Insurance” column when making their credit-hour approval decisions.
      1.3.3 Contact the individual state to determine whether there are any state specific requirements for submitting courses.
   1.4 Submit the application form along with required course materials, a detailed course outline, instructor information, if required, and the required course application fee.

2. **If you are a PROVIDER filing for approval from a Reciprocal State:**
   2.1 Make a sufficient number of photocopies of the Home State approval form to enable you to submit a copy of this application to each of the Reciprocal States where you are seeking credit.
   2.2 On each application, write the Reciprocal State and the provider number assigned to you by that state in the “Reciprocal State” and adjacent “Provider #” fields.
   2.3 Send the CER application, home state approval, if home state issues one, a detailed course outline, and the required fee to the reciprocal state. If this is a National Course *, the Providers will be allowed to submit an agenda that must include date, time, each topic and event location in lieu of a detailed course outline.
   2.4 Subsequent national course offerings should only be reported for events that are conducted in the “home” state.

* **National Course** is defined as an approved program of instruction in insurance related topics, offered by an approved provider, and leads to a national professional designation or is a course offered to individuals who must update their designation once it is earned.

3. **If you are the HOME STATE or designated representative of the Home State:**
   3.1 After reviewing the course materials, complete the “Hrs Approved by Home State” column.
      3.1.1 Multiple types of credit and delivery methods can be approved using one CER Form.
   3.2 Enter the date of approval, course # assigned, course approval expiration date. Sign the CER Form OR attach the home state approval form.
   3.3 If the course is not approved, note it on the bottom of the CER Form.

4. **If you are the RECIPROCAL STATE or designated representative of the Reciprocal State:**
   4.1 After reviewing “Hrs approved by Home State” complete the “Hrs Approved by Reciprocal State”.
      4.1.1 It is unnecessary for each state to perform a substantive review of continuing education courses that have previously been approved by the Home State.
      4.1.2 Reciprocal states cannot award different credits than the home state unless certain aspects are not allowed by state law.
   4.2 Enter the date of approval, course number assigned, course approval expiration date. Sign the CER Form OR attach the reciprocal state approval form.
   4.3 If the course is not approved, note it on the bottom of the CER Form.
   4.4 The reciprocal state agrees to approve the CER submission within 30 days of receipt.

**Substantive Review** – A thorough review of the course to confirm compliance with the home state’s applicable laws and regulations for the approval of insurance continuing education. The review includes a determination whether the:

1. Subject matter meets the criteria for insurance education, to include approvable and non-approvable topic guidelines;
2. Provider has procedures for reviewing course material in order to keep it up to date and timely;
3. Course design and instructional strategies are appropriate for the method of delivery;
4. Credit hours are properly calculated based on instruction method;
5. Criteria for completing the course meets the standards applicable to the instruction method.

* Drafting Note: The instructor information matrix was eliminated in 2018 as this information should be readily available on individual state/jurisdiction websites.
APPENDIX B

Continuing Education Recommended Guidelines for Online Courses
Adopted by NAIC Membership March 2015.

Goal: To deliver functional computer-based internet courses that offer quality insurance and/or risk management material in a password-protected online environment.

Key Components:
- Material that is current, relevant, accurate, and that includes valid reference materials, graphics and interactivity.
- Clearly defined objectives and course completion criteria
- Technical support/provider representative should be available during business hours and response provided within 24 hours of initial contact.
- Instructors/subject matter experts must be available to answer student questions during provider business hours.
- Process to authenticate student identity such as passwords and security prompts.
- Method for measuring the student’s successful completion of course which includes the material, exam and any proctor requirements.
- Process for requesting and receiving CE course-completion certificate and reporting student results to the appropriate regulator.
- Require each agent to enroll for the course before having access to course material.
- Prevent access to the course exam before review of the course materials.
- Prevent downloading of any course exam.
- Provide review questions at the end of each unit/chapter and prevent access to the final exam until each set of questions are answered at a 70% rate.
- Provide final exam questions that do not duplicate unit/chapter questions.
- Prevent alternately accessing course materials and course exams. This does not apply if the state allows for “open book” exams.
- Have monitor affidavit containing specific monitor duties and responsibilities printed for monitor’s use to direct the taking of the final exam. Monitor will complete the affidavit after the exam is completed. (This only for states that require a monitored exam).

Final Assessment (exam) Criteria:
- Minimum of 10 questions for 1 credit hour course with additional 5 questions for each subsequent credit hour and a score of 70% or greater.
- At least enough questions to fashion a minimum of 2 versions with a least 50% of questions being new/different in each subsequent version.
- Inability to print the exam or to view the exam prior to reviewing material.
- Proctor, if required by the state, who verifies identity by photo identification and processes affidavit testifying the student received no outside assistance.

Procedures to determine Appropriate Number of Credit Hours:

Word Count/Difficulty Level:
- Divide total number of words by 180 (documented average reading time) = number of minutes to read material
- Divide number of minutes by 50 = credit hours
- Course difficulty level is identified by the CE provider on the CER form and should be based on the NAIC CE Standardized Terms-Definitions for basic, intermediate and advanced course difficulty levels.
- Multiply number of hours by 1.00 for a basic level course; 1.25 for an intermediate level; 1.50 for an advanced course for additional study time = total number of credit hours (fractional hours rounded up if .50 or above and rounded down if .49 or less).
Interactive Course Content
- Elements included in the online course, in addition to text, such as video, animation, interactive exercises, quizzes, case studies, games, and simulations.
- Interactive elements should be applicable to course material and facilitate student learning.
- Only mandatory interactive elements should be included in the calculation of CE credit hours.
- Calculation of CE hour credits should be based on the run time of the interactive elements.
- CE providers will indicate run time of the interactive elements in the course content and upon request provide access to the state for review of the course.

Professional Designation Course
- Course that is part of a nationally recognized professional designation
- Credit hours equivalent to hours assigned to the same classroom course material

Final Assessment
- Time spent completing the final assessment should not be used in calculation of CE credit hours.

Adopted by the NAIC Membership March 2015
APPENDIX C

COURSE GUIDELINES FOR CLASSROOM WEBINAR/WEBCAST DELIVERY

Adopted by NAIC Membership April 2014.

- These guidelines are intended to apply to courses conducted and viewed in real time (live) in all locations and are not intended to apply when courses have been recorded and are viewed at a later time or to other online courses.

- Each student will be required to log in to the webinar using a distinct username, password and/or email. Students that view webinars in group settings which is two or more individuals should alternatively verify their participation in the form of sign-in and sign-out sheets submitted by a monitor with an attestation or verification code.

- The provider will verify the identity and license number, or National Producer Number (NPN), of all students.

- A provider representative, using computer-based attendance-monitoring technology, must monitor attendance throughout the course.

- The provider must have a process to determine when a participant is inactive or not fully participating, such as when the screen is minimized, or the participant does not answer the polling questions and/or verification codes.

- For webinars not given in a group setting, no less than two polling questions and/or attendance verification codes must be asked, with appropriate response provided, at unannounced intervals during each one-hour webinar session to determine participant attentiveness.

- The provider will maintain an electronic roster to include records for each participant’s log-in/log-out times. If required by states chat history and polling responses should be captured as part of the electronic record.

- When a student is deemed inactive or not fully participating in the course by the course monitor of failure to enter appropriate polling question response or verification codes, continuing education (CE) credit is denied.

- All students and the instructor do not need to be in the same location.

- Students in all locations must be able to interact in real time with the instructor. Students should be able to submit questions or comments at any point during the webinar session.

- The course pace must be set by the instructor and does not allow for independent completion.

- Instruction time is considered the amount of time devoted to the actual course instruction and does not include breaks, lunch, dinner or introductions of speakers.

- One credit will be awarded for each 50 minutes of webinar/webcast instruction, and the minimum number of credits that will be awarded for webinar/webcast courses is one credit.

- The provider must have a procedure that informs each student in advance of course participation requirements and consequences for failing to actively participate in the course.

- A comprehensive final examination is not required.
APPENDIX D

RECOMMENDED APPROVED/NOT APPROVED TOPICS FOR CE CREDIT

Adopted by NAIC Membership August 2018.

Approved Topics

1. Actuarial mathematics, statistics and probability – in relation to insurance
2. Assigned risk – in relation to insurance
3. Claims adjusting
4. Courses leading to and maintaining insurance designations
5. Employee benefit plans – in relation to insurance
6. Errors and omissions – in relation to insurance
7. Estate planning/taxation – in relation to insurance
8. Ethics
9. Fundamentals/principles of insurance (including but not limited to: annuities, crop and hail, life, accident and health, property/casualty [P/C], etc.)
10. Insurance accounting/actuarial considerations
11. Insurance contract/policy comparison and analysis
12. Insurance fraud
13. Insurance laws, rules, regulations and regulatory updates
14. Insurance policy provisions
15. Insurance product-specific knowledge
16. Insurance rating/underwriting/claims
17. Insurance tax laws
18. Legal principles – in relation to insurance
19. Long-term care/partnership
20. Loss prevention, control and mitigation – in relation to insurance
21. Managed care
22. Principles of risk management – in relation to insurance
23. Proper uses of insurance products
24. Real Estate Settlement Procedures Act (RESPA) – in relation to insurance
25. Restoration – addresses claims, loss control issues and mitigation – in relation to insurance
26. Retirement planning – in relation to insurance
27. Securities – in relation to insurance
28. Suitability in insurance products
29. Surety bail bond
30. Underwriting principles – in relation to insurance
31. Viaticals/life settlements – in relation to insurance

Other topics approved that contribute substantive knowledge relating to the field of insurance and expands competence of the licensee.
RECOMMENDED APPROVED/NOT APPROVED TOPICS FOR CE CREDIT

Adopted by NaIC Membership August 2018.

Not Approved Topics

1. Automation
2. Clerical functions
3. Computer science
4. Computer training/skills or software presentations
5. Courses on investments – stocks, bonds, mutual funds, Financial Industry Regulatory Authority (FINRA)/U.S. Securities and Exchange Commission (SEC) compliance (National Association of Securities Dealers [NASD]/SEC), etc.
6. Courses that are primarily intended to impart knowledge of specific products of specific insurers
7. Customer service
8. General management training
9. Goal-setting
10. Health/stress/exercise management
11. Marketing/telemarketing
12. Motivational training
13. Company and vendor-specific product launches
14. Office skills or equipment or procedures
15. Organizational procedures and internal policies of an individual insurer
16. Personal improvement
17. Prospecting
18. Psychology
19. Relationship building
20. Restoration – promoting products or services
21. Sales training
22. Service standards or service vendors
23. Time management

Other topics or courses not related to insurance knowledge or competence of the licensee.

W:\National Meetings\2020\Summer\Plenary\Att 7 2019 CER Agreement Adopted 12.9.19.pdf
(Traditional insurers) Nov. 15, 2019 referral adopted by the Financial Regulation Standards and Accreditation (F) Committee – Dec. 7, 2019

(Risk retention groups) In addition, the March 3, 2020 referral also attached will be considered for adoption by the Financial Regulation Standards and Accreditation (F) Committee on August 12, 2020. This referral clarifies that the model provisions in the Nov. 15 referral also apply to risk retention groups. It is recommended, for clarity purposes, the Executive (EX) Committee and Plenary consider adoption of both referrals at the same time.

MEMORANDUM

To: Financial Regulation Standards and Accreditation (F) Committee

From: Reinsurance (E) Task Force

Date: November 15, 2019

Re: 2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786)

Executive Summary

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). These revisions were intended to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. The Covered Agreement would eliminate reinsurance collateral and local presence requirements for European Union (EU) reinsurers that maintain a minimum amount of own funds equivalent to $250 million and a solvency capital requirement (SCR) of 100% under Solvency II. Conversely, U.S. reinsurers that maintain capital and surplus equivalent to 226 million euros with a risk-based capital (RBC) of 300% of authorized control level would not be required to maintain a local presence in order to do business in the EU or post collateral in any EU jurisdiction. On Dec. 18, 2018, a similar Covered Agreement was signed with the United Kingdom (UK). In addition, the 2019 revisions extend similar treatment to Qualified Jurisdictions and accredited NAIC jurisdictions.

At the 2019 Summer National Meeting, Director Chlora Lindley-Myers (MO), Chair of the NAIC Reinsurance (E) Task Force, made the following recommendation to the Financial Regulation Standards and Accreditation (F) Committee: 1) the Committee recognize that states may begin adoption of provisions that are substantially similar to the 2019 revisions to Model #785 and Model #786 and remain in compliance with the Reinsurance Ceded accreditation standard; 2) the accreditation standard be modified in accordance with the normal processes and procedures outlined in the Accreditation Program Manual, and that the Task Force and Financial Condition (E) Committee prepare a formal recommendation to the Financial Regulation Standards and Accreditation (F) Committee for consideration at the 2020 Spring National Meeting; and 3) in the interim, states should be
encouraged to adopt the 2019 revisions in the form adopted by Plenary within the 60-month timeframe set forth in the Covered Agreement to best avoid potential federal preemption. Committee Chair Commissioner Todd E. Kiser (UT) asked if there were any objections to the approach proposed in the referral from the Reinsurance (E) Task Force, and none were noted.

At its meeting on October 22, the Reinsurance (E) Task Force agreed to submit the following new recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. The 2019 revisions to Model #785 and Model #786 should be adopted as a new accreditation standard by the NAIC, Reciprocal Jurisdictions, with significant elements as outlined in Appendix A.

2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver of procedure as provided for in the Accreditation Program Manual and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Oct. 1, 2022, the end of the 60-month period when federal preemption determinations must be completed, with enforcement of the standard to commence Jan. 1, 2023. [Note: after the Oct. 22 conference call, NAIC staff had conversations with representatives of the Federal Insurance Office (FIO), in which they advised NAIC staff that in their opinion the end of the 60-month period when federal preemption determinations must be completed is Sept. 1, 2022].

A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The current Reinsurance Ceded accreditation standard requires that state law shall contain the significant elements from Model #785 and Model #786. The models serve to provide regulators with an effective method of monitoring the reinsurance activities of U.S. companies. U.S. primary insurance companies may be given reinsurance credit on their statutory financial statements for insurance risk they transfer via reinsurance that meets the legal and accounting risk transfer requirements and other relevant laws. Both the 2011 revisions to the credit for reinsurance models, which served to reduce reinsurance collateral requirements for certified reinsurers domiciled in qualified jurisdictions, and the 2019 revisions with respect to Reciprocal Jurisdictions, address the reinsurance collateral requirements necessary for U.S. ceding companies to take credit for certain reinsurance transactions.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The Dodd-Frank Wall Street Reform and Consumer Protection Act provides that a state insurance measure shall be preempted to the extent that the Director of FIO “determines” that the measure is inconsistent with the covered agreement and results in less favorable treatment of a non-U.S. insurer domiciled in a foreign jurisdiction that is subject to a “covered agreement” than a U.S. insurer domiciled, licensed or otherwise admitted in that state. A “covered agreement” under Dodd-Frank is an agreement entered into between the U.S. and foreign government(s) on prudential measures with respect to the business of insurance or reinsurance that achieves a level of protection for consumers that is “substantially equivalent” to the level of protection under state law. The revisions to Model #785 and #786 are considered by the Reinsurance (E) Task Force to be consistent with the requirements of the Covered Agreements entered into with the EU and UK.

Article 9(4) of the Covered Agreements provide, as follows with respect to Implementation of the Agreement:

4. Provided that this Agreement has entered into force, on a date no later than the first day of the month, 42 months after the date of signature of this Agreement [22 September 2017], the United States shall begin evaluating a potential preemption determination under its laws and regulations with respect to any U.S. State insurance measure that the United States determines is inconsistent with this Agreement and results in less favourable treatment of an EU insurer or reinsurer than a U.S. insurer or reinsurer domiciled, licensed, or otherwise admitted in that U.S. State. Provided that this Agreement has entered into force, on a date no later than the first day of the month 60 months after the date of
signature of this Agreement [22 September 2017], the United States shall complete any necessary preemption determination under its laws and regulations with respect to any U.S. State insurance measure subject to such evaluation. For the purposes of this paragraph, the United States shall prioritise those States with the highest volume of gross ceded reinsurance for purposes of potential preemption determinations. [Emphasis added].

To summarize, FIO may begin evaluating potential preemption “determinations” 42 months after the signature of the Covered Agreement, or March 1, 2021. FIO must complete any necessary preemption determinations 60 months after signature, which they believe to be Sept. 1, 2022. In order to avoid potential federal preemption determinations by the FIO Director, each state should adopt the 2019 revisions to Model #785 and Model #786 in a timely manner.

A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:

The pre-2011 versions of Model #785 and Model #786 are currently part of the Reinsurance Ceded accreditation standard, and the significant elements have been adopted in substantially similar form by all NAIC-accredited jurisdictions. The 2011 revisions to these models implemented reinsurance collateral reduction for Reinsurance Ceded to Certified Reinsurers domiciled in qualified jurisdictions. At the current time, all NAIC accredited jurisdictions have adopted the 2011 revisions to Model #785, and only 5 jurisdictions have not adopted the 2011 revisions to Model #786, which became part of the accreditation standard effective January 1, 2019.

We are not currently aware of any states that have adopted the 2019 revisions to Model #785 and Model #786, although we have been advised that many states have begun their legislative processes for adoption of these revisions. We are not aware of any negative impact to any jurisdiction or its domiciliary ceding insurers that has adopted these revisions, which are similar in function and format to the Reciprocal Jurisdiction requirements of the 2019 revisions.

A statement as to the provisions needed to meet the minimum requirements of the standard. That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:

The current accreditation standard for Model #785 and Model #786 requires state adoption on a substantially similar basis. In addition, the Covered Agreements themselves and the Dodd-Frank Act require that the United States cannot impose reinsurance collateral or local presence requirements that result in less favorable treatment for EU or UK reinsurers, and further that any state insurance measures cannot be inconsistent with the Covered Agreements. Therefore, the Reinsurance (E) Task Force recommends that the attached proposed significant elements for Reciprocal Jurisdictions (Appendix A) be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. Note: While the Task Force is recommending that the Committee adopt a “substantially similar” standard for accreditation purposes, it should be noted that Dodd-Frank requires the state insurance measure to be “consistent” with the Covered Agreement in order to avoid federal preemption, which may be interpreted as a higher standard. It is the recommendation of the Task Force that states adopt the 2019 revisions in close to identical form to the models in order to best avoid the possibility of federal preemption.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to the 2019 revisions to Model #785 and Model #786, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable.
31 U.S.C. §313(f) provides the process for making a “determination” in this context:

(2) Determination.—

(A) Notice of potential inconsistency.—Before making any determination under paragraph (1), the Director shall—

(i) notify and consult with the appropriate State regarding any potential inconsistency or preemption;

(ii) notify and consult with the United States Trade Representative regarding any potential inconsistency or preemption;

(iii) cause to be published in the Federal Register notice of the issue regarding the potential inconsistency or preemption, including a description of each State insurance measure at issue and any applicable covered agreement;

(iv) provide interested parties a reasonable opportunity to submit written comments to the Office; and

(v) consider any comments received.

***

(C) Notice of determination of inconsistency.—Upon making any determination under paragraph (1), the Director shall—

(i) notify the appropriate State of the determination and the extent of the inconsistency;

(ii) establish a reasonable period of time, which shall not be less than 30 days, before the determination shall become effective; and

(iii) notify the Committees on Financial Services and Ways and Means of the House of Representatives and the Committees on Banking, Housing, and Urban Affairs and Finance of the Senate.

(3) Notice of effectiveness.—Upon the conclusion of the period referred to in paragraph (2)(C)(ii), if the basis for such determination still exists, the determination shall become effective and the Director shall—

(A) cause to be published a notice in the Federal Register that the preemption has become effective, as well as the effective date; and

(B) notify the appropriate State.
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) and the NAIC Life and Health Reinsurance Agreements Model Regulation (#791) or substantially similar laws.

### Credit for Reinsurance Model Law (#785)

**a.** Credit allowed for reinsurance ceded to a licensed insurer?

**b.** Credit allowed for reinsurance ceded to an accredited insurer who meets requirements similar to those in Section 2B and 2I of the model law?

**c.** Credit allowed for reinsurance ceded to an insurer domiciled and licensed in a state which employs substantially similar standards regarding credit for reinsurance and who maintains capital and surplus of at least $20,000,000 and submits to this state’s authority to examine its books and records?

**d.** Credit allowed for reinsurance ceded to an insurer who maintains a trust fund, established in a form approved by the commissioner, in a qualified U.S. financial institution for the payment of the valid claims of its U.S. policyholders and ceding insurers, their assigns and successors in interest and who reports financial information annually to the commissioner to determine the sufficiency of the trust fund?

**e.** In instances where reinsurance is ceded to insurers maintaining a trust fund, trustees of the trust required to report to the department annually, on or before February 28, the balance of the trust and a listing of the trust’s assets as of the end of the year and a certification of the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the next following December 31?

**f.** Credit for reinsurance allowed under c. or d. above only permitted where assuming insurer agrees in the reinsurance agreements: 1) that in the event of a failure of the assuming insurer to perform its obligations, the assuming insurer shall submit to the jurisdiction of any court of competent jurisdiction in any state of the U.S.; and 2) to designate the commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process instituted by or on behalf of the ceding company?
g. Credit allowed for reinsurance ceded to an insurer not meeting the requirements of a., b., c., or d. above, or with respect to a certified reinsurer described below, in an amount not exceeding the liabilities carried by the ceding insurer and only in the amount of funds held by or on behalf of the ceding insurer in the form of cash, securities listed by the Securities Valuation Office of the NAIC, including those deemed exempt from filing as defined by the Purposes and Procedures Manual of the Securities Valuation Office, and qualifying as admitted assets, clean, irrevocable, unconditional letters of credit, and other forms of security acceptable to the commissioner?

h. Ceding insurers must be subject to notification requirements with respect to reinsurance concentration risk substantially similar to those in Section 2J2K of Model #785.

**Life and Health Reinsurance Agreements Model Regulation (#791)**

i. Scope similar to Section 3?

j. No insurer, for reinsurance ceded establishes any asset or reduces any liability due to the terms of the reinsurance agreement, in substance or effect if any of the conditions in Section 4A exist?

k. Agreements entered into after the effective date of this regulation which involve the reinsurance of business issued prior to the effective date of agreements, along with subsequent amendments shall be filed by the ceding company with the commissioner within 30 days from the execution date along with attachments noted in Section 4C(1)?

l. Any increase in surplus net of federal income tax resulting from arrangements described in Section 4C(1) to be reported as described in Section 4C(2)?

m. Written agreements with provisions similar to Section 5?

n. Insurers required to reduce to zero any reserve credits or assets established with respect to existing reinsurance agreements entered into prior to the effective date of this regulation which would not be recognized under the provisions of this regulation?

**Credit for Reinsurance Model Regulation (#786)**

o. Credit for reinsurance allowed for reinsurance ceded by domestic insurers to assuming insurers that were licensed in the state as of the last date of the ceding insurers’ statutory financial statement?

p. Credit for reinsurance provisions for accredited reinsurer similar to Section 5?

q. Credit for reinsurance provisions for reinsurers licensed and domiciled in other states similar to Section 6?
r. Credit for reinsurance provisions for reinsurers maintaining trust funds similar to Section 7?

s. Credit for reinsurance required by law similar to Section 9?

t. Reduction from liability for reinsurance ceded to an unauthorized assuming insurer similar to Section 10?

u. Provisions for trust agreements similar to Section 11?

v. Provisions for letters of credit similar to Section 12?

w. Provisions for unencumbered funds similar to Section 13?

x. Provisions for reinsurance contracts similar to Section 14?

y. The adoption of Form AR-1—Certificate of Assuming Insurer.

Reinsurance Ceded to Certified Reinsurers

z. A state’s laws and regulations shall allow credit for reinsurance ceded to a certified reinsurer, including affiliated reinsurance transactions. Its laws and regulations shall contain provisions that are substantially similar to those applicable to certified reinsurers contained in Section 2E of Model #785 and Section 8 of Model #786.

i. The credit allowed is based upon the security held by or on behalf of the ceding insurer in accordance with the rating assigned to the certified reinsurer by the commissioner? The amount of security required in order for full credit to be allowed shall not be less than that required under Section 8A(1) of Model #786.

ii. The security provided by the certified reinsurer is in a form consistent with the provisions of Section 2E(5) of Model #785 and Section 8A of Model #786?

iii. The commissioner requires the certified reinsurer to post 100% security upon the entry of an order of rehabilitation, liquidation or conservation against the ceding insurer?

iv. A state’s laws or regulations shall include provisions for granting a certified reinsurer a deferral period for posting security applicable to catastrophe recoverables, substantially similar to Section 8A(4) of Model #786. The deferral period shall not exceed one year from the date of the first instance of a liability reserve entry by the ceding company as a result of a loss from a catastrophic occurrence as recognized by the commissioner, and shall not apply to lines of business other than those provided in Section 8A(4) of Model #786.
v. Credit for reinsurance ceded to a certified reinsurer shall apply only to reinsurance contracts meeting requirements substantially similar to Section 8A(5) of Model #786?

aa. In order to be a certified reinsurer, an assuming insurer must be certified by the commissioner in accordance with the process similar to Section 8B of Model #786?

i. The commissioner is required to post notice upon receipt of any application for certification substantially similar to the requirements of Section 8B(1) of Model #786?

ii. The commissioner is required to publish a list of all certified reinsurers and their ratings substantially similar to the requirements in Section 2E(4) of Model #785 and Section 8B(2) of Model #786?

iii. A certified reinsurer must be domiciled and licensed to transact insurance or reinsurance in a qualified jurisdiction, as determined by the commissioner?

iv. A certified reinsurer must maintain capital and surplus, or its equivalent, of no less than $250,000,000, calculated in accordance with Section 8B(4)(h) of Model #786? This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

v. A certified reinsurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner, and the maximum rating that a certified reinsurer may be assigned will correspond to its financial strength rating as set forth in Section 8B(4)(a) of Model #786? These ratings must be based on interactive communication between the rating agency and the assuming insurer and not based solely on publicly available information.

vi. A certified reinsurer is rated by the commissioner on a legal entity basis, with consideration given to the group rating where appropriate (an association including incorporated and individual unincorporated underwriters that have been approved to do business as a single certified reinsurer may be evaluated on the basis of its group rating)? Factors may be considered in the evaluation process similar to those provided under Section 8B(4) and (5) of Model #786.
vii. A certified reinsurer must submit a properly executed Form CR-1 as evidence of its submission to the jurisdiction of the state, appointment of the commissioner as an agent for service of process in the state, and agreement to provide security for one hundred percent (100%) of its liabilities attributable to reinsurance ceded by ceding insurers if it resists enforcement of a final U.S. judgment? The commissioner must not certify any assuming insurer that is domiciled in a jurisdiction that the commissioner has determined does not adequately and promptly enforce final U.S. judgments or arbitration awards.

viii. A certified reinsurer must agree to meet applicable information filing requirements substantially similar to those provided under Section 8B(7) of Model #786, both with respect to an initial application for certification and on an ongoing basis?

ix. Changes in rating or revocation of certification of a certified reinsurer are applied by the commissioner in a manner substantially similar to the provisions of Section 2I2J of Model #785 and Section 8B(8) of Model #786?

x. A certified reinsurer must file audited financial statements, regulatory filings and actuarial opinion (as filed with the certified reinsurer’s supervisor, with a translation into English) consistent with the requirements set forth in Section 8B(4)(h) and Section 8B(7)(d) of Model #786? Upon the initial application for certification, the commissioner will consider audited financial statements for the last two (2) years filed with its non-U.S. jurisdiction supervisor?

bb. The commissioner is required to create and publish a list of qualified jurisdictions, under which an assuming insurer licensed and domiciled in such jurisdiction is eligible to be considered for certification by the commissioner as a certified reinsurer?

i. In determining whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the commissioner evaluates the reinsurance supervisory system of the non-U.S. jurisdiction, both initially and on an ongoing basis, under criteria substantially similar to those provided under Section 8C(2) of the model regulation?

ii. The commissioner shall consider the list of qualified jurisdictions published by the NAIC in determining qualified jurisdictions? If the commissioner approves a jurisdiction as qualified that does not appear on the NAIC list of qualified jurisdictions, the commissioner must provide thoroughly documented justification with respect to criteria substantially similar to that provided under Section 8C(2) of Model #786.

iii. U.S. jurisdictions that meet the requirements for accreditation under the NAIC financial standards and accreditation program are recognized as qualified jurisdictions?
cc. A state’s laws and regulations shall allow a commissioner to defer to the certification and rating of a certified reinsurer issued by another NAIC accredited jurisdiction. Recognition of certification is made in accordance with provisions substantially similar to Section 8D of Model #786.

dd. Reinsurance contracts entered into or renewed with a certified reinsurer must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurer for reinsurance ceded to the certified reinsurer.

Reciprocal Jurisdictions

ee. A state’s laws and regulations shall allow credit for reinsurance ceded to an assuming insurer that has its head office or is domiciled in, and is licensed in, a Reciprocal Jurisdiction. Its laws and regulations shall contain provisions that are substantially similar to those contained in Section 2F of Model #785 and Section 9 of Model #786. Its laws and regulations must provide that a Reciprocal Jurisdiction is a jurisdiction that meets one of the following:

i. A non-U.S. jurisdiction that is subject to an in-force covered agreement meeting the requirements of Section 2F(1)(a)(i) of Model #785 and Section 9B(1) of Model #786.

ii. A U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program pursuant to Section 2F(1)(a)(ii) of Model #785 and Section 9B(2) of Model #786.

iii. A Qualified Jurisdiction that meets all of the requirements of Section 2F(1)(a)(iii) of Model #785 and Section 9B(3) of Model #786.

ff. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction, and which meets each of the conditions set forth in Section 2F(1)(b) – (g) of Model #785 and Section 9C of Model #786.
i. The assuming insurer must have and maintain on an ongoing basis minimum capital and surplus, or its equivalent, calculated on at least an annual basis as of the preceding December 31 or at the annual date otherwise statutorily reported to the Reciprocal Jurisdiction of no less than $250,000,000 similar to Section 2F(1)(b) of Model #785 and Section 9C(2) of Model #786. This minimum capital and surplus requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) or own funds of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

ii. The assuming insurer must have and maintain on an ongoing basis a minimum solvency or capital ratio, as applicable, as set forth in Section 2F(1)(c) of Model #785 and Section 9C(3) of Model #786.

iii. The assuming insurer must submit a properly executed Form RJ-1 consistent with Section 2F(1)(d) of Model #785 and Section 9C(4) of Model #786:

   - The assuming insurer must agree to provide prompt written notice and explanation to the commissioner if it falls below the minimum requirements set forth in this subsection, or if any regulatory action is taken against it for serious noncompliance with applicable law pursuant to Section 2F(1)(d)(i) of Model #785 and Section 9C(4)(a) of Model #786.

   - The assuming insurer must consent in writing to the jurisdiction of the courts of this state and to the appointment of the commissioner as agent for service of process pursuant to Section 2F(1)(d)(ii) of Model #785 and Section 9C(4)(b) of Model #786. The commissioner may also require that such consent be provided and included in each reinsurance agreement under the commissioner’s jurisdiction.

   - The assuming insurer must consent in writing to pay all final judgments, wherever enforcement is sought, obtained by a ceding insurer, that have been declared enforceable in the territory where the judgment was obtained pursuant to Section 2F(1)(d)(iii) of Model #785 and Section 9C(4)(c) of Model #786.
• Each reinsurance agreement must include a provision requiring the assuming insurer to provide security in an amount equal to one hundred percent (100%) of the assuming insurer’s liabilities attributable to reinsurance ceded pursuant to that agreement if the assuming insurer resists enforcement of a final judgment that is enforceable under the law of the jurisdiction in which it was obtained or a properly enforceable arbitration award, whether obtained by the ceding insurer or by its legal successor on behalf of its estate, if applicable pursuant to Section 2F(1)(d)(iv) of Model #785 and Section 9C(4)(d) of Model #786?

• The assuming insurer must confirm that it is not presently participating in any solvent scheme of arrangement, which involves this state’s ceding insurers, and agrees to notify the ceding insurer and the commissioner and to provide one hundred percent (100%) security to the ceding insurer consistent with the terms of the scheme, should the assuming insurer enter into such a solvent scheme of arrangement pursuant to Section 2F(1)(d)(v) of Model #785 and Section 9C(4)(e) of Model #786?

• The assuming insurer must agree in writing to meet the applicable information filing requirements pursuant to Section 9C(4)(f) of Model #786?

iv. The assuming insurer or its legal successor must provide, if requested by the commissioner, on behalf of itself and any legal predecessors, the documentation to the commissioner as outlined in Section 2F(1)(e) of Model #785 and Section 9C(5) of Model #786:

• For the two years preceding entry into the reinsurance agreement and on an annual basis thereafter, the assuming insurer’s annual audited financial statements, in accordance with the applicable law of the jurisdiction of its head office or domiciliary jurisdiction, as applicable, including the external audit report pursuant to Section 9C(5)(a) of Model #786?

• For the two years preceding entry into the reinsurance agreement, the solvency and financial condition report or actuarial opinion, if filed with the assuming insurer’s supervisor pursuant to Section 9C(5)(b) of Model #786?

• Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, an updated list of all disputed and overdue reinsurance claims outstanding for 90 days or more, regarding reinsurance assumed from ceding insurers domiciled in the United States pursuant to Section 9C(5)(c) of Model #786?
Prior to entry into the reinsurance agreement and not more than semi-annually thereafter, information regarding the assuming insurer’s assumed reinsurance by ceding insurer, ceded reinsurance by the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer pursuant to Section 9C(5)(d) of Model #786?

v. The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements consistent with Section 2F(1)(f) of Model #785 and Section 9C(6) of Model #786?

vi. The assuming insurer’s supervisory authority must confirm to the commissioner on an annual basis that the assuming insurer complies with the minimum capital and surplus requirements and the minimum solvency or capital ratio requirements as required under Section 2F(1)(g) of Model #785 and Section 9C(7) of Model #786?

gg. The commissioner is required to timely create and publish a list of Reciprocal Jurisdictions similar to Section 2F(2) of Model #786 and Section 9D of Model #786?

i. If the commissioner approves a jurisdiction that does not appear on the NAIC list of Reciprocal Jurisdictions, the commissioner must provide thoroughly documented justification in accordance with criteria published through the NAIC Committee Process pursuant to Section 2F(2)(a) of Model #785 and Section 9D(1) of Model #786?

ii. The commissioner may remove a jurisdiction from the list of Reciprocal Jurisdictions upon a determination that the jurisdiction no longer meets one or more of the requirements of a Reciprocal Jurisdiction pursuant to Section 2F(2)(b) of Model #785 and Section 9D(2) of Model #786, except that the commissioner shall not remove from the list a Reciprocal Jurisdiction as defined under Section 9B(1) and (2) of Model #786?

hh. The commissioner shall timely create and publish a list of assuming insurers to which cessions shall be granted credit consistent with Section 2F(3) of Model #785 and Section 9E of Model #786? Such assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require.

i. If an NAIC accredited jurisdiction has determined that the conditions set forth in Section 2F of Model #785 and Section 9 of Model #786 have been met, the commissioner has the discretion to defer to that jurisdiction’s determination and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit in accordance pursuant to Section 2F(3) of Model #785 and Section 9E(1) of Model #786? The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC with respect to such reinsurer.
ii. When requesting that the commissioner defer to another NAIC accredited jurisdiction’s determination, an assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require pursuant to Section 9E(2) of Model #786?

ii. If the commissioner determines that an assuming insurer no longer meets one or more of the requirements set forth in Section 2F of Model #786 and Section 9 of Model #786, the commissioner may revoke or suspend the eligibility of the assuming insurer consistent with Section 2F(4) of Model #785 and Section 9F of Model #786?

i. While an assuming insurer’s eligibility is suspended, no reinsurance agreement issued, amended or renewed after the effective date of the suspension qualifies for credit except to the extent that the assuming insurer’s obligations under the contract are otherwise secured pursuant to Section 2F(4)(a) of Model #785 and Section 9F(1) of Model #786?

ii. If an assuming insurer’s eligibility is revoked, no credit for reinsurance may be granted after the effective date of the revocation with respect to any reinsurance agreements entered into by the assuming insurer, including reinsurance agreements entered into prior to the date of revocation, except to the extent that the assuming insurer’s obligations under the contract are otherwise secured in a form acceptable to the commissioner pursuant to Section 2F(4)(b) of Model #785 and Section 9F(2) of Model #786?

iii. Before denying statement credit or imposing a requirement to post security or adopting any similar requirement that will have substantially the same regulatory impact as security, the commissioner shall follow the process set forth in Section 9G of Model #786?

ii. If subject to a legal process of rehabilitation, liquidation or conservation, as applicable, the ceding insurer, or its representative, may seek and, if determined appropriate by the court in which the proceedings are pending, may obtain an order requiring that the assuming insurer post security for all outstanding liabilities in accordance with Section 2F(5) of Model #785 and Section 9H of Model #786?

kk. Nothing shall limit or in any way alter the capacity of parties to a reinsurance agreement to agree on requirements for security or other terms in that reinsurance agreement, except as expressly prohibited by other applicable law or regulation similar to Section 2F(6) of Model #785?

ll. Credit may be taken only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal consistent with the provisions of Section 2F(7) of Model #785?
MEMORANDUM

To: Financial Regulation Standards and Accreditation (F) Committee

From: NAIC Staff

Date: March 3, 2020

Re: 2011 & 2019 Revisions to Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786)—Applicability to Risk Retention Groups (RRGs)

Executive Summary

On June 25, 2019, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). These revisions were intended to incorporate the relevant provisions of the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement), which was signed on Sept. 22, 2017. At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted these revisions to the Reinsurance Ceded accreditation standard effective Sept. 1, 2022, for consideration by the Executive (EX) Committee and Plenary for final adoption at the Spring National Meeting.

The purpose of this memorandum is to clarify the applicability of these revisions to risk retention groups (RRGs) organized as captives. The recommendation to this Committee is that the 2019 revisions to Model #785 and Model #786, as well as the 2011 revisions establishing certified reinsurers and qualified jurisdictions (which became applicable as an accreditation standard Jan. 1, 2019), also should be made applicable to RRGs.

Risk Retention Groups Organized as Captives

Article 3 (Reinsurance) of the Covered Agreement is applicable to ceding insurers, which Article 2(j) defines as “an undertaking which is authorized or licensed to take up or engage in the business of direct or primary insurance.” This would arguably include RRGs that are organized or incorporated by states as captive insurers. Reinsurance Ceded is part of the Part A accreditation requirements for RRGs, and requires that state law should contain Model #785 and Model #786, or substantially similar laws. The primary difference between the current reinsurance accreditation standard for RRGs is that “a state’s laws and regulations may allow RRGs to take credit for reinsurance without posting collateral in circumstances not contemplated by the Credit for Reinsurance Model Law and Regulation. For such cases, the Accreditation Interlineations include ‘Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers’ and a state’s laws and regulations must comply with the guidelines in order to be considered substantially similar with this standard.”

NAIC staff has reviewed the laws and regulations with respect to the fifteen (15) NAIC jurisdictions which currently license multi-state RRGs as captive insurers (AL, AZ, CO, DE, DC, HI, KY, ME, MT, NV, NC, OK, SC, TN and VT), and each meets the current Reinsurance Ceded accreditation standard in a very similar manner. First, each states’ laws require that an RRG must be licensed as a captive insurer (and in some instances, a specific type of captive insurer) subject to its captive insurance laws. Second, the captive insurance laws generally exempt captive
insurers from the general laws with respect to traditional insurers, except as is otherwise specified in statute. Finally, the statutes make RRGs that are licensed as captive insurers subject to the state’s credit for reinsurance laws, either generally (e.g., an RRG licensed as a captive insurer must comply with all of the laws, rules, regulations and requirements applicable to insurers chartered and licensed in the state) or specifically (e.g., an RRG licensed as a captive insurer must comply with the laws specified in this chapter, including specifically the credit for reinsurance laws). We also reviewed the proposed legislation of the five states currently considering adoption of the 2019 revisions to the models (ME, OK, SC, TN & VT), and the proposed legislation would not change this outcome.

Recommendation

NAIC staff recommends that the Committee consider making the 2019 revisions to Model #785 and Model #786 an accreditation standard for RRGs effective Sept. 1, 2022, with enforcement of the standard to commence Jan. 1, 2023. Staff further recommends that the 2011 revisions to the models relating to certified reinsurers and qualified jurisdictions also be made a part of the accreditation standard, because the 2019 revisions are in large part based on these earlier revisions. Finally, we recommend that the changes in the attached redlined accreditation standard be adopted as the new accreditation standard for reinsurance ceded to RRGs.

Note: The Risk Retention Group (E) Task Force met on March 2, and approved these recommendations. The Reinsurance (E) Task Force will meet March 11 to consider approval of the recommendations.
10. Reinsurance Ceded

State law should contain the NAIC Credit for Reinsurance Model Law (#785), the NAIC’s Credit for Reinsurance Model Regulation (#786) or substantially similar laws.

Complete the following question only if this is an interim annual review:

<table>
<thead>
<tr>
<th>YES</th>
<th>NO</th>
</tr>
</thead>
<tbody>
<tr>
<td>Have there been any changes to the department’s ceded reinsurance requirements since last year’s review?</td>
<td></td>
</tr>
</tbody>
</table>

If the response is NO, there is no further information needed regarding this standard, please proceed to the next standard.

If the response is YES, in the reference column please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that had a change and ensure that they are clearly marked for the changes that have been made (i.e., highlight the changes, redlined version, etc.) Please place an asterisk (*) in the reference column on the right-hand side of the page by each citation that has been changed. Also, please include below a brief description of the nature or reason for the change.

If the department is completing the self-evaluation guide due to an upcoming full review, please provide the applicable citation for each of the questions in this particular standard. Additionally, please attach a copy of the statutes or regulations that are listed in the reference column.

**Credit for Reinsurance Model Law (#785)**

<table>
<thead>
<tr>
<th>a. Credit allowed for reinsurance ceded to a licensed insurer? If the reinsurer is licensed as a RRG, then the ceding RRG or its members must qualify for membership with the reinsurer.</th>
</tr>
</thead>
<tbody>
<tr>
<td>b. Credit allowed for reinsurance ceded to an accredited insurer who meets requirements similar to those in Section 2B of the model law?</td>
</tr>
<tr>
<td>c. Credit allowed for reinsurance ceded to an insurer domiciled and licensed in a state which employs substantially similar standards regarding credit for reinsurance and who maintains capital and surplus of at least $20,000,000 and submits to this state’s authority to examine its books and records?</td>
</tr>
<tr>
<td>d. Credit allowed for reinsurance ceded to an insurer who maintains a trust fund, established in a form approved by the Commissioner, in a qualified U.S. financial institution for the payment of the valid claims of its U.S. policyholders and ceding insurers, their assigns and successors in interest and who reports financial information annually to the Commissioner to determine the sufficiency of the trust fund?</td>

</table>
f. Credit for reinsurance allowed under c. or d. above only permitted where assuming insurer agrees in the reinsurance agreements: 1) that in the event of a failure of the assuming insurer to perform its obligations, the assuming insurer shall submit to the jurisdiction of any court of competent jurisdiction in any state of the U.S.; and 2) to designate the Commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process instituted by or on behalf of the ceding company?

g. Credit allowed for reinsurance ceded to an insurer meeting requirements similar to those in Section 2E (Certified Reinsurers) of the model law?

h. Credit allowed for reinsurance ceded to an insurer meeting requirements similar to those in Section 2F (Reciprocal Jurisdictions) of the model law?

i. Although not required for accreditation, a state’s laws and regulations may allow RRGs to take credit for reinsurance without posting collateral in circumstances not contemplated by the Credit for Reinsurance Model Law and Regulation. For such cases, the Accreditation Interlineations include “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers” and a state’s laws and regulations must comply with the guidelines in order to be considered substantially similar with this standard. If your state’s laws and regulations do allow credit for reinsurance without collateral as discussed in the Accreditation Interlineations, please include the citation.

Note: An RRG’s reinsurers as of Jan. 1, 2011, are grandfathered in as acceptable without meeting the requirements in the Reinsurance Guidelines. The requirements in the Reinsurance Guidelines should be used for new reinsurers with which business is placed after Jan. 1, 2011.

j. Credit allowed for reinsurance ceded to an insurer not meeting the requirements of a., b., c., d., g., h. or i. above in an amount not exceeding the liabilities carried by the ceding insurer and only in the amount of funds held by or on behalf of the ceding insurer in the form of cash, securities listed by the Securities Valuation Office of the NAIC and qualifying as admitted assets, clean, irrevocable, unconditional letters of credit, and other forms of security acceptable to the Commissioner?

Credit for Reinsurance Model Regulation (#786)

k. Credit for reinsurance allowed for reinsurance ceded by domestic reinsurers to assuming insurers that were licensed in the state as of the last date of the ceding insurers’ statutory financial statement? If the reinsurer is licensed as a RRG, then the ceding RRG or its members must qualify for membership with the reinsurer.

l. Credit for reinsurance provisions for accredited reinsurer similar to Section 5?
m. Credit for reinsurance provisions for reinsurers licensed and domiciled in other states similar to Section 6?

n. Credit for reinsurance provisions for reinsurers maintaining trust funds similar to Section 7?

o. Credit for reinsurance required by law similar to Section 9, to the extent permitted by 15 USC 3902(a)?

p. Reduction from liability for reinsurance ceded to an unauthorized assuming insurer similar to Section 10? Note: See significant element g. above regarding allowance of credit for reinsurance in certain situations not contemplated by the Model Law.

q. Provisions for trust agreements similar to Section 11?

r. Provisions for letters of credit similar to Section 12?

s. Provisions for unencumbered funds similar to Section 13?

t. Provisions for reinsurance contracts similar to Section 14? Note: For those reinsurance contracts for which credit is allowed under significant element g. above, the reinsurance contract should contain language similar to Section II of the “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers.”

u. The adoption of Form AR-1—Certificate of Assuming Insurer. Note: For situations in which credit for reinsurance is taken under significant element g. above, the reinsurance contract should contain language similar to Section II of the “Reinsurance Guidelines for Risk Retention Groups Licensed as Captive Insurers.”

v. Credit for reinsurance provisions for certified reinsurers similar to Section 8?

w. Credit for reinsurance provisions for reciprocal jurisdictions similar to Section 9?

Appendix A (proposed accreditation standard and significant elements) includes a tracked change to significant element “b”. This change is the result of technical changes to Model #787 adopted by the Reinsurance (E) Task Force and does not change the substance of the proposed standard. The F Committee is scheduled to consider adoption of this technical change on Aug. 12, 2020. It is recommended that the Executive (EX) Committee and Plenary consider adoption of the technical change in conjunction with adoption of the Aug. 24, 2017 referral.

MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Reinsurance (E) Task Force

DATE: August 24, 2017

RE: Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

The NAIC membership adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the 2016 Fall National Meeting on Dec. 13, 2016. At that same time, the NAIC membership also adopted revisions to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) to conform with the provisions of Model #787, effective Jan. 1, 2017. Model #787 establishes uniform, national standards governing reserve financing arrangements pertaining to term life and universal life insurance policies with secondary guarantees, and ensures that funds consisting of primary security and other security are held in the forms and amounts required.

At its meeting on Aug. 7, 2017, the Reinsurance (E) Task Force agreed to submit the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. Model #787 should be adopted as a new accreditation standard by the NAIC, with significant elements as outlined in Appendix A.

2. The Financial Regulation Standards and Accreditation (F) Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force recommends that the accreditation standard become effective Jan. 1, 2020. The
Task Force further recommends that a state’s adoption of AG 48 will serve to satisfy this accreditation standard until such time that the state adopts the significant elements of Model #787.

3. The 2016 revisions to the Credit for Reinsurance Model Law (#785) should be considered acceptable but not required by the states.

In addition to the preceding recommendations, the Task Force is offering the following additional information in order to assist the Financial Regulation Standards and Accreditation (F) Committee in reviewing the proposed accreditation standard for Model #787.

**Substantially Similar**

The Task Force has recommended in the draft accreditation standard that the “substantially similar” standard be utilized to meet the minimum requirements of the standard. However, the Task Force did note that Drafting Notes to Section 2, Section 3 and Section 5 of Model #785 might suggest a stronger standard of review than “substantially similar.” The Drafting Notes provide, as follows: “To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are **substantially similar in all material respects** to NAIC adopted model regulations in the handling and treatment of such reinsurance arrangements.” [Emphasis added]. In recognition of this, and to assist in review of the actuarial method used to determine the required level of primary security as described in Section 6 of Model #787, the Task Force recommends that the NAIC Legal Division specifically note any material changes in a state’s regulation during an accreditation review for consideration by the Financial Regulation Standards and Accreditation (F) Committee.

**State Adoption of AG 48**

The Task Force recommends that the accreditation standard become effective on an expedited basis beginning Jan. 1, 2020. However, the Task Force further recognizes that meeting the expedited date may not be feasible for some states in instances due, in whole or part, to other legislative priorities of the states. It is the recommendation of the Task Force that, in such cases, a state’s compliance with AG 48 should be considered as satisfactory to the Financial Regulation Standards and Accreditation (F) Committee as substantial compliance with Model #787. AG 48 became effective Jan. 1, 2015, and became part of the Accounting Practices and Procedures Manual through its inclusion in Appendix C, and has been amended to conform with Model #787 effective Jan. 1, 2017.

**2016 Revisions to Model #785**

The Task Force does not recommend that the 2016 revisions to Model #785 be included in the proposed accreditation standard. These revisions provide that the commissioner may adopt regulations with respect to: 1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; 2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; 3) variable annuities with guaranteed death or living benefits; 4) long-term care insurance policies; and 5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices, and is: 1) licensed in at least 26 states; or 2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

The reasoning of the Task Force is that Model #787 only applies to term life and universal life with secondary guarantees (XXX/AXXX) captive reinsurance transactions, and that variable annuities, long-term care insurance and other life and health insurance and annuity products are not currently addressed. Therefore, it would be considered to be premature to require the states to adopt these provisions. In addition, the professional reinsurer exemption of Section 5B(4) of Model #785 is specifically referenced in the draft accreditation standard. Therefore, it is the recommendation of the Task Force that the 2016 revisions to Model #785 are optional, and should be considered as acceptable but not required by the states.
Appendix A

Proposed Accreditation Standard

Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

State statute and/or regulation should be substantially similar to uniform, national standards that govern reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees, to ensure that both the total security and the primary security are provided in forms and amounts that are in compliance with the requirements set forth in the Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

a. Provides that the Credit for Reinsurance Model Regulation (#786) and Model #787 shall both apply to reinsurance treaties that cede liabilities pertaining to Covered Policies; provided, that in the event of a direct conflict between the provisions of Model #787 and the provisions of Model #786, the provisions of Model #787 shall apply, but only to the extent of the conflict, substantially similar to Section 3 of Model #787?

b. Provides that Model #787 does not apply to reinsurance exempt by the provisions of Section 4 of Model #787, including reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of the Credit for Reinsurance Model Law (#785), which pertains to certain certified reinsurers, or Section 5B(4)(b) of Model #785, which pertains to reinsurers meeting certain threshold size and licensing requirements? [Note: this change is due to technical changes to Model #787 adopted by the Reinsurance (E) Task Force and does not change the substance of the standard – see March 3 referral attached]

c. Provides definitions of “Covered Policies,” “Grandfathered Policies,” “Required Level of Primary Security,” “Actuarial Method,” “Primary Security,” “Other Security” and “Valuation Manual” that are substantially similar to such terms as defined in Section 5 of Model #787?

d. Provides for an Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation that is substantially similar to the methodology as set forth in Section 6A of Model #787?

e. Provides for valuations to be used 1) in calculating the Required Level of Primary Security pursuant to the Actuarial Method; and 2) in determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, that are substantially similar to the valuations set out in Section 6B of Model #787?

f. Provides for requirements to obtain credit for reinsurance with respect to ceded liabilities pertaining to Covered Policies that are substantially similar to the requirements set out in Section 7A of Model #787?

g. Provides for requirements at inception date and on an ongoing basis substantially similar to Section 7B(1) of Model #787?

h. Provides that if the requirements to hold Primary Security and total security are not both satisfied, the ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held, unless any deficiency has been eliminated pursuant to remediation provisions substantially similar to Section 7B(2) of Model #787?

i. Includes a prohibition against avoidance provision similar to Section 9 of Model #787?

RE: 2016 Revisions to Credit for Reinsurance Model Law (#785)
Term and Universal Life Insurance Reserve Financing Model Regulation (#787)

Executive Summary

On June 30, 2014, the Principle-Based Reserving Implementation (EX) Task Force adopted the recommendations in the report of Rector & Associates, Inc. dated June 4, 2014, regarding a proposal for the XXX/AXXX Reinsurance Framework. The Framework sought to address concerns regarding reserve financing transactions and to do so without encouraging them to move offshore. The changes would be prospective and apply only to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life with secondary guarantees business (XXX/AXXX). The NAIC Executive (EX) Committee adopted the Framework (in concept) on Aug. 17, 2014. As an interim step to implementing the Framework, the NAIC adopted Actuarial Guideline XLVIII Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48) on Dec. 16, 2014. It was expected that AG 48 would eventually be replaced by effective codification through the Credit for Reinsurance Model Law (#785) and creation of a new model regulation to establish requirements regarding the reinsurance of XXX/AXXX policies.

The NAIC adopted revisions to Model #785 on Jan. 8, 2016, which give insurance commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework. The Reinsurance (E) Task Force adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) at the Summer National Meeting on Aug. 27, 2016, and it was adopted by the Financial Condition (E) Committee with slight revisions via conference call on Sept. 30, 2016. Model #787 was then adopted by the Executive (EX) Committee and Plenary on Dec. 13, 2016. At that same time, the NAIC also revised AG 48 to conform with the provisions of Model #787, effective Jan. 1, 2017.

The Reinsurance (E) Task Force hereby submits the following recommendations to the Financial Regulation Standards and Accreditation (F) Committee:

1. The 2016 revisions to Model #785 and new Model #787 should be adopted as a new accreditation standard by the NAIC.

2. The F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this standard. The Task Force would recommend that the accreditation standard become effective January 1, 2020.
A statement and explanation of how the potential standard is directly related to solvency surveillance and why the proposal should be included in the standards:

The 2016 revisions to Model #785 provide that the commissioner may adopt regulations with respect to (1) life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits; (2) universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period; (3) variable annuities with guaranteed death or living benefits; (4) long-term care insurance policies; and (5) other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance. The revisions to Model #785 also contain a “professional reinsurer exemption” for reinsurers that maintain at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is (1) licensed in at least 26 states; or (2) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

Model #787 does not materially change the ability of insurers to obtain credit for reinsurance ceded to “certified” reinsurers or to obtain credit for reinsurance ceded to “licensed” or “accredited” reinsurers that follow statutory accounting and risk-based capital (RBC) rules. As a practical matter, the Model #787 requirements apply to reinsurance ceded to captive insurers, SPVs, reinsurers that are not eligible to become “certified” reinsurers, or reinsurers that materially deviate from statutory accounting and/or RBC rules. In those situations, subject to certain exemptions and grandfathering provisions, the ceding insurer may receive credit for reinsurance if:

- The ceding insurer continues to establish gross reserves, in full, using applicable reserving guidance;
- Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis;
- The Actuarial Method used to establish the Required Level of Primary Security for each reinsurance treaty subject to Model #787 is based on VM-20, applied on a treaty-by-treaty basis;
- Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held are held by or on behalf of the ceding insurer as security under the reinsurance contract; and
- The reinsurance arrangement is approved by the ceding insurer’s domestic regulator.

A statement as to why ultimate adoption by every jurisdiction may be desirable:

The NAIC Principle-Based Reserving Implementation (EX) Task Force serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. This Task Force was also charged with further assessing, and making recommendations regarding the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013, NAIC White Paper Captives and Special Purpose Vehicles, which provides in relevant part:

The Captive and Special Purpose Vehicle (SPV) Use (E) Subgroup studied the use of captives and SPVs formed by commercial insurers. The Subgroup concluded that commercial insurers cede business to captives for a variety of business purposes. The Subgroup determined that the main use of captives and SPVs by commercial insurers was related to the financing of XXX and AXXX perceived reserve redundancies. The implementation of principle-based reserving (PBR) could reduce the need for
commercial insurers to create new captives and SPVs to address perceived reserve redundancies; however, existing captives and SPVs are likely to remain in existence for several years or decades, until the existing blocks of business are run-off. **Regulators need to be able to assess and monitor the risks that captives and SPVs may pose to the holding company system, and the current regulatory process should be enhanced to provide standardized tools and processes to be used by all regulators when reviewing such transactions.** Commercial insurer-owned captives and SPVs should not be used to avoid statutory accounting. **To the extent that insurer-affiliated captives and SPVs may be created in the future for unforeseen purposes, additional guidance should be developed by the NAIC to assist the states in a uniform review of transactions.** [Emphasis added].

In addition, in coordination with the adoption in principle of the XXX/AXXX Reinsurance Framework, the Financial Regulation Standards and Accreditation (F) Committee was given the following charge: “As the various work products are adopted by the Principle-Based Reserving (EX) Task Force, Executive Committee, and Plenary, consider them for inclusion in the Part A and Part B Accreditation Standards.”

Finally, effective Jan. 1, 2016, the NAIC amended the Preamble for Part A: Laws and Regulations of the NAIC Policy Statement on Financial Regulation Standards to apply to the regulation of a state’s domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct with respect to XXX/AXXX business, which is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction satisfies the XXX/AXXX Reinsurance Framework requirements adopted by the NAIC. Further, the revised Preamble provided, as follows: “The revisions to the Credit for Reinsurance Model Act (#785) and the new XXX/AXXX Model Regulation will need to be specifically considered for accreditation purposes once adopted by the NAIC.”

**A statement as to the number of jurisdictions that have adopted and implemented the proposal or a similar proposal and their experience to date:**

AG 48 became effective Jan. 1, 2015, and became part of the NAIC Accounting Practices and Procedures Manual through its inclusion in Appendix C. As such, provisions similar to the proposal have been effective in all states since that date.

As of this date, three states (Louisiana, Oklahoma and Utah) have gone beyond AG 48 and have adopted the 2016 revisions to Model #785 giving commissioners authority to issue regulations codifying AG 48 and the XXX/AXXX Reinsurance Framework, with several other states currently considering such revisions.

The new Part A Preamble became effective Jan. 1, 2016, with regard to XXX/AXXX reinsurance captives. NAIC staff worked with necessary state insurance departments to assess compliance with the new Part A Preamble related to captives that assume XXX/AXXX business, and reported its findings at the 2016 Fall National Meeting to the Financial Regulation Standards and Accreditation (F) Committee. NAIC staff reviewed all of the Dec. 31, 2015, XXX/AXXX Reinsurance Supplements that were filed with the NAIC to first ascertain whether the appropriate level of primary and other securities was being held to back the non-exempt XXX/AXXX reinsurance transactions. NAIC staff reported that all of the transactions held the required amount of securities, and therefore, all of the transactions satisfied the new Part A requirements.

**A statement as to the provisions needed to meet the minimum requirements of the standard.** That is, whether a state would be required to have “substantially similar” language or rather a regulatory framework. If it is being proposed that “substantially similar” language be required, the referring committee, task force or working group shall recommend those items that should be considered significant elements:
Regulators needed to be able to assess and monitor the risks posed with respect to XXX/AXXX captive reinsurance transactions, and the regulatory process was enhanced through the adoption of the XXX/AXXX Reinsurance Framework, AG 48 and Model #787 to provide standardized tools and processes to be used by all regulators when reviewing such transactions. However, these new tools are complex and technical in nature, requiring the use of a new actuarial methodology to achieve the desired financial solvency results. Therefore, the Reinsurance (E) Task Force recommends that any new accreditation standard developed for Model #787 be adopted by NAIC-accredited jurisdictions in a “substantially similar” manner, as that term is defined in the Accreditation Interlineations of the NAIC Financial Regulation Standards and Accreditation Program. In addition, all of the elements of the XXX/AXXX Reinsurance Framework have been put into place, with the exception of the new accreditation standard. Therefore, F-Committee should consider a waiver in its normal timeline for adoption of an accreditation standard, and expeditiously consider adoption of this new standard effective as of January 1, 2020.

An estimate of the cost for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it, if reasonably quantifiable:

The NAIC has not performed a cost/benefit analysis with respect to Model #787, nor do we believe that the specific costs for insurance companies to comply with the proposal and the impact on state insurance departments to enforce it are reasonably quantifiable. However, it should be noted that Model #787 does not require dramatic changes from how insurance companies have been financing XXX/AXXX captive reinsurance transactions since the NAIC’s adoption of AG 48. As with AG 48, Model #787 provides “standardized tools and processes to be used by all regulators when reviewing such transactions.” Prior to the adoption of AG 48, insurers would enter into various captive reinsurance transactions to “finance” different portions of the statutory reserve differently—i.e., to fund different portions of the reserve using different kinds of assets—based on what insurers believed to be a better correlation between the kind of asset used and the probability that it would be needed. Many state regulators were comfortable with these transactions in theory, but there was significant unease regarding how these transactions were being implemented, and especially as to the lack of consistency from insurer to insurer and regulator to regulator regarding key aspects as to how these transactions may have been approved. Such transactions are still permitted under Model #787, but now a clear and consistent process has been implemented to ensure that the proper amount and type of assets have been applied with respect to these transactions in order to ensure that they continue to meet strong financial solvency standards.

DATE: March 3, 2020

RE: Technical Revisions to the Term and Universal Life insurance Reserve Financing Model Regulation (\#787) as an Accreditation Standard

At the 2019 Fall National Meeting, the Financial Regulation Standards and Accreditation (F) Committee adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (\#787), commonly known as the XXX/AXXX model, as a new accreditation standard. The decision is pending approval by Plenary.

Following adoption by the Committee, the Reinsurance (E) Task Force adopted technical changes to Model \#787, which included Section 4E as follows:

E. Reinsurance ceded to an assuming insurer that meets the requirements of either [insert provision of state law equivalent to Section 5B(4)(a) of the Credit for Reinsurance Model Law, pertaining to certain certified reinsurers] or [insert provision of state law equivalent to Section 5B(4)(b) of the Credit for Reinsurance Model Law, pertaining to reinsurers meeting certain threshold size and licensing requirements]; or

The technical changes were due to revisions to the Credit for Reinsurance Model Law (\#785) adopted by the NAIC in June 2019, which impacted sections referenced in Model \#787. The referenced Section 5B(4) provides an exemption to Model \#787 for what is commonly referred to as “professional reinsurers.” As defined in the 2016 version of Model \#785 Section 5B(4)(a) and (b), these professional reinsurers are reinsurers that meet certain minimum capital requirements and are certified reinsurers in a certain minimum number of states. The 2019 revisions to Model \#785 add a new Section 5B(4)(a) to provide a similar exemption for reinsurers domiciled in reciprocal jurisdictions, as defined in Section 2F of Model \#785. This shifted the original (a) and (b) to (b) and (c). A copy of the revised Section 5 is attached. To accurately reflect the exemption intended by the reference in Model \#787, the entire Section 5B(4) is now referenced in Model \#787.

NAIC staff therefore recommend that an equivalent change also be made to the accreditation standard. The proposed change affects significant element “b” as follows:

b. Provides that Model \#787 does not apply to reinsurance exempt by the provisions of Section 4 of Model \#787, including reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of the Credit for Reinsurance Model Law (\#785), which pertains to certain certified reinsurers, or Section 5B(4)(b) of Model \#785, which pertains to reinsurers meeting certain threshold size and licensing requirements?

The original referral from the Reinsurance (E) Task Force with the recommendation to the Committee regarding Model \#787 as an accreditation standard, including the accreditation significant elements, is attached for reference.
CREDIT FOR REINSURANCE MODEL LAW

Table of Contents

Section 1. Purpose
Section 2. Credit Allowed a Domestic Ceding Insurer
Section 3. Asset or Reduction from Liability for Reinsurance Ceded by a Domestic Insurer to an Assuming Insurer not Meeting the Requirements of Section 2
Section 4. Qualified U.S. Financial Institutions
Section 5. Rules and Regulations
Section 6. Reinsurance Agreements Affected

****************

Section 5. Rules and Regulations

A. The commissioner may adopt rules and regulations implementing the provisions of this law.

Drafting Note: It is recognized that credit for reinsurance also can be affected by other sections of the enacting state’s code, e.g., a statutory insolvency clause or an intermediary clause. It is recommended that states that do not have a statutory insolvency clause or an intermediary clause consider incorporating such clauses in their legislation.

B. The commissioner is further authorized to adopt rules and regulations applicable to reinsurance arrangements described in Paragraph (1) of this Section 5B.

Drafting Note: This new regulatory authority is being added in response to reinsurance arrangements entered into, directly or indirectly, with life/health insurer-affiliated captives, special purpose vehicles or similar entities that may not have the same statutory accounting requirements or solvency requirements as US-based multi-state life/health insurers. To assist in achieving national uniformity, commissioners are asked to strongly consider adopting regulations that are substantially similar in all material respects to NAIC adopted model regulations in the handling and treatment of such policies and reinsurance arrangements.

(1) A regulation adopted pursuant to this Section 5B, may apply only to reinsurance relating to:

(a) Life insurance policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits;
(b) Universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period;
(c) Variable annuities with guaranteed death or living benefits;
(d) Long-term care insurance policies; or
(e) Such other life and health insurance and annuity products as to which the NAIC adopts model regulatory requirements with respect to credit for reinsurance.

(2) A regulation adopted pursuant to Paragraph 1(a) or 1(b) of this Section 5B, may apply to any treaty containing (i) policies issued on or after January 1, 2015, and/or (ii) policies issued prior to January 1, 2015, if risk pertaining to such pre-2015 policies is ceded in connection with the treaty, in whole or in part, on or after January 1, 2015.

Drafting Note: The NAIC’s Actuarial Guideline XLVIII (AG 48) became effective January 1, 2015, and covers policies ceded on or after this date unless they were ceded as part of a reserve financing arrangement as of December 31, 2014. One regulation contemplated by this revision to the NAIC Credit for Reinsurance Model Law (9785) is intended to substantially replicate the requirements for the amounts and forms of security held under the rules provided in AG 48. AG 48 was written to sunset upon a state’s adoption (pursuant to the enabling authority of the preceding paragraph) of a regulation with terms substantially similar to AG 48. The preceding paragraph is intended to provide continuity of rules applicable to those policies and reinsurance arrangements, including continuity as to the policies covered by such rules. The preceding paragraph is not intended to change the scope of, or collateral requirements for policies and treaties covered under AG 48.
(3) A regulation adopted pursuant to this Section 5B may require the ceding insurer, in calculating the amounts or forms of security required to be held under regulations promulgated under this authority, to use the Valuation Manual adopted by the NAIC under Section 11B(1) of the NAIC Standard Valuation Law, including all amendments adopted by the NAIC and in effect on the date as of which the calculation is made, to the extent applicable.

(4) A regulation adopted pursuant to this Section 5B shall not apply to cessions to an assuming insurer that:

(a) Meets the conditions set forth in Section 2F of the Credit for Reinsurance Model Law (#785) in this state or, if this state has not adopted provisions substantially equivalent to Section 2F of the Credit for Reinsurance Model Law (#785), the assuming insurer is operating in accordance with provisions substantially equivalent to Section 2F of the Credit for Reinsurance Model Law (#785) in a minimum of five (5) other states; or

(b) Is certified in this state or, if this state has not adopted provisions substantially equivalent to Section 2E of the Credit for Reinsurance Model Law (#785), certified in a minimum of five (5) other states; or

(c) Maintains at least $250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is

(i) licensed in at least 26 states; or

(ii) licensed in at least 10 states, and licensed or accredited in a total of at least 35 states.

(5) The authority to adopt regulations pursuant to this Section 5B does not limit the commissioner’s general authority to adopt regulations pursuant to Section 5A of this law.
Date: 7/16/2020

State Implementation Reporting of NAIC-Adopted Model Laws and Regulations

Executive (EX) Committee

- Adoption of the new *Insurance Data Security Model Law* (#668)—This model was adopted by the Executive (EX) Committee and Plenary at the 2017 Fall National Meeting. Eleven states have enacted this model.

Life Insurance and Annuities (A) Committee

- Amendments to the *Suitability in Annuity Transactions Model Regulation* (#275)—These revisions were adopted by the Executive (EX) Committee and Plenary during the February 13, 2020 conference call. Two states have enacted these revisions to the model.

- Amendments to the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2017 Summer National Meeting. One state has enacted these revisions to the model.

Health Insurance and Managed Care (B) Committee

- Amendments to the *Health Insurance Reserves Model Regulation* (#10) *(Cancer Expense Table)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2017 Spring National Meeting. Two states have enacted these revisions to the model.

- Amendments to the *Health Carrier Prescription Drug Benefit Management Model Act* (#22)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2018 Spring National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act* (#170)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2019 Spring National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Adoption of the *Limited Long-Term Care Insurance Model Act* (#642)—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

- Adoption of the *Limited Long-Term Care Insurance Model Regulation* (#643)—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. NAIC staff are not aware of any state activity regarding this model.

Property and Casualty Insurance (C) Committee

- Adoption of the *Travel Insurance Model Act* (#632)—This model was adopted by the Executive (EX) Committee and Plenary at the 2018 Fall National Meeting. Six states have enacted this model.

Market Regulation and Consumer Affairs (D) Committee

- Amendments to the *Privacy of Consumer Financial and Health Information Regulation* (#672)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2017 Spring National Meeting. Eleven states have enacted these revisions to the model.
Financial Condition (E) Committee

- Amendments to the *Life and Health Insurance Guaranty Association Model Act* (#520)—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2017 Fall National Meeting. 32 states have enacted these revisions to the model.

- Amendments to the *Credit for Reinsurance Model Law* (#785)—These revisions were adopted by the Executive (EX) Committee and Plenary during the June 26, 2019 conference call. NAIC staff are not aware of any state activity regarding this model.

- Amendments to the *Credit for Reinsurance Model Regulation* (#786)—These revisions were adopted by the Executive (EX) Committee and Plenary during its June 26, 2019 conference call. NAIC staff are not aware of any state activity regarding this model.

EXECUTIVE (EX) COMMITTEE

Executive (EX) Committee Aug. 13, 2020, Minutes ................................................................................................................ 4-2
Executive (EX) Committee May 12, April 2, Feb. 13 and Jan. 10, 2020, Summary Report
(Attachment One) .......................................................................................................................................................... 4-5
Report of the Executive (EX) Committee Task Forces, Aug. 11, 2020 (Attachment Two) .............................................. 4-7
NAIC Principles on Artificial Intelligence (AI), Aug. 11, 2020, Draft (Attachment Two-A) .................................. 4-9
Long-Term Care Insurance (EX) Task Force Subgroup Charges, Aug. 13, 2020, Draft
(Attachment Two-B) ........................................................................................................................................ 4-11
Request for NAIC Model Law Development for the Insurance Holding Company System Regulatory
Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms
and Instructions (#450) (Attachment Three) .................................................................................................................. 4-13
Request for NAIC Model Law Development for the Standard Nonforfeiture Law for Individual
Deferred Annuities (#805) (Attachment Four) ...................................................................................................................... 4-18
Memorandum Regarding 2019 Annual Report of NAIC Designation Program Advisory Board
Activities, Aug. 13, 2020 (Attachment Five) ..................................................................................................................... 4-20
State Ahead Strategic Plan Status Reporting – July 2020 (Attachment Six) ................................................................. 4-25
Model Law Development Report, July 31, 2020 (Attachment Seven) .................................................................................. 4-26
The Executive (EX) Committee met via conference call Aug. 13, 2020. The following Committee members participated: Raymond G. Farmer, Chair (SC); David Altmaier, Vice Chair (FL); Dean L. Cameron, Vice President (ID); Chlora Lindley-Myers, Secretary-Treasurer (MO); Eric A. Cioppa, Most Recent Past President (ME); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Michael Conway (CO); Doug Ommen (IA); James J. Donelon (LA); Gary D. Anderson (MA); Mike Chaney (MS); Jillian Froment (OH); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); and Larry D. Deiter (SD). Also participating were Jon Godfread (ND); and Scott A. White (VA).

1. **Adopted the July 14 Report of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee**

Director Farmer reported that the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee met July 14 in a joint session. The meeting was held in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC) and paragraph 6 (consultations with NAIC staff members) of the NAIC Policy Statement on Open Meetings.

During this joint meeting, the Committee and Subcommittee took the following action: 1) adopted its May 12 minutes; and 2) adopted the Internal Administration (EX1) Subcommittee’s May 20 minutes, which included the following action: a) received an update on the Defined Benefit Plan portfolio as of March 31; b) received an update on the NAIC long-term investment plan portfolio as of March 31; and c) approved a recommendation to replace one of the NAIC’s fund managers responsible for short-term bond funds.

The Committee and Subcommittee also: 1) adopted the report of the Audit Committee, which met via conference call June 2 and received the 2019/2020 Service Organization Control (SOC) 1 and SOC 2 reports; 2) received an update on the 2020 financial results and preliminary 2021 budget assumptions and approved an extension of unused 2020 grant funds to the end of 2021; 3) established a Special Committee on Race and Insurance; 4) established the Climate & Resiliency (EX) Task Force and adopted its draft charges; 5) received a System for Electronic Rate and Form Filing (SERFF) Assessment and directed NAIC staff to prepare and issue a request for proposal (RFP) to solicit proposals to help complete a “modernization pilot” and “Wave One” as recommended in the SERFF Assessment; 6) approved Management’s recommendation to extend the residential mortgage-backed securities (RMBS)/commercial mortgage-backed securities (CMBS) modeling contract with BlackRock for another year; 7) approved the release of the Economic Scenario Generator (ESG) fiscal for a two-week public review period prior to a final vote of the Executive (EX) Committee during a future meeting; 8) approved a U.S. Department of Labor (DOL) Information Sharing Agreement; 9) selected the meeting locations for the 2024 summer and fall national meetings: the 2024 Summer National Meeting will be held in Chicago, IL, and the 2024 Fall National Meeting will be held in Denver, CO; and 10) received the joint chief executive officer (CEO)/chief operating officer (COO) report.

Commissioner Conway made a motion, seconded by Director Froment, to adopt the July 14 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee. The motion passed unanimously.

2. **Adopted its May 12, April 2, Feb. 13 and Jan. 10 Interim Meeting Report**

Director Lindley-Myers made a motion, seconded by Commissioner Altman, to adopt the Committee’s May 12, April 2, Feb. 13 and Jan. 10 interim meeting report (Attachment One). The motion passed unanimously.

3. **Adopted the Reports of its Task Forces**

The Committee adopted written reports from the Financial Stability (EX) Task Force, the Government Relations (EX) Leadership Council, the Innovation and Technology (EX) Task Force, and the Long-Term Care Insurance (EX) Task Force.

Commissioner Godfread further reported that the Innovation and Technology (EX) Task Force met Aug. 7 and adopted the Artificial Intelligence (AI) Principles for the insurance industry adopted by the Artificial Intelligence (EX) Working Group on June 30.
During the meeting, the Task Force discussed the outstanding issues raised during its meeting on July 23. Each section of the AI Principles was discussed individually. The Task Force had a productive discussion that ultimately resulted in adoption of the AI Principles as amended during the meeting. The Principles will be presented for further adoption at the joint meeting of Executive (EX) Committee and Plenary on Aug. 14.

Commissioner White further reported that the Long-Term Care Insurance (EX) Task Force also adopted charges for three new subgroups during its Aug. 7 meeting. The Subgroups will move more discussions about the rate review methodology and RBOs and consumer notices work of the Task Force into the public realm. The Subgroup charges are a delegation of the Task Force charges and a consolidation of the six existing workstreams into three subgroups.

Director Wing-Heier made a motion, seconded by Director Cameron, to adopt the reports of the Financial Stability (EX) Task Force; the Government Relations (EX) Leadership Council; the Innovation and Technology (EX) Task Force, including the AI Principles; and the charges of the new subgroups of the Long-Term Care Insurance (EX) Task Force (Attachment Two, Attachment Two-A, Attachment Two-B). The motion passed unanimously.

4. Adopted a Model Law Development Request for Amendments to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450)

Commissioner White reported that at the 2019 Fall National Meeting, the Executive (EX) Committee approved a request from the Financial Condition (E) Committee and the Group Capital Calculation (E) Working Group to open up the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) to make sure the calculation is held confidential.

Commissioner White stated that prior to the scheduled Spring National Meeting, the Financial Condition (E) Committee received and approved two additional requests for amending Model #440 and Model #450. The first request was from the Receivership and Insolvency (E) Task Force to make changes for issues that can arise in a receivership of an insurance company where affiliated entities provide essential services through inter-company agreements. For example, in the cases of claims handling, underwriting and premium collection, the continuation of these services can be critical to the operation of the receivership, particularly when all staffing and information technology (IT) functions are outsourced. The request recommends developing language that gives the commissioner the authority over these situations. The second request was from the Financial Stability (EX) Task Force requesting an avenue to maintain the confidentiality of a liquidity stress test that the Task Force is currently developing for certain very large life insurers. This new requirement is being suggested as the key deliverable on the Macroprudential Initiative (MPI) led by Commissioner Marlene Caride (NJ). Commissioner White acknowledged that the three ongoing amendments may not be completed at the same time, but it is still important to proceed with all the work.

Commissioner Altmaier made a motion, seconded by Commissioner Conway, to adopt the request to develop amendments to Model #440 and Model #450 (Attachment Three). The motion passed unanimously.

5. Adopted a Model Law Development Request for Amendments to the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805)

Director Froment reported that the Request for NAIC Model Law Development for the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805) came to the Life Insurance and Annuities (A) Committee from the Life Actuarial (A) Task Force, and it arises out of concern with the 1% floor on the minimum nonforfeiture accumulation rate that is currently in the model. This minimum will be difficult for insurers to achieve in the current very low interest rate environment and significantly limit the availability of annuity products. This request to revise Model #805 is to address this minimum nonforfeiture rate floor.

Director Froment made a motion, seconded by Director Lindley-Myers, to adopt the request to develop amendments to Model #805 (Attachment Four). The motion passed unanimously.

6. Received the 2019 Annual Report of NAIC Designation Program Advisory Board Activities

Superintendent Dwyer provided an update on the NAIC Designation Program Advisory Board’s activities and the 2019 achievements for the NAIC Insurance Regulator Professional Designation Program (Attachment Five). In 2019, there was an increase of more than 350 insurance regulator designation enrollments. At year-end, enrollments totaled 2,392 since its inception in 2006. In 2019, 1,310 new professional insurance regulation designations were awarded.
Superintendent Dwyer also reported that the Advisory Board, entered into a contract with Certemy to replace the existing enrollment site with Certemy’s program management system. The Advisory Board made a number of changes to the program as requested by commissioners, including: 1) waiving the first retake fee; 2) removing tenure requirements for Associate Professional in Insurance Regulation (APIR) and Professional in Insurance Regulation (PIR); and 3) allowing courses to be taken “out of sequence.”

Superintendent Dwyer thanked Commissioner Godfried, Mary Mealer (MO), Pat McNaughton (WA), Scott Sanders (GA) and Rachel Chester (RI) for their hard work and dedication in developing this program into the success it is today.

7. Received a Status Report on the NAIC State Ahead Strategic Plan Implementation

Director Farmer provided an update on the NAIC State Ahead implementation efforts. State Ahead is a three-year strategic plan intended to further advance the products, services and support that the NAIC provides to state insurance regulators in order to better meet the changing regulatory landscape. NAIC staff continue to make good progress on the many State Ahead projects (Attachment Six). Given the change in priorities with the COVID-19 outbreak, the development of State Ahead 2.0 is on pause and that important work will continue in 2021.

8. Received a Report of Model Law Development Efforts

Director Farmer presented a written report on the progress of ongoing model law development efforts (Attachment Seven).

9. Heard a Report from the Interstate Insurance Product Regulation Commission (Commission)

Superintendent Dwyer reported that the Commission held a joint meeting with its Management Committee Aug. 14. The Compact has been working on implementing several action items in its strategic plan, which was adopted at the 2019 Fall National Meeting.

Superintendent Dwyer stated that many of the action items in the strategic plan call for examining and enhancing various procedures, notices and information to keep members and others informed and encourage meaningful input. A key initiative in the strategic plan involved the restructuring of the outstanding debt repayment to the NAIC. This new agreement was approved by the Compact during its May meeting, and the Compact made its first of 10 annual payments to the NAIC at the end of May. The Compact is currently kicking off two strategic projects—a governance review and a business assessment. An RFP process was conducted for both projects and the selection process was completed last month. Squire Patton Boggs is performing the governance review project, and Rector & Associates Inc. is performing the business assessment engagement.

The Compact has a Governance Review Committee, which includes three officers—Superintendent Dwyer, Commissioner Mark Afable (WI), and Director Robert H. Muriel (IL)—along with Commissioner Kent Sullivan (TX) and Commissioner James A. Dodrill (WV). The Committee is managing these projects, along with coordinating a state-by-state review being conducted by the Compact Office to document meaningful differences between the Uniform Standards and state statutes.

Superintendent Dwyer also reported that in April, the Colorado Supreme Court issued an opinion in Amica v. Wertz, 462 P.3d 51, on the Compact and its delegated authority. The Compact was recognized as a valid delegation of authority at the district court level. When the case was appealed, the 10th Circuit Court of Appeals certified the delegation of authority question to the Colorado Supreme Court, as it involved a conflict between a state statute with a one-year suicide exclusion and the Compact’s Uniform Standard that had a two-year suicide exclusion. The Colorado Supreme Court concluded that the Compact’s Uniform Standards operate as regulations and with respect to an interstate compact that has not been approved by the U.S. Congress (Congress), the Colorado legislature may not delegate to an interstate agency the authority to adopt regulations that effectively override a Colorado statute. This opinion respects the Compact structure and focuses on where a provision in the Uniform Standards may conflict with a state statute, especially where the state law is more stringent. The Compact staff has been working with states and industry to identify those areas where the Compact standards conflict with a state statute.

Having no further business, the Executive (EX) Committee adjourned.
EXECUTIVE (EX) COMMITTEE
May 12, 2020 / April 2, 2020 / February 13, 2020 / January 10, 2020

Summary Report

The Executive (EX) Committee met May 12, April 2, Feb. 13 and Jan. 10, 2020. These meetings were held in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During these meetings, the Committee:

1. Adopted the 2019 Fall National Meeting minutes of the Joint Meeting of the Executive (EX) Committee and Internal Administration (EX1) Subcommittee.
2. Adopted its April 2, Feb. 13 and Jan. 10 minutes.
3. Adopted the report of the NAIC Audit Committee.
4. Adopted the report of the Investment Committee.
5. Adopted the recommendation of the Life Actuarial (A) Task Force to delay the start of Principle-Based Reserving (PBR) Experience Data Reporting from 2020 to 2021.
6. Appointed Commissioner Vicki Schmidt (KS) and Director Bruce R. Ramge (NE) to serve on the National Insurance Producer Registry (NIPR) Board of Directors effective May 12.
7. Heard a report on a change in membership for the System for Electronic Rate and Form Filing (SERFF) Advisory Board. Andrea Davey (Athene Annuity and Life Company) will serve as the Life Insurance Representative on the SERFF Advisory Board.
8. Discussed the National Association of Registered Agents and Brokers (NARAB) Board recommendations.
10. Heard an update on the SERFF Assessment.
11. Heard an update on cybersecurity.
12. Discussed the status of the Mid-Year Roundtable and the Summer National Meeting.
13. Heard a joint chief executive officer (CEO)/chief operating officer (COO) report.
15. Received an update on the 2019 Year-End Financial Results.
16. Approved the fiscal impact statement for the Long-Term Care Insurance Data Call and authorized management to contract with a selected vendor.
17. Approved the fiscal impact statement for the SERFF Filing Review Tools Pilot.
18. Approved the following non-regulator appointments to the SERFF Advisory Board: Birny Birnbaum (Center for Economic Justice—CEJ) as the Consumer Representative; Theresa Boyce (Chubb Group) for Property & Casualty (P&C); Amanda Wheeler (LifeSecure Insurance Company) for Life Insurance; and Rachel Benton (Bright Health) for Health Insurance and Vice-Chair.
19. Appointed Director Chlora Lindley-Myers (MO) as Vice Chair of the 2020 Consumer Participation Board of Trustees.
20. Appointed Commissioner Mark Afable (WI) to serve on the NIPR Board of Directors effective Feb. 13.

21. Received an update confirming the committee structure changes: the Executive (EX) Committee disbanded the joint Long-Term Care Insurance (B/E) Task Force, the NAIC/State Government Liaison Committee, and the NAIC/Industry Liaison Committee; and the Executive (EX) Committee also removed the membership limit on the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force.

22. Approved the fiscal impact statement for the PBR Yearly Renewable Term Reinsurance Study.

23. Voted to release for public review and comment the Long-Term Care Insurance Data Call and Analysis fiscal impact statement.

24. Approved the debt restructure terms between the NAIC and Interstate Insurance Product Regulation Commission (Compact).

25. Appointed Florida, Idaho, Kentucky, Massachusetts, Missouri, Nebraska, Nevada, Ohio and Oklahoma as members of the NAIC 2020 Audit Committee.
REPORT OF THE EXECUTIVE (EX) COMMITTEE TASK FORCES

Financial Stability (EX) Task Force—The Financial Stability (EX) Task Force met Aug. 5 and took the following action: 1) adopted its Feb. 26, 2020, and 2019 Fall National Meeting minutes; 2) heard an update on Financial Stability Oversight Council (FSOC) developments; 3) adopted the report of the Liquidity Assessment (EX) Subgroup, which provides an update on its progress toward achieving its deliverables related to liquidity stress testing; 4) received an update from the Receivership and Insolvency (E) Task Force on its work to address the Financial Stability (EX) Task Force’s referral letter to undertake analysis relevant to the NAIC Macroprudential Surveillance Initiative; 5) heard an update on collateralized loan obligation (CLO) stress tests; 6) heard an update on the International Association of Insurance Supervisors (IAIS); 7) heard an update on the London Interbank Offered Rate (LIBOR); and 8) discussed exposure comments for the draft revisions to the Holding Company Model Law.

Government Relations (EX) Leadership Council—The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting. The Leadership Council meets weekly via conference call in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss federal legislative and regulatory developments affecting insurance regulation.

Innovation and Technology (EX) Task Force—The Innovation and Technology (EX) Task Force met Aug. 7 and took the following action: 1) adopted its 2019 Fall National Meeting minutes and July 23 minutes; 2) adopted its working group reports and heard a report on the activities of the Innovation and Technology State Contact Group; 3) discussed comments related to the Artificial Intelligence Principles (Principles) adopted by the Artificial Intelligence (EX) Working Group, accepted amendments and adopted the Principles (Attachment Two-A); 4) received an update from the Accelerated Underwriting (A) Working Group and heard presentations on use of algorithms in insurance and algorithmic auditing; 5) and heard an update on comments submitted related to the draft Unfair Trade Practices Act (#880) amended language pertaining to Section 4. H. specific to rebating and exposed language for another comment period ending Aug. 28.

The Artificial Intelligence (EX) Working Group met multiple times in 2020 and after publishing five draft principles and accepting comments from stakeholders, it adopted Artificial Intelligence Principles for the insurance industry during its June 30 meeting.

The Big Data (EX) Working Group met Aug. 4 and took the following action: 1) adopted its Dec. 7, 2019, minutes; 2) received an update from the Casualty Actuarial and Statistical (C) Task Force regarding its draft white paper on best practices for the review of predictive models and analytics filed by insurers to justify rates; 3) received an update on the work of the Accelerated Underwriting (A) Working Group; and 4) received an update on NAIC technical and nontechnical rate review trainings.

The Speed to Market (EX) Working Group met via conference call June 15, June 30 and July 15. During its June 15 meeting, the Working Group: 1) received an update on the SERFF Advisory Board and System for Electronic Rate and Form Filing (SERFF) metrics; 2) received an update from the Interstate Insurance Product Regulation Commission (Compact); 3) discussed SERFF state reports; and 4) adopted the suggestion to create a SERFF canned report for rate changes. During its June 30 meeting, the Working Group: 1) discussed suggestions for 2020 changes to the Life, Accident/Health, Annuity and Credit Uniform Product Coding Matrix (PCM) and Uniform Transmittal Document (UTD) effective Jan. 1, 2021. Two of the suggested changes were adopted: a) change the term “implementation date” to “effective date” on the UTD within the SERFF system general information area on the disposition letter; and b) add a sub-type of insurance (TOI) for expatriate plans under H15G and H15I. The description would be expatriate plans that are not required to comply with all state or federal mandates for health benefits. During its July 15 meeting, the Working Group: 1) adopted its June 15 minutes; 2) discussed suggestions for 2020 changes to the Property and Casualty PCM and UTD effective Jan. 1, 2021. None of the suggested changes were adopted; and 3) discussed plans for its next meeting, which will take place Aug. 27 to discuss the SERFF canned report in more detail and other topics related to the Working Group’s charges.

Long-Term Care Insurance (EX) Task Force—The Long-Term Care Insurance (EX) Task Force met Aug. 7 and took the following action: 1) adopted its July 2 minutes, which includes the following action: a) adopted its 2019 Fall National Meeting minutes; and b) received progress reports on the activities of its six workstreams; 2) adopted the formation of three subgroups and related charges (Attachment Two-B); 3) received a progress report on the activities of two of the Task Force’s workstreams: a) the rate review practices workstream has made progress developing a multi-state rate review process, which includes...
coordination with states and collaboration with the Compact; and b) the reduced benefit options (RBO) and consumer notices workstream developed and exposed for public comment a draft RBO Principles document that is intended to assist in providing guidance to state insurance regulators when evaluating RBO offerings by insurers; and 4) heard from consumer and industry representatives on their comments on the draft RBO Principles document.
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)

**RECOMMENDS** that insurance companies and all persons or entities facilitating the business of insurance that play an active role in the AI system life cycle, including third parties such as rating, data providers and advisory organizations (hereafter referred to as “AI actors”) promote, consider, monitor and uphold the following principles according to their respective roles; and

**THIS DOCUMENT** is intended to establish consistent high-level guiding principles for AI actors. These principles are guidance and do not carry the weight of law or impose any legal liability. This guidance can serve to inform and establish general expectations for AI actors and systems emphasizing the importance of accountability, compliance, transparency, and safe, secure, fair and robust outputs.

Further, **THIS DOCUMENT**

Should be used to assist regulators and NAIC committees addressing insurance-specific AI applications. The level of regulatory oversight may vary based on the risk and impact to the consumer. These principles should be interpreted and applied in a manner that accommodates the nature and pace of change in the use of AI by the insurance industry and promotes innovation, while protecting the consumer.

**Fair and Ethical**

a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, ratemaking standards, advertising decisions, claims practices, and solvency.

b. Consistent with the risk-based foundation of insurance, AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and remediates for such consequences when they occur.
Accountable
a. AI actors should be accountable for ensuring that AI systems operate in compliance with these principles consistent with the actors’ roles, within the appropriate context and evolving technologies. Any AI system should be compliant with legal requirements governing its use of data and algorithms during its phase of the insurance life cycle. Data supporting the final outcome of an AI application should be retained and be able to be produced in accordance with applicable insurance laws and regulations in each jurisdiction. AI actors should be responsible for the creation, implementation and impacts of any AI system, even if the impacts are unintended. AI actors should implement mechanisms and safeguards consistent with the degree and nature of the risks posed by AI to ensure all applicable laws and regulations are followed, including ongoing (human or otherwise) monitoring and, when appropriate, human intervention.

Compliant
a. AI actors must have the knowledge and resources in place to comply with all applicable insurance laws and regulations. AI actors must recognize that insurance is primarily regulated by the individual states and territories of the United States as well as by the federal government, and that AI systems must comply with the insurance laws and regulations within each individual jurisdiction. Compliance is required whether the violation is intentional or unintentional. Compliance with legal requirements is an ongoing process. Thus, any AI system that is deployed must be consistent with applicable laws and safeguards against outcomes that are either unfairly discriminatory or otherwise violate legal standards, including privacy and data security laws and regulations.

Transparent
a. For the purpose of improving the public’s confidence in AI, AI actors should commit to transparency and responsible disclosures regarding AI systems to relevant stakeholders. AI actors must have the ability to protect confidentiality of proprietary algorithms, provided adherence to individual state law and regulations in all states where AI is deployed can be demonstrated. These proactive disclosures include revealing the kind of data being used, the purpose of the data in the AI system and consequences for all stakeholders.

b. Consistent with applicable laws and regulations, stakeholders (which includes regulators and consumers) should have a way to inquire about, review and seek recourse for AI-driven insurance decisions. This information should be easy-to-understand and describe the factors that lead to the prediction, recommendation or decision. This information may be presented differently and should be appropriate for applicable stakeholders.
Secure, Safe and Robust

a. AI systems should be robust, secure and safe throughout the entire life cycle so that in conditions of normal or reasonably foreseeable use, or adverse conditions, they can function in compliance with applicable laws and regulations. To this end, AI actors should ensure a reasonable level of traceability in relation to datasets, processes and decisions made during the AI system life cycle. AI actors should enable analysis of the AI system’s outcomes, responses and other insurance-related inquiries, as appropriate in keeping with applicable industry best practices and legal requirements.

b. AI actors should, based on their roles, the situational context and their ability to act, apply a systematic risk management approach to each phase of the AI system life cycle on a continuous basis to address risks related to AI systems, including privacy, digital security and unfair discrimination as defined by applicable laws and regulations.
Proposed Charges:

The **LTCI Multistate Rate Review (EX) Subgroup** will:

Develop a consistent national approach for reviewing LTCI rates that results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization. The Subgroup should complete its charges by the 2021 Summer National Meeting.

- **Chair**: Commissioner Michael Conway (CO)
- **Consolidation of workstream 1—Multi-state Rate Review Practices and workstream 5—Non-Actuarial Variance Among the States**
- **Open Sessions or Regulator Only Sessions, pursuant to open meetings policy #3 – discussion of companies, entities or individuals**

The **LTCI Reduced Benefit Options (EX) Subgroup** will:

Identify options and develop recommendations for the rate review approach that provides consumers with choices regarding modifications to LTCI contract benefits where policies are no longer affordable due to rate increases. The Subgroup should complete its charges by Dec. 31, 2020.

- **Chair**: Commissioner Jessica K. Altman (PA)
- **Former workstream 3—Reduced Benefit Options and Consumer Notices**
- **Open Sessions**

The **LTCI Financial Solvency (EX) Subgroup** will:

a. Explore restructuring options and techniques to address potential inequities between policyholders in different states; and techniques to mitigate policyholders’ risk to state guaranty fund benefit limits including states’ pre-rehabilitation planning options. Evaluate the work of the consultant and report on the work to the Task Force
b. Evaluate the results of consultants’ work on the completion of a data call and report on the work to the Task Force
c. Monitor work performed by other NAIC solvency working groups and assist in the timely multi-state coordination/communication of the review of the financial condition of LTC insurers

The Subgroup should complete its charges by the 2021 Summer National Meeting.

- **Co-Chairs**: Doug Slape (TX) and Fred Andersen (MN)
- **Consolidation of workstream 2—Restructuring Techniques, workstream 4—Valuation of Long-Term Care Insurance (LTCI) Reserves and workstream 6—Data Call Design and Oversight**
- **Regulator Only Sessions, pursuant to open meetings policy #3 – discussion of companies, entities or individuals**
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: □ New Model Law or ✔ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

   Receivership Law (E) Working Group

2. NAIC staff support contact information:

   Jane Koenigsman

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

   - **Insurance Holding Company System Regulatory Act (#440)**
   - **Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)**

   In 2018 the Financial Stability (EX) Task Force made a referral to the Receivership and Insolvency (E) Task Force as part of the Macro Prudential Initiative (MPI). At the 2019 Summer National Meeting, the Receivership and Insolvency (E) Task Force adopted a report including recommendations to address receivership powers that are implicit in state laws, rather than explicit. One such area is the power to ensure the continuity of essential services and functions within a holding company group once an insurer is placed into receivership.

   The Financial Stability Board’s (FSB) Key Attributes (KAs) of Effective Resolution Regimes for Financial Institutions KA 3.2 states that a resolution authority should have the power to ensure the continuity of essential services and functions by requiring companies in the group to continue providing services. Under Common Framework for the supervision of Internationally Active Insurance Groups (ComFrame) (CF 12.7a), a resolution authority may take steps to provide continuity of essential services by requiring other entities within the IAIG (including non-regulated entities) to continue services. The Task Force identified the following authority and remedies available within the US regime related to these international standards:

   - The **Insurance Holding Company System Model Act (#440)** requires approval of affiliated transactions, allowing a regulator to identify agreements that could create obstacles in a receivership. The **Insurance Holding Company System Model Regulation (#450)**, Section 19, provides that cost sharing and management agreements specify if the insurer is placed in receivership that an affiliate has no automatic right to terminate the agreement.
   - The Receiver can take action against a provider that refuses to continue services under a contract, or seek an order requiring it to turn over records. If an affiliate providing services is inextricably intertwined with the insurer, the Receiver could also seek to place the affiliate into receivership.

   However, it was noted that some of these authorities and remedies may not address the immediate need to continue services in some receiverships. Despite these available remedies, receivers continue to be challenged by this issue in receivership, often resulting in significant additional legal and administrative expenses to the receivership estate.

   One potential solution is to revise the definition of “insurer” under state insurance holding company laws to encompass affiliated entities whose sole purpose is to provide services to the insurer.
The NAIC adopted 2020 charges for the Receivership Law (E) Working Group to: “Review and provide recommendations for remedies to ensure continuity of essential services and functions to an insurer in receivership by affiliated entities, including non-regulated entities. Consult with the Group Solvency Issues (E) Working Group as the topic relates to affiliated intercompany agreements.”

Scope of the Proposed Revisions to Models 440 and 450
The scope of the request is limited to addressing the issue of continuation of essential services through affiliated intercompany agreements that arise during the receivership of an insurance company. The Receivership Law (E) Working Group under the Receivership and Insolvency (E) Task Force would complete the review and recommend proposed revisions. Revisions may be necessary to the following sections of Models 440 and 450 including, but not limited to:

- Model 440 Section 1. Definitions
- Model 440 Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System
- Model 440 Section 12. Receivership
- Model 450. Consistency with any revisions to Model 440

4. Does the model law meet the Model Law Criteria? ❑ Yes or ❑ No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? ❑ Yes or ❑ No (Check one)

If yes, please explain why:

While this change is being made in connection with the NAICs Macro Prudential Initiative, most important is that such changes are needed to address the challenges receivers continue to encounter in the area of continuation services which often result in significant additional legal and administrative expenses to the receivership estate and all members of the Task Force supported this request.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

❑ Yes or ❑ No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

❑ 1 ❑ 2 ❑ 3 ❑ 4 ❑ 5 (Check one)

High Likelihood Low Likelihood

Explanation, if necessary:

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

❑ 1 ❑ 2 ❑ 3 ❑ 4 ❑ 5 (Check one)

High Likelihood Low Likelihood

Explanation, if necessary: See previous discussion.
7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1  ☐ 2  ☐ 3  ☐ 4  ☐ 5  (Check one)

High Likelihood  Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

The Insurance Holding Company System Model Act (#440) is an Accreditation Standard but the task force has not yet considered whether this should become part of the required elements of that specific standard. However, given the potential the changes have in reducing the cost of regulation under receiverships, a national standard is likely appropriate.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: □ New Model Law or □ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

   Financial Stability (EX) Task Force

2. NAIC staff support contact information:

   Todd Sells
tsells@naic.org
   816-783-8403

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

   - Insurance Holding Company System Regulatory Act (#440)
   - Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)

   Background & Description
   One of the key deliverables of the Financial Stability (EX) Task Force is to implement the Macroprudential Initiative (MPI) domestically, which includes enhancements to the U.S. regulatory toolkit as part of the State Ahead initiative. The most significant of the deliverables from the MPI includes the development of a liquidity stress test for the largest life insurers.

   Scope of the Proposed Revisions to Model #440 and Model #450
   The scope of the request is limited to addressing the issue of establishing regulatory authority to require stress testing and disclosures related to liquidity risk and establish, in statute, the confidentiality of those disclosures as appropriate. The Financial Stability (EX) Task Force would complete the review and recommend proposed draft revisions to Model #440 and Model #450. It is anticipated that these revisions will need to reference liquidity stress testing framework documents that will need to be able to be modified annually without opening up the models themselves (e.g., directions regarding the liquidity stress test, reporting templates, and specific requirements of the stress scenarios). Revisions may be necessary to the following sections of Model #440 and Model #450, including, but not limited to:

   Model #440 Section 1. Definitions
   Model #440 Section 5. Standards and Management of an Insurer Within an Insurance Holding Company System
   Model #440 Section 8. Confidential Treatment
   Model #450: Consistency with any revisions to Model #440

4. Does the model law meet the Model Law Criteria? □ Yes or □ No (Check one)

   (If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

   a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? □ Yes or □ No (Check one)
If yes, please explain why:

While this change is being made in connection with the NAIC’s MPI, most important is that such changes are needed for confidentiality protections for those who would be filing this stress test, which includes the largest life insurers that are operating in all of the states.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

☐ Yes or ☐ No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

☐ 1 ☐ 2 ☒ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood
Low Likelihood

Explanation, if necessary:

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

☐ 1 ☐ 2 ☒ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood
Low Likelihood

Explanation, if necessary:

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

☐ 1 ☐ 2 ☒ 3 ☐ 4 ☐ 5 (Check one)

High Likelihood
Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple; the Task Force believes that such changes will be widely supported.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

The Model #440 is an accreditation standard, but the Task Force has not yet considered whether this should become part of the required elements of that specific standard.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.
REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC’s Executive Committee is required. The NAIC’s Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: □ New Model Law or □ Amendment to Existing Model

1. Name of group to be responsible for drafting the model:
   Life Actuarial (A) Task Force

2. NAIC staff support contact information:
   Reggie Mazyck

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

   The Standard Nonforfeiture Law for Individual Deferred Annuities (#805) sets the floor for the nonforfeiture interest rate at 1 percent. The current low interest rate environment necessitates lowering the nonforfeiture interest rate to 0 percent to allow companies to support the nonforfeiture guarantees in their deferred annuity contracts. The Life Actuarial (A) Task Force proposal seeks to amend Section 4B(3) of #805 to lower the 1 percent interest rate floor to 0 percent.

4. Does the model law meet the Model Law Criteria? □ Yes or □ No (Check one)
   (If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).
   a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states?
      □ Yes or □ No (Check one)
      If yes, please explain why
   b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?
      □ Yes or □ No (Check one)

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No
To: Members of the NAIC Executive Committee  
From: Superintendent Beth Dwyer, Rhode Island Department of Business Regulation Insurance Division  
Chair, NAIC Insurance Regulator Professional Designation Program Advisory Board  
Date: August 13, 2020  
Subject: 2019 Annual Report of NAIC Designation Program Advisory Board Activities

In October of 2006, the NAIC launched the Insurance Regulator Professional Designation Program ("Designation Program"), a formal credentialing program designed for regulators, by regulators to establish structured training and development paths for insurance department employees. In that same year, the Internal Administration (EX1) Subcommittee directed the program’s Advisory Board to present a brief annual report of program benchmarks and board activities. This memorandum, with its supplemental charts, sets forth an account of the program’s year in review.

**Program Enrollments**
We continued our outreach to states and have seen increased interest and enrollments across the board. In 2019, the NAIC Education & Training Department processed over 350 Designation Program enrollments, bringing the total number of enrollments since 2006 to 2,392.

We awarded 235 new designations in 2019. By year-end, earned designation totals were as follows: 943 APIR designees, 343 PIR designees, 22 SPIR designees, and 2 IPIR designees.

With the continuation of the State Ahead Strategic Plan, we expect a continuing increase in enrollments in 2020. Goal III of State Ahead speaks to Superior Member Services and Resources, which includes the initiative to “continue to increase regulator participation in the NAIC Insurance Regulator Professional Designation Program.”

**Program Updates**
Goal I of State Ahead speaks to providing regulators with the data, training and tools required to support a collaborative regulatory environment which, in part, includes utilizing cloud capabilities. The NAIC Designation Program cloud-based enrollment system was released at the end of 2017 to allow regulators to enroll, pay, apply for the designation, renew and keep their transcripts in the site. Work is underway to enhance functionality and expand support for participants as the program continues to grow.

**The Designation Program Mentoring Network**
States have been encouraged to appoint a “mentor” that can serve as a liaison between the Department and the NAIC’s Education & Training Department as a means of disseminating information about the program to interested regulators, and to assist candidates as they have questions. All but one territory has individuals active in this role. Most mentors have earned an NAIC Designation or are currently working toward one.

© 2020 National Association of Insurance Commissioners
The Annual Designation Program Advisory Board Meeting
The Designation Program Advisory Board met regularly throughout 2019 via conference call to discuss policy matters and other issues. The annual in-person board meeting was held May 6 in Kansas City. Discussion items included policy recommendations and promotion of the program in conjunction with the State Ahead goals.

2020 Accomplishments
Several significant accomplishments have occurred in 2020, including:
- Replacing the program’s enrollment site with a new program management system (Certemy) to streamline and automate many of the processes done manually today, which will provide a better user experience for program participants. Onboarding to the Certemy system began July 1 for an October implementation.
- Created and implemented a new course for the APIR level, “Introduction to Financial Regulation for Non-Financial Regulators.”
- Updated program policies in response to program participant needs and requests (waiving first retake fee, removing tenure requirements for APIR and PIR, and allowing courses to be taken “out of sequence”).
- Granted a 1-year extension on all Designation renewal dates.

About the Insurance Regulator Professional Designation Program Advisory Board
The 2019 Advisory Board was composed of Mary Mealer, Life and Health Manager, Market Regulation Division, Missouri Department of Insurance; Pat McNaughton, Chief Financial Examiner, Washington Office of the Insurance Commissioner; Rachel Chester, Chief of Consumer and Licensing Services, Rhode Island Department of Business Regulation Insurance Division and Scott Sanders, Supervisor of Insurance and Financial Oversight, Georgia Office of Insurance.

North Dakota Commissioner Jon Godfread chaired the 2019 Advisory Board.

In addition to overseeing Designation Program policy and advising NAIC Education Department staff on designation program policy administration, the board members work on outreach to regulators during NAIC Zone Meetings and other regulatory meetings. Additional information about the Designation Program can be found by visiting the NAIC website: http://naic.org/education_designation.htm

Model Law Development Report

Amendments to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)—Amendments to Model #171 are required for consistency with the federal Affordable Care Act (ACA); therefore, they did not require approval of a Request for NAIC Model Law Development by the Executive (EX) Committee. At the 2015 Fall National Meeting, the Regulatory Framework (B) Task Force discussed the proposed revisions to this model. The Task Force met Feb. 11, 2016, and appointed the Accident and Sickness Insurance Minimum Standards (B) Subgroup to work on revisions to this model. The Subgroup has been meeting on a regular basis since the 2016 Spring National Meeting, and it plans to continue meeting via conference call until it completes its work. During its meetings, the Subgroup has discussed several issues, including its approach for revising the model’s disability income insurance coverage provisions, and decided preliminarily to review the Interstate Insurance Product Regulation Commission’s (Compact’s) approach. After pausing its work due to the ACA’s potential repeal, replacement or modification—and the possible impact on the provisions of this model, as well as the Subgroup’s preliminary proposed revisions to the model—the Subgroup began meeting again via conference call in May 2018. Revisions to the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170) were adopted by the full NAIC membership at the 2019 Spring National Meeting. The Subgroup has been meeting via conference call to consider revisions to Model #171 for consistency with the revised Model #170 since the 2019 Summer National Meeting discussion on comments received on Sections 1–5 of Model #171. In December 2019, the Subgroup set a public comment period ending Feb. 7 to receive comments on Section 6 and Section 7 of Model #171. Due to the COVID-19 health emergency, the Subgroup has not scheduled any meetings. Any future meetings will depend on when a new co-chair is appointed and the duration of the COVID-19 health emergency. As requested, the Subgroup received comments from stakeholders on Section 6 and Section 7 of Model #171. Whenever the Subgroup meets next, the Subgroup will: 1) complete its discussion of the comments received on Sections 1–5 of Model #171; and 2) begin discussion of the comments received on Section 6 and Section 7 of Model #171. The Subgroup would like to complete its work by the end of 2020.

Amendments to the Annuity Disclosure Model Regulation (#245)—The Executive (EX) Committee met June 19, 2017, and approved a Request for NAIC Model Law Development to amend Model #245. The amendments will revise Section 6—Standards for Illustrations. The purpose of the revision is to address issues identified by the Annuity Disclosure (A) Working Group of the Life Insurance and Annuities (A) Committee related to innovations in annuity products that are not addressed, or not addressed adequately, in the current standards. Revisions addressing participating income annuities were adopted by the Life Insurance and Annuities (A) Committee during its July 19, 2018, conference call and held pending the resolution of the Working Group’s discussions regarding illustrating indexes in existence for less than 10 years. The Working Group continues to discuss additional revisions on the index issue. The Working Group made progress during discussions via conference calls in late 2019 and early 2020, and it received an extension from the Life Insurance and Annuities (A) Committee at the 2020 Summer National Meeting to finish its work.

Amendments to the Health Maintenance Organization Model Act (#430)—The Executive (EX) Committee approved the Request for NAIC Model Law Development to amend Model #430 at the 2019 Summer National Meeting. The HMO Issues (B) Subgroup of the Regulatory Framework (B) Task Force is drafting the amendments to address conflicts and redundancies with provisions in the Life and Health Insurance Guaranty Association Model Act (#520). Following the 2019 Summer National Meeting, the Working Group met via conference call to consider recommendations from the Virginia Insurance Bureau on revising Model #430 consistent with its charge. During its Nov. 21, 2019, conference call, the Working Group decided to move forward with revising Model #430 based on recommendations from the Maine Bureau of Insurance (BOI). It is anticipated that the Subgroup will meet via conference call sometime after the 2019 Fall National Meeting to review an initial draft of revisions to Model #430 based on the Maine BOI’s recommendations. The Subgroup adopted the revisions to Model #430 on July 13. The Regulatory Framework (B) Task Force and the Health Insurance and Managed Care (B) Committee will consider adoption of the revisions after the 2020 Summer National Meeting.

Amendments to the Insurance Holding Company System Regulatory Act (#440) and the Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)—The Executive (EX) Committee approved the Requests for NAIC Model Law Development for amendments to Model #440 and Model #450 at the 2019 Fall National Meeting. The Working Group recently exposed proposed changes to Model #440 for a second round of comments while also exposing proposed changes to Model #450 for a first round of comments. The Working Group is still striving to adopt the calculation before the end of 2020.
Amendments to the Life Insurance Disclosure Model Regulation (#580)—The Executive (EX) Committee met June 19, 2017, and approved the Request for NAIC Model Law Development to incorporate a policy overview document requirement into Model #580 and the Life Insurance Illustrations Model Regulation (#582) in order to improve the understandability of the life insurance policy summary and narrative summary already required by Section 5A(2) of Model #580 and Section 7B of Model #582. While the Life Insurance Illustration Issues (A) Working Group of the Life Insurance and Annuities (A) Committee was originally planning to revise both Model #580 and Model #582, it will now revise only Model #580. The Working Group has been meeting via conference call to develop language to add a requirement for a one- to two-page consumer-oriented policy overview. The Working Group continued to make progress during conference calls in late 2019 and early 2020, and it received an extension from the Life Insurance and Annuities (A) Committee at the 2020 Summer National Meeting to continue its work.

Amendments to the Mortgage Guaranty Insurance Model Act (#630)—The Executive (EX) Committee and Plenary approved the Request for NAIC Model Law Development to amend Model #630 on July 26, 2013. The Mortgage Guaranty Insurance (E) Working Group of the Financial Condition (E) Committee developed substantial changes to the model, but it continues to discuss those changes. COVID-19 has prevented the Working Group from working on Model #630, for which in February the Financial Condition (E) Committee adopted an extension until the 2020 Fall National Meeting.

Amendments to the Unfair Trade Practices Act (#880)—The Executive (EX) Committee approved the Request for NAIC Model Law Development to amend Model #880 at the 2019 Fall National Meeting. The Innovation and Technology (EX) Task Force will draft amendments to Model #880, focusing on Section 4H, to clarify what is considered a “rebate” or “inducement.” A drafting group was formed, led by Superintendent Elizabeth Kelleher Dwyer (RI), to develop language for exposure. The drafting group held its first call on Jan. 27, 2020, followed by three more calls. In all, five drafts were discussed, the drafting group disbanded on June 17, 2020, and the draft coming out of that work was distributed and posted to the NAIC website for comment. The Innovation and Technology (EX) Task Force continues to deliberate regarding the language, and it will discuss it during its meeting on Aug. 7, 2020.

New Model: Real Property Lender-Placed Insurance Model Act—The Executive (EX) Committee approved the Request for NAIC Model Law Development, submitted by the Property and Casualty Insurance (C) Committee, to draft the new Real Property Lender-Placed Insurance Model Act at the 2017 Summer National Meeting. The Lender-Placed Insurance Model Act (C) Working Group of the Property and Casualty Insurance (C) Committee exposed a draft of this proposed new model focusing on lender-placed insurance related to mortgage loans for a public comment period ending Oct. 31, 2018. At the 2020 Summer National Meeting, the Working Group received an extension of time to continue drafting the new model.

New Model: Pet Insurance Model Law—The Executive (EX) Committee approved the Request for NAIC Model Law Development at the 2019 Summer National Meeting. The Pet Insurance (C) Working Group is holding conference calls to draft the model law to define a regulatory structure for pet insurance and address issues, such as: producer licensing; policy terms; coverages; claims handling; premium taxes; disclosures; arbitration; and preexisting conditions.

New Model: [State] Pharmacy Benefit Manager Licensure and Regulation Model Act—The Executive (EX) Committee approved the Request for NAIC Model Law Development at the 2019 Summer National Meeting to draft a new model law addressing the licensure or registration of pharmacy benefit managers (PBMs). The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force is drafting the model as a result of discussions that began during the Health Insurance and Managed Care (B) Committee’s work to revise the Health Carrier Prescription Drug Benefit Management Model Act (#22). Following the 2019 Summer National Meeting, the Working Group held several information-gathering sessions to assist it in working on its charge. The Working Group met via conference call in regulator-to-regulator session to discuss its next steps. The Working Group formed an ad hoc drafting group to develop an initial draft regulating PBMs. The Subgroup met via conference call July 16 to discuss a draft of establishing a PBM licensing requirement and other PBM provisions, including a gag clause provision. The Subgroup exposed the draft for a public comment period ending Sept. 1, 2020.
The Financial Stability (EX) Task Force met via conference call. The following Task Force members participated: Marlene Caride, Chair (NJ); Eric A. Cioppa, Vice Chair (ME); Alan McClain represented by Mel Anderson (AK); Ricardo Lara represented by Kim Hudson (CA); Andrew N. Mais represented by Kathy Belfi (CT); Karima Woods represented by Philip Barlow (DC); David Altmaier represented by Susanne Murphy (FL); Doug Ommen (IA); Robert H. Muriel represented by Vincent Tsang and Kevin Fry (IL); Gary Anderson (MA); Chlora Lindley-Myers represented by John Rehagen (MO); Bruce R. Range represented by Justin Schrader (NE); Linda A. Lacewell represented by Martha Lees (NY); Jessica Altman (PA); and Kent Sullivan represented by Mike Boerner and James Kennedy (TX).

1. Adopted its Feb. 26, 2020, and 2019 Fall National Meeting Minutes

The Task Force met Feb. 26, 2020, and Dec. 9, 2019. During its Feb. 26 meeting, the Task Force took the following action: 1) announced reappointment of the Liquidity Assessment (EX) Subgroup; 2) discussed comments received on the draft 2019 liquidity stress test framework; and 3) discussed comments received on a request to join the Financial Condition (E) Committee in opening holding company models.

2. Heard an Update on FSOC Developments

Superintendent Cioppa reported that since the 2019 Fall National Meeting, the Financial Stability Oversight Council (FSOC) has met three times with a primary focus on the COVID-19 pandemic and the related economic crisis. On March 26, the FSOC met in executive session to discuss COVID-19 and non-bank mortgage origination and in open session to discuss developments related to COVID-19. He added that during the open session, he reported on the work of state insurance regulators in response to the crisis, noting that the insurance sector remains strong but that the impact of the low interest rate environment on life and annuity writers, as well as the issues surrounding business interruption coverage, are being monitored. On May 14, the FSOC met in closed session to discuss regulators’ response to COVID-19 and received an update on the work of the Nonbank Mortgage Liquidity Task Force. Finally, the FSOC met July 14 to hear an update on an activities-based review of the secondary mortgage market and to receive an update on the Federal Reserve’s stress tests, including additional COVID-19 focused analysis.

3. Received an Update from the Liquidity Assessment (EX) Subgroup on Progress in Achieving its Deliverables related to Liquidity Stress Testing

Mr. Schrader reported that via an e-vote effective April 17, the Task Force adopted a motion to pause the work on the 2019 Liquidity Stress Test (LST) and instead adopted a new 2020 charge for the Subgroup to address an American Council of Life Insurer’s (ACLI) proposal to focus on macroprudential information regarding how the insurance sector is navigating market conditions due to the economic impact of the pandemic. The Subgroup’s study group has established a scope of 23 companies for a quantitative and qualitative data collection with respect to liquidity. He added that the data collection consists of Phase I, which is qualitative data based on first-quarter financials, and Phase II, which is qualitative and quantitative data on second-quarter financials. He said that the deadline for Phase I was July 15, and the deadline for Phase II is Aug. 31. Mr. Schrader noted that results from both phases will be used to refine the study group’s prior work of developing the 2019 LST. He said that a pandemic in conjunction with an economic stress will now be considered for the postponed LST.

4. Received an Update from the Receivership and Insolvency (E) Task Force on its Work to Address the Financial Stability (EX) Task Force’s Referral Letter to Undertake Analysis Relevant to the MPI

Mr. Kennedy reported that the Receivership and Insolvency (E) Task Force continues to work to address the Financial Stability (EX) Task Force’s referral letter to undertake an analysis of resolution and recovery concerns important to financial stability as part of the Macroprudential Initiative (MPI) but with some delay due to the impact of COVID-19. The Receivership and Insolvency (E) Task Force will request comments and further consider key provisions that states should adopt into states’ receivership and guaranty fund laws and regulations. He added that earlier this year, the Receivership and Insolvency (E) Task Force and Financial Condition (E) Committee adopted a Request for NAIC Model Law Development, which, if adopted by...
the Executive (EX) Committee, the Receivership Law (E) Working Group will develop recommendations within the Insurance Holding Company System Regulatory Act (¶440) and Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (¶450) to ensure the continuation of essential services to an insurer in receivership by affiliated entities in a group.

Mr. Kennedy reported that the Receivership and Insolvency (E) Task Force found that a bridge institution might be useful in a receivership to address early termination on qualified financial contracts (QFCs) but would require the use of a temporary stay on termination rights, which is prohibited in many states. Therefore, a possible solution is to explore if a bridge can be established under regulatory oversight before receivership to address early termination of QFCs.

Mr. Kennedy added that at the 2019 Fall National Meeting, the Executive (EX) Committee and Plenary adopted revisions to the Guideline for Stay on Termination of Netting Arrangements and Qualified Financial Contracts (¶1556) and at this Summer National Meeting, the Receivership and Insolvency (E) Task Force plans to adopt amendments to the Receiver’s Handbook to address federal taxes and federal releases. He also reported that the International Association of Insurance Supervisors (IAIS) will be meeting virtually in September to finalize the Application Paper on Resolution Planning.

5. Heard an Update on Collateralized Loan Obligation (CLO) Stress Tests

Eric Kolchinsky (NAIC) reported that equity markets continue to stabilize and have staged a comeback with year-to-date (YTD) return on nonaffiliated publicly traded common stocks being down by about 15% as of June 30. He added that the negative performance is driven primarily by insurer holdings of energy stocks. He also reported that the amount of bonds that have been downgraded to below investment grade has been minimal. He added that total NAIC 1 and NAIC 2 designation holdings have only decreased from approximately 95% to 93% from year-end 2019 to June 2020. Mr. Kolchinsky said that collateralized loan obligations (CLOs) continue to be a growing asset class for U.S. insurers, increasing 18% from $130 billion at year-end 2018 to $158 billion at year-end 2019. He noted that the NAIC was able to model $119 billion in several stress test scenarios. He concluded that NAIC CLO stress tests have determined that COVID-related scenarios will have a minor impact on the vast bulk of CLO-holding insurers. However, he cautioned that significant CLO exposures relative to capital and surplus, and concentrated exposures to atypical securities, are potential risks (particularly in a stressed environment) for several medium to small insurers.

6. Heard an Update on the IAIS

Tim Nauheimer (NAIC) reported that the IAIS has adopted a framework for a holistic approach to assessing and mitigating systemic risk, which recognizes that systemic risk can arise both from sector-wide trends with regard to specific activities and exposures, as well as from a concentration of these activities and exposures in individual insurers. He added that the IAIS Macroprudential Monitoring Working Group (MMWG) oversees many of the holistic initiatives, including the global monitoring exercise (GME) that consists of individual insurer monitoring (IIM) and sector-wide monitoring (SWM).

Mr. Nauheimer reported that the IAIS launched its eighth annual IIM exercise in March, but the exercise was reduced to a targeted COVID-19 data collection with both a quantitative section and a qualitative section. He added that there are 58 insurers participating worldwide, including 16 U.S. insurers that are submitting data quarterly on a best effort basis. He also reported that the IAIS launched its annual SWM exercise in March, but the exercise was also reduced to a targeted COVID-19 data collection with both a quantitative and qualitative section. He added that the NAIC has been providing quarterly SWM data to the IAIS. He said that the IAIS, in consultation with the Financial Stability Board (FSB), agreed that reporting to the FSB on the outcomes of the 2020 GME will be postponed by one year to October 2021. He concluded that common themes from the GME include: 1) the potential materialization of credit risk in insurers’ investment portfolio; 2) the impact of the low interest rate environment; 3) insurance sector interconnectedness; 4) business interruption; 5) operational resilience; and 6) cyber risk. He added that the IAIS is also developing a global risk dashboard with data from the GME.

Mr. Nauheimer also reported that the Macro-prudential Supervision Working Group (MSWG) has completed and exposed the application paper on liquidity risk management and is preparing for a second public consultation in November. Additionally, MSWG began drafting the Macroprudential Supervision Application Paper to provide guidance on Insurance Core Principle (ICP) 24. He added that the IAIS is also conducting a baseline assessment questionnaire for the implementation of the holistic framework, which focuses on ICPs and IAIS Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) standards adopted in November 2019. He said that the proposed NAIC staff survey responses were forwarded to Financial Stability (EX) Task Force members and interested regulators for review on July 27 and will be submitted jointly with the Federal Reserve and the Federal Insurance Office (FIO) to the IAIS.
He said that some of the work of the NAIC’s MPI has been delayed in order to provide relief to industry and members. He added that while the NAIC continues to work on a U.S. risk dashboard, the work has been paused to establish interim COVID risk dashboards for the property, life and health sectors, which will assist regulators in prioritizing the myriad of COVID issues that were occurring rapidly in April.

7. **Heard an Update on LIBOR**

Mr. Nauheimer reported that the Task Force monitors London Interbank Offered Rate (LIBOR)-related matters to assess if there are any issues that may significantly affect financial stability. He added that NAIC staff are also ex officio members of the Alternative Reference Rates Committee (ARRC), which is a group of private-market participants convened by the Federal Reserve Board and the Federal Reserve Bank of New York to help ensure a successful transition from U.S. dollar LIBOR to the secured overnight financing rate (SOFR). He identified several issues:

- Insurers were looking for safe harbor language from the NAIC and states to hold basis swaps in their derivatives portfolio. In response, the Financial Condition (E) Committee issued a letter on June 12 alerting insurers of its support of those swaps being deemed permissible derivative investments up to one year past the cutover.
- Some life reserving and accounting issues need to be addressed by the NAIC but pose no threat to financial stability.

8. **Discussed Exposure Comments for the Draft Revisions to Model #440**

Todd Sells (NAIC) reported that two comment letters were received by the Subgroup for the draft revisions to Model #440:

- The Texas Department of Insurance’s (DOI) comment letter suggests: 1) to incorporate the separate confidentiality section 8.2 into the original section 8 of Model #440 as occurred for the Group Capital Calculation; 2) to consider the Liquidity Stress Test an additional type of enterprise risk filing; 3) to define scope criteria in the definitions section; and 4) to ensure the NAIC Liquidity Stress Test Framework for a given year is completed in advance enough to allow states to adopt it and for insurers in scope to meet the requirements.
- The ACLI’s comment letter suggests modifications to the draft confidentiality provisions, but recognized their specific edits may not be valid if the Texas DOI’s recommendation to collapse the draft section 8.2 into the original section 8 of Model #440.

Mr. Sells concluded that the Subgroup intends to address these comments and provide a set of proposed revisions to Model #440 for the Task Force to expose and finalize.

Having no further business, the Financial Stability (EX) Task Force adjourned.

W:\national meetings\2020\summer\tf\financialstability\8-5FSTFmin.docx
GOVERNMENT RELATIONS (EX) LEADERSHIP COUNCIL

The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting.
The Innovation and Technology (EX) Task Force met Aug. 7, 2020. The following Task Force members participated: Jon Godfread, Chair, and Chris Aufenthie (ND); Elizabeth Kelleher Dwyer, Vice Chair (RI); Lori K. Wing-Heier represented by Chris Murray (AK); Jim L. Ridling represented by Jerry Workman and Gina Hunt (AL); Alan McClain and Letty Hardee (AR); Elizabeth Perri (AS); Evan G. Daniels and Erin Klug (AZ); Ricardo Lara and Lucy Jabourian (CA); Michael Conway (CO); Andrew N. Mais (CT); Karima M. Woods (DC); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron (ID); Robert H. Muriel (IL); Stephen W. Robertson represented by Jerry Ehlers (IN); Vicki Schmidt represented by LeAnn Crow (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary Anderson (MA); Kathleen A. Birrane (MD); Eric A. Cioppa represented by Ben Yardley (ME); Anita G. Fox (MI); Steve Kelly represented by Tammy Lohmann, Grace Arnold and Phil Vigliaturo (MN); Chlora Lindley-Myers and Cynthia Amann (MO); Mike Chaney and Andy Case (MS); Matthew Rosendale represented by Steve Matthews and Jeannie Keller (MT); Mike Causey represented by Tracy Biehn (NC); Bruce R. Ramge (NE); Chris Nicolopoulos represented by Christian Citarella (NH); Marlene Caride represented by Mark McGill and Carl Sorenson (NJ); Barbara D. Richardson (NV); Jillian Froment (OH); Glen Mulready represented by Cuc Nguyen (OK); Andrew R. Stolfi (OR); Jessica K. Altman and Michael Humphreys (PA); Raymond G. Farmer (SC); Larry D. Deiter (SD); Hodgen Mainda (TN); Kent Sullivan represented by Doug Sape and Michael Nored (TX); Scott A. White and Rebecca Nichols (VA); Michael S. Pieciak represented by Anna Van Fleet (VT); Mike Kreidler and Molly Nollette (WA); Mark Afable (WI); and James A. Dodrill (WV). Also participating was: My Chi To (NY).

1. **Adopted its July 23, 2020, and 2019 Fall National Meeting Minutes**

Commissioner Altman made a motion, seconded by Ms. Biehn, to adopt the Task Force’s July 23, 2020 (Attachment Five) and Dec. 6, 2019 (see NAIC Proceedings – Fall 2019, Innovation and Technology (EX) Task Force) minutes. The motion was unanimously adopted.

2. **Adopted its Working Group Reports**

Commissioner Godfread asked for reports from the Task Force’s working groups.

   a. **Big Data (EX) Working Group**

Commissioner Ommen said the Big Data (EX) Working Group met Aug. 4 and adopted its 2019 Fall National Meeting minutes and received an update from the Casualty Actuarial and Statistical (C) Task Force (CASTF). He said the CASTF is drafting a white paper, *Regulatory Review of Predictive Models*, to provide best practices for the review of predictive models and analytics filed by insurers to justify rates.

Commissioner Ommen said state insurance regulators have the responsibility to review and evaluate the advancing uses of technology, modeling techniques and the application of models in insurance and the priority question being addressed is whether state insurance regulators can determine whether predictive models, as used in rate filings, are compliant with state laws and regulations. He said the white paper includes an update on the development of the best practices for evaluating the use of variables and predictive modeling, noting the four best practices for regulatory review outlined in the white paper are to: 1) ensure compliance with state rating laws; 2) review all aspects of a model (data assumptions, adjustments, variables, inputs and outputs); 3) evaluate how a model interacts with and improves the rating plan; and 4) enable competition and innovation.

Commissioner Ommen said the white paper references the concept of “rational explanation” that refers to a plausible narrative connecting the variable and/or treatment in question with real-world circumstances or behaviors that contribute to the risk of insurance loss in a manner that is readily understandable to a consumer or other educated layperson. He said the white paper indicates that a “rational explanation” does not require strict proof of causality but should establish a sufficient degree of confidence that the variable and/or treatment selected are not obscure, irrelevant, or arbitrary.

Commissioner Ommen said the latest draft of the white paper was exposed June 12 and the CASTF is now reviewing the latest round of comments and plans to present the white paper to the Property and Casualty Insurance (C) Committee in September.
Commissioner Ommen noted that the white paper has been prepared more in the context of generalized linear models (GLMs) and similar systems that could be described as “static” models or algorithms, which are now more commonly found in insurance rate filings, although the best practices would also apply to models that also involve artificial intelligence. He said the “NAIC Principles for artificial intelligence (AI)” (AI Principles), which will be considered by the Innovation and Technology (EX) Task Force later in this meeting, more narrowly apply to a subset of developing innovative modeling that could be described as “more dynamic” due to the addition of AI to the modeling.

Commissioner Ommen said the Big Data (EX) Working Group also received an update from the Accelerated Underwriting (A) Working Group, noting that another important workstream initiated by the Big Data (EX) Working Group is the NAIC technical and nontechnical rate review trainings. These trainings started Nov. 13, 2019, and ended in June 2020. He said state insurance regulators received technical training in exploratory data analysis and statistical techniques insurers are using to develop property and casualty risk classification and rating plans and the training also covered specific advanced statistical techniques including GLMs, generalized additive models (GAMs), gradient boosted trees, random forest ensembles and decision tree models. He said that in addition to the more advanced technical training, the NAIC sponsored two non-theoretical, practical webinars, designated as “nontechnical webinars.” Moving forward, the NAIC plans to provide training targeted specifically to market conduct examiners.

Ms. Nichols reported that the Speed to Market (EX) Working Group met July 15, June 30 and June 15 via conference call. During its June 15 conference call, the Working Group heard updates regarding the NAIC System for Electronic Rates and Forms Filing (SERFF) Advisory Board and SERFF metrics, as well as an update from the Interstate Insurance Product Regulation Commission (Compact.)

Ms. Nichols said, in addition to hearing updates, the Working Group discussed the suggestion to create a SERFF canned report for rate changes. She said that after hearing comments from Working Group members, interested regulators and interested parties, the Working Group adopted the suggestion, noting that the parameters for this report will be discussed during the Working Group’s Aug. 27 conference call. She said the last item discussed during the June 15 conference call was the SERFF State Reports document, noting that any suggested revisions or additions will be discussed during a future call.

Ms. Nichols said the Working Group discussed changes to the Life, Accident/Health, Annuity and Credit Uniform Product Coding Matrix (PCM) and Uniform Transmittal Document on its June 30 conference call, noting that two of the suggested changes were adopted. She said the first was to change the term “implementation date” to “effective date” on the Uniform Transmittal Document within the SERFF “General Information” area and on the disposition letter; the second was to add a sub-type of insurance (TOI) for “expatriate plans” under H15G and H15I, which are the TOIs used for group health and individual health plans for hospital/surgical/medical expense. She said the description for this new sub-TOI would be: “expatriate plans that are not required to comply with all state or federal mandates for health benefits,” noting that these changes will be effective Jan. 1, 2021.

Ms. Nichols said that during its July 15 call, the Working Group, interested regulators and interested parties discussed the suggestions for changes to the Uniform Property & Casualty PCM and Uniform Transmittal Document, but the Working Group did not adopt any of the suggested changes. She said the Working Group adopted its June 30 and July 15 minutes via e-vote.

Commissioner Godfread provided the report of the Artificial Intelligence (EX) Working Group. He said the Working Group met during the 2019 Fall National Meeting and discussed comments related to how to start the process for developing the AI Principles for the insurance industry. He said the decision was to use the Organisation of Economic Co-operation and Development (OECD) principles as a basis and a draft was exposed for a public comment period ending in January 2020, followed by conference calls held June 30, June 3, May 5, Feb. 19 and Feb. 4. Numerous suggestions from many different stakeholders were discussed and many incorporated into the AI Principles, where was ultimately adopted during the Working Group’s June 30 conference call. He said the Task Force will be considering the AI Principles later in this meeting.
Commissioner Godfread asked if there were any questions regarding any of the Working Group reports. Hearing none, Commissioner Mais made a motion, seconded by Commissioner Conway, to adopt the following reports: 1) Big Data (EX) Working Group, including its Aug. 4 minutes (Attachment One); 2) Speed to Market (EX) Working Group, including its July 31, July 15, June 30 and June 15 minutes (Attachment Two); and 3) Artificial Intelligence (EX) Working Group, including its June 30, June 3, May 5, Feb. 19 and Feb. 4 minutes (Attachment Three). The motion passed unanimously.

3. Heard an Update on the Innovation and Technology State Contacts Group

Denise Matthews (NAIC) provided an update on the activities of the Innovation and Technology State Contacts group. She said the group has not been as active as in 2019 given other priorities, but it does continue to meet. She noted the following:

- The state contact names and contact information is posted on the NAIC website, so if a state has a change regarding that position, send the changes to Ms. Matthews so they can be updated.
- The group held three webinars in June. They were:
  - AAIS: Livraria/Kira workflow tool (June 2).
  - Verisk: Mozart workflow tool (June 4).
  - Theta Lake’s Compliance AI tool (June 8).
- There will be a contacts roundtable meeting Sept. 16 during the NAIC/NIPR Insurance Summit.

Ms. Matthews said one topic the group will consider is to identify what digital or other types innovations deployed or that experienced accelerated deployment as a result of COVID-19, will likely continue and what, if any, related regulatory implications would be of interest to discuss. She said she would be reaching out to industry trade groups and other interested parties to share experiences to help further that discussion.

4. Adopted the AI Principles

Commissioner Godfread said the next agenda item is to discuss the AI Principles document, which was adopted by the Artificial Intelligence (EX) Working Group during its June 30 conference call. He said he previously provided a brief recap regarding the work of the Working Group and an overview of the process, noting that there has been a great deal of discussion since the first draft of the AI Principles was exposed in January 2020. He said there were four calls specific to the draft, as well as new drafts issued as that work progressed. He said the June 30 version of the AI Principles was exposed by the Task Force for a public comment period and those comments were discussed during the Task Force’s July 23 meeting.

Commissioner Godfread thanked the stakeholders who participated throughout the process and said the issues are on the table and decisions now need to be made by the Task Force members regarding each. He said in order to expedite that process, he, working with Commissioner Afable, Superintendent Dwyer and staff, put together a “decisions” document that was sent July 28 to Task Force members, interested regulators and interested parties. He said he would be taking this section by section and would request a vote at the end of each section discussion, but would be taking the proxy discrimination issue separately and then ending with a vote on the overall AI Principles as amended during the process.

a. Amendments to the Introductory, Preamble Section

Commissioner Godfread began by introducing the outstanding issues related to the introductory language. He said there is a suggestion to add “data providers” to the opening paragraph, add the word “fair” after the word “secure” in the second paragraph, a request to further define “AI actors” and remove the words “from harm” in the last sentence of the third paragraph.

Commissioner Mais said he supports Commissioner Godfread’s suggestions that “data providers” and “fair” be added, “AI actors” not be further defined and “from harm” be removed.

Commissioner Godfread further clarified that he does not consider that adding “data providers” to this document implies that state insurance regulators would be regulating third-party data providers but that adding the language essentially draws their attention to this document that is intended for use within the insurance industry. He said it should put data providers on notice that these are the principles for use within the insurance industry.

Superintendent Toal made a motion, seconded by Superintendent Dwyer, to add “data providers,” “fair” and remove “from harm” from the introductory language. The motion was unanimously adopted.
b. Amendments to the Fair and Ethical Section Not Related to the Proxy Discrimination Issue

Commissioner Godfread said there is a suggestion regarding changing the word “unfair” to “unlawful” under the Fair and Ethical section. He said he would be opposed to making that change and asked for discussion.

Commissioner Conway said he would be opposed to that change, as well. He said the term “unfair discrimination” is used throughout the statutory structure and to change “unfair” to “unlawful” would cause confusion and lead to problems.

Commissioner Ommen agreed with Commissioner Conway and said the two principles of unfair discrimination are that similar risks are to be treated the same and protected class data is not to be used in the rating process. As such, if the concept of unlawfulness it introduced, it would lead to 56 jurisdiction interpretational differences.

Commissioner Mainda agreed and said changing “unfair” to “unlawful” brings about the thought of rule of law and that is not the direction of this document, which is more of a guidance document. He said he would support leaving it as “unfair.”

Commissioner Godfread said there did not seem to be support for this change, but asked if anyone would like to make a motion to adopt this change. Hearing none, he continued.

c. Suggested Language Related to the Proxy Discrimination Issue in the Fair and Ethical Section

Commissioner Godfread drew the Task Force member’s attention to the document provided and asked if the members wanted to make any changes to the proxy discrimination language in the draft. He said the discussion document outlines a summary of the language suggested to the Task Force via the comment letters. He said there three options are provided. He said the suggested language is a nod to understanding insurance is built on a cost- or risk-based foundation and he opened it up for discussion.

Commissioner Mais said he was in favor of leaving the language as-is in the draft, but the second option, including the words “Consistent with the cost-based foundation of insurance” does accomplish the intended purpose and reassures everyone that it is recognized that this is a cost-based industry, so he would support that language.

Ms. Nollette said Washington state supports the amended language and believes it is appropriate.

Commissioner Ommen said he supports the amended language but asked if it should be “cost-based” or “risk-based.” He asked if “risk-based” was discussed by the drafters, as it is typically the term he has heard used.

Commissioner Godfread said it was discussed and the intention was to use the broader term and to encompass more than ratemaking, but said he would be open to either term. He said it should be reflected in the minutes that it is intended to be the broader term that encompasses the entirety of the foundation of insurance.

Commissioner Ommen said in part it has to do with the context, and rating systems deal with losses and expenses and traditional factors tied to risk, but part of this deals with issues associated with other aspects of insurance such as marketing, fraud detection and others. He said he would be agreeable to “cost-based,” given the more general application of AI.

Commissioner Clark asked if consideration should be given to just saying, “Consistent with the foundation of insurance.”

Commissioner Godfread said the drafters did not discuss that but would be open to discussion by the Task Force members.

Commissioner Afaile said this issue was discussed by the drafters, noting that he believes “risk-based” is the broader term, but one of the two terms should be in the AI Principles and is important to clarify the intent.

Commissioner Godfread said the minutes will reflect the intention is that it is to be applied broadly.

Mr. Keen said the Option Two language is appropriate and he generally believes “risk-based” to be the broader term.

Commissioner Anderson agreed with Mr. Keen and said it may also capture what Commissioner Clark was talking about, as well, so he would support that language.

Commissioner Conway made a motion, seconded by Commissioner Ommen, to add the proposed language and change the word “cost-based” to “risk-based,” so it would read, “Consistent with the risk-based foundation of insurance…..”
Superintendent Dwyer asked for clarification that the intention is for this language to include claims, as well as rating. Commissioner Godfread said that it does and, hearing no further discussion, called the for the vote on the motion. The motion was unanimously adopted.

d. Amendments to the Accountable Section

Commissioner Godfread said there is a request to remove the last sentence in the Accountable section. He said it was added to provide some type of a “safe harbor” for the good actors in this space who do everything the right way and with good intentions, acknowledging there will be some grace given if mistakes are made, recognizing this is new technology and is being used in new ways which can result in unanticipated mistakes. He said that was the thinking behind adding that sentence. He said it may be a bit repetitive, as state insurance regulators consistently consider the entirety of the situation before acting.

Commissioner Mais said his concern is two-fold, the first being that this is a guidance document and is intended to convey expectations regarding the need to correct or compensate for consequences when they occur and we understand there will be some that may be harmful. He said state insurance regulators have the responsibility to look at the situation and act within the context, responding accordingly; however, this document should not limit or put restrictions on the authority of state insurance regulators. He said the last sentence in the Accountable and Compliant sections both are strongly directed at state insurance regulators and they do not belong in this type of document. He said the thought behind the suggested change in the Fair and Ethical section to add “and corrects and compensates such consequences when they occur” is intended to address that. He said he strongly believes AI can be a positive force and if he thought not having this language would stunt the growth of AI, he would be opposed to removing it; however, those two “safe harbor” sentences at the end of the Accountable and Compliant sections do not need to be there.

Commissioner Godfread asked Commissioner Mais to confirm that it is his preference to remove this language and go back and address this under the Fair and Ethical section. Commissioner Mais confirmed that to be correct.

Superintendent Dwyer agreed with Commissioner Mais and said she does not like the sentence, as negligence means there is a duty and a breach of that duty, and it is unclear what this language does. She said it tries to create a “safe harbor” but she does not believe it accomplishes that, so she would agree to go back to the Fair and Ethical section and add language suggested by Director Ramge.

Commissioner Conway said if there needs to be a statement like this, it belongs in the Accountable section. He said if the concept is to say that a good actor will not be hit with penalties, it seems like it should be incorporated into the Accountable section.

Commissioner Godfread said he could go either way. He said he leans toward putting it in the Accountable section, but he believes it fits in either place.

Commissioner Ommen said part of the issue is this is a guidance document and this seems to be mixing in a requirement for companies and data providers to comply with the law and additional responsibility in terms of fair and ethical behaviors that may go beyond current law. He said part of the problem is negligence is not the issue, but trying to avoid an algorithm or AI that contains inherent bias or that perpetuates or makes worse bias. He said the duty is to avoid that, but there is not currently a law related to it, so he said he agrees with Commissioner Mais, as this a guidance document and not a regulation.

Commissioner Anderson said he understands the concern, but said this happens and the aim is to remediate so if that can be captured in the Fair and Ethical section, like suggested, it would be the best way to capture this.

Ms. To said she would echo those comments, adding that she supports Commissioner Mais’ suggestion to delete the sentence. She said these are guiding principles and the difficult work lies ahead to implement and operationalize them. She said it will take everyone coming to the table with an open mind and a lot of trust. She said she understands the importance but does not believe this type of language is needed.

Commissioner Mais made a motion, seconded by Superintendent Dwyer, to delete the last sentence in the Accountable section and add language to the Fair and Ethical section part b, replacing the word “compensates” with “remediates” to read, “AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences and corrects and remedies for such consequences when they occur.” The motion was unanimously adopted.
e. Amendments to the Compliant Section

Commissioner Godfread said there is a suggestion to delete the last sentence in the Compliant section.

Superintendent Dwyer said she would propose replacing it with, “Use of AI does not create or change any existing statutory or regulatory requirements.” Commissioner Mais said that is the aim of that language, so he would support the new language.

Commissioner Conway asked if this language would impact some type of regulatory structure specific to AI created after these AI Principles are adopted. Superintendent Dwyer said the intent is that nothing changes that exists today, but it is not intended to impact anything that might be passed in the future specific to AI. Commissioner Conway said he was fine with that explanation.

Superintendent Toal said he has concerns with the language, as well, as this seems to be a broad statement and it is entirely possible there will be new regulatory requirements as a result of AI.

Superintendent Dwyer said an alternative is simply to delete the last sentence. She said AI will change regulatory requirements and the intent is not to alter that.

Commissioner Conway agreed that deletion of the sentence would be preferable.

Commissioner Conway made a motion, seconded by Superintendent Toal, to delete the last sentence. Hearing no further discussion, Commissioner Godfread called the vote. The motion was unanimously adopted.

f. Amendments to the Transparent Section

Commissioner Godfread said there were some suggestions made by Connecticut that clean up some of the language in this section.

Commissioner Mais said the suggestions were mostly technical edits and he proposed taking out the words “including consumers,” as they were the only stakeholder group identified. He said he understands wanting to be sure consumers are included but, on balance, the language is better without that, as consumers do not need to be called out specifically and it may cause questions or confusion to do so.

Commissioner Mais made a motion, seconded by Director Ramge, to adopt the edits suggested by Connecticut, including removing the words “including consumers” and changing the second sentence to read, “AI actors must have the ability to protect confidentiality of proprietary algorithms, provided adherence to individual state law and regulations in all states where AI is deployed can be demonstrated.” The motion was unanimously adopted.

g. Other Amendments

Superintendent Dwyer said Tom Considine (National Conference of Insurance Legislators—NCOIL) sent a text message to her indicating that NCOIL would like to comment on the introductory language. She said Mr. Considine said NCOIL suggests deleting the words “emphasizing the importance of accountability, compliance, transparency, and safe, secure, fair and robust outputs” from the end of the second paragraph in the introductory language. She said NCOIL is concerned those words make this more of a “practices” as opposed to a “principles” document.

Commissioner Conway said he struggles with that concern, because it says clearly that these principles are guidance and do not carry the weight of law or impose any legal liability.

Commissioner Ommen said he would support the change because just mentioning “outputs” is narrow, and state insurance regulators are interested in the inputs, as well as the outputs. He made a motion to change the word “outputs” to “systems.”

Superintendent Dwyer asked if Commissioner Ommen would prefer to end the sentence after “transparency,” as NCOIL’s suggestion is to end it after “systems.”

Commissioner Ommen said his intent is to leave in the change previously suggested by Connecticut and adopted by the Task Force to add the word “fair” and so that would be a problem with ending the sentence after “transparency.”
Director Ramge asked if the word “outcomes” as opposed to “outputs” would work, but Commissioner Ommen said it does not. He said maybe saying “systems” again is redundant.

Commissioner Godfread said ending the sentence at “systems” does not change the intent, so he does not have a problem with doing that.

Mr. Considine said this paragraph makes clear this is a principles document that does not carry the weight of law, but despite that sentence, everything after “systems” detracts from that intent.

Ms. Jabourian recommended the sentence stay in because it is important to emphasize paying attention to the outputs, as well.

Indiana State Rep. Matt Lehman (R-Berne) said the concern is the word “however,” because that implies there is a list of things that would be more guiding issues as opposed to principles, so taking out that language does not change the document but makes the “however” not as strong.

Mr. Keen suggested removing the word “however” and leaving the sentence in. Commissioner Mais agreed with that suggestion. Commissioner Mainda agreed with Mr. Keen and Commissioner Mais.

Superintendent Dwyer said she understands the concern and agreed that Mr. Keen’s suggestion may resolve the issue.

Rep. Lehman said he was fine with that and, even though the language may be redundant, removing the “however” resolves the concern.

Superintendent Dwyer made a motion, seconded by Commissioner Altman, to remove the word “however.” The motion was unanimously adopted.

Superintendent Toal made a motion, seconded by Commissioner Conway, to adopt the “NAIC Principles on Artificial Intelligence (AI)” (see NAIC Proceedings – Summer 2020, Executive (EX) Committee and Plenary, Attachment One) as amended during the meeting. The motion was unanimously adopted.

5. Heard an Update from the Accelerated Underwriting (A) Working Group and Presentations on Algorithmic Auditing

Commissioner Godfread asked Director Muriel to provide an update regarding what the Accelerated Underwriting (A) Working Group has been working on over the past months, noting that it ties closely to issues the AI Principles serve to inform and potentially guide. He said the AI Principles are guideposts to the industry and, while they do not carry the weight of law, they will inform other workstreams where decisions, definitions and potentially regulations may need to be developed to monitor and oversee this space. He said, therefore, it is important for the Task Force to be informed and aptly coordinating these efforts to ensure that there is consistency and the AI Principles are appropriately embedded in those work products.

a. Accelerated Underwriting (A) Working Group Update

Director Muriel reviewed the charge and the work plan of the Accelerated Underwriting (A) Working Group and the presentations that have been made to the Working Group. He said the Working Group appointed two subgroups: 1) Ad Hoc NAIC Liaison Subgroup; and 2) Ad Hoc Drafting Subgroup. He reviewed the key questions the Working Group is seeking to answer, the input data for accelerated underwriting, how behavioral data is being used and existing legislation that plays a role, such as the federal Fair Credit Reporting Act, and outlined potential consumer concerns. Director Muriel then discussed the timeline for the Working Group deliverables.

b. Algorithm Auditing in Life

Chris Stehno (Deloitte) provided an update on algorithm auditing considerations in life insurance underwriting. He said using historical decision data to build an algorithm will teach it to make similar decisions in the future, and if past decisions included bias, then the algorithm will reproduce that bias. Mr. Stehno said disproportional representation of protected groups in available data can be equally harmful for protected classes, noting that model performance in the real world is never identical to performance on an initial training set. He said algorithms need to be comprehensively audited for fairness, explainability and robustness, noting that automated code checks and comprehensive methodology should be used to detect and correct hidden risks.
c. **Accelerated Underwriting and Evaluating the Risks**

Patricia Matson (Risk and Regulatory Consulting—RRC) discussed traditional methods for life underwriting and the features of accelerated underwriting. She talked about the data elements used in accelerated underwriting now and what they would be in 10 years, as well as inherent risks related to accelerated underwriting. Ms. Matson provided an overview of how a company can test for these risks.

6. **Discussed Anti-Rebating Amendments to Model #880**

Commissioner Godfread asked Superintendent Dwyer to review the status of the work on Section 4H of the *Unfair Trade Practices Act* (#880) amendments related to anti-rebating.

Superintendent Dwyer said 21 comment letters were received on the language exposed by the drafting group. She said based on those comments, several changes were made to the draft (Attachment Four) to hopefully accommodate issues that appeared to be something the group would want to change. She provided an overview of some of the changes made, as well as some requested changes that were not included in the most recent draft.

Superintendent Dwyer said comments were received saying the words “value-added” introduced lack of clarity, so they were removed throughout the revised language, and the word “non-cash” was substituted, as it was recognized that nowhere in the document did it indicate that giving cash would not be allowed. She said it was suggested the word “specified” be changed to “provided,” noting that she would be interested in feedback on that suggestion. She said some changes were requested that were not made, including one related to unregulated third parties, keeping the insurer responsible, redrafting the section so the subsections are part of Section 1, and a suggestion that the word “related” was not specific enough, as there was no better suggested language provided. She said she is open to discussion related to these items. She said no change was made to require the product be added within the policy terms.

Superintendent Dwyer said there were comments related to the use of the words “primarily intended,” but the drafting group discussed that at length and when Rep. Lehman said NCOIL had discussed that at length and preferred “primarily intended,” that was chosen for the draft but she said, again, that she is open to alternative language.

Superintendent Dwyer said “loss mitigation” was added to Section 4H(2)(e)(1)(b)(1) and Section 4H(2)(e)(1)(b)(8) was rewritten. She said there were suggestions that Section 4H(2)(e)(1) through Section 4H(2)(e)(8) be limited to certain lines of insurance, but a line of insurance can mean different things in different states, so it may not be appropriate to do that; however, she said she is willing to discuss additional comments on that. She said the term “group” was requested in several of the comment letters, but it was not included in the most recent draft because of concerns in regard to abuses seen in the lender-placed and title insurance space, and the group did not want to create a situation like that again. She said Section 4H(2)(e)(3), Section 4H(2)(e)(4) and Section 4H(2)(e)(5) were written in an attempt to accommodate many of the comment letter suggestions, so she would ask the Task Force members to take a look at those, as well. She said there were comments related to using the term “policyholders,” so it was replaced with “clients” and that term is defined in the new draft language. She said she would welcome comments on that change. She said the new draft does not include a safe harbor for health insurers, as that did not seem warranted.

Superintendent Dwyer said Section 4H(2)(f)(1) was also rewritten and a drafting note added, as suggesting what the limits might be in terms of a static number appears problematic. She said it was suggested that charitable donations be put in a separate section, but no language was provided, so that has not yet been done. She said a subsection relating to things offered for “free” was added and there was agreement that offering insurance in connection with another policy would not be appropriate.

Superintendent Dwyer said this draft will be exposed for a public comment period ending Aug. 28 and then discussed during a future Task Force meeting.

7. **Discussed the Privacy Protections (D) Working Group**

Commissioner Godfread said the planned update from the Privacy Protections (D) Working Group would be provided during the next meeting of the Task Force.

Having no further business, the Innovation and Technology (EX) Task Force adjourned.
The Big Data (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call Aug. 4, 2020. The following Working Group members participated: Doug Ommen, Chair (IA); Elizabeth Kelleher Dwyer, Vice Chair, (RI); Lori K. Wing-Heier (AK); Daniel Davis (AL); Ken Allen (CA); Andrew N. Mais and George Bradner (CT); Sharon Shipp (DC); Frank Pyle (DE); Sandra Starnes (FL); Robert H. Muriel (IL); Rich Piazza (LA); Kathleen A. Birrane (MD); Benjamin Yardley (ME); Karen Dennis (MI); Phil Vigliaturo (MN); Brent Kabler (MO); Christian Citarella (NH); Carl Sornson (NJ); Gennady Stolyarov (NV); Jillian Froment (OH); Andrew R. Stolfi (OR); Michael McKenney and Shannen Logue (PA); Michael Wise (SC); Rachel Cloyd and J’ne Byckovski (TX); Todd E. Kiser, Tanji Northrup and Reed Stringham (UT); Kevin Gaffney and Christina Rouleau (VT); Molly Nollette (WA); and James A. Dodrill (WV).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Mr. Vigliaturo made a motion, seconded by Mr. Bradner, to adopt the Working Group’s Dec. 7, 2019, minutes (see *NAIC Proceedings – Fall 2019, Innovation and Technology (EX) Task Force, Attachment One*). The motion passed unanimously.

2. **Received an Update on the Work of the Casualty Actuarial and Statistical (C) Task Force**

   Mr. Piazza said the Casualty Actuarial and Statistical (C) Task Force is working on two charges. The first charge is to draft and propose changes to the *Product Filing Review Handbook* to include best practices for the review of predictive models and analytics filed by insurers to justify rates. The second charge is to draft and propose state guidance for rate filings that are based on complex predictive models.

   Mr. Piazza said state insurance regulators are trying to determine if a rating plan and model included in a rating plan are compliant with state laws and regulations. Mr. Piazza said there are four best practices for regulatory review based upon regulatory expertise in the review of generalized linear models (GLMs) used in private passenger automobile insurance. The first is to ensure compliance with rating laws by reviewing the overall rate level impact of the proposed revisions and determine that individual input characteristics to a predictive model and their resulting rating factors are related to the expected loss or expense differences in risk. The second practice is to obtain a clear understanding of the data used to build and validate the model, including assumptions, adjustments, variables, sub-models used as input, and resulting output. The third practice is to evaluate how the model interacts with and improves the rating plan. The fourth practice is to enable competition and innovation. Mr. Piazza said states insurance regulators should assist in getting products to the market and ensure the public receives the benefit of models and more sophisticated rating plans.

   Mr. Piazza said Appendix B of the white paper identifies information a regulator may want to know to meet the objectives of the best practices. There are 79 informational elements referenced in Appendix B, which a state insurance regulator may find helpful in reviewing a GLM. Mr. Piazza said a regulator may need to access a large amount of information to understand how a model was built and how the model is used. Mr. Piazza said the 79 informational elements are organized in three categories of regulatory interest: 1) selecting model input; 2) building the model; and 3) the filed rating plan.

   Mr. Piazza said Appendix B of the white paper identifies information a regulator may want to know to meet the objectives of the best practices. There are 79 informational elements referenced in Appendix B, which a state insurance regulator may find helpful in reviewing a GLM. Mr. Piazza said a regulator may need to access a large amount of information to understand how a model was built and how the model is used. Mr. Piazza said the 79 informational elements are organized in three categories of regulatory interest: 1) selecting model input; 2) building the model; and 3) the filed rating plan.

   Mr. Piazza said the white paper addresses the concept of rational explanation, which is a somewhat controversial topic. Mr. Piazza said that a variable may be correlated to loss frequency, but the variable’s correlation to loss frequency may not make sense. Because of this, a state insurance regulator may ask the filer to provide a rational explanation of the correlation. Mr. Piazza said confidentiality of models remains a concern for industry. Mr. Piazza said the white paper recognizes confidentiality of models and that confidentiality protections are dependent upon state law.

   Mr. Piazza said the last draft of the white paper was circulated in June, and the Casualty Actuarial and Statistical (C) Task Force will review the nine comments submitted on the draft. The Task Force hopes to present the white paper to the Property and Casualty Insurance (C) Committee by the end of September.
Mr. Ommen said the Big Data (EX) Working Group’s focus is on whether state laws and regulations provide the framework to effectively regulate models and data being used. In response to Commissioner Ommen’s question about the concept of rational relationship and the Casualty Actuarial and Statistical (C) Task Force’s discussion about causation, Mr. Piazza said there were state insurance regulators who thought correlation alone may not be sufficient, and some states use the term “reasonable relationship” in statute. Mr. Piazza said a state insurance regulator may ask about the rational relationship a variable has to the cost of insurance if a correlation does not make sense to a regulator or a consumer would be unlikely to understand the importance of a variable.

Mr. Stolyarov said the white paper encapsulates longstanding practices of regulators and should not be misinterpreted as imposing new requirements for the review of GLMs. Mr. Stolyarov said state insurance regulators have considered the concept of rational relationship for decades since state insurance regulators must understand why a variable has a correlation to risk of loss. Mr. Stolyarov said a correlation may be spurious. Mr. Davis agreed and said actuaries in Alabama ask for an intuitive and plausible connection between predictor variables and the target variable. Mr. Davis said companies should be able to explain connection since there may be a correlation but no plausible explanation.

Commissioner Ommen said the Artificial Intelligence (EX) Working Group is addressing the impact of artificial intelligence (AI) on protected classes. Commissioner Ommen said the work of the Casualty Actuarial and Statistical (C) Task Force is being completed in the context of the current legal framework and addresses how the prohibition of using factors related to race affects the review of current models.

3. **Received an Update on the Work of the Accelerated Underwriting (A) Working Group**

Director Muriel said the Life Insurance and Annuities (A) Committee appointed the Accelerated Underwriting (A) Working Group at the 2019 Summer National Meeting and is charged to: “Consider the use of external data and data analytics in accelerated life underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, drafting guidance for the states.” Director Muriel said the Working Group has three phases of work: 1) information gathering; 2) identifying issues and work product; and 3) developing a work product. Director Muriel said the Working Group has met 16 times since October 2019 to receive presentations from actuarial consulting firms, life insurance companies, consumer advocates, law firms and a machine learning assurance company. Director Muriel said the Working Group is forming a liaison subgroup to coordinate activities with other NAIC working groups and a drafting subgroup to begin drafting a white paper. Director Muriel said the Accelerated Underwriting (A) Working Group plans to expose the first draft of the white paper by the end of 2020 and present a final work product to the Life Insurance and Annuities (A) Committee by the 2021 Summer National Meeting.

4. **Received an Update on NAIC Technical and Nontechnical Rate Review Trainings**

Kris DeFrain (NAIC) said the NAIC offered trainings from November 2019 to June 2020. Ms. DeFrain said state insurance regulators received technical training in exploratory data analysis and statistical techniques insurers are using to develop property/casualty (P/C) risk classifications and rating plans. A consulting actuary presented the theoretical development of statistical techniques and how to apply the theory to real-world datasets using R Programming Language. Ms. DeFrain said the initial sessions focused on exploratory data analysis to familiarize participants with approaches to inspect data irregularities in model data that can undermine the validity of models. The next phase of training was devoted to advanced statistical techniques, including GLMs, generalized additive models (GAMs), gradient boosted trees, random forest ensembles and decision tree models. Ms. DeFrain said the NAIC also offered two non-theoretical webinars, which were classified as nontechnical webinars. The NAIC plans to provide training in October targeted specifically to market conduct examiners. This training is being designed to assist market conduct examiners in identifying priority modeling issues in not only rate models, but also models used in underwriting, claims and marketing.

Ms. DeFrain said the NAIC presented new tools in February for states that contract with the NAIC to receive technical assistance in reviewing P/C rate models. Ms. DeFrain said state insurance regulators will be able to share information through a confidential model database and obtain NAIC technical assistance when reviewing a specific company’s model. Ms. DeFrain emphasized the NAIC is providing technical assistance in response to requests from state insurance regulators. Birny Birnbaum (Center for Economic Justice—CEJ) asked for more information about the functionality of the System for Electronic Rate and Form Filing (SERFF) to enhance the review of models and share information among state insurance regulators. Ms. DeFrain
said the NAIC has implemented the use of a SharePoint for state insurance regulators to share documents and is providing technical assistance to assist state insurance regulators in identifying whether information is missing in a rate filing. In response to Mr. Birnbaum’s question about whether there are written procedures regarding NAIC assistance, Ms. DeFrain said there are currently no written procedures and no direct connection of SharePoint to SERFF. Ms. DeFrain said these are two items still being developed.

Commissioner Ommen said he believes the Speed to Market (EX) Working Group has some responsibility regarding the functionality of SERFF and that SERFF needs to be updated so state insurance regulators are able to access and share information on models. Commissioner Ommen said he agrees written procedures are needed.

Having no further business, the Big Data (EX) Working Group adjourned.
The Speed to Market (EX) Working Group of the Innovation and Technology (EX) Task Force conducted an e-vote that concluded July 31, 2020. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Wally Thomas (AK); Jerry Workman (AL); William Lacy (AR); Frank Pyle (DE); Dean L. Cameron (ID); Heather Droge (KS); Tammy Lohmann (MN); Mark Rabauliman (MP); Jon Godfread (ND); Frank Cardamone (NH); Russell Toal (NM); Cuc Nguyen (OK); Mark Worman (TX); Tanji Northrup (UT); Lichiou Lee (WA); and Barry Haney (WI).

1. **Adopted its July 15 minutes**

The Working Group met July 15 (Attachment Two-A) and took the following actions: 1) adopted its June 15 minutes; 2) discussed suggestions for 2020 changes to the Property and Casualty PCM and Uniform Transmittal Document effective Jan. 1, 2021. None of the suggested changes were adopted; and 3) discussed plans for the next call, which will take place Aug. 27, to discuss the SERFF canned report in more detail and other topics related to the Working Group’s charges.

2. **Adopted its June 30 minutes**

The Working Group met June 30 (Attachment Two-B) and took discussed suggestions for 2020 changes to the Life, Accident/Health, Annuity and Credit Uniform Product Coding Matrix (PCM) and Uniform Transmittal Document effective Jan. 1, 2021. Two of the suggested changes were adopted: 1) change the term “implementation date” to “effective date” on the Uniform Transmittal Document within the System for Electronic Rate and Form Filing (SERFF) system general information area on the disposition letter; and 2) add a sub-type of insurance (TOI) for expatriate plans under H15G and H15I. The description would be expatriate plans that are not required to comply with all state or federal mandates for health benefits.

Having no further business, the Speed to Market (EX) Working Group adjourned.
The Speed to Market (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call July 15, 2020. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Wally Thomas (AK); Jerry Workman (AL); William Lacy (AR); Shirley Taylor represented by Donna Archuleta (CO); Heather Droge (KS); Tammy Lohmann (MN); Camille Anderson-Weddle and LeAnn Cox (MO); Ted Hamby represented by Timothy Johnson (NC); Chrystal Bartuska (ND); Frank Cardamone (NH); Russell Toal represented by Leatrice Geckler (NM); Cuc Nguyen (OK); Mark Worman and Sharalyn Taylor-Hargrove (TX); Tanji Northrup (UT); Gail Jones and Lichiou Lee (WA); and Barry Haney (WI).

1. Adopted its June 15 minutes

The Working Group met June 15 and took the following action: 1) received an update on the SERFF Advisory Board and System for Electronic Rate and Form Filing (SERFF) metrics; 2) received an update from the Interstate Insurance Product Regulation Commission (Compact); 3) adopted the suggestion to create a SERFF canned report for rate changes; and 4) discussed SERFF state reports.

Ms. Droge made a motion, seconded by Mr. Thomas, to adopt the Working Group’s June 15 minutes (Attachment Two-A1). The motion passed unanimously.

2. Reviewed Suggestions and Made Changes to the Property and Casualty Uniform PCM and Uniform Transmittal Document effective Jan. 1, 2021

   a. The first suggestion discussed was to either change the “effective date of last rate revision” located on page four of the paper document and the rate/rule schedule of SERFF to the “renewal effective date of last rate revision” or add a field and capture both new and renewal effective dates for last rate revision. The other suggestion that aligned with this and was discussed simultaneously was to add a field to the rate/rule schedule showing the SERFF tracking number for the last rate revision. The reason for these suggestions is that they would be helpful since the state suggesting it limits rate changes during a renewal cycle. Ms. Motter noted that every state looks at these fields a little differently. She asked if it would be helpful to add instructions to the state general instructions and/or use the objection process with quick text to request that these fields be updated with a post submission update. Quick text could also be used at disposition to explain which type of date is being approved.

   Ms. Lohmann believed adding a field to the rate/rule schedule showing the SERFF tracking number for the last rate revision would be useful. Ms. Geckler believed both suggestions would be helpful. Ms. Archuleta noted that Colorado’s preference is to leave this section as it is and make no changes.

   Ms. Motter asked if changing the name of what is currently there would cause data integrity issues for filings previously submitted. Brandy Woltkamp (NAIC) noted that the previously submitted data may not reflect the new labeling if labels were changed. Ms. Motter asked if adding two new fields would be best. Ms. Woltkamp noted that this would be the best option for data integrity purposes. Ms. Droge noted that Kansas would not need these fields, but it is not opposed to adding them. Ms. Archuleta noted that Colorado also does not need these fields. Ms. Nguyen and Mr. Cardamone noted that quick text would be the best solution for the states that want these fields.

   Ms. Droge made a motion, seconded by Ms. Nguyen, to not adopt the suggestions to change the effective date of last rate revision or add a field to the rate/rule schedule showing the SERFF tracking number for the last rate revisions at this time. The motion passed unanimously.
b. The next suggestion discussed was regarding type of insurance (TOI) number 28. The suggestion was to update the instructions on force-placed business to force-placed or lender-placed business. It stated that this differs from the NAIC Annual Statement where force-placed business is filed on the same pre-defined lines of business as business placed by borrower or creditor for the same coverage. The reason provided for this suggestion is that this language would further clarify where the product should be reported on the annual statements.

Ms. Motter noted that there is already a footnote in the product coding matrix (PCM) that explains to report the business in the annual statement line. There is an asterisk placed next to TOI number 28 to draw attention to this explanation, which is located on the final page of the PCM. The existing note indicates that there is a difference between the PCM TOI and the annual statement reporting and to report the business in the appropriate annual statement line.

Mr. Thomas made a motion, seconded by Ms. Lohmann, not to further update the instructions on force-placed business under TOI number 28. The motion passed unanimously.

c. The next suggestion discussed was to add a TOI for Certificates of Insurance with the following Sub-TOIs: Personal/Commercial Certificate of Insurance Filings, Personal Certificate of Insurance Filings, and Commercial Certificate of Insurance Filings with the description, “Certificates are used to show proof that an organization or person has insurance coverage.” Ms. Motter noted that it may be appropriate to submit this under TOI number 33.0 (Other Lines of Business) or under the individual line of business these belong under. For example, if there was a filing submission for Commercial General Liability that would include the certificate of insurance used, it would be part of the filing submission and not be separated out. In this case, it would have the same TOI and be in the same filing submission as the remainder of the product.

Ms. Jones noted that Washington’s analysts are not in favor of implementing this suggestion. The analysts did not believe a certificate is a TOI, but it is more of a policy type; TOIs are supposed to be about the coverage involved. The analysts believe a new filing type is more appropriate than a new TOI. Ms. Droge noted that Kansas does not need this additional TOI. Mr. Worman noted that in Texas, these are filed separately, and they have their own statute and their own separate filing requirements. Ms. Bartuska noted that North Dakota also has a separate statute that dictates the certificates, and it uses filing labels for this. She noted that typically they come in with a larger policy, and she agrees that this is not needed, as it is more of a specific administrative form used by industry and agents and not a policy itself. Mr. Lacy noted that he is not in favor of creating a new TOI just for a certificate that already applies to an existing product and would require the filer to file under the appropriate TOI. Ms. Nguyen agreed.

Ms. Nguyen made a motion, seconded by Ms. Bartuska, to not add a new TOI for Certificates of Insurance. The motion passed unanimously.

d. The next suggestion discussed was to separate the TOIs for commercial umbrella and excess to the following: excess liability, umbrella liability, excess umbrella, and combination umbrella and excess. The reason provided for this suggestion is that some states consider these excess lines as separate lines of insurance. Ms. Motter noted that Ohio does not have different requirements for these lines. Ms. Jones noted that Washington’s staff is not in favor of making these changes, as the current TOI is working fine for Washington. She also expressed concern with how the data integrity of past filings would be affected if the current TOI were separated out.

Theresa Boyce (ACE Group) noted that she is only aware of two states where this information must be broken out, and it has not been a problem to use the current TOI in most states. Ms. Motter noted that states that need this information broken out can use filing labels.

Mr. Cardamone made a motion, seconded by Ms. Droge, to not separate out the TOIs for commercial umbrella and excess. The motion passed unanimously.
e. The last suggestion discussed was to add a field for advisory affiliations to the general information tab for specific TOIs/sub-TOI combinations. The reason for this suggestion is that they would like to create a method for the company to indicate, for state exceptions and compliance related issues, whether they are affiliated with and use an advisory affiliation such as Insurance Services Office (ISO), Association Insurance Services Inc. (AIS), The Mutual Service Office Inc. (MSO), Association for Cooperative Operations Research and Development (ACORD), ODEN Insurance Services Inc., Administrative Services Organization (ASO), etc.

Ms. Motter noted that state specific fields can be utilized for this request. Ms. Boyce noted that this request could be confusing because the reference number field for the advisory organization is not filled out unless they are adopting an ISO filing. She explained that it would need to be clarified if placed on the general information screen for a good understanding of exactly what has been requested. Ms. Jones agreed with this because if reference organization, reference number and reference title are already there, and then a new entity is added, it would need to be more descriptive; consequently, since a state specific field is utilized, everyone that fills out the filing would have to answer that question. She noted that she is concerned that the reference organization and advisory organization could get placed in the wrong field for the filing due to confusion on this request. Ms. Motter explained that this suggestion appears to ask for various compliance related exception information for various things, such as cancellations notice forms, fraud language, etc., all in one field, which could be difficult to interpret.

Mr. Cardamone made a motion, seconded by Ms. Droge, to not add a field for advisory affiliations to the general information tab for specific TOIs/sub-TOIs. The motion passed unanimously.

3. Discussed Other Matters

Ms. Nichols noted that another call will be scheduled at the end of August to discuss the SERFF canned report and a couple of other topics related to the Working Group’s charges.

Having no further business, the Speed to Market (EX) Working Group adjourned.
Draft: 7/7/20

Speed to Market (EX) Working Group
Conference Call
June 15, 2020

The Speed to Market (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call June 15, 2020. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Joanne Bennett and Wally Thomas (AK); Jerry Workman (AL); William Lacy (AR); Shirley Taylor (CO); Frank Pyle (DE); Heather Droge (KS); Tammy Lohmann (MN); LeAnn Cox (MO); Ted Hamby (NC); Chrystal Bartuska (ND); Frank Cardamone (NH); Russell Toal (NM); Cuc Nguyen (OK); Sharalyn Taylor and Mark Worman (TX); Tanji Northrup (UT); Lichiou Lee (WA); and Barry Haney (WI). Also participating was: Maria Ailor (AZ); and George Bradner (CT).

1. Received an Update on the SERFF Advisory Board and SERFF Metrics

Joy E. Morrison (NAIC) noted that the System for Electronic Rate and Form Filing (SERFF) Advisory Board did not meet at the Spring National Meeting, but it will meet at the Summer National Meeting. She noted the new board members that joined in March. She stated that the SERFF data hosting project is complete, and it included some additional work to the state data retention feature, which is also complete. Both projects were finished under the projected budget. The other project discussed was a SERFF billing enhancement. Previously, industry customers were buying a block of filing transactions in advance. The blocks are being removed, and now states will be charged on transactions when the transactions occur. In the same way that they would put their state fees on a filing, the transactions fee will be added to the filing, and when the customer submits a transaction fee will be initiated at the same time. It is a four-piece project: 1) a self-service interface for the centralized e-commerce initiative; 2) a credit card payment method being added for infrequent filers; 3) removal of the filing block; and 4) a separate project for the SERFF filing review. A fee will be put in place to offset the cost of the vendor payments. There will be an analysis fee on filings that are submitted to Texas with an attachment on the forms schedule, which will help offset the cost of licensing for the vendor product that is being used for that pilot. That piece of work will be done as part of the billing project, and it is being reported separately in a separate fiscal project report.

The last project wrapping up is the SERFF Assessment. This involved bringing in an outside group to review SERFF and figure out what needs to happen for SERFF to meet existing and future needs of the stakeholders. About 100 stakeholder interviews took place as part of this process. A survey was also distributed to collect information from additional stakeholders. A final draft of the report was completed in May. Phases of the billing project will be put in to place this summer and fall. The SERFF Assessment project will be distributed to some of the members in July, and a fiscal request will probably be sent in the fall.

Birny Birnbaum (Center for Economic Justice—CEJ) noted that at each SERFF Advisory Board meeting for the last four to five years, the issue of SERFF filing access functionality was discussed. Many states use the SERFF filing access to provide the public access to rate and form filings. The public has access only to the public information, so if a filing has some sort of confidential information that a company marks trade secret for example, then those documents are not included in the public document that a member of the public can access. There is no disclosure when you go to SERFF filing access that any document has been withheld or the reason it has been withheld. This can be problematic as it may conflict with state laws, as the state may not refuse to provide a member of the public a document unless they disclose what document has been withheld and the reason for withholding that document. The CEJ has been asking for several years to include this SERFF filing access functionality to identify what documents are being withheld from public disclosure and the reason. The CEJ believes that some states may be out of compliance with their public information laws by not having SERFF provide that additional functionality.

Theresa Boyce (Chubb) noted that if you prepay the SERFF filing block now, the fee is a lot less than if you do not. She asked whether there would be an adjustment to the fee when the change is made to remove prepayments for filing blocks. Ms. Morrison noted that they do not intend to change the pricing based on whether it is or is not a block. They are trying to put everyone in the same rate group that they are currently in. Ms. Morrison noted that this is not being done to generate revenue, but to simplify things for both industry users and NAIC staff who manage the filing blocks. Ms. Boyce explained that her understanding then is that if a company typically buys a block then they will not have to prepay going forward to get the lower fee, they will just be charged the lower fee. Ms. Morrison noted that they would stay in that category through 2021. The block expiration is March 2022. In late 2021, pricing is expected to be based on usage. Most people should fall into the same bucket because a block is bought that is used within two years, and that is what is keeping a company in that rate band. Ms. Morrison noted that very little fluctuation is expected. Ms. Boyce asked how they would be billed. Ms. Morrison noted that they will not
be billed because the transaction fee will be taken by Automated Clearing House (ACH) debit, the same way the state fee is paid. She noted that additional details on this matter will be provided in early July.

2. Received an Update on SERFF Metrics

Ms. Morrison noted that the SERFF team generally looks at transaction volume, and it tries to determine if there are any kind of trends or changes that may occur in a state and how it handles a particular line of business that would affect the transaction volumes that come through the system. This helps the SERFF team predict and provide performance and support as well as a tracking revenue budget. The submissions are static from year to year. Generally, there are 550,000 to 565,000 transactions, not filings. If you are in a state where filings can be submitted on behalf of multiple companies, each company is counted as a transaction. If one filing is submitted on behalf of four companies, that is four transactions. This is what SERFF metrics are based on and what is used to generate the Speed to Market Assessment report that is provided to the individual states and the Commissioners at Roundtable in the national meetings. Mr. Bradner noted that from a reporting and workload standpoint, Connecticut only looks at the example provided as one transaction. The SERFF report he gets from his examiners shows four transactions, when they only reviewed one transaction. Mr. Bradner believes that this is a reporting metric that needs to be looked at because a company could be filing the product in four companies, but the examiner only reviews that one filing. He believes it should not be tracked in SERFF as a metric in workload management as four transactions, and it should just be one. He asked if there is a way that the states can change that to reflect how they measure workload. Ms. Morrison noted that she did not think the report could be modified in that way. Brandy Woltkamp (NAIC) noted that the way the reports are currently, they are based on transactions solely, which came from the direction of the Working Group. Ms. Morrison noted that this could be changed at the direction of the Working Group, and this was decided when metrics were reviewed. Mr. Bradner noted that it could be discussed in the future. Mr. Worman noted that Texas was having this issue as well, and someone on the SERFF team helped them come up with a way to address this concern so that the workload management is more reflective of what the reviewers are looking at. Mr. Lacy noted that the data they receive from SERFF can be used in many ways, and he discussed how they review the data in Arkansas. Ms. Morrison noted that they are looking at ways to make the data provided from SERFF easier to understand as part of the assessment.

3. Received an Update from the Compact

Karen Schutter (NAIC) noted that the Insurance Compact Compass, a three-year strategic plan with three priorities, nine objectives, and 28 action items, has been adopted. There is a webpage devoted to the strategic planning initiative. The link can be located on the Interstate Insurance Product Regulation Commission’s (Compact’s) website, insurancecompact.org. There are various tools available, including a dashboard, tracker and navigator. The navigator breaks down the action items by steps and timeframe. The timeframes will be reviewed due to the COVID-19 situation.

Last fall, the Compact’s Product Standards Committee (PSC) recommended amendments to two individual life uniform standard benefit features that had been in place for 10 years: a waiver of premium and a waiver of monthly deductions. The Committee is also working on a recommended new standard for a waiver of surrender charges for life products. These amendments and the uniform standard add qualifying benefit triggers. They are not long-term care (LTC); they just trigger upon the insured having a qualifying event. These amendments were done at the direction of the Management Committee. A gap analysis was completed in 2018, and this was on the list. The PSC met for the first time this year in mid-May, and it is working on these amendments and the new standard. The Committee is also working on the first action item under the strategic plan, which is providing wider and easier to follow notices and steps with respect to the development of uniform standards. The Committee will be looking for feedback from the states and consumer and industry representatives.

The Rulemaking Committee is actively working on its strategic plan action items, including whether to expand the group standards that are in place for term life, annuities and disability income to include more group types than just the employer groups. It is also working on a survey for companies and state insurance regulators to gather comprehensive information on how group types are filed, reviewed, approved, used and marketed. In addition, the Committee is reviewing notices to state insurance regulators and legislators regarding notice and their rights in terms of adoption and opting out of uniform standards. Work plans for the PSC rulemaking and published call summaries are available on the About page of the Compact website.

Committee drafting calls are now open to all state insurance regulators starting this year. The members of the Committee are still the only ones who will vote on any recommendations before they go up to the Compact. Upcoming calls will take place this summer.
The Compact has developed a COVID-19 resource page, which answers frequently asked questions (FAQ) about what type of questions a company can ask on an application with respect to COVID-19. The uniform standards regarding application questions are carefully drafted, and they must be in a certain format and require that any question be related to receiving a diagnosis from a member of the medical profession. State insurance regulators looking for guidance should review the resource page, and they are encouraged to reach out to the Compact office.

A website survey was previously conducted, and focus groups for state insurance regulator, industry, and consumer state legislators are being created. Each group will provide feedback on its perspective for enhancing the website, then a public call will take place to bring all the groups together to review the recommendations.

The Colorado Supreme Court has issued an opinion in a third-party litigation case. It was not the deciding court, but its opinion does affect Colorado and the Compact. It said that the uniform standards operate more as regulation, and a regulation cannot override a conflicting state statute. The membership has been looking at that, and they are working to put together a comparison, a state statute, and provisions of uniform standards. The initial feedback is that there are not a lot of situations where the uniform standards would differ from a state statute. The conflict in the Colorado case is that a two-year suicide clause was followed, and Colorado is one of three states that follow a one-year clause. There is a governance review committee that was created this year. It is looking at this case and kicking off two major projects for the Compact. One is a governance review to ensuring that best practices are being followed and benchmarking against comparable organizations. The other is a business assessment to look at the organization and ensure that it is sustainable over the next five to 10 years. Both projects came out of the strategic planning process. The selection process is currently taking place and responses came in earlier this month. The Governance Review Committee is reviewing those, and it will make selections and recommendations at the Summer National Meeting for the Compact to review and discuss.

4. Discussed the Suggestion to Create a SERFF Canned Report for Rate Changes

Brandy Woltkamp (NAIC) noted that the suggestion to create a SERFF Canned Report for rate changes came from the yearly request for Speed to Market suggestions that is sent out annually. The reason for this suggestion is that rate changes are important to every state insurance regulator, and allowing the state insurance regulators an easy way to see what was requested and in turn what was approved in one report would help the reviewers and state consumer help lines in reporting differences of rate information.

Mr. Bradner asked if this is for all lines of business or just specific lines of business and if it would include block cost filings. Ms. Ailor noted that this request is from one state, but that if there is a lot of interest in this suggestion, then the details regarding lines of business and types of insurance (TOIs) would need to be discussed further. Mr. Bradner noted that Connecticut is interested in this report, as he does a report each year for multiple lines of business regarding how many rate filings they received and what the overall rate the company was taking. For Auto and Homeowners, he reviews what the overall statewide impact of that change is and looks at commercial lines of business as well. Ms. Droge is also interested, and she noted that Kansas does a similar report. Mr. Toal, Ms. Taylor, Ms. Nguyen, Mr. Haney and Mr. Lacy also expressed interest in this report.

Ms. Taylor asked if this would encompass anything within a date parameter provided so it can provide several different filings in the same report. Ms. Motter said that is correct. She noted that it would be helpful if the states that currently create a report like this on their own or people that have an idea of what they would want out of this report can provide feedback and requests to the Working Group about what fields would be helpful. She asked that the feedback and requests be sent to Ms. Woltkamp.

Ms. Lee made a motion, seconded by Mr. Toal, to create a SERFF Canned Report for rate changes. The motion passed unanimously.

Lisa Brown (American Property Casualty Insurance Association—APCIA) asked if this information can be pulled from existing filings in SERFF, and she wanted to clarify that this is not a discussion about companies having to provide additional information. Mr. Bradner noted that this report would not be seeking additional information. It would look at what a company filed and then what was ultimately approved by the state. Ms. Nichols asked that any thoughts on this be sent to Ms. Woltkamp or Leana Massey (NAIC) so that information can be compiled and discussed in greater detail on a future call.
5. **Discussed SERFF State Reports**

Ms. Motter noted that a year or two ago, a meeting took place that centered around the Canned Reports, and feedback was sought as to which SERFF State Reports state insurance regulators were using. It was apparent in the meeting that people were not using the Canned Reports, and a lot of the reason was that it was not intuitive and people were unclear as to what data was being provided or not provided and what the fields represented. An attachment that outlines the existing Canned Reports and what fields are captured both in criteria selection and display was sent out with the agenda, and it is also posted to the Speed to Market webpage. Ms. Motter asked that everyone review the SERFF State Reports document to get a good understanding of the information currently provided and what the reports can capture and produce. Any suggested revisions or additions to the report going forward will be discussed in more detail on a future call.

Having no further business, the Speed to Market (EX) Working Group adjourned.
The Speed to Market (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call June 30, 2020. The following Working Group members participated: Rebecca Nichols, Chair (VA); Maureen Motter, Vice Chair (OH); Joanne Bennett and Wally Thomas (AK); Yada Horace for Jerry Workman (AL); William Lacy (AR); Shirley Taylor (CO); Dean L. Cameron (ID); Heather Droge (KS); Tammy Lohmann (MN); Camille Anderson-Weddle (MO); Chrystal Bartuska (ND); Russell Toal (NM); Cuc Nguyen (OK); Sharalyn Taylor (TX); Tanji Northrup (UT); Gail Jones and Lichiou Lee (WA); and Barry Haney (WI). Also participating was: Bob Grissom (VA).

1. Reviewed Suggestions and Made Changes to the Life, Accident/Health, Annuity and Credit Uniform PCM and Uniform Transmittal Document effective Jan. 1, 2021

   a. The first suggestion discussed was to change the term “implementation date” to “effective date” on the filing and disposition letter, which is part of the transmittal document. For the paper filings, this would affect the transmittal document; and if the change is agreed upon, it would affect the System for Electronic Rate and Form Filing (SERFF), and changes would be made in SERFF as well. Reasons for this suggestion were discussed.

      Ms. Motter noted that a possible solution is to change the label to “effective/implementation date” with state instructions upon request to indicate how the state is viewing the date. Quick Text for the disposition could also be utilized to indicate what the date means. Ms. Jones noted that she believes using “effective date” is a better idea than using “effective/implementation date” because it stays consistent with the property and casualty line. She asked what would happen to filings that have the old implementation date if this change is made. Ms. Motter noted that it would not change the data previously stored. Ms. Taylor agreed with changing the wording as suggested, as did Superintendent Toal.

      Mr. Thomas made a motion, seconded by Ms. Lee, to change the term from “implementation date” to “effective date” on the Uniform Transmittal Document within the SERFF system general information area and on the disposition letter. The motion passed unanimously.

   b. The next suggestion discussed was to create an additional sub-type of insurance (TOI) for expatriate plans within the H15 TOI. Expatriate plans are exempt for the federal Affordable Care Act (ACA), and the recommendation is that they have a separate sub-TOI for identification and ease of locating. The recommendation is that the code be similar to the one created for short-term limited-duration (STLD) plans.

      Ms. Motter noted that something to consider is whether a TOI would need to be created for H15G, which is for health group, and H15I, which is for health individual. Ms. Jones noted that Washington’s actuarial staff has stated that expatriate coverage is only applicable to groups, and it supports adding a TOI for H15G. Ms. Motter noted that this would add H15G.005 for expatriate plans if this change is implemented. Mr. Thomas noted that Alaska’s analysis indicates that it would need this for individual sub-TOIs. Ms. Motter noted that this could be accommodated in a similar manner as stated previously. Ms. Jones noted that Alaska has filings coming in for expatriate plans, so it would use these suggested sub-TOIs.

      Mr. Thomas made a motion, seconded by Superintendent Toal, to add a sub-TOI for expatriate plans under H15G and H15I. The description would be expatriate plans that are not required to comply with all state or federal mandates for health benefits. The motion passed unanimously.

   c. The next suggestion was to either create a new TOI of A09I for Individual Annuities Registered Index-Linked with three sub-TOIs of A09I.001 for Interim Value based on fair value, A09I.002 for Interim Value based on proxy value, and A09I.003 for Interim Value based on other approach, or to create a new sub-TOI of A07I.004 for Registered Index-Linked. The reason for this suggestion was discussed.
Ms. Motter noted that things to consider are whether this would be applicable to group and individual, and whether an alternate solution could be the addition of one or two new TOIs of A07I and/or A07G and using filing labels for additional product granularity since state insurance regulators can search on filing labels. Ms. Jones noted that she prefers the alternate suggestion of adding a sub-TOI, but she stated that Washington would not be using these new TOIs. Superintendent Toal noted that New Mexico has not received these types of filings. Ms. Taylor noted that Colorado does not require any Life annuity rate or form filings, so it would not use these codes. Ms. Bartuska noted that North Dakota would also not use these new TOIs.

Ms. Nguyen made a motion, seconded by Ms. Bennett, to table this recommendation for future discussion and use other tools if needed for identifying these types of filings due. The motion passed unanimously.

d. The next suggestion discussed was to include a sub-TOI for “Group Medicare Part D Supplement” under H17G, Group Health – Prescription Drug. This would be used for plans sold to retiree groups to supplement the benefits provided by Medicare Part D. The reason for this suggestion is that Medicare Part D supplemental filings are not received often, but they have unique characteristics and requirements. It would be helpful to be able to identify these filings separately from other filings.

Ms. Taylor and Ms. Jones noted that it would be helpful to have a sub-TOI for this. Ms. Lee noted that Washington prefers having a separate TOI and sub-TOI under H17G for non-Medicare Part D supplemental or any other prescription. Ms. Motter asked if the filing labels would be a solution since most states are not in need of this change. Ms. Jones confirmed that they could use the labels. Ms. Taylor noted that she believes the filing labels would work for them as well. Ms. Nguyen noted that Oklahoma uses the filing labels a lot and finds them very helpful.

Ms. Nguyen made a motion, seconded by Ms. Bennett, to not create a new sub-TOI under H17G, but rather utilize the filing labels capability feature in SERFF in order to identify Group Medicare Part D Supplemental Filings. The motion passed unanimously.

e. The next suggestion was to include a new TOI and sub-TOI for “Group Retiree Health” to be used for plans designed to provide health insurance coverage to retirees of an employer. The reason for this suggestion was discussed. Ms. Lee noted that based on the current filing requirements for Washington, it is concerned that this change would confuse carriers, and it would prefer using filing labels for this.

Superintendent Toal made a motion, seconded by Ms. Bartuska, to not create a new TOI and sub-TOI, but rather utilize the filing label feature in SERFF to identify filing submissions for Group Retiree Health.

f. The next suggestion was to include a new TOI for combined dental and vision products with a sub-TOI for dental/vision with hearing benefits and a sub-TOI for dental/vision without hearing benefits. The reason for this suggestion was discussed. Ms. Lee noted that in Washington, these suggested TOIs could not be used due to its statutes for these coverages. The Working Group did not have an interest in making this suggested change.

Ms. Bennett made a motion, seconded by Superintendent Toal, to not create a new TOI for combined dental and vision products with sub-TOIs of dental/vision with and without hearing benefits, but rather continue utilizing the existing TOIs for these types of products, including filing labels and/or additional benefits fields where needed. The motion passed unanimously.

g. The next suggestion was to include a new TOI for “H# Multi-line – Other” to be used for forms with multiple products that are all health coverages. The reason for this suggestion was discussed. Ms. Motter asked if the TOI of H21 for Health Other could be used for these types of filings. Ms. Jones, Ms. Bartuska and Superintendent Toal thought that would be appropriate. Ms. Taylor noted that in Colorado, the carriers are required to complete separate filings for each type of product. The Working Group did not have an interest in making this suggested change.

Superintendent Toal made a motion, seconded by Ms. Taylor, to not make a change to the Product Coding Matrix (PCM) for a new TOI of “H# Multi-line – Other,” but rather recommend using H21 for Health Other for these types of filings. The motion passed unanimously.
Ms. Taylor noted that Colorado has seen carriers submitting 10 different types of products on an application; one included Life. She asked if any other states allow Life forms and rates to be included with other types of health coverages on the application. Superintendent Toal and Ms. Bartuska noted that New Mexico and North Dakota are not allowing that. Ms. Taylor confirmed that Colorado is making them take it off, as they are different products, and she wanted to confirm that other states were handling that in a similar manner.

h. The final suggestion discussed was adding sub-categories for reports in certain areas. The TOI with the most pressing concern is Long-Term Care (LTC). The suggestion also included a request for reports related to Medicare Supplements, Life Illustrations, Group Credit and Network Adequacy. The reason for this suggestion was discussed. Ms. Motter noted that many states are using a filing type of “Reports” for this item and filing labels for more granularity. Ms. Jones noted that using the filing type of “Reports” and connecting it to the sub-TOI the carrier deems fitting is appropriate. Ms. Taylor noted that Colorado uses annual certification on all of its reports. Colorado has created and uses state specific codes that specify each one of the LTC reports and Medicare Supplement reports. The Working Group did not have an interest in making this suggested change.

Ms. Taylor made motion, seconded by Ms. Anderson-Weddle, to not create additional sub-TOIs, but rather utilize filing types or state TOIs to assist in the acceptance of filing submissions for LTC, Medicare Supplements, Life Illustrations, Group Credit, and Network Adequacy. The motion passed unanimously.

Having no further business, the Speed to Market (EX) Working Group adjourned.
The Artificial Intelligence (EX) Working Group met via conference call June 30, 2020. The following Working Group members participated: Jon Godfread, Chair, Chris Aufenthie, Chrystal Bartuska and John Arnold (ND); Mark Afable, Vice Chair, Timothy Cornelius, Jody Ullman, Mark Prodoehl, Nathan Houdek, Barbara Belling, and Mary Kay Rodriguez (WI); Jerry Workman and Gina Hunt (AL); Erin Klug, Vanessa Darrah and Tom Zuppan (AZ); Lucy Jabourian and Pam O’Connell (CA); Michael Conway, Jason Lapham and Peg Brown (CO); Andrew N. Mais and George Bradner (CT); David Altmaier, Rebecca Smid, and Nicole Altieri Crockett (FL); Doug Ommen and Travis Grassel (IA); Bruce Sartain, Jeff Varga, CJ Metcalf and Vincent Tsang (IL); Amy Beard and Karl Knable (IN); Rich Piazza and Tom Travis (LA); Kathleen A. Brrane, Ron Coleman and Robert Baron (MD); Grace Arnold, Tammy Lohmann and Phil Vigliaturo (MN); Chlora Lindley-Myers and Cynthia Amann (MO); Kathy Shortt (NC); Christian Citarella (NH); Barbara D. Richardson (NV); Ron Kreiter (OK); Jessica K. Altman, Michael McKenney and Shannen Logue (PA); Alison May and Rachel Jade-Rice (TN); and Christina Rouleau (VT). Also participating were: Dean L. Cameron and Jo McGill (ID); Brenda Johnson and Tate Flott (KS); Robert Wake and Sandra Darby (ME); Troy Smith (MT); Randall Currier (NJ); Mark McLeod (NY); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer and Michael Wise (SC); Mike Boerner (TX); and David Hippen (WA).

1. **Adopted its June 3 Minutes**

The Working Group met June 3 and took the following action: 1) adopted its May 5 minutes; 2) continued reviewing the draft Principles on Artificial Intelligence (Principles); and 3) reviewed a proposed timeline for adoption of the AI Principles.

Commissioner Ommen made a motion, seconded by Commissioner Afable, to adopt the Working Group’s June 3 minutes (Attachment Three-C). The motion passed unanimously.

2. **Reviewed Draft AI Principles Version 5**

Commissioner Godfread reviewed the process for adopting the Principles once they have been adopted by the Working Group. He said the changes in Version 5 of the AI Principles, posted to the Working Group’s webpage since June 15, should reflect the discussion on the Working Group’s June 3 conference call. He reviewed those changes.

3. **Discussed Comments Related to Introductory Language, Legal Liability and Proxy Discrimination**

Commissioner Godfread said the APCIA recommended changes get us to a point where we are speaking consistently regarding what the Principles are intended to be; i.e., an internal, aspirational, guiding document for the NAIC. He said the language offered by the APCIA clarifies and adds weight to that purpose.

Ms. Jabourian asked why the word “aspire” is included. She said the entire document is aspirational. She said the word weakens the overall concept. Ms. Gleason said these are high level guiding principles, and that is why the word “aspire” was included. Ms. Jabourian said if the word was removed, it would not change that intent. Ms. Gleason said removing it would be agreeable if the rest of the language remains. Mr. McKenney said he would support removing the word “aspire” as well because the previous version recommends that AI actors “adhere” to the AI Principles, and changing that to the word “aspire” does seem to weaken the intent.
William D. Latza (Lemonade) asked if the word “aspire” is anywhere else in the Principles and whether anything else characterizes the Principles as aspirational if the word “aspire” is removed from the introductory language. Commissioner Godfread said he does not believe so but adding the word “aspire” does not change that this is aspirational; therefore, it is not necessary. Ms. Jabourian added that these are high level guiding principles, and they do not carry the weight of law or any legal liability. She said including the word “aspire” is simply not needed, and if included, it weakens the intent. Ms. Gleason asked if the minutes could reflect that the intent of the document is to be “aspirational.” Commissioner Godfread said yes, the minutes can reflect that point.

Binny Birnbaum (Center for Economic Justice—CEJ) said the CEJ submitted a comment that directly addresses this issue. He said the CEJ has some concerns with the APCIA language specific to so many references to compliance with legal requirements. He said it is the CEJ’s view that people do not need to be reminded that they must comply with the law. He said it is not an “aspirational” thing to comply with the law; this is an emerging area, and current legal requirements do not address everything. He said the CEJ suggested the addition of language that calls on AI actors to not simply seek to comply with legal requirements but to act according to the AI Principles in the absence of specific legal requirements and go beyond mere compliance when such actions would better meet the Principles. He said this gets to the aspirational part and drives home the point that the whole area of AI is uncharted ground for a lot of regulatory insurer actions. He said the CEJ has a real concern with the “level of regulatory oversight” language proposed by the APCIA, stating that the level of regulatory oversight will vary based on the risk and impact to the consumer. He said the Principles should be interpreted and applied in a manner that accommodates the nature and pace of change in the use of AI by the insurance industry and promotes innovation, while protecting the consumer from harm. He said this language introduces a lot of new terms that would be open to interpretation and could lead to stakeholders interpreting them to mean whatever they want, and the language does not really add anything useful.

Commissioner Mais said he agrees with deleting the word “aspire,” but regarding the “level of regulatory oversight” language, that just brings out the idea of proportionality that is fundamental to regulation. Commissioner Godfread said he agrees, noting that the entirety of this process is an attempt to get to balance in what is uncharted areas, while acknowledging and avoiding inherent risks. He said he believes this language does that and sets the right tone for other committees that will continue to have discussions about the level of regulatory oversight in the area of AI going forward.

Mr. Citarella said the word “will” in that sentence might be changed to “should” or “ought” to be more suggestive and not tie the hands of the state insurance regulator. Commissioner Mais suggested changing the word to “may.” Commissioner Afable and Commissioner Birrane agreed that it is a good change. Commissioner Ommen agreed that the document is intended to be guiding principles, and it does not have to be specific in all areas. He said he agrees with what is proposed.

Commissioner Godfread said the word “aspire” would be removed and the word “will” would be changed to “may” in the sentence about the level of regulatory oversight being based on the risk and impact to the consumer. Commissioner Richardson made a motion, seconded by Commissioner Altman, to adopt the APCIA language with the two suggested changes. The motion passed unanimously.

Commissioner Godfread asked the Working Group to turn its attention to the language under the Fair and Ethical section that says “AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes.” He said on a recent member call, this language was discussed and had overwhelming support. He said the risk of embedded bias in the use and creation of an algorithm is a recognized issue, and the members are committed to not allowing it. He said this has been front of mind since the creation of this Working Group, and this language is not only warranted but necessary at this point. He said a work product that does not address proxy discrimination would leave a gaping hole in terms of our intentions. He asked Mr. Aufenthie to talk about the North Dakota DOI’s suggested language. Mr. Aufenthie said a minor edit for clarification was offered. He said it was not the intent to make it confusing or equate the use of proxy variables with proxy discrimination, but quite the opposite. He said the feedback on the Version 5 language was that it could be interpreted to mean that proxy variables would never be allowed, but the proposed language is intended to say they would not be allowed to be used to unfairly or unlawfully discriminate against protected classes. He added that AI actors should proactively avoid AI systems that use variables or bad data that would make discrimination somehow legal, but at the same time, use of proxy variables would be allowed if there is a legitimate and acceptable business purpose.

Commissioner Ommen said he continues to have concerns about phrases such as “proxy variables” that are not well understood. He said discrimination in terms of education and employment is not unfair discrimination in the business of insurance. Commissioner Mais said he does think proxy discrimination has to be in the document, and disparate impact is a recognized
term. He said the proxy variable is a separate thing and having the two together does tend to unnecessarily confuse the issue. Commissioner Afable said he agrees that the North Dakota language helps clarify the points we are trying to make and gives direction to AI actors. He said it may not be perfect, but it is directionally correct. Ms. Lohmann said Minnesota would be in favor of the proxy discrimination language over the proxy variable, which seems directional, but the purpose of the proxy discrimination language is to capture the unintentional. Therefore, to Commissioner Ommen’s point, Ms. Lohmann said this is aspirational, and considering all things that might proxy a prohibited variable should be included. Commissioner Conway said the proxy discrimination language is needed. He asked whether it is necessary to call this out specifically in this document if there are truly legitimate business purposes in play that do not lead to proxy discrimination. He did say this is directionally headed in the right way. Commissioner Altman said the inclusion of the proxy discrimination language is critical in terms of thinking about this as an aspirational document and recognizing the risk.

J. Bruce Ferguson (American Council of Life Insurers—ACLI) said the ACLI believes that racial discrimination in any form, direct or indirect, is wrong; therefore, the ACLI would support the goal of the AI Principles and the Working Group’s desire to move forward with them. He said the ACLI would agree to including, at this point, a reference to proxy discrimination. He said the concept of proxy discrimination is somewhat new, and it was just introduced into the guiding Principles on June 3. He said that in looking at a number of comment letters, and as Commissioner Ommen pointed out, they all seem to differ somewhat regarding what is meant by the concept of proxy discrimination. He said that for the ACLI and within the life insurance context, it really means that AI should not be used to make underwriting decisions that would otherwise be prohibited by life insurance unfair trade practices laws as unfair discrimination. He said these guiding Principles are really intended to inform the work of other NAIC initiatives and for that matter individual state actions, so it is important to reach a common understanding among all the stakeholders as to what proxy discrimination means. He said he thinks this can be accomplished without delaying the progress made on the Principles.

Commissioner Godfread said he has reviewed many AI Principles documents, and this document is one of the most balanced in terms of recognizing that there will be some challenges as we move into utilizing this technology, but not having perfect definitions is expected, as this is an evolving space. He said this is a directional document for the NAIC, and there will need to be discussions regarding what is acceptable and what is unacceptable; that may need to happen at the different committees as these issues come forward. He said it is important to keep moving forward. Mr. Latza expressed support for Mr. Birnbaum’s concept regarding proxy discrimination, but the reason we are having the debate is because of failing to differentiate between these concepts. He said rather than wed the AI Principles to a particular legal construct, the Working Group should focus on the goal that insurance decisions should not be made solely on the basis of constitutionally protected classes, which is not to say there cannot be discrimination on an actuarial basis. He said if this principle is phrased in such a way so as to get away from the means and what we are trying to achieve, we can come up with something better.

Commissioner Ommen said the ACLI perspective is helpful. He said one must understand causation. He said one of the most emotional subjects is law enforcement, and data clearly supports the idea that there has been discrimination in a number of different ways that is clearly racially connected. He said you must be able to separate out what is flawed and what is good, actuarially supported data. He said it appears that a lot of the information being used is flawed because it unfairly selects based on race. He said he values this AI Principles document as a guidance, and the Working Group needs to have honest conversations about variables that are being used, but it cannot use unintentional disparate impact to conclude that something is wrong with the insurance model. He said using the term proxy discrimination may draw some people to conclude that we are talking about disparate impact, and he does not believe that we should.

Commissioner Conway said he is not so sure that it should just be accepted that societal problems and issues is a part of our insurance regulatory system. He said we need robust conversation about that, and he is not convinced that this should not be part of the discussion at this time. Commissioner Ommen said he agrees, and a lot of things are unequal and unjust; some of those factors are part of a rate making system. He said our eyes must be open as we discuss this because you cannot automatically conclude that the ratemaking process is improper. He said there are inequities that have been in our country for a long time that are being addressed and should be in the discussion. Commissioner Conway said the insurance industry should not be perpetuating those problems, and we should be discussing how to stop those activities. Commissioner Godfread said the current version of the Principles has language about absent negligence saying that if something is wrong, it simply needs to be corrected and does not call for punitive penalties. He said this is a balancing act.

Mr. Birnbaum said characterizing proxy discrimination as something vague and just a legal term is quite depressing. He said state insurance regulators have been looking for proxy discrimination forever, and when rating factors are filed that do not make sense, state insurance regulators have always looked to see if it is some kind of proxy for something else. He said the idea that the concept is untested or unknown is wrong, as it has been around as a legal concept in the fair housing act for over.
40 years and in insurance for decades. He said the language in the proposal is clear, and it does not need any embellishment by adding the term “proxy variables.” He said the high-level Principles are there to say insurers should be proactive because of the much greater risk of discrimination with AI algorithms. He said the language is sufficient, and discussion regarding proxy variables should be part of the model law development.

Ms. Gleason said this is an important conversation. She said the term “proxy discrimination” raises concerns, and she would recommend replacing it with “prohibited discrimination.” She said that would keep the conversation moving.

Andrew R. Pauley (National Association of Mutual Insurance Companies—NAMIC) said NAMIC cannot support the proxy discrimination language, as it is not defined in the document. He said it goes against the high-level aspirations of the document by including a very nuanced legal determination concerning these issues. He said NAMIC does not support unfair discrimination or any type of intentional discrimination; however, any attempt to remove rating factors that are actuarially justified and improve the predictive value of rating plans would be a move away from risk-based pricing, and NAMIC supports risk-based pricing. He said NAMIC has significant concerns, and it cannot be said that this is just an internal document, as the NAIC is a standard-setting body by its own definition, so when this document is created with this terminology without definition or understanding of what we are talking about, it is going to create confusion, litigation risk and new duties out in the public once it is released. He said the lack of a definition is not going to provide any guidance to future work streams, and it can do more harm than good. He said NAMIC applauds the work of the Working Group and understands the intention, but this has been a rushed process and forcing the issue in this manner is disconcerting to say the least. Commissioner Godfread said he takes exception to characterizing this as having been rushed. He said documents about the use of ethical algorithms or AI generally have a section denoting ethical and fairness, including proxy discrimination, and to somehow assume the term is not understood is not factual and he could not agree to that. He said there is a firm understanding of what it is, and it will be further developed as state insurance regulations are flushed out. He said many insurer chief executive officers (CEOs) have made statements over the last six weeks about doing better and being a part of the solution. He said on the NAIC member call, Director Farmer said we are going to take proactive steps to address some of these top of mind issues.

Richard L. Bates (State Farm) said he has read a lot of the documents that talk about proxy discrimination and disparate impact, and one of the articles says that for underwriting purposes, geography would be considered a proxy for race. He asked if that would carry over to the rating variable because geography is an acceptable rating factor. He said State Farm is opposed to unfair discrimination, but it is waiting to see the legislation that says geography cannot be used as a rating factor based on the idea that it would be considered a proxy for a prohibited characteristic.

4. **Adopted the AI Principles**

5. **Discussed its Timeline and Next Steps**

Commissioner Godfread said the adopted version of the Principles will be distributed, posted on the Working Group’s webpage, and forwarded to the Innovation and Technology (EX) Task Force for consideration. He said comments will be accepted until July 20 and discussed on the Task Force call on July 23. He said comments and changes could continue to be discussed with the possibility of adoption during the Task Force’s meeting the week of Aug. 3.

Having no further business, the Artificial Intelligence (EX) Working Group adjourned.

American Property Casualty Insurance Association (APCIA)
Introductory Language Amendments

North Dakota Insurance Department, Artificial Intelligence (AI) Principles
Suggested Introductory Language
May 18, 2020

RECOMMENDS that insurance companies and all persons or entities facilitating the business of insurance that play an active role in the AI system lifecycle, including third parties such as rating and advisory organizations (hereafter referred to as “AI actors”) adhere to these fundamental principles: aspire to promote, consider, monitor, and uphold the following principles according to their respective roles; and:

THIS DOCUMENT is intended to establish consistent high-level guiding principles and best practices for AI actors. Although these principles are guidance and do not carry the weight of law or impose any legal liability. However, they should serve to inform and establish general expectations for AI actors and systems emphasizing the importance of accountability, compliance, transparency, and safe, secure and robust outputs. ensuring both are accountable, compliant, transparent, safe, secure and robust and produce outputs that are fair and ethical.

Further, THIS DOCUMENT

Should be used to assist regulators and NAIC committees addressing insurance-specific AI applications. The level of regulatory oversight will vary based on the risk and impact to the consumer. These principles should be interpreted and applied in a manner that accommodates the nature and pace of change in the use of AI by the insurance industry and promotes innovation, while protecting the consumer from harm.

RECOMMENDS that insurance companies and all persons or entities facilitating the business of insurance that play an active role in the AI system lifecycle, including third parties such as rating and advisory organizations (hereafter referred to as “AI actors”) adhere to these fundamental principles.

CALLS ON all AI actors to promote, consider, and monitor, the following principles for responsible stewardship of trustworthy AI, according to their respective roles.

UNDERLINES that the following principles are complementary and should be considered as a whole in totality.

W:\National Meetings\2020\Summer\TF\Innovation\_Working_Groups\Artificial_Intelligence\AI Principles Comments\APCIA Introductory Language Amendment 061520.docx
National Association of Insurance Commissioners (NAIC) Principles on Artificial Intelligence (AI)

RECOMMENDS that insurance companies and all persons or entities facilitating the business of insurance that play an active role in the AI system life cycle, including third parties such as rating and advisory organizations (hereafter referred to as “AI actors”) promote, consider, monitor and uphold the following principles according to their respective roles; and

THIS DOCUMENT is intended to establish consistent high-level guiding principles for AI actors. These principles are guidance and do not carry the weight of law or impose any legal liability. However, this guidance can serve to inform and establish general expectations for AI actors and systems emphasizing the importance of accountability, compliance, transparency, and safe, secure and robust outputs.

Further, THIS DOCUMENT

Should be used to assist regulators and NAIC committees addressing insurance-specific AI applications. The level of regulatory oversight may vary based on the risk and impact to the consumer. These principles should be interpreted and applied in a manner that accommodates the nature and pace of change in the use of AI by the insurance industry and promotes innovation, while protecting the consumer from harm.

Fair and Ethical

a. AI actors should respect the rule of law throughout the AI life cycle. This includes, but is not limited to, insurance laws and regulations, such as those relating to trade practices, unfair discrimination, access to insurance, underwriting, privacy, consumer protection and eligibility practices, ratemaking standards, advertising decisions, claims practices, and solvency.

b. AI actors should proactively engage in responsible stewardship of trustworthy AI in pursuit of beneficial outcomes for consumers and to avoid proxy discrimination against protected classes. AI systems should not be designed to harm or deceive people and should be implemented in a manner that avoids harmful or unintended consequences.

Accountable

a. AI actors should be accountable for ensuring that AI systems operate in compliance with these principles consistent with the actors’ roles, within the appropriate context and evolving technologies. Any AI system should be compliant with legal requirements governing its use of data and algorithms during its phase of the insurance life cycle. Data supporting the final outcome of an AI application should be retained and be able to be produced in accordance with applicable insurance laws and regulations in each jurisdiction. AI actors should be responsible for the creation, implementation and impacts of any AI system, even if the impacts are unintended. AI actors should implement mechanisms and safeguards consistent with the degree and nature of the risks posed by AI to ensure all applicable laws and regulations are followed, including ongoing (human or otherwise) monitoring and, when appropriate, human intervention. However, absent negligence in the creation, implementation or monitoring of an AI system, the remedy of an impact that violates existing regulation should be correction of said impact.
Compliant

a. AI actors must have the knowledge and resources in place to comply with all applicable insurance laws and regulations. AI actors must recognize that insurance is primarily regulated by the individual states and territories of the United States as well as by the federal government, and that AI systems must comply with the insurance laws and regulations within each individual jurisdiction. Compliance is required whether the violation is intentional or unintentional. Compliance with legal requirements is an ongoing process. Thus, any AI system that is deployed must be consistent with applicable laws and safeguards against outcomes that are either unfairly discriminatory or otherwise violate legal standards, including privacy and data security laws and regulations. Any decision by an AI actor that utilizes an AI system in its creation shall not be held in violation of existing regulation, if that same decision would have been rendered without the use of an AI system.

Transparent

a. For the purpose of improving the public’s confidence in AI, AI actors should commit to transparency and responsible disclosures regarding AI systems to relevant stakeholders, including consumers. AI actors must have the ability to protect confidentiality of proprietary algorithms and adherence to individual state law and regulations in all states where AI is deployed. These proactive disclosures include revealing the kind of data being used, the purpose of the data in the AI system and consequences for all stakeholders.

b. Consistent with applicable laws and regulations, stakeholders (which includes regulators and consumers) should have a way to inquire about, review and seek recourse for AI-driven insurance decisions. This information should be easy-to-understand and describe the factors that lead to the prediction, recommendation or decision. This information may be presented differently and should be appropriate for applicable stakeholders.

Secure, Safe and Robust

a. AI systems should be robust, secure and safe throughout the entire life cycle so that in conditions of normal or reasonably foreseeable use, or adverse conditions, they can function in compliance with applicable laws and regulations. To this end, AI actors should ensure a reasonable level of traceability in relation to datasets, processes and decisions made during the AI system life cycle. AI actors should enable analysis of the AI system’s outcomes, responses and other insurance-related inquiries, as appropriate in keeping with applicable industry best practices and legal requirements.

b. AI actors should, based on their roles, the situational context and their ability to act, apply a systematic risk management approach to each phase of the AI system life cycle on a continuous basis to address risks related to AI systems, including privacy, digital security and unfair discrimination as defined by applicable laws and regulations.
The Artificial Intelligence (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call June 3, 2020. The following Working Group members participated: Jon Godfread, Chair, Chris Aufenthie, Chrystal Bartuska, John Arnold and Mike Andreing (ND); Mark Afable, Vice Chair, Timothy Cornelius, Jody Ullman, Mark Prodoehl, Nathan Houdek, Barbara Belling, Renee Fabry and Mary Kay Rodriguez (WI); Tom Zuppan and Vanessa Darrah (AZ); Lucy Jabourian (CA); Peg Brown (CO); George Bradner (CT); Rebecca Smid and Nicole Allieri Crockett (FL); Doug Ommen and Travis Grassel (IA); Judy Mottar (IL); Jerry Ehlers (IN); Ron Coleman (MD); Phil Vigliaturo (MN); Cynthia Amann (MO); Kathy Shortt (NC); Christian Citarella and Emily Doherty (NH); Barbara D. Richardson (NV); Tynesia Dorsey (OH); Michael McKenzie and Shannen Logue (PA); Rachel Jade-Rice (TN); and Christina Rouleau (VT). Also participating were: Brenda Johnson and Tate Flott (KS); Troy Smith (MT); and Randall Currier (NJ).

1. Adopted its May 5 Minutes

The Working Group met May 5 and took the following action: 1) adopted its Feb. 19 minutes; 2) continued reviewing the draft Principles on Artificial Intelligence (Principles); and 3) reviewed a proposed timeline for adoption of the AI Principles.

Commissioner Richardson made a motion, seconded by Ms. Brown, to adopt the Working Group’s May 5 minutes (Attachment Three-C1). The motion passed unanimously.

2. Reviewed Draft Principles Version 4

Commissioner Godfread said the goal is to review the changes to version 4 of the Principles draft agreed to during the Working Group’s last meeting and go over a few other items. He said the document posted to the website represents the changes accepted by the Working Group based on the comments provided, but as noted in that document, there are a couple of outstanding questions and few things to discuss.

Commissioner Godfread said changes noted represent some clean-up done by North Dakota and Wisconsin staff working with Denise Matthews (NAIC). He said changes represent suggestions for cleaner or more correct language as suggested by the NAIC editors but do not represent substantive changes. He said they are intended to improve and make the language more consistent. He asked if anyone had any concerns about those changes. Hearing none, he said that paragraph (b) under the Accountable section seemed to more appropriately belong in the Transparent section, so that change was made as well. He asked if there are any corrections or concerns about version 4 of the draft artificial intelligence (AI) Principles as posted. Ms. Jabourian said “according to applicable law” under the Accountable section (a) is not needed, and “federal and state” is not needed under the Compliant section (a). She also said moving the paragraph to the Transparent section is appropriate.

Birny Birnbaum (Center for Economic Justice—CEJ) said one of the core consumer protection issues with AI is the increased potential for unfair discrimination caused by the use of data that reflect historical discrimination against protected classes or discrimination by proxy. He said simply avoiding intentional discrimination is not enough and suggested the principles are missing this key issue of responsibility for AI developers and users to identify and minimize proxy discrimination against protected classes. He suggested adding “to avoid proxy discrimination against protected classes” to the end of the first sentence in the Fair and Ethical section part (b) to address that concern.

Ms. Jabourian asked if it would be appropriate to add “including unfair discrimination” to the end of the last sentence in the Fair and Ethical section (b) to address Mr. Birnbaum’s concern. Mr. Birnbaum said the term “proxy discrimination” needs to be added because most in the industry think “unfair discrimination” means “intentional,” and in this case, if there is an intent to address unintentional discrimination, it needs to be specifically stated.

Commissioner Ommen said this is a complex and difficult issue, and he is concerned about using language that is not well understood or well developed in a guidance document. Mr. Birnbaum said Commissioner Ommen seems to be saying there is a legal system in place that does not identify proxy discrimination, and it is an undefined term. He said when he talks to regulators, they say they have the authority to take action if they find a factor that has a discriminatory effect. Therefore, it
seems to be well understood. Commissioner Ommen said he does not think it is a good idea to use terms that are not uniformly understood in a guidance document.

Mr. Currier said he agrees with Ms. Jabourian’s suggestion as a way to address Mr. Birnbaum’s concern. Peter Kochenburger (University of Connecticut School of Law) said he prefers to have the “proxy discrimination” language in as well and that there are other terms in the document that could have different meanings in different states. Mr. Kochenburger suggested some language used in a Vatican document related to AI. Commissioner Godfread said he would be interested in seeing that language.

Scott Kosnoff (Faegre Drinker Biddle & Reath LLP—Faegre Drinker) said he agrees that these words sometimes are not well understood. He said he used to think unfair discrimination was broad enough to include proxies but now is not sure it is. He said the Big Data (D) Working Group asked NAIC staff to come up with a definition for unfair discrimination and what is prohibited in terms of rate making. He said the definition was focused on whether there are equitable differences in expected losses and expenses. He noted that in addition to unfair discrimination prohibitions, a number of states prohibit certain classifications from being considered. He said proxies for prohibited factors does not fit in with what is often thought to be unfair discrimination. Mr. Birnbaum asked if there is agreement that discriminating based on race is not permitted, then why would an algorithm that has the same effect be permitted. He said the only way to prevent that in an era of big data is to take a proactive approach to determine what can be done to recognize and minimize this type of unfair discrimination by proxy. He said there are two types of unfair discrimination, one based on prohibited factors and the other based on lack of a sound actuarial correlation, and the two types bleed into each other. He said that is why it is so important to recognize it in this AI document. Mr. Birnbaum said the words “and to avoid proxy discrimination against protected classes” should be added at the end of the first sentence in the Fair and Ethical section, item (b). He said the key message is to “proactively engage,” and it should be considered as an AI model is being developed.

Angela Gleason (American Property and Casualty Insurance Association—APCIA) said that consistent with what Commissioner Ommen said, this is guidance and for NAIC committees as the look at AI applications. She said that is where these conversations should take place, and they are not appropriate for this document. Commissioner Godfread said the argument to include something of this nature is persuasive. He said as has been pointed out, if proxy discrimination were to be discovered, we would expect to stamp it out and do our best to remove it. He added that this is a big concern with AI and something that has come up on every conference call. He said he would be inclined to include that language as a signal to the other groups that the bias brought about by these types of proxies will need to be addressed. Commissioner Afable agreed and said he would like to have an opportunity to look at this to see if there is a better definition of proxy discrimination. He said it does not necessarily lead to disparate impact but is a practice upon which regulators have consistently taken action. Mr. Bradner agreed there needs to be a statement in the Principles that guides regulators and Working Groups as they develop guidance and standards related to AI. Ms. Jabourian and Ms. Logue agreed. Commissioner Godfread said that if there are no objections from the Working Group, Mr. Birnbaum’s language would be taken under advisement and added for now as this issue continues to be considered. He said as these are aspirational principles, one of the larger aspirations would be missing if something is not included on this. Commissioner Ommen said he fully supports the exploration of this matter but because discrimination is systemic historically, even if there is correlation to risk, it is very difficult to determine what to do about it in insurance. William D. Latza (Lemonade) said he agrees with Mr. Birnbaum and that AI should not be a mechanism to perpetuate these problems. He said actuaries have a good idea of what unfair discrimination is, and there are laws that are fairly clear. He said AI can be a way to resolve this type of discrimination as well, and he would be willing to help to eliminate the noise related to this type of discrimination and work to try to develop language to resolve this very important issue.

Richard Bates (State Farm) agreed with Commissioner Ommen and said this needs to be studied more. He said the industry needs to be part of this discussion. He said there is a lot of litigation risk and not a lot of clarity. Mr. Bates said there may be a more appropriate time to discuss it, given current events, when cooler heads can prevail, and it can be done from a broader perspective. Commissioner Godfread said right now, it is just a placeholder for future discussion.

Commissioner Godfread asked the Working Group if there was any additional discussion on removing the “applicable law” and “state and federal” language previously brought up by Ms. Jabourian. He said hearing no objections, those words would be removed from the next version of the Principles.

Mr. Kochenburger said in the second line of the Transparent section related to consumers having a way to inquire about, review or seek resource for AI-driven insurance decisions, the word should be “and” as opposed to “or.” Commissioner Godfread said he agrees, and that change will be made.
Commissioner Godfread commented on the Accountable and the Compliant sections related to potential inadvertent or unforeseen impacts of AI, particularly when it is without negligence. He said he would not like to see use of AI stifled, especially in areas where it can benefit consumers and insurers, by potentially being punitive regarding unintended consequences. He said to that end, he suggests adding language to basically thread the needle between heavy-handed regulation and doing what is right for the consumer. He said he would like to add “However, absent negligence in the creation, implementation or monitoring of an AI system, the remedy of an impact that violates existing regulation should be correction of said impact” in the Accountable section right after the sentence ending in “human intervention.” He said he would also like to recommend, in the Compliant section, that the last sentence be: “Any decision by an AI actor that utilizes an AI system in its creation shall not be held in violation of existing regulation, if that same decision would have been rendered without the use of an AI system.” Commissioner Afable agreed with the suggested changes. Commissioner Godfread said that if an AI actor is a habitual violator of what is agreed to be inappropriate, other actions would be taken related, but if everything has been done appropriately and yet something adverse comes of it, the thought would be to take corrective action as the remedy. Commissioner Godfread said hearing no comments objecting to this language, it will be included in the next draft.

3. Discussed Comments Related to Introductory Language

Commissioner Godfread said for the discussion on the introductory language, he would draw everyone’s attention to a new document provided with the notice of the meeting and posted on the NAIC website regarding suggested language from the North Dakota Department of Insurance (DOI). He said the APCIA also offered language in its previously posted comments. He asked Mr. Aufenthie to present the North Dakota proposed language. Mr. Aufenthie said the language is intended to clarify that the Principles are intended to be guideposts and high-level guidance and do not necessarily carry the weight of law. Ms. Gleason said the APCIA offered some suggestions previously but would be happy to work with Mr. Aufenthie to make this language a little more robust as this is an important point. She said the APCIA will identify the objectives, to ensure consistency across the NAIC committees and to be clear these are only guidance and do not carry the weight of law. Mr. Latza asked where this document will live and who is actually giving these guidelines. Commissioner Godfread said it is the intention to send this to the Executive (EX) Committee and then to Plenary for adoption. Ms. Matthews confirmed that would be the process and said this document would be within the purview of the Innovation and Technology (EX) Task Force and as innovation and technology projects are worked on by other NAIC committees, this would be something it would review as it starts working on other applications of AI. Mr. Birnbaum said the CEJ likes the North Dakota language and appreciates the APCIA’s comments about this pertaining to NAIC committees and that would be a positive contribution. However, he said the other APCIA comments seem to water down the Principles such that they do not have an affect, so the CEJ would be opposed to that language.

4. Discussed its Timeline and Next Steps

Commissioner Godfread said the Working Group has stated from the beginning that it would like to complete this work expeditiously. He said the goal is for the Principles to be adopted by the Working Group’s parent committee, the Innovation and Technology (EX) Task Force, at the NAIC Summer National Meeting, making it possible for the Principles to be adopted by the full membership by the Fall National Meeting. He reviewed a timeline that would make that possible, including:

- Posting version 5 of the Principles, based on this meeting, by June 15.
- Holding another conference call of the Working Group the week of June 29, with the intention of adopting the Principles.
- Posting the adopted version of the Principles by the end of that week.
- Providing an exposure and comment period.
- Task Force consider adoption of the Principles during the Summer National Meeting.

Having no further business, the Artificial Intelligence (EX) Working Group adjourned.
The Artificial Intelligence (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call May 5, 2020. The following Working Group members participated: Jon Godfread, Chair, Chris Aufenthie, Chrystal Bartuska and Colton Schulz (ND); Mark Afable, Vice Chair, Timothy Cornelius, Barbara Belling, and Mary Kay Rodriguez (WI); Vincent Gosz (AZ); Lucy Jabourian (CA); Peg Brown (CO); George Bradner (CT); David Altmaier (FL); Doug Ommen and Andrea Seip (IA); Judy Mottar (IL); Rich Piazza (LA); Ron Coleman (MD); Phil Vigliaturo and Tammy Lohmann (MN); Cynthia Amann (MO); Kathy Shortt and Tracy Biern (NC); Christian Citarella and Emily Doherty (NH); Barbara D. Richardson (NV); Mark Hamlin (OH); Ron Kreiter (OK); Rachel Jade-Rice, David Combs and Bill Huddleston (TN); and Christina Rouleau and Kevin Gaffney (VT). Also participating were: Mark McGill and Randall Currier (NJ); Matt Homer (NY); Daniel Morris (SC); Maggie Dell and Travis Jordan (SD); Nancy Clark (TX); and Tracy Klausmeier (UT).

1. Adopted its Feb. 19 Minutes

The Working Group met Feb. 19 and took the following action: 1) adopted its Feb. 4 minutes; 2) continued reviewing the draft Principles on Artificial Intelligence (Principles); and 3) reviewed a proposed timeline for adoption of the Principles.

Mr. Kreiter made a motion, seconded by Commissioner Ommen, to adopt the Working Group’s Feb. 19 minutes (Attachment Three-C2). The motion passed unanimously.

2. Reviewed Draft Principles Version 3 Comment Letters

Commissioner Godfread asked for general comments related to version 3 of the Principles draft. Hearing none, he said he wants to begin the discussion by going section by section, deferring the reviewing of comments related to the introductory section until later.

Commissioner Godfread said the American Property Casualty Insurance Association (APCIA) offered suggested language to replace or revise the term “risk-based” to eliminate any confusion related to how the term is used within a rating context. He asked if any of the trade associations on the call would like to speak to it, but hearing no comments from those representatives, he asked Mr. Aufenthie if he would like to comment. Mr. Aufenthie said the APCIA suggested replacing the term “risk-based” with “appropriate,” which seems in line with what the Working Group is looking for. It would read “appropriate use of artificial intelligence,” not to be confused with how it is used within the context of rating. Mr. Aufenthie said he agrees with this change. Commissioner Richardson said she prefers that language as well. Denise Matthews (NAIC) also pointed out another place in the Accountable section where the sentence was modified to replace the term “risk-based” with “…appropriate mechanisms and safeguards consistent with the degree and nature of the risks posed by AI…” Ms. Jabourian asked how the word “appropriate” would be defined within this context. Mr. Aufenthie said given that this document is intended to be high level, the assumption is that it would be defined more specifically later, but he said he is open to suggestions regarding alternatives. Ms. Jabourian said she just wants to understand this better. Commissioner Godfread said these principles are intended to be a guiding framework and not a law or regulation. Commissioner Richardson said it will be easier to know what is inappropriate than appropriate, and you will not know until you see it.

Mr. Currier said he is not sure the word “appropriate” is even needed. Commissioner Godfread said the Working Group could discuss that when it gets back to the section by section review. He directed the Working Group member’s attention to the Fair and Ethical section of the Principles. He said he is comfortable with the American Council of Life Insurers’ (ACLI’s) suggested revisions to this section. Commissioner Afable agreed that the ACLI language is acceptable.

Commissioner Godfread asked if anyone had any additional comments on the Fair and Ethical section. Hearing none, he asked Mr. Aufenthie to walk through the changes to the Accountable section. Mr. Aufenthie said a few of the comments that were suggested limited the Principles to “regulated entities.” He asked if the Working Group wants it limited to regulated entities or applied to a broader group like third parties and other artificial intelligence (AI) actors. Mr. Bradner said third parties may be selling AI products to insurance carriers and state insurance regulators, so those parties should be included. Ms. Jabourian and
Ms. Brown (CO) agreed. Commissioner Richardson said her regulatory authority is limited to the regulated entity; therefore, she might disagree. Commissioner Godfread said he agrees with that statement in a practical sense, but this would send a signal to the third-party entities that they were expected to follow these principles, and there may be some value in doing that. Commissioner Richardson agreed.

Andrew R. Pauley (National Association of Mutual Insurance Companies—NAMIC) said NAMIC still has two significant concerns with the Principles, the first being its applicability even if the result is unintended, as it is not considered to be the current state of the law. He would ask that the last part of that sentence be stricken or at least the language “according to law” be added so that it is very clear. He also said NAMIC objects to the “right to seek recourse” language, suggesting that it could be written in other ways, and the ACLI has proposed some alternative language.

Commissioner Godfread asked if the Working Group members have any comments related to Mr. Pauley’s comments. Mr. Bradner said he thinks the language needed to be there, but he does not object to adding “according to law.” He believes companies should not be able to hide behind a contention that they did not know something was happening. He said that can be the outcome if the company is not doing due diligence and testing to be sure they are understanding how the AI is working. Ms. Jabourian agreed with Mr. Bradner. Mr. Aufenthie said he is okay with the language “according to law,” but when talking about AI, he thinks the unintentional phrase still needs to be there. Commissioner Godfread agreed, and he said the comments were valid regarding unintended outcomes and the guidance is intended to apply to the “unintended” as well. Mr. Currier asked for clarification regarding the language “according to current law” and whether that is referring to the law as of the date of this document or in the future as the law evolves. Commissioner Godfread said his intention was the current laws of the times, so it is not frozen as of the date of this document. Mr. Currier said the addition of the last sentence by the APCIA that states, “[t]he information may be presented to the regulator and consumer differently” is concerning. Lisa Brown (APCIA) said changing the word “current” to “applicable” might make this more of a living document, the intent behind the language related to presenting information differently to a consumer is to acknowledge the level of specificity, and detail may need to be greater for a state insurance regulator than a consumer. Peter Kochenburger (University of Connecticut School of Law) said the language, as is, would be preferable even with the addition of “applicable law” and “unintended” only implies that there is a responsibility to get it corrected. He said it does not necessarily speak to whether it would be a cause of action or a violation of any law. He said there must be some recourse for a problem, but this document is not saying what that must or should be, so both are well phrased as they are.

Scott Kosnoff (Faegre Drinker Biddle & Reath LLP—Faegre Drinker) said he encouraged state insurance regulators to consider where they want the laws to evolve to as opposed to where it exists today and to let that guide future efforts and NAIC workstreams. Commissioner Godfread said that is the intention, and he asked the Working Group members’ preference regarding the use of the term “current” versus “applicable” regarding laws and regulations. Mr. Kosnoff and Mr. Kochenburger both agreed that “applicable” is preferred. Commissioner Godfread agreed, and he said the ability to seek recourse needs to be there; he said that while the Principles do not carry the weight of law, there has to be recourse available to consumers. Commissioner Afable agreed that the language related to seeking recourse should stay in the Principles for the reasons already stated.

Commissioner Godfread asked about the suggestion from the APCIA that there be a different presentation of information to consumers than to state insurance regulators. Ms. Brown (APCIA) indicated that different levels of disclosure may be necessary for consumers versus state insurance regulators, not to minimize anything that needs to be disclosed to a consumer but to recognize that a state insurance regulator may need much more information than a consumer. Ms. Jabourian said if the intention behind a different presentation of information to consumers is to make it easier for the consumer to understand, she could agree with that, but not if that is intended to signify that it would be limited in scope.

Commissioner Godfread asked the Working Group members if they wanted to include any kind of language related to acknowledging that something may go wrong even when good, strong, best practices are followed. Mr. Bradner said this would come down to a case by case situation and trying to craft language to soften that is not appropriate. He said each case will have to be reviewed on its own merits. Mr. Aufenthie said the APCIA’s suggested language does try to address that concern, but the point of reviewing each case on its own merits makes sense. Commissioner Godfread agreed that adding language may muddy the waters. Mr. Currier said it gets into creating legal defenses; therefore, it is probably not appropriate. Mr. Kosnoff agreed, but it does raise an important point, as there will be mistakes, but the intention is for the carrier to be responsible in terms of what they do with AI. Mr. Citarella said it goes beyond the scope of the document, and it does not need to be included. Ms. Brown (APCIA) and Commissioner Richardson agreed. Commissioner Godfread agreed, and he said that while there is an
understanding, there will be mistakes and those will have to be navigated to ensure that the response is not too harsh; this gets too far into the weeds for this document.

Mr. Aufenthie reviewed the comments received on the Transparent section related to disclosure and whether it needs to be narrowed down to be more specific and protect proprietary information. Commissioner Afable said the Working Group continues to discuss whether this document should be narrowed down, but given that it has also repeatedly been said it is intended to be a guideline, it seems that it should stay broad; therefore, he said he would not favor the suggested narrowing language. Mr. Bradner agreed with Commissioner Afable. Mr. Pauley said NAMIC suggested including materiality language, and he said adding the word “relevant” to “stakeholders” would be helpful if the intention is to provide guidance to future workstreams. William D. Latza (Lemonade) said the last sentence of the Transparent section related to “proactive disclosures,” including the kind of data being used, the purpose in the AI, and consequences for stakeholders combined with the ability for consumers to change the information, is very prescriptive language and it could be an invitation to consumers to “game” the system or be fraudulent. He suggested changing the word “proactive” and inserting a particular purpose regarding disclosures that enable consumers to modify risky behavior or to correct misinformation. Mr. Aufenthie said he views this as similar to what is done related to credit scoring where the consumer knows where to go to correct their data. Mr. Latza said he agrees with that, but giving consumers a roadmap to manipulate the data is a bad idea. Ms. Jabourian said the language should be kept as is because a consumer has a right to know if information is being used and where the data is coming from, such as social media. She said to the degree that it has an adverse impact, the consumer has a right to know. Mr. Kochenburger agreed with Ms. Jabourian. Mr. Currier said the ACLI’s suggested language related to non-proprietary is a little concerning and not helpful. Commissioner Godfread said it would be left as is for now.

The language suggested by Shannen Logue (PA) was discussed. Commissioner Godfread said the language was intended to keep this more future thinking and the use of the term “applicable” as opposed to “current” again should cover that well. He also said there was no objection to adding “as defined by law and regulation,” as suggested by the ACLI.

3. Discussed Timeline and Next Steps

Commissioner Godfread said the Working Group will create a redline version of these changes and provide an opportunity for review. He said there will be another conference call to review introductory language and the new redline draft and cover the other sections and comments.

Having no further business, the Artificial Intelligence (EX) Working Group adjourned.
The Artificial Intelligence (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call on Feb. 19, 2020. The following Working Group members participated: Jon Godfread, Chair (ND); Vanessa Darrah (AZ); Lucy Jabourian (CA); David Altmaier and Rebecca Smid (FL); Andria Seip and Travis Grassel (IA); Judy Mottar (IL); Amy Beard (IN); Michelle Johnson (LA); Ron Coleman (MD); Phil Vigliaturo (MN); Cynthia Amann (MO); Christian Citarella (NH); Barbara D. Richardson (NV); Mark Hamlin (OH); Ron Kreiter (OK); Shannon Logue and Michael McKenney (PA); David Combs and Allison May (TN); and Christina Rouleau (VT). Also participating were: Michelle Scaccia (MT); Chris Aufenthie (ND); Randall Currier (NJ); Olivia Bumgardner (NY); G. Lee Hill, Jr. (SC); and Rachel Hemphill and Nancy Clark (TX).

1. Adopted its Feb. 4 Minutes

Commissioner Godfread said the Working Group met Feb. 4 to review the comments received on the Working Group’s artificial intelligence (AI) principles draft exposed at the 2019 Fall National Meeting.

Commissioner Richardson made a motion, seconded by Commissioner Altmaier, to adopt the Working Group’s Feb. 4 minutes (Attachment Three-C3). Mr. McKenney said the minutes reflect that he has concerns about potentially excluding third parties such as rating and advisory organizations. He said he provided that comment regarding the first paragraph in the draft starting with “Recommends.” He said he was suggesting language to that effect be included after the “…that play an active role in the AI system lifecycle” to make clear they would be included in the definition of “AI actors.” Commissioner Richardson and Commissioner Altmaier accepted the change as a friendly amendment to their motion and second to adopt the minutes. The motion passed unanimously.

2. Heard Introductory Remarks

Commissioner Godfread reiterated that the purpose of this document is to be a very high-level working document essentially providing guideposts for the NAIC and other workstreams touching on this area. He said it is not intended to be interpreted as a model law or regulation but rather is a principles-based document that state insurance regulators can use as they look at how AI affects the many different areas of insurance.

3. Reviewed its Draft Principles

Commissioner Godfread started with comments related to the Compliant section of the draft. He said a change was suggested for the first sentence to read: “AI actors must have resources in place to ensure compliance with all applicable federal and state insurance laws and regulations.” Angela Gleason (American Property and Casualty Insurance Association—APCIA) said the APCIA offered that language because it would be very difficult for one person to have specific knowledge of all laws and regulations. Mr. Citarella said he offered a similar suggestion in his comments to ensure the responsibility would not fall on the modelers themselves. He agreed that the language proposed by the APCIA would cover his concern. Ms. Jabourian emphasized that there are modelers getting licensed as producers and insurers are then using those modelers, so it is important that the modelers, who are AI actors, have knowledge of insurance laws and regulations. Mr. McKenney agreed that everyone involved needs to know the insurance laws and regulations. He said “specific knowledge” maybe too strong, but they should have the knowledge. Commissioner Godfread said he thinks that is the intention of the offered language and said he would be comfortable with it saying they must have “the knowledge and the resources.” He asked if the Working Group was good with: “AI actors must have the knowledge and the resources in place to ensure compliance with all applicable federal and state insurance laws and regulations.” There were no objections to that language.

Commissioner Godfread said the only comment on the second sentence under the Compliant section was to add the words “as well” as a grammar clean-up. He said there were comments to remove the third sentence altogether. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI recommends removing it because it is redundant and unnecessary. Ms. Gleason said the APCIA agrees and if it remains, it would hold the AI actor to a higher burden and level of compliance than is found in any other insurance law or practice. Commissioner Godfread said this sentence intends to make clear that regardless of the intent, the reality is the buck will stop with the insurer if there is a bad outcome. Mr. Currier said that makes sense but what might be missing from the sentence is the subject. Commissioner Godfread asked if that was resolved by adding the word
“violation” so the sentence would read: “Compliance is required whether the violation is intentional or unintentional.” Ms. Jabourian and Mr. Vigliaturo agreed with leaving the sentence in and the suggested change. Commissioner Godfread said there will likely be more discussion on this, but the sentence, with the change, will be left in for now.

Commissioner Godfread said that the APCIA recommended deleting the fourth sentence. Ms. Gleason said the APCIA does not disagree with the intent of this sentence but it is represented in the Accountable section, so it would be redundant. Commissioner Godfread agreed with that assertion and deleting the sentence from this section. He said it was suggested the words “cultural, social, and” be removed from the fifth sentence consistent with other areas of the draft. J.P. Weiske (American InsureTech Council—AITC) said the AITC agrees with that recommendation. Mr. Currier said the words “agreed upon” are not necessary as well, and he said he likes the recommendation to include the words “including privacy and data security” to the end of the sentence. Commissioner Godfread noted there is a recommendation to include “risk-based” in front of the words “monitoring for compliance,” so that will be added as well. He said the sentence will read: “Compliance with state and federal laws is an ongoing process, thus any AI system that is deployed must show consistent risk-based monitoring for compliance with laws and safeguards against outcomes that are either unfairly discriminatory or violate legal standards, including privacy and data security.” Commissioner Richardson said many states have specific “public policy” language in their statutes and asked if the Working Group thinks those will be picked up with the “legal standards” language in this sentence. Commissioner Godfread said he thinks it would.

Commissioner Godfread read the first sentence in the Transparent section and then recommended language proposed by New Hampshire. Mr. Currier said he likes the New Hampshire language as well, suggesting there needs to be “AI” added in front of “Actors.” Mr. Vigliaturo said he likes the language as well but recommended adding the words “laws and” in front of “regulations.” Mr. Godfread said the new language would read: “For the purpose of improving the public’s confidence in AI, AI actors must be transparent about how they use these systems. AI Actors should commit to transparency and responsible disclosures regarding AI systems to relevant stakeholders, including consumers, while maintaining the ability to protect confidentiality of proprietary algorithms and adherence to individual state laws and regulations in all states where AI is deployed. Among these proactive disclosures include revealing the kind of data being used, the purpose of the data in the AI system and consequences for all stakeholders.”

Ms. Gleason said the APCIA still has concerns about the disclosure being overly robust even though the APCIA supports transparency. She said this is a lot for this stage of the development of the AI process. Ms. Jabourian said this is important language. She said the word “consumer” could possibly be replaced with “regulators,” but transparency is very important to the state insurance regulators. Mr. McKenny said the word “stakeholders” should remain because the issue is broader than just state insurance regulators. Commissioner Godfread acknowledged the APCIA’s position but said those details will be determined as this moves forward and if those words were removed, it would be effectively gutting this section.

Commissioner Godfread reviewed the language for the first sentence in the Secure, Safe and Robust section. He suggested the language submitted by the APCIA without the first phrase, so the sentence would read: “AI systems should be robust, secure and safe throughout the entire life cycle so that, in conditions of normal use or reasonably foreseeable use, the AI system can function in compliance with existing laws and regulations.” Ms. Hemphill said she is concerned with taking out the words “or other adverse conditions.” Ms. Gleason said the APCIA was just trying to clean up the language. Scott Kosnoff (Faegre Drinker Biddle & Reath LLP—Faegre Drinker) said this language is in the Organisation for Economic Cooperation and Development (OECD) AI Principles and is intended to provide protection from things like hackers compromising how the AI works. Commissioner Godfread said he is comfortable with removing those words because that type of activity should be “reasonably foreseeable,” so it is covered. Ms. Hemphill stated she still thinks “other adverse conditions” should be left in because they may not be “reasonably foreseeable.” Commissioner Godfread said he understands her concern and said the “or other adverse conditions” language will remain for the next draft.

Ms. Gleason said the APCIA recommends removing the second sentence in the section because traceability is more of a transparency concept and, therefore, is already covered. Ms. Jabourian said it should be left in because traceability is more technical than just transparency. She said it makes sure every step is captured so the process is known, not just the outcome. Ms. Gleason said there should be some clarity and specificity around the level of traceability required because this is a technically difficult concept and could require more than what is possible. Mr. Bayerle said the ACLI recommends deleting this sentence as it has concerns about this creating new regulations for AI that would not apply to other programs companies have in place. He also said a lack of clarity may also be a concern. Commissioner Godfread asked if it would help to add a modifier such as “reasonable level” before “traceability.” Ms. Logue said adding “reasonable” is a good idea and since this is a principles-based document, it is not intended to get into the details of how it will work. Mr. Vigliaturo agreed this is a good compromise. Ms. Jabourian agreed as well. Commissioner Godfread said that will be added, and the sentence for the next draft
will read: “To this end, AI actors should ensure a reasonable level of traceability in relation to datasets, processes, and decisions made during the AI system lifecycle.”

Commissioner Godfread read the APCIA’s recommended changes to the next sentence. Mr. Currier asked if it would make sense to replace “state of the art technologies, methods or processes” with “best practices.” Mr. Vigliaturo said a difference between “best practices” and “state of the art technologies” is currency, as “best practices” could have been from 20 years ago as opposed to “state of the art” being current. Commissioner Godfread said the intent is to keep these principles broad, so he said he leans more toward “current industry best practices and as required by law.” He said the sentence would read: “AI actors should enable analysis of the AI system’s outcomes and responses to insurance related inquiries as appropriate to the context, and in keeping with current industry best practices and as required by law.”

He said the last sentence in that section received a couple of comments. He said it was suggested that “unfair bias” be replaced with “unfair discrimination.” The Working Group agreed with that language for the next draft of the AI Principles.

4. Discussed its Timeline and Next Steps

Commissioner Godfread said the Working Group will create and send out another redline version of the draft document. He said the goal will be to discuss it at the Spring National Meeting. He said the next draft will be sent out and published by Feb. 28, with a deadline for comments by March 13. He said stakeholders would have an opportunity to make public comments at the Working Group’s meeting at the Spring National Meeting.

Denise Matthews (NAIC) and Mr. Aufenthie noted there are still some issues to get resolved from the first conference call and that it will be the goal to get those incorporated into the next draft to the extent possible.

Having no further business, the Artificial Intelligence (EX) Working Group adjourned.
The Artificial Intelligence (EX) Working Group of the Innovation and Technology (EX) Task Force met via conference call on Feb. 4, 2020. The following Working Group members participated: Jon Godfread, Chair (ND); Mark Afable, Vice Chair, represented by Lauren Van Buren (WI); Vincent Gosz (AZ); Lucy Jabourian (CA); Mark Murphy (CT); Rebecca Smid (FL); Doug Ommen, Andria Seip and Travis Grassel (IA); Judy Mottar (IL); Amy Beard and Jerry Ehlers (IN); Rich Piazza and Tom Travis (LA); Ron Coleman (MD); Phil Vigliaturo and Tammy Lohmann (MN); Cynthia Amann (MO); Christian Citarella (NH); Barbara D. Richardson (NV); Mark Hamlin (OH); Ron Kreiter (OK); Shannen Logue and Michael McKenney (PA); David Combs and Allison May (TN); Mike Peterson and Eric Lowe (VA); and Christina Rouleau (VT). Also participating were: Chris Aufenthie and Colton Schulz (ND); Mark McGill and Randall Currier (NJ); Olivia Bumgardner and Marshal Bozzo (NY); Maggie Dell and Travis Jordan (SD); Rachel Hemphill (TX); and Barbara Belling, Sue Ezalarab, and Mary Kay Rodriguez (WI).

1. **Heard Introductory Remarks**

Commissioner Godfread said the comments submitted are very helpful. He said the intention behind these principles is to provide guiding principles for the NAIC and state insurance regulators across the country to use as the Working Group starts to look at the use of artificial intelligence (AI) in the insurance industry. He said the comments are not intended to be a model law or regulation; they are essentially an internal document to be used as while looking at other working groups and workstreams where AI may be used. He said some of the comments attempt to get more detailed, and the Working Group has been resistant to do that because these are higher level principles or guideposts to be used by state insurance regulators and industry. He said not defining terms is, in some cases, intentional.

2. **Reviewed Artificial Intelligence (EX) Working Group Draft Principles Comment Letters**

Commissioner Godfread started with comments related to the Preamble. He said that not being too specific with definitions is intended to respect that AI is an evolving space in technology and guidance of this sort is meant to be a high-level review. He said he is hesitant to limit the scope to marketing, distribution, underwriting, ratemaking and claims settlement, as he would hope these principles could be used more broadly, remembering that they do not carry the weight of law. Commissioner Richardson asked if the task could be approached in a piecemeal fashion, as it is difficult to get one’s arms around it when it is so broad. She said that it might allow progress to be made a little at a time. Commissioner Godfread asked if it would help to add “any other insurance related usages.”

Angela Gleason (American Property and Casualty Insurance Association—APCIA) said it would be helpful to memorialize the intention behind these principles—possibly in the preamble—in order to limit and take this one piece at a time, as suggested by Commissioner Richardson. She said this is a big issue; and in order to ensure that these principles have value, there needs to be an understanding of who the players are and to whom the expectations are related.

Commissioner Godfread said both the APCIA and the American Council of Life Insurers (ACLI) have proposed language that the Working Group can consider to see if some direction can be provided that does not necessarily limit the scope of these definitions. He said he could go either way and was open to feedback regarding the term “AI actors” not being defined and the suggestion that it be limited to a specific list of stakeholders. He said the intention is to keep it broad but related to the business of insurance, so it may be good to define it for those that play a role in insurance. Mr. McKenney said he has concerns about potentially excluding third parties since they may not necessarily facilitate the business of insurance. Commissioner Godfread said he was comfortable leaving it broad to ensure that no one is left out that is participating and expected to consider these principles.

Commissioner Godfread said that under the “Under Calls On” section, it was suggested that “implement” be changed to “consider.” He said he was fine with that. He said Pennsylvania provided a comment to add the word “monitor” as well, so that it would say “consider and monitor.” He said he would be open to that. Hearing no objections, he said the change would be made.
Commissioner Godfread said that under the “Fair and Ethical” section, the intent was to narrow the language to regulation only with respect to insurance. He said adding the word “unfair” in front of “discrimination” and removing “promotion of fair” would be acceptable to him. Commissioner Richardson asked if the verb “should” be “must [obey the law]” as it is normally expected that laws must be obeyed. Commissioner Godfread said “should” was consistent with the principles not carrying the weight of law, but he acknowledged Commissioner Richardson’s point. Commissioner Ommen said he appreciated the opening comments regarding the language not carrying the weight of law, which suggests to him that this is an aspirational document in some ways. He said that while he understands Commissioner Richardson’s concern, if it is not a law, then “should” better reflects the intent. He said, regarding the list of things this section and part would pertain to, he felt that “truthfulness” is an important aspiration, and protection of consumer privacy should be included, such as the principles of informed consent. Commissioner Godfread agreed that it would be good to add something about consumer privacy, consumer truthfulness and protection. Mr. Currier agreed with changing “should” to “must” and agreed with adding consumer privacy and protection language. Ms. Jabourian agreed that consumer privacy and protection should be added as well.

Mr. Coleman asked why it was necessary to insert the word “unfair” before “discrimination.” Commissioner Godfread said the concern is that without that word the language could be interpreted as going broader than current law in terms of unfair discrimination. He said such language should tie back to laws already in place for insurance today, like the Unfair Trade Practices Act (#880), which helps to guide this document. Commissioner Ommen said the word “discrimination” can unfortunately carry a negative connotation, but that is what risk-based pricing is designed to do. He said that it would be unfair if companies did not give equitable treatment to consumers with similar risks, but without an accepted understanding of what “unfair” means, it is unclear and therefore open to interpretation.

Commissioner Godfread reviewed suggested changes to the “Fair and Ethical” section under Item b. He said it was suggested that the phrases “and society,” “enhancing creativity while,” and “cultural, social, and” be removed and the word “must” be changed to “should.” He said he is comfortable with all these narrowing changes because they keep in line with the authority of insurance commissioners. Mr. Vigliaturo suggested adding the words “for consumers” at the end of the paragraph to make it clearer. Commissioner Ommen said he supports the changes because even though this is an aspirational document, part of the issue is that even with laws regarding fairness, this is even more vague; and since there is a system of laws, there needs to be some tie to that or it is really hard to define. He said state insurance regulators are not ethicists, so this must be kept in mind. Mr. Travis said he agreed with changing “must” to “should.”

Commissioner Godfread said the “Accountable” section received the most comments. He said, in summary, there was a request to remove “principles” from the first sentence. He said based on the suggestions that the new sentence would read, “AI actors should be accountable for ensuring that AI systems operate in compliance with all state principles, consistent with the actors’ roles, the risk-based situational context, and evolving technologies.” Ms. Gleason said the APCIA put forward some of this language and explained that changing “best practices” to “technologies” makes it more definitive and easier for companies to understand. She said “risk-based,” like privacy, is intended to clarify taking a risk-based approach regarding AI systems. Mr. Citarella asked what was meant by “risk-based” because this would not be specific to ratemaking. She said the term “risk-based” in this context does not pertain to ratemaking, but it is more along the lines of a cost and risk versus benefit analysis.

Commissioner Godfread read the proposed second sentence. He said based on the suggestions, the new sentence would read, “Any AI system should be compliant with laws and regulation governing its use of data and algorithms during its phase of the insurance lifecycle.” He said he thought these were good changes. Mr. Vigliaturo said he had concerns with inserting “existing laws and regulations” because this is attempting something that is more along the lines of establishing guiding principles, and the existing regulations may not be quite up to the standards needed to cover behaviors in this area. For that reason, he said he would be against making that change. Commissioner Godfread said the goal is to highlight the laws that might need to be changed, but state insurance regulators do not have the ability to go beyond the existing laws that are in place. He suggested making a new third sentence stating, “Data supporting the final outcome of an AI application should be retained and be able to be produced to the extent similar information is required in non-AI systems in accordance with applicable insurance laws in each jurisdiction.” He said this would address data privacy concerns and establish the expectation that the industry be able to readily produce the data that they are using. Ms. Gleason said this was added for transparency and an accountability issue. Ms. Jabourian said she is not sure about this being the same as non-AI applications, as much of this is unknown; therefore, she is not comfortable with this sentence. She said leaving the matter with the laws and regulations in the jurisdiction would make her more comfortable. Ms. Gleason said the APCIA assumes that these principles are not intending to create a higher burden for AI. Commissioner Godfread said one can get to the same point without highlighting the differences in application insurance
laws within each jurisdiction and the document reads cleaner without it. Ms. Jabourian agreed that they must comply with the laws in each jurisdiction.

Commissioner Godfread moved on to the next sentence and, based on the comments, suggested changing it to read, “AI actors are responsible for the creation, and implementation and impacts of any AI system, even if certain impacts are not foreseeable.” He asked for comments and there were none. He then moved on to the next sentence. He said it was suggested that the words “risk-based” be inserted before “human” and that the words “or otherwise” be inserted after the word “human.” He said he thought these were good additions. Hearing no objection, he moved on to the next sentence. Based on the suggested changes, he suggested that the sentence be re-worded to read, “Consistent with current requirements, stakeholders should have a way to inquire about, review or seek recourse of the AI-driven insurance decisions.” Ms. Jabourian agreed that consumers and state insurance regulators should have the ability to get access to this information, so leaving this in is important.

Commissioner Godfread read the last sentence in the “Accountable” section, and he said that there were requests to remove it from the section. He said it would be his preference to leave it in. Brian Bayerle (ACLI) said requirements already exist regarding having the right to correctability; therefore it is redundant. Ms. Jabourian said the matter is important from a state insurance regulator’s perspective, and it is not redundant. She said it provides clarity and recommended that it not be removed. Mr. Vigliaturo agreed with Ms. Jabourian, as did Peter Kochenburger (University of Connecticut Law School), and he said the issue has come up in the past and should be left in. Mr. Currier noted that in the previous sentence New Hampshire and Louisiana suggested language defining “stakeholders” that is interesting and should be considered regarding the inclusion of consumers and potential policyholders. Commissioner Godfread asked if putting “which includes regulators and consumers” in parentheses following the word “stakeholders” would make that better. Mr. Currier agreed that it would.

3. **Discussed Timeline and Next Steps**

Commissioner Godfread said the Working Group will create a redline version of these changes and provide an opportunity to review it. He said there will be another conference call to review the new redline draft and cover the other sections.

Having no further business, the Artificial Intelligence (EX) Working Group adjourned.
Section 4(H) of NAIC Model Unfair Trade Practices Act

Any of the following practices, if committed in violation of Section 3, are hereby defined as unfair trade practices in the business of insurance:

H. Rebates.

(1) Except as otherwise expressly provided by law, knowingly permitting or offering to make or making any life insurance policy or annuity, or accident and health insurance or other insurance, or agreement as to such contract other than as plainly expressed in the policy issued thereon, or paying or allowing, or giving or offering to pay, allow, or give, directly or indirectly, as inducement to such policy, any rebate of premiums payable on the policy, or any special favor or advantage in the dividends or other benefits thereon, or any valuable consideration or inducement whatever not specified in the policy; or giving, or selling, or purchasing or offering to give, sell, or purchase as inducement to such policy or annuity or in connection therewith, any stocks, bonds or other securities of any insurance company or other corporation, association or partnership, or any dividends or profits accrued thereon, or anything of value whatsoever not specified in the policy.

(2) Nothing in Subsection G, or Paragraph (1) of Subsection H shall be construed as including within the definition of discrimination or rebates any of the following practices:

(a) In the case of life insurance policies or annuities, paying bonuses to policyholders or otherwise abating their premiums in whole or in part out of surplus accumulated from nonparticipating insurance, provided that any such bonuses or abatement of premiums shall be fair and equitable to policyholders and for the best interests of the company and its policyholders;

(b) In the case of life insurance policies issued on the industrial debit plan, making allowance to policyholders who have continuously for a specified period made premium payments directly to an office of the insurer in an amount that fairly represents the saving in collection expenses;

(c) Reducing the rate of premium for a group insurance policy based on the loss or expense thereunder, at the end of the first or any subsequent policy year of insurance thereunder, which may be made retroactive only for such policy year; or

(e)(1) The offer or provision by insurers or producers, by or through employees, affiliates or third party representatives, of value-added non-cash products or services at no or reduced costs when such products or services are not specified provided in the policy of insurance if the product or service:
   (a) Relates to the insurance coverage and
   (b) Is primarily intended to satisfy one or more of the following:
      (1) Provide loss mitigation or loss control;
      (2) Reduce claims costs or claim settlement costs;
      (3) Educate about risk of loss to persons or property;
      (4) Monitor or assess risk, identify sources of risk, or develop strategies for eliminating or reducing risk;
      (5) Enhance health or financial wellness;
      (6) Provide post-loss services;
      (7) Incent behavioral changes that improve the health or reduce the risk of death of the insured; or
(8) Assists in the administration of underlying employee or retiree benefit policies or with compliance with a state of federal law or regulatory requirement.

(2) The insurer or producer making the offer must clarify that the product or service is not part of the insurance policy and must provide information regarding the assistance, if any, that the insurer will provide should the consumer have an issue with the product or service.

(2.3) The Commissioner may adopt regulations when implementing the permitted practices set forth in (2)(e)(1) this regulation, the Commissioner may adopt regulations for the purpose of ensuring consumer protection. Issues include: Such regulations may address, but are not limited to among others, consumer data protections and privacy, especially instances where third party vendors require policyholder data as a condition of receiving the value added product or service, consumer disclosure and unfair discrimination consistent with applicable law.

(3.4) If the product or service is not made available to all policyholders or applicants clients (defined as policyholders, potential policyholders, certificate holders, potential certificate holders, insureds, potential insureds or applicants), its availability must be based on written objective criteria and offered in a fair and nondiscriminatory manner that is fair and not unfairly discriminatory including, by example, offering the product or service based on risk characteristics of a client.

(5) If an insurer does not have such objective criteria sufficient evidence that the product or service is cost effective or has a material correlation to risk, but has a good-faith belief that the product or service meets the criteria in (H)(e)(1) may mitigate, assess or identify sources of risk of loss or claims, the insurer or producer may provide the product or service in a fair and not unfairly discriminatory manner as part of a pilot or testing program for a reasonable period of time upon approval of the Commissioner.

(4.6) The cost to the insurer or producer offering the product or service to any given policyholder client should be reasonable in comparison to the average that policyholder’s client’s premiums or the insurance coverage without the provided product or service.

(5) Gifts or offers of gifts in connection with marketing for the sale or retention of contracts of insurance is considered de minimus and not in violation of this statute as long as the cost does not exceed [two hundred and fifty dollars] per person per year; Drafting Note: States may wish to alter the financial limitations set forth in this section depending upon each state’s economic environment.

(f) Notwithstanding any other provision, an insurer or a producer may:

(1) Offer or give non-cash promotional or advertising items or meals to or charitable donations on behalf of to a personal lines policyholder or potential policyholder client, as long as the total fair market value actual cost of the non-cash promotion or advertising items and/or meals or charitable donations, for all named or additional insureds in the policy in total, does not exceed an amount set in regulation reasonably determined by the Commissioner per calendar policy year per person and no purchase or renewal of an insurance policy is either expressly or impliedly not required. The offer must be made in a fair and not unfairly discriminatory manner and may not be contingent on the purchase, continued purchase or renewal of a policy;

Drafting note – The committee would suggest that, at the time of the drafting of this model, the lesser of 5% of the current or projected policyholder premium or $250 would be an appropriate limit.

(2) Offer or give gifts or value added services to commercial or institutional insureds clients in connection with marketing for the sale or retention of contracts of insurance, as long as the cost is reasonable in light of the relationship between the parties premium or proposed premium and the cost of the gift or service is not included in any amounts charged to another person or entity; and/or

Drafting note – The committee would suggest that, at the time of the drafting of this model, the lesser of 5% of the current or projected policyholder premium or $250 would be an appropriate limit.
(3) conduct raffles or drawings to the extent permitted by state law, as long as there is no participation cost to entrants, the drawing or raffle does not expressly or impliedly obligate participants to purchase insurance and the prizes are not valued in excess of five hundred dollars a reasonable amount determined by the Commissioner and the drawing or raffle is open to the public. The raffle or drawing must be fair and not unfairly discriminatory and may not be contingent on the purchase, continued purchase or renewal of a policy.

Drafting Note: States may wish to alter the financial limitations set forth in this section depending upon each state’s economic environment.

(g) An insurer, producer or representative of either may not offer or provide insurance as an inducement to or interdependent with the purchase of another policy or give or offer to give “free” insurance or otherwise use the word “free” in any offer.

Drafting Note: Section 104 (d)(2)(B)(viii) of the Gramm-Leach-Bliley Act provides that any state restrictions on anti-tying may not prevent a depository institution or affiliate from engaging in any activity that would not violate Section 106 of the Bank Holding Company Act Amendments of 1970, as interpreted by the Board of Governors of the Federal Reserve System. The Board of Governors of the Federal Reserve System has stated that nothing in its interpretation on combined-balance discount arrangements is intended to override any other applicable state and federal law. FRB SR 95-32 (SUP). Section 5(q) of the Home Owners’ Loan Act is the analogous provision to Section 106 for thrift institutions. The Office of Thrift Supervision has a regulation 12 C.F.R. 563.36 that allows combined-balance discounts if certain requirements are met.

Drafting Note: Each state may wish to examine its rating laws to assure that they contain sufficient provision against rebating. If they do not, this section might be expanded to cover all lines of insurance.
Draft: 8/20/20

Innovation and Technology (EX) Task Force
Conference Call
July 23, 2020

The Innovation and Technology (EX) Task Force met via conference call July 23, 2020. The following Working Group members participated: Jon Godfread, Chair, and Chris Aufenthie (ND); Elizabeth Kelleher Dwyer, Vice Chair (RI); Lori K. Wing-Heier represented by Chris Murray and Anna Latham (AK); Jim L. Ridling represented by Gina Hunt (AL); Alan McClain and Letty Hardee (AR); Elizabeth Perri (AS); Evan G. Daniels and Erin Klug (AZ); Ricardo Lara represented by Lucy Jabourian (CA); Michael Conway (CO); Andrew N. Mais (CT); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron (ID); Robert H. Muriel represented by Judy Mottar (IL); Stephen W. Robertson represented by Jerry Ehlers (IN); Vicki Schmidt represented by LeAnn Crow (KS); Sharon P. Clark (KY); James J. Donelon and Tom Travis (LA); Gary Anderson (MA); Kathleen A. Birrane (MD); Anita G. Fox represented by Chad Arnold (MI); Steve Kelly, Grace Arnold and Tammy Lohmann (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Mike Causey represented by Tracy Bieln and Kathy Shortt (NC); Bruce R. Ramge (NE); Chris Nicolopoulos represented by Christie Rice (NH); Barbara D. Richardson (NV); Jillian Froment represented by Rich Campbell (OH); Andrew R. Stolfi (OR); Jessica K. Altman and Michael Humphreys (PA); Raymond G. Farmer (SC); Larry D. Deiter (SD); Hodgen Mainda represented by Rachel Jade-Rice (TN); Kent Sullivan represented by Doug Slape and Michael Nored (TX); Scott A. White represented by Trish Todd (VA); Michael S. Pieciak represented by Emily Brown (VT); Mike Kreidler represented by John Haworth and Michael Bryant (WA); Mark Afable represented by Nathan Houdek (WI); and James A. Dodrill represented by Joylynn Fix (WV). Also participating: Joana Lucasukh (NY).

1. Discussed AI Principles as Adopted by the Artificial Intelligence (EX) Working Group

Commissioner Godfread said NAIC members made the decision to form the Artificial Intelligence (EX) Working Group during last year’s Mid-Year meeting. He said members heard a presentation and spent time discussing artificial intelligence (AI), how it is being driven by the availability of vast amounts of data and ever expanding computing power, and how important it would be to expediently develop guidance in this area for the insurance industry. He said that was the genesis of the Artificial Intelligence (EX) Working Group last June 2019. He reviewed the charge to the Working Group established by the Innovation and Technology (EX) Task Force during its meeting at the NAIC 2019 Summer National Meeting in New York, NY. He said the Working Group has been able to stay on track, holding its first meeting on Sept. 5, 2019, hearing an overview on AI, and covering AI principles generally and the Organisation for Economic Co-operation and Development’s (OECD’s) AI principles, which have been adopted by 42 countries, including the U.S. He said he and Commissioner Afable discussed how to approach developing principles for the insurance industry and using the OECD Principles as a basis for developing AI principles for the insurance industry with the Working Group members who agreed that it is an appropriate approach. He said an AI Principles (Principles) draft was first exposed for comment in January 2020 and the Working Group held calls on Feb. 4 and Feb. 19. Then, after a delay due to the COVID-19 pandemic, the Working Group got back to work holding calls on May 5 and June 3. Commissioner Godfread said the Working Group recently met on June 30 where the work was finalized, and the Principles were adopted and again exposed for comment. He said the Principles before the Task Force represent AI “FACTS” for the insurance industry, establishing expectations around its development and use of AI including sections titled, Fair and Ethical, Accountable, Compliant, Transparent and Secure/Safe/Robust. He said these are the key tenets of the Principles.

Commissioner Godfread highlighted a couple of key points related to the Principles. First, he said the industry has been adamant about being clear that these Principles represent “guideposts” and do not carry the weight of law; to that end, specific introductory language was added. He said there have also been sensitivities related to anything that might create new burdens related to adverse consumer impact, given that AI and everything associated with it in terms of big data and algorithms is fairly nascent, and there may be inadvertent or unintentional missteps as we all explore the vast potential of AI and benefits it can bring consumers and the industry, even as we consider and work to mitigate potential risk of harm. He said the Working Group’s proposed Principles have “threaded that needle” in a way that can work for everyone.

Secondly, Commissioner Godfread said most have heard a lot about “proxy discrimination” lately, and the potential AI has to use proxies to perpetuate unfair discrimination or fail to identify and eradicate embedded bias against protected classes. The Working Group was sensitive to that issue, and there has been a lot of discussion around this, not only at the Working Group level but with the full membership on more than one occasion.
Commissioner Godfread opened it up to discussion by the Task Force members. Commissioner Mais presented points from his comment letter. He said the comments were straightforward, and he reviewed them, including the inclusion of data providers in the first paragraph. He said he would also suggest adding the word “fair” in the introductory paragraph beginning with “This Document,” prior to “safe, secure and robust outputs.” He said he also suggests deleting the word “or” between the words “harmful” and “unintended” in the Fair and Ethical section and adding “and corrects and compensates for such consequences when they occur.” He said there will be failures, and this spells out the consequences which is to “correct and compensate.” He said in the next two sections, he will discuss the last sentences as one. He said he has a concern regarding the last sentences in the Accountable and Compliant sections. He said this should be a guiding document, not a regulatory guidance document, and those two sentences represent regulatory guidance. Therefore, he said this is not the place for that, and it could be interpreted as tying the hands of state insurance regulators. He said there needs to be fairness, openness and trust, and he does not think this document should be telling state insurance regulators what they should and should not be doing. Lastly, he said specifically mentioning “consumers” in the Transparent section is concerning because by only mentioning consumers, it might make others think they were not meant to be included, and it would leave out relevant stakeholders.

Commissioner Godfread said he has no concerns with the preamble changes and adding the word “fair” as suggested. He said in regard to the language in the Fair and Ethical section stating, “and corrects and compensates for such consequences when they occur,” that is covered in Part A of the Accountable section, and that shows some balance in terms of what we are trying to do. He said there may be a difference of opinion in terms of how this gets accomplished. He said he does not believe the language ties the hands of state insurance regulators because this is a guiding document. He said the last sentence in both the Accountable and Compliant sections give a nod to the creation of or discussion around a safe harbor and the good actors in this space saying that if you do everything right and follow proper procedures, there will be some regulatory flexibility within the regulatory community. He said it the language recognizes that mistakes are going to happen with new technology, especially of this caliber, and there will be unexpected outcomes even with the best intentions. He said the last sentence in the Accountable section covers that, and it allows for a remedy that makes the consumer whole again.

Ms. Jabourian said California agrees with Commissioner Godfread’s comments, but it does have concerns with the proposed language under Subsection b of the Fair and Ethical section. She said there is no need to add that because it is covered under the Accountable section.

Commissioner Godfread asked if any member of the Task Force wished to offer the Connecticut proposed language as an amendment to the Principles. Commissioner Anderson asked if it would be appropriate to take this and comments just recently received under consideration and discuss them during the next meeting of the Task Force. Commissioner Godfread said another exposure draft could be put together and discussed during the next meeting. He asked the Task Force members what might be included in that next draft. Commissioner Anderson said it would be easier to gather the feedback and determine how they might be woven into the document. He said it is difficult to determine the impact of these comments, having not had time to give them more thought. Commissioner Birrane agreed, and she said it would be good to hear the reasoning, but she is not ready to vote on a motion at this point. Mr. Nored agreed that it would be helpful to see another exposure draft on this. Commissioner Godfread said that could be done. Commissioner Conway suggested that the Task Force push hard to vote during the next meeting; endless amounts of time could be spent tweaking and reworking the language and it would still not be perfect, so it is important to recognize the work already done, and it is time to take that next step. Commissioner Godfread said that is the goal, as it does not appear the members are ready to vote on it today. Commissioner Anderson said the delay is not to take away from the good work already done, but just to try to take into consideration the comment letters before taking a vote. Commissioner Oommen said he agrees with thinking this through, and he supports some of Commissioner Mais’ suggestions. He said he wants to propose that the Task Force consider the North Dakota language raised at the Working Group level having to do with proxy discrimination that recognizes avoiding proxy discrimination does not preclude the use of proxy variables for legitimate and acceptable business purposes. Commissioner Oommen provided the example of the correlation between hypertension and race, and he attributes it to various correlations between diet, nutrition and smoking, and to some extent geography and other factors. He said the relationship between hypertension and mortality is based on science, and he expects that there is also a correlation between race and premium as a result of this, but the premium is not the causation of the disparity. He said he thinks the North Dakota language recognizes that there are inequities that need to be carefully looked at and examined, but at the same time the science and the cause need to be addressed without turning the premium rate into a causation. He said he would support the North Dakota language because it ably explains this and captures one of the challenges state insurance regulators will face when dealing with these disparities in society.
Commissioner Godfread said this will be offered as possible language in the next draft of the Principles. He said he would open the discussion to interested parties. Paul S. Graham (American Council of Life Insurers—ACLI) said the ACLI supports the Principles as adopted by the Artificial Intelligence (EX) Working Group. He talked about how life insurers use AI and how important it is today in the marketplace. He said the ACLI supports the wording at the end of the Accountable section, as having a safe harbor is important for new and innovative ideas to come into play. He said the ACLI supports including a reference to proxy discrimination, and it looks forward to working with stakeholders regarding the concept of proxy discrimination in the insurance context, what it means exactly, and how processes and oversight can be put into place to prevent AI from doing what would otherwise not be allowed by regulation or law. He said the ACLI supports the adoption of the Principles as written, and it supports the amendment offered by the North Dakota Department of Insurance (DOI) as being very helpful in framing the concept of proxy discrimination in the insurance context.

Bob Ridgeway (America’s Health Insurance Plans—AHIP) said AHIP believes it would be better and easier to define if the focus on proxy discrimination was narrowed by changing the word “unfair” to “unlawful.” He also said AHIP suggests that in some cases, AI might result in unintentional proxy discrimination, and it would be helpful to include the word “unlawful” again before the words “proxy discrimination” making it easier to regulate.

Angela Gleason (American Property Casualty Insurance Association—APCIA) offered a few additional considerations, saying the APCIA is fully committed to the strict enforcement of discrimination laws and practices, and it understands that the goal is to stress the importance of processes and procedures being in place to proactively engage in responsible stewardship of AI. She said as you look at proxy discrimination, it is important to balance that with ensuring that regulatory objectives, such as consumer protections, are adhered to as well as sound insurance principles grounded in financial solvency. She said the APCIA suggests that terms such as “beneficial outcomes” and “harmful” are subjective and can be removed without changing the intent. She said the APCIA suggests some additional introductory language to provide more clarity, stating that the Principles are not intended to expand current law or create additional laws and last. She said the APCIA suggests the addition of the words “willful and wonton” in front of “negligence,” protecting employees working on these issues.

Commissioner Godfread asked if the anyone from the Consumer Data Industry Association (CDIA) wished to present their comments. Hearing none, Andrew R. Pauley (National Association of Mutual Insurance Companies—NAMIC) said NAMIC provided written comments. He said NAMIC respects the NAIC’s response to race discrimination in insurance, and it adamantly opposes discrimination in general, but it is strongly supportive of risk-based pricing in insurance. He asked that if the term proxy discrimination remains in the Principles that it be paired with some statement supporting risk-based pricing as a general concept. He said NAMIC believes that the North Dakota language is very important in term of approaching an understanding of the concerns listed, and it concurs with the comments made by Commissioner Ommen. He said not much time has been spent discussing the positive aspects of AI in terms of transforming the consumer experience in many positive ways, and he hopes there are not any unintended consequences from the Principles that would have a negative impact on that.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ supports the Connecticut proposals. He said proxy discrimination is clear and appropriate for these principles, and the CEJ opposes the proposed North Dakota language, as it introduces an unrelated concept—proxy variables—that confuses the basic principle. He said he also takes issue with Commissioner Ommen’s suggestion that it is at odds with cost-based pricing, saying that it improves cost-based pricing, and the CEJ provided an example of that in its comments. He said minimizing proxy discrimination does not mean you cannot use a particular variable as you can to the extent that variable is or those variables are, predictive of the outcome but not to the extent they are correlated with a particular class. He said the role of proxy discrimination versus cost-based pricing is also not addressed by the North Dakota language. He said the CEJ opposes using the word “unlawful” versus “unfair” because current law does not envision any action or prohibition against proxy discrimination, and that is what the CEJ wants to see enshrined in these principles. He said the CEJ supports the Connecticut proposals, particularly regarding supposed “safe harbors” in the Accountable and Transparent sections.

b. Discussed Next Steps for the Adoption of the AI Principles

Commissioner Godfread said the next steps are to provide a summary document to the Task Force members with options that may lead to some amendments to the Principles to be discussed during the next Task Force meeting.
2. **Discussed Anti-Rebating Draft Model Law Amendments**

   a. **Discussed Comments Related to the Anti-Rebating Draft Model Law Amendments**

Superintendent Dwyer provided background on the rebating issue. She said most states have language consistent with the *Unfair Trade Practices Act (8880)*, but there is inconsistent application. To clarify that, many bulletins have been issued to explain the intent, creating angst as to what can and cannot be done. Superintendent Dwyer said this has gone on for a long time, so there was a desire to get to some language that allows the consumer benefits to be offered. She said a drafting group was formed to get pen to paper, including eight state insurance regulators, five trade associations, one insurtech startup, one industry representative, a consumer representative, and representation by the National Council of Insurance Legislators (NCOIL). She said the work began on Jan. 27 working with a chair’s draft, followed by several conference calls to discuss and revise the draft. She said the drafting group disbanded after its June 3 meeting after creating five drafts and putting the last one out for comment (Attachment Five-A). She said 23 comment letters were received; all were and will continue to be considered, and she reviewed some common themes including:

- **H. 2. (e)(1):** Some commenters wanted expanded and some wanted more restrictive language, as well as comments requesting additional language to avoid unfair discrimination.
- **H. 2. (e)(2):** There were comments indicating confusion as to what the language meant and requests to change it to allow the commissioner to create regulations.
- **H. 2. (e)(3):** Comments requesting more clarity and specificity as to what a pilot and test program would be and limiting the duration to one year.
- **H. 2. (e)(4):** Comments saying the language is a bit vague and requests to change to be more specific.
- **H. 2. (e)(5):** There were a number of comments saying that (e)(5) and (f)(1) are talking about the same thing and yet are in two different sections; therefore, recommendations to move it to (f)(1). Comments about what the amount should be or be set by the commissioner, and yet, in another part it stipulates it as [two hundred and fifty dollars], and some suggested that it should be $500. Again, some comments suggested that the language should be expanded to allow more and others saying it should be more restrictive.
- **H. 2. (f)(2):** There was a suggestion to add the word “group” in addition to what is there. Superintendent Dwyer noted that the use of that term might bring up issues regarding rebating issues related to commercial insureds in the lender-placed area, and that may be of concern. She said the commenters suggesting that might want to look at that again to see how it could be considered while not creating a situation in which commercial is preferred and people paying the premium are adversely affected.
- **H. 2. (f)(3):** There were comments that the “five hundred dollars” should be bracketed, and some mention that language in the section is vague.

Superintendent Dwyer then opened it up for comment from the Task Force members. Mr. Murray said Alaska just wants to show support for the draft. Commissioner Mais said Connecticut provided a technical edit. Regarding the specified amounts being set in regulation, he said in some states it is a difficult and time consuming process to change, and it does not offer the flexibility needed, so the suggestion is to add “or otherwise reasonably determined by the commissioner.” Superintendent Dwyer asked if putting those amounts in brackets would help. Commissioner Mais said he would prefer to not be locked into a number because it can stay locked in for many years and get woefully out of date. He said he preferred something to the effect of “reasonably determined by the commissioner.”

Ms. Lucashuk said she had no additional comments to offer beyond what was provided in writing. Mr. Humphreys said he did not have much to add to Pennsylvania’s comment letter either, but he said the specificity was appreciated and he would suggest deleting some of it and providing more of a general approach to rebates not tied to the risk and not having a predetermined amount dictated to the states, allowing them to determine what may be appropriate in their markets. He said it is important to note that in COVID-19 filings they received, carriers were making the COVID-19 benefits contingent on continued purchase or renewals, so it is important to clarify that.

Mr. Bryant said Washington made 13 comments in its letter that covered three areas that are: 1) providing a more direct link with the type of value added benefit of the underlying coverages; 2) suggesting changing terms like “mental state” and “good faith belief” to a more empirical standard; and 3) committing to giving the commissioner regulatory authority over consumer protection issues that arise from this.
Director Ramge said he supports the model, as it strikes a good balance, and he suggested that the drafting note include brief but appropriate comments to remind that there are provisions within the Real Estate Settlement Procedures Act (RESPA) and the Federal Crop Insurance Corporation (FCIC) that might affect the ability to provide rebates. Superintendent Dwyer asked Director Ramge if he could provide language to address that issue, and he said yes.

Ms. Lohmann said the only thing Minnesota would comment on not already mentioned is the concern regarding third parties, regarding whether anyone has any liability or obligation there since they are not licensed and therefore the commissioner would not be giving approval for these services, and most carriers say they have no liability for them. She said there may need to be something addressing that issue in the model. Superintendent Dwyer asked if Minnesota could provide language to that effect, and Ms. Lohmann said yes.

Mr. Ridgeway said the summary of issues provided earlier in the meeting did not mention some of AHIP’s comments. Superintendent Dwyer clarified that it was just a general summary, but all letters and comments will be considered.

b. Discussed Next Steps for Completing the Development of Amended Model Law Language

Superintendent Dwyer said the intention is to go through the comment letters carefully and come up with summaries and possibly another draft for discussion during the Task Force meeting on Aug. 7.

3. Discussed its Timeline and Next Steps

Commissioner Godfread said the plan is to create summaries for the comments and continue the discussion during the Task Force meeting on Aug. 7.

Ms. Jabourian said she would like to go on record as stating that California does not agree with changing the word “unfair” to “unlawful” in the Principles.

Commissioner Anderson asked for clarification regarding the timeline for completing the Principles. Commissioner Godfread said they were to be created by the Summer National Meeting. He said significant discussion has taken place both at the Working Group level and on member calls. He said he thinks it is very close, it just needs the final touches and then it will be ready to move forward. He said there has been a lot of discussion in an open and transparent setting; they are guiding level principles for the NAIC, and they will become more defined as related work transpires in other workstreams. He said the Principles do not represent a model law or regulation, but they serve as guideposts that will be considered in terms of guiding that discussion.

Commissioner Altman said she supports the timeline and pushing forward. She said much conversation has already taken place and could continue, but in recognition of all the work and discussion that has already taken place, it is important to move this forward. She said she fully supports doing everything possible to get this wrapped up at the Summer National Meeting.

Having no further business, the Innovation and Technology (EX) Task Force adjourned.
Section 4(H) of NAIC Model Unfair Trade Practices Act

Any of the following practices, if committed in violation of Section 3, are hereby defined as unfair trade practices in the business of insurance:

H. Rebates.

(1) Except as otherwise expressly provided by law, knowingly permitting or offering to make or making any life insurance policy or annuity, or accident and health insurance or other insurance, or agreement as to such contract other than as plainly expressed in the policy issued thereon, or paying or allowing, or giving or offering to pay, allow, or give, directly or indirectly, as inducement to such policy, any rebate of premiums payable on the policy, or any special favor or advantage in the dividends or other benefits thereon, or any valuable consideration or inducement whatever not specified in the policy; or giving, or selling, or purchasing or offering to give, sell, or purchase as inducement to such policy or annuity or in connection therewith, any stocks, bonds or other securities of any insurance company or other corporation, association or partnership, or any dividends or profits accrued thereon, or anything of value whatsoever not specified in the policy.

(2) Nothing in Subsection G, or Paragraph (1) of Subsection H shall be construed as including within the definition of discrimination or rebates any of the following practices:

(a) In the case of life insurance policies or annuities, paying bonuses to policyholders or otherwise abating their premiums in whole or in part out of surplus accumulated from nonparticipating insurance, provided that any such bonuses or abatement of premiums shall be fair and equitable to policyholders and for the best interests of the company and its policyholders;

(b) In the case of life insurance policies issued on the industrial debit plan, making allowance to policyholders who have continuously for a specified period made premium payments directly to an office of the insurer in an amount that fairly represents the saving in collection expenses;

(c) Redistributing the rate of premium for a group insurance policy based on the loss or expense thereunder, at the end of the first or any subsequent policy year of insurance thereunder, which may be made retroactive only for such policy year; or

(e) The offer or provision by insurers or producers, by or through employees, affiliates or third party representatives, of value-added products or services at no or reduced costs when such products or services are not specified in the policy of insurance if the product or service:

(a) Relates to the insurance coverage and

(b) Is primarily intended to satisfy one or more of the following:

(1) Provide loss control;

(2) Reduce claims costs or claim settlement costs;

(3) Educate about risk of loss to persons or property;

(4) Monitor or assess risk, identify sources of risk, or develop strategies for eliminating or reducing risk;

(5) Enhance health or financial wellness;

(6) Provide post-loss services.

(7) Incent behavioral changes that improve the health or reduce the risk of death of the insured; or
(8) Assists in the administration of employee or retiree benefit policies.

(2) The Commissioner may adopt regulations when implementing the permitted practices set forth in (2)(e)(1) to ensure consumer protection. Issues include, but are not limited to, consumer data protections, especially instances where third party vendors require policyholder data as a condition of receiving the value added product or service, consumer disclosure, unfair discrimination consistent with applicable law.

(3) If the product or service is not made available to all policyholders or applicants its availability must be based on written objective criteria and offered in a fair and nondiscriminatory manner. If an insurer does not have sufficient evidence that the product or service is cost effective or has a material correlation to risk, but has a good-faith belief that the product or service may mitigate, assess or identify sources of risk of loss or claims, the insurer or producer may provide the product or service as part of a pilot or testing program for a reasonable period of time upon approval of the Commissioner.

(4) The cost to the insurer or producer of providing the product or service to any given policyholder should be reasonable in comparison to the average policy premiums or the insurance coverage.

(5) Gifts or offers of gifts in connection with marketing for the sale or retention of contracts of insurance is considered de minimus and not in violation of this statute as long as the cost does not exceed [two hundred and fifty dollars] per person per year;

Drafting Note: States may wish to alter the financial limitations set forth in this section depending upon each state’s economic environment.

(f) Notwithstanding any other provision, an insurer or a producer may:

(1) offer or give promotional or advertising items or meals or charitable donations on behalf of to a personal lines policyholder or potential policyholder, as long as the total fair market value of the promotion or advertising items and/or meals does not exceed an amount set in regulation by the Commissioner per calendar year per person and no purchase or renewal of an insurance policy is either expressly or impliedly required;

(2) offer or give gifts or value added services to commercial or institutional insureds in connection with marketing for the sale or retention of contracts of insurance, as long as the cost is reasonable in light of the relationship between the parties; or

(3) conduct raffles or drawings to the extent permitted by state law, as long as there is no participation cost to entrants, the drawing or raffle does not expressly or impliedly obligate participants to purchase insurance and the prizes are not valued in excess of five hundred dollars.

Drafting Note: States may wish to alter the financial limitations set forth in this section depending upon each state’s economic environment.

Drafting Note: Section 104 (d)(2)(B)(viii) of the Gramm-Leach-Bliley Act provides that any state restrictions on anti-tying may not prevent a depository institution or affiliate from engaging in any activity that would not violate Section 106 of the Bank Holding Company Act Amendments of 1970, as interpreted by the Board of Governors of the Federal Reserve System. The Board of Governors of the Federal Reserve System has stated that nothing in its interpretation on combined-balance discount arrangements is intended to override any other applicable state and federal law. FRB SR 95-32 (SUP). Section 5(q) of the Home Owners’ Loan Act is the analogous provision to Section 106 for thrift institutions. The Office of Thrift Supervision has a regulation 12 C.F.R. 563.36 that allows combined-balance discounts if certain requirements are met.

Drafting Note: Each state may wish to examine its rating laws to assure that they contain sufficient provision against rebating. If they do not, this section might be expanded to cover all lines of insurance.

Reduced Benefit Options Associated with Long-Term Care Insurance Rate Increases,
Principles and Issues (RBO Principles Document), July 2, 2020 Draft (Attachment One-A) ..........................4-92
2020 Proposed Charges for Newly Appointed Subgroups (Attachment One-B) .....................................................4-94
The Long-Term Care Insurance (EX) Task Force met via conference call Aug. 7, 2020. The following Task Force members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair (CO); Lori K. Wing-Heier (AK); Jim L. Ridling (AL); Alan McClain represented by Carroll Astin (AR); Evan G. Daniels (AZ); Ricardo Lara represented by Bryant Henley (CA); Karima M. Woods (DC); Trinidad Navarro (DE); David Altmairer represented by John Reilly (FL); Colin M. Hayashida represented by Paul Yuen (HI); Doug Ommen (IA); Dean L. Cameron (ID); Robert H. Muriel (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary Anderson (MA); Anita G. Fox represented by Karen Dennis (MI); Steve Kelley represented by Fred Andersen and Grace Arnold (MN); Chlora Lindley-Myers (MO); Matthew Rosendale represented by Bob Biskupiak (MT); Mike Causey represented by David Yetter (NC); Jon Godfread (ND); Bruce R. Ramge (NE); Marlene Caride (NJ); Russell Toal represented by Anna Krylova (NM); Glen Mulready represented by Andy Schallhorn and Cuc Nguyen (OK); Andrew R. Stolfi represented by TK Keen (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); Raymond G. Farmer (SC); Larry D. Deiter (SD); Hodgen Mainda (TN); Kent Sullivan (TX); Michael S. Pieciak represented by Kevin Gaffney (VT); Mike Kreidler (WA); Mark Afable (WI); James A. Dodrill (WV); and Jeff Rude represented by Linda Johnson (WY).

1. **Adopted its July 2 Minutes**

Commissioner White said the Task Force met July 2 and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) received progress reports on the current activities of its six workstreams; 3) exposed a draft reduced benefit option (RBO) principles document for a 30-day public comment period ending Aug. 3; and 4) exposed draft 2020 charges for its newly appointed subgroups for a 14-day public comment period ending July 17.

Commissioner Donelon made a motion, seconded by Commissioner Altman, to adopt the Task Force’s July 2 minutes (Attachment One). The motion passed unanimously.

2. **Adopted 2020 Charges for its Newly Appointed Subgroups**

Commissioner White said the Task Force exposed the charges for its three new appointed subgroups for public comment. No comments were received. The subgroups are a consolidation of the Task Force’s six workstreams, and the charges are a delegation of Task Force charges. The existing workstream memberships will be rolled into each subgroup, and existing interested parties of the Task Force will be listed as interested parties for each of the subgroups. If any state insurance regulator wishes to be added or removed as a member or interested regulator or if interested parties wish to be added to the distribution list, please notify NAIC staff.

Director Ramge made a motion, seconded by Commissioner Atman, to appoint the three new subgroups—the Long-Term Care Insurance (LTCI) Multistate Rate Review (EX) Subgroup, the LTCI Reduced Benefit Options (EX) Subgroup and the LTCI Financial Solvency (EX) Subgroup—and related 2020 charges (Attachment One-B). The motion passed unanimously.

3. **Received a Progress Report on Activities of the Task Force**

   a. **Multistate Rate Review Practice**

Commissioner Conway said the multistate rate review workstream remains the centerpiece work of the Task Force, and it is intended to develop a consistent state-based approach for reviewing LTCI rate increase filings. The goal is to have the result be an actuarially justified rate increase process that is timely and eliminates cross-state rate subsidization. He said the multistate actuarial review group is overseen by himself and Commissioner White, and it has involved state department actuaries from Connecticut, Minnesota, Nebraska, Texas and Utah. The multistate actuarial team considers the experience and expectations filed by the requesting company, as well as other actuarial matters that have been discussed by the Long-Term Care Pricing (B) Subgroup the past several years, including the handling of shrinking blocks and not allowing inappropriate inclusion of past losses in remaining policyholders’ rates.
Commissioner Conway said collaboration is also occurring between the multistate team and the Interstate Insurance Product Regulation Commission (Compact) for rate filings submitted to the Compact. The infrastructure of the Compact is also used for efficiency and coordination. The pilot project is underway and reviewing several rate filings. The multistate team will be working with the Task Force to determine the final work product. The intent is for state insurance departments to be able to rely on the work of the multistate team in their review and granting of LTCI rate increase filings. However, each state will ultimately be responsible for approving, partially approving or denying a rate increase filing in their state.

Birny Birnbaum (Center for Economic Justice—CEJ) asked how, in evaluating rate inequality between states’ policyholders under the work of the consultant performing the data call, the Task Force will assess the quality of the rate reviews performed to-date by individual states. He asked whether rate inequality, if it exists, is due to differing assumptions by the states as to who is responsible—policyholders or shareholders—or pricing errors.

Commissioner Conway said part of the multistate review process has been to look at the rate increases that have been granted. This is a discussion that the Task Force is having. The multistate team is focused on the actuarial rate review processes used by Minnesota and Texas, both of which consider the concerns Mr. Birnbaum has raised.

Mr. Birnbaum asked if the data call submissions would be made publicly available to consumer stakeholders. If not, he inquired as to why, as the information seems like it would be the same information available in public rate filings. Additionally, he asked why the information is confidential.

Commissioner White said the data call was conducted under confidentiality laws. He said the data has not yet been reviewed by the Task Force; therefore, no final decisions have been made, but the Task Force will evaluate if any information can be shared.

Jan M. Graeber (American Council of Life Insurers—ACLI) said the insurance carriers that participated in the data call provided the information with the understanding that it would remain confidential. While carriers have access to their own information, they do not have access to other company information.

Commissioner Conway said the Task Force will be as transparent as possible, but it must weigh confidentiality issues. He said the Task Force will have more discussions that can be made public.

Ms. Graeber asked when industry and interested parties would be included in any of the work of the multistate rate review workstream. Commissioner Conway said the Task Force is just beginning to review an initial work product. He said the goal is to have the process in place by the end of the year, so he hopes to engage industry and interested parties within the next couple months.

Commissioner Donelon asked if the report of the multistate review team will be released in confidential regulator-only format or if will it be publicly released. Commissioner White said the Task Force will discuss this on a future call.

Commissioner Donelon asked if there is a pool of funds available industrywide to LTCI insurers. Mr. Andersen said each company holds reserves that will fund future policyholder claims, and he is not aware of any other funds.

b. **RBO and Consumer Notices**

Commissioner Altman said the RBO and Consumer Notices workstream developed a principles document to provide guidance to state insurance regulators when evaluating RBO offerings by insurers. The document is offered to assist the Task Force in completing its charge to “[i]dentify options to provide consumers with choices regarding modifications to long-term care insurance (LTCI) contract benefits where policies are no longer affordable due to rate increases.” The principles and issues outlined in the document are:

- Fairness and equity for policyholders that elect an RBO.
- Fairness and equity for policyholders that choose to accept rate increases and continue LTCI coverage at their current benefit level.
- Clarity of communication with policyholders eligible for an RBO.
- Consideration of encouragement or requirement for a company to offer certain RBOs.
- Exploration of innovation, particularly where an outcome of improved health and lower claim costs are possible.
Commissioner Altman said the workstream released an RBO Principles document for public comment and received comments from interested parties. She said the new subgroup will meet after the national meeting to discuss comments in more depth. She said the subgroup will also begin developing a principles document for consumer notices.

4. Received Comments on the RBO Principles Document

Bonnie Burns (California Health Advocates—CHA) said CHA’s comment letter included concerns with how RBOs are presented and portrayed to policyholders, how they are offered, if policyholders have an understanding of the relationship between the RBOs and their potential premiums, how the rates are affected by the RBO decisions policyholders make, and the fairness of the rates. She said some consumer notices include language that there may be additional rate increases. She said standards for format and how information is presented in consumer notices will be important. She said she has done a lot of work in California with consumers. She wants to ensure that the RBOs are fair to the insured and that consumer notices are understandable for policyholders of different ages and financial and care-giving situations to make the best decision.

Commissioner Altman said input from the consumer representatives will be important to the development of the consumer notices principles document. She said while they have not yet answered the questions around rates and the impact of RBOs, she is discussing with Commissioner Conway how the two subgroups will work together in bringing the review and pricing of RBOs into the multistate rate review process.

Ms. Graeber said the ACLI provided comments on the RBO principles document. She said the ACLI wants to be a partner with state insurance regulators and other stakeholders on a goal in providing policyholders meaningful options for the rate increase on LTCI coverage. She said the ACLI is supportive of developing principles to guide state insurance regulators in the review of RBOs facing an increase on the LTCI policy. She said it is important to recognize the characteristics of the block of business and how those characteristics affect the choices that are provided to consumers.

Ms. Graeber said the ACLI identified three overarching principles supporting a review: 1) no policyholder or carrier should be required to modify a contract that has been entered into; 2) any offer made should consider the impact on remaining policyholders; and 3) offers should ensure that there is no unfair discrimination among policyholders. Providing fair and meaningful options to consumers starts with recognizing all aspects of LTCI policies, as not all LTCI products are the same and have evolved over time. Insurers have LTCI blocks with variations.

Ms. Graeber said a policyholder’s decisions may not be just based on affordability, but also based on their personal situation, so there is no one-size-fits-all for RBOs. Fairness and equity can be achieved by clear communication of the options available and insurers encouraging policyholders to base decisions on the appropriateness of that option for their individual situation and benefit level. She said a main point is to balance communication with the policyholders—what is reasonable and fair—while still allowing insurers the flexibility to identify what options make sense for their block of business.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\LTC (EX) TF\_Final Minutes\LTCI(EX)TF 080720 Minutes.doc
The Long-Term Care Insurance (EX) Task Force met via conference call July 2, 2020. The following Task Force members participated: Scott A. White, Chair, and Doug Stolte (VA); Michael Conway, Vice Chair (CO); Jim L. Ridling (AL); Alan McClain represented by William Lacy (AR); Christina Corieri represented by Vincent Gosz (AZ); Ricardo Lara represented by Susan Bernard (CA); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro (DE); David Altmaier represented by Carolyn Morgan (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron represented by Weston Trexler (ID); Robert H. Muriel represented by Eric Anderson (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt (KS); Sharon P. Clark represented by Stephanie McGaughey-Bowker (KY); James J. Donelon (LA); Eric A. Cioppa (ME); Anita G. Fox represented by Karen Dennis (MI); Steve Kelley represented by Fred Andersen (MN); Matthew Rosendale represented by Regan Hess (MT); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska (ND); Bruce R. Range represented by Rhonda Ahrens (NE); Marlene Caride (NJ); Russell Toal represented by Anna Krylova (NM); Barbara D. Richardson (NV); Glen Murlie represented by Andrew Schallhorn (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Raymond G. Farmer (SC); Larry D. Deiter represented by Jill Kruger (SD); Hodgen Mainda represented by Rachel Jade-Rice (TN); Kent Sullivan and Doug Slape (TX); Todd E. Kiser (UT); Michael S. Pieciak represented by Emily Brown (VT); Mike Kreidler (WA); Mark Afable represented by Richard Wicka (WI); James A. Dodrill (WV); and Jeff Rude (WY).

1. **Adopted its 2019 Fall National Meeting Minutes**

Commissioner Ridling made a motion, seconded by Commissioner Caride, to adopt the Task Force’s Dec. 9, 2019, minutes (see NAIC Proceedings – Fall 2019, Long-Term Care Insurance (EX) Task Force). The motion passed unanimously.

Commissioner White said the Task Force also met June 30 in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss workstream planning.

2. **Received a Progress Report on Activities of the Task Force and Exposed a Draft Principles Document for Public Comment**

   a. **Multistate Rate Review Practice**

Commissioner Conway said the multistate rate review workstream is the center-piece work of the Task Force. He said the workstream is intended to develop a consistent state-based approach for reviewing long-term care insurance (LTCI) rate increase filings that culminate actuarially appropriate increases granted by the participating state insurance departments. The rate review process will be timely and eliminate cross-state rate subsidization to the extent that it exists.

Commissioner Conway said the multistate actuarial review group will perform an actuarial review of a rate increase filing that can be relied upon by the state insurance departments. Member actuaries from Connecticut, Minnesota, Nebraska, Texas and Utah are leading this work. The multistate actuarial team will consider the experience and expectations filed by the requesting company. The review will also consider actuarial matters that have been discussed by the Long-Term Care Pricing (B) Subgroup the past several years, including the handling of shrinking blocks and not allowing inappropriate inclusion of past losses in remaining policyholders’ rates.

The multistate actuarial team will collaborate with the Interstate Insurance Product Regulation Commission (Compact) for rate filings submitted to the Compact. The infrastructure of the Compact may be used for efficiency and coordination. The team is currently reviewing several rate filings, and it is learning lessons as progress is made through those rate filings. The team will work with the Task Force on how the coordination of a rate review analysis will be designed.
b. **Non-Actuarial Variances Among the States**

Commissioner Kreidler said the non-actuarial variance among the states workstream was focused on evaluating the differences among the states in the application of non-actuarial factors and reviewing considerations in evaluating rate increase requests. The workstream was tasked with developing a model set of recommendations for non-actuarial practices. On June 24, the workstream adopted its recommendations that address caps, phase-in periods, and solvency impact, as well as other concepts, such as waiting periods, size of the block, and age of the policyholders. These are topics that may need to be viewed from both the actuarial and non-actuarial perspective. This workstream recognizes the need for the multistate rate review workstream to consider these recommendations, as the topics correspond with the actuarial development process. As the Task Force is aware, these recommendations were formerly referred to the multistate rate review workstream to be incorporated into their development process for the overall rate review methodology and framework.

Mr. Knable said he would like to emphasize that the Task Force discusses the multistate rate review and non-actuarial workstreams’ recommendations with each individual state, and that each state will still be responsible for the final approval of the rate increase in their state, so that this process is not confused with a complete national approach to LTCI rate increases.

Commissioner White said the non-actuarial considerations were referred to the multistate rate review workstream, and there will be an opportunity for further discussion by commissioners as they are incorporated into that development process.

c. **Restructuring Techniques**

Mr. Slape said the restructuring techniques workstream was formed to evaluate restructuring options. The workstream has developed a scope of work that would direct a legal consultant to evaluate restricting options and provide a report to the Task Force. The scope of work and listing of qualifications for a consultant have been adopted by the Task Force. Mr. Slape anticipates that the NAIC will consider and issue a request for proposal (RFP). Any law firms that may be interested in bidding on such a project and would like to be on a distribution list for an RFP may contact Dan Daveline (NAIC). If the RFP is issued, and once bids are received, before initiating the project, the Executive (EX) Committee would determine if a Budget and Fiscal Impact Statement (BFIS) should be adopted by the NAIC.

d. **Reduced Benefit Options and Consumer Notices**

Commissioner Altman said the workstream has been looking at the options that companies make available to consumers as alternative choices to accepting rate increases when rate increases are necessary. The workstream has also been focused on sharing information across the states on practices currently in use and opportunities to be more aligned strategically. The workstream developed the Reduced Benefit Options (RBO) Principles document to provide guidance to state insurance regulators when evaluating RBO offerings by insurers. The principles and issues outlined in the document are:

- Fairness and equity for policyholders that elect an RBO.
- Fairness and equity for policyholders that choose to accept rate increases and continue LTCI coverage at their current benefit level.
- Clarity of communication with policyholders eligible for an RBO.
- Consideration of encouragement or requirement for a company to offer certain RBOs.
- Exploration of innovation, particularly where an outcome of improved health and lower claim costs are possible.

Commissioner Altman said the draft RBO Principles document is ready for public comment. She recommends a 30-day public comment period with comments submitted to Eric King (NAIC) by Aug. 3. The workstream plans to engage with stakeholders going forward. The workstream will schedule a conference call shortly after the Summer National Meeting to discuss comments received on the draft and next steps for collaboration. One additional charge of the workstream is to focus on the consumer notices to make sure the information provided to consumers about RBOs is clear and robust.

Commissioner White said the draft RBO Principles document (Attachment One-A) will be exposed for a 30-day public comment period ending Aug. 3.
e. Valuation of LTCI Reserves

Mr. Andersen said the valuation workstream’s goal is to coordinate valuation and rating issues affecting reserves, which tend to be the same issues, including morbidity, policyholder behavior and investment returns. There continues to be uncertainty in older-age morbidity and COVID-19. Older-age morbidity experience is continuing to develop. Recently, issues related to COVID-19 have affected LTCI. The current and future nursing home impacts and the market impact due to the declining interest rates could be offsetting in some areas. These issues will be a focus in upcoming months and years if consumers’ attitudes over elders entering long-term care (LTC) facilities changes over time. Also, as part of the workstream’s scope, a document was developed to help ensure that states’ LTCI rate review and reserve teams are coordinating. The Task Force released this document for feedback from state insurance regulators only.

f. Data Call Design and Oversight

Mr. Stolte said the data call design and oversight workstream was organized to perform two functions: 1) define a scope of work for a data call for certain LTCI carriers in order to accumulate and analyze the current level of LTCI rate inequity among the states’ policyholders; and 2) review the work of a consultant performing such a data call for communication to the Task Force. Prior to the 2019 Fall National Meeting, the workstream was focused on developing that data call, as well as developing a scope of work for a consultant. In November 2019, the NAIC released an RFP to several actuarial consulting firms; subsequently, the Executive (EX) Committee adopted a BFIS in February. Soon after, the NAIC announced that it had hired LTCG Actuarial Consulting Group (LTCG) as the NAIC’s consultant on this project. Subsequently, the workstream met with the consultant to provide it with direction, and under Virginia state law, it directed 19 insurers to complete the data call overseen by LTCG. Most of the insurers have now completed that data call, and LTCG is analyzing the data. The workstream has met on three calls to review the data.

Bonnie Burns (California Health Advocates—CHA) asked when the documents and reports discussed by the workstreams would be made available to the public. Jeffrey C. Johnston (NAIC) said the data call RFP was posted to the NAIC website last fall, and it was removed once the NAIC administrative process was completed. Commissioner Conway said the multistate rate review workstream has not reached the point where information can be made public yet. Once that point is reached, information will be made available for public discussion.

Birny Birnbaum (Center for Economic Justice—CEJ) said the data call information will be of great interest to stakeholders, he and asked if the data call information will be made public and in what time frame. Mr. Stolte said the data was collected confidentially under Virginia state law. He said a report will be made available when the analysis is complete. Mr. Johnston said the data analysis is still in process, and the Task Force may know a time frame by the Summer National Meeting.

3. Exposed 2020 Proposed Subgroup Charges for Public Comment

Commissioner White said the next steps for the Task Force include moving more discussions about the rate review methodology, reduced benefit options, and consumer notices into the public realm. An administrative plan is to consolidate the six workstreams into three NAIC subgroups. This organizational step will help to ensure that the Task Force properly accounts for the views of the consumer representatives, industry and other stakeholders. The Task Force chose to appoint subgroups, as these groups are largely intended to be temporary NAIC groups. The subgroup charges include a delegation of the Task Force charges a new LTCI Multistate Rate Review (EX) Subgroup and a new LTCI Reduced Benefit Options (EX) Subgroup. The new LTCI Multistate Rate Review (EX) Subgroup will be the consolidation of the multistate rate review and non-actuarial variances workstreams, which will be chaired by Colorado. The new LTCI Reduced Benefit Options (EX) Subgroup will be the RBO and consumer notices workstream, which will be chaired by Pennsylvania. The new LTCI Financial Solvency (EX) Subgroup will be a consolidation of the restructuring techniques, valuation of LTCI reserves, and data call design and oversight workstreams. It is intended to address the confidential work of those three workstreams. It is co-chaired by Minnesota and Texas.

The Task Force exposed proposed charges for its three new subgroups for a 14-day public comment period ending July 17 (Attachment One-B). Comments should be sent to Jane Koenigsman (NAIC). The Task Force will plan to address any comments and consider the charges for adoption at the Summer National Meeting.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.
REduced benefit options associated with long-term care insurance (LTCI) rate increases –
request for public comment -

Drafted by the Reduced Benefit Options Workstream (#3) of the Long-Term Care Insurance (EX) Task Force

INTRODUCTION

The Reduced Benefit Options (RBO) Workstream is composed of regulators from 17 state insurance
departments. It has been tasked with assisting the Long-Term Care Insurance (EX) Task Force in completing the
following charge:

Identify options to provide consumers with choices regarding modifications to long-term care insurance (LTCI)
contract benefits where policies are no longer affordable due to rate increases.

The Workstream regulators have developed a list of RBO principles in order to provide guidance for evaluating
RBO offerings.

PRINCIPLES AND ISSUES, INCLUDING THOSE WITH PARTICULAR NEED FOR STAKEHOLDER INPUT, INCLUDE:

1. Related to fairness and equity for policyholders that elect an RBO:
   - Are all policyholders facing a rate increase being offered an RBO?
   - Do the RBOs provide reasonable value?

2. Related to fairness and equity for policyholders that choose to accept rate increases and continue LTCI
   coverage at their current benefit level:
   - To what extent could anti-selection take place, placing the financial stability of the remaining block of
     business at further risk?

3. Related to clarity of communication with policyholders eligible for an RBO:
   - What are recommendations for ensuring policyholders have maximized opportunity to make decisions
     in their best interest?
   - Should regulators, in some cases, encourage a company to offer fewer options in order to reduce the
     complication in decisions policyholders will face?

4. Related to consideration of encouragement or requirement for a company to offer certain RBOs:
   - Evaluate legal constraints, impact on remaining policyholders and company finances, and impact on
     Medicaid budgets if regulators are driving reduced LTCI benefits.
5. Related to exploration of innovation, particularly where an outcome of improved health and lower claim costs are possible:

- Identify pros and cons of rate increases being tied into insurers offering, e.g., hand railings for fall prevention in high-risk homes.

WIDELY ESTABLISHED RBOs IN LIEU OF RATE INCREASES

a. Reduce inflation protection going forward, while preserving accumulated inflation protection
b. Reduce Daily Benefit
c. Decrease Benefit Period/Maximum Benefit Pool
d. Increase Elimination Period
e. Contingent Nonforfeiture
   i. Claim amount can be sum of past premiums paid
   ii. Only receive that benefit if the policyholder qualifies for a claim

LESS COMMON RBOs FOR POTENTIAL DISCUSSION

a. Cash buyout
b. Co-pay percentage on benefits
Proposed Charges:

The **LTCI Multistate Rate Review (EX) Subgroup** will:

Develop a consistent national approach for reviewing LTCI rates that results in actuarially appropriate increases being granted by the states in a timely manner and eliminates cross-state rate subsidization. The Subgroup should complete its charges by the 2021 Summer National Meeting.

- *Chair: Commissioner Michael Conway (CO)*
- *Consolidation of workstream 1—Multi-state Rate Review Practices and workstream 5—Non-Actuarial Variance Among the States*
- *Open Sessions or Regulator Only Sessions, pursuant to open meetings policy #3 – discussion of companies, entities or individuals*

The **LTCI Reduced Benefit Options (EX) Subgroup** will:

Identify options and develop recommendations for the rate review approach that provides consumers with choices regarding modifications to LTCI contract benefits where policies are no longer affordable due to rate increases. The Subgroup should complete its charges by Dec. 31, 2020.

- *Chair: Commissioner Jessica K. Altman (PA)*
- *Former workstream 3—Reduced Benefit Options and Consumer Notices*
- *Open Sessions*

The **LTCI Financial Solvency (EX) Subgroup** will:

a. Explore restructuring options and techniques to address potential inequities between policyholders in different states; and techniques to mitigate policyholders’ risk to state guaranty fund benefit limits including states’ pre-rehabilitation planning options. Evaluate the work of the consultant and report on the work to the Task Force.
b. Evaluate the results of consultants’ work on the completion of a data call and report on the work to the Task Force.
c. Monitor work performed by other NAIC solvency working groups and assist in the timely multi-state coordination/communication of the review of the financial condition of LTC insurers.

The Subgroup should complete its charges by the 2021 Summer National Meeting.

- *Co-Chairs: Doug Slape (TX) and Fred Andersen (MN)*
- *Consolidation of workstream 2—Restructuring Techniques, workstream 4—Valuation of Long-Term Care Insurance (LTCI) Reserves and workstream 6—Data Call Design and Oversight*
- *Regulator Only Sessions, pursuant to open meetings policy #3 – discussion of companies, entities or individuals*
The Information Systems (EX1) Task Force met via conference call Aug. 5, 2020. The following Task Force members participated: Kathleen A. Birrane, Chair, represented by Paula Keen (MD); Ricardo Lara, Vice Chair, represented by David Noronha (CA); Lori K. Wing-Heier (AK); Alan McClain represented by Letty Hardee (AR); Robert H. Muriel represented by Judy Mottar (IL); Vicki Schmidt represented by Shannon Lloyd (KS); Sharon P. Clark represented by Russell Hamblen (KY); Steve Kelley represented by Matthew Vatter (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Barbara D. Richardson (NV); Jillian Froment represented by Tynesia Dorsey (OH); Kent Sullivan represented by Nancy Clark (TX); and Scott A. White represented by Vicki Ayers (VA). Also participating were: Chris Murray and Katrina Kelly (AK); Blase Abreo (AL); Bud Leiner, Vanessa Darrah and Cheryl Hawley (AZ); Charlene Ferguson, Stephanie Wong and Henry Tam (CA); Lady Mendoza (CT); Gordon I. Ito, Mio Shimamura and Melanie Fujiwara (HI); Doug Ommen and Kim Cross (IA); Lauren Peters and Cindy Anderson (IL); Jennifer Groth (IN); Timothy Schott and Pamela Roybal (ME); Christine Peters and Adam Goldhammer (MN); Kathy Shortt and Tracy Biehn (NC); Johnny Palsgraaf (ND); Russell Toal and Myra Morris (NM); Eileen Fox, Nellie Rosin and Leigh Solomon (NY); Ben Anderson, Lori Barron and Michelle Brugh Rafeld (OH); Ron Kreiter, Cuc Nguyen and Michael Parrott (OK); Tashia Sizemore, Brian Fordham and Kirsten Anderson (OR); David Kelly (PA); Matt Gendron (RI); David Muckerheide (TX); Trish Todd, Richard Tozer and Andrea Baytop (VA); Randy Fong, John Haworth and Molly Nollette (WA); Timothy Cornelius (WI); and Bryan Stevens (WY).

1. **Adopted its 2019 Fall National Meeting Minutes**

Director Wing-Heier made a motion, seconded by Ms. Amann, to adopt the Task Force’s Dec. 6, 2019, minutes (see NAIC Proceedings – Fall 2019, Information Systems (EX1) Task Force). The motion passed unanimously.

2. **Adopted its 2021 Proposed Charges**

Mr. Noronha made a motion, seconded by Mr. Hamblen, to adopt the Task Force’s 2021 proposed charges, which remain consistent with 2020 (Attachment One). The motion passed unanimously.

3. **Received an IT Operational Summary Report**

Scott Morris (NAIC) highlighted several sections included in the Information Technology (IT) Operational Report received by the Task Force members. The report provides updates on technology initiatives at the NAIC, upcoming improvements, impacts to state technology, new offerings from the NAIC, and general updates on the activities of the NAIC technology team.

   a. **Product Highlights**

   The Iowa and State Based Systems (SBS) teams successfully transitioned Iowa from legacy SBS to the new platform. This milestone was the first virtual transition due to the COVID-19 work environment. The final two states moving to the new platform this year are Tennessee (September) and North Carolina (November). Connecticut is currently licensed and in queue for its new implementation in 2021 and Hawaii for a 2022 implementation.

   In mid-March, the NAIC swiftly moved into a work-from-home mode, given the COVID-19 pandemic. The NAIC team realigned priorities to support state insurance departments’ needs around COVID-19. Some of the COVID-19 work and activities included:

   - Creating a regulator-only collaboration website for sharing COVID-19 related information.
   - Supporting members with SBS needs, such as extension of licenses, temporary license setup, continuing education (CE) waivers, certificate of authority emailing, etc.
   - Helping several states move to electronic payments using the NAIC Online Premium Tax for Insurance (OPTins) platform.
   - Completing the property/casualty data collection for business interruption insurance and supporting the life data collection.
   - Supporting virtual meetings, such as the 2,900-attendee COVID-19 special event.
   - Creating a new SharePoint document portal as an iPad alternative for commissioners and senior staff to access meeting artifacts.

© 2020 National Association of Insurance Commissioners
A request for proposal (RFP) process was completed in the fourth quarter of 2019, and Deloitte was selected to complete an assessment of the NAIC System for Electronic Rate and Form Filing (SERFF). Deloitte started the assessment in January and completed interviews with more than 100 stakeholders. Essentially, Deloitte found that the platform has performed well for the states to help improve the rate and form filing process, but foundational improvements are needed. The report recommends a phased approach to the SERFF redesign, with a pilot phase and three implementation phases. That assessment was shared with the Executive (EX) Committee at the mid-year meeting, and it will be also be shared during Roundtable at the Summer National Meeting, after which next steps will be determined.

OPTins is used by 28 states to process premium and surplus lines tax forms and fees. It also allows taxes to be collected electronically, and some can be very large. The NAIC is working to reduce transactional risk by modifying OPTins to delay the settlement to states to reduce the number of failed payments. Prior to moving forward with this enhancement, the NAIC solicited feedback from the states on this change. Based on that input, the system enhancement will move forward, and it will be released in December, ahead of the 2020 annual filing deadline for most states.

b. **Innovation and Technology**

The NAIC continues to explore technology to provide secure, reliable and flexible options for its members. Creating an NAIC data cloud platform is one key area of focus, and many pieces are now in place and being configured. The NAIC is starting to test a proof of concept using a new data warehouse technology called Snowflake as the access point for a safe and secure way for the states to connect to NAIC datasets. The solution will provide access to read-only data, and it is being piloted with two states. Feedback from those participants will help shape the solution to best meet member needs as we move forward with building the platform.

Cloud migrations of the applications that the NAIC builds and supports for state insurance regulators are underway. Applications are being migrated to multiple test and development environments first. Once proven, the production systems that state insurance regulators use will be moved. Third and fourth quarters will also include database upgrades and migrations. The NAIC is targeting to be complete by the end of the year, with these migrations with full cut-over most likely occurring in the first quarter of 2021.

c. **Service and Support**

Overall NAIC service request volume remains steady at around 11,000 to 13,700 inquiries per month. In March, volume had increased by approximately 10%. This increase in volume was related to the COVID-19 pandemic, and the NAIC continues to receive calls related to this event. Overall, most of call drivers during the second quarter were primarily made up of industry users requesting assistance while accessing NAIC products and services to accomplish regulatory filing deadlines for annual financial statements (internet filing), premium and surplus lines tax filings (OPTins), product and rate filings (SERFF), annual corporate updates (Uniform Certificate of Authority Application—UCAA), and licensing transactions (SBS).

4. **Received a Portfolio Update and Project Status Reports**

Cheryl McGee (NAIC) reported on the project portfolio. As of July, the NAIC’s technical project portfolio includes 23 active technical projects, 17 of which are projects of the State Head strategic plan. Two projects have been completed since the last report.

5. **Discussed Other Matters**

Ms. Keen said the Task Force will meet Sept. 25 via conference call in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to review documents for new 2021 financial impact statements that are considered technical projects.

Having no further business, the Information Systems (EX1) Task Force adjourned into regulator-to-regulator session pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
The mission of the Information Systems (EX1) Task Force is to: 1) provide regulator-based technology expertise to the Internal Administration (EX1) Subcommittee; and 2) support committee activities and objectives by monitoring projects that provide technical services or systems for state-based insurance regulation, as prioritized by the Executive (EX) Committee.

Ongoing Support of NAIC Programs, Products or Services

1. The Information Systems (EX1) Task Force will:
   A. Serve as the Internal Administration (EX1) Subcommittee’s project-independent technology monitor and consultant. This involves monitoring the development, deployment and operations of NAIC information technology (IT) systems and services for state insurance regulators and, based on this effort, providing reports and recommendations to the Subcommittee as appropriate. To achieve this, the Task Force will receive regular portfolio and technical operational reports.
   B. Provide consultation to the NAIC technology staff, as well as the interpretation of intent and specific technology direction where needed. For example, from time to time, NAIC technology staff may request approval of a specific technology approach, such as a proposal to drop support for a particular version of software. The Task Force will provide direction in such matters, either directly or through a working group. Task Force members will also communicate current and future state technology changes planned for their state to alert NAIC technology staff of potential impacts and requirements for NAIC systems and services used by state insurance regulators.
   C. Review, with technical recommendations for the Subcommittee: 1) Fiscal Impact Statements Appendix A for all State Ahead projects, as well as others involving a technology component exceeding $100,000 or 1,150 hours of technology staff development and which is not limited to the support of the internal operations; and 2) project requests that involve technology being submitted to the Subcommittee or directly to the Executive (EX) Committee.

NAIC Support Staff: Cheryl McGee/Sherry Stevens

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

Life Insurance and Annuities (A) Committee Aug. 11, 2020, Minutes .................................................................6-2
Life Insurance and Annuities (A) Committee July 10, 2020, Minutes (Attachment One) ........................................6-6
Life Insurance and Annuities (A) Committee Dec. 30, 2019, Minutes (Attachment One-A) ..............................6-10
Accelerated Underwriting (A) Working Group July 31, 2020, Minutes (Attachment Two) ........................................6-13
Accelerated Underwriting (A) Working Group March 12, 2020, Minutes (Attachment Two-A) .....................6-17
Accelerated Underwriting (A) Working Group Feb. 20, 2020, Minutes (Attachment Two-B) .........................6-21
Accelerated Underwriting (A) Working Group Feb. 6, 2020, Minutes (Attachment Two-C) .........................6-23
Accelerated Underwriting (A) Working Group Jan. 23, 2020, Minutes (Attachment Two-D) .........................6-25
Annuity Disclosure (A) Working Group March 13, 2020, Minutes (Attachment Three) .....................................6-27
Annuity Disclosure Model Regulation (#245), Jan. 24, 2020, Draft (Attachment Three-A) ...............................6-31
Annuity Suitability (A) Working Group July 29, 2020, Minutes (Attachment Four) ...............................................6-46
Annuity Suitability (A) Working Group Dec. 19, 2019, Minutes (Attachment Four-A) ........................................6-48
The Life Insurance and Annuities (A) Committee met via conference call Aug. 11, 2020. The following Committee members participated: Jillian Froment, Chair, and Peter Weber (OH); Marlene Caride, Vice Chair, represented by Philip Gennace (NJ); Jim L. Ridling and Steve Ostlund (AL); Trinidad Navarro (DE); Doug Ommen and Mike Yanacheak (IA); Dean L. Cameron (ID); James J. Donelon (LA); Jon Godfread (ND); Bruce R. Ramge (NE); Chris Nicolopoulos represented by Roni Karnis (NH); Barbara D. Richardson (NV); Linda A. Lacewell represented by Bill Carmello (NY); and Mark Afable and Richard Wicka (WI). Also participating were: David Altmaier (FL); Robert H. Muriel (IL); Sharon P. Clark (KY); Eric A. Cioppa (ME); Chlora Lindley-Myers (MO); Mike Causey (NC); Jessica K. Altman (PA); Elizabeth Kelleher Dwyer (RI); and Raymond G. Farmer (SC).

1. **Adopted its July 10 Minutes**

The Committee met July 10 and took the following action: 1) adopted its Dec. 30, 2019, and Dec. 8, 2019, minutes; 2) adopted technical revisions to *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48)*; 3) adopted *Valuation Manual* amendments; and 4) adopted *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49-A)*.

Commissioner Donelon made a motion, seconded by Commissioner Godfread, to adopt the Committee’s July 10 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the Reports of its Working Groups and Task Force**

   a. **Accelerated Underwriting (A) Working Group**

   Director Muriel said the Accelerated Underwriting (A) Working Group met July 31. During its meeting, the Working Group took the following action: 1) adopted its March 12, Feb. 20, Feb. 2, Jan. 23 and 2019 Fall National Meeting minutes; and 2) heard an update presentation, including a summary of the process that has been followed, some of the lessons learned, and the timeline for completion of its charge.

   b. **Annuity Disclosure (A) Working Group**

   Mr. Yanacheak said the Annuity Disclosure (A) Working Group met March 13. He said the Working Group has not met since March because Working Group members have been focused on issues related to the pandemic in their own states. He said during its March 13 meeting, the Working Group took the following action: 1) continued to discuss revisions to the *Annuity Disclosure Model Regulation (#245)*; 2) adopted revised language clarifying what financial instruments are included in an index, each of which has to have been in existence for at least 15 years; and 3) identified a few additional issues that it wants to address prior to bringing the revisions to the Committee.

   First, the Working Group would like to include some plain language revisions to the disclosure requirement in Section 6G. The second and third issues revolve around whether the Working Group wants to make recommendations to the Committee related to whether there is a need for product approval standards for proprietary indices and whether there needs to be standards surrounding the relationship between the hedging provider and the index provider.

   Mr. Yanacheak said the Working Group is close to finishing the revisions to Model #245, and it requested an extension of the Request for NAIC Model Law Development in order for the Working Group to finish its work by the Fall National Meeting.

   Commissioner Ommen spoke in support of giving the Working Group additional time. He made a motion, seconded by Commissioner Godfread, to extend the Request for NAIC Model Law Development until the Fall National Meeting.
c. **Annuity Suitability (A) Working Group**

Commissioner Ommen said the Annuity Suitability (A) Working Group met July 29. During this meeting, the Working Group took the following action: 1) adopted its 2019 Fall National Meeting minutes and Dec. 19, 2019, minutes; and 2) heard an update from Idaho, Iowa, Kentucky, Ohio and Rhode Island on their efforts to adopt the revised *Suitability in Annuity Transactions Model Regulation* (#275), including any issues they had encountered.

Commissioner Ommen said the Working Group discussed its work for 2020 and agreed to develop a frequently asked questions (FAQ) document to assist the states as they move forward with adopting the revised Model #275 and implementing its provisions in fulfillment of the second part of its charge to “consider how to promote greater uniformity across NAIC-member jurisdictions.” He said the Working Group decided a draft FAQ document would be developed and exposed for a 30-day public comment period to solicit any additional questions to add to the document. He said the Working Group plans to meet via conference call in September to discuss any comments received.

d. **Life Insurance and Illustration Issues (A) Working Group**

Mr. Wicka said the Life Insurance Illustration Issues (A) Working Group met July 24, after not having met since before the 2019 Fall National Meeting. He explained that, like everyone else, the Working Group member’s attention was focused on addressing pandemic-related issues in their home states. He said that during its July 24 meeting, the Working Group reviewed two alternate versions of revisions to the *Life Insurance Disclosure Model Regulation* (#580). He said one version retains the current time frame for delivery of the policy overview at the same time as the buyer’s guide (either at the time of application or at the time of policy delivery if there is a free-look period). The other version has the policy overview delivered at the time of application.

Mr. Wicka said the Working Group also reviewed two alternative versions of the sample policy overview for term life insurance policies. One version shows the sample pre-underwriting; the other, after underwriting. He said the Working Group exposed the sample policy overview for a public comment period ending Aug. 28. He said the Working Group plans to meet via conference call to discuss any comments received and make any adjustments to the sample policy overview. He said the Working Group plans to develop sample policy overview documents for whole life and universal life, which will be exposed for public comment in the future.

Mr. Wicka said he believes the Working Group is making good progress, and he would like to request an extension of the Request for NAIC Model Law Development, so the Working Group can finish up its work.

e. **Life Actuarial (A) Task Force**

Mr. Weber said the Life Actuarial (A) Task Force met Aug. 6, Aug. 4 and Aug. 3. He said during these meetings, the Task Force adopted its June 25, June 18, June 11, June 4, May 28, May 21, May 14 and May 7 minutes, which included the following action: 1) adopted its Feb. 27, Feb. 20, Feb. 13, Feb. 6, Jan. 30 and Jan. 23 minutes; 2) adopted changes to the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805); 3) adopted amendment proposal 2020-05, which modifies the net premium reserve (NPR) to reflect continuous deaths and immediate payment of claims; 4) adopted *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold After November 25, 2020* (AG 49-A); 5) adopted amendment proposal 2020-06, which establishes a process for replacing the London Interbank Offered Rate (LIBOR); and 6) adopted amendment proposal 2020-07, which modifies VM-02, Minimum Nonforfeiture Mortality and Interest of the *Valuation Manual* by replacing the fixed 4% floor for the life minimum nonforfeiture interest rate with a reference to the rate used to determine the minimum funding for the cash value accumulation test in Internal Revenue Code § 7702 that will serve as the floor, as previously intended, but it will change as appropriate if this § 7702 rate changes.

Mr. Weber said the Task Force heard an update on the results of the yearly renewable term (YRT) field test modeling and range of interpretation survey from the American Academy of Actuaries (Academy) YRT Field Test Project Oversight Work Group, Oliver Wyman and NAIC staff. He said the Task Force also discussed proposed changes to the Model #805 nonforfeiture interest rate floor. The Task Force agreed to expose Section 4B of Model #805 with various nonforfeiture rate floor options between one-half of one percent (0.5%) and zero percent (0%), inclusive.

Mr. Weber said the Task Force heard an update from the Academy Annuity Reserves Work Group (ARWG) on the proposed timeline and approach for the development of a principle-based reserving (PBR) framework for non-variable annuities; and it adopted the report of the VM-22 (A) Subgroup, including its July 15, July 1, June 11 and May 20 minutes. He said the Task...
Force also heard an update from the Interstate Insurance Product Regulation Commission (Compact); and adopted the reports of the Longevity Risk (E/A) Subgroup, the Guaranteed Issue (GI) Life Valuation (A) Subgroup, the Experience Reporting (A) Subgroup, and the Indexed Universal Life (IUL) Illustration (A) Subgroup, including its June 2 and May 26 minutes.

Mr. Weber said the Task Force exposed the following amendment proposals: 1) 2019-33, which provides for the application of PBR requirements for group life insurance contracts with individual risk selection criteria issued under insurance certificates; 2) 2020-03, which clarifies that exact calculations for the NPR are allowed; and 3) 2019-34, which affirms that policies subject to the Standard Valuation Law (#820), prior to becoming parties to modified coinsurance (mod-co) agreements, are still subject to Model #820 after entering the mod-co agreements, and it provides guidance related to the actuarial opinion and asset adequacy analysis.

Mr. Weber said the Task Force exposed the 2021 Generally Recognized Expense Table (GRET) recommendation and heard an update from the Society of Actuaries (SOA) on research and education. He said the SOA update of 2020 Life Mortality Improvement Factors was exposed, and the Task Force heard updates from the Academy PBR Governance Work Group and Council on Professionalism.

Commissioner Donelon made a motion, seconded by Director Ramge, to adopt the following reports: Accelerated Underwriting (A) Working Group (Attachment Two); Annuity Disclosure (A) Working Group (Attachment Three), including an extension of the Request for NAIC Model Law Development; Annuity Suitability (A) Working Group (Attachment Four); Life Insurance Illustration Issues Working Group, including an extension of the Request for NAIC Model Law Development; and Life Actuarial (A) Task Force. The motion passed unanimously.

3. **Discussed Next Steps for the Life Insurance Online Guide (A) Working Group**

Director Froment reminded the Committee of the genesis of the Life Insurance Online Guide (A) Working Group. She explained that the Working Group came out of the work of the Life Insurance Buyer’s Guide (A) Working Group. That Working Group developed a two-page guide to life insurance. But the Working Group also recognized that there is a lot more information about life insurance that would be useful for consumers to know than what made sense to include in a two-page Life Insurance Buyer’s Guide. Director Froment said there was also information at that time on the NAIC website, under Insure U. This led to the Committee appointing the Life Insurance Online Guide (A) Working Group with the charge to “[d]evelop an online resource on life insurance, including the evaluation of existing content on the NAIC website, to be published digitally for the benefit of the public.”

Director Froment said this Working Group was originally chaired by Mary Mealer (MO), and it is currently chaired by Sarah Neil (RI). Director Froment said that while this Working Group has made progress in identifying topics and developing language, the number of Working Group members has declined and the Working Group has encountered difficulty making progress on the design and function of the buyer’s guide in an online format. Director Froment said the most likely explanation for this is that online design and computer applications are not the areas of expertise of the participants on this Working Group.

Director Froment said she has spoken Ms. Neil about taking a bifurcated approach to moving this project forward. She said first, she would like for the Working Group to focus on finishing the substance of the online guide. Next, she said she would like for the Working Group to enlist the expertise of the NAIC Communications Division, which is currently working on a rebranding of the NAIC website. She said Jennifer Cook (NAIC) has had conversations with NAIC Communications Director Laura Kane, who has expressed her willingness to assist with the project. She said Ms. Cook, in the coming weeks, will send an email to Committee members describing its work plan going forward and to seek additional state insurance regulator members to be on the Working Group.

4. **Discussed Next Steps for the Retirement Security (A) Working Group**

Director Froment said she would like to see the Retirement Security (A) Working Group make significant progress in the coming months. She said our recent experiences with the pandemic have only highlighted the critical importance of retirement security. She reminded the Working Group that during the latter part of 2019, Commissioner Taylor had—before leaving the District of Columbia Department of Insurance, Securities and Banking—heard presentations from a number of groups that were active in the area of retirement security, to learn about what they were doing. He also had requested comments on a draft work plan and received significant feedback.
Director Froment said, in order to move forward, this Working Group needs a chair and some additional members. She said she has reviewed the comments on the work plan, and suggests revising it in response to those comments to: 1) narrowly focus on areas where the NAIC and insurance regulators have expertise; and 2) leverage the extensive work of our many partners on this topic. She said she does not anticipate that this project will be overly burdensome, especially once a final work plan is in place. She said she would like to receive comments from regulators and interested parties on a revised work plan, as well as provide an opportunity for additional volunteers to join this Working Group. She said she does not anticipate that this project will be overly burdensome, especially once a final work plan is in place. She said if there are no volunteers to chair the group, Ohio is willing, but she would be happy to step aside if another state is interested in chairing this effort.

She asked Committee members, or members of their staff, to email David Torian (NAIC) with their interest to chair or be a member of this Working Group. She said Mr. Torian would be sending an email to Committee members in the coming weeks that will include a revised work plan with a deadline to submit comments.

5. **Discussed Reviewing the Design and Guidance for Life Insurance and Annuities Illustrations**

Director Froment explained that this topic is on the Committee agenda because of the conversations that occurred on the Committee’s July 10 conference call. She said part of the discussion that preceded the adoption of AG 49-A revolved around issues raised in a comment letter submitted by Birny Birnbaum (Center for Economic Justice—CEJ). She said Mr. Birnbaum’s comment letter is posted on the Committee page on the NAIC website in the materials for the July 10 conference call. She said Mr. Birnbaum also submitted a comment letter to the Executive (EX) Committee and Plenary, as AG 49-A is being considered for adoption at the upcoming meeting of the Executive (EX) Committee and Plenary. She mentioned that Mr. Birnbaum inquired whether this Committee would reconsider its adoption of AG 49-A; however, that is not procedurally possible. She explained that AG 49-A is now before the Executive (EX) Committee and Plenary for its consideration, noting that they are the appropriate groups to consider the issues raised by Mr. Birnbaum in his submitted comment letter.

Director Froment said the adoption of AG 49-A is an important first step in addressing some concerns with IUL illustrations involving multipliers. The Committee agreed to discuss the larger issues raised in the CEJ comment letter regarding all illustrations, as well as discuss perhaps having a new charge. She explained that the regulatory framework has evolved over time and naturally has evolved as state insurance regulators have addressed specific issues or concerns. She said state insurance regulators must react to new concerns or products by trying to adapt the existing framework to the issue before them. She said this can sometimes cause unintended consequences or leave gaps in the guidance.

Director Froment said she would like to reiterate her suggestion from the Committee’s July 10 conference call, that there may be a need to look closely at the current design and regulation framework for life insurance and annuity illustrations and determine what, if any, changes or additions may be needed. She said she does not have a charge to suggest at this time, but would like to take this first more formal step of placing the issue on the agenda and starting the discussion. Because the virtual meeting format does not allow for input from audience members, Director Froment said she would schedule a follow-up call in the near future to discuss a possible charge in more detail, including where that charge most likely belongs.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
The Life Insurance and Annuities (A) Committee met via conference call July 10, 2020. The following Committee members participated: Jillian Froment, Chair, Tynesia Dorsey and Peter Weber (OH); Marlene Caride, Vice Chair (NJ); Jim L. Ridling, Yada Horace and Steve Ostlund (AL); Alan McClain represented by Vincent Gosz and Vanessa Darrah (AR); Doug Ommen, Mike Yanacheak, Lindsay Bates and Kevin Clark (IA); Dean L. Cameron and Michele Mackenzie (ID); Vicki Schmidt represented by Julie Holmes, Tate Flott, Nicole Boyd, Craig Van Aalst, Barbara Torkelson and Brenda Johnson (KS); James J. Donelon represented by Rich Piazza, Frank Opelka and Tom Travis (LA); Jon Godfread (ND); Bruce R. Ramge and Martin Swanson (NE); Chris Nicoloopoulos represented by Roni Karnis (NH); Barbara D. Richardson (NV); Linda A. Lacewell represented by Mark McLeod, Victor Agbu and Bill Carmello (NY); and Mark Afable (WI). Also participating were: Russ Galbraith (AR); Jodi Lerner, and Perry Kupferman (CA); Eric Unger and Rolf Kaumann (CO); David Altmaier, Chris Struk and Carolyn Diggis (FL); Fred Andersen and John Robinson (MN); Cynthia Amann and Marjorie Thompson (MO); Steve Boston (PA); Elizabeth Kelleher Dwyer, Matt Gendron and Sarah Neil (RI); Mike Boerner, Rachel Hemphill Raja Malkani and David McElroy (TX); Tanji Northrup and Tomasz Serbinowski (UT); Craig Chupp (VA); and Lichiou Lee and John Haworth (WA).

1. **Adopted its Dec. 30, 2019, and 2019 Fall National Meeting Minutes**

Commissioner Ridling made a motion, seconded by Commissioner Caride, to adopt the Committee’s Dec. 8, 2019 (see NAIC Proceedings – Fall 2019, Life Insurance and Annuities (A) Committee) and Dec. 30, 2019 (Attachment One-A) minutes. The motion passed unanimously.

Director Froment said since the adoption of the *Suitability in Annuity Transactions Model Regulation (#275)* via conference call Dec. 30, 2019, questions have come up in the states regarding implementation of the model. She explained that given the second part of the Annuity Suitability (A) Working Group’s charge to “[c]onsider how to promote greater uniformity across NAIC-member jurisdictions” and after speaking with Commissioner Ommen, they agreed that it would be helpful for the Working Group to continue to try to develop guidance for the states as they implement the revised model. Director Froment said Commissioner Ommen has graciously agreed to chair this effort. Director Froment said the Working Group is scheduled to meet on July 29 as part of the virtual NAIC Summer National Meeting.

Director Range said the Market Conduct Examination Standards (D) Working Group plans to revise the Market Regulation Handbook in accordance with the revised Model #275. He asked whether the Working Group should postpone its work until after the Annuity Suitability (A) Working Group finishes its guidance. Commissioner Ommen agreed that it makes sense for the Market Conduct Examination Standards (D) Working Group to hold off for just a few months.

2. **Approved the Request for NAIC Model Law Development for Model #805**

Mr. Boerner explained that the Request for NAIC Model Law Development for the *Standard Nonforfeiture Law for Individual Deferred Annuities (#805)* arises out of concern with the 1% minimum nonforfeiture accumulation rate, which may be difficult for insurers to achieve in the current very low interest rate environment. He said this Request for NAIC Model Law Development is to revise Model #805 to address this minimum nonforfeiture rate.

Mr. Carmello said he would like to expand the Request for NAIC Model Law Development to address the current cap in Model #805. He explained that while this is not an issue at the moment, during a high interest rate environment in the future, the 3% cap currently in Model #805 could become a problem. He said it makes sense to address both of these issues at this time.

Mr. Gendron said he would like for Life Actuarial (A) Task Force to consider whether the minimum nonforfeiture rate should be something other than 0%, like 0.5%. Mr. Boerner said under the Request for NAIC Model Law Development, the Task Force could also consider other alternatives between 0% and 1%. He clarified that the move to 0% does not mean a company is prohibited from guaranteeing more than that.
Director Froment suggested that the Committee vote on the current Request for NAIC Model Law Development, which is responding to the current situation in the marketplace. She suggested that the Task Force discuss the additional issues raised by Mr. Carmello and Mr. Serbinowski and report back to the Committee with any suggestions regarding additional modifications to Model #805. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI would be supportive of having the Task Force look at the cap, but the current Request for NAIC Model Law Development is responding to an urgent need and the cap is not likely to be an issue in the near term. Liz Pujolas (Insured Retirement Institute—IRI) agreed with Mr. Bayerle that revisiting the cap could occur down the road.

Commissioner Richardson made a motion, seconded by Commissioner Caride, to approve the Request for Model Law Development with respect to Model #805. The motion passed unanimously.

3. ** Adopted Technical Revisions to AG 48**

Mr. Boerner said a couple of edits were made to *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model 830) (AG 48)* that were already made to the *Term and Universal Life Insurance Reserve Financing Model Regulation (#787)*. He said one was a reference change to the Credit for Reinsurance Model Law (#785) and another was a reference change to the Credit for Reinsurance Model Regulation (#786). He said AG 48 needs to remain similar to Model #787, as there are situations in which both are needed for some period of time to cover their portion of XXX financing arrangements.

Mr. Ostlund made a motion, seconded by Director Ramge, to adopt technical revisions to AG 48 (see *NAIC Proceedings – Summer 2020, Executive (EX) Committee and Plenary – Attachment Three*) The motion passed unanimously.

4. ** Adopted Valuation Manual Amendments**

Mr. Boerner said there were seven *Valuation Manual* amendments for the Committee to consider. He said they are primarily technical in nature. He said one example involves a reference to the London Interbank Offered Rate (LIBOR), which is scheduled to go away in 2021. He said *Valuation Manual* amendment 2020-06 revises the *Valuation Manual* to be with when LIBOR is scheduled to go away. He said another example is *Valuation Manual* amendment 2020-07, which replaces the 4% floor for the minimum nonforfeiture interest rates with a reference to Internal Revenue Service (IRS) §7702 with which it was originally intended to coordinate. Director Ramge asked if there are any references to LIBOR in any of the NAIC models. Mr. Boerner said he does not know, but the question could be researched.

Commissioner Ommen made a motion, seconded by Commissioner Caride, to adopt the *Valuation Manual* amendments (see *NAIC Proceedings – Summer 2020, Executive (EX) Committee and Plenary – Attachment Four*). The motion passed unanimously.

5. ** Adopted AG 49-A**

Mr. Andersen explained the background behind the development of AG 49-A, which starts with the *Life Insurance Illustrations Model Regulation (#582)*. Model #582 specifies the requirements for life insurance illustrations. Mr. Andersen said insurance companies favor illustrations because they allow the demonstration to consumers of both guaranteed and non-guaranteed elements of life insurance policies. He said an example of a non-guaranteed element is the credited rate on a policy’s account value in a given year. He said, for some policies in some products, this credited interest rate is determined at the beginning of a policy year, dependent on the market interest rate and market factors at that time. He said for indexed universal life (IUL) insurance policies, the credited interest rate plays out during a policy year. He said in many cases, it depends on the movement of a stock market index during that year. He explained that if Standard & Poor’s 500 index (S&P 500) has a good year, there will be a higher credited interest rate; but if the S&P 500 has a bad year, the credited interest rate might be zero. He said the account might not lose money due to that movement, but it does not gain money in a bad stock market scenario either. He said the question is how these credited interest rates should be illustrated.

Mr. Andersen explained that the Model #582 contemplates constraints on illustrations based on what has recently happened. He said for indexed products, there were concerning practices taking place involving illustrations of what has recently happened, which led to *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49)* being developed in 2015. He said an extreme example of what AG 49 was trying to prevent is risky international stock funds that had a good five-year run being the baseline for an illustration that projects the next 30 years.
Mr. Andersen explained that in 2018, commissioners became aware of product innovations that were leading to the illustration of even higher credited rates than was contemplated when AG 49 was being developed. The biggest innovation was the multiplier. He said the multiplier results in more downside and more upside than related indexed products seen before. He said in 2018, the Committee charged the Life Actuarial (A) Task Force, which formed the IUL Illustration (A) Subgroup, to address any concerns with these products. Throughout 2019, there were a number of open in-person meetings and conference calls, and key decisions were made. Mr. Andersen said the first decision by the Task Force was to reject a proposal from a coalition of active IUL writers suggesting that adding disclosures would be a sufficient way to address the charge. The Task Force instead decided to take a more conservative approach and place additional constraints on the illustrated credited rates. The second decision by the Task Force was to reject a proposal by a large contingency of companies that suggested that products with multipliers should illustrate more favorably than products without multipliers. The Task Force instead decided to allow products with multipliers to illustrate no more favorably than products without multipliers. The third decision was to add more conservatism in the illustration of policy loans, cutting in half the illustrated benefit of borrowing at a certain rate and illustrating at a rate that was up to 1% higher and under Task Force adoption would now be 0.5% higher.

Mr. Andersen said the general concept behind these issues is selecting a point on the spectrum of allowing innovation on one side preventing loopholes on the other side. He acknowledged that on the Task Force, there were many differing opinions about where on the spectrum of allowing innovation verses preventing loopholes the Task Force should land. He said AG 49-A lands somewhere in the middle, but it is significantly more conservative than AG 49.

Commissioner Ommen spoke in support of AG 49-A. He said this project is critically needed at this time and reflects the knowledge and diligence of the Task Force members. He said AG 49-A is a big step forward for consumers.

Scott R. Harrison (IUL Coalition) said the outcome, while not perfect, does successfully resolve the concerns raised by state insurance regulators. He said that the IUL Coalition still supports disclosures, and there is opportunity to work on enhanced disclosures for innovative products. Mr. Bayerle is supportive of AG 49-A. He said it addresses the issues at hand without stifling innovation. He said that while not perfect, it will be a positive outcome for consumers.

Birny Birnbaum (Center for Economic Justice—CEJ) cautioned the Committee to keep in mind that the purpose of this effort is to reign in unrealistic and deceptive IUL illustrations and prevent insurers from using product designs to juice accumulation values with no real benefits to consumers. He said these are faux innovations. He said this resulted in an approach to setting maximum crediting rates that is overly complex, untethered to reality and virtually impossible for regulatory or consumer accountability.

Mr. Birnbaum said AG 49-A was developed under a flawed process orchestrated by industry. He said AG 49-A reflects policy decisions that are fundamentally anti-consumer, and they should have been made by the Committee instead of the Task Force actuaries. He said a high-level task force should be created to address the inherent deceptiveness and over-complexity of current illustrations. He said AG 49-A is too complex to permit any accountability of insurers to consumers or state insurance regulators, and it still creates opportunities to game the guideline.

Mr. Birnbaum identified four major areas of concern:

1) The flawed process used to develop AG 49-A was the result of an inappropriate request by the Task Force for the ACLI to coordinate industry to come up with a proposal, effectively giving ownership of the AG 49 rewrite to the very insurers whose practices were causing the problems the Task Force was charged with stopping. Mr. Birnbaum said this resulted in an approach to setting maximum crediting rates that is overly complex, untethered to reality and virtually impossible for regulatory or consumer accountability.

2) The Task Force should be directed to work with the Independent Proposal, which was drafted by independent experts who have expertise in the design and sale of IUL and other life insurance products, who have no financial interest in the outcome. Mr. Birnbaum said the Independent Proposal establishes a simpler, more effective and more accountable approach to establishing crediting rates for IUL illustrations.
3) The application of any revised protections should apply to all illustrations whether for new policies or for new illustrations on in-force policies regardless of date of issue. Mr. Birnbaum said if the purpose for revising AG 49 is to stop unrealistic illustrations and provide consumers with better information and expectations about how the IUL product will operate and perform, logic dictates that the consumer protections in a revised AG 49 should be available to all consumers.

4) The revised AG 49-A must eliminate loan arbitrage that permits illustrations to show premium and finance policy loans as a risk-free way to make money. Mr. Birnbaum said the current AG 49 and proposed AG 49-A permit policy loans to be illustrated with a policy loan interest rate less than the crediting rate for illustrating account value accumulation. He said this is an example of illustrating riskless arbitrage—the consumer can borrow money at one rate and earn a higher rate of return without any risk. He said this allows IUL illustrations to present future loans on the policy as cash disbursements that never need to be paid back because the policy is continuing to earn the constant better-than-loan-interest-rate returns.

Bonnie Burns (California Health Advocates) said she was shocked by the complexity of the illustration that Mr. Birnbaum attached to his comment letter. She said that a person would need to take a class to be able to understand this document.

Director Froment said she has been actively engaged with Mr. Boerner and Mr. Andersen throughout the development of AG 49-A. She said it is clear to her that they have made incredible progress that will have an immediate positive impact on consumers. She said the longer action is delayed, the longer these illustrations will continue the way that they are. She said she recognizes that there is a broader question, and she would like to discuss at the Summer National Meeting the possibility of a new charge to thoroughly review the design and regulation of illustrations and determine what changes, if any, might be needed and what group might be best able to handle the charge.

Mr. Carmello said New York would support taking a fresh look. Commissioner Ommen said he supports moving forward with AG 49-A because there is a need for immediate action. However, he recognizes that a state insurance regulator’s work is never done, and he would support further review of illustrations broadly and the Task Force’s consideration of aspects of the Independent Proposal, to the extent that they were not considered before.

Commissioner Ommen made a motion, seconded by Commissioner Ridling, to adopt AG 49-A amendments (see NAIC Proceedings – Summer 2020, Executive (EX) Committee and Plenary – Attachment Five). The motion passed unanimously.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
The Life Insurance and Annuities (A) Committee met via conference call Dec. 30, 2019. The following Committee members participated: Doug Ommen, Chair, (IA); Stephen C. Taylor, Vice Chair (DC); Jim L. Ridling represented by Steve Ostlund (AL); Keith Schraad represented by Vincent Gosz (AZ); Trinidad Navarro represented by Fleur McKendell (DE); Dean L. Cameron (ID); James J. Donelon (LA); Bruce R. Ramge (NE); Barbara R. Richardson (NV); Linda A. Lacewell represented by Mark McLeod (NY); Jillian Froment (OH); Hodgen Mainda represented by Brian Hoffmeister and Rachel Jade-Rice (TN); and Mark Afable represented by Richard Wicka (WI). Also participating were: Jodi Lerner and Perry Kupferman (CA); Jason Lapham (CO); Jim Walker (FL); Teresa Winer (GA); Amy Beard (IN); Tate Flott and Julie Holmes (KS); Al DeRemigis (MD); Lindsay Laxon (ME); Renee Campbell (MI); Cynthia Amann (MO); Keith Nyhan and Denise Lamy (NH); Jeffrey Rohaly (PA); Elizabeth Kelleher Dwyer, Matt Gendron and Sarah Neil (RI); Andrew Dvorine (SC); Mike Boerner, Doug Danzeiser and Phil Reyna (TX); Tomasz Serbinowski (UT); and Michael Gerachis (VA).

1. **Adopted Revisions to Model #275**

Commissioner Ommen explained that during the Committee’s meeting at the Fall National Meeting, the Committee directed the Annuity Suitability (A) Working Group to review and consider revisions to the proposed draft appendices to the *Suitability in Annuity Transactions Model Regulation* (Model #275). He said the Working Group met Dec. 19 via conference call and revised the draft appendices (see NAIC Proceedings – Summer 2020, Life Insurance and Annuities (A) Committee, Attachment Four-A).

Commissioner Ommen said that prior to this conference call, NAIC staff distributed a draft of proposed revisions to Model #275 reflecting the Working Group’s revisions to the appendices during its Dec. 19 call and additional revisions he is suggesting as Committee chair. He suggested that the Committee review the draft and discuss his suggested revisions. There was no objection.

Commissioner Ommen discussed the suggested revisions to Section 6A(2)—Disclosure Obligation. He explained that the suggested revisions are being made for consistency with the proposed language for Appendix A. He requested comments. There were no comments.

Commissioner Ommen discussed the suggested revisions to Section 6A(4)—Documentation Obligation. He explained that the suggested revisions to this provision reflect the discussion during the Working Group’s Dec. 19 conference call to add an Appendix C.

Commissioner Ommen explained the suggested revision to Section 6A(5)—Application of the Best Interest Obligation to add the word “direct” for clarity. He said that during its discussions of the proposed revisions to Model #275, the Working Group extensively discussed Section 6A(5) and its intent to apply the proposed best interest standard of conduct to any producer who exercises material control or influence in the making of a recommendation and who receives direct compensation as a result of the recommendation or sale. He requested comments. There were no comments.

Commissioner Ommen next discussed the proposed drafting note for Section 6C(2)(h)—Supervision System. He explained that the Utah Insurance Department suggested the drafting note to clarify the intent of Section 6C(2)(h).

Director Cameron asked about the provision’s intent. Commissioner Ommen explained that Section 6C(2)(h) is intended to require insurers to eliminate certain types of incentives targeted at specific annuities within a limited period. He said Section 6C(2)(h) does not prohibit general incentives regarding sales of a company’s products with no emphasis on any particular product. He said the proposed drafting note is consistent with this intent.

Gary Sanders (National Association of Insurance and Financial Advisors—NAIFA) suggested the Committee consider amending the drafting note to more closely track the language in Section 6C(2)(h) by deleting the words “that promote” and replacing those words with “based on.”

Mr. Serbinowski said Utah has no objection to the suggested revision. After discussion, the Committee accepted Mr. Sanders’ suggested revision.
Commissioner Ommen next discussed the suggested revisions for Section 6E—Safe Harbor. He said the suggested revisions to Section 6E are the result, in part, of his discussions with NAIC staff and the U.S. Department of Labor (DOL) staff, particularly with respect to language in Section 6E concerning fiduciaries. He explained that the suggested revision to Section 6E(1) clarifies the general scope of the safe harbor. He said the suggested revisions to Section 6E(4)(b) clarify the scope of the safe harbor with respect to investment adviser representatives. He said the suggested revision to Section 6E(4)(c) to change the statutory citation from Section 4975(f)(8)(J)(i) of the Internal Revenue Code (IRC) to Section 4975(e)(3) of the IRC also is clarifying. He explained that the initial IRC citation was not wrong, but, as explained by the DOL staff, it was not broad enough to be consistent with Section 3(21) of the federal Employee Retirement Income Security Act of 1974 (ERISA).

Director Ramge suggesting adding the language “and any amendments or successor statutes thereto” to Section 6E(4)(c) for consistency with the language in Section 6E(5)(c). There was no objection to his suggestion.

Commissioner Ommen discussed the suggested revisions to the drafting note for Section 6E(5)(b). He said the suggested revisions are clarifying. There was no objection to the suggested revisions. He discussed the suggested revisions to Section 6E(5)(c), which also are a result of his discussion with the DOL staff. He explained that under some provisions in federal law describing fiduciaries, a fiduciary may not have fiduciary duties. He said the suggested revisions address this issue. There was no objection to the suggested revisions.

The Committee next discussed proposed Appendix A—Agent (Producer) Disclosure for Annuities. Commissioner Ommen said Appendix A is based on and was developed by the Working Group to provide guidance on the information to be provided to consumers in accordance with Section 6A(2)—Disclosure Obligation.

Director Froment acknowledged and expressed appreciation for the comments received on Appendix A. She said that in reading the comments, she believes many of the suggested revisions have already been extensively discussed, and many are outside the scope of the proposed revisions to Model #275. She reiterated that the Working Group developed the appendices to provide guidance and clarity of expectations for producers. She said the appendices were not meant to be buyer’s guides for consumers.

Commissioner Ommen walked the Committee through the provisions of Appendix A, beginning with its proposed title. Director Froment said she could support the Fixed Annuity Consumer Choice Campaign’s (FACC) suggestion to add the word “insurance” to the title for consistency with the next section in the appendix. There was no objection to her suggestion.

Commissioner Ommen discussed next the section in the appendix describing the information the insurance producer is to provide in the form. He explained that the Working Group’s revisions to Appendix A included an “Additional Information” section, which required the inclusion of the producer’s national producer number (NPN). He said that as part of the Committee chair’s suggested revisions to Appendix A, he has deleted the “Additional Information” section because the information that was to be provided under that section was outside the scope of the proposed revisions to Model #275. He suggested including the NPN in this section. There was no objection to his suggestion.

Commissioner Ommen next discussed the “What Types of Products Can I Sell You?” section.

Director Froment said the Working Group extensively discussed this section. She said the purpose of this section is to provide meaningful information to consumers without overwhelming them with too much information and making it lose its meaning. She said she believes the proposed language for this section strikes a good balance.

Commissioner Taylor and Commissioner Donelon expressed support for Director Froment’s comments. No revisions were made to this section.

Commissioner Ommen next discussed the section “How I’m Paid for My Work.” He said he is suggesting alternative language to what the Working Group developed for this section, which he believes is more consumer friendly. He asked for comments.

Director Froment expressed support for Commissioner Ommen’s alternative language with some minor revisions. There was no objection to substituting Commissioner Ommen’s alternative language for this section for the Working Group’s language.
Director Froment suggested deleting “or third parties such as independent marketing organizations” and replacing it with “other sources” and requiring the producer to further describe the other sources of compensation. She said she suggests this revision because consumers typically will not know what an “independent marketing organization” is. She also suggested deleting the word “cash” in the box and replacing it with “above” for clarity. There was no objection to her suggested revisions.

Commissioner Ommen reiterated his reasons for deleting the “Additional Information” section because the information to be included in this section was outside the scope of the proposed revisions to Model #275. There was no objection to deleting the section.

The Committee next discussed proposed Appendix B—Consumer Refusal to Provide Information. No changes were made to this appendix.

The Committee next discussed proposed Appendix C—Consumer Decision to Purchase an Annuity NOT Based on a Recommendation.

Director Froment explained that during the Working Group’s Dec. 19 conference call, the Working Group decided it was appropriate to split Appendix B into two appendices, with Appendix C being the second appendix because the appendices address the two different situations described in Section 6A(4)—Documentation Obligation.

Commissioner Ommen asked for comments from the Committee on the appendices.

Commissioner Richardson asked if it was the Working Group’s intent to restrict the appendices, if possible, to one page. Commissioner Ommen said for Appendix A, he believes it could be one page, but there was no specific intent to make it one page.

Commissioner Richardson explained that she has seen issues with forms having the acknowledgement and signature on a separate page removed from the substantive language in the form. She suggested adding a drafting note above the acknowledgement and signature lines to instruct insurers that the acknowledgement and signature should be in immediate proximity to the disclosure language. There was no objection to her suggestion.

Director Froment made a motion, seconded by Commissioner Taylor, to adopt the revisions to Model #275 (see NAIC Proceedings – Summer 2020, Executive (EX) Committee and Plenary, Attachment Two-A). Alabama, Arizona, Delaware, District of Columbia, Iowa, Louisiana, Nebraska, Nevada, Ohio, Tennessee and Wisconsin voted in favor of the motion. New York voted against the motion. The motion passed.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.
Accelerated Underwriting (A) Working Group  
Virtual Summer National Meeting  
July 31, 2020

1. Adopted its March 12, Feb. 20, Feb. 6, Jan. 23, and 2019 Fall National Meeting Minutes

2. Heard an Update Presentation on the Work of the Working Group

Director Muriel said the rest of this meeting is going to be an update presentation on the progress of the Working Group. He said he is going to review the process the Working Group is following, and Mr. Tsang will review some of the highlights of the information shared with the Working Group.

Director Muriel explained that the Working Group was formed by the Life Insurance and Annuities (A) Committee at the 2019 Summer National Meeting. He said the Working Group was charged to “[c]onsider the use of external data and data analytics in accelerated life underwriting, including consideration of the ongoing work of the Life Actuarial (A) Task Force on the issue and, if appropriate, drafting guidance for the states.” He said there are 12 members on the Working Group: himself as chair, Ms. Arnold as vice chair, Colorado, Iowa, Louisiana, Missouri, Nebraska, North Dakota, Ohio, Rhode Island, Washington and Wisconsin.

Director Muriel said the Working Group held its first coordinating conference call Oct. 2, 2019, and it developed a three-phase work plan. He explained that the first phase is information gathering, the second phase will focus on identifying the issues and deciding on a work product, and the last phase will focus on putting pen to paper. He said the Working Group hopes to have a first draft of its work product by the end of this year, with a final product to the Life Insurance and Annuities (A) Committee by the 2021 Summer National Meeting.

Director Muriel said the Working Group has met 16 times, including its current meeting. He said six of those meetings were held in regulator-to-regulator session pursuant to paragraph 3 of the NAIC Policy Statement on Open Meetings (specific companies, entities of individuals) when requests were made to share information involving particular companies or company-specific proprietary intellectual property. He said the Working Group’s goal is to maintain as open a process as possible, and it even held both open and regulator-to-regulator session with the same presenters.

Director Muriel said the Working Group has heard presentations from: 1) insurance companies about their accelerated underwriting programs and practices; 2) consulting firms about their experience in assisting companies to build and review accelerated underwriting programs (Deloitte, Risk & Regulatory Consulting LLC, and Milliman); 3) a consumer advocate about consumer concerns regarding the use of accelerated underwriting from a fairness perspective (Center for Economic Justice—CEJ); 4) the American Academy of Actuaries (Academy) about accelerated underwriting from an actuarial perspective; 5) lawyers from two Illinois law firms about data collection and privacy from a legal standpoint (Foley & Lardner LLP and Edelson PC); and 6) a machine learning assurance company about its experience in assisting companies to establish controls and audits for artificial intelligence (AI) (Monitaur).
Director Muriel explained the next steps that the Working Group plans to follow. He said the Working Group plans to form two ad hoc subgroups. He said one is called the Ad Hoc Liaison Subgroup, which will focus on coordinating with the all the other NAIC groups that are looking at related issues; and the other is called the Ad Hoc Drafting Subgroup, which will focus on synthesizing information and making a recommendation to the Working Group on a work product.

Mr. Tsang explained that accelerated underwriting is an emerging platform; and traditional underwriting is still the norm for most applications. He said companies are pursuing accelerated underwriting because it offers many attractive business incentives, such as the potential to save on underwriting expenses, especially for low premium policies like term life insurance, where it can take companies several years to break even. Accelerated underwriting is also attractive to companies because when underwriting takes less time, companies can underwrite more policies. Life insurance applicants also benefit from accelerated underwriting because the process can be accomplished entirely online without any invasive blood tests.

Mr. Tsang mentioned that companies may give up important medical information in using accelerated underwriting, which may lead to higher mortality risk. He said, unlike traditional underwriting, which is based on the current underwriting manual, accelerated underwriting relies on the reasonableness of its algorithm. He said accelerated underwriting also requires companies to implement additional controls and documentation responsibilities, including disclosures to applicants who receive an adverse underwriting decision.

Mr. Tsang said with respect to the data used in accelerated underwriting, insurers have the sole responsibility to collect, scrutinize and analyze the input data to ensure that it is accurate. He said some companies, with the help of reinsurers, use third parties to collect data and provide an initial risk analysis. He said some accelerated underwriting programs “triage” applications into separate groups. He explained that under some accelerated underwriting programs, when an applicant is triaged as someone who should go through the remaining accelerated underwriting steps, the algorithm then assigns the applicant a risk score and recommends a risk class. He said a human underwriter reviews that recommendation and may request a blood or urine test even when the accelerated underwriting program recommends otherwise.

Mr. Tsang said the data collected for accelerated underwriting is normally a subset of traditional underwriting data, and it includes a mix of medical and behavioral data, such as: 1) data provided in the life application; 2) an attending physician statement; 3) prescription drug history; and 4) Medical Information Bureau (MIB) info. He said it is important to note that accelerated underwriting programs and its algorithms are assisting, not replacing, human underwriters by collecting data and performing an initial risk analysis.

Mr. Tsang explained that traditional underwriting is considered the “gold standard,” and each company expects its accelerated underwriting program to replicate the gold standard via back-testing. He said the interactions between the accelerated underwriting program and the human underwriter enable the algorithm to learn from its mistakes and improve via the machine learning process. He explained that back-testing may also identify isolated prior underwriting errors and provide valuable feedback to the human underwriter.

Mr. Tsang explained that accelerated underwriting algorithms are not static. He said most are on their second- or third-generation algorithm, and they continue to change through machine learning processes. He said insurers develop controls and documentation for the first-generation algorithms, but they sometimes place less emphasis on the controls and documentations for later generations. He said it is important that companies continue to perform the checks and balances on all generations of their accelerated underwriting programs. Besides medical data, some companies believe that behavioral data can also provide...
important information about an individual’s risk profile, especially for younger people. Some examples of the behavioral data collected are gym membership, profession, marital status, family size, shopping habits, wearables and credit scores.

Mr. Tsang said if behavioral data is not properly scrutinized, association may be confused with causation and lead to unfair adverse underwriting decisions. For example, a high-income individual is perceived as someone who has excellent medical care. However, a high-income individual may also have the resources for illegal drug use, or a healthy young couple may not have the dispensable income to join a gym but exercise on their own. In that case, lack of a gym membership should not indicate an increased mortality risk. He cautioned that behavioral data could lead to incorrect conclusions or unintended discrimination.

Mr. Tsang said the Working Group has spoken with only a few major life insurers about their current accelerated underwriting practices, so its findings are not conclusive. He said, generally, larger companies have resources to develop their own accelerated underwriting programs. Accelerated underwriting programs require plenty of resources, and they can be expensive.

Mr. Tsang said compliance with laws and regulations is the responsibility of a company’s chief risk officer (CRO), general counsel, and enterprise risk management committee. Smaller companies may not have the required resources to develop their own programs and rely on external consulting firms to monitor and build controls for their accelerated underwriting programs.

Mr. Tsang said insurers have high expectations for accelerated underwriting programs because of their potential to reduce human errors in data processing and allow human underwriters to spend more time on high value activities. He said the potential for savings is significant for low premium products, such as term insurance. The companies expect that the expense savings, along with the ability to issue more policies, compensates for the potentially higher mortality cost.

Mr. Tsang said based on a 2019 Society of Actuaries (SOA) “Accelerated Underwriting Practices Survey,” companies rely mostly on data in the application form and other medical-related data. Some companies also rely on other data such as motor vehicle records, criminal history, credit scores and financial data. Very few companies use data such as electronic health records, wearables and social media usage. Mr. Tsang said companies are currently using back-testing, random holdouts, post-issue monitoring and other techniques to examine the accuracy of accelerated underwriting programs. He said peer reviews are also used to test a program’s compliance with applicable laws and regulations.

Mr. Tsang said there are several federal laws that may affect accelerated underwriting programs, such as the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA), which protects medical data privacy. There is the federal Fair Credit Reporting Act (FCRA), which protects credit data privacy and prohibits illegal use of credit data. Most recently, at the state level, there is the NY Circular Letter No. 1 issued in January 2019, which outlines the key compliance issues for accelerated underwriting; i.e., integrity of input data, transparency of algorithm, and adequate disclosure). There is also Florida House Bill 1189, which is the first state law that prohibits insurers from using genetic data for underwriting and pricing of life, disability and retirement products.

Mr. Tsang said credit data is not widely used in accelerated underwriting programs today, but that is likely to change over the next decade. He said credit data is popular among the companies that use it, like employers and banks, because it covers most Americans and the data is updated frequently. A few life insurers currently use credit data as an input item for their AU programs. Mr. Tsang said those companies have performed actuarial studies to justify its soundness, actuarially. He said a typical credit report contains about 800 attributes, which include a consumer’s employment history, mortgage payment history and rental payment history, among other things. Insurers only use about 50 out of the 800 attributes because many of these attributes are correlated with one another.

Mr. Tsang said using credit score data is controversial, as the distributions of credit scores are quite different among ethnic groups and there is not a lot of information on how companies document their monitoring and control processes for unlawful discrimination. He said the selected attributes are perceived as variables that explain the consumer’s behavior. He said the mortality hypothesis is that individuals with high credit scores are expected to have lower mortality risk profiles; but the correlation between mortality and credit score is not absolute. For example, having a high credit score does not shield a person from illness.

Mr. Tsang said it is easy to confuse association with causation. He said two items that behave in similar patterns does not mean that one is causing the other. He said while some companies consider credit score as a valuable input to explain mortality risk, some groups challenge this view due to the potential confusion of association with causation. He said credit scores should not be used in isolation, and checks and balances must be employed to minimize the occurrence of unintended discrimination.
against protected classes. He suggested that one possibility is to use credit data as a supplemental data point rather than a key input variable in order to use it as a check for a negative rather than a check for a positive.

Mr. Tsang said the FCRA protects consumers from illegal uses of their credit scores, and it allows consumers to see their data and challenge the data’s validity; however, the scope of FCRA is limited, and it does not cover personal information such as credit card purchases, social media usage and wearables. Consumers do not have an avenue to challenge the validity of non-FCRA data or any adverse decisions that may arise as a consequence. Currently, few companies use non-FCRA data, but this may change over time.

Mr. Tsang highlighted a few questions that state insurance regulators may want to consider, such as whether insurance regulations should be updated to disallow the use of non-FCRA covered data or to provide avenues for customers to challenge the validity of non-FCRA data and its adverse effects.

Mr. Tsang said Birny Birnbaum (CEJ) gave a presentation where he raised a number of concerns regarding the potential for adverse underwriting decisions to unfairly affect minorities. Mr. Birnbaum said: 1) the regulatory framework has failed to keep pace with the market in terms of using big data and AI; 2) the input data used by insurers may have inherited biases, which should be removed or controlled; 3) regulations should promote fairness, and underwriting decisions should not be justified solely on actuarial soundness; and 4) the life industry should promote availability and affordability of insurance products to protected classes and curtail any unlawful discrimination. Mr. Tsang said Mr. Birnbaum also provided some other suggestions, including requiring companies using accelerated underwriting to file their accelerated underwriting programs with state insurance regulators for review, which is consistent with the accelerated underwriting programs for auto and property insurance. Mr. Birnbaum also suggested extending FCRA-type protections to all input data for accelerated underwriting.

Ms. Shepherd asked whether companies are using accelerated underwriting currently. Mr. Tsang said there are large companies developing and using their own accelerated underwriting programs, and smaller companies are working with consultants or reinsurers to develop a template to modify and use. He said right now, about 10% of applications go through accelerated underwriting, but he expects that to increase to around 40% within the next decade.

Mr. Birnbaum asked about how the Ad Hoc Liaison Subgroup and the Ad Hoc Drafting Subgroup would be formed and report their work. Director Muriel said the membership for the subgroups is just getting established, but he assured Mr. Birnbaum that the subgroups would hold open meetings to discuss how to develop and report their work to the Committee.

Peter Kochenburger (University of Connecticut School of Law) asked how important it is for accelerated underwriting modelers to be able to plausibly provide a causation analysis as well as a correlation. Mr. Tsang said it is important that there be some reasoning and rationale provided for why one variable would be causing another, above and beyond observing a pattern or correlation between two variables.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
Accelerated Underwriting (A) Working Group
Conference Call
March 12, 2020

The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call March 12, 2020. The following Working Group members participated: Robert H. Muriel, Chair, Mike Chrysler, Bruce Sartain, Fred Moore, Vincent Tsang and Lita Mavrothalasitis (IL); Grace Arnold, Vice Chair, Fred Andersen and John Robinson (MN); Jason Lapham (CO); Russ Gibson and Lindsay Bates (IA); Rich Piazza (LA); Chris Aufenthie and Ross Hartley (ND); Sarah Neil (RI); Lichiou Lee and David Hippen (WA); and Mark Afable, Barbara Belling, Susan Ezalarab, Diane Dambach, Rebecca Rebholz, Mary Kay Rodriguez, Renee Fabry and Richard Wicka (WI). Also participating were: Katherine Hrouda, Perry Kupferman and Pam O’Connell (CA); Wanchin Chou (CT); Jo McGill (ID); Karl Knaale (IN) Brenda Johnson and Barbara Torkelson (KS); Renee Campbell (MI); Denise Lamy, Roni Karnis and Karen McCallister (NH); Peter Dumar and Todd Cafarelli (NY); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed Next Steps

Director Muriel reminded the Working Group and interested parties that the Spring National Meeting is cancelled and plans for having meetings via conference call are underway. He said he has been considering the best way for the Working Group to commence with the next phases of its work plan. He said one idea is to appoint two subgroups: 1) a drafting subgroup; and 2) an NAIC Liaison Subgroup.

Director Muriel explained that the drafting subgroup would focus on synthesizing the information received in the presentations and making a recommendation to this Working Group about the type of work product to develop. He said the drafting subgroup could also propose a process for accomplishing the work product. He said the NAIC Liaison Subgroup could focus on ensuring that this Working Group is aware of the work undertaken by all other NAIC groups, past and present, that might be useful. He asked that people with feedback on the subgroups or interest in participating in either subgroup email Jennifer R. Cook (NAIC).

2. Heard Presentations

Director Muriel said the Working Group today would hear presentations from two Illinois law firms: 1) Edelson PC; and 2) Foley & Lardner LLP.

a. Accelerated Underwriting: Potential Data Collection Methods and Concerns

Director Muriel introduced Shawn Davis (Edelson PC) as the director of digital forensics with Edelson PC and an adjunct industry professor with the Illinois Institute of Technology. Mr. Davis said he was going to focus his presentation on: 1) how consumer data is collected and users are tracked online; 2) issues that may be of concern with accelerated underwriting going forward; and 3) suggestions for possible guidelines or regulations.

Mr. Davis said there are two main types of data collection mechanisms: 1) active data collection; and 2) passive data collection. He said active data collection occurs when a consumer knowingly gives information, usually filling out a survey, web registration forms or social media postings. Passive data collection is running in the background, and it tracks consumers’ activity through the use of cookies, IP addresses or MAC addresses, geolocation, browsers and http headers. He said every time someone clicks on a website, third parties are automatically notified. He explained that his firm uses a network interception proxy to see background network traffic. He gave an example where, in 2018, he went to four websites and clicked on one link on each website, and 192 third parties were contacted by clicking on one link on four sites. He conducted this same test two and a half years later, and 347 third parties were notified.

Mr. Davis said there is a lot of information being collected and transmitted to third parties in which consumers have no idea. Almost all websites have third-party software code built in, like Google code, Facebook code or Adobe code. Each website will place a cookie on your computer to identify you, or it will read that cookie to see if it is you when you are looking at a site. Whatever pages you click on, the third parties know based on the cookies. Companies also track geolocation, and they are able to do so with a great deal of specificity so they can tell where you are and what you have looked at. This is collected from an app.
Mr. Davis said geolocation is also collected from people’s devices. For example, if someone turns on Google maps, Google sees everywhere you have gone. Apple phones also track geolocation, but they do not send the information back to Apple. Facebook also collects information, which is personally linked to the individual. Educational platforms also collect massive amounts of information in order to implement adaptive learning programs. Health information is another category of information that is collected and shared with third parties. For example, GoodRx provides discounts for prescription drugs, and it sends names of drugs selected for coupons to Facebook. Mr. Davis said some telehealth apps also disclose medical information to third parties. Financial data is another category of data that is collected. Data is collected every time someone swipes their credit card or uses a mobile payment application. Then, there are financial transaction data aggregators like Yodlee and Mint. Mr. Davis said these companies provide a service that allows consumers to log on to their accounts and pull transactional data into a single application. Yodlee then sends “de-identified” data to clients to determine risk.

Mr. Davis explained that consumers cannot always trust that their data has been truly de-identified, and he explained that there is a difference between “de-identified” data and “anonymized” data. He explained that data can often easily be “re-identified.” He explained that there are direct identifiers, like name, Social Security number, driver’s license number, phone number or email address. There are also indirect identifiers that do not identify someone on their own, but they may when combined; e.g., ZIP code, age and race. If data has been de-identified, all direct and indirect identifiers are removed from the data, but it contains a unique identifier. The original data collector has a link between the identifier and the identity of the people. The data purchaser does not have the link, and it cannot re-identify people. On the other hand, data is anonymized when all direct and indirect identifiers are removed, and there is no way for either the collector or the buyer to re-identify it.

Mr. Davis said there is a false narrative that once information is de-identified, it cannot be used to identify people; however, companies often remove direct identifiers but indirect identifiers may remain. He said 87% of people in the U.S can be re-identified with only date of birth, gender and ZIP code. He said re-identification of 90% of the people in the U.S. is possible with only four transactional data points from purchases, noting that both passive and active collectors often collect passive information, such as geolocation. He said an address can be determined from geolocation and a person can be identified.

Mr. Davis said the data is collected by data brokers, and Acxiom is the largest data broker. As of 2018, Acxiom collects more than 5,000 data points across 700 million consumers worldwide. He shared some examples of the data points collected: socioeconomic status; economic stability; one of nearly 200 ethnic codes; religion; health interests; alcohol and tobacco interests; casino gaming and lottery interests; details about someone’s home; whether someone is planning to have a baby; details about banking and insurance policies; media usage; credit card purchases; activities; relationship status; age; gender; education; employment; and number of children.

Mr. Davis said life insurers are starting to look at using data from data brokers to identify risky clients. He said insurers are starting to test mined data from shopping history, social media and magazine subscriptions to identify risky clients. He showed a slide used by a consulting company illustrating how marketing data can be used by life insurers to indicate eligibility for a preferred policy as opposed to additional underwriting. According to the consulting company’s infographic titled, “Can Marketing Data Predict Life Span?,” a sample potential customer “Sarah” is profiled. Sarah reads travel magazines, has good finances, bikes and runs, eats healthy food, and does not watch a whole lot of TV. Based on this profile, Sarah should be actively pursued for new business and retention, and the insurer should quickly issue her a preferred policy without additional underwriting. In contrast, a sample potential customer “Beth” is also profiled. Beth has a long commute, has had a bankruptcy, frequently eats at McDonalds, bought a treadmill, and watches a lot of TV. Based on this information, the recommendation is not to send Beth any offers, not to pursue aggressive retention efforts, and to collect more information to review before offering Beth a policy. Mr. Davis said another area is mailing lists. Mailing lists can be bought based on specific information. A purchase can sort for certain information, such as religion, ethnicity and income level, to generate a leads list.

Mr. Davis discussed potential concerns with using this data. He explained that the federal Fair Credit Reporting Act (FCRA) has jurisdiction over consumer reporting agencies’ (CRAs) use of data. CRAs are companies whose primary purpose is to collect consumer information and provide reports. Under the FCRA, people have the right to be told if information in a consumer report is used against them in order to deny an application for insurance. Under the FCRA, consumers have the ability to request the data that a CRA possesses, including credit reports, and it provides consumers with the ability to dispute incorrect information. Under the FCRA, consumers are able to see everyone who has accessed their credit report. The FCRA has jurisdiction over 400+ CRAs, including credit bureaus and companies that screen tenants. However, FCRA requirements do not apply to companies that are not CRAs. The new types of data that insurance companies are looking to use in accelerated underwriting—such as purchase data, web history data, geolocation from mobile apps, driver data from apps, facial and behavioral analytics, social media data, fitness data from wearables, electronic health records, and genetic data—are not
covered under the FCRA. Consumers do not have the right to be advised of any adverse action taken in reliance on this data, nor is there a mechanism to dispute potential inaccuracies.

Mr. Davis also said it is difficult for insurance companies to know if this data is accurate. He gave several examples of the potential for non-FCRA data to be inaccurate. For example, he said an individual who purchases alcohol for clients in a sales job could incorrectly be added to an “alcoholic” profile in a data broker list. Another example is facial analytics that scans people faces to detect medical conditions or whether someone might be a smoker. Facial analytics may not detect plastic surgery, which could improve approvals for wealthy individuals or the facial analytics algorithm may incorrectly categorize a person as a smoker due to crow’s feet and under eye bags when they may be stressed or tired. Wearable devices may inaccurately sense heart rate or oxygen levels and falsely categorize someone as a potential heart attack risk. Web use inaccuracies may result from search data or social media. Mr. Davis gave the example of a wife researching her husband’s cancer or joining a network cancer group, resulting in the wife being added to a data broker cancer risk profile. Another example is mobile applications flagging an individual who frequently drives near medical offices as a risk due to mobile app geolocation data. Another example is posting a happy hour on Facebook and getting flagged as a potential alcohol abuser.

Mr. Davis said another concern is discrimination. He explained that insurance by nature discriminates based on things such as health, age and gender. However, insurance should not discriminate based on an individual’s race, religion or beliefs, national origin, employer, sexual orientation, geography or disability. It is possible that algorithms may inadvertently be causing additional medical underwriting at a higher rate for protected classes of people. Artificial intelligence (AI) and machine learning may make unintended decisions or adapt models without an insurance company realizing. Some examples of this include an algorithm that may inadvertently evaluate skin tone during facial analytics and flag race; or, an algorithm may flag minorities or LGBTQ persons due to the types of magazines they read or TV shows and movies they watched. An algorithm might also flag individuals as a risk due to geolocation data for an area that is tied predominantly to a particular race or national origin.

Based on the potential for inaccurate conclusions and inadvertent discrimination to be based on non-FCRA data, Mr. Davis suggests that state insurance regulators consider guidance or regulations for: 1) transparency of risk algorithms used to state insurance departments; 2) prohibiting the use of non-FCRA data or requiring similar adverse action reports as required under the FCRA; 3) transparency to consumers when non-FCRA data is used; 4) auditing or evaluating new technologies, such as facial analytics and wearables, for accuracy; and 5) ensuring that re-identification methods are not used for purchased data where consumers were originally told data was de-identified or anonymized.

b. Changing Legal Landscape: Privacy Developments

Jennifer Urban Rathburn (Foley & Lardner LLP) gave a presentation on privacy developments affecting the insurance industry. She explained that the current debate focuses on the merits of a comprehensive legal privacy regime versus allowing industry and companies to self-regulate. She said there is a strong trend towards more sweeping privacy legislation at the international, federal and state levels. Some examples include New York’s cybersecurity regulation for financial services companies (23 NYCRR 500), the European Union (EU) General Data Protection Regulation (GDPR), Nevada’s privacy law and the California Consumer Privacy Act (CCPA), which have all been enacted in the past five years.

Ms. Rathburn said her presentation is based on providing guidance to companies to address the privacy laws that are emerging. She said her presentation describes how companies can best comply with new legal requirements. She said there is a lot of focus on how different privacy laws affect the insurance industry and how companies can comply with all these varying regulations. She said companies should look at things from a policy and competitive perspective. Separate from the laws that are being enacted, consumers are becoming increasingly concerned about how their information is being accessed and used. She said companies want to be responsive to these concerns and transparent regarding how they use data.

Ms. Rathburn said companies can gain a competitive edge by having robust privacy programs in place. She said a recent study showed that companies enjoy significant returns on their investments in privacy systems. She said as new legal regimes emerge, there are best practices that companies can put into place to prepare for compliance. She said companies need to make it a priority to know the data they are using and to have processes and mechanisms in place to respond to individual rights, whether an individual wants to access, correct or delete information.

Ms. Rathburn said having a privacy notice that complies with the legal requirements that are in place for such notices in a state is critical. She said companies should regularly review and update their privacy practices, privacy notices, as well as regularly update any third-party contracts in which protected information is shared. She said part of knowing their data is staying up to date on legal developments and classifying data based on its sensitivity in regard to the applicable legal requirements. She said
companies should develop procedures for processing an individual’s rights under the legal regime, including developing model consents and training employees on how to handle requests within the required deadlines.

Ms. Rathburn said when state insurance regulators are looking to develop models, they need to keep in mind not only what they are most concerned about, but also how the insurance company is using data and their continued operations.

Mr. Sartain asked about transparency and whether Ms. Rathburn was aware of any laws addressing how authorizations should specify where data is being collected from.

Ms. Rathburn explained that authorizations usually address a company’s use and subsequent disclosure of information. She said a company’s privacy practices should list what data a company is collecting.

Mr. Davis said a few states have laws covering transparency; but in the majority of cases, consumers are not aware of what information is being collected and used. He said he anticipates that laws will be drafted to cover this issue, noting that he expects nationwide laws addressing the use of data collection to be enacted.

Director Muriel asked Mr. Davis if it is his understanding that life insurance companies are currently using non-FCRA data.

Mr. Davis said that his understanding, based on white papers, is that insurers are not using non-FCRA data currently to deny applications, but they may use the data to decide who to market to or whether to refer an application for additional underwriting. He said his impression is that companies are hesitant to use non-FCRA data, but they are very interested in doing so in the future.

Peter Kochenburger (University of Connecticut School of Law) asked what changes companies may be contemplating to improve how they obtain consumer consent. He said online disclosures are generally problematic, and consent, practically speaking, is often a fiction because few people actually read and understand consent forms or privacy notices.

Ms. Rathburn said, in her opinion, the consent process and privacy notices are just getting more confusing, but companies are trying to address this issue. She said some companies are developing summaries that outline a company’s general data use principles. She said layered notices are also common where checkboxes are utilized to verify that a consumer has read a notice, but there is not a standard, consistent practice. She said things are still in flux, but companies are hoping to develop shorter summary notices that consumers will be better able to understand.

Ms. Mavrothalasitis followed up on Mr. Sartain’s question and asked how to make consumers aware that information from their phones or social media accounts may be used by insurers when they apply for a policy. For example, she said social media accounts or applications on iPhones have consents, and she discussed whether a third party with shared information should also have to obtain consent, or at least highlight to a consumer where they are getting their data from.

Mr. Davis said an application will often prominently state that they will not disclose data to third parties, but the fine print says they will share “de-identified” or “anonymized” data, which, in some cases, can be “re-identified.”

Ari Scharg (Edelson) said when a company gets consent to use data for a specific purpose, this needs to be articulated and identified in its privacy policy. He said this type of usage of data would have to be identified in the privacy policy.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call Feb. 20, 2020. The following Working Group members participated: Robert H. Muriel, Chair (IL); Grace Arnold, Vice Chair (MN); Jason Lapham (CO); Russ Gibson (IA); Rich Piazza (LA); Cynthia Amann (MO); Chris Aufenthie (ND); Matt Holman (NE); Jillian Froment and Mark Hamlin (OH); Elizabeth Kelleher Dwyer represented Sarah Neil (RI); David Hippen (WA); and Mark Afable represented by Sue Ezalarab (WI). Also participating was: Wanchin Chou (CT).

1. **Heard a Presentation from the CEJ**

Director Muriel said the purpose of the Working Group’s call is to hear a presentation from the Center for Economic Justice (CEJ), but before the presentation, he wanted to discuss the Working Group’s next steps. He said he understands that some states have reached out to Deloitte to seek their comments on the reviewing, auditing and testing of a life insurer’s accelerated underwriting program. He explained that as discussed during the Working Group’s Feb. 6 conference call, the Working Group has scheduled a few more companies, law firms, the American Academy of Actuaries (Academy), and other speakers to present during future Working Group conference calls on actual company accelerated underwriting practices, legal, and compliance issues. He said the Working Group’s objective is to provide state insurance regulators with a more in-depth understanding of, not just a theory, but the practical aspects of accelerated underwriting. He said following that discussion, the Working Group would discuss the auditing, reviewing and testing issues related to accelerated underwriting. He said the Working Group plans to reach out to Deloitte to have it present to the Working Group during its April 2 conference call on topics such as the auditing, reviewing and testing of a life insurance accelerated underwriting program, as well as its experience related to these topics. He urged Working Group members to contact him or the Working Group’s vice chair if anyone has any questions about the Working Group’s next steps and its objectives.

Birny Birnbaum (CEJ) discussed consumer protection issues related to accelerated underwriting in life insurance (AUW) and regulatory actions needed to address them. He said accelerated underwriting is the application of big data analytics (BDA) in insurance based on the data mining of massive databases with consumer information coupled with predictive modeling, and it has been used by property/casualty (P/C) insurers since the early 1990s. He said that given this, there is a lot of information and experience available to state insurance regulators to review related to BDA and its use with respect to AUW.

Mr. Birnbaum described what types of consumer data are used for certain types of BDA applications. He also discussed the historical and current regulatory oversight over the data and the algorithms used by insurers, explaining why insurers’ use of BDA represents a challenge to state insurance regulation and consumer protection. He said insurers’ use of BDA has a huge potential to benefit consumers and insurers, but it also has huge implications for fairness, access and affordability of insurance and for state insurance regulators’ ability to keep up with the changes and protect consumers from unfair practices. He said the current insurance regulatory framework generally does not provide state insurance regulators with the tools and resources to effectively respond to insurers’ use of big data. He noted that “free-market competition” alone cannot and will not protect consumers from unfair insurer practices. Regulatory modernization is needed to protect consumers, which is even more important for AUW because state insurance regulators do not even have the tools that have been developed for P/C insurance.

Mr. Birnbaum said insurers are using and have used BDA for more than predicting claims, such as fraud detection, price optimization and personalization. He provided a historical background on such use beginning in 2005 with Allstate using BDA algorithms with credit scoring. He described the current regulatory framework and how it has been challenged in the era of BDA. He detailed the regulatory structure in place from its beginnings as the old school era of big data and how that framework has moved to the new school era of big data with limited regulatory oversight and the ability of state insurance regulators to address certain issues, such as disparate impact issues.

Mr. Birnbaum described how BDA models are developed by comparing historical univariate analysis versus modern multivariate analysis, explaining their strengths, limitations and challenges. He said understanding the difference between historical univariate analysis and modern multivariate analysis is essential to understand consumer protection issues, and he needed regulatory response to insurers’ use of BDA. He discussed algorithmic bias and its causes and remedies. He said insurers’ use of BDA increases the potential for proxy discrimination and disparate impact. He highlighted the New York Department of Financial Services’ Circular Letter to insurers on the use of external consumer data and information sources in
underwriting for life insurance and a provision from the NAIC’s *Market Regulation Handbook* on the issue of disparate impact on protected classes. He discussed changes needed to modernize the current regulatory framework to address these issues by providing state insurance regulators with the necessary regulatory tools, resources and techniques to examine disparate impact. He said such modernization needs to generally include new or revised NAIC models, particularly for life insurance that: 1) establish principles and values for insurers’ use of BDA; 2) require routine reporting by insurers and publication by state insurance regulators of types, sources and uses of data by insurers; 3) require advisory organization oversight of vendors providing algorithms for marketing, pricing and claims settlement; 4) require filing and regulatory review of underwriting guidelines and/or tier placement factors, rating plans and algorithms; and 5) provide explicit recognition of disparate impact against protected classes as unfair discrimination in marketing, pricing and claims settlement with safe harbors for practices that assess and minimize disparate impact without compromising cost-based pricing.

Mr. Gibson asked Mr. Birnbaum about disparate impact and disparate intent. Mr. Birnbaum explained the differences between the two. He said disparate intent occurred in the past when insurers intentionally discriminated against consumers with their use of race-based pricing and underwriting. He said disparate impact refers to unintentional discrimination or proxy discrimination, such as the use of criminal history in pricing and underwriting. He said the issue, particularly in this era of multivariate analysis is to recognize the possibility of disparate impact, identify it, and minimize it. Mr. Hippen asked Mr. Birnbaum if he had any recommendations to help to ensure that state insurance regulators stay abreast of what is going on in the marketplace with AUW. He said the first step is for state insurance regulators to establish their values and principles for using BDA. The second step is to make sure the state’s laws are current with respect to the regulatory authority needed to meet the established values and principles. He said the last step is ensuring that the state department of insurance (DOI) has the necessary regulatory resources, such as DOI employee skill sets, needed to analyze multivariate analyses and algorithms to help ensure that insurers are complying with the state’s values and principles for using BDA.

Mr. Chou discussed what has been occurring on the P/C insurance side with respect to BDA and its application to the life insurance side. He also asked how state DOIs can address the issue of limited regulatory resources. Mr. Birnbaum reiterated some of the suggestions that he offered for regulatory modernization to address issues in the new era of AUW. He suggested that state insurance regulators may want to leverage the Interstate Insurance Product Regulation Commission (Compact) to address the limited regulatory resources issue.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call Feb. 6, 2019. The following Working Group members participated: Robert H. Muriel, Chair, Patrick Hyde, Erica Weyhenmeyer, Vincent Tsang and Bruce Sartain (IL); Grace Arnold, Vice Chair, Fred Andersen and John Robinson (MN); Jason Lapham (CO); Russ Gibson and Lindsay Bates (IA); Rich Piazza (LA); Cynthia Amann, William Leung and Camille Anderson-Weddle (MO); Chris Aufenthie and Ross Hartley (ND); Jillian Froment, Peter Weber and Mark Hamlin (OH); Sarah Neil (RI); and Rebecca Rebholz and Lauren Van Buren (WI). Also participating were: Perry Kupferman, Katherina Hrouda and Pam O’Connell (CA); Wanchin Chou and Andrew Greenhalgh (CT); Michele MacKenzie (ID); Karl Knable (IN); Barbara Torkelson and Tate Flott (KS); Maile Campbell (NV); Mark McLeod and Peter Dumar (NY); Cuc Nguyen (OK); Tracy Bixler (PA); Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed its Work Plan

Director Muriel asked for feedback on the focus of the Working Group’s efforts so far. He reminded the Working Group that Deloitte Consulting gave a presentation during the Working Group’s Jan. 23 conference call. He said he is working on scheduling presentations for the coming weeks with another consulting firm, a consumer advocate, two life insurance companies and a law firm.

Ms. Arnold said she has found the presentations helpful in understanding how accelerated underwriting (AUW) fits in a broader context.

Director Muriel said that some presenters have proprietary and confidential information to share and would like to do so in a regulator-to-regulator session. He explained that in keeping with the NAIC Policy Statement on Open Meetings, the Working Group is able to grant these requests on a case-by-case basis if they involve particular companies and company-specific proprietary intellectual property. He said he wants everyone to know that the Working Group plans to keep presentations in open session as much as possible and will strive to meet in regulator-to-regulator session when necessary to protect proprietary and confidential information.

Director Muriel clarified the Working Group will not be delving into the actuarial aspects of AUW. He explained that the Working Group’s charge contemplates coordination with the Life Actuarial (A) Task Force, noting that the Working Group will not be duplicating their work. He said the Working Group plans to focus on unlawful discrimination, privacy, transparency and disclosure in the context of AUW. He said the intention is for this focus to lead to an end product that satisfies the concerns of consumers, state insurance regulators and the industry alike.

Birny Birnbaum (Center for Economic Justice—CEJ) said he agrees with the Working Group’s stated focus and suggested adding a presentation about state efforts in this area, like the Illinois Biometric Protection Act (BIPA) and the genetic discrimination legislation in Florida.

Mr. Tsang said he would ask the law firms he has been in contact with to address these topics in their presentations.

Ms. Hemphill said it is not possible to completely separate topics like unfair discrimination from actuarial issues and suggested that the Society of Actuaries (SOA) has resources that would be helpful to the Working Group.

Mr. Leung suggested that the Working Group review the Casualty Actuarial and Statistical (C) Task Force’s Regulatory Review of Predictive Models white paper.

Mr. Robinson asked whether genetic testing information is part of the AUW process and if it is an issue within the scope of the Working Group.

Mr. Sartain said he had the same question. He said it is not clear what types of external data insurers are using and whether it may include data from Ancestry and/or 23andMe.

© 2020 National Association of Insurance Commissioners 1
David Leifer (American Council of Life Insurers—ACLI) said the decision of whether to tackle this topic in this Working Group is up to the state insurance regulators, but he said that life insurers do not use data from Ancestry or 23andMe. He said any genetic information would be found in an individual’s medical file. He said that a ban on the use of all genetic information is stunningly controversial. He suggested focusing on transparency and disclosure. He said that genetic information and credit score data is being dealt with elsewhere.

Mr. Birnbaum said he hopes that the Working Group will develop principles and approaches to deal with AUW, regardless of the data source, in a uniform way across the country.

Brendan Bridgeland (Center for Insurance Research—CIR) said that consumers are not sure what data is being accessed when they apply for life insurance. He said the presentations have mentioned the types of data used, but also include an “other data” catch-all category. He said he understands the desire to protect proprietary information about a specific algorithm, but, from a transparency perspective, this is important information for consumers to have. He said that to the extent that genetic information is increasingly available, it is important to consider it, along with everything else that may be available and accessed.

Director Muriel said the Working Group would continue to consider and discuss this issue. He summarized the topics he would like future presentations to address: 1) data sources, their legitimacy, privacy and embedded biases of the data, if any; 2) transparency and development of the algorithm; 3) accuracy versus fairness; 4) disclosure of AUW results to consumers; 5) implementation issues; and 6) controls, governance and data warehousing.

Director Muriel said two law firms have been contacted to present to the Working Group. He said one will be talking about discrimination from a legal perspective, and the second will cover cybersecurity. He said the Working Group will plan to coordinate with the NAIC working groups that are also working on related issues. He said he wants to make sure the different workstreams are coordinating.

Director Muriel asked for feedback on what the Working Group’s work product should be. He said the default seems to be a white paper that would be for state insurance regulators, the industry and consumers.

Ms. Neil suggested that the Working Group revisit what was going on in the Big Data (EX) Working Group that precipitated the referral to the Life Insurance and Annuities (A) Committee.

Jennifer Cook (NAIC) said she would circulate excerpts from the minutes of the Big Data (EX) Working Group.

Director Muriel asked the Working Group to think about what work product the Working Group should develop.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.

W:\National Meetings\2020\Summer\Cmte\A\AUWG\natmtgmin\2-6-20 confcall AUWG final.docx
The Accelerated Underwriting (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call Jan. 23, 2020. The following Working Group members participated: Robert H. Muriel, Chair, Mike Chrysler, Linda Bryant, Vincent Tsang and Bruce Sartain (IL); Grace Arnold, Vice Chair, and John Robinson (MN); Jason Lapham (CO); Russ Gibson and Lindsay Bates (IA); Rich Piazza (LA); Cynthia Amann, William Leung and Camille Anderson-Weddle (MO); Ross hartley (ND); Matt Holman (NE); Jillian Froment and Mark Hamlin (OH); Elizabeth Kelleher Dwyer, Matt Gendron and Sarah Neil (RI); David Hippen (WA); and Diane Dambach; Mary Kay Rodriguez, Sue Ezalarab, Rebecca Rebholz and Lauren Van Buren (WI). Also participating were: Jacob Lauten (AK); Perry Kupferman, Katherina Hrouda and Pam O’Connell (CA); Andrew Greenhalgh (CT); Karl Knable (IN); Barbara Torkelson and Tate Flott (KS); Denise Lamy, and Karen McCallister (NH); Seong-min Eom (NJ); Annette James (NV); Cuc Nguyen (OK); Mark McLeod and Bill Carmello (NY); Brian Hoffmeister (TN); Mike Boerner (TX); Tomasz Serbinowski (UT); and James Young (VA).

1. **Heard a Presentation from Deloitte Consulting**

Director Muriel reminded the Working Group that the work plan contemplates the Accelerated Underwriting (A) Working Group progressing through three phases in order to complete its charge by the 2020 Fall National Meeting. The first phase is the information-gathering phase, which started with a presentation at the 2019 Fall National Meeting from Patrick L. Brockett (The University of Texas at Austin).

Director Muriel said this phase is scheduled to continue until the 2020 Spring National Meeting, noting that he is in the process of scheduling additional presentations for every other Thursday to explore this topic from different perspectives. He said Chris Stehno (Deloitte Consulting LLC) is giving the presentation on this conference call.

Mr. Stehno said Deloitte started helping clients with accelerated underwriting (AUW) in 2007. He explained that Deloitte called it “application triage” and that it came out of the realization that the number of people purchasing life insurance was declining. He said the number of individual life and annuity policies sold has dropped significantly, while the face amounts of the policies sold has increased—indicating that just the wealthy are buying life insurance. He said the mechanism for selling life insurance—through agents earning a commission—has not evolved over the years. He said consumers’ buying preferences have changed and that the channels for selling insurance have not. He said agents cited the fact that the same number of hours is required to sell a policy, regardless of the size of the policy. He said it became clear that traditional sales methods, cumbersome and time-consuming risk assessment processes, and unacceptable commissions all have contributed to the declining numbers of middle-income people buying life insurance.

Mr. Stehno said Deloitte undertook protective value studies, where the company looked at whether paramedical exams and fluid collections are always necessary. He said Deloitte was trying to determine if there is a type of person that can be identified where there are diminishing returns for going through the paramedical exam and fluid collection. He explained that predictive analytics were being used to triage applications, identifying certain healthy applications for whom selected medical underwriting requirements can be waived. He said Deloitte determined that out of the individuals that apply for life insurance, 30% to 40% are able to go through AUW. Most companies use a binary rule (such as policy face amounts or the age of applicant) in combination with an algorithm to determine if they can be waived out of traditional underwriting.

Mr. Stehno explained the application triage process used to determine if an application can skip traditional underwriting. He said illustrative eligibility criteria, a detailed build chart and disqualifying major medical conditions criteria are applied in the initial step of identifying eligible and healthy applicants. He said if the application met this linear criteria, then the company will query third-party data sources—such as Medical Information Bureau (MIB) records, motor vehicle records (MVRs), prescription drug (Rx) records and electronic health records (EHRs)—and apply an underwriting filter to that information to determine if the applicant needs to go through traditional underwriting. If the application does not go to traditional underwriting at this point, the applicant will go through a telephone interview, at which time additional underwriting filters are applied. If the application is not kicked to traditional underwriting after the phone interview, the data collected to that point is processed by predictive model. He said each application then receives a health score and reason code. Then a policy is issued within 24 to 48 hours without going through medical underwriting. About 40% of policies applied for are issued without medical
underwriting. The remaining 60% of applications go through traditional underwriting. He said about 75% of the policies eligible for AUW are life insurance policies.

Mr. Stehno said Deloitte has found that transparent and open algorithmic solutions provide for a better agent/customer experience as “reason codes” can be easily developed to share algorithm details at the appropriate level to the appropriate person. He said that applying “application triage” using application data, MIB, MVR, Rx and other third-party data—together with underwriting rules established by the insurer—often provides results that are similar to fully underwritten decisions for a significant portion of the business, predominantly the higher-scoring segments. He explained that application triage does not result in an adverse action, because the applicant will either go through accelerated underwriting or traditional underwriting.

Mr. Stehno explained that most all large and mid-size companies have established data analytics practices. He said more than a dozen companies in the marketplace have some form of AUW. He said some reinsurers, data vendors and consulting firms are now offering “industry” algorithms and risk-scoring. He said electronic health records are complementary to AUW and are now widely used. He explained that there are many opportunities for expanding the use of data analytics in life insurance, such as use in producer optimization; product design and pricing; sales and marketing; new business and underwriting, in-force management; and claims and fraud.

Director Muriel asked Working Group members and interested regulators to reach out to the industry in their respective states to get feedback on their expectations for this Working Group.

Having no further business, the Accelerated Underwriting (A) Working Group adjourned.
Annuity Disclosure (A) Working Group
Conference Call
March 13, 2020

The Annuity Disclosure (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call March 13, 2020. The following Working Group members participated: Mike Yanacheak, Chair, and Kim Cross (IA); Chris Struk (FL); Julie Holmes, Craig Van Aalst and Shannon Lloyd (KS); Nour Benchaboun (MD); John Robinson (MN); Andrew Schallhorn and Cuc Nguyen (OK); Matt Gendron and Sarah Neil (RI); and Doug Danzeiser, Sandra Dodson and Lynn Pazdral (TX). Also participating were: Steve Ostlund (AL); Dave Lathrop (AZ); Carrie Couch and Marjorie Thompson (MO); Denise Lamy (NH); Andrew Dvorine (SC); David Hippen (WA); and Susan Ezalarab (WI).

1. **Adopted a Revision to Section 6F(9)(b)(i) of Model #245**

Mr. Yanacheak said that because the in-person Spring National Meeting has been postponed due to COVID-19, the Working Group finds itself with additional time to address any outstanding issues. He said that most of the Working Group members he has spoken with over the past few days think that the language in the Jan. 24 draft revisions to the Annuity Disclosure Model Regulation (#245) could be improved (Attachment Three-A).

The American Council of Life Insurers (ACLI) submitted a comment letter on this draft. Robbie Meyer (ACLI) summarized the ACLI comment letter. She said the ACLI remains concerned with the language of Section 6F(9)(b)(i) in the draft, which states: “The index is a combination of indices, made up of stocks, bonds, futures, commodities, interest rates, or exchange traded funds, each of which has been in existence for at least fifteen (15) years.”

Ms. Meyer said ACLI is concerned that this language would inadvertently undercut robust and understandable disclosures for consumers. She said the language is ambiguous as to whether each listed component needs to have been in existence for 15 years and whether each of the listed components needs to be an index. She said this requirement would prohibit illustration of many nontraditional indices of fixed indexed annuities that have been approved for sale and in the market and that are constructed from financial components, such as exchange-traded funds (ETFs) or futures, that are not indices.

Ms. Meyer said the ACLI suggests the following revision: “The index is comprised of indices, stocks, bonds, futures, commodities, interest rates or exchange traded funds, each of which has been in existence for at least fifteen (15) years.”

The Working Group discussed the ACLI’s suggested revision to Section 6F(9)(b)(i). Mr. Robinson said he has discussed this issue with the ACLI, as has Mr. Benchaboun and Mr. Van Aalst. They all said they would support the ACLI language. Ms. Neil said she struggles with what steps are taken by companies to ensure that a consumer understands what goes into these indices. She said fixed indexed annuities (FIAs) typically attract a more traditional investor, but these types of indices contain elements that require a higher level of sophistication than a typical FIA.

Mr. Robinson agreed that this is an issue and that maybe the Working Group should discuss how to tell the consumer about what makes up an index. However, he said he does not consider that question to be affected by the language change being discussed.

Mr. Schallhorn pointed out that there is a requirement to illustrate a high 10 years and a low 10 years, so consumers will be shown a possible upside and a downside. Ms. Neil explained that, in her view, if the suggested language opens up what financial products can comprise an index, she wants to be sure that proper steps are taken to ensure that consumers understand these financial products that comprise the index.

Birny Birnbaum (Center for Economic Justice—CEJ) followed up on Ms. Neil’s concerns and said the ACLI’s proposed revisions do more than simply say what financial products can be part of an index. He said this change allows the illustration of something that was not previously allowed to be illustrated because it had not been in existence for the requisite period of time. He said the biggest concern with this change is that it encourages data-mining for certain historical results to create products that illustrate well.

© 2020 National Association of Insurance Commissioners
Mr. Birnbaum said there is no consumer demand for products with indices that consumers have never heard of and do not understand. He said just because a product is already in the marketplace does not mean it is a good product that should be illustrated. He said this language creates a situation that amounts to an invitation to data mine recent historical experience to produce a favorable illustration for the past 15 years, but it is not likely to produce the same results going forward. He said that is inherently misleading.

Mr. Birnbaum also said that the revisions allow for gaming of the illustration. He shared the following example to illustrate his point. He said if there is an index that is comprised of five financial instruments and only one of the instruments has been in existence for only 15 years, while the rest have been in existence for 20 years, the illustration of the index will only look back 15 years. He said this allows for a company to create an index that limits the lookback to 15 years, when a lookback to years 16–20 would harm the illustration. Mr. Birnbaum suggested that Section 6F(9)(b)(i) should be revised to require each financial instrument to have been in existence for at least 20, but preferably 30, years.

Ms. Meyer said the ACLI believes that customers understand these products. She conceded that it is difficult to ensure understanding, but the more information consumers get, the more likely it is they will understand. She said prohibiting the illustration of a number of products that are already in the marketplace is in conflict with consumer education. She said that if a product has been approved, it should be able to be illustrated. She said if there are issues with these products that have been approved, this project addressing illustrations is not the most effective context to address those concerns.

Mr. Birnbaum said the ACLI says it is committed to consumer understanding, but he questioned that assertion based on the ACLI’s opposition to other provisions in the model that would require disclosure to consumers about how the index is calculated. He also said that the idea that more information is always better is false; i.e., more information does not equate to consumer understanding. He said consumers need information that will help them understand. He said illustrations are not needed to explain a product. He said illustrations create a false impression that past performance is an indication of future performance, which it is not. He said in this way, illustrations accomplish the opposite of consumer understanding. He said the goal is to stop misleading illustrations and force companies to explain their products in ways that consumers understand.

Mr. Birnbaum also said the ACLI’s suggested revision is incorrect when it states that “[t]he index is comprised of indices, stocks, bonds, futures, commodities, interest rates, or exchange traded funds…” He said an index is not comprised of components, it tracks the performance of something.

The Working Group discussed whether language that says “the index is an instrument that tracks the performance of indices, stocks, bonds, futures, commodities, interest rates or exchange traded funds…” is more accurate than saying the index is “comprised” of something.

Mr. Robinson said Mr. Birnbaum’s suggested language speaks to what an index does, which is not a definition. He said the language the ACLI suggested is an accurate way to describe an index; i.e., that the index is a weighted average of something, describes what it is, to say that it tracks something and describes what it does.

Mr. Gendron said Section 6F(9)(b)(i) refers to a “combination of indices,” and Section 6F(9)(b) (iii) refers to “any algorithm or other method of combining the indices,” which explains what it means to “combine” the indices. He conceded that these are not exactly definitions, but that is the practical effect, so he is OK with the language.

Mr. Benchaaboun pointed out that Section 6F(9)(b)(iv) states that the algorithm must be made available to insurance commissioners, which means that the insurance departments will have the ability to approve the algorithm at the time of the product filing.

Mr. Gendron said he is concerned with relying on the insurance commissioner’s ability to approve an algorithm at the time of filing. He said he is not aware of any insurance departments that have standards for reviewing indices. He said he asked the Interstate Insurance Product Regulation Commission (Compact), and he learned that it has form filing requirements but no vetting or standards by which indices are measured. He said this is not something that can be fixed quickly. He suggested that the Working Group could make a recommendation to the Life Insurance and Annuities (A) Committee that such standards should be developed, but they do not exist right now.

Mr. Struk said Florida is not a member of the Compact and does not have standards by which to judge whether an index is appropriate or inappropriate.
Ms. Neil said forms are reviewed to make sure they comply with state law. She said it is her opinion that this is the appropriate place for a discussion about how these products are going to be sold to the public.

Mr. Hippen said, when reviewing filings, Washington attempts to stop companies from using an index that it controls or that it can tell from its construction could be easily manipulated by the company. He said, however, the insurance department is limited by how much and what kind of information the company provides.

Mr. Birnbaum summarized his view of how the revised provisions in Model #245 allow for the creation of products that mislead consumers. He said, first, there are the provisions that allow data mining to create bespoke indices that will illustrate favorably over the previous 15-year period. If the company sees that an index is not preforming well, the model allows it to tweak the indices. The company is not required to disclose to the consumer how the index is calculated, and overwhelmed insurance departments do not provide a lot of accountability. He also pointed out that there is no requirement that the index company be separate from the company that is providing the hedging for the product based on the index. The index provider can change its rules as long as it is consistent with its own governance procedures, with no review of those rules.

Bryan Pinsky (American International Group Inc.—AIG) said AIG is supportive of consumer protection and making sure that illustrations and all the other materials provided to consumers at the point of sale are clear, understandable, fair and balanced. He said the purpose for revising Model #245 is to ensure that the regulation is pragmatic and usable, but does not create inappropriate loopholes. He said he appreciates Mr. Birnbaum’s underlying concerns, but some of his comments do not reflect the way the industry operates or the way the indices actually work. He said hedge costs do not assume a reversion to the mean. He said hedge costs are not affected by past performance of indices; they consider how fair markets would price based on a formula. He said whether an index performance is high or low does not affect the hedge costs for these indices.

Mr. Pinsky explained that a lot of information is provided to consumers by their financial advisor that augments an illustration, such as marketing materials and fact sheets, that describe how the indices work. He said the reason that companies do not support providing the underlying algorithm and rule book to consumers is because they are not owned by the company and are not the insurance company’s intellectual property. He said these indices are created and provided by third parties, and they continue to own the intellectual property. He said the rule book is not going to help consumers or financial advisors understand the index. He said that understanding is provided by the simplified, fair and balanced marketing materials, fact sheets provided by the index provider, and an understanding of how the index works within the indexed annuity that it is being purchased with, which is in the illustration.

Mr. Pinsky said it is important to realize that clients cannot lose money when they buy an indexed annuity. He said consumers are not investing in the index; they are investing in a product that references the index for the sole purpose of determining what interest credit will be provided to the client. He said that while the mechanisms supporting the index are important, the exact mathematical nuances of the index are not the most important pieces of information for the client to understand. He said the most important thing for consumers is diversification in choice in the product. He said the products were not developed to data-mine for indices that illustrate most favorably; they are intended to provide diversification in choice for clients. He said because of how independent third parties are able to create these indices, they are generally able to provide a more stable crediting rate that the insurance companies are able to provide. He said no consumer is forced to buy or stay in these. He said clients in all indexed annuities can reallocate across different strategies or indices if they do not like what they have for whatever reason, or as their crediting strategies mature, at no cost.

Mr. Pinsky said there are no facts to support the assertion that indices are changed to improve the look of performance. He said that sometimes indices are changed if there are new versions and that in new markets, environments may perform differently. He said that he is not sure of the reason for Mr. Birnbaum’s concern with the tie between index providers and hedging. He said there might be a circumstance where there is an arm of an investment bank that provides hedging assets to insurance companies and may also have another arm that creates indices. But he said that ultimately, the insurance company is accountable for ensuring that it is setting an appropriate option budget for its clients on indices that are available within the products provided to its clients.

Mr. Yanacheak identified three issues the Working Group’s discussion brought to light. The first is whether the Working Group should raise with the Life Insurance and Annuities (A) Committee the issue of the need for standards for product oversight in the states and with the Compact in the area of indexed annuities. He said the second issue involves the relationship between an index provider and the hedging provider. Iowa asked about this relationship in its product review and would like the Working Group to consider whether a referral to further consider this issue might be appropriate. The final issue is to revise Section 6F(9)(b)(i).
Mr. Van Aalst made a motion, seconded by Mr. Robinson, to revise Section 6F(9)(b)(i) as follows: “The index is comprised of indices, stocks, bonds, futures, commodities, interest rates, or exchange traded funds, each of which has been in existence for at least fifteen (15) years.” Florida, Kansas, Maryland, Minnesota, Oklahoma and Texas voted in favor of the motion. Rhode Island voted against the motion. The motion passed.

Mr. Gendron said he has been working on some “plain language” modifications to the disclosure requirements in Section 6G that he would like the Working Group to consider before it forwards the proposed revisions to Model #245 to the Life Insurance and Annuities (A) Committee for consideration.

Mr. Kilcoyne said he also has language modifications to suggest for the language just adopted.

Mr. Robinson also said he has some wording changes he would like the Working Group to consider.

The Working Group agreed to wait to finalize its proposed revisions to Model #245 until after reviewing this revised language. Mr. Yanacheak asked for revisions to be emailed to his attention, with a copy to Jennifer Cook (NAIC). Mr. Yanacheak confirmed that if the American Academy of Actuaries (Academy) has any minor suggestions along the lines of what the Working Group members are discussing, it should submit them.

Having no further business, the Annuity Disclosure (A) Working Group adjourned.

Section 5. Standards for the Disclosure Document and Buyer’s Guide

A. (1) Where the application for an annuity contract is taken in a face-to-face meeting, the applicant shall at or before the time of application be given both the disclosure document described in Subsection B and the Buyer’s Guide, if any.

(2) Where the application for an annuity contract is taken by means other than in a face-to-face meeting, the applicant shall be sent both the disclosure document and the Buyer’s Guide no later than five (5) business days after the completed application is received by the insurer.

(a) With respect to an application received as a result of a direct solicitation through the mail:

   (i) Providing a Buyer’s Guide in a mailing inviting prospective applicants to apply for an annuity contract shall be deemed to satisfy the requirement that the Buyer’s Guide be provided no later than five (5) business days after receipt of the application.

   (ii) Providing a disclosure document in a mailing inviting a prospective applicant to apply for an annuity contract shall be deemed to satisfy the requirement that the disclosure document be provided no later than five (5) business days after receipt of the application.

(b) With respect to an application received via the Internet:

   (i) Taking reasonable steps to make the Buyer’s Guide available for viewing and printing on the insurer’s website shall be deemed to satisfy the requirement that the Buyer’s Guide be provided no later than five (5) business day of receipt of the application.

   (ii) Taking reasonable steps to make the disclosure document available for viewing and printing on the insurer’s website shall be deemed to satisfy the requirement that the disclosure document be provided no later than five (5) business days after receipt of the application.
(c) A solicitation for an annuity contract provided in other than a face-to-face meeting shall include a statement that the proposed applicant may contact the insurance department of the state for a free annuity Buyer’s Guide. In lieu of the foregoing statement, an insurer may include a statement that the prospective applicant may contact the insurer for a free annuity Buyer’s Guide.

(d) Where the Buyer’s Guide and disclosure document are not provided at or before the time of application, a free look period of no less than fifteen (15) days shall be provided for the applicant to return the annuity contract without penalty. This free look shall run concurrently with any other free look provided under state law or regulation.

B. At a minimum, the following information shall be included in the disclosure document required to be provided under this regulation:

(1) The generic name of the contract, the company product name, if different, and form number, and the fact that it is an annuity;

(2) The insurer’s legal name, physical address, website address and telephone number;

(3) A description of the contract and its benefits, emphasizing its long-term nature, including examples where appropriate:

(a) The guaranteed and non-guaranteed elements of the contract, and their limitations, if any, including for fixed indexed annuities, the elements used to determine the index-based interest, such as the participation rates, caps or spread, and an explanation of how they operate;

(b) An explanation of the initial crediting rate, or for fixed indexed annuities, an explanation of how the index-based interest is determined, specifying any bonus or introductory portion, the duration of the rate and the fact that rates may change from time to time and are not guaranteed;

(c) Periodic income options both on a guaranteed and non-guaranteed basis;

(d) Any value reductions caused by withdrawals from or surrender of the contract;

(e) How values in the contract can be accessed;

(f) The death benefit, if available and how it will be calculated;

(g) A summary of the federal tax status of the contract and any penalties applicable on withdrawal of values from the contract; and

(h) Impact of any rider, including, but not limited to, a guaranteed living benefit or long-term care rider;

(4) Specific dollar amount or percentage charges and fees shall be listed with an explanation of how they apply; and

(5) Information about the current guaranteed rate or indexed crediting rate formula, if applicable, for new contracts that contains a clear notice that the rate is subject to change.

C. Insurers shall define terms used in the disclosure statement in language that facilitates the understanding by a typical person within the segment of the public to which the disclosure statement is directed.
Section 6. Standards for Annuity Illustrations

A. An insurer or producer may elect to provide a consumer an illustration at any time, provided that the illustration is in compliance with this section and:

(1) Clearly labeled as an illustration;

(2) Includes a statement referring consumers to the disclosure document and Buyer’s Guide provided to them at time of purchase for additional information about their annuity; and

(3) Is prepared by the insurer or third party using software that is authorized by the insurer prior to its use, provided that the insurer maintains a system of control over the use of illustrations.

B. An illustration furnished an applicant for a group annuity contract or contracts issued to a single applicant on multiple lives may be either an individual or composite illustration representative of the coverage on the lives of members of the group or the multiple lives covered.

C. The illustration shall not be provided unless accompanied by the disclosure document referenced in Section 5.

D. When using an illustration, the illustration shall not:

(1) Describe non-guaranteed elements in a manner that is misleading or has the capacity or tendency to mislead;

(2) State or imply that the payment or amount of non-guaranteed elements is guaranteed; or

(3) Be incomplete.

E. Costs and fees of any type shall be individually noted and explained.

F. An illustration shall conform to the following requirements:

(1) The illustration shall be labeled with the date on which it was prepared;

(2) Each page, including any explanatory notes or pages, shall be numbered and show its relationship to the total number of pages in the disclosure document (e.g., the fourth page of a seven-page disclosure document shall be labeled “page 4 of 7 pages”);

(3) The assumed dates of premium receipt and benefit payout within a contract year shall be clearly identified;

(4) If the age of the proposed insured is shown as a component of the tabular detail, it shall be issue age plus the numbers of years the contract is assumed to have been in force;

(5) The assumed premium on which the illustrated benefits and values are based shall be clearly identified, including rider premium for any benefits being illustrated;

(6) Any charges for riders or other contract features assessed against the account value or the crediting rate shall be recognized in the illustrated values and shall be accompanied by a statement indicating the nature of the rider benefits or the contract features, and whether or not they are included in the illustration;

(7) Guaranteed death benefits and values available upon surrender, if any, for the illustrated contract premium shall be shown and clearly labeled guaranteed;
The non-guaranteed elements underlying the non-guaranteed illustrated values shall be no more favorable than current non-guaranteed elements and shall not include any assumed future improvement of such elements. Additionally, non-guaranteed elements used in calculating non-guaranteed illustrated values at any future duration shall reflect any planned changes, including any planned changes that may occur after expiration of an initial guaranteed or bonus period.

In determining the non-guaranteed illustrated values for a fixed indexed annuity, the index-based interest rate and account value shall be calculated for three different scenarios: one to reflect historical performance of the index for the most recent ten (10) calendar years; one to reflect the historical performance of the index for the continuous period of ten (10) calendar years out of the last twenty (20) calendar years that would result in the least index value growth (the “low scenario”); one to reflect the historical performance of the index for the continuous period of ten (10) calendar years out of the last twenty (20) calendar years that would result in the most index value growth (the “high scenario”). The following requirements apply:

(a) The most recent ten (10) calendar years and the last twenty (20) calendar years are defined to end on the prior December 31, except for illustrations prepared during the first three (3) months of the year, for which the end date of the calendar year period may be the December 31 prior to the last full calendar year;

(b) If any index utilized in determination of an account value has not been in existence for at least ten (10) calendar years, indexed returns for that index shall not be illustrated, unless all of the following criteria are met:

(i) The index is a combination of indices, made up of stocks, bonds, futures, commodities, interest rates, or exchange traded funds, each of which has been in existence for at least fifteen (15) years;

(ii) The method of combination is such that a unique fifteen (15)-year history of the index can be constructed;

(iii) Any algorithm or other method of combining the indices shall be fixed from the creation of the index, except for changes made pursuant to the index provider’s established governance rules and procedures;

(iv) Any algorithm or other method that is supporting such an index and is included in the illustration shall be made available for inspection at the request of the commissioner; and

Drafting Note: States may want to consider making the algorithm available to consumers upon request.

(v) Indexed returns that are based on historical performance prior to the existence of the index are visually differentiated from indexed returns that are based on historical performance thereafter.

(vi) If the fixed indexed annuity provides an option to allocate account value to more than one indexed or fixed declared rate account, and one or more of those indexes has not been in existence for at least ten (10) calendar years, the allocation to such indexed account(s) shall be assumed to be zero;

(c) If any index utilized in determination of an account value has been in existence for at least ten (10) calendar years but less than twenty (20) calendar years, the ten (10) calendar year periods that define the low and high scenarios shall be chosen from the exact number of years the index has been in existence;

(d) If any index utilized in determination of an account value meets the criteria of Section 6.E.(9)(b) but has less than twenty (20) calendar years of history, the ten (10) calendar year
periods that define the low and high scenarios shall be chosen from the exact number of years of unique history, including history, constructed pursuant to 6.F.(9)(b)(ii);

(de) The non-guaranteed element(s), such as caps, spreads, participation rates or other interest crediting adjustments, used in calculating the non-guaranteed index-based interest rate shall be no more favorable than the corresponding current element(s);

(ef) If a fixed indexed annuity provides an option to allocate the account value to more than one indexed or fixed declared rate account:

(i) The allocation used in the illustration shall be the same for all three scenarios; and

(ii) The ten (10) calendar year periods resulting in the least and greatest index growth periods shall be determined independently for each indexed account option.

(gf) The geometric mean annual effective rate of the account value growth over the ten (10) calendar year period shall be shown for each scenario;

(gh) If the most recent ten (10) calendar year historical period experience of the index is shorter than the number of years needed to fulfill the requirement of subsection H, the most recent ten (10) calendar year historical period experience of the index shall be used for each subsequent ten (10) calendar year period beyond the initial period for the purpose of calculating the account value for the remaining years of the illustration;

(hi) The low and high scenarios: (i) need not show surrender values (if different than account values); (ii) shall not extend beyond ten (10) calendar years (and therefore are not subject to the requirements of subsection H beyond subsection H(1)(a)); and (iii) may be shown on a separate page. A graphical presentation shall also be included comparing the movement of the account value over the ten (10) calendar year period for the low scenario, the high scenario and the most recent ten (10) calendar year scenario; and

(ii) The low and high scenarios should reflect the irregular nature of the index performance and should trigger every type of adjustment to the index-based interest rate under the contract. The effect of the adjustments should be clear; for example, additional columns showing how the adjustment applied may be included. If an adjustment to the index-based interest rate is not triggered in the illustration (because no historical values of the index in the required illustration range would have triggered it), the illustration shall so state;

(10) The guaranteed elements, if any, shall be shown before corresponding non-guaranteed elements and shall be specifically referred to on any page of an illustration that shows or describes only the non-guaranteed elements (e.g., “see page 1 for guaranteed elements”);

(11) The account or accumulation value of a contract, if shown, shall be identified by the name this value is given in the contract being illustrated and shown in close proximity to the corresponding value available upon surrender;

(12) The value available upon surrender shall be identified by the name this value is given in the contract being illustrated and shall be the amount available to the contract owner in a lump sum after deduction of surrender charges, bonus forfeitures, contract loans, contract loan interest and application of any market value adjustment, as applicable;

(13) Illustrations may show contract benefits and values in graphic or chart form in addition to the tabular form;
(14) Any illustration of non-guaranteed elements shall be accompanied by a statement indicating that:

(a) The benefits and values are not guaranteed;

(b) The assumptions on which they are based are subject to change by the insurer; and

(c) Actual results may be higher or lower;

(15) Illustrations based on non-guaranteed credited interest and non-guaranteed annuity income rates shall contain equally prominent comparisons to guaranteed credited interest and guaranteed annuity income rates, including any guaranteed and non-guaranteed participation rates, caps or spreads for fixed indexed annuities;

(16) The annuity income rate illustrated shall not be greater than the current annuity income rate unless the contract guarantees are in fact more favorable;

(17) Illustrations shall be concise and easy to read;

(18) Key terms shall be defined and then used consistently throughout the illustration;

(19) Illustrations shall not depict values beyond the maximum annuitization age or date;

(20) Annuity income rate shall be based on contract values that reflect surrender charges or any other adjustments, if applicable; and

(21) Illustrations shall show both annuity income rates per $1000.00 and the dollar amounts of the periodic income payable.

G. An annuity illustration shall include a narrative summary that includes the following unless provided at the same time in a disclosure document:

(1) A brief description of any contract features, riders or options, guaranteed and/or nonguaranteed, shown in the basic illustration and the impact they may have on the benefits and values of the contract;

(2) A brief description of any other optional benefits or features that are selected, but not shown in the illustration and the impact they have on the benefits and values of the contract;

(3) Identification and a brief definition of column headings and key terms used in the illustration;

(4) A statement containing in substance the following:

(a) For other than fixed indexed annuities:

(i) This illustration assumes the annuity’s current nonguaranteed elements will not change. It is likely that they will change and actual values will be higher or lower than those in this illustration but will not be less than the minimum guarantees.

(ii) The values in this illustration are not guarantees or even estimates of the amounts you can expect from your annuity. Please review the entire Disclosure Document and Buyer’s Guide provided with your Annuity Contract for more detailed information;
For fixed indexed annuities:

(i) This illustration assumes the index will repeat historical performance and that the annuity’s current non-guaranteed elements, such as caps, spreads, participation rates or other interest crediting adjustments, will not change. It is likely that the index will not repeat historical performance, the non-guaranteed elements will change, and actual values will be higher or lower than those in this illustration but will not be less than the minimum guarantees.

(ii) The values in this illustration are not guarantees or even estimates of the amounts you can expect from your annuity. Please review the entire Disclosure Document and Buyer’s Guide provided with your Annuity Contract for more detailed information.

(ii) For fixed indexed annuities where the index has not been in existence for fifteen (15) years, but the criteria in Section 6.F.(9)(b) have been met, the following additional statements:

(I) Indexed returns that are based on historical performance prior to the existence of the index are visually differentiated from indexed returns that are based on historical performance thereafter;

(II) Because the index has not been in existence for the entire time period used in the illustration, some of the values of the index shown are a weighted average of indices or other financial instruments that were in existence for that time period;

(III) Either the weights used in combining the indices or other financial instruments are constant over time, or the weights are based on an algorithm that is consistently applied over time but may produce different weights in different years; and

(IV) The consumer may request further explanation of the algorithm used to determine the weights;

(iii) For fixed indexed annuities where the index is a combination of indices or other financial instruments and has been in existence for fifteen (15) years, the following additional statements:

(I) Either the weights used in combining the indices are constant over time, or the weights are based on an algorithm that is consistently applied over time but may produce different weights in different years; and

(II) The consumer may request further explanation of the algorithm used to determine the weights;
Additional explanations as follows:

(a) Minimum guarantees shall be clearly explained;

(b) The effect on contract values of contract surrender prior to maturity shall be explained;

(c) Any conditions on the payment of bonuses shall be explained;

(d) For annuities sold as an IRA, qualified plan or in another arrangement subject to the required minimum distribution (RMD) requirements of the Internal Revenue Code, the effect of RMDs on the contract values shall be explained;

(e) For annuities with recurring surrender charge schedules, a clear and concise explanation of what circumstances will cause the surrender charge to recur; and

(f) A brief description of the types of annuity income options available shall be explained, including:

   (i) The earliest or only maturity date for annuitization (as the term is defined in the contract);

   (ii) For contracts with an optional maturity date, the periodic income amount for at least one of the annuity income options available based on the guaranteed rates in the contract, at the later of age seventy (70) or ten (10) years after issue, but in no case later than the maximum annuitization age or date in the contract;

   (iii) For contracts with a fixed maturity date, the periodic income amount for at least one of the annuity income options available, based on the guaranteed rates in the contract at the fixed maturity date; and

   (iv) The periodic income amount based on the currently available periodic income rates for the annuity income option in item (ii) or item (iii), if desired.

H. Following the narrative summary, an illustration shall include a numeric summary which shall include at minimum, numeric values at the following durations:

(1) (a) First ten (10) contract years; or

   (b) Surrender charge period if longer than ten (10) years, including any renewal surrender charge period(s);

(2) Every tenth contract year up to the later of thirty (30) years or age seventy (70); and

(3) (a) Required annuitization age; or

   (b) Required annuitization date.

I. If the annuity contains a market value adjustment, hereafter MVA, the following provisions apply to the illustration:

(1) The MVA shall be referred to as such throughout the illustration;

(2) The narrative shall include an explanation, in simple terms, of the potential effect of the MVA on the value available upon surrender;

(3) The narrative shall include an explanation, in simple terms, of the potential effect of the MVA on the death benefit;
A statement, containing in substance the following, shall be included:

When you make a withdrawal the amount you receive may be increased or decreased by a Market Value Adjustment (MVA). If interest rates on which the MVA is based go up after you buy your annuity, the MVA likely will decrease the amount you receive. If interest rates go down, the MVA will likely increase the amount you receive.

Illustrations shall describe both the upside and the downside aspects of the contract features relating to the market value adjustment;

The illustrative effect of the MVA shall be shown under at least one positive and one negative scenario. This demonstration shall appear on a separate page and be clearly labeled that it is information demonstrating the potential impact of a MVA;

Actual MVA floors and ceilings as listed in the contract shall be illustrated; and

If the MVA has significant characteristics not addressed by Paragraphs (1) – (6), the effect of such characteristics shall be shown in the illustration.

Drafting Note: Appendix A provides an example of an illustration of an annuity containing an MVA that addresses Paragraphs (1) – (6) above.

J. A narrative summary for a fixed indexed annuity illustration also shall include the following unless provided at the same time in a disclosure document:

An explanation, in simple terms, of the elements used to determine the index-based interest, including but not limited to, the following elements:

(a) The Index(es) which will be used to determine the index-based interest;
(b) The Indexing Method – such as point-to-point, daily averaging, monthly averaging;
(c) The Index Term – the period over which indexed-based interest is calculated;
(d) The Participation Rate, if applicable;
(e) The Cap, if applicable; and
(f) The Spread, if applicable;

The narrative shall include an explanation, in simple terms, of how index-based interest is credited in the indexed annuity;

The narrative shall include a brief description of the frequency with which the company can re-set the elements used to determine the index-based credits, including the participation rate, the cap, and the spread, if applicable; and

If the product allows the contract holder to make allocations to declared-rate segment, then the narrative shall include a brief description of:

(a) Any options to make allocations to a declared-rate segment, both for new premiums and for transfers from the indexed-based segments; and
(b) Differences in guarantees applicable to the declared-rate segment and the indexed-based segments.
K. A numeric summary for a fixed indexed annuity illustration shall include, at a minimum, the following elements:

(1) The assumed growth rate of the index in accordance with Subsection F(9);

(2) The assumed values for the participation rate, cap and spread, if applicable; and

(3) The assumed allocation between indexed-based segments and declared-rate segment, if applicable, in accordance with Subsection F(9).

L. If the contract is issued other than as applied for, a revised illustration conforming to the contract as issued shall be sent with the contract, except that non-substantive changes, including, but not limited to changes in the amount of expected initial or additional premiums and any changes in amounts of exchanges pursuant to Section 1035 of the Internal Revenue Code, rollovers or transfers, which do not alter the key benefits and features of the annuity as applied for will not require a revised illustration unless requested by the applicant.

Section 7. Report to Contract Owners

For annuities in the payout period that include non-guaranteed elements, and for deferred annuities in the accumulation period, the insurer shall provide each contract owner with a report, at least annually, on the status of the contract that contains at least the following information:

A. The beginning and end date of the current report period;

B. The accumulation and cash surrender value, if any, at the end of the previous report period and at the end of the current report period;

C. The total amounts, if any, that have been credited, charged to the contract value or paid during the current report period; and

D. The amount of outstanding loans, if any, as of the end of the current report period.

Section 8. Penalties

In addition to any other penalties provided by the laws of this state, an insurer or producer that violates a requirement of this regulation shall be guilty of a violation of Section [cite state’s unfair trade practices act].

Section 9. Separability

If any provision of this regulation or its application to any person or circumstance is for any reason held to be invalid by any court of law, the remainder of the regulation and its application to other persons or circumstances shall not be affected.

Section 10. [Optional] Recordkeeping

A. Insurers or insurance producers shall maintain or be able to make available to the commissioner records of the information collected from the consumer and other information provided in the disclosure statement (including illustrations) for [insert number] years after the contract is delivered by the insurer. An insurer is permitted, but shall not be required, to maintain documentation on behalf of an insurance producer.

Drafting Note: States should review their current record retention laws and specify a time period that is consistent with those laws.

B. Records required to be maintained by this regulation may be maintained in paper, photographic, microprocess, magnetic, mechanical or electronic media or by any process that accurately reproduces the actual document.

Drafting Note: This section may be unnecessary in States that have a comprehensive recordkeeping law or regulation.
Section 11. Effective Date

This regulation shall become effective [insert effective date] and shall apply to contracts sold on or after the effective date.
Annuity Illustration Example
[The following illustration is an example only
And does not reflect specific characteristics of any actual product for sale by any company]

ABC Life Insurance Company

Company Product Name
Flexible Premium Fixed Deferred Annuity with a Market Value Adjustment (MVA)
An Illustration Prepared for John Doe by John Agent on mm/dd/yyyy
(Contact us at Policyownerservice@ABCLife.com or 555-555-5555)

| Sex: Male                               | Initial Premium Payment: $100,000.00 |
| Age at Issue: 54                        | Planned Annual Premium Payments: None |
| Annuitant: John Doe                     | Tax Status: Nonqualified              |
| Oldest Age at Which Annuity Payments Can Begin: 95 | Withdrawals: None Illustrated |

Initial Interest Guarantee Period: 5 Years

Initial Guaranteed Interest Crediting Rates
First Year (reflects first year only interest bonus credit of 0.75%): 4.15%
Remainder of Initial Interest Guarantee Period: 3.40%

Market Value Adjustment Period: 5 Years
Minimum Guaranteed Interest Rate after Initial Interest Guarantee Period *: 3%

* After the Initial Interest Guarantee Period, a new interest rate will be declared annually. This rate cannot be lower than the Minimum Guaranteed Interest Rate.

Annuity Income Options and Illustrated Monthly Income Values

This annuity is designed to pay an income that is guaranteed to last as long as the Annuitant lives. When annuity income payments are to begin, the income payment amounts will be determined by applying an annuity income rate to the annuity Account Value.

Annuity income options include the following:
- Periodic payments for Annuitant’s life
- Periodic payments for Annuitant’s life with payments guaranteed for a certain number of years
- Periodic payments for Annuitant’s life with payments continuing for the life of a survivor annuitant

Illustrated Annuity Income Option: Monthly payments for annuitant’s life with payments guaranteed for 10-year period.
Assumed Age When Payments Start: 70

For column descriptions, turn to page 245-14
Column Descriptions

(1) **Ages** shown are measured from the Annuitant's age at issue

(2) **Premium Payments** are assumed to be made at the beginning of the Contract Year shown

**Values Based on Guaranteed Rates**

(3) **Interest Crediting Rates** shown are annual rates; however, interest is credited daily. During the Initial Interest Guarantee Period, values developed from the Initial Premium Payment are illustrated using the Initial Guaranteed Interest Rate(s) declared by the insurance company, which include an additional first year only interest bonus credit of 0.75%. The interest rates will be guaranteed for the Initial Interest Guarantee Period, subject to an MVA. After the Initial Interest Guarantee Period, a new renewal interest rate will be declared annually, but can never be less than the Minimum Guaranteed Interest Rate shown.

(4) **Account Value** is the amount you have at the end of each year if you leave your money in the contract until you start receiving annuity payments. It is also the amount available upon the Annuitant's death if it occurs before annuity payments begin. The death benefit is not affected by surrender charges or the MVA.

(5) **Cash Surrender Value Before MVA** is the amount available at the end of each year if you surrender the contract (after deduction of any Surrender Charge) but before the application of any MVA. Surrender charges are applied to the Account Value according to the schedule below until the surrender charge period ends, which may be after the Initial Interest Guarantee Period has ended.

<td>6%</td>
<td>5%</td>
<td>4%</td>
<td>3%</td>
<td>2%</td>
<td>0%</td>
</tr>
</tbody>
</table>

(6) **Minimum Cash Surrender Value After MVA** is the minimum amount available at the end of each year if you surrender your contract before the end of five years, no matter what the MVA is. The minimum is set by law. The amount you receive may be higher or lower than the cash surrender value due to the application of the MVA, but never lower than this minimum. Otherwise the MVA works as follows: If the interest rate available on new contracts offered by the company is LOWER than your Initial Guaranteed Interest Rate, the MVA will INCREASE the amount you receive. If the interest rate available on new contracts offered by the company is HIGHER than your initial guaranteed interest rate, the MVA will DECREASE the amount you receive. Page 4 of this illustration provides additional information concerning the MVA.

**Values Based on Assumption that Initial Guaranteed Rates Continue**

(7) **Interest Crediting Rates** are the same as in Column (3) for the Initial Interest Guarantee Period. After the Initial Interest Guarantee Period, a new renewal interest rate will be declared annually. For the purposes of calculating the values in this column, it is assumed that the Initial Guaranteed Interest Rate (without the bonus) will continue as the new renewal interest rate in all years. The actual renewal interest rates are not subject to an MVA and will very likely NOT be the same as the illustrated renewal interest rates.

(8) **Account Value** is calculated the same way as column (4).

(9) **Cash Surrender Value Before and After MVA** is the Cash Surrender Value at the end of each year assuming that Initial Guaranteed Interest Rates continue, and that the continuing rates are the rates offered by the company on new contracts. In this case the MVA would be zero, and Cash Surrender Values before and after the MVA would be the same.

**Important Note:** This illustration assumes you will take no withdrawals from your annuity before you begin to receive periodic income payments. **Withdrawals will reduce both the annuity Account Value and the Cash Surrender Value.** You may make partial withdrawals of up to 10% of your account value each contract year without paying surrender charges. Excess withdrawals (above 10%) and full withdrawals will be subject to surrender charges.

This illustration assumes the annuity’s current interest crediting rates will not change. It is likely that they will change and actual values may be higher or lower than those in the illustration.

The values in this illustration are not guarantees or even estimates of the amounts you can expect from your annuity. For more information, read the annuity disclosure and annuity buyer’s guide.
MVA-adjusted Cash Surrender Values (CSVs) Under Sample Scenarios

The graphs below show MVA-adjusted Cash Surrender Values (CSVs) during the first five years of the contract, as illustrated on page 2 ($100,000 single premium, a 5-year MVA Period) under two sample scenarios, as described below.

**Graph #1** shows if the interest rate on new contracts is 3% LOWER than your Initial Guaranteed Interest Rate, the MVA will increase the amount you receive (green line). The pink line shows the Cash Surrender Values if the Initial Guaranteed Interest Rates continue (from Column (9) on Page 2).

**Graph #2** shows if the interest rate on new contracts is 3% HIGHER than your Initial Guaranteed Interest Rate, the MVA will decrease the amount you receive, but not below the minimum set by law (Column (6) on Page 2), which in this scenario limits the decrease for the first 2 years (yellow line). The pink line shows the Cash Surrender Values if the Initial Guaranteed Interest Rates continue (from Column (9) on Page 2).

These graphs and the sample guaranteed interest rates on new contracts used are for demonstration purposes only and are not intended to be a projection of how guaranteed interest rates on new contracts are likely to behave.
The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call July 29, 2020. The following Working Group members participated: Doug Ommen, Chair (IA); Jillian Froment, Vice Chair (OH); Steve Ostlund (AL); Jodi Lerner (CA); Tanisha Merced (DE); Dean L. Cameron (ID); Tate Flott (KS); Renee Campbell (MI); Bruce R. Range (NE); Keith Nyhan (NH); Cuc Nguyen (OK); Elizabeth Kelleher Dwyer, Matt Gendron and Sarah Neil (RI); Rachel Jade-Rice (TN); and Richard Wicka (WI). Also participating was: Malinda Shepherd (KY).

1. **Adopted its Dec. 19, 2019, and 2019 Fall National Meeting Minutes**

The Working Group met Dec. 19, 2019, and Dec. 7, 2019. During its Dec. 19 meeting, the Working Group discussed comments received on appendices to the *Suitability in Annuity Transactions Model Regulation* (#275).

Superintendent Dwyer made a motion, seconded by Director Froment, to adopt the Working Group’s Dec. 19, 2019 (Attachment Four-A), and Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Life Insurance and Annuities (A) Committee, Attachment Two). The motion passed unanimously.

2. **Discussed State Activities to Adopt Revised Model #275**

Commissioner Ommen said the purpose of this agenda item is hear a discussion of activities some states have taken to adopt the 2020 revisions to Model #275, which added a best interest standard of conduct for insurers and producers. He said this discussion relates to the Working Group’s work in 2020 to complete the second part of its charge to “consider how to promote greater uniformity across NAIC-member jurisdictions.”

Commissioner Ommen said Iowa adopted the revisions to Model #275 through the adoption of an administrative rule in May with a Jan. 1, 2021, effective date.

Superintendent Dwyer discussed the steps Rhode Island has taken to move toward promulgating a rule to adopt the 2020 revisions. She asked Commissioner Ommen about Iowa’s experience in adopting the revisions to Model #275 and whether the Iowa Insurance Department (IID) had experienced pushback from stakeholders with respect to some of the provisions.

Commissioner Ommen said that prior to Iowa beginning its administrative rulemaking process, the IID had discussions with stakeholders. Some of the discussions related to issues included in the draft frequently asked questions (FAQ) guidance document the Working Group will discuss next. He said Iowa received widespread support from stakeholders on the new regulation. He detailed the process the IID used to adopt the regulation, which included going through an administrative rules committee of the Iowa Legislature, and through that process, the IID was able to explain the history and the process the NAIC used to develop the revisions to Model #275. He explained that Iowa’s administrative rulemaking process does not allow for the adoption of drafting notes within the text of a rule. He said stakeholders encouraged the IID to include the drafting notes found in the revisions to Model #275 in a bulletin, which insurers can use, together with the rule, to assist in their implementation.

Director Cameron said Idaho has submitted legislation related to the revisions to Model #275 for consideration during Idaho’s upcoming legislative session. He said the Idaho Department of Insurance has not received any comments yet suggesting changes to the language in the revisions to Model #275. He discussed legislation enacted during Idaho’s last legislative session imposing additional standards for indexed annuities. He discussed provisions in the legislation requiring clarification and provisions that caused concern among some stakeholders, such as the new surrender charge requirements and provisions requiring insurers to file before use of advertising materials and materials insurers provide to their producers.
Commissioner Ommen agreed the states could encounter additional issues other than those specifically related to the best interest standard of conduct during their process to adopt the revisions to Model #275.

Director Froment said Ohio is beginning its administrative process to adopt the revisions to Model #275. She said the Ohio Department of Insurance has had informal discussions with stakeholders and expects within the next few weeks to submit a legislation proposal implementing the revisions to Model #275 for executive branch review before submitting legislation to the Ohio legislature for its consideration. Director Froment said that during some of Ohio’s discussions with stakeholders, some questions have been raised about certain provisions in the revisions to Model #275 and the intent behind them. She said Ohio has expressed its commitment to stakeholders to develop a bulletin or a FAQ document to answer some of the questions, but is looking to use some of what the Working Group includes in its FAQ guidance document to assist Ohio in developing its own FAQ or bulletin. She said Ohio also is looking at a Jan. 1, 2021, implementation date.

Ms. Shepherd explained that Kentucky has a requirement to review adopted regulations every five years. She said that as part of this review process, the Kentucky Department of Insurance will be submitting revised annuity suitability regulations, which will include the revisions to Model #275, to the Kentucky Legislature in August.

Commissioner Ommen said Working Group members, NAIC staff and he are ready and available to assist the states as they move forward with adopting the revisions to Model #275. He said he believes the FAQ guidance document is part of this effort to provide assistance to the states, but he also urged states to reach out directly to the Working Group members if they have questions about the revisions to Model #275.

3. Exposed the Draft FAQ Guidance Document

Commissioner Ommen said that NAIC staff, along with others and himself, developed a draft FAQ document as one way for the Working Group to complete the second part of its charge to “consider how to promote greater uniformity across NAIC member jurisdictions.” He explained that this guidance document will assist the states as they move forward with adopting the revisions to Model #275 through either the administrative or legislative process.

Commissioner Ommen said the FAQ document included in the Working Group’s materials is a draft and, at the end of the discussion, he is going to suggest exposing it for a 30-day public comment period. He said the purpose of the 30-day comment period is for the Working Group to receive input from stakeholders on what issues should be addressed in the document. He explained that some of the initial questions included in the FAQ document are questions NAIC staff and others received to date from the states and other stakeholders as they have moved forward with adopting the revisions to Model #275.

After additional discussion, the Working Group agreed to expose the draft FAQ document for a 30-day public comment period. The Working Group directed NAIC staff to revise the draft to “clean up” the draft prior to distributing it for public comment.

Having no further business, the Annuity Suitability (A) Working Group adjourned.
Annuity Suitability (A) Working Group Conference Call December 19, 2019

The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met via conference call Dec. 19, 2019. The following Working Group members participated: Jillian Froment, Chair (OH); Doug Ommen, Vice Chair (IA); Jerry Workman and Steve Ostlund (AL); Jodi Lerner (CA); Fleur McKendell (DE); Dean L. Cameron (ID); Vicki Schmidt and Tate Flott (KS); Nour Benchaaboun (MD); Renee Campbell (MI); Bob Harkins (NE); Keith Nyhan (NH); Mark McLeod (NY); Elizabeth Kelleher Dwyer, Matt Gendron and Sarah Neil (RI); Patrick Merkel (TN); and Richard Wicka (WI).

1. Discussed Comments Received on Appendices to Model #275

Director Froment discussed the purpose of the call, reminding the Working Group that at the Fall National Meeting, the Life Insurance and Annuities (A) Committee directed the Working Group to discuss potential revisions to the appendices based on the comments received by the Nov. 26 public comment deadline and any supplemental comments received. She said the goal is to create consumer-friendly documents that provide guidance to producers and insurers in satisfying the disclosure and documentation obligations established in the proposed revisions to the Suitability in Annuity Transactions Model Regulation (#275). She said the Working Group would discuss the comments received section-by-section beginning with Appendix A.

Director Froment said the Center for Economic Justice (CEJ) submitted comments on Appendix A, suggesting that the title should be revised to reflect consumer-friendly terms such as “agent and broker” and the appendix’s scope, which is annuities. After discussion, the Working Group agreed to accept the suggested revision, but retained the word “producer” in in parentheses in the title because the state insurance departments license “producers.”

The Working Group next discussed the CEJ’s suggested revisions to the next section, “Insurance Agent Information,” which describes the information to be provided on the form concerning the insurance agent.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) asked what the reference to “company name” means and whether it refers to the name of the insurance company or the producer’s insurance agency. He said most consumers will assume “company” name means the insurance company.

The Working Group discussed whether to retain “company” or use another word. After discussion, the Working Group agreed to change the reference to “business/agency name.”

The Working Group discussed the next section, “Client Information,” which describes the information to be provided on the form concerning the consumer.

Mr. Bissett suggested changing the word “client” to “consumer.” After discussion, the Working Group agreed to accept Mr. Bissett’s suggested revision.

Birny Birnbaum (CEJ) explained that the CEJ’s suggested revisions to this section make it more consumer-friendly. He said the CEJ differs in its approach to this section from the Joint Trades’ approach because the CEJ believes this section should include other types of investment products a producer may be authorized to sell, not just annuities. He pointed out that both the CEJ and the Joint Trades agree that the product checklist should be deleted.

The Working Group discussed the two approaches and whether to delete the product checklist. After discussion, the Working Group agreed to change the section’s title to “What Types of Products Can I Sell You?” The Working Group also agreed to revise the section’s language to read as follows: “I am licensed to sell annuities to You in accordance with state law. If I recommend that You buy an annuity, it means I believe that it effectively meets Your financial situation, insurance needs, and...
financial objectives. Other financial products, such as life insurance or stocks, bonds and mutual funds, also may meet Your
needs.” The Working Group decided to retain the checklist of products the producer can offer or sell, including non-insurance
products, such as mutual funds, stocks and bonds, and certificates of deposit.

The Working Group discussed the provision in the appendix concerning whose insurance products a producer is authorized to
sell, such as products from one insurer or two or more insurers.

Director Froment said the Joint Trades and the CEJ both suggest in their comments that this provision be a distinct section in
the appendix. The Joint Trades suggests titling the section as “Whose Insurance Products Can I Sell to You?” The CEJ suggests
titling the section as “Whose Annuities Can I Sell to You?” Director Froment said the CEJ suggests additional revisions to
delete “contracted and appointed” and to revise other language to make it more consumer-friendly.

After discussion, the Working Group agreed to the CEJ’s suggested title and the other suggested revisions to this provision.
The Working Group also agreed to delete the language concerning “My Relationship with You” because of potential
consumer confusion.

The Working Group discussed the next section in the appendix, “My Compensation Structure.” Director Froment said the Joint
Trades and the CEJ both suggest revising the section’s title to “How I’m Paid for My Work.” She said the Joint Trades and the
CEJ differ on the language to be included in this section.

Jason Berkowitz (IRI) said the Joint Trades’ suggested revisions strive to avoid potential consumer confusion.

The Working Group discussed the Joint Trades and the CEJ’s suggested revisions. After discussion, the Working Group decided
to retain the checkbox compensation-related language and add the following introductory paragraph: “It’s important for You
to understand how I’m paid for my work. Depending on the particular annuity You purchase, I may be paid a commission or a
fee. Commissions are generally paid to Me by the insurance company while fees are generally paid to me by the consumer. If
You have questions about how I’m paid, please ask Me.”

The Working Group next discussed the CEJ’s suggested language for inclusion in the section “Additional Information.”

Mr. Birnbaum suggested the Working Group delete the requirement in section “Insurance Agent (Producer) Information” to
provide the producer’s license number and instead include in this section the requirement that the producer provide his or her
national producer number (NPN). After discussion, the Working Group agreed.

Mr. Berkowitz said the Joint Trades do not believe the information the CEJ suggests including in this section is necessary.

Mr. Gendron said he could support requiring the appendix to include the BrokerCheck website information.

Commissioner Ommen said he could support requiring the appendix to include the information about viewing an insurance
agent’s record by going on the appropriate state insurance department’s website.

After discussion, the Working Group agreed to add this additional language and the additional CEJ suggested language
requiring a producer to include his or her securities license number if the producer is licensed to sell securities.

The Working Group next discussed Appendix B—Consumer Refusal to Disclose All or Partial Consumer Profile Information
Form. Director Froment said the Joint Trades suggests dividing this form into two forms with one form titled “Consumer
Refusal to Provide Information” and the other form, to be Appendix C, titled “Consumer Decision to Purchase an Annuity
NOT Based on a Recommendation.” She asked if the Working Group supported this approach. The Working Group expressed
support for taking this approach.

Director Froment said the Joint Trades and the CEJ suggest revisions to Appendix B. She suggested using the Joint Trades’
suggested revisions as the starting point for Working Group discussion. The Working Group agreed to her suggestion.

Mr. Birnbaum said the CEJ’s suggested revisions are meant to make the appendix more meaningful and more consumer-
friendly.
Mr. Berkowitz said the Joint Trades’ suggested revisions are tailored to make sure consumers understand what they are doing when they refuse to provide information that the producer needs to help to ensure a recommended product effectively meets the consumer’s financial needs, objectives and situation.

The Working Group discussed the suggested revisions, with some Working Group members expressing concern that some of the suggested revisions could cause more consumer confusion.

Commissioner Ommen noted the purpose of the appendices, which is to provide guidance to insurers and producers for complying with the proposed disclosure and documentation obligations. He suggested that the Working Group include the Joint Trades’ suggested revisions for Appendix B and Appendix C in the next draft of proposed revisions to Model #275 and discuss the language and any additional comments received on the language at the Life Insurance and Annuities (A) Committee’s meeting at the Fall National Meeting. There was no objection to his suggestion.

Having no further business, the Annuity Suitability (A) Working Group adjourned.

The Life Actuarial (A) Task Force met via conference call Aug. 3, Aug. 4 and Aug. 6, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain and Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA). Also participating was: Rachel Hemphill (TX).

1. **Adopted its June 25, June 18, June 11, June 4, May 28, May 21, May 14 and May 7 Minutes**

The Task Force met June 25, June 18, June 11, June 4, May 28, May 21, May 14 and May 7 and took the following action: 1) adopted its Feb. 27, Feb. 20, Feb. 13, Feb. 6, Jan. 30 and Jan. 23 minutes; 2) adopted changes to the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805); 3) adopted amendment proposal 2020-05, which modifies the net premium reserve (NPR) to reflect continuous deaths and immediate payment of claims; 4) adopted *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold After November 25, 2020* (AG 49-A); 5) adopted amendment proposal 2020-06, which establishes a process for replacing the London Interbank Offered Rate (LIBOR); 6) adopted amendment proposal 2020-07, which modifies VM-02, Minimum Nonforfeiture Mortality and Interest, of the *Valuation Manual* by replacing the fixed 4% floor for the nonforfeiture interest rate used to determine the minimum funding for the cash value accumulation test in Internal Revenue Code Section 7702.

Mr. Ostlund made a motion, seconded by Mr. Kupferman, to adopt the Task Force’s June 25 (Attachment One), June 18 (Attachment Two), June 11 (Attachment Three), June 4 (Attachment Four), May 28 (Attachment Five), May 21 (Attachment Six), May 14 (Attachment Seven) and May 7 (Attachment Eight) minutes. The motion passed unanimously.

2. **Heard an Update on the YRT Field Test**

Jason Kehrberg (American Academy of Actuaries—Academy) said the Academy initially commented in November 2017 on the potential occurrence of issues when projecting rates for yearly renewable term (YRT) reinsurance premiums under VM-20, *Requirements for Principle-Based Reserves for Life Products*, of the *Valuation Manual*. He said the letter noted the possibility of companies having differing interpretations of how to perform the modeling. He said the Task Force subsequently asked the Academy to conduct a field test on the different ways that companies might be modeling YRT reinsurance premiums. In response, the Academy put together a project oversight group (POG), comprising industry members and state insurance regulators. The POG established a design subgroup to develop instructions for testing different potential long-term solutions to the issue of projecting YRT premiums. Mr. Kehrberg said soon after the start of the design subgroup process, Oliver Wyman was engaged to put together a model office to provide oversight for the field testing of the potential YRT solutions.

Chris Whitney (Oliver Wyman) provided an overview of the YRT field test and interpretation survey presentation (Attachment Nine). He said a representative principle-based reserving (PBR) model was developed with the goal of providing early insights into the drivers for the variabilities and the impact that reinsurance has on PBR. He said initial insights from the model were shared last year while the industry field test and interpretation survey were being designed. He said the field test has since been conducted by the Academy. He said Oliver Wyman then partnered with the Academy and the NAIC to: 1) expand the granularity of the analysis dimensions and the model based on observations from field test participants; 2) use the PBR model to confirm and explain the results of the field test and perform some additional analysis based on responses to the interpretation survey; and 3) develop the report, including establishing some broad key takeaways and insights for the analysis. He said the report, in conjunction with the Academy report that summarizes the field test responses, provides additional clarity on the impact that the proposed solutions and interpretations of those solutions might have on company results. He noted that the PBR model is available for any additional analysis the Task Force may need to decide on a potential solution.
Jennifer Frasier (NAIC) provided a review of the proposed solutions in amendment proposal 2019-40, amendment proposal 2019-41, and amendment proposal 2019-42. She said the three proposals can respectively be associated with principles, best estimates and prescribed margins. Dylan Strother (Oliver Wyman) discussed the field test results and analysis. He said the field test instructions requested that participating companies submit point in time and projected reserve results for term or universal life with secondary guarantee (ULSG) products. Companies were required to submit results using a baseline scenario applying the interim solution (1/2 cL) and each of the three scenarios proposed in the amendment proposals. While numerous companies were invited to participate in the field test, the sophistication of the modeling, the extensive analysis, and some resource constraints limited the number of participants to 11 entities. Mr. Strother said the number was sufficient to do the required analysis and comparison to the representative PBR model. He noted that the distribution of companies in the field test was a good representation of company sizes, credibility assumptions and mortality assumptions across the industry. The field test submissions were used to refine the granularity in the places that were identified as the most significant drivers. Those drivers were the mortality, reserves and the properties of reinsurance. Mr. Strother said the biggest driver of the variation in results was the relationship between current scale of rates and anticipated mortality. He said two credibility scenarios for the representative model were also selected. He reviewed the results from each of the three amendment proposals under the baseline assumptions and the proposed action scenarios. Mr. Tsang asked if any of the participating companies expressed a preference for one of the three amendment proposals. Scott O’Neal (NAIC) said while no company expressed a preference for a specific proposal as the winning solution, some companies did note how they would implement a particular proposal or which actions may require additional work or potential model enhancements. Jeffrey L. Johnson (John Hancock) said a comment letter was submitted prior to commencement of the field test that stated a preference for amendment proposal 2019-42. Leonard Mangini (Academy) asked if the results of amendment proposal 2019-41 reflect a lack of understanding of the proposal. Mr. Strother said the proposals may require rewording. Mr. Jakielo asked why the baseline did not include mortality improvement. Mr. O’Neal said the observed company rates were more favorable than the rates reflecting mortality improvement. Alice Fontaine (Fontaine Consulting) said in amendment proposal 2019-40, Action C and Action D were suggestions of formulaic approaches representing how companies might decide when to change the rates in their model. She said using the formulaic approach was expected to be more informative than allowing a company to use only its judgment.

Mr. O’Neal said the range of interpretation survey, conducted by the Academy with support from Oliver Wyman, was designed to gather information on how companies would interpret the different proposed solutions for modeling non-guaranteed YRT reinsurance under PBR. The survey was intended to increase the level of participation above that observed in the field study and to use the additional responses to generalize across the industry. Mr. O’Neal said the survey was designed to capture most of the potential company responses and interpretations using predefined choices. For responses that were outside of the predefined choices, written descriptions could be provided in the “other” category. Companies were asked to complete a survey for each YRT treaty that had a separate modeling approach. Mr. O’Neal said 36 separate groups of direct writers and reinsurers submitted 51 separate survey responses. He discussed the slides, providing data on reinsurers’ actions taken in response to the various proposed options. He noted that if a company chose the “other” option and the survey reviewer felt the description of the company action was close to a predefined option category, the company would be asked to consider mapping the response to the predefined category. He discussed the results based on the three amendment proposals. He said all the models assume mid-year issue dates, a single neutral YRT scale developed from the field study, and a single high credibility mortality scenario. He noted that ULSG used a neutral rate scale with zero first year premium, followed by renewal premiums determined using a 95% factor applied to company best estimate mortality without any allowance for future mortality improvement. Mr. Boerner asked why the graph of the pre-reinsurance deterministic reserve for term insurance model of amendment proposal 2019-40 results shows a dip. Mr. Strother said it is possibly due with the discount rate and some of the asset mechanics related to revaluing. Mr. Whitney said they will check to confirm that that is the case. After reviewing the survey results for the three proposed amendment proposals, Mr. O’Neal directed participants to page 38 of the presentation for the list of key takeaways.

Katie van Ryn (Oliver Wyman) discussed the evaluation of the impact on the deterministic reserve under these different amendment proposals. She said no reinsurers participated in the field test. She said the range of interpretation survey was used to provide insight into how reinsurers would handle the various proposals and to investigate the total reserve impact between the ceding and assuming companies. The results from the five reinsurers that participated in the range of interpretation survey were the basis for the analysis. Ms. van Ryn said a key observation is that differing modeling approaches between the ceding and assuming companies can result in differences between the reserve credit and the assumed reserve. Mr. Strother said slide 45 provides the dimensions on which the field test results can be compared. He reiterated that the intent of the presentation is not to recommend a solution but to provide the dimensions on which the decision can hinge. Mr. Boerner said a follow up call will be scheduled to allow Oliver Wyman to respond to further questions.
2. **Exposed Revisions to Model #805**

On its June 11 call, the Task Force adopted a revision to Model #805 (Attachment Ten) that sets the floor for the interest rate used to determine minimum nonforfeiture to 0%. The revision was held by the Task Force in anticipation of the approval of a Request for NAIC Model Law Development for changes to Model #805. The Life Insurance and Annuities (A) Committee adopted the Request for NAIC Model Law Development July 10. The Executive (EX) Committee will consider adoption of the Request for NAIC Model Law Development Aug. 13. Mr. Boerner said on July 10, the Life Insurance and Annuities (A) Committee asked the Task Force to consider a minimum nonforfeiture rate between 0% and 1%. He said the Request for NAIC Model Law Development is written to allow consideration of the request. He said suggestions for removing the 3% cap applicable to the minimum nonforfeiture rate or revising the redetermination provision would be outside the scope of the Request for NAIC Model Law Development. Brian Bayerle (American Council of Life Insurers—ACLI) discussed the ACLI comment letter (Attachment Eleven) supporting the 0% floor for the minimum nonforfeiture interest rate. He said the rate on five-year U.S. Department of the Treasury (Treasury Department) notes and 10-year Treasury Department notes were respectively 21 basis points (bps) and 55 bps on July 31. He said the rates are historically low, making it difficult for companies to support a 1% guarantee. He said maintaining an unsupported rate is a risk to the continued availability of deferred annuity products for consumers. Liz Pujolas (Insured Retirement Institute—IRI) said the IRI comment letter (Attachment Twelve) concurs with the need for the 0% floor. She said IRI is willing to work to get the Model #805 changes adopted at the state level. Mr. Leung asked for information on the reasoning behind adoption of the 1% floor. Mr. Bayerle said he would do research and provide a response for the next Task Force discussion on the issue. Mr. Carmello said he recalls that at the time, a 1% floor was not a significant issue. He suggested that in the current economic situation, companies may not want to increase surrender charges to maintain profitability. Mr. Bayerle said companies have a limited number of options available in lieu of having a lower rate. Mr. Carmello said the New York Department of Financial Services favors a rate higher than 0%. He said the thought that a company could have a 0% crediting rate is not palatable. Mr. Bayerle said the minimum nonforfeiture rate floor affects only the guaranteed rate, not the crediting rate. He said competitive market pressures will keep the crediting rate above 0%, and it will drive rates up as the interest environment improves. Mr. Leung suggested that because the company credits interest on only 87.5% of the annuity premium, the minimum nonforfeiture rate floor might not need to be as low as 0%. Mr. Bayerle said the ACLI will consider that suggestion. Mr. Ostlund asked for examples of the minimum nonforfeiture values under various interest scenarios. Mr. Bayerle agreed to consider the request. Mr. Robinson asked what the implication might be for indexed annuities. Sheldon Summers (Claire Thinking Inc.) said the rates for indexed annuities still fall between the 1–3% range. He said there would be no immediate effect on indexed annuities. Janne Daharsh (Interstate Insurance Product Regulation Commission—Compact) said state adoption of a revised Model #805 is not required for filings under the Compact. She said the Compact Uniform Standard requires only NAIC adoption. Mr. Boerner asked what if a compacting state has a higher standard in their law. Ms. Daharsh said a state could opt out of the Uniform Standards, but that has never happened for annuities.

After the close of the session, the chair released an exposure of Model #805 that provided four options for the minimum nonforfeiture interest rate, 0.15%, 0.25%, 0.35% and 0.5% for a 21-day public comment period ending Aug. 25.

3. **Adopted the Minutes of the VM-22 (A) Subgroup**

Mr. Hendrick made a motion, seconded by Mr. Weber, to adopt the VM-22 (A) Subgroup’s July 15 (Attachment Thirteen), July 1 (Attachment Fourteen), June 11 (Attachment Fifteen) and May 20 (Attachment Sixteen) minutes. The motion passed unanimously.

4. **Heard an Update from the Academy ARWG**

Ben Slutsker (Academy Annuity Reserves Work Group—ARWG) introduced the ARWG presentation (Attachment Seventeen) on elements of the framework for fixed annuity PBR. He said the objective is to propose a new statutory reserve methodology for fixed annuities that uses an actuarial framework to determine reserves based on the level and type of risk inherent in the contract. The four main pillars of the ARWG objective are: 1) appropriate reflection of risk; 2) comprehensive accounting for all material risks; 3) consistent application across similar products; and 4) practicality and appropriateness of the methodology. Mr. Slutsker said the recent revisions to VM-21, Requirements for Principle-Based Reserves for Variable Annuities, will be the starting point for development of the new fixed annuity framework. The target effective date for the new framework is January 2023. Chris Conrad (ARWG) said the ARWG recommends that the framework scope cover both payout and deferred annuity contracts, for individual and group business. The scope for deferred annuities will include most of the account value-based annuities, such as single and flexible premium deferred annuities, multi-year guarantee annuities, fixed indexed annuities, two-tiered annuities, and riders on fixed annuity contracts. The scope for payout annuities will include single premium immediate annuities, deferred income annuities, pension risk transfer, and structured settlement contracts. Mr. Conrad said
guaranteed investment contracts, synthetic stable value contracts, and funding agreements are not be included in the scope of products covered by the new framework.

John Miller (ARWG) said exclusion tests will be developed to allow products with less risk to continue using the current requirements. He said the exclusion test calibration has not been set. He said field tests being conducted by Willis Towers Watson will help determine the appropriate ratio for the exclusion test. He said that use of the exclusion test will be voluntary.

Mr. Conrad said the ARWG recommendation is to have reinvestment assumptions consistent with the current VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, investment quality percentage allocation, which is reflective of industry experience. He said other asset assumptions should be consistent with VM-20 and VM-21, as appropriate. Mr. Miller said the ARWG recommends allowing aggregation across contracts consistent with the risks inherent in the products and how the risks are managed. He said consistent aggregation principles should be applied for stochastic processes and exclusion tests. Mr. Slutsker said the ARWG has discussed the question of application of the new framework to in force business. He said the ARWG believes that there is merit to applying the framework to all in force business regardless of issue date.

5. Adopted the VM-22 Subgroup Report

Mr. Sartain said half of the Subgroup calls were used to discuss the issues presented by the ARWG. He said the remaining time was spent talking about the standard projection amount. He said the thought is to use the VM-21 standard projection amount, appropriately modified for fixed annuities. He said discussion of whether the standard projection amount will be used as a floor will occur later. He said the Subgroup recommendations to the Task Force are to accept the scope proposed by the ARWG and to instruct the ARWG to continue working on an exclusion test. He said the Subgroup does not have a current recommendation on aggregation. Task Force members voiced no objection to the two recommendations. Mr. Carmello did state a preference for retaining the current requirements as a floor. Ms. Hemphill noted that as the exclusion test is developed, thought must be given to the relationship of the thresholds to company materiality standards. Mr. Sartain said the discussion of the application of the new framework to in force business was a low priority for the Subgroup. He said the Subgroup tabled its discussion of aggregation until the ARWG work is complete. He said the Subgroup has no recommendation on the reinvestment guardrails or the standard projection amount/floor issue.

Mr. Sartain made a motion, seconded by Ms. Ahrens, to adopt the report of the VM-22 (A) Subgroup. The motion passed unanimously.

6. Heard an Update from the Compact

Ms. Daharsh provided an update on the activities of the Compact. She said the officers of the Compact Commission and the Compact Management Committee will meet Aug. 14 to receive comments on and consider adoption of proposed guidelines on committee composition and application criteria for the Consumer Advisory Committee. She said the Compact Commission will hear the reports of the Governance Committee on two projects, governance review, and the business structure.

Ms. Daharsh said the Product Standards Committee began reviewing comments from the ACLI regarding amendments to the additional standards for waiver of premium and waiver of monthly deduction standards. The key purpose of the amendment is to expand the trigger for waiver benefits beyond total disability. The Committee is also working on an additional standard for a waiver of surrender charge for life insurance.

Ms. Daharsh said the Compact has received 690 filings through October, of which 656 have been approved. Those numbers are down 20% compared to last year. She said the average wait time for review of a filing is 20 days, compared to 33 days last year. The median number of states on a Compact filing is 43. The number of mix-and-match filings has continued to decrease and now comprises 26% of filings. She said 54% of the filings are for life products, 33% of the filings are for annuity products, and most of the remaining filings are for long-term care (LTC) and disability income. She said the newest uniform standard to become effective is the group annuity standards. Three group annuity filings have been received.

Ms. Daharsh said the Compact actuaries are monitoring Task Force activities related to Model #805. She noted that the Compact uniform standards for deferred annuities refer to any model and changes to the model as effective immediately and available for Compact filing once adopted by the NAIC. She said state adoption of the model is not required for Compact filings. Mr. Robinson asked for further information on why state adoption for Model #805 is not required. Mr. Weber said states joining the Compact agree to allow the Compact standards to supersede state requirements.
7. **Adopted the Report of the Longevity Risk (E/A) Subgroup**

Ms. Ahrens said the Subgroup has not met since the 2019 Fall National Meeting. She said the Life Risk-Based Capital (E) Working Group was finalizing plans to implement longevity risk factors for risk-based capital (RBC) C-2 risk. The plans have been delayed until an impact study can be completed. The impact study for the factors is planned for early next year. She said work is being done on longevity risk transactions that are unlike payout annuities. These transactions call for future premium collection, with the reinsurer absorbing the longevity risk. The ceding company holds zero reserves and the assuming company holds near zero reserves at inception, therefore, producing near zero longevity risk. She said only a few companies are engaging in these transactions. A regulator-only call will be planned to discuss those transactions.

Ms. Ahrens made a motion, seconded by Mr. Kupferman, to adopt the report of the Longevity Risk (E/A) Subgroup. The motion passed unanimously.

8. **Adopted the Report of the GI Life Valuation (A) Subgroup**

Ms. Ahrens said the Subgroup did not meet during the spring or summer. She said previous discussions favored developing a PBR approach for guaranteed issue (GI) mortality. She suggested that *Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves* (AG 44) could provide guidance. She asked if the target date for completion of the Subgroup charge could be extended. Mr. Boerner said Ms. Ahrens should make a recommendation for a revised target date to the Task Force prior to the deadline for submitting 2021 charges.

Ms. Ahrens made a motion, seconded by Mr. Ostlund, to adopt the report of the GI Life Valuation (A) Subgroup. The motion passed unanimously.

9. **Adopted the Report of the Experience Reporting (A) Subgroup**

Mr. Andersen said an exposure of additional elements related to accelerated underwriting for VM-51, Experience Reporting Formats, will be considered after the initial transition of the NAIC becoming the statistical agent. He said the Subgroup plans to have calls during the next quarter regarding actuarial aspects of accelerated underwriting, specifically an update on how well accelerated underwriting is predicting mortality in comparison to traditional underwriting. He said the Subgroup will also look to study experience for variable annuities with guarantees.

Mr. Andersen made a motion, seconded by Ms. Ahrens, to adopt the report of the Experience Reporting (A) Subgroup. The motion passed unanimously.

10. **Adopted the Report of the IUL Illustration (A) Subgroup**

Mr. Weber made a motion, seconded by Mr. Chou, to adopt the IUL Illustration (A) Subgroup’s June 2 (Attachment Eighteen) and May 26 (Attachment Nineteen) minutes. The motion passed unanimously.

Mr. Andersen said the Life Insurance and Annuities (A) Committee adopted AG 49-A. The Executive (EX) Committee and Plenary will consider the guideline for adoption on Aug. 14. Mr. Andersen briefly summarized that in late 2018, the Life Insurance and Annuities (A) Committee became aware of index product innovations that were leading to illustrations with higher credited rates than contemplated when the original guideline was developed. He said one of the major innovations was the multiplier. The Task Force was charged with addressing the concerns regarding product features. The charge was assigned to the Subgroup. To address the concerns, the Task Force instructed the Subgroup to add conservatism to the constraints of illustrated credited rates instead of focusing solely on disclosures. The Subgroup was also told to allow products with multipliers to illustrate no more favorably than products without multipliers and to reduce by half the illustrated benefit of borrowing at a certain rate and illustrating at a higher rate. These decisions were reflected in the guideline that was adopted.

Mr. Andersen said a general concept behind these issues is selecting a point on the spectrum of allowing innovation and preventing loopholes. He said AG 49-A ended up somewhere in the middle. He said while it is significantly more conservative than the existing guideline, it still provides guidance aligned with the *Life Insurance Illustrations Model Regulation* (#582). He said if after observing the results and practices following adoption of AG 49-A, there remain substantial concerns about unrealistic illustrations, the Committee will need to consider changes to Model #582.

Mr. Andersen made a motion, seconded by Mr. Yanacheak, to adopt the report of the IUL Illustration (A) Subgroup’s. The motion passed unanimously.
11. **Exposed Amendment Proposal 2019-33**

Mr. Boerner said amendment proposal 2019-33 was previously exposed for public comment. He said the Academy Life Reserves Work Group (LRWG) has revised the proposal to respond to comments from the ACLI (Attachment Twenty), Mr. Chupp (Attachment Twenty-One) and Mr. Robinson (Attachment Twenty-Two). Mary Bahna-Nolan (LRWG) said the amendment proposes to bring into scope a group insurance product that has attributes of individualized products that should be subject to VM-20. She said because the product is usually filed under a group chassis, it is generally being excluded from VM-20 requirements. She said in response to the comment letters, the following changes were made: 1) the amendment was modified to more clearly define the policies it covers so that true group insurance business would not be swept in; 2) VM-51 was modified to accommodate a certificate number and add an individual/group indicator; and 3) a clarifying edit was made to the language format. She recommended that the Task Force proceed with the proposal. Mr. Weber asked if the premiums for these products are easily identified in the annual statement blank. Ms. Bahna-Nolan said the premiums are not separated, and a request to the Blanks (E) Working Group may be necessary. Mr. Robinson said a group contract number data element should also be added to VM-51. Ms. Bahna-Nolan agreed that the field should be added.

Mr. Leung made a motion, seconded by Mr. Robinson, to expose amendment proposal 2019-33 (Attachment Twenty-Three), including the suggested edits, for a 60-day public comment period ending Oct. 5. The motion passed unanimously.

12. **Exposed Amendment Proposal 2020-03**

Ms. Hemphill said amendment proposal 2020-03 clarifies that the NPR can be calculated using the mean or mid-terminal method, or it can also be calculated using a more direct method. She said since its previous exposure, the language in the proposal has been aligned with the language in the *Accounting Practices and Procedures Manual* (AP&P Manual).

Mr. Chou made a motion, seconded by Mr. Weber, to expose amendment proposal 2020-03 (Attachment Twenty-Four) for a 21-day public comment period ending Aug. 25. The motion passed unanimously.

13. **Exposed Amendment Proposal 2019-34**

Mr. Robinson said the amendment proposal seeks to clarify the asset adequacy requirements for modified coinsurance (mod-co) business. He said because the mod-co agreement is structured such that the ceding company holds the reserves while the assuming company is responsible for the liability, there are challenges in holding either company responsible for cash-flow testing. He said the amendment clarifies that cash-flow testing is the responsibility of the ceding company, regardless of whether the liability has been ceded to a reinsurer. Mr. Carmello suggested that the amendment should be expanded to include other forms of reinsurance, such as funds withheld.

Mr. Robinson made a motion, seconded by Ms. Ahrens, to expose amendment proposal 2019-34 (Attachment Twenty-Five) for a 45-day public comment period ending Sept. 18. The motion passed unanimously.

14. **Exposed the 2021 GRET**

Dale Hall (Society of Actuaries—SOA) discussed the 2021 Generally Recognized Expense Tables (GRET) presentation (Attachment Twenty-Six). He noted that the SOA has also supplied a letter (Attachment Twenty-Seven), which provides a deeper overview of the methodology. He said there are no material changes in the process as compared to past years. He said the methodology attempts to minimize large jumps from one year to the next. He noted that the number of companies in the study decreased from 326 to 292. He attributed the decrease to companies no longer meeting the criteria for inclusion.

Mr. Leung made a motion, seconded by Mr. Weber, to expose the 2021 GRET for a 21-day public comment period ending Aug. 25. The motion passed unanimously.

15. **Heard an Update on SOA Research and Education**

Mr. Hall provided a presentation (Attachment Twenty-Eight) identifying recent and upcoming topics of possible interest to state insurance regulators of life insurance. He said most of the SOA research team’s recent work is related to COVID-19 topics crossing all areas of practice. He said the pandemic has had an impact on claims, assets, interest rates, operational risk and underwriting. He listed a few COVID-19 related references available on the SOA website. He said studies are under way that will provide information on the COVID-19 impact on insured life claims. He specifically noted a group life claim study that will allow comparisons of 2020 group life death claims to group life death claims for 2018 and 2019. He said the study is not
limited to COVID-19 claims, and it will also include death trends, such as suicide and accidental deaths. He pointed out a few other life insurance studies focusing on how companies are looking at mortality, modeling, new business practices, and asset/liability management, considering the low interest environment.

16. Exposed the 2020 Life Mortality Improvement Scale Recommendation

Marianne Purushotham (Joint Academy/SOA Life Mortality Improvement Subgroup) discussed a presentation (Attachment Twenty-Nine) on the 2020 mortality improvement scale recommendation. She said the objective of the mortality improvement updates is to address the incorporation of mortality improvement allowed in VM–20 Section 9.C.3.g. She said the mortality improvement scale is based on an average of historical data and data based on forecasted expectations, which is then smoothed to yield the mortality improvement scale. She said for 2020, there has been much discussion of how shocks, like the COVID-19 pandemic, affect the historical mortality improvement scale. She said the Subgroup decided to treat shocks as capital planning events, as opposed to treating them as impacts to reserves. Among the considerations leading to the decision for 2020 are: 1) the lack of sufficient data to understand the COVID-19 shock; 2) that reflecting a shock is inconsistent with the goals of the mortality improvement goal updates; and 3) avoiding the setting of a precedent for other excess mortality events. She said while the 2020 mortality improvement will not include an impact for the pandemic, pandemic deaths will be included in historical average used in the 2022 mortality improvement scale; but its effect will be smoothed. She said COVID-19 issues to be considered in the future are whether its impact on the insured population will be similar to its impact on the general population and what, if any, will be its long-term impact on mortality improvement rates.

The Task Force agreed to expose the 2020 Life Mortality Improvement Scale Recommendation for a 21-day public comment period ending Aug. 25 without objection.

17. Heard an Update from the Academy PBR Governance Work Group

Donna Claire (Academy PBR Governance Work Group) gave a presentation (Attachment Thirty) on PBR resources available from the Academy. She said the Academy is surveying appointed actuaries to get information on the impact of COVID-19 on 2020 year-end asset adequacy testing, including assumptions for mortality, lapses, interest rates, and long-term care (LTC). The white paper generated from the survey is expected to be available in September. Ms. Claire said the Academy Variable Annuity Reserves and Capital Work Group released a VM-21 checklist on Aug. 3. The checklist details the items to consider when determining variable annuity reserves and capital. Ms. Claire said the Academy PBR practice page on the Academy website provides the PBR toolkit, Academy comments on PBR, links to NAIC PBR resources, and Academy publications on PBR. She noted that the Life Principle-Based Reserves Under VM-20 practice note has been updated to reflect the 2020 Valuation Manual. She also highlighted the PBR Qualification Standard on the webpage. She said the Boot Camp will be virtual. Information is available on the Academy website. Another publication referenced by Ms. Claire is the PBR analysis template.

18. Heard an Update from the Academy Council on Professionalism

Shawna Ackerman (Academy) said the Academy has COVID-19 resources available on its website, including links to federal rules and regulations, congressional resources, Academy resources, and the NAIC Coronavirus Resource Center. Kathy Riley (Academy) said the Actuarial Standards Board (ASB) met in June to review the second exposure draft of Actuarial Standard of Practice (ASOP) No. 2—Nonguaranteed Elements for Life Insurance and Annuity Products. The comment period closes on Nov. 13. Ms. Riley said the comment period for the second exposure draft for ASOP No. 22—Statements of Opinion Based on Asset Adequacy Analysis by Actuaries for Life or Health Insurers ends on Nov. 30. She said the comment period for the first exposure draft of ASOP No. 11—Financial Statement Treatment of Reinsurance Transactions Involving Life Insurance or Health Insurance ended June 30. Comments on ASOP No. 11 will be reviewed by the ASB in December. She said ASOP No. 56—Modeling has been released, and it is effective for work done on or after Oct. 1. Godfrey Perrott (Academy) said the Actuarial Board for Counseling and Discipline (ABCD) received 72 requests for guidance (RFG). He said one general RFG asked whether Precept 1, covering integrity and honesty, applies only to actuarial work or applies to all activities. He said the answer is that it applies to all activities. He said Precept 13 requires Academy members to report material violation of the code if they cannot correct it.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call June 25, 2020. The following Task Force members participated:
Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted Revisions to AG 49**

Mr. Andersen said AG 49-A, the proposed revision to *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest* (AG 49), will reflect the Task Force charge that products with multipliers, cap buy ups and other index-linked enhancements should not illustrate more favorably than products without those features. AG 49-A also provides additional limits on the illustration of policy loan leverage. He said that given the constraints of the *Life Insurance Illustrations Model Regulation (#582)*, AG 49-A strikes a balance between allowing product innovation and reducing potential loopholes without eliminating all index features. He recommended that if AG 49-A is adopted, the Task Force should observe market activities for first six to 12 months following the effective date to determine if Model #582, its associated illustrated scale and focus on historic returns make sense for the indexed universal life (IUL) product.

Mr. Andersen made a motion, seconded by Mr. Weber, to adopt AG 49-A, the revision to AG 49 effective for all policies issued after the AG 49-A effective date (Attachment One-A). The motion passed unanimously.

Mr. Boerner said, once AG 49-A is adopted by the Executive (EX) Committee and Plenary, and its effective date is set, the Task Force will consider exposure of a proposal to discontinue AG 49 for all policies issued after the effective date of AG 49-A.

2. **Adopted Amendment Proposal 2020-07**

Tom Kalmbach (Globe Life) discussed the Globe Life comment letter (Attachment One B) on amendment proposal 2020-07, which proposes to change the life nonforfeiture interest rate floor in VM-02, Minimum Nonforfeiture Mortality and Interest. He said the change will result in increases in cash values and higher premiums for consumers. He said higher premiums will make the products in the small face amount market less affordable. He said the only economic reason for the change is related to paid-up additions and in-kind benefits. He proposed allowing a lower interest rate to determine the amount of paid-up and in-kind benefits while retaining the current rate for calculation of the base cash value.

Mr. Serbinowski said that lowering the interest rate for paid-up values and in-kind benefits results in lower values for both. He said the proposal should not receive regulatory consideration.

Mr. Boerner said a change such as the one Mr. Kalmbach is proposing should not be pursued in the *Valuation Manual*. He said that type of modification should be addressed through a model law change.

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment One-C) responds to companies’ concerns about whether adoption of the proposal should be deferred to allow more time to prepare for the change. He said deferring the change to the 2022 *Valuation Manual* would provide companies less time to address the matter. He pointed out that if the change is adopted for the 2021 *Valuation Manual*, companies will have 18 months to comply with the change. He said it is important that the nonforfeiture rate link to Section 7702 of the Internal Revenue Code (IRC) be maintained.
Elizabeth Brill (New York Life) said the comment letter (Attachment One-D), jointly submitted with three other companies, supports amendment proposal 2020-07. She said it is important that policyowners who surrender their policies receive equitable value in line with the intent of the standard nonforfeiture law. She said that in this low interest rate environment, retaining a 4% nonforfeiture interest rate floor potentially hurts consumers.

Mr. Weber made a motion, seconded by Mr. Yanacheak, to adopt amendment proposal 2020-07 (Attachment One-E). The motion passed, with Nebraska dissenting.

3. Adopted Amendment Proposal 2020-06

Mr. Boerner said Task Force members will consider whether the option for companies to produce their own swap spread curves should remain in amendment proposal 2020-06. He said if the Task Force chooses to remove the company option from the amendment proposal, it will result in the removal of the word “calculated,” the restoration of the word “prescribed” and the removal of the language requiring the VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, disclosures.

Mr. Bayerle said the ACLI comment letter encourages the Task Force to adopt the amendment proposal in its entirety. He said the amendment proposal was initiated because of the noted differences between the rates produced by the NAIC and the rates observed in the marketplace. He said allowing companies to use their market observable rates helps align their rates used in valuation with the rates used in their other internal processes. He said that with the disclosure provisions in the proposal providing a safety net, the risks are minimal. He said the disclosure would easily allow the NAIC to discover issues and quickly resolve them through discussion with the company.

Mr. Ostlund asked if a Valuation Manual change will be required to implement the replacement of the London Interbank Offered Rate (LIBOR).

Pat Allison (NAIC) said adoption of the amendment proposal gives the Task Force the authority to adopt and implement a LIBOR replacement without further changes to the Valuation Manual. She said once the LIBOR replacement has been implemented, a Valuation Manual amendment proposal could be submitted to capture the identity of the new data source for the sake of clarity.

Mr. Carmello made a motion, seconded by Mr. Robinson, to adopt amendment proposal 2020-06, with the “company may elect ...” paragraph deleted, the word “calculated” removed, the word “prescribed” restored and the proposed revisions to VM-31 Section 3.D.6.v and Section 3.F.4.h deleted (Attachment One-F). The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\LA\LATF Calls\06-25\June 25 Minutes.docx
Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for in-force illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows: for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*],

1.1 Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

1.2 Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

1.3 Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:
i. The policy is subject to Model #582.

ii. Interest credits are linked to an external index or indices.

ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The credited rate Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum credited rate Annual Rate of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum credited rate Annual Rate of Indexed Credits for the illustrated scale and the guaranteed credited rate Annual Rate of Indexed Credits for that account. However, the credited rate Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed credited rate Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated rate credited to the loan balance does not exceed the illustrated loan charge. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.

B.C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

C.D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.
vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

vi. The Hedge Budget used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.

viii. There are no enhancements or similar features that provide additional Indexed Credits in excess of the interest provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, or bonuses.

ix. There are no limitations on the portion of account value allocated to the account.

x. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

D. Fixed Account: An account where the credited rate is not tied to an external index or index; there are no Indexed Credits.

E. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

F. Index Account: An account where some or all of the amounts credited are Indexed Credits.

G. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an Index Account are included.

H. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

I. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

J. Policy Loan Interest Credited Rate: The annualized interest rate is tied to an external index or indices credited that applies to the portion of the account value backing the Loan Balance:

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate.

ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.

L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The credited rate of Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:
A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):

i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall reflect that the Index Account that is not the Benchmark Index Account in 3 (C), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated using actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For the Purposes of compliance with Section 5 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the illustrated rate before comparing to the earned interest rate underlying the Disciplined Current Scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the account, inclusive of all general account assets (excluding hedges for index-based credits) allocated to both hedge and non-hedge assets, that support the policy's net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed:

i. the Annual Net Investment Earnings Rate, plus

ii. 45% of the lesser of (1) and (2);
1. Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

The assumed earned rate used in testing the Disciplined Current Scale may not exceed the Annual Rate of Indexed Credits plus the excess of the Annual Net Investment Earnings Rate over the Hedge Budget.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a policy with multiple Index Accounts, a maximum rate in 5.A. should be calculated for each account. All accounts, fixed and indexed, within a policy can be tested in aggregate.

B. If an insurer does not engage in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4.50%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical indexed interest rates Indexed Credits using current index parameters for the most recent 20-year period.
Removing the 4% floor on minimum non-forfeiture rates has the potential to increase cash values on traditional whole life coverage, thus limiting the affordability and/or the amount of insurance protection for many Americans at a time when getting life insurance is more important than ever!

Overview of Whole Life Coverage – Two Approaches Used to Determine Policy Premiums

1. For traditional whole life coverage, many companies determine policy premiums based on anticipated costs which include:
   - The cost of providing Death Benefits
   - The cost of providing Cash Values or Surrender Benefits including In-Kind Benefits
   - The cost of underwriting and other acquisition expenses
   - The cost of administration
   - The cost of holding statutory reserves in excess of economic reserves
   - The cost of capital given the risks taken.

2. For mutual companies, it is common to determine premiums based on the Statutory Reserve Valuation Net Premium which is generally conservative and may provide the opportunity to pay policyholder dividends after reflecting the company’s costs in #1 above. So the policy premium may be independent of the cash values provided.

Companies have the option to provide cash values that are greater than the minimum required. So a 4% floor on discount rates used to determine minimum cash values does not preclude companies from this option and offering higher cash values.

The Nonforfeiture Interest Rate is a Discount Rate which is used to determine cash values – this discount rate determines how cash values emerge through maturity at which time they converge to equal the face amount for traditional whole life policies regardless of the discount rate.

At a 2% discount rate cash values are 30% higher than at a 4% discount rate in the 20th policy year. Minimum Cash Values increase with lower discount rates resulting in higher surrender benefits. The cost of providing these higher benefits is reflected in the costs used to determine premiums; higher benefits lead to higher premiums.

Cash Values as determined at 2%, 2.5%, 3%, and 3.5% as a % of Minimum Cash Values determined using 4%
Upon Surrender, life insurance policies provide one or more in-kind benefits (Paid Up coverage or Extended Term Insurance) in lieu of cash surrender. The Cash Surrender value is used to determine the amount of these in-kind benefits; ideally, they should be economically equivalent. A lower interest rate used to determine Paid Up (or other in-kind) benefit amounts that is more aligned with the current market rate environment has the potential to reduce overall policy costs and supports lower policy premiums.

We urge LATF to consider an amendment to APF 2020-07, which would keep costs low for basic protection life insurance thus helping the affordability and accessibility of life insurance protection for many Americans at a time when getting life insurance protection is more important than ever.

Proposed Amendment:
The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on or after the operative date of this amendment shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the Valuation Manual for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%. Provided, however, that the nonforfeiture interest rate shall not be less than the applicable interest rate used to meet the definition of life insurance in the Cash Value Accumulation Test under section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

Amendment Benefits:
- Maintains the current 4% floor established in the valuation manual for the discount rate used to determine minimum cash values.
- Mitigates the impact of lower interest rates on the cost of providing minimum cash values and therefore on premiums or dividends.
- Allows for a lower interest rate to determine the amount of paid-up and in-kind benefits aligned with the rates permissible under 7702 and proposed amendments aligning better with current interest rates.

June 17, 2020  

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)  

Re: ACLI Comments on APF 2020-07 (Nonforfeiture Floor)  

Dear Mr. Boerner:  

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments regarding the APF 2020-07, which changes the cash value floor for the nonforfeiture rate in VM-02. ACLI continues to support this change, and we provide the following comments to address concerns raised by regulators.  

**Standard Nonforfeiture Law Addresses Timing Concerns**  

Several regulators expressed concern about the timing required for companies to reprice and refile depending on when adoption of federal legislation revising the Internal Revenue Code (IRC) §7702 would occur. The Standard Nonforfeiture Law provides companies 18 months to comply with a new lower rate; NAIC Model #808 Section 5c (H) (1) states the following:  

(1) At the option of the company, calculations for all policies issued in a particular calendar year may be made on the basis of a rate of interest not exceeding the nonforfeiture interest rate, as defined in this section, for policies issued in the immediately preceding calendar year.  

If this APF is passed, there is no additional pressure for companies to reprice this year versus a deferral on adoption. If the APF is adopted this year it provides companies more flexibility on timing for the newly priced products, assuming Federal action. Delaying action may actually create a worse situation for companies: companies cannot file until the NAIC adopts the Valuation Manual, and the Interstate Insurance Product Regulation Commission would need to update their standards quickly.  

**Greater Benefit to Consumers**  

A lower maximum nonforfeiture interest rate provides higher minimum benefits to consumers upon surrender. Higher nonforfeiture benefits encourages policyholders to continue paying premiums to build up greater value. Proponents of the floor would argue maintaining the floor may result in lower premiums, but this would be contingent on companies passing the savings of lower nonforfeiture
benefits to consumers. If the 4% floor is removed, then such benefits are required to be passed to policyholders upon surrender.

**The Floor Will Alter Relationship between Valuation and Nonforfeiture Values**

Assuming the valuation rate updates to 3.0%, the calculated nonforfeiture rate will decrease to 3.75%. If the floor is kept at 4.0%, this is a 25bp higher discount rate companies can use, and breaks the 125% relationship between the nonforfeiture rate over the valuation interest rate. This difference would become more magnified if the valuation interest rate decreased even further; if the valuation interest rate decreased to 2.5% while retaining the 4.0% floor the margin increases to 60%. Increasing the margin on nonforfeiture would likely lead to more lapse-supported permanent policies. For such products, companies begin to profit from policyholders who lapse their policy, because it costs the company less to pay the surrender benefit than it does to keep the policy in-force.

**No Issues if Tax Code Is Not Changed**

Adopting this APF does not create any potential issues in the event the Federal Government does not act on legislation. The APF just links the nonforfeiture interest rate floor to the tax code, which is why the interest rate floor in VM-02 exists in the first place. If the APF is adopted and the tax code is not updated, then the nonforfeiture floor stays at 4%, consistent with current requirements.

We look forward to a discussion on this important issue.

Sincerely,

[Signature]

Chair, NAIC Life Actuarial (A) Task Force

Attention: Reggie Mazyck (rmazyck@naic.org)

Re: APF 2020-07 on Life Nonforfeiture

Dear Chair Boerner,

Our companies appreciate the opportunity to comment on APF 2020-07. We strongly support the proposal to replace the 4.0% interest rate floor in life nonforfeiture requirements with a reference to the tax code as it best protects policyholders in a low interest rate environment. Moreover, this proposal is consistent with the fundamental purpose and intent of the nonforfeiture requirements – to provide fair value to policyholders who surrender their policies after years of paying premiums. In a low interest rate environment, a minimum nonforfeiture standard that includes an artificial 4% interest rate floor permits the development and sale of products that deprive policyholders from receiving equitable value upon surrender after years of policy contributions, at a time when they no longer need or are able to afford coverage.

**Nonforfeiture Objective is to Provide Equitable Value to Consumers**

The intent of the nonforfeiture law is to provide equitable policyholder value between those who surrender versus those who persist. This is done by passing a value linked to the reserve to consumers through cash surrender value and other nonforfeiture options. If the 4.0% interest rate floor remains, products can be designed where consumers will not receive equitable value upon surrender in the current low interest rate environment. If the nonforfeiture interest rate is floored at an artificially high level, minimum guaranteed cash values will be smaller relative to the size of the reserve, making whole life a lapse-supported product.

When a policyholder surrenders a whole life contract, the company releases reserves that are larger than surrender benefits, receiving a surrender gain. The nonforfeiture interest rate is 125% of the valuation interest rate, allowing 25% of the investment income to be retained by the company.

In the likely scenario that the valuation rate drops to 3.0% for policies issued in 2021, but the 4.0% floor remains, the discount rate cushion would increase from 25% to 33% (4.0%/3.0%-1), allowing increased surrender gains to be retained by the company. If the current low rate environment persists and the valuation rate drops to 2.5%, and if the 4.0% floor remains, the discount rate cushion would increase to 60% (4.0%/2.5%-1), allowing for even more surrender gains to be retained by the company. In such a scenario, consumers who pay into policies for years and surrender the policy in a time of need would not receive value commensurate with their policy. In contrast, the company would realize a gain that may or may not be passed back to
the consumer via reduced premiums. If the 4.0% floor is kept, then the lower the interest rate environment, the greater the amount that can be withheld from the policyholder upon surrender.

The following chart shows examples of an insurance company’s “surrender gains”, which are the excess of the minimum reserves over the minimum nonforfeiture values (cash values). This is shown for a sample policy under two different reserve valuation rate scenarios (3.0% and 2.5%), with and without the current 4.0% nonforfeiture interest rate floor.

<table>
<thead>
<tr>
<th>“Surrender Gains” – Difference between Reserves and Minimum Cash Values</th>
<th>Valuation Rate = 3.0%</th>
<th>Valuation Rate = 2.5%</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Nonforfeiture Rate</strong></td>
<td><strong>Additional Value Withheld</strong></td>
<td><strong>Additional Value Withheld</strong></td>
</tr>
<tr>
<td>4.0% (NF Floor)</td>
<td>3.75% (No NF Floor)</td>
<td>4.0% (NF Floor)</td>
</tr>
<tr>
<td>Duration 10</td>
<td>$3,371</td>
<td>$2,896</td>
</tr>
<tr>
<td>Duration 20</td>
<td>$4,506</td>
<td>$3,672</td>
</tr>
<tr>
<td>Duration 30</td>
<td>$4,386</td>
<td>$3,483</td>
</tr>
</tbody>
</table>

As shown in the chart above, maintaining the current 4.0% interest rate floor in a low interest rate allows the insurer to realize a higher surrender gain in all durations. As illustrated, the more years the policyholder pays into the policy, the more the company is able to withhold additional value from the consumer upon surrender if the 4.0% floor remains.

**Leaving in the 4.0% Floor Harms Consumers**

Claims that removing the 4.0% floor would harm consumers by increasing premiums is a misdirected argument. In fact, if the floor remains, companies would be permitted to withhold value from consumers, resulting in greater gains for the company. These gains could either be passed through as lower premiums (creating a lapse-supported product) or pocketed by the company in a low interest rate environment. There is no requirement to lower premiums. To frame lower minimum benefits to the consumer as helping the consumer is fundamentally misguided.

The nonforfeiture requirements are designed to protect policyholders who do not stay inforce, either because they no longer want or need coverage or are unable to afford coverage. Requiring a higher exit value maintains parity with persisting policyholders and protects all customers, not just those who persist.

1 If the company passes the surrender gain back to policyholders in the form of lower premiums it is potentially (1) creating inequities between persisting and surrendering policyholders and (2) creating a lapse-supported policy, where the company is financially incented to have a greater percentage of policyholders surrender.
**Holding Archaic Remnants of the Tax Code Hostage**

The change to the nonforfeiture law in 2014 to include the 4.0% interest rate floor was not made to lower nonforfeiture benefits, but instead solely to avoid conflict between the minimum nonforfeiture values and the maximum funding values permitted under Section 7702 of the Internal Revenue Code (“Section 7702”). However, if Section 7702 is amended so that it no longer includes a hard-coded 4% minimum rate, the 4% floor in the nonforfeiture interest rate would no longer be appropriate. APF 2020-07 proposes to eliminate this floor in the interest of providing greater equity to policyholders who surrender. We support returning to the level of fairness that was always intended by the Standard Nonforfeiture Law.

**Conclusion**

We strongly urge LATF to adopt APF 2020-07 to maintain equity between persisting and surrendering policyholders consistent with the purpose of the Standard Nonforfeiture Law. Leaving the current 4.0% floor in VM-02 is not only arbitrary, but deprives surrendering policyholders of value in a low interest rate environment. Consumers are not helped by lower premiums that may or may not come to fruition. In contrast, they are helped by ensuring that minimum nonforfeiture values are fair and equitable relative to the value they have already paid into their policy.

Sincerely,

RE-EXPOSURE OF APF 2020-07

Comments should be submitted to Reggie Mazyck (RMazyck@NAIC.ORG) by COB June 17, 2020

Please comment on the change of wording from “used” to “prescribed”

Additionally, provide an opinion of the pro and cons of adopting or not adopting the wording of the proposal. Particularly, concerns about the potential impacts of the proposed change on companies are welcomed.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Brian Bayerle, ACLI

Title of the Issue:
Remove 4% Floor from Life Standard Nonforfeiture Rate.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 NAIC Valuation Manual – VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Upon any possible tax code (IRC, S. 7702) modifications to remove the hardcoded interest rate floor starting in 1/1/2021, the life standard nonforfeiture rate is being updated to ensure the minimum funding under state requirements does not exceed the maximum funding under federal requirements for life insurance contracts issued starting in 1/1/2021.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2020-07
VM-02

Version 1: Remove floor

Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the *Valuation Manual* shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the *Valuation Manual* for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the applicable interest rate prescribed to meet the definition of life insurance in the Cash Value Accumulation Test under Section 7702 (*Life Insurance Contract Defined*) of the U.S. Internal Revenue Code.

**Guidance Note:** For flexible premium universal life insurance policies as defined in Section 3.D of the *Universal Life Insurance Model Regulation* (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.
Re-Exposure of APF 2020-06
Updated 6/11/20 v.2

This version of APF is the same as the initial version exposed after the June 11 LATF call with the exception that the following sentences

“When LIBOR is terminated or its use becomes de minimis, the LIBOR rates will be replaced with the most appropriate replacement rates for the specified purpose. The NAIC will monitor these market observable values and, in the event the then current values are discontinued or replaced, will recommend an appropriate replacement to the Life Actuarial (A) Task Force.”

have been replaced by the sentence below

“When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to LATF which shall be effective upon adoption by Life Actuarial (A) Task Force.”

Reggie Mazyck
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force  
Amendment Proposal Form* 

1. Identify yourself, your affiliation and a very brief description (title) of the issue.  
   Brian Bayerle, ACLI – Interest Rate Swap Spread Determination  

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:  

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)  
   See attached.  

4. State the reason for the proposed amendment? (You may do this through an attachment.)  
   Interest Rate Swap Spreads are currently being calculated by the NAIC under methodology outlined in the Valuation Manual. This APF changes the methodology for calculation of the 3-month and 6-month swap spreads to use market observable values for Treasury rates and LIBOR, rather than the average of these values from JP Morgan and Bank of America.  
   With the forthcoming termination of LIBOR, the requirements of the Valuation Manual will need to change. This APF provides broad guidance allowing for one or more currently unnamed rate to replace LIBOR in these calculations.  
   Additionally, this APF allows the company to calculate its own current swap spreads based on market observable values. The spread requirements are currently included in VM-20, with VM-21 referencing the applicable sections. With the potential of VM-22 likely having similar references, LATF may want to consider moving these and other asset requirements to their own section.  

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2020-06
Options for LATF consideration: Per the 6/11 LATF discussion, in addition to adopting the full text of the APF, regulators wanted to consider not allowing for companies to produce their own current swap spreads. This option would be to retain “prescribed” instead of “calculated”, would strike the paragraph beginning “The company may elect to produce their own current swap curves...”, and would remove the VM-31 Section 3.D.6.v and VM-31 Section 3.F.4.h language.

VM-20 Section 9.F.8.d
Interest rate swap spreads over Treasuries shall be prescribed/calculated by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed/calculated for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When LIBOR is terminated or its use becomes de minimis, the LIBOR rates will be replaced with the most appropriate replacement rates for the specified purpose. The NAIC will monitor these market-observable values and, in the event that the current values are discontinued or replaced, will recommend an appropriate replacement to the Life Actuarial (A) Task Force. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to LATF which shall be effective upon adoption by LATF.

The company may elect to produce their own current swap spread curves based on current observable rates. The company will document the data source(s) of the observable rates and the methodology of interpolation of non-published rates in the VM-31 report.

VM-20 Appendix 2.F.1
F. Current Benchmark Swap Spreads

1. For tenors of one-year to thirty-years, extract swap spread data determined as of the last business day of the month by maturity. For Bank of America data, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.

VM-31 Section 3.D.6.v (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads, and the methodology used to determine the non-published tenors.

VM-31 Section 3.F.4.h (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads, and the methodology used to determine the non-published tenors.

Commented [MR1]: The word “calculated” was proposed as a replacement for the word “prescribed” if the paragraph starting “The company may select…” was adopted. The paragraph was rejected so this language goes back to “prescribed.”

Commented [MR2]: The word “calculated” was proposed as a replacement for the word “prescribed” if the paragraph starting “The company may select…” was adopted. The paragraph was rejected so this language goes back to “prescribed.”

Commented [MR3]: This paragraph was not accepted, which results in the proposal reverting to the word “prescribed” and the deletion of the two proposed revisions to VM-31 below.

Commented [MR4]: See the note above.
The Life Actuarial (A) Task Force met via conference call June 18, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Exposed the ACLI Revisions to AG 49-A

Mr. Andersen discussed the proposed loan leverage options. He said option 1 limits some of the good features available in policies and limits the ability to illustrate the loan leveraging aspects of those features. He said the illustrations allowed by option 1 permit relatively high values related to those features, which is contrary to the preferences of some state insurance regulators. He said option 2 eliminates some of the undesirable features that would inflate illustration values, but option 2 also limits some desirable features. Mr. Andersen said option 3 is like option 1, but the value of the option features would be mitigated by limiting the loan leverage.

Alex Silva (John Hancock) discussed the IUL Coalition examples (Attachment Two-A) of the workings of each of the three loan leveraging options. He noted the IUL Coalition’s concern about an example (Attachment Two-B) submitted by Securian Financial. He characterized the example as misleading.

Graham Summerlee (Lincoln Financial), also a member of the IUL Coalition, provided examples (Attachment Two-C) refuting the assertions of the Securian Financial examples. He said the Securian example shows fixed bonuses but fails to show the related costs. He reiterated the IUL Coalition’s support for option 1.

Seth Detert (Securian Financial) said he is concerned that there is no requirement for charges related to the bonuses. He said it is a mistake to assume that every company would choose to cover bonuses with specific costs tied to the value of the fixed bonuses. He said the examples Securian provided are representative of common industry scenarios. He said the fixed bonuses on loans creates a loophole. He said the Securian Financial comment letter (Attachment Two-D) supports option 2 to close the loophole.

Mr. Yanacheak said it seems that option 2 goes too far and complicates consumer understanding of the illustration. He said the option 2 limit on wellness bonus credits is excessive. He said he supports option 1.

When polled by Mr. Boerner, 14 Task Force members said they preferred an option more conservative than option 1.

Mr. Andersen said he supports option 2.

Mr. Yanacheak said he does not fully agree with option 2 and thinks that option 3 relitigates the loan leverage discussion. He said he has previously stated his dislike for loan leveraging but does not consider wellness bonuses as loan leverage and would support option 3.

Mr. Andersen was asked to consider allowing companies to use either option 2 or option 3 depending on the policy circumstances.

Mr. Yanacheak said writing the language for allowing company choice would be difficult.
Mr. Boerner asked whether Task Force members preferred option 2 or option 3. Eleven members preferred option 3. Five members voted for option 2. Three members abstained.

Brian Bayerle (American Council of Life Insurers—ACLI) discussed the technical edits (Attachment Two-E) made to AG 49-A, the proposed revision of Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49). Mr. Chupp suggested several nonsubstantive edits.

Mr. Andersen made a motion, seconded by Mr. Schallhorn, to expose the ACLI revisions to AG 49-A, including the language for option 3 and the edits suggested by Mr. Chupp, for a seven-day public comment period ending June 24. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Chair, NAIC IUL Illustration (A) Subgroup

Re: Proposed Changes to Actuarial Guideline 49 Loan Illustration Provisions

Fred:

On behalf of the companies listed below (the “IUL Coalition”), we are submitting this letter in support of Option 1 in the draft of Actuarial Guideline 49 (“AG 49-A”) that was submitted by the ACLI to the Life Actuarial Task Force (“LATF”).

Lincoln Financial Group  
Pacific Life Insurance Company  
National Life Group  
John Hancock  
Sammons Financial Group

Background

Indexed loans allow policyholders to take loans from their policies and continue to earn indexed interest on the loaned policy cash values designated by the insurer as loan collateral. The mechanics that support indexed interest on loaned values are very similar to the mechanics that support indexed interest on unloaned values:

- **Account value (AV)**  
- **Company earns yield (e.g., 4%)**  
- **Yield used to buy hedges**  
- **Hedge payoffs support index credits (e.g., 7.00%)**

- **Unloaned AV**
- **Company earns yield (e.g., 4%)**  
- **Yield and loan charges used to buy hedges**
- **Hedge payoffs support index credits (e.g., 7.00%)**

- **Loaned AV**
- **Company collects loan charges (e.g., 4%)**
The same risk premium that supports index credits in excess of the company’s portfolio yield also supports index credits in excess of the collected loan charge.

Although the mechanics that support indexed interest on loaned and unloaned values are very similar, the presence of a loan balance can make IUL policies more sensitive to indexed returns. Thus, when LATF first adopted AG 49, regulators chose to limit the illustrated “loan leverage” (the difference between the illustrated credits on cash values held as loan collateral or “indexed loan credit” and the loan charge) to 100 basis points.

Today, LATF has exposed three options for consideration. Each of those options would limit indexed loan leverage inclusive of all index multipliers, index bonuses, and other index credits. The options differ in the following ways:

- Option 1 would limit indexed loan leverage to 100 basis points;
- Option 2 would limit all indexed and non-indexed loan credits in excess of the loan charge to 100 basis points; and
- Option 3 would limit indexed loan leverage to 50 basis points.

The IUL Coalition Supports Option 1

Option 1 achieves the stated goal of imposing an appropriate level of new, additional conservatism on illustrations of indexed loan leverage. Option 1 is consistent with the underlying principles underlying the original loan leverage rule in AG 49. Options 2 and 3, on the other hand, go beyond regulators’ stated concerns about IUL illustrations and would create new limits on illustrations applicable to all IUL products.

The purpose of the original loan leverage rule in AG 49 was to limit the difference between the indexed loan credit and the loan charge. That limit was considered desirable because “leverage” causes increased policy sensitivity. That rationale does not, however, apply to non-indexed credits. Non-indexed credits (e.g. a fixed, guaranteed persistency bonus or wellness credits) are not supported by hedge returns that can vary and do not contribute to increased policy sensitivity. Instead, non-indexed credits are supported by mechanisms that are not dependent on indexed returns, such as policy charges and/or margins on COIs. Furthermore, there are already limits to the amount of non-indexed credits that can be illustrated, as the illustrated level of non-indexed credits are subject to self-support/lapse-support tests. We therefore urge LATF to adopt Option 1 in AG 49-A because it addresses regulator concerns and accomplishes the purpose of the loan leverage rule in AG 49 without unnecessarily limiting non-indexed credits.

In addition to concerns that have been expressed about the use of the term “charge reductions” in Option 2, we do not support Option 2 for additional reasons. Specifically, Option 2 goes beyond indexed loan leverage by limiting all credits, regardless of whether they are tied to an index. Option 2 would apply to illustrations for all products - including products without multipliers or other enhancements. Option 2 would also discourage innovation. For example, a company desiring to offer non-indexed bonuses would need to illustrate the charges related to the bonus, yet would also be prohibited from illustrating the benefit on loaned account values with indexed loans. Option 2 would also introduce inconsistencies that would cause customer confusion (e.g. inconsistent treatment of features between unloaned AV vs loaned AV, standard loans vs indexed loans, max illustrated rate vs lower illustrated rates, and UL vs IUL).
Likewise, we do not support Option 3 because it would also add conservatism for illustrations of all IUL products (including products without multipliers or other enhancements). The 100 basis point loan leverage limit already includes conservatism for index loans.

The following example demonstrates the impact of the different options:

<table>

March 25 IUL Coalition Comment Letter

In our comment letter dated March 25, 2020, we provided additional support for Option 1. For ease of reference we are providing a summary of key points from that letter:

1. Non-indexed credits do not contribute to loan “leverage.” As described in the ACLI comment letter, loan “leverage” is when the index credit is higher than the loan charge. Non-indexed credits do not impact the index return or the loan charged rate, so **Option 1 and Option 2 provide the same limit to loan leverage.**

2. Option 2 creates inconsistencies.
   a. **Loaned vs. Unloaned Values within IUL product.** Option 2 would allow the illustration of non-indexed credits on unloaned values but not on loaned values. This leads to difficulties for a consumer to compare and understand the costs associated with a loan and the impact on benefits under the policy.
   b. **Standard Loans vs. Indexed Loans within IUL product.** Option 2 would allow the illustration of non-indexed credits on Standard Loans but not on Indexed Loans. This creates confusion to the consumer when determining which type of loan would be best suited for them.
   c. **Maximum illustrated rate vs. lower illustrated rates.** Option 2 would allow the illustration of non-indexed credits at lower illustrated rates. This is misleading because it gives the consumer the impression that the bonus amount truly varies by index performance.
   d. **UL vs. IUL.** Option 2 would create a discrepancy between UL and IUL illustrations because UL policies can illustrate non-indexed credits on loaned values. This difference will make it more difficult for the applicant to understand which product better suits his or her needs and will also make it more difficult to compare the mechanics of each product.

3. **Innovative products will be disadvantaged.** Many innovative products are designed to add non-indexed credits that could increase a customer’s policy value. The best way for a customer to understand the benefits derived from these features is in the illustration. Option 2 would create a disadvantage for innovative product designs, such as policies that offer wellness credits to customers who engage in activities that help them live longer and healthier lives.

4. **Option 1 does not provide any undue “optimism” compared to Option 2.** The illustration of non-indexed credits does not add any additional optimism because the credits will be paid regardless of future index performance. Therefore the level of “optimism” in projecting uncertain events like indexed returns is identical between the two options.

In conclusion, AG 49 was created to limit the illustration of indexed performance. Option 2 goes beyond the scope of AG 49 by restricting the illustration of non-indexed credits and would add conservatism for all IUL products (including products without multipliers or other enhancements). Option 3 would also add conservatism for all IUL products (including products without multipliers or other enhancements). Thus, the IUL Coalition urges LATF to adopt Option 1 in AG 49-A because Option 1 limits the illustration of indexed loan credits while allowing for the illustration of innovative non-indexed product features.
We appreciate the opportunity to provide input to the IUL Subgroup and look forward to further discussions.

Deputy Commissioner of Insurance
Minnesota Department of Commerce
Chair, NAIC IUL Illustration (A) Subgroup

Re: Proposed Changes to Actuarial Guideline 49 Loan Illustration Provisions – Added Example

Fred:

On behalf of the companies listed below (the “IUL Coalition”), we are submitting examples in addition to our June 12 letter in support of Option 1 in the draft of Actuarial Guideline 49 (“AG 49-A”) that was submitted by the ACLI to the Life Actuarial Task Force (“LATF”). Our objective through these examples is to increase understanding about each of the three loan options that LATF is considering, and their potential impact.

Lincoln Financial Group
Pacific Life Insurance Company
National Life Group
John Hancock
Sammons Financial Group

These examples demonstrate each of the following key takeaways:

- The impact of fixed persistency bonuses is vastly overstated if the corresponding charge is not included.
- Our examples show Option 2 results in policies with fixed persistency bonuses illustrating worse than policies without fixed persistency bonuses when indexed loans are also illustrated.
- Option 1 does not create the risk of runaway illustration values.
- Option 2 creates inconsistent treatment of non-index credits between indexed loans and standard loans.

Discussion

Concerns about Option 1 claim that it creates the risk of “runaway illustrations,” (i.e., that non-indexed features could significantly enhance illustrated values). These concerns fail to acknowledge the critical fact that the illustrated values would also need to reflect the corresponding cost of the benefit. Our examples show that while the benefits of non-indexed features can be material, once the associated cost is also included the resulting net impact on illustrated values is less material.

The hypothetical examples below assume the illustration of an IUL policy where the insured’s issue age is 55 years old, premiums are paid on the policy for 15 years and an indexed loan is taken for 20 years. The
illustrated loan interest crediting rate is 6% and the loan interest charged rate is 5%, so the illustration values are at the maximum 1% difference between the index loan credited rate and charged rate.

Based on the above assumptions, the following hypothetical examples compare how Options 1, 2 and 3 impact illustrated values under three different scenarios:

(A) No fixed bonus  
(B) 0.50% fixed bonus paid each year on both loaned and non-loaned values  
(C) 1.00% fixed bonus – paid each year on both loaned and non-loaned values

Options 1 and 3 allow the full amount of the bonus to be included in illustrated values for both loaned and non-loaned values. Option 2 limits the illustration of the bonus to non-loaned values only. Option 3 has lower illustrated values than Option 1 because the 1% loan leverage limit is reduced to 0.50%. Standard loans are also included as a comparison point.

<table>
<thead>
<tr>
<th>Bonus not linked to index performance</th>
<th>Option 1</th>
<th>Option 2</th>
<th>Option 3</th>
<th>Std Loan Option 1, 2, &amp; 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>58,202</td>
<td>58,202</td>
<td>55,160</td>
<td>52,421</td>
</tr>
<tr>
<td>0.50%</td>
<td>66,995</td>
<td>63,406</td>
<td>63,406</td>
<td>60,176</td>
</tr>
<tr>
<td>1.00%</td>
<td>76,906</td>
<td>68,869</td>
<td>72,666</td>
<td>68,869</td>
</tr>
</tbody>
</table>

As expected, if only the bonus amount is included without reflecting the associated cost, the illustrated values could be significantly higher when adding a fixed bonus. This is not how the illustrated values are determined, however. In actual practice, the carrier needs to offset the cost of the bonus to maintain profitability levels, and to pass illustration testing. This offset results in a material change in the illustrated values and mitigates the risk of runaway illustrations.

The examples were then updated to include the following costs:

- No fixed bonus, no additional cost
- 0.50% fixed bonus, with an associated cost of 5.59% of premium
- 1.00% fixed bonus, with an associated cost of 10.92% of premium
<table>
<thead>
<tr>
<th>Bonus not linked to index performance</th>

<td>2,796</td>
</tr>
<tr>
<td>1.00%</td>
<td>6,614</td>
<td>(204)</td>
<td>6,057</td>
<td>5,577</td>
</tr>
</tbody>
</table>

When reflecting the cost of the bonus in Options 1 and 3, the illustrated values are increased by adding a fixed bonus. Option 2 shows reduced illustrated values. This reduction results because, while the full amount of the bonus needs to be accounted for in setting the cost of providing the bonus, Option 2 does not allow the bonus to be illustrated on loaned values. This example demonstrates, however, that the additional illustrated value from an indexed loan is relatively modest when compared to the impact on standard loan illustrated values. The treatment of the fixed persistency bonus is consistent between Indexed Loans and Standard Loans for Option 1 (similar size increase in maximum annual loan) while the treatment is inconsistent between Indexed Loans and Standard Loans for Option 2 (maximum annual loan decreases for Indexed Loans but increases for Standard Loans).

Furthermore, the policyholder would also see a reduction in early cash value on the illustration due to the added charge to cover the associated cost of the bonus. This would be an important consideration for a policyholder evaluating the costs and benefits of the bonus.

In conclusion, these examples demonstrate that the impact on illustrated values from adding a fixed bonus on indexed loan illustration values is not significantly greater than illustrated values for a standard loan. They also address stated concerns about a significant risk that illustrated values will substantially increase under Option 1. For the reasons outlined in our June 12 letter, we urge LATF to adopt Option 1.

We appreciate the opportunity to provide input to the IUL Subgroup and look forward to further discussions.

Fred Andersen
Acting Deputy Commissioner of Insurance
Minnesota Department of Commerce
85 7th Place East, Suite 280
St. Paul, MN 55101

Dear Fred,

The undersigned companies present these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the exposed draft of the ACLI recommended changes to AG49.

Respectfully,

Seth Detert, Securian Financial
Pete Rothermel, Nationwide
Jacqueline Fallon, Penn Mutual Life Insurance Co
Seth Harlow, Mutual of Omaha

We want to take this opportunity to reiterate that it is our belief that the exposed ACLI revisions to AG49 meet the stated requirements of LATF:

- That products with charged-for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

- That, within an illustration, there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

We appreciate the time and energy spent by the Subcommittee, the ACLI, and the ACLI member companies driving us towards a vote on the revisions to AG49. On the most recent call there was a lively discussion around the two options for loan leverage presented in the ACLI recommendation. This spawned a third option to be introduced and added to the subsequent ACLI recommendation.

We continue to recommend the Subcommittee adopt Option #2 of the ACLI comment letter in regard to the applicability of loan leverage. The impact of participating loans is unique to the IUL product and that in and of itself gives IUL products certain advantages over other product types in the industry. Thus, it is important that illustrations be inclusive of all types of credits in the loan leverage limit to not overemphasize the impact participating loans can have on the illustrated values of IUL products and avoid giving consumers unrealistic expectations.

During the call a comment was made that having examples showing the impact of the three different loan arbitrage options would help regulators understand the impacts of each option. Below we have provided a summary table of the work we have done quantifying the impact of each loan option on a hypothetical illustrated scenario for supplemental retirement income.

*Same results as "Option 2" because here "Option 3" effectively shows 1% loan leverage.
Background
The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text
1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The total annual percentage rate (Annual Rate) of Indexed Credits for each Index Account does not exceed the lesser of the maximum total annual percentage rate (Annual Rate) of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the total annual percentage rate (Annual Rate) of Indexed Credits for each Index Account shall not exceed the average of the maximum total annual percentage rate (Annual Rate) of Indexed Credits for the illustrated scale and the guaranteed total annual percentage rate (Annual Rate) of Indexed Credits.
Credits for that account. However, the **total annual percentage rate** (Annual Rate) of Indexed Credits for each Index Account shall never be less than the guaranteed **total percentage rate** (Annual Rate) of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. **Annual Net Investment Earnings Rate:** Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind are not included. Charges of any kind are not used to increase the Annual Net Investment Earnings Rate.

C. **Annual Rate of Indexed Credits:** The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

D. **Benchmark Index Account:** An Index Account with the following features:
   i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)
   ii. An annual cap is used in the interest calculation.
   iii. The annual floor used in the interest calculation shall be 0%.
   iv. The participation rate used in the interest calculation shall be 100%.
   v. Interest is credited once per year.
   vi. The **hedge budget** (Hedge Budget) used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind are not included when determining the applicable annual cap rate.
   vii. There are no enhancements or similar features that provide additional amounts credited that are linked to an index or indices. Indexed Credits in excess of the interest calculation, provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, and bonuses.
   viii. There are no limitations on the portion of account value allocated to the account.
   ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

E. **Fixed Account:** An account where the amounts credited are not tied to an index or indices. Indexed Credits.

F. **Index Account:** An account where some or all of the amounts credited are Indexed Credits.

G. **Indexed Credits:** Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that are linked to an index or indices. Indexed Credits to the policy resulting from a floor are included.

H. **Hedge Budget:** For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

G. **Index Account:** An account where some or all of the amounts credited are Indexed Credits.
H. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an Index Account are included.

I. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

J. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

K. Policy Loan Interest Credited Rate: The annualized interest rate credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.
   i. For the portion of the account value in the Fixed Account that is backing the Loan Balance that is in a Fixed Account, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

   [OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI April 14, 2020 Comment Letter. There is an Option 3 that would use the language from Option 1 and Option 2 may need to reduce the limit in Section 6 from 100bp to be tightened up to 50bp.]

   Option 1: ii. For any portion of the account value in an Index Account that is backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account, as defined in the policy.

   Option 2: ii. For any portion of the account value in an Index Account that is backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage Annual Rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements intended to impact the portion of the account value backing the Loan Balance, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.

L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that determines used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.
   i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).
   ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For the Benchmark Index Account the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):
i. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Account that is not the Benchmark Index Account in 3 (C), the total Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The maximum Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The total Annual Rate of Indexed Credits that reflects the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget may cause the illustrated rate before comparing to exceed the earned interest rate underlying the Disciplined Current Scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale for the account, inclusive of all general account assets both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed:

i. the Annual Net Investment Earnings Rate, plus

ii. 45% of the lesser of (1) and (2):

1. Hedge Budget minus any floor, annual floor, to the extent that the floor is supported by the Hedge Budget.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.

Commented [A8]: One of several edits addressing Academy S.A. Comment #3

Commented [A9]: Suggested language to address the floor

Commented [A10]: This language shouldn’t inherently disadvantage multiplier designs. The timing adjustment will impact both multiplier and non-multiplier designs. For multiplier designs, the Supplemental Hedge Budget definition allows for an amount “consistent with the hedging program of the company”, which may allow the timing difference to be reflected in that value and not disadvantage a multiplier.

Commented [A11]: If a product does not have an interest spread (i.e., the full NIER is spent on hedging), it should not generate excess hedge earnings in the testing which would not be the case in reality.

Commented [A12]: Changes address VA Comment #6

Commented [A13]: Reflects Academy S.A. Comment #1
C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

6. Policy Loans

**OPTION FOR CONSIDERATION:** In addition to the 2 options outlined in 3.K, a third option was suggested to use the Option 1 language but reduce below from 100 to 50 bps.

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than [Options 1 and 2: 100; Option 3: 50] basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.
The Life Actuarial (A) Task Force met via conference call June 11, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Manny Hidalgo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted Revisions to Model #805**

   Jason Berkowitz (Insured Retirement Institute—IRI) said the IRI comment letter (Attachment Three-A) supports the revision of the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805) that lowers the nonforfeiture interest rate floor 1% to 0%.

   Brian Bayerle (American Council of Life Insurers—ACLI) said there is an urgent need for adoption of the revisions. He said the ACLI is open to revisiting the issue later if other considerations arise.

   Mr. Chou made a motion, seconded by Mr. Carmello, to adopt the revisions to Model #805 (Attachment Three-B). The motion passed unanimously.

2. **Re-exposed APF 2020-06**

   Pat Allison (NAIC) said the NAIC calculates swap spreads using methodology outlined in the *Valuation Manual*. She said the first section of the proposal addresses how the NAIC use of J.P. Morgan and Bank of America values has become an issue, particularly for variable annuity (VA) writers. Amendment proposal form (APF) 2020-06 changes the methodology for calculation of the three-month and six-month swap spreads to use market observable values for U.S. Treasury rates and the London Interbank Offered Rate (LIBOR), rather than the average of the values from JPMorgan and Bank of America. She said another section of the proposal provides language that facilitates the replacement of LIBOR, when NAIC staff determine that using LIBOR values is no longer feasible. The third section of the proposal allows companies to calculate their own swap spreads using market observable values. Ms. Allison noted that market observable values are available only at certain tenors of the swap rate curve. She said companies will have to decide how to determine the rates at points between tenors and will be required to disclose their methodologies.

   Mr. Bayerle said that, in addition to disclosing their methodologies, the proposal requires companies to disclose their data sources. He said the ACLI is comfortable with the NAIC determining when to discontinue use of LIBOR.

   Mr. Ostlund suggested the word “calculated” be replaced with the word “prescribed.”

   Mr. Boerner said the option of making that change could be included as part of the exposure.

   Mr. Ostlund also suggested that the language describing the replacement of LIBOR be revised.

   Ms. Allison will work Mr. Bayerle, Mr. Ostlund and Mr. Carmello to revise the wording for the exposure.

   Mr. Ostlund made a motion, seconded by Mr. Carmello, to re-expose APF 2020-06 (Attachment Three-C), with the edits suggested by Mr. Ostlund and provided by Ms. Allison, for a seven-day public comment period ending June 17. The motion passed unanimously.
3. **Re-exposed APF 2020-07**

Jim Hodges (National Alliance of Life Companies—NALC) said the NALC comment letter (Attachment Three-D) opposes adoption of APF 2020-07. He suggested the Task Force pursue a comprehensive solution that modernizes the *Standard Nonforfeiture Law for Life Insurance* (#808). He said the Task Force should wait until after the U.S. Congress takes official action on changes to Section 7702 of the Internal Revenue Code (IRC) before considering the amendment proposal. He said any change should consider the effect on low- to middle-income consumers.

Tom Kalmbach (Globe Life) said the Globe Life comment letter (Attachment Three-E) also opposes the amendment proposal and asks for consideration of the impact on consumers of lowering the nonforfeiture rate floor. He suggested lowering the interest rate on in kind benefits as an alternative. He said that in an era of higher interest rates, setting the nonforfeiture rate at 125% of the valuation interest rate provided a sufficient margin between the rates. He said as interest rates declined the margin also declined. He suggested that a revision to the law may be warranted.

Mr. Bayerle said the low interest environment presents several challenges. He said the ACLI comment letter (Attachment Three-F) explains that the proposed change is in response to congressional legislative action and maintains the important relationship between the valuation rate and the nonforfeiture rate. He said that as the valuation rate drops, there is an element of fairness in commensurately increasing the cash value. He said there have been discussions of revising #808, but that is a longer process that would not allow for a timely resolution of the issue.

Mr. Kalmbach said companies can provide higher cash values even if the nonforfeiture floor remains at the current level.

Ms. Ahrens said if companies are required to use a rate lower than the nonforfeiture rate floor to comply with the requirements of Section 7702 they would do so regardless of whether the amendment proposal is adopted.

Mr. Robinson suggested that the word “used” be replaced with “prescribed.” Mr. Bayerle agreed to the change.

Mr. Leung made a motion, seconded by Mr. Sartain, to re-expose APF 2020-07 (Attachment Three-G) with the edits suggested by Mr. Robinson, for a seven-day public comment period ending June 17. The motion passed unanimously.

4. **Adopted APF 2020-05**

APF 2020-05 clarifies that the net premium reserve (NPR) is intended to reflect continuous payment of premiums and immediate payment of death claims.

Mr. Hidalgo said his comment letter (Attachment Three-H) suggested adding wording to clarify that death claims on riders and supplemental benefits are intended to be reflected in the NPR.

Jason Kehrberg (PolySystems, Inc.) agreed that the wording of the amendment proposal was intended to cover death claims on riders and supplemental benefits. The amendment proposal was edited to provide the clarification suggested by Mr. Hidalgo.

Mr. Ostlund made a motion, seconded by Mr. Robinson, to adopt APF 2020-05 (Attachment Three-I) with the recommended edits. The motion passed unanimously.

5. **Discussed APF 2020-02**

Bill Wilton (unaffiliated) said his comment letter (Attachment Three-J) makes the case that the amendment proposal is unnecessary because the requirements it attempts to clarify need no further clarification. He said he also has concerns about the use of the pre-tax interest maintenance reserve (IMR).

Ms. Allison said the amendment proposal seeks to clarify that there are steps outlined in VM-20, Requirements for Principle-Based Reserves for Life Products, that cannot be skipped. She said reviews of principle-based reserving (PBR) actuarial reports have revealed that some companies are skipping steps.
Mr. Bock gave an example of companies holding zero reserves on small blocks of business, because they consider the block immaterial. He said that violates Section 2.G of VM-20, which says an approximation should not be biased in a downward direction.

Mr. Carmello suggested the language in the proposed guidance note should be moved to the text.

Philip Wunderlich (Nationwide) said the Nationwide comment letter (Attachment Three-K) suggests that the requirements should be balanced with practicality. He also said that requirements demonstrated in one year should not require demonstration in future years if there has not been a material change.

Mr. Bayerle said the ACLI comment letter (Attachment Three-L) suggests that adding a new requirement when some companies are doing PBR for the first time creates an additional burden. He said rather than adding prescription, state insurance regulators should approach specific companies with their issues.

Mr. Robinson suggested that the companies should be able to consider the materiality of the pre-tax IMR.

Ms. Ahrens advocated tabling the amendment proposal and expanding the use of VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, instead of adding prescription.

Mr. Boerner said the Task Force will resume the discussion on a future call.

Having no further business, the Life Actuarial (A) Task Force adjourned.
May 29, 2020

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Reggie Mazyck
Life Actuary, NAIC

Re: Model 805 Exposure, Standard Nonforfeiture Law for Individual Deferred Annuities

Dear Mr. Boerner and Mr. Mazyck:

On behalf of our members, the Insured Retirement Institute (“IRI”)\(^1\) appreciates the opportunity to comment on the proposed change to Model 805 Exposure. For the reasons set forth below, we support the proposal and respectfully urge the NAIC to move expeditiously to adopt the proposal.

The current financial environment is challenging institutional and individual investors and product offerings. The proposed change from 1% to 0% will give companies more flexibility to provide the value and benefits wanted and needed by consumers. If companies are required to offer 1% crediting rates, and interest rates remain low or decrease further, certain products will no longer be feasible to offer. The products most at risk are often those in greatest demand by consumers. For example, products with short surrender charge periods may not be able to find investments that have a high enough yield to support a 1% rate. At the same time, many consumers will be understandably hesitant to purchase long term products in a low yield environment. Additional guarantees in contracts such as a return of premium benefit may become unaffordable if the asset yield available is exhausted by the 1% guarantee.

IRI is committed to responding to the country’s economic condition with policy recommendations that support individual investment. Companies must have a diverse product portfolio to respond to the

\(^1\) IRI is the leading association for the entire supply chain of insured retirement strategies, including life insurers, asset managers, and distributors such as broker-dealers, banks and marketing organizations. IRI members account for more than 95 percent of annuity assets in the U.S., include the top 10 distributors of annuities ranked by assets under management, and are represented by financial professionals serving millions of Americans. IRI champions retirement security for all through leadership in advocacy, awareness, research, and the advancement of digital solutions within a collaborative industry community.
changing economic and individual situation. IRI supports the responsive approach of Model 805 and encourages the Life Actuarial Task Force to adopt as proposed.

Thank you again for the opportunity to share our views on this important subject. Please contact the undersigned if you have questions about anything in this letter, or if we can be of any further assistance in connection with this important regulatory effort.

Sincerely,

Jason Berkowitz

STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES
ACLI DRAFT EDIT APRIL 30, 2020

Table of Contents

Section 1. Title
Section 2. Applicability
Section 3. Nonforfeiture Requirements
Section 4. Minimum Values
Section 5. Computation of Present Value
Section 6. Calculation of Cash Surrender Values
Section 7. Calculation of Paid-Up Annuity Benefits
Section 8. Maturity Date
Section 9. Disclosure of Limited Death Benefits
Section 10. Inclusion of Lapse of Time Considerations
Section 11. Proration of Values; Additional Benefits
Section 12. Rules
Section 13. Effective Date

Section 1. Title

This Act shall be known as the Standard Nonforfeiture Law for Individual Deferred Annuities.

Section 2. Applicability

A. This Act shall not apply to any reinsurance, group annuity purchased under a retirement plan or plan of deferred compensation established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended, premium deposit fund, variable annuity, investment annuity, immediate annuity, any deferred annuity contract after annuity payments have commenced, or reversionary annuity, nor to any contract which shall be delivered outside this state through an agent or other representative of the company issuing the contract.

B. Sections 3 through 8 shall not apply to contingent deferred annuities.

C. Notwithstanding Subsection B, the commissioner shall have the authority to prescribe, by regulation, nonforfeiture benefits for contingent deferred annuities that are, in the opinion of the commissioner, equitable to the policyholder, appropriate given the risks insured, and to the extent possible, consistent with general intent of this law.

Drafting Note: It is expected that any regulation prescribing specific nonforfeiture requirements for the CDAs and promulgated by the commissioner under Subsection C above would apply only to the CDA contracts issued subsequent to the effective date of such regulation.

Section 3. Nonforfeiture Requirements

A. In the case of contracts issued on or after the operative date of this Act as defined in Section 13, no contract of annuity, except as stated in Section 2, shall be delivered or issued for delivery in this state unless it contains in substance the following provisions, or corresponding provisions which in the opinion of the commissioner are at least as favorable to the contractholder, upon cessation of payment of considerations under the contract:

(1) That upon cessation of payment of considerations under a contract, or upon the written request of the contract owner, the company shall grant a paid-up annuity benefit on a plan stipulated in the contract of such value as is specified in Sections 5, 6, 7, 8 and 10;

(2) If a contract provides for a lump sum settlement at maturity, or at any other time, that upon surrender of the contract at or prior to the commencement of any annuity payments, the company shall pay in lieu of a paid-up annuity benefit a cash surrender benefit of such amount as is
specified in Sections 5, 6, 8 and 10. The company may reserve the right to defer the payment of the cash surrender benefit for a period not to exceed six (6) months after demand therefor with surrender of the contract after making written request and receiving written approval of the commissioner. The request shall address the necessity and equitability to all policyholders of the deferral;

(3) A statement of the mortality table, if any, and interest rates used in calculating any minimum paid-up annuity, cash surrender or death benefits that are guaranteed under the contract, together with sufficient information to determine the amounts of the benefits; and

(4) A statement that any paid-up annuity, cash surrender or death benefits that may be available under the contract are not less than the minimum benefits required by any statute of the state in which the contract is delivered and an explanation of the manner in which the benefits are altered by the existence of any additional amounts credited by the company to the contract, any indebtedness to the company on the contract or any prior withdrawals from or partial surrenders of the contract.

B. Notwithstanding the requirements of this section, a deferred annuity contract may provide that if no considerations have been received under a contract for a period of two (2) full years and the portion of the paid-up annuity benefit at maturity on the plan stipulated in the contract arising from prior considerations paid would be less than $20 monthly, the company may at its option terminate the contract by payment in cash of the then present value of the portion of the paid-up annuity benefit, calculated on the basis on the mortality table, if any, and interest rate specified in the contract for determining the paid-up annuity benefit, and by this payment shall be relieved of any further obligation under the contract.

Section 4. Minimum Values

The minimum values as specified in Sections 5, 6, 7, 8 and 10 of any paid-up annuity, cash surrender or death benefits available under an annuity contract shall be based upon minimum nonforfeiture amounts as defined in this section.

A. (1) The minimum nonforfeiture amount at any time at or prior to the commencement of any annuity payments shall be equal to an accumulation up to such time at rates of interest as indicated in Subsection B of the net considerations (as hereinafter defined) paid prior to such time, decreased by the sum of Paragraphs (a) through (d) below:

(a) Any prior withdrawals from or partial surrenders of the contract accumulated at rates of interest as indicated in Subsection B;

(b) An annual contract charge of $50, accumulated at rates of interest as indicated in Subsection B;

(c) Any premium tax paid by the company for the contract, accumulated at rates of interest as indicated in Subsection B; and

(d) The amount of any indebtedness to the company on the contract, including interest due and accrued.

(2) The net considerations for a given contract year used to define the minimum nonforfeiture amount shall be an amount equal to eighty-seven and one-half percent (87.5%) of the gross considerations credited to the contract during that contract year.

B. The interest rate used in determining minimum nonforfeiture amounts shall be an annual rate of interest determined as the lesser of three percent (3%) per annum and the following, which shall be specified in the contract if the interest rate will be reset:
The five-year Constant Maturity Treasury Rate reported by the Federal Reserve as of a date, or average over a period, rounded to the nearest 1/20th of one percent, specified in the contract no longer than fifteen (15) months prior to the contract issue date or redetermination date under Section 4B(4);

Reduced by 125 basis points;

Where the resulting interest rate is not less than one zero percent (10%); and

The interest rate shall apply for an initial period and may be redetermined for additional periods. The redetermination date, basis and period, if any, shall be stated in the contract. The basis is the date or average over a specified period that produces the value of the five-year Constant Maturity Treasury Rate to be used at each redetermination date.

C. During the period or term that a contract provides substantive participation in an equity indexed benefit, it may increase the reduction described in Subsection B(2) above by up to an additional 100 basis points to reflect the value of the equity index benefit. The present value at the contract issue date, and at each redetermination date thereafter, of the additional reduction shall not exceed the market value of the benefit. The commissioner may require a demonstration that the present value of the additional reduction does not exceed the market value of the benefit. Lacking such a demonstration that is acceptable to the commissioner, the commissioner may disallow or limit the additional reduction.

D. The commissioner may adopt rules to implement the provisions of Section 4C and to provide for further adjustments to the calculation of minimum nonforfeiture amounts for contracts that provide substantive participation in an equity index benefit and for other contracts that the commissioner determines adjustments are justified.

Section 5. Computation of Present Value

Any paid-up annuity benefit available under a contract shall be such that its present value on the date annuity payments are to commence is at least equal to the minimum nonforfeiture amount on that date. Present value shall be computed using the mortality table, if any, and the interest rates specified in the contract for determining the minimum paid-up annuity benefits guaranteed in the contract.

Section 6. Calculation of Cash Surrender Value

For contracts that provide cash surrender benefits, the cash surrender benefits available prior to maturity shall not be less than the present value as of the date of surrender of that portion of the maturity value of the paid-up annuity benefit that would be provided under the contract at maturity arising from considerations paid prior to the time of cash surrender reduced by the amount appropriate to reflect any prior withdrawals from or partial surrenders of the contract, such present value being calculated on the basis of an interest rate not more than one percent (1%) higher than the interest rate specified in the contract for accumulating the net considerations to determine maturity value, decreased by the amount of any indebtedness to the company on the contract, including interest due and accrued, and increased by any existing additional amounts credited by the company to the contract. In no event shall any cash surrender benefit be less than the minimum nonforfeiture amount at that time. The death benefit under such contracts shall be at least equal to the cash surrender benefit.

Section 7. Calculation of Paid-up Annuity Benefits

For contracts that do not provide cash surrender benefits, the present value of any paid-up annuity benefit available as a nonforfeiture option at any time prior to maturity shall not be less than the present value of that portion of the maturity value of the paid-up annuity benefit provided under the contract arising from considerations paid prior to the time the contract is surrendered in exchange for, or changed to, a deferred paid-up annuity, such present value being calculated for the period prior to the maturity date on the basis of the interest rate specified in the contract for accumulating the net considerations to determine maturity value, and increased by any additional amounts credited by the company to the contract. For contracts that do not provide any death benefits prior to the commencement of any annuity payments, present values shall be calculated on the basis of such interest rate and the mortality table specified in the contract for determining the maturity value of the paid-up annuity benefit. However, in no event shall the present value of a paid-up annuity benefit be less than the minimum nonforfeiture amount at that time.
Section 8. Maturity Date

For the purpose of determining the benefits calculated under Sections 6 and 7, in the case of annuity contracts under which an election may be made to have annuity payments commence at optional maturity dates, the maturity date shall be deemed to be the latest date for which election shall be permitted by the contract, but shall not be deemed to be later than the anniversary of the contract next following the annuitant’s seventieth birthday or the tenth anniversary of the contract, whichever is later.

Section 9. Disclosure of Limited Death Benefits

A contract that does not provide cash surrender benefits or does not provide death benefits at least equal to the minimum nonforfeiture amount prior to the commencement of any annuity payments shall include a statement in a prominent place in the contract that such benefits are not provided.

Section 10. Inclusion of Lapse of Time Considerations

Any paid-up annuity, cash surrender or death benefits available at any time, other than on the contract anniversary under any contract with fixed scheduled considerations, shall be calculated with allowance for the lapse of time and the payment of any scheduled considerations beyond the beginning of the contract year in which cessation of payment of considerations under the contract occurs.

Section 11. Proration of Values; Additional Benefits

For a contract which provides, within the same contract by rider or supplemental contract provision, both annuity benefits and life insurance benefits that are in excess of the greater of cash surrender benefits or a return of the gross considerations with interest, the minimum nonforfeiture benefits shall be equal to the sum of the minimum nonforfeiture benefits for the annuity portion and the minimum nonforfeiture benefits, if any, for the life insurance portion computed as if each portion were a separate contract. Notwithstanding the provisions of Sections 5, 6, 7, 8 and 10, additional benefits payable in the event of total and permanent disability, as reversionary annuity or deferred reversionary annuity benefits, or as other policy benefits additional to life insurance, endowment and annuity benefits, and considerations for all such additional benefits, shall be disregarded in ascertaining the minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits that may be required by this Act. The inclusion of such benefits shall not be required in any paid-up benefits, unless the additional benefits separately would require minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits.

Section 12. Rules

The commissioner may adopt rules to implement the provisions of this Act.

Section 13. Effective Date

After the effective date of this Act, a company may elect to apply its provisions to annuity contracts on a contract form-by-contract form basis before the second anniversary of the effective date of this Act. In all other instances, this Act shall become operative with respect to annuity contracts issued by the company after the second anniversary of this Act.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

2017 3rd Quarter (amended).
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Brian Bayerle, ACLI – Interest Rate Swap Spread Determination

2. Identify the document, including the date if the document is “released for comment,” and the location in the
document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify
the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version
of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Interest Rate Swap Spreads are currently being calculated by the NAIC under methodology outlined in the Valuation
Manual. This APF changes the methodology for calculation of the 3-month and 6-month swap spreads to use market
observable values for Treasury rates and LIBOR, rather than the average of these values from JP Morgan and Bank
of America.

With the forthcoming termination of LIBOR, the requirements of the Valuation Manual will need to change. This
APF provides broad guidance allowing for one or more currently unnamed rate to replace LIBOR in these
calculations.

Additionally, this APF allows the company to calculate its own current swap spreads based on market observable
values. The spread requirements are currently included in VM-20, with VM-21 referencing the applicable sections.
With the potential of VM-22 likely having similar references, LATF may want to consider moving these and other
asset requirements to their own section.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by
the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2020-06
VM-20 Section 9.F.8.d
Interest rate swap spreads over Treasuries shall be prescribed calculated by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed calculated for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries, shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. There is an expectation that LIBOR will be discontinued, and prior to that time, the use of LIBOR will decline substantially. At such point, the LIBOR rates should be replaced with the most appropriate rates that replace LIBOR for the specified purpose. The NAIC will monitor these market-observable values and, in the event the then-current values are discontinued or replaced, will recommend an appropriate replacement to the Life Actuarial (A) Task Force.

The company may elect to produce their own current swap spread curves based on current observable rates. The company will document the data source(s) of the observable rates and the methodology of interpolation of non-published rates in the VM-31 report.

VM-20 Appendix 2.F.1
F. Current Benchmark Swap Spreads

1. For tenors of one-year to thirty-years, extract swap spread data determined as of the last business day of the month by maturity. For Bank of America data, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.

VM-31 Section 3.D.6.v (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads and the methodology used to determine the non-published tenors.

VM-31 Section 3.F.4.h (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads and the methodology used to determine the non-published tenors.

Re: ACLI Proposal Regarding Non-Forfeiture Rates

Dear Mike:

I am writing on behalf of the members of the National Alliance of Life Companies (the NALC), a trade group composed of small and mid-sized life and health insurers across the United States. Our members focus on addressing the life insurance needs of middle income and working class Americans, and are pleased to offer comments on behalf of the policyholders we serve to the proposal by the American Council of Life Insurance (the ACLI) to eliminate the 4% floor for non-forfeiture interest rates set out in the Valuation Manual.

After carefully considering the proposal, we must share our opposition to its adoption until more thorough study is completed. Many of the customers of our member companies are working class Americans who buy basic whole life policies. We have concerns that pricing may increase for these customers as a result of these changes, and would encourage the Committee to thoroughly and carefully evaluate the potential impact of this proposal on this group of customers.

Basic whole life customers are price sensitive and budget conscious, and these changes may possibly mean less coverage or higher premiums. The problems associated with millions of underinsured Americans in this demographic are well documented and have been a concern of state insurance regulators for years.

There is a more comprehensive solution to this dilemma- modernizing the Model Non-Forfeiture Law to better address changes in the economy as well as the way life insurers now do business.
Everyone would benefit from this approach. In the interim, we could support a temporary step that carves out basic whole life from this proposal.

On a final note, we understand the hurried nature of this proposal is because of efforts by proponents to align discussions with current efforts to enact tax law changes in the U.S. Congress. To use a well-worn phrase, we seem to be “putting the cart before the horse.” The NAIC should be waiting for Congress to act, rather than making changes in the Valuation Manual that are dependent on congressional activity that may never take place.

Thank you for allowing the NALC to comment.

Sincerely,

Jim Hodges  
Executive Director  
NALC

Re: APF 2020-07

Dear Mike:

We appreciate the opportunity to provide comments on APF 2020-07. At Globe Life, our purpose is to help working class families, with a focus on basic protection life and supplemental health products for low to middle income families. In the past few years, we issued more than a million life insurance policies through our operating companies; this may be more than any other insurance group in the US. Keeping costs low is an important element in making life insurance accessible to low and middle income families.

We do not support changes to the Valuation Manual as proposed in APF 2020-07 regarding non-forfeiture rates that simply remove the 4% interest rate floor. Although simple, this proposal is a source of concern particularly as it has the potential to increase the cash value on whole life insurance, which we believe will lead to higher costs for these products, thus limiting the affordability and amount of life insurance protection for many Americans at a time when getting life insurance is more important than ever. The 4% rate limit in the Valuation Manual sets a floor for the minimum cash values. A company would have the option to offer higher cash values than this floor if rates needed to meet the Internal Revenue Code definition of life insurance (Section 7702 rates) fall below 4%; thus there is no need to eliminate the current 4% limit.

Instead, we support an option that causes the non-forfeiture interest rates used to determine in-kind benefits like paid-up additions and extended term insurance to be more aligned with the current interest rate environment and rates needed to meet the definition of life insurance. This change could lead to reductions in insurance company costs and thus support lower premiums or higher dividends. We support this option as a stop gap measure until a comprehensive solution can be considered:

**VM-02**

**Section 3: Interest**

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the Valuation Manual shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the Valuation Manual for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes,
rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than 4%, but the nonforfeiture interest rate to determine paid-up benefits and other in-kind nonforfeiture benefits shall not be less than the applicable interest rate used to meet the definition of life insurance in the Cash Value Accumulation Test under Section 7702 (Life Insurance Contract Defined) of the U.S. Internal Revenue Code.

Finally, we favor a more deliberative process that would consider the comprehensive modernization of non-forfeiture laws that are reflective of the current economic environment and costs associated with selling and maintaining permanent life insurance contracts today. In the past, there has been reluctance in doing so given the Internal Revenue Code definition of life insurance and tax reserve requirements. With the current proposal to change the definition of life insurance interest rates and recent tax reserve changes, there are fewer constraints to moving forward with modernization of non-forfeiture requirements. Today’s non-forfeiture requirement dates back to the 1940’s – it is hardly modern -- and has not kept pace with changes to product designs (no-lapse guarantee products), industry mortality tables, interest rates, inflation and associated costs of acquiring business. A comprehensive rewrite is needed to effectively consider all these items rather than addressing them piecemeal, with the goal of making insurance more accessible to many more Americans.

Thank you, we look forward to working with LATF on this proposal.

Re: ACLI Comments on APF 2020-07

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to provide comments regarding the APF 2020-07, which eliminates the cash value floor for the nonforfeiture rate in VM-02. ACLI is supportive of this change.

Likely Change to Federal Code Makes Floor Unnecessary

The floor of 4% was added to the NAIC Valuation Manual in 2014 to provide consistency with the codified limitations in the Internal Revenue Code (IRC) §7702. Given low interest rates, US Congress has proposed changing the fixed limits in IRC §7702 to a variable indexed rate. This change has passed in the US House of Representatives, and will hopefully become signed legislation this year. APF 2020-07 was structured to address this potential uncertainty by referencing the Cash Value Accumulation Test (CVAT) rate within IRC §7702, which is currently 4% (consistent with the floor). Were the legislation to become law, the reference would automatically be updated, thus lowering the floor. If nothing passes, the reference will remain consistent with the current requirements. We note the reference to CVAT rate is only needed to Congressional uncertainty. If Congress changes the law, we can simply remove the floor for the following year’s NAIC Valuation Manual.

Consumer Costs Will Likely Increase Regardless of the Change

The low interest rate environment will continue to challenge the investment return on insurance products, which will likely lead to higher insurance premiums. Notably, there is likely to be a reduction in the valuation interest rate in 2021, which will lead to higher reserves that will be financed by higher premiums. Eliminating the interest rate floor in the nonforfeiture calculation will maintain the existing relationship between the rates (since nonforfeiture interest rate is 125% of the valuation rate), and will lead to more equitable nonforfeiture benefits for consumers.

We look forward to discussing our comments on a future call.

---

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.
Sincerely,

RE-EXPOSURE OF APF 2020-07

Comments should be submitted to Reggie Mazyck (RMazyck@NAIC.ORG) by COB June 17, 2020

Please comment on the change of wording from “used” to “prescribed”

Additionally, provide an opinion of the pro and cons of adopting or not adopting the wording of the proposal. Particularly, concerns about the potential impacts of the proposed change on companies are welcomed.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Brian Bayerle, ACLI

**Title of the Issue:**
Remove 4% Floor from Life Standard Nonforfeiture Rate.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   January 1, 2020 NAIC Valuation Manual – VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   Upon any possible tax code (IRC, S. 7702) modifications to remove the hardcoded interest rate floor starting in 1/1/2021, the life standard nonforfeiture rate is being updated to ensure the minimum funding under state requirements does not exceed the maximum funding under federal requirements for life insurance contracts issued starting in 1/1/2021.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

**Notes:** VM APF 2020-07
VM-02

Version 1: Remove floor

Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the *Valuation Manual* shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the *Valuation Manual* for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the applicable interest rate prescribed to meet the definition of life insurance in the Cash Value Accumulation Test under Section 7702 (*Life Insurance Contract Defined*) of the U.S. Internal Revenue Code 4%.

**Guidance Note:** For flexible premium universal life insurance policies as defined in Section 3.D of the *Universal Life Insurance Model Regulation* (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.
Manny Hidalgo Comment on APF 2020-05

Jason,

With regard to APF 2020-05, you may want to address how riders and supplemental benefits are treated with regard to immediate payment of benefits. Per page 10 of the Valuation Manual, Section II, Subsection 6. B:

"For supplemental benefits, including Guaranteed Insurability, Accidental Death or Disability Benefits, Convertibility, or Disability Waiver of Premium Benefits, the supplemental benefit may be included with the base policy and follow the reserve requirements for the base policy under VM20, VM-A and/or VM-C, as applicable."

So, it is possible for a company to include supplemental benefits in the NPR calculation. I assume it’s the same with riders.

Thank you,

Manny

Manuel V. Hidalgo, FSA, MAAA, CFA

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

   Jason Kehrberg, Vice President, PolySystems, Inc.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   4. The NPR shall reflect the immediate payment of claims.

   Proposed VM-20 3.C.4 (revised):

   4. The NPR shall reflect continuous deaths and the immediate payment of death claims, including death claims on any riders or supplemental benefits for which the NPR is being calculated.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   I believe the intent was that 3.C.4 apply to death claims, e.g. not to payment of positive cash surrender values upon lapse, and that on a present value basis the calculated periodic death claim payments equate to immediate claim payment on deaths assumed to occur continuously.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Re: VM-20, Exposure 2020-02

I appreciate the opportunity to provide comments on the Amendment Proposal Form 2020-02 submitted jointly by NAIC staff and Staff of Office of Principle-Based Reserving, California Department of Insurance.

My comments relate to the proposed addition of Section 2.I.

I personally believe the requirements are clear and that the issue being addressed is better handled in VM-31 (which is designed to establish minimum reporting requirements) as opposed to VM-20.

I believe the purpose of the valuation manual, as stated in the Introduction of the Valuation Manual, is to “set forth the minimum reserve requirements…” One of the reasons the movement to principle-based approaches has occurred is it is nearly impossible to define every formula, every assumption, or every process / step required to establish an appropriate reserve.

A couple items of specific note:

1. We file reserves with quarterly statements. How many times a year do we need to show / model, as opposed to analyzing, prescribed spreads and prescribed defaults to prove that the limitation of Section 7.E.1.g. (50% Aa2 and 50% A2 non-callable bonds) produces a higher reserve than the company’s investment strategy? This is already an annual requirement of VM-31, Section D.6.s.

2. In my opinion, PIMR is an ill-conceived concept, appears to be mis-understood by many in the industry, and should be completely eliminated from actuarial literature and reserve requirements. Conceptually, reserves are being set at the level for asset cash flows and future premiums to result in the liquidation of projected benefits. (Section 4.B.) PIMR is an artificial actuarial / accounting construct that does not impact cash flows. Therefore, if PIMR is zero or a non-zero number, conceptually the same reserve should be quantified.
The Deterministic Reserve, as outlined in Section 4.B. is equal to a-b, where b is PIMR. In essence if the PIMR liability is included in starting assets, the value of assets supporting it must be subtracted to determine the Deterministic Reserve. The same goes for the Stochastic Reserve and is further explained in Section 7.D. The embedded file below contains analysis submitted to the Life Actuarial Task Force in 2014. Although not directly related to the required adjustment, it does demonstrate equivalency and irrelevance of PIMR in establishing reserves.

I believe the items in Section 2.I are best confirmed by auditors and disclosed in VM-31. If additional information is desired by the task force to better understand the impact of prescribed assumptions, then VM-31 would appear to be the more appropriate place for periodic disclosures of calculated amounts and methods utilized to comply with the requirements of VM-20, much of what is already included in VM-31. Mandating steps that add no value only increases the cost of establishing reserves resulting in less value provided and more cost to the policyholders.

Therefore, the Life Actuarial Task Force should not approve the addition of proposed Section 2.I. to VM-20 and specifically exclude from the guidance note the comment relating to PIMR.”

I would like to thank LATF for the opportunity to comment on this exposure draft.

Sincerely,

William H. Wilton, CFA, FSA, MAAA

Chair, NAIC Life Actuarial Task Force

Re: APF 2020-02

Dear Mike:

Nationwide appreciates the opportunity to comment on APF 2020-02 regarding the topic of materiality in VM-20. Materiality is an important consideration within a PBR framework. While we believe VM-20 should ensure that all material risks are reserved for appropriately, any explicit materiality requirements within VM-20 should be balanced against practicality issues facing companies and the resulting operational burden which would be created by potential requirements.

We believe the suggested language in APF 2020-02 is too restrictive and does not consider the practical issues which companies encounter frequently. For example, most companies will at some point encounter immaterial blocks of business subject to PBR, which under any reasonable lens of materiality could be adequately reserved for with a proxy. In these situations, companies should be ready to defend their approach to regulators, but to remove this option entirely is impractical and would result in the unnecessary burden of creating and maintaining additional complex PBR models.

In addition, the proposed language requires certain items, like the alternate investment strategy, to be proven every year. Over time companies will have verified repeatedly that the alternate investment strategy produces a higher reserve. If the additional reserve using the alternate investment strategy is large, and the company’s investment strategy has not changed, does this comparison need to be retested every year? It seems unnecessarily burdensome on companies to repeatedly demonstrate an obvious result. As we move forward under the new PBR framework, it will be important to find appropriate ways to reduce the operational burden associated with the PBR framework.

We appreciate your consideration of our comments.

Sincerely,

Philip Wunderlich, FSA, MAAA

Chair, NAIC Life Actuarial Task Force

Re: APF 2020-02

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to submit the following comments on APF 2020-02.

ACLI is concerned with this APF as drafted. The standard imposed by the language suggests companies perform significant work when actuarial experience or materiality would suggest it is not necessary. We note the following areas of concerns:

1. **Immateriality:** Most companies are going to have small pockets of business where the cost of doing a precise VM-20 calculation will far exceed the reserve, and possibly even the sum at risk. In such situations, the cost of needing to perform a mortality experience study (just to prove that mortality wasn't higher than the fully loaded prescribed table), building out a full asset model, etc. would be cost and time prohibitive. ACLI believes skipping such steps is reasonable if the impact is truly immaterial, and meets both the spirit and letter of Section 2.G:

   A company may use simplifications, approximations and modeling efficiency techniques to calculate the NPR, the deterministic reserve and/or the stochastic reserve required by this section if the company can demonstrate that the use of such techniques does not understate the reserve by a material amount, and the expected value of the reserve calculated using simplifications, approximations and modeling efficiency techniques is not less than the expected value of the reserve calculated that does not use them.

2. **Annual demonstration:** Actuarial judgment is a necessary and appropriate component to PBR. While demonstrations of the impact of modeling simplifications are appropriate, we are concerned that annual demonstrations are excessive, particularly when the actuary reasonably expects no change in the result. For example, for many companies, the alternative reinvestment strategy will consistently produce a higher reserve; it seems excessive to have to demonstrate this annually when the qualified actuary reasonably expects this to be the case. We support

---

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers' financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers' products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
addressing this with a simple statement within the VM-31 documentation that notes why the qualified actuary believes a formal demonstration provides no value.

3. **Short-term latitude:** While a few companies have been doing PBR for a few years, 2020 will be the first time it is mandatory for many companies. While companies have done a best effort of getting their products ready, adding this as a mandate creates practical implementation concerns.

ACLI would appreciate the opportunity to further discuss this APF with regulators; we believe we can find a solution that addresses the concerns raised with this APF without codifying excessive requirements that go against the spirit of reasonable model simplifications.

We look forward to a discussion of our proposed language. Thank you.

Sincerely,

[Signature]

Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Manny Hidalgo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Exposed Revisions to AG 49**

Brian Bayerle (American Council of Life Insurers—ACLI) said the language in Section 3.k of the proposed revisions to *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49)* requires tweaking to clarify how loan leverage option 2 applies to charge reductions. He said as it stands, the language may have unintended consequences.

Seth Detert (Securian Financial) suggested removing references to charge reductions from the option 2 language. He said the opportunities for exploiting any loophole created by removing the language are small.

Mr. Bayerle said the ACLI will review the language and propose revisions.

Mr. Ostlund asked if there is also an issue with the “other enhancements” referenced in the option 2 language.

Mr. Andersen said that concern could be addressed later.

Mr. Andersen said constraints were placed on loan arbitrage in 2015 when AG 49 was developed. He said prior to AG 49, loan arbitrage allowed interest credited on the loan values to be substantially higher than the loan interest charges. He said that resulted in illustrations that were inflated. AG 49 placed a limit on the differential between the credited rate and the loan interest rate to 1%. He said a current concern is that the relationship of the overall returns of the illustration and the loan interest rate is higher than when AG 49 was developed, leading to a higher probability of illustrated values being unrealized. He said the loan options being considered address these issues.

Birny Birnbaum (Center for Economic Justice—CEJ) recommended that if option 1 is chosen, the differential between the loan rate and the crediting rate should be zero.

Mr. Andersen recommended a third option, which would use a 50-basis point differential between the crediting rate and the policy loan interest rate.

Mr. Bayerle said the third option could be included in the next exposure of edits.

Mr. Andersen suggested the Task Force decide whether the proposed revisions should apply only to new issues after a certain date or to all illustrations, including in-force illustrations.

Mr. Birnbaum said the CEJ is advocating for application of the revisions to all illustrations, so as not to deprive illustrations of the benefits of the revisions.
Mr. Serbinowski said the issue is not actuarial. He suggested the issue should be decided by the Life Insurance and Annuities (A) Committee.

Mr. Bayerle said the ACLI favors applying the revisions to the illustration of new policies only.

Mr. Boerner asked for a straw vote on whether the revisions will apply to illustrations of new policies only or to all illustrations. The Task Force voted to apply the revisions to illustrations of new policies only.

The Task Force agreed to expose the current set of proposed edits (Attachment Four-A) for a seven-day public comment period ending June 12.

Having no further business, the Life Actuarial (A) Task Force adjourned.
Actuarial Guideline XLIX-A – Draft [ACLI DRAFT JUNE 4, 2020]
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for in-force illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows for all new business and in-force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*].

i. Sections 4 and 5 shall be effective for all new business and in-force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in-force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:
i. The policy is subject to Model #582.

ii. Interest credits are linked to an external index or indices.

ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The credited rate Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum credited rate Annual Rate of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum credited rate Annual Rate of Indexed Credits for the illustrated scale and the guaranteed credited rate Annual Rate of Indexed Credits for that account. However, the credited rate Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed credited rate Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated rate credited to the loan balance does Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedges for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.

C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.

B.D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.
vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

vi. The Hedge Budget used to determine the cap in 3 (C) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.

vii. There are no enhancements or similar features that provide additional Indexed Credits, including but not limited to experience refunds, multipliers, or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4(A)(ii) for purposes of complying with this regulation. A policy shall have no more than one Benchmark Index Account.

C.E. Fixed Account: An account where the credited rate is not tied to an external index or indices; there are no Indexed Credits.

F. Index Account: An account where some or all of the amounts credited are Indexed Credits.

G. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an Index Account are included.

H. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.

I. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

J. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

D.K. Policy Loan Interest Credited Rate: The annualized interest rate is tied to an external index or indices. That applies to the portion of the account value backing the Loan Balance:

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate

[OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI Comment Letter; language for Option 1 and Option 2 may need to be tightened up:

Option 1: ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.

Option 2: ii. For any portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the total of the Annual Rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact such values, net of any applicable Supplemental Hedge Budget for that account.

L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.
The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

Illustrated Scale

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):

iii. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall Account that is not the Benchmark Index Account in 3 (C), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The Annual Rate of Indexed Credits should reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

B.D. For the credited Purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the illustrated rate before comparing to the earned interest rate underlying the Disciplined Current Scale as it is supported by policy charges and not the earned interest rate for the illustrated scale exceed the applicable rate calculated in 4 (B).

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:
A. If an insurer engages in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale for the policy, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed 145:

i. the Annual Net Investment Earnings Rate, plus

ii. 45% of the lesser of (1) and (2):

1. Hedge Budget minus any annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding floor).

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

These amounts should be adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost. The assumed return on hedges for index-based credits allocated to support shall only be used in the disciplined current scale testing to support the illustrated Index Credits in the policy.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a product with multiple Index Accounts with different Hedge Budgets, a maximum rate in 5.A. should be calculated for each set of accounts with different Hedge Budgets.

A.B. If an insurer does not engage in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy Annual Net Investment Earnings Rate.

B.C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

C. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates Indexed Credits using current index parameters for the most recent 20-year period.
The Life Actuarial (A) Task Force met via conference call May 28, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlern (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Choup and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Cllora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Discussed Comments on the ACLI AG 49 Proposal

Mr. Andersen said a large number of comments were submitted in support of either the American Council of Life Insurers (ACLI) proposal (see NAIC Proceedings – Summer 2020, Life Actuarial (A) Task Force, Attachment Seven-A) or the Independent Proposal (see NAIC Proceedings – Summer 2020, Life Actuarial (A) Task Force, Attachment Seven-D). He said comment letters, for and against the Independent Proposal, were summarized on a detailed list (Attachment Five-A).

Bobby Samuelson (The Life Product Review) said Mr. Andersen’s list captured the important points from his comment letter (Attachment Five-A). Mr. Samuelson said the use of indexed universal life (IUL) multipliers and buy up caps is consistent with the requirements of Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49). He said the incentives for using buy ups and caps are created by the hypothetical historical lookback methodology used in AG 49. He said the scope of the Independent Proposal broadly affects all IUL products because it is not possible to separate the guideline’s application to multiplier, buy up caps and other similar product features from its application to the base IUL product.

Mr. Samuelson said the hypothetical historical lookback methodology applies to hypothetical assumptions about caps to historical data to create the maximum AG 49 rate. He indicated that industry often refers to the use of the hypothetical caps as a proxy for the risk premium. He noted that while a risk premium is created and illustrated in perpetuity, there is no parallel disclosure of the corresponding risk. He said IUL products illustrate better than universal life (UL) products because the reward is not risk-adjusted in the IUL illustration. He said the Independent Proposal’s use of the Black-Scholes model in the illustration addresses that concern by being risk-neutral. It also allows for the disclosure of the reward provided by the policy return. He reiterated that the rewards of the policy should not be illustrated without illustrating the corresponding risks.

Larry Rybka (Valmark) said consumers do not understand the risks inherent in the IUL illustration. He advocated using a best interest standard for IUL illustrations.

Steven Roth (Wealth Management International Inc.) said he is concerned that insurers are not required to disclose the basis for the assumptions on which the caps and participation rates are based nor are they required to justify decreases in caps and participation rates. He said the Independent Proposal remedies those shortcomings.

Mr. Andersen said an equally large number of comments against the Independent Proposal were received.

Brian Bayerle (ACLI) said the IUL illustration discussions have been ongoing for a year and a half. He said at no time during that period was the Task Force directed to change the scope of the charge given by the Life Insurance and Annuities (A) Committee. He provided a 2014 ACLI letter (Attachment Five-B) that indicates that several of the issues raised by the Independent Proposal were previously addressed by the Task Force.
Scott Harrison (High Point Strategies LLC) said when the IUL illustration efforts were initiated more than a year ago, the revisions to AG 49 was one of two tracks for addressing the IUL illustration issues. The other track was enhancing the required disclosures for IUL illustrations. He said the members of the IUL Coalition are looking forward to moving on to the disclosure efforts.

Gayle Donato (Nationwide) said Nationwide supports the ACLI proposal. She said the proposal satisfies the directives issued by the Task Force and should be adopted.

Seth Detert (Securian Financial) agreed with Ms. Donato and Mr. Harrison, and encouraged adopting the ACLI proposal and moving on to addressing disclosures.

Birny Birnbaum (Center for Economic Justice—CEJ) said the Independent Proposal satisfies the Task Force directives and additionally resolves some systemic problems of AG 49. He said the ACLI proposal is a massive rewrite of AG 49 and does not adhere to the Task Force directives. He said he doubts that disclosures will help consumers understand the IUL policy risks and rewards.

Mr. Andersen provided an explanation of the hypothetical historical lookback methodology. He said the 145% net investment interest rate test reflects the historic equity risk premium present in other NAIC standards. He said the returns on stocks can be replicated using a combination of a bond returns portfolio and a Standard & Poor’s (S&P) 500 call option. He said the risk for a call option is much higher than the risk of S&P 500 investments and the call option should have a higher return to reflect the higher risk. He said the return on the S&P call option has historically been roughly 45% but the investor must understand that 25% of the time the option will result in a complete loss.

Mr. Andersen said the Independent Proposal assumes the call option earns no more than the net investment earned rate due to the risk-neutral assumption applied by the proposal. He said the Independent Proposal goes beyond the current Task Force charge by not only aligning IUL multiplier and cap buy ups illustrations with regular IUL illustrations, but also by aligning IUL multiplier and cap buy up illustrations with regular UL illustrations, even though returns for IUL products have historically outperformed returns for regular UL products. He noted that the Independent Proposal is more conservative than the Task Force desires but could be considered in the future if AG 49 abuses continue.

Brian Lessing (AXA-Equitable) said the Equitable proposal (Attachment Five-C) blends elements of the ACLI Proposal and the Independent Proposal. He said the proposal uses the Black-Scholes methodology and proposes a 5% safe harbor for equity returns.

The Task Force conducted a straw vote to determine whether the Task Force favored the ACLI proposal or the Independent Proposal. The Task Force voted 15-2 to proceed with the ACLI proposal, with Mr. Carmello and Mr. Kupferman voting for the Independent Proposal. The representative from New Mexico did not respond when called to vote.

Having no further business, the Life Actuarial (A) Task Force adjourned.
### Summary of Comments on AG 49A Proposals

**Equitable Proposal**

Integrates ACLI w/ Bobby proposal, 20% option return
May 27, 2020

Mr. Mike Boerner, Chairperson, Life Actuarial (A) Task Force (LATF)
Mr. Fred Andersen, Chairperson, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners

Re: Bobby Samuelson’s Proposal

Mr. Boerner and Mr. Andersen,

Thank you for the opportunity to provide comments in response to Mr. Samuelson’s proposal for Actuarial Guideline 49 (AG 49).

During the LATF call on May 14, 2020, interested parties made a number of unfounded claims. Many of these claims were also made when AG 49 was originally developed, so the ACLI created a whitepaper in 2014 to correct the misinformation. We encourage you to review the whitepaper for discussion of the following topics:
- Why analysis of the BXM index is not indicative of the value of an IUL policy (page 8);
- Why a 45% return assumption on highly leveraged investments is reasonable (page 9); and
- Why the use of options should be evaluated as a part of an entire investment portfolio and not in isolation (page 9).

When AG 49 was originally developed, LATF considered a proposal from Mr. Samuelson that would limit IUL illustrated rates at the fixed account rate. After careful review, LATF rejected that proposal and voted in 2015 for an approach that allowed the illustration of risk premium. LATF also included an alternate scale illustration at the fixed account rate to educate policyholders on the potential for different levels of interest.

Here again, Mr. Samuelson’s proposal would effectively limit IUL illustrated rates at the fixed account rate. We urge LATF to reject this proposal because it removes risk premium from IUL illustrations, which adds conservatism for illustrations of all products (including products without multipliers or other enhancements). In addition, the proposal contains fundamental flaws that would take significant time and effort to correct.

**The Importance of Illustrating Risk Premium in IUL Policies**

As shown in the spreadsheet provided by Mr. Samuelson, the proposal would lead to illustrated rates that do not exceed the NIER. As a result, IUL illustrated rates would be roughly equal to fixed account rates and IUL policies would illustrate the same as traditional fixed UL policies. This would not only limit the illustration of multipliers and buy-up caps, but would also limit the illustration of products without such features, leading to overly conservative illustrations of IUL policies.

The proposal neglects to recognize the risk premium that is inherent in indexed products such as IUL. The existence of risk premium is supported by both theory (as shown in the ACLI white paper) and experience. At Allianz, we are proud of the value our IUL products have delivered to our customers and this value clearly shows the existence of risk premium.
The table below contains a breakdown of our actual customer experience. The table shows the average index credits and fixed account credits by issue year. Note that our fixed account rates have been approximately equal to our option budgets.

<table>

</tr>
</tbody>
</table>

Table includes all policy credits through 12/31/2019
Risk premium = [Index Credit]/[Fixed Credit] – 1
Table shows average policy credits; individual policy credits vary and have been as low as 0%

In aggregate, we have credited our IUL policies an average index credit of 7.18% and an average fixed credit of 3.97%. This demonstrates an average realized risk premium of 80%, which is more than the 45% return limit in AG 49. If the illustrated rate had been limited to the fixed account rate as proposed, the illustrations for these policies would have omitted the illustration of risk premium. This would have denied our customers relevant product education and understanding of the features of IUL.

Although past performance is not a prediction of future results, the underlying theory of risk premium that was present when these policies were sold continues to be present for the policies sold today.

The Misuse of Black-Scholes in the Proposal is Fundamentally Flawed

The Black-Scholes formula was designed to calculate the price of calls and puts. The user inputs the current stock price, a strike price, the risk-free interest rate, volatility, and the dividend yield, and the formula outputs a cost for the call or put. This output is not a growth rate and should not be used to project illustrated values. In addition, Black-Scholes cannot be used for the many index accounts that are supported by hedge instruments other than calls and puts.

Furthermore, although the Black-Scholes formula uses a risk-free interest rate to calculate the cost of a put or call, it should not be misunderstood that puts and calls are risk neutral. In reality, option returns will be driven by real-world interest rates and volatility, not the risk-free interest rates and implied volatility used in a Black-Scholes valuation.

Creating an option valuation framework for AG 49 that can be used for all index accounts, has agreed upon inputs, and reflects the expected option returns would be a complex task and may significantly delay the implementation of an updated AG 49.

***

In conclusion, we do not support Mr. Samuelson’s proposal because it goes against previous LATF decisions to allow the illustration of risk premium and it misuses Black-Scholes. Instead, we strongly support the ACLI proposal because the ACLI proposal accomplishes the goals set forth by regulators, has broad industry support, and is close to completion.
Thank you for the opportunity to provide these comments.

Regards,

Austin Bichler, FSA, MAAA
Senior Director Actuary & Illustration Actuary
Allianz Life Insurance Company of North America
May 27, 2020

Mr. Mike Boerner  
Chair, Life Actuarial (A) Task Force (LATF)  
National Association of Insurance Commissioners (NAIC)

Dear Mr. Boerner,

On behalf of the American Academy of Actuaries\(^1\) Life Illustrations Work Group (the “Work Group”), I appreciate the opportunity to provide comments to LATF on the “Independent Proposal.”

The methodology is very different from the methodology that has been in place for most indexed universal life (IUL) product illustrations even before Actuarial Guideline XLIX (AG 49) went into effect, and although there are few modifications to the text of AG 49 in the Independent Proposal, applying the proposal would not be a simple modification.

On the surface, the proposal appears to limit the illustrated rate to an amount approximately equal to the option budget or fixed account rate due to no risk premium being assumed on the option. This would cause the illustrated scale to be nearly identical to the alternate scale, because the alternate scale generally uses the fixed account rate. Illustrating at the fixed rate was discussed when AG 49 was originally drafted, and this concept was rejected in 2015.

We note that using an option cost-pricing formula to calculate an illustrated credited interest rate seems disconnected. The Work Group would need more time to consider whether it is reasonable to use a pricing formula such as Black-Sholes to calculate a longer-term illustrated credited rate. The Work Group would also need to consider how the short-term nature of the Black-Sholes formula (12 months) can be reconciled with ASOP No. 24, *Compliance with the NAIC Life Insurance Illustrations Model Regulation*, section 3.4.1, which states that actuaries “should consider an appropriate time frame commensurate with [business or economic] cycles” when setting investment return assumptions.

In addition, the Work Group would like to make some general comments in response to some of the verbal comments made during the presentation of the proposal. First, while options are commonly priced using a risk-neutral methodology, the pricing methodology should not be misunderstood to imply that the options themselves are risk-neutral. Second, options should be

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
evaluated as a part of an entire investment portfolio (i.e., not in isolation), because options are often mixed with other types of investments to achieve a desired risk profile. Even though some option positions may not seem particularly valuable when considered in isolation, it does not discredit them; indeed, some investors are willing to incur costs to ensure that they are protected from rare events (i.e., investment insurance).

Finally, we also note the Independent Proposal does not address the question of what should be included in the 100-basis-point limit between loan charges and loan credits.

We hope these comments are helpful. Given the relatively short exposure period, The Work Group has not had sufficient time to evaluate all aspects of the proposal. If LATF would like us to provide more specific comments about the proposal, we would require additional time to review the proposal and the spreadsheet examples.

The Work Group appreciates the efforts of the LATF and IUL Illustration Subgroup to review AG 49. If you have any questions or would like to dialogue on the above topics, please contact Ian Trepanier, life policy analyst, at trepanier@actuary.org.

Sincerely,

Donna Megregian, MAAA, FSA

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen  
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI Comments on AG 49-A and Independent Proposal

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to provide further commentary on the ACLI proposal and the Independent Proposal. We appreciate the hard work of the Life Actuarial (A) Task Force (LATF) and the IUL Illustration (A) Subgroup (Subgroup), and the contributions from the American Academy of Actuaries, individual companies, consumer advocates, and others.

The ACLI proposal best achieves the stated regulatory objectives and represents industry consensus. The ACLI proposal is a product of a year of dialogue with regulators, consumer advocates, and others. Our proposal does not represent the interests of a handful of IUL writers, but rather the input of a broad collection of companies, including those who write IUL (with and without multipliers), and non-IUL writers. We have crafted a proposal consistent with regulators’ decisions. Further, in our accompanying spreadsheet, we have provided illustrative examples of how our proposal meets the goal of regulators to restrict the illustration of multipliers and other enhancements (see below). Furthermore, for ease, we have added the Independent Proposal calculation to our spreadsheet, along with a summary of the current AG49 approach against the two proposals (‘Summary of Results’).

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at [www.acli.com](http://www.acli.com).
### 1.) Independent Proposal Disregards Prior Regulator Decisions

The Independent Proposal seemingly disregards the past year of dialogue by attempting to re-litigate issues that were resolved back in 2014. At that time, regulators considered a proposal to limit the illustrated rate to the fixed rate but rejected that proposal in favor of an approach that allows the illustration of some risk premium. Regulators also wanted to include an illustration of more conservative returns, so they created an alternate scale that illustrates at the fixed rate. The alternate scale is shown side-by-side with the illustrated scale to ensure that policyholders see both scales.

ACLI has attached our October 28, 2014 letter that addresses many of the concerns raised, notably on the rationale of the 145% factor.

### 2.) The Independent Proposal is Overly-Conservative

The direction from LATF was to reduce the illustrated value of charged-for index features. The Independent Proposal takes conservatism to the next level, by fundamentally changing how all IUL products are illustrated.

The Independent Proposal limits the illustrated rate to the hedge cost, dramatically restricting illustrations of all IUL products. Even in the case of the Benchmark Index Account, the illustration is limited to the hedge cost. This proposal may lead to identical illustrations across virtually every IUL product, causing confusion among policyholders who will have no way to differentiate features among carriers. This is not consistent with the regulator request.

### 3.) Concerns with the Independent Proposal Would Take Significant Time to Resolve

The Independent Proposal contains a number of flaws that would take substantial time to resolve and further delay implementation of a solution. In the short exposure period, we have identified the following flaws (elaborated on below): inappropriate use of Black-Scholes to model illustrated credits,
elimination of any level of risk premium, undue volatility in illustrations, and missing assumptions and inputs for the proposed approach.

The Independent Proposal approach, while reasonable for determining hedge costs, is not a reasonable basis to illustrate credits. The Black-Scholes formula is risk neutral and while appropriate to price a call or a put, it is not intended to determine the expected return on the option. Our October 28, 2014 letter (p.9) explained the justification of what ultimately led to the 145% limit in AG 49.

We have identified several technical flaws in the Independent Proposal that would further delay this process to thoroughly address. Given the Independent Proposal relies solely on hedge cost, illustrated rates could vary quite significantly from year to year. To illustrate this, we are providing the following examples. The Black-Scholes method will return a value equal to the option cost. As a result, we only need to look at historical option costs to see the variability.

<table>
<thead>
<tr>
<th>Year</th>
<th>Avg Cost 12% Cap</th>
<th>NI ER</th>
<th>Illustrated Rate</th>
<th>Chg. in IR</th>
</tr>
</thead>
<tbody>
<tr>
<td>2015</td>
<td>4.82%</td>
<td>5.00%</td>
<td>5.06%</td>
<td></td>
</tr>
<tr>
<td>2016</td>
<td>4.89%</td>
<td>5.00%</td>
<td>5.06%</td>
<td>0.07%</td>
</tr>
<tr>
<td>2017</td>
<td>4.57%</td>
<td>5.00%</td>
<td>5.13%</td>
<td>0.07%</td>
</tr>
<tr>
<td>2018</td>
<td>5.20%</td>
<td>5.00%</td>
<td>4.80%</td>
<td>-0.34%</td>
</tr>
<tr>
<td>2019</td>
<td>5.18%</td>
<td>5.00%</td>
<td>5.46%</td>
<td>0.66%</td>
</tr>
</tbody>
</table>

The Independent Proposal utilizes costs from the prior year to generate the illustrated rate for the then current year. For example, the 2016 rate of 5.06% is derived as 4.82% x (1 + 5.00%). The above table shows that, with anunchanging cap, the illustrated rate varies by 66bps over the past 3 years. In contrast, applying the AG49’s lookback calculation with a 12% cap to that index history produces a maximum illustrated rate for a 12% cap has varied by 10bps, resulting in a more consistent outcome for consumers.

While the example above assumes that a company’s cap remains the same during this sample period (2015-2019), it is also worth considering an example where the cap rate does change. Under the Independent Proposal, if the hedge cost changes each year, a change to the cap would result in no change to the illustrated rate. For example, if a 12% cap costs 5% one year, but then the costs decrease and a 13% cap now costs 5%, both would be illustrated at 5%. This would convey no important information to consumers regarding changes to their policy which would stand in contrast with AG49’s stated objective of aiding consumer understanding.

Finally, the Independent Proposal may require an administrative procedure to collect and publish historical data to be used as inputs for the Black-Scholes model, which will take time to determine.

We urge LATF to recognize that the Independent Proposal does not implement the direction from regulators and turn their attention to resolving the remaining issues with the ACLI proposal.

We look forward to a discussion on this important issue.

Sincerely,

cc Reggie Mazyck, NAIC

Re: AG49 Independent Proposal

Mr. Andersen and Members of the Committee:

I added my name to the proposal Bobby Samuelson previously forwarded to the subgroup laying out the merits of the Independent Proposal. This letter amplifies my hope that the committee will adopt the Independent Proposal as submitted.

Having spent the better part of the last 14 years working with Trustees and Fiduciaries nationwide in the Trust Owned Life Insurance (TOLI) space, I have seen firsthand how Index UL illustrations can cloud the decision making process of professionals who have a duty to “do right” by the client.

Consumers also struggle to comprehend illusive illustrations that generate unrealistic expectations. This often leads to client dissatisfaction that harms the life insurance industry.

I believe that the stated goal to “to ensure that illustrations do not mislead purchasers of insurance and to make illustrations more understandable” is noble – and needed.

I believe that the best way to get there is to adopt the Independent Proposal and urge the committee to do so.

Thank you for your time and consideration,

Michael Brohawn, CFP®, CLU®, CAP®
Comments for the Center for Economic Justice
To the NAIC Life Actuarial Task Force
Support for the AG49 Independent Proposal / Opposition to the ACLI Proposal
May 27, 2020

CEJ writes in support of the Independent Proposal (“IP”) and in strong opposition to the ACLI proposal for revisions to AG49 to stop the problems with current indexed universal life (“IUL”) insurance products.

Gut-Check Time for Insurance Regulators

As insurance regulators, there are a few times in your career when you can make an era-defining difference. What would you do differently if you had the chance to go back to 1990 and review LTCI rate and form filings? What would you do differently if you had the chance to go back and stop the vanishing premium illustrations? For many of these epochal consumer protection failures, regulators did not have the information or knowledge to do things differently. Who expected a decade or more of interest rates lower than any time in the prior 50 years?

Indexed UL is undoubtedly a new era in life insurance and now accounts for more than a third of new permanent life insurance sales. But when it comes to AG49, you are not only at another epochal point in regulatory history, but you have the knowledge and foresight to prevent future consumer harm. How do you want to be judged in 10 or 20 years? As the regulators who ensured consumer retirement security or the regulators who destroyed that security for millions of consumers?

Both Proposals Start from the Same Two Values

Both the IP and ACLI proposal start from the same two values – Net Investment Earnings Rate and Market Cost of Hedges, as universally determined by application of the Black-Scholes option pricing model, to support the indexed product features. The IP relies on the NIER, which is not disclosed on the illustration, for illustration actuary testing and uses the Black-Scholes option valuation model for the purposes of illustrated performance.
In contrast, the ACLI proposal starts with these values and then transmogrifies these values into a variety of other values which are then used to develop the maximum crediting rate. The ACLI proposal starts with the market cost of hedges to create the Hedge Budget and the Supplemental Hedge Budget. The ACLI proposal creates a BIA crediting rate cap based on the lesser of the Section 4A hypothetical historical credited rate (HHCR) or NIER x 145%. Both of these values bear no – none, zero, zilch, nada, null – relationship to historical returns or future expected returns. As a result, the maximum credit rate is based on numbers picked out of thin, very thin air. We are not aware of the ACLI presenting long-term historical data or testimony of an independent third party on the validity and appropriateness of either the HHCR or the 145% factor applied to the NIER.

The HHCR is a flawed measure of historical outcomes and unlike anything we’ve seen used to evaluate historical performance of financial instruments. The calculation is based on 42 years of daily calculations of 25 year geometric returns requiring a 66-year experience period. Then the arithmetic mean of these nearly 11,000 results is calculated. This procedure gives massively unequal weight – 25 to 1 – to different years’ outcomes. Years 1 and 66 get one year’s worth of weight, while years 25 to 42 get 25 years’ worth of weight. Early and late years in the 66-year period get far less weight than middle years. As a result, the calculation bears no relationship to actual historical returns and, consequently, the ACLI part 4Bi is a nonsensical value.

ACLI part 4Bii is NIER times the unsupported and fabulous 145%. Again, no relationship to actual historical returns and certainly not remotely reasonable of future long-term expected returns. Nevertheless, the 145% now takes center stage in the ACLI proposal as a guardrail. If 145% were a reasonable expectation, then why wouldn’t other investment managers be using this methodology to enhance their long-term returns? Why would investment managers instead advocate selling options rather than buying them? And, finally, why would regulators believe that 45% annual profits forever should serve as the baseline expectation for consumers purchasing a fixed life insurance product?

It is beyond baffling why regulators would prefer the ACLI approach -- overly complex, untethered to reality and virtually impossible for regulatory or consumer accountability -- to develop a maximum crediting rate to the IP approach – direct, tightly-linked-to-market-values, and much simpler with greater accountability to regulators and consumers.
ACLI Proposal Fails to Address the Reward without Risk Problem While the IP Solves It

As has been discussed in prior comments, the current AG49 and ACLI proposal continue to permit illustrations to show riskless arbitrage benefits. This shows up in the loan arbitrage provisions. In addition, even if the ACLI proposal stops the riskless arbitrage for cap buy-ups, multipliers and bonuses, it doesn’t stop the problem from occurring with other product designs. The IP proposal solves the riskless arbitrage benefit problem.

The ACLI Proposal is a Massive Re-Write of AG49. Any Argument That the IP Exceeds the Narrow Parameters of the LATF Guidance Doesn’t Hold Water.

In prior meetings, the IP was criticized or dismissed because it allegedly went beyond the decisions/guidance by LATF. Given the massive re-write of AG49 in the ACLI proposal with a host of new sections and new terms, it is not reasonable or fair to lodge these criticisms of the IP.

ACLI’s introduction of Annual Percentage Rate Will Likely Confuse Consumers

In section 3.A. Alternate Scale – ACLI introduces a number of new terms, including “annual percentage rate.” Annual Percentage Rate or APR has a well-known meaning in consumer finance much different than used in the ACLI proposal.

We Continue to Have Concerns about Anti-trust Violations with ACLI’s Coordination of Industry Comments and Possible Suppression of Dissenting Insurer Views

We understand that ACLI has sent a message to its members to support the ACLI proposal and to oppose the IP. At best, such action by ACLI can prevent LATF members and other interested parties from learning the views and recommendations of insurers. At worst, such an action is coordination among insurers on an issue directly related to product design and an antitrust violation. While it is one thing for regulators to ask the ACLI for advice and feedback, it is completely different for ACLI to promote collusion or stifle dissenting voices. We ask LATF to determine if ACLI has sent such a letter and, if so, to actively encourage individual insurers to offer their perspectives. Given prior comments like those of Equitable, we expect there are insurers who disagree with the ACLI proposal, but now fear speaking out for the IP.

Application to All New Illustrations

We’ve discussed this issue several times so will be brief here. The ACLI proposal applies the new AG49 guidelines only to illustrations for new and in-force policies issued on or after the effective date. This means that for policies issued prior to the effective date, all new illustrations for those policies will continue to use an older methodology/guideline.
The purpose of the AG49 exercise is to stop unrealistic illustrations and provide consumers with better information and expectations about how the product will operate and perform. The revisions to AG49 are intended to provide consumers with better information, presumably to make more informed decisions and have more realistic expectations about the future performance of the IUL product.

ACLI argues against applying AG49 to all new illustrations based on false claims about consumer confusion and retroactive application of a guideline. Applying a revised AG49 to all new illustrations is clearly not retroactive application as AG49 was not written into any IUL contract. The argument about consumer confusion is simply jaw-dropping – We lied to you before with the earlier illustrations, but we want to keep lying to you because the truth will confuse you.

The sad fact about this argument – beyond the absurd claims of consumer confusion and “retroactivity” – is the tacit acknowledgement that illustrations don’t serve the purpose they are intended for – to educate consumers about the operation of the product – but function to mislead consumers. Why else would insurers resist providing better information to consumers?
AG49 Comment Letter

Mr. Fred Andersen  
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI proposed draft of Actuarial Guideline 49-A

Dear Mr. Andersen:

Equitable appreciates the opportunity to submit this follow-up to our proposal regarding AG49-A on prospective requirements for IUL illustrations.

This follow-up proposal integrates select elements of the Independent and Equitable proposals into the ACLI proposal structure. The resultant “Integrated Proposal” leverages the effort to develop the ACLI proposal but adjusts features required to satisfy our understanding of regulator objectives – including several valid concerns raised by non-ACLI commentators about the ACLI proposal that, if not addressed, jeopardize the durability of the AG49 revisions. Critical features of the Integrated Proposal are its greater clarity and simplicity.

A draft of the Integrated Proposal, redlined from the ACLI proposal, is attached for reference.

The remainder of this letter is organized to accomplish the following objectives:

1. Articulate our (refined) understanding of the regulator governance objectives

2. Propose an “integrated proposal” that accomplish regulator objectives

3. Suggest next steps for regulators to finalize AG49 revisions

I. Our (refined) understanding of the IUL illustration governance objectives

The stated goals of AG 49 are to (i) guide the determination of maximum illustrated crediting rates and earned interest rates for the disciplined current scale and (ii) require additional side-by-side illustrations and disclosures to aid consumer understanding. As noted in our prior letter, we believe this reflects the overarching regulator desire to ensure policy illustrations depict a realistic projection of long-term policyholder returns upon which a current or prospective policyholder can establish realistic expectations for account performance and funding requirements.

From a technical perspective, we bifurcate the elements of the illustration that require governance into the:

a) Size of the "option budget": the amount of total contract value "put at risk" by investing in equity options or other risky investments.
b) **Rate-of-return on the “option budget”:** the illustrated long-term return of the instruments in which the option budget is invested.

Figure 1: Elements of the IUL illustrated return and associated regulator concerns

With respect to the **size** of the option budget, we understand the foremost regulator concern to be option budgets that are substantially larger than what can be supported by investing the contract value at yields on prevailing high-quality investments — especially given the expected decline of current portfolio NIERs given far lower prevailing investment yields. This concern has not been addressed by the ACLI proposal, which was developed before interest rates declined to their present level and the examples for which continue to reflect assumed NIERs of 4.5%.

With respect to the **rate-of-return** on the option budget, we understand the foremost regulator concern to be illustrated returns well in excess of high grade investment yields — i.e. overly optimistic assumptions about the realization of market risk premia.

These concerns manifest in the ultimate regulator concern that consumers predicate decisions on unrealistic expectations of contract performance, irrespective of whether the option budgets themselves are overstated or the rate-of-return on the option budget are overstated.

## II. Proposed “Integrated Solution”

In order to address these concerns in a manner that builds upon the time and thought invested into the ACLI proposal, Equitable proposes to integrate elements of the Independent Proposal and prior Equitable proposal into the ACLI proposal structure. The table below summarizes the principal adjustments to the ACLI proposal that we believe are necessary to accomplish the regulator objectives. The table includes a description and rationale for each adjustment.
The key beliefs behind the Integrated Proposal adjustments to the ACLI proposal are below:

- **Past performance is no guarantee of future returns:** The Integrated Proposal reduces the reliance on backtesting to forecast long-term future returns. Equitable believes backtesting of a given strategy can be part of the product sale process – as reflected in the section 7 table of historical index returns – but has a limited role in the illustration of long-term returns given their unproven predictive power for future returns over multiple decades.

- **A 45% annual excess return is an imprudent basis for long-term return expectations:** The Integrated Proposal reduces the maximum long-term realization of risk premia to 20% per year. Equitable believes this level could still be viewed as overly optimistic – but strikes a compromise relative to the existing 45%. To be sure, a 45% annual return over a multi-decade illustration timeframe leads to significant levels of
projected contract outperformance (three-fold account levels over 50 years), as
summarized in the table below.

**Table I: Long-term accumulated returns of $1 by proposed annual return cap**

<table>
<thead>
<tr>
<th>Return cap (5% hedge budget)</th>
<th>Contract return</th>
<th>Projection length (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>30</td>
</tr>
<tr>
<td>100%</td>
<td>5.00%</td>
<td>4</td>
</tr>
<tr>
<td>120%</td>
<td>6.00%</td>
<td>6</td>
</tr>
<tr>
<td>145%</td>
<td>7.25%</td>
<td>8</td>
</tr>
</tbody>
</table>

Of paramount importance to the success of AG49 is that the policyholder expectation for contract performance does not rely on excessive long-run outperformance of the instruments in which the option budget (of whatever size) is invested. The table above demonstrates the considerable outperformance that is assumed in current proposals.

- **The size of the option budget should be governed distinctly from the rate-of-return of the option budget**: The prior belief notes the significant impact of high annual illustrated risk premia. Better governance of the rate-of-return enables more latitude in the illustration of option budgets that rely, in part, on supplemental charges (not investment returns). This view reflects a belief that (a) a policyholder may reasonably seek a contract with greater market exposure than what can be created by an option budget supported only by prevailing yields on high quality investments – and hence who desire a larger option budget and (b) an outsized (e.g. 145%) rate-of-return on the supplemental charges is not illustrated given more strict governance of the rate-of-return.

To reinforce this point, we consider Indexed UL as offering a spectrum between fixed UL and Variable UL – and a VUL policy has a 100% market exposure since all contract value can be invested in equities, far above the proposed 5% cap for IUL illustrations.

- **Standardization of option budget sizes is critical to consistency of illustrations**: The Integrated Proposal embraces the Independent Proposal use of Black-Scholes to determine option budget size. Use of a Black-Scholes methodology will ensure consistent inputs are used to size the illustrated option budgets. The prospect of two companies with substantially similar index crediting features and NIERs that illustrate different returns is an objectionable feature of the ACLI proposal.

- **Black-Scholes is the best available method to ensure consistent option budgets**: Black-Scholes is simply another term for market pricing – and is a practical and robust method to size long-run option budgets. First, Black-Scholes inputs are readily accessible (the ACLI analysis demonstrates this). Second, any market risk premia in Black-Scholes has been demonstrated to be modest over time and, to be sure, any conservatism is far more than offset by the allowance of up to 20% annual excess returns on the option budget investments. Third, any concerns about rate stability year-over-year are irrelevant given (i) rates are, by nature, not stable given fluctuations in market risk from year-to-year and (ii) rate stability has not been identified as a regulator objective.
- **Realistic ‘downside scale’ performance add valuable transparency to consumers:**
  The requirement to include an equally prominent, side-by-side illustration of the downside (aka “alternate”) scale that differs only in the rate-of-return of the option budget offers consumers valuable insight into contract performance and potential funding requirements should risk premia not be realized. Holding constant all other elements of the illustration helps to ensure such alternate illustrations are not disregarded as overly conservative by consumers.

### III. Suggested next steps for regulators to close out AG49 revisions

Equitable believes the Integrated Proposal represents a pragmatic solution that leverages the investment of time in the ACLI proposal with critical adjustments to ensure its durability.

To bring the AG49 revisions to a close we suggest the regulators confirm or reject the concerns outlined in Section I and the associated key beliefs behind the “integrated proposal” in Section II. This will enable a more rapid convergence on the final features of the AG49 revision and use of the Integrated Proposal (practical given it starts with the structure of the ACLI proposal).

Thank you once again for the opportunity to share our thoughts with you on this important issue. Please do not hesitate to contact me should you have any questions or concerns regarding our proposal.

Mr. Fred Andersen  
Chair, NAIC IUL Illustration (A) Subgroup  
Mr. Reggie Mazyck  
Life Actuary, NAIC

Re: Exposure of Independent Proposal and Draft AG49

Dear Mr. Andersen and Mr. Mazyck,

At the fall NAIC meeting, LATF members indicated that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. The American Council of Life Insurers Proposal (ACLI Proposal) achieves this objective by clarifying AG49 requirements for these new IUL product designs. As detailed below, the Independent Proposal:

1. Changes the AG49 requirements for all IUL illustrations, not just the new designs. This was beyond the scope sought by LATF and is not in the spirit of AG49.
2. Increases variability in illustrated rates that will deter consumer understanding. The stability of illustrated rates for a given cap fosters consumer education and the Independent Proposal replaces stability with variability.
3. Contradicts itself in its advocacy, creating further confusion for the consumer. This utilization of different credited rate methodologies fails to meet AG49’s goals.

Global Atlantic recommends rejection of the Independent Proposal and adoption of the ACLI Proposal.

Changes to All IUL Product Illustrations

The Independent Proposal purportedly replaces the lookback approach in AG49 Section 4 with a Black-Scholes calculation. As shown in the examples provided by the Independent Proposal team, however, the detailed Black-Scholes description covers up the calculation’s simple use of the hedge budget. This change is applicable to all IUL designs. Illustrations for all IUL products, not just those with multipliers or cap buy-ups, would change under this proposal. The original draft of AG49 considered the same suggestion as the current Independent Proposal, choosing the lookback approach within AG49 over this proposed approach. The Independent Proposal thus changes the spirit of AG49 beyond that previously established and currently requested by LATF.

The Independent Proposal indicates that the lookback approach is only used with index products. IUL products are the only products subject to the Illustration Regulation that utilize a lookback approach. AG49 was developed because of IUL’s crediting feature and the lack of illustrated rate consistency prior to AG49. All products subject to the Illustration Regulation, including IUL, declare a non-guaranteed credited parameter. For UL, it is the fixed credited rate. For WL, it is within the dividend scale. For both UL and WL, the declared rate is the rate illustrated. For IUL, the declared parameter, for a
Benchmark Account, is the cap. The cap is not the credited rate within the illustration. IUL is therefore
the only product that needs to translate the declared parameter into an illustrated rate. It is therefore
not noteworthy that illustration requirements stipulate a lookback approach only with IUL products as
suggested by the Independent Proposal. It is simply out of necessity. The drafting of AG49 recognized
this necessity and developed the lookback approach as a straightforward, understandable approach to
foster consistency of illustrations and consumer understanding of product design. This approach
should be retained, not replaced.

Increased Variability in Illustrated Rates
The Independent Proposal replaces the lookback calculation within AG49 Section 4 with an alternate
calculation. The lookback approach was designed to bring consistency and stability in maximum
illustrated rates. It also fosters consumer education as the lookback approach is understandable.

The Independent Proposal’s approach will produce notably more variability in maximum illustrated
rates year-over-year for a given cap. Variations in option costs will generate these notable changes.
This lack of stability will cause consumer confusion, further hindering the consumer’s understanding.
AG49’s lookback approach, retained within the ACLI Proposal, maintains maximum illustrated rate
stability, benefitting the consumer.

Contradictory Methods to Illustrated IUL’s Crediting Feature
The Independent Proposal adds an additional requirement in Section 7B. This would add additional
crediting rates to the illustration. These rates are calculated using a lookback approach. The
approaches in Sections 4 and Sections 7 of the Independent Proposal therefore contradict each other,
producing a myriad of unstable rates determined using different methodologies within a single
illustration. Additional rates using different methodologies fails to foster consumer education. It
instead will decrease consumer understanding and add to consumer confusion. If the display of
lookback interest rates in line with that required by the index annuity illustration is desired, they could
be added to the ACLI Proposal which maintains the lookback approach that the Independent Proposal
abandoned.

Summary
Global Atlantic remains supportive of updating AG49 to ensure that new IUL product designs are
illustrated within the spirit of AG49. The ACLI Proposal succeeds in doing so, meeting LATF’s
objectives. The Independent Proposal fails to do so and should be set aside. The Independent
Proposal team’s recommendation for additional disclosures within the ACLI Proposal should also be set
aside. Requiring disclosure of the NIER within IUL illustrations would lead to an uneven playing field as
universal life and whole life products are not required to display their NIER. Listing the NIER will likely lead to companies seeking to have the highest rate displayed. The original illustration regulation was developed to eliminate this exact situation. The Independent Proposal’s recommendation for just IUL products therefore further contradicts the premise of the entire illustration regulation. Requiring such disclosure would also reveal proprietary information, thereby leading to anti-trust issues.

We appreciate your continued work ensuring the spirit of AG49 and welcome further engagement on the subject.

Dear Mr. Andersen:

This letter is to convey the reasons for our support for the Independent Proposal. In no way should our support for the Independent Proposal be interpreted to denigrate or minimize the incredible efforts and countless hours your subgroup and the industry and actuarial organizations have expended in the effort to improve the illustration of Indexed Universal Life.

The chief reasons for our support for the Independent Proposal are listed below. The opinion below are our own personal opinions and observations.

The Independent Proposal is a more complete solution.

The alternative is the ACLI proposal, and while it does a reasonable job addressing the target issues, it does so in a complicated and incomplete manner. The Independent Proposal does a better job of minimizing the potential for future modifications to AG 49 to address product designs that are unknowable at this time.

The Independent Proposal reflects the current environment.

As with fixed Universal Life, it is important to reflect the current economic environment in the illustrated crediting rate. Basing the illustrated crediting rate for a fixed UL policy on historical average interest rates is not appropriate because it does not reflect current economic and market conditions. We believe the same principle should apply to indexed products as well. While history does provide some frame of reference for future performance (and we support the additional return disclosure in section 7 of the Independent Proposal), predicting future performance is not a valid use of illustrations.
The Independent Proposal promotes proper usage of illustrations.

This crucial issue is one identified many years ago in the Final Report of the SOA Task Force for Research on Life Insurance Illustrations. In the report, Type A illustration usage – which is defined as illustrating how the policy works – makes an illustration a useful tool. It is important to show how the policy being illustrated functions under different scenarios of future non-guaranteed experience. A weakness in the industry's current approach is that it focuses on a single maximum-rate illustration, and it is shown along with the required and frequently ignored guaranteed and midpoint scenarios.

Type B usage is defined as projecting likely or best estimate future performance, and evaluating comparative cost or performance of several policies – and therefore helps the consumer understand which policy is the “best buy.” This type of usage is savaged by the SOA's task force report as being a wholly inappropriate usage of illustrations.

Further from the report, “It can be seen that Type B usage is inappropriate unless the illustrations include a measure of relative risk. For example, if one illustration shows 15 percent lower premiums, but has a 60 percent greater risk of not achieving projected values, then lack of risk disclosure renders the comparison meaningless. Type B questions assume similar degrees of relative risk...However, since there are really no practical means of assuring similar relative risks, Type B usage for illustrations is fundamentally inappropriate.” [emphasis added]

Many of today's IUL product illustrations include one or more of these features:
- borrowing to pay premiums
- borrowing to provide retirement income
- cap buy-ups
- multipliers
- non-guaranteed bonus features
- increased policy charges that are leveraged for investment gain

These features can be easily demonstrated to affect the relative risk of failing to achieve illustrated policy performance. In spite of the SOA task force report's sage advice, policies which contain these features have the appearance of identical relative risk as those that do not – and that has a potential to misrepresent the risks of policy underperformance to the consumer, which is contrary to one of the primary purposes of insurance regulation, i.e. to protect the public.

The opaque nature of Indexed Universal Life demands more illustration discipline and disclosure than fixed Universal Life.
With fixed UL, it was understood by most that interest rates in the 1980’s would not stay at historically high levels indefinitely into the future. Agents and policyholders had a reasonable expectation that fixed UL credited rates would generally follow prevailing rates on investments. In spite of this, many did not fully focus on the severity and required remediation of the effects of declining interest rates on policy performance.

With Indexed UL, policyholders (and possibly agents) DO NOT understand all – or perhaps any – of the factors that will affect policy performance due to changes in the crediting rate and how those are likely to fluctuate in the future. For instance, what future economic conditions would make a “cap” go up or down? What would make a “participation rate” go up or down?

We must admit that the use of illustrations as a competitive tool (Type B usage) is a prevalent use of illustrations. The more we can make use of illustrations to demonstrate how the policy works (Type A usage) and thus allowing the agent and consumer to make an informed decision regarding their financial future, the better we will serve our customers.

Having primary responsibility over the parameters at which IUL credited rates are illustrated, the subgroup should take this opportunity to adopt a guideline that will:

- Base maximum illustrated rates on the current environment and in a prudent manner.
- Minimize manipulation of policy features that increase the risks of policy underperformance, presented in an illustration that is ill-suited for disclosure of the nature and magnitude of such risks.

We believe the Independent Proposal serves these goals better than the ACLI proposal, and we encourage the subgroup to adopt the framework advocated therein.

Respectfully,

Christopher H. Hause

Re: IUL Coalition Comments on the ACLI’s Proposed AG 49-A and Other Proposals

Fred:

Thank you for the opportunity to comment on the ACLI’s Proposed AG 49-A, and another proposal recently submitted by Mr. Samuelson and others. This letter is submitted on behalf of the following companies listed below (the “IUL Coalition”).

- Lincoln Financial Group
- Pacific Life Insurance Company
- National Life Group
- John Hancock
- Sammons Financial Group

The IUL Coalition strongly endorses the ACLI’s proposal and urges its timely adoption by the NAIC Life Actuarial Task Force (“LATF”). Along with the ACLI and others, we also have very serious concerns with the alternative proposal.

The starting point for consideration of the merits of either proposal is whether it achieves the objectives laid out by LATF in votes taken in October and December of last year. Those votes directed that changes to AG 49 be made that ensure that IUL products with charged-for indexed features not illustrate more favorably than IUL products without those features.

As the table on the first page of the ACLI comment letter demonstrates, the ACLI proposal satisfies that test: IUL products with charged-for indexed features will not illustrate more favorably than IUL products without those features. Achieving this goal was a highly complex and time-consuming undertaking that included active involvement and input from a broad spectrum of the life insurance industry; including many companies that are not active writers of IUL products. The ACLI comment letter accurately describes its proposal as representing the consensus of a “broad collection of companies.”

In contrast, the proposal put forth by Mr. Samuelson is inconsistent with LATF’s stated objectives. Mr. Samuelson’s proposal overreaches, extending far beyond regulator direction. The Samuelson
proposal would fundamentally alter illustration practices for every IUL product in the market. The IUL Coalition does not believe that broad and sweeping changes to IUL illustrations – including IUL products without enhancements - are what LATF and other regulators intended when the current review of AG 49 began last year. Neither vote taken by LATF directed or even contemplated such far-reaching impact on every IUL product in the market.

It is also worth mentioning that the key elements of the Samuelson proposal are not new. In fact, these same ideas and arguments were presented to and rejected by LATF in 2015, when AG 49 was originally adopted by the NAIC after extensive debate and discussion.

The IUL Coalition also concurs with the ACLI’s concerns that Mr. Samuelson’s proposal is fundamentally flawed. We note that many of these same flaws were addressed and refuted in an October 28, 2014, ACLI white paper. The ACLI has attached that paper to its comment letter for your review. Any attempt to fix those flaws – even if that could be achieved - would take significant time, potentially months, without any associated consumer benefit. The ACLI proposal by contrast could be finalized in the coming weeks. Taking the time to attempt to fix a fundamentally flawed proposal would needlessly delay the regulators’ stated intent to move quickly on changes to AG 49 before moving on to a “Phase Two” discussion of enhanced consumer disclosures in IUL illustrations.

We appreciate the opportunity to provide our comments and look forward to further discussions.

Respectfully Submitted,

Scott R. Harrison

Dear Fred,

The undersigned companies present these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the exposed draft of the Samuelson Proposal for recommended changes to AG49.

Respectfully,

Seth Detert, Securian Financial
Pete Rothermel, Nationwide
Jacqueline Fallon, Penn Mutual Life Insurance Co
Seth Harlow, Mutual of Omaha

We believe that without substantial revisions, the Samuelson Proposal’s exposed revisions to AG49 do not meet the stated requirements of LATF:

- That products with charged-for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

- That, within an illustration, there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

Furthermore, we believe that the exposed version is an attempt to relitigate decisions pertaining to the original AG49. If adopted, the Samuelson Proposal would result in Indexed Universal Life contracts being at a disadvantage versus other fixed products from an illustration perspective.

Below are some concerns we have with the Samuelson Proposal. It is not to be viewed as an exhaustive list of our concerns.

- The proposal as written doesn’t establish guidelines for consistent application of the proposed rules to the variety of different ways products credit interest (such as multipliers, bonuses linked to index credits, or persistency bonuses).
  - The examples provided by Samuelson show their approach to achieve the desired LATF results on a variety of product designs. However, the wording in their proposal leaves the application of the regulation to the discretion of each carrier.

- Several clarifications and definitions would need to be added to AG49 to provide clarity and allow for consistent application throughout the industry.
Without the NAIC or another industry group publishing the required inputs, there is a lot of ambiguity around the inputs for the Black-Scholes valuation that will lead to inconsistencies throughout the industry.

Using 12 months average lookback on implied volatility will cause volatility in maximum illustrated rates from year to year versus the current AG49 66-year lookback methodology.

With LIBOR being phased out, it is not a good long-term choice. This section needs to be revisited because “another appropriate interest rate measure” is too generic and will result in inconsistent application throughout the industry.

Section 7 is acknowledging and showing the risk premium associated with different index crediting strategies. We find this inconsistent because the concept of long-term risk premium is the main premise underlying the Samuelson Proposal’s concerns with the ACLI’s recommendation.

The Samuelson Proposal lists concerns that they have with the ACLI proposal, but we do not see how their proposal addresses those concerns:

- The Samuelson Proposal puts emphasis on how each carrier defines their inputs for the Black-Scholes Valuation. Therefore, we believe there is incentive for carriers to use proprietary or less used indices to increase the illustrated rate. Proprietary and lesser used indices will have less consistent data around the Black-Scholes inputs and this could be manipulated by carriers.

- While there is always the potential for new, innovative product designs, the Samuelson Proposal is also susceptible to its application not being applied effectively to new product designs. As currently written, the Samuelson Proposal does not effectively cover the variety of already existing product designs.

- We don’t believe the Samuelson Proposal addresses the “timing differences” noted because the basis for which you credit interest or take asset charges on is not defined.

In closing, we believe that the Samuelson Proposal is farther reaching than the stated goals of LATF when they opened up AG49 for revision. Due to the issues we raised above, the Samuelson Proposal in its current form is incomplete and needs meaningful revisions before it is even to be considered as a solution to LATF’s stated goals. That process will take time, and meanwhile the stated goals of LATF would continue to be unmet and IUL contracts with multipliers and buy-ups could continue to show aggressive illustrations to new clients. For those reasons, we strongly urge the Subcommittee to bring forward the ACLI proposal for vote and ultimate adoption. The ACLI recommendation is a meaningful step forward in the consistent illustration of IUL products and by Samuelson Proposal’s admission addresses the goals of LATF.

Dear Fred,

Securian Financial presents these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the exposed draft of the ACLI recommended changes to AG49.

Securian believes the ACLI’s exposed revisions to AG49 accomplishes the main tasks set forth by the Subcommittee:

- That products with charged for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

- That within an illustration there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

We would like to commend the ACLI for the job they have done in facilitating the drafting sessions and allowing interested parties to comment on the proposed language. We believe the ACLI has appropriately brought together the previous exposed recommendations to AG49, including new language to address the majority of the concerns raised during the drafting sessions.

We recommend the Subcommittee adopt Option #2 of the ACLI comment letter in regard to the applicability of loan leverage. We believe that the impact of participating loans is unique to the IUL product and that in and of itself gives IUL products certain advantages over other product types in the industry. Thus, it is important that illustrations be inclusive of all types of credits in the loan leverage calculation and not over emphasize the impact participating loans can have on the illustrated values of IUL products.

Securian urges the Subcommittee to bring forward the ACLI proposal for vote and ultimate adoption. The ACLI recommendation is a meaningful step forward in the consistent illustration of IUL products. Additionally, Securian looks forward to working with LATF and the industry on new illustrated practices and disclosures as part of the continued evolution towards transparency and furthering consumer understanding of IUL products.

Respectfully,

Seth Detert, Securian Financial

RE: AG49 Independent Proposal Request for Adoption  

Dear Mr. Anderson,  

I implore the committee to adopt the Independent Proposal as it best aligns with the stated goals of NAIC’s Model Illustrations Regulation and helps better protect consumers from misleading sales illustrations. The complexity of IUL products is staggering especially with products using multipliers, bonuses, and proprietary indexes. The illustration is a woefully incomplete picture of such products, yet that is precisely what consumers are shown to induce a purchase. It is simply unreasonable to expect consumers to identify omissions of material facts, infer under-disclosed risks, or catch inherent nuances in language that imply significant performance reliability (that doesn’t exist) when reviewing IUL illustrations. Consumers need stronger protections from current IUL illustration practices, and the adoption of the Independent Proposal is a good step for the committee to help protect vulnerable consumers.

I have been in the life insurance industry for 28 years, working for life insurance companies, as a producer, and now in the role of VP, Insurance Analytics at Valmark Financial Group. I have written extensively on life insurance topics and given countless speeches to agents, financial planners, CPAs, attorneys, and trustees helping them to better understand products. Frustration with the common public misperception that the illustration is an accurate representation of a life insurance policy contract was the inspiration behind an article I co-authored, “Beyond Illustrations – The Importance of Contract Language”, which was published in the Journal of Financial Service Professionals in July 2017. I work every day with agents, life wholesalers, and other professional advisors reviewing and trying to understand products and illustrations. I have found that few people really understand or appreciate the complexity of IUL products and the significant on-going administrative expertise required over many decades to avoid consumer headaches down the road.

A quirk in the life insurance business is that policy contracts with client specific pricing and features are not available until a policy is issued for delivery. Reversal of the course of action is often impractical at that point especially in cases involving Section 1035 exchanges. As a result, consumer expectations of the product are, unfortunately, shaped almost exclusively by the sales illustration. Consumers are not harmed when an IUL product performs better than expected.
However, product underperformance can be devastating for consumers. The reliance upon IUL illustrations puts consumers at risk of:

- Unrealistic expectations of product performance
- Failure to understand the sequence of return risk
- Misinterpretation of carrier control over key drivers of policy performance
- Misunderstanding of the broad spectrum of product risks
- Increased out of pocket premiums
- Loss of insurance protection for family members
- Elimination of an anticipated source of retirement income
- Potentially large income tax bills if coverage terminates (in policies using loans for retirement income)

Like many of the supporters of the Independent Proposal, I have seen numerous dubious IUL illustration designs that are, in my opinion, destined for disaster. The net effect of the Independent Proposal is to produce a more conservative illustration than the current AG49 standards or the modifications proposed by the ACLI. It is important to take a step back from the calculation minutia and look at the big picture effect of what a more conservative illustration means to the consumers. It is likely that a more conservative illustration would:

- Effectively require a higher illustrated premium. However, if the consumer experiences better actual performance over time, future premiums may be reduced at the discretion of the consumer. Alternatively, the consumer may utilize the higher cash values that result from better than expected performance.
- Lead to a better statistical probability of adequate funding to achieve policy goals and reduce the risk of harmful policy termination.
- Create a policy better positioned to absorb two key elements that aren’t adequately reflected in illustrations, but which are key drivers of actual policy performance: sequence of returns and carrier changes to non-guaranteed elements like caps, participation rates, or thresholds. (It should be noted that products using multipliers, bonuses and some proprietary indexes are often much more sensitive to changes in these elements.)
- Inherently protect the consumer from some of the poorly understood mechanics and risks unwittingly assumed when purchasing complex IUL products.
- Better manage consumer performance expectations in the IUL products they purchase.
- Reduce some of the marketplace conduct concerns in IUL sales.

A more conservative illustration would NOT:

- Restrict the consumer’s choice of carrier, product, or features.
- Prevent a carrier from utilizing creative product designs or having innovative features.
- Eliminate leverage or arbitrage opportunities in the product if the consumer wanted to utilize it.
There’s little downside to the Independent Proposal. It would help protect vulnerable consumers from the bad actors without restricting choices in the marketplace. I encourage the committee to make the bold choice to embrace the Independent Proposal and better protect the consumers that rely upon the leadership of the committee and other NAIC members.

Respectfully,

Re: Life Actuarial Task Force (LATF) request for comments on the Samuelson’s Proposal  

Dear Mr. Andersen:  

Broadly-speaking, we feel the objective of life insurance product illustrations should be to help consumers make informed financial decisions by demonstrating how the product works and the potential risk and return opportunities. While we believe sales professionals are accountable for reviewing the risk and return associated with indexed universal life insurance policies with consumers, we also see an opportunity for improvement in the way these products are illustrated. We look forward to continuing to work with the NAIC on longer-term, more holistic changes to provide better consumer clarity.  

The direction that LATF gave in late 2019 was that index accounts with multipliers, cap buy-ups, and other index-linked enhancements should illustrate the same as an index account without such features. We believe that the ACLI’s AG 49A proposal represents a collaborative effort by the industry and accomplishes LATF’s directives.  

We are concerned that many of the issues discussed over the past year and carefully considered when drafting the ACLI’s AG 49A proposal, will not be resolved by the Samuelson Proposal. The Samuelson Proposal makes minimal changes to the wording in AG 49 and does not account for all product designs. As such, the Samuelson Proposal changes the foundation set by LATF for AG 49 and introduces substantial complexity that would require further review. Furthermore, the calculations in the Samuelson Proposal lack transparency for the consumer through the use of the Black-Scholes option valuation in determining illustrated rates.  

We continue to support the ACLI AG 49A proposal as submitted on April 30, 2020. We welcome the opportunity to discuss and I can be reached at (614) 249-5947.  

Regards,  

Pete Rothermel  
VP, CFO – Individual Life
RE: AG49 Independent Proposal Request for Adoption

Dear Mr. Andersen,

I am writing to express my support for the Independent Proposal on the IUL AG49 refinements. I have been in the life insurance industry for 40 years.

I am a lawyer by education and admitted to the bar in Ohio, my home state, and Florida, and I am frequently asked by attorneys, accountants, and trustees to review IUL proposals that are being promoted to their clients. I can personally attest to the lack of consumer understanding of IUL products and misleading nature of the sales pitch using the IUL illustration. The consumer isn’t educated in the subtleties of illustration disclosure language or the mathematics used in the illustration. As a result, consumers are frequently left with the impression that their IUL will outperform equity markets with zero risk to them.

The risks are particularly understated in products using policy loans and multiplier or bonus designs which, in my experience, is the prevalent product structure being promoted today. This lack of understanding has been exacerbated by the influx of products using multipliers, buy-up caps, and other mechanisms to use an effective earnings rate that is several percentage points higher than the stated return on the illustration.

AG49 has been abused by life insurers and agents to sell life insurance policies with illustrated results that have no possibility of coming true. Consumers are sheep being lead to financial slaughter with no disclosure of the risks involved with financed and non-financed IUL proposals.

The ACLI proposal will only result in greater product complexity and consumer confusion beyond the high levels of confusion today. The Independent Proposal is a better alternative to protect consumers. I urge the committee to adopt the Independent Proposal.

Fred,

Thank you for exposing the Independent Proposal and providing the opportunity to comment on it.

A Fundamental Misconception about Multipliers and Buy-Up Caps

The Independent Proposal was created and submitted for a very specific reason, but perhaps not the one that the members of the Subgroup or the supporters of the ACLI proposal imagine. For the past 18 months, the Subgroup has been evaluating newly created features of Indexed UL products that appear to circumvent the letter and spirit of the original AG 49. Late last year, the Subgroup took a directional vote that these features, particularly multipliers and buy-up caps, should not provide any illustrated benefits in excess of a base Indexed UL product. The implication from the Subgroup’s vote is that a product with these features should illustrate net performance no better than a product without them.

However, these new features are part and parcel to a base Indexed UL product. In fact, buy-up caps were contemplated by the original AG 49 and determined to be in accord with both the letter and spirit of the guideline. They were specifically accommodated by the allowance for multiple Benchmark Index Accounts. Similarly, multipliers are also consistent with the letter and spirit of the original AG 49 in that they do not augment illustrated performance beyond the applicable BIA rate. See below for a table of examples demonstrating the consistency of both buy-up caps and multipliers with AG 49.

*Adjusted so that ratio of Black-Scholes valuation to AG 49 Hypothetical Historical Lookback valuation is constant

Despite claims to the contrary, the companies using multipliers, buy-up caps and other types of product designs were not circumventing or aggressively interpreting AG 49. These companies were, in fact, operating in a manner consistent with the letter and spirit of the original guideline, using the tools specifically provided to them to augment their illustrated performance. The Subgroup is revisiting AG 49 because companies did exactly what the guideline allowed – and even encouraged – them to do. Accomplishing the goals set forth by the regulators regarding multipliers and buy-up caps is not a matter of replacing a faulty heart valve with a new one while keeping the heart itself intact. The guideline is clearly afflicted by a broader disease, of which multipliers and buy-up caps are only some of the symptoms. Limiting the reach of the disease, which is what the ACLI proposes, is only a temporary solution with problematic side effects. The Independent Proposal, by contrast, would permanently cure the disease – quickly, simply and with beneficial side effects for consumers and insurers alike.

The Hypothetical Lookback Methodology in AG 49 Shows Reward, but Not Risk

The source of the disease within AG 49 is readily apparent. The SOA Task Force on Illustrations described the incubator for such a virus in their 1992 report by writing that:
It can be seen that Type B usage [that is, usage of illustrations as performance projections] is inappropriate unless the illustration can include a measure of relative risk. For example, if one illustration shows 15% lower premiums but has 60% greater risk of not achieving projected values, then lack of risk disclosure renders the comparison meaningless.

It is well known and an uncontested fact that Type B usage of illustrations is pervasive in the market for all product types, not just Indexed UL. But Indexed UL has a particular advantage for Type B illustration usage that the Task Force clearly describes as “inappropriate” – AG 49 allows for the illustration of a “risk premium” without a commensurate measure of the risk. Although the ACLI and its constituent companies have repeatedly argued in favor of showing a risk premium in the illustrated scale, they have omitted a mathematical measure of the risk that creates the reward. Fortunately, calculating the risk within the strict confines of the maximum AG 49 illustrated rate is relatively easy.

The illustrated risk premium for Indexed UL is a function of the hypothetical historical lookback methodology (HHLM) detailed in Section 4 (A) of AG 49. This calculation is entirely arbitrary in that it defines a 66 year lookback period, prescribes 25-year rolling geometric averages and uses the arithmetic average of all of the observations as the maximum illustrated rate for the product. Currently, for example, a 10% Cap BIA would result in a 6.2% illustrated rate. Had the parameters been altered to different start dates and different segment lengths (50-10 years), the maximum illustrated rate could have ranged from a low of 5.83% to a high of 7.49%. Most importantly, the calculation uses the average of all of the 25-year segments. The lookback methodology prescribed in AG 49, in effect, dictates that the illustration should show the risk premium associated with a 50% failure rate based on the assumption of constant caps and future index performance mirroring past index performance.

To put this in stark terms, imagine the following example: A client purchases an Indexed UL product and plans to fund the product with a minimum premium to maintain coverage for life. Running the illustration at the maximum AG 49 illustrated rate produces an illustrated level premium of, say, $10,000 annually. What is the likelihood that the $10,000 will maintain coverage through maturity? Roughly 54%, using the actual historical data driving the HHLM in AG 49. Graphically, here is the outcome of returns for this scenario based on the hypothetical historical data feeding the maximum illustrated rate in the current AG 49 calculation for a 10% Cap BIA.
However, even this overstates the true likelihood of success because it rests on the assumptions that the index parameters will not change, that future equity performance will mirror past equity performance and does not show the impact of return volatility. Each of these assumptions are false or wildly aggressive. Future equity returns are broadly expected to be less than 7% and nowhere near the historical average of 11% for the S&P 500 Total Return. Indexed credits are vary in the real world and cause sequence of return risk. But most importantly, caps have fallen consistently since 2015 as a result of falling general account yields and adverse option pricing. For example, the ACLI spreadsheet assumes the price of a 10% cap to be 4.31% based on 2015-2019 data and the Black-Scholes formula. Today, an option budget of 4.31% would purchase an 8.5% cap. Below is the same graph as above but recalibrated with today’s fair-market cap of 8.5% as opposed to the 10% cap shown in the first graph.

Despite the fact that the baseline failure expectation of an illustration using the maximum AG 49 illustrated rate is nearly 50%, none of this risk is disclosed to clients. They see a risk premium, but no risk. It is little wonder, then, why Indexed UL has become the fastest growing part of the life insurance industry and now commands over a 3rd of new permanent life insurance premiums. It is also little wonder why multipliers and buy-up caps, which simply increase the risk and the potential reward of the strategy, have come to dominate the market. If the only thing clients are seeing is reward without any measure of risk, why would they choose anything different?

And, finally, it is little wonder why the ACLI and its constituents are clinging to this flawed methodology. Illustrations sell. Illustrations that show reward with no risk sell even better. What will happen to the Indexed UL sales if the product can no longer illustrate reward without risk? This is not an academic question, but a practical and essential one for life insurers selling Indexed UL. Of the top 20 Indexed UL writers, Indexed UL makes up the majority of sales for 16. More than half of Indexed UL premium is written at life insurers where Indexed UL makes up more than 80% of sales. Much is at stake. But as one regulator noted on a previous call, informed clients would not change their decision based on illustrated performance. In my experience working with countless retail clients, I completely agree with this sentiment. Informed clients see illustrations for their Type A usage, not for improper Type B projections. If life insurance companies have the same view, then why would they be so resistant to replacing a flawed methodology that has now resulted in two regulatory actions to rein in real or perceived abuses stemming from overly aggressive illustrations with something more reflective of fair-market values?
The Independent Proposal Provides the Only Permanent Solution

Remedying this disconnect between illustrated reward and non-illustrated risk is the only way to satisfy the goals stated by regulators. Both the ACLI proposal and Independent Proposal recommend eliminating the impact of the illustration of reward without risk. The ACLI proposal attempts to achieve the goals of the regulators by specifically eliminating the illustration of reward without risk for index-linked features, including multipliers and buy-up caps, that are funded with option budget in excess of the NIER. But in doing so, the ACLI proposal substantially modifies the original guideline in both its letter and spirit, introduces new and ambiguous definitions and formulas and allows non-disclosed elements to affect illustrated performance, rendering illustrations less understandable for consumers. We have detailed the problems with the ACLI proposal in previous letters. The long-run side effects of the strategy proposed by the ACLI proposal may prove to be worse than its benefits.

The Independent Proposal, by contrast, eliminates the illustration of reward without risk for all index-linked credits regardless of how they are funded. It is simple, effective and comprehensive. It meets all of the goals stated by the regulators regarding multipliers and buy-up caps. It does not “renegotiate” AG 49 – it requires just one simple change to Section 4, which is a modular section that can be swapped out without any impact to the rest of the guideline. It does not change the 145% factor in Section 5. Furthermore, the rates shown by the Independent Proposal would accurately reflect the level of the current index parameter, allowing for clear differentiation between the rates shown by different companies or in different accounts.

The only side effect of the Independent Proposal is that it produces more realistic and robust illustrations for consumers that will set expectations such that policies are funded to have a high likelihood of success over the long run. This is the basic concept behind all other fixed life insurance illustrations, where the likelihood of success is 100% assuming no changes to the non-guaranteed elements. The equivalent likelihood of success for an Indexed UL product assuming no changes to non-guaranteed elements and illustrating at the maximum AG 49 rate is 56%. It would be a bizarre argument for one to make the case that, somehow, clients are better served with illustrations that have lower illustrated premiums or higher illustrated distributions but a very high likelihood of failure. If regulators did not choose this illustration regime for other fixed products, then why Indexed UL?

However, the Independent Proposal recognizes that Indexed UL has the real possibility of outperformance as well as underperformance, particularly over short periods of time. Understanding the variability of returns and the potential for both upside and downside is absolutely essential for consumers to make an informed decision. As a result, the Independent Proposal provides for augmented supplemental crediting reports that show a range of variable returns, including those with a clear risk premium. This same methodology has been used in Fixed Index Annuity illustrations with broad support from life insurers. As in FIA, this methodology used in the supplemental crediting reports described in Section 7 of AG 49 would enhance the understanding of consumers, allow life insurers to differentiate their products and promote the potential benefits (and risks) of the index-linked crediting strategy. All of the marketing and promotion done by life insurers about the merits of their crediting strategies, including multipliers and buy-up caps, could be fully demonstrated in these reports. Life insurers would not be constrained in any way to both innovate their crediting strategies and position them with clients.

As a result, I urge the Subgroup to adopt the Independent Proposal. The ACLI and other life insurers who have spoken with their own voice, such as Equitable, can further enhance the proposal On behalf of my co-signers, I would welcome their input and input from regulators.

Sent via E-mail to RMazyck@NAIC.org

Re: Proposed Actuarial Guideline XLIX (49) Revisions

Dear Mr. Andersen and Members of the Subgroup:

I support the adoption of the Independent Proposal. I am an actuary, fee-only insurance advisor, and expert witness in insurance litigation – and in my view, the current abuses surrounding the illustrations of Indexed Universal Life (IUL) polices are eerily reminiscent of past episodes that ended up being embarrassing and harmful for the entire life insurance industry.

Furthermore, I strongly believe that the ACLI proposal would ultimately be a step in the wrong direction if it were adopted, leading to more complexity, less transparency, more gamesmanship, and no doubt the reconvening of another NAIC subgroup to tackle the next round of abuses. (It’s worth noting that because I am compensated by my clients on only an hourly or project fee basis, I have no financial interest in favoring the Independent Proposal – in fact, maintaining the status quo or adopting the ACLI proposal would no doubt create more future business opportunities for me than adopting the Independent Proposal would.)

Our industry has basically been in a continuous cycle of product (or more accurately illustration) innovation pushing the bounds of plausibility and regulation attempting to reel in perceived abuses. High interest rates in the late 1970s and early 1980s (and the development of widespread computing power) led to arguably the first battleground for illustration wars, where the “best” illustrations had significant marketing advantages. Universal Life (UL) and whole life (WL) each had their moments in the sun, and many consumers purchased policies in the 1980s with false expectations that had been created by unreasonable illustrations used as the primary basis for the purchase decision.

The next battleground emerged within the next decade as booming stock market returns shifted the focus to variable products as the product du jour that could win the illustration wars.
My personal opinion is that the Illustrations Regulation that was promulgated in the 1990s was initially quite effective in curbing illustration abuses, but over time, the effectiveness of that regulation has eroded. With the advent of indexed products, it was apparent that there was a giant loophole in the Illustrations Regulation that did not address such products – and now IUL is the most prominent battleground in the current illustration wars. The original AG 49 attempted to close that loophole, but one need only look at today’s marketplace (and the existence of this subgroup) to see that we are further away than ever from the original intent of the Illustrations Regulation. And again, I do not believe that the ACLI proposal will do anything other than create opportunities for more gamesmanship whose sole purpose is to increase the allowable illustrated rate. Companies and agents have long recognized that the best way to sell insurance policies is to have the best illustration – and as long as regulation exists that rewards the companies that are most willing to push the envelope, there will always be a back and forth between abuses and regulations intended to curb those abuses.

The Independent Proposal properly reflects that the hedges used to mitigate the investment risks within an IUL policy are insurance rather than investments. I have yet to see any reasonable basis for believing that a hedging program is itself a source of profit; indeed, it seems that the primary justification for increasing the amount of hedging (through features like rate multipliers) within an IUL policy is to increase the effective illustrated rate of return (even though the stated illustrated rate of return is unchanged). This leads to disturbing observations in today’s IUL illustrations that are commonplace – and observations that in my view would ultimately NOT change under the ACLI proposal (because it keeps the door open for other potential abuses, some of which have already been identified in the Independent Proposal and others that we can’t anticipate). As I write this, I’m looking at a representative IUL multiplier illustration with an account value that increases by 7.8% from one year to the next, net of expenses and cost of insurance charges with no premiums paid in that year, in spite of the fact that the stated illustrated rate is 5.67%. This very same illustration shows a cash value and death benefit IRR at age 100 of 7.6%, which again is quite remarkable when the stated illustrated rate is only 5.67%. What consumer wouldn’t be attracted to an illustration that shows an effective rate of return in excess of 7% when it is being compared with other IUL and non-IUL products that are not taking advantage of the multiplier loophole (and therefore have effective illustrated returns likely under 5%)? Ultimately, I believe that these types of illustrations will continue to exist even if the ACLI proposal were adopted – they would just manifest themselves in ways other than the current multiplier technique.

This IUL illustration problem manifests itself in two other ways via leveraging. First, it is quite commonplace for IUL illustrations to show heavy internal borrowing for distributions during retirement. The most attractive illustrations utilize indexed loans, which combine a fixed policy loan rate with credited rates on borrowed funds that are unaffected by the
borrowing activity (think non-Direct Recognition on WL policies). When you combine a loan rate of say 4.67% with a 5.67% IUL illustration (100 bps is the widest spread allowed with AG 49 currently) that has an effective illustrated return of more than 7%, you arrive at the inescapable conclusion that you are better off by borrowing sooner, borrowing more, and borrowing longer – and that’s exactly what the most “competitive” illustrations do – without capturing any of the risk presented by the extra leveraging or the possibility of the dreaded “surrender squeeze” phenomenon on heavily loaned policies.

Second, it is increasingly common for premium financing proposals to utilize aggressively illustrated IUL as the product of choice. Again, when you are able to combine an initial premium financing loan rate of under 4% with an illustrated effective IUL return upwards of 7%, it’s easy to see how compound interest works its magic – at least on an illustrated basis. In my experience, these proposals often barely acknowledge the multi-layered risk that exists with the reliance on a continued positive arbitrage, and it all starts with the portrayal of the illustrated returns within the IUL policy being deemed reasonable and sustainable. Quite often, these premium financing proposals become dramatically less attractive or fall apart completely if they use a non-multiplier IUL or a non-IUL product instead of the IUL product with multipliers (or whatever the next version of a multiplier product would be under the ACLI proposal).

By utilizing the widely recognized Black-Scholes option valuation methodology, the Independent Proposal creates what I believe is a more transparent and more appropriately level playing field, not only with IUL vs. IUL comparisons but with IUL vs. non-IUL comparisons.

I believe that the NAIC has the opportunity to proactively address and prevent what may otherwise become another black eye for the industry. With all due respect to the tremendous amount of work encompassed therein, my view is that the ACLI proposal is a band-aid approach that virtually guarantees that we will once again be revisiting this topic and looking for regulatory revisions within the next few years.

Sincerely,

Scott J. Witt, FSA, MAAA
President, Witt Actuarial Services, LLC

Mr. Mike Boerner
Chairman – NAIC Life Actuarial Task Force

Re: Actuarial Guideline on Illustrations of Indexed Universal Life Policies

Dear Mr. Boerner;

The ACLI thanks the Life Actuarial Task Force (LATF) for the opportunity to provide comments on the two exposed Actuarial Guidelines for IUL Illustrations. In the comments that follow, we provide support for the ACLI’s proposal, questions about the alternative proposal, and highlight what we believe to be the strengths of ACLI’s proposal compared to the alternative proposal.

Illustrated rates vs. market conduct items

In our development of the proposed Actuarial Guideline, we focused on the value provided in an IUL and how it translates into an appropriate illustrated rate. We recognize that illustrated rates are not the only issue to be addressed; however, given the current lack of clear guidance, the ACLI chose to address illustrated rates first with an Actuarial Guideline. The advantage of an Actuarial Guideline is that it would:

- Apply to all carriers uniformly and immediately
- Clarify practices for actuarial functions
- Draw authority from existing regulations.

In February, the ACLI Life Insurance Committee charged the IUL Task Force to address, once the illustrated interest rate was settled, other important items such as loan illustrations, variability of returns, and other disclosures. Since these items potentially impact non-IUL life insurance products, and are not actuarial items, the ACLI believes it is appropriate to address them in an initiative separate from this Actuarial Guideline. While this work has currently taken a back-seat to the illustrated rate discussions, ACLI welcomes the opportunity to work with regulators on further improvements for broader illustration considerations. We do not believe that the existence of these

---

1 The American Council of Life Insurers (ACLI) is a Washington, D.C.-based trade association with more than 300 legal reserve life insurer and fraternal benefit society member companies operating in the United States. ACLI advocates in federal, state and international forums. Its members represent more than 90 percent of the assets and premiums of the U.S. life insurance and annuity industry. In addition to life insurance, annuities and other workplace and individual retirement plans, ACLI members offer long-term care and disability income insurance, and reinsurance. Its public website can be accessed at www.acli.com.
other items should preclude resolution of guidance for illustrated rates as addressed in the exposed Actuarial Guideline proposed by ACLI.

**The ACLI’s proposal improves customer understanding**

IUL illustrations are subject to the life illustration regulation (NAIC Model 582) and Illustration Actuaries are subject to the Actuarial Standard of Practice on such illustrations (ASOP 24). While use of current interest parameters and current charges is clearly allowed in illustrations, existing guidance for the IUL illustrated rate is unclear, since the credited rate relies on the performance of an external index. As a result, various crediting rates are illustrated today.

The limited guidance for the Illustration Actuary and the lack of consumer understanding that results from inconsistent methods of determining illustrated rates was a focus of ACLI activity. The ACLI identified the following goals, and then drafted a proposed Actuarial Guideline that meets those goals:

1. Create consistency in determining illustrated rates for similar IUL products;
2. Ensure customer awareness of the likelihood for variability of returns;
3. Align with existing regulations and other general account products;
4. Allow for uniform and expedient applicability; and
5. Be adaptable for future new product development and future economic scenarios.

The ACLI’s recommendation meets these goals, and highlights the interest crediting features that are unique to IUL. Key features, which were influenced by all participating ACLI members including those who ultimately did not support the end product, include the following:

- Policy values are illustrated at two nonguaranteed interest rates in addition to the guaranteed rate in order to highlight the likelihood of variability of returns.
- A table of historical index rates is provided to highlight year-by-year variability of returns.
- A table of historical averages based on different index parameters is provided to highlight variability of nonguaranteed elements and the impact to credited rates.

The illustrations resulting from ACLI’s proposal will provide valuable disclosure to consumers and will educate consumers on the different types of index crediting options that are available within an IUL policy.

**The ACLI’s proposal is technically sound and supported by actual experience**

A key question that has been raised is whether a typical company’s investment strategy can support the rates that are determined by a look-back of past index performance. Often, the majority of a company’s assets supporting an IUL policy are typical general account assets (e.g. bonds and mortgages) and a smaller amount of assets are options that generate payoffs to support index-linked crediting rates.

A review of S&P 500 options since 1994 shows the cost of an annual 0%-12% call-spread has been relatively stable. Specifically, the mean cost was 5.09%, with a low cost of 3.74% and a high cost of 6.41%. At the time of the highest cost, a 10% cap would have brought the cost down close to the long-term average for the 12% cap. The average return over that period based on the cost of the

---

2 Prices for 12 month S & P options obtained from reports provided by Credit Suisse
options was more than 50%, implying that a 5% budget would have produced a 7.5% average return with annual rates that varied from 0% to 12%.

In this light, the ACLI's proposed look-back methodology provides a result that is not unreasonable (7.6% for a one year S&P 500 index, using a 12% cap and a 0% floor). This is particularly true when viewed in the context of the various components of the proposal.

Strengths of the ACLI Proposal

The ACLI has reviewed the alternate proposal and all publicly available material in support of that proposal and wants to highlight the following strengths of the ACLI proposal:

An Illustration based on the ACLI proposal will:

- Educate consumers on IUL likelihood of variability of returns,
- Highlight the nonguaranteed nature of interest credits, that an illustration is not a projection,
- Show consistent illustrated rates for products with similar interest crediting options,
- Use illustrated rates that reflect the unique characteristics of the underlying index and crediting method,
- Align with NAIC Model 582 and ASOP 24:
  - Use non-guaranteed elements and actual experience in accordance with ASOP 24,
  - Be based on sound, accepted investment theory and actual experience,
- Be based on a disciplined current scale that results from clear, formulaic guidance for the Illustration Actuary, and
- Highlight risk tradeoffs in interest crediting options.

Conclusion

The ACLI continues to support our proposed Actuarial Guideline for IUL illustrated rates and looks forward to separate collaborations to address broader illustration considerations that impact all life insurance product illustrations. The ACLI welcomes the opportunity to work with LATF to discuss the proposed Actuarial Guideline and incorporate suggestions that will improve consumer understanding, protection, and disclosure within an IUL illustration that builds upon the foundation established within Model 582 and ASOP 24. Attached is a paper developed by a group of IUL carriers that provides additional detail and context to the various details of the proposals.

Cc Reggie Mazyck, NAIC
IUL Study: Theory, Practice, and Experience

Introduction
On August 14, 2014, the American Council of Life Insurers (ACLI) presented a proposed Actuarial Guideline for Indexed Universal Life (IUL) illustrations to the Life Actuarial Task Force (LATF). In this document we provide sound analytical support for this proposal. In response to the alternative proposal, actuaries from the ACLI majority coalition have put together the following detailed analysis, demonstrations, and case studies in support of IUL and the ACLI’s proposed guideline.

On September 5, 2014, a group of life insurance carriers distributed an alternative proposal for an IUL Actuarial Guideline and a letter describing the rationale behind the proposal. While we disagree with both the alternative proposal and the rationale, we share many of the goals and believe the ACLI’s most recent proposal contains robust solutions needed to address these issues.

In the analysis that follows, we will demonstrate:

- **IUL products provide strong value for consumers looking for more growth potential without risk of loss of principal by enabling them to exchange their fixed account return for an index-based return.**
- **The ACLI’s proposal**
  - Is consistent with existing regulation.
  - Is supported by actuarial principles, sound, accepted investment theory, and solid historical evidence.
  - Will enable consumers to understand the risks and rewards of the product.
- **ACLI believes that the alternative proposal**
  - Is inconsistent with existing regulation.
  - Is inconsistent with observed experience.
  - Does not provide sought-after consistency.

In **Appendices A through E**, we provide:

- A case study showing actual risk premium credits exceeding 400 basis points.
- An industry history of steady rate setting despite tumultuous market conditions.
- Analysis showing the ACLI’s proposal is calibrated with other UL products on the market.
- A demonstration showing the alternative proposal would cause incongruous disparity between insurers.
- Analysis demonstrating that the last 20 years were not ideal for IUL.

**The value of IUL**

IULs are a type of universal life insurance product, with flexible premiums and long expected duration. Unlike Traditional Universal Life (TUL), where policy value earns a fixed interest rate declared by the company, IUL provides the opportunity to earn interest based on the performance of a market index. Unlike Variable Universal Life (VUL), where policy value is invested in “subaccounts” that may increase or decrease due to market index changes, IUL is a general account product that provides an interest rate floor (e.g., 0% or higher) that protects against market index losses, and applies index parameters (e.g., caps, participation rates) that may limit the indexed interest earned. Thus, the average level of IUL interest crediting can be thought of as being between TUL and VUL.3

Consumers who purchase an IUL choose to trade the relatively stable fixed account return for a more risky and uncertain return based on an index. IULs provide consumers the ability to earn interest based on a market index, while providing downside protection against market losses.

Because market indexes bear more risk than traditional general account bond portfolios, IUL index options are expected to provide a long-term average return that is higher than the general account rate consistent with capital market theory and practice.

---

3 Although IUL credits indexed interest, it is not a security; its value cannot decrease due to market index changes.
IUL Study: Theory, Practice, and Experience

Risk premium: theory and practice
Many insurers use a derivatives-based strategy to back their IUL products. By using call options, these insurers can offer their policyholders a responsible balance between principal protection and market exposure.

Investment portfolios with similar expected volatility (risk) have similar expected returns, and portfolios with higher expected risk will have higher expected reward. This theory is called arbitrage pricing theory, is reflected in the capital assets pricing model (CAPM), and it has been supported by historical experience.

Analysis from 1996-2013 has demonstrated a typical IUL portfolio comprised of bonds and call options has close to 300 basis points of risk premium over a portfolio consisting solely of bonds. Depending on the asset assumptions used, a back-tested one-year S&P IUL index interest option would have credited between 9-10% compared with a typical 6-7% general account portfolio yield during the same time period.

One company’s actual weighted average payoff on their option positions from September 2005 to August 2014 was 9.14%, compared with a weighted average option cost of 4.94%.

The investment mechanics supporting IUL
IUL companies could use a number of strategies to support index-linked interest. The following two strategies would generate returns to match the index-linked interest with floor guarantee:

1. Invest in equities and buy put options for downside protection
2. Invest in fixed income instruments and buy call options for both upside potential and downside protection

Both strategies provide the same return profiles and therefore have similar, meaningful risk premium; strategy 2 is more capital efficient under RBC calculations.

Support for the ACLI’s proposed Actuarial Guideline
A life illustration is one of many tools used to facilitate consumer education. Ideally, the illustrated values in a life illustration would exactly match future policy performance; however, this cannot be accomplished for TUL, IUL, VUL, or whole life products due to nonguaranteed policy features such as interest rates, policy charges, dividends, and bonuses. Because of this, it is inappropriate to imply that any aspect of an illustration should be used to project or predict the future; illustrations are intended to show how different policy features work.

Although both Model 582 and ASOP 24 apply to IUL illustrations, IUL illustration actuaries have lacked clear guidance for illustrated rates, so the ACLI formed the ACLI IUL Task Force to develop guidance. The task force identified the following five goals, and then drafted a proposed Actuarial Guideline that meets those goals.

Goal 1. Create consistency in illustrated rates for similar IUL products
The ACLI’s proposal will result in identical maximum illustrated rates for IUL products with the same index, crediting method, and index parameters. Illustration actuaries will benefit from that clarity of the ACLI’s proposed guideline, and consumers will gain a better understanding of the product with this consistency.

Goal 2. Ensure consumer awareness of variability of returns
The ACLI’s proposed Actuarial Guideline includes three mechanisms to address this goal.

The first is the inclusion of a midpoint scenario in addition to the input scenario and guaranteed values. This additional scenario is unique to IUL, and will show the impact of lower interest rates to the various features of an IUL policy. It will also provide a safeguard

when indexed loans are being illustrated—illustrated rates will typically be less than loan charges so the loan mechanics will become more transparent.

The second is the historical look back table. This table will illustrate the potential variability of returns from year to year so consumers know not to expect a level interest rate in all years.

The third is a table showing the sensitivity of the look back rate to index parameter changes, which will emphasize that index parameters are nonguaranteed.

**Goal 3. Align with existing regulations and other general account products.**

An Actuarial Guideline should clarify and build upon existing regulations and standards of practice. Section 3.4.1(a) of ASOP 24 prescribes the use of experience factors when determining the investment income for the disciplined current scale:

- **Investment income**, which is defined as an “experience factor,” should reflect the “recent actual investment experience, net of default costs, of the assets supporting the policy block.”

- **Investment income** should also “reflect the insurer’s actual practice for nonguaranteed elements with respect to realized and unrealized capital gains and losses, investment hedges, policy loans, and other investment items.”

The same section of ASOP 24 also requires the use of historical index data *specifically* for IUL:

- **Investment return factors**, which are used to determine investment income, should “be reasonably based on recent actual investment experience [...] the actuary should consider an appropriate time frame commensurate with such cycles and the characteristics of the underlying index in determining recent actual experience.”

The ACLI’s proposed 25-year look back aligns with ASOP 24 because it uses actual historical index experience and current nonguaranteed elements (i.e. the index parameters).

The use of current index parameters reflects the roughly 10 years of IUL carriers’ experience developing and selling IUL. Over that time period, most carriers’ index parameters have been reasonably stable.\(^9\) Proposals to use “historical” index parameters could result in index parameters that exceed an insurer’s current scale, would conflict with ASOP 24, and would be akin to showing historical fixed rates in a TUL illustration.

The ACLI’s proposed Actuarial Guideline builds on ASOP 24 by specifying an “appropriate time frame” to be used as the basis for the assumed investment returns. Since 1945, the average business cycle has been just over 5 years long\(^10\). As a result, a 25-year look back period would include 4-5 business cycles. Thus, the 25-year period proposed by the ACLI aligns with the guidance in ASOP 24.

**Goal 4. Uniform and expedient applicability**

Given the current lack of clear guidance, the ACLI *first* chose to address illustrated rates with an Actuarial Guideline, because Actuarial Guidelines:

- Apply to all carriers uniformly and immediately.

- Clarify practices for actuarial functions (in this case, the role of an illustration actuary).

- Align with existing regulations and standards of practice.

The ACLI established a process in the early spring to address market conduct-related illustration items – such as policy loans, variability of returns, and other disclosures – in a separate initiative. These market conduct items potentially impact non-IUL life insurance products, and are not actuarial items, so it was appropriate to separate them from the IUL Actuarial Guideline. Due to discussions on the illustration interest rates, work on the other issues has been deferred.

---

\(^9\) Actual historical IUL caps are shown in Appendix B.

Goal 5. Adapt to product differentiation, future new product development, and future economic scenarios

The ACLI’s proposed Actuarial Guideline adapts to new product and emerging economic scenarios.

Many IUL products offer more than one interest option. These interest options fall on a wide continuum—from the stable fixed interest options (similar to TUL) to index options with more upside potential.

Figure 1 shows the impact that volatility of returns has on illustrated rates for various types of life insurance. The analysis to support Figure 1 is contained in Appendix C.

Figure 1: Maximum illustrated rates for various types of universal life products

Practical problems with the alternative proposal

The alternative proposal introduces the following problems:

Problem 1. The alternative proposal does not comply with ASOP 24

The alternative proposal does not use actual experience to determine investment income, does not use actual index experience, and does not reflect the current cap (the nonguaranteed element), in conflict with Section 3.3.4.a. of ASOP 24.

Problem 2. The alternative proposal would result in inconsistent illustrated rates

Under the alternative proposal, two companies with the same index parameters could have two different illustrated rates. The opposite could also be true: two companies with different index parameters could have the same illustrated rates. This inconsistency would cause confusion and hinder consumer understanding.\(^{11}\)

Problem 3. The alternative proposal does not provide guidance for the defined “indexed derivative return” (the proxy for equity risk premium)

Each illustration actuary would need to develop an individual evaluation methodology, resulting in ambiguity for compliance and inconsistencies across the industry.

Problem 4. Explanation of “indexed derivative return” within illustration would hinder consumer understanding of the IUL product.

Agents would be expected to explain the actuarial derivation of the “indexed derivative return,” which would be further complicated by the inconsistencies among insurers. This detail would confuse consumers and distract them from the relevant mechanics of their policy, rather than improve their understanding of how the policy operates.

In addition, this would cause inconsistencies with all other life insurance product types, which are not required to disclose investment return assumptions in their illustrations.

Problem 5. The alternative proposal applies an arbitrary 12% limit on the “indexed derivative return” without any evidence to support it. According, it would not permit reflection of differences between various index designs.

The 12% cap on the “indexed derivative return” does not allow for the illustration of a risk premium consistent with historical experience, nor does it differentiate between the risk profiles among the index options. For example, under the alternative proposal, an IUL with a 5% fixed interest rate would have a 5.60% maximum illustrated rate, meaning the maximum difference between a general account and any index options would be 0.60%, which is far less than the 300 basis points found in the IUL Risk Premium Analysis.\(^{12}\)

\(^{11}\) Appendix D demonstrates the disparity caused by the alternate proposal.
\(^{12}\) See attached IUL Risk Premium Analysis.
IUL Study: Theory, Practice, and Experience

Controversial items raised by the alternative proposal

Claim 1: BXM index proves that "options are generally profitable to the seller and are unprofitable to the buyer."

This assertion does not recognize the difference in risk profile between the covered call reflected in the BXM and the call spread reflected in IUL interest crediting.

A covered call is a strategy in which an investor has a long position in equity (i.e., owns stock) and then sells a call option on that same equity. In doing so, the investor gives up the potential for returns above a certain threshold in exchange for the certainty of the option premium.

A call spread is a strategy in which an investor buys a call at one strike price and sells a call at a different strike price. In the case of IUL, the strike price for the purchased call is typically at the level of the floor (e.g., 0% or 2%) and the strike price for the sold call is typically at the level of the cap. In doing so, the IUL carrier payoff structure matches the interest owed to the policy owner.

The payoffs for a covered call and a call spread purchase are shown in Figure 2.

Figure 2: BXM strategy vs. call spread payoffs

The BXM strategy maintains downside risk if the market decreases because the value of the equity decreases and the call option has no value. If the market increases, the investor must pay the increase to the call buyer; this is offset by the increase in the value of the equity and the investor keeps the call premium from the original sale.

Claim 2: Stochastic analysis proves the 25-year look back produces unsupportable rates

The analysis described in the alternate proposal support letter uses an Economic Scenario Generator (ESG) that was developed for variable annuity reserving valuation. As such, the ESG is calibrated to be conservative and produce a large number of low or negative equity scenarios relative to actual experience and reasonable assumptions. Thus, it is inappropriate to use these ESG scenarios to analyze the reasonableness of the 25-year look back methodology.

Claim 3: The expected return on a call option over time should be 0%.

One of the citations used to justify this position is academic literature describing risk-neutral valuation. However, the alternative proposal does not consider that risk neutral valuation is "merely an artificial device for obtaining solutions to the Black-Scholes differential equation."13 Options and derivatives are not risk neutral, and they carry more risk than general account bond portfolios and even equities.14

Claim 4: A 50% annual return assumption is “exorbitant.”

To some, a 50% expected return seems outrageous, especially considering the historical average annual return for the S&P 500 total return index was around 10%. But the letter ignores the fact that a position in a call option is riskier than a position in equity. If an index change is negative (even if only slightly negative) a call option will pay out $0 and the purchaser will lose the entire purchase price. So it would stand to reason that a purchaser of a call would expect a high upside in return for a chance of total loss.

Historical data supports this concept. Analysis of option prices obtained from Credit Suisse demonstrates a 54% historical average annual return for a one-year S&P 500 IUL interest option with a 12% cap and 0% floor.15 If the cap drops to 10%, the average annual return is still 52%.

Question 1: If call options are so profitable, why don’t insurers use them to generate higher returns in their own general accounts?

The purpose of an insurer’s general account is to provide a relatively stable fixed income return; the variable expected return of call options does not fit within that profile. Insurers’ match their assets with their liabilities, and buying call options beyond what is required to support policyholder interest crediting would result in an unmatched portfolio.

Question 2: Why would anyone sell a call if the long run expectation is negative?

Derivatives are rarely used as a sole investment, so one should use caution when analyzing derivatives use separately from the rest of an investment strategy. In addition, every investor’s goals are unique; often one cannot pinpoint the motivation behind an isolated decision.

Four examples of parties who sell call options:

- Short term speculators who are not interested in long run expectation.
- Owners of equity portfolios who earn fee income by giving up the upside in their holdings. The combined positions (known as covered calls strategies) give up expected upside return for a more reliable stream of fee income.
- Insurers who subsidize the cost of an at-the-money-call purchase by selling an out-of-the-money call (i.e. call spread).
- Index managers and fund managers who protect equity investments against market declines at a reduced cost.16,17

There are many observed examples of rational purchases made when the long run expectation is negative. Insurance in general is a prime example—anyone who buys insurance has a negative long run expectation, yet the benefits to the purchaser justify the cost.

One specific example of buying insurance is common within the variable insurance market. Although the long run expectation of buying a put is negative, variable insurance providers buy puts because they are willing to pay for protection. Another specific example: investment managers (whose fees are based on the value of customer accounts) will also pay for protection in exchange for the more certain income.

Claim 5: Investment professionals, endowments, and pension funds “sell options as a way to generate income.”

In reality, these professionals sell options as a part of the covered call structure described in the BXM analysis section of this paper; they are not sold alone as investments. Such parties who sell options to hedge their net long positions in equities remain net long. An IUL also has a net long position in equity.

---

15 Annual options purchased once per month (mid-month), covering index changes from 9/16/1994 through 7/18/2014

16 E.g., the CBOE S&P 500 95-110 Collar IndexSM (CLLSM): http://www.cboe.com/SPXMS/SP500/95-10CollarIndex.aspx

17 E.g., the Russell Strategic Call Overwriting Fund: http://www.russell.com/us/Investment_Products/Russell_Funds/Strategic_Call_Overwriting_overview.asp
IUL Study: Theory, Practice, and Experience

Claim 6: Index performance from 1994 through 2013 was “ideal” for an IUL look back.

An analysis of the S&P 500 price index since its inception shows that the most recent 20-year time period was not “ideal” when compared with other historical 20-year time periods in terms of average volatility, interest rates, and equity movements.\(^{18}\)

Since there is no such thing as a “typical” index period, it is important to follow ASOP 24 and find “an appropriate time frame commensurate with such cycles and the characteristics of the underlying index.” The ACLI’s proposed Actuarial Guideline defines this as a 25-year period. Historically, 25-year periods have been sufficiently long to include 4-5 business cycles, but are not so long as to understate the more recent results of an evolving marketplace.

Conclusion

In this paper, we have demonstrated:

- IUL products provide strong value for consumers looking for more growth potential without risk of loss of principal by enabling them to exchange their fixed account return for an index-based return.
- The ACLI’s proposal:
  - Is consistent with existing regulation.
  - Is supported by actuarial principles, established investment theory, and solid historical evidence.
  - Will enable consumers to understand the risks and rewards of the product.
- ACLI believes that the alternative proposal:
  - Is inconsistent with existing regulation.
  - Is inconsistent with observed experience.
  - Does not provide sought-after consistency.

Important analysis and additional information is contained in the appendices.

We welcome the opportunity to work with LATF to consider additional improvements that will further aid consumer understanding, while remaining consistent with existing guidance and established actuarial principles.

---

\(^{18}\) Appendix E shows that 1994 through 2013 was unfavorable for IUL analysis.
Appendix A

Actual options experience demonstrates significant risk premium

Company XYZ case study

Company XYZ has invested in high quality bonds and equity index call spreads to back its IUL products since 2005, and has exhaustively tracked their historic investment activity. Company XYZ’s actual results for all of their products are far better than the levels the alternative proposal views as possible:

- The one-year S&P 500 product (12% - 13% cap, 0% floor) has produced attractive credits for policy owners, averaging 8.63% since inception.
- Their fixed-income portfolio has supported the options budget every year.
- As a percentage of account value, their average options cost has been 4.94%.
- The weighted average payoff on their option positions has been 9.14%.
- This translates to an 85% return on their options through a very difficult market cycle.
- The average fixed rate during that time was 5.15% with a range from 4.50% to 5.35%.

Company ABC case study

Company ABC has invested in high quality bonds and equity index call spreads to back its IUL products since January 2006, and has tracked their historic investment activity. Company ABC’s actual results are far better than the levels the alternative proposal views as possible:

- As a percentage of account value, their average options cost for all of their one-year S&P 500 products has been 4.64%.
- The weighted average payoff on their option positions has been 8.29%.
- This translates to a 78% return on their options through a very difficult market cycle.
- The average fixed rate during that time was 5.10% with a range from 4.00% to 5.80%.
Appendix B

Actual historical IUL caps were steady despite an unsteady market

IUL products have been on the market since 2002. During that time, caps have been reasonably stable despite tumultuous market movements.

Please note: Both IUL and TUL have nonguaranteed rates, such as crediting rates, mortality charges, and expense charges, and various product designs may result in different rates or different updates to those rates. Thus, an appropriate evaluation of any product considers the entire product, and not one rate alone (e.g., index parameters).

</tbody>
</table>

The differences in these interest options are compounded when paired with a variety of underlying indexes with different characteristics (e.g. expected volatility, expected return, correlation, etc.).

Each interest option presents a unique risk profile. Some interest options tend to produce steady, more consistent interest crediting from year to year, while other interest options tend to be more volatile with higher average credits at lower frequencies.

Consistency across UL products

The maximum illustrated rate should be set at a level that is consistent with other products and allows IUL illustrations to illustrate these differences. The 12% maximum illustrated rate was selected for VUL because it was unlikely that an average would exceed 12%. The maximum for IUL illustrations should be set with a similar goal.

The most risky interest option available for an IUL today is the uncapped 5-year option with a 100% participation rate; based on arbitrage pricing theory, it is also the option with the highest expected return. Since this option is uncapped, it should have a similar expected return as the underlying index, with some risk premium lost as a result of the 0% floor guarantee.

This uncapped 5-year interest option is currently available based on the S&P 500 price index. Many VULs available today offer the S&P 500 total return fund. The two differences between the returns in these options are (1) dividends, and (2) the 0% floor. The difference between the maximum VUL illustrated rate and the maximum IUL illustrated rate reflects these differences.

Setting a maximum illustrated rate

The 10% maximum illustrated rate is set at a level where it is unlikely that an IUL average would exceed it, and allows appropriate room for the look back mechanism to allow different indexes with different index parameters to be compared and contrasted in terms of historical performance.

While the 10% maximum is one guardrail, the look back uses a 25-year average that further limits the maximum illustrated rate. The 10% guardrail will be redundant for most interest options—the look back rate for the most common products will be approximately 7.5%.
Appendix D
The alternative proposal would cause disparity between insurers

Observations:

1) Although Company 1 and Company 2 can use the same illustrated rate under the ACLI’s proposal, to comply with disciplined current scale (DCS) the underlying policy charges would need to be higher for Company 2 so their illustration would perform worse. Under the alternative proposal the impact of the higher charges would be compounded by being forced to use a lower maximum illustrated rate than other companies, despite identical index returns.

2) Under the alternative proposal, Company 3 and Company 4 could theoretically pass DCS testing with lower insurance charges than Company 1, which would provide them higher illustrated values despite their lower caps. The customer would not understand the impact of caps on returns over a long time horizon.
IUL Study: Theory, Practice, and Experience

Appendix E

1994-2013 was not “ideal” for IUL

Claim/Null Hypothesis: The most recent 20-year period (1994-2013) was “ideal” for IUL.

Process: Evaluate the most recent period against all other 20-year periods on the following measures:

- Equity returns
- Volatility
- Interest rates

If the most recent period was ideal for IUL, equity returns will be relatively high, volatility will be relatively low, and interest rates will be relatively high. Analysis uses data from 1953 through 2013.19

Conclusion: Reject the Null Hypothesis. The most recent 20 calendar year period was not ideal for IUL. Equity returns were near average, volatility was medium to high, and interest rates were at all time lows.

EQUITY RETURNS

Equity returns during the most recent 20-year period were neither atypical nor ideal for IUL:

Figure 8: 20-year period S&P 500 price index analysis

<table>
<thead>
<tr>
<th>Percentile</th>
<th>0</th>

<td>7.13%</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: Calendar year data was used for equity return analysis (1/1 to 12/31).

VOLATILITY

Volatility during the most recent 20-year period was atypical, but not ideal for IUL:

Figure 9: Historical realized volatility

Realized volatility was generally the same or higher during the last 20-year period with a huge spike in 2009. Thus, volatility was atypical, but was not ideal for IUL during that period.

Note that actual option costs depend on implied volatility, not realized volatility, but there is not enough implied volatility data to determine a trend by looking at implied volatility alone. The following graph shows the relationship between realized volatility and implied volatility since the early 1990’s. The strong correlation between the two implies we can use historical trends in realized volatility to infer trends in implied volatility.

Figure 10: Historical realized volatility and implied volatility

AG49 Comment Letter

Mr. Fred Andersen
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI proposed draft of Actuarial Guideline 49-A

Dear Mr. Andersen:

Equitable appreciates the opportunity to submit this follow-up to our proposal regarding AG49-A on prospective requirements for IUL illustrations.

This follow-up proposal integrates select elements of the Independent and Equitable proposals into the ACLI proposal structure. The resultant “Integrated Proposal” leverages the effort to develop the ACLI proposal but adjusts features required to satisfy our understanding of regulator objectives – including several valid concerns raised by non-ACLI commentators about the ACLI proposal that, if not addressed, jeopardize the durability of the AG49 revisions. Critical features of the Integrated Proposal are its greater clarity and simplicity.

A draft of the Integrated Proposal, redlined from the ACLI proposal, is attached for reference.

The remainder of this letter is organized to accomplish the following objectives:

1- Articulate our (refined) understanding of the regulator governance objectives
2- Propose an “integrated proposal” that accomplish regulator objectives
3- Suggest next steps for regulators to finalize AG49 revisions

I. Our (refined) understanding of the IUL illustration governance objectives

The stated goals of AG 49 are to (i) guide the determination of maximum illustrated crediting rates and earned interest rates for the disciplined current scale and (ii) require additional side-by-side illustrations and disclosures to aid consumer understanding. As noted in our prior letter, we believe this reflects the overarching regulator desire to ensure policy illustrations depict a realistic projection of long-term policyholder returns upon which a current or prospective policyholder can establish realistic expectations for account performance and funding requirements.

From a technical perspective, we bifurcate the elements of the illustration that require governance into the:

a) **Size of the “option budget”**: the amount of total contract value “put at risk” by investing in equity options or other risky investments.
b) Rate-of-return on the “option budget”: the illustrated long-term return of the instruments in which the option budget is invested.

Figure 1: Elements of the IUL illustrated return and associated regulator concerns

With respect to the size of the option budget, we understand the foremost regulator concern to be option budgets that are substantially larger than what can be supported by investing the contract value at yields on prevailing high-quality investments – especially given the expected decline of current portfolio NIERs given far lower prevailing investment yields. This concern has not been addressed by the ACLI proposal, which was developed before interest rates declined to their present level and the examples for which continue to reflect assumed NIERs of 4.5%.

With respect to the rate-of-return on the option budget, we understand the foremost regulator concern to be illustrated returns well in excess of high grade investment yields – i.e. overly optimistic assumptions about the realization of market risk premia.

These concerns manifest in the ultimate regulator concern that consumers predicate decisions on unrealistic expectations of contract performance, irrespective of whether the option budgets themselves are overstated or the rate-of-return on the option budget are overstated.

II. Proposed “Integrated Solution”

In order to address these concerns in a manner that builds upon the time and thought invested into the ACLI proposal, Equitable proposes to integrate elements of the Independent Proposal and prior Equitable proposal into the ACLI proposal structure. The table below summarizes the principal adjustments to the ACLI proposal that we believe are necessary to accomplish the regulator objectives. The table includes a description and rationale for each adjustment.
The key beliefs behind the Integrated Proposal adjustments to the ACLI proposal are below:

- **Past performance is no guarantee of future returns**: The Integrated Proposal reduces the reliance on backtesting to forecast long-term future returns. Equitable believes backtesting of a given strategy can be part of the product sale process – as reflected in the section 7 table of historical index returns – but has a limited role in the illustration of long-term returns given their unproven predictive power for future returns over multiple decades.

- **A 45% annual excess return is an imprudent basis for long-term return expectations**: The Integrated Proposal reduces the maximum long-term realization of risk premia to 20% per year. Equitable believes this level could still be viewed as overly optimistic – but strikes a compromise relative to the existing 45%. To be sure, a 45% annual return over a multi-decade illustration timeframe leads to significant levels of
projected contract outperformance (three-fold account levels over 50 years), as summarized in the table below.

**Table I: Long-term accumulated returns of $1 by proposed annual return cap**

<table>
<thead>
<tr>
<th>Return cap (5% hedge budget)</th>
<th>Contract return</th>
<th>Projection length (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>100%</td>
<td>5.00%</td>
<td>4</td>
</tr>
<tr>
<td>120%</td>
<td>6.00%</td>
<td>6</td>
</tr>
<tr>
<td>145%</td>
<td>7.25%</td>
<td>8</td>
</tr>
</tbody>
</table>

Of paramount importance to the success of AG49 is that the policyholder expectation for contract performance does not rely on excessive long-run outperformance of the instruments in which the option budget (of whatever size) is invested. The table above demonstrates the considerable outperformance that is assumed in current proposals.

- **The size of the option budget should be governed distinctly from the rate-of-return of the option budget**: The prior belief notes the significant impact of high annual illustrated risk premia. Better governance of the rate-of-return enables more latitude in the illustration of option budgets that rely, in part, on supplemental charges (not investment returns). This view reflects a belief that (a) a policyholder may reasonably seek a contract with greater market exposure than what can be created by an option budget supported only by prevailing yields on high quality investments – and hence who desire a larger option budget and (b) an outsized (e.g. 145%) rate-of-return on the supplemental charges is not illustrated given more strict governance of the rate-of-return.

To reinforce this point, we consider Indexed UL as offering a spectrum between fixed UL and Variable UL – and a VUL policy has a 100% market exposure since all contract value can be invested in equities, far above the proposed 5% cap for IUL illustrations.

- **Standardization of option budget sizes is critical to consistency of illustrations**: The Integrated Proposal embraces the Independent Proposal use of Black-Scholes to determine option budget size. Use of a Black-Scholes methodology will ensure consistent inputs are used to size the illustrated option budgets. The prospect of two companies with substantially similar index crediting features and NIERs that illustrate different returns is an objectionable feature of the ACLI proposal.

- **Black-Scholes is the best available method to ensure consistent option budgets**: Black-Scholes is simply another term for market pricing – and is a practical and robust method to size long-run option budgets. First, Black-Scholes inputs are readily accessible (the ACLI analysis demonstrates this). Second, any market risk premia in Black-Scholes has been demonstrated to be modest over time and, to be sure, any conservatism is far more than offset by the allowance of up to 20% annual excess returns on the option budget investments. Third, any concerns about rate stability year-over-year are irrelevant given (i) rates are, by nature, not stable given fluctuations in market risk from year-to-year and (ii) rate stability has not been identified as a regulator objective.
Realistic ‘downside scale’ performance add valuable transparency to consumers:
The requirement to include an equally prominent, side-by-side illustration of the downside (aka “alternate”) scale that differs only in the rate-of-return of the option budget offers consumers valuable insight into contract performance and potential funding requirements should risk premia not be realized. Holding constant all other elements of the illustration helps to ensure such alternate illustrations are not disregarded as overly conservative by consumers.

III. Suggested next steps for regulators to close out AG49 revisions

Equitable believes the Integrated Proposal represents a pragmatic solution that leverages the investment of time in the ACLI proposal with critical adjustments to ensure its durability.

To bring the AG49 revisions to a close we suggest the regulators confirm or reject the concerns outlined in Section I and the associated key beliefs behind the “integrated proposal” in Section II. This will enable a more rapid convergence on the final features of the AG49 revision and use of the Integrated Proposal (practical given it starts with the structure of the ACLI proposal).

Thank you once again for the opportunity to share our thoughts with you on this important issue. Please do not hesitate to contact me should you have any questions or concerns regarding our proposal.

Aaron Sarfatti, ASA
Chief Risk Officer
The Life Actuarial (A) Task Force met via conference call May 21, 2020. The following Task Force members participated:
Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain and Vincent Tsang (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Adopted the IUL Illustration (A) Subgroup Minutes

The IUL Illustration (A) Subgroup met March 3 and Jan. 28 to discuss proposed revisions to Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49).

Mr. Yanacheak made a motion, seconded by Mr. Weber, to adopt the Subgroup’s March 3 (Attachment Six-A) and Jan. 28 (Attachment Six-B) minutes. The motion passed unanimously.

2. Exposed Amendment Proposal 2020-07

Paul Graham (American Council of Life Insurers—ACLI) said the Heroes Act, a bill passed recently by the U.S. House of Representatives, contains a revision to Section 7702 of the Internal Revenue Code (IRC), which for tax purposes provides the definition of life insurance. The definition uses the cash value accumulation test (CVAT) to determine whether a policy qualifies as life insurance, allowing it to avoid being taxed as an investment. The interest rate used in the Section 7702 CVAT is currently floored at 4%. He noted that the 4% nonforfeiture interest rate floor in the Standard Valuation Law and the Valuation Manual was set to match the 4% floor in the Section 7702 CVAT.

Mr. Graham further explained that the Heroes Act changes the CVAT by replacing the interest rate floor from the 4% static rate to an indexed rate. He said the change necessitates a similar change in the Valuation Manual for policies issued after the congressional bill is adopted by the U.S. Senate. He said the challenge is that the timing of the Senate adoption is uncertain.

Brian Bayerle (ACLI) said amendment proposal 2020-07 (Attachment Six-C) removes Valuation Manual references to the 4% interest rate floor and replaces it with language that sets the nonforfeiture rate floor in the Valuation Manual to the rate determined by Section 7702, eliminating the need for future adjustment to align the two sets of requirements. He reiterated that the change will not affect any existing policy.

Mr. Tsang said lowering the nonforfeiture rate will result in higher cash values. He asked if there is a business reason for lowering the rate.

Mr. Graham said that as interest rates decline, premiums on new policies will increase. He said providing higher cash values as premiums increase is a matter of equity.

John Norton (Globe Life) said Globe Life is not in favor of the change recommended in amendment proposal 2020-07. He said Globe Life is concerned the change will lead to higher costs that will affect the affordability of basic life protection. He said Globe Life is supportive of comprehensive reform of the nonforfeiture laws.

Jim Hodges (National Alliance of Life Companies—NALC) said that the NALC agrees with the Globe Life viewpoint.
Mr. Yanacheak made a motion, seconded by Mr. Tsang, to expose amendment proposal 2020-07 for a 21-day public comment period ending June 10. The motion passed unanimously.

3. Accepted Amendment Proposal 2020-04 As an Editorial Change

Bill Wilton (unaffiliated) said amendment proposal 2020-04 (Attachment Six-D) recommends reordering the rows of the Exhibit 7 reserve table in Section 3.A.5 of VM-30, Actuarial Opinion and Memorandum Requirements, to match the rows of Exhibit 7 in the life and health annual financial statement.

The Task Force agreed, without objection, to accept the recommendation in amendment proposal 2020-04 as an editorial change.

4. Exposed Amendment Proposal 2020-05

Jason Kehrberg (PolySystems) said amendment proposal 2020-05 (Attachment Six-E) recommends modifying VM-20, Requirement for Principle-Based Reserves for Life Products, to clarify that in Section 3.C.4, the net premium reserve reflects death claims and assumes continuous deaths and immediate payment of claims.

Mr. Leung made a motion, seconded by Mr. Yanacheak, to expose amendment proposal 2020-05 for a 21-day public comment period ending June 10. The motion passed unanimously.

5. Exposed Amendment Proposal 2019-58

Mr. Bock said amendment proposal 2019-58 proposes revising Section A.1 of the Valuation Manual, Introduction, Section I, Process for Updating, to require that updates to templates prescribed by the Valuation Manual be considered substantive and, therefore, subject to the Valuation Manual change requirements.

Mr. Robinson made a motion, seconded by Mr. Chou, to adopt amendment proposal 2019-58 (Attachment Six-F). The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call March 3, 2020. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andrew Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner, John Carter and Rachel Hemphill (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Comments on the IUL Illustration Jan. 28 Exposure

Brian Bayerle (American Council of Life Insurers—ACLI) proposed revisions to Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49). He said the revised guideline, titled AG 49-A (Attachment Six-A1), is designed to be prospectively applied to new business. He noted that the ACLI is not in favor of retroactive application of AG 49. He said the revision uses a single benchmark index account (BIA), and it proposes several new or revised definitions. The revision attempts to address the major concerns of state insurance regulators, while avoiding unnecessary complicated language.

Mr. Tsang asked whether a product with a multiplier will illustrate better than a non-multiplier product under the ACLI proposal.

Mr. Bayerle said the net effect on the account values should be the same. He said the ACLI’s hope is to provide examples at the Spring National Meeting.

Seth Detert (Securian Financial) discussed the proposal (Attachment Six-A2) jointly submitted by Mutual of Omaha, Nationwide, Penn Mutual, Prudential and Securian Financial. He said the ACLI proposal potentially allows policies that use charges to increase cap rates to illustrate better than policies that do not allow charges to increase cap rates, which is inconsistent with the request of the Life Actuarial (A) Task Force to have the products illustrate the same. He said the language in the joint proposal does a better job of closing that loophole than the ACLI proposal. He said the five companies generally agree with the ACLI changes to the illustrated scale, but they have questions related to Section 4.B. He said the five companies are generally in favor of the changes, with possibly a few minor tweaks, to the disciplined current scale proposed by the group represented by Scott Harrison (High Point Strategies).

Graham Summerlee (Lincoln Financial) said the IUL Coalition proposal (Attachment Six-A3) adds language for the process of selecting the BIA. He said the ACLI proposal is ambiguous about which account one would select for the BIA. The IUL Coalition proposal also proposes revisions for the language related to the determination of the illustrated rate.

Tom Doruska (Global Atlantic) said Global Atlantic’s proposal (Attachment Six-A4) stresses that designs with more index growth potential should have higher illustrated rates. He said the proposal differentiates itself from the ACLI proposal in the treatment of cap buy-ups and multipliers and the determination of the portion of assets backing the product that should be subject to the earned interest rate.

Tom Love (Valmark Financial) read comments (Attachment Six-A5) from a group of independent life insurance professionals concerned about the state of indexed universal life (IUL) illustrations. He said illustrations can be used to display the mechanics of the product (type A) or used as means to show performance projections (type B). The group is concerned that Task Force decisions are designed to address type B illustrations without regard for the education of the consumer on the functioning of the product. He said the group recommends using the fixed indexed annuity (FIA) illustration standards for AG 49 and using a Black-Scholes model to determine the intrinsic value of the options strategies instead of the historical lookback approach to providing the index credits for the illustration.

Mr. Andersen said the current work on AG 49 is just a single step in a multi-step process. He said after addressing the IUL illustrated rate issue by revising AG 49, other issues, such as disclosures and potentially opening the model regulation for long-term changes, could be addressed by the Subgroup, as directed by the Life Insurance and Annuities (A) Committee.
Mr. Chupp asked if Securian Financial could comment on its reasons for advocating a single BIA instead of multiple BIAs.

Mr. Detert said Securian Financial understood the Task Force direction on buy-up and multiplier accounts to mean that any type of charge could not be used to enhance the crediting rate or create multiple benchmark accounts.

Austin Bichler (Allianz) said the Allianz comment (Attachment Six-A6) expressed its agreement with the ACLI and IUL Coalition proposals as bases for revising AG 49.

Mr. Tsang said his comment (Attachment Six-A7) supports having products with multipliers illustrate no better than non-multiplier products. He suggested setting the crediting rate and account value for the non-multiplier product as an upper bound for all illustrations.

Mr. Andersen suggested that those developing future drafts of AG 49 should note when they have included or omitted Mr. Tsang’s recommendations.

Donna Megregian (American Academy of Actuaries—Academy) said the Academy comment (Attachment Six-A8) focuses on the historical background of illustrations. She the Society of Actuaries’ (SOA) Task Force for Research on Life Insurance Sales Illustrations, which defined the type A and type B uses for illustrations, noted that while type A usage can be handled well with illustrations, type B usage cannot. She said the Academy is concerned that the Subgroup decisions may result in limits on type A usages while trying to address issues related to type B usages. She said the Academy comment letter recommends a number of principles through which to evaluate potential changes to AG 49.

Mr. Andersen said that during Subgroup’s Oct. 17, 2019, conference call, it was determined that multiplier products should illustrate no better than non-multiplier products (possibility 2). He said the Subgroup was directed to address the crediting rate for loans in a manner reflecting possibility 2. He said industry members have said their perception is that the loan issue had not been decided.

Mr. Weber said addressing loans using possibility 2 is appropriate as a current solution. He said a better, longer term solution can be considered in the future. Mr. Boerner agreed.

Mr. Harrison said industry members believe that ample opportunity to discuss the decision was not provided.

Mr. Andersen said any revisions submitted to the Subgroup should reflect the use of possibility 2 or add commentary on why it is believed that possibility 2 should not apply.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
March 24, 2020

Mr. Fred Andersen
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI proposed draft of Actuarial Guideline 49-A

Dear Mr. Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following draft of AG49-A on prospective requirements for IUL illustrations.

During the March 3rd call of the Subgroup, multiple commenters suggested possible language to revise the Guideline. ACLI reviewed the various proposals and attempted to harmonize a version that both addresses concerns raised by regulators while providing consumers with the information necessary to make informed decisions on products they are considering for purchase.

The attached revisions (Attachment One) borrow concepts raised by the various drafts, and we’re appreciative of all the thought that went into each of these efforts. We note that, while this draft reflects our best-effort, there remain items that require additional consideration.

Consistent with the ACLI’s established opposition to retroactivity, AG49-A assumes that these new requirements are applicable on a prospective-only basis, and solely for policies issued after the guideline’s effective date.

ACLI notes the following in this best-effort draft:

- Definitions in Section 3 were refined from the earlier ACLI 02-21-20 draft.
- Language in Section 4 and 5 were largely borrowed from the Securian et al draft, with several modifications. We note the language in Section 5 requires additional consideration.
- For the treatment of Policy Loans (Section 6 and within the definition of “Alternate Scale”), industry is offering two proposals for regulators to consider. We note that the language in this section may require additional modification. This language attempt to capture the two main approaches previously submitted.

Indexed UL products may allow the loaned amount to remain in the index and earn index credits. When the index return is higher than the loan charged rate then the loan is “leveraged”. IUL products are the only product type where actuarial guidelines endorse this type of leveraging in

---

1 The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at www.acli.com.
illustrations. An objective for regulators in tightening this language is to ensure that the Supplemental Hedge Budget is not double counted.

During a straw poll at the end of the October 17 conference call, the vote favored language similar to Option 2. However, some of the language proposed subsequent of this call was similar to Option 1. We lay out arguments below for each approach, and we recommend further discussion on the topic.

We note there are advantages of each approach:

- **Option 1:** 100 bp loan leverage limit only applies to index credits:
  - Provides consistent treatment of illustrated bonuses between fixed UL and indexed UL, as well as consistent treatment of standard loans and indexed loans within an indexed UL.
  - Is consistent with the original scope of AG49, which was to apply to index-linked credits.
  - Allows for the illustration of consistent maximum crediting rates between IUL policies with a loan and IUL policies without a loan.
  - The Option 2 language may pose technical difficulties to implement.
  - The Option 2 language may be read to disadvantage innovative product designs, such as policies that offer wellness credits to customers who engage in activities that help them live longer and healthier lives.

- **Option 2:** 100 bp loan leverage limit applies to index credits and other types of bonuses:
  - If the limit only applies to Index Credits, loan leverage may exceed 100 bps using fixed rate bonuses or other innovative product designs.
  - Since all index accounts will illustrate similarly under the new AG 49, other bonus types may become more common.
  - This is a maximum illustration limit to prevent illustrations that are overly optimistic.
  - Products could still offer other bonus types and demonstrate how they work at lower interest rate illustrations or when loans are not illustrated.

We look forward to a discussion of our proposed language. Thank you.

Sincerely,

cc Reggie Mazyck, NAIC
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows: for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*].

i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:
The policy is subject to Model #582.

Interest credits are linked to an external index or indices.

The policy offers Indexed Credits

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The credited rate (total annual percentage rate of Indexed Credits) for each Index Account does not exceed the lesser of the maximum credited (total percentage rate of Indexed Credits) for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate (total annual percentage rate of Indexed Credits) for each Index Account shall not exceed the average of the maximum credited (total percentage rate of Indexed Credits) for the illustrated scale and the guaranteed credited (total percentage rate of Indexed Credits) for that account. However, the credited rate (total annual percentage rate of Indexed Credits) for each Index Account shall never be less than the guaranteed credited (total percentage rate of Indexed Credits) for that account.

ii. If the illustration includes a loan, the illustrated rate credited to the loan balance does Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge for the policy. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedges for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind are not included in the Annual Net Investment Earnings Rate.

B.C. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4(B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

vi. Additional amounts credited The amount used to determine the cap in 3 (C) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind are not included when determining the applicable cap rate.
vii. There are no less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 1 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account that are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values linked to an index or indices in excess of the interest calculation, including but not limited to experience refunds or multipliers and bonuses.

eighth. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. A policy shall have no more than one Benchmark Index Account.

C.D. Fixed Account: An account where the amounts credited are not tied to an external index or indices.

D.E. Index Account: An account where the amounts credited are tied to an external index or indices.

F. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Credits to the policy resulting from a floor are included.

G. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This amount should be consistent with the hedging program of the company.

H. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

I. Policy Loan Interest Rate: The annual interest rate that is charged on any Loan Balance. This does not include any other policy charges.

J. Policy Loan Interest Credited Rate: The annual interest rate credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.

i. For the portion of the account value backing the Loan Balance that is in a Fixed Account, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

[OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI Comment Letter; language for Option 1 and Option 2 may need to be tightened up:

Option 1: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.

Option 2: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact the portion of the account value backing the Loan Balance, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.]

K. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the Annual Net Investment Earnings Rate. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The credited rate, total annual percentage rate of Indexed Credits, for the illustrated scale for each Index Account shall be limited as follows:
A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the total Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

iii.i. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

B. D. For purposes of compliance with Section 6 (C) of Model #582, the credited rate for Supplemental Hedge Budget may cause the illustrated rate to exceed the earned interest rate underlying the Disciplined Current Scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% for the policy, inclusive of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the all general account assets (excluding hedges for index-based credits) allocated to support the policy and hedge assets that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed:

iii. the Annual Net Investment Earnings Rate, plus
iv. 45% of the lesser of the Hedge Budget minus any floor and the Annual Net Investment Earnings Rate, adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost.

The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate.

For a product with multiple Index Accounts with different Hedge Budgets that are less than or equal to the NIER, a maximum rate in 5.A. should be calculated for each set of accounts with different Hedge Budgets.

B. If an insurer does not engage in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support test under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates Indexed Credits using current index parameters for the most recent 20-year period.
February 21, 2020

Fred Andersen  
Acting Deputy Commissioner of Insurance  
Minnesota Department of Commerce  
85 7th Place East, Suite 280  
St. Paul, MN 55101

Dear Fred,

The undersigned companies present this proposal and the attached AG49 with examples, in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on AG49 on the January 28, 2020 call. We would be happy to discuss the revisions and examples at your convenience and on the next Subcommittee call.

Respectfully,

Seth Detert, Securian Financial  
Pete Rothermel Life CFO, Nationwide  
Jacqueline Fallon, Penn Mutual Life Insurance Co  
John Ponte, Prudential  
Seth Harlow, Mutual of Omaha

We believe that the proposed revisions accomplish the main tasks set forth by the Subcommittee to date:

- That products with charged for multipliers and/or buy up accounts illustrate substantially similar to those products without the additional charges.

- That there is consistent illustrative treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

During this comment period the majority of our revisions were to Sections 3 and 4 to accomplish the Subcommittees’ goals in a transparent manner and clarify existing issues. We also made revisions to Section 5 for clarity and consistency throughout AG49.

At this time, we have declined to comment on the applicability to policies sold before the effective date of the new revisions. We believe that the applicability to inforce policies is a conversation better served when we understand the impact of the revisions.

In the attached draft of AG49 we recommend these changes:

- In Section 3 we have added definitions for Annual Net Investment Earnings Rate, Index Credits, and Supplemental Hedge Budget.

- We have modified the definition of Benchmark Index in 3 (C)
  - We believe that there should only be ONE Benchmark Index for any given product.

  - As such we modified Section (C) (vi) to clearly state that only the Annual Net Investment Earnings Rate can be used when determining the Cap for the Benchmark Index account.
We modified Section (C) (vii) to identify that for the Benchmark account that no additional credits through bonus or multipliers apply.

- In Section 4 we changed the focus of the section from the illustrated credited rate to be concerned with illustrated Index Credits.
  - We believe this is important because as we have seen products with similar credited rates can produce significantly different illustrated values due to the Index Credits produced through multipliers and bonuses.
  - In section 4 (A) and 4 (A) (i & ii) we made small modifications to align with the concept of only having one Benchmark Index per product.
  - In Section 4 (B) we changed the wording to define the maximum Index Credits for the Benchmark Index (versus the maximum illustrated credit rate) and we implemented an additional limit to the maximum Index Credits to be 145% of the Annual Net Investment Earnings rate.
  - In Section 4 (C) we defined how an illustration actuary would determine the maximum Index credited rate for non-benchmark indices.

- In Section 5 (A) & (B) we updated the language to be clearer and consistent with the rest of the revisions to the guideline.
  - We believe Section 5 (D) can be eliminated due to the change to limit to one Benchmark Index per policy.

- In Section 6 we added language to clarify that the 100 bps of loan arbitrage of should be inclusive of any policy credit that increases the account value of the policy.

The attached examples are included to show the impact of the proposed revisions on illustrated Index Credits. The examples are hypothetical, however they do provide a good representation of the types of products currently available in the industry.
Proposed AG 49 edits to reflect 1) multipliers illustrating the same as non-multipliers and 2) subject cap buy-ups and index return enhancements to constraints reasonably similar to the constraints applied to multipliers

Actuarial Guideline XLIX
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows:

i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. Interest credits The policy offers interest credits, multipliers, factors, bonuses, or other enhancements to policy values any of which are linked to an external index or indices.
3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The credited rate for each Index Account does not exceed the lesser of the maximum credited rate for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate for each Index Account shall not exceed the average of the maximum credited rate for the illustrated scale and the guaranteed credited rate for that account. However, the credited rate for each Index Account shall never be less than the guaranteed credited rate for that account.

ii. If the illustration includes a loan, the total amount credited as a result of the loan balance, including Index Credits and all other illustrated benefits and bonuses that impact the policy’s account value, shall not exceed the illustrated loan charge.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate, less provisions for investment expenses and default cost, of the general account assets (excluding hedges for Index Credits) allocated to support the policy. Policy charges of any kind are not included in the Annual Net Investment Earnings Rate.

B.C. Benchmark Index Account: A policy shall have only one Benchmark Index Account, which has the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Only the Annual Net Investment Earnings Rate is used to support the cap in 3 (C) (ii). Policy charges of any kind are not included when determining the applicable cap rate. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered within the policy, only one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of S.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

vii. There are no additional amounts credited that are linked to an index or indices in excess of the interest calculation, including but not limited to multipliers and bonuses.

viii. There are no limitations on the portion of account value allocated to the account.
C.D. **Fixed Account**: An account where the credited rate is not tied to an external index or indices.

E. **Index Account**: An account where the credited rate is tied to an external index or indices.

F. **Index Credits**: Any interest credit, multiplier, factor, bonus, or other enhancement to policy values that is linked to an index or indices.

D.G. **Supplemental Hedge Budget**: For each Index Account, the annualized amount available to generate the Index Credits as determined by the illustration actuary minus the Annual Net Investment Earnings Rate, not less than zero. This amount is expressed as a percent of the account value in the Index Account and adjusted for timing to align with when the Index Credits are applied.

**Illustrated Scale**

The total Index Credits credited rate for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

   i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

   ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of a Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable the Benchmark Index Account, the total Index Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

   i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

   ii. 145% of the Annual Net Investment Earnings Rate.

C. For other any Index Accounts that does not meet the definition of the Benchmark Index Account in 3 (C) using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the total Index Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

   i. The maximum Index Credits for the Benchmark Index Account calculated in 4(B) plus the Supplemental Hedge Budget for the Index Account

   ii. The total Index Credits that the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in 4 (B). The illustration actuary shall use actuarial judgment to determine this value using methodology consistent with 4 (A) and 4 (B) where appropriate.

D. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. **Disciplined Current Scale**

   The earned interest rate for the disciplined current scale shall be limited as follows:
A. If an insurer engages in a hedging program for index-based interest Index Credits, the assumed earned interest rate underlying the disciplined current scale, inclusive of all general account assets and hedge assets that support the policy, net of default costs and investment expenses, including the amount spent to generate the Index Credits of the policy shall not exceed 145% of the Annual Net Investment Earnings Rate, (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

B. If an insurer does not engage in a hedging program for index-based interest Index Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all benefits including illustrated bonuses.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate total amount credited to as a result of the loan balance, including Index Credits and all other illustrated benefits and bonuses that impact the policy’s account value, shall not exceed the sum of illustrated loan charges and the Supplemental Hedge Budget by more than 100 basis points.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates using current index parameters for the most recent 20-year period.

Fred Andersen  
Deputy Commissioner of Insurance  
Minnesota Department of Commerce  
Chair, NAIC IUL Illustration (A) Subgroup

Re: Proposed Changes to Actuarial Guideline 49

Fred:

On behalf of the companies listed below (the “IUL Coalition”), we are submitting this letter in response to proposed changes to Actuarial Guideline 49 (“AG 49-A”) submitted by the ACLI to the Indexed Universal Life Illustration (IUL) Subgroup (“IUL Subgroup”). These proposed changes are intended to implement regulators’ stated intent over the last several months.

- Lincoln Financial Group  
- Pacific Life Insurance Company  
- National Life Group  
- John Hancock  
- Sammons Financial Group

The IUL Coalition has worked closely with ACLI as it drafted AG49-A and sincerely appreciates the effort to collaborate and compromise up to this point.

First, the IUL Coalition strongly agrees with ACLI that AG49-A should be applied on a prospective-only basis to policies issued after the effective date of changes. We refer you to prior comments we have made on this issue.

Second, the IUL Coalition concurs with the ACLI comment letter where a consensus was reached. The IUL Coalition provides further comment below on the one area of the ACLI letter where a consensus was not reached.

**The Coalition Supports ACLI Option 1 Regarding the Treatment of Policy Loans**

While the ACLI was able to reach a consensus on most provisions, one exception was with respect to the treatment of policy loans. As a result, the AG49-A draft contains two proposals for the treatment of policy loans: Option 1 and Option 2. Both Options limit the maximum crediting rate on the portion of the policy that is collateral for an index loan to a rate that is not higher than 100 bps above the illustrated loan interest charge rate (the “1% limit”). The difference between these options is that Option 1 applies the limit on Index-related performance while Option 2 applies the limit on all credits, regardless of whether they are tied to an index or not.
We agree with the ACLI that further discussion on this topic is warranted. Below we provide more clarification and education to the regulators beyond the comment letter distributed by the ACLI and describe why we support Option 1.

In evaluating the two proposed options as well as the arguments supporting each, it is the IUL Coalition’s belief that there are flaws and inconsistencies in Option 2 as described below:

1. **Applying loan “leverage” to Non-Indexed Credits.** One of the purposes of AG49 was to limit the loan leverage shown in the illustration. While the term “leverage” is not defined within AG49 itself, it is defined within the comment letter provided by the ACLI. Within that document, it defines loan “leverage” as when the index return is higher than the loan charged rate. Option 2 indicates that the loan leverage may exceed 100 bps via means of fixed rate bonuses or other innovative product designs. We respectfully disagree. Since non-indexed credits do not impact the index return nor the loan charged rate, the loan leverage remains consistent between Option 1 and Option 2.

2. **Inconsistent treatment of Indexed Loans.** Option 2 creates various inconsistencies as outlined below:

   a. **Loan vs. Non-Loaned within IUL product.** Option 2 allows the Non-Indexed Credits to be fully illustrated on non-loaned values but they may be limited on loaned values. The leads to difficulties for an applicant to compare and understand the costs associated with a loan and the impact on benefits under the policy.

   b. **Standard Loans vs. Indexed Loans within IUL product.** Option 2 allows the Non-Indexed Credits to be fully illustrated on Standard Loans but they may be limited on Indexed Loans. This creates confusion to the policyholder when determining which type of loan would be best suited for them.

   c. **Varying by Index Return.** Option 2 advocates that “products could still offer other bonus types and demonstrate how they work at lower interest rate illustrations or when loans are not illustrated.” The implication is that at higher illustrated returns, the Non-Indexed Credits cannot be illustrated since the true loan leverage is already at 100 bps. However, at lower return scenarios, they are allowing you to illustrate the bonus as you would no longer be illustrating any leverage. To illustrate items such as fixed credits differently across the return scenario is inconsistent, arbitrary and misleading as it gives the impression that the bonus amount truly varies by index performance.

   d. **UL vs. IUL.** UL policies illustrated with a loan can include Non-Indexed Credits (subject to self-support/lapse-support tests) while the IUL policies illustrated with the loan will only be able to reflect the Non-Indexed Credits that don’t cause the 1% limit to be exceeded. This difference will make it more difficult for the applicant to understand which product better suits his or her needs and will also make it more difficult to compare the mechanics of each product. The ACLI letter cautions that non-Index bonuses may become more common. We note, however, that these bonuses have been in common use for many years and have proven beneficial to many policyholders. There are no negative implications associated with a possible increase in the use of these bonuses.
To summarize, and for additional clarity, when a simplified example is shown to demonstrate how Option 1 and Option 2 would illustrate a Non-Indexed Credit under various scenarios, the inconsistency becomes apparent:

<table>

<td>5</td>
<td>0</td>
</tr>
</tbody>
</table>

3. **Innovative products will be disadvantaged.** Many innovative products are designed to add Non-Indexed Credits that could increase a customer’s policy value. The best way for a customer to understand the benefits derived from these types of products is in the illustration. By applying the 1% limit to Non-Indexed Credits, illustrated values for the product when a loan is taken will reflect the full charge associated with the innovative feature but may not be permitted to reflect the full potential benefit. This would create a disadvantage for innovative product designs, such as policies that offer wellness credits to customers who engage in activities that help them live longer and healthier lives.

4. **Option 1 does not provide any undue “optimism” compared to Option 2.** Within the comment letter distributed by the ACLI, one of the arguments provided for Option 2 is that it “prevents illustrations that are overly optimistic.” The implication is that Option 1 is allowing overly optimistic illustrations. This is not true. The inclusion of an item like a fixed bonus is not adding any additional optimism in that the bonus will be paid regardless of index performance. Therefore the level of “optimism”, in projecting uncertain items like indexed return, is identical between the two options.

The IUL Coalition feels that Option 1 as outlined in the ACLI draft and comment letter is the appropriate direction. The IUL Coalition believes that Option 1 provides consistent treatment of Non-Indexed Credits to allow a policyholder to properly understand the implication of a loan. In addition, Option 1 limits illustrated index loan leverage while encouraging innovative product designs. And, while each of the points above get into detail as to why we prefer Option 1, it’s also wise to step back and remember the overall goal of AG49. It was created to prevent over-illustrating indexed performance within IUL illustrations. Option 2 restricts the illustrations beyond index-related items which we don’t believe aligns with the objectives of AG49.

**Comments on other changes to AG49-A**

The revisions in AG49-A accomplish the main objectives of the IUL Subgroup’s request. The guideline establishes a maximum level of index credits based on hedge budgets that are no greater than the earned rate on assets supporting the product. At maximum levels for illustrated rates and hedge budgets,
features like multipliers or higher caps illustrate at a similar level as products without those features. We don’t believe there are openings to illustrate a net value for a BIA that is higher than the limits shown by the examples submitted by the ACLI.

We note that the ACLI is continuing discussions on a few remaining items and may have some additional changes to propose. Once the ACLI has completed discussions on any remaining changes, we plan to provide more detailed comments at that time.

The IUL Coalition is committed to working with stakeholders to promptly implement the intent of regulators, even during this time of economic and social uncertainty. We note that, over the coming months, regulators may need to consider providing increased flexibility regarding comment deadlines and decision-making as regulators and companies operate under emergency plans in response to the COVID-19 pandemic. While IUL Coalition members’ first priority is to maintain essential services to our policyholders during this public health emergency, we stand ready to continue progress on this issue as appropriate.

We appreciate the opportunity to provide input to the IUL Subgroup and look forward to further discussions.

Respectfully Submitted,

Scott R. Harrison

Re: Questions on IUL Illustrations

Dear Mr. Andersen and Mr. Mazyck,

Global Atlantic supports the continued review of Actuarial Guideline XLIX (AG49) considering new policy designs which have once again brought a lack of uniformity in illustrated values that can be confusing to potential buyers, in addition to creating uncertainty for the illustration actuary. We continue to believe that all index product designs should illustrate consistently and within the spirit of the current guideline. The current guideline provides for illustrated values based on the product’s index growth potential, using restrictions on the credited rates, earned interest rates within the disciplined current scale and loan leverage.

Global Atlantic is submitting a draft update that, we believe, develops illustrated value uniformity across index products while maintaining the spirit of AG49. The attached draft addresses the issues within the January 2020 exposure document as follows:

**Issue #1**
Section 3.B.ix. of the draft requires all sources of index credits to be included in the Benchmark Index Account. The different maximum AG49 lookback rates are therefore eliminated.

Additionally, the draft does not utilize the “Supplemental Option Budget” term, thereby eliminating the issues raised with defining that item.

**Issue #2**
The current AG49 allows for more than one Benchmark Index Account to be used. The attached draft builds on this through:
1. Section 3.B.ix requiring all sources of index credits to be included in the Benchmark Index Account.
2. Section 4.A.iii. providing guidance on determining the maximum credited rate for Index Accounts that differ from the Benchmark Index Account.

**Issue #3**
The attached draft specifies utilization of policy values subject to index interest, eliminating the interpretation differences of dollar amount and interest rate approaches listed in the exposed document.

**Issue #4**
AG49 applies to policies that have interest credits linked to an external index or indices. The attached draft requires all credits linked to an external index or indices to be considered within the 100 basis point limit. This consistent definition clarifies the 100 basis point differential applies to all sources index-based credits as Global Atlantic has suggested in our previous comment letters. Other policy credits, such as a reduction
in policy charges for those who lead a healthy lifestyle, are not derived from an external index and thus are not considered.

We look forward to continued dialogue on this important topic and the suggested revisions we are submitting with this comment letter.

Thomas A. Doruska  
Head of Life Product Development

David P. Wilken  
President - Life
Fred,

Thank you for the opportunity to comment on potential revisions to AG49. While we see merits in the Supplemental Option Budget approach, we believe that it is unable to address the full spectrum of designs that could lead to effective illustrated rates well in excess of the AG49 maximum illustrated rate for the Benchmark Index Account (BIA). For example, it is not effective for dealing with the implications of alternative crediting strategies and hybrid indices that have higher imputed option profits based on the hypothetical historical lookback methodology in AG49 Section 4(A), which already provide for means of illustrating returns well in excess of the BIA maximum illustrated rate in products available for sale today. It is also not clear how the concept of a Supplemental Option Budget would interact with persistency funded multipliers, bonuses or cash infusions, as are commonly found on Indexed UL products currently in market.

As a result, we believe that alternatives to the Supplemental Option Budget approach should be considered that will better align Indexed UL illustrations to Fixed Indexed Annuity illustrations and address the full spectrum of potential indexed crediting and product designs. This letter outlines an alternative methodology with specific AG49 language recommendations. We believe that the changes we are proposing to AG49 will accomplish the goals set forth by the regulators while maintaining the ability for life insurers to clearly differentiate crediting strategies and products on the basis of risk and return characteristics using historical index return data.

Our recommendation is for two primary modifications to AG49. The first is to move the hypothetical historical lookback methodology currently used in 4(A) to the crediting rate reports described in Section 7. We also recommend that Section 7 be augmented to encompass best case, worst case and most recent case historical returns over 10 years, aligning Indexed UL illustrations with Fixed Indexed Annuity illustrations. Finally, we recommend that Section 7 be clarified to allow any additional credits or charges contractually related to providing indexed interest which, again, is in accordance with Fixed Indexed Annuity illustrations. Taken together, these changes will augment the insurer’s ability to show how variability of returns can impact crediting performance in a variety of scenarios for each indexed crediting option, thereby increasing consumer understanding of the crediting mechanics and potential risks and returns of the strategies.

Second, we recommend using an option valuation methodology for Section 4(A) with pricing inputs being drawn from the previous calendar year. We recommend using the Black-Scholes formula, a universally accepted valuation methodology for derivatives, including call options, and is commonly applied to the valuation of financial products containing derivatives-based payoffs, such as warrants and retail structured products. Replacing 4(A) with an option valuation formula aligns the maximum illustrated rate with the denominator for all indexed-linked credits in the contract, regardless of whether they are funded through the insurer’s portfolio yield, additional policy charges or persistency. This modification to 4(A) will eliminate the illustrated benefits of multipliers and buy-up caps.

It would also align the illustrated benefits of alternative crediting strategies and hybrid indices with the Benchmark Index Account. There would be differences in the illustrated rates for the various accounts based solely on the fair market value of the options, which is a true and reasonable indicator to consumers of the current intrinsic value of the indexed crediting option. However, consumers would still be able to see the potential risks and rewards of these strategies in the hypothetical historical crediting reports described in Section 7 based on historical index returns. By combining these two approaches, consumers will be able to make an informed decision about choosing an indexed crediting strategy based on both the current fair-market valuation of the replicating options for the strategy (Section 4(A)) and its potential to deliver performance in a variety of historical return scenarios (Section 7).
The changes to the AG49 language proposed herein would accomplish the following goals stated by regulators:

1. Standardizing illustrated rates across Benchmark Index Account options, in accordance with the stated goals of the original Indexed UL Illustration Subgroup in 2013.
2. Limiting the ability for alternative crediting strategies and indices to illustrate more advantageously than traditional indices and crediting strategies, in accordance with the stated goals of the original subgroup.
3. Ensuring that products with multipliers illustrate similarly to products without multipliers, in accordance with the recent vote taken by the IUL Illustration Subgroup.
4. Ensuring that products with buy-up caps illustrate similarly to products without buy-up caps, in accordance with the vote taken at the most recent NAIC meeting in Austin.
5. Bringing Indexed UL illustrations into alignment with Fixed Indexed Annuity illustrations.
6. Maintaining the majority of the current AG49 language, including the 145% factor for illustration actuary testing, thereby avoiding a time-intensive rework of the guideline.

The language proposed herein would also satisfy the following concerns raised by life insurers:

1. Continuing to provide for the ability of life insurers to differentiate their products and crediting methodologies by demonstrating the potential for different indexed crediting options to offer different risk/return profiles, including multipliers, buy-up caps and proprietary/hybrid indices.
2. Providing for illustrated loan arbitrage to a similar degree as Whole Life, thereby ensuring that Indexed UL is not at a competitive disadvantage to Whole Life in terms of illustrated loan treatment.
3. Providing for the continued illustration of persistency-based, embedded multipliers and bonuses, thereby ensuring that Indexed UL is not at a competitive disadvantage to other types of Universal Life products.

Specific AG49 language changes, with accompanying comments, are appended. We appreciate the opportunity to comment and respectfully submit our proposal.

Suggested AG49 Language Modifications

1. Replace 4(A) with:

   A. Calculate the value of the replicating option trades for the Benchmark Index Account over the preceding calendar year, based on the Black-Scholes formula using the following inputs calculated on each trading day:
      i. Average closing implied volatility for 12-month, at-the-money S&P 500 call options
      ii. Average closing implied volatility for out-of-the-money 12-month S&P 500 call options with a normalized strike price equal to the currently declared cap
      iii. Average dividend yield on the S&P 500
      iv. Average 12-month LIBOR

   This section is designed to replicate the reasonable price of replicatively hedging the current index parameters in the Benchmark Index Account. An alternative approach may be for the NAIC to publish standard tables of the estimated price for hedging index participation parameters at defined intervals (0.25%, for example) with allowance for insurers to interpolate between the datapoints. This would limit the degree to which insurers with identical index participation parameters would have different illustrated performance. LIBOR may also be exchanged for another measure of Risk Free Rates.

2. Replace 4(B) with:

   B. The value calculated in 4(A) shall be the maximum credited rate(s) for the illustrated scale.

3. Remove 3(A) – The Alternate Scale

4. Replace 4(C) with:

   C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgement to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account as relates to the inputs for the Black-Scholes valuation formula, including realized volatility, implied volatility, volatility targets (if applicable), embedded fees (if applicable), deduction of an interest rate component (if applicable), dividend participation (if applicable) and other factors that may apply.

   This section is designed to ensure that products using different crediting methodologies, indices or combinations of the two illustrate in the same methodology as the Benchmark Index Account in accordance with their fundamental, underlying characteristics

5. Replace 7 with the following:

   A. A table showing the minimum and maximum of a geometric average for any available Benchmark Index Account using the following methodology:
i. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

ii. Calculate the arithmetic average of the geometric average annual returns in all 25-year periods

B. For each Index Account illustrated, a table showing actual annual historical index changes and corresponding hypothetical interest rates using current index parameters, including any applicable asset-based charges and asset-based interest bonuses or index credit multipliers paid within the first 10 years of the policy:

i. The 10-year period with the lowest calculated returns within the period referenced in 7(A)(i)

ii. The 10-year period with the highest calculated returns within the period referenced in 7(A)(i)

iii. The most recent 10-year historical period as calculated on the final trading day of the preceding calendar year

C. If an index has not been in existence for 10 years, the table shall replace the figures with the maximum available back-tested performance.

This section is designed to bring Indexed UL illustrations into alignment with Fixed Index Annuity illustrations. These demonstrations will also provide latitude for insurers to demonstrate the potential risk and return profiles of various crediting strategies, indices and policy mechanisms.

The following sections of AG49 were not altered for the following reasons:

5. There is no need to change the 145% provision in 5(A) as it will provide a cushion for the inevitable mismatches between the standardized illustrated price of the replicating options calculated in 4(A) and the insurer’s own pricing for options, expectations of prices or cap-setting process. Retaining the 145% will allow insurers who have economies of scale in hedging, are supporting higher caps with higher policy charges or other designs to illustrate benefits and costs accordingly. However, it may be advisable to adopt some of the clarifications to this language previously proposed in other comment letters.

6. There is no need to change the 100 basis points allowance for illustrated loan arbitrage. As with Section 5, there are inevitable mismatches between what an insurer is willing to charge on a loan and the value of what it may credit by providing current index participation parameters. This section preserves the ability for insurers to reflect those changes. However, it may be prudent to add clarifying language about the inclusion of illustrated bonuses and multipliers for the 100bps allowance.
February 21, 2020

Mr. Fred Andersen, Chairperson, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners

Re: Proposed Changes to Actuarial Guideline 49

Mr. Andersen,

Allianz has had the opportunity to preview a number of different proposals for changes to Actuarial Guideline 49 and we appreciate the opportunity to provide our comments on the matter.

In the spirit of gaining industry consensus, we support using the ACLI and IUL Coalition proposals as the foundation for the revised guideline. The companies represented by the ACLI and IUL Coalition offer a variety of product designs and serve a broad range of consumer needs, and these proposals accomplish the goals set forth by regulators while also being clear, direct, and broadly applicable.

Where there are differences between the proposals, we support the approach that is more broadly applicable to the various product designs offered throughout the industry.

Thank you for the opportunity to provide these comments.

Regards,

Austin Bichler, FSA, MAAA
Senior Director Actuary & Illustration Actuary
Allianz Life Insurance Company of North America
Dear Fred;

Thank you for the opportunity to comment on the proposed Actuarial Guideline 49 (AG 49) “The Application of The Life Illustrations Model Regulation to Policies with Indexed-Based Interest.”

Members of the Life Actuarial Task Force (LATF) Indexed Universal Life (A) Subgroup had previously voted to promote the general principle of “not allowing multiplier products illustrate better than products without multipliers.” The objective of revising the AG 49 is to clarify the guidance and applicability for this general principle. Examples noted in the current version of the proposed AG 49 also demonstrate the essence of this general principle. During the 2019 NAIC Winter Meeting, members of the subgroup voted to further expand this general principle to cover the “cap buy-up” feature of Indexed Universal Life (IUL) products.

As indicated in the provided document for the Jan 28, 2020 conference call, both Option A and Option B for Sections 3.G and 4.E of the proposed AG 49 leave rooms for companies to illustrate higher net credited rates for multiplier products than non-multiplier products. As both options violate the general principle of “not allowing multiplier products illustrate better than products without multiplier,” we prefer neither Option A nor Option B.

Regardless of the final option (A, B or others) being adopted, no regulations or actuarial guidelines may cover all future product innovations and terms used in insurance contractual provisions. Innovative IUL products or contractual provisions may gradually limit the effectiveness of the final AG 49 on IUL illustration. It is also not practical for regulators to continually revise the definitions of the AG 49.

While we should continue to revise the language of AG 49 to achieve the general principle, we may also consider implementing a supplementary approach of defining the net credited rates and the projected account values of the base IUL product (without multipliers, cap buy-up or other credit enhancing features) as the upper bounds for the net credited rates and the projected account values of IUL products with multipliers, cap buy-up or other credit enhancing features. The combination of the two approaches may minimize the loopholes of AG 49 and reduce the frequency for updating AG 49.

In conclusion, we do not prefer either Option A or Option B on a stand-alone basis. Besides revising the languages for Section 3.G and 4.E, we encourage the subgroup to consider amending the AG 49 by defining the net credited rates and the projected account values of a base IUL product as the upper bounds for the IUL product with multipliers, cap buy-up or other enhancing product features.

Thank you.

Very truly yours,

Vincent Tsang, FSA, MAAA

Illinois Department of Insurance

Mr. Fred Andersen
Chair, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners (NAIC)

Dear Mr. Andersen,

On behalf of the American Academy of Actuaries\(^1\) Life Illustrations Work Group (the “Work Group”), I appreciate the opportunity to provide comments to the IUL Illustration Subgroup regarding the illustrations of Indexed Universal Life (IUL) insurance policies under Actuarial Guideline XLIX (AG 49).

In the early 1990s, the Task Force for Research on Life Insurance Sales Illustrations researched life insurance sales illustrations and published a report of its findings in the *Transactions of the Society of Actuaries* 1991–1992 Reports (see attachment). We believe this report is important because it formed part of the basis for the Life Insurance Illustrations Model Regulation (adopted later that decade) and much of it continues to be relevant today.

The research indicated there are two major uses of illustrations:

- **Type A Usage** is intended to show the consumer the mechanics of the policy being purchased and how the policy values or premium payments change over time. The emphasis is a matter of *how and what* rather than *how much*.
- **Type B Usage** tries to project likely or best estimates of future performance and compare cost or performance of different policies. It attempts to show *how much* on the premise that the *hows and whats* are comparable enough for this to be meaningful.”

Although the Task Force concluded that “illustrations handle Type A requirements well,” the report states that “Type B usage for illustrations is fundamentally inappropriate” and “illustrations are structurally incapable of handling Type B questions.”

During subsequent development of the Life Insurance Illustrations Model Regulation, a majority of regulators agreed with the conclusions of the Task Force:

“A regulator suggested that a provision be added to refer to comparison between policies, recognizing that people will compare policies whether the working group thinks it is

---

\(^1\) The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
appropriate or not. The majority decided the NAIC should not go on record in any way encouraging what they consider an inappropriate use of illustrations.” (*Proceedings of the NAIC*, 1995 Proc. 2nd Quarter 537.)

We are concerned that the recent direction from the Life Actuarial Task Force (LATF) will result in the inability to show the consumer the mechanics of the policy being purchased (i.e., inhibit Type A usage). We understand LATF’s concern that illustrations could be misleading if consumers believe the illustrated rates are best estimates (Type B usage), but it is also misleading to deprive consumers of the ability to see how certain product features work (Type A usage).

Therefore, the Work Group offers the following principles for evaluating potential changes to AG 49:

1. Product features are adequately disclosed and reasonably demonstrated in all illustrated scenarios, to support Type A usage and educate consumers on what they are buying (e.g., costs, functionality, benefits/risks/limitations, impact on illustrated values, etc.).
2. Discourage Type B usage through disclosures in the illustration and through consumer education.
3. Illustrated values that are supportable through DCS testing.
4. Maximum illustrated rates that are reasonably related to the product features and also reflect the economic environment.

In addition, we suggest that Section 7.C. of AG 49 be reviewed to improve disclosure of total credits and charges (not only credited rates).

****

The Work Group appreciates the efforts of the IUL Illustration Subgroup to review AG 49. If you have any questions or would like further dialogue on the above topics, please contact Ian Trepanier, life policy analyst, at trepanier@actuary.org.

Sincerely,

Donna Megregian, MAAA, FSA

1991-92 REPORTS

FINAL REPORT* OF THE TASK FORCE†
FOR RESEARCH ON LIFE INSURANCE SALES ILLUSTRATIONS
UNDER THE AUSPICES OF THE
COMMITTEE FOR RESEARCH ON SOCIAL CONCERNS

EXECUTIVE SUMMARY

Purpose
The Task Force for Research on Life Insurance Sales Illustrations reports to the Society's Committee for Research on Social Concerns. The Task Force was formed in recognition of the declining level of consumer confidence in the life insurance industry and, in particular, to investigate how sales illustration practices can add to, or detract from, consumer confidence.

In developing this report, the Task Force surveyed life insurance company illustration practices, reviewed available literature and regulatory requirements, held open forums at Society of Actuaries (SOA) and Canadian Institute of Actuaries (CIA) meetings, and considered the methodology applied to other financial products.

Situation Analysis
Sales illustrations have been developed to meet a variety of needs from a variety of consumers, all placing different requirements on an illustration. There are two major uses of illustrations:

• **Type A Usage** is intended to show the consumer the mechanics of the policy being purchased and how policy values or premium payments change over time. The emphasis is a matter of how and what rather than how much.

• **Type B Usage** tries to project likely or best estimates of future performance and compare cost or performance of different policies. It attempts to show how much on the premise that the hows and whats are comparable enough for this to be meaningful.

Illustrations handle Type A requirements well, especially if several illustrations are used to show different scenarios. Illustrations inherently do not

*Opinions expressed herein are those of the Task Force for Research on Life Insurance Sales Illustrations and of the Committee for Research on Social Concerns. This report does not purport to represent the views of the Society of Actuaries or of its Board of Governors.
† Judy A. Faucett (Chairperson), Benjamin J. Bock, Bruce E. Booker, John W. Keller, John R. Skar, Linden N. Cole, Staff Liaison, W. Steven Prince, CIA Liaison, and Michael J. Roscoe, AAA Liaison.
handle Type B requirements well. How credible are any nonguaranteed numbers projected 20 years into the future, even if constructed with integrity? How does a consumer evaluate the credibility of two illustrations if they are from different companies or even from the same company if different products with different guarantees are being considered? Most illustration problems arise because illustrations create the illusion that the insurance company knows what will happen in the future, and that knowledge has been used to create the illustration.

In many countries, Type B usage of life illustrations is prevented, in effect, through use of standardized assumptions. It is acknowledged that there are real differences in performance between companies, but such differences cannot be described through illustrations. Within North America in other financial products such as mutual funds, it is recognized that future performance cannot be illustrated. The emphasis of these illustrations is to disclose expense charges, not the performance of the underlying fund.

Life insurance policies are complex financial contracts. There is no simple measure or analysis to compare future performance of unpredictable events. This fact is well understood in the securities industry and needs to be assimilated into the life insurance industry as well.

CONCLUSION: Illustrations are a valuable tool for the consumer and third-party advisors when used properly. Most companies are making a good-faith effort to comply with the regulatory requirements and disclose material facts on the illustration. However, the consumer would benefit from illustrations that demonstrate the sensitivity and operation of nonguaranteed elements and better methods/measures to compare policies and companies.

Alternatives to Current Practices

The Task Force considered a number of alternatives to current practices for illustrations. Specific recommendations are contained in Sections VI and VII of the report. The recommendations fall into these main categories:

- **Educational Efforts:** A large educational effort should be undertaken with consumers, agents and head office personnel concerning the limitations of illustrations for Type B purposes. The sales process should emphasize selling of the product, not the illustration.

- **Standards, Disclosures and Regulations:** The CIA and American Academy of Actuaries (AAA) should consider developing specific standards
on what assumptions should be used in illustrations or on required disclosure of assumptions used. It should be required that unique product features are prominently disclosed as well.

- **Optional Improvements:** Companies could require a consumer signature on illustrations. Historical data could be provided separately from the illustration. Illustrations could be accompanied by graphs or quinquennial summaries to avoid the illusion of precision.

- **Continuing Research:** The proposed alternatives are not a complete solution to the problem of properly explaining a policy to a consumer and allowing an informed choice to be made. Research on methods to achieve this should continue.

### 1. Scope of Research

A life insurance policy illustration is a mathematical calculation of benefits and values over time under specific, simplified, and generally static assumptions. Illustrations have evolved into relatively sophisticated marketing tools. Their popularity and importance have increased not only with easier access to fast, powerful computers, but also as the result of heightened consumer need to understand what is being purchased and how much it will cost.

Consumers and their advisors use illustrations to understand how a policy operates and its expected cost over time. When a consumer is comparing several products, illustrations are often used to determine relative performance or cost. While current practices may have some flaws, illustrations are an important source of information to the consumer.

The Task Force on Life Insurance Sales Illustrations was formed to research life insurance company sales illustration practices from the perspective of the consumer. Much of the motivation for this research was based on the perception that:

- Serious problems exist with respect to the use of life insurance sales illustrations in the U.S. and Canada.
- More than two decades of regulations and required disclosures have not solved the problems; if anything, the situation is getting worse.
- Actuaries are familiar with these problems and should be involved in the solutions. Our goal is to encourage an efficient market by applying principles of actuarial science. These principles include:
  - Appropriate and consistent recognition of the time value of money.
- Use of probability to measure uncertainty or risk.
As part of this research, the Task Force undertook to investigate:
  ● Current illustration practices, including regulatory requirements and the
    flexibility that companies provide agents to customize illustrations in the
    field
  ● Alternatives to current illustration practices
  ● Advantages and disadvantages of current and alternative practices
  ● Appropriate uses for illustrations.
  To support these efforts, the Task Force considered:
  ● How consumers currently use illustrations
  ● How to make illustrations more intelligible to the consumer
  ● The appropriate disclosures to the consumer
  ● How to maintain credibility with the consumer in the illustration process
  ● What data and assumptions should be displayed on the illustration
  ● Illustration practices in other countries
  ● Illustration practices for other financial products.
  While the following items may have an impact on the illustrations delivered to the consumer and merit study, they are beyond the scope of this research paper:
  ● How agents modify illustrations beyond the flexibility provided by the company
  ● The setting of profit standards and pricing assumptions within a company
  ● The appropriateness of policy provisions and their conformance with regulatory or actuarial standards
  ● Variable life insurance.
  Further, we focused primarily on life insurance. Annuities and health insurance were not generally considered. While our comments are specific to sales illustrations, many of them apply equally to in-force illustrations. We did not consider variable product illustrations, except as an example of alternative illustration methodology. While we primarily focused on the situation in the U.S., we believe our research and conclusions are equally appropriate to Canada.
  It may be useful to describe our research activities.
  ● We surveyed 87 life insurance companies regarding their current illustration practices and sought their ideas on positive change. These companies were selected as being major writers of participating insurance policies, universal life and/or innovative life insurance policies in the U.S. and Canada. Their responses are summarized in Appendix I.
LIFE INSURANCE SALES ILLUSTRATIONS

- We compiled a bibliography from actuarial literature, which is shown in Appendix IV.
- We reviewed the work of other organizations and state regulations.
- We talked with actuaries from other countries to gain an understanding of their illustration practices and the associated strengths and weaknesses.
- We talked with our counterparts in other financial services to determine whether their illustration practices were adaptable to life insurance.
- We sought input from our colleagues: actuaries, legal counsel, compliance officers, agents, marketing officers, regulators, and others.

The result of these efforts is this white paper. To those who contributed, we appreciate your input. The development of regulations and standards of practice is beyond the purview of the Society of Actuaries. However, we hope that this paper will provide input, and serve as a catalyst, to the organizations that can effect such changes.

II. REGULATORY REQUIREMENTS FOR LIFE INSURANCE ILLUSTRATIONS

The policy performance and features illustrated to the buyer have been an issue with regulators for at least a century. At the turn of the century, there was concern about the tontine dividends that companies illustrated to their customers. An outgrowth of the Armstrong Commission was the required annual distribution of dividends and the elimination of tontines based on survivorship.

During the 1930s, there was again concern about illustrations because dividend scales were decreasing due to the economic environment. Among the issues discussed were:

- The appropriate number of years for dividend illustrations (20 years was common but thought too long, given the uncertainties of the 1930s)
- Display of year-by-year dividends or 3–5 year totals
- Disclosure to the buyer of the nonguaranteed nature of dividends and the assumptions underlying the current scale.

More recently, there has been concern about the impact of policy illustrations on the industry’s credibility in the context of changes in interest rates, asset quality and policy features. Policies are more flexible and more complex than in the past and place greater emphasis on nonguaranteed values.

The insurance code of each state has certain requirements that apply to illustrations. While these requirements vary by state, the following are generally applicable:
• If dividends are illustrated, the illustration must use the insurer’s current dividend scale.
• If nonguaranteed elements other than dividends are illustrated, the illustration must use the insurer’s current interest rate, mortality charges and expense charges.
• If the policy provides for a separately identified interest credit, the interest rate used in the illustration must be displayed. If the interest rate is linked to an index, the index must be described. Any limitations on the crediting of interest must also be described.
• Any reference to dividends or nonguaranteed elements must include a statement that such elements are not guaranteed.
• Illustrations of nonguaranteed values must display, with equal prominence, the comparable guaranteed values. If nonguaranteed and guaranteed values are shown combined as a single sum, they must also be shown separately in close proximity thereto.
• For policies providing for flexible premiums and/or death benefits, all data shall be displayed assuming the schedule of anticipated premiums and death benefits.
• Interest adjusted cost indexes must be displayed for specified durations. These indexes are the net payment cost index and the net surrender cost index. If the policy is participating, the interest-adjusted equivalent level annual dividend also must be displayed.
• If the guaranteed policy cost factors or the initial policy cost factor assumptions would result in policy values becoming exhausted prior to the policy’s maturity date, such fact shall be disclosed.

Additionally, for U.S. business, Exhibit 8, Question 3 of the Annual Statement requires a company to opine on its ability to support the nonguaranteed elements currently illustrated for new and existing business. This applies only to illustrations authorized by the company. Schedule M requires an attachment that describes the precise methods by which dividends are calculated. In Canada, the valuation actuary must comment on the appropriateness of the dividend scale but not any other nonguaranteed elements.

The purpose of these illustration requirements is to ensure that both the guaranteed and nonguaranteed performance of the policy are disclosed to the buyer. The cost indexes are intended to help the buyer judge the relative value or cost of an insurance policy. However, the Life Insurance Buyer’s Guide points out that cost comparisons should only be made between similar plans of insurance. Further, it states that other information, such as company financial strength and historical performance, will be needed on which to
base the purchase decision. When the cost indexes were originally developed, they were perhaps more useful than they are now. Policies had, at that time, fixed premium patterns with fairly consistent design features and profit margins. This is not the case with most permanent, cash value life insurance being sold today.

Regulations and requirements must change to remain appropriate and effective. Evolving marketplace and economic conditions necessitate periodic updating of regulations, including rescinding requirements that are no longer helpful. The regulations of the early 1980s did not anticipate the product features, payment options and anomalies of the succeeding decade. As examples:

- Illustrations of a vanishing premium for a fixed-premium product depend upon the nonguaranteed policy factors to support premium payments after the vanish year. Should the accompanying guaranteed values be based on the illustrated premium outlay by the buyer or the payment of full premiums in all years?

- Companies are required to illustrate the current dividend scale or the current scale of nonguaranteed factors as appropriate. At a time when interest rates, mortality experience and expenses may not be improving, current scale may provide an overly optimistic projection of future results. Many companies currently provide agents with the flexibility to illustrate performance under alternative dividend scales or scales of non-guaranteed factors. While such sensitivity analysis is not explicitly provided for by most states, we believe it provides valuable information to the buyer.

- There is a great deal of discretion given to companies in the development of current dividends or nonguaranteed factors. There is no regulation, or any required disclosure, of the degree of risk or contingency associated with those nonguarantees.

- When a company increases its current dividend scale to distribute accumulated surplus over a specified period of years, there is no required disclosure of the likelihood of lower dividends at the end of that period.

- There is no regulation or disclosure of policies that are lapse supported, that are not self-supporting or that are based on assumptions that are inconsistent with a company's experience. Each of these items increases the performance risk to the buyer.

- The Internal Revenue Code in the U.S. contains sections which may have an impact on the tax treatment to the buyer or beneficiary of death proceeds, policy surrenders and partial withdrawals of policy values.
Most companies alert the buyer to possible tax implications through some disclosure on the illustration, although such disclosure is not required.

III. CURRENT PRACTICES

A. General

To better understand current illustration practices, we surveyed 87 companies; 56 responded. A sample questionnaire with responses summarized is contained in Appendix 1.

The first section of the survey provided companies with an opportunity to present their perspective on life insurance sales illustration practices. Over 95 percent of the companies responding to our survey perceive a problem with current industry sales illustration practices in terms of successfully communicating with the potential buyer in a good-faith manner. Of these, 65 percent thought that the problem was serious but could be fixed.

Based on the comments from respondents, the perceived problems are:

- The typical consumer does not understand which values in 50-year projections are guaranteed.
- The consumer cannot determine if the underlying assumptions are realistic.
- The consumer cannot evaluate the relative conservatism of the nonguaranteed policy values illustrated by different companies.
- Footnotes and other narrative disclose assumptions and other important facts, but they are often not carefully reviewed by the consumer.
- Providing agents with the ability to run their own illustrations limits the control companies have over what the consumer is shown.
- Companies have too much discretion in illustrating nonguaranteed elements.

Some companies provide the agent with tools to customize illustrations to particular client needs, or agents can buy or develop these tools on their own. The tools that companies provide allow flexibility with respect to column selection and formats, variations on nonguaranteed elements, and different premium patterns. Many companies that allow this flexibility require that the client also be given a ledger illustration in an approved format.

Companies are generally opposed, or neutral, to such complete flexibility. Respondents are concerned about outside programming that alters policy values or eliminates required columns or footnotes. There is also concern as to whether the consumer receives the complete illustration package, including the pages of caveats and footnotes.
While information regarding company size and financial strength is important to the consumer, most companies do not provide this as part of the illustration.

Respondents believe that the best features of their illustrations are flexibility, completeness and conservatism. Completeness includes disclosure of the contract’s operation and the tax consequences to the buyer. Basing non-guaranteed elements on current experience and lack of “gimmicks” were cited by several companies as examples of the conservatism built into their illustrations.

Respondents offered a number of suggestions regarding how illustrations could be improved to the benefit of the consumer.

- Simplify illustrations; there are too many numbers and too much “legalese.”
- Educate the consumer that an illustration demonstrates the operation of a contract under only one scenario and that there is a range of possible outcomes as to nonguaranteed benefit levels.
- Establish standards for illustration practices; in particular, provide more specificity in the definition of current experience and require disclosure of assumptions.
- Require that scenario testing with defined assumptions be part of the illustration package.

B. Dividend-Paying Policies

Of the 56 companies responding to the Task Force survey, 35 write participating policies.

When asked the question, “Which, if any, of the following dividend factors as illustrated anticipate a change from current experience, either by projecting trends or on some other basis? . . . Mortality, Interest, Expense,” one company indicated that it used mortality projections in its current illustrations. Three companies responded positively regarding interest and two reported anticipated changes in expense.

The comments accompanying this question indicate that only one company is anticipating lower expenses in its illustrations. One company occasionally anticipates higher expenses in its illustrations. At least two of the three companies projecting interest rates are companies that only allow agents to select a lower-than-current rate for illustration purposes. The company using mortality projections is assuming improved mortality in the future.

To the question, “Are such changes disclosed to the consumer?” three of these companies answered affirmatively.
Seventeen companies, or almost half of the 35 responding, answered yes to the question, “Do your agents have the flexibility to run illustrations at dividend interest rates or mortality rates higher or lower than the current scale?” All 17 companies indicated that they allow fluctuations in the dividend interest rate only. Fourteen of the companies stated that they only allow dividend interest rates to be illustrated that are lower than the current scale. Only two companies allow either higher or lower interest rates to be illustrated. Eight companies cap the maximum variance from current scale at 2 percent. Two of the companies allow the variance to be as much as 3 percent. One company allows agents to choose the average interest rate from the past 8, 12, 20, or 40 quarters.

Ten of the 35 responding companies answered “yes” to the question “Has your company received an increasing number of policyowner complaints about dividends paid versus dividends illustrated?” Eight companies indicated that the largest number of complaints concerned the vanishing point of premiums. Typical comments included:

“Most misunderstandings relate to vanishing premium illustrations and dividend scale changes. Policyholders mistake a vanishing-premium illustration for a promise of a paid-up policy.”

“Policyowner complaints have increased as dividend scales have decreased. [Policyowners] do not always comprehend the nonguaranteed nature of dividends.”

The Task Force also asked three state insurance departments whether or not they had observed an increase in complaints regarding dividend illustrations. Two (New York and Wisconsin) indicated that very few of the complaints they received were related to life insurance and, further, that they did not keep records in sufficient detail to respond to our questions. However, both expressed great interest in our research and voiced the concern that complaints may become more significant in the future. The third (California) noted that, based on a random sample of recent complaints, illustration complaints arose from decreasing dividend scales which affected total policy values and the vanishing point.

In addition to asking companies to fill in the questionnaire concerning their current practices, the Task Force also asked them to send samples of policy illustrations currently being used. Exhibits A–H are examples, as described below. All exhibits are in Appendix 11.
LIFE INSURANCE SALES ILLUSTRATIONS

Exhibit A

Exhibit A is an example of a traditional illustration for a participating whole life policy. It shows dividends, paid-up additions, guaranteed and total cash values and death benefits, increase in total cash value and guaranteed paid-up insurance for each policy year from the date of issue until age 100. It also includes the interest-adjusted surrender and payment cost indexes for 10 and 20 years.

Although the sheer volume of numbers may be overwhelming, the footnotes are kept to a bare minimum. They simply mention that the first dividend is contingent upon the payment of the second-year’s premium, that dividends are affected by policy loans, that dividend figures are based on the current scale assuming no loans, and that dividends are not guaranteed.

Exhibit B

The illustration shown in Exhibit B builds on the traditional model but gives the prospective buyer fewer numbers and a great deal more text material. The first page is a summary of the numerical results at the end of 20 years and at attained age 65. This is followed by two pages of numbers showing year-by-year values from the year of issue to attained age 98. Footnotes are again kept to a minimum, but a statement at the bottom of page 3 warns that two other forms must be enclosed with the illustration. These forms add two more pages of explanatory material.

One form is a listing of all the optional benefits that are available with the policy. The second form contains the dividend caveat, an explanation of illustrative life income figures, a brief explanation of term plans, and some information about the policy loan provision and interest-adjusted indexes.

Exhibit C

Exhibit C is another fairly traditional illustration, but it is included here because of its unusually forthright dividend caveat. Page 1 is a complete illustration showing 20 years of values plus values at attained ages 65 and 75. It has a very brief dividend caveat but refers the prospect to an attached page of footnotes.

Page 2 gives the year-by-year values through age 95. Page 3 is the footnote page. The first footnote assures the client that the policy is not a modified endowment contract. The second footnote pertains to dividends. It first gives the usual statement that dividends are based on the current scale and are not guaranteed. However, it then goes on to say, “Due to new federal taxes and
economic conditions including declining interest rates, dividends based on the 1992 dividend schedule are expected to be lower than those shown in the illustration.” Among all the illustrations submitted to the Task Force, this one surely deserves an award for its candor! Several more footnotes follow, including a statement that the illustration does not recognize the time value of money and should not be used to compare policy costs.

Finally, the bottom of page 3 shows the interest-adjusted surrender cost and net payment cost index numbers, and gives an explanation of them.

Exhibits D and E

Exhibits D and E show how two different companies handle illustrating dividend interest rates which differ from the current scale. The illustration in Exhibit D simply takes the standard illustration format and runs it at an alternate dividend interest rate. The actual rate used and the fact that it is less than the current rate are disclosed at the very top of the illustration on each page.

The illustration in Exhibit E compares the results of the current dividend scale and an alternative dividend scale in the same illustration. The first page shows values for the first 20 policy years and at attained ages 65 and 70. Page 2 is an illustration based on the alternative dividend scale showing a vanishing-premium scenario. This page also includes a comparative rate of return. Page 3 gives some summary figures at the end of 20 years and shows the interest-adjusted costs and payments.

The fourth page of the illustration contains several footnotes, including a statement about the hypothetical dividend interest rates and an explanation of the comparative rate of return. At the bottom of the page are listed the actual hypothetical interest rates used in the illustration.

Exhibit F

Since several companies indicated that vanishing-premium illustrations were their largest source of policyowner complaints, it was natural that many of these illustrations were sent in as samples. It is obvious that some companies are trying hard to find ways to educate policyowners to the fact that the vanish point depends on the dividends that will be paid in the future.

The illustration in Exhibit F is a case in point. It illustrates policy values on a vanishing-premium basis but places a full-pay illustration right alongside the vanishing-premium illustration for comparison purposes. The footnotes state that “the term ‘vanish’ does not mean that the premiums are no
LIFE INSURANCE SALES ILLUSTRATIONS

longer due, but that the cash premium due reflects the payments of future gross annual premiums through the use of current dividends. If future dividends are reduced from the current, results of the vanish may differ from that illustrated. Additional premium payments may be required if the current scale of dividends is reduced."

Exhibit G

The illustration in Exhibit G is another example of an attempt at complete disclosure. The first page, labeled 1 of 4, shows the vanishing premiums, together with the paid-up additions that need to be surrendered in years 12 through 15. Page 2 shows a guaranteed ledger assuming all premiums paid. Pages 3 and 4 contain explanations, including an explanation of vanishing premiums and a suggestion that an alternate proposal be requested on a lower dividend interest rate. Finally, the policyowner and agent must sign a statement to the effect that they have received and reviewed all four pages of the proposal, including the footnotes.

Exhibit H

Exhibit H represents an innovative approach to showing a vanishing premium plan on both the current scale and 1 percent less than current scale, all on the same page. From the wording in the first footnote, we can see that it is designed to be shown along with a full-pay ledger and is to be accompanied by an explanation of the vanishing premium concept.

C. Universal Life

From the beginning, a necessity for successful marketing of universal life has been the ability of the seller to illustrate the performance of a policy tailored (within policy limits) to the needs and resources of the prospective purchaser. The agent and prospect have the ability to choose almost any pattern of benefits and premiums. No longer is the sale limited to one of several fixed plans of insurance from a ratebook. Each one is different.

Any system of policy illustrations will have some limitations on this flexibility. For instance, few can illustrate off-anniversary changes. Besides such practical constraints and the policy’s inherent restrictions, how should the illustrations be limited? What interest rates can be shown? What cost of insurance rates can be used?

Most observers would agree on the appropriateness of current rates of interest and cost of insurance deductions along with guaranteed rates. But
what about other than current rates of interest and cost of insurance, such as lower or higher interest rates? Should the buyer be able to factor in his or her own conservatism, or optimism, about future economic conditions?
