In our survey of insurance company practices in this area, 49 of 56 responding companies reported that they allow the agent or consumer to vary interest rates. Four of these allow higher interest rates than the current scale, usually with a footnote disclosing this fact. Others show both the current rate and another lower rate chosen by the agent. Most of the companies allowing cost-of-insurance variations reported offering a choice of only current or guaranteed deductions.

Since any life insurance policy is a long-term contract, its performance depends more on what happens in the future than on current credits and deductions. Some companies will pay more interest than others. Some companies will charge lower cost-of-insurance rates or loads than others. How can these differences be discerned and/or illustrated at the time of sale? The premiums on this policy have not been invested yet. There is no experience on the mortality and persistency of this year’s sales yet. How can the company show that it is different, and how can a consumer judge differences?

From an actuarial point of view, there is guidance. In the U.S., Actuarial Standards of Practice No. 1, “The Redetermination (or Determination) of Non-Guaranteed Charges and/or Benefits for Life Insurance and Annuity Contracts” (ASOP 1), sets a standard of using anticipated experience factors, that is, “those elements in the redetermination (or determination) of non-guaranteed charges and benefits that reflect expected future experience.” ASOP 1 states that “anticipated, or projected, experience of a factor class means experience expected in the future as determined by the actuary through the application of sound professional judgement.” It should be based on recent experience and expected trends, where applicable. ASOP 1 also explicitly recognizes that current company experience may be of limited value in projecting future experience.

ASOP 1 thus allows a company to use its best judgment in estimating its future experience factors to use in setting parameters for determining illustrative policy values.

Of the 56 responses to the survey, five use mortality assumptions which differ from current experience, eight use different interest rates, and two use different expenses. Since policy illustrations may go for as long as 100 years, and the oldest universal life policy is only 12 years old, some projections of future experience from current are obviously necessary.
LIFE INSURANCE SALES ILLUSTRATIONS

The question remains: To what degree will the illustrated differences in policies actually occur? Currently, there are no recognized yardsticks for the consumer to use. At best, a comparison of credited interest rates with bond yields, and a comparison of actual to illustrated cost-of-insurance rates, may show how the company's customers have fared in the past.

Separate from the questions of the ultimate realization of illustrated interest and cost-of-insurance factors is that of "persistency bonuses." For this purpose, a persistency bonus is a retrospective or prospective credit structure which provides enhanced values to a long-term policyowner compared to a short-term one. If guaranteed, persistency bonuses are limited in most states by the workings of the smoothness test in the Standard Nonforfeiture Law. Simply put, this test requires that policy values grade smoothly within each successive five-year period, so that large, one-time bonuses are not allowed. Most states do not restrict the crediting of properly disclosed nonguaranteed bonuses.

Ten of the 56 survey respondents reported bonuses. The existence of a bonus in the illustrated values is disclosed in footnotes by these companies, along with disclosure of its nonguaranteed nature, if appropriate.

We are aware of at least one company which displays the current cash surrender values in a footnote; only the accumulation values are shown in the body of the illustration.

Companies responding to the survey also provided us with sample illustrations for universal life and interest-sensitive whole life products. The representative illustrations that we selected dealt with policy features that are unique to these products. These are shown in Exhibits I-M.

Exhibits I-M

Exhibit I is an illustration showing values on three different bases: current, illustrative and guaranteed. The interest rates associated with each set of values are clearly displayed on the first page. A footnote at the bottom of the page indicates that the policy has a prospective interest rate bonus that is applicable after 20 years. We assume that it is not guaranteed since it is included for only the current values.

For each rate basis, account value, cash value and death benefit are shown. Footnotes describe the assumptions for each rate basis. Cost indexes are shown for all three bases.

A footnote indicates that the policy terminates in year 31 based on guaranteed values. This is a year not displayed on the illustration.
Disclosure of persistency bonuses is a key feature in these illustrations. Exhibit J is an example of a guaranteed bonus. Values are shown on three bases, with both the implicit and nominal interest rates displayed. Pages 4 and 5 describe the assumptions underlying each set of values, as well as the impact of the persistency bonus at each bonus point.

Exhibit K contains several variations. The assumptions, including those for mortality and expense, for both guaranteed and current values are part of the column caption. There is a footnote on page 3 alerting the consumer to a number of tax issues and citing the need for professional advice. Page 4 describes certain product features, including a prospective persistency bonus. The comments on the persistency bonus do not mention whether it is guaranteed.

Exhibit L is included for its use of graphics. Displaying key values graphically is certainly easier for the typical consumer to grasp than seven columns of numbers. The graphic display is based on projected values.

Exhibit M is an example of a product with an accelerated death benefit, or living benefit. The cover page describes how the living benefit works. There is no reference to the tax treatment of the living benefit although the tax treatment of death proceeds is mentioned. This is followed by one illustration page of values and two pages of explanatory notes.

This policy has two types of bonuses: interest and mortality. The consumer is referred to the policy for a complete description of factors affecting the mortality bonus.

D. Term and Term Look-Alikes

Approximately three-fourths of the companies responding to our survey sell these types of products. None of the responses to our survey questions pointed to any potentially abusive or questionable illustration practices on these kinds of products, nor did contact with state regulators turn up any. We were particularly interested in whether the conversion privilege (or lack thereof) was being adequately explained, and it appears that it is.

However, a couple of problems have been observed. One is that a company will display a cost comparison of its term plan with another company's permanent plan strictly on the basis of premium. Clearly, this is inappropriate. Another problem is that illustrations of indeterminate-premium term plans do not always display the corresponding guaranteed premiums. When the term plan includes a deposit fund, guaranteed values are not always displayed.
LIFE INSURANCE SALES ILLUSTRATIONS

Companies provided us with several representative illustrations, which are contained in Exhibits N and O.

*Exhibits N and O*

These are two basic term illustrations, displaying current and guaranteed premiums. Exhibit N shows the death benefit, current premium, accumulated premium, and maximum premium for an indeterminate yearly renewable term plan. Interest-adjusted cost indexes are displayed. The only footnote references the nonguaranteed nature of current premiums.

Exhibit O is an illustration of a 10-year re-entry term product. Current premiums are displayed for the second 10-year period, both with and without re-entry. A footnote discloses that re-entry is subject to evidence of insurability.

*E. Second-To-Die Policies*

Of the 56 responding companies, 39 indicated that they sell a second-to-die product. Only six of the 39 companies offer a product that provides for a cash value increase at the first death. Of those six, only one company answered “yes” to the question, “Are the values shown on your illustration always based on the assumption that both lives remain alive?” Three companies mentioned that agents could choose the year of death for the first death for illustration purposes.

To the question, “Does the illustration contain an explicit statement that there is no death benefit payable on the first death?”, 12 companies answered yes.

Exhibits P and Q are examples of illustrations of second-to-die policies.

*Exhibits P and Q*

Exhibit P is a survivor life ledger showing a traditional policy with dividends used to purchase paid-up additions. The final footnote makes it clear that no death benefit is paid until the second death. Although a term rider is mentioned in the footnote, it does not seem to be included in the illustration. Also, without further analysis, it is not readily apparent whether or not this policy provides a cash value increase on the first death.

Exhibit Q offers perhaps the ultimate in full disclosure. The first illustration, consisting of six pages, shows a 10-year vanishing premium and both insureds alive. Note that the policy is a combination of permanent whole life and term insurance.
Pages 4 through 6 show results on an alternative dividend scale, but do not include the vanishing-premium concept. Following this six-page illustration is a three-page illustration which assumes that the male insured dies at age 64. All premiums are assumed to be paid. This is followed by another three-page illustration assuming both insureds are alive and also assuming an alternative dividend scale. Then there is another three-page illustration that assumes the male dies at age 64 and that premiums vanish in the eleventh year.

Presumably, in addition to all these alternatives, one could request still more illustrations on different alternative dividend interest rates and different years of death for the first death.

F. Two-Tier Products

A two-tier product is one that has different cash surrender and annuitization values. Typically, the annuity value cannot be commuted and surrendered; it is available only as an income stream. Only five of the 56 companies answering our survey sell two-tier products. Most of these five companies feel that their illustrations clearly indicate that the policyholder who surrenders will receive less than the amount that would be applied toward annuitization at the same point in time. In some cases this is emphasized with additional statements on the illustration.

Another area of concern is whether the annuity income figures shown on the illustration are calculated only using current annuitization rates, or on both current and guaranteed annuitization-rate bases. Again, most but not all companies are showing the results on both bases.

A nonstandard illustration practice we encountered on two-tier products was that of a company whose illustration included a footnote naming its reinsurer—a large, well-known company—and stating that the reinsurer approved of the product.

G. Special Issues for Corporate Buyers

Corporate buyers of insurance are concerned about the accounting and tax impact of the purchase, as well as the product’s operation. Illustrations may be for individual insureds, but it is quite common for the corporation to be given illustrations that include all insureds, either on an actual or modeled basis.

Illustrations typically show all cash flows: premiums, use of dividends or other nonguaranteed elements, policy loans or withdrawals, benefits paid to
employees, annual expected death proceeds paid to the corporation, and the tax impact. The cash flows and asset (cash value) development are summarized to reflect the impact on the corporation’s balance sheet and the profit and loss statement. The illustration might also demonstrate the development of the benefit liability and its impact on the company’s accounting statements.

There are two common ways of reflecting the impact of deaths in the illustration. One is to assume that each insured dies at a specified age, such as 75 or 80. The other method is to adjust for mortality based on an appropriate table; this is known as fractional mortality or partial mortality. Based on discussions with several companies, there is concern that corporate buyers do not appreciate that the timing of the death proceeds is not guaranteed.

Traditional interest-adjusted cost indexes may be shown, but buyers focus on performance measures such as Internal Rate of Return and Net Present Value of Gain. Net present value of gain is usually calculated at the corporation’s after-tax cost of capital. These measures are usually calculated on a basis consistent with the expected death proceeds.

Guaranteed values are not usually displayed prominently next to current values although companies may require an accompanying ledger illustration. There are some group experience-rated contracts used in this market that do not have guaranteed maximum mortality charges and therefore do not have guaranteed values.

As with individual illustrations, illustrations for the corporate buyer are subject to company discretion as to the timing of certain events.

Illustrated funding patterns are more aggressive or flexible in this market than for individual purchases. The most aggressive is a 7-pay contract with premiums paid by policy loan in policy years 1–3 and by the surrender of nonguaranteed values in policy years 4–7, with the only illustrated outlay from the corporation being the payment of policy loan interest. This gives the perception that insurance can be purchased without real premium outlay by the buyer.

Because the products and the benefit plans being funded are very complex, companies attempt to disclose pertinent tax issues such as the impact of TAMRA, TEFRA, etc. Many include footnotes stating that buyers should seek their own tax counsel and not rely on the illustration for any tax advice.

H. Current Practices—Other

Other noteworthy illustration practices that we found included the following: (a) a Product Features Page which gives the answers item by item to
the questions posed in the CLU Professional Practices guidelines; (b) a full page dedicated to the 7-pay test, including the company’s interpretation of some of the aspects of TAMRA; (c) a place for the client to sign the illustration signifying that he or she has read and understands all the disclaimers; and (d) page numbering schemes that inhibit removal of footnote pages (for example, “Page 1 of 5”). We also found: (a) unclear column headings, for example, lack of clarity as to whether benefits and values shown reflect valuation for loan, and (b) vanishing-premium illustrations in which the guaranteed figures shown alongside the current figures assume premiums paid all the way to maturity.

Survey and preliminary report respondents also expressed the following concerns:

- Whether products that are a blend of whole life and term insurance are in some cases being improperly portrayed as simply “whole life”
- The impropriety of Company X printing comparisons of its nonguaranteed values to Company Y’s guaranteed values
- The appropriateness of calculating net outlay as the premium less the dividend payable at the end of the same policy year, that is, not recognizing the time value of money during the year.

IV. USES OF LIFE POLICY ILLUSTRATIONS

An extensive body of literature already exists on this subject. However, most previous work deals with symptoms, rather than with underlying causes. For example, many articles decry aggressive assumptions, unrealistic nonguaranteed elements, lapse-supported pricing, and question the integrity of some illustrations. However, there is very little written about what caused the symptoms.

One way to get at root causes is to examine appropriate and inappropriate uses of illustrations. If an illustration is used for addressing questions it inherently cannot answer, problems will occur, even if the illustration is built with integrity.

The primary users of life insurance illustrations are:

- Consumers
- Life Insurance Agents/Brokers
- Companies (actuarial and marketing departments)
- Outside Advisers/Third-Party Analysts.

Each of these may have multiple needs which they hope to satisfy with an illustration. In general, these needs are of two primary types:
LIFE INSURANCE SALES ILLUSTRATIONS

Type A usage tries to:
- Demonstrate how policy values change over time under specified premium payment and experience (for example, interest rate) scenarios.
- Demonstrate how a particular financial design or concept works, such as deferred compensation or vanishing premium.

Type A usage helps the consumer understand what is being purchased. It focuses on a single contract and its contractual features and mechanisms. It shows how a particular contract responds to illustrative conditions. Multiple illustrations of a single contract demonstrate how contractual values change in response to variations in assumptions.

Type B usage tries to:
- Project likely or best estimate future performance.
- Evaluate comparative cost or performance of several policies.

Type B usage helps the consumer understand which policy is the best buy. It evaluates comparative cost or performance among competing alternatives. It also focuses on projecting most likely estimates of cost.

Type B questions are of great interest to all user groups. Therefore, an objective, credible, inexpensive and quantitative means of answering these questions is highly desirable. Illustrations are quantitative and relatively inexpensive. But are they objective and credible? What can actuaries say about the ability of illustrations to accommodate Type A and B usage?

Illustrations appear well suited for Type A questions. In particular, multiple illustrations run under different premium patterns and interest rates are very helpful in explaining contractual mechanisms.

Type B usage is a different story. Today’s life insurance and annuity products are complex financial instruments, whose ultimate future cost and performance depend on macroeconomic and demographic factors, individual company performance and individual consumer behavior. Type B questions necessarily involve many factors, including:
- Evaluation of the likelihood of future economic events
- Measurement of company-specific performance risks
- Measurement of product-specific performance risks
- The individual consumer’s likely response to various future events.

For today’s individual life insurance products, reliable answers to Type B questions are not possible using illustrations. The footnotes, caveats and disclosures on a typical illustration are already overwhelming for most consumers. Yet this information adds little value in terms of developing a reliable estimate of future performance.
It can be seen that Type B usage is inappropriate unless the illustrations include a measure of relative risk. For example, if one illustration shows 15 percent lower premiums but has 60 percent greater risk of not achieving projected values, then lack of risk disclosure renders the comparison meaningless. Since relative risk cannot be calculated, Type B questions assume similar degrees of relative risk. Regulations try to assure “consistency” between illustrations as a way to keep relative risk equal. However, since there are really no practical means of assuring similar relative risks, Type B usage for illustrations is fundamentally inappropriate.

The incentives associated with Type B questions are considerable. However, an objective actuarial evaluation must conclude that typical life insurance products are too complex and the number of unknowable events is too great to allow for simple answers to questions of this type. Even when developed appropriately and with integrity, illustrations are structurally incapable of handling Type B questions. Illustrations, by their nature, cannot answer these questions. Problems arise because of the illusion that they can.

Many people believe that although illustrations aren’t perfect, they are the best available indicator of future performance. They may believe, for example, that all illustrations are somewhat optimistic, but then conclude, “Even if they’re all high by 15 percent, I’ll still do better with the one which shows the highest values on these illustrations.” Actuaries should oppose this myth.

V. OTHER ILLUSTRATION PRACTICES

It is easy to forget that sales illustrations in the U.S. and Canada have a unique history. Life insurance products sold in other countries, and other financial products sold in North America, do not share the same illustration practices. A review of these practices is helpful before evaluating alternatives for our system.

A. Other Countries

A quick survey of illustration practices in other countries reveals the importance of a historical and cultural context. In countries where insurance products are standardized by law, there is little controversy with respect to illustrations. This is the case for much of the Far East and Europe. Where product standardization is the rule, there is little product competition as we know it, and illustrations are naturally limited to noncontroversial Type A usage.
LIFE INSURANCE SALES ILLUSTRATIONS

The United Kingdom and Australia have relatively competitive life insurance markets, with many similarities to the North American market. As in our market, ledger illustrations have been employed for Type B comparative cost and performance evaluation. Not surprisingly, these countries have also encountered problems with sales illustrations.

Japan

Currently, sales illustrations in Japan are based on the "current" dividend scale. There is increasing concern that this practice may cause the consumer to believe that the current scale will remain unchanged in future years. Consequently, procedures will be revised to show the effect of a 0.1 percent decrease in the dividend interest rate. Disclosures will emphasize the variable nature of dividends and the fact that the illustration is based on current scale. In addition, special maturity dividends will be identified and shown separately from regular dividends.

U.K.

Sales illustrations are heavily regulated in the U.K. Regulations were influenced by a number of perceived abuses which developed during the 1980s. Currently, illustrations are constrained in at least three major ways:

(a) Upper-level performance constraint (maximum interest rate)

(b) Risk disclosure, by means of two alternative scenarios at significantly different interest rate levels. The regulators believe that two scenarios are better than either one or three at conveying the basic uncertainty of the investment performance assumption. Low and high investment rates are specified, and only change occasionally, based on underlying inflation expectations. There is a deliberate emphasis against specifying a "best estimate" rate.

(c) Standardized expense and mortality assumptions. All companies are required to use the same nonguaranteed expense and mortality assumptions. These are set by regulation based on current industry averages. While conceding that actual expense and mortality differences could influence the choice of a life carrier, the regulators felt that they should not be reflected in projections. This emphasizes their strong belief that illustrations have a limited scope, and should not be used for comparative performance measurement.
**Australia**

In early 1991, the Insurance and Superannuation Commission Circular #291 promulgated completely new guidelines for benefit illustrations in Australia. This was the first major change since 1985 and followed growing concerns about overly optimistic assumptions and a lack of consistency in the approach to long-term benefit projections.

The circular takes note of the situation in the U.K., where illustrations have been “ruthlessly standardized” and “serve only to create a generalized impression of the order of magnitude of benefits.”

Under the Australian approach, companies have some latitude, through their Appointed Actuary, to reflect individual circumstances in their projections. There is a clear threat that this remaining privilege will disappear if these new guidelines do not work.

Australian companies are required to ensure that agents, brokers or other intermediaries representing them do not alter their benefit projections in any way.

Principal provisions of the Australian regulations are:

- A specified maximum assumption basis, with lower rates permitted if appropriate.
- Specific standards of practice to follow for all promotional material, aimed at avoiding ambiguity or false impressions.
- Two illustrations are normally required. The higher rate cannot be greater than \((CB + 3) \times (1 - t)\) where \(CB\) = the 3-year average 10-year Treasury bond yield, and \(t\) is the maximum tax rate on the type of business in question. The lower rate is no more than 80 percent of the higher rate. If only one illustration is shown, it must be at the lower rate. If more than two rates are illustrated, the third and subsequent cannot exceed the higher rate.
- Projections are required to include an illustration of the effects of inflation, for the term of the projection, with an inflation rate of 60 percent of \(CB\).

In summary, regulation of illustrations in both the U.K. and Australia has been structured to emphasize their suitability for Type A usage only. To enforce this, illustrations are highly standardized and provide little or no opportunity for comparative performance or cost evaluation.

**B. Other Financial Products**

A review of other financial products’ illustration practices provides interesting comparisons to life insurance.
LIFE INSURANCE SALES ILLUSTRATIONS

The securities industry has many complex financial products. The risk and uncertainty of future performance in these products are so well accepted by the public, however, that it is difficult to imagine Type B usage in ledger illustrations. For example, try to imagine a stockbroker advising a consumer on whether to buy IBM or AT&T stock, using a 30-year projection of last quarter’s dividend and change in stock price!

For most securities, the consumer must use something other than illustrations to make judgments about performance. The prospectus is the primary document for this purpose. It is both highly structured and complex. It is difficult, if not impossible, for a consumer to have a quick, easy-to-understand, numerical basis for doing comparative performance evaluation for mutual funds or securities.

The *NASD Manual on Investment Company Securities* gives detailed guidance on what must be done if comparison of investment products or services is to be done.* The essence of this guidance is that comparisons should not be performed unless all factors which could possibly be considered relevant are disclosed.

**Mutual funds** may be illustrated on a “hypothetical” basis, with full disclosure of all expense charges and a statement that the illustration is based on past performance and is not indicative of future performance. The relative simplicity of a mutual fund product structure makes it feasible to use illustrations for this purpose. There are no “nonguaranteed elements” or “participating” expenses and mortality charges to muddy the waters. The prospectuses for both mutual funds and variable annuities include fee table examples, so that buyers can compare expense levels among different products.

**Variable life insurance** illustrations are regulated by the SEC and the NASD. Investment returns must be specified as gross yields. At least one investment return assumption must be 0 percent, and no return can be higher than 12 percent. All expense charges and loads must be shown explicitly in the prospectus. It is easier to attempt Type B comparisons on variable life, particularly since one of the most important factors, investment return, is assumed constant between products. In a more fundamental sense, however, Type B analysis of variable life illustrations may have limited value, since differences in expenses and cost of insurance could be overwhelmed by differences in investment performance. Some observers see a trend toward more nonguaranteed bonuses and charges in variable life products. If this is

---

true, it may be progressively more difficult to use sales illustrations to answer Type B questions for variable life insurance, as is true today for nonvariable products.

In general, a review of relevant practices for other countries and other financial products reveals an understanding that illustrations should not be used for comparative performance measurement. This is particularly true for the more complex products containing nonguaranteed performance elements.

VI. ALTERNATIVES TO CURRENT PRACTICES

Our Task Force presented 23 alternatives to current illustration practices in our preliminary report. During the exposure period, we received a number of comments on these alternatives, and suggestions of other alternatives that we might consider.

We categorized the alternatives that were identified during our research as follows:

- Reduce or limit numbers
- More stringent requirements for nonguaranteed elements
- Product or market specific issues
- Consistency of illustrations
- Strategic/educational efforts.

Our Task Force was charged with researching illustration practices from the perspective of the consumer. Therefore, we evaluated alternatives on these criteria:

- Will it improve the consumer’s understanding of the life insurance policy being considered?
- Will it improve the consumer’s understanding of life insurance generally?

A. Reduce or Limit Numbers

The road to full disclosure has some pitfalls. In showing as many numbers on illustrations as most companies already do, a couple of phenomena occur. First, consumers who are simply not numbers-oriented, and there are many such people, may tune out or be misled; they may be more interested in a careful verbal explanation of the basic concepts. On the other hand, there are consumers who will fixate on the numbers, particularly the current account value column on a typical universal life illustration or the total value column on a dividend-paying whole life illustration, which marches mesmerizingly toward a 6- or 7-figure number. Compounding this problem is the fact that the prevailing practice is to show these account values to the
nearest dollar, which, perhaps unwittingly, ascribes a level of credibility to the numbers that is quite inappropriate, especially for durations in the murky future beyond the 10th or 20th year. These account values are purely illustrative figures that, at best, are based on convenient, reasonable working assumptions as to what future mortality charges and interest rates might be like. Small differences between the assumptions and actual experience will compound to a very large “error” before very many years go by. In short, our Task Force sees a need for the industry to take some definitive steps away from selling our packaging (the illustration) and toward selling products, by reducing the focus on raw numbers.

There are several possible remedies to this general problem:

1. If possible, supplement numeric information with a presentation in graph form. Technical advances now make this feasible in many instances. This approach addresses the need to emphasize concepts more and numbers less, and the problem of “extra” significant digits in the account values disappears. Safeguards against the misleading scaling of graphs may be needed, however. Graphics, if done well, can be an excellent tool for conveying information to the average person. One reason often cited for the tremendous success of the newspaper USA Today is its very popular and informative graphs.

CONCLUSION: We would encourage actuaries to work with their colleagues in systems and sales/marketing to find new and more customer-friendly ways to present illustration information in graphic form.

2. Limit illustrations of current values to 20 years and every fifth duration thereafter. This, we think, would help to make it clear that we have a sketchier picture of the distant future than of the near future. Also, it reduces the degree to which the client is overwhelmed by numbers and leaves more room on the page for useful narrative. It is important that values be shown to maturity or lapse so that the consumer is aware of any changes in benefits over time. However, if there is a change in premium or if a policy provision first manifests itself after the twentieth year, the illustration should display all durations.

CONCLUSION: Companies should consider adopting this convention on a voluntary basis.

3. Show current values to the nearest $10 per thousand of initial face amount. This rule could apply at all durations, or perhaps just after the fifth or tenth year.

CONCLUSION: Companies should consider adopting this convention on a voluntary basis.
B. More Stringent Requirements on Nonguaranteed Elements

The Task Force identified five alternatives that deal with nonguaranteed elements.

1. More Complete Definition of “Current Experience” or “Current Dividend Scale”

At present, confusion exists as to what is meant by current experience or current dividend scale. For example, a current-dividend-scale illustration may assume mortality improvements built into it, but those improvements are not reflected in the dividends of older duration in-force policies. Is the illustration really based on the company’s “current scale”? Some may define current-scale illustrations much more stringently as only those on a dividend scale having the same experience factors as are currently being paid to in-force policyholders.

In 1978 a paper appeared in the Transactions of the Society of Actuaries (Volume XXX, pp. 447–475) entitled “Choice of Basis for Dividend Illustrations” by Russell R. Jensen. In it Jensen states,

“The simplest definition of current experience would be in terms of those factors of mortality, interest, and expense used in determining dividends currently payable (current allocation). Yet at times this type of definition may not be valid or applicable. There may be no such factors that are appropriate for the illustration of dividends because anticipated mortality, lapses, or expenses of the new business are clearly different from those now experienced on any block of business in force. Or, a company may use different investment yield rates for different eras of business, and there may be a question as to the rate to be applied to current issues.”

A company entering a new market will not have any past experience to illustrate. A new product may require a different investment pattern from anything the company currently has. These and other situations would mean that showing current experience can be more misleading than using currently anticipated experience.

CONCLUSION: We believe that further study and research into this issue would be worthwhile. Therefore, we encourage the AAA and the CIA to:

- Review existing regulations requiring the use of current experience or current dividend scales in life insurance sales illustrations;
- Suggest revisions to those regulations which would clarify the meaning of “current,” and
LIFE INSURANCE SALES ILLUSTRATIONS

• Recommend modifications to the regulations which would allow the use of both current experience and deviations from current experience, but, if the latter, only with appropriate and mandated disclosure of the assumptions used.

2. Standards of Practice for “Illustration Actuary”

As part of his response to our survey of current illustration practices, Armand de Palo suggested that the time has come to consider the concept of an “Illustration Actuary.” This individual would be responsible for informing senior management whenever illustrations with unrealistic assumptions are being used. This might be considered as part of the enhanced standards for nonguaranteed elements.

CONCLUSION: We are not ready to endorse this concept at this time, but we agree that it is an idea worth pursuing. Therefore, we encourage the AAA and the CIA to study this concept further.

3. Furnish Historical Data

This alternative would require agents to furnish clients with dividend histories, and dividend history comparisons with other companies, in addition to current illustrations. These would show clients how the company performed over the last 20 years, information similar to that supplied to buyers of mutual funds.

The argument is often made that dividend histories are not subject to manipulation and, therefore, are a more reliable gauge of a company’s performance than are current illustrations. Certainly for those companies included in Best’s annual 20-year history study, the information is readily available, including rankings and comparisons with other companies.

Companies have reasons for arguing that historical comparisons are not pertinent. Today’s products are much different from products issued 20 years ago. For example, 20-year histories of universal life policies are not yet available. A company may argue that it has changed its approach to underwriting, its investment philosophy or its expense controls. Also, the formation of new companies, mergers and acquisitions pose practical problems for presenting 20-year histories.

One danger in using histories is that often the historical results are compared with the illustration provided at the time of issue. Over the past 20 years, of course, actual results have been much better than the illustrated results of 20 years ago. This could give both buyers and agents the false impression that they could expect the same pattern of results in the future,
that is, that illustrations are always conservative and actual results will always be significantly better.

CONCLUSION: We believe there is value to illustrating historical performance and in providing buyers with a company’s actual record of dividends or experience rates credited over the past 10 or 20 years. However, given the fact that many of today’s products were not being issued 10 or 20 years ago, and that linking past performance of significantly different products with today’s products may be misleading, we do not recommend that historical data be made a required part of illustrations.

4. Disclosure of Underlying Assumptions and Current Experience Supporting Illustrated Performance

Complete disclosure would include publication of interest rates, mortality charges, lapse assumptions, expenses (home office, field, investment, etc.), taxes, and profit assumptions that support current values. Most companies disclose the current interest rates used in their illustrations and some disclose mortality charges. Many companies, however, would object to such full disclosure on the grounds that the information is proprietary and disclosure would be competitively damaging.

Even the information being disclosed today is suspect in that the interest rates disclosed may be before or after investment expenses and taxes, mortality charges may or may not reflect actual experience, and expense charges may or may not cover actual expenses. Would a consumer be able to sort out all of the different experience factors and assumptions used in an illustration to determine if the illustrated values are in fact reasonable or not?

CONCLUSION: We believe that the idea of requiring more complete disclosure deserves further study. Therefore, we recommend that the AAA and the CIA pursue this topic further.

5. Identification of, or Special Reserving Requirements for, Unusual Features Such as Lapse-Supported or Two-Tiered Products, Terminal Dividends, Interest Rate Kickers, Persistency Bonuses

We wholeheartedly support complete and clear disclosure of unusual policy or pricing features, particularly if they result in inconsistent treatment of one group of policyholders relative to another group (for example, persisters versus early terminators).

CONCLUSION: We would encourage the AAA and the CIA to work toward development of appropriate disclosure requirements for such
practices and to determine whether or not special reserves should be required.

C. Specific Product Issues

Based on the illustrations available to us, we believe the following product-specific issues must be resolved.

1. Vanishing Premium Illustrations of Fixed-Premium Products

There should be consistency between the premium patterns assumed for guaranteed and nonguaranteed values, particularly when they are shown next to each other. If the underlying premium pattern is not consistent, the illustration should explicitly show both premium patterns. This is not an issue for flexible premium policies since both current and guaranteed values must be based on the same premium pattern.

Many consumer complaints relate to vanishing-premium illustrations. Consumers do not understand what is guaranteed or the sensitivity of illustrated performance to changes in the nonguaranteed policy factors.

CONCLUSION: The AAA and the CIA should both consider and recommend improvements to these illustrations which will communicate the sensitivity and the associated guarantees. The result should be consistent with the illustration requirements for flexible premium policies.

2. Second-To-Die Products

Second-to-die product illustrations should be required to disclose whether or not there is a cash value increase on the first death. If there is, the illustration should include examples of values after a first death occurs.

For second-to-die products that include a term portion—usually paid for through dividends—it is especially important to illustrate values all the way to the end of the mortality table. It is also crucial to show how these policies perform at lower than current dividend interest rates. While current scales may support the policy adequately for 20 or 30 years, the insureds could be faced with very large premiums due at very advanced ages.

CONCLUSION: We believe that important policy features must be disclosed to the consumer. Further, modular policy design may increase the sensitivity of nonguaranteed policy features. The AAA and the CIA should consider appropriate disclosures and/or standards for sensitivity analysis that will help the consumer understand these features and their impact on performance.
3. Two-Tier Products

The difference between the tiers can be quite large. The tier differential could be viewed (and is viewed, by some regulators) as a surrender charge, so certainly one alternative to current practice is to format the illustration accordingly, possibly even including a column that explicitly displays this surrender charge. Another alternative is to add language to the illustration that provides the needed additional emphasis of the important point that needs to be made to the client: the cost of rolling the funds out of this product to another one is unusually high, that is, the client needs to feel highly committed to staying with this company. Also, as life expectancies and expenses increase, annuitization rates may become less favorable, so a case could be made for using something more conservative than current annuitization rates on the illustration for someone who is not going to annuitize until several decades from now.

Another idea worthy of consideration, which comes from the California Department of Insurance, is to require that the account value column heading say “not available in cash.”

Mandating that the tier differential be explicitly characterized as a surrender charge may be a bit severe and could unduly limit a company’s freedom to illustrate its products in a reasonable way. Adequate disclosure is really the key point. Thus, for example, the idea of requiring the words “not available in cash” for the annuitization account value column heading seems like a good one.

Good-faith disclosure also clearly calls for showing monthly incomes on both a current and guaranteed annuitization-rate basis. As to the idea of using slightly conservative current annuitization rates for this purpose, in anticipation of future increases in life expectancy, this may be laudable but it does not seem necessary, since the juxtaposition of the corresponding guaranteed figure next to the current figure should convey the sense that things may not work out as favorably as the current figure suggests. Furthermore, this could create additional unneeded complexity and could even be latched onto as a defense of using future mortality improvements on life illustrations. Likewise, monthly incomes should be shown based on both the current and guaranteed annuitization account values.

CONCLUSION: The Task Force believes that the AAA and the CIA should consider the appropriate disclosures for two-tier products and appropriate changes to the values displayed.
LIFE INSURANCE SALES ILLUSTRATIONS

4. Concept Illustrations

These illustrations demonstrate a concept or a program, such as split dollar or executive benefits. The focus is typically the accounting or tax impact rather than the operation of the insurance policy. Concept illustrations usually do not meet the regulatory requirements for policy illustrations. To demonstrate both concept and policy operation in the same illustration would overwhelm the consumer with numbers.

The Task Force believes that concept illustrations are appropriate. However, these illustrations should be clearly labeled “Concept Illustration Only.” Unless guaranteed values are prominently displayed next to current values, the footnotes should disclose that this is not a policy illustration. This would allow agents to demonstrate concepts while alerting the consumer that the illustration does not demonstrate the operation of the policy.

CONCLUSION: We would recommend the recognition of concept illustrations and would encourage the AAA and the CIA to develop the appropriate disclosure to differentiate concept illustrations from policy illustrations.

D. Consistency of Illustrations

A somewhat more standardized approach to illustrations could make it easier for a buyer to understand the illustration. The Task Force identified five possible areas of standardization.

1. Standard Definition of Terms

Commonly used terms should have the same meaning in all companies’ illustrations. For example, the column labeled “Current-Year’s Death Benefit” should have data that are consistent for all companies. There should be no discretion as to whether it is the death benefit at the beginning of the year, end of the year or some interim value. Standard definitions of terms would increase the clarity of illustrations to all users, not just to consumers.

CONCLUSION: We encourage the AAA and the CIA to consider pursuing this suggestion with industry trade groups, professional organizations and regulatory bodies.

2. Standardized Notes

There are probably too many notes on illustrations today, and they are not consumer-friendly. Furthermore, given today’s product features, regulatory requirements for notes do not keep current with the need for disclosure
of how a product operates. Since the notes are at the end of the illustration, it is not clear how much attention they are given by the buyer. It would seem appropriate that important notes should be placed at the beginning of the illustration.

**CONCLUSION.** While the complete standardization of notes is most likely unattainable and perhaps not even desirable, we would encourage the AAA and the CIA to determine what degree of standardization might be helpful to consumers.

3. **Different Print Sizes**

Currently, all the data and notes on an illustration are given equal prominence. To the extent that it is technologically possible, the Task Force believes there is merit in using boldface or different print sizes for emphasis. This would help to ensure that the buyer reads important notes such as the nonguaranteed nature of illustrated values.  

**CONCLUSION:** We encourage the AAA and the CIA to pursue this concept.

4. **Standard Assumptions**

Three possible models have been described in this paper: the illustration of variable life and the illustration practices in the United Kingdom and Australia. These models for standardization of assumptions help the buyer to understand that the illustrated performance varies with the underlying assumptions and is not guaranteed. The Australian requirement that effects of inflation also be demonstrated for the term of the projection has considerable appeal to the Task Force.  

**CONCLUSION:** We encourage the AAA and the CIA to consider pursuing this alternative with industry trade groups, professional organizations and regulatory bodies.

5. **Range Approach/Specified Scenarios**

The range approach was advanced by the American Council of Life Insurance to the National Association of Insurance Commissioners in 1988. As proposed, it would apply to both life insurance and annuity illustrations. Use of the approach would have been elective, not compulsory. It would have allowed a range of interest rates only—not of mortality or expense assumptions. Finally, it would have allowed interest rates up to two percentage points higher and two percentage points lower than the interest rates underlying the company’s current scale.
The assumption behind this approach was that the agent would actually show three complete illustrations to the client. One would be on the current scale, one up to two percentage points higher than the current scale and the third based on an interest rate up to two percentage points lower than the current scale. The current-scale illustration would always be required. The other two would be optional, but if an illustration based on an interest rate higher than current scale is shown, then the correspondingly lower-interest-rate illustration must also be shown. The NAIC did not adopt this approach.

An advantage of the range approach is that it allows clients to see how the policy performs under different interest rate assumptions. More importantly, it demonstrates powerfully that variations are likely. In his presentation to the NAIC, Anthony T. Spano, Actuary with the American Council of Life Insurance (ACLJ), said,

"Use of the range approach would demonstrate to the insurance buying public that illustrations are merely examples of how a product may perform rather than benchmarks on how it will perform. An undue focus on the company’s current scale, which would result if illustrations were restricted to current scale, would be a disservice to the consumer in that it may create the impression that there is something magical or permanent about a company’s current scale. This could lead the consumer to feel that current scale figures are tantamount to guarantees."

Needless to say, companies were not unanimous in their support of the ACLJ in advancing the range approach. The most controversial aspect of this proposal was that companies would be allowed to illustrate policies at higher than current interest rates for the first time. The counterbalance to this, of course, was the requirement to also show an illustration at a rate lower than current scale. The fear, however, was that agents would not always show the lower-interest-rate illustration, or even the current-scale illustration, but instead would concentrate only on the higher-interest-rate numbers.

Another concern was that only the interest rate could be varied and not mortality or expenses, which could also be expected to change over time.

Although the NAIC did not adopt the range approach, the industry seems to have gone part way towards it on its own. Several companies are allowing agents to show illustrations at dividend interest rates lower than current scale, while very few allow illustrations at higher than current scale. Most illustrations of products with explicit interest credits allow the interest rate to vary, either up or down.
The Task Force strongly believes that consumers should be made aware of a product’s sensitivity to changes in the environment. The range approach is one approach that might be considered.

CONCLUSION: We think further discussion on the range approach within the industry and within our profession is warranted. As stated in Section B-1 above, we encourage the AAA and the CIA to:

- Review current regulations requiring the use of current experience or current dividend scales in life insurance sales illustrations;
- Suggest revisions to those regulations which would clarify the meaning of “current,” and
- Recommend modifications to the regulations which would allow the use of both current experience and deviations from current experience, but, if the latter, only with appropriate and mandated disclosure of the assumptions used.

E. Strategic/Educational Efforts

1. Change Use of Illustration in Sales Process: Consumer Disclosure

Consumer education efforts should focus on appropriate uses for illustrations. Usage disclosure should be clear and simple. It should indicate that illustrations are only useful for Type A questions, as defined in this paper. Required disclosures should make clear that it is inappropriate for agents, companies or advisers to use illustrations for Type B questions, regardless of the integrity of the illustrations involved.

This is not a ban on illustrations. Over time, however, such disclosure should reduce the occurrence of abusive practices. Previous regulations and disclosures have not been effective, because it has been possible to design around a rule while still using illustrations for comparative cost purposes.

Sample usage disclosures, for display at the top of the illustration:

a. **Sales illustrations should not be used for comparative policy performance purposes.** Life insurance policies are complex financial instruments, which generally contain both guaranteed and nonguaranteed elements. A sales illustration may be helpful in understanding how a particular policy performs under specified circumstances. It is generally not feasible, however, to use sales illustrations to determine whether one policy is a better buy than another.

b. The only promises a life insurance company makes when it sells a policy are the contractual guarantees. Policy illustrations are not promises. Rather, they are hypothetical examples of what might happen if certain assumptions are met.
c. Policy illustrations should not be used for comparing the relative cost or performance of life insurance products.

d. Most life insurance policies are complex financial contracts which contain both guaranteed and nonguaranteed features which depend on unpredictable future events. Consequently, the amount of risk associated with a particular sales illustration cannot be determined.

If illustrations cannot be used as a comparative performance measure, many people will demand to know, “What can be used?” The honest answer is that there is no simple measure or analysis which can be done for such complex financial products. The consumer bears a degree of future performance risk, and this cannot be readily estimated, especially for competing policies. This fact is already well understood in the securities industry. It needs to be assimilated in the life insurance industry.

Of course, there are other factors to consider, including rating agency analyses and retrospective cost measures. There are also many service and quality factors. Contractual features which have value to the consumer’s individual situation may be more important than generalized cost estimates. Finally, an evaluation and recommendation by the agent or broker may be of critical importance. Ultimately, although many factors may be considered, the final decision on the best policy must be based on individual judgment.

CONCLUSION: The AAA and the CIA should encourage their respective regulatory bodies to mandate inclusion of sales illustration disclosures of the type shown above. At least one of the disclosures should be prominently displayed at the top of every page.

2. Consumer Brochure

A small, easy-reading brochure, developed by an industry or professional association, could supplement the proposed disclosures and explain proper and improper uses of policy illustrations in more detail. It could also cover other due diligence questions which a consumer might want to ask before making a decision. The brochure should be offered in every situation in which an illustration is used as part of a decision to buy, lapse or replace life insurance coverage. It should be designed as a way to educate the consumer about both insurance and illustrations.

CONCLUSION: There are many associations that could sponsor or contribute to this effort, including the ACLI and the Canadian Life and Health Insurance Association (CLHIA). We believe that it is important to have active actuarial sponsorship of this publication. We recommend
that the AAA and the CIA take the lead in developing the text. The brochure could replace the current buyers' guides used in the U.S. and Canada.

3. Consumer Hotline

Though it would be a logistic challenge to set up, an industry-funded consumer hotline could be established, staffed by actuaries or other industry personnel interested in addressing the illustration problem on a one-on-one basis with the public. Consumers would call in (or fax) their questions.

This approach would be the most proactive of all the methods of addressing the illustration problem discussed in this paper, since it is a direct, hands-on approach rather than just another report or regulation. The concept is similar to that of the Legal Aid hotlines set up by various bar associations.

CONCLUSION: We do not recommend proceeding with this approach. In our opinion, most questions of this type are best handled by the individual company or the servicing agent.

4. Consumer Signature

There is value in having the consumer acknowledge something about the process used in deciding to buy, lapse or replace life insurance coverage. This is similar to the requirement that a consumer receive a prospectus prior to buying securities. The acknowledgment should be simple and short enough that it actually gets read before it is signed.

A sample might be: "I understand that my decision to buy/lapse/replace this life insurance policy should not be based on illustrations of nonguaranteed future performance or cost. If I was shown an illustration, I was given a copy of the brochure, Life Insurance Illustrations."

CONCLUSION: Companies should implement such disclosures on a voluntary basis.

5. Illustrations as Road Maps

As technology advances, it may soon be possible to store the illustration upon which the sale was made in the home office's computer. Then each year on the anniversary, the total current value would be compared to the value originally illustrated for that anniversary and, if it is less, the policyholder would be given (a) the reason(s) why it is less, and (b) the chance to make up the difference via an additional premium payment, if feasible. Illustrations would thus be used as road maps instead of just as point-of-sale
projections, credibility would be enhanced, and the workings of the policy would be clearer to the buyer on an ongoing basis.

CONCLUSION: Companies should consider providing “in-force illustrations” on a voluntary basis to help educate and inform their customers.

6. Agent and Home Office Education

A knowledgeable, well-informed agent is critical to ensuring that illustrations are used and interpreted properly. Our industry already invests a great deal of money in home office and field training of agents. With respect to illustrations, this effort is currently focused principally in two areas: (a) how to explain the “performance” of their own illustrations in a positive way; (b) how to discover and discredit “unreasonable” assumptions in competing illustrations. The sense of our Task Force is that agent education about illustrations should refocus on proper and improper usage, as described previously in this paper.

Once the concept of Type A and Type B usage is widely understood and accepted, agents will have more time to spend on activities which truly benefit themselves and their clients. For example, they can try to understand and explain the contractual differences between two policies (Type A), rather than trying to infer which policy will have the lowest cost over the next 40 years (Type B).

Educational efforts should not be limited to agents. Home office marketing, sales and product areas must understand and accept the concepts involved before meaningful progress can be made among agents.

CONCLUSION: The effort to refocus agent and home office education should start with the industry’s professional societies and trade associations, including SOA, AAA, CIA, ACLI, CLHIA, Life Underwriters Association of Canada (LUAC), Association Des Intermediaries en Assurance de Personnes du Quebec (AIAPQ), and The American College. Trade publications, such as the National Underwriter and Best’s Review, are important educational forums which should be used to further this effort.

VII. SUMMARY OF RECOMMENDATIONS AND NEXT STEPS

To summarize, the Task Force endorses the use of illustrations for Type A purposes. We do not believe they are appropriate for Type B purposes. Educating the consumer and others on the appropriate uses for illustrations
is a long-term effort. In the interim, we must deal with the Type B uses, and our report makes recommendations specific to these uses. The need for some of these recommendations may diminish as consumers understand the uses for, and limitations of, illustrations.

Several persons commented that we must provide consumers with a basis on which to compare different policies and companies. Past committees of the SOA and others have grappled with this issue, and have “tolerated” the use of illustrations and interest-adjusted indexes for this purpose. We would recommend that the actuarial profession renew its efforts to develop appropriate methodologies or indexes on which to compare products and companies. Our recommendations are in four areas:

- Educational Efforts
- Standards, Disclosures and Regulations
- Optional Improvements
- Continuing Research.

_Educational Efforts_

Educational efforts represent a long-term strategy for the industry. These efforts will necessarily involve insurance professionals from a number of disciplines, including agents, actuaries, regulators and company management. Without management commitment, these efforts are not likely to succeed. We would recommend that the AAA and the CIA consider the educational efforts that have been identified and develop a strategic plan for development and implementation. These organizations would determine the appropriate forum for bringing in other insurance disciplines.

Among the alternatives that we believe have particular merit for further consideration are:

- Agent education and licensing
- Home office education
- Consumer brochures.

_Standards, Disclosures and Regulations_

These recommendations represent the short-term approaches to deal with the problems arising from Type B uses. They also deal with the changes needed to support and enhance Type A uses. The AAA and the CIA should be charged with the development of an integrated program of standards, disclosures and regulations to improve illustrations in the near term. This Task Force believes that the following have considerable potential:
LIFE INSURANCE SALES ILLUSTRATIONS

- Standard assumptions, following the variable life or Australian model
- Disclosure of underlying assumptions
- Review of actuarial standards for establishing nonguaranteed factors
- Disclosure of unique product features
- Display of alternative scenarios or sensitivity testing.

The Task Force strongly recommends the adoption of changes to vanishing premium illustrations in order to properly communicate the concept and its nonguaranteed nature, to the consumer.

Optional Improvements

The Task Force identified several alternatives that could improve illustrations that companies could implement on an optional basis. These would include:

- Consumer signatures on illustrations
- Presentation of historical data, separate from the illustration
- Use of graphs to supplement numerical data
- Display only quinquennial durations after year 20
- Round current values to nearest $10 per 1000 of initial face amount
- Illustrations as road maps.

Continuing Research

We would recommend that the SOA form a task force to research an appropriate methodology for comparison of products. The Task Force believes that in the current product environment, a measure that is not adjusted for risk is not helpful to the consumer or any reviewer of life insurance illustrations and contracts.

CONCLUSION: The illustration practices of most companies are consistent with regulatory practices and attempt to communicate in a good-faith manner with the consumer. However, there is room for improvement. Life insurance policies are complex, and consumers often do not understand which benefits are guaranteed and which benefits are not.

The Task Force strongly encourages the AAA and the CIA to consider our recommendations and to work with the other industry groups and regulatory bodies to improve illustration practices and to develop educational materials that will aid consumers.
APPENDIX 1
SAMPLE SURVEY AND SUMMARY OF RESPONSES

I. GENERAL

A. To what extent does your company feel that a problem exists within the industry regarding life illustration practices today, in terms of successfully communicating with the potential buyer in a good-faith manner?

(5) We think there is a serious problem but the nature of today's products makes it unavoidable.

- Problem is that the people selling them (producers, agents, reps, etc.) oftentimes will do and say anything to make the sale. Product differences and volatility of interest rates, etc. make it difficult for the consumer to compare products and understand all the pieces.
- The trend in the industry seems to be a return to more responsible illustrations. But illustrations still create a strong visual impact. Footnote, disclaimers, and ledger have trouble competing for the buyer's attention.
- So long as agents are allowed to run their own proposals, there will never be assurance that what the company intended is shown. Also, differences between companies will never be able to be accurately portrayed.

(35) We think there is a serious problem which can be fixed.

- We do not, however, believe that policies with adjustable elements will ever be completely understood by the buying public.
- Many agents sell on the basis of a 40–50 year projection of policy values as if these had a reasonable probability of materializing. Furthermore, they frequently misunderstand some of the fundamentals (that is, they often compare UL policies at a fixed rate of interest for several products even though companies take margins differently and may actually be paying very different rates at the time the illustration was prepared).
- We feel that some companies are misleading their customers by showing unrealistic illustrations, for example, a rate of interest which the agent knows will never be attained. This raises the issue of integrity because the individual agent and company are left to decide how to illustrate nonguaranteed elements, so long as the guaranteed elements are shown. The industry should develop, and the state regulators should adopt, a
standard by which all companies must conform when illustrating non-guaranteed elements. This would eliminate the practice of companies and agents competing by way of misleading sales illustrations which give the customer unrealistic expectations.

- It is important to disclose what is being illustrated rather than restrict or complicate the illustration.
- Many aggressive companies do not want to fix this problem and choose to illustrate values that are not likely to be paid, or will be paid only to a very few policyowners. These companies, in general, cannot be competitive on actual performance. However, there are still a few quality companies doing the right thing, although they are considered old fashioned since they believe in giving good value to the policyholder and in paying out real value, rather than illusions.
- The lowering of dividend scales has helped agents finally understand that dividends really are not guaranteed!
- Many companies show unrealistic interest rates and have great flexibility in making products look better. Disclosure statements and footnotes should be required to improve situation.
- The fix will require a realignment of some companies’ fiber of integrity and a decision to include guidelines in full disclosure.
- Our company position is that the insurance industry must take steps to begin monitoring the practices of its representatives and initiate consistent regulation of the industry throughout the country.
- We have been working on consumer education pieces to supplement illustrations which provide additional information on the nature of illustrations.
- Illustrations of unrealistic projection of mortality and bonuses.

(13) We think there is a problem, but it's not serious.

- In Canada, some UL illustrations may use unrealistic interest rates. Major complaints arise from (name of company)’s unbelievable Par illustrations.
- Most agents and companies are OK, the bad cases get a lot of attention.
- Some illustrations need improvement in both stock and mutual companies; however, most companies do an adequate job.
- As the marketplace becomes more sophisticated, so must products sold in these markets. Illustrating complex products in a simple fashion causes unavoidable problems for the consumer.
• Overall practices are acceptable. Very few problem areas. TAMRA should be handled better. Handful of copies allow illustration at much higher interest rates than current credited rates, and some companies do utilize projected improvements in future mortality rates.

• I don’t see how to enable the prospective policyowner to judge the relative value of nonguaranteed policies from different companies.

• Any attempt to fix may make the cost of doing business too high.

(2) We think current practices are acceptable.

B. Software packages are available that enable an agent to take the numerical output from a company produced illustration program and “recast” the results into a format individually tailored by the agent. Examples include the ability to rearrange, add or delete columns, and to change headings and footnotes. Also, some agents have sufficient programming skills to accomplish this on their own. What is your company’s position on this?

(9) We promote it (for example, we make such software available).

• However, we strongly discourage any alterations and/or deletions of information.

• We don’t like it, but competition has forced us to make it available.

(4) We condone it.

• Some flexibility is necessary to meet the needs of sophisticated markets.

(10) We are neutral.

(19) Officially we’re opposed, but there’s little enforcement.

• Difficult to enforce in brokerage environment. Can control branch offices easier, but it still happens.

• We do everything we can to ensure that this doesn’t happen, but you can never have 100 percent control of software running on a PC.

(6) We oppose these practices and vigorously enforce this.

• But it is difficult to catch individuals that doctor illustrations. We fire any that are caught.

• Officially we’re opposed . . . however, we do encourage agents to have Head Office review proposals.

• Our software is designed to prevent these practices.
(8) Other.

- It is available, but we don't promote it—those that find it are capable and we work with them.
- We allow agents to add additional information by adding columns to the standard illustration.
- Allow specified adjustments.
- Currently we make available a software package which translates our company-produced illustration into a different format. The format is chosen by the agent from a menu of formats, and so the individual agent cannot modify or otherwise rearrange the output to suit his/her needs. The software company, however, has the ability to add or modify formats, and we have basically trusted them not to abuse or misrepresent our products. Only one area of disagreement has arisen to date: the software’s treatment of a MEC is different from ours, and our solution is to not pass the data over from our company’s system if the policy turns out to be a MEC. Hopefully, solutions for all disagreements can be accomplished as easily.
- We promote use of (name of company), but our illustration is required.
- Different marketing channels follow different approaches. The largest one opposes. Other channels encourage or attempt to limit to company-approved programs. In any case it is very difficult to control agents who are computer-literate and can design their own spreadsheets.
- We have asked our field to show us their special charts for review. While we do not receive many, we do review all that come in and we have requested changes where appropriate.
- Agents have the ability to customize columns but not numerical values. We condone customization of this type and oppose agent programming that allows altering values in any manner.

Please indicate the illustration flexibility, if any, that your company provides to your agents, or explicitly allows them to use.

- Graphic interfaces.
- We provide ability to download data and reformat it using commercial graphics packages. This facility is used by relatively few agents. Minimum disclosure requirements for such presentations are being developed.
- An agent may edit a print file created from the illustration. However, we feel that this is a better option than allowing an agent the flexibility of typing his own error-prone illustration.
• Customize column selection from a predetermined list, output to an ASCII file, limited interest rate flexibility, and input Universal Life in-force information.
• Cannot alter form or format of proposal. May only change the current credited rate and this should be done only when company declares a change in rate.
• We allow the agent to use a lower interest rate than the current rate.
• We use a company called (name of company). We require all agents to show the company-produced illustration; it is automatically printed, but the agent can always throw it away (that is, enforcement may be impossible).
• Illustrations can not be modified. Agents can incorporate them in their sales package, but they must include “all” pages generated by our proposal system.
• We offer the (name of company) system.
• We allow agents to use a software package that reformats columns and rewords headings and footnotes in whatever manner the agent desires, so as to produce a snazzier-looking illustration. However, company policy is that this second illustration is to be provided to the client in addition to (not instead of) the regular company-approved illustration.
• Choice of interest rate for some products; no choice on others.
• Headings and footnotes cannot be changed. A variety of pre-set and user-defined illustrations may be selected from a menu.
• Ability to illustrate with their own interest rate assumptions as well as the current rate. Some flexibility as to what output is produced—optional graphs, additional notes, etc.
• Our illustrations can be converted to (name of company). Agents then can produce whichever numbers they choose. Footnotes are not converted, however.
• Our software allows agents to rearrange or delete columns, or add columns from a group of columns that are available through the software. VUL is an exception, however, as no alterations may take place.
• Our software allows column add/deletion only—no footnote or header editing.
• Company provided software with fixed formats; other formats require our ledger to be attached.
• We allow customization of illustration output; however, we strictly maintain footnotes that require a standard illustration that provides all guaranteed values.
LIFE INSURANCE SALES ILLUSTRATIONS

- A limited range is \( \pm \frac{1}{2} \) of 1 percent on interest rate assumptions.
- We support an Interface to Advanced Underwriting Software but do not provide such software.
- An agent can always retype any illustration, even without a PC. We take strict action if we find erroneous numbers or an outrageous illustration that is not company-produced. All software has flexibility and the market demands this flexibility, but we always require a ledger and footnote to precede any summary. However, no one is with the agent to ensure that he gives it to the customer. All pages are numbered as “x” of “y” pages, that is, page 1 of 4, etc. Company illustration system has over 200 available columns of information that can be displayed, but standard formats exist. The results of the PC version can be captured by agent-owned software that we have little control over. Outside independent vendors, who we cannot control, have our rate files.
- None for company-provided computer system. If outside PC software is used, we have no control.
- Minimal flexibility is provided.
- Lower dividend interest rate, first-death scenarios for survivorship, optional columns to show, for example, face amount of PUA’s, cost of 5th div rider.
- [name of company], cash needs analysis, advanced needs analysis, split dollar.
- We require agents get pre-approval on any special format illustrations.
- Planners have only the ability to select the pages that are included in the sales presentation. They must always include the ledger (numerical) illustration.
- We have little or no flexibility.
- Ability to add, delete and customize columns; however, we require a “compliance” page which shows GTD values. Portfolio rates may be illustrated with lower assumptions—not higher.
- Difficult to summarize briefly. Column selection is available to some agents and brokerage offices. Changing headings and footnotes is generally not condoned.
- For our universal life product, we allow agents to select an interest rate for illustration from 4–14 percent inclusive. Current rates are, however, disclosed.
- We allow download into prearranged packages.
- We support [name of company].
- None, except for illustrative rate flexibility.
Ability to vary interest rates, and specify premiums (within policy limits).
Some column selection and report writing capabilities; (name of company) download conversion.
All life products (including UL) are participating, and only current dividend scale can be shown. Agents have flexibility to show various interest rates for annuity illustrated.
Agent can enter interest rate but not change format.
Flexibility about what pages to produce, what columns to output.
Any illustrated rate between 4½ percent and 14 percent can be shown, but whatever is illustrated is disclosed. Mortality and expenses are only shown at current levels with no option to vary. Of course the premium and face amounts in a UL illustration may also vary.
Column customization, funding flexibility, optional report selections.
The agent can illustrate changing premium patterns, death benefits and interest rates, but footnotes, column headings, guarantees cannot be altered.
Agent can download for graphics. Once downloaded, however, the possibility of rearrangement exists.
C. Do your illustrations routinely contain text about:
   (5) Your company’s ratings from the various rating agencies.
   (5) Company size.
   (4) Company financial strength.
Yes. Yes. Yes. Marketing page that is available.
Yes. Yes. Yes, but do not explicitly state our surplus.
This information can be produced as an OPTION on the software.
Yes. Yes. Yes. But agent has to request.
No. No. No. Separate sales publications are used for above.
(1) Optional on some products.
This is an area we are exploring.
D. What do you consider to be the best feature of your illustrations?
Electronic data transfer to (name of company)/graphics.
Illustrated values are generally based upon reasonable assumptions. Volatility disclosed by way of mandatory conservative rate illustration.
The fact that it is maintained “in-house” and has a large degree of flexibility.
Flexibility to customize to consumer’s own situation.
Strong vendor who produces the software, comprehensive system that is state-of-the-art and accurate.
LIFE INSURANCE SALES ILLUSTRATIONS

- The menu of options on our flexible UL allows agents to be very flexible in illustrating deposit and withdrawal scenarios. Proposals may almost appear custom-tailored.
- Checks for DEFRA, TAMRA, etc.; can vary premium, death benefit, etc.
- We have no gimmicks (COI give-backs, retroactive interest rate bonuses, etc.).
- Our alternative illustration demonstrates the impact of IIT, AIDS, etc. No other Canadian company illustrates lower dividend rates even when the IIT was introduced and everyone knew it would decrease dividends by 50–75 bps on the investment return.
- Consistency.
- User-friendliness of input screens; speed of calculations, especially on solve-for-the-premium requests.
- Our sales illustrations are developed to comply with state laws and regulations. While the expiration date of the policy is not required by law, it is an important feature because it lets the customer know how long the policy will remain in-force, based on guaranteed factors and planned premiums.
- Meaningful disclosure of contract guarantees and current values.
- Illustrate specific products well. Flexible enough to assist an agent in selling with different marketing strategies (U-Life).
- We feel that our illustrations present a fair, conservative picture. We do not overstate values, and these values are based on our current experience.
- The column add/delete feature allows the agent to adjust the complexity of the illustration to suit his client.
- Honest, straightforward, no gimmicks.
- Readability and easy to understand.
- Our illustration systems are very flexible.
- The completeness.
- User-friendly input.
- They are clear, concise, and complete.
- Flexibility.
- A decoupled dividend interest scale can be run showing dividend interest lower than currently payable. The allowable range is between current and guaranteed. Also complete and extensive footnotes exist. Note: This is very unusual. Most companies cannot do this.
- Accurate/complete including benefits.
Integrity through promotion of conservatism in assumptions and well-documented disclosure of assumptions and guarantees.

Pertinent and accurate information and dividends are based on current experience.

Simple to understand.

Flexibility in showing premium payment options (borrow or surrender PUA's only in certain years, use paid-up add riders to achieve quick pay in targetted years), and in showing cash distributions from policies.

Integration of products on one software piece.

Can illustrate flexibility of the products (for example, future changes); footnotes regarding compliance with tax laws.

Simplicity of basic input; marketing support including graphics and concepts display.

The fact that it can be easily read and understood by our prospects as well as our field force.

Simplicity of use.

User-friendly system with no “trick” illustrations or assumptions.

Flexibility; accuracy compared with administrative system (ties in very well).

The large number of available page formats, and the flexibility to tailor new formats to a specific need.

Alternate interest rate scenarios. On vanishing premium illustrations, a “low side” illustration is now produced automatically by our major systems.

They are short and easy to read.

Flexibility, user-friendliness.

Flexibility of sales presentations.

Ease of use, flexibility, supplement pages with text explaining product and marketing concept.

TAMRA and TEFRA premium checks.

Interest-sensitive products show intermediate values from use and an illustrative interest rate. In addition to current and guaranteed.

Ease of use for agent.

The disclosure regarding the nonguaranteed elements.

Variability of interest/premiums to match prospects’ outlook and needs.

Simplicity, user-friendliness, speed.

Ease of use to agent, easy to read.

Their flexibility.

User-friendly.
LIFE INSURANCE SALES ILLUSTRATIONS

• Flexibility relative to formats and supporting reports.
• Completeness and correctness. We check for TEFRA and TAMRA.
• Uniformity of presentation on all products, straightforward presentation.
• Straightforward, easy-to-use software, which does not project improvement in any factors except possibly interest with disclosure. There are also a lot of options to allow the agent to solve for solutions to the client needs.

E. How, if at all, would you change illustrations to improve them from the consumer's standpoint?

• Show the consumer how his needs are being solved, ask for signature.
• Reduce the amount of data presented which tends to suggest more accuracy and higher probability of realization than is warranted. More emphasis should be placed on the volatility of future results.
• Try to make them more efficient from a time perspective (that is, make them faster). Greater disclosure with respect to variable products.
• Better disclosure about proper use—should not be used as a prospective cost measure.
• Standardize footnotes for all companies so consumer can make a fair comparison.
• Use graphics.
• No illustration of “gimmicks” unless guaranteed and reserved for. Greater clarity and explanation of the fluctuation of interest (particularly the down side). Include a couple of interest rate indexes such as 5-year treasuries and Moody’s AAA bonds with explanation of the companies interest rate margins and the risks of crediting too high a rate.
• 1. Simplify them. The total volume of numbers intimidates many clients.
   2. Deemphasize the importance of illustrations to the sale. In many cases the agent uses the 40th-year CSV as the key selling point as if it were a given.
• Use the illustrations to explain the product rather than just show numbers.
• Only show first 10 years of values, and quinquennial thereafter. More disclosure. In short, fewer numbers and more words, as it should be for a “concept” sale.
• Companies should not be allowed to show illustrated values which are greater than those currently being credited. As the rates change, the customer should be notified accordingly.
• Require disclosure if illustration does not reflect current assumptions.
• Require disclosure of improved lapse, mortality and/or expense assumptions shown in the illustration, and require an alternative illustration showing results if the improvements are not realized.
• More explanation aimed at the “average person,” not just legalese. Perhaps also cut down on the level of technical detail that is presented in our standard illustrations.
• As it happens, we are undertaking some research to establish the answer to that very question.
• Should explain unusual features. Remove the requirement to show guarantees on the same page. (Still must show them.) Space could be used to make numbers easier to follow.
• Consumers need education about products to understand them before illustration changes will help—anyway, an interest cap will help.
• From the consumer’s standpoint, all of our illustrations are very well caveated.
• In the same way a valuation actuary needs to sign off on reserves, require an actuary to sign off on illustration procedures.
• Similar terminology; more graphic illustrations.
• Make them more clear, concise and complete.
• Better caveats and explanations, more control over “current experience” requirements, better agent education.
• Require a standard ledger be run with all of the other possible variations.
• No change.
• We attempt to stay current with enhancements and modifications which improve the usefulness of our illustrations; no improvements are outstanding at this time.
• Ideally, limit illustrations to 10 or 20 years.
• Disclose all important information in an easy and understandable format.
• Illustrate true performance of product; use of graphics; require financial ratings of at least two rating agencies; indicate investment quality.
• More accurate depiction of expenses and mortality, especially in later years. Showing the impact on policy values, when expense and mortality assumptions are kept at current.
• The illustrations are easy to read and understand in the format they are currently in. I wouldn’t change them at all.
• Require a standardized format for traditional, UL, interest-sensitive products. Use would be in addition to customized format.
• Accuracy of mid-year projections; too much verbiage.
LIFE INSURANCE SALES ILLUSTRATIONS

- Require more disclosure of the assumptions behind each illustration. Give the consumer the necessary information to properly evaluate the risks involved. (For example, 1, possible consequences of future tax law changes; for example 2, current mortality charges assume future improvements in underlying mortality; for example 3, current interest rate would be X percent if company could earn Y percent after investment expenses.)
- This subject is under constant discussion within our marketing and actuarial organizations. We would like to simplify illustration outputs, so that people are not confused by masses of numbers and multiple pages of footnotes. At the same time, we would like the customer to be thinking about a range of possible outcomes. Our new vanishing premium ("abbreviated payment plan") may help us meet this goal. Another idea which is under discussion and has not been implemented is to round nonguaranteed cash values and death benefits to the lower multiple of say, $100 or $1,000. Numbers with six or eight significant digits have an aura of precision which can’t be overcome by footnotes or other disclaimers.
- More restrictions regarding disclosure.
- Clear explanation of product features.
- Decrease amount of footnotes on each page by putting clearer notes on a required extra page.
- Provide a page of comparison values: that is, assuming current interest and current mortality project the premium and values, the same assuming guaranteed mortality and guaranteed interest, current interest and guaranteed mortality, etc.
- 1. Bar retroactive mortality or interest credits. 2. Mandate illustrative rate showing results at lower than current interest.
- 1. Require a historical angle to the output. 2. Regulate what is being used in the assumptions or disclose what’s used currently (fully disclose).
- Highlight or emphasize (large print) that illustration is nothing more than a sample of how the contract MAY work.
- Include brief definitions of terminology used on illustrations. Include graphics.
- Use graphics rather than tables of numbers to show results.
- Wouldn’t.
- Yes, I would include company ratings and financial strength.
- Limit number of years that could be illustrated.
TSA 1991-92 REPORTS

- Automatically include variations of CSV and DB development, less numbers, more verbiage.
- We would prefer to provide easy-to-understand supplemental brochures describing important issues since footnotes on illustrations are not effective.

F. (7) Does your company have an illustration that you regard as a positive innovation in terms of format, content, or concept, from a consumer standpoint?

- We produce a policy illustration and include it in the policy. Differences between this independently produced projection and the one originally provided by the agent can and has identified misunderstandings right at the outset when they can most easily be corrected.
- Edit screen on UL.
- We’re the only Canadian company to illustrate an alternative (lower only) dividend scale, but this is common in the U.S. (I believe) so it’s not really a great innovation.
- Signature page; various columns for INN calculations; three scenario pages.
- Screen graphics are available—easier to visualize.
- We examine our illustrations regularly to see what improvements we can make. While they may not be “innovative,” we believe that they do an excellent job of fairly presenting the product.
- No. But we do allow interest rate modeling, and we have an extensive re-illustration (in-force ledger) system.
- Question is not clear—we have a typical big company type of system, except for our decoupled illustration, and an in-force system.
- The ability to illustrate dividends less than the current scale.
- This is a vanishing premium illustration that automatically produces a low-dividend-interest-rate scenario. Also, the zero premium has been replaced by a special character that references a footnote.
- It isn’t so much an illustration, rather that we have adjusted our products to include investment income tax (as stated in the footnotes).

II. DIVIDEND-PAYING PRODUCTS

A. (35) Does your company sell this type of product? (If no, skip to III).

B. Which, if any, of the following dividend factors as illustrated anticipate a change from current experience, either by projecting trends or on some other basis? Please explain the general nature of such changes.
LIFE INSURANCE SALES ILLUSTRATIONS

(1) Mortality.
(2) Interest.
(3) Expense.

- Mortality. Projected improvements.
- Company does not illustrate dividends higher than our current scale.
- We are aggressively attacking the expense issue.
- Performance of our pool fund is more than enough to support dividends this year, and our projections suggest we’ll be fine in 1992. However, a continued deterioration in the economy could accelerate that occurrence. A few years ago when the AIDS issue was heating up and the IIT was about to be implemented, we specifically showed a reduction to reflect the potential impact. Currently, we simply show a 1/2 percent reduction in interest rate to illustrate the effect of a drop in yields. Our field force hates our doing this at all.
- Use current dividend assumptions. For projections, don’t try to anticipate change.
- The standard illustrated scale is the actual payable scale with no projection. The agent has the option to run any lower dividend interest assumption the client wants to see.
- Illustrations reflect current experience.
- (This was a response to II-B. and II-C.) Unless otherwise requested, the dividend factors which produce the illustrated dividends will be based on the following: (a) The mortality and expense factors will reflect the current-dividend-scale assumptions. (b) The interest factor will reflect the current-dividend-scale assumptions unless it has been determined that the scale which applies to the policy will in fact contain a lower-interest-rate assumption. If this is the case, this lower rate will be used. If the reverse is true, however, and it is anticipated that the actual interest rate will be higher than the current value, we do NOT reflect this higher rate but instead remain at the current level. Lower only. We do not allow dividends to be illustrated in excess of the current scale. Agents have the flexibility to run illustrations where the interest component can range from zero to a maximum which assumes the default rate as defined in (b) above. The mortality and expense components currently cannot be adjusted. However, an upcoming enhancement will provide the flexibility to completely zero out the dividends. Our illustrations contain a supplementary page which illustrates all nonguaranteed elements otherwise buried within the illustration.
• Current scale is projected to continue—no changes in experience are anticipated.
• In aggregate the current experience reflects actual; by blocks they don’t. DAC has not been reflected.
• Currently illustrated refunds are calculated using expense factors which have become out-of-date. This will be corrected on next change.
• We illustrate current scale only; in 1998, when tax laws were changing, we temporarily illustrated a lower-than-current scale.

(3) Are such changes disclosed to the consumer?
• Dividends are not guaranteed on the illustration. Values illustrated may vary depending upon actual experience.
• Yes, though the change is not imminent, it is shown as an alternative scenario.
• Advise consumer that these factors affect dividends and changes may occur.
• Not specifically, but reproposals are available as requested.

C. (17) Do your agents have the flexibility to run illustrations at dividend interest rates or mortality rates higher or lower than the current scale?

If yes, please indicate the degree of flexibility they have.

• Select interest rate to be assumed within a range rate assumed disclosed on illustration along with actual recent experience.
• Interest only. Higher or lower. Illustration will say “hypothetical.”
• Lower, but not higher.
• Only lower.
• −1%, −2% and −3%.
• Illustrations can be run up to 200 basis points below the current gross crediting rate. Our conservative illustration practices do not allow us to show an increase in dividends.
• We allow up to a 200-basis-point reduction. We do not allow illustrations of a dividend increase.
• Current scale, reduce interest factor 1 percent or 2 percent.
• Interest rate less than current scale only.
• Lower dividend interest rates only may be run.
• At lower rate only. May decrease dividend interest rate by up to 200 basis points.
• Yes—lower only; 200 basis points lower than current.
LIFE INSURANCE SALES ILLUSTRATIONS

- Agents can illustrate dividend interest rates lower than the current rate. (As low as three percentage points below current.) Mortality rates cannot be varied.
- Up to 2 percent lower than current scale, average of 8, 12, 20 or 40 prior quarter interest rates.
- Can show results of lower interest factor (higher not sanctioned by company).
- Lower interest only. Two percent interest drop, no change in mortality assumption. Maximum differential is 2 percent.

D. (10) *Has your company received an increasing number of policyowner complaints about dividends paid versus dividends illustrated?*  
(1) *Have these complaints indicated any common misunderstandings of illustrations furnished at the time of sale? Please explain.*

- No. Consumers thought of dividends as guaranteed.
- No. These plans are relatively new. Track record thus far has been pretty good—dividends have generally exceeded expectations.
- Same. Only in terms of the “vanish” if dividends are decreased and have more premiums will need to be paid prior to “vanish.”
- The problem has not been dividends paid versus dividends illustrated, but how the changes in the dividend scale affect the vanish point of the contract. That is, the way they see it, if you had a 1 percent reduction in your dividend scale, total cash to vanish should only increase by 1 percent!
- Policyowner complaints have increased as dividend scales have decreased. They do not always comprehend the “nonguaranteed” nature of dividends.
- The nonguaranteed nature of dividends was not well understood nor presented well.
- Normal level. Most complaints are minor. The majority of the questions concern vanishing outlay or values less than originally projected. However, once the policyowner understands that he/she is still being credited a competitive return versus available options, then the policyowner in general is satisfied.
- Yes, but relatively few so far. Impression, belief, or hope that dividends only increase.
- Many complaints deal with misunderstandings that quick-pay years were guaranteed, or at least highly unlikely to change.
Most misunderstandings relate to vanishing-premium illustrations and dividend scale changes. Policyholders mistake a vanishing-premium illustration for a promise of a paid-up policy.

Policyholders believed dividends would cover premiums by a certain date, and due to a decrease in the dividend scale this is not so.

People seem to think insurance dividends should be unaffected by expense changes and interest swings. They remember the 15–16 percent interest rates of 10 years ago.

We had some complaints immediately following scale drops in 1987 and 1988, but fewer than expected.

The consumer did not understand the relationship of investment yield to product performance.

"Vanish" illustrations are frequently misunderstood regardless of the agent's explanation at the time of sale.

Most complaints pertain vanish year increasing due to reduction in dividend scale.

III. UNIVERSAL LIFE AND INTEREST-SENSITIVE LIFE PRODUCTS

A. (52) Does your company sell these types of product? (If no, skip to IV.)

B. Which, if any, of the following experience factors as illustrated anticipate a change from current levels, either by projecting trends or on some other basis? Please explain the general nature of such changes.

(5) Mortality.
(8) Interest.
(2) Expense.

• Mortality—can illustrate based upon current or guaranteed maximum scale. Interest—select rate from an allowable range. Mandatory lower rate projection also produced. Expense—administrative fees subject to fixed inflation factor.

• An input assumption.
• All current values are based on company experience.
• Mortality on juvenile issues. Illustrations for juveniles assume conversion to nonsmoker product at minimum allowable attained age.
• Mortality—no, have priced for AIDS. Interest—no, based on current interest rate. Expense—no, have priced for IIT, AST, etc.
• Bonus interest.
LIFE INSURANCE SALES ILLUSTRATIONS

- Negative anticipated changes are not considered when the illustrations are developed. We see this as part of the integrity problem because, while there is no legal obligation to forewarn customers of anticipated negative changes, the company and/or agent may be aware of such changes. For example, a decrease in interest rates may be imminent, but until it’s effective, the agents continue to illustrate the higher rate as if that rate will remain in effect for 20 years. Although agents should not be required to provide predictions, they should be honest with the customer if it appears that a change is about to occur.
- All factors reflect current assumptions.
- Projections may be done using an interest table based on anticipated future changes.
- We don’t anticipate changes.
- We are opposed to future enhancements in these factors.
- Current level projected to continue—can lower interest assumptions over time.
- Alternate interest rate projections are available.
- Illustration values are based on (1) current assumed interest and mortality and (2) guaranteed rates.
- Mortality—OK in aggregate; in process of repricing. Interest—too high on new premiums; managed down over time. Expense—doesn’t reflect DAC, otherwise OK.
- Expense factors are out of date and need to be updated.
- We expect mortality to continue to improve as it has in almost every period in the past.
- Rates are adjusted for the guaranteed added interest credits at the end of years 10, 15, 17, 18, 19 and 20.
- Use of a higher credited rate (i.e., lower spread) after 5 years.
  (9) Are such changes disclosed to the consumer?
- Mortality and interest.
- Footnotes/guaranteed values illustrated.
- Before the full level of the IIIT was known, we advised new clients of the potential range of the impact.
- Not on illustration; in Exhibit interrogatories.

C. Which, if any, of the following experience factors can the agent vary from current levels in your illustrations?
(49) **Interest.**
(6) **Cost of insurance.**
(2) **Minimum premium.**

( ) **Policy loads.**

- Interest. Cost of Insurance—guaranteed and current, only.
- Interest. Cost of Insurance—choice is current rate or guaranteed maximum scale only.
- None. Our branch offices only can go 3 percent above current interest rate and this is footnoted.
- Interest in a separate section of proposal labelled “projected values.”
- Interest—but *must* show current rates and a minimum rate illustration.
  The current rate is the upper limit the agent can use in the projection.
- Interest. Agents are permitted to vary interest rates up or down (up to a maximum of 14 percent). Due to good training and (to some extent) a fear of litigation, more of our agents vary the interest rate downward than upward.
- Interest, from 4 percent to 10 percent. Cost of Insurance, illustration can be run with guaranteed mortality charges.
- Interest, but *never more* than current rate.
- Interest, additional page only.
- Interest—This is done so we don’t have to provide new software when interest rates change.
- Interest—Our illustrations show Universal Life values on a current basis allowing for an alternate interest rate either higher (subject to a maximum) or lower if desired. In addition, values are illustrated on a guaranteed basis which are based on the guaranteed minimum interest rate and the guaranteed maximum cost of insurance charges.
- Interest—this is an agency input item.
- Interest—but only a lower rate than current, only available on some illustrations systems.
- Interest—However, the current illustration is automatically printed in addition to the assumed-rate illustration.
- Cost of insurance, guaranteed only.
- Cost of insurance, show current and/or guaranteed.
- Interest, range of values. Cost of Insurance, choice: guaranteed or non-guaranteed cost. Minimum Premium, compensation is not based on the premium chosen but on the cost of insurance and policy fees.
D. (10)  *Does your policy include any contingent credits or persistency bonuses? If yes, how are they disclosed?*

- Some policies guarantee a higher credited rate from year 11+ on. Footnote explains.
- Bonus interest credited once policy reaches a certain duration. This feature is fully disclosed and is contractually guaranteed.
- Footnote. Illustration of credits is optional—agent may decide not to show it.
- Contractually guaranteed bonus interest is disclosed in a footnote.
- No. We believe most of these "gimmicks" will be taken away from the consumer unless persistency is lousy. Most "gimmicks" are designed to encourage persistency.
- The bonuses are guaranteed, so they are reflected in both the current and guaranteed values shown on the illustration. In some cases there is further explanation in footnotes also.
- Within the footnotes.
- As a company practice in a footnote.
- They are disclosed in footnotes on the illustration.
- A paragraph describing the requirements to receive the benefit, the amount, and any other restrictions is included.
- A footnote provides the method of calculation and notes that the bonuses are "nonguaranteed."
- They are illustrated only if they apply in situation illustrated. Caveats explain requirements to get credits.
- On the summary page of the illustration.
- By footnote at bottom of illustration.
- Payroll deduction UL discloses higher interest beginning years 11 and 21 if premiums are paid pro-rata thru 10 years.
- They are disclosed in a footnote in the summary page.
- In the page of notes following the illustration.
- In footnotes.
- Reduced COI after specified cumulative amount of insurance purchased; asterisk on ledger once lower COIs are being charged.
- Bonus interest, described in footnote at bottom of sales proposal, cost disclosure.
- No. We will, however, soon introduce a UL product that includes an interest rate bonus of 1.25 percent after 10 years provided cumulative...
target premiums have been paid. This will be fully disclosed in the explanatory notes section of illustration.

- Interest rate bonus is listed in ledger and in the footnotes.

IV. TERM AND TERM-LIKE (FOR EXAMPLE, GRADED PREMIUM WHOLE LIFE) PRODUCTS

A. (41) Do you sell this type of product? (If no, skip to V.)

B. (13) Can your agents illustrate conversion to universal life, participating life or interest-sensitive life plans on a term or GPWL proposal?

(12) If yes, does the conversion illustration show both current and guaranteed values?

C. (8) Do you sell nonconvertible term?

(10) Or term with a very short conversion period?

(9) If yes, does the illustration prominently disclose that the product is nonconvertible or very limited in its conversion rights?

- No illustration.
- Very short, first 3 years only on a 20-year decreasing term plan.
- We do not provide illustrations for our NCT product.
- No, but the illustration is entitled ‘‘. . . Nonconvertible Term.’’
- Covered in brochure and contract. The term illustration shows rates on a guaranteed and current basis with and without re-entry.

V. SECOND-TO-DIE PRODUCTS

- These are the wrong questions to ask on this product. You need to consider both the base policy and the term riders.

A. (41) Do you sell this type of product? (If no, skip to VI.)

- No. We offer a beneficiary insurance rider. It gives the insureds a guaranteed right to purchase an additional amount of insurance at the first death.

B. (6) Does your product provide for a cash value increase on the first death?

(1) If yes, are the values shown on your illustration always based on the assumption that both lives remain alive?
LIFE INSURANCE SALES ILLUSTRATIONS

- Yes. Yes. Agents can illustrate death and illustration does prominently disclose the death scenario.
- Yes. No. Agent can choose both alive or first death in any duration.
- Yes. No, can be run to choose year of death of either life.
  
  ( ) If yes, is this assumption prominently disclosed on the illustration?

C. (14) Does the illustration contain an explicit statement that there is no death benefit payable on the first death?
- Company has death benefit payable on 1st death Rider approach. Two separate policies are issued.
- No, but the illustration is entitled “...Second-to-Die.”
- No—but it shows that cash value increases.
- N/A. We offer a guaranteed insurability option that, upon the first death, allows for the use of the death benefit as premium for a Universal Life policy payable upon the death of the second life.

VI. TWO-TIER PRODUCTS
A. (6) Do you sell this type of product? (If no, skip to VII.)
B. (5) Does the illustration clearly indicate the amount payable if the policyholder surrenders rather than annuitizing?
- Additional verbiage also emphasizes this fact.
C. ( ) Are the illustrated monthly incomes (upon annuitization) shown using both current and guaranteed annuitization factors?

VII. OTHER
A. (20) Are there other specialty products on the market for which you feel illustration practices should be researched? If so, please indicate which products:
- First-to-Die, Variable Universal.
- Registered Life, Variable Life.
- Variable Life products.
- Disability Income.
- Living benefits.
- Term-to-100 (basically low premium whole life with no nonforfeiture values and is sold in Canada only). Often assume very high lapses in pricing and illustrations.
- Annuities; lapse-supported illustrations.
TSA 1991-92 REPORTS

- Yes, UL and VUL products.
- Annuities.
- Accelerated benefits.
- Renewable health product with low initial rates may be worth considering.
- Two-tier Universal Life, 10-year indeterminate level premium which becomes 1-year term thereafter, and deferred annuities where interest rate for the initial period and renewal period are different.
- Realism of second to die product pricing/illustration; use of projections of improving experience in combination WL/term illustrations.
- Products that are stated to be whole life but are actually blends of base and term.
- No, except (name of company) shows their projections against others' guarantees.
- Annuities.
- Universal life products with equity side funds, in relation to credited interest rates and tax status.
- Universal life maturing as an annuity.
- Interest-sensitive whole life.
- Group UL especially for executive purchases.

B. (35) Are there specific illustration practices that you believe should be researched? If so, please indicate which practices:

- On traditional WL illustrations, “guaranteed” values should never include any dividends.
- 1. Use of nominal interest rates. 2. Disclosure of only the gross fund value before surrender charge for UL products. 3. Ability to illustrate temporary coverage (say to life expectancy) without adequate disclosure.
- Producers creating their own illustrations via (name of company), etc. Telling consumer wrong information about guarantees.
- Are graphs easier to understand than columns of numbers for the consumer.
- Projecting continual improvement in mortality for UL policies.
- I believe agents put too much emphasis on illustrations during the sale process and some companies go too far in selecting optimistic assumptions to make long term values look good.
- Lapse-supported illustrations; increasing interest rates, mortality improvement. As somewhat already addressed in this survey, the issue of an agent’s ability to manipulate figures in the illustration is of importance because of the potential to mislead customers by illustrating unrealistic interest rates. Further research is needed to ascertain how often such
practices occur. Also of importance is compliance with state disclosure regulations. This issue should be researched and the insurance departments made aware of any widespread noncompliance, so that appropriate action can be taken at a state level to enforce the laws and regulations that govern disclosure.

- Necessity of illustrating at a low interest rate even for asset products like the RRIF.
- Failure to disclose guaranteed charges/costs (mortality, expenses, etc.) and illustrating improved lapse, mortality experience, etc.
- Any illustrations that show the extent to which funds may be attached to and accumulate tax-free within an insurance policy. There is a propensity to liberally interpret the Canadian Income Tax Act.
- Refunding cost of insurance and other bonuses.
- Any illustration practices which have incomplete disclosure, are ambiguous or are confusing, should be examined. Though these concepts are difficult to formalize, some guidance should be codified.
- Failure to illustrate to age 100, or to such duration where coverage may decrease under current assumptions.
- Persistency or lapse supported illustrations should be made illegal. We should urge the adoption of an IRR approach, a modified Linton-type yield with cost of mortality. There should also be a standardization of decoupled formats. Some companies blend lower new money rates into their portfolio that will not reach a 200 basis point cut for 10–20 years. However, these companies claim they are using the lower rate.
- Concern that some companies are not reflecting current costs (for example, expenses, IIT) in their illustrations.
- Practices which do not adequately disclose nonguaranteed assumptions and values.
- Premium offset.
- Projected improvements in mortality.
- Placing disclosure statements within the illustration, not on a separate sheet that can be discarded.
- List assumed improvements in experience, and bonuses and how they impact the illustration.
- Practice of illustrating improving expenses or mortality assumptions.
- Interest rate kickers, terminal dividends and persistence bonuses, interest rate improvements, assumed mortality improvements, unlabeled columns, that is, BOY/EOY death benefit. Unidentified rider blends.
• Illustrations should not anticipate mortality improvement. In the past guaranteed minimum value used guaranteed interest but current mortality for some companies.
• Mortality improvement in pricing or in illustrations. Declared interest rates that cannot be supported. Vanish on a current basis by surrendering PUAs and put these columns next to guaranteed columns (based on a full pay) with the result that the guaranteed values look like they are based on the vanishing premium. Agents compare illustrations at a common declared interest rate—it is not obvious to them or the consumer why this is not a fair comparison.
• Nonguaranteed persistency bonuses for which no reserve is held. Also, illustrating mortality improvement. What disclosure is needed if better than current mortality is assumed in a traditional product, or better than current mortality changes is a UL product?
• More explicit disclosure of nonguarantees.
• Current interest rates and validation.
• 1. Tontine credits. 2. Interest far in excess of earnings.
• Abuse in the super select illustrations. Misuse of annual versus monthly premiums.
• Lapse supported bonus arrangements, disclosure.
• Reduction in future mortality charges (guaranteed and nonguaranteed). Dividends on universal life, lump sum and accumulated mortality charge persistency bonuses.
• Projected improvement in mortality.
• Nonguaranteed terminal dividends and bonuses, particularly those that are retroactive.
• Illustration of long-term values when product is not expected to persist that many years.
• Enhanced mortality and bonus rates—especially higher interest rates than company currently earning.

C. Undoubtedly all companies get an occasional question or complaint about an illustration from a consumer. What is the most common kind of illustration complaint received in your Home Office?

• Contract performance not as illustrated and additional premiums needed. Surrender charges not understood.
• Illustrated policy values are at policy anniversaries. Annual statements based on actual data after anniversary processing so differences occur that require explanation.
LIFE INSURANCE SALES ILLUSTRATIONS

- Why can't the illustration be run faster?
- Sold on a "vanish" premium, and dividends decreased.
- Don't understand where the numbers are coming from, "Vanish" year discrepancies when dividends are changed.
- Discrepancies between proposals and "Statement of Policy Benefits & Costs" required by state regulations, which is provided with the policy. These are easily explained. Usually the reason is due to monthly premiums on the proposal versus annual premiums used in the disclosure statement.
- We haven't any major complaints from our consumers.
- Illustration doesn't match contract summary pages—usually because policy was not illustrated (mode, riders) as issued.
- Interest rate illustrated versus paid, or premium vanish illustrated versus actual.
- Quick pay illustrations (for example, at 11 percent interest in 1984) not being fulfilled as originally illustrated.
- Specific statistics regarding complaints received concerning sales illustrations are not available. However, our group that handles customer complaints has indicated that the most common kind of complaint involving sales illustrations is the misunderstanding of the surrender charges and their effect on cash values.
- Illustration differs from cost disclosure due to change in interest rates.
- No overall common complaints that I know of.
- Policyowners frequently do not understand that illustrations are projections, subject to change, and they especially are unaware of the results of a dividend change.
- 1. Vanish illustrated at issue differs from current vanish. 2. Want more flexibility, for example, show what happens if dividends fall 25 basis points in each of the next five years, then begin to rise again.
- Vanishing premiums, but using side-funds rather than dividends. Interest rate changes cause the payment stream into the fund to be altered or some "spillover" into a taxable fund.
- Too much compliance information.
- Only that did not understand not all premium earning interest—not illustration itself.
- Dividend scale reduction.
- Premium cease date is later than initially illustrated so client needs to continue paying premiums.
Illustration too difficult to understand and compare with other company’s products/illustrations.

We do not get complaints about proposals. We believe that this is a direct result of our philosophy of clear, complete, concise wording. My experience is that agents are usually the people that complain about illustrations.

Actual performance falls short of illustration—for example, premium vanish period is longer than illustrated.

Misunderstanding of what the policyowner purchased. Our agents have a good relationship with their clients. We have few real complaints.

Customer not fully understanding that it is an “illustration.”

Interest rates on UL policies less than that illustrated.

Premium offset.

Consumers don’t understand quick pays; don’t understand effect of loans on policy values.

Consumers assume the illustration is a “guarantee” of what their policies will look like.

Removal of detailed illustration from back of annual report for universal life contract.

Effect of increase or decrease in assumed interest rates especially in relation to vanish.

We typically do not hear consumers’ complaints first hand. Planners’ complaints about our competitor’s illustrations usually involve the fact that they are often difficult to read and understand. Many times, pages are missing from the presentation.

Extended vanish period due to dividend/interest rate decreases.

Regarding unfamiliarity with UL, which is labeled “Flexible Premium.” Term information also shows “end of year” to be consistent with cash value products.

Actual policy configuration or performance did not match the illustration given by agent.

That the originally illustrated premium vanish point has not been realized.

Our most common illustration question is, “What happens after age 75?”

Illustration does not always match materials received at issue.

Having to pay more premiums before vanishing the premium with dividends.

Rarely receive a complaint. Most often they involve the premium illustrated which does not hold when interest falls.
• Vanishing premium.
• Lower values (dividends) than illustrated.
• Policyowner believes illustration was a guarantee.
• Don’t understand why “current” projection goes to maturity but “guaranteed” stops after a few years. Guaranteed is too conservative or too costly.
• The numbers in the policy don’t match the illustration. This is because the policy does not reflect any future changes to premiums or face amounts except as required by tax law, and the illustration can reflect changes that may be contemplated.
• Required to pay more premiums than anticipated to vanish policy (due to drop in interest rates).
• Vanish delays.
• Calculation of settlement options.
• Agent does not show footnotes.

D. (21) Has the number of illustration complaints your company receives increased over the past five years?

• Yes—use and volume have significantly increased during past five years.
• Slightly, due to pricing assumptions used and the decline of rates from 11 to 7–8 percent which affect UL, dividends, other interest-sensitive products.
• No, hardly ever get any from clients. Generally get them from agents who complain that our 40th-year CSV is less than some other companies’ 40th-year value given the same premium and death benefit.
• No. The number of such complaints have actually decreased over the past five years. While the exact reason for the decrease in such sales illustration complaints is unknown, we believe that both the agent and customer service representatives are doing a better job of explaining the surrender charges so that the customers are more aware of the implications of surrender charges.
• Yes, due to falling interest rates as well as changing tax legislation.
• Most complaints are handled by the agencies. We have an 800 number, but the volume of complaints and questions is not that large—maybe a few thousand on an in-force of 500,000 (that is, low percentage).
• Not significantly in relation to increase in volume.
• Not markedly.
Yes, due to software systems that are now obsolete, product sold was interest-sensitive whole life which was sold when interest rates were much higher.

- Yes, although the number of complaints from consumers continues to be small.
- This is probably more from an increase in-force business and lower interest crediting rates than from poor illustrations, or improper sales concepts.
- Only because we write a lot more business than 5 years ago.
- Decreased.

E. Please use this space for any comments you'd like to offer regarding life insurance illustrations from the consumer's perspective.

- Regrettably we have let the ease of production push us in the direction of providing the consumer more and more data that clouds basic understanding of the policy being purchased. With the numbers based upon assumptions that are inconsistent between companies, this puts the focus on noncomparable possible values scores of years in the future. More properly, illustrations would provide clearer illustration of the product's main features with as few numbers (and pages) as is reasonably possible.

- 1. Producers, Home Office personnel, salespeople, all need to have a clear and concise understanding of the products they are selling. Consumers need to fully understand what they are buying. Better training and education of salespeople and insurance people is necessary. 2. Illustrations contain lots of numbers, not all people are numbers people and understand what the numbers represent. 3. Insurance terminology, what does “Vanish” mean, paid-up mean? That is, “if I paid 10 years of premiums on my Universal Life policy, then I will be paid up,”’ is what people are told when they have an illustration that solved for a 10-year premium paying period to carry the policy to maturity. However, if rates decline, more premiums could be due to sustain the contract.

- We have a concern regarding illustrations of an income stream generated by policy cash values. In some cases that we have seen, the policy lapses within five years or less after the income has been paid. The assumption is that the insured will die before that (based on normal life expectancy). However, if insured lives and policy lapses, this triggers a significant taxable event. This (the tax implications) is not disclosed to the insured.

In some cases, the insured is not informed that the policy could terminate prior to death.
LIFE INSURANCE SALES ILLUSTRATIONS

- No gimmicks should be illustrated unless guaranteed and reserved for. The impact of lower interest rates needs to be more fully disclosed. The risks of crediting too high an interest rate need to be more fully explained. Perhaps, a comparison of an industry acceptable (probably not possible) index, such as Moody’s AAA bonds less an assumed interest spread (profit margin), with the current rate would tend to bring more realistic rates into the marketplace. Today, my company’s ULs are crediting 8 percent. This is probably a little too high. Yet, we are 75–100 basis points below most of our competitors. We think we can earn about 9 percent in today’s market, but there are products out there crediting 9 percent. What gives?

- The majority of consumers find illustrations confusing and have no concept as to the long-term achievability of the numbers, let alone what they actually mean. Personally, I believe we need very strong guidelines regarding illustrations and what can be shown, either at the professional or legislative levels. Otherwise, consumers are likely to view them as little more than smoke and mirrors which will further damage the public’s general view of the insurance industry.

- In-force projections should be provided at anniversaries, allowing the customer to see if the policy will behave as intended, based on new nonguaranteed elements and past premium payment patterns and cash value accumulations. In many instances, the consumer’s attention is drawn to the current illustrated values without mention of the guaranteed values. Although the guaranteed values are required by regulation to be included in the illustration, the agents often fail to mention the fact that there are minimum guaranteed. The consumer should be informed of the “worst-case scenario,” so that there are no misconceptions as to the accumulation of cash values. In other words, the agent should give equal time during the sales presentation to explaining what the minimum guarantees are and what effect they may have on the policy values.

- Illustration practices vary considerably from one company to the next, for example, beginning or end-of-year cash values? Beginning or end-of-year death benefit? How are internal rates of return calculated? This is particularly a problem in later years, when large dividends are typically paid, since the point in time illustrated can have a substantial impact on illustrated value. This is a key concern in highly competitive markets, such as the second-to-die marketplace.

- The main problem is that aggressive companies are illustrating values not likely to be paid. The illustrations of most mutual companies do not
have this problem. It is mostly a problem found in the UL illustration of a stock company. There is no easy solution, but the problem is getting worse, not better. The Annual Statement disclosures of dividends and other nonguaranteed elements are either not given to the consumer or the responses are not meaningful. Few companies state that their nonguaranteed elements are not based on realistic assumptions. Historic performance is useful, but many companies do not have good track records and new products may not be comparable. Dividend history IACs are subject to manipulation if noncomparable products are used or if very little of the "historical" product is still in-force. The only solution to the problem that I can foresee is to provide the client with an illustration using standard assumptions, in addition to the company's regular illustration. The standard assumptions used could be as follows: 1. assume no lapses and accumulate net premiums underlying cash values by: 2. crediting an interest rate equal to 10 percent less actual investment expenses and priced for the spread of the product; the spread should be disclosed; 3. never charging mortality less than 100 percent of S/NS 75–80 S&U table; the company can disclose if current experience is better; 4. using a realistic expense assumption; 5. charging a defined profit margin. If these assumptions and accumulated premium less expense and mortality charges are used, the values are much less than the illustration. (The client should also ask more questions.)

- 1. Illustrations are only one piece of a sales/disclosure process and should not be used to select companies without considering such things as actual dividend history, financial strength, etc. 2. Illustration assumptions should be modified as soon as possible after new schedules of credits or charges are authorized. Additional Comment: In general, our company does not believe in letting distributors do "what-if" illustrations which: (a) assume future improvements in interest, mortality, expenses; (b) "solve" for loan or other transaction patterns which cannot be supported administratively. However, some producers do use the output from our illustrations as input to spreadsheet applications, massaging the data as they see fit. Although we are uncomfortable with this practice, we recognize that it is basically beyond our control.

- We believe that life insurance sales illustrations should be easy to understand and to read. In addition, they should provide complete disclosure regarding the assumptions that are used in the generation of the numbers.
• There should be enough information available for a consumer to figure out the risks of buying life insurance based on the illustration.

• Consumers are in a very vulnerable position. They don’t look at illustrations until they are ready to buy. They are too often sold a vanishing premium illustration as a “paid-up” policy without understanding that it is really a source of PUAs or other type of use of policy values to carry the premium in the future. Carriers must recognize that the people who sell insurance products usually do not feel comfortable asking for a lifetime commitment of significant premiums, so they resort to overselling the possibility of a reprieve (via vanish) as a certainty. A new “lesson in life insurance” easy to understand and to explain should be part of every sales presentation. It should be worded in such a way that agents will want clients to see it rather than keep it from them.

• Nonguarantees too commonly seen; consumers end up depending on these nonguarantees for long term.

• A due diligence type of approach should be used to illustrate products for the consumer. Show all possible combinations of factors subject to change, from worst-case scenario to best-case scenario and some in between.

• Illustrations should only be a part of the sales process. They should be fair and should provide the consumer with a sense of the range of values possible over the future from guaranteed to current scale. Excessive footnotes and mandated exculpatory working should be guarded against.

• The two-tier, superman and kicker abuses are the most flagrant. We’d like to see historical data included much like Mutual Fund hypotheticals.

• Computer projections have reduced life insurance sales to a ledger sale, not a needs sale, the higher ledger numbers or lower premium gets the sale. Insurance sales emphasize investment performance rather than protection, tax deferral, safety and needs satisfaction or completion. Illustrations have not done our business much good in the last five years. All illustrations are not alike but the customer can’t tell the difference. We have to level the playing field.

• In order to protect themselves, companies list numerous disclosures and disclaimers. This coupled with the ability to show almost unlimited changes during the years illustrated, causes the client/prospect to be unsure of what he/she expects of the product and will often cause the prospect to delay making a decision. Illustrations need to be used as supportive material in the sales process rather than being used to sell future projected values.

*Guaranteed cash value, cash value of additional insurance and any terminal dividend.

†Paid-up insurance available if you stop paying premiums and reduced paid-up insurance option is chosen. Illustrative paid-up insurance includes paid-up insurance bought by dividends. Any remaining optional benefits and riders end when paid-up option takes effect.

‡Benefit applicable to principal insured, includes basic insurance, additional insurance, any terminal dividend and any rider insurance value.

§Age at life expectancy, U.S. population life tables.

Dividends based on Jan. 1991 scale that uses current interest, mortality and expense rates. Illustrative figures are not guarantees or estimates for the future.

Explanatory notes form —— and form ——— must be enclosed.
EXHIBIT B: PAGE 4 OF 5

BENEFITS THAT MAY BE AVAILABLE

Following are descriptions of benefits provided by riders that may be included with your policy. These benefits are subject to certain limitations and exclusions which are not described below. For full details, ask to see a specimen form.

DISABILITY WAIVER OF PREMIUMS BENEFIT. Provides that, if you become totally disabled as described in the rider, before your age 60 and your disability lasts for at least six months, you will not have to pay premiums while totally disabled. There is also a limited waiver benefit for total disability which occurs between the ages 60 and 65.

ACCIDENTAL DEATH BENEFIT. Provides additional insurance, usually equal to the face amount of insurance, if you die from an accident. An amount equal to twice the A.D.B. amount is paid if the accident occurred while you were a fare-paying passenger in a licensed public conveyance being operated by a common carrier for passenger service.

FAMILY INCOME BENEFIT. Provides a monthly income to your family if you die before the end of a specified period (10, 20 or 30 years). The monthly income is paid for the balance of the period and is in addition to the amount payable under the basic policy. A similar income benefit on a spouse is also available.

ONE-YEAR TERM INSURANCE BENEFIT. Provides renewable and convertible level term insurance payable if you die before the end of the specified one-year period. This benefit is also available on a spouse.

10-YEAR LEVEL TERM INSURANCE BENEFIT. Provides renewable and convertible level term insurance payable if you die before the end of the specified 10-year period. This benefit is also available on a spouse.

GUARANTEE TO ISSUE NEW INSURANCE WITHOUT EVIDENCE OF INSURABILITY. Guarantees you the right to buy a new policy on your life without evidence of insurability for an amount of insurance up to the specified option amount. The new policies may be purchased only on an option date.

CHILDREN’S TERM INSURANCE BENEFIT. Provides term insurance on each covered child to the policy anniversary at the child’s age 25, or to the policy anniversary at the insured’s age 65 if earlier. An insured child may obtain a new policy without evidence of insurability.

ONE YEAR COST OF LIVING TERM INSURANCE BENEFIT. Provides one-year term insurance which varies annually to match yearly fluctuations as indicated by the CPI.

PAID-UP ADDITIONS RIDER. A permanent additional insurance rider that provides supplemental growing cash values. This rider also provides the potential for enhanced premium flexibility and for advancing the year when out of pocket premium payments are no longer required under the Accelerated Premium Payment plan, or when the policy can be fully paid up or matured for its face amount.

ACCELERATION OF POLICY BENEFITS FOR LONG-TERM-CARE RIDER. Provides for the acceleration payment of a portion of the death benefit for the long-term care of the insured. Such care can be provided either in a qualified convalescent facility or at home when the insured has a qualified disability. The benefit payments are made each month and continue as long as the insured remains disabled and the maximum benefit under the rider has not been paid. The size of the monthly payments and the maximum benefit are stated in the rider (subject to state approval).
EXHIBIT B: PAGE 5 OF 5

EXPLANATORY NOTES

ACCELERATION OF DEATH BENEFIT RIDER. Provides for a one-time discounted payment of all or a portion of the death benefit to the policyowner once the insured has been determined to be terminally ill with 12 months or less to live. The size of the benefit payments and the maximum benefit are stated in the rider. There are no premiums or fees for this rider (subject to state approval).

DIVIDEND INFORMATION. Dividends paid by ______ depend on future experience as to investment earnings, operating expenses, claims paid, and taxes. All of these factors may so that dividend scales will change from time to time. The dividends shown in this proposal are an illustration of our current dividend scale and are not a guarantee or estimate of future results.

Terminal dividends may be paid on Whole Life, Life Paid Up at 95, and Life Paid Up at 98 policies. There are no terminal dividends payable on term life insurance plans.

ILLUSTRATIVE LIFE INCOME. Any illustrative life income figures shown in this proposal are based upon our life income plan rates currently in effect. These rates are not guarantees or estimates for payments starting in the future. After monthly life income payments begin, the amounts will be fixed.

TERM PLANS. Term Life insurance plans and term insurance riders provide insurance protection only. They do not provide cash or loan values.

The POLICY-LOAN provision provides for an adjustable policy loan interest rate that is charged daily at the rate we set from time to time. This rate will never be more than the maximum allowed by law and will not change more often than once a year on the policy anniversary. Loan interest is due at the end of each policy year. Interest not paid within 31 days after it is due will be added to the loan principal.

INTEREST-ADJUSTED INDEXES. These indexes, if shown in this proposal, provide a means for evaluating the comparative cost of the policy under stated assumptions. They can be useful in comparing similar plans of insurance, a lower index being better than a higher one. Indexes are approximate because they involve assumptions, including the rate of interest used, the dividends being paid in cash and the continuation of current dividend scales. Indexes apply to the basic policy only. They exclude any optional riders such as accidental death.

"Total premiums less illustrative cash value," "total premiums less total dividends," "net increase or decrease in business surplus," etc., should not be used in policy cost comparisons because they do not consider the effect interest could have on payments made at different times. They can sometimes be helpful for accounting purposes.

Any application for insurance will be subject to underwriting rules.

Dividends are not guaranteed and are subject to significant fluctuations. Changes in dividends will change all nonguaranteed values. See page 3 for footnotes, assumptions and explanations.
EXHIBIT C: PAGE 3 OF 3

Proposed Insured: Society of Actuaries
Plan: Whole Life Policy
Basic Policy Amount: $100,000
Dividend Option: Dividends used to purchase paid-up additions

Footnotes:

As illustrated, this policy would not become a modified endowment contract (MEC) under the Internal Revenue Code. Loans and distributions from a MEC are subject to income tax and may also trigger a penalty tax. Changes made to the policy may cause the policy to become a MEC.

*This footnote pertains to column(s) 3, 4, 5, 6, 7:
Based on the 1991 dividend schedule. Dividends are not guaranteed. Due to new federal taxes and economic conditions including declining interest rates, dividends based on the 1992 dividend schedule are expected to be lower than those shown in the illustration. Transfer of policy ownership to a qualified pension or profit-sharing plan would result in a different dividend schedule. The first year dividend, although included in this illustration, is contingent on payment of the entire second year premium. The first year dividend is not used in the calculation of first year paid-up insurance and first year monthly life income.
*This policy is available at issue with a policy loan rate of either 8% or an annually adjustable rate. This illustration assumes no policy loans. For the 8% policy, loans will affect dividends.
*This footnote pertains to column(s) 4, 6:
The components of this column are depicted separately in this illustration.
*This footnote pertains to the monthly income figures shown:
   Based on total cash surrender value using the current rate which is not guaranteed.
*This footnote pertains to the monthly income figures shown:
   Monthly income shown assumes the right to commute unpaid payments has been waived.

This illustration does not recognize the time value of money and should not be used to compare policy costs.

</tr>
</tbody>
</table>

The interest-adjusted cost comparison indexes provide two means of comparing the relative cost of similar plans of insurance issued by the same company or different companies. A low index number represents a lower cost than a higher one. These indexes reflect the time value of money by applying a 3 percent interest factor to policy premiums, dividends, and for the surrender cost index, the 10- and 20-year cash values. The dividends used in calculating these indexes are based on current year’s scale and are not guarantees nor estimates of future dividends.

The indexes do not consider: (1) the value of the services of an agent or company; (2) the relative strength and reputation of the company and its actual dividend performance; or (3) differences in the policy provisions.

*Dividends assume no loans; loans will reduce dividends. Illustrated dividends (1991 scale) reflect claim and expense experience and are not estimates or guarantees of future results. They may be larger or smaller than those illustrated. This illustration does not reflect that money is paid and received at different times. 0% loan provision.*

This illustration compares the cash values and death benefits that would be provided by the basic policy if dividends are used to purchase paid-up additions in each of the following future scenarios:
1. No dividends are ever paid, guaranteed values
2. The current dividends scale is maintained indefinitely
3. Dividends are paid based on the alternate dividend scale described in the footnotes to the following illustration.

This illustration is merely intended to demonstrate the effect of our current dividend scale and variations in the interest rate underlying that scale. It is not an illustration of the coverage you have selected. This illustration assumes that no premiums are paid in addition to the base policy premium.

Exhibit E: Page 4 of 4

Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 4.00%.

All cash values shown are end-of-year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endowment for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endowment. This test is not a guarantee that a particular policy will not be classified as a modified endowment in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on a hypothetical dividend scale. That scale has the same factors as the 1991 dividend scale, except for the interest return. The interest return is based on assumed rates that would credit, which may vary by policy year. These rates are shown in the end of those footnotes, and do not exceed the current rate of 10.50%.

Actual future dividends may be higher or lower than those illustrated depending on the company's actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned had the premiums been invested rather than paid to the insurer.

Net death benefit on all permanent plans means the face amount plus riders, if any, plus the end of year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 8.00%. Dividends are affected by policy loans. To the extent the dividend scale is based on an interest rate greater than 7.00%, in any given policy year the greater the amount of loan, the smaller the dividend.

(This does not apply to term, which has no loan value.)

The number of years of required cash outlays depends upon age at issue, policy class, face amount, and continuation of current dividend scale, and assumes no policy loans. This is not an automatic dividend option. Policy owners must request change of dividend option at policy year indicated. He may pay the balance of premium by surrendering a portion of paid-up insurance.

This is not a paid-up policy, premiums are due and payable in all policy years.

(1) The comparative rate of return shown represents the rate, not considering the effect of taxes, which the policyholder would have to earn on an adjusted series of outlays to accumulate to the total cash value at the end of the period. The adjusted series of outlays equals the actual outlay in each year less the cost of insurance protection for that year, which is based on the 1980 CSO Basic Table (K).

(2) Interest adjusted cost indexes are based on the policy excluding riders and are useful in comparing policies of similar types.

This is an illustration and not a contract.

Dividends are not guaranteed and are based on the current scale.

Cash values and death benefits may vary depending on actual experience.

This illustration assumes that recommended premium deposits are always made.

(Name of company) does not give legal or tax advice. Please consult your professional tax advisors regarding any items which involve the interpretation of applicable tax laws.

Because of long-term interest rate trends, all policyholders should be aware that dividend scales at (name of company) and throughout the industry will likely be reduced at some point in the future. (Name of company) believes in providing full disclosure to our prospective policyholders, and we, therefore, suggest you consider obtaining additional illustrations to demonstrate the sensitivity of product values to potential reductions in dividends.

The term "vanish" does not mean that premiums are no longer due, but that the cash premium due reflects the payment of future gross annual premiums through the use of current dividends. If future dividends are reduced from the current, results of the vanish may differ from that illustrated.

Additional premium payments may be required if the current scale of dividends is reduced.

*Guaranteed values do not reflect any loans, surrenders or dividends from the policy.

Cash values are illustrated at the end of the year.

The actual beginning of year cash value will be lower when the dividends are surrendered to pay the premium.

This illustration is only valid if all pages are included.

This illustration assumes the surrender of paid-up values; these may be deemed as taxable income under I.R.C. sections 72(E) and 7702 and others. Please consult your professional tax advisor.

If this policy, in combination with any other insurance policies in-force or applied for, exceeds _______ dollars, special underwriting, reinsurance or commissioning may be required which could affect the premium and values illustrated.

The insured's tax bracket is 28%.

IMPORTANT INFORMATION ABOUT THIS PROPOSAL

(Name of company) has a reputation for its financial integrity and for providing solid, long-term value to our policyholders. In keeping with that tradition, we encourage our clients to fully examine and understand the assumptions used in a life insurance proposal. We have provided the following information to help you make an informed purchase decision.

This proposal is not a contract; we recommend that you refer to your policy for a complete explanation of your policy benefits.

GUARANTEES
Only those premiums and values labeled as “guaranteed” in this proposal will be contractually guaranteed in your policy.

DIVIDENDS
Illustrated dividends, and all values depending on illustrated dividends, are based on the July 1990 dividend scale. They are neither guarantees nor estimates of future dividends.

The first dividend is dependent upon payment of the first premium due in the second year.

PREMIUM
Premiums due, when reduced by dividends, may vary substantially from the illustrated premiums due, depending on the actual dividends paid in future years.

VANISHING PREMIUMS
The policy illustrated requires that premiums be paid each year without limitation. However, it is possible that at some future date, dividends, and if necessary, the surrender of paid-up additions may become sufficient to pay current and future premiums due. The proposal shows this by indicating a time when premiums “vanish.”

If actual dividends are lower than illustrated, you would have to pay premiums beyond the date at which this proposal shows that premiums might “vanish.” For policies where premiums have already “vanished,” future premiums could be required.

LOANS AND SURRENDERS
The dividends shown in this proposal reflect the loans and loan interest rates as illustrated. Actual policy dividends will vary according to actual loan interest rates and loan activity.

This proposal is valid only if all pages are included.
TAXATION
This proposal may not fully reflect your actual tax or accounting situation. We suggest that you consult your professional advisors regarding the interpretation of current and proposed tax laws and accounting principles. The individual’s illustrated tax bracket is 28%.

PROPOSAL DESIGN
Internal Rates of Return on death have been calculated assuming that death takes place: (1) at the beginning of the year, and (2) at the end of the year (prior to the payment of the dividend). The two figures which result, represent the range of returns that will be delivered by the policy (based on the current dividend scale), depending on when during the year the insured dies. Internal Rates of Return on death are illustrated on a Traditional and Aggressive basis. While both assume that death occurs at the end of the policy year, the Aggressive basis makes the further assumption that the end of year dividends have been credited.

ALTERNATE PROPOSALS
In light of past interest rate trends, you should be aware that dividend scales at any company, including (name of company) could be reduced at any point in the future. Values illustrated are sensitive to changes in the dividend scale. If you wish to assess the sensitivity of the values illustrated to a drop in our current scale, you should review a second proposal prepared using a dividend scale lower than the scale currently being credited.

I have reviewed and reviewed four pages of this proposal, including footnotes. I also understand the implications of the above information on premium amounts and values illustrated.

Policyowner (For Trust: this should be signed by the Trustee)

Date

*The Abbreviated Payment Plan uses dividend results to limit the number of premiums paid in cash. Results are not guaranteed. See Form 9-138 for details on how the Abbreviated Payment Plan works. Refer to the following "Full" Pay Ledger for a complete schedule of premium payments. †Based on the dividend scale reflected which is not guaranteed, no out-of-pocket cash outlay is required. Premiums are assumed to be paid by application of dividend credits. A reduction in the dividend scale could require you to make additional out-of-pocket cash outlays in one or more of these years.*

#### 5% Interest-Adjusted Cost Indexes

| Guaranteed Values | 3.58 | 4.91 | 7.00 | 7.00 | 5 |
| 7.00% Illustrative Values | 1.60 | 1.24 | 7.00 | 7.00 | 381 |
| 8.50% Current Values | 1.09 | 0.01 | 7.00 | 7.00 | 391 |

Cost indexes are useful only for comparison of the related costs of similar policies. Charges for additional benefits have been removed from these indexes. The guaranteed columns reflect a guaranteed interest rate of 4.00% and guaranteed cost of insurance rates. Illustration for use in the state of __________. Initial guideline premiums: Net single 15,176 Net level 1,336 Maximum annual premium that complies with 7-pay test: 3,981

Columns other than guaranteed show values based on current cost of insurance rates and the interest rate indicated, and these columns are not guaranteed. Current interest rate is determined monthly. Using planned premiums this policy will terminate in policy year 31 based on guaranteed values.

IMPORTANT INFORMATION ABOUT THIS PROPOSAL

(Name of company) has a reputation for financial integrity and for providing solid, long term value to its policyholders. In keeping with that tradition, we encourage our clients to fully examine and understand the assumptions used in a life insurance illustration. We have provided the following information to help you make an informed purchase decision.

This proposal is not a contract; we recommend that you refer to your policy for a complete explanation of your policy benefits.

GUARANTEED COLUMN ASSUMPTIONS

Only those values labeled as “guaranteed” in this proposal will be contractually guaranteed in your policy.

Guaranteed values reflect the guaranteed cost of insurance charges which are not subject to change. Guaranteed values are illustrated using a guaranteed interest rate of 4% at any time and 5.5% over the life of the policy.

CURRENT COLUMN ASSUMPTIONS

Current values are illustrated using a current interest rate of 7.8% and are based on current cost of insurance charges, which are subject to change.

Additional interest is credited at the end of every 10th year and will be equal to 30% of the unborrowed interest credited during the previous 10 years. The additional interest feature is guaranteed.

The additional interest feature affects the current values in the following manner:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>$2,105.37</td>
</tr>
<tr>
<td>20</td>
<td>$7,620.01</td>
</tr>
<tr>
<td>30</td>
<td>$17,163.83</td>
</tr>
<tr>
<td>40</td>
<td>$31,712.05</td>
</tr>
<tr>
<td>50</td>
<td>$69,324.55</td>
</tr>
</tbody>
</table>

*The interest rate, credited from purchase, required to produce equivalent cash values every 10th year is 9.40%.

This illustration is only valid if all pages are included.
ASSUMED COLUMN ASSUMPTIONS

Assumed values are illustrated at an assumed interest rate of 7.55% and are based on current cost of insurance charges, which are subject to change.

Additional interest is credited at the end of every 10th year and will be equal to 30% of the unborrowed interest credited during the previous 10 years. The additional interest feature is guaranteed. The additional interest feature affects the assumed values in the following manner:

<table>
<thead>
<tr>
<th>Year</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>$2,020.11</td>
</tr>
<tr>
<td>20</td>
<td>$7,164.21</td>
</tr>
<tr>
<td>30</td>
<td>$15,513.62</td>
</tr>
<tr>
<td>40</td>
<td>$25,417.76</td>
</tr>
<tr>
<td>50</td>
<td>$38,886.11</td>
</tr>
</tbody>
</table>

**The interest rate, credited from purchase, required to produce equivalent cash values every 10th year is 9.06%.

POLICY LOANS AND PARTIAL WITHDRAWALS

No policy loans or partial withdrawals of the cash surrender value are shown on this proposal.

CASE DESIGN ASSUMPTIONS

Your policy is illustrated on an assumed policy value basis.

You should carefully review the full proposal including the section entitled "Important Information About This Proposal."

I have received and reviewed all five pages of this proposal, including the section entitled "Important Information about This Proposal."

Policyowner (For Trust: this should be signed by the Trustee)

The first year basic annual premium including riders is $17,760.00. WARNING/ TAX NOTICE: This illustration makes no representation or guarantees as to the tax treatment of life insurance transactions. The tax rules are complex and subject to change. This illustration is intended to comply with the rules limiting the amount of premiums (DEFRA) to meet the tax definition of life insurance. Loans or withdrawals may be taxable if premiums exceed allowances set forth under the law. The DEFRA and TAMRA premium limits are stated below only for the initial insurance amount. Any policy change would change these limits:

- DEFRA Single Premium Limit: $418,425.53
- DEFRA Annual Premium Limit: $55,568.30
- TAMRA Annual Premium Limit: $91,960.00

The information contained in this illustration is not intended to be legal or tax advice. Advice must be obtained from applicant’s own counsel.

This is an illustration, not an offer of insurance.
EXHIBIT K: PAGE 4 OF 4

EXPENSE DEDUCTIONS: An expense deduction is made from each premium paid on the policy. The present deduction is 3.5% on policies with attained specified face amount less than $1,000,000, and 2.5% on policies of $1,000,000 or above. These percentages may be changed by the company at any time but can never exceed 6%. In addition, a monthly expense deduction is assessed against policies with attained specified amount less than $1,000,000. This charge is $5 on policies between $25,000 and $99,999, and $3.50 on policies between $100,000 and $999,999.

CASH AND SURRENDER VALUE DEFINITIONS: Cash value is the policy value before the application of surrender charges. Surrender value is the policy value less any applicable surrender charges, withdrawals and outstanding loans. It is the amount actually available upon policy surrender.

PERSISTENCY BONUS, INSURANCE COSTS, EXPENSES AND INTEREST RATES: The current and assumed interest rate accumulations include an annual one half percent persistency bonus after the 10th year. The present insurance costs, expense charges and interest rates are subject to change by the company at any time. It may credit excess interest which may vary from time to time under a pattern that depends upon the date of premium payments. Variation may be caused by such factors as investment income, expenses, mortality and withdrawal experience under this series of Universal Life policies.

GUARANTEED BASIS: The expense charges and cost of insurance are illustrated at the maximum allowed. The guaranteed minimum rate of interest on policy cash values is 4.5%.

Loan amount is increased, each year, by the interest due on the loan. Premium payment in excess of the basic premium will be applied to reductions of any loan. The death benefit shown is the "net" after loans or withdrawal amounts. Interest on loans will be charged in advance at 8% and will be capitalized on the policy anniversary date, policy termination or loan repayment.

Values illustrated are end of year values. Premium payments, loans and withdrawals are assumed to occur at the beginning of the policy year.

The current cost of insurance depends upon the premium payment pattern and the account value amount, and may increase or decrease accordingly.

**GUARANTEED VALUES:** Based on guaranteed interest, expense, and cost of insurance rates. The guaranteed interest rate is 7.5% of the 90 day CD rate, Chemical Bank of New York, but in no event less than 4.50%.

**PROJECTED VALUES:** Based on the projected interest rate, current expense and cost of insurance which are subject to change. Current interest rates are declared quarterly.

Projected and Guaranteed Values include guaranteed added interest credits on unborrowed values as follows: 0.25% at the end of year 10, an additional 0.25% at the end of year 15, and 0.125% at the end of years 17, 18, 19 and 20. The interest will be credited retroactively from the date of issue and prospectively while the policy is in force. Cash values equal to any outstanding loan balance will earn interest at 4.5%.

*Account Values subject to a graded surrender charge if policy is wholly or partially surrendered in first nine years.
†The Payments shown are not sufficient to maintain a policy in force under these assumptions.
The policy matures at age 100 on a projected basis with an Account Value of $2,093,184.
This is an illustration, not a contract.
This illustration has been checked against federal tax laws.
This illustration has been checked against the 7-pay test.
Illustrates total cash accumulation based on current interest rate. Net gain represents cash growth in excess of cumulative payments made into the policy. Net gain at age 65, $74,171. Net gain at age 75, $210,652.

A LIVING BENEFIT UNIVERSAL LIFE PLAN

Living Benefit Universal Life Plan, described below, is one of the most versatile and comprehensive
life insurance programs available.

Most of us realize the need to provide additional dollars for our families in the event of our premature
death. However, in today's world of improved technology, the main concern has changed from
“What if I die prematurely?” to “What if I survive a serious illness?”
• “How do I pay for expenses not covered by health insurance?”
• “How do I pay for rehabilitation expenses?”
• “How do I make up for lost income?”

The solution to this new problem is “...” With this innovative
program, we will pay you a Living Benefit upon confirmed diagnosis of one of several specified
conditions. You do not have to die to collect!

Covered Conditions:
• Heart attack
• Stroke
• Life-Threatening Cancer
• Renal Failure
• Coronary Heart Surgery

Here is How It Works:
• You will receive $25,000 upon diagnosis of one of the specified catastrophic illnesses.
• If you die after receiving this Living Benefit, your beneficiaries will receive an additional
  $75,000.
• However, should you never experience one of these conditions, your beneficiaries will receive
  $100,000 tax-free and probate-free upon your death, plus any additional supplemental benefits.

Thank you for considering our exciting new Living Benefit plan. We hope you will agree that this
program offers the highest degree of protection and peace of mind for you and your loved ones.

**Federally Legislated Guideline Initial Premium is** $3,132.15

*Based on guaranteed values, policy coverage would terminate during policy year 36 unless planned periodic premiums are increased at that point. Additional contributions that increase the death benefit of the policy may require evidence of insurability.
NOTES TO THE UNIVERSAL LIFE ILLUSTRATION

Values are illustrated and based on premiums shown in the Total Premiums column of the Ledger Printout and are subject to policy provisions. Guaranteed values are calculated using the maximum cost of insurance factors that would be contained within the policy and a minimum guaranteed interest rate of 5.0%. Projected values are calculated using projected cost of insurance factors, and a current nonguaranteed interest rate of 8.00%, with an additional nonguaranteed persistency bonus of .5% of additional interest beginning in the sixth policy year. The current interest rate and projected cost of insurance factors are not guaranteed and may be changed by the company. Your actual values under the insurance program may change with variations in the interest rates, cost-of-insurance factors (mortality risk charges), and frequency, timing, and amount of your premium payments. As plan values may change in the future due to these factors, subsequent and similar illustrations may be furnished to you upon request.

Projected costs of insurance factors are based upon our current estimations of future mortality experience and are not guaranteed.

The amount of actual cash value available upon surrender of this coverage is subject to a surrender charge as described in your issued policy. During the first policy year, the amount of such charge would be $363.75. Charges for subsequent policy years are shown on Page 1 of this proposal as the difference between accumulation value and surrender value.

In the event of a policy loan, interest at the rate of 7.4% would be due annually in advance. The current rate of interest being credited to policy values impaired by policy loans is 6.0%

After the first policy year, withdrawals can be made against the net surrender value of the policy for a $25 administrative charge, as long as the amount is at least $500. After the withdrawal is made, at least $500 must remain in the surrender value. Withdrawals decrease the death benefit of the policy by the amount withdrawn.

Premium contributions, loans, and withdrawals are illustrated as of the beginning of the year. All other amounts are shown as of the end of the year.

Death benefits are shown as being reduced by any applicable withdrawals or loans. Any increases in coverage requested by the policyholder may require evidence of insurability, and are subject to the appropriate cost of insurance deductions.
A corridor amount of coverage, designed to comply with the current tax code, must be maintained in order for the coverage to enjoy favorable tax treatment. As such, any single premium, or other substantial additional premium tendered, or any request for a reduction in coverage that would violate the requirements of the tax code may result in the loss of this favorable tax treatment. The tax status of this policy as it applies to the owner of this contract should be reviewed each year.

Every effort has been made to comply with current tax law. However, due to the complexities and frequent changes in the tax code, premium patterns illustrated may not comply with all federal limitations. The content of this illustration should not be interpreted as assurance that premium tests have been satisfactorily met. In the event actual premiums received may adversely affect tax treatment, the policyholder will be notified. For complete information, it is recommended that a qualified tax advisor be consulted.

An explanation of the intended use of the cost indices is provided in the Life Insurance Buyer’s Guide. Such indices are useful only for the comparison of the relative costs of two or more similar policies. These indices have been calculated using the interest adjusted method with an assumed interest rate of 5%.

At the end of the 10th policy year, $1,500.94 was returned to the projected accumulation value by the UL-300 + Plus.

UL-300 + Plus is subject to guidelines which are numerous and complex. Please consult the policy form for complete details and information. Projected cost-of-insurance factors are based upon our current estimations of future mortality experience and are not guaranteed.

The schedule of premiums illustrated on this proposal would qualify the policy for the UL-300 + Plus return of mortality bonus through the 60th year, assuming there were no loans or withdrawals which violated the UL-300 + Plus guidelines. (See the policy for full details.)

This illustration includes an accelerated benefit rider which will pay a pre-death benefit for the conditions outlined in the policy. If the benefit is not paid sooner, it will be included as a death benefit.

**Current Values**

Dividends buy paid-up additions to age 100.

Dividends in this Illustration are based on the current dividend scale and are neither guaranteed nor estimated for the future.

Issue of this policy at the rates illustrated is subject to underwriting approval.

Based on an initial seven pay premium of 35,900.00. This policy is not a modified endowment contract.

The death benefit shown is paid upon the second death. No insurance benefits other than the optional 1st-death term rider are payable at the first death. Age shown is based upon the joint equal age and is not necessarily the age of either insured.

Summary at 20 yrs

- Total Premiums: 101,191
- (Loss) Total Cash Value: 241,501
- (Guaranteed) Value of Dividends: 206,035
- (Value of Dividends): 35,466
- Difference: -140,310
- Average Difference per Year: -7,015
- Average Death Benefit: 1,006,626
- 5% Interest-Adjusted Costs:
  - At 10 Years: 3.85
  - At 20 Years: -1.76
- 5% Interest-Adjusted Payments:
  - At 10 Years: 16.64
  - At 20 Years: 10.11
Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 4.00%.

All cash values shown are end-of-year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endowment for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endowment. This test is not a guarantee that a particular policy will not be classified as a modified endowment in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on the 1991 dividend scale.

Actual future dividends may be higher or lower than those illustrated depending on the company’s actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned had the premiums been invested rather than paid to the insurer.

Net death benefits on all permanent plans means the face amount plus riders, if any, plus the end of year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 8.00%. Dividends are affected by policy loans. Under current economic conditions, in any given policy year the greater the amount of loan, the smaller the dividend. (This does not apply to economix term, which has no loan value.)

The illustration is calculated assuming that the policy split option is included. The policy split option is included in a policy if it insures two lives married to each other. Your agent can supply details on the importance of this feature and details regarding its exercise.

The death benefit is payable only when both insureds have died.

The initial additional amount shown in this illustration is only available if PUA/PUI payments and OYD premiums illustrated are paid. If payments are not made, the target amount may be reduced.

The death benefits in this illustration, particularly in the later policy years, are sensitive to the schedule of PUA or PUI deposits as well as the current dividend scale. If the schedule of deposits is not maintained, or the dividend scale is decreased, the death benefit may not be maintained.

The initial number of years of cash outlays shown in this illustration may be less than the required number because of the manner in which the illustration was requested. If so, additional cash outlays will be required in later years.

The number of years of required cash outlays depends upon ages at issue, smoking classifications, policy class, face amount, and continuation of current dividend scale and one-year term rates, and assumes no policy loans. This is not an automatic dividend option. Policyowner must request change of dividend option at policy year indicated. He may pay the balance of premium by surrendering a portion of paid up insurance. This is not a paid-up policy; premiums are due and payable in all policy years.

1) Interest-adjusted cost indexes are based on the policy excluding riders and are useful in comparing policies of similar types.
While it may be possible to exclude the proceeds of this policy from the insured’s estates, legal advice should be obtained from qualified counsel.

Summary at 20 Yrs

| Total Premiums: | 197,383 |
| (Less) Total Cash Value: | 309,312 |
| (Guaranteed) | 206,035 |
| (Value of Dividends) | 103,277 |
| Difference | -111,929 |
| Average Difference per Year | -5,596 |
| Average Death Benefit | 1,004,588 |
| 5% Interest-Adjusted Costs(1): | |
| At 10 years | 5.31 |
| At 20 Years | 1.85 |
| 5% Interest-Adjusted Payments: | |
| At 10 Years | 18.10 |
| At 20 Years | 13.72 |
EXHIBIT Q: PAGE 6 OF 15

This illustration is based on the plan, face amount, dividend option and underwriting class specified by the agent. However, results based on dividends are based on a modified scale. The interest rate factor of this dividend scale is assumed to be a level 8.000%, but other components of this scale are identical with the 1991 dividend scale. This illustration is intended to show what term insurance amounts and costs would be if the dividend scale decreases materially due to a reduction in interest rates.

Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 8.000%.

All cash values shown are end-of-year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endorsement for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endorsement. This test is not a guarantee that a particular policy will not be classified as a modified endorsement in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on a hypothetical dividend scale.

Actual future dividends may be higher or lower than those illustrated depending on the company's actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned had the premiums been invested rather than paid to the insurer.

Net death benefit on all permanent plans means the face amount plus riders, if any, plus the end-of-year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 8.00%. Dividends are affected by policy loans. To the extent the dividend scale is based on an interest rate greater than 7.00%, any given policy year the greater the amount of loan, the smaller the dividend.

The illustration is calculated assuming that the policy split option is included. The policy split option is included in a policy if it insures two lives married to each other. Your agent can supply details on the importance of this feature and details regarding its exercise.

The death benefit is payable only when both insureds have died.

The target additional amount shown in this illustration is only available if PUA/PUI payments and DYT premiums illustrated are paid. If payments are not made, the target amount may be reduced.

The death benefits in this illustration, particularly in the later policy years, are sensitive to the schedule of PUA or PUI deposits as well as the current dividend scale. If the schedule of deposits is not maintained, or the dividend scale is decreased, the death benefit may not be maintained.

1. Interest-adjusted cost indexes are based on the policy excluding riders and are useful in comparing policies of similar types.

While it may be possible to exclude the proceeds of this policy from the insureds' estates, legal advice should be obtained from qualified counsel.

Summary at 20 yrs:

| Total Premiums: | 202,383 |
| (Less) Total Cash Value: | 559,266 |
| (Guaranteed) | 255,440 |
| (Value of Dividends) | 303,826 |
| Difference | -356,883 |
| Average Difference per Year | -17,844 |
| Average Death Benefit | 1,012,351 |
Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 4.00%.

All cash values shown are end of year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endowment for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endowment. This test is not a guarantee that a particular policy will not be classified as a modified endowment in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on the 1991 dividend scale.

Actual future dividends may be higher or lower than those illustrated depending on the company’s actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned had the premiums been invested rather than paid to the insurer.

Net death benefit on all permanent plans means the face amount plus riders, if any, plus the end of year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 8.00%. Dividends are affected by policy loans. Under current economic conditions, in any given policy year the greater the amount of loan, the smaller the dividend. (This does not apply to economic term, which has no loan value.)

The illustration is calculated assuming that the policy split option is included. The policy split option is included in a policy if it insures two lives married to each other. Your agent can supply details on the importance of this feature and details regarding its exercise.

The net paid up insurance shown is the amount that can be purchased with the end of year net cash value (remainder after loan has been repaid). Since repayment of the loan at this time may have tax consequences, you should consult your agent for alternatives.

Results in this illustration assume death of a specified insured in a certain policy year. Should death occur before or after that specified year, results will be different.

The death benefit is payable only when both insureds have died.

The target additional amount shown in this illustration is only available if PUA/PUI payments and OYT premiums illustrated are paid. If payments are not made, the target amount may be reduced.

The death benefits in this illustration, particularly in the later policy years, are sensitive to the schedule of PUA or PUI deposits as well as the current dividend scale. If the schedule of deposits is not maintained, or the dividend scale is decreased, the death benefit may not be maintained.

(1) Interest-adjusted cost indices are based on the policy excluding riders and are useful in comparing policies of similar types.

While it may be possible to exclude the proceeds of this policy from the insureds’ estates, legal advice should be obtained from qualified counsel.

In this illustration must be accompanied by the following supplemental illustrations.

© 2020 National Association of Insurance Commissioners
EXHIBIT Q: PAGE 12 OF 15

This illustration is based on the plan, face amount, dividend option and underwriting class specified by the agent. However, results based on dividends are based on a modified scale. The interest rate factor of this dividend scale is assumed to be a level 8.00%, but other components of this scale are identical with the 1991 dividend scale. This illustration is intended to show what term insurance amounts and costs would be if the dividend scale decreases materially due to a reduction in interest rates.

Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 4.00%.

All cash values shown are end of year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endowment for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endowment. This test is not a guarantee that a particular policy will not be classified as a modified endowment in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on a hypothetical dividend scale.

Actual future dividends may be higher or lower than those illustrated depending on the company's actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned if the premiums been invested earlier than paid to the insurer.

Net death benefit on all permanent plans means the face amount plus riders, if any, plus the end of year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 8.00%. Dividends are affected by policy loans. To the extent the dividend scale is based on an interest rate greater than 7.00%, in any given policy year the greater the amount of loan, the smaller the dividend.

The illustration is calculated assuming that the policy split option is included. The policy split option is included in a policy if it insures two lives married to each other. Your agent can supply details on the importance of this feature and details regarding its exercise.

The death benefit is payable only when both insureds have died.

The target additional amount shown in this illustration is only available if PU or PUI payments and OVT premiums illustrated are paid. If payments are not made, the target amount may be reduced.

The death benefits in this illustration, particularly in the later policy years, are sensitive to the schedule of PU or PUI deposits as well as the current dividend scale. If the schedule of deposits is not maintained, or the dividend scale is decreased, the death benefit may not be maintained.

(1) Interest-adjusted cost indices are based on the policy excluding riders and are useful in comparing policies of similar types.

While it may be possible to exclude the proceeds of this policy from the insured's estates, legal advice should be obtained from qualified counsel.

In _________this illustration must be accompanied by the following supplemental illustrations.

### Summary at 20 yrs

- **Total Premiums:** 101,191
- **Less Total Cash Value:** 581,726
- **Guaranteed Cash Value:** 255,440
- **Value of Dividends:** 126,286
- **Difference:** -280,534
- **Average Difference per Year:** -14.06
- **Average Death Benefit:** 1,010,208

**5% Interest-Adjusted Costs:**
- **At 10 Years:** -4.86
- **At 20 Years:** -8.28

**5% Interest-Adjusted Payments:**
- **At 10 Years:** 15.97
- **At 20 Years:** 6.44
EXHIBIT Q: PAGE 15 OF 15

Guaranteed cash values as shown on this illustration are only available if all premiums have been paid. The annual rate of interest underlying the computation of these guarantees is 4.00%.

All cash values shown are end of year values.

All illustrations for individual life insurance products are tested for the possibility of classification as a modified endowment for the purposes of federal income taxation. This test applies to policies entered into after June 20, 1988 and may not be used for policies in force before that date.

The illustrated outlays shown on this illustration would not cause it to be classified as a modified endowment. This test is not a guarantee that a particular policy will not be classified as a modified endowment in the future.

Figures depending on dividends are neither estimated nor guaranteed, but are based on the 1991 dividend scale.

Actual future dividends may be higher or lower than those illustrated depending on the company's actual future experience.

The cost of the above policy over a period of years cannot be determined without taking into account the interest that would have been earned had the premiums been invested rather than paid to the insurer.

Net death benefits on all permanent plans means the face amount plus riders, if any, plus the end of year dividend less policy loans. A full dividend is not generally paid upon death during the policy year. Other variables are possible. Your agent will define the rules upon request.

The policy loan interest rate shown on your illustration is payable in advance at a discount rate equivalent to an annual rate of 6.00%. Dividends are affected by policy loans. Under current economic conditions, in any given policy year the greater the amount of loan, the smaller the dividend. (This does not apply to economax term, which has no loan value.)

The illustration is calculated assuming that the policy split option is included. The policy split option is included in a policy if it insures two lives married to each other. Your agent can supply details on the importance of this feature and details regarding its exercise.

Results in this illustration assume death of a specified insured in a certain policy year. Should death occur before or after that specified year, results will be different.

The death benefit is payable only when both insureds have died.

The target paid-up amounts shown in this illustration is only available if premium payments and OYU premiums illustrated are paid. If payments are not made, the target amount may be reduced.

The death benefits in this illustration, particularly in the later policy years, are sensitive to the schedule of OUP or PUI deposits as well as the current dividend scale. If the schedule of deposits is not maintained, or the dividend scale is disrupted, the death benefits may not be maintained.

The number of years of required cash outlays depends upon ages at issue, smoking classifications, policy class, face amount, and continuation of current dividend scale and one year term rates, and assumes no policy loans. This is not an automatic dividend option. Policy owner must request a policy dividend option at policy year indicated. He may pay the balance of premium by surrendering a portion of paid-up insurance. This is not a paid-up policy; premiums are due and payable in all policy years.

[1] Interest-adjusted cost indices are based on the policy excluding riders and are useful in comparing policies of similar types.

While it may be possible to exclude the proceeds of this policy from the insureds' estates, legal advice should be obtained from qualified counsel.
LIFE INSURANCE SALES ILLUSTRATIONS

APPENDIX III
SUMMARY OF COMMENTS ON THE PRELIMINARY REPORT

The Task Force received a number of comments on the preliminary report, both in writing and at the open forums. These comments are summarized below. The Task Force carefully reviewed these comments in the development of our conclusions. Copies of all correspondence will be made available to the AAA and CIA for their consideration.

Applicability to variable life

Several commenters noted that the alternatives identified were not appropriate for variable life policies.

The Task Force agreed that our report focused on the illustration practices for general account policies. The first section was changed to exclude variable life policies from the scope of our research, other than as an alternative illustration model.

Define the problem and the role of the actuary

Several commenters suggested the need to define the problems with illustrations at an earlier point in the report and the role of the actuary in solving these problems.

The Task Force agreed and added these points to the first section.

Research methodology

Many commenters suggested that our research should include consumer interviews or focus groups.

The Task Force discussed this approach with market researchers associated with LIMRA. They indicated that focus groups would tell us how they think they should have used illustrations during the sales process, as opposed to how the illustration was actually reviewed and considered by the buyer. For this reason, we did not pursue this methodology.

What data should be on the illustration

One commenter noted that our Task Force does not define the data that every consumer should have available on the illustration.

The Task Force used current regulations to define a starting point. We recommended changes as we deemed necessary and appropriate.
Valuation

One commenter suggested that the underlying problem in the U.S. is its conservative valuation procedures. The Task Force believes the revision of valuation procedures is beyond the scope of our research.

Concerns with current practices

Several commenters brought what they considered unique or questionable illustration practices to our attention to ensure that the final report would encompass these practices. The Task Force considered these comments in developing our conclusions.

Alternatives to Type B usage

Many commenters agreed with the conclusion that illustrations cannot be used for Type B analysis in today’s environment. Those who disagreed argued that consumers require a tool to measure relative performance. Among their comments were:
- It should be possible to provide reasonable estimates of future performance based on credible assumptions
- Sensitivity analysis or the range approach should help the consumer determine variation
- Illustrations are the best indicator until some better measure is developed.

The Task Force acknowledges that a methodology for measuring and comparing products should be developed. We have added a recommendation that the SOA continue research in this area. We strongly support sensitivity analysis and the use of reasonable, credible assumptions, but that still does not address the variation among companies regarding relative conservatism in the choice of underlying assumptions.

Concerns with alternative practices

Many commenters pointed out concerns and problems with the suggested alternatives in the areas of implementation, helpfulness to the consumer, and potential for abuse. The Task Force considered these comments in restructuring the alternatives and developing conclusions on each.
LIFE INSURANCE SALES ILLUSTRATIONS

Disclosure and standards

Many commenters stated a preference for solutions involving improved disclosure or standards of practice, rather than increased regulation. Some even provided sample disclosures for the illustration.

These comments will be passed on to the CIA and AAA for their consideration in developing an implementation plan for changes to illustration practices.

Limited control by actuaries

Several commenters noted that the illustration practices are set by company management, with input from the actuaries. Further, neither the actuaries nor management are present when the agent meets with the buyer. Therefore, there is little that actuaries can effectively do to change industry practices.

The Task Force acknowledges the fact that the role of the actuary in the illustration process does not provide our profession with complete control. However, the actuary has a role in identifying shortcomings of current practices for management and others, and in developing appropriate and ethical standards of practice for the profession.

IUL Illustration (A) Subgroup
Conference Call
January 28, 2020

The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call Jan. 28, 2020. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andrew Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Bill Carmello (NY); Peter Weber (OH); Mike Boerner, John Carter and Rachel Hemphill (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Comments on the IUL Illustration Questions Exposed on Nov. 1

Mr. Andersen said that in 2019, there were two Life Actuarial (A) Task Force conceptual votes on indexed universal life (IUL) issues. The Task Force voted to prohibit products with multipliers from illustrating better than products without multipliers and products with other product enhancements, such as cap buy-ups, from illustrating better than products without those features. He said there are a number of conceptual issues to be resolved, including the grandfathering of illustrations for previous policies, the handling of loans and the drafting of revised language for Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49) to reflect these concepts.

Mr. Weber recalled that the Subgroup had agreed by straw poll to put a 100-basis point limit on loan arbitrage.

Mr. Boerner had a similar recollection. He asked NAIC staff to review previous Subgroup minutes to confirm his recollection.

Scott Harrison (Harrison Law Office) said he met with several companies to attempt to reach consensus on language to capture the proposed AG 49 revisions. He said during those meetings, a number of interpretational issues were identified. The group decided to list those issues, identify some goals and attempt to provide additional context around the proposed language. He provided an industry document (Attachment Six-B1) intended to identify four issues with the proposed language that may require clarification.

Ernest Armijos (Pacific Life) said the first issue is to clarify whether state insurance regulators have a preference for either of the previously proposed versions of the language addressing the supplemental option budget (Option A or Option B). He said both versions achieve much of the Task Force’s objective of restricting the illustration of multiplier and buy-up features, but both still allow illustration of a smaller multiplier benefit. He said if state insurance regulators prefer neither option, industry is willing to pursue a different solution. He said Option A defines the option budget as a charge that explicitly increases the amount spent to generate index credits. It limits the indexed credits such that they can only be as high as the charges.

Mr. Armijos noted that there are still a few remaining interpretational issues, as indicated on page 2 of the industry document. He said the differences in interpretations indicate the difficulty in determining how a charge can be used in a given situation. Two examples were provided to demonstrate the variation in interpretations of how charges can be used.

Graham Summerlee (Lincoln Financial Group) said the examples in the industry document are attempting to point out instances that are contrary to the Subgroup’s premise that a product with a multiplier can illustrate no better than a product without a multiplier. He said industry wants the Subgroup to determine whether the results depicted in the examples are acceptable, or if the Subgroup requires its premise to be firmly upheld in all situations. He said the decision is needed in order for appropriate language to be proposed.
Mr. Andersen said it does not seem possible to draft language that would be applicable to all situations. He said if the new language results in maximum illustrated rates that are less than the 7% or 8% experienced prior to AG 49, the Subgroup will generally be happy.

Gayle Donato (Nationwide) suggested that a fully revised AG 49 be drafted that would address the multiple components that can be included in IUL policies.

Mr. Andersen asked for comments, due by Feb. 14, on the options related to the supplemental option budget presented in the industry document. He said comments that provide pros and cons of either option, provide an additional option, or include proposed draft revisions to AG 49 will be appreciated.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
INDUSTRY FEEDBACK ON IUL EXPOSURE DRAFTS (10/29/2019 and 11/01/2019)

Since the LATF straw poll taken on October 17, 2019, insurers have submitted drafts of changes to AG49 that reflect their interpretation of the types of revisions that are needed to support LATF’s stated objective: That multiplier products illustrate no higher than non-multiplier products. Those proposed revisions are referred to in this document as the “11/01/2019 Exposure” or “the Nationwide letter”, and the “10/29/2019 Exposure.”

Despite these and other efforts to produce satisfactory changes to AG49, progress has been hindered because certain key provisions that have been proposed are subject to multiple interpretations over which the industry lacks consensus. The uncertainty over the treatment of buy-up accounts, which was resolved at the NAIC Austin meeting, is just one example of differing interpretations of draft AG49 changes requiring guidance from regulators.

To continue the progress that was made in Austin and move toward producing amendments to AG49 in line with LATF’s stated intentions, this document identifies four issues in the proposed language for potential clarification. With respect to each issue we (1) identify the relevant proposed language; (2) describe the possible interpretations; and (3) note the impact each interpretation will have on the illustration. We believe it is critical that any changes to AG49 be clear and unambiguous, which is why receiving clarification from regulators on these provisions is necessary before drafting of changes to the guideline can be finalized.

**Issue #1. Are either of the current options regarding the Supplemental Option Budget which are meant to restrict the illustration of multiplier and buy-up features acceptable to regulators?**

Two different versions of language addressing the Supplemental Option Budget have been proposed (described in more detail below as “Option A” and “Option B”). While both Option A and Option B achieve much of what LATF intended to accomplish on its October 17, 2019 straw vote, they do so in different ways. Both would still allow for some, albeit significantly smaller, multiplier benefits to be shown. Clarification is needed as to whether regulators have a preference between Option A and Option B, or another approach.
Option A: 11/01/2019 Exposure

The proposed language provides as follows:

3. **G. Supplemental Option Budget:** Any asset-based charges or other policy charges that are explicitly used to increase the total amount spent to generate the Indexed Credits of the policy. This amount is expressed as a percent of the policy’s indexed account value.

4. **E. If charges that fund a Supplemental Option Budget are deducted from the illustrated cash value, then Indexed Credits generated by the return from the Supplemental Option Budget within the scenario being illustrated may be illustrated in an amount up to, but not exceeding, such charges.

**Benefit:** Clearly identifies the Supplemental Option Budget as a charge that is explicitly used to increase the total amount spent to generate Index Credits. It is also clear that any Indexed Credits, by the return from the Supplemental Option Budget, can only ever be as high as the charges themselves.

**Interpretational Issues:** The draft language allows for at least two interpretations, each producing different outcomes:

**Interpretation A:** The draft language does not allow illustration of bonuses other than those funded through NIER to enhance the maximum AG49 values.

**Interpretation B:** The draft language allows a bonus without a charge to enhance the maximum AG49 values since it is already limited by DCS testing as modified in Section 5B.

The differences in interpretation result from the fact that policy charges in general can be used for a variety of purposes. Determining how a charge is being used in every situation could be extremely difficult to ascertain.

What follows are examples of how, working combination with section 5B, this section may still allow for bonuses that take the shape of a multiplier to be illustrated.

**Example 1:** Assuming a cap of 10% and a maximum AG49 lookback of 6.15%, suppose we assume that the cost of such an account is 4.5%. 145% of 4.5% is 6.525%. Based upon those assumptions it would be possible to Illustrate a persistency bonus not explicitly funded by charges but which provides a credit expressed as a percentage of index-linked credits and which is supported by hedges. The supporting hedges could increase the earned rate from 6.15% to 6.525% and still comply with this draft language.

**Example 2:** Assume with an option budget of 4.5%, a cap of 10% can be afforded with a multiplier of 0%, resulting in a maximum AG49 lookback rate of 6.15%. The option budget
of 4.5% could alternatively purchase a cap of <10% and a multiplier > 0%, such as a cap of 8% and a multiplier of 15%, resulting in a maximum AG49 lookback rate of 5.15%. The chart below shows the effective illustrated rates for these two indexed accounts.

<tr>
<td>Effective illustrated rate post multiplier (assuming max AG49 illustrated rate)</td>
<td>6.15% x (1+ 0% multiplier) = 6.15%</td>
<td>5.15% x (1+ 15% multiplier) = 5.92%</td>
</tr>
</tbody>
</table>

**Other issues:** Many discussions have centered on the potential issues that defining the Supplemental Options Budget as a charge could create. Policy charges in general can be used for a variety of purposes and it could be difficult to ascertain whether a charge is being used explicitly for the purposes of generating indexed credits. For example, it would be difficult to know whether a portion of COI charges or per 1000 Face Amount charges is being used to increase the option budget. Another example would be that a source other than a charge could be used to fund a supplemental option budget, such as reducing a persistency bonus in later years to fund a supplemental option budget.

**Option B: 10/29/2019 Exposure**

The proposed language provides as follows:

3. **G. Supplemental Option Budget:** The total amount spent to generate the Indexed Credits of the policy minus the Annual Net Investment Earnings Rate. This amount is expressed as a percent of the policy’s indexed account value.

4. **E.** The total Index Credits illustrated shall not exceed the annual earned interest rate underlying the disciplined current scale as defined in 5 (A) and (B).
**Benefit:** This version bypasses the issue of where the budget for policy enhancements can come from by tying the maximum illustrated enhancement to the Net Investment Earned Rate. This would help close a potential loophole it is tied to a well-defined metric.

**What it still allows:** In combination with section 5B, this section may still allow illustration of charged for policy enhancements such as multipliers and buy-up accounts. A simple example of this would be to assume a cap of 10% and a maximum AG49 lookback of 6.15. Assume further an earned rate of 4.5% and a hedge cost of 4.5%. 145% of 4.5% is 6.525%

Here are two examples:

**Example 1:** Given that 4.E. does not mandate that charged for features only credit back the charges, there is an avenue that a charged for multiplier could exist to increase the credit up to 6.525% from 6.15%. The multipliers or buy-up features that result from this difference (6.525% - minus 6.15%) are significantly reduced from the multipliers that exist in the market today. In the example above, the resulting multiplier would be 6% and the charge for such a multiplier could be 27bps of Account Value. Although the enhancements and charges are significantly reduced in this scenario, they would still be illustratable.

Example 2: Assume with an option budget of 4.5%, a cap of 10% can be afforded with a multiplier of 0%, resulting in a maximum AG49 lookback rate of 6.15%. The option budget of 4.5% could alternatively purchase a cap of <10% and a multiplier > 0%, such as a cap of 8% and a multiplier of 15%, resulting in a maximum AG49 lookback rate of 5.15%. The chart below shows the effective illustrated rates for these two indexed accounts.

**Other issues:** Some concerns around the language in 4E should be converted to a return on assets to be comparable to the annual earned interest rate.

**Issue #2: What are the appropriate ways to set the maximum illustrated rate for Index Accounts that have a different risk profile than the Benchmark Index Account?**

This issue relates to the current language in Section 4.C, which states:

```
For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in 4 (B).
```

**Why guidance is needed:**

Many index accounts have a different risk profile than the Benchmark Index Account. For example, certain index accounts use bonds, cash or commodities or use different crediting methods. AG 49 provides that the maximum illustrated rate for these index accounts is determined using actuarial judgment, subject to two requirements: the maximum illustrated rate (1) shall reflect an appropriate relationship to the expected risk and return of the applicable Benchmark Index Account and (2) shall not exceed the maximum illustrated rate for the Benchmark Index Account. The guideline provides little guidance for the first requirement. Are regulators okay with the fact that assessments of expected risk and return may vary in the industry? As an example, varying assessments could result in maximum illustrated rates that differ between products that have the same index, same crediting method, and same index parameters.
Issue #3: Clarification is needed as to whether the intent is to limit this to the dollar amount of earnings produced by the GA assets or the interest rate of earnings on the GA assets.

The direction provided by the IUL Subgroup is that the hedge cost that can assume a 145% return is limited to the earnings on the GA portfolio.

Example:

GA portfolio assets = $1000  
Earned rate on GA portfolio = 5%  
Dollar amount of GA earnings = $50

If the account value also equals $1000, using the dollar amount or rate allows the same hedge cost of up to $50 to assume a 145% return, resulting in a hedge return of $72.50.

However, when the account value is higher or lower than the assets, the two approaches can produce a different result.

Under the dollar amount approach, up to $50 of hedge cost can assume a 145% return, resulting in a hedge return of $72.50.

  If the account value is $800, the $50 hedge cost assuming 145% is 6.25% of the AV ($50 / $800)

  If the account value is $1,200, the $50 hedge cost assuming 145% is 4.17% of the AV ($50 / $1,200)

Under the interest rate approach, 5% of the account value can assume a 145% return, resulting in different amounts of hedge cost that assumes 145% than the dollar amount earned by the GA assets.

  If the account value is $800, 5% of the account value or $40 of hedge cost can assume 145%, producing a hedge return of $58.

  If the account value is $1,200, 5% of the account value or $60 of hedge cost can assume 145%, producing a hedge return of $87.
The Nationwide letter dated 11/12/2019 identifies two possible methods of incorporating hedge cost and return in DCS testing (Section 5.B.A) which can produce different results. Guidance is needed as to whether these differences are acceptable.

**ISSUE #4  Should any credits, such as a fixed bonus, that are not directly tied to the performance of an index account, be included within the 100 basis point limit?**

Proposed language for section 6.B in the 11/01/2019 Exposure indicates that credits, such as a fixed bonus, that are not tied directly to the performance of an index account, should not be included within the 100 basis point limit:

| If the illustration includes a loan, the total index credits to the policy loan balance shall not exceed the interest rate charged to the loan by more than 100 basis points. For example, if the loan charge is 4% of the loan balance, index credits to the loan balance cannot exceed 5%, regardless of product features available. |

However, the language above should include the following:

- Incorporating the pre-defined term “Indexed Credits” into the language above. From the “Definition” section of the 11/01/2019 exposure:
  - **Indexed Credits:** Any interest credit, multiplier, factor, bonus, or other enhancement to policy values that is linked directly or indirectly to an index or indices.
- How to incorporate charges used to fund a Supplemental Option Budget that apply to the loan balance
- Suggested revised language:

| If the illustration includes a loan, the total Indexed Credits as a result of the policy loan shall not exceed the illustrated rate charged to the loan by more than 100 basis points. The illustrated rate charged on the loan is inclusive of any asset-based fee or other policy charges used to fund a Supplemental Option Budget. For example, if the illustrated rate charged on the loan is 4% of the loan balance, Indexed Credits as a result of the policy loan cannot exceed 5%, regardless of product features available. |

Additionally, there are philosophical differences concerning whether credits, such as a fixed bonus, that are not directly tied to the performance of an index account, ought to be included within the 100 basis point limit. Guidance from regulators is therefore needed regarding the following two options:

- **Option #1:** The limit is absolute and therefore should apply to the total amounts credited to indexed account (inclusive of any non-indexed bonus).
Option #2: The limits should only apply to the credit that is tied to the index performance and the addition of a bonus that is not impacted by index performance should not be affected by the 100 basis point limit.

Once there is clarification around which option is preferred, additional language can be added to increase transparency around the issue.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

**Identification:**
Brian Bayerle, ACLI

**Title of the Issue:**
Remove 4% Floor from Life Standard Nonforfeiture Rate.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 NAIC Valuation Manual – VM-02 Section 3.A

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Upon any possible tax code (IRC, S. 7702) modifications to remove the hardcoded interest rate floor starting in 1/1/2021, the life standard nonforfeiture rate is being updated to ensure the minimum funding under state requirements does not exceed the maximum funding under federal requirements for life insurance contracts issued starting in 1/1/2021.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

**Notes:** VM APF 2020-07
VM-02

Version 1: Remove floor

Section 3: Interest

A. The nonforfeiture interest rate for any life insurance policy issued in a particular calendar year beginning on and after the operative date of the *Valuation Manual* shall be equal to 125% of the calendar year statutory valuation interest rate defined for the NPR in the *Valuation Manual* for a life insurance policy with nonforfeiture values, whether or not such sections apply to such policy for valuation purposes, rounded to the nearer one-quarter of 1%, provided, however, that the nonforfeiture interest rate shall not be less than the applicable interest rate used to meet the definition of life insurance in the Cash Value Accumulation Test under Section 7702 *(Life Insurance Contract Defined)* of the U.S. Internal Revenue Code 4%.

Guidance Note: For flexible premium universal life insurance policies as defined in Section 3.D of the *Universal Life Insurance Model Regulation* (#585), this is not intended to prevent an interest rate guarantee less than the nonforfeiture interest rate.

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total Exhibit 7</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

However, the Annual Statement Blank is presented as:

```
EXHIBIT 7 - DEPOSIT-TYPE CONTRACTS

1  2  3  4  5  6
Total Guaranteed Interest Contracts Annuities Certain Supplemental Contracts Dividend Accumulations or Refunds Premium and Other Deposit Funds
```

I think our reserve table would be better presented in the order of Exhibit 7, i.e.

Guaranteed Interest Contracts
Annuities Certain
Supplemental Contracts
Dividend Accumulations or Refunds
Premium and Other Deposit Funds

4. State the reason for the proposed amendment? (You may do this through an attachment.)

In my opinion, the listing of items in the reserve table should be consistent with the presentation in Exhibit 7.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Appendix

ISSUE:

Now that the concept of a prescribed template has been introduced into VM-31, it should be made clear what the rules are surrounding making changes to such templates.

SECTIONS:

Introduction, Section I, Process for Updating the Valuation Manual, Section A.1

REDLINE:

1. Substantive Items

Substantive changes to the Valuation Manual are proposed amendments to the Valuation Manual that would change or alter the meaning, application or interpretation of a provision. All changes to the Valuation Manual or to templates prescribed for use by the Valuation Manual will be considered substantive, unless specifically identified as either a nonsubstantive item or an update to a table by simple majority vote of the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force. Any item placed on the Active List as substantive will be exposed by the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force for a public comment period commensurate with the length of the draft and the complexities of the issue, but for no less than 21 days. The comment period will be deemed to have begun when the draft has been placed on the appropriate public NAIC web page. The Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will hold at least one open meeting (in person or via conference call) to consider comments before holding a final vote on any substantive items. Subsequent exposures of substantive items will be for a minimum of seven days. Meeting notices for Life Actuarial (A) Task Force/Health Actuarial (B) Task Force meetings will indicate if a vote is anticipated on any substantive items. Adoption of all changes at the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will be by simple majority.

REASONING:

Help assure readers that there no back doors through which to create new requirements.
The Life Actuarial (A) Task Force met via conference call May 14, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Discussed Comments on the ACLI AG 49 Proposal

Mr. Andersen said in 2018, the Life Insurance and Annuities (A) Committee identified features of indexed universal life (IUL) products, including multipliers, that should be illustrated in a manner consistent with Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49).

Mr. Andersen said a series of public meetings of the Task Force and the IUL Illustration (A) Subgroup followed, resulting in several state insurance regulator decisions. The decisions included: 1) initially addressing issues related to the illustrated rate instead of focusing on disclosures; 2) not re-litigating current AG 49 concepts but focusing instead on newer product features, including multipliers and other product features that resulted in crediting rates greater than 6.75%; 3) prohibiting products with multiplier features from illustrating better than products without multiplier features; and 4) prohibiting products with cap buy up features from illustrating more favorably than products without cap buy up features.

Mr. Andersen said preliminary discussions also included the possibility of tightening guidance related to loan arbitrage. He reiterated that actions that may lead to disclosures or more drastic changes to the structure of life illustrations would be deferred. He said that leading into spring 2020, it was determined that industry experts should work together to coalesce their divergent thoughts on enhancing AG 49 requirements.

Mr. Andersen said the American Council of Life Insurers (ACLI) gathered a broad cross-section of companies to work on the effort, resulting in the currently exposed ACLI proposal (Attachment Seven-A), which combines the best efforts of previous proposals submitted by numerous entities. He expressed confidence that the ACLI proposal conforms to the direction provided by the Task Force and makes good progress in eliminating the problems that led to the charge from the Life Insurance and Annuities (A) Committee. He said the ultimate goal is to have a high likelihood that consumer expectations will be met, and the market will be fair and stable.

Brian Bayerle (ACLI) reviewed the highlights of the ACLI proposal. He noted that the document assumes the proposed changes are to be applied prospectively to minimize consumer confusion and to lessen the extent of the changes to AG 49. He pointed out that the industry participants did not reach a consensus on the treatment of policy loans. He said the proposal cover letter does offer a list of pros and cons of the two policy loan options. He provided a sample spreadsheet (Attachment Seven-B) that demonstrates the mechanics of the proposal. Mr. Bayerle acknowledged some outstanding commenter questions and agreed to attempt to address them later. He emphasized that the proposal does incorporate the earlier decisions made by the Task Force.

Bobby Samuelson (The Life Product Review) read prepared remarks (Attachment Seven-C) on behalf of the industry advocates, independent consultants and academicians who jointly authored an independent proposal (Attachment Seven-D). The independent proposal advocates the use of the Black-Scholes model to determine the maximum illustrated crediting rate.

Ms. Ahrens asked how the Black-Scholes model input will be controlled. Mr. Samuelson responded that suggestions on how to standardize the input would be solicited from insurance companies and other experts.

© 2020 National Association of Insurance Commissioners
Mr. Tsang said the Black-Scholes model assumes a risk-neutral environment. He asked how the accumulation rate will be determined from the model results. Mr. Samuelson said the equity risk premium will be determined as a factor of the volatility. He said another alternative is to get independent experts to opine on the appropriate equity risk premium.

Mr. Chupp asked if examples could be provided to demonstrate how the Black-Scholes model would be used. Mr. Samuelson agreed to provide examples.

Birny Birnbaum (Center for Economic Justice—CEJ) discussed his comment letter (Attachment Seven-E) submitted in support of the independent proposal. He expressed concern that the proposal would not be reviewed fairly. He also opined that any changes to AG 49 should be applicable to in-force illustrations for existing policies, as well as to new policies.

Mr. Andersen said some companies agree with many of Mr. Birnbaum’s comments but have agreed to compromise in support of the ACLI proposal in order to advance the issue.

Donna Megregian (American Academy of Actuaries—Academy) discussed the contents of the comment letter from the Academy’s Illustration Work Group (Attachment Seven-F).

Mr. Andersen said the Subgroup will consider the technical issues identified in the comment letter.

Aaron Sarfatti (Equitable) said the Equitable proposal (Attachment Seven-G) is designed to address two state insurance regulator concerns about illustrations, the size of the option budget and the returns on the option budget. He suggested that the proposal is simpler than the ACLI proposal and could be blended with the independent proposal to form a revised AG 49.

Neil Kulkarni (Global Atlantic) said the Global Atlantic comment letter (Attachment Seven-H) supports the ACLI proposal Option 1 method for addressing loan leverage.

Gayle Donato (Nationwide) said the ACLI proposal follows the guidance that the Task Force provided. She said its conformance with Task Force directives is the primary reason the Nationwide comment letter (Attachment Seven-I) expresses support for the proposal.

Scott Harrison (High Point Strategies) spoke on behalf of the companies comprising the IUL Coalition. He said the companies worked closely with the ACLI to develop the proposal. The IUL Coalition’s comment letter (Attachment Seven-J) reflects its support for the ACLI proposal.

Alex Silva (John Hancock) stated the IUL Coalition support for the ACLI proposal Option 1 method.

Seth Detert (Securian Financial) said his comments (Attachment Seven-K) represent a group of companies. The companies support the ACLI proposal and recommend adoption of the ACLI Option 2 method for loan leveraging.

Mr. Andersen said the Subgroup will incorporate some of the technical aspects of the comments into the ACLI proposal.

Gary Sanders (National Association of Insurance and Financial Advisors—NAIFA) said that while it will not change the performance of the policy, retroactive application of the AG 49 revisions will cause harm to the producer/client relationship, the agent’s reputation and the client’s trust in the agent.

Mr. Birnbaum asked for exposure of the independent proposal.

Subsequent to this conference call, the Task Force chair exposed the independent proposal for a 14-day public comment period ending May 27.

Having no further business, the Life Actuarial (A) Task Force adjourned.
April 14, 2020

Mr. Fred Andersen
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI proposed draft of Actuarial Guideline 49-A

Dear Mr. Andersen:

The American Council of Life Insurers (ACLI)\textsuperscript{1} appreciates the opportunity to submit the following draft of AG49-A on prospective requirements for IUL illustrations.

During the March 3rd call of the Subgroup, multiple commenters suggested possible language to revise the Guideline. ACLI reviewed the various proposals and attempted to harmonize a version that both addresses concerns raised by regulators while providing consumers with the information necessary to make informed decisions on products they are considering for purchase.

The attached revisions (Attachment One) borrow concepts raised by the various drafts, and we’re appreciative of all the thought that went into each of these efforts. There are relatively small changes from the previously submitted March 24th draft, which are highlighted in the attachment. We note that, while this draft reflects our best-effort, there remain items that require additional consideration.

Accompanying the draft is a spreadsheet that walks through several examples of how the mechanics of this proposal are operating. One tab, ‘ACLI 04-14-20 Draft-BIA HB=NIER’, demonstrates how this works when the BIA hedge budget is equal to the NIER; these results should be consistent with the March 24th draft. Tab ‘ACLI 04-14-20 Draft-BIA HB<NIER’ shows the mechanics when the BIA hedge budget is less than the NIER, which shows the impact of many of the additional edits in this proposed version.

Consistent with the ACLI’s established opposition to retroactivity, AG49-A assumes that these new requirements are applicable on a prospective-only basis, and solely for policies issued after the guideline’s effective date.

ACLI notes the following in this best-effort draft:

- Definitions in Section 3 were refined from the earlier ACLI 02-21-20 draft.
- Language in Section 4 and 5 were largely borrowed from the Securian et al draft, with several modifications. We note the language in Section 5 requires additional consideration.
- For the treatment of Policy Loans (Section 6 and within the definition of “Alternate Scale”), industry is offering two proposals for regulators to consider. We note that the language in this

\textsuperscript{1} The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers' financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers' products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at \url{www.acli.com}.

American Council of Life Insurers
101 Constitution Avenue, NW, Washington, DC 20001-2133
(202) 624-2169  \texttt{briandbayerle@acli.com}
\url{www.acli.com}
section may require additional modification. This language attempts to capture the two main approaches previously submitted.

Indexed UL products may allow the loaned amount to remain in the index and earn index credits. When the index return is higher than the loan charged rate then the loan is “leveraged”. IUL products are the only product type where actuarial guidelines contemplate this type of leveraging in illustrations. An objective for regulators in tightening this language is to ensure that the Supplemental Hedge Budget is not double counted.

During a straw poll at the end of the October 17 conference call, the vote favored language similar to Option 2. However, some of the language proposed subsequent of this call was similar to Option 1. We lay out arguments below for each approach, and we recommend further discussion on the topic.

We note there are advantages of each approach:

- **Option 1**: 100 bp loan leverage limit only applies to index credits:
  - Provides consistent treatment of illustrated bonuses between fixed UL and indexed UL, as well as consistent treatment of standard loans and indexed loans within an indexed UL.
  - Is consistent with the original scope of AG49, which was to apply to index-linked credits.
  - Allows for the illustration of consistent maximum crediting rates between IUL policies with a loan and IUL policies without a loan.
  - The Option 2 language may pose technical difficulties to implement.
  - The Option 2 language may be read to disadvantage innovative product designs, such as policies that offer wellness credits to customers who engage in activities that help them live longer and healthier lives.

- **Option 2**: 100 bp loan leverage limit applies to index credits and other types of bonuses:
  - If the limit only applies to Index Credits, loan leverage may exceed 100 bps using fixed rate bonuses or other innovative product designs.
  - Since all index accounts will illustrate similarly under the new AG 49, other bonus types may become more common.
  - This is a maximum illustration limit to prevent illustrations that are overly optimistic.
  - Products could still offer other bonus types and demonstrate how they work at lower interest rate illustrations or when loans are not illustrated.

We look forward to a discussion of our proposed language. Thank you.

Sincerely,

[Signature]

cc Reggie Mazyck, NAIC
Actuarial Guideline XLIX-A – Draft [ACLI DRAFT APRIL 14, 2020]

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption*]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for in-force illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].

i. Sections 1 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.
3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

i. The \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for each Index Account does not exceed the lesser of the maximum \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for each Index Account shall not exceed the average of the maximum \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for the illustrated scale and the guaranteed \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for that account. However, the \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for each Index Account shall never be less than the guaranteed \(\text{credited-rate} \times \text{total annual percentage rate of Indexed Credits} \) for that account.

ii. If the illustration includes a loan, the illustrated \(\text{rate credited to the loan balance does policy loan interest credited rate shall not exceed the illustrated loan charge-policy loan interest rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.}

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedges for Indexed Credits), less provisions for investment expenses and default costs, allocated to support the policy. Charges of any kind are not included in the Annual Net Investment Earnings Rate.

B.C. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500\(^\circ\) Index value only, over a one-year period using only the beginning and ending index values. (S&P 500\(^\circ\) Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

vi. Additional amounts credited The hedge budget used to determine the cap in 3 (C) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind are not included when determining the applicable cap rate.
vii. There are not less than three additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account that are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values linked to an index or indices in excess of the interest calculation, including but not limited to experience refunds or multipliers and bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. A policy shall have no more than one Benchmark Index Account.

C.D. Fixed Account: An account where the amounts credited are not tied to an external index or indices.

D.E. Index Account: An account where the amounts credited are tied to an external index or indices.

F. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Credits to the policy resulting from a floor are included.

G. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This amount should be consistent with the hedging program of the company.

H. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

I. Policy Loan Interest Rate: The annual interest rate that is charged on any Loan Balance. This does not include any other policy charges.

J. Policy Loan Interest Credited Rate: The annual interest rate credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.

   i. For the portion of the account value backing the Loan Balance that is in a Fixed Account, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

[OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI Comment Letter; language for Option 1 and Option 2 may need to be tightened up:

   Option 1: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account, as defined in the policy.

   Option 2: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact the portion of the account value backing the Loan Balance, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.]

K. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the hedge budget that determines the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. Illustrated Scale

The credited rate total annual percentage rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:
A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

ii. If the insurer does not offer applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the total Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

iii. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate. Account that is not the Benchmark Index Account in 3 (C), the total Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The maximum Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the illustrated scale. The determination shall Index Account.

ii. The total Indexed Credits that reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the illustration actuary use actuarial judgment to determine this value using bookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

B. For purposes of compliance with Section 6 (C) of Model #582, the credited rate for Supplemental Hedge Budget may cause the illustrated scale rate to exceed the earned interest rate underlying the Disciplined Current Scale. Applicable rate calculated in 4 (B).

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale.
The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for indexed based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% for the policy, inclusive of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy and hedge assets that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed.
i. the Annual Net Investment Earnings Rate, plus

ii. 45% of the lesser of (1) and (2):

1. Hedge Budget minus any floor.

2. The minimum of the Annual Net Investment Earnings Rate and the hedge budget that determines the Benchmark Index Account.

These amounts should be adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost.

The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate.

For a product with multiple Index Accounts with different Hedge Budgets that are less than or equal to the NIER, a maximum rate in 5.A. should be calculated for each set of accounts with different Hedge Budgets.

B. If an insurer does not engage in a hedging program for indexed-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5.(A), (B), and (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates Indexed Credits using current index parameters for the most recent 20-year period.

Thanks, Fred. I appreciate the opportunity present the comment letter on behalf of the twelve co-signers of the Independent Proposal. We have joined together for no purpose other than to voice our concern about the state of Indexed UL and to present a solution that we believe is in the best interest of our industry and all of its constituents.

Fundamentally, we believe that the ACLI proposal is a highly complex, overly engineered solution that requires significantly more disclosure, makes illustrations less understandable for consumers and leaves the door open for future product designs that will take advantage of its many grey areas and ambiguities. Our letter explores each one of these aspects of the ACLI proposal in detail and paints the contrast between the ACLI proposal and the Independent Proposal, which represents a simple but comprehensive solution to the mandate from LATF.

For context, it’s helpful to understand how we got here in order to also understand why the ACLI proposal is flawed. The original AG 49 prescribes a methodology for determining the illustrated value of the hedges used to create indexed credits in Section 4(A). This methodology is based on hypothetical historical backtesting – hypothetical in that the calculation assumes that the currently available, non-guaranteed indexed parameters based on today’s hedge costs never change. Historical in that the index returns used for the backtesting are actual historical index returns. The net result of combining a hypothetical assumption of constant index parameters with historical index returns is not a historically indicative valuation of the hedges – it is a purely hypothetical valuation. To our knowledge, this hypothetical historical hedge valuation methodology has no empirical or theoretical basis and is not used anywhere except in indexed insurance products.

This methodology is also at odds with how the hedges are actually valued in the marketplace. Life insurers purchase hedges at market prices that can be understood through the universally used and empirically validated Black-Scholes valuation methodology. For example, a 10% cap purchased last year would have cost approximately 4.6% of the notional value. That is the market valuation for the option. However, using the unique hypothetical historical backtesting methodology in AG 49, the illustrated valuation for the option would be 6.12%. This implies a perpetual illustrated valuation arbitrage between the empirically proven, universally used, market-driven Black-Scholes option valuation methodology and the unique, untested, entirely hypothetical option valuation methodology prescribed in AG 49.

This disconnect between the price of options and their illustrated value is what allows Indexed UL to illustrate superior performance to traditional fixed insurance products by a significant margin. It is also what allows Indexed UL products with multipliers and buy-up caps to produce superior illustrated performance to otherwise identical products without them. It also follows that, if the entirety of the account value were to have been used to purchase hedges, that the illustrated performance of that variant of product would have dramatically outperformed even the most aggressive multiplier-driven products on the market today.

As a result, it is clear that the problem with multipliers and buy-up caps is not actually multipliers and buy-up caps. The problem with multipliers and buy-up caps is the assumption of a hedge valuation arbitrage embedded into every indexed UL illustration, courtesy of the hypothetical historical lookback methodology employed by AG 49 in Section 4(A).

The ACLI proposal is a tacit acknowledgement of that fact. The way that the ACLI has proposed to satisfy the mandate from LATF to limit the illustrated benefits of buy-up caps and multipliers is by bifurcating Indexed UL illustrated rates into two segments – the Hedge Budget, which can illustrate with hedge valuation arbitrage, and the Supplemental Hedge Budget, which does not illustrate perpetual hedge valuation arbitrage.
This segmentation of the illustrated rate is both incongruous with the original letter and spirit of AG 49 and entirely artificial, created for the sole purposes of fulfilling the LATF mandate. This is why the ACLI proposal is so cumbersome, complex and opaque. In order to mechanically accommodate creating an artificial bifurcation of illustrated indexed credits and implement different solutions for each, nearly every clause in AG 49 had to be modified in some way, including the introduction of new definitions, formulas and clauses. By our count, 51 of the 61 clauses in AG 49 were modified by the ACLI proposal.

These modifications and additions to AG49 create their own set of problems. Virtually all of these new factors are uncertified rates determined internally by the life insurer and not disclosed on the illustration. Furthermore, because these factors will be interpreted, defined and set internally at the discretion of the insurer, there will be natural inconsistencies between how life insurers apply them. These inconsistencies will undo the chief goal of the original AG 49, which was to create consistency across illustrated rates for products with identical index parameters. The ACLI proposal manages to simultaneously make illustrations less transparent and less consistent, a combination that renders them almost unintelligible except to the company issuing the product.

But more importantly, the ACLI proposal leaves significant latitude to life insurers, providing them with ample opportunity to find new ways currently not contemplated by the drafters or LATF to generate higher illustrated performance while remaining in technical compliance with the guideline. In our letter, we have detailed at least 5 potential product designs that would produce outsized performance while remaining in compliance with the ACLI proposal, all of which already exist in some form in today’s market. It is only a matter of time before these designs are tuned for optimal illustrated performance under the new AG 49 in the same way that life insurers tuned designs for optimal illustrated performance after the original AG 49 was implemented.

As a result, we believe the ACLI proposal to be fundamentally flawed. It is a limited solution for the particular problem of multipliers and buy-up caps. It relies on internally inconsistent logic that is only tenuously bound together through overly complex and ambiguous language. It is not, by any stretch, a long-term holistic solution to the general problem of prolific, repeated and – most importantly – generously rewarded gamesmanship in Indexed UL illustrations, of which multipliers and buy-up caps are merely the most recent manifestation and hardly the last.

By contrast, the Independent Proposal is a simple and holistic solution. It requires that the illustrated value for the hedges be calculated using the Black-Scholes formula, which will roughly align the actual market price of the hedges with their illustrated value. This will eliminate the possibility for any sort of illustrated valuation arbitrage in the Indexed UL illustration, including excess interest from multipliers and buy-up caps. This simple alignment of actual market hedge valuation and illustrated hedge valuation will satisfy LATF’s mandate without any further modifications to the guideline. But more importantly, it will eliminate the ability for gamesmanship with future product designs for Indexed UL. The proposal is as simple as that. It requires a change to just one section of AG 49, Section 4(A).

We have also recommended that the supplemental crediting reports in Section 7 of AG 49 be augmented to allow life insurers to display the mechanics and potential return profiles of their various crediting strategy, but – and this is key – only in the context of the crediting rate and not in the illustrated scale. Our proposal recommends a methodology for these supplemental crediting reports that would align them to the crediting reports available in Fixed Index Annuity illustrations. This methodology was broadly supported by industry for the purposes of FIA illustrations and recognized as an effective way to educate consumers about the mechanics, variability and potential performance of indexed crediting. To be clear, these supplemental crediting reports are not a part of the illustrated scale and do not have any interaction with the illustration model regulation. The Independent Proposal
in its entirety is in conformity with the illustration model regulation. The augmentation of these supplemental reports also does not constitute “new disclosure” because they already exist in the guideline.

In summary, we believe that the basis for Indexed UL illustrations should align market hedge values with illustrated hedge values. This view is also shared by the ACLI’s proposal – but, in their view, only for the multipliers and buy-up caps specifically called out by LATF and only then because of the LATF vote. We would remind LATF that prior to the vote, many life insurers and their professional advocates voiced support for the continued illustration of multipliers and buy-up caps. These insurers have not changed their minds about the merits of these strategies. They’re simply complying with LATF’s request in order to keep the franchise going and, by that, I mean the franchise of illustrated valuation arbitrage that generates double-digit internal rates of return in Indexed UL illustrations even without multipliers and buy-up caps. As long as that exists, and it certainly will with the ACLI proposal, then gamesmanship in Indexed UL illustrations will continue unabated and we will certainly be revisiting AG 49 in the future.

The Independent Proposal, in contrast, is a simple, holistic solution that rests on a universally-used and empirically proven hedge valuation methodology that will end Indexed UL illustrated performance gamesmanship once and for all. Furthermore, the Independent Proposal maintains the ability for life insurers to demonstrate the mechanics and potential performance of indexed crediting methodologies, but only in the context of supplemental crediting reports that are not a part of the illustrated scale. The Independent Proposal strikes the appropriate balance between restricting illustrated gamesmanship while still providing life insurers a means to demonstrate the mechanics of their indexed crediting methodologies in a way that will both educate consumers as to their mechanics and highlight their potential to perform well in certain environments. We urge LATF to consider the Independent Proposal.

Finally, we would welcome any feedback and questions on the Independent Proposal and request the ability to respond on today’s call.

Thank you.
Not surprisingly, companies selling Indexed UL will voice concerns about some aspects of the Independent Proposal. Allow me to address some of those:

1. The Independent Proposal does not allow for the illustrated benefit of an equity risk premium.
   a. This is not true. The primary market input of the Black-Scholes formula is implied volatility, the market expectation for equity volatility over the same period of time as the option. Volatility is a proxy for risk. As described by the also universally used Capital Asset Pricing Model, more risk means more return. As a result, the expected return for the option until its expiration is explicitly accounted for through market pricing for implied volatility. This is why option prices are constantly changing in reaction to the risk-return dynamics in the marketplace.
   b. Furthermore, the methodology currently prescribed by AG 49 is not an appropriate or accepted measure of the equity risk premium. The burden of proof is on proponents of this obscure methodology to prove that it is empirically grounded. No proof of the robustness and accuracy of the methodology has ever been presented.
   c. However, the Independent Proposal recognizes the fact that over a certain period of time, perhaps even more than a decade, options may be consistently undervalued or overvalued in retrospect relative to their actual returns. For example, the last 10 years have produced stellar risk-adjusted returns in the S&P 500, meaning that option valuations have been consistently underpriced. As a result, we have recommended that Section 7 be expanded to allow more latitude for life insurers to demonstrate hypothetical historical performance of their crediting methodologies over specific period of times, including multipliers and buy-up caps. We believe this is a fair and informative way to demonstrate the mechanics and potential value of various crediting strategies. And, to be clear, this is only for Section 7 – these crediting reports are supplemental and are not a part of the illustrated scale. The Independent Proposal does not require any change to the Model Regulation for complete implementation.

2. The Independent Proposal will cause changes to illustrated rates even if the indexed parameter does not change.
   a. This is true and this currently happens with today’s AG 49 hypothetical historical methodology because the historical period is rolling and changes every year.
   b. The other side is also true – the illustrated rate using the Independent Proposal might not change even if the index parameter does. This will actually provide a more accurate picture to the consumer for setting expectations and a superior solution to the current AG 49 methodology.
      i. For example, if the cap drops from 10% to 9% because option prices increase, the current AG 49 maximum rate would decrease the illustrated rate from 6.14% to 5.67%. This would lead a consumer to believe that their product is now “underperforming” relative to the original expectation.
      ii. This is a false conclusion because the market value of the 10% cap previously is the same as the 9% cap is currently. The Independent Proposal takes actual market valuation into account and will correctly inform the consumer that their value has actually not changed and the product is not “underperforming.”
   c. Over time and taking index parameter changes into account, the Independent Proposal would actually produce more stable illustrated rates than the current AG 49 methodology and therefore enhance consumer understanding and expectations for the product.

3. Finally, and most importantly, the chief criticism of the Independent Proposal will be that it lowers the illustrated rate of Indexed UL products. Or, put differently, it no longer provides for Indexed UL to illustrate long-term perpetual arbitrage between the actual market value of the option and illustrated value of the option based on the untested and empirically unproven hypothetical historical lookback.
methodology. We fail to see why this is a concern for regulators. Furthermore, we fail to see why this is a concern for life insurers. Illustrations are used for explaining the mechanics of the product, not as performance projections. Therefore, a change to the illustrated rate should not change sales or the consumer appetite for the product. An informed consumer would not rely on the illustrated rate to make a decision. Our goal is to have informed consumers and we believe that the Independent Proposal will enhance their understanding of the product and its potential performance. The ACLI proposal, by contrast, will restrict it.

As long as perpetual riskless illustrated arbitrage exists in Indexed UL because of the disconnect between actual option values and the AG 49 hypothetical historical lookback values, there will be gamesmanship in Indexed UL.
Fred,

We have reviewed the ACLI proposal regarding revisions to AG 49 and appreciate the opportunity to comment on it. Overall, we believe that the ACLI proposal effectively fulfills LATF’s stated goals of eliminating the specific illustrated benefits of both Cap Buy-Ups and Multipliers but does so in an overly complex and engineered way that requires more disclosure, makes illustrations less understandable for consumers and leaves the door open for product designs that, if history is any indication, will be created in its aftermath to maximize illustrated performance for the express purpose of competitive positioning.

In stark contrast to the ACLI proposal, the Independent Proposal makes only one modification to the underlying structure of AG 49 to accomplish the goals outlined by LATF and does not, in any way, require changes to the Illustration Model Regulation. The Independent Proposal is far simpler – and far more effective – than the ACLI proposal. Furthermore, the Independent Proposal also includes revisions to Section 7 that will allow life insurers to fully demonstrate the mechanics and potential performance of indexed crediting strategies using supplemental crediting reports in an effort to further consumer understanding and provide a platform for life insurers to differentiate their products in a way that is consistent with Fixed Index Annuities. We fail to see why this approach would be any less appealing for Indexed UL than it is for Fixed Index Annuities, where it was widely supported by life insurers.

The remainder of this letter will detail the challenges with the ACLI proposal and contrasts them with the Independent Proposal.

Proposal Overview

Of the 61 independent clauses in the ACLI proposal, only 10 are unchanged from the original AG 49 language. The ACLI proposal introduces numerous and material new clauses, definitions and formulas. While many of the changes were clarifications to the original guideline, the ACLI proposal relies on the following material modifications to deliver an effective solution to LATF’s request:

1. 3(B) – The formal definition of the Annual Net Investment Earned Rate (NIER)
2. 3(G) – The introduction and definition of the Hedge Budget
3. 3(K) – The introduction and definition of the Supplemental Hedge Budget
4. 4(B)(ii) – The addition of NIER * 1.45 as a maximum illustrated Index Credit as a percentage of AV ("illustrated rate")
5. 5(A)(ii) – The addition of the Hedge Budget as a limitation for application of the 1.45 factor for DCS

Taken together, these material modifications form the mechanical changes to the guideline that limit the illustrated benefits of Buy-Up Caps and Multipliers. However, they also represent fundamentally new additions to the guideline that create their own new challenges that require a response.

By contrast, the Independent Proposal requires just one modification to Section 4(A) to accomplish all of LATF’s goals. The current AG 49 language for Section 4(A) uses a hypothetical historical lookback approach, applying today’s currently available index parameters based on highly dynamic option prices to long-term historical index data, a methodology only used (to our knowledge) in indexed insurance products. The Independent Proposal replaces this rare and untested methodology with the universally accepted and empirically supported Black-Scholes formula for option valuation. In doing so, any option-based strategy used inside of an indexed insurance product will always illustrate at its fair-market value, meaning that any augmentation of the option budget through policy charges will be neutralized for the purposes of the illustrated scale. For example, a 1% asset-based...
charge to buy a 20% multiplier for an account with a 5% Black-Scholes fair-market valuation will result in a net illustrated rate of 5% (5% * 1.2 = 6% - 1% charge = 5% illustrated rate). This simple modification entirely satisfies LATF’s stated goals and does not require any other changes to AG 49 to accommodate it.

Disclosure
In the original AG 49, the entirety of the illustrated scale was directly related to declared non-guaranteed elements or contractual provisions. However, in the ACLI’s proposal, the illustrated scale will be impacted by non-contractual, non-disclosed elements. For example:

1. The maximum illustrated rate for the product may be limited by NIER * 1.45 (Section 4)
2. The maximum illustrated rate for a product with a Supplemental Hedge Budget will be comprised of two separately calculated factors:
   a. 4(B) – Maximum illustrated rate, the minimum of 4(A) calculation and NIER * 1.45
   b. 4(C)(i) – Supplemental Hedge Budget, which is a function of both NIER and the Hedge Budget

In either situation, it will be impossible to calculate the maximum illustrated rate based solely on declared non-guaranteed elements and contractual factors because the NIER, the Hedge Budget and the Supplemental Hedge Budget are not disclosed and are not declared non-guaranteed elements. This is immensely problematic for consumer understanding of illustrated performance and product mechanics and represents a significant step backwards from the original guideline.

In order to remedy this problem, disclosure of the newly defined terms of Net Investment Earned Rate, Hedge Budget and Supplemental Hedge Budget for each offered indexed account, including the BIA, must be required and certified. These rates should be readily available in the illustration along with a description of how these rates formulaically relate to the maximum illustrated rate with numerical examples.

The Independent Proposal, by contrast, presents a simple and straightforward approach to determining the maximum illustrated rate in Section 4(A) using the Black-Scholes Formula, the most common options valuation formula in the world, and relying on externally verifiable pricing factors such as LIBOR and index implied volatility. The remaining inputs are the declared non-guaranteed elements of the product relating to indexed performance such as the cap or participation rate. As a result, the entirety of the illustrated scale under the Independent Proposal can be easily sourced using publicly available data or declared non-guaranteed elements, presenting a superior solution for furthering consumer understanding of illustrated performance and product mechanics.

Product Designs
While the ACLI proposal effectively addresses products currently in market using Buy-Up Caps and Multipliers, it leaves open the potential for other product designs created to maximize illustrated performance under the new guideline. These product designs may take many forms, but generally speaking, they may fall into the following categories:

1. Use of proprietary indices and alternative S&P 500 crediting strategies, which can have significantly higher lookback rates than the BIA, to reduce hedge costs without reducing illustrated performance and to reinvest the savings into other product features, including fixed interest bonuses or policy charge reductions. There are already products in market using proprietary indices to generate excess illustrated performance and many of these products would be unchanged under the ACLI proposal.
2. Development of product features that do not technically adhere to the definition of an Index Credit in 3(F) but allow the life insurer to generate an effective illustrated rate in excess of the BIA rate, but is still
3. Development of bonuses that exploit seemingly small timing differences to generate outsized performance. For example, a charge for the Supplemental Hedge Budget might be deducted based on the end of year values but its value credited based on the beginning of year values, effectively allowing excess interest from the Supplemental Hedge Budget to appear on the illustration. There are already products in market using timing differences to increase attractiveness of certain features.

4. Product designs that provide for actuaries to assume a higher Hedge Budget than is actually currently required to hedge the account, such as in the case of assuming a higher Hedge Budget today in order to account for the possibility of future increases in hedge costs. Using a higher Hedge Budget will allow for insurers to illustrate all the way up to the NIER * 1.45 limit in certain cases, allowing for higher illustrated performance simply by applying a different interpretation of what constitutes a Hedge Budget. Every company already uses a different methodology for determining their hedge budgets.

Each of these product designs represents a way for a life insurer to gain an edge in illustrated performance. However, these designs can also be combined in ways that could produce illustrated performance on par with the products driven by Multipliers and Buy-Up Caps prevalent in today’s market. There is no doubt that designs like these will become the next phase of the ongoing Indexed UL illustration war. Significant revisions and clarifications need to be added to the ACLI proposal in order to prevent the illustrated benefits of designs like these. Without those revisions and clarifications, we will certainly be revisiting AG 49 again in the future.

The Independent Proposal, however, does not leave open the possibility of any of these designs generating outsized performance because all effects of enhancing the option-based returns in the product are neutralized by using only fair-market option valuation for the purpose of the illustrated scale rather.

**Direct Illustration of Defined Hedge Profits**

In the original AG 49, the maximum illustrated rate defined in 4(B) was a function solely of the hypothetical historical lookback methodology (HHLM) prescribed in 4(A) and limited by the 1.45 factor in 5(A) for the purposes of DCS testing. In both the original guideline and the ACLI proposal, the 1.45 factor is only applicable to insurers that engage in a hedge program, which is an indicator that the factor is due to an implied average, long-term return from directly engaging in a hedge program.

In the ACLI proposal, the 4(B) maximum illustrated rate is now also limited directly by the NIER * 1.45 factor. In effect, the 1.45 factor has now become a visible limitation that directly impacts the illustrated scale as opposed to a DCS limitation that was created to accommodate the illustrated scale. Furthermore, the effective reduction of the factor to 1.0 for the Supplemental Hedge Budget is also a visible limitation.

Considering that the 1.45 factor is **solely attributable to a hedge program and therefore the assumed profits from engaging in the hedge program**, illustrated performance under the ACLI proposal will be sourced directly from illustrated returns attributable solely to the hedge program. This is fundamentally different than how asset returns are modeled in other fixed insurance products, where the declared illustrated rate is based on actual, currently paid returns in aggregate rather than assumed future returns of a specific asset class that directly and attributably impacts the illustrated rate in all years, as in the ACLI proposal.

The Independent Strategy, by contrast, uses the Black-Scholes option valuation methodology and therefore does not have any recognition of “profits” arising from hedging transactions. As a result, the 1.45 factor is repurposed in the Independent Proposal for inevitable temporary disconnects between the insurer’s NIER/hedge budget and...
the fair-market valuation of the indexed parameters. The 1.45 factor, therefore, does not need to be directly disclosed or explained in the illustration.

If LATF were to consider to the proposed ACLI framework, it is essential for LATF to consider and formally engage outside experts, including independent actuaries and finance academicians and practitioners, in determining:

1. Whether or not it is appropriate to illustrate directly attributable returns from specific asset classes or strategies, including hedge strategies, in a fixed, non-registered life insurance product
2. If it is appropriate, then what factor most accurately represents the average expected profit from engaging, generally, in hedging strategies that will replicate the various parameters of indexed crediting

The second question is of critical importance because of the central role that the 1.45 factor plays in the ACLI proposal and the fact that the magnitude of the factor itself was never publicly supported with external and independent empirical and theoretical evidence.

In closing, we ask that LATF consider the Independent Proposal on equal footing with the ACLI proposal and allow an exposure period for both proposals. For your reference, a blue-lined version of AG 49 with the suggested changes in the Independent Proposal is below.

Thank you.

Actuarial Guideline XLIX

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST

Background

The *Life Insurance Illustrations Model Regulation (#582)* was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows:

i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.

ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.

iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.
2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.

ii. Interest credits are linked to an external index or indices.

3. Definitions

A. **Benchmark Index Account**: An Index Account with the following features:
   
i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

   ii. An annual cap is used in the interest calculation.

   iii. The annual floor used in the interest calculation shall be 0%.

   iv. The participation rate used in the interest calculation shall be 100%.

   v. Interest is credited once per year.

   vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy’s Index Accounts, subject to the requirements of 5.D. However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.

   vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

   viii. There are no limitations on the portion of account value allocated to the account.

B. **Fixed Account**: An account where the credited rate is not tied to an external index or indices.

C. **Index Account**: An account where the credited rate is tied to an external index or indices.

4. Illustrated Scale

The credited rate for the illustrated scale for each Index Account shall be limited as follows:

A. **Calculate the value of the replicating option trades for the Benchmark Index Account over the preceding calendar year**, based on the Black-Scholes formula using the following inputs calculated on each trading day:
   
i. Average closing implied volatility for 12-month, at-the-money S&P 500 call options

   ii. Average closing implied volatility for out-of-the-money 12-month S&P 500 call options with a normalized strike price equal to the currently declared cap

   iii. Average dividend yield on the S&P 500

   iv. Average 12-month LIBOR or another appropriate interest rate measure
v. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration 
actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).
vi. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the 
illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual 
cap for a hypothetical, supportable Index Account that meets the definition of a Benchmark Index 
Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the value calculated in 4 (A) shall be the maximum credited rate(s) 
for the illustrated scale.

C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, 
the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. 
The determination shall reflect the fundamental characteristics of the Index Account as relates to the Black-Scholes 
valuation formula, including realized volatility, implied volatility, volatility targets (if applicable), embedded fees (if 
applicable), deduction of an interest rate component (if applicable), dividend participation (if applicable) and any 
other factors that may apply. In no event shall the credited rate for the illustrated scale exceed the applicable rate 
calculated in 4 (B).

D. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate 
for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale
   The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the 
disciplined current scale shall not exceed 145% of the annual net investment earnings rate (gross portfolio earnings 
less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-
based credits) allocated to support the policy.

B. If an insurer does not engage in a hedging program for index-based interest, the assumed earned interest rate 
underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general 
account assets allocated to support the policy.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, 
accounting for all benefits including illustrated bonuses.

D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that 
correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests 
under Model #582, subject to the limitations in 5 (A), (B), and (C). All experience assumptions that do not 
directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account 
assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire 
policy.

6. Policy Loans
   If the illustration includes a loan, the illustrated rate credited to the loan balance shall not exceed the illustrated loan charge 
by more than 100 basis points.

7. Additional Standards
   The basic illustration shall also include the following:

A. A table showing the minimum, maximum and arithmetic average of a geometric average for any available Benchmark 
Index Account using the following methodology:
   i. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account 
for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current 
calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each
subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

B. For each Index Account illustrated, a table showing actual annual historical index changes and corresponding hypothetical interest rates using current index parameters, including any applicable asset-based charges and asset-based interest bonuses or index credit multipliers paid within the first 10 years of the policy:
   ii. The 10-year period with the lowest calculated returns within the period referenced in 7(A)(i)
   iii. The 10-year period with the highest calculated returns within the period referenced in 7(A)(i)
   iv. The most recent 10-year historical period as calculated on the final trading day of the preceding calendar year

C. If an index has not been in existence for 10 years, the table shall replace the figures with the maximum available back-tested performance.
Comments for the Center for Economic Justice

To the Indexed Universal Life Subgroup of the NAIC Life Actuarial Task Force

Proposed Revisions to AG 49

April 30, 2020

The Center for Economic Justice (CEJ) has reviewed the ACLI proposal to address loopholes in AG49 that have resulted in IUL products designed to game AG49 to produce unrealistic, deceptive and misleading illustrations. While CEJ appreciates the effort by ACLI, we urge LATF to reject the ACLI proposal and adopt the Independent Party (IP) proposal.

Our concerns with the ACLI proposal – and which are addressed with the IP proposal – are:

1. The ACLI proposal is complex extension of an already complex set of AG 49 calculations that will move illustrations further away from the core purposes of an illustration – to demonstrate how a product operates and to provide realistic expectations and understanding to the consumer about the product. The ACLI proposal is a classic example of losing sight of the forest because of the trees. In contrast, the IP proposal leads to illustrations and consumer disclosures that improve the outcomes for consumers compared to the current AG49

2. The ACLI proposal is a substantial re-write of large swaths of AG49 and introduces new terms undefined in the policy contract which would result in less accountability to and comprehension by consumers and regulators. In contrast, the IP proposal has revises minimal sections of AG49 to achieve the broader consumer protection and comprehension goals.
3. The ACLI proposal makes the 145% return on the option budget the de facto guardrail for crediting rates in illustrations. This is a radical departure from the current AG49 framework and effectively sets the key guardrail on an arbitrary value that is simply not supportable for a long-term investment horizon. Stated differently, it transforms AG49 compliant illustrations and incentives for product designs into life insurance as an option play. In contrast, the IP proposal does not rely upon an arbitrary value for long-term option return, but relies upon actual market values using the Black-Scholes methodology that has been the standard for nearly 50 years.

4. The ACLI proposal narrowly addresses some loopholes while creating incentives for other product designs to game AG49. In particular, the ACLI proposal encourages the use of data-mined proprietary indices instead of discouraging such practice. In addition, the ACLI proposal introduces new discretion for illustration actuaries that lessen accountability to consumers and regulators and promote disparity of illustration results across similar or identical product design. The IP proposal does not create these additional loopholes because no additional discretion is created and incentives for gaming AG49 through, among other things, proprietary indices is eliminated.

5. It is unclear why LATF would defer the design of fixing the loopholes in AG49 and deceptive nature of current IUL illustrations to the same industry participants who have abused IUL illustrations to create the need for AG49 and then further abused IUL illustrations to create the need for fixing loopholes in AG49. This is a classic example of what economist George Akerlof described as the market for “lemons” – products sold in markets with information asymmetry.¹ In such a market – like the market for IUL – those sellers seeking to provide realistic and comprehensible information (illustrations) to consumers lose out to sellers willing to employ unrealistic, deceptive and incomprehensible illustrations to consumers. Given the nature of a market in which competition rewards the bad players, it seems bizarre for regulators to defer the development of market problem solutions to those players benefiting from the current abuses.

   In summary, while we appreciate the efforts of the ACLI to respond to LATF’s directive, the problems with the ACLI approach are obvious and severe. In contrast, the IP proposal provides a better solution to the problems of multipliers and bonuses without creating new problems and while providing a more comprehensive solution for AG49 that will improve IUL illustrations in a manner consistent with the goals and purposes of those illustrations.

May 8, 2020

Mr. Fred Andersen
Chair, IUL Illustration (A) Subgroup
National Association of Insurance Commissioners (NAIC)

Dear Mr. Andersen,

On behalf of the American Academy of Actuaries1 Life Illustrations Work Group, I appreciate the opportunity to provide comments to the IUL Illustration (A) Subgroup regarding the illustrations of Indexed Universal Life (IUL) insurance policies under Actuarial Guideline XLIX (AG 49), and the American Council of Life Insurers (ACLI) proposal for AG 49-A exposed April 15, 2020.

We offer the following comments and note certain items that we believe warrant additional clarification as it pertains to AG 49-A as proposed by the ACLI. We have also made some observations related to Section 4 and would like to reserve comments on Section 6 and application to inforce.

Section 3: Definitions

1. 3.A.i.—We believe it is not clear as to what the total annual percentage rate is. We suggest making it clear how to do a “total annual percentage rate” calculation. Also, the definition in 3.A.i. uses “total percentage rate” and “total annual percentage rate” terminology, which leads to a question of the reason for this difference within the definition.

2. 3.B.—We suggest wording changes to last sentence to say “Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate,” which we believe would help clarify the intent.

3. 3.C.vi.—We suggest wording changes similar to 3.B. above, “Charges of any kind cannot be used to increase the annual cap.”

4. 3.C.vii.—We are unclear on how to do the “in excess of the interest calculation” that is specified in the definition and suggest examples or more wording to provide clarity.

5. 3.C.—We suggest adding clarity on what to do when Benchmark Index Account (BIA) definition is not met. Additional guidance could be to add into Item ix. the definition of Benchmark Index Account (BIA), which states that a hypothetical account needs to be developed using only Annual Net Investment Earning Rate to buy a cap.

---

1 The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.
6. 3.D.—We suggest modifying the definition of Fixed Account to be “An account where no amount credited is tied to an index or indices.”

7. 3.E.—We suggest modifying the definition of Index Account to be “An account where some or all of the amount credited are Indexed Credits.”

8. 3.F.—It is unclear in the definition of Indexed Credits how a company addresses the floor: for example, is this an annual floor or a cumulative floor? Also, is there a difference between interest credit vs. credit to the policy? To be consistent with previous language in the draft, using “Amounts credited to the policy” rather than “Credits to the policy…” when including the floor may be clearer.

9. 3.G.—We suggest modifying the second sentence in the definition of Hedge Budget to read “This total annualized amount should be…” to be clearer.

10. 3.I.—We suggest this should be defined as “The current annual interest rate as defined in the policy that is charged…”

11. 3.J.i.—We suggest modifying the first phrase in the definition of Policy Loan Interest Credited Rate to read, “For the portion of the account value in the Fixed Account that is backing the Loan Balance.”

12. 3.J.ii.—We also suggest modifying the first phrase in the definition of Policy Loan Interest Credited Rate to read, “For any portion of the account value in the Indexed Account backing the Loan Balance,”

13. 3.J.ii.—We note that it is difficult to understand the phrase “as defined in the policy” in Option 2 due to sentence structure.

14. 3.K.—We note that Hedge Budget is a defined term and should be capitalized consistently when relying on that definition.

Section 4

15. In general, we note that hypothetical BIAs may be developed more frequently as a result of the changes in AG49-A, which could make the maximum illustrated rate less transparent.

16. 4.D.—We are concerned that Section D is unclear with respect to the requirement to comply with Section 6(c) of Model #582. Noting an illustrated rate may exceed Section 6(c) of Model 582 does not seem to ensure the illustrated rate will be in compliance with the Model. We believe that AG49 should not contradict or override Model #582. We suggest that this section be clarified.

Section 5

17. 5.A.—The provision indicates the assumed interest rate underlying the Disciplined Current Scale (DCS) is inclusive of “All general account assets and hedge assets that support…” Hedge assets should already be included in “all general account assets,” and do not need separate mentioning. We suggest the following “…inclusive of all general account assets, both hedge and non-hedge assets, that support the policy…”

18. 5.A.ii.1.—We believe this should say “Hedge Budget minus any annual floor.”

19. 5.A.ii.—We believe the sentence starting with “The above approach…” should be guidance or drafting note because it does not provide instruction. Also, we believe the sentence could be made clearer by adding “underlying the disciplined current scale” after “assumed earned interest rate” at the end of the sentence.
20. 5.A.—The NIER abbreviation should be expanded to “Annual Net Investment Earnings Rate.”

Section 6
21. We would like to reserve comment on Section 6 until the Life Actuarial (A) Task Force (LATF) provides guidance on whether the 1% differential between the policy loan interest rate and the policy loan credited rate should or should not limit illustrated non-indexed credits to any policy loan balance. At that time, we will also review the definition of Policy Loan Credited Interest Rate, and Option 1 or Option 2 for completeness, clarity, and harmony with the rest of the draft.

The work group will also hold any comments on the application of the requirements to inforce policies until final revisions are made to AG49.

Drafters of the background section of AG 49 expressed the concern that, prior to AG 49, there was the possibility of confusing potential buyers when “two illustrations that use the same index and crediting method often illustrated different credited rates.” We note that the guidance from LATF and the resulting draft AG 49-A will cause two illustrations that use different indexes and crediting methods to illustrate similar credited rates. This may hinder consumers’ ability to understand the features of the product being considered. Additionally, with the dependence on an assumed Annual Net Investment Earning Rate in the draft AG 49-A, illustrations that use the same index and crediting method could again illustrate different credited rates.

*****

The work group appreciates the efforts of the IUL Illustration Subgroup to review AG 49. If you have any questions or would like further dialogue on the above topics, please contact Ian Trepanier, life policy analyst, at trepanier@actuary.org.

Sincerely,

Donna Megregian, MAAA, FSA
Chairperson, Life Illustrations Work Group
American Academy of Actuaries
AG49 Comment Letter

Mr. Fred Andersen

Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI proposed draft of Actuarial Guideline 49-A

Dear Mr. Andersen:

Equitable appreciates the opportunity to submit the following proposal regarding AG49-A on prospective requirements for IUL illustrations.

We believe that the ACLI draft represents quality work. However, we submit a distinct proposal from the ACLI for two reasons. First, the ACLI letter was developed prior to the recent decline in interest rates. A 10-year US Treasury yield of 0.65% interest rates does not align with the annual 4.5% net investment earnings rate assumption underlying the submitted numerical examples.

Second, we believe that the ACLI proposal has a narrow objective to ensure products with multipliers or other enhancements do not illustrate better than products without them. This has led to a result that, in our opinion, is rather extreme: that illustrated index credits reflect solely the options budget that can be supported by each company’s assumed annual net investment earnings rate. We do not believe the original goal of the AG 49 amendment was to eliminate the use of any policy charges to support illustrated indexed credits, but rather to limit the illustration of unrealistically high levels of indexed credits. We are concerned that the resulting proposal may not align well with the actual mechanics of the contracts being illustrated, which would reduce rather than enhance consumer understanding.

Our proposal has been informed by the discussions behind the ACLI draft but diverges in its form and substance in a manner that reflects our understanding of regulator objectives.

The remainder of this letter is organized to accomplish the following objectives:

1- Articulate our understanding of the regulator governance objectives for IUL illustrations
2- Propose a governance framework to accomplish each regulator objective
3- Outline specific parameters to calibrate the proposed framework

1. Our understanding of the IUL illustration governance objectives

The stated goals of AG 49 are to guide determinations of maximum illustrated crediting rates and to identify additional side-by-side illustrations to enhance consumer understanding. We
believe this reflects a broader regulator desire to ensure policy illustrations depict a realistic projection of long-term policyholder returns upon which a current or prospective policyholder can establish realistic expectations for account performance and funding requirements.

From a technical perspective, we bifurcate the elements of the illustration that require governance into the:

a) **Size of the “option budget”:** the amount of total contract value “put at risk” by investing in equity options or other risky investments.

b) **Rate-of-return on the “option budget”:** the illustrated long-term return of the instruments in which the option budget is invested.

**Figure 1: Elements of the IUL illustrated return and associated regulator concerns**

With respect to the size of the option budget, we understand the foremost regulator concern to be option budgets that are substantially larger than what can be supported by investing the contract value at yields on prevailing high-quality investments. Similarly, we understand the manifestation of that concern to be poor performance of large option budget investments which can lead to more rapid reductions in contract value beyond what clients expect.

With respect to the returns on the option budget, we understand the foremost regulator concern to be illustrated returns well in excess of high grade investment yields. Such returns are considered both volatile and unlikely to be sustained over long-periods, and any performance below illustrated rates-of-return may require the policyholder to contribute substantial premiums to maintain the policy in force.
II. Proposed illustration governance framework

In order to address these concerns, Equitable believes regulators should seek to govern both elements of the illustrated IUL return. That said, Equitable favors a more lenient “guardrail approach” that simply caps the size of the option budget. This would couple with stricter governance on the rate-of-return of the option budget. This approach reflects our beliefs that:

- A policyholder may reasonably seek a contract with greater market exposure than what can be created by an option budget supported only by prevailing yields on high quality investments – and hence who desire a larger option budget
- The policyholder expectation for contract performance should not rely on excessive long-run outperformance of the instruments in which the option budget (of whatever size) is invested

Equitable proposes a framework that governs distinctly each element of the illustrated return. We believe this approach offers the simplest governance framework for regulators and companies as well as aligns with the two aforementioned beliefs.

Table 1 below summarizes the proposed governance framework:

<table>
<thead>
<tr>
<th>Illustration element</th>
<th>Regulator concern</th>
<th>Governance approach</th>
<th>Rationale for approach</th>
</tr>
</thead>
</table>
| Size of option budget | • Budgets well in excess of levels supported by high quality fixed income assets | • “Guardrail”  
• Cap amount of option budget as % of contract value | • Allows adequate illustration of products designed to offer more/less market exposure  
• However, establishes an “upper bound” for the annual contract exposure |
| Return on option budget investments | • Returns on budgets which are unlikely to be sustained over long periods | • “Return limit”  
• Cap annual return on option budget investments | • Explicitly regulates the long-run returns on instruments in which option budgets are invested |

III. Proposed framework parameterization

Equitable believes the parameters for the proposed governance framework should permit illustration of products designed to suit customer needs, but also recognize the limits of downside risk expected for an IUL policy (before a Variable policy may become more appropriate). Moreover, we also seek to integrate the regulator feedback received during the preceding months of discussion on AG49.

The table below contains our proposed framework parameterization and the supporting rationale for the parameterization.
<table>
<thead>
<tr>
<th>Illustration element</th>
<th>Governance approach</th>
<th>Proposed parameter</th>
<th>Rationale</th>
</tr>
</thead>
</table>
| Size of option budget | • “Guardrail”  
• Cap amount of option budget as % of contract value | • Max(5%, Annual Net Investment Earnings Rate) | • Floors annual loss of value at 5% of CSV  
• Allows higher option budgets if prevailing investment yields rise  
• Permits carriers to offer meaningful market exposure even in low interest rate environments (e.g. point-to-point cap of 10%+) |
| Return on option budget investments | • “Return limit”  
• Cap annual return on option budget investments | • Cap set to [110%-130%]  
• Requirement to illustrate 100% | • Caps option budget performance at realistic levels  
• Zero outperformance (fixed account return) is a plausible yet prudent downside case |

The guardrail on the “size of the option budget” would be 5% in prevailing market conditions. We believe this cap balances the ability to create products with meaningful exposure market performance with the desire to limit contract value declines from underperformance. Moreover, to account for potential changes in prevailing investment yields we include a provision to increase the maximum option budget should prevailing investment yields rise in the future.

Governance over the illustrated rate-of-return on option budget investments contains two elements: a cap on the illustrated rate, and a requirement to project a “plausible but prudent” downside case. Equitable supports a prudent cap on the illustrated rate-of-return within the range of 110% - 130%. The 110% is a level advocated by NY DFS, which reflects the allowance of a prudent risk premium associated with converting the option budget into risky instruments (e.g., a 5% option budget is then illustrated to earn 5.5% in perpetuity). However, we also support a rate-of-return of up to 130%, which reflects the realization of a considerable risk premium (e.g., a 5% option budget is illustrated to earn 6.5% in perpetuity). We would not support levels above 130% on a sustained basis. Moreover, we believe levels close to 130% would require the parallel “downside” illustration of 85-100%. This level is consistent with no additional risk premium earned – a level consistent with a traditional fixed account. We support no lower than 85-100% to ensure the policyholder does not dismiss the downside case illustration as an unrealistic stress scenario. We believe that the existing Alternate Scale illustration could perform this role, if combined with a requirement for the prospective policy owner to acknowledge in writing that they have reviewed it and understand the downside risk.

Thank you once again for the opportunity to share our thoughts with you on this important issue. Please do not hesitate to contact me should you have any questions or concerns regarding our proposal.

Re: Exposure of ACLI Comments and Draft AG49

Dear Mr. Andersen and Mr. Mazyck,

Global Atlantic supports the exposed Actuarial Guideline XLIX-A (AG49A) draft, as submitted by the American Council of Life Insurers (ACLI), to bring uniformity in illustrated values and aid potential buyers. Global Atlantic continues to believe that all index product designs should illustrate consistently and within the spirit of the current guideline. The ACLI’s cover letter presents two alternatives regarding loan leverage. Global Atlantic submits this comment letter in support of loan leverage Option 1 as listed in the ACLI submission.

AG49 limits the illustrated index return to no more than 100bps above the illustrated loan rate charged. The excess of index return over the loan rate charge is the leverage. AG49A Option 1 establishes the Policy Loan Interest Credited Rate as the total percentage rate of Indexed Credits, net of any applicable Supplemental Hedge Budget. Option 1 appropriately includes index-based provisions within the Policy Loan Interest Credited Rate and therefore leverage limit.

AG49A Option 2 establishes the Policy Loan Interest Credited Rate as the total percentage rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact the portion of the account value backing the Loan Balance. By including all illustrated bonuses, charge reductions and other enhancements, non-index provisions are included within the leverage limit. The background section of AG49, and in fact its title, indicate that its focus is the illustration of index-based benefits. Option 2’s inclusion of other provisions within the leverage limit will result in a lack of uniformity and consumer confusion.

Global Atlantic has for over a decade offered our Wellness for Life® product feature. That feature guarantees cost of insurance (COI) discounts when the insured leads a healthy lifestyle. We have offered the feature on both UL and IUL products. The feature is available on our IUL products regardless of whether policy funds are in the fixed or indexed accounts. The COI discounts are a reduction in policy charges. Option 2 would require that this COI discount be translated into a basis point interest benefit on a loan balance and reduce the loan leverage limit otherwise illustrated. The inclusion of such non-index provisions as included within Option 2 inappropriately restricts the leverage limit for non-index provisions. This was not the intent of AG49 and should not be included in AG49A. Option 2 creates an uneven market. It also creates complexity, if not impossibility, for the illustration actuary to translate non-index provisions that aren’t tied to interest crediting into interest rate benefit applied within illustrations involving loans.
We recommend that AG49A utilize the ACLI’s Option 1 wording to align with the intent of AG49, create a level playing field and provide consistent guidance to the illustration actuary. We look forward to continued dialogue on this important topic.

Re: Life Actuarial Task Force request for comments on the ACLI draft AG49 by April 30, 2020.

Dear Mr. Andersen:

Broadly-speaking, we feel that the objective of life insurance product illustrations should be to help consumers make informed financial decisions by demonstrating how the product works and the potential risk and return opportunities. While we believe that sales professionals are accountable for reviewing the risk and return associated with indexed universal life insurance policies with consumers, we also see an opportunity for improvement in the way these products are illustrated. We look forward to continuing to work with the NAIC on longer-term, more holistic changes to provide better consumer clarity.

While additional changes may be important for the long term, the current ACLI AG49 draft dated April 14, 2020, represents a significant step forward for meeting the goals set forth by LATF. Within the ACLI AG49 draft, we support loan Option 2. This language will limit the illustrated loan leverage to 100 bp (1.00%), regardless of product design. Products could still offer additional bonus features and demonstrate how they work by illustrating at a lower index interest rate or when loans are not illustrated, however the loan leverage will never exceed 100 bp. We believe loan Option 2 fits with the spirit of AG49 and is in the best interest of consumers.

We would welcome the opportunity to discuss our position further with you. I can be reached at (614) 249-5947.

Regards,

Pete Rothermel

Re: ACLI Proposed Draft of Actuarial Guideline 49-A and clarity on earned rate in the DCS and the percentage rate of Indexed Credits

Fred:

This letter is submitted on behalf of John Hancock, Lincoln Financial Group, Pacific Life Insurance Company and Sammons Financial Group. The purpose of this letter is to ask regulators to consider clarifying language on the relationship between the earned rate underlying the DCS in Section 5 and the percentage rate of Indexed Credits in Section 4 of the ACLI draft. The above noted companies have also submitted a separate letter that supports the direction of the ACLI’s proposed AG49-A including prospective-only application and Option #1 regarding the treatment of policy loans. This letter is meant to supplement that letter.

We believe that having clarity regarding the DCS and the rate of Indexed Credits is a minor but necessary change for the industry to have a common understanding of how to apply AG49-A. Different interpretations for this relationship were identified during discussions among carriers regarding potential changes to AG49.

**Interpretation 1:** The earned rate underlying the DCS in Section 5A is not restricted by the percentage rate of Indexed Credits in an illustration.

**Interpretation 2:** The earned rate underlying the DCS in Section 5A should be restricted by the percentage rate of the Indexed Credits in an illustration.

The ACLI examples represent the first interpretation. Example 1 on the tab with the hedge budget equal to the net investment earnings rate shows Indexed Credits at a level of 6.20%, while the Section 5A rate is calculated at 6.53%. In the illustration testing calculations for this example, Interpretation 1 could allow the earned rate underlying the DCS to be 0.33% more than the illustrated rate of Indexed Credits.

However, in a typical IUL design, the contract will state that the index-linked credits will equal the increase in the underlying index and if a carrier has perfectly hedged the amount of index credits, these amounts would be the same and there would be no additional return on the hedge. The hedge return would match the amount credited to the policy values.
Therefore, we believe that the correct interpretation is number 2, that the earned rate underlying the DCS should be limited by the illustrated Indexed Credits. Otherwise, the illustration tests could include margins that are not contractually realizable. For this reason, the IUL Coalition proposal dated February 21 contained the following in Section 5A:

The assumed return on hedges shall only be used in the disciplined current scale testing to support the illustrated Index Credits in the policy.

If regulators are comfortable with Interpretation 1, that the earned rate underlying the DCS need not be restricted by the level of Indexed Credits, it would be valuable to have AG49-A directly state this or include a drafting note that clearly allows an illustration actuary to use this interpretation. This will ensure there is consistent interpretation on this issue and clarity for actuaries certifying illustrations for these products.

Thank you for consideration of our comments and we are happy to answer any questions or concerns you may have.

Respectfully Submitted,

Scott R. Harrison

April 30, 2020

Fred Andersen
Acting Deputy Commissioner of Insurance
Minnesota Department of Commerce
85 7th Place East, Suite 280
St. Paul, MN 55101

Dear Fred,

The undersigned companies present these comments in response to the NAIC IUL Illustrations (A) Subcommittee request for comments on the exposed draft of the ACLI recommended changes to AG49.

Respectfully,

Seth Detert, Securian Financial
Pete Rothermel Life CFO, Nationwide
Jacqueline Fallon, Penn Mutual Life Insurance Co
John Ponte, Prudential
Seth Harlow, Mutual of Omaha

We believe that the ACLI’s exposed revisions to AG49 accomplish the main tasks set forth by the Subcommittee:

- That products with charged for multipliers and/or buy-up accounts illustrate substantially similar to those products without the additional charges.

- That within an illustration there is consistent treatment of policy features such as multipliers, index bonuses, participating loan crediting, and non-benchmark indices across the industry.

We would like to commend the ACLI for the job they have done in facilitating the drafting sessions and allowing interested parties to comment on the proposed language. We believe that the ACLI has done an appropriate job of bringing the previous exposed recommendations to AG49 together in one draft and including new language to address the majority of the concerns raised during the drafting sessions.

We recommend the Subcommittee adopt Option #2 of the ACLI comment letter in regard to the applicability of loan leverage. We also recommend a slight modification to the ACLI’s current language. We would recommend either clarifying what was intended by “charge reductions” or to remove it. We believe that the impact of participating loans is unique to the IUL product and that in and of itself gives IUL products certain advantages over other product types in the industry. Thus, it is important that illustrations be inclusive of all types of credits in the loan leverage calculation and not over emphasize the impact participating loans can have on the illustrated values of IUL products.

We do recognize there are some ongoing concerns with the proposed ACLI revisions to AG49. We understand those concerns, however, we urge the Subcommittee to bring forward the current ACLI proposal for vote and ultimate adoption. The ACLI recommendation is a meaningful step forward in the consistent illustration of IUL products.
The Life Actuarial (A) Task Force met via conference call May 7, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Ben Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by William Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted its Minutes and the VM-22 (A) Subgroup’s Minutes**

    The Task Force met Feb. 27, Feb. 20, Feb. 13, Feb. 6, Jan. 30 and Jan. 23. During these meetings, the Task Force took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted an amendment to allow the use of different credibility methods for significantly different blocks of business; 3) adopted an amendment to clarify that policies with universal life policies with secondary guarantees (ULSG) business are excluded from the life principle-based reserving (PBR) exemption, whether provided in the base policy or in a rider when the secondary guarantee is material; 4) adopted an amendment emphasizing the requirement for increasing the reserve to reflect the increase in risk for policies resulting from term conversions; and 5) adopted an amendment providing a guidance note to reference Excel examples of mortality aggregation and the reporting of assumptions.

    The VM-22 (A) Subgroup met Feb. 26 to discuss potential revisions to VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities.

    Mr. Andersen made a motion, seconded by Mr. Weber, to adopt the Task Force’s Jan. 23 – Feb. 27 minutes (Attachment Eight-A) and the VM-22 (A) Subgroup’s Feb. 26 minutes (Attachment Eight-B). The motion passed unanimously.

2. **Agreed to Forward the Recommendation to Delay Collection of Company Mortality Experience Data**

    Pat Allison (NAIC) updated the Task Force on the status of the collection of company mortality experience data. She said the presentation (Attachment Eight-C) provides information on the schedule for planned communications with companies that have been selected to report their mortality experience. The communications are intended to keep the companies engaged even though the reporting of data for the 2018 observation year, which would normally be collected in 2020, will be delayed until 2021.

    Ms. Allison said a memorandum (Attachment Eight-D) proposing the delay was exposed by the Task Force in April. She shared that the NAIC began serving as experience reporting agent on Jan. 1. She said that at a June 25, 2019, Task Force meeting, NAIC life actuarial support staff presented information on the selection of companies required to submit mortality experience data in 2020. A total of 176 companies were selected, representing 31 states of domicile. Since then, all selected companies were notified, and the data call was planned to begin during Q2, 2020. The memorandum proposes the delay, at the request of the American Council of Life Insurers (ACLI), because of the disruption experienced by life insurance companies due to the COVID-19 pandemic and the corresponding impact on company resources required to support the collection efforts. The memorandum recommends the collection of data for the 2018 and 2019 observation years in 2021.

    Ms. Allison indicated that section 5.A.3 of VM-50, Experience Reporting Requirements, states that the experience reporting agent “may modify or enlarge the requirements of the Valuation Manual…… to accommodate changing needs and environments.” She suggested that the COVID-19 pandemic has resulted in “changing needs and environments.” She noted that collection of company mortality experience data remains a high priority regulatory issue for the NAIC. She said the proposed delay of data collection should not be interpreted as diminishing either the importance of the issue to the NAIC or the
role of experience reporting as the foundation for PBR. Therefore, insurers are admonished to ensure the continuity and quality of experience reporting data submissions.

Brian Bayerle (ACLI) said the ACLI comment letter (Attachment Eight-E) expresses support for the proposed reporting delay.

Mr. Kupferman made a motion, seconded by Mr. Leung, to forward the memorandum proposing the delay of the 2020 experience data collection until 2021 to the Executive (EX) Committee for its consideration (see NAIC Proceedings – Summer 2020, Executive (EX) Committee, Attachment One). The motion passed unanimously.

3. Heard an Update on the ESG

Ms. Allison gave a presentation (Attachment Eight-F) on the status of efforts to find a new economic scenario generator (ESG) to replace the American Academy of Actuaries’ (Academy) ESG. During the presentation, she reviewed the timeline of the request for proposal (RFP). She noted that six bids have been received, and they will be reviewed by the Task Force chair and vice chair and three NAIC PBR staff actuaries. Bids will be ranked based on the scoring criteria provided in the RFP. Ms. Allison said the review is expected to be completed by the end of May, and it will then be taken to the Executive (EX) Committee for funding approval in June. The implementation of the ESG is targeted for no earlier than 2022.

4. Discussed the Cessation of LIBOR

Ms. Allison provided a presentation (Attachment Eight-G) to raise awareness of the United Kingdom (UK) Financial Conduct Authority (FCA) intention to cease publishing the London Interbank Offered Rate (LIBOR) after 2021. She said the Alternative Reference Rates Committee (ARRC), formed in 2014 by the Federal Reserve Board and the Federal Reserve Bank of New York, is moving toward using the Secured Overnight Financing Rate (SOFR) as a replacement for LIBOR. She noted that insurance companies will need to inventory their products and processes that currently use LIBOR. She pointed out the need to revise the language in section 9.F.8.d of VM-20, Requirements for Principle-Based Reserves for Life Products, to eliminate the reference to LIBOR.

5. Exposed Amendment Proposal 2020-06

Mr. Bayerle discussed a slide presentation (Attachment Eight-H) on the interest rate swap spreads tables in the Valuation Manual. He said the Valuation Manual prescribes interest rate swap spreads for VM-20 and VM-21, Requirements for Principle-Based Reserves for Variable Annuities. He noted that the use of the NAIC published swap spreads increased substantially with the implementation of the new VM-21 reserve requirements for variable annuities. He said, while the NAIC three-month and six-month current swap spreads should track market observable data, there have been differences as large as 19 basis points. He recommended several actions to address this issue and other issues, including increased clarity of the rate calculation process and the need for a LIBOR replacement.

Ms. Allison said the NAIC’s published data is calculated as an average of data obtained from JP Morgan and Bank of America. She said market observable data is only available at selected tenors of the yield curve, requiring interpolation for the points in between the selected tenors. JP Morgan and Bank of America use proprietary processes to provide data at all points along the U.S. Department of the Treasury (Treasury Department) yield curve. Differences can be expected compared to market observable data because these firms calculate their own Treasury Department yield curve and their own LIBOR values.

Mr. Bayerle introduced amendment proposal 2020-06 (Attachment Eight-I), which provides Valuation Manual revisions that address the swap spreads issues by allowing companies to determine their own swap rates from market observable sources. He said the amendment proposal also requires the disclosure of the market observable sources in the PBR Actuarial Report.

Mr. Leung made a motion, seconded by Mr. Kupferman, to expose amendment proposal 2020-06 for a 21-day public comment period ending May 27. The motion passed unanimously.
6. **Exposed Revisions to Model #805**

Mr. Bayerle said the *Standard Nonforfeiture Law for Individual Deferred Annuities* (#805) currently sets the floor for the nonforfeiture interest rate at 1%. He said the current economic environment necessitates lowering the nonforfeiture interest rate to 0% to allow companies to support the nonforfeiture guarantees in their deferred annuity contracts. He submitted a proposal to revise Model #805 to lower the nonforfeiture rate.

Mr. Carmello made a motion, seconded by Mr. Weber, to expose revisions to Model #805 (Attachment Eight-J) for a 21-day public comment period ending May 27. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call Feb. 27, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Jason Wade (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman and Benjamin Bock (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Agreed to Distribution of the ESG RFP

Mr. Boerner said the need to replace the American Academy of Actuaries (Academy’s) economic scenario generator (ESG) was discussed during the July 16, 2019, joint call of the Task Force and the Life Risk-Based Capital (E) Working Group. The groups agreed, without objection, to have NAIC staff develop a request for proposal (RFP) for a replacement ESG. He said the proposed RFP (Attachment Eight-A1) was developed in response to that decision and in accordance with the direction provided to staff after discussions with a drafting group comprised of state insurance regulators and NAIC staff, Academy and industry representatives.

Mr. Boerner said the goal is to have the Task Force agree, without objection, to allow NAIC staff to release the RFP and provide a memorandum informing the Life Insurance and Annuities (A) Committee of the release of the RFP. Scott O’Neal (NAIC) said the memorandum to the Committee provides the background and history necessitating the RFP and summarizes the deliverables required of potential vendors.

Mr. Ostlund questioned the Task Force’s authority to issue the RFP without approval from the Committee.

Mr. Boerner said the information provided by NAIC staff is that Committee approval is not required.

Reggie Mazyck (NAIC) noted that the RFP was approved by both the NAIC chief operating officer (COO) and the chief financial officer (CFO), and it has been discussed with the Committee chair.

Mr. Boerner reiterated his understanding that Committee approval is not required, but he is willing to defer to Mr. Ostlund’s request to obtain Committee approval before recommending distribution of the RFP.

Mr. O’Neal said the RFP provides the minimum requirements expected from an ESG. He discussed the scope of the RFP, including the expected deliverables; ongoing production, maintenance and support requirements, including costs; and other contractual terms of the RFP.

Mr. Ostlund made a motion, seconded by Ms. Eom, to direct the Task Force chair to request permission from the Committee to issue an RFP for an ESG, noting that the ESG RFP memorandum serves as the request, while also providing information on the initiative (Attachment Eight-A2). The motion passed unanimously.*

*Editor’s Note: Subsequent to the conference call, it was determined that the RFP does not require Life Insurance and Annuities (A) Committee approval prior to distribution. The Task Force conducted an e-vote to agree, without objection, for NAIC staff to release the RFP and to provide the memorandum, as referenced in the minutes above, to the Committee.
2. **Adopted Amendment Proposal 2019-62**

Mr. Boerner said amendment proposal 2019-62 was exposed for 14 days after moving the proposed language from a guidance note into the text as an additional paragraph of VM-20, Requirements for Principle-Based Reserves for Life Products, Section 9.C.4.

Mr. Leung made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2019-62 (Attachment Eight-A3). The motion passed unanimously.

3. **Exposed Amendment Proposal 2020-03**

Ms. Hemphill said there were differing interpretations of the treatment of the premium mode when calculating the VM-20 net premium reserve (NPR). She said amendment proposal 2020-03 clarifies that the actual modal premium may be reflected directly in the NPR calculation. Ms. Fenwick suggested modifying the language proposed for VM-20 Section 3.B.3.a to read, “Directly within the calculations” instead of, “Through direct adjustments to the calculations” because the latter may be subject to judgment.

Ms. Hemphill said that change works for the direct calculation, but it may not work if using an unearned premium approach. She recommended adding a note to the exposure asking commenters if the revised language proposed for Section 3.B.3.a might necessitate an additional requirement to cover calculations utilizing an unearned premium approach.

Ms. Fenwick made a motion, seconded by Mr. Ostlund, to expose amendment proposal 2020-03, including the change to Section 3.B.3.a, and the proposed cover note, for a 21-day public comment period (Attachment Eight-A4). The motion passed unanimously.

4. **Exposed Amendment Proposal 2019-58**

Mr. Bock made a motion, seconded by Ms. Eom, to expose amendment proposal 2019-58 for a 21-day public comment period (Attachment Eight-A5). The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

W:\National Meetings\2020\Spring\TF\LA\LATF Calls\02-27\Feb 27 Minutes.docx
The Life Actuarial (A) Task Force met via conference call Feb. 20, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce. R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Bill Carmello (NY); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Adopted Revisions to AG 48

Mr. Boerner said changes were made to Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) to reflect changes to the Term and Universal Life Insurance Reserve Financing Model Regulation (#787) (Attachment Eight-A6) adopted by the Reinsurance (E) Task Force.

Mr. Leung made a motion, seconded by Mr. Chou, to adopt the revisions to AG 48 (Attachment Eight-A7). The motion passed unanimously.

2. Agreed to Forward Revisions to the VM-20 Reserve Supplement

Jennifer Frasier (NAIC) discussed proposed changes to the VM-20 Reserve Supplement blank. She said the major changes to the blank include: 1) changing the reporting units from thousands to dollars to be consistent with other annual statement reporting formats; 2) splitting Part 1 into Part 1A and Part 1B to provide the necessary space to accommodate the reporting unit change to dollars; and 3) removing Part 2, which was required only for the three-year transition period.

Ms. Frasier discussed proposed changes to the VM-20 Reserve Supplement instructions to reflect the revisions to the blanks. She noted receiving feedback that the sentence in the instructions for reporting the net premium reserve (NPR) in Part 1B, which reads “Report the floored amount,” may be unnecessary or confusing. She said the sentence was added after reviewing reserve supplements in which companies did not report the floor. She agreed to remove the sentence to provide clarity.

Ms. Frasier discussed the changes to the Variable Annuities (VA) Supplement blanks and instructions that reflect the VA Framework changes effective in the 2020 Valuation Manual. She said some feedback she received suggested adding a reference to Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43). She agreed to add that reference by changing the scope-related sentence to read: “Complete this supplement for contracts and certificates subject to VM-21 or AG 43.” She said other feedback suggested breaking proposed line for “Reserves Ceded” into two lines showing the amount of reinsurance ceded to captives and the amount of reinsurance ceded to other non-captive companies. There was no objection to the change.

The Task Force agreed, without objection, to forward the VM-20 Reserve Supplement blank and its instructions (Attachment Eight-A8), and the VA Supplement blank and its instructions (Attachment Eight-A9), including the agreed-upon edits, to the Blanks (E) Working Group.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call Feb. 13, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Linda A. Lacewell represented by Bill Carmello (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Re-Exposed Amendment Proposal 2019-62**

Mr. Boerner presented two options for editing amendment proposal 2019-62. The first option provides leading language to add context to the wording of the guidance note. The second option moves the guidance note language into the text to create a new VM-20, Requirements for Principle-Based Reserves for Life Products (Section 9.C.4.d.)

Mr. Chupp said that while either option is acceptable, his preference is for option 2. Mr. Carmello concurred with a preference for option 2.

Mr. Boerner suggested exposing the amendment proposal with option 2 and an explanatory note calling attention to the language in Section 9.C.4 and noting that the proposed language was extracted from the previously exposed guidance note.

Mr. Chupp made a motion, seconded by Mr. Ostlund, to expose amendment proposal 2019-62 for a 14-day public comment period ending Feb. 26 (Attachment Eight-A10). The motion passed unanimously.

2. **Exposed Amendment Proposal 2020-02**

Pat Allison (NAIC) said amendment proposal 2020-02 clarifies VM-20 Section 2.H and adds a new Section 2.I to address the skipping of steps mandated in VM-20 on the grounds of materiality or reliance on the allowance of approximations provided in Section 2.G. She said the proposal includes a guidance note that provides examples of steps that cannot be omitted.

Mr. Chupp made a motion, seconded by Mr. Leung, to expose amendment proposal 2020-02 for a 21-day public comment period ending March 4 (Attachment Eight-A11). The motion passed unanimously.

3. **Rejected Amendment Proposal 2017-51**

Mr. Boerner said the amendment proposes allowing final expense policies to be treated similar to pre-need policies, which are exempt from principles-based reserving (PBR). He said pre-need policies have a clearly defined boundary that distinguishes them from other policy types. He said the broad categorization of final expense policies could allow various product designs to fit under the final expense umbrella. Allowing final expense policies an exemption similar to that granted to pre-need policies might allow a PBR exemption to some policies inappropriately. He recommended the rejection of the amendment proposal.

Mr. Carmello indicated that if there were a limit on the face amount of the policies characterized as final expense dollar, he might be more amenable to the proposal, but he could not support it in its current form.

Mr. Carmello made a motion, seconded by Mr. Weber, to reject amendment proposal 2017-51 (Attachment Eight-A12). The motion passed, with Alabama and Iowa dissenting.
4. Discussed Amendment Proposal 2019-33

Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comments (Attachment Eight-A16) on amendment proposal 2019-33 note concerns with the scope of the definition of “individual risk selection process” and practical implementation concerns. He said in addition to the written comments, the ACLI is also concerned that companies that issue very small group business may be doing more underwriting than is normally done for a group contract. He suggested the consideration of a minimum group size if there is a scope revision. He said consideration should also be given to the appropriateness of the mortality and lapse rates compared to the rates used in the net premium reserve (NPR). He recommended that the Task Force defer consideration until the concerns are addressed.

Len Mangini (Academy) said the proposal has a three-year phase-in, which would allow time for edits to the amendment proposal after Task Force adoption.

Mr. Chupp said the use of the term “ordinary life” might be problematic because the Valuation Manual uses the term to apply only to individual policies. He said his comment (Attachment Eight-A13) questions whether the proposed language is appropriately placed within the Valuation Manual. The comment recommends a new section to accommodate the language.

Mr. Robinson said his comment (Attachment Eight-A14) suggests that the proposal will require changes to VM-51, Experience Reporting Formats.

Mr. Mangini said the Academy Life Reserve Work Group will consider the comments.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call Feb. 6, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Mr. Ostlund made a motion, seconded by Mr. Yanacheak, to adopt the Task Force’s Dec. 5–6, 2019, minutes (see NAIC Proceedings – Fall 2019, Life Actuarial (A) Task Force). The motion passed unanimously.

2. **Discussed Amendment Proposal 2019-62**

   Leonard Mangini (American Academy of Actuaries—Academy) said amendment proposal 2019-62 (Attachment Eight-A15) clarifies the treatment of additional mortality risk arising from the conversion of term life policies. He said the proposed language also requires a description of the conversion privileges and how the mortality was factored into the aggregation and segmentation.

   Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Eight-A16) supports the proposed amendment.

   Mr. Chupp said his comment letter (Attachment Eight-A17) suggests that, given the use of the word “must” in the proposed language, the language should not be relegated to a guidance note, but it should be a part of the text. He suggested that the proposed guidance note should become Section 9.C.4.d of VM-20, Requirements for Principle-Based Reserves for Life Products.

   Mr. Mangini said the Academy’s Life Reserves Work Group proposed using a guidance note because they did not want to give the impression that they were changing existing requirements.

   Mr. Boerner said the guidance note could be revised to point to the specific section of VM-20 containing the existing requirements. He recommended deferring action on the proposal until it could be determined whether the guidance note can appropriately point to Section 9.C.4 without requiring revisions to the language in that section.

3. **Adopted Amendment Proposal 2019-61**

   Ms. Hemphill said amendment proposal 2019-61 clarifies that all universal life policies with a material secondary guarantee are ineligible for the life principle-based reserves (PBR) exemption, regardless of whether the secondary guarantee is a part of the base policy or a rider.

   Mr. Bayerle said the ACLI comment letter expressed support for the proposal.

   Mr. Leung made a motion, seconded by Mr. Weber, to adopt amendment proposal 2019-61 (Attachment Eight-A18). The motion passed unanimously.
4. **Adopted Amendment Proposal 2019-60**

Ms. Hemphill said that while the *Valuation Manual* requires a company to use one credibility method for all of its business, the lack of industry factors for 2008 Valuation Basic Table (VBT) is a practical constraint that does not allow application of the Bühlmann method to business issued on the 2008 VBT. She said amendment proposal 2019-60 allows a company using the Bühlmann method for its fully underwritten business to use the Limited Fluctuation method for its business issued on the 2008 VBT. She said it also clarifies that claims using different credibility methods cannot be aggregated for the purpose of determining credibility and the sufficient data period.

Mr. Chou made a motion, seconded by Mr. Leung, to adopt amendment proposal 2019-60 (Attachment Eight-A19). The motion passed unanimously.

5. **Accepted Amendment Proposal 2020-01 as an Editorial Change**

Ms. Hemphill explained that amendment proposal 2020-01 provides two guidance notes that point to documents on the NAIC website to assist users of VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, by providing examples. She said the first guidance note points to mortality aggregation examples provided in the Mortality Aggregation excel spreadsheet, and it includes a Mortality Aggregation Presentation from the 2019 Summer National Meeting. The second guidance note points to the Sample Assumptions Summary for PBR Actuarial Report, which may be a useful reference document to individuals developing reporting in accordance with VM-31 Section 3.D.l.a.

Mr. Boerner noted that the guidance notes only provide the location of examples and do not change any requirements.

Reggie Mazyck (NAIC) said that because the guidance notes are only informational and no requirements are changed, he recommends that the Task Force accept the amendment proposal as an editorial change.

Mr. Boerner asked if any Task Force members objected to accepting amendment proposal 2020-01 (Attachment Eight-A20) as an editorial change to the *Valuation Manual*. The proposal was accepted without objection from Task Force members.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call Jan. 30, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair, represented by Peter Weber (OH); Jim L. Ridling represented by Steve Oslund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou and Jim Jakielo (CT); Doug Ommen represented by Mike Yanacheak (IA); Robert H. Muriel represented by Bruce Sartain (IL); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce. R. Range represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Russell Toal represented by Mark Hendrick (NM); Linda A. Lacewell represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. Discussed the Oliver Wyman YRT Reinsurance Reserve Credit Long-Term Solution

Chris Whitney (Oliver Wyman) reviewed the yearly renewable term (YRT) reinsurance reserve credit slide deck discussed on the Jan. 23 Task Force call (Attachment Eight-A22). He acknowledged a request from a Task Force member for an example of how the YRT rates used in the analysis were derived. He said the example will be provided to NAIC staff for distribution to Task Force members. Mr. Whitney reiterated that key takeaways from the previous discussion were:

1) Principles-based projections of reinsurance ceded can allow for scenarios reflecting reinsurer reactions that can produce reserve credits in excess of \( \frac{1}{2} c_x \).

2) The relative impact of each solution changes over time as the level of margin and remaining projection years change.

Mr. Whitney said because initial field test results are at a point-in-time, they will provide limited information. He said the longer-term projections, expected to be available at the end of February, will be more informative.

Dylan Strother (Oliver Wyman) said the long-term solution supplement document (Attachment Eight-A23), providing the assuming reinsurer’s perspective, was developed in response to mirror reserving questions posed at the 2019 Fall National Meeting. He said mirror reserving is not expected under the principle-based reserving (PBR) approach, primarily due to the differing assumptions of the direct writer and the reinsurer. He noted that the mix of business and the mechanics of the PBR calculation also contribute to the unlikelihood of having mirror reserves.

Katie van Ryn (Oliver Wyman) discussed examples where differing assumptions lead to the implausibility of mirror reserving. She noted that for the graphs on slide 6, the credibility assumptions for the ceding and assuming companies differ, with the lower ceding company credibility resulting in a higher PBR mortality margin. A similar comparison is provided on slide 7, except the YRT premium rates are modeled as the current scale plus 105% of the increase in PBR mortality. The adjustment to the YRT premiums reduces the difference between the reserve credit and the assumed reserves.

Mr. Robinson noted that the graphs show instances where the ceded reserve credit is greater than the assumed reserve. He asked Task Force members if it is permissible for the reserve credit to exceed the assumed reserve. He requested that Mr. Whitney provide revised graphs comparing the reserve credit, the assumed reserve, the assumed net premium reserve (NPR) and \( \frac{1}{2} c_x \).

Mr. Boerner said that unless the Valuation Manual prohibits it, the calculated PBR reserve credit may be different from the calculated PBR assumed reserve.

Mr. Jakielo said that when reviewing the reserve amounts resulting from the testing of three amendment proposals, the Task Force should consider not only the comparison of the reserve credit and assumed reserve, but also it should consider the differences in the assumed reserve under each amendment proposal.

Having no further business, the Life Actuarial (A) Task Force adjourned.
The Life Actuarial (A) Task Force met via conference call Jan. 23, 2020. The following Task Force members participated: Kent Sullivan, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Jillian Froment, Vice Chair; Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Robert H. Muriel represented by Bruce Sartain (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Steve Kelley represented by Fred Andersen and John Robinson (MN); Chlora Lindley-Myers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Linda A. Lacewell represented by Bill Carmello and Amanda Fenwick (NY); Glen Mulready represented by Andrew Schallhorn (OK); Todd E. Kiser represented by Tomasz Serbinowski (UT); and Scott A. White represented by Craig Chupp (VA).

1. **Heard a Status Update on the YRT Field Test**

Jason Kehrberg (American Academy of Actuaries—Academy), representing the Academy’s YRT Field Test Project Oversight Group, provided a status update on the yearly renewable term (YRT) field test (Attachment Eight-A21). The update included discussion of the timeline for the project workstreams and the dates of the project milestones.

Mr. Boerner noted that the date for the Plenary adoption milestone should be corrected to Tuesday, Aug. 11.

2. **Discussed the Oliver Wyman YRT Reinsurance Reserve Credit Long-Term Solution**

Chris Whitney (Oliver Wyman) provided an overview of the YRT reinsurance reserve credit slide deck presented at the 2019 Fall National Meeting (Attachment Eight-A22) and the supplement developed in response to mirror reserving questions (Attachment Eight-A23). He said questions from Task Force members and interested state insurance regulators indicated that a more targeted review of the presentation would be beneficial.

Dylan Strother (Oliver Wyman) said the Executive Summary of the slide deck seemed to be clearly understood by participants at the 2019 Fall National Meeting. He said one of the questions points to the need for a high-level overview of how the nested modeling and projection modeling depicted on slide #7 work. He clarified that best estimate assumptions are outer loop assumptions, and prudent estimates assumptions are inner loop assumptions.

Mr. Strother reminded the Task Force that as the projection moves forward to the next valuation date, the sufficient data period will increase, and inner loop assumptions must be updated for historical mortality improvement up to that point. He said such things are reflected in the Oliver Wyman modeling.

Mr. Strother said the major goals of the Background section were to set up a baseline analysis comprised of two straightforward base cases for modeling YRT premiums. The base cases will be used to analyze the various amendment proposals being presented. He said the first base case increases the YRT premium to equal the principle-based reserving (PBR) mortality. The second base case sets the current scale equal to the PBR mortality. One goal of the section is to compare the base cases, one conservative and the other aggressive, to the approach using \( \frac{1}{2} c_0 \). Another goal was to look at how the different approaches compare over a projection horizon.

As Mr. Strother discussed the graph of the mortality and PBR margins, he noted that the lack of future mortality improvement is an implicit margin that is a large part of the total margin in the early years, and reduces to a less significant portion of the total margin in later years.

Pat Allison (NAIC) said the graph shows that, assuming that no adjustments are made to the YRT reinsurance premium scale, reserve credits are driven by the difference between the PBR mortality and the best estimate mortality.

Mr. Strother noted that the impact of reinsurance on the reserve is largely dependent on whether the reinsurer chooses to adjust the premium to reflect changes in PBR mortality.
Katie van Ryn (Oliver Wyman) said the purpose of the Initial Insights and Analysis section is to frame the discussion within the context of amendment proposal 2019-40, amendment proposal 2019-41 and amendment proposal 2019-42, which are being evaluated as part of the field test. She discussed the results of each amendment proposal on the reserve credits under various assumptions of mortality improvement and reinsurer reactions.

Having no further business, the Life Actuarial (A) Task Force adjourned.
March 4, 2020

Re: RFP #2053 – **Economic Scenario Generator (ESG)**

The National Association of Insurance Commissioners (NAIC) is soliciting proposals from vendors to provide, maintain, and support an ESG producing real-world interest and equity scenarios to be prescribed for use in calculations of life and annuity Statutory reserves according to the *Valuation Manual* (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2).

The chosen vendor will deliver an ESG and supporting tools that meet requirements set by regulators, along with robust documentation and training materials. On an ongoing basis, the vendor will produce the scenarios, support end users of the ESG, research changes considered by NAIC’s Life Actuarial (A) Task Force and Life Risk-Based Capital (A) Working Group and implement those that are adopted.

To receive consideration, proposals should be sent electronically to Proposals@naic.org by 5 PM Central on Friday, May 1, 2020. In addition to ensuring your proposal addresses all items within the scope of work, the proposal should clearly state the price plus any service charges or fees that could be incurred in the delivery of this service.

**Request for Proposal Schedule**

Please submit questions regarding any aspect of this project to Jim Woody via Proposals@naic.org by close of business on Wednesday, March 25, 2020. All questions will be consolidated and answers provided to all potential vendors and posted to the NAIC website by close of business on Wednesday, April 8, 2020.

**Selection Criteria**

A committee of NAIC staff will review the proposals and award the project.

The selection will be based on the following criteria:

- Completeness of the proposal
- Qualifications of staff dedicated to developing and supporting the ESG
- Professional reputation of the firm
- Ability to deliver the items listed in Section II
• Capability to perform updates to economic scenario generator (ESG) features, parameters, and tools in a timely manner
• Flexibility in being able to work through the NAIC process to customize ESG features, parameters, and tools as needed
• Robustness of ESG and calibration documentation
• Quality of training materials and other means for providing support
• Price, including one-time and ongoing costs

NAIC reserves the right to reject any or all proposals, request new proposals, or request additional information. NAIC reserves the right to further negotiate with any or all bidders. The NAIC also reserves the right to cancel this RFP at the direction of its membership. Thank you for your consideration.

Sincerely,

James W. Woody
NAIC Chief Financial Officer

CC: Andy Beal, NAIC Chief Operating Officer/CLO
    Donna Powers, NAIC Strategic Business Initiatives Assistant Director
I. BACKGROUND AND PURPOSE

The American Academy of Actuaries (Academy) has developed an Economic Scenario Generator (ESG), which may be found on the Society of Actuaries website at https://www.soa.org/tables-calcs-tools/research-scenario/ and https://www.naic.org/cmte_e_lrbc.htm. The ESG is currently used by the life insurance industry in calculations of life and annuity reserves and capital.

Beginning in early 2017, the Academy notified the Life Actuarial (A) Task Force (LATF) that it did not have the resources to maintain the ESGs, except in their current form until a suitable replacement can be found. Since the NAIC does not currently have the resources or expertise to develop and maintain an ESG, a third-party ESG vendor is needed for these functions. In an open meeting held on 7/16/19, LATF and the Life RBC Working Group (LRBC WG) requested that NAIC staff consider issuing a Request for Proposals (RFP).

The purpose of this RFP is to solicit proposals from vendors to provide, maintain, and support an ESG producing real-world interest and equity scenarios to be prescribed for use in calculations of life and annuity Statutory reserves according to the Valuation Manual (e.g., VM-20, VM-21) and capital under the NAIC RBC requirements (e.g., C3 Phase 1, C3 Phase 2). The chosen vendor will deliver an ESG and supporting tools that meet requirements set by regulators, along with robust documentation and training materials. On an ongoing basis, the vendor will produce the scenarios, support end users of the ESG, research changes considered by LATF and LRBC WG and implement those that are adopted.

II. DELIVERABLES

This project requires an initial set of deliverables, as well as ongoing maintenance and support. As noted in Section III below, bids should include a detailed breakdown of costs for each of the initial and ongoing items listed in A-P below.

Initial Deliverables (Items with One-Time Costs)

A. An existing ESG capable of producing, at a minimum, real-world interest rate, equity, and bond fund return scenarios for use in calculations of life and annuity Statutory reserves according to the Valuation Manual (e.g., VM-20, VM-21) and capital under the NAIC RBC requirements (e.g., C3 Phase 1, C3 Phase 2). If the ESG can produce additional variables beyond the minimum requirements (e.g. inflation rates, risk-neutral scenarios, corporate bond spreads, implied volatility scenarios,
credit defaults, credit rating migrations, etc.), indicate if there is an additional cost for these features.

B. Meetings with NAIC staff and regulators as needed to discuss the vendor’s existing economic scenario generator (ESG) features and parameters, as well as potential modifications.

C. Customization of ESG features and parameters to reflect any modifications adopted by regulators.

D. A scenario reduction tool to allow companies to choose a specific number of representative scenarios (e.g. 100, 500, 1000, etc.) from a universe of 10,000 scenarios. Scenario subsets provided by the tool as of a valuation date must contain the same scenarios for all users of the tool.

E. Calibration criteria used to determine whether stratified scenario subsets are sufficiently dispersed relative to the universe of 10,000 scenarios.

F. A tool to generate scenarios for the VM-20 Stochastic Exclusion Ratio Test.

G. A tool to generate the VM-21 Company-Specific Market Path method scenarios.

H. A tool to generate statistics on the output of the ESG.

I. Full documentation on the ESG specifications, calibration, and tools.

J. Robust training materials for regulators and industry end-users.

Ongoing Production, Maintenance and Support (Items with Ongoing Costs)

K. Run the ESG as of each month-end and produce the required scenarios on the first business day of the following month. The process to generate the scenarios must be completed in time to post scenarios on business day one of each month. Statistics on the output of the ESG are expected to be delivered simultaneously with the scenarios. Note that NAIC staff intends to provide the scenarios on the NAIC website to ensure they are available to all companies regardless of whether they have licensed the vendor’s software.

L. Develop parameter updates at a frequency determined by the regulators. The process to update the ESG will include the following steps:
   1. Perform research on potential changes as requested by regulators.
   2. Document and present potential changes to regulators for exposure and adoption. Attend regulator meetings as needed to respond to questions/comments received during the exposure period. Materials to be provided for consideration of changes should include a) discussion on how changes were vetted for complex interactions between parameters, b) attribution analysis showing the impact of each change, and c) documentation on the above in sufficient detail to allow independent review.
   3. Modify the ESG to reflect final adopted updates in a timely manner and provide evidence to NAIC staff that they were made appropriately.
4. Update documentation on the ESG specifications.

M. Update training materials for regulators and industry end users.

N. Provide full support to end users of the economic scenario generator (ESG) scenarios who have licensed the ESG software.

O. Provide help desk support to end users of the ESG scenarios who have not licensed the ESG software.

P. Provide scenarios to support field testing of the new ESG under regulatory reserving and capital frameworks.

III. CONTENT OF PROPOSAL

For final evaluation of proposals, it is important that vendors provide the information requested below:

A. A breakdown of the number of staff dedicated to ESG development by division (e.g., parameterization, software development, documentation, training, etc.) along with the resumes of key staff members.

B. The number of life insurance and annuity companies that are currently licensed to use the ESG for real-world liability valuation. Additionally, please provide at least three named clients to act as references along with their contact information.

C. Description of the ESG indicating the type of model (e.g. stochastic log volatility, independent log normal, regime switching lognormal with number and frequency of regimes, stochastic volatility jump diffusion, other etc.). The vendor should also include a discussion of the benefits and limitations of their recommended ESG model.

D. Description of the ESG parameters and how they are determined (e.g. fitting model to actual historical data using maximum likelihood estimation, etc.).
   1. If model fitting is done using historical data, detail the source of the data and length of the period used and whether any adjustments are made to the source data.
   2. Describe how any parameters, including mean reversion parameters, are derived and whether they are static or dynamic.
   3. Provide information on the level of customization available to regulators in specifying ESG features and parameters. For example, regulators may want to specify a certain type of mean reversion formula, the historical period used to determine parameterization, or other items.

E. Description of the types of returns that can be simulated by the ESG (e.g. Treasury rates, bond returns of different maturities and credit qualities, equities of different indices, different types of international equities, currencies, inflation rates, etc.).

F. Details on how credit spreads and defaults are implicitly reflected or explicitly simulated in bond fund returns.
G. Description of the methodology for completing the full Treasury yield curve from the simulated interest rates.

H. The level of dependency between different financial variables in the economic scenario generator (ESG). If the ESG is integrated, describe how the correlations are developed and whether they are dynamic (e.g. either exhibiting both positive and negative correlations if appropriate, etc.).

I. Statistics on the range of scenarios produced (e.g. the percentage of scenarios with low interest rates coupled with low equity returns, low interest rates coupled with high equity returns, etc.).

J. An analysis showing how the range of scenarios produced compares to the current Academy VM-20/VM-21 and C3 Phase 1 ESGs, including testing over different historical and/or potential future economic conditions.

K. The frequency of review and consideration of updates for each ESG parameter. Please describe the rationale for the frequency of each parameter update and specify which parameters require judgement to calibrate and those that do not (e.g. parameters updated formulaically).

L. Information on how end-users of the ESG will be able to generate scenarios on-the-fly through a mechanism such as software licensing, an application programming interface (API), and/or available full documentation of the technical workings the ESG.

M. A copy of existing ESG documentation.

N. A copy of existing ESG training materials, and a description of any other support provided.

O. A detailed breakdown of costs for each of the one-time and ongoing deliverables listed in Section II. Bids should also include both first year and ongoing ESG software licensing costs for NAIC staff, regulators, and companies that may wish to license the software for up to five years.

IV. SELECTION PROCESS

The NAIC will be responsible for the selection of the vendor that will be awarded this project to be funded. Input from regulators and other subject-matter experts may also be sought, but the NAIC will make the final decision.

The following factors will be considered in making the vendor selection:

- Completeness of the proposal
- Qualifications of staff dedicated to developing and supporting the ESG
- Professional reputation of the firm
- Ability to deliver the items listed in Section II
- Capability to perform updates to ESG features, parameters, and tools in a timely manner
• Flexibility in being able to work through the NAIC process to customize ESG features, parameters, and tools as needed
• Robustness of economic scenario generator (ESG) and calibration documentation
• Quality of training materials and other means for providing support
• Price, including one-time and ongoing costs

V. CONFLICTS OF INTEREST

The NAIC recognizes that, given the broad scope of this project, any vendor with the experience reasonably necessary to produce the ESG may have certain conflicts of interest based upon past associations with industry participants. These conflicts of interest will not automatically disqualify the vendor, but the vendor must have verifiable policies and procedures in place designed in compliance with established industry standards to address conflicts of interest issues that may arise.

VI. CONDITIONS

The NAIC reserves the right to not award a contract for this ESG. Reasons for not awarding a contract could include, but are not limited to, a lack of acceptable proposals or a finding that insufficient funds are available to proceed. The NAIC also reserves the right to redirect the project as is deemed advisable. The NAIC also reserves the right to cancel this RFP at the direction of its membership.

VII. QUESTIONS

Any questions regarding the Scope of Work should be directed to: Proposals@naic.org. Questions related to any other matter should be directed to Jim Woody, e-mail: JWoody@naic.org
**NAIC CONFLICT OF INTEREST FORM**

**FOR RETENTION OF CONSULTANTS SUBJECT TO BID**

**NAIC RFP 2053**

Any *Entity* that desires to contract with the NAIC must complete this form, including vendors, consultants and purchasers of goods or services. All potential conflicts must be disclosed and approved before the contract execution.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
PURCHASE ORDERS FOR SERVICES

As used herein, “Seller” means the person, firm, or corporation to whom this Purchase Order is issued; “Buyer” means the National Association of Insurance Commissioners, a nonprofit Delaware corporation.

1. Acceptance of Terms and Conditions. Seller agrees to perform the services (“Services”) described in any purchase order (“Purchase Order”) in accordance with these Terms and Conditions. Upon acceptance of a Purchase Order or upon commencement of Services, Seller shall be bound by these Terms and Conditions and all provisions set forth on the face of any applicable Purchase Order, whether Seller signs or otherwise acknowledges these Terms & Conditions or the Purchase Order, unless Seller objects to such Terms and Conditions in writing prior to commencing Services.

2. Revocable. This writing does not constitute a firm offer and may be revoked at any time prior to acceptance.

3. No modification. No agreement or other understanding in any way altering the terms, prices or conditions of the applicable Purchase Order or these Terms and Conditions shall be binding upon Buyer unless made in writing and signed by Buyer’s duly authorized representative.

4. Termination. Buyer may immediately terminate the Purchase Order upon written notice to Seller if Seller fails to perform or otherwise breaches these Terms and Conditions, files a petition in bankruptcy, becomes insolvent, or dissolves. Buyer may terminate the Purchase Order for any other reason upon thirty (30) days’ written notice to Seller. Upon receipt of notice of termination, Seller shall cease to provide Goods and/or perform Services pursuant to the Purchase Order. In the event of termination, Buyer shall be liable to Seller only for those Services satisfactorily performed before the date of termination, less appropriate offsets. Buyer shall not be subject to any charges or other fees as a result of such cancellation. Seller may terminate this Agreement upon written notice to Buyer if Buyer fails to pay Seller within sixty (60) days after Seller notified Buyer in writing that payment is past due and that it intends to terminate the Purchase Order.

5. Warranty of Services. Seller represents and warrants that all Services shall be completed in a professional, workmanlike manner, with the degree of skill and care that is required by current, good, and sound professional procedures. Further, Seller warrants that the Services shall be completed in accordance with applicable specifications. Seller represents and warrants that the performance of Services hereunder will not conflict with, or be prohibited in any way by any other agreement or statutory restriction to which Seller is bound.

6. Seller’s Indemnification. Seller shall indemnify, hold harmless, and at Buyer’s request, defend Buyer, its officers, directors, agents and employees, against all claims,
liabilities, damages, losses and expenses, including attorneys’ fees and costs of suit arising out of or in any way connected with any claim by a third party against Buyer alleging that the Services infringe a patent, copyright, trademark, trade secret or other proprietary right of third party. Seller shall not settle any such suit or claim without Buyer’s prior written consent. Seller shall also indemnify and hold harmless Buyer from any injury to person or property arising out of or caused by Seller’s performance of the Purchase Order. Seller agrees to pay or reimburse all costs that may be incurred by Buyer in enforcing this indemnity provision, including attorneys’ fees.

7. Compliance with Laws. Seller shall comply with all laws and regulations of federal, state and local governments, including without limitation, laws and regulations dealing with fair labor standards, civil rights, and public contracts. Seller further warrants that all Services performed pursuant to the Purchase Order have been produced or performed in compliance with such laws and regulations and Seller agrees to indemnify Buyer for any liability resulting from such noncompliance by the Seller.

8. Price. The price to be paid by the Buyer shall be the price contained in Seller’s bid and/or the price stated on the face of the Purchase Order whichever is less. Seller represents the price contained in Seller’s bid is no higher than Seller’s current prices on orders by others for similar products or services under similar or like conditions and methods of purchase.

9. Invoices. Seller shall submit invoices on each Purchase Order after each delivery. Buyer shall not be charged sales tax and shall furnish a tax exemption certificate upon request. Discounts will be taken from the date of acceptance of services or date the invoice is received by Buyer whichever is later. Buyer shall retain the right of offset.

10. Force Majeure. Buyer shall not be liable for any failure to perform including failure to: (1) accept performance of Services, or (2) take delivery of the Goods as provided if caused by circumstances beyond Buyer’s control which make such performance commercially impractical including, but not limited to, acts of God, fire, flood, acts of war, government action, accident, labor difficulties or shortage, or the inability to obtain materials, equipment or transportation.

Seller shall not be liable for any failure to perform including failure to: (1) provide Services, or (2) deliver Goods as provided if caused by circumstances beyond Seller’s control which make such performance commercially impractical including, but not limited to, acts of God, fire, flood, acts of war, government action, accident, labor difficulties or shortage, or the inability to obtain materials, equipment or transportation.

11. Insurance. Seller shall be solely responsible for maintaining adequate auto, workers’ compensation, unemployment compensation, disability, liability and other applicable insurance, as is required by law or as is the common practice in Seller’s trade or business, whichever affords greater coverage. Seller shall carry Comprehensive General Liability coverage and Umbrella or Excess Liability coverage with minimum limits of $1,000,000 per occurrence and $2,000,000 in the aggregate for property damage and bodily injury. Upon request, Seller shall provide Buyer with certificates of
insurance evidencing adequate coverage naming the Buyer as additional insured.

12. **Limitation of Liability.** In no event shall Buyer be liable to Seller or Seller’s agents, or any third party for any incidental, indirect, special, or consequential damages arising out of, or in connection with, this Agreement, whether or not Buyer was advised of the possibility of such damage.

13. **Confidentiality.** In the event Seller gains written or oral confidential information of or from the Buyer, Seller agrees not to reveal to anyone or make use of such knowledge and information at any time for any purposes except as necessary in the course and scope of provision of Goods or performance of Services specified hereunder. Upon termination of the Purchase Order, Seller agrees to deliver to Buyer all such confidential information or work product belonging to Buyer.

14. **Assignability.** Seller shall not assign or subcontract this Purchase Order or any of its rights or obligations hereunder without the prior written consent of Buyer. Any assignment or transfer without such written consent shall be null and void.

15. **Publicity.** Seller shall not use Buyer’s name in any form or attribution in connection with any solicitation, publicity, advertising, endorsement or other promotion.

16. **Survivability.** Any obligations and duties, which by their nature extend beyond the expiration or termination of this Purchase Order shall survive the expiration or termination hereof.

17. **Choice of Law.** This Purchase Order shall be construed in accordance with, and disputes shall be governed by, the laws of the State of Missouri.

18. **Severability.** If any provision of this Purchase Order shall be deemed to be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions shall not in any way be affected or impaired thereby.

Date: 3/4/20  

Re: Recommendation to NAIC Staff to Issue a Request for Proposal for an Economic Scenario Generator

The Life Actuarial (A) Task Force has made a recommendation to NAIC staff to issue a Request for Proposal (RFP) for an Economic Scenario Generator (ESG). The purpose of this memorandum is to provide information on this initiative. Funding is not being requested at this time since the cost is unknown.

Background and History

The American Academy of Actuaries (Academy) has developed ESGs over a decade ago which are currently used by the life insurance industry in calculations of life and annuity reserves and capital. An ESG is a complex mathematical model that simulates economic variables such as interest rate and equity returns under a large number of scenarios.

Beginning in early 2017, the Academy notified the Life Actuarial (A) Task Force (LATF) that it did not have the resources to maintain the ESGs, except in their current form until a suitable replacement can be found. Since the NAIC does not currently have the resources or expertise to develop and maintain an ESG, a third-party ESG vendor is needed for these functions. In an open meeting held on 7/16/19, LATF and the Life RBC Working Group (LRBC WG) requested that NAIC staff begin the RFP process. A group consisting of regulators, NAIC staff, Academy and ACLI representatives, and other industry subject matter experts was then formed to draft the Scope of Work section of the RFP.

RFP Deliverables

The RFP will solicit proposals from vendors to provide, maintain, and support an ESG producing real-world interest and equity scenarios to be prescribed for use in calculations of life and annuity Statutory reserves according to the Valuation Manual (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2).

The chosen vendor will deliver an ESG and supporting tools that meet requirements set by regulators, along with robust documentation and training materials. On an ongoing basis, the vendor will produce the scenarios, support end users of the ESG, research changes considered by LATF and the LRBC WG and implement those that are adopted. Initially, the vendor will need to meet with LATF and the LRBC WG to discuss existing ESG features and parameters, as well as potential modifications desired by regulators. The vendor will customize the ESG with these modifications, and then support a field test (by providing scenarios) to determine potential industry reserve and capital impacts.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   American Academy of Actuaries’ Life Reserves Work Group.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
   January 1, 2020, edition of the Valuation Manual with NAIC adoptions through August 6, 2019
   Locations with proposed changes: VM-20 and VM-31

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.):
   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
   The Valuation Manual already requires that if there is additional risk arising from the conversion of term life insurance, whether group or individual, it must be reserved for. The purpose of this APF is to emphasize this requirement and to provide guidance on what must be included in the Life PBR Actuarial Report with respect to conversions.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2019-62 rev 02-10-20; 14-day re-exposure through 2/26/20
VM-20 Section 9.C.4 - Add Section 9.C.4.d

c. The mortality rates from the resulting anticipated experience assumptions must be no lower than the mortality rates that are actually expected to emerge and that the company can justify.

d. In satisfying Section 9.C.4.c, the company must ensure that any excess mortality is appropriately reflected in the anticipated experience mortality rates. This includes but is not limited to excess mortality associated with policies issued via conversion from term policies or from group life contracts.

Exposure of the proposed section 9.C.4.c includes the following changes which have been reviewed and accepted by the Task Force:

VM-31 Section 3.B.3 [Executive Summary – policy overview]

3. Policies – A summary of the base policies within each VM-20 reserving category. Include information necessary to fully describe the company’s distribution of business. For direct business, use PBR Actuarial Report Template A located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3) to provide descriptions of each base policy product type and underwriting process (including a description of the process, the time period in which it was used, and the level of any additional margin), with a breakdown of policy count and face amount by base policy product type and underwriting process. Also include the target market, primary distribution system, and key product features that affect risk, including conversion privileges.

d. Assumption and Margin Development – The following information for each risk factor: description of the methods used to determine anticipated experience assumptions and margins, including the sources of experience (e.g., company experience, industry experience, or other data); how changes in such experience are monitored; any adjustments made to increase mortality margins above the prescribed margin (such as to reflect increased uncertainty associated with newer underwriting approaches); and any other considerations, such as conversion features, helpful in or necessary to understanding the rationale behind the development of assumptions and margins, even if such considerations are not explicitly mentioned in the Valuation Manual.

VM-31 Section 3.D.3.x (new section) [Life Report – Mortality]

(We suggest placing after Adjustments for Mortality Improvement and before Mortality for Impaired Lives)
Mortality for Converted Policies – Description of the treatment of mortality for
Mortality policies issued under group or term conversion privileges including:

i. A description of the method(s) by which any excess conversion mortality
was taken into account in the development of company experience
mortality rates (e.g., through the use of separate mortality segments for
policies issued upon conversion, through aggregation of claim experience,
or through use of other methods), the rationale for the method(s) used,
and any changes in the method(s) from those used in previous years.

ii. The source(s) of the data used in the method(s) employed.

Mortality for Impaired Lives or Policyholder Behavior – Disclosure of:

i. the percentage of business that is on impaired lives;

ii. whether impaired lives were included or excluded from the mortality study
upon which company experience mortality was based; and

iii. whether any adjustments to mortality assumptions for impaired lives or
policyholder behavior were found to be necessary and, if so, the rationale
for the adjustments that were used.

Item (iii) above is a required disclosure for post-level term mortality assumptions even if
the company uses a 100% shock lapse assumption, since it pertains to the analysis
demonstrating whether there are post-level term profits.

Post-Level Term Testing – For products with a level term period:

i. Summary results of the seriatim comparison of the present value of
postlevel term cash inflows and outflows for the DR as required by VM-20

ii. If this comparison showed that there were post-level term profits, describe
how anti-selection was handled in the post-level term period, including the
prudent estimate premium, mortality and lapse assumptions used.

iii. If the comparison showed that there were post-level term losses, confirm
that the prudent estimate premium, mortality and lapse assumptions for
the post-level period were addressed in Section 3.D.1.a and were used in
the reserve calculation.
l. Term Conversions – Description of how the company reflects the impact of any term conversions privilege contained in the policy when setting reserves.

m. Lapse Rates for Converted Policies – Description of and rationale for lapse rates used for policies issued under any group or term conversion privilege.

a. Agreements – For those reinsurance agreements included in the calculation of the minimum reserve as per VM-20 Section 8.A, a description of each reinsurance agreement, including, but not limited to, the type of agreement, the counterparty, the risks reinsured, any provisions related to converted policies, the portion of business reinsured, identification of both affiliated and non-affiliated, as well as captive and non-captive, or similar relationships, and whether the agreement complies with the requirements of the credit for reinsurance under the terms of the AP&P Manual.
EXPOSURE OF APF 2020-03

Commenters are asked to consider whether having the revised language proposed for VM-20 Section 3.B.3.a might necessitate an additional requirement (possibly 3.B.3.c) to cover calculations utilizing an unearned premium reserve approach.

Please send comments to RMyzycz@naic.org by close of business on March 19, 2020.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
Clarify NPR calculation requirements.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 3.B.1 – 3.B.3, and VM-20 Section 3.B.6.d.i

January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Clarify any confusion on whether more direct calculations of the NPR to reflect non-annual premium modes, etc., are allowed. The current guidance note in Section 3.B.3 states that these may be reflected either “directly or through adjusting accounting entries”. However, due to some confusion on this point, I suggest emphasizing that more direct calculation methods are not prohibited.

Since the guidance note at the end of Section 3.B.3 contains requirements and not just guidance, it should be taken out of a guidance note. This requires moving the four terms to Section 3.B.1 and updating two cross references in VM-20 Section 3.B.6.d.i.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: APF 2020-03 revised 2/26/20 Exposed 2/27/20
VM-20 Section 3.B.1 – 3.B.3

B. NPR Calculation

1. For the purposes of Section 3, the following terms apply:
   a. For purposes of this section, a policy with “multiple secondary guarantees” is one that: a) simultaneously has more than one shadow account; b) simultaneously has more than one cumulative premium type of guarantee; or c) simultaneously has at least one of each. A single shadow account with a variety of possible end dates to the secondary guarantee, depending on the policyholder’s choice of funding level, constitutes a single—not multiple—secondary guarantee.

Guidance Note:
Policy designs that are created simply to disguise guarantees or exploit a perceived loophole must be treated in a manner similar to more typical product designs with similar guarantees. If a policy contains multiple secondary guarantees, such that a subset of those secondary guarantees in combination represent an implicit guarantee that would produce a higher NPR if that implicit guarantee were treated as an explicit secondary guarantee of the policy, then the policy should be treated as if that implicit guarantee were an explicit guarantee. For example, if there were a policy with a “sequential secondary guarantee” where only one secondary guarantee applied at any given point in time but with a series of secondary guarantees strung together with one period ending when the next one began, the combined terms of the secondary guarantees would be regarded as a single secondary guarantee.

For the purposes of Section 3, the following terms apply:
   a. The “fully funded secondary guarantee” at any time is:
      i. For a shadow account secondary guarantee, the minimum shadow account fund value necessary to fully fund the secondary guarantee for the policy at that time. For any policy for which the secondary guarantee contractually cannot be fully funded in advance, this shall be the present value of the contractually permitted premium stream that would fully fund the guarantee at the earliest possible date (using the valuation interest rate and mortality standard specified in Section 3.C).

   ii. For a cumulative premium secondary guarantee, the amount of cumulative premiums required to have been paid to that time that would result in no future premium requirements to fully fund the guarantee, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee. For any policy for which the secondary guarantee contractually cannot be fully funded in advance, this shall be the present value of the contractually permitted premium stream that would fully fund the guarantee at the earliest possible date (using the valuation interest rate and mortality standard specified in Section 3.C).

   b. The “actual secondary guarantee” at any time is:
      a. For a shadow account secondary guarantee, the actual shadow account fund value at that time.

      b. For a cumulative premium secondary guarantee, the actual premiums paid to that point in time, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee.

   c. The “level secondary guarantee” at any time is:
      a. For a shadow account secondary guarantee, the shadow account fund value that would have existed at that time assuming payment of the level gross premium determined according to Section 3.B.6.c.i.
b.ii. For a cumulative premium secondary guarantee, the amount of cumulative level gross premiums determined according to Section 3.B.6.c.i, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee.

2. The definition of the NPR in Section 3.B.4, Section 3.B.5 and Section 3.B.6 is intended to result in the calculation of a terminal NPR under the assumption of an annual mode gross premium. In Section 3.B.4, Section 3.B.5 and Section 3.B.6, the gross premium referenced should be the gross premium for the policy assuming an annual premium mode.

3. The reported reserve as of any valuation date should reflect the actual premium mode for the policy and the actual valuation date relative to the policy issue date, either directly or through adjusting accounting entries.
   b. Through adjusting accounting entries (such as due and deferred premium asset).

Guidance Note: The definition of the NPR in Section 3.B.4, Section 3.B.5 and Section 3.B.6 is intended to result in a terminal NPR under the assumption of an annual mode gross premium. The gross premium referenced should be the gross premium for the policy assuming an annual premium mode. The reported reserve as of any valuation date should reflect the actual premium mode for the policy and the actual valuation date relative to the policy issue date either directly or through adjusting accounting entries.

VM-20 Section 3.B.6.d.i

As of the valuation date for the policy being valued, determine the actual secondary guarantee, denoted ASGx+t, as outlined in Section 3.B.2-1.c and the fully funded secondary guarantee, denoted FFSGx+t, as outlined in Section 3.B.1.b.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Staff of Office of Principle-Based Reserving, California Department of Insurance – Address the topic of prescribed templates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

Valuation Manual (January 1, 2019 edition), Introduction, Section I, A.1

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached Appendix.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

See attached Appendix.

ISSUE:

Now that the concept of a prescribed template has been introduced into VM-31, it should be made clear what the rules are surrounding making changes to such templates.

SECTIONS:

Introduction, Section I, Process for Updating the Valuation Manual, Section A.1

REDLINE:

1. Substantive Items

Substantive changes to the Valuation Manual are proposed amendments to the Valuation Manual that would change or alter the meaning, application or interpretation of a provision. All changes to the Valuation Manual – or to templates prescribed for use by the Valuation Manual – will be considered substantive, unless specifically identified as either a nonsubstantive item or an update to a table by simple majority vote of the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force. Any item placed on the Active List as substantive will be exposed by the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force for a public comment period commensurate with the length of the draft and the complexities of the issue, but for no less than 21 days. The comment period will be deemed to have begun when the draft has been placed on the appropriate public NAIC web page. The Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will hold at least one open meeting (in person or via conference call) to consider comments before holding a final vote on any substantive items. Subsequent exposures of substantive items will be for a minimum of seven days. Meeting notices for Life Actuarial (A) Task Force/Health Actuarial (B) Task Force meetings will indicate if a vote is anticipated on any substantive items. Adoption of all changes at the Life Actuarial (A) Task Force/Health Actuarial (B) Task Force will be by simple majority.

REASONING:

Help assure readers that there no back doors through which to create new requirements.
TERM AND UNIVERSAL LIFE INSURANCE RESERVE FINANCING MODEL REGULATION

TABLE OF CONTENTS:

Section 1. Authority
Section 2. Purpose and Intent
Section 3. Applicability
Section 4. Exemptions from this Regulation
Section 5. Definitions
Section 6. The Actuarial Method
Section 7. Requirements Applicable to Covered Policies to Obtain Credit for Reinsurance; Opportunity for Remediation
Section 8. Severability
Section 9. Prohibition against Avoidance
Section 10. Effective Date

Section 1. Authority

This regulation is adopted and promulgated by [title of supervisory authority] pursuant to [insert provision of state law equivalent to section 5B of the Credit for Reinsurance Model Law] of the [name of state] Insurance Code.

Section 2. Purpose and Intent

The purpose and intent of this regulation is to establish uniform, national standards governing reserve financing arrangements pertaining to life insurance policies containing guaranteed nonlevel gross premiums, guaranteed nonlevel benefits and universal life insurance policies with secondary guarantees; and to ensure that, with respect to each such financing arrangement, funds consisting of Primary Security and Other Security, as defined in Section 5, are held by or on behalf of ceding insurers in the forms and amounts required herein. In general, reinsurance ceded for reserve financing purposes has one or more of the following characteristics: some or all of the assets used to secure the reinsurance treaty or to capitalize the reinsurer (1) are issued by the ceding insurer or its affiliates; or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty).

Section 3. Applicability

This regulation shall apply to reinsurance treaties that cede liabilities pertaining to Covered Policies, as that term is defined in Section 5B, issued by any life insurance company domiciled in this state. This regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation] shall both apply to such reinsurance treaties; provided, that in the event of a direct conflict between the provisions of this regulation and [insert provision of state law equivalent to the Credit for Reinsurance Model Regulation], the provisions of this regulation shall apply, but only to the extent of the conflict.

Section 4. Exemptions from this Regulation

This regulation does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

(1) Policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6F of the Valuation of Life Insurance Policies Model Regulation] or [insert provision of state law equivalent to Section 6G of the Valuation of Life Insurance Policies Model Regulation]; and which are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to
establish the ceded policies’ statutory reserves, but in no event later than Jan 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in [insert provision of state law equivalent to Section 6E of the Valuation of Life Insurance Policies Model Regulation] and which
are issued before the later of:
(a) The effective date of this regulation, and
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to
establish the ceded policies’ statutory reserves, but in no event later than Jan. 1, 2020;

(3) Any universal life policy that meets all of the following requirements:
(a) Secondary guarantee period, if any, is five (5) years or less;
(b) Specified premium for the secondary guarantee period is not less than the net level
reserve premium for the secondary guarantee period based on the Commissioners
Standard Ordinary (CSO) valuation tables and valuation interest rate applicable to the
issue year of the policy; and
(c) The initial surrender charge is not less than one hundred percent (100%) of the first year
annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which
varies according to the investment experience of any separate account or accounts; nor

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule
of maximum gross premiums required in order to continue coverage in force for a period in excess
of one year.

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provision of
state law equivalent to Section 2D of the Credit for Reinsurance Model Law]; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of
state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in
addition:

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and
Procedures Manual, without any departures from NAIC statutory accounting practices and
procedures pertaining to the admissibility or valuation of assets or liabilities that increase the
assuming insurer’s reported surplus and are material enough that they need to be disclosed in the
financial statement of the assuming insurer pursuant to Statement of Statutory Accounting
Principles No. 1 ("SSAP 1"); and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control
Level Event, or Mandatory Control Level Event as those terms are defined in [insert provision of
state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its RBC is
calculated in accordance with the life risk-based capital report including overview and instructions
for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of [insert provisions of
state law equivalent to Sections 2A, 2B or 2C, of the Credit for Reinsurance Model Law], and that, in
addition:
(1) Is not an affiliate, as that term is defined in [insert provision of state law equivalent to Section 1A of the Insurance Holding Company System Regulatory Model Act], of:

(a) The insurer ceding the business to the assuming insurer; or

(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;

(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and

(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in [insert provision of state law equivalent to the Risk-Based Capital (RBC) for Insurers Model Act] when its Risk-Based Capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus;

E. Reinsurance ceded to an assuming insurer that meets the requirements of either [insert provision of state law equivalent to Section 5B(4)(a) of the Credit for Reinsurance Model Law, pertaining to certain certified reinsurers] or [insert provision of state law equivalent to Section 5B(4)(b) of the Credit for Reinsurance Model Law, pertaining to reinsurers meeting certain threshold size and licensing requirements]; or

Drafting Note: A state may satisfy the requirements of Section 4E above by either adopting Section 5B(4) of the Credit for Reinsurance Model Law (#785), or it may include the specific provisions of Section 5B(4) of the Credit for Reinsurance Model Law (#785) directly into its adoption of this regulation, Term and Universal Life Insurance Reserve Financing Model Regulation (#787).

E.F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this regulation (as described in Section 2 above);

(2) The risks are included within the scope of this regulation only as a technicality; and

(3) The application of this regulation to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 4F to exempt a reinsurance treaty from this regulation, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: The exemption set forth in Section 4F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this regulation purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 4A, B, C, D, or E or meet the substantive requirements of this regulation.
Section 5. Definitions

A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 6.

B. “Covered Policies” means the following: Subject to the exemptions described in Section 4, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:

(1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,

(2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.

C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:

(1) Issued prior to January 1, 2015; and

(2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 4 had that section then been in effect.

D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.

E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

F. “Primary Security” means the following forms of security:

(1) Cash meeting the requirements of [insert provision of state law equivalent to Section 3A of the Credit for Reinsurance Model Law];

(2) Securities listed by the Securities Valuation Office meeting the requirements of [insert provision of state law equivalent to Section 3B of the Credit for Reinsurance Model Law], but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and

(3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:

(a) Commercial loans in good standing of CM3 quality and higher;

(b) Policy Loans; and

(c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

Drafting Note: Section 5H presumes that each state is permitted under its state laws to directly reference the Valuation Manual adopted by the NAIC. If a state is required by its state laws to reference a state law or regulation, it should modify Section 5H as appropriate to do so.

Drafting Note: Sections 5H and I presume that each state is permitted under its state laws to “adopt” the Valuation Manual in a manner similar to how the Accounting Practices and Procedures Manual becomes effective in many states, without a separate regulatory process such as adoption by regulation. It is desirable that all states adopt the Valuation Manual requirements and that such adoption be achieved without a separate state regulatory process in order to achieve uniformity of reserve standards in all states. However, to the extent that a state may need to adopt the valuation manual through a formal state regulatory process, these sections may be amended to reflect any state’s need to adopt the Valuation Manual through regulation or otherwise.

Section 6. The Actuarial Method

A. Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this regulation shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 5B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 5B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations.

(2) For Covered Policies described in Section 5B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met.

(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;

(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be
reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed \[c_x/ (2 \times \text{number of reinsurance premiums per year})\] where \(c_x\) is calculated using the same mortality table used in calculating the Net Premium Reserve; and

\[(d)\] For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

\[(5)\] In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

\[(6)\] If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this Regulation, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this Regulation;

\[(7)\] If a reinsurance treaty subject to this Regulation cedes risk on both Covered and Non-Covered Policies, credit for the ceded reserves shall be determined as follows:

\[(a)\] The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies, and Section 7 shall be used to determine the reinsurance credit for the Covered Policy reserves; and

\[(b)\] Credit for the Non-Covered Policy reserves shall be granted only to the extent that security, in addition to the security held to satisfy the requirements of Subparagraph (a), is held by or on behalf of the ceding insurer in accordance with [cite the state’s version of Sections 2 and 3 of the Credit for Reinsurance Model Law]. Any Primary Security used to meet the requirements of this Subparagraph may not be used to satisfy the Required Level of Primary Security for the Covered Policies.

B. Valuation used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

\[(1)\] For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

\[(2)\] For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the
NAIC’s Life Actuarial (A) Task Force no later than the Dec. 31st on or immediately preceding the valuation date for which the Required Level of Primary Security is being calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

Section 7. Requirements Applicable to Covered Policies to Obtain Credit for Reinsurance; Opportunity for Remediation

A. Requirements

Subject to the exemptions described in Section 4 and the provisions of Section 7B, credit for reinsurance shall be allowed with respect to ceded liabilities pertaining to Covered Policies pursuant to [insert provisions of state law equivalent to Sections 2 or 3 of the Credit for Reinsurance Model Law] if, and only if, in addition to all other requirements imposed by law or regulation, the following requirements are met on a treaty-by-treaty basis:

1. The ceding insurer’s statutory policy reserves with respect to the Covered Policies are established in full and in accordance with the applicable requirements of [insert provisions of state law equivalent to the Standard Valuation Law] and related regulations and actuarial guidelines, and credit claimed for any reinsurance treaty subject to this regulation does not exceed the proportionate share of those reserves ceded under the contract; and

2. The ceding insurer determines the Required Level of Primary Security with respect to each reinsurance treaty subject to this regulation and provides support for its calculation as determined to be acceptable to the commissioner; and

3. Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law], on a funds withheld, trust, or modified coinsurance basis; and

4. Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (3) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of [insert provision of state law equivalent to Section 3 of the Credit for Reinsurance Model Law]; and

5. Any trust used to satisfy the requirements of this Section 7 shall comply with all of the conditions and qualifications of [insert provision of state law equivalent to Section 124 of the Credit for Reinsurance Model Regulation], except that:

   a. Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 6B, be valued according to the valuation rules set forth in Section 6B, as applicable; and

   b. There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 7A(3); and

   c. The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 7A(3)) below 102% of the level required by Section 7A(3) at the time of the withdrawal or substitution; and

   d. The determination of reserve credit under [insert provision of state law equivalent to Section 124F of the Credit for Reinsurance Model Regulation] shall be determined according to the valuation rules set forth in Section 6B, as applicable; and
The reinsurance treaty has been approved by the commissioner.

B. Requirements at Inception Date and on an On-going Basis; Remediation

1. The requirements of Section 7A must be satisfied as of the date that risks under Covered Policies are ceded (if such date is on or after the effective date of this regulation) and on an ongoing basis thereafter. Under no circumstances shall a ceding insurer take or consent to any action or series of actions that would result in a deficiency under Section 7A(3) or 7A(4) with respect to any reinsurance treaty under which Covered Policies have been ceded, and in the event that a ceding insurer becomes aware at any time that such a deficiency exists, it shall use its best efforts to arrange for the deficiency to be eliminated as expeditiously as possible.

2. Prior to the due date of each Quarterly or Annual Statement, each life insurance company that has ceded reinsurance within the scope of Section 3 shall perform an analysis, on a treaty-by-treaty basis, to determine, as to each reinsurance treaty under which Covered Policies have been ceded, whether as of the end of the immediately preceding calendar quarter (the valuation date) the requirements of Sections 7A(3) and 7A(4) were satisfied. The ceding insurer shall establish a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 7A(3), unless either:

   a. The requirements of Section 7A(3) and 7A(4) were fully satisfied as of the valuation date as to such reinsurance treaty; or

   b. Any deficiency has been eliminated before the due date of the Quarterly or Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 7A(3) and 7A(4) to be fully satisfied as of the valuation date.

3. Nothing in Section 7B(2) shall be construed to allow a ceding company to maintain any deficiency under Section 7A(3) or 7A(4) for any period of time longer than is reasonably necessary to eliminate it.

Section 8. Severability

If any provision of this regulation is held invalid, the remainder shall not be affected.

Section 9. Prohibition against Avoidance

No insurer that has Covered Policies as to which this regulation applies (as set forth in Section 3) shall take any action or series of actions, or enter into any transaction or arrangement or series of transactions or arrangements if the purpose of such action, transaction or arrangement or series thereof is to avoid the requirements of this regulation, or to circumvent its purpose and intent, as set forth in Section 2.

Section 10. Effective Date

This regulation shall become effective [insert date] and shall pertain to all Covered Policies in force as of and after that date.
Actuarial Guideline XLVIII
(Applies to 2017 and Subsequent Year Valuations)

ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL #830)

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force (“PBRI Task Force”) serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as “XXX/AXXX Captive arrangements,” although not all such arrangements actually involve reinsurers organized as captives. In this connotation, XXX denotes the reserves prescribed by Section 6 of the NAIC Valuation of Life Insurance Policies Model Regulation (Model #830) while AXXX denotes the reserves prescribed by Section 7 of Model #830, and by Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation (AG 38). On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the “June 2014 Rector Report”). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the “Required Level of Primary Security”) that must be supported by certain defined assets (“Primary Security”). The level of reserves is to be calculated by a method referred to as the “Actuarial Method.”

Another charge to LATF was to promulgate an actuarial guideline specifying that, in order to comply with the NAIC Actuarial Opinion and Memorandum Regulation, Model 822 (“AOMR”) as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer’s reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. The initial version of Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48) was developed in response to that charge, with an effective date of January 1, 2015.

Coordination between this Actuarial Guideline and the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)

Subsequently, on January 8, 2016, the NAIC adopted revisions to the Credit for Reinsurance Model Law (Model #785). Among other things, the revisions to Model #785 provide commissioners with the authority to enact, by regulation, additional requirements for ceding insurers to claim credit for reinsurance with respect to certain XXX/AXXX financing arrangements. On December 13, 2016, the NAIC adopted the Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787) as the regulation permitted by Model #785. LATF subsequently received a charge to redraft AG 48 to make it as consistent as possible with the provisions of Model #787. The current version of this actuarial guideline is the result.

The following is an overview of the interrelationship between this actuarial guideline and Model #787, and the regulatory strategy that led to the adoption of each:

1. The initial version of this actuarial guideline immediately established national standards for the use of XXX/AXXX financing arrangements in an attempt to quickly set minimum standards based on the framework adopted by the PBRI Task Force on June 30, 2014. This initial version applied to such reinsurance arrangements entered into on or after 1/1/2015.
2. The revised statute (the NAIC Credit for Reinsurance Model Law (Model #785)) and a new regulation (the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)) were then developed and adopted by the NAIC.

3. Except as noted in #4 below, this actuarial guideline will cease to be effective, on a state by state basis, as individual states enact Model #785 and adopt Model #787 to replace it.

4. Notwithstanding, it is anticipated that in a small number of states, Model #787 will need to be adopted on a “prospective” basis only (that is, it will only apply to ceded policies issued on or after the effective date thereof). In those cases, this actuarial guideline will remain as the authority for ceded policies subject to this actuarial guideline but to which Model #787, as adopted in a given state, does not apply. So although its role might diminish, this actuarial guideline will remain an essential part of the regulatory framework for a small number of states for many years to come.

5. To ensure uniformity of treatment between states, companies, and ceded policies (whether governed by this actuarial guideline or by Model #787) and to avoid confusion, this actuarial guideline is being updated, effective as of January 1, 2017, to make it as substantively identical to Model #787 as possible.

Authority, Avoidance, and Purpose

The requirements in this actuarial guideline derive authority from Section 3 of the AOMR, or, after the Operative Date of the Valuation Manual, from Section 1 of VM-30 of the Valuation Manual. Both Section 3 of the AOMR and Section 1 of VM-30 provide that the commissioner has the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items. As contained in the framework adopted by the PBRI Task Force on June 30, 2014, this actuarial guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this actuarial guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this actuarial guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer’s domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this actuarial guideline.

The purpose and intent of this actuarial guideline is to establish uniform, national standards governing XXX or AXXX reserve financing arrangements on reserve financing arrangements have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and

1 In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and
and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in Section 4.B., the provisions of this actuarial guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this actuarial guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this actuarial guideline if the facts and circumstances warrant such action.

Text

1. Authority

Pursuant to Section 3 of the AOMR or, after the Operative Date of the Valuation Manual, to Section 1 of VM-30 of the Valuation Manual, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner’s judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

This actuarial guideline applies to reinsurance contracts that cede liabilities pertaining to Covered Policies as that term is defined in Section 4.

3. Exemptions

This actuarial guideline does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

(1) Policies that satisfy the criteria for exemption set forth in Section 6F or Section 6G of Model #830; and which are issued before the later of:

(a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(2) Portions of policies that satisfy the criteria for exemption set forth in Section 6E of Model #830 and which are issued before the later of:

(a) The effective date of Model #787 in the state of domicile of the ceding insurer, and

used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).
(b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies’ statutory reserves, but in no event later than January 1, 2020;

(3) Any universal life policy that meets all of the following requirements:

(a) Secondary guarantee period, if any, is five (5) years or less;

(b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables and valuation interest rate applicable to the issue year of the policy; and

(c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;

(4) Credit life insurance;

(5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; or

(6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year; or

B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Section 2D of Model #785; or

C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer’s reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to Statement of Statutory Accounting Principles No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures (“SSAP No. 1”), and

(2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC Risk-Based Capital (RBC) for Insurers Model Act (Model #312) when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:

(1) Is not an affiliate, as that term is defined in Section 1A of the NAIC Insurance Holding Company System Regulatory Model Act (Model #440), of:
Appendix C

AG XLVIII

(a) The insurer ceding the business to the assuming insurer; or
(b) Any insurer that directly or indirectly ceded the business to that ceding insurer;

(2) Prepares statutory financial statements in compliance with the NAIC Accounting Practices and Procedures Manual;

(3) Is both:

(a) Licensed or accredited in at least 10 states (including its state of domicile), and
(b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and

(4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in Model #312 when its risk-based capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer’s reported surplus; or

E. Reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of Model #785, pertaining to certain certified reinsurers or Section 5B(4)(b) of Model #785, pertaining to reinsurers meeting certain threshold size and licensing requirements; or

F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:

(1) The risks are clearly outside of the intent and purpose of this actuarial guideline (as described in the Authority, Avoidance and Purpose section above);

(2) The risks are included within the scope of this actuarial guideline only as a technicality; and

(3) The application of this actuarial guideline to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 3F to exempt a reinsurance treaty from this actuarial guideline, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: The exemption set forth in Section 3F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this actuarial guideline purely as a technicality; and that regulatory
relief in those instances may be appropriate. The example that was given at the time this exemption was
developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business
ceded. The exemption should not be used with respect to so-called “normal course” reinsurance
transactions; rather, such transactions should either fit within one of the standard exemptions set forth in
Sections 3A, B, C, D, or E or meet the substantive requirements of this actuarial guideline.

4. Definitions

A. “Actuarial Method” means the methodology used to determine the Required Level of
Primary Security, as described in Section 5.

B. “Covered Policies” means the following: Subject to the exemptions described in Section
3, Covered Policies are those policies, other than Grandfathered Policies, of the following
policy types:

(1) Life insurance policies with guaranteed nonlevel gross premiums and/or
guaranteed nonlevel benefits, except for flexible premium universal life
insurance policies; or,

(2) Flexible premium universal life insurance policies with provisions resulting in
the ability of a policyholder to keep a policy in force over a secondary guarantee
period.

Note: Although “Covered Policies” is defined to include all the policies described in Subsections
B1 and B2 above, it is noted that whether a given “Covered Policy” is subject to this actuarial
guideline or, instead, to Model #787 should be determined under Section 8 (Sunset).

C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2
above that were:

(1) Issued prior to January 1, 2015; and

(2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not
have met one of the exemptions set forth in Section 3 had that section then been
in effect.

D. “Non-Covered Policies” means any policy that does not meet the definition of Covered
Policies, including Grandfathered Policies.

E. “Required Level of Primary Security” means the dollar amount determined by applying
the Actuarial Method to the risks ceded with respect to Covered Policies, but not more
than the total reserve ceded.

F. “Primary Security” means the following forms of security:

(1) Cash meeting the requirements of Section 3A of Model #785;

(2) Securities listed by the Securities Valuation Office meeting the requirements of
Section 3B of Model #785, but excluding any synthetic letter of credit, contingent
note, credit-linked note or other similar security that operates in a
manner similar to a letter of credit, and excluding any securities issued by the
ceding insurer or any of its affiliates; and
Appendix C

(3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:

(a) Commercial loans in good standing of CM3 quality and higher;
(b) Policy Loans; and
(c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.

G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.

H. “Valuation Manual” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.

5. The Actuarial Method

A. Description of Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this actuarial guideline shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the Valuation Manual as then in effect, applied as follows:

(1) For Covered Policies described in Section 4B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the Valuation Manual, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 4B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the Valuation Manual imposes when aggregating these policy types for purposes of principle-based reserve calculations. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

(2) For Covered Policies described in Section 4B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.
(3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.

(4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:

(a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;

(b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;

(c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed \[\frac{c_i}{2 \times \text{number of reinsurance premiums per year}}\] where \(c_i\) is calculated using the same mortality table used in calculating the Net Premium Reserve; and

(d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty. The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.
Appendix C

(5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.

(6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this actuarial guideline, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this actuarial guideline.

(7) If a reinsurance treaty subject to this actuarial guideline cedes risk on both Covered and Non-Covered Policies:

(a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies; and

(b) Any Primary Security and/or Other Security used to meet any requirements pertaining to the Non-Covered Policies may not be used to satisfy any requirements related to the Required Level of Primary Security and/or Other Security for the Covered Policies.

B. Valuation Used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

(1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer’s general account and without taking into consideration the effect of any prescribed or permitted practices; and

(2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the NAIC’s Life Actuarial (A) Task Force no later than the December 31 on or immediately preceding the valuation date for which the Required Level of Primary Security is being calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

6. Required Actuarial Analysis and Actuarial Opinion and Memorandum Requirements

A. Required Actuarial Analysis

Before the due date of each actuarial opinion, as to each reinsurance treaty in which Covered Policies have been ceded, the appointed actuary of each ceding insurer must
perform an analysis on a treaty by treaty basis, of such Covered Policies to determine whether, as of the immediately preceding December 31 (the valuation date):

(1) Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of Section 3 of Model #785, on a funds withheld, trust, or modified coinsurance basis; and

(2) Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (1) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of Section 3 of Model #785; and

Note: For the sake of clarity, funds consisting of Primary Security pursuant to Paragraphs (1) may exceed the Required Level of Primary Security, and Other Security is only required under Paragraph (2) to the extent that there is any portion of the statutory reserves as to which Primary Security is not so held. For example, if a ceding insurer’s statutory reserves equal $1 Billion, its Required Level of Primary Security is $600 Million, and it holds $1 Billion in Primary Security pursuant to Paragraph (1), no Other Security is required under Paragraph (2).

(3) Any trust used to satisfy the requirements of this Section 6 complies with all of the conditions and qualifications of Section 1244 of the NAIC Credit for Reinsurance Model Regulation (Model #786), except that:

(a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5B, be valued according to the valuation rules set forth in Section 5B, as applicable; and

(b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 6A(1); and

(c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 6A(1)) below 102% of the level required by Section 6A(1) at the time of the withdrawal or substitution.

B. Qualified Actuarial Opinion; Remediation

(1) The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, unless:

(a) The requirements of Section 6A(1) and 6(A)(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or

(b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or
Appendix C AG XLVIII

(c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).

(2) In addition to the requirement set forth in Section 6B(1) above, the appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the Valuation Manual, as applicable, if the appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such affiliated reinsurer where (a) the affiliate reinsures Covered Policies of the ceding insurer and (b) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this actuarial guideline.

Note: The remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787. Under this option, a ceding company may choose to avoid the consequence (a qualified opinion under this actuarial guideline) by establishing a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held. For example, suppose a ceding insurer has established statutory reserves of $1 Billion and has Primary Security of $550 Million and Other Security of $450 Million. Suppose further that the actuary determines that the insurer’s Required Level of Primary Security is $600 Million. Under Section 6B(1)(c), the insurer may avoid a qualified opinion by establishing a liability equal to $450 Million (the difference between the statutory reserve of $1 Billion and the $550 Million amount of Primary Security actually held).

C. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this actuarial guideline

(1) In the statement of actuarial opinion, the appointed actuary of the ceding insurer must state whether (i) he has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.

(2) In the actuarial memorandum as described by Section 7 of the AOMR or Section 3B of VM-30 of the Valuation Manual, as applicable, the appointed actuary of the ceding insurer must document the analysis and requirements applied by this actuarial guideline as to each reinsurance arrangement under which Covered Policies are ceded.

(3) In the event that a reinsurance treaty contains both (1) Covered Policies subject to this actuarial guideline rather than to Model #787, and (2) Covered Policies subject to Model #787 rather than to this actuarial guideline, the treaty shall be tested as a whole for purposes of a ceding insurer’s compliance with both (a) the requirements of Section 6A(1) and Section 6A(2) of this actuarial guideline and (b) the requirements of Section 7A(3) and Section 7A(4) of Model #787; provided further, that:
AG XLVIII

Appendix C

(a) If funds consisting of Primary Security are held in amounts less than the Required Level of Primary Security, such funds consisting of Primary Security shall be allocated first to fulfill the Required Level of Primary Security for the Covered Policies subject to this actuarial guideline, with any remainder allocated to those Covered Policies subject to Model #787; and

(b) If funds consisting of Other Security are held in amounts less than the requirements of Section 6A(2), such funds consisting of Other Security shall be allocated first to fulfill the Other Security requirements for the Covered Policies subject to this actuarial guideline, and any remainder shall be allocated to those Covered Policies subject to Model #787.

7. Effective Date

This actuarial guideline shall become effective as of January 1, 2017 with respect to all Covered Policies. This actuarial guideline supersedes and replaces all previous versions thereof with respect to actuarial opinions rendered as to valuation periods ending on or after January 1, 2017.

Note: For the avoidance of doubt, actuarial opinions issued with respect to the year ended December 31, 2016, shall be governed by the version of AG 48 in effect on December 31, 2016, as included in the Accounting Practices and Procedures Manual.

8. Sunset Provision

This actuarial guideline shall cease to apply as to Covered Policies that are both (a) issued by ceding insurers domiciled in a jurisdiction that has in effect, as of December 31st of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a regulation substantially similar to Model #787 adopted by the NAIC on December 13, 2016; and (b) subject to Model #787 as so adopted by the ceding insurer’s jurisdiction of domicile. This Actuarial Guideline shall continue to apply, without interruption, to any and all Covered Policies not included in both (a) and (b) of the immediate preceding sentence.

Note: It is anticipated that, for most states, this actuarial guideline will sunset pursuant to (a) and (b) of Section 8 and will continue only with respect to the limited number of states in which their version of Model #787 applies prospectively only, i.e., applies only to Covered Policies issued on or after the effective date of their version of Model #787. It is anticipated, however, that most states will be able to adopt a version of Model #787 that, like the Model itself, applies to all Covered Policies (subject to the applicable exemptions and grandfathering provisions) that are “in force” on or after the effective date, even if the policies were originally issued prior to that effective date. The goal of Section 8 is to ensure that all Covered Policies ceded in reinsurance transactions within the scope of this actuarial guideline continue to be subject to this actuarial guideline unless and until they become subject to Model #787.

**IDENTIFICATION OF ITEM(S) TO CHANGE**

See next page for details of changes to the VM-20 Reserves Supplement.

**REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Changing the reporting units for reserves to attain consistency with other annual statement blanks. Clarifying the instructions to attain consistency in company reporting. Changes are based on findings from the 2018 review of company filings.

**NAIC STAFF COMMENTS**

Comment on Effective Reporting Date: ____________________________

Other Comments: ____________________________

**This section must be completed on all forms.** Revised 7/18/2018
IDENTIFICATION OF ITEM(S) TO CHANGE

VM-20 Reserves Supplement Blank:

- Splitting Part 1 into Part 1A and Part 1B.
- For Part 1A:
  - Changing the description header for Column 3 to be “Due and Deferred Premium Asset” so that it matches the instructions.
  - Adding “XXX” in two places to the indicate that a Due and Deferred Premium Asset does not need to be reported in the lines shown for Total Reserves.
  - Changing the reporting units for all columns to be in dollars rather than in thousands.
  - Expanding all columns to allow room for a number as large as 999,999,999,999.
  - Changing the product labels for clarity.
- For Part 1B:
  - Changing the reporting units for the Reserve columns to be in dollars rather than in thousands.
  - Expanding the Reserve columns to allow room for a number as large as 999,999,999,999.
  - Expanding the Face Amount columns to allow room for a number as large as 9,999,999,999.
  - Changing the product labels for clarity.
- Removing Part 2 and re-numbering the remaining Parts.

VM-20 Reserves Supplement Instructions:

- Adjusting the instructions according to the changes made to the blanks.
- Clarifying instructions and adding examples for Parts 1A and 1B.
ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VM-20 RESERVES SUPPLEMENT – PART 1

Life Insurance Reserves Valued According to VM-20 by Product Type

($000 Omitted Except for Number of Policies)

This Supplement provides information on the reserves required to be calculated by Section VM-20 of the Valuation Manual. This includes the Net Premium Reserve and, as applicable, the Deterministic Reserve and the Stochastic Reserve. This Supplement also provides information regarding business where VM-20 of the Valuation Manual is not required to be applied. Only business issued on or after Jan. 1, 2017, valued by the requirements of VM-20 should be reported in Part 1. Part 1 is intended to aid regulators in the analysis of reserves as determined under Section VM-20 of the Valuation Manual for both the prior and current year. Companies that elect the three-year transition for some of their policies should not report those policies in this part.

This Supplement also provides information regarding business where VM-20 of the Valuation Manual is not required to be applied. Companies that elect the three-year transition period for all of their business or are otherwise exempted from the requirements of Section VM-20 are not required to complete Part 1 of this Supplement pursuant to the instructions in Part 2 of this Supplement, but must complete Part 2 or Part 3 as applicable.

VM-20 RESERVES SUPPLEMENT – PART 1A

Life Insurance Reserves Valued According to VM-20 by Product Type

Part 1A of this Supplement breaks out, by product type, the prior year and current year reported reserves on a Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded basis as defined in Section 8.D of Section VM-20 of the Valuation Manual. The Due and Deferred Premium Asset for the current year is also shown. In addition, Part 1 of this Supplement shows, by product type for the current year, the Due and Deferred Premium Asset, the Net Premium Reserve (NPR), the Deterministic Reserve (DR) and the Stochastic Reserve (SR), where the NPR, DR, and SR are as defined in Section VM-20 of the Valuation Manual. This Supplement is intended to aid regulators in the analysis of reserves as determined under Section VM-20 of the Valuation Manual for both the prior and current year.

Section VM-20 of the Valuation Manual requires that the Post-Reinsurance-Ceded Reserve be determined by three product groups: VM-20 Reserving Categories: Term Insurance, Universal Life with Secondary Guarantees (ULSG) and all other. Term Insurance should be reported on line 1.1. ULSG, including Variable Universal Life with a secondary guarantee, Indexed life insurance with a secondary guarantee, regular Universal Life with a secondary guarantee, and ULSG policies with a non-material secondary guarantee as defined in Section VM-01 of the Valuation Manual, should be reported on line 1.2. Each of the other products reported in lines 1.3 – 1.8 should be determined as the sum of the policy reserves using the policy reserves determined following the allocation process of VM-20 Section 2. A similar process should be used for each of the pre-reinsurance-ceded reserves.

Section A: Columns 4 through 8 are to be completed if each of the reserves in Columns 4 through 6 (NPR, DR, SR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section B: Columns 9 through 12 are to be completed only if the reserves in Columns 9 and 10 (NPR, DR) are calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section C: Columns 13 through 15 are to be completed only if the reserve in Column 13 (NPR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.
Provide the reported reserve, in \textit{thousands whole dollars}, for the prior year and current year for each line item. Post-Reinsurance-Ceded is net of reinsurance ceded, and Pre-Reinsurance-Ceded includes reinsurance assumed and excludes any reinsurance ceded should be prior to any reinsurance ceded and include reinsurance assumed. Sections 2 and 8 in the \textit{Valuation Manual} further describe the required reserve and treatment of reinsurance. The reported reserve for the current year should reflect all policies in force as of the end of the current year. The reported reserve for the prior year should reflect all policies in force as of the end of the prior year.

Provide the due and deferred premium asset amount, in \textit{thousands whole dollars}, associated with the current year Reported Reserve from Column 2 and calculated in a manner consistent with lines 15.1 and 15.2 of the Annual Statement Assets page.

\textit{Example 1:}
A company reinsures a ULSG product using YRT reinsurance.
- The ceding company reports their reserve on lines 1.2 and 3.2 for ULSG.
- The assuming company reports their reserve on lines 1.1 and 3.1 for Term.

\textit{Example 2:}
A company reinsures a Term product using YRT reinsurance.
- The ceding company reports their reserve on lines 1.1 and 3.1 for Term.
- The assuming company reports their reserve on lines 1.1 and 3.1 for Term.
VM-20 RESERVES SUPPLEMENT – PART 1B

Life Insurance Reserves Valued According to VM-20 by Product Type

($000 Omitted for Face Amount)

Part 1B of this Supplement provides details underlying the amounts shown in Part 1A.

Section A: Columns 4.1 through 6.3 are to be completed if each of the reserves in Columns 4.1 through 6.3 (NPR, DR, SR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section B: Columns 9.6 through 12.9 are to be completed only if the reserves in Columns 9.6 and 10.7 (NPR, DR) are calculated according to the requirements of Section VM-20 of the Valuation Manual.

Section C: Columns 13.10 through 15.12 are to be completed only if the reserve in Column 13.10 (NPR) is calculated according to the requirements of Section VM-20 of the Valuation Manual.

Column 4.1, 9.6 & 13.10 – Net Premium Reserve (NPR)
Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Net Premium Reserve for each product type, in whole dollars. Report the floored amount. The Net Premium Reserve is defined in Section 3 in VM-20 of the Valuation Manual.

Column 5.2 & 10.7 – Deterministic Reserve
Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Deterministic Reserve for each product type, in thousands. Report the amount whether it is positive or negative; do not floor the amount at zero if it is negative. The Deterministic Reserve calculation is defined in Section 4 in VM-20 of the Valuation Manual.

Column 6.3 – Stochastic Reserve
Report the Post-Reinsurance-Ceded and Pre-Reinsurance-Ceded Stochastic Reserve for each product type, in thousands. Report the amount whether it is positive or negative; do not floor the amount at zero if it is negative. The Stochastic Reserve calculation is defined in Section 5 in VM-20 of the Valuation Manual.

Column 7.4, 11.8 & 15.12 – Number of Policies
Report the number of individual life insurance policies by product type and by the required VM-20 methodology used as described in Section A, Section B and Section C above. The number of policies should be prior to any reinsurance ceded and include reinsurance assumed.

Column 8.5, 12.9 & 16.12 – Face Amount
Report the face amount, in thousands, of individual life insurance by product type and by the required VM-20 methodology used as described in Section A, Section B and Section C above. The face amount should be prior to any reinsurance ceded and include reinsurance assumed.

Example:
A company has Term business subject to VM-20, and there is no reinsurance. The Deterministic Exclusion Test was passed. The Deterministic Reserve at year-end was negative:

- The company completes Section B,
- The floored Net Premium Reserve is reported in whole dollars in Column 6,
- The negative Deterministic Reserve is reported in whole dollars in Column 7,
- The Number of Policies is reported in Column 8
- The Face Amount is reported in thousands in Column 9.
VM-20 RESERVES SUPPLEMENT – PART 2

Three Year-Transition Period

($000 Omitted Except for Number of Policies)

This section of the Supplement should be completed when a reporting entity has elected to apply the three-year transition provided in Section II, Sub-section C under Life Insurance Products of the Valuation Manual to some or all of its business. This Part 2 should include the values requested for the business for which the three-year transition has been elected and should not include values for any policies valued based on VM-20. This Part 2 allows the company to establish minimum reserves according to applicable requirements stated in Appendix A (VM-A) and Appendix C (VM-C), in the Valuation Manual, for business otherwise subject to VM-20 requirements and issued during the first three years following the Operative Date of the Valuation Manual. If a company does not elect this three-year transition, but elects to apply VM-20 to a block of business issued on and after the Operative Date, then such company must continue to apply the requirements of VM-20 to this block of business, as well as future new issues of this type of business.

A company that elects to apply the three-year transition for all of its products within the scope of VM-20 does not have to complete Part 1 of the VM-20 Supplement. If a company applies VM-20 to a product or products, then Part 1 of this VM-20 Supplement will need to be completed.

VM-20 RESERVES SUPPLEMENT – PART 3.2

Life PBR Exemption

This section of the Supplement should be completed by a company that has filed and been granted a Life PBR Exemption from its state of domicile.

If a company has been granted a Life PBR Exemption, the company must indicate the source of the Life PBR Exemption, which could be defined in a state statute, a state regulation or in the NAIC-adopted Valuation Manual. If the source of the granted Life PBR Exemption is not the NAIC-adopted Valuation Manual, the company must disclose the criteria of the state’s Life PBR Exemption that the company has met, and the company must disclose the minimum reserve requirements that are required by the state of domicile. If the minimum reserve requirements of the state of domicile are the same as those specified in the NAIC-adopted Valuation Manual, the company may indicate: “Same as NAIC VM”.

Companies whose individual ordinary life business is exempted from the requirements of VM-20 pursuant to a Life PBR Exemption are not required to complete Part 1 of this VM-20 Supplement.

VM-20 RESERVES SUPPLEMENT – PART 4.3

Other Exclusions from Life PBR

Questions 1 and 2 of this section of the Supplement should be completed by a company that has filed and been granted a Single State Exemption from the reserve requirements of VM-20 by its state of domicile pursuant to requirements similar to the optional Section 15 of the NAIC Standard Valuation Law (§ 820). The response to question 2 should be “Yes” if the company has any business assumed that relates to issues outside the state of domicile.

Question 3 of this section of the Supplement should be completed by a company if all its life business is excluded from the requirements of VM-20 pursuant to Section II.B of the Valuation Manual.

Companies responding “Yes” to question 1 are not required to complete Part 1 of this VM-20 Supplement if all of their individual ordinary life business was covered under the Single State Exemption. Companies responding “YES” to question 3 are not required to complete Part 1 of this VM-20 Supplement.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VARIABLE ANNUITIES SUPPLEMENT
PARTS 1 AND 2

This supplement is to be filed on or before April 1.

Complete this supplement for contracts and certificates subject to VM-21. A separate chart shall be prepared for individual contracts and for group contracts with individual certificates.

For variable annuities (VAs) with guaranteed benefits, disclose the type(s) of guaranteed benefit(s), the number of contracts or certificates with those benefits, the amount of the benefit base related to each type of benefit, the net amount at risk for death benefits and the guaranteed annual payout for income and withdrawal benefits, the gross amount of the reserve for the guaranteed benefit(s), the portion of the contract/certificate account value related to contract/certificate funds in the General Account or the Separate Account, and the percent of the guaranteed benefit reinsured.

Column 1 & Column 2 – Type of Guaranteed Benefit

For purposes of this supplement, a Guaranteed Death Benefit is defined in accordance with the term “Guaranteed Minimum Death Benefit” in VM-21, and a Guaranteed Living Benefit (GLB) is defined in accordance with the term “Variable Annuity Guaranteed Living Benefits” in VM-01.

“Type” shall include a summary description of the type of benefit. Examples are provided in the table illustrated below. Descriptions that may apply when identifying “Type” for Column 2 include, “Guaranteed Minimum Accumulation Benefit” (GMAB), “Guaranteed Minimum Income Benefit” (GMIIB), “Hybrid GMIB,” “Traditional GMIB,” “Guaranteed Minimum Withdrawal Benefit” (GMWB), “Lifetime GMWB,” “Non-Lifetime GMWB,” and “Guaranteed Payout Annuity Floor” (GPAF). These terms are defined in VM-01. For those guaranteed benefits that include waiting periods before any benefit can be realized, include the length of the original waiting period in the description.

• A separate line shall be created for each combination of Guaranteed Death Benefit and Guaranteed Living Benefit.
  o See the illustration in the table below for an example.
  o For a category with only one guarantee, show “None” in the other column.
  o For a category with no guaranteed benefit, show “None” in both columns.

• Each contract/certificate shall be included in one and only one line.
  o For a contract with multiple living benefits, determine the most appropriate classification.

A separate chart shall be prepared for individual contracts and for group contracts with individual certificates. In each chart, show the amount of any reinsurance reserve credit being taken separately for treaties with affiliated captive reinsurers and for other reinsurers.

For purposes of this supplement, a Guaranteed Living Benefit (GLB) is defined as a contract, certificate, agreement or rider in which the insurance entity guarantees specified payouts during a defined period, which may include the lifetime of the insured(s). For VAs, these guaranteed payouts are typically made regardless of the performance of the contractual account value that is used to determine cash surrender values and/or withdrawal benefits.

Column 3 – Number of Individual (Part 1) Contracts or Group (Part 2) Certificates
<table>
<thead>
<tr>
<th>Column 4</th>
<th>Benefit Base For Guaranteed Death Benefit (Col 1)</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<th>Column 9</th>
<th>Account Value – Separate Account</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Column 10</th>
<th>Reserve for Guaranteed Benefits (Total Reserve Less Base Adjusted Reserve) Contract-Level Reserves Less Cash Surrender Value</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Total gross reserve for guarantees as defined in AG-43 or VM-21 as applicable in excess of the base contract reserve. Reserves calculated according to AG-43 and VM-21 are allocated to individual contracts or certificates following the guidance of Appendix 6 of AG-43 or Section 8 of VM-21. Report in column 10 the excess of this per policy reserve over the base contract reserve. For base contract reserve, the company may use CSV or Base Adjusted Reserve (defined in Appendix 3, A.3.2D of AG-43 or Section 5, B.4. of VM-21) for that contract or certificate. For each contract/certificate, calculate the excess amount of the pre-reinsurance ceded contract-level reserve, defined in VM-21, over the contract’s cash surrender value. For each “Type” listed under Columns 1 and 2, report the sum of the excess amounts calculated for the associated contracts/certificates. For the Subtotal, report the sum of the excess amounts calculated for all contracts/certificates. The Subtotal should equal the excess of the aggregate reserve over the aggregate cash surrender value.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Column 11 &amp; Column 12</th>
<th>Percentage of Guaranteed Benefits Reinsured</th>
</tr>
</thead>
<tbody>
<tr>

<tbody>
<tr>
<td></td>
<td>Report the sum of the cash surrender values for all contracts/certificates.</td>
</tr>
</tbody>
</table>
**Line 2** – **Pre-Reinsurance Ceded Aggregate Reserve (Subtotal for Column 10 plus Line 1)**

Report the sum of the pre-reinsurance ceded contract-level reserves for all contracts/certificates. This should equal the Subtotal Line for Column 10 plus Line 1.

**Line 3** – **Reserves Ceded (Line 2 minus Line 4)**

**Line 34** – **Total Net of Reinsurance Post-Reinsurance Ceded Aggregate Reserve**

Line 3 Total Net of Reinsurance should equal the Subtotal Line for Column 10 minus the sum of Line 1 Reserve Credit from Affiliated Captive Reinsurance and Line 2 Reserve Credit from Other Reinsurance. Report the sum of the post-reinsurance ceded contract-level reserves for all contracts/certificates.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
American Academy of Actuaries’ Life Reserves Work Group.

2. Identify the document, including the date if the document is “released for comment,” and the location in the
document where the amendment is proposed:
January 1, 2020, edition of the Valuation Manual with NAIC adoptions through August 6, 2019
Locations with proposed changes: VM-20 and VM-31

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and
identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in
Word®) version of the verbiage. (You may do this through an attachment):
See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
The Valuation Manual already requires that if there is additional risk arising from the conversion of term
life insurance, whether group or individual, it must be reserved for. The purpose of this APF is to
emphasize this requirement and to provide guidance on what must be included in the Life PBR Actuarial
Report with respect to conversions.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by
the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2019-62 rev.02-10-20
VM-20 Section 9.C.4

Option 1:

VM-20 Section 9.C.4 - Add Guidance Note related to converted policies at the end of the section.

c. The mortality rates from the resulting anticipated experience assumptions must be no lower than the mortality rates that are actually expected to emerge and that the company can justify.

Guidance Note: Pursuant to Section 9.C.4.c, the company must ensure that excess mortality associated with policies issued via conversion from term policies or from group life contracts is appropriately reflected in the anticipated experience mortality rates.

Option 2:

VM-20 Section 9.C.4 - Add Section 9.C.4.d

c. The mortality rates from the resulting anticipated experience assumptions must be no lower than the mortality rates that are actually expected to emerge and that the company can justify.

d. In satisfying Section 9.C.4.c, the company must ensure that any excess mortality is appropriately reflected in the anticipated experience mortality rates. This includes but is not limited to excess mortality associated with policies issued via conversion from term policies or from group life contracts.

Both Option 1 and Option 2 include all the following changes:

VM-31 Section 3.B.3 [Executive Summary – policy overview]

3. Policies – A summary of the base policies within each VM-20 reserving category. Include information necessary to fully describe the company’s distribution of business. For direct business, use PBR Actuarial Report Template A located on the NAIC website [https://www.naic.org/pbr_data.htm?tab_3] to provide descriptions of each base policy product type and underwriting process (including a description of the process, the time period in which it was used, and the level of any additional margin), with a breakdown of policy count and face amount by base policy product type and underwriting process. Also include the target market, primary distribution system, and key product features that affect risk, including conversion privileges.

d. Assumption and Margin Development – The following information for each risk factor: description of the methods used to determine anticipated experience assumptions and margins, including the sources of experience (e.g., company experience, industry
experience, or other data); how changes in such experience are monitored; any adjustments made to increase mortality margins above the prescribed margin (such as to reflect increased uncertainty with due to newer underwriting approaches; and any other considerations, such as conversion features, helpful in or necessary to understanding the rationale behind the development of assumptions and margins, even if such considerations are not explicitly mentioned in the Valuation Manual.

VM-31 Section 3.D.3.x [new section] [Life Report – Mortality]

(We suggest placing after Adjustments for Mortality Improvement and before Mortality for Impaired Lives)

i. Mortality for Converted Policies – Description of the treatment of mortality for Mortality policies issued under group or term conversion privileges including:

   i. A description of the method(s) by which any excess conversion mortality was taken into account in the development of company experience mortality rates (e.g., through the use of separate mortality segments for policies issued upon conversion, through aggregation of claim experience, or through use of other methods), the rationale for the method(s) used, and any changes in the method(s) from those used in previous years.

   ii. The source(s) of the data used in the method(s) employed.

j. Mortality for Impaired Lives or Policyholder Behavior – Disclosure of:

   i. the percentage of business that is on impaired lives;

   ii. whether impaired lives were included or excluded from the mortality study upon which company experience mortality was based; and

   iii. whether any adjustments to mortality assumptions for impaired lives or policyholder behavior were found to be necessary and, if so, the rationale for the adjustments that were used.

Item (iii) above is a required disclosure for post-level term mortality assumptions even if the company uses a 100% shock lapse assumption, since it pertains to the analysis demonstrating whether there are post-level term profits.
VM-31 Section 3.D.4.xl and ym (new sections) [Life Report – Policyholder Behavior]

k. Post-Level Term Testing – For products with a level term period:

i. Summary results of the seriatiom comparison of the present value of postlevel term cash inflows and outflows for the DR as required by VM-20 Section 9.D.6.

ii. If this comparison showed that there were post-level term profits, describe how anti-selection was handled in the post-level term period, including the prudent estimate premium, mortality and lapse assumptions used.

iii. If the comparison showed that there were post-level term losses, confirm that the prudent estimate premium, mortality and lapse assumptions for the post-level period were addressed in Section 3.D.1.a and were used in the reserve calculation.

l. Term Conversions – Description of how the company reflects the impact of any term conversions privilege contained in the policy when setting reserves.

m. Lapse Rates for Converted Policies – Description of and rationale for lapse rates used for policies issued under any group or term conversion privilege.

a. Agreements – For those reinsurance agreements included in the calculation of the minimum reserve as per VM-20 Section 8.A, a description of each reinsurance agreement, including, but not limited to, the type of agreement, the counterparty, the risks reinsured, any provisions related to converted policies, the portion of business reinsured, identification of both affiliated and non-affiliated, as well as captive and non-captive, or similar relationships, and whether the agreement complies with the requirements of the credit for reinsurance under the terms of the AP&P Manual.

VM APF 2020-02 (CA APF DP)
Appendix

ISSUE:
Skipping steps in VM-20 should not be allowed on grounds of immateriality or the latitude to use approximations.

SECTION:
VM-20 Section 2.H and new Section 2.I

REDLINE:
H. The company shall establish, for the DR and SR, a standard containing the criteria for determining whether an assumption, risk factor or other element of the principle-based valuation has a material impact on the size of the reserve. This standard shall be applied when identifying material risks under VM-20 Section 9.B.1. Such a standard shall also apply to the NPR with respect to VM-20 Section 2.G.

Guidance Note: For example, the standard may be expressed as an impact of more than X dollars or Y% of the reserve, whichever is greater, where X and Y are chosen in a manner that is meant to stand the test of time and not need periodic revision.

The standard is based on the impact relative to the size of the NPR, DR and SR as opposed to the impact relative to the overall financial statement (e.g., total company reserves or surplus). Reviewing items that may lead to a material misstatement of the financial statement in the current year is appropriate in its own context, but it is not appropriate for identifying material risks for PBR, which itself is an emerging risk.

Note that the criteria apply to the NPR, DR and SR, and not just the final reported reserve. For example, if the DR is less than the NPR, the criteria still apply to the DR.

The standard also applies to exclusion tests, as they are an element of the principle-based valuation.

I. Section 2.G and Section 2.H provide companies with a certain amount of latitude when setting assumptions and making approximations, but they should not be misconstrued to be a justification for completely skipping mandated steps.

Guidance Note: Examples of unacceptable omissions of steps would be: not computing an NPR, not computing a DR or SR without having performed and passed the relevant exclusion test(s), leaving out prescribed mortality margins, not building an asset model for the DR, using the alternative investment strategy without having first shown that it produces a higher reserve than the company investment strategy, skipping making a PIMR adjustment to the modeled reserve, and ignoring lapses or expenses or post-level term losses altogether.

REASONING:
Provide clearer guidance on the boundaries of a company’s latitude in following VM-20 steps.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
Eric Pedersen FSA MAAA
Associate Actuary
National Guardian Life
To address the issue of the product types included in the “Preneed Exemption” from PBR as specified in VM-II, B
and as defined in VM-02, Section 3, B.

2. Identify the document, including the date if the document is “released for comment,” and the location in the
document where the amendment is proposed:
  Insurance Products”, B
- NAIC Valuation Manual, adopted August 29, 2016 with changes through 12/31/16. VM-02, Section 3
  “Definitions”
  Insurance Products”, D, footnote 1

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify
the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version
of the verbiage. (You may do this through an attachment.)
See attached

4. State the reason for the proposed amendment? (You may do this through an attachment.)
We are asking that the committee consider the reason Pre-need is excluded from PBR, and consider products
(specifically Final Expense) that are substantially similar to Pre-need in the context of PBR, in the sense they have
the same general chassis – small “whole life” death benefit, generally older insured, little to no underwriting, little to
no investment risk, etc. (I.e. in the modeling world they are handled in exactly the same way.)

My concern is that the VM-02 definition of Pre-need focuses on the qualifying language “…that is issued in
combination with, in support of, with an assignment to, or as a guarantee for a prearrangement agreement for goods
and services…” We sell Final Expense products that are essentially identical to a Pre-need product in every way
except they do not have the “goods and services agreement” as defined in VM-02 and are marketed as “Final
Expense.” The goods and services agreement is important in the context of marketing, administration, product
filings, etc. But we do not think the goods and services agreement is vital in the context of PBR. (I.e. you take a
Pre-need product and strip away the goods and services agreement - that should not make it subject to VM-20.)

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. These types of changes do not require action by
the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes:
APF 2017-51
B. Minimum reserve requirements for variable and non-variable individual life contracts, excluding preneed life contracts, final expense life contracts, industrial life contracts, credit life contracts, and policies of companies exempt pursuant to the companywide exemption in paragraph D below, are provided by VM-20 except for election of the transition period in paragraph C of this subsection.

Minimum reserve requirements of VM-20 are considered PBR requirements for purposes of the Valuation Manual and VM-31 unless VM-20 or other requirements apply only the net premium reserve method or applicable requirements in VM-A and VM-C.

Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C.

C. Final Expense Whole Life - Any whole life insurance policy that is issued with a generally small face amount and with simplified or guaranteed issue underwriting, is marketed to the senior market to cover funeral services and other final expenses, and bears the words, is marketed as, or is filed as “final expense” or words of similar meaning (such as, but not limited to, “burial insurance policy”, “funeral insurance policy”, or “senior life policy”). The definition of final expense whole life shall be subject to that definition of final expense in a particular state of issue if such definition is different in that state. [Note: To be completed.]  

C.D. Ordinary Life [to be completed].

Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the Ordinary Life line of business reported in the prior calendar year L & H annual statement, Exhibit 1 Part 1, Column 3, “Ordinary Life Insurance”, excluding premiums for pre-need and final expense life contracts and excluding amounts that represent the transfer of reserves in-force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as Ordinary Life Insurance premium. Pre-need and final expense are as defined in VM-02.
Date: December 12, 2019

Please allow me to submit the following comment on behalf of Virginia regarding the following exposure:

**APF 2019-33 (Clarify definition of individually underwritten life insurance and applicability of PBR for group insurance)**

**Comment:**

Subsection 1.B under Section II. “Reserve Requirements” of the VM addresses minimum reserve requirements for “individual life contracts”. Since individual life and group life are two distinct and non-overlapping categories of contracts, the new proposed Subsection 1.B.1 which address certain group life contracts should not be placed under Subsection 1.B, but should be pulled out from under Subsection 1.B and made its own Subsection 1.C. Subsections 1.B.2 and 1.B.3 should also be pulled out from under Subsection 1.B and renumbered.

**Suggested Edits to APF 2019-33:**

**Subsection 1: Life Insurance Products**

**A.** This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

**B.** Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in paragraph FC below. For this purpose, joint life policies are considered individual life.

**C.** Minimum reserve requirements for group life contracts in which the individual certificate holders were subjected to an individual risk selection process as described in VM-20 Section 1.B to obtain the insurance coverage are provided by VM-20, except for election of the transition period in paragraph F below.

**D.** Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

**E.** Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.
A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for:

1. Business described in paragraph C above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.
2. Business not described in paragraph C otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

**G.D. Life PBR Exemption**

1. A company meeting the condition in G.D.2 below may file a statement of exemption for ordinary life insurance policies and group life contracts individually underwritten life insurance policies, except for policies in G.D.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition G.D.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

   The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:
   a. The company has less than $300 million of ordinary life premiums, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Footnote change

- Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. For exemptions after 1/1/2024, premiums should also include the premiums from
group life insurance certificates that were subject to an individual risk selection process as defined in VM-20 Section 1.B and included in the group life certificates subject to an individual risk selection process line of business reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement, Part 3.

Premiums should exclude premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed and guaranteed issue life insurance policy are as defined in VM-01.

Thank you for providing me the opportunity to submit this comment.

Craig Chupp, FSA, MAAA
Life and Health Insurance Actuary
Virginia Bureau of Insurance
 craig.chupp@sec.virginia.gov
Phone: (804) 371-9131
The APF mentions a revision to VM-51 to incorporate these contracts. However, no modifications to the VM-51 layout are offered.

APF 2019-56 addresses a series of important changes to the VM-51 layout, which will make it a multi-table system. I have previously commented that the table structure of the system needs to be carefully designed.

Adding group contracts will also require careful design considerations. For example, it is possible that fields should be added for

(a) Certificate Number (applicable to each covered individual in the group contract); and

(b) An indicator, “I” for individual”, and “G” for group, to tell whether a particular contract is individual or group.

I suggest that these considerations be included in the work currently being done for APF 2019-56.

Thank you.

John Robinson

Notes: VM APF 2019-62
VM-20 Section 9.C.4

Add Guidance Note related to converted policies at the end of the section.

Guidance Note: The company must ensure that excess mortality associated with policies issued via conversion from term policies or from group life contracts is appropriately reflected in the anticipated experience mortality rates. This can be accomplished through the use of a separate segment for converted policies, through inclusion of conversion experience with the experience of a group of similar directly issued policies, by adjustment of anticipated experience rates for such group of similar directly issued policies, or through other methods.

Commented [A1]: Since the intent is to determine the range of company practices, it may be better not to give examples.

VM-31 Section 3.B.3 [Executive Summary – policy overview]

3. Policies – A summary of the base policies within each VM-20 reserving category. Include information necessary to fully describe the company’s distribution of business. For direct business, use PBR Actuarial Report Template A located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3) to provide descriptions of each base policy product type and underwriting process (including a description of the process, the time period in which it was used, and the level of any additional margin), with a breakdown of policy count and face amount by base policy product type and underwriting process. Also include the target market, primary distribution system, and key product features that affect risk, including conversion privileges.

d. Assumption and Margin Development – The following information for each risk factor: description of the methods used to determine anticipated experience assumptions and margins, including the sources of experience (e.g., company experience, industry experience, or other data); how changes in such experience are monitored; any adjustments made to increase mortality margins above the prescribed margin (such as to reflect increased uncertainty due to newer underwriting approaches; and any other considerations, such as conversion features, helpful in or necessary to understanding the rationale behind the development of assumptions and margins, even if such considerations are not explicitly mentioned in the Valuation Manual.

Commented [A2]: The conversion features have been moved away from the margins sentence because conversions should inform anticipated experience and the general requirement for uncertainty margins covers conversions. Not sure if we should just delete this.

VM-31 Section 3.D.3.x (new section) [Life Report – Mortality]
We suggest placing after Adjustments for Mortality Improvement and before Mortality for Impaired Lives

\[\text{Mortality for Converted Policies} – \text{Description of the treatment of mortality for policies issued under group or term conversion privileges including:}\]

\begin{itemize}
\item[i.] A description of the method(s) by which any excess conversion mortality was taken into account in the development of company experience mortality rates (e.g., through the use of separate mortality segments for policies issued upon conversion, through aggregation of claim experience, or through use of other methods), the rationale for the method(s) used, and any changes in the method(s) from those used in previous years.
\item[ii.] The source(s) of the data used in the method(s) employed.
\end{itemize}

VM-31 Section 3.D.4.x and y (new sections) [Life Report – Policyholder Behavior]

\begin{itemize}
\item Term Conversions – Description of how the company reflects the impact of any term conversion privilege contained in the policy when setting reserves.
\item Lapse Rates for Converted Policies – Description of and rationale for lapse rates used for policies issued under any group or term conversion privilege.
\end{itemize}

\begin{itemize}
\item[a.] Agreements – For those reinsurance agreements included in the calculation of the minimum reserve as per VM-20 Section 8.A, a description of each reinsurance agreement, including, but not limited to, the type of agreement, the counterparty, the risks reinsured, any provisions related to converted policies, the portion of business reinsured, identification of both affiliated and non-affiliated, as well as captive and non-captive, or similar relationships, and whether the agreement complies with the requirements of the credit for reinsurance under the terms of the AP&P Manual.
\end{itemize}
January 31, 2020

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: Amendment Proposal Forms (APFs) Exposed During NAIC Fall Meeting

Dear Mike:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to submit the following comments regarding the following APFs exposed during the NAIC 2019 Fall Meeting:

**APF 2019-33: Individually underwritten group life insurance**

ACLI has significant concerns with this amendment in its current form. We have two main areas of concern: the scope implied by the definition of “individual risk selection process” and practical implementation concerns.

Regarding scope, we believe that the wording may inadvertently loop in business not intended to be in scope. For example, something as simple as smoking status could be construed as “individual underwriting”, greatly expanding the business that would be impacted by this proposal. The use of underwriting as the criteria to define what is in scope for PBR is a simplification that could scope in traditional group life policies that are priced based on the unique claim costs of an employer group. We do not believe that is the intent of this APF. The definition of what is in scope for the APF requires additional contemplation.

Our second concern is around the practical implementation of the amendment. If individually underwritten group business becomes subject to PBR, it would have to follow the prescribed NPR requirements. However, the expected mortality and lapse rates for individually underwritten group business may be different than the prescribed mortality and lapse assumptions in VM-20. Compounding the problem, we are unaware of any experience studies that have been done on this type of business and deriving appropriate assumptions for other underwriting types, such as guaranteed issue and simplified issue, have proven difficult. Without potential adjustments to mortality and lapse rates for individually underwritten group business, companies may see excessive or nonsensical results for the NPR.

At this time, ACLI is unaware of a wide-spread issue associated with individually underwritten group business; we suspect this is more of a hypothetical problem. As such, we don’t see a pressing need for

---

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.
this APF. We suggest that LATF continue to monitor this issue, and if changes are deemed necessary, LATF should request that the Academy make significant revisions to avoid excessive scope and unintended consequences.

**APF 2019-62: Considerations for term conversion reserves**
ACLI agrees with the American Academy of Actuaries’ Life Reserves Work Group on the need to understand what mortality adjustments are being made for term conversions. We support this APF’s improved disclosures associated with conversions.

**APF 2019-60: Allowance for additional credibility methods**
ACLI supports this amendment. This APF provides important flexibility around credibility methods for companies with simplified underwriting business.

**APF 2019-61: Clarification around secondary guarantee riders**
ACLI believes this APF is a straight-forward clarification around what constitutes a secondary guarantee, and supports this amendment.

We look forward to a discussion of these issues. Thank you.

Sincerely,

[Signature]

cc Reggie Mazyck, NAIC
Date: December 12, 2019

Please allow me to submit the following comment on behalf of Virginia regarding the following exposure:

**APF 2019-62 (Term Conversions additional risk)**

**Comment:**

The proposed Guidance Note to be added to Section 9.C.4 of VM-20 uses the word “must” as follows: “The company must ensure that excess mortality associated with policies issued via conversion from term policies or from group life contracts is appropriately reflected in the anticipated experience mortality rates.” Since the word “must” is used, which is mandatory, the added language in the Guidance Note should not be in a Guidance Note but rather should be made a separate subparagraph 9.C.4.d.

Thank you for providing me the opportunity to submit this comment.

Amendment Proposal Form

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
The Life PBR Exemption restriction is intended to apply to ULSG with material secondary guarantees regardless of whether the secondary guarantee is an embedded guarantee or is a separate rider.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM Section II, Subsection 1.D.3
January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

ULSG policies with material secondary guarantees are intended to be excluded from the Life PBR Exemption, regardless of whether the secondary guarantee is embedded in the base policy or is a separate rider. The VM does say that non-ULSG base policies with secondary guarantee riders follow the reserving requirements for ULSG policies in Section II, Subsection 6.C: “ULSG and other secondary guarantee riders shall be valued with the base policy and follow the reserve requirements for ULSG policies under VM-20, VM-A and/or VM-C, as applicable.” It should be made clear that following the reserve requirements for ULSG includes exclusion from the Life PBR Exemption, when the secondary guarantee is material.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

   **Identification:**
   Rachel Hemphill, Texas Department of Insurance
   Mary Bahna-Nolan, Pacific Life

   **Title of the Issue:**
   VM-20 restriction on using different credibility methods for significantly different blocks of business

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

   VM-20 Sections 9.C.5.a and 9.C.7.b.ii
   January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

   See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

   Currently, a company must select a single credibility methodology, Limited Fluctuation or Bühlmann, for all business that company has that is subject to VM-20 and requires credibility percentages. The Bühlmann methodology is technically allowed for Simplified Issue business within the Valuation Manual; however, at present, it is not practically possible since there are no industry factors available for Simplified Issue. Therefore, only the Limited Fluctuation method can currently be used for determining credibility for Simplified Issue business. The factors in VM-20 for the Bühlmann were developed to only be used in conjunction with the 2015 VBT. Thus, currently, a company with any Simplified Issue business subject to VM-20 that requires credibility calculations must use the Limited Fluctuation method for all of their business subject to VM-20 that requires credibility calculations, including the fully underwritten business. We do not see this as a reasonable restriction. VM-20 already requires that companies not change their credibility method once selected unless they receive commissioner approval for the change, and we believe that that constraint is sufficient to avoid any significant gaming of the credibility method selection.

---

**Notes:** APF 2019-60
**VM-20 Section 9.C.5.a**

5. Credibility of Company Experience

a. For valuations in which the industry basic mortality table is the 2008 VBT, determine an aggregate level of credibility over the entire exposure period using a methodology to determine the level of credibility that follows common actuarial practice as published in actuarial literature (for example, but not limited to, the Limited Fluctuation Method or Bühlmann Empirical Bayesian Method).

For valuations in which the industry basic mortality table is the 2015 VBT, determine an aggregate level of credibility following either the Limited Fluctuation Method by amount, such that the minimum probability is at least 95% with an error margin of no more than 5% or Bühlmann Empirical Bayesian Method by amount. Once chosen, the credibility method must be applied to all business subject to VM20 and requiring credibility percentages.

Not all blocks of a company’s business subject to VM-20 necessarily need to use the same credibility method. However, a company seeking to change the credibility methods for a given block of business must request and subsequently receive the approval of the insurance commissioner. The request must include the justification for the change and a demonstration of the rationale supporting the change.

**VM-20 Section 9.C.7.b.ii**

7. Process to Determine Prudent Estimate Assumptions

a. If applicable industry basic tables are used in lieu of company experience as the anticipated experience assumptions, or if the level of credibility of the data as provided in Section 9.C.5 is less than 20%, the prudent estimate assumptions for each mortality segment shall equal the respective mortality rates in the applicable industry basic tables as provided in Section 9.C.3, including any applicable improvement pursuant to Section 9.C.3.g, plus the prescribed margin as provided in Section 9.C.6.c, plus any applicable additional margin pursuant to Section 9.C.6.d.v and/or Section 9.C.6.d.vi.

b. If the company uses company experience mortality rates as the anticipated experience assumptions, the following process shall be used to develop prudent estimate assumptions:

i. Determine the values of A, B and C from the Grading Table below, based on the level of credibility of the data as provided in Section 9.C.5.

ii. Determine the value of D, which represents the last policy duration that has a substantial volume of claims, using the chosen data source(s) as specified in Section 9.C.2.b. D is defined as the last policy duration at which there are 50 or more claims (not the first policy duration in which there are fewer than 50 claims), not counting riders. This may be determined at either the mortality segment level or at a more aggregate level if the mortality for the individual mortality segments was determined using an aggregate level of mortality experience pursuant to Section 9.C.2.d.
**Guidance Note:** The same level of aggregation is used in Section 9.C.2.d for determining company experience mortality rates, Section 9.C.5.b for determining credibility, and Section 9.C.7.b.ii for determining the value of D. Thus, when determining the value of D, all claims being aggregated will have used the same credibility method in Section 9.C.5.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:
Pat Allison, NAIC
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
Add guidance notes to refer the reader to Excel examples available for mortality aggregation and for assumption reporting.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.C.2.d.vi and VM-31 Section 3.D.1.a
January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

During the exposure of the presentation and Excel examples that were developed for mortality aggregation, we received feedback that it would be helpful for companies if we included a link to the examples in a guidance note in the Valuation Manual. We agree that this would be helpful for the users of the Valuation Manual.

Similarly, an example in Excel was developed for the listing of assumptions required by VM-31 Section 3.D.1.a and we propose that a reference be added to the guidance note in VM-31 Section 3.D.1.a to point the reader to this additional reference material.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2020-01
VM-20 Section 9.C.2.d.vi

vi. If the company uses the aggregate company experience for a group of mortality segments when determining the company experience mortality rates for each of the individual mortality segments in the group, the company shall either:

   a. Use techniques to further subdivide the aggregate experience into the various mortality segments (e.g., start with aggregate nonsmoker and then use the conservation of total deaths principle, normalization or other approach to divide the aggregate mortality into super preferred, preferred and residual standard non-smoker class assumptions).

   b. Use techniques to adjust the experience of each mortality segment in the group to reflect the aggregate company experience for the group (e.g., by credibility weighting the individual mortality segment experience with the aggregate company experience for the group).

In doing so, the company must ensure that when the mortality segments are weighted together, the total amount of expected claims is not less than the aggregate company experience data for the group.

Guidance Note: There are several examples of the two mortality aggregation methods outlined in VM-20 Section 9.C.2.d.vi.a and VM-20 Section 9.C.2.d.vi.b in a Mortality Aggregation Excel Spreadsheet, along with a Mortality Aggregation Presentation from the 2019 Summer Meeting, located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3). These may be useful reference documents when using aggregate company experience for a group of mortality segments in determining the company experience mortality rates.

VM-31 Section 3.D.1.a

1. Assumptions and Margins – Details on the valuation assumptions and margins, including:

   a. Tables – For each material risk, the anticipated experience assumptions, margins, and prudent estimate assumptions used in the model, provided in Excel format. A complete table of reinsurance premiums is not required. If applicable, provide upon request a sample calculation demonstrating the methodology used to determine future reinsurance premiums reflecting non-guaranteed reinsurance features, including margins and details of any simplifications and approximations used.

Guidance Note: See VM-20 Section 9.B.1 for a discussion on material risks.

There is a Sample Assumptions Summary for PBR Actuarial Report located on the NAIC website (https://www.naic.org/pbr_data.htm?tab_3), which may be a useful reference document when developing reporting in accordance with Section 3.D.1.a. For valuation dates prior to Dec. 31, 2022, the company’s domiciliary commissioner may permit less than full compliance with the above Section 3.D.1.a, provided that the commissioner determines that the company has made a good faith attempt to comply.
Executive summary

Oliver Wyman was requested by the American Council of Life Insurers, the American Academy of Actuaries and the National Association of Insurance Commissioners to support an industry field test being conducted to aid the NAIC Life Actuarial (A) Task Force in the selection of a long-term solution for the treatment of non-guaranteed reinsurance under PBR.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

This report does not represent investment advice or provide an opinion regarding the fairness of any transaction to any and all parties. The report does not profess to be authoritative, and merely the product of expert opinion. The views, conclusions and recommendations expressed herein are those of Oliver Wyman and are provided as information for the purpose of general interest and discussion of the topics addressed. The information contained herein is based on Oliver Wyman’s best knowledge and belief at the date of the report, and should not be considered as a warranty or guarantee of the future or success of any program, project or transaction.

Executive summary
Long-term solution for modeling non-guaranteed reinsurance

BACKGROUND
A wide range of practice was observed from early adopters of FRPS in regards to the modeling of non-guaranteed reinsurance and a formulaic solution was adopted on an interim basis for the 2020 Valuation Manual.

OLIVER WYMAN SUPPORT
Oliver Wyman was selected to support and supplement the industry field test. The scope of our support is summarized below and further outlined in the remaining slides in this section of the presentation.

1 - Analysis and insights
Using generic industry models, Oliver Wyman will perform analysis that will be provided in advance of field test results and will provide additional insights beyond those provided by field test participants, informed by a survey of broader industry practice. As needed, analysis outside the scope of the field test may be performed.

2 - Field test support
Oliver Wyman will work closely with field test participants and assist in the preparation and interpretation of results. Additionally, analysis will be performed to better understand the range of variation in participant results (e.g., company and reinsurance structure, field test interpretations, modeling simplifications and/or limitations).

The purpose of today’s presentation is to share details on the design of the analysis models as well as initial insights.

Deliverables
Deliverables for the stages of work shown on the prior slide are described below

Stage Deliverables
Analysis and insights
- AXIS models, documentation and software which will be made available to the NAIC
- Initial analysis and associated model design, with capabilities to analyze the impact field tested proposals across a range of products types, insurance structure and reinsurance structure
- ‘Range of interpretation’ survey intended to further understand the range of interpretations for field tested proposals in a much larger participant base than the actual field test
- Reports summarizing results from industry field test, with additional analysis to further understanding of these results
- Conference calls with field test participants to ensure consistent understanding of field testing instructions and provide advice as to the use of model simplifications or limitations (insurer-specific calls with participants will be used as needed)

Field test support
- Conference calls with field test participants to ensure consistent understanding of field testing instructions and provide advice as to the use of model simplifications or limitations
- ‘Range of interpretation’ survey and beyond the scope of the field test (of each AXIS to be shared with the NAIC)

Timeline
Oliver Wyman will support the stages of the field test depicted below

Deliverables for the stages of work are described on the next slide

Field test support
- The industry field test will commence; initially the focus will be on model preparation, testing of simple solutions and point-in-time reserve assessments with a goal of defining model challenges and testing the integrity and range of variability of the results of Oliver Wyman’s analysis
- The range of results for each model proposal will be communicated to LATF as part of the March 2020 meeting (March 2020)
- Field test participants will produce projected reserves for the various solutions, while Oliver Wyman assists with the interpretation and collection of results. The results of this test will give regulators additional comfort in conclusion that was shared in the field analysis by extending the range of results for understanding variation and any previously unaccounted for

Analysis and insights
- Field test participants will prepare their models for the field test while Oliver Wyman performs deep analysis across a range of products and reinsurance structures to provide insights with implementable potential solutions inputs on an supplement to the standard basis

Initial analysis and insights
Assumptions and modeling methodology underlying the results shown today are summarized below

Component Description
Model
- Governmental (GOV A/X)
- 30-year prepayment horizon (30/15 Terms)
Best estimate assumptions
- Mortality is improved in each valuation date to reflect historic mortality improvement
- Initial forecasted duration period equal to 10 years and increased by one year at each future valuation date, subject to maximum years of future data allowed under VM-20 for the level of credibility
- Prudent margin intended for entire industry averages with a separate set of mortality margins to resemble a small/mid-sized and large insurer (or reinsurer)
Reserve assumptions
- The IRPS uses the 2017 CSO and a reservation interest rate of 6% for calculations subject to VM-20 Sections 3.4, 3.5 and 3.6
- The valuation scenario for the IRPS follows the 12/31/2018 scenario at each valuation date
- Interpolation of credits at each valuation date and the formula of the approach
- The 12 (and fewer) S0 in common annually for 15 years and every 5 years thereafter. Reserve balances are interpreted using a unique method for each insurance company and are measured to account for “reserve reserve” coverage by the reinsurance triggering (frequency and severity-related)

Analysis is intended to align with industry field test instructions and the products and assumptions are intended to be broadly representative of the industry
Background

This section explores the relationship between mortality margin and the impact that reinsurance has on reserves under PBR.

1. Mortality and PBR prescribed margins
2. Impact of mortality margins
3. Projected reinsurance credit
4. Formulaic reserve credit

Results are presented for two sets of boundary reinsurer reactions under PBR mortality margins, and an analytical benchmark (10% mortality margin).

Mortality and PBR prescribed margin

Level of margin by VM-20 mortality assumption component is illustrated below.

- The mortality assumption under VM-20 contains both direct sources of margin and an indirect source of margin (lack of future mortality improvement).

Impact of mortality margins (1/2)

The impact of a 50% first dollar YRT reinsurance agreement with the current scale of rates equal to best estimate mortality is shown below.

The impact of reinsurance depends largely on the modeled reinsurer reaction.
Impact of mortality margins (2/2)
The impact of the 50% reinsurance agreement is re-evaluated below after updating the PBR mortality assumption to use a level 10% margin.

The impact of reinsurance depends largely on the modeled reinsurer reaction.

Projected reinsurance credit
The reinsurance reserve credit (difference between pre- and post-reinsurance reserve) under the two sets of margins is shown below.

Key takeaways

<table>
<thead>
<tr>
<th>Takeaway</th>
<th>Justification</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Reinsurer reaction scenarios can produce reserve credits in excess of 1/2 Cs.</td>
</tr>
<tr>
<td></td>
<td>• 1/2 Cs represents the cost of reinsurance that corresponds to the period for which the reinsurance premium has been paid, but not yet earned by the reinsurer, with no provision for reinsurance beyond the paid to date.</td>
</tr>
<tr>
<td></td>
<td>• Full reinsurer reaction scenario tested above for:</td>
</tr>
<tr>
<td></td>
<td>o Reinsurer reaction that reflects differences between evolution of mortality margin and reinsurance premium payment dates.</td>
</tr>
<tr>
<td></td>
<td>o Contractual provisions around the return of future unearned reinsurance premiums on death and lapse.</td>
</tr>
<tr>
<td></td>
<td>o Other mechanical differences due to VM-20 requirements (e.g. differences in starting assets and the resulting earned rate).</td>
</tr>
<tr>
<td>2</td>
<td>It is important to look at long-term projections of reserves when evaluating the impact of reinsurance modeling approaches.</td>
</tr>
<tr>
<td></td>
<td>• The level of margin in mortality as compared to best estimate changes at future valuation dates due to unlocking of mortality improvement and extending the sufficient data period.</td>
</tr>
<tr>
<td></td>
<td>• As the business ages, higher mortality and shorter projection horizons will change the impact of reinsurance on reserves at future valuation dates.</td>
</tr>
</tbody>
</table>
Proposed granularity for the analysis and modeling is outlined below

<table>
<thead>
<tr>
<th>Reinsurance reaction</th>
<th>Grading</th>
<th>Justification</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>High</td>
<td>High-level granularity on the amount of reinsurance and relationship between rates and best mortality is required to provide coverage of treaty terms, provisions, and the range of company usage of YRT reinsurance.</td>
</tr>
<tr>
<td>Medium</td>
<td>Medium</td>
<td>Medium-level granularity is needed to provide projected long-term impacts in support of a long-term solution.</td>
</tr>
<tr>
<td>Low</td>
<td>Low</td>
<td>Low-level granularity is acceptable for field test participants.</td>
</tr>
</tbody>
</table>

This section contains the results of sensitivities performed to confirm this level of granularity. See Appendix B for further details on the analysis design.

Reinsurance reaction scenarios
Proposed coverage is shown below. As needed, these results will be produced for the methodology analysis dimensions (e.g., product, company size, reinsurance attributes)

Impact analysis | High granularity
The following summarizes the impact reinsurance on PBR reserves for the sensitivities on model components with high granularity

Impact on Deterministic Reserve
Impact on PBR reserve (price of DR and NPR)

Mortality
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Mortality sensitivity
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Mortality sensitivity
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Reinsurance reserve credit
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Both the properties of reinsurance and mortality have a significant impact on the reinsurance reserve credit

Impact analysis | Low-medium granularity
The following summarizes the impact reinsurance on PBR reserves for the sensitivities on model components with low-medium granularity

Impact on Deterministic Reserve
Impact on PBR reserve (price of DR and NPR)

Mortality
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Product sensitivity
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

Yield curve sensitivity
- Reduced mortality and probability of death by 5 years
- Reduced probability of death by 10 years
- Reduced probability of death by 15 years

The product and yield curve sensitivities have a lower impact on the reinsurance reserve credit

© 2020 National Association of Insurance Commissioners
Initial insights and analysis

The scope of the industry field test is focused on the “field test modified” APFs discussed on the September 12th LATF call and summarized below.

<table>
<thead>
<tr>
<th>APF</th>
<th>Description</th>
<th>Field testing variations</th>
</tr>
</thead>
<tbody>
<tr>
<td>2019-40</td>
<td>Actuarial judgement with clarified modeling principles/guidance</td>
<td>- Prudent estimate of all uncertain event assumptions. - Prudent estimate of rate changes only after reaching 115% reinsurer loss ratio. - Model prudent estimate of rate changes only after reaching 5 consecutive years of reinsurer losses.</td>
</tr>
<tr>
<td>2019-41</td>
<td>Reinsurance margin such that the difference between best estimate mortality and the current scale of YRT rates is maintained</td>
<td>- Best estimate mortality for the purpose of calculating reinsurance margin contains future mortality improvement for 15 years at a rate of 0%, 3%, and 1% per year.</td>
</tr>
<tr>
<td>2019-42</td>
<td>Future mortality improvement included in best estimate mortality used for the purpose of calculating reinsurance margin for 5, 10, 15 and 20 years.</td>
<td></td>
</tr>
</tbody>
</table>

The field test submission calls for two baselines; the interim solution (½ Cx) and a scenario where no change from the current scale of YRT rates is assumed.

Impact analysis | Baseline
½ Cx and no change to current scale of YRT rates

The purpose of these results is to foster dialogue among these APFs, the format results are presented in, and any desired follow-up analysis.

There is no margin on reinsurance premiums under the baseline results because the first is formulaic and the second assumes that YRT rates are unchanged.

© 2020 National Association of Insurance Commissioners
Impact analysis | APFs 2019-40

YRT rates are increased by 105% of the difference between the current scale and PBR mortality, until recapture in 2044

- Mortality and reinsurance margins
- 40-year-old male, preferred non-tobacco, 2019 valuation
- Impact analysis | APF 2019-40
- YRT rate increase followed by recapture
- Reserve credit – PBR reserve
- Gross and net reserves
- APFs 2019-41, 2019-42 | Progressive rate increases starting in 2024
- Projected reserves
- Duration (Years)
- Reserve ($MM) Reserve credit ($MM)
- 0% 20% 40% 60% 80% 100%
- 100 150 200 250 300 350
- 100 150 200 250 300 350

The reinsurance reaction (5% over mortality margin) produces a reserve credit in excess of ½ Cx (See Background section for explanation) until recapture in 2044

Impact analysis | APF 2019-40

No change in YRT rates until 2024 followed by progressive increases to break even in 2044 and later

- Mortality and reinsurance margins
- 40-year-old male, preferred non-tobacco, 2019 valuation
- Impact analysis | APF 2019-40
- YRT rate increase followed by recapture
- Reserve credit – PBR reserve
- Gross and net reserves
- APFs 2019-41, 2019-42 | Progressive rate increases starting in 2024
- Projected reserves
- Duration (Years)
- Reserve ($MM) Reserve credit ($MM)
- 0% 20% 40% 60% 80% 100%
- 100 150 200 250 300 350
- 100 150 200 250 300 350

The reserve credit is higher than the prior slide because of a slower reinsurer action. The reserve credit persists beyond 2044 because recapture is not modeled.

Impact analysis | APFs 2019-41, 2019-42

Future mortality improvement included in the best estimate component of reinsurance margin for 15 years at a rate of .75% per year

- Mortality and reinsurance margins
- 40-year-old male, preferred non-tobacco, 2019 valuation
- Impact analysis | APFs 2019-41, 2019-42
- YRT rate increase followed by recapture
- Reserve credit – PBR reserve
- Gross and net reserves
- APFs 2019-41, 2019-42 | 15 years of improvement
- Projected reserves
- Duration (Years)
- Reserve ($MM) Reserve credit ($MM)
- 0% 20% 40% 60% 80% 100%
- 100 150 200 250 300 350
- 100 150 200 250 300 350

The impact of APFs 2019-41 and 2019-42 are equal due to the selection of mortality improvement parameters and the method used to calculate the reinsurance margin

Next steps
Listed below are next steps for the analysis and field test:

<table>
<thead>
<tr>
<th>Next Step</th>
<th>Target Date</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Point in time reserves</td>
<td>February 2020</td>
<td>Oliver Wyman to confirm and share results of industry field test for point-in-time reserves as well as additional consultant analysis at a LATF call in February.</td>
</tr>
<tr>
<td>2. APF results</td>
<td>March 2020</td>
<td>Oliver Wyman to share APF specific results informed by industry range of practice survey at the March LATF meeting.</td>
</tr>
<tr>
<td>3. Projected reserves</td>
<td>April 2020</td>
<td>Oliver Wyman to work alongside companies to develop projected reserves and share results with LATF at an April call.</td>
</tr>
<tr>
<td>4. Draft amendment</td>
<td>May - June 2020</td>
<td>Academy working group will work with LATF to draft an amendment and expose for comment. Oliver Wyman will perform additional analysis as needed.</td>
</tr>
</tbody>

Impact analysis | gross reserves (1 of 2)
Pre-reinsurance reserves are shown below for the sensitivities on model components with high granularity:

Impact analysis | gross reserves (2 of 2)
Pre-reinsurance reserves are shown below for the sensitivities on model components with low-medium granularity.
Impact analysis | net reserves (1 of 2)
Post-reinsurance reserves are shown below for the sensitivities on model components with high granularity.

Baseline: Results from Section 1

Reinsurance sensitivity
Reduce portion of business reinsured

Mortality sensitivity
Reduce credibility and years of sufficient data

Impact analysis | net reserves (2 of 2)
Post-reinsurance reserves are shown below for the sensitivities on model components with low-medium granularity.

Baseline: Results from Section 1

Assets sensitivity
100bps increase to outer loop yield curve

Product sensitivity
5% increase in premium loads (and retail premiums)

Methodology analysis dimensions
The proposed coverage for the analysis is summarized below:

</tr>
<tr>
<td></td>
<td>• These tools are embedded in the Dataset in order to enhance controls and governance</td>
</tr>
</tbody>
</table>
Documentation
Details the requirements, design, documentation, and testing of the model in a modular and expandable structure.

User guide
Supplements the model documentation and provides additional detail on the AXIS model structure.

Testware
Replicates model calculations while supporting version management, increasing transparency, and augmenting documentation.

Analysis tool
Aggregates results under pre-PBR and PBR setups and provides financial metrics and implied rate analysis.
Input builders
Document and generate assumptions and product features in Excel with a process to import into AXIS

Appendix D  Project team and governance

The consultant analysis will be overseen by NAIC Staff, the Academy, and the ACLI, as depicted in the following chart

The report and the findings herein are subject to the reliance and limitations outlined at the beginning of this report. This report is considered a statement of actuarial opinion under the guidelines promulgated by the American Academy of Actuaries. Chris Whitney, Dylan Strother and Katie van Ryn of Oliver Wyman developed this report and meet the qualification requirements of the American Academy of Actuaries to render the opinion contained herein.
QUALIFICATIONS, ASSUMPTIONS AND LIMITING CONDITIONS

Oliver Wyman was requested by the American Council of Life Insurers, the American Academy of Actuaries, and the National Association of Insurance Commissioners to support an industry field test being conducted to aid the NAIC Life Actuarial (A) Task Force in the selection of a long-term solution for the treatment of non-guaranteed reinsurance under PBR.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

This report does not represent investment advice or provide an opinion regarding the fairness of any transaction to any and all parties. The report contains opinions, judgments, conclusions and recommendations, and may not be relied upon by legal counsel or any other party in any transaction. No warranty is given as to the accuracy or completeness of the information contained herein or the conclusions drawn therefrom. No responsibility is assumed for changes in market conditions or laws or regulations and no obligation is assumed to revise this report to reflect changes, events or conditions which occur subsequent to the date hereof.

BACKGROUND
This presentation is intended to supplement the materials entitled “YRT & PBR – Overview and Initial Analysis (Fall 2019 NAIC meeting)” that were presented to LATF at the Fall NAIC Meeting in December 2019.

This supplement expands the background information and analysis to an assuming reinsurers perspective. Additionally, it provides key take-aways from the analysis provided in the Background section of the initial materials.

CONTENTS
1 | Assuming reinsurer’s perspective 3
2 | Key take-aways 8
Appendix: Supplementary results (from Section 1) 10
Conceptual example (1 of 2)
As illustrated below, applying the PBR methodology under the same assumptions can produce differences in reserves between the cedant and assuming reinsurer.

Even with the exact same assumptions, the mechanics of the PBR calculation can result in a difference in ceded reserves and assumed reserves.

Supplementary projections (1 of 2)
The graphs show projected ceded and assumed reserves, where YRT rates are modeled as the current scale plus 105% of the increase in mortality under PBR.

Conceptual example (2 of 2)
Aggregation and mix of business can also lead to differences in ceded and assumed reserves.

Total reserves ceded by the direct writers is 7.0 while the reserve assumed is 6.3.

Supplementary projections (2 of 2)
Projected ceded and assumed reserves where YRT rates are modeled as the current scale plus 105% of the increase in mortality under PBR.

Using an adjustment to YRT reinsurance premiums reflective of a reinsurer’s perspective reduces the differences between reserve credit and assumed reserves.
Key takeaways

1. Reinsurer reaction scenarios can produce reserve credits in excess of \( \frac{1}{2} C_x \).
   - \( \frac{1}{2} C_x \) represents the cost of reinsurance that corresponds to the period for which the reinsurance premium has been paid, but not yet earned by the reinsurer, with no provision for reinsurance beyond the paid to date.
   - Full reinsurer reaction scenario tested allow for:
     - Reinsurer reaction that reflects differences between evolution of mortality margin and reinsurance premium payment dates.
     - Contractual provisions around the return of future unearned reinsurance premiums on death and lapse.
     - Other mechanical differences due to VM-20 requirements (e.g., differences in starting assets and the resulting earned rate).

2. It is important to look at long-term projections of reserves when evaluating the impact of reinsurance modeling approaches.
   - The level of margin in mortality as compared to best estimate changes at future valuation dates, due to unlocking of mortality improvement and extending the sufficient data period.
   - As the business ages, higher mortality and shorter projection horizons will change the impact of reinsurance on reserves at future valuation dates.

3. Differences in reserve credits and assumed reserves under PBR are likely to occur for multiple reasons.
   - Reserves between direct writers and reinsurers will not be mirrored, primarily due to differences in valuation assumptions (including changes to non-guaranteed YRT premiums).
   - Other drivers include the mechanics of computing final PBR reserves, and reinsurers aggregating results across multiple treaties and multiple cedants.
   - Differences between ceded and assumed reserves are reduced when adjustments to YRT premiums are based on the level of mortality margin specific to each party.

---

QUALIFICATIONS, ASSUMPTIONS AND LIMITING CONDITIONS

Oliver Wyman was requested by the American Council of Life Insurers, the American Academy of Actuaries and the National Association of Insurance Commissioners to support an industry field test being conducted to aid the NAIC Life Actuarial (A) Task Force in the selection of a long-term solution for the treatment of non-guaranteed reinsurance under PBR.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

This report does not represent investment advice or provide an opinion regarding the fairness of any transaction to any and all parties. The report contains opinion, data, analysis, and advice, and must be considered in relation to the context, circumstances, and guidance of the report. This report is for the sole and exclusive benefit of the American Council of Life Insurers, the American Academy of Actuaries, and the National Association of Insurance Commissioners. This report may not be reproduced, transmitted, or made available to any third party in whole or in part, in any form, without the express written permission of Oliver Wyman.

The opinions expressed herein are valid only for the purpose stated herein and as of the date hereof.

Information furnished by others, upon which all or portions of this report are based, is believed to be reliable but has not been verified. No warranty is given as to the accuracy of such information. Public information and industry and statistical data are from sources Oliver Wyman deems to be reliable; however, Oliver Wyman makes no representation as to the accuracy or completeness of such information and has accepted the information without further verification. No responsibility is taken for changes in market conditions or laws or regulations and no obligation is assumed to revise this report to reflect changes, events or conditions which occur subsequent to the date hereof.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met via conference call Feb. 26, 2020. The following Subgroup members participated: Bruce Sartain, Chair and Vincent Tsang (IL); Jim Jakielo (CT); William Leung (MO); Bill Carmello (NY); Tomasz Serbinowski (UT); and Craig Chupp (VA). Also participating was: Elaine Lam (CA).

1. Discussed the Potential Revisions to VM-22

Mr. Sartain discussed the Subgroup priorities for revising VM-22, Maximum Valuation Interest Rates for Income Annuities to incorporate principle-based reserving (PBR). He acknowledged monitoring the American Academy of Actuaries (Academy) Annuity Reserves Work Group conference calls, during which they worked on the details of PBR for non-variable annuities. He said the target date for implementation of the Work Group’s PBR version of VM-22 is Jan. 1, 2023.

Mr. Sartain said there are six items on which the Work Group needs state insurance regulator feedback. He anticipates that the Subgroup will provide that feedback via making recommendations to the Life Actuarial (A) Task Force. He said current thinking is that all non-variable annuities will be subject to an exclusion test. Deferred annuity contracts passing the exclusion test will be valued according to the requirements of Actuarial Guideline XXXIII—Determining CARVM Reserves for Annuity Contracts with Elective Benefits (AG 33). The requirements for determining valuation interest rates for an immediate annuity that passes the exclusion test will default to the current version of VM-22.

Mr. Chupp questioned whether it is necessary to have a PBR approach for immediate annuities that fail the exclusion test.

Mr. Sartain said that one aspect of a PBR approach would be a robust approach for handling reinvestment risk.

Ben Slutsker (Academy Annuity Reserves Work Group) said the exclusion tests can be calibrated to consider the characteristics of the various annuity designs, including the duration, longevity risk and reinvestment risk.

Ms. Lam said the Subgroup should consider that scoping immediate annuities out of the PBR approach would preclude them from being subject to VM-G, Appendix G – Corporate Governance Guidance for Principle-Based Reserves. She said having immediate annuities opt out by passing an exclusion test does not offer the same opportunity.

Mr. Leung asked if VM-22, which currently considers only valuation rates, should be expanded to include the valuation methods.

Mr. Sartain said that the Subgroup charges include the potential for changes to valuation methodology, but it has not been determined whether a methodology change would reside in VM-22 or be placed elsewhere in the Valuation Manual.

Mr. Serbinowski said having separate regimes for different subclasses of annuities encourages companies to search for regulatory arbitrage opportunities.

Mr. Slutsker said the ARWG’s preference is to have all non-variable annuity requirements contained in a single Valuation Manual chapter.

Mr. Sartain stated it was his intent to vote on these issues during the Subgroup’s next conference call.

Mr. Sartain said about three years ago, the Academy Standard Valuation Law (SVL) Interest Rate Modernization Work Group was asked by the Life Actuarial (A) Task Force to consider whether a new methodology for determining interest rates for the Commissioners Annuity Reserve Valuation Method (CARVM) would make sense. He said, given the move toward a PBR methodology for non-variable annuities, including the use of exclusion tests, it is questionable whether the Work Group’s work should continue.
Chris Conrad (Academy) said that because single premium immediate annuities (SPIAs) have little policyholder optionality, valuation of SPIAs will not require the same level of modeling sophistication required for non-SPIAs. He recommended pausing the Academy SVL Interest Rate Modernization Work Group’s work on SPIAs until the work on exclusion tests and other aspects of non-variable annuities valuation are farther along.

Mr. Sartain said the group could quickly resume its work when the time arises.

Mr. Leung made a motion, seconded by Mr. Chupp, to request the Academy SVL Interest Rate Modernization Work Group to delay work until further notice on modernizing the process for determining valuation rates for non-SPIA non-variable annuities, as referenced in Mike Boerner’s letter of Jan. 25, 2017. The motion passed unanimously.

Having no further business, the VM-22 (A) Subgroup adjourned.

* VM-50 Section 4.B.2 requires control totals for each data submission

** VM-50 Section 4.B.3 requires a reconciliation between submitted data and the company’s statistical and financial data

5/7/2020
To: Life Actuarial (A) Task Force  
From: NAIC Support Staff  
Date: April 15, 2020  
Re: Recommendation to Delay 2020 Collection of Company Mortality Experience Data

Background

VM-50 Section 2.B.2 designates the NAIC as the Experience Reporting Agent for the Statistical Plan for Mortality beginning Jan. 1, 2020. At a June 25, 2019 LATF meeting, NAIC life actuarial support staff presented information on the selection of companies required to submit mortality experience data in 2020. A total of 176 companies were selected, representing 31 states of domicile. Since then, all selected companies were notified, and the data call was planned to begin during Q2, 2020.

Recommendation to Delay 2020 Data Collection

Due to the disruption being experienced by life insurance companies from the COVID-19 pandemic and the significant resources required to provide mortality experience data, the American Council of Life Insurers (ACLI) has requested a delay in the 2020 data collection. NAIC support staff recommends a one-year delay. This means that mortality data for the 2018 observation year would not be collected in 2020. Instead, data for both the 2018 and 2019 observation years would be collected in 2021. The 2021 data call would occur during the second quarter of 2021, and would require data for both the 2018 and 2019 observation years. Data submissions for both observation years would be due by Sept. 30, 2021. Corrections of data submissions for both observation years would be required by Dec. 31, 2021.

VM-51 Section 2.D states that data shall be submitted on an annual basis, and defines the reporting year (the calendar year the company submits experience data) and observation year (two years prior to the reporting calendar year). This language is not in sync with a 2021 reporting year for two observation years (2018 and 2019). However, VM-50 Section 5.A.3 states that the Experience Reporting Agent may modify or enlarge the requirements of the Valuation Manual, through recommendation to the Life Actuarial (A) Task Force and in accordance with the Valuation Manual governance process for information to accommodate changing needs and environments. Therefore, NAIC staff recommends the collection of mortality experience data for the 2018 and 2019 observation years in 2021 under the timeline noted above.

The collection of company mortality experience data under the Valuation Manual remains a high priority regulatory issue for the NAIC, and the proposed one-year delay in the collection of this data should not be interpreted as diminishing the importance of this issue to the NAIC. This accommodation does not reflect on diminishment of the role of experience reporting as the foundation for principle-based reserving. Because successful life experience reporting traditionally has relied on year-to-year continuity of processes and staff, it is expected that life insurers taking advantage of this accommodation will take care to ensure this continuity takes place and future experience reporting submissions will be of high quality, even with the one-year delay and potential temporary disruption of continuity. Lack of quality data submissions could create uncertainty which could lead to additional margins in reserve assumptions being required.
April 30, 2020

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force

Re: ACLI Comments on Proposed Delay of PBR Experience Reporting

Dear Mike:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to comment on the proposed delay of PBR Experience Reporting.

ACLI is supportive of the temporary deferral of the mortality experience reporting requirement. We are appreciative of the NAIC responsiveness to the pandemic and current economic environment.

We look forward to a discussion of this issue. Thank you.

Sincerely,

cc Reggie Mazyck, NAIC

\(^1\) The American Council of Life Insurers (ACLI) advocates on behalf of 280 member companies dedicated to providing products and services that promote consumers’ financial and retirement security. 90 million American families depend on our members for life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, dental and vision and other supplemental benefits. ACLI represents member companies in state, federal and international forums for public policy that supports the industry marketplace and the families that rely on life insurers’ products for peace of mind. ACLI members represent 95 percent of industry assets in the United States. Learn more at www.acli.com.
Update on the Request for Proposal for the Economic Scenario Generator (ESG)

Pat Allison, MAAA, FSA

5/7/2020

RFP for a New ESG

- An RFP has been issued to select a vendor to provide a new ESG to be prescribed for life and annuity reserves and capital (e.g., VM-20, VM-21, C-3 Phase I, and C-3 Phase II)

- RFP Timeline:

- The new ESG is expected to be implemented no earlier than 2022
Cessation of the London Interbank Offered Rate (LIBOR)

Pat Allison, MAAA, FSA
5/7/2020

Agenda

- Background
- Actions Needed
  - Company Preparation
  - Valuation Manual Amendment

Background

- The UK’s Financial Conduct Authority is responsible for regulating LIBOR and has indicated that publication of LIBOR is not guaranteed beyond 2021
- The Alternative Reference Rates Committee (AARC) was formed in 2014 by the Federal Reserve Board and the NY Fed
- In 2017, the AARC identified the Secured Overnight Financing Rate (SOFR) as the rate that represents best practice for use in certain new USD derivatives and other financial contracts
- The AARC has 10 working groups to help ensure a successful transition from USD LIBOR to SOFR, e.g.:
  - Outreach/Communications Working Group
  - Regulatory Issues Working Group
  - Accounting/Tax Working Group

Actions Needed

- Insurance companies will need to take inventory of existing products and processes that use LIBOR, which may include:
  - Investments (e.g., floating rate debt, where the interest rate is reset periodically based on LIBOR; derivatives linked to LIBOR)
  - Contracts with policyholders (e.g., annuities with credited rate equal to LIBOR plus a margin)
  - Reinsurance treaties
  - IT feeds
- Take action where required to move toward SOFR or another rate (e.g. for annuity contracts with policyholders, file for approval with the IIPRC and notify owner)
Actions Needed

  Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model whenever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries.

- VM-20 Spreads Drafting Group was formed to consider the changes needed to this language

Questions?
Background

- Current spreads are market-observable values, and not assumptions.
- The NAIC is currently receiving current spread data from Bank of America and JP Morgan daily.
- Data published by the NAIC has not consistently been tracking market-observable values in the derivatives market. These differences are most notable at the 3-month and 6-month tenors.
- Absolute differences between the NAIC Table J Spread and market-observable spreads have been as large as 10bps.

Issue Raised by Industry

- Charts showing differences in recent spreads:

  ![Chart 1](image1)
  ![Chart 2](image2)

  *Market observed swap spreads source is Bloomberg data*
Issues Raised by Industry

- Review current calculated rates and verify data sources
- Address elimination of LIBOR: includes both direct replacement for LIBOR as well as potential LIBOR fallback rates
- Request increased clarity in VM-20/VM-21 as company observed spreads will differ from published spreads:
  - Swap contract specifics – Plain Vanilla Swap terms are not uniformly defined. For example, which LIBOR rate, 3-month or 6-month? Other terms such as rate reset frequency and payment dates should also be disclosed. Also, assume these are exchange cleared contracts.
  - How the swap rates are determined (short, intermediate, and long end).
- How the Treasury rates are determined/source.
- Importance of other uses of swap spreads
  - Market value determination (e.g., buying/selling of assets impact)
  - Hedging

Actions to Address this concern

- LATF formed an informal VM-20 Spreads Drafting Group to review industry concerns.
- The Drafting Group and industry/ACLI had a call on 2/3/2020 to discuss the identified issue and possible path forward.
- Industry favors finding a solution as soon as possible. We would seek an APF for the 2021 Valuation Manual, and if possible, data source modification for 2020 reporting.
- ACLI will work on a proposal to LATF to modify the Valuation Manual so that the any guidance around Swap Spreads allows for a data source that:
  - (1) aligns with use in the actuarial models and reflects the market economics appropriately;
  - (2) is accessible for Industry to use independent of NAIC;
  - (3) is flexible to address the expected end of LIBOR in 2021.

Questions?
1. Identify yourself, your affiliation and a very brief description (title) of the issue.
   
   Brian Bayerle, ACLI – Interest Rate Swap Spread Determination
   
2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
   
   
3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)
   
   See attached.
   
4. State the reason for the proposed amendment? (You may do this through an attachment.)
   
   Interest Rate Swap Spreads are currently being calculated by the NAIC under methodology outlined in the Valuation Manual. With the forthcoming termination of LIBOR, the requirements of the Valuation Manual will need to change. This APF provides broad guidance allowing for one or more currently unnamed rate to replace LIBOR in these calculations. Additionally, it allows the company to calculate its own current rates only using market observable values. The spread requirements are currently included in VM-20, with VM-21 referencing the applicable sections. With the potential of VM-22 likely having similar references, LATF may want to consider moving these and other asset requirements to their own section.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM APF 2020-06
VM-20 Section 9.F.8.d
Interest rate swap spreads over Treasuries shall be prescribed calculated by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves represent the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries.

The company may elect to produce their own current swap spread curves based on current observable rates. The company will document the data source(s) of the observable rates in the VM-31 report.

**Guidance Note:** The swap curves should be determined by the NAIC using appropriate market-observable rate or rates. The London Interbank Offered Rate (LIBOR) spreads over Treasuries was the defined spread curves up to and including the 2020 NAIC Valuation Manual, however with the expectation that this rate will be terminated, the rate or rates used in the calculations should be replaced with the most appropriate rate or rates that replace LIBOR for the specified purpose.

VM-31 Section 3.D.6.v (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads.

VM-31 Section 3.F.4.h (additional bullet):

v. Current Swap Spreads Data Source: If the company used something other than the NAIC produced current swap spreads as permitted by VM-20 Section 9.F.8.d, documentation of the data source(s) used in the determination of the swap spreads.
STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES
ACLI DRAFT EDIT APRIL 30, 2020

Table of Contents

Section 1. Title
Section 2. Applicability
Section 3. Nonforfeiture Requirements
Section 4. Minimum Values
Section 5. Computation of Present Value
Section 6. Calculation of Cash Surrender Values
Section 7. Calculation of Paid-Up Annuity Benefits
Section 8. Maturity Date
Section 9. Disclosure of Limited Death Benefits
Section 10. Inclusion of Lapse of Time Considerations
Section 11. Proration of Values; Additional Benefits
Section 12. Rules
Section 13. Effective Date

Section 1. Title

This Act shall be known as the Standard Nonforfeiture Law for Individual Deferred Annuities.

Section 2. Applicability

A. This Act shall not apply to any reinsurance, group annuity purchased under a retirement plan or plan of deferred compensation established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended, premium deposit fund, variable annuity, investment annuity, immediate annuity, any deferred annuity contract after annuity payments have commenced, or reversionary annuity, nor to any contract which shall be delivered outside this state through an agent or other representative of the company issuing the contract.

B. Sections 3 through 8 shall not apply to contingent deferred annuities.

C. Notwithstanding Subsection B, the commissioner shall have the authority to prescribe, by regulation, nonforfeiture benefits for contingent deferred annuities that are, in the opinion of the commissioner, equitable to the policyholder, appropriate given the risks insured, and to the extent possible, consistent with general intent of this law.

Drafting Note: It is expected that any regulation prescribing specific nonforfeiture requirements for the CDAs and promulgated by the commissioner under Subsection C above would apply only to the CDA contracts issued subsequent to the effective date of such regulation.

Section 3. Nonforfeiture Requirements

A. In the case of contracts issued on or after the operative date of this Act as defined in Section 13, no contract of annuity, except as stated in Section 2, shall be delivered or issued for delivery in this state unless it contains in substance the following provisions, or corresponding provisions which in the opinion of the commissioner are at least as favorable to the contractholder, upon cessation of payment of considerations under the contract:

(1) That upon cessation of payment of considerations under a contract, or upon the written request of the contract owner, the company shall grant a paid-up annuity benefit on a plan stipulated in the contract of such value as is specified in Sections 5, 6, 7, 8 and 10;

(2) If a contract provides for a lump sum settlement at maturity, or at any other time, that upon surrender of the contract at or prior to the commencement of any annuity payments, the company shall pay in lieu of a paid-up annuity benefit a cash surrender benefit of such amount as is
specified in Sections 5, 6, 8 and 10. The company may reserve the right to defer the payment of
the cash surrender benefit for a period not to exceed six (6) months after demand therefor with
surrender of the contract after making written request and receiving written approval of the
commissioner. The request shall address the necessity and equitability to all policyholders of the
deferral;

(3) A statement of the mortality table, if any, and interest rates used in calculating any minimum paid-
up annuity, cash surrender or death benefits that are guaranteed under the contract, together with
sufficient information to determine the amounts of the benefits; and

(4) A statement that any paid-up annuity, cash surrender or death benefits that may be available under
the contract are not less than the minimum benefits required by any statute of the state in which
the contract is delivered and an explanation of the manner in which the benefits are altered by the
existence of any additional amounts credited by the company to the contract, any indebtedness to
the company on the contract or any prior withdrawals from or partial surrenders of the contract.

B. Notwithstanding the requirements of this section, a deferred annuity contract may provide that if no
considerations have been received under a contract for a period of two (2) full years and the portion of the
paid-up annuity benefit at maturity on the plan stipulated in the contract arising from prior considerations
paid would be less than $20 monthly, the company may at its option terminate the contract by payment in
cash of the then present value of the portion of the paid-up annuity benefit, calculated on the basis on the
mortality table, if any, and interest rate specified in the contract for determining the paid-up annuity benefit,
and by this payment shall be relieved of any further obligation under the contract.

Section 4. Minimum Values

The minimum values as specified in Sections 5, 6, 7, 8 and 10 of any paid-up annuity, cash surrender or death benefits
available under an annuity contract shall be based upon minimum nonforfeiture amounts as defined in this section.

A. (1) The minimum nonforfeiture amount at any time at or prior to the commencement of any annuity
payments shall be equal to an accumulation up to such time at rates of interest as indicated in
Subsection B of the net considerations (as hereinafter defined) paid prior to such time, decreased
by the sum of Paragraphs (a) through (d) below:

(a) Any prior withdrawals from or partial surrenders of the contract accumulated at rates of
interest as indicated in Subsection B;

(b) An annual contract charge of $50, accumulated at rates of interest as indicated in
Subsection B;

(c) Any premium tax paid by the company for the contract, accumulated at rates of interest
as indicated in Subsection B; and

(d) The amount of any indebtedness to the company on the contract, including interest due
and accrued.

(2) The net considerations for a given contract year used to define the minimum nonforfeiture amount
shall be an amount equal to eighty-seven and one-half percent (87.5%) of the gross considerations
credited to the contract during that contract year.

B. The interest rate used in determining minimum nonforfeiture amounts shall be an annual rate of interest
determined as the lesser of three percent (3%) per annum and the following, which shall be specified in the
contract if the interest rate will be reset:
The five-year Constant Maturity Treasury Rate reported by the Federal Reserve as of a date, or average over a period, rounded to the nearest 1/20th of one percent, specified in the contract no longer than fifteen (15) months prior to the contract issue date or redetermination date under Section 4B(4);

Reduced by 125 basis points;

Where the resulting interest rate is not less than one zero percent (10%); and

The interest rate shall apply for an initial period and may be redetermined for additional periods. The redetermination date, basis and period, if any, shall be stated in the contract. The basis is the date or average over a specified period that produces the value of the five-year Constant Maturity Treasury Rate to be used at each redetermination date.

During the period or term that a contract provides substantive participation in an equity indexed benefit, it may increase the reduction described in Subsection B(2) above by up to an additional 100 basis points to reflect the value of the equity index benefit. The present value at the contract issue date, and at each redetermination date thereafter, of the additional reduction shall not exceed the market value of the benefit. The commissioner may require a demonstration that the present value of the additional reduction does not exceed the market value of the benefit. Lacking such a demonstration that is acceptable to the commissioner, the commissioner may disallow or limit the additional reduction.

The commissioner may adopt rules to implement the provisions of Section 4C and to provide for further adjustments to the calculation of minimum nonforfeiture amounts for contracts that provide substantive participation in an equity index benefit and for other contracts that the commissioner determines adjustments are justified.

Section 5. Computation of Present Value

Any paid-up annuity benefit available under a contract shall be such that its present value on the date annuity payments are to commence is at least equal to the minimum nonforfeiture amount on that date. Present value shall be computed using the mortality table, if any, and the interest rates specified in the contract for determining the minimum paid-up annuity benefits guaranteed in the contract.

Section 6. Calculation of Cash Surrender Value

For contracts that provide cash surrender benefits, the cash surrender benefits available prior to maturity shall not be less than the present value as of the date of surrender of that portion of the maturity value of the paid-up annuity benefit that would be provided under the contract at surrender arising from considerations paid prior to the time of cash surrender reduced by the amount appropriate to reflect any prior withdrawals from or partial surrenders of the contract, such present value being calculated on the basis of an interest rate not more than one percent (1%) higher than the interest rate specified in the contract for accumulating the net considerations to determine maturity value, decreased by the amount of any indebtedness to the company on the contract, including interest due and accrued, and increased by any existing additional amounts credited by the company to the contract. In no event shall any cash surrender benefit be less than the minimum nonforfeiture amount at that time. The death benefit under such contracts shall be at least equal to the cash surrender benefit.

Section 7. Calculation of Paid-up Annuity Benefits

For contracts that do not provide cash surrender benefits, the present value of any paid-up annuity benefit available as a nonforfeiture option at any time prior to maturity shall not be less than the present value of that portion of the maturity value of the paid-up annuity benefit provided under the contract arising from considerations paid prior to the time the contract is surrendered in exchange for, or changed to, a deferred paid-up annuity, such present value being calculated for the period prior to the maturity date on the basis of the interest rate specified in the contract for accumulating the net considerations to determine maturity value, and increased by any additional amounts credited by the company to the contract. For contracts that do not provide any death benefits prior to the commencement of any annuity payments, present values shall be calculated on the basis of such interest rate and the mortality table specified in the contract for determining the maturity value of the paid-up annuity benefit. However, in no event shall the present value of a paid-up annuity benefit be less than the minimum nonforfeiture amount at that time.
Section 8. Maturity Date

For the purpose of determining the benefits calculated under Sections 6 and 7, in the case of annuity contracts under which an election may be made to have annuity payments commence at optional maturity dates, the maturity date shall be deemed to be the latest date for which election shall be permitted by the contract, but shall not be deemed to be later than the anniversary of the contract next following the annuitant’s seventieth birthday or the tenth anniversary of the contract, whichever is later.

Section 9. Disclosure of Limited Death Benefits

A contract that does not provide cash surrender benefits or does not provide death benefits at least equal to the minimum nonforfeiture amount prior to the commencement of any annuity payments shall include a statement in a prominent place in the contract that such benefits are not provided.

Section 10. Inclusion of Lapse of Time Considerations

Any paid-up annuity, cash surrender or death benefits available at any time, other than on the contract anniversary under any contract with fixed scheduled considerations, shall be calculated with allowance for the lapse of time and the payment of any scheduled considerations beyond the beginning of the contract year in which cessation of payment of considerations under the contract occurs.

Section 11. Proration of Values; Additional Benefits

For a contract which provides, within the same contract by rider or supplemental contract provision, both annuity benefits and life insurance benefits that are in excess of the greater of cash surrender benefits or a return of the gross considerations with interest, the minimum nonforfeiture benefits shall be equal to the sum of the minimum nonforfeiture benefits for the annuity portion and the minimum nonforfeiture benefits, if any, for the life insurance portion computed as if each portion were a separate contract. Notwithstanding the provisions of Sections 5, 6, 7, 8 and 10, additional benefits payable in the event of total and permanent disability, as reversionary annuity or deferred reversionary annuity benefits, or as other policy benefits additional to life insurance, endowment and annuity benefits, and considerations for all such additional benefits, shall be disregarded in ascertaining the minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits that may be required by this Act. The inclusion of such benefits shall not be required in any paid-up benefits, unless the additional benefits separately would require minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits.

Section 12. Rules

The commissioner may adopt rules to implement the provisions of this Act.

Section 13. Effective Date

After the effective date of this Act, a company may elect to apply its provisions to annuity contracts on a contract form-by-contract form basis before the second anniversary of the effective date of this Act. In all other instances, this Act shall become operative with respect to annuity contracts issued by the company after the second anniversary of this Act.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

2017 3rd Quarter (amended).
LONG-TERM SOLUTION
(YRT & VM-20)
Results and analysis for field test and interpretation survey

June 2020
OVERVIEW
This report contains results and additional analysis for the industry field test and interpretation survey which will aid the NAC Life Actuarial (A) Task Force ("LATF") in the selection of a longer-term solution for the treatment of non-guaranteed reinsurance under PBR.

Following the delivery of this report, Oliver Wyman and NAIC staff are available to answer questions and perform additional analysis requested by LATF members to assist in decisions for the long-term treatment of non-guaranteed reinsurance under PBR.

KEY TAKEAWAYS
Key takeaways from analysis of field test and interpretation survey results are highlighted below in addition to those previously established.

1. Multiple mortality improvement scenarios were included with APF 2019-41 and 42
2. It is important to look at long-term projections of reserves when evaluating the impact of reinsurance modeling approaches.
3. Differences in reserve credits and assumed reserves under PBR are likely to occur for multiple reasons.
4. Differences in modeled reserves are primarily driven by the relationship between the current scale of NY premiums and PBR mortality (anticipated experience and the level of margin).
5. Differences in reserve credits and assumed reserves are minimized when a mechanical perspective using the representative PBR model) from both a direct writer and assuming reinsurers as well as the potential for asymmetry in reserves due to differences in interpretation and application of the PBRs.
6. Potential for asymmetry between actual and potential reserves due to differences in interpretation and application of the PBRs.

Additional details for each key takeaway can be found in this report in the sections listed.

02 REVIEW OF PROPOSED SOLUTIONS

APF 2019-40

Representative language

• Model YRT premiums using anticipated experience with margins based on clarified modeling principles/guidance and actuarial judgment

The company shall base its company and counterparty action assumptions relating to YRT reinsurance consistent with the moderately adverse environment as applicable to the valuation of all other policyholders (APF 2019-40, Section 8.5)

The assuming company shall not be assumed to incur indefinite losses if treaty terms allow adjustment of the underlying economics (APF 2019-40, Section 8.7)

The company shall base its company and counterparty action assumptions relating to YRT reinsurance treaty changes reflecting that, in general, there is no relevant company or industry experience currently available upon which to base the anticipated experience assumption (APF 2019-40, Section 8.6)

Companies are responsible for developing their own margin used in the projection of future non-guaranteed reinsurance premiums

APF 2019-41

VRT premiums and claims

• Premiums determined using current YRT premium scale with projected adjustments based on what the company actually expects will occur
  • Claims determined using the company's anticipated experience mortality assumptions including mortality improvement

Reinsurance premium margin development

The formula for the prescribed margin (additive to current rates) from APF 2019-42 is summarized below:

\[ m = \frac{\Omega - \Omega_0}{\Omega} \times \text{current YRT rate} \]

where:
- \( m \) = prescribed experience mortality calculated using a minimum of 80% credibility and a 4% [future data period of at least 10 years]
- \( \Omega \) = company experience mortality reflecting industry mortality improvement beyond the valuation date

Non-guaranteed reinsurance premiums are developed based on prescribed inputs, with some flexibility to make adjustments to reflect contract provisions

APF 2019-42

VRT premiums

• Use current VRT premium rates, plus a prescribed margin for non-guaranteed rates based on the difference between "baseline credibility" prudent estimate mortality and company experience mortality

• Baseline credibility assumes a minimum level of credibility and sufficient data period to avoid bias against small companies

Non-guaranteed reinsurance premiums are modeled as the current scale plus a margin, which is developed based on prescribed inputs, with some flexibility to make adjustments to reflect contract provisions
REFINEMENTS TO REPRESENTATIVE PBR MODEL

Field test results and analysis

Observation:

- Turn off mortality assumption unlocking

Model refinements:

- Model refinements: in their reserve projections did not reflect unlocking of mortality up to future valuation dates

- Utilize two credibility scenarios in representative PBR model, Model YRT scales based on relationships to anticipated experience assumptions and underlying levels of credibility

- Normalize reinsurance reserve credits per 1,000 of ceded reinsurance parameters; in particular the portion of business reinsured and the relationship between the current scale of rates and anticipated mortality

Further details on refinements made to methodology analysis dimensions in the representative PBR model are shown

FIELD TEST RESULTS AND ANALYSIS

OVERVIEW

Field test scenarios

- Two baseline runs and each proposed solution with modification per testing scenarios (see below)

- Produce modeled results and detailed disclosures for Term and/or ULSG products, using the 2020 Valuation Manual with modifications to the treatment of non-guaranteed reinsurance

- Compute point-in-time and projected reserves for submissions reflecting the range in levels of credibility observed in field test submissions

- Examined based on information provided in (Unlocking)

Reserves (Credibility)

- Reserves

Mortality

Reinsurance

Properties of reinsurance

Submission requirements Participation

- Source: 2018 individual life insurance sales

- One Term submission and one ULSG submission did not include projected reserves

3.5 Field test results and analysis

**BASELINE | ULSG RESULTS**

The representative PBR model explains the variance in impacts of reinsurance on modeled reserves observed in field test submissions.

- The representative PBR model includes a margin to reinsurance premiums equal to the difference between best estimate mortality and valuation mortality.
- Various approaches in field test submissions to incorporate margins to YRT premiums were observed, resulting in higher DR "reserve credits" compared to the representative PBR model.
- Approaches included grading to an increased premium over time, increasing premiums after a certain duration, and increasing premiums after a loss ratio is triggered.

Derivations of the unitized reduction to DR can be found in Appendix A.

3.1 Field test results and analysis

The representative PBR model explains the variance in impacts of reinsurance on modeled reserves observed in field test submissions.

- The representative PBR model includes a margin to reinsurance premiums equal to the difference between best estimate mortality and valuation mortality.
- Various approaches in field test submissions to incorporate margins to YRT premiums were observed, resulting in higher DR "reserve credits" compared to the representative PBR model.
- Approaches included grading to an increased premium over time, increasing premiums after a certain duration, and increasing premiums after a loss ratio is triggered.

Commentary

- Action A produces only a slight shift in the impact of reinsurance on modeled reserves relative to the baseline, as it is limited to the inclusion of anticipated counterparty actions such as default, recapture and other terminations.
- Action B reflects the impact of a "loss ratio" trigger, which is lower in the projection for "Lower YRT scale" (lower bound) compared to "Baseline YRT scale" and "Higher YRT scale" (upper bound).
- Action C is to model a prudent estimate of all counterparty actions (which includes changes to YRT rates), apply the PBR with no additional restrictions or guidance.
- In the representative PBR model, margins were applied based on the difference between best estimate mortality (including future mortality improvements) and valuation mortality.
- Various approaches in field test submissions to incorporate margins to YRT premiums were observed, resulting in higher DR "reserve credits" compared to the representative PBR model. Approaches included grading to an increased premium over time, increasing premiums after a certain duration, and increasing premiums after a loss ratio is triggered.

Deviations from GDR are shown primarily for observed gain and loss results.

APF 2019-40 (ACTION B) | ULSG RESULTS

The impact of reinsurance on modeled reserves is dependent on the range of participant prudent estimates used in modeling counterparty actions.

Commentary

- Action A is to model a prudent estimate of all counterparty actions (which includes changes to YRT rates), apply the PBR with no additional restrictions or guidance.
- The representative PBR model includes a margin to reinsurance premiums equal to the difference between best estimate mortality (including future mortality improvements) and valuation mortality.
- Various approaches in field test submissions to incorporate margins to YRT premiums were observed, resulting in higher DR "reserve credits" compared to the representative PBR model. Approaches included grading to an increased premium over time, increasing premiums after a certain duration, and increasing premiums after a loss ratio is triggered.
3.14 APF 2019-42 | ULSG RESULTS

Applying a “consecutive losses” approach to determine the timing of reinsurer reaction reduces variability in the impact that reinsurance has on modeled reserves relative to the baseline, albeit to a lesser extent than the application of a "loss ratio" trigger.

APF 2019-40 (ACTION D) | ULSG RESULTS

Field test results and analysis

3.9 • Prudent estimate margins are not applied ubiquitously, therefore the results are less dependent on the relationship of current YRT rates and valuation mortality compared to other solutions.

Similar to Action C, application of prudent estimates are driven by the relationship between YRT rates and valuation mortality during the projection.

3.11 APF 2019-41 | ULSG RESULTS

Introducing future mortality improvement to the projected claims reduces reinsurance gains, given the current scale of reinsurance premiums is held constant.

Field test results and analysis

3.12 Additional key takeaways from analysis of field test results are highlighted below in addition to those previously established.

Field test results and analysis

APF 2019-42 | ULSG RESULTS

Similar to APF 2019-42, increasing the level of future mortality improvement decreases reserve credits.

Field test results and analysis

APF 2019-41 and APF 2019-42 produce similar results, with more moderate effects driven by the application of mortality improvement (magnitude and length).

A 5-year incremental mortality improvement reduces the DR "reserve credit" by roughly 50% (relative to DR "reserve credit") with no future mortality improvement.

When a margin is defined as the relationship between anticipated experience and best estimate mortality, “Higher YRT rate scales” lead to negative reserve credits.

When reinsurance premium margins are based on the level of mortality margin, the application of mortality improvement (magnitude and length) improves the degree of variability in impacts of reinsurance on modeled reserves across companies.

Field test results and analysis

KEY TAKEAWAYS

Additional key takeaways from analysis of field test results are highlighted below in addition to those previously established.

1. Automatic reinsurance reaction can produce reserve reserve reaction relative to loss of life.

2. In all cases, it is important to look at long-term bias of reserve reaction after considering the impact of actuarial reserving assumptions.

3. Differences in reserve credits and assumed reserves under PBR are unlikely to exceed the sample reserves.

4. Differences in modelled reserves are generally driven by the level of future mortality improvement or the period for which the reinsurance premium has been paid, plus net premium following the reinsurance, with assumptions for mortality beyond the paid date.

SURVEY COMMENTARY

Range of responses

- APF with largest variance across survey options
- Largest percentage selecting "Other"
- Examples: recapture at certain periods, utilize a loss trigger to determine when rates are raised, grading into a prudent estimate rate over a period of time

Complexity

- Responses ranged from straightforward (reactive or break-even) to complex
- Complex responses were often associated with None and Other and related to reflect modeling solutions used for other applications or adjustments to cash flows other than YRT premiums
**APF 2019-40 | ULSG**

A fully reactive reinsurance margin produces the largest post-reinsurance DR relative to other options.

**APF 2019-40 | TERM**

No change in rates scenario produces the highest modeled “reserve credit” for Term but is smaller than ½ cx for most valuation dates due to a higher baseline YRT scale than ULSG.

**APF 2019-41 | SURVEY RESULTS**

Reinsurer reaction

- None: 55%
- Reactive: 17%
- Break-even: 18%
- Other: 10%

**SURVEY COMMENTARY**

- Range of responses: Most respondents were either none or break even. These responses generally included a comment regarding intent to adjust claims in lieu of premiums.
- Complexity: Many respondents indicated the need for multiple models or scenarios to reflect the shift in reflected mortality and reinsurance cash flows and to address ½ cx mortality for all other cash flows. Some respondents expressed concerns with consistency between using one projection using prudent estimate assumptions and a separate one using best estimate assumptions.

**APF 2019-41 | ULSG**

The relationship between YRT rates and anticipated mortality minimizes the impact of interpretation differences. This is because Option 1 uses anticipated experience assumptions, and reinsurance premiums are closely aligned with benefits (nearly break-even) and reinsurance is break-even under Option 5.
Pre-reinsurance DR (projected reserve amount)

High credibility

Post-reinsurance DR (projected reserve amount)

"Baseline YRT scale" and high credibility

Pre-reinsurance DR – Post-reinsurance DR (projected reserve amount)

"Baseline YRT scale" and high credibility

Reserve ($MM)

Year

Pre-reinsurance DR

NPR (gross and net)

No change in rates (option 1)

Break even after 1 year (option 5)

1/2 Cx

APF 2019-41 | TERM

Similar to ULSG, the no change in rate scenario produces the largest "reserve credit", but it is considerably smaller than for ULSG and ½ Cx

Interpretation survey results and additional analysis

APF 2019-42 | SURVEY RESULTS

Reinsurer reaction

None 1%

Reactive 64%

Break-even 29%

Other 6%

Modeling approaches illustrated

Increase YRT premiums by

• 100% of the difference between current YRT premium and prescribed mortality immediately and each year thereafter

• 100% of prescribed mortality margin after 1 year and every year thereafter

• Including 10 years of future mortality improvement in implicit margin

Range of responses

• Most responses were reactive and incorporate 100% of the prescribed margin

• Variation in reactive responses was the number of years of mortality improvement included in the margin

Complexity

• Some responses pointed out that the prescribed solution will require a company to develop multiple sets of mortality assumptions to determine the prescribed margin

• Given that over 35% of responses were something other than a reactive margin, the prescribed margin formula may be difficult to interpret and understand

Attachment Nine

**EVALUATION OF TOTAL IMPACT ON DR (CEDED AND ASSUMED)**

Most common responses and responses resulting in the largest reduction in aggregate DR from reinsurers and direct writers are compared, removing impact of any differences between reserve credits and assumed reserves shown by assumptions for modeled reserves and PBR methodology.

**Observation:** Differences in assumptions between ceded and aggregate perspective for modeled reserves are the primary driver of differences between reserve credits and assumed reserves.

**Analytical adjustment:** The consistent assumption for both perspectives to isolate the impact of interpretation in regards to the treatment of non-guaranteed reinsurance.

Assumed reserves in the following slides are developed using the ceded pre- and post-reinsurance DR, an approach which captures reinsurance cash flows in determining the assumed reserve with some simplification (i.e., excludes reinsurers expenses and uses ceding company asset assumptions).
Interpretation survey results and additional analysis

### APF 2019-40 | Ceded and Assumed

Combined impact to DR from both ceding and assuming companies for the most common surveyed reactions is positive; combinations of other surveyed reactions could lead to a reduction in total DR.

- **Differences in calculation methodology and assumptions**
- **Interpretation survey results and additional analysis**

#### Reinsurer reaction – Ceding company

</tbody>
</table>

#### Commentary

- Differences in modeling approach result in differences between ceded credit and assumed reserve.
- Some assuming companies noted that they may raise their rates in response to these differences.
- Ceding companies noted that the life modeling approach and assumptions typically reconcile to those previously established.
- Differences in methodology and assumptions can lead to changes in future mortality improvement included in the margin, versus fully driving the difference between current YRT premiums and mortality and can be thought of as mechanisms around return of unearned reinsurance premium and other mechanical differences due to VM-20 requirements.

**APF 2019-41 | Ceded and Assumed**

Impact of reinsurance on combined DR based on most common responses is smaller than APF 2019-40.

- **None** reaction refers to no adjustments to premium, mortality, or other assumptions.
- Reinsurers had similar comments as direct companies regarding the need to make reinsurance risk assumptions separate to properly reflect the guidance in the APF.
- Reinsurers noted that APF 2019-40 issue responses did not reflect "no adjustment.

---

**KEY TAKEWAYS**

**Additional key takeaway:** From evaluation of total impact on DR (ceded and assumed) are highlighted below in addition to those previously established.

1. **Reinsurer reaction**
   - **Impact to total projected deterministic reserves (ULSG)**
   - **None**
   - Reacting to reinsurance is used by both parties.

2. **Impact of reinsurance on DR combined (assumed – credit)**
   - **None**
   - Most common responses (     ceded credit,     assumed reserve)

3. **Largest reduction to DR**
   - **None**
   - Impact to total projected deterministic reserves (ULSG)

Supplemental results

FIELD TEST RESULTS AND ANALYSIS

APPENDIX C.1

C.1 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

No change to YRT rates

C.2 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

1/2 Cx

(6) (4) (2) -2 4 6 8 10

Lower bound = 1/2 Cx

Upper bound = 1/24 Cx

Field test results and analysis

BASELINE | TERM RESULTS

Similar to LiLG, the representative PBR model explains the variance in impacts of reinsurance on modeled reserves observed in field test submissions.

C.3 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

Action A

C.4 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

Action B

APF 2019–40 | TERM RESULTS

Application of prudent estimate margins in Action B lowers the impact to DR and including additional parameters to determine the application of margins (Action C and Action D) reduces the variation in field test results.

C.5 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

Action C

C.6 – Gross DR – Net DR (per 1000 of projected ceded NAAR)

Action D

Analysis coverage range (OW)

Neutral YRT rate scale (OW)

Coverage range (Representative PBR model)

"Baseline YRT scale" with high credibility
Similar to ULSG, introducing future mortality improvement to the projected claims reduces reinsurance gains, given the current scale of reinsurance premiums is held constant.

Field test results and analysis
APF 2019-41 | TERM RESULTS

Similar to ULSG, increasing the level of future mortality improvement has a similar impact on both APF 2019-41 and 2019-42.

Notes
- Impact to DR is unitized as per 1000 of Ceded NAAR.
- Unitized impact to DR for no changes to YRT policy = \frac{(a) - (b)}{(c)} * 1000

The report and the findings herein are subject to the reliances and limitations outlined at the beginning of this report. This report is considered a statement of actuarial opinion under the guidelines promulgated by the American Academy of Actuaries. Chris Whitney, Dylan Strother and Katie van Ryn of Oliver Wyman developed this report and meet the qualification requirements of the American Academy of Actuaries to render the opinion contained herein.
QUALIFICATIONS, ASSUMPTIONS, AND LIMITING CONDITIONS

Oliver Wyman was engaged by the American Council of Life Insurers, the American Academy of Actuaries and the National Association of Insurance Commissioners to support an industry field test being conducted to aid the NAIC Life Actuarial (A) Task Force in the selection of a long-term solution for the treatment of non-guaranteed reinsurance under PBR.

Oliver Wyman shall not have any liability to any third party in respect of this report or any actions taken or decisions made as a consequence of the results, advice or recommendations set forth herein.

This report does not represent investment advice or provide an opinion regarding the fairness of any transaction to any and all parties. This report does not represent legal advice, which can only be provided by legal counsel and for which you should seek advice of counsel. The opinions expressed herein are valid only for the purpose stated herein and as of the date hereof. Information furnished by others, upon which all or portions of this report are based, is furnished in good faith but has not been independently verified by or under the control of Oliver Wyman. Oliver Wyman makes no representations as to the accuracy or completeness of such information and has accepted the information without further verification.

No warranty is given as to the accuracy of such information. Public information and industry and statistical data are from sources Oliver Wyman deems to be reliable; however, Oliver Wyman makes no representation as to the accuracy or completeness of such information and has accepted the information without further verification. STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES

ACLI DRAFT EDIT APRIL 30, 2020

Table of Contents

Section 1. Title
Section 2. Applicability
Section 3. Nonforfeiture Requirements
Section 4. Minimum Values
Section 5. Computation of Present Value
Section 6. Calculation of Cash Surrender Values
Section 7. Calculation of Paid-Up Annuity Benefits
Section 8. Maturity Date
Section 9. Disclosure of Limited Death Benefits
Section 10. Inclusion of Lapse of Time Considerations
Section 11. Proration of Values; Additional Benefits
Section 12. Rules
Section 13. Effective Date

Section 1. Title

This Act shall be known as the Standard Nonforfeiture Law for Individual Deferred Annuities.

Section 2. Applicability

A. This Act shall not apply to any reinsurance, group annuity purchased under a retirement plan or plan of deferred compensation established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended, premium deposit fund, variable annuity, investment annuity, immediate annuity, any deferred annuity contract after annuity payments have commenced, or reversionary annuity, nor to any contract which shall be delivered outside this state through an agent or other representative of the company issuing the contract.

B. Sections 3 through 8 shall not apply to contingent deferred annuities.

C. Notwithstanding Subsection B, the commissioner shall have the authority to prescribe, by regulation, nonforfeiture benefits for contingent deferred annuities that are, in the opinion of the commissioner, equitable to the policyholder, appropriate given the risks insured, and to the extent possible, consistent with general intent of this law.

Drafting Note: It is expected that any regulation prescribing specific nonforfeiture requirements for the CDAs and promulgated by the commissioner under Subsection C above would apply only to the CDA contracts issued subsequent to the effective date of such regulation.

Section 3. Nonforfeiture Requirements

A. In the case of contracts issued on or after the operative date of this Act as defined in Section 13, no contract of annuity, except as stated in Section 2, shall be delivered or issued for delivery in this state unless it contains in substance the following provisions, or corresponding provisions which in the opinion of the commissioner are at least as favorable to the contractholder, upon cessation of payment of considerations under the contract:

(1) That upon cessation of payment of considerations under a contract, or upon the written request of the contract owner, the company shall grant a paid-up annuity benefit on a plan stipulated in the contract of such value as is specified in Sections 5, 6, 7, 8 and 10;

(2) If a contract provides for a lump sum settlement at maturity, or at any other time, that upon surrender of the contract at or prior to the commencement of any annuity payments, the company shall pay in lieu of a paid-up annuity benefit a cash surrender benefit of such amount as is
specified in Sections 5, 6, 8 and 10. The company may reserve the right to defer the payment of the cash surrender benefit for a period not to exceed six (6) months after demand therefor with surrender of the contract after making written request and receiving written approval of the commissioner. The request shall address the necessity and equitability to all policyholders of the deferral;

(3) A statement of the mortality table, if any, and interest rates used in calculating any minimum paid-up annuity, cash surrender or death benefits that are guaranteed under the contract, together with sufficient information to determine the amounts of the benefits; and

(4) A statement that any paid-up annuity, cash surrender or death benefits that may be available under the contract are not less than the minimum benefits required by any statute of the state in which the contract is delivered and an explanation of the manner in which the benefits are altered by the existence of any additional amounts credited by the company to the contract, any indebtedness to the company on the contract or any prior withdrawals from or partial surrenders of the contract.

B. Notwithstanding the requirements of this section, a deferred annuity contract may provide that if no considerations have been received under a contract for a period of two (2) full years and the portion of the paid-up annuity benefit at maturity on the plan stipulated in the contract arising from prior considerations paid would be less than $20 monthly, the company may at its option terminate the contract by payment in cash of the then present value of the portion of the paid-up annuity benefit, calculated on the basis on the mortality table, if any, and interest rate specified in the contract for determining the paid-up annuity benefit, and by this payment shall be relieved of any further obligation under the contract.

Section 4. Minimum Values

The minimum values as specified in Sections 5, 6, 7, 8 and 10 of any paid-up annuity, cash surrender or death benefits available under an annuity contract shall be based upon minimum nonforfeiture amounts as defined in this section.

A. (1) The minimum nonforfeiture amount at any time at or prior to the commencement of any annuity payments shall be equal to an accumulation up to such time at rates of interest as indicated in Subsection B of the net considerations (as hereinafter defined) paid prior to such time, decreased by the sum of Paragraphs (a) through (d) below:

(a) Any prior withdrawals from or partial surrenders of the contract accumulated at rates of interest as indicated in Subsection B;

(b) An annual contract charge of $50, accumulated at rates of interest as indicated in Subsection B;

(c) Any premium tax paid by the company for the contract, accumulated at rates of interest as indicated in Subsection B; and

(d) The amount of any indebtedness to the company on the contract, including interest due and accrued.

(2) The net considerations for a given contract year used to define the minimum nonforfeiture amount shall be an amount equal to eighty-seven and one-half percent (87.5%) of the gross considerations credited to the contract during that contract year.

B. The interest rate used in determining minimum nonforfeiture amounts shall be an annual rate of interest determined as the lesser of three percent (3%) per annum and the following, which shall be specified in the contract if the interest rate will be reset:
The five-year Constant Maturity Treasury Rate reported by the Federal Reserve as of a date, or average over a period, rounded to the nearest 1/20th of one percent, specified in the contract no longer than fifteen (15) months prior to the contract issue date or redetermination date under Section 4B(4);

Reduced by 125 basis points;

Where the resulting interest rate is not less than one zero percent (10%); and

The interest rate shall apply for an initial period and may be redetermined for additional periods. The redetermination date, basis and period, if any, shall be stated in the contract. The basis is the date or average over a specified period that produces the value of the five-year Constant Maturity Treasury Rate to be used at each redetermination date.

C. During the period or term that a contract provides substantive participation in an equity indexed benefit, it may increase the reduction described in Subsection B(2) above by up to an additional 100 basis points to reflect the value of the equity index benefit. The present value at the contract issue date, and at each redetermination date thereafter, of the additional reduction shall not exceed the market value of the benefit. The commissioner may require a demonstration that the present value of the additional reduction does not exceed the market value of the benefit. Lacking such a demonstration that is acceptable to the commissioner, the commissioner may disallow or limit the additional reduction.

D. The commissioner may adopt rules to implement the provisions of Section 4C and to provide for further adjustments to the calculation of minimum nonforfeiture amounts for contracts that provide substantive participation in an equity index benefit and for other contracts that the commissioner determines adjustments are justified.

Section 5. Computation of Present Value

Any paid-up annuity benefit available under a contract shall be such that its present value on the date annuity payments are to commence is at least equal to the minimum nonforfeiture amount on that date. Present value shall be computed using the mortality table, if any, and the interest rates specified in the contract for determining the minimum paid-up annuity benefits guaranteed in the contract.

Section 6. Calculation of Cash Surrender Value

For contracts that provide cash surrender benefits, the cash surrender benefits available prior to maturity shall not be less than the present value as of the date of surrender of that portion of the maturity value of the paid-up annuity benefit that would be provided under the contract at the time arising from considerations paid prior to the time of cash surrender reduced by the amount appropriate to reflect any prior withdrawals from or partial surrenders of the contract, such present value being calculated on the basis of an interest rate not more than one percent (1%) higher than the interest rate specified in the contract for accumulating the net considerations to determine maturity value, decreased by the amount of any indebtedness to the company on the contract, including interest due and accrued, and increased by any existing additional amounts credited by the company to the contract. In no event shall any cash surrender benefit be less than the minimum nonforfeiture amount at that time. The death benefit under such contracts shall be at least equal to the cash surrender benefit.

Section 7. Calculation of Paid-up Annuity Benefits

For contracts that do not provide cash surrender benefits, the present value of any paid-up annuity benefit available as a nonforfeiture option at any time prior to maturity shall not be less than the present value of that portion of the maturity value of the paid-up annuity benefit provided under the contract arising from considerations paid prior to the time the contract is surrendered in exchange for, or changed to, a deferred paid-up annuity, such present value being calculated for the period prior to the maturity date on the basis of the interest rate specified in the contract for accumulating the net considerations to determine maturity value, and increased by any additional amounts credited by the company to the contract. For contracts that do not provide any death benefits prior to the commencement of any annuity payments, present values shall be calculated on the basis of such interest rate and the mortality table specified in the contract for determining the maturity value of the paid-up annuity benefit. However, in no event shall the present value of a paid-up annuity benefit be less than the minimum nonforfeiture amount at that time.
Section 8. Maturity Date

For the purpose of determining the benefits calculated under Sections 6 and 7, in the case of annuity contracts under which an election may be made to have annuity payments commence at optional maturity dates, the maturity date shall be deemed to be the latest date for which election shall be permitted by the contract, but shall not be deemed to be later than the anniversary of the contract next following the annuitant’s seventieth birthday or the tenth anniversary of the contract, whichever is later.

Section 9. Disclosure of Limited Death Benefits

A contract that does not provide cash surrender benefits or does not provide death benefits at least equal to the minimum nonforfeiture amount prior to the commencement of any annuity payments shall include a statement in a prominent place in the contract that such benefits are not provided.

Section 10. Inclusion of Lapse of Time Considerations

Any paid-up annuity, cash surrender or death benefits available at any time, other than on the contract anniversary under any contract with fixed scheduled considerations, shall be calculated with allowance for the lapse of time and the payment of any scheduled considerations beyond the beginning of the contract year in which cessation of payment of considerations under the contract occurs.

Section 11. Proration of Values; Additional Benefits

For a contract which provides, within the same contract by rider or supplemental contract provision, both annuity benefits and life insurance benefits that are in excess of the greater of cash surrender benefits or a return of the gross considerations with interest, the minimum nonforfeiture benefits shall be equal to the sum of the minimum nonforfeiture benefits for the annuity portion and the minimum nonforfeiture benefits, if any, for the life insurance portion computed as if each portion were a separate contract. Notwithstanding the provisions of Sections 5, 6, 7, 8 and 10, additional benefits payable in the event of total and permanent disability, as reversionary annuity or deferred reversionary annuity benefits, or as other policy benefits additional to life insurance, endowment and annuity benefits, and considerations for all such additional benefits, shall be disregarded in ascertaining the minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits that may be required by this Act. The inclusion of such benefits shall not be required in any paid-up benefits, unless the additional benefits separately would require minimum nonforfeiture amounts, paid-up annuity, cash surrender and death benefits.

Section 12. Rules

The commissioner may adopt rules to implement the provisions of this Act.

Section 13. Effective Date

After the effective date of this Act, a company may elect to apply its provisions to annuity contracts on a contract form-by-contract form basis before the second anniversary of the effective date of this Act. In all other instances, this Act shall become operative with respect to annuity contracts issued by the company after the second anniversary of this Act.

Chronological Summary of Actions (all references are to the Proceedings of the NAIC).

2017 3rd Quarter (amended).
Brian Bayerle  
Senior Actuary  
July 20, 2020

Mr. Mike Boerner  
Chair, NAIC Life Actuarial Task Force (LATF)

Re: ACLI Comments on Opening of NAIC Model #805

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to provide comments on the opening of NAIC Model #805 on Standard Nontopertual Law for Individual Deferred Annuities. We appreciate the leadership of LATF and the Life Insurance and Annuities (A) Committee to address this critical issue for consumers.

ACLI believes regulators should make quick, tactical revisions to Model #805 in light of the current economic environment. Specifically, we believe the appropriate course of action is to reduce the minimum nontopertual interest rate in Section 4 (B) (3) from 1% to 0%.

The current interest rate environment creates unique challenges on crediting rates. As of June 30th, the yields for the US 5-year and 10-year Treasurys were 0.29% and 0.66%, respectively. It is difficult to support the current 1.00% minimum guaranteed rate given these historically low interest rates. An annuity contract is a long-term commitment and requires that insurers maintain a long time horizon with respect to managing contract liabilities. Many companies are contemplating or have begun to limit their product offerings in response to the current situation and would appreciate greater flexibility to address the current environment. Greater flexibility will help promote expanded product availability to consumers.

We note that the 0% is a floor only; and the current formula will continue to be used to determine the minimum rates companies are permitted to guarantee on newly-issued contracts. The 0% floor will only be triggered in low interest rate environments, such as the one we are currently experiencing. Companies will continue to use non-guaranteed crediting rates, bonuses, and other features in order to maintain market competitiveness and product differentiation. If, and when, market conditions improve, competitive pressures will necessitate that insurers increase both their current and guaranteed crediting rates regardless of the regulatory floor.

We look forward to a discussion on this important issue.
Sincerely,

[Signature]

Mr. Reggie Mazyck
Life Actuary, NAIC

Re: Model 805 Exposure, Standard Nonforfeiture Law for Individual Deferred Annuities

Dear Mr. Boerner and Mr. Mazyck:

On behalf of our members, the Insured Retirement Institute (“IRI”)\(^1\) appreciates the opportunity to comment on the proposed change to Model 805 Exposure. For the reasons set forth below, we support the proposal and respectfully urge the NAIC to move expeditiously to adopt the proposal.

The current financial environment is challenging institutional and individual investors and product offerings. The proposed change from 1% to 0% will give companies more flexibility to provide the value and benefits wanted and needed by consumers. If companies are required to offer 1% crediting rates, and interest rates remain low or decrease further, certain products will no longer be feasible to offer. The products most at risk are often those in greatest demand by consumers. For example, products with short surrender charge periods may not be able to find investments that have a high enough yield to support a 1% rate. At the same time, many consumers will be understandably hesitant to purchase long term products in a low yield environment. Additional guarantees in contracts such as a return of premium benefit may become unaffordable if the asset yield available is exhausted by the 1% guarantee.

IRI is committed to responding to the country’s economic condition with policy recommendations that support individual investment. Companies must have a diverse product portfolio to respond to the

\(^1\) IRI is the leading association for the entire supply chain of insured retirement strategies, including life insurers, asset managers, and distributors such as broker-dealers, banks and marketing organizations. IRI members account for more than 95 percent of annuity assets in the U.S., include the top 10 distributors of annuities ranked by assets under management, and are represented by financial professionals serving millions of Americans. IRI champions retirement security for all through leadership in advocacy, awareness, research, and the advancement of digital solutions within a collaborative industry community.
May 29, 2020

changing economic and individual situation. IRI supports the responsive approach of Model 805 and encourages the Life Actuarial Task Force to adopt as proposed.

Thank you again for the opportunity to share our views on this important subject. Please contact the undersigned if you have questions about anything in this letter, or if we can be of any further assistance in connection with this important regulatory effort.

Sincerely,

Jason Berkowitz
Chief Legal & Regulatory Affairs Officer
Insured Retirement Institute

Liz Pujolas
Director, State Affairs
Insured Retirement Institute
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met via conference call July 15, 2020. The following Subgroup members participated: Bruce Sartain, Chair (IL); Jim Jakielo (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Bill Carmello (NY); Tomasz Serbinowski (UT); and Craig Chupp (VA). Also participating was: Russell Toal (NM); and Rachel Hemphill (TX).

1. Discussed the Revisions to VM-22

Mr. Sartain said the aggregation discussion will be deferred until the American Academy of Actuaries (Academy) Annuity Reserve Work Group (ARWG) finalizes its development of aggregation principles. He presented a list of Subgroup decisions that could be presented to the Life Actuarial (A) Task Force for its consideration. The first item on the list was the inclusion of payout annuities in the principle-based reserving (PBR) framework. He noted that the decision on the location of the PBR requirements for payout annuities will be decided later. The second item was the decision to continue development of an exclusion test for less risky annuities. The third item was the deferral of discussions on whether the PBR requirements for payout annuities are to be applied retroactively. He said that the decision on retroactivity will be tabled until the Subgroup gets closer to a final product. Mr. Carmello said the New York Department of Financial Services (NYDFS) prefers retaining Actuarial Guideline XXXIII, Determining CARVM Reserves for Annuity Contracts with Elective Benefits (AG 33) and Actuarial Guideline XXXV, The Application of the Commissioners Annuity Reserve Method to Equity Indexed Annuities (AG 35). He said those requirements are sufficient and the PBR payout annuities project is not necessary. The Subgroup agreed to forward the three decisions to the Task Force for its review. Mr. Carmello did not agree with moving the decisions forward. Although not a member of the Subgroup, Commissioner Toal also voiced opposition sending the items to the Task Force.

Mr. Sartain said two issues related to the standard projection amount (SPA) are whether to develop an SPA and, if an SPA is developed, whether it should be a reserve floor or a disclosure item. He said the benefits of having an SPA in the PBR payout annuity framework that would be analogous to the SPA in VM-21, Requirements for Principle-Based Reserves for Variable Annuities, have been discussed. He said there is a thought that having consistency between VM-21 and the PBR payout annuities framework would be a positive step to keep companies from cherry picking requirements for products that straddle the line of variable and fixed identification. He said there is also thinking that supports waiting until field testing has been completed to decide whether the SPA would be a floor or disclosure item. He noted that the Task Force has been charged with reviewing the VM-21 SPA by the end of 2023. He said it may make sense to have the floor/disclosure decision coincide with the VM-21 SPA review. He asked subgroup members if there were any objections to proceeding with the development SPA. Ms. Ahrens said that during the VM-21 deliberations, the Nebraska Department of Insurance spoke against using the SPA as a floor. She said her current stance on the PBR payout annuity framework SPA is that it should be a disclosure item, but she is willing to await completion of the ARWG work before making a final decision. Ms. Ahrens suggested that there could be a set of multiple standard scenarios. Mr. Sartain asked if VM-21 assumptions for the CTE with Prescribed Assumptions (CTEPA) will be periodically revisited. Ms. Hemphill said the intent was to revisit the prescribed assumptions, but no set period for revisiting was determined. She said she finds the VM-21 SPA helpful when doing company reviews and at minimum would like to have the PBR payout annuity SPA as a disclosure item. Ms. Ahrens said her preference would be to only have the PBR stochastic calculations with the cash value as the floor. She said she is not opposed to continuing the work on the SPA but is concerned that there is a presupposition that the SPA will be used as a floor. Ben Slutsker (Academy ARWG) said the Academy does not support using the SPA a floor. He said they would rather have the SPA as a disclosure item. Mr. Sartain asked if subgroup members would like to add the discussion of the SPA to the list of items for Task Force consideration or to continue SPA discussions within the subgroup. The Subgroup voted, 5-4, to keep the SPA discussions at the subgroup level.

Having no further business, the VM-22 (A) Subgroup adjourned.

W:\National Meetings\2020\Summer\TF\LA\VM-22\07 15\07_15 VM-22 Minutes.docx

© 2020 National Association of Insurance Commissioners
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met via conference call July 1, 2020. The following Subgroup members participated: Bruce Sartain, Chair and Vincent Tsang (IL); Jim Jakielo (CT); William Leung (MO); Bill Carmello (NY); Tomasz Serbinowski (UT); and Craig Chupp (VA). Also participating were: Pete Weber (OH); John Robinson (MN); and Rachel Hemphill and Karen Jiang (TX).

1. Discussed the Revisions to VM-22

Mr. Sartain said his thought is to move forward with developing a standard projection amount (SPA) for VM-22, Statutory Maximum Valuation Interest Rate for Income Annuities, and wait to decide whether it should be a floor amount or a disclosure item until the SPA development process is nearly complete. He said another decision is whether the VM-22 SPA will use the CTE with Prescribed Assumptions (CTEPA) method or the Company-Specific Market Path (CSMP) method, the two VM-21, Requirements for Principle-Based Reserves for Variable Annuities, methods for determining the SPA. Mr. Sartain said using the SPA would be consistent with the decision to use VM-21 as a model for VM-22, making changes wherever necessary. He noted that a field test, using an initial set of prescribed assumptions which will allow for comparisons of the stochastic reserve, SPA, cash surrender value, and the CARVM reserve, will be conducted in 2021. He said it is premature to make decisions on the SPA before completion of the field test. He said the Life Actuarial (A) Task Force has received a charge requiring review of the VM-21 SPA by the end of 2023. He said the VM-22 SPA could also be reviewed at that time. Also, an SPA floor would be stochastically based, and if it were decided to be a disclosure item that would also be helpful in regulatory reviews. John Robinson asked if a different SPA would be considered for deferred annuities (DAs) and single premium immediate annuities (SPIAs). Mr. Sartain said prescribed assumptions would be developed by product line and modeled according to the aggregation rules.

Ms. Jiang asked whether the prescribed assumptions would be best estimates or margins added to industry averages. Mr. Sartain said his simplistic view is to use best estimate assumptions with a margin. Ben Slutsker (American Academy of Actuaries Annuity Reserves Work Group—ARWG) said the ARWG approach has been to focus on the principle-based reserve (PBR). He said a floor reserve may impede the PBR objective. He said the prescribed assumptions should align with the objectives of the adopted approach. Mr. Sartain asked if VM-21 used a best estimate or a best estimate plus a margin. Ms. Hemphill said VM-21 does not use an explicit margin but adds conservatism when encountering uncertainty. She questioned whether there is double buffering if prescribed assumptions have explicit margins. Mr. Weber said, Oliver-Wyman stated that, while it does not have an explicit margin, the VM-21 reserve requirements are sufficiently conservative. Mr. Sartain said VM-22 should use the VM-21 margin approach. Ms. Hemphill suggested considering ways to quantify the size of the margin. She said having the margin quantified is helpful when conducting reviews. Cindy Barnard (Pacific Life) said developing assumptions for areas in which there are no experience will be challenging.

Mr. Robinson asked for the reasons why the SPA is being considered for VM-22. Mr. Sartain said it is reasonable to consider the SPA as a floor reserve. He said even if it is not used as a floor, disclosing the SPA provides valuable information. Mr. Weber said having a floor for VM-21 and no floor for VM-22 would require clear differentiation of the variable and non-variable annuity products. Mr. Sartain said discussion of the issue will continue on the next subgroup call.

Mr. Sartain said the concept of aggregation is discussed in section 5A of VM-20, Requirements for Principle-Based Reserves for Life Products. Mr. Slutsker said aggregation refers to the grouping of policies with off-setting risks. He said aggregation interacts with lots of elements within the PBR framework, primarily appearing in the CTE-70 calculation, the comparing of reserve components and in exclusion testing. He detailed the uses of aggregation within VM-20 and VM-21. He said the ARWG believes an approach which outlines principles will be best for VM-22. He suggested one principle might be aggregating in a manner consistent with the company’s risk management process. Mr. Slutsker noted that exclusion testing may require prescribed prudent requirements that may utilize knockout criteria, such as not excluding future hedging strategies supporting guaranteed living benefits. He said the ARWG is drafting principles for aggregation for elements other than exclusion testing.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met via conference call June 11, 2020. The following Subgroup members participated: Bruce Sartain, Chair and Vincent Tsang (IL); Jim Jakielo (CT); Nicole Boyd (KS); William Leung (MO); Rhonda Ahrens (NE); Bill Carmello (NY); Tomasz Serbinowski (UT) and Craig Chupp (VA). Also participating were: John Robinson (MN); Pete Weber (OH); and Rachel Hemphill (TX).

1. Discussed the Potential Revisions to VM-22

Mr. Sartain said the American Academy of Actuaries (Academy) Annuity Reserve Work Group (ARWG) has been working on principle-based reserve (PBR) developments for non-variable annuities, including possibly using the VM-20, Requirements for Principle-Based Reserves for Life Products, exclusion test concept. John Miller (ARWG) said the ARWG has long thought that an exclusion test was needed for annuities that do not have material risk. He reiterated that the current ARWG thinking is to use the VM-20 concept. Products that pass the exclusion test will use Actuarial Guideline XXXIII, Determining CARFM Reserves for Annuity Contracts with Elective Benefits (AG 33).

Ben Slutsker (ARWG) provided an overview of the three options for the VM-20 exclusion test. He said the first option, the stochastic ratio test, compares the greatest scenario reserve resulting from the 16 prescribed scenarios from the Academy test scenario generator to the baseline scenario reserve to determine if the ratio meets the criteria to pass the test. He said the second option is to compare the PBR results to the reserve amount that would otherwise be held, to determine if the pre-PBR reserve is sufficient. He said the third option for an exclusion test is the certification option. Rachel Hemphill said consideration should be given to having absolute dollar amount criteria in addition to applying the VM-20 stochastic ratio test thresholds for non-variable annuities. She expressed concern about whether contracts with different risk profiles should be aggregated for the stochastic ratio test. Mr. Slutsker said the concerns will be considered as discussions progress. No subgroup members voiced objection to the overall direction of the ARWG VM-22 development efforts.

Mr. Weber provided an overview of the standard projection amount (SPA) used in VM-21, Requirements for Principle-Based Reserves for Variable Annuities. He said the Variable Annuity Issues (E) Working Group considered whether VM-21 needed a floor reserve. He said working group members thought it unwise to remove the guardrail provided by the SPA. He said the working group charged the Life Actuarial (A) Task Force with revisiting the SPA issue within five years to determine whether the hard floor could be replaced by a disclosure requirement.

Mr. Weber said there are two methods for determining the SPA, the company-specific market path (CSMP) and the CTE with prescribed assumptions (CTEPA). He said, once a company chooses a method, domestic commissioner approval is required to change. Mr. Jakielo asked if the VM-21 prescribed assumptions would be a good starting point for development of prescribed assumptions for non-variable annuities. Mr. Weber responded that, while VM-21 might provide a good starting point, the characteristics of variable annuity buyers and non-variable annuity buyer are different. He said the prescribed assumptions must be changed to reflect the differences. Mr. Robinson asked if development of an SPA for VM-22 is within the scope of the ARWG work. Mr. Slutsker said the ARWG is focused on developing the modeled reserve and would prefer the SPA be a disclosure item. Mr. Sartain said it has not been determined if the ARWG would be tasked with development of the SPA. Mr. Carmello said he would like to retain the AG 33 as the floor for non-variable annuities. He said AG 33 works well for products with guaranteed living benefits.

Having no further business, the VM-22 (A) Subgroup adjourned.
The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met via conference call May 20, 2020. The following Subgroup members participated: Bruce Sartain, Chair and Vincent Tsang (IL); Jim Jakielo (CT); Mike Yanacheak (IA); Nicole Boyd (KS); Rhonda Ahrens (NE); Bill Carmello (NY); and Tomasz Serbinowski (UT).

1. Discussed the Potential Revisions to VM-22

Mr. Sartain said the Subgroup has two options to consider: 1) to go farther out on the principle-based reserve (PBR) curve by eliminating guardrails present in VM-20, Requirements for Principle-Based Reserves for Life Insurance and VM-21, Requirements for Principle-Based Reserves for Variable Annuities; or 2) to keep the guardrails currently in VM-20 and VM-21 for the moment, followed by a measured approach using a determined timeline to open and revise the guidance. He said an example of the first option would be to allow companies to use more of their own asset experience than they can use in VM-20 and VM-21. Ms. Ahrens said there are some areas in which there should be less prescription and more application of principles. She suggested that policyholder behavior experience is an area where using company specific experience might be feasible. She said she would be less comfortable with allowing a company to use its own asset experience. Mr. Carmello asked if contracts that fail the exclusion test will be subject to a formulaic floor. Mr. Sartain said that is yet to be determined. Mr. Carmello said that in absence of a formulaic floor he favors option 1.

Ben Slutsker (American Academy of Actuaries Annuity Reserves Work Group—ARWG) gave a presentation on the work of the ARWG. He said the ARWG is working to develop a PBR framework for fixed annuities, with a focus on the stochastic reserve. He expects that once the framework is completed a full presentation will be provided to the Subgroup. The presentation will include assumptions for assets and liabilities, as well as exclusion tests. Mr. Slutsker said the framework design will follow VM-21 and will result in a revised VM-22, Statutory Maximum Valuation Interest Rate for Income Annuities. He said the target effective date for the revised VM-22 is Jan. 2023. He said because products are becoming increasingly similar, the plan is to apply the PBR methodology to fixed deferred annuities, fixed indexed annuities and fixed payout annuities. He said initially the scope will not include guaranteed investment contracts (GICs), funding agreements and stable value contracts, which tend to have more specific windows for optionality, have less longevity risks and are subject to different regulations. Mr. Sartain asked if any Subgroup members are against applying PBR to payout annuities. Mr. Carmello said he supports applying PBR to payout annuities if the current reserve is retained as a floor. Ms. Ahrens said the PBR methodology is designed to prepare for product innovation without requiring regulatory changes. She said, with the increasing demand for longevity risk products possibly leading to greater longevity product innovations, she prefers keeping payout annuities in scope. She said a PBR reserving standard for pension risk transfer business should be considered. Mr. Sartain said pension risk transfer business is expected to be in scope. Mr. Jakielo asked whether the PBR requirements for fixed annuities will reside in VM-22. Mr. Sartain said he envisions the requirements residing in VM-22, but the geography issue is still a matter for discussion.

Ms. Ahrens commented that there should be separate chapters for deferred annuities and payout annuities. Mr. Sartain said the major issue seems to be aggregation. He suggested that the products could reside in the same chapter if there are clear guidelines on how to aggregate the contracts.

Mr. Sartain said the question of whether the PBR requirements for fixed annuities will be retrospective is to be resolved by the Life Actuarial (A) Task Force.

Having no further business, the VM-22 (A) Subgroup adjourned.
Preliminary Framework Elements for Fixed Annuity PBR

American Academy of Actuaries Annuity Reserves Work Group (ARWG)

Ben Slutsker, MAAA, FSA
Chairperson, Annuity Reserves Work Group
John R. Vohs, MAAA, FSA
Vice Chairperson, Annuity Reserves Work Group
Chris Conrad, MAAA, FSA
Vice Chairperson, Annuity Reserves Work Group

ARWG Pillars of Objective

1) Appropriate Reflection of Risk — All else equal, greater risk in moderately adverse conditions requires greater statutory reserves, and vice-versa.

2) Comprehensive — The statutory reserve accounts for all material risks covered in the Valuation Manual and inherent in product features and potential management actions associated with the policies or contracts being valued.

3) Consistency Across Products — Statutory reserves between two contracts with similar features and risks are consistent given the same anticipated experience, regardless of product type.

4) Practicality and Applicability — Balance principles above with an approach that is practical, auditable, and able to be implemented.

ARWG Objective

Objective: Propose a new statutory reserve methodology for fixed annuities that uses an actuarial framework to determine reserves based on the level and type of risk inherent in the contract.

Notes:

1. These objectives are specific to the ARWG and intentionally condensed; Refer to VM-21, Section 1.B for a formal list of PBR principles.

ARWG Vision and Need

Vision: Provide Academy framework on principle-based reserve (PBR) methodology for fixed annuity products and promote consistency with existing PBR frameworks.

How ARWG Plans to Accomplish Vision:

a) Propose a PBR Approach — ARWG plans to propose a CTE70 stochastic reserve calculation.

b) Develop a Framework Deck — Develop a set of slides laying out various elements of methodology.

c) Recommend Consistency With VM-21 Where Appropriate — Start with VM-21 methodology.

Why Fixed Annuity PBR now?

Flexible Methodology — As new products emerge introducing greater optionality and reinvestment risk, there is greater need for a reserve methodology that appropriately captures the risks in these products.

Extend Existing PBR Framework — Seek consistency between fixed annuities and life/variable annuities (VM-20/VM-21).

Preliminary Timeline

- Fall 2019–Spring 2020
  - Develop proposed fixed annuity PBR framework deck
  - Initial modeling sensitivities for generic FIA/guarantee

- Summer 2020
  - ARWG to present framework deck proposal to LATF

- Fall 2020
  - Seek LATF endorsement of PBR framework deck (with feedback addressed)
  - Valuation Manual language drafting efforts

- Spring 2021
  - Begin industry field testing using draft (specifics TBD)

- Spring 2022
  - Target adoption of fixed annuity PBR (potentially VM-22)
  - Target 1/1/2023 effective date (monitor as progress develops)

(i) The ARWG only proposes a PBR modeling framework and we not include any formulaic or prescriptive floors in its proposal.
ARWG Key Topics

1. Preliminary Steps
   - Question: Apply PBR to both deferred annuity and payout annuity contracts?
   - ARWG Perspective: Recommend applying the PBR framework to both deferred and payout contracts. Not applying to immediate annuities allows companies to avoid principle-based reserves and creates possible advantages for some products over others, even if they share the same risks. That said, the recommendation is to hold off applying to Guaranteed Investment Contracts (GICs), funding agreements, and stable value contracts for the first round of fixed annuity PBR and revisit these at a later point in time.

2. Exclusion Test Methodology
   - Question: Allow for exclusion test on new business that follows a similar framework to the VM-20?
   - ARWG Perspective: Recommend following an exclusion test similar to the framework outlined in VM-20, which includes following a stochastic exclusion ratio test or certification method test. Products that pass the exclusion test are deemed to have lower levels of market risk and policyholder optionality risk and, therefore, may elect to use the pre-PBR Commissioners’ Annuity Reserve Valuation Method (CARVM) reserve standards (i.e., AG33, current VM-22, AG35, etc.).

3. Asset Reinvestment Assumptions
   - Question: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.
   - ARWG Perspective: A general account investment risk has a proportionately larger impact on fixed annuity modeled reserves relative to other risks, whereas this may not necessarily be the case to the same extent for variable annuities and life insurance (mortality dependent).
   - ARWG Perspective: If requiring prescribed default/reinvestment spread assumptions, then give the emphasis on general account spreads for fixed annuity products, we suggest revisiting the reinvestment 50% AA / 50% A fixed-income guardrail, which does not reflect industry experience.
   - ARWG Perspective: Eventually consider updating VM-20 uses an exclusion test and VM-21 uses an Alternative Methodology.
   - ARWG Perspective: VM-20/VM-21 Treatment: VM-20 permits aggregation across contracts; VM-20 permits aggregation within terms vs. USAA, or other buckets.
   - ARWG Perspective: VM-20/VM-22 Treatment: VM-21 permits aggregation across contracts; VM-20 permits aggregation within terms vs. USAA, or other buckets.
   - ARWG Perspective: Aggregate across fixed annuity contracts, whether payouts or deferred, based on a set of outlined principles (including whether policies are part of the same integrated risk management system, managed/administered together, same or similar asset portfolios, etc.), but with no pre-defined buckets restricting aggregation.

4. Aggregation
   - Question: What assumptions should be used for reinvestment strategy?
   - ARWG Perspective: VM-20/VM-22 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.
   - ARWG Perspective: VM-20/VM-21 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.
   - ARWG Perspective: VM-20/VM-21 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.

5. Inforce Application
   - Question: What assumptions should be used for reinvestment strategy?
   - ARWG Perspective: VM-20/VM-22 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.
   - ARWG Perspective: VM-20/VM-21 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.
   - ARWG Perspective: VM-20/VM-21 Treatment: Use fixed-income reinvestment limits of 50% A / 50% AA and prescribed defaults and reinvestment spreads for fixed-income general account assets.

The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call June 2, 2020. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andrew Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner and John Carter (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Technical Edits to the ACLI AG 49 Proposal

Mr. Andersen discussed the redline version of AG 49-A, the proposed revisions to *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest* (AG 49) (Attachment Eighteen-A). He said the revisions include technical edits to replace the term “annual percentage rate” with “annual rate” because the former term is commonly used in places other than AG 49. Birny Birnbaum (Center for Economic Justice—CEJ) recommended revising the proposed definition of “annual rate of index credits” because the definition seemed circular.

Brian Bayerle (American Council of Life Insurers—ACLI) discussed the remaining revisions. Upon Mr. Andersen’s request, Mr. Bayerle agreed to provide an updated version of AG 49-A for submission to the Life Actuarial (A) Task Force. Mr. Andersen said the Task Force will address the question of retroactivity.

Graham Summerlee (Lincoln Financial Group) said the IUL Coalition comment letter (Attachment Eighteen-B) is seeking to add a sentence to Section 5A to ensure that the assumed earned rate from the hedge will not exceed the amount of index credits being illustrated. Mr. Bayerle said the suggested sentence has already been incorporated into the AG 49-A revision.

Mr. Chupp said his comment letter (Attachment Eighteen-C) recommends several changes, including a change to correct the language in Section 5A to be consistent with the examples that the ACLI provided. He agreed to work with Mr. Bayerle to correct the issues in advance of the Task Force conference call.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

i. The policy is subject to Model #582.
ii. The policy offers Indexed Credits.

3. Definitions

A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:

   i. The total annual percentage rate \[Annual Rate\] of Indexed Credits for each Index Account does not exceed the lesser of the maximum total percentage rate \[Annual Rate\] of Indexed Credits for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the total annual percentage rate \[Annual Rate\] of Indexed Credits for each Index Account shall not exceed the average of the maximum total percentage rate \[Annual Rate\] of Indexed Credits for the illustrated scale and the guaranteed total percentage rate \[Annual Rate\] of Indexed

© 2020 National Association of Insurance Commissioners
Credits for that account. However, the total annual percentage rate Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed total percentage rate Annual Rate of Indexed Credits for that account.

ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedges for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind are not included in, cannot be used to increase the Annual Net Investment Earnings Rate.

C. Annual Rate of Indexed Credits: The annualized total Indexed Credits divided by the account value used to determine index credits according to the policy features.

C.D. Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. The hedge budget Hedge Budget used to determine the cap in 3 (C) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind are not included in, cannot be used to increase the applicable annual cap rate.

vii. There are no additional amounts credited that are linked to an index or indices in excess of the interest calculation provided by the annual cap, including but not limited to experience refunds, multipliers, and bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4(A)(ii) for purposes of complying with this regulation. A policy shall have no more than one Benchmark Index Account.

D.F. Fixed Account: An account where the amounts credited are not tied to an index or indices Indexed Credits.

E.F. Index Account: An account where some or all of the amounts credited are tied to an index or indices Indexed Credits.

F.G. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Credits Amounts credited to the policy resulting from a floor greater than zero on an Index Account are included.

G.H. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.
H.I. **Loan Balance**: Any outstanding policy loan and loan interest, as defined in the policy.

I.J. **Policy Loan Interest Rate**: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.

J.K. **Policy Loan Interest Credited Rate**: The annual interest rate credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.

i. For the portion of the account value in the Fixed Account that is backing the Loan Balance that is in a Fixed Account, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI Comment Letter; language for Option 1 and Option 2 may need to be tightened up:

Option 1: ii. For any portion of the account value in an Index Account that is backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account, as defined in the policy.

Option 2: ii. For any portion of the account value in an Index Account that is backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of the Annual Rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact the portion of the account value backing the Loan Balance, as defined in the policy, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.

K.L. **Supplemental Hedge Budget**: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that determines the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. **Illustrated Scale**

The total annual percentage rate Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).

ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

B. For the Benchmark Index Account the total Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

i. the arithmetic mean of the geometric average annual credited rates calculated in 4 (A).

ii. 145% of the Annual Net Investment Earnings Rate.
C. For any other Index Account that is not the Benchmark Index Account in 3 (C), the total Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The maximum Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.

ii. The total Annual Rate of Indexed Credits that should reflect the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget may cause the illustrated rate before comparing to exceed the earned interest rate underlying the Disciplined Current Scale. As it is supported by policy charges and not the earned interest rate.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale
The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale for the policy, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed:

i. the Annual Net Investment Earnings Rate, plus

ii. 45% of the lesser of (1) and (2):

1. Hedge Budget minus any annual floor.

2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that determines the Benchmark Index Account.

These amounts should be adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost. The assumed returns on hedges shall only be used in the disciplined current scale testing to support the illustrated Index Credits in the policy.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate under the disciplined current scale.

For a product with multiple Index Accounts with different Hedge Budgets that are less than or equal to the NIER, a maximum rate in 5.A. should be calculated for each set of accounts with different Hedge Budgets.

B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

6. Policy Loans
If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

7. Additional Standards

The basic illustration shall also include the following:

A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.

Fred Andersen
Deputy Commissioner of Insurance
Minnesota Department of Commerce
Chair, NAIC IUL Illustration (A) Subgroup

Re: ACLI Proposed Draft of Actuarial Guideline 49-A and clarity on earned rate in the DCS and the percentage rate of Indexed Credits

Fred:

This letter is submitted on behalf of John Hancock, Lincoln Financial Group, Pacific Life Insurance Company and Sammons Financial Group. The purpose of this letter is to ask regulators to consider clarifying language on the relationship between the earned rate underlying the DCS in Section 5 and the percentage rate of Indexed Credits in Section 4 of the ACLI draft. The above noted companies have also submitted a separate letter that supports the direction of the ACLI’s proposed AG49-A including prospective-only application and Option #1 regarding the treatment of policy loans. This letter is meant to supplement that letter.

We believe that having clarity regarding the DCS and the rate of Indexed Credits is a minor but necessary change for the industry to have a common understanding of how to apply AG49-A. Different interpretations for this relationship were identified during discussions among carriers regarding potential changes to AG49.

**Interpretation 1:** The earned rate underlying the DCS in Section 5A is not restricted by the percentage rate of Indexed Credits in an illustration.

**Interpretation 2:** The earned rate underlying the DCS in Section 5A should be restricted by the percentage rate of the Indexed Credits in an illustration.

The ACLI examples represent the first interpretation. Example 1 on the tab with the hedge budget equal to the net investment earnings rate shows Indexed Credits at a level of 6.20%, while the Section 5A rate is calculated at 6.53%. In the illustration testing calculations for this example, Interpretation 1 could allow the earned rate underlying the DCS to be 0.33% more than the illustrated rate of Indexed Credits.

However, in a typical IUL design, the contract will state that the index-linked credits will equal the increase in the underlying index and if a carrier has perfectly hedged the amount of index credits, these amounts would be the same and there would be no additional return on the hedge. The hedge return would match the amount credited to the policy values.
Therefore, we believe that the correct interpretation is number 2, that the earned rate underlying the DCS should be limited by the illustrated Indexed Credits. Otherwise, the illustration tests could include margins that are not contractually realizable. For this reason, the IUL Coalition proposal dated February 21 contained the following in Section 5A:

*The assumed return on hedges shall only be used in the disciplined current scale testing to support the illustrated Index Credits in the policy.*

If regulators are comfortable with Interpretation 1, that the earned rate underlying the DCS need not be restricted by the level of Indexed Credits, it would be valuable to have AG49-A directly state this or include a drafting note that clearly allows an illustration actuary to use this interpretation. This will ensure there is consistent interpretation on this issue and clarity for actuaries certifying illustrations for these products.

Thank you for consideration of our comments and we are happy to answer any questions or concerns you may have.

Respectfully Submitted,

Scott R. Harrison

Please allow me to submit the following comments on behalf of Virginia regarding the following exposure:

ACLI Comments and Draft of AG 49 Dated 4-14-20

1. **Benchmark Index Account.** Section 3(C)(vi). “The hedge budget used to determine the cap” is confusing. Since the floor is zero and we are not allowing multipliers or bonuses, would not all the hedge budget be used for the cap? Why not just say “The Supplemental Hedge Budget shall be zero”?

2. **Policy Loan Interest Rate.** Section 3(I). Other policy charges are not included in the loan charges. I would just like to point out that on the 10/17/19 LATF call, asset-based charges were included with loan charges in the 100 bps limit. It would seem that not including asset-based charges is more restrictive and therefore may be acceptable?

3. **Interest Credits.** Section 3(F). The second sentence of the definition is not consistent with the first sentence. The first sentence requires the interest credit to be linked to an index. The second sentence seems to include any credit whether or not it is linked to an index. If the intention is to include guaranteed interest credited due to a floor, then would not any guaranteed interest credits fall under this definition, including guaranteed interest credits on a non-indexed UL policy? This would potentially bring non-indexed UL policies into the scope of AG 49. Also, by including guaranteed interest credits in the definition of Interest Credits, they also get included in the definition of Hedge Budget, which does not seem right, since these amounts are not used for hedging.

4. **Supplemental Hedge Budget.** Section 3(K). Should not “hedge budget” be capitalized? “The hedge budget that determines the Benchmark Index Account” is somewhat confusing. Would it be clearer to say “The Hedge Budget that is used in the determination of the Benchmark Index Account”? This also applies to Section 5(A)(ii)(2).

5. **Illustrated Scale.** Section 4(A)(ii). This subsection states that it is possible for an insurer to “not offer a Benchmark Index Account with the illustrated policy.” However, Section 3(C)(ix) states a “Benchmark Index Account will be determined for each policy.” Does this mean that an insurer is required to determine a single Benchmark Index Account for each policy for purposes of Section 4(B) but does not have to offer this Benchmark Index Account as an option to the policyholder? If so, this should be made more clear in Section 4(A)(ii) or elsewhere in AG 49. If this is not the case, then language in Sections 3(K) and 4(C)(i) which assumes that each policy will have a Benchmark Index Account will need to be changed.

6. **Disciplined Current Scale.** Section 5(A). In the last sentence of Section 5(A), “NIER” is not defined. Also, the language is not clear. Does it mean one maximum rate that applies for all Index Accounts or a separate maximum rate for each Index Account? Also, there may be other situations where a maximum rate in 5(A) should be calculated for each set of Index Accounts. What if there is an Index Account with a floor and a Hedge Budget greater than the Annual Net Investment Earnings Rate (see Examples 8 and 9 in the mechanics worksheet)? What if the
Hedge Budget is the same for two different Index Accounts which have different floors? Also, the formula in the worksheet examples does not match the language. Should not the Earned Rate in Examples 8 and 9 be 6.12% and 6.20%, respectively? For Example 8: .045 + .45*min(.0461 -.01, .045) = 6.12%.

Thank you for providing me the opportunity to submit this comment.

Craig Chupp, FSA, MAAA
Life and Health Insurance Actuary
Virginia Bureau of Insurance

Phone: (804) 371-9131
The IUL Illustration (A) Subgroup of the Life Actuarial (A) Task Force met via conference call May 26, 2020. The following Subgroup members participated: Fred Andersen, Chair (MN); Ted Chang (CA); Andrew Greenhalgh (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Rhonda Ahrens (NE); Bill Carmello (NY); Peter Weber (OH); Mike Boerner and John Carter (TX); Tomasz Serbinowski (UT); and Craig Chupp (VA).

1. Discussed Technical Edits to the ACLI AG 49 Proposal

Brian Bayerle (American Council of Life Insurers—ACLI) discussed the changes made to the ACLI proposal for edits to Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest (AG 49) (Attachment Nineteen-A) resulting from comments provided on the May 21 Life Actuarial (A) Task Force conference call. The Subgroup agreed with the revisions being proposed, except for a few minor edits. Mr. Bayerle said he would create a redline version by applying the agreed upon edits to the current version of AG 49. He noted that the Task Force will be called upon to decide on the desired approach for determining the crediting rate for policy loans.

Having no further business, the IUL Illustration (A) Subgroup adjourned.
THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD AFTER [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption]

Background

The Life Insurance Illustrations Model Regulation (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for in-force illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

1. Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
2. Limits the policy loan leverage shown in an illustration.
3. Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after [greater of 5 months after LATF adoption and 3 months after EX/Plenary Adoption].

   i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.
   ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this actuarial guideline, regardless of the date the policy was sold.
   iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

   i. The policy is subject to Model #582.
Definitions

Annual Net Investment Earnings Rate: The annual net investment earnings rate for each Index Account does not exceed the lesser of the maximum annual net investment earnings rate for each Index Account shall not exceed the average of the maximum annual net investment earnings rate of Indexed Credits for that account. However, the annual net investment earnings rate of Indexed Credits for each Index Account shall never be less than the guaranteed annual percentage rate of Indexed Credits for that account.

If the illustration includes a loan, the illustrated rate credited to the loan balance does not exceed the illustrated loan charge.

Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.

All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.

B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding policy. Charges of any kind are not included in the Annual Net Investment Earnings Rate.

Benchmark Index Account: An Index Account with the following features:

i. The interest calculation is based on the percent change in the S&P 500® Index value only, over a one-year period using only the beginning and ending index values. (S&P 500® Index ticker: SPX)

ii. An annual cap is used in the interest calculation.

iii. The annual floor used in the interest calculation shall be 0%.

iv. The participation rate used in the interest calculation shall be 100%.

v. Interest is credited once per year.

vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the annual net investment earnings rate for the policy's Index Accounts, subject to the requirements of 5.D.

vi. Additional amounts credited The Hedge Budget used to determine the cap in 3 (C) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind are not included when determining the applicable cap rate.
vii. There are not less than these additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account that are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values linked to an index or indices in excess of the interest calculation, including but not limited to experience refunds, multipliers and bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

ix. A single Benchmark Index Account will be determined for each policy. A policy shall have no more than one Benchmark Index Account.

C.D. Fixed Account: An account where the amounts credited rate are not tied to an external index or indices.

D.E. Index Account: An account where the amounts credited rate are tied to an external index or indices.

F. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Credits to the policy resulting from a floor are included.

G. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This amount should be consistent with the hedging program of the company.

H. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.

Commented [A10]: Academy #4: We are unclear on how to do the “in excess of the interest calculation” that is specified in the definition and suggest examples or more wording to provide clarity.

Commented [A11R10]: ACLI suggest “in excess of the interest provided by the cap”

Commented [A12]: Academy #6: Suggests “an account where no amount credited is linked to an index or indices”

Commented [A13R12]: ACLI: Make Consistent with Index Account: “an account where there are no Indexed Credits”

Commented [A14]: Academy #7: Suggests: ”We suggest modifying the definition of Index Account to be ‘an account that includes a guaranteed interest credited due to a floor, then would not any guaranteed interest credits fall under this definition, including guaranteed interest credits on a non-indexed UL order? This would potentially bring non-indexed UL policies into the scope of AC #6. Also, by including guaranteed interest credits at the definition of Indexed Credits, they are not included in the definition of Hedge Budget, which does not seem right, since these amounts are not used for hedging.”

Academy #8: It is unclear in the definition of Indexed Credits how a company addresses the floor, for example, is this an annuity floor or a cumulative floor? Also, is there a difference between interest credit vs. credit to the policy? To be consistent with previous language in the draft, using “Amounts credited to the policy” rather than “Credits to the policy...” when including the floor may be clearer.

Commented [A14R15]: ACLI: Agree need to clarify 2+ statement. Suggest: “Amounts credited to the policy resulting from a floor on an Index Account are included.”

Commented [A17]: Academy #5: Agrees with Academy #3 that non-indexed amounts should be...
I. Policy Loan Interest Rate: The annual interest rate that is charged on any Loan Balance. This does not include any other policy charges.

J. Policy Loan Interest Credited Rate: The annual interest rate credited that applies to the portion of the account value backing the Loan Balance, as defined in the policy.

i. For the portion of the account value backing the Loan Balance that is in a Fixed Account, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate, as defined in the policy.

OPTION FOR CONSIDERATION: Please see commentary on these approaches in the ACLI Comment Letter; language for Option 1 and Option 2 may need to be tightened up:

Option 1: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.

Option 2: ii. For any portion of the account value backing the Loan Balance that is in an Index Account, the Policy Loan Interest Credited Rate is the total percentage rate of Indexed Credits and all illustrated bonuses, charge reductions or other enhancements that impact the portion of the account value backing the Loan Balance, net of any applicable Supplemental Hedge Budget for that account, as defined in the policy.
K. **Supplemental Hedge Budget.** For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that determines the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.

4. **Illustrated Scale**

The **annual percentage rate of Indexed Credits** for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of applicable Benchmark Index Account, and shall use that cap in 4 (A).

B. For each applicable Benchmark Index Account, the total Indexed Credits illustrated as a percentage of the account value in the Index Account shall not exceed the minimum of (i) and (ii):

i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

ii. 145% of the Annual Net Investment Earnings Rate.

C. For any other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate Account that is not the Benchmark Index Account in 3 (C), the total Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):

i. The maximum Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the illustrated scale. The determination shall Index Account.

ii. The total Indexed Credits that reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. The determination shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.

D. For purposes of compliance with Section 6 (C) of Model #582, the credited rate for Supplemental Hedge Budget may cause the illustrated scale rate to exceed the earned interest rate underlying the Disciplined Current Scale, applicable rate calculated in 4 (B).
At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale
The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% for the policy, inclusive of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of all general account assets (excluding hedges for index-based credits) allocated to support the policy and hedge assets that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed:
   i. the Annual Net Investment Earnings Rate, plus
   ii. 45% of the lesser of (1) and (2):
       1. Hedge Budget minus any annual floor.
       2. the Annual Net Investment Earnings Rate and the Hedge Budget that determines the Benchmark Index Account.

   These amounts should be adjusted for timing differences to ensure that fixed interest is not earned on the hedge cost.

The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate.

For a product with multiple Index Accounts with different Hedge Budgets that are less than or equal to the Annual Net Investment Earnings Rate a maximum rate in 5.A. should be calculated for each set of accounts with different Hedge Budgets.

B. If an insurer does not engage in a hedging program for index-based interest Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net investment earnings rate of the general account assets allocated to support the policy.

C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy’s account value.

E. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in 5.A., 5.B., and 5.C. All experience assumptions that do not directly relate to the Index Accounts or to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

2.6. Policy Loans
If the illustration includes a loan, the illustrated rate credited to the loan balance Policy Loan Interest Credited Rate shall not exceed the illustrated loan charge Policy Loan Interest Rate by more than 100 basis points. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 5%.

7. Additional Standards
The basic illustration shall also include the following:
A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.

B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).

C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: Amendment Proposal Forms (APFs) Exposed During NAIC Fall Meeting

Dear Mike:

The American Council of Life Insurers (ACLI)\(^1\) appreciates the opportunity to submit the following comments regarding the following APFs exposed during the NAIC 2019 Fall Meeting:

**APF 2019-33: Individually underwritten group life insurance**

ACLI has significant concerns with this amendment in its current form. We have two main areas of concern: the scope implied by the definition of “individual risk selection process” and practical implementation concerns.

Regarding scope, we believe that the wording may inadvertently loop in business not intended to be in scope. For example, something as simple as smoking status could be construed as “individual underwriting”, greatly expanding the business that would be impacted by this proposal. The use of underwriting as the criteria to define what is in scope for PBR is a simplification that could scope in traditional group life policies that are priced based on the unique claim costs of an employer group. We do not believe that is the intent of this APF. The definition of what is in scope for the APF requires additional contemplation.

Our second concern is around the practical implementation of the amendment. If individually underwritten group business becomes subject to PBR, it would have to follow the prescribed NPR requirements. However, the expected mortality and lapse rates for individually underwritten group business may be different than the prescribed mortality and lapse assumptions in VM-20. Compounding the problem, we are unaware of any experience studies that have been done on this type of business and deriving appropriate assumptions for other underwriting types, such as guaranteed issue and simplified issue, have proven difficult. Without potential adjustments to mortality and lapse rates for individually underwritten group business, companies may see excessive or nonsensical results for the NPR.

At this time, ACLI is unaware of a wide-spread issue associated with individually underwritten group business; we suspect this is more of a hypothetical problem. As such, we don’t see a pressing need for

---

\(^1\) The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.
this APF. We suggest that LATF continue to monitor this issue, and if changes are deemed necessary, LATF should request that the Academy make significant revisions to avoid excessive scope and unintended consequences.

APF 2019-62: Considerations for term conversion reserves
ACLJ agrees with the American Academy of Actuaries’ Life Reserves Work Group on the need to understand what mortality adjustments are being made for term conversions. We support this APF’s improved disclosures associated with conversions.

APF 2019-60: Allowance for additional credibility methods
ACLJ supports this amendment. This APF provides important flexibility around credibility methods for companies with simplified underwriting business.

APF 2019-61: Clarification around secondary guarantee riders
ACLJ believes this APF is a straight-forward clarification around what constitutes a secondary guarantee, and supports this amendment.

We look forward to a discussion of these issues. Thank you.

Sincerely,

[Signature]

Date: December 12, 2019

Please allow me to submit the following comment on behalf of Virginia regarding the following exposure:

APF 2019-33 (Clarify definition of individually underwritten life insurance and applicability of PBR for group insurance)

Comment:

Subsection 1.B under Section II. “Reserve Requirements” of the VM addresses minimum reserve requirements for “individual life contracts”. Since individual life and group life are two distinct and non-overlapping categories of contracts, the new proposed Subsection 1.B.1 which address certain group life contracts should not be placed under Subsection 1.B, but should be pulled out from under Subsection 1.B and made its own Subsection 1.C. Subsections 1.B.2 and 1.B.3 should also be pulled out from under Subsection 1.B and renumbered.

Suggested Edits to APF 2019-33:

Subsection 1: Life Insurance Products

A. This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

B. Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in paragraph FC below. For this purpose, joint life policies are considered individual life.

C. Minimum reserve requirements for group life contracts in which the individual certificate holders were subjected to an individual risk selection process as described in VM-20 Section 1.B to obtain the insurance coverage are provided by VM-20, except for election of the transition period in paragraph F below.

D. Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

E. Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.
A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for:

1. Business described in paragraph C above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.
2. Business not described in paragraph C otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

Life PBR Exemption

1. A company meeting the condition in GD.2 below may file a statement of exemption for ordinary life insurance policies and group life contracts individually underwritten life insurance policies, except for policies in GD.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition GD.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:
   a. The company has less than $300 million of ordinary life premiums1, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums1 of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Footnote change

1-Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. For exemptions after 1/1/2024, premiums should also include the premiums from...
group life insurance certificates that were subject to an individual risk selection process as defined in VM-20 Section 1.B and included in the group life certificates subject to an individual risk selection process line of business reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement, Part 3. Premiums should exclude premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force as of the effective date of a reinsurance assumed transaction and are reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed and guaranteed issue life insurance policy are as defined in VM-01.

Thank you for providing me the opportunity to submit this comment.

Commented [A1]: This will need to be added to the PBR Supplement by the NAIC Blanks (E) Working Group.
APF 2019-33 – Individually Solicited Group Contracts

Comments by John Robinson, Minnesota

January 7, 2020

The APF mentions a revision to VM-51 to incorporate these contracts. However, no modifications to the VM-51 layout are offered.

APF 2019-56 addresses a series of important changes to the VM-51 layout, which will make it a multi-table system. I have previously commented that the table structure of the system needs to be carefully designed.

Adding group contracts will also require careful design considerations. For example, it is possible that fields should be added for

(a) Certificate Number (applicable to each covered individual in the group contract); and

(b) An indicator, “I” for individual”, and “G” for group, to tell whether a particular contract is individual or group.

A suggest that these considerations be included in the work currently being done for APF 2019-56.

Thank you.

John Robinson
1. Identify yourself, your affiliation and a very brief description (title) of the issue.

American Academy of Actuaries, Life Reserves Work Group

Addition of language to clarify the definition of individually underwritten life insurance and the applicability of Principle-Based Reserve (PBR) requirements for group insurance contracts with individual risk selection issued under insurance certificates.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

January 1, 2020 version of the Valuation Manual used.

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Individual insurance certificates issued under a group contract which utilize an individual risk selection process, pricing, premium rate structures and product features are similar to individual life insurance policies. They are currently excluded from VM-20 because they are filed under a group contract, but they should be subject to VM-20 due to this similarity. See Appendix.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.
Appendix

Issue

Certain contracts issued under a master group contract require individual risk selection in order to qualify for issuance of the group insurance certificate and do not require continued membership in the group in order to maintain coverage. The certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing and risk classification, and are managed in a similar manner as individual ordinary life insurance contracts. These individual certificates should follow the same reserve requirements as other individual life contracts of the same product type. Therefore, a change is needed within the Valuation Manual to bring these individual certificates into scope of VM-20.

Eight changes are recommended:

1) Within the Reserve Requirements section (Section II), change the minimum reserve requirements to also apply to group life contracts which, other than the difference between issuing a policy and issuing a group certificate, have the same or mostly similar contract provisions, risk selection process and underwriting as individual ordinary life contracts;

2) Within the Reserve Requirements section (Section II), add a transition period for individual group certificates issued on or before 1/1/2024;

3) Within the Reserve Requirements section (Section II), add language to Subsection 1.D and the corresponding footnote to include premiums from group life contracts which have individual certificates that were issued using individual risk selection processes;

4) Add new paragraph, VM-20 Section 1.B (and reformat to make current paragraph Section 1.A) to clarify group life certificates issued using individual risk selection processes, including a definition and requirements to be met, are subject to the requirements of VM-20;

5) Add guidance note after first sentence in VM-20 Section 2.A.1 that group life certificates that meet the definition for individual risk selection process use the same VM-20 Reserving Categories as defined in Section 2;

6) Modify VM-51 Section 2.B to no longer exempt individually solicited group life which meet the requirements and definitions under items (1) and (2) above; and

7) Modify VM-51, Appendix 4, Item 17 to no longer exempt individually solicited group life contracts which meet the requirements under items (1) and (2) above.

8) Draft referral to the NAIC Blanks (E) Working Group, to revise the VM-20 Reserves Supplement, Part 2 to report premiums for total Group Life and Group Life with certificates subjected to an individual risk selection process and which meet all of the conditions as defined in VM-20 Section 1.B separately.
II. Reserve Requirements

This section provides the minimum reserve requirements by type of product, as set forth in the seven subsections below, as follows:

1. Life Insurance Products
2. Annuity Products
3. Deposit-Type Contracts
4. Health Insurance Products
5. Credit Life and Disability Products
6. Riders and Supplemental Benefits
7. Claim Reserves

All reserve requirements provided by this section relate to business issued on or after the operative date of the Valuation Manual. All reserves must be developed in a manner consistent with the requirements and concepts stated in the Overview of Reserve Concepts in Section I of the Valuation Manual.

Guidance Note: The terms “policies” and “contracts” are used interchangeably.

Subsection 1: Life Insurance Products

A. This subsection establishes reserve requirements for all contracts issued on and after the operative date of the Valuation Manual that are classified as life contracts as defined in SSAP No. 50 in the AP&P Manual, with the exception of annuity contracts and credit life contracts. Minimum reserve requirements for annuity contracts and credit life contracts are provided below in subsection 2 and subsection 5, respectively.

B. Minimum reserve requirements for variable and nonvariable individual life contracts—excluding guaranteed issue life contracts, preneed life contracts, industrial life contracts, and policies of companies exempt pursuant to the life PBR exemption in paragraph D below—are provided by VM-20, Requirements for Principle-Based Reserves for Life Products, except for election of the transition period in subsection 1.F below. For this purpose, joint life policies are considered individual life.

C. Minimum reserve requirements for group life contracts with individual certificates which meet all the requirements in VM-20 Section 1.B are provided by VM-20, except for election of the transition period in subsection 1.F below.

D. Minimum reserve requirements of VM-20 are considered principle-based valuation requirements for purposes of the Valuation Manual.

E. Minimum reserve requirements for life contracts not subject to VM-20 are those pursuant to applicable requirements in VM-A and VM-C. For guaranteed issue life contracts issued after Dec. 31, 2018, mortality tables are defined in VM Appendix M – Mortality Tables (VM-M), and the same table shall be used for reserve requirements as is used for minimum nonforfeiture requirements as defined in VM-02, Minimum Nonforfeiture Mortality and Interest.

F. A company may elect to establish minimum reserves pursuant to applicable requirements in VM-A and VM-C for...
1. Business described in subsection 1.C above and issued on or after the operative date of the Valuation Manual and prior to 1/1/2024.

2. Business not described subsection 1.C otherwise subject to VM-20 requirements and issued during the first three years following the operative date of the Valuation Manual.

A company electing to establish reserves using the requirements of VM-A and VM-C may elect to use the 2017 Commissioners’ Standard Ordinary (CSO) Tables as the mortality standard following the conditions outlined in VM-20 Section 3. If a company during the three years elects to apply VM-20 to a block of such business, then a company must continue to apply the requirements of VM-20 for future issues of this business.

Life PBR Exemption

1. A company meeting the condition in subsection DG.2 below may file a statement of exemption for ordinary life insurance policies including group life insurance certificates subject to an individual risk selection process and meeting all the conditions in VM-20 Section 1.B, except for policies in subsection DG.3 below, issued directly or assumed during the current calendar year, that would otherwise be subject to VM-20. Such a statement must be filed with the domiciliary commissioner prior to July 1 of that year certifying that condition subsection DG.2 was met based on premiums from the prior calendar year annual statement. The statement of exemption must also be included with the NAIC filing for the second quarter of that year.

The domiciliary commissioner may reject such statement prior to Sept. 1 and require the company to follow the requirements of VM-20 for the ordinary life policies covered by the statement.

2. Condition for Exemption:
   a. The company has less than $300 million of ordinary life premiums, and if the company is a member of an NAIC group of life insurers, the group has combined ordinary life premiums of less than $600 million.

3. Policies Excluded from the Life PBR Exemption:
   a. Universal life with secondary guarantee (ULSG) policies with a secondary guarantee that does not meet the VM-01, Definitions for Terms in Requirements, definition of a “non-material secondary guarantee.”

4. Each exemption, or lack of an exemption, applies only to policies issued or assumed in the current year, and it applies to all future valuation dates for those policies. The minimum reserve requirements for the ordinary life policies subject to the exemption are those pursuant to applicable methods required in VM-A and VM-C using the mortality as defined in VM-20 Section 3.C.1 and VM-M Section 1.H.

Footnote change

Premiums are measured as direct plus reinsurance assumed from an unaffiliated company from the ordinary life line of business reported in the prior calendar year life/health annual financial statement, Exhibit 1, Part 1, Column 3, “Ordinary Life Insurance”. Premiums should include the premiums from group life insurance certificates that were subject to an individual risk selection process and meet all the conditions as defined in VM-20 Section 1.B. For a statement of exemptions filed for calendar year 2022 and beyond, the premiums for these group life certificates were reported in the prior calendar year life/health annual financial statement, VM-20 Reserves Supplement Part 2, if applicable. Premiums should exclude premiums for guaranteed issue policies and preneed life contracts and excluding amounts that represent the transfer of reserves in force at the effective date of a reinsurance transaction and are reported in Exhibit 1 Part 1, Column 3 as ordinary life insurance premium. Preneed and guaranteed issue life insurance policies are as defined in VM-01.
VM Change 4 – VM-20: Requirements for Principle-Based Reserves for Life Products

VM-20: Requirements for Principles-Based Reserves for Life Products

Section 1: Purpose

A. These requirements establish the minimum reserve valuation standard for individual life insurance policies issued on or after the operative date of the Valuation Manual and subject to a principle-based valuation with an NPR floor under Model #820. These requirements constitute the Commissioners Reserve Valuation Method (CRVM) for policies of individual life insurance.

B. If all of the following requirements are met, individual life certificates under a group contract are included in the requirements of VM-20.

(i) An individual risk selection process, defined below, is used to obtain group life insurance coverage;

(ii) The individual certificates utilize premiums or cost of insurance schedules and charges based on the individual applicant’s issue age, duration from underwriting, coverage amount and risk classification and there is a stated or implied schedule of maximum gross premiums or net cash surrender value required in order to continue coverage in force for a period in excess of one year;

(iii) The group master contract is designed, priced, solicited, and managed similar to individual ordinary life insurance policies rather than specific to the group as a whole;

(iv) The individual certificates have similar acquisition approaches, provisions, certificate-holder rights, pricing, and risk classification as individual ordinary life insurance contracts;

(v) The group master contract and individual certificates are issued on or after the operative date of the Valuation Manual and subject to a principle-based valuation with an NPR floor under Model #820.

An individual risk selection process is based on characteristics of the insured(s) beyond sex, gender, age, tobacco usage, and membership in a particular group. This may include, but is not limited to, completion of an application (beyond acknowledgement of membership to the group, sex, gender and age), questionnaire(s), on-line health history or tele-interview to obtain non-medical and medical or health history information, prescription history information, avocations, usage of tobacco, family history, or submission of fluids such as blood, Home Office Specimens (HOS), or oral fluid. The resulting risk classification is determined based on the characteristics of the individual insured(s) rather than the group, if any, of which it is a member (e.g., employer, affinity, etc.). The individual certificate holder is charged a premium rate based solely on the individual risk selection process and not on membership in a specific group.
Guidance Note: The use of evidence of insurability does not by itself constitute an individual risk selection process. Use of information obtained from a census or question(s) regarding gender, occupation, age, income and/or tobacco usage solely for purposes of determining a rate classification does not by itself qualify a group as having used an individual risk selection process. Group insurance where the underwriting based on the characteristics of the group and census data but where some individuals are subjected to individual risk selection as a result of compensation level, age, an existing medical condition or impairment, late entry into the group, failure of the group to meet minimum participation requirements or voluntary buy-up of increased coverage does not meet the definition of an individual risk selection process.
VM Change 5 - VM-20: Requirements for Principle-Based Reserves for Life Products

Section 2: Minimum Reserve

A. All policies subject to these requirements shall be included in one of the VM-20 Reserving Categories, as specified in Section 2.A.1, Section 2.A.2 and Section 2.A.3 below.

Guidance Note: Since Group Insurance subject to an individual risk selection process and meeting all the requirements, as defined by Section 1.B is subject to VM-20 requirements, Section 2.A shall apply—meaning that any such contracts will be included in one of the VM-20 Reserving Categories defined by Section 2.A.1, Section 2.A.2, and 2.A.3. All requirements in VM-31 which apply to a VM-20 Reserving Category shall apply to any group insurance subject to Individual Underwriting Selection that has been included in that VM-20 Reserving Category.

The company may elect to exclude one or more groups of policies from the stochastic reserve calculation and/or the deterministic reserve calculation. When excluding a group of policies from a reserve calculation, the company must document that the applicable exclusion test defined in Section 6 is passed for that group of policies. The minimum reserve for each VM-20 Reserving Category is defined by Section 2.A.1, Section 2.A.2 and Section 2.A.3, and the total minimum reserve equals the sum of the Section 2.A.1, Section 2.A.2 and Section 2.A.3 results below, defined as:
Section 1: Introduction

The type of experience to be collected under this statistical plan is mortality experience.

Section 2: Statistical Plan for Mortality

A. Type of Experience Collected Under This Statistical Plan

The type of experience to be collected under this statistical plan is mortality experience.

B. Scope of Business Collected Under This Statistical Plan

The data for this statistical plan is the individual ordinary life line of business. Such business is to include direct written business issued in the U.S., and all values should be prior to any reinsurance ceded. Therefore, reinsurance assumed from a ceding company shall be excluded from data collection to avoid double-counting of experience submitted by an issuer and by its reinsurers; however, assumption reinsurance of an individual ordinary life line of business, where the assuming company is legally responsible for all benefits and claims paid, shall be included within the scope of this statistical plan. The ordinary life line of business does not include separate lines of business, such as SI/GI, worksite, individually solicited group life that does not meet all the requirements as defined in VM-20 Section 1.B, direct response, final expense, preneed, home service, credit life and COLI BOLI/charity-owned life insurance (CHOLI).

C. Criteria to Determine Companies That Are Required to Submit Experience Data

Companies with less than $50 million of direct individual life premium shall be exempted from reporting experience data required under this statistical plan. This threshold for exemption shall be measured based on aggregate premium volume of all affiliated companies and shall be reviewed annually and be subject to change by the Experience Reporting Agent. At its option, a group of nonexempt affiliated companies may exclude from these requirements affiliated companies with less than $10 million direct individual life premium provided that the affiliated group remains nonexempt.

Additional exemptions may be granted by the Experience Reporting Agent where appropriate, following consultation with the domestic insurance regulator, based on achieving a target level of approximately 85% of industry experience for the type of experience data being collected under this statistical plan.

080 = Variable life
081 = Variable universal life (decreasing risk amount)
082 = Variable universal life (level risk amount)
083 = Variable universal life – unknown whether code 081 or 082
084 = First to die variable universal life plan (submit separate records for each life)
085 = Second to die variable universal life plan (submit separate records for each life)
086 = Joint life variable universal life plan – unknown whether 084 or 085 (submit separate records for each life)

Variable Life Plans with Secondary Guarantees:
090 = Variable life with secondary guarantees
091 = Variable universal life with secondary guarantees (decreasing risk amount)
092 = Variable universal life with secondary guarantees (level risk amount)
093 = Variable universal life with secondary guarantees – unknown whether code 091 or 092
094 = First to die variable universal life plan with secondary guarantees (submit separate records for each life)
095 = Second to die variable universal life plan with secondary guarantees (submit separate records for each life)
096 = Joint life variable universal life plan with secondary guarantees – unknown whether code 094 or 095 (submit separate records for each life)

Nonforfeiture:
098 = Extended term
099 = Reduced paid-up
198 = Extended term for joint life (submit separate records for each life)
199 = Reduced paid-up for joint life (submit separate records for each life)
VM Change 8 – VM-20 Reserves Supplement, Part 2: Life PBR Exemption

Refer to NAIC Blanks (E) Working Group, request for modification to the supplemental report for the Life PBR Exemption, to show the premiums for the group life that utilized an individual risk selection process and meets all of the requirements in VM-20 Section 1.B. as these premiums are currently grouped together with other Group Insurance in Exhibit 1. As there are other instances where the ordinary life premiums are not included in the determination of the Life PBR Exemption (e.g., for guaranteed issue policies), it may be useful to request addition of the breakdown of premiums used to determine the exemption.

Possible insertion between questions 1 and 2 for disclosure of premiums used in the determination of eligibility for the Life PBR exemption, split by ordinary life and group subject to an individual risk selection process and meeting all of the requirements in VM-20 Section 1.B.
Identification:
Rachel Hemphill, Texas Department of Insurance

Title of the Issue:
Clarify NPR calculation requirements.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 3.B.1 – 3.B.3, and VM-20 Section 3.B.6.d.i

January 1, 2020 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

Clarify any confusion on whether more direct calculations of the NPR to reflect non-annual premium modes, etc., are allowed. The current guidance note in Section 3.B.3 states that these may be reflected either “directly or through adjusting accounting entries”. However, due to some confusion on this point, I suggest emphasizing that more direct calculation methods are not prohibited. This is consistent with SSAP 51R, Paragraph 24:

24. Since terminal reserves are computed as of the end of a policy year and not the reporting date, the terminal reserve as of policy anniversaries immediately prior and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in paragraphs 25-28. Other appropriate methods, including an exact reserve valuation, may also be used.
For re-exposure, to address both the question posed in the initial exposure of clearly reflecting both mean and mid-terminal adjustments, as well as to address comments received, I recommend language consistent with SSAP 51R, paragraph 24. SSAP 51R paragraphs 25-28 are referenced by paragraph 24. They are provided below for completeness, and specific references for policies subject to the Valuation Manual are highlighted.

**Mean Reserve Method**

25. Under the mean reserve method, the policy reserve equals the average of the terminal reserve at the end of the policy year and the initial reserve (the initial reserve is equal to the previous year’s terminal reserve plus the net annual valuation premium for the current policy year). When reserves are calculated on the mean reserve basis, it is assumed that the net premium for a policy is collected annually at the beginning of the policy year and that policies are issued ratably over the calendar year.

26. However, as premiums are often received in installments more frequently than annually and since the calculation of mean reserves assumes payment of the current policy year’s entire net annual premium, the policy reserve is overstated by the amount of net modal premiums not yet received for the current policy year as of the valuation date. As a result, it is necessary to compute and report a special asset to offset the overstatement of the policy reserve.

27. This special asset is termed “deferred premiums.” Deferred premiums are computed by taking the gross premium (or premiums) extending from (and including) the modal (monthly, quarterly, semiannual) premium due date or dates following the valuation date to the next policy anniversary date and subtracting any such deferred premiums that have actually been collected. Deferred premium assets shall also be reduced by loading. Since the calculation of mean reserves assumes payment of the current policy year’s entire net annual premium, deferred premium assets are considered admitted assets to compensate for the overstatement of the policy reserve. For policies subject to the Valuation Manual requirements, the deferred premium asset will continue to be calculated for the net premium reserve component of the total principle-based reserve.

**Mid-Terminal Method**

28. Under the mid-terminal method, the policy reserves are calculated as the average of the terminal reserves on the previous and the next policy anniversaries. These reserves shall be accompanied by an unearned premium reserve consisting of the portion of valuation premiums paid or due covering the period from the valuation date to the next policy anniversary date. For policies subject to the Valuation Manual requirements, the adjustment to the unearned premium reserve will continue to be calculated for the net premium reserve component of the total principle-based reserve.

Since the guidance note at the end of Section 3.B.3 contains requirements and not just guidance, it should be taken out of a guidance note. This requires moving the four terms to Section 3.B.1 and updating two cross references in VM-20 Section 3.B.6.d.i.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

**Notes:** APF 2020-03 revised 2/26/20 Exposed 2/27/20, Revised 3/31/20
VM-20 Section 3.B.1 – 3.B.3

B. NPR Calculation

1. For the purposes of Section 3, the following terms apply:
   a. For purposes of this section, a policy with “multiple secondary guarantees” is one that: a) simultaneously has more than one shadow account; b) simultaneously has more than one cumulative premium type of guarantee; or c) simultaneously has at least one of each. A single shadow account with a variety of possible end dates to the secondary guarantee, depending on the policyholder’s choice of funding level, constitutes a single—not multiple—secondary guarantee.

   Guidance Note:
   Policy designs that are created simply to disguise guarantees or exploit a perceived loophole must be treated in a manner similar to more typical product designs with similar guarantees. If a policy contains multiple secondary guarantees, such that a subset of those secondary guarantees in combination represent an implicit guarantee that would produce a higher NPR if that implicit guarantee were treated as an explicit secondary guarantee of the policy, then the policy should be treated as if that implicit guarantee were an explicit guarantee. For example, if there were a policy with a “sequential secondary guarantee” where only one secondary guarantee applied at any given point in time but with a series of secondary guarantees strung together with one period ending when the next one began, the combined terms of the secondary guarantees would be regarded as a single secondary guarantee.

For the purposes of Section 3, the following terms apply:
   a.b. The “fully funded secondary guarantee” at any time is:
      i. For a shadow account secondary guarantee, the minimum shadow account fund value necessary to fully fund the secondary guarantee for the policy at that time. For any policy for which the secondary guarantee contractually cannot be fully funded in advance, this shall be the present value of the contractually permitted premium stream that would fully fund the guarantee at the earliest possible date (using the valuation interest rate and mortality standard specified in Section 3.C).
      ii. For a cumulative premium secondary guarantee, the amount of cumulative premiums required to have been paid to that time that would result in no future premium requirements to fully fund the guarantee, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee. For any policy for which the secondary guarantee contractually cannot be fully funded in advance, this shall be the present value of the contractually permitted premium stream that would fully fund the guarantee at the earliest possible date (using the valuation interest rate and mortality standard specified in Section 3.C).

   b.c. The “actual secondary guarantee” at any time is:
      a.i. For a shadow account secondary guarantee, the actual shadow account fund value at that time.
      b.ii. For a cumulative premium secondary guarantee, the actual premiums paid to that point in time, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee.

   c.d. The “level secondary guarantee” at any time is:
      a.i. For a shadow account secondary guarantee, the shadow account fund value that would have existed at that time assuming payment of the level gross premium determined according to Section 3.B.6.c.i.
For a cumulative premium secondary guarantee, the amount of cumulative level gross premiums determined according to Section 3.B.6.c.i, accumulated with any interest or accumulation factors per the contract provisions for the secondary guarantee.

2. The definition of the NPR in Section 3.B.4, Section 3.B.5 and Section 3.B.6 is intended to result in the calculation of a terminal NPR under the assumption of an annual mode gross premium. In Section 3.B.4, Section 3.B.5 and Section 3.B.6, the gross premium referenced should be the gross premium for the policy assuming an annual premium mode.

3. Since terminal NPRs are computed as of the end of a policy year and not the reporting date, the terminal NPR as of policy anniversaries immediately prior and subsequent to the reporting date are adjusted to reflect that portion of the net premium that is unearned at the reporting date. This is generally accomplished using either the mean reserve method or the mid-terminal method as discussed in SSAP 51R. Other appropriate methods, including an exact reserve valuation, may also be used.

Guidance Note: The definition of the NPR in Section 3.B.4, Section 3.B.5 and Section 3.B.6 is intended to result in a terminal NPR under the assumption of an annual mode gross premium. The gross premium referenced should be the gross premium for the policy assuming an annual premium mode. The reported reserve as of any valuation date should reflect the actual premium mode for the policy and the actual valuation date relative to the policy issue date either directly or through adjusting accounting entries.

VM-20 Section 3.B.6.d.i

As of the valuation date for the policy being valued, determine the actual secondary guarantee, denoted $ASG_{x+t}$, as outlined in Section 3.B.2-1.c and the fully funded secondary guarantee, denoted $FFSG_{x+t}$, as outlined in Section 3.B.1.b.
Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

John Robinson, Director PBR – Valuation Actuary, MN

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

4. State the reason for the proposed amendment? (You may do this through an attachment.)

The purposes of this APF are to
(a) Affirm that if a block of business is subject to SVL before being reinsured on a modco basis, it remains subject to SVL when reinsured on a modco basis.
(b) Clarify the responsibilities of the appointed actuaries of both the ceding and assuming companies, relative to both the SAO and asset adequacy analysis.
(c) Make a minor modification to the table headings in VM-30, Section 3.A.5.

The proposed text is in the Appendix below.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Notes: VM Maintenance Agenda 2019-34
APPENDIX

1. It is proposed to add the following text as VM-30, Section 4:

Section 4: Modified Coinsurance Reserves

1. A block of business that would be subject to Model #820 were it not reinsured under
   a modified coinsurance agreement remains subject to Model #820 if it is reinsured under
   a modified coinsurance agreement.

2. Reserves for a block of business that is subject to Model #820 and is reinsured under
   a modified coinsurance agreement, are subject to
   a. the statement of actuarial opinion of the ceding company’s appointed actuary
      (Section 3.A); and
   b. asset adequacy analysis (Section 3.B).

Guidance Note: The asset adequacy analysis may be performed by either the
ceding or assuming company. The result of the asset adequacy analysis must be
reported in the ceding company’s actuarial memorandum.

In accordance with Section 3.A.6, the ceding company’s appointed actuary may
rely on the assuming company for data, assumptions and more, but may not
simply rely on their actuarial opinion. Similarly, in accordance with Section 3.B.2,
ceding company’s appointed actuary may rely on the assuming company’s
actuarial memorandum, but may not simply rely on their actuarial opinion.

3. In the event that the assuming company is required, either by law or under the
   reinsurance agreement, to ensure the adequacy of such reserves, the assuming
   company shall perform an asset adequacy analysis (Section 3.B).

2. Revision to Section 3.A.5, Table Headings:

| Asset Adequacy Tested And Not Tested Amounts—Reserves and Related Actuarial Items |
|-----------------------------------------------|------------------------------|----------------|----------------|----------------|----------------|
| Statement Item | Formula Reserves (1) | Principle-Based Reserves (2) | Additional Reserves (3) | Analysis Method (4) | Other Amount Not Tested (5) | Total Amount = (1)+(2)+(3)+(4) |

GRET Agenda

• Methodology
• Recommendation
• Comparison to Prior Years
• Information on Companies in Study

Methodology

• Select data points provided by NAIC from company Annual Statement submissions
• SOA surveyed companies to determine Distribution Channels
• SOA analyzed data to derive unit expense factors by those Distribution Channels
Additional Comments on Methodology

- Allocated expenses to acquisition and maintenance categories using the same seeds as has been previously used
  - Acquisition/Policy: $200.00
  - Acquisition/Face Amount: $1.10
  - Acquisition/Premium: 50%
  - Maintenance/Policy: $60.00

Information on Companies in Study

- The following percentages of companies responded that GRET factors are used for individual life sales illustration purposes:
  - 2020 Survey: 29%
  - 2019 Survey: 26%
  - 2018 Survey: 28%
  - 2017 Survey: 30%
  - 2016 Survey: 26%

- We believe variation is a result of the mix of respondents and the limited number of responses.

Information on Companies in Study

- Included 292 companies in this year’s study
  - Decrease of 34 companies from last year’s study.
  - This is due to companies that are new outliers or have large premiums which fall outside the preset range.
  - There were a total of 776 companies originally in the data received from the NAIC in this year’s data extraction versus 722 in last year.
  - However, total ordinary policies issued for these 776 companies remained essentially flat (14,000 more policies out of a total of 9.9M) over the prior year.
  - Face amount issued increased by 6.1% over the prior year.

Questions?
TO: Reggie Mazyck, NAIC  
FROM: Dale Hall, Managing Director of Research, Society of Actuaries (SOA)  
Leon Langlitz, Chair, SOA Committee on Life Insurance Company Expenses  
DATE: July 23, 2020  
RE: 2021 Generally Recognized Expense Table (GRET) – SOA Analysis

Dear Mr. Mazyck:

As in previous years, the Society of Actuaries expresses its thanks to NAIC staff for their assistance and responsiveness in providing Annual Statement expense and unit data for the 2021 GRET analysis for use with individual life insurance sales illustrations. The analysis is based on expense and expense-related information reported on companies’ 2018 and 2019 Annual Statements. This project has been completed to assist the Life Actuarial Task Force (LATF) in its consideration of potential revisions to the GRET that could become effective for calendar year 2021. This memo describes the analysis and resultant findings.

NAIC staff provided Annual Statement data for life insurance companies for calendar years 2018 and 2019. This included data from 722 companies in 2018 and 776 companies in 2019. This increase breaks the trend of small decreases over the previous few years. Of the total companies, 292 were in both years and passed the outlier exclusion tests and were included as a base for the GRET factors (326 companies passed similar tests last year).

APPROACH USED

The methodology for calculating the recommended GRET factors based on this data is similar to that followed the last several years. The methodology was last altered in 2015. The changes made at that time can be found in the recommendation letter sent to LATF on July 30, 2015.

To calculate updated GRET factors, the average of the factors from the two most recent years (2018 and 2019 for those companies with data available for both years) of Annual Statement data was used. For each company an actual-to-expected ratio was calculated. Companies with ratios that fell outside predetermined parameters were excluded. This process was completed three times to stabilize the average rates. The boundaries of the exclusions have been modified from time to time; however, there were no adjustments made this year. Unit expense seed factors (the seeds for all distribution channel categories are the same), as shown in Appendix B, were used to compute total expected expenses. Thus, these seed factors were used to implicitly allocate expenses between acquisition and maintenance expenses, as well as among the three acquisition expense factors (on a direct of ceded reinsurance basis).

Companies were categorized by their reported distribution channel (four categories were used as described in Appendix A included below). There remain a significant number of companies for which no distribution channel was provided, as no responses to the annual surveys have been received from those companies. The characteristics of these companies vary significantly, including companies not currently writing new business or whose major line of business is not individual life insurance. Any advice or assistance from LATF

1 https://www.soa.org/Files/Research/Projects/research-2016-gret-recommendation.pdf
in future years to increase the response rate to the surveys of companies that submit Annual Statements in order to reduce the number of companies in the “Other” category would be most welcomed. The intention is to continue surveying the companies in future years to enable enhancement of this multiple distribution channel information.

Companies were excluded from the analysis if (1) their actual to expected ratios were considered outliers, often due to low business volume, (2) the average first year and single premium per policy were more than $40,000, (3) they are known reinsurance companies or (4) their data were not included in both years of the data supplied by the NAIC. To derive the overall GRET factors, the unweighted average of the remaining companies’ actual-to-expected ratios for each respective category was calculated. The resulting factors were rounded, as shown in Table 1.

THE RECOMMENDATION

The above methodology results in the proposed 2021 GRET values shown in Table 1. To facilitate comparisons, the current 2020 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount ($000s) per policy issued.

To facilitate comparisons, the current 2020 GRET factors are shown in Table 2. Further characteristics of the type of companies represented in each category are included in the last two columns in Table 1, including the average premium per policy issued and the average face amount ($000s) per policy issued.

© 2020 National Association of Insurance Commissioners
In previous recommendations, an effort was made to reduce volatility in the GRET factors from year-to-year by limiting the change in GRET factors between years to about ten percent of the prior value. The changes from the 2020 GRET were reviewed to ensure that a significant change was not made in this year’s GRET recommendation. The Direct Marketing and Other distribution channel categories experienced a change greater than ten percent so the factors for this line were capped at the ten percent level (the Acquisition per unit factor changed somewhat more than 10% because of rounding) from the corresponding 2020 GRET values. The volatility occurred due to the change in the composition of the companies in this category where a small number of companies were included.

USAGE OF THE GRET
This year’s survey, responded to by companies’ Annual Statement correspondent, included a question regarding whether the 2020 GRET table was used in its illustrations by the company. Last year, 26% of the responders indicated their company used the GRET for sales illustration purposes, with similar percentage results by size of company; this contrasted with about 28% in 2018. This year, 29% of responding companies indicated that they used the GRET in 2019 for sales illustration purposes. The range was from 22% for Direct Marketing to 48% for career carriers. Based on the information received over the last several years, the variation in GRET usage appears to be in large part due to the relatively small sample size and different responders to the surveys.

We hope LATF finds this information helpful and sufficient for consideration of a potential update to the GRET. If you require further analysis or have questions, please contact Dale Hall at 847-273-8835.

Life Insurance Company Expenses
APPENDIX A -- DISTRIBUTION CHANNELS

The following is a description of distribution channels used in the development of recommended 2021 GRET values:

1. **Independent** – Business written by a company that markets its insurance policies through an independent insurance agent or insurance broker not primarily affiliated with any one insurance company. These agencies or agents are not employed by the company and operate without an exclusive distribution contract with the company. These include most PPGA arrangements.

2. **Career** – Business written by a company that markets insurance and investment products through a sales force primarily affiliated with one insurance company. These companies recruit, finance, train, and often house financial professionals who are typically referred to as career agents or multi-line exclusive agents.

3. **Direct Marketing** – Business written by a company that markets its own insurance policies direct to the consumer through methods such as direct mail, print media, broadcast media, telemarketing, retail centers and kiosks, internet or other media. No direct field compensation is involved.

4. **Niche Marketers** – Business written by home service, pre-need, or final expense insurance companies as well as niche-market companies selling small face amount life products through a variety of distribution channels.

5. **Other** – Companies surveyed were only provided with the four options described above. Nonetheless since there were many companies for which we did not receive a response (or whose response in past years’ surveys confirmed an “other” categorization (see below), values for the “other” category are given in the tables in this memo. It was also included to indicate how many life insurance companies with no response (to this survey and prior surveys) and to indicate whether their exclusion has introduced a bias into the resulting values.
APPENDIX B – UNIT EXPENSE SEEDS

The expense seeds used in the 2014 and prior GRETs were differentiated between branch office and all other categories, due to the results of a relatively old study that had indicated that branch office acquisition cost expressed on a per Face Amount basis was about double that of other distribution channels. Due to the elimination of the branch office category in the 2015 GRET, non-differentiated unit expense seeds have been used in the current and immediately prior studies.

The unit expense seeds used in the 2021 GRET and the 2020 GRET recommendations were based on the average of the 2006 through 2010 Annual SOA expense studies. These studies differentiated unit expenses by type of individual life insurance policy (term and permanent coverages). As neither the GRET nor the Annual Statement data provided differentiates between these two types of coverage, the unit expense seed was derived by judgment based this information. The following shows the averages derived from the Annual SOA studies and the seeds used in this study. Beginning with the 2019 Annual Statement submission this information will become more readily available.

Considerations for 2020 & beyond

- **Date** - we don’t have sufficient data to fully understand the impact of the COVID-19-related mortality shock on the insured population (anecdotal reports from companies indicate they are seeing a smaller shock).
- **MI scale update** - reflecting a shock in 2020 does not seem in line with the goals for the MI scale updates
  - Are shock events more appropriately reflected in capital planning rather than reserves?
  - An effective vaccine may make COVID-19’s impact on MI much shorter than the long-term impact arising from the opioid epidemic.
  - However, COVID-19 may have potential longer-term impacts that may arise from survivor impaired health, health impacts from delays in health care, and/or testing for early detection of dread diseases, etc.
  - Conversely, some experts and models indicate the 2020/2021 COVID-19 shock is mainly a moving forward of deaths that would have occurred due to other causes and/or combinations. Might that improve future mortality improvement?
- **Precedent for other excess mortality events**
  - First group to consider the impact of a short-term shock event – setting a precedent for other future MI scale work.
  - The current methodology uses a moving average to “smooth out” the impact of any one year or event.
  - 2008/2009 influenza season and the effect of the opioid epidemic – the methodology was not adjusted for those events.
**LMISG 2020 Recommendation**

Apply the historical methodology for 2020 consistent with the past scale updates (2013–2019).

Implications:
- There will be no specific impact included for the 2020 scale for the pandemic shock effect.
- The 10-year historical average in the 2022 scale update will include a "smoothed" impact of the shock as part of the usual methodology.

**Future Issues**

- Insured vs. general population impacts
  + Some evidence that impact on insured population will be less
  + SOA “Socioeconomic decile” study will provide some guidance here
  + Consideration of consistent framework and changes to the current methodology (i.e., averaging periods)

- Will COVID-19 have a long-term impact on mortality improvement rates, and what will the impact be?
  + Lower due to survivor impaired health as well as the redirect effect arising from the virus delaying the early condition diagnosis of dread diseases and preventive treatments?
  + Higher due to greater application of good hygiene habits (e.g., social distancing and washing hands) and/or higher utilization of other vaccines (such as the annual flu shot)?
  + Need to understand the impact in terms of potential effects on future slope and size of MI
  + Impact in light of a COVID-19 vaccine availability and effectiveness
General Population:
Pattern of excess deaths vs general mortality

- Actual deaths = COVID-19
- Expected deaths = 2015
- Unismoke, ANB 2015 VBT rates, weighted by 7/2019 estimated U.S. population
- Slope of VBT matches COVID-19 female rates better than male rates
- Small ratios >>> only 1 cause of death (COD) in numerator, all CODs in denominator

Health Innovations (B) Working Group June 23, 2020, Minutes (Attachment Six-A) ....................................................... 7-40
The Health Insurance and Managed Care (B) Committee met via conference call Aug. 11, 2020. The following Committee members participated: Jessica K. Altman, Chair (PA); Lori K. Wing-Heier, Vice Chair (AK); Michael Conway (CO); Vicki Schmidt (KS); Kathleen A. Birrane (MD); Steve Kelley represented by Grace Arnold and Peter Brickwedde (MN); Mike Chaney (MS); Jon Godfread (ND); Linda A. Lacewell represented by John Powell (NY); Glenn Mulready (OK); Andrew R. Stolfi and TK Keen (OR); Hodgen Mainda (TN); Todd E. Kiser (UT); and Mike Kreidler (WA). Also participating were: David Altmaier (FL); Dean L. Cameron (ID); Sharon P. Clark (KY); Eric A. Cioppa (ME); Anita G. Fox (MI); Chlora Lindley-Myers (MO); Bruce R. Ramge (NE); Marlene Caride (NJ); Russell Toal (NM); and Marie Ganim (RI).

1. Adopted its April 28, Feb. 26, and 2019 Fall National Meeting Minutes

The Committee met April 28, Feb. 26, and Dec. 8, 2019. During its April 28 and Feb. 26 meetings, the Committee took the following action: 1) received a report from the Health Actuarial (B) Task Force on its work to develop an outline and eventual 2021 rate pricing resource and guidance document for the states to consider when reviewing initial 2021 rates in light of the COVID-19 pandemic; 2) discussed and heard comments from stakeholders on areas, such as telehealth requirements and form filing requirements, in which state insurance regulators can provide regulatory flexibility due to the COVID-19 pandemic; and 3) adopted the Regulatory Framework (B) Task Force’s revised 2020 charges, which added a charge for the newly appointed MHPAEA (B) Working Group.

Commissioner Godfread made a motion, seconded by Commissioner Conway, to adopt the Committee’s April 28 (Attachment One), Feb. 26 (Attachment Two) and Dec. 8, 2019, (see NAIC Proceedings – Fall 2019, Health Insurance and Managed Care (B) Committee) minutes. The motion passed unanimously.

2. Adopted its Subgroup, Working Group and Task Force Reports

Commissioner Schmidt made a motion, seconded by Ms. Arnold, to adopt the following reports: the Consumer Information (B) Subgroup, including its July 9 (Attachment Three), Jan. 21 (Attachment Four) and Jan. 7 (Attachment Five) minutes; the Health Innovations (B) Working Group (Attachment Six); the Health Actuarial (B) Task Force; the Regulatory Framework (B) Task Force; and the Senior Issues (B) Task Force.

3. Heard a Presentation on Health Equity and Disparities in Health Care and Coverage

Samantha Artiga (Kaiser Family Foundation—KFF) provided an overview of disparities in health and health care. She defined health and health care disparities as: 1) differences in health and health care between populations; 2) arising from a complex and interrelated set of individual, provider, health system, societal and economic factors; and 4) occurring across a broad range of dimensions—race/ethnicity, socioeconomic status, gender, age, disability, sexual orientation or gender identity, geographic location and more. She discussed the implications of such disparities for black and Hispanic populations, including higher infant mortality rates, higher mortality rates due to certain diseases, and a disproportionate share of COVID-19 cases. She described health disparities as a symptom of social and economic inequities.

Ms. Artiga said uninsured rates have declined since the implementation of the federal Affordable Care Act (ACA); but despite that, disparities in health care persist for some populations, such as African Americans and other people of color. She discussed some of the reasons for this occurrence, such as coverage gaps and geography. African Americans make up a larger share of the population in the South, where many states have not expanded Medicaid.

Ms. Artiga ended her presentation with five key takeaways for the Committee to consider: 1) health and health care disparities are a longstanding and persistent issue; 2) the COVID-19 pandemic has highlighted and exacerbated underlying disparities; 3) health disparities are a symptom of broader social and economic inequities rooted in structural and systemic barriers that disadvantage people of color, including racism and discrimination; 4) increased awareness and recognition of disparities provides an opportunity to advance equity; and 5) progress will require long-term efforts across sectors to prioritize equity and address systemic and structural barriers, including racism and discrimination.
Professor Meuse said Pennsylvania expanded Medicaid under the ACA as an approach to alleviate the disparities in health and health care. She asked Ms. Artiga if such actions actually make a difference. Ms. Artiga said research has shown that states that have opted to expand Medicaid eligibility under the ACA have improved disparities in health and health care. However, she noted that coverage is one piece of the puzzle because improving access to coverage does not necessarily improve other factors that lead to these disparities, such as access to certain types of foods and reliable transportation to get to health care providers. Director Wing-Heier asked for additional information about disparities in health and health care for Alaska Natives. Ms. Artiga said there is limited data on this population because of the way states report it. She said states report aggregate data on Alaska Natives that includes other populations, such as American Indians. She said this is an ongoing issue, that affects the ability of researchers to understand what is happening, specifically to these populations.

Commissioner Mainda asked Ms. Artiga what types of stakeholders she believed could come together to address disparities in health care and coverage. Ms. Artiga said she envisions the states coordinating across multiple agencies and sectors to address not only health and health care disparities, but other issues that underlie them, such as housing and transportation. She said this also includes more data collection to better understand the problems and setting certain outcomes. Commissioner Birrane asked Ms. Artiga whether expanded access to telehealth services has had an impact on health and health care disparities. Ms. Artiga said the KFF has data on telehealth services and its use, but it has not analyzed it specifically with respect to health and health care disparities. However, she said anecdotally, given the unequal access to telehealth service coverage and attitudes on using such services, in addition to probable issues with having access to compatible equipment and broadband for certain populations, in the short-term, telehealth most likely has not improved health and health care disparities.

4. Heard a Presentation on COVID-19 and Employer-Sponsored Insurance

Daniel Meuse (State Health and Value Strategies (SHVS), Princeton School of Public and International Affairs) discussed COVID-19 and the resulting recession’s effect on employer-sponsored insurance (ESI) coverage. He raised the following questions for the Committee’s consideration: 1) what do we know about how the COVID-19 recession is affecting ESI; 2) where do people go if they lose ESI, and what does that mean for consumers and providers; and 3) what are the larger policy considerations for state insurance regulators. He walked the Committee through these issues, describing the differences in ESI coverage pre-COVID-19 and post-COVID-19 because of the COVID-19 driven recession. He discussed federal and state policymakers’ responses to the recession, such as enacting the federal Paycheck Protection Program (PPP) and new special enrollment periods (SEPs) established by state health insurance exchanges. He also highlighted what policymakers do not know with respect to ESI coverage, such as who is actually losing ESI coverage, where consumers go to get coverage, and whether the loss of ESI coverage disproportionately affects people of color or patients at risk for increased morbidity.

Mr. Meuse touched on the options consumers have after losing ESI coverage, such as Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA), Medicaid/Children’s Health Insurance Plan (CHIP), non-compliant plans like short-term, limited-duration (STLD) plans, or becoming uninsured. He also discussed what consumers consider in choosing what option to take after losing ESI coverage, including premium costs, deductibles and provider networks. He discussed the policy opportunities and lessons to be learned. He said because this is the first widespread coverage loss since full ACA implementation, it provides an opportunity for policymakers to consider existing and new options to address it. Those options include: 1) Medicaid expansion; 2) reconsidering the timing of enrollment and outreach; and 3) alternative payment models.

Commissioner Altman asked Mr. Meuse for any best practices he would suggest to assist people in moving from ESI coverage to other coverage, particularly with assisting consumers in obtaining sufficient information to make informed decisions. Mr. Meuse said the states should partner with community-based organizations that may already have a relationship with certain populations to assist in providing outreach and distributing information. Commissioner Conway asked Mr. Meuse if he has any recommendations on what state insurance regulators could use to assist consumers in transitioning to other coverage in addition to SEPs. Mr. Meuse suggested additional marketing campaigns particularly targeted at individuals transitioning on and off Medicaid coverage. Health Insurance Commissioner Ganim asked Mr. Meuse if any states that have an individual mandate are considering changes to that mandate, considering the COVID-19 driven recession resulting in consumers losing ESI coverage. Mr. Meuse said he is not aware of any such activity, but he anticipates that the states would relax their hardship exemption documentation requirements in order for consumers to meet the requirements of a state’s hardship exemption from having to have health insurance coverage.

5. **Heard a Presentation on COVID-19 Testing and Costs**

Matt Eyles (America’s Health Insurance Plans—AHIP) discussed expanding access to COVID-19 testing and the need for additional federal funding for such testing. He discussed the purposes of COVID-19 testing—guiding care and treatment, public health surveillance, and occupational health—and its essential components. He explained that with respect to COVID-19 testing, federal agencies have a critical responsibility to ensure quality, support appropriate use, and prioritize affordable solutions. He also outlined the role that insurers, governmental and public health agencies, and employers play in the COVID-19 testing framework.

Mr. Eyles said AHIP and 48 other organizations believe that COVID-19 testing is one of the most important tools the U.S. has to combat the pandemic, both for identifying the virus and for preventing its spread. He said it is vital that the federal government designate the resources to support expanded access to testing. He discussed AHIP’s recommendations related to COVID-19 testing: 1) ensure all Americans have access to testing regardless of coverage status; 2) ensure federal funding accounts for the magnitude of tests required to get the economy back on track and reduces the risk of transmission in different settings and the progression of the disease; 3) solidify comprehensive strategies that incorporate testing to achieve occupational and public health goals; 4) ensure that testing does not lead to premium spikes in 2021; and 5) protect against fraud.

6. **Heard an Update on ACA Federal Court Cases**

Katie Keith (Out2Enroll) gave an update on ACA federal court cases. She discussed U.S. Supreme Court (Court) decisions from its 2019 session, including the Court’s 8-1 decision in favor of insurers in *Maine Community Health Options v. United States*, which challenged the legality of the federal government withholding full risk corridor payment amounts to participants. She also discussed cases scheduled for oral arguments during the Court’s upcoming 2020 session, including the *California v. Texas* case, which challenges the constitutionality of the ACA’s individual mandate and its potential impact on other key ACA provisions, as well as the *Rutledge v. PCMA* case, which challenges the state regulation of pharmacy benefit managers (PBMs).

Ms. Keith also discussed other pending ACA cases in the federal circuit courts, including a case pending in the D.C. Circuit Court of Appeals, *Association of Community Affiliated Plans, et al. v. U.S. Department of Treasury, et al.*, which upheld the legality of the federal STLD plan regulation, and a case pending in the U.S. Court of Appeals for the Second Circuit, *UnitedHealthcare of New York, v. Lacewell*, which ruled that New York’s risk adjustment rule is preempted by the ACA.

7. **Received an Update on the Work of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup**

Mr. Keen updated the Committee on the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup’s work to complete its charge to develop a new NAIC model establishing a registration or licensing process for PBMs. He said after the Subgroup was appointed in late 2018, the Subgroup decided during its first meetings in early 2019 that it wanted to obtain more information on the issues before beginning its work to draft the new model regulating PBMs and potentially including additional provisions related to PBM prescription drug pricing and cost transparency. The Subgroup held a series of conference calls throughout the summer and early fall of 2019 to hear from various stakeholders on the issues the Subgroup wanted to hear more about, such as rebating, discounts, prescription drug pricing, and how PBMs are currently regulated.

Mr. Keen said during these meetings, the Subgroup heard presentations from consumers, economists, the PBM industry, insurers, and the states on these issues and suggestions on how the Subgroup might address them. He said after finishing these information-gathering sessions, the Subgroup decided that it had obtained sufficient information to move forward with its charge. In November 2019, the Subgroup established an ad hoc technical drafting group to develop an initial draft for the full Subgroup’s review.

Mr. Keen said after a series of meetings late last year and early this year, the ad hoc group developed a draft for the Subgroup’s review. He said the ad hoc group based its draft on the National Council of Insurance Legislators (NCOIL) model and made changes based on the Subgroup’s charge to the ad hoc group.

Mr. Keen said the Subgroup met July 16 via conference call to discuss the ad hoc group’s draft. He said there was robust discussion among the Subgroup members about the draft, particularly about a proposed provision that lists potential provisions, such as PBM network adequacy requirements and rebates, that states could include in any regulations adopted to implement the proposed model’s provisions. At the end of the discussion, the Subgroup agreed that the draft was just the beginning of the drafting process, not the end of the process, and it exposed the draft for a public comment period ending Sept. 1. Mr. Keen said after the public comment period ends, the Subgroup will begin meeting via conference call to discuss and consider changes to the draft based on the comments received.
8. **Heard a Federal Legislative Update**

Brian Webb (NAIC) provided a federal legislative update on Congressional activity of interest to the Committee. He discussed the current status of surprise billing legislation, saying that the NAIC sent yet another letter to Congressional leaders urging them to pass federal surprise bill legislation and extend protections to air ambulances. He explained that the COVID-19 health emergency has stymied a lot of action in Congress on this issue despite bi-partisan support and support from the Trump Administration to address the issue. NAIC staff will continue to monitor this issue.

Mr. Webb said the U.S. House of Representatives (House) Committee on Appropriations passed its package of fiscal year 2021 appropriations bills, which included additional funding in the U.S. Department of Labor (DOL)/U.S. Department of Health and Human Services (HHS) bill in the amount of $2.9 million for state health insurance assistance programs (SHIPs), bringing the total appropriation to $55 million. He said the U.S. Senate (Senate) Committee on Appropriations has not acted yet.

Mr. Webb said with respect to the administrative action, the NAIC has requested additional guidance on a number of issues, such as COVID-19 testing and the insurer payment responsibilities. He said the federal Centers for Medicare & Medicaid Services (CMS) did issue guidance on the issue, but state insurance regulators still have questions. NAIC staff are working with CMS representatives to seek answers to those questions. Mr. Webb said the NAIC also requested guidance on premium holidays, particularly with respect to the individual market and its potential impact on advance premium tax credit (APTC) payments. The CMS released additional guidance on that issue last week, as announced during the Regulatory Framework (B) Task Force’s meeting on Aug. 4. Mr. Webb said the guidance did not answer all the questions, and NAIC staff will be working with CMS staff to receive answers on the outstanding issues.

Mr. Webb said one issue still awaiting additional guidance concerns the risk corridor payments owed to insurers as a result of the 8-1 Court decision of the *Maine Community Health Options v. United States* case that Ms. Keith mentioned during her presentation. However, he said he recently learned that one state’s insurer has received its payment after completing the Court of Federal Claims process and receiving a final certification of payment from the Judgement Fund. Therefore, payments are being made, but the CMS has not provided guidance on how it will be accounted for for the purposes of medical loss ratio (MLR) refunds.

Mr. Webb said the NAIC sent a comment letter, like many other states, on the Internal Revenue Services’ (IRS’) proposed regulations on health reimbursement arrangements (HRAs) that would permit an individual to use an HRA to fund health care sharing ministry (HCSM) payments. He said the letter expressed concern with adverse selection and other potential issues that could affect the stability of the individual market. He said NAIC staff will be closely tracking what happens with this proposed regulation.

Mr. Webb said NAIC staff continues to work closely with the CMS and DOL on mental health parity implementation. He said NAIC staff also has been working with the CMS and its federal Center for Program Integrity (CPI) on improper marketing concerns. NAIC staff have also had numerous discussions with the CMS on its new requirement that the states annually submit a report to the CMS on state mandates. The states still have many questions on this new requirement.

Mr. Webb said a new issue has arisen concerning telehealth and the ability for the states and insurers to continue to provide access to this expanded coverage after the COVID-19 health emergency declaration ends because of Health Insurance Portability and Accountability Act of 1996 (HIPAA) privacy concerns. NAIC staff are working with the CMS and the federal Office of Civil Rights (OCR) to find a solution to address this concern. NAIC staff are also working with the CMS and state insurance regulators on issues related to outreach with the upcoming open enrollment for plan year 2021 during the COVID-19 health emergency and discussing alternatives to what the states have traditionally done to educate and inform consumers about open enrollment in lieu of face-to-face meetings and forums.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
The Health Insurance and Managed Care (B) Committee met via conference call April 28, 2020. The following Committee members participated: Jessica Altman, Chair (PA); Lori K. Wing-Heier, Vice Chair (AK); Michael Conway (CO); John F. King represented by Teresa Winer (GA); Vicki Schmidt (KS); Al Redmer Jr. (MD); Steve Kelley represented by Grace Arnold and Sherri Mortensen Brown (MN); Mike Chaney represented by Bob Williams (MS); Jon Godfread (ND); Linda A. Lacewell represented by John Powell and Frank Horn (NY); Glen Mulready (OK); Andrew R. Stolfi represented by TK Keen (OR); Hodgen Mainda (TN); Todd E. Kiser represented by Jaakob Sundberg (UT); and Mike Kreidler represented by Molly Nollette and Jane Beyer (WA). Also participating were: David Altmaier (FL); Chlora Lindley-Myers (MO); Russell Toal (NM); Barbara D. Richardson (NV); and Marie Ganim (RI).

1. Received a Report from the Health Actuarial (B) Task Force

Mr. Sundberg provided a brief overview of the Health Actuarial (B) Task Force’s April 23 meeting. He said the Task Force heard presentations from the American Academy of Actuaries (Academy), America’s Health Insurance Plans (AHIP), Blue Cross and Blue Shield Association (BCBSA) and the Society of Actuaries (SOA) on COVID-19’s potential effects on health care spending and the health insurance system, particularly with respect to the federal Affordable Care Act (ACA) 2021 premium rate assumptions. He said each presenter emphasized the uncertainty in 2021 pricing assumptions due to COVID-19 because of several factors, including 1) the rate of COVID-19 testing; 2) treatment rate, including treatment setting and treatment services provided; 3) treatment cost; 4) rate of services deferred from 2020; and 5) cost of services deferred from 2020. Mr. Sundberg said some presenters also suggested that the states assess their current rate filing deadlines and delay them if possible. Specifically, they recommended that the states target July 22 to give issuers time to incorporate the most recent data on the impact of COVID-19 when finalizing 2021 rates and strongly encouraged the states to allow issuers to revise their rate filings using the latest information available prior to states finalizing rates. He said presenters also stressed the importance of state insurance regulators working collaboratively with the industry to address these issues.

Mr. Sundberg said that among its next steps, the Task Force is meeting May 1 via conference call in regulator-to-regulator session to begin development of an outline and eventual 2021 rate pricing resource and guidance document for the states to consider when reviewing initial 2021 rates. He said the Task Force also will be discussing potential impact on risk corridors, particularly in light of the recent U.S. Supreme Court decision in Maine Community Health Options v. United States, which ruled that, in accordance with the ACA, the federal government illegally withheld full risk corridor payment amounts to insurers for significant losses to their health plans incurred during the first three years of the ACA’s health marketplaces and that the insurers could sue for nonpayment of approximately $12 billion in the U.S. Court of Federal Claims.

Commissioner Altman asked Mr. Sundberg about the Task Force’s timeline for completing the resource and guidance document. Mr. Sundberg said he anticipates the Task Force completing this work and sending out a draft of the document within the next few weeks for comment given that some states have initial filing deadlines in May.

2. Discussed and Heard Comments from Stakeholders on Regulatory Flexibility Requests Due to COVID-19

Brian R. Webb (NAIC) said the NAIC has received letters from various stakeholders requesting state insurance regulatory relief due to COVID-19 in a brief overview of the Health Actuarial (B) Task Force’s April 23 meeting. He said the Task Force heard presentations from the American Academy of Actuaries (Academy), America’s Health Insurance Plans (AHIP), Blue Cross and Blue Shield Association (BCBSA) and the Society of Actuaries (SOA) on COVID-19’s potential effects on health care spending and the health insurance system, particularly with respect to the federal Affordable Care Act (ACA) 2021 premium rate assumptions. He said each presenter emphasized the uncertainty in 2021 pricing assumptions due to COVID-19 because of several factors, including 1) the rate of COVID-19 testing; 2) treatment rate, including treatment setting and treatment services provided; 3) treatment cost; 4) rate of services deferred from 2020; and 5) cost of services deferred from 2020. Mr. Sundberg said some presenters also suggested that the states assess their current rate filing deadlines and delay them if possible. Specifically, they recommended that the states target July 22 to give issuers time to incorporate the most recent data on the impact of COVID-19 when finalizing 2021 rates and strongly encouraged the states to allow issuers to revise their rate filings using the latest information available prior to states finalizing rates. He said presenters also stressed the importance of state insurance regulators working collaboratively with the industry to address these issues.

Mr. Sundberg said that among its next steps, the Task Force is meeting May 1 via conference call in regulator-to-regulator session to begin development of an outline and eventual 2021 rate pricing resource and guidance document for the states to consider when reviewing initial 2021 rates. He said the Task Force also will be discussing potential impact on risk corridors, particularly in light of the recent U.S. Supreme Court decision in Maine Community Health Options v. United States, which ruled that, in accordance with the ACA, the federal government illegally withheld full risk corridor payment amounts to insurers for significant losses to their health plans incurred during the first three years of the ACA’s health marketplaces and that the insurers could sue for nonpayment of approximately $12 billion in the U.S. Court of Federal Claims.

Commissioner Altman asked Mr. Sundberg about the Task Force’s timeline for completing the resource and guidance document. Mr. Sundberg said he anticipates the Task Force completing this work and sending out a draft of the document within the next few weeks for comment given that some states have initial filing deadlines in May.

Mr. Webb noted that AHIP and the BCBSA recently submitted a letter to the Committee recommending that the states assess their current rate filing deadlines and delay them if possible to July 22 to give carriers time to incorporate the most recent data on the impact of COVID-19 when finalizing 2021 rates. Specifically, AHIP and the BCBSA are encouraging the states to allow issuers to revise their rate filings using the latest information available prior to states finalizing rates in the Health Insurance and Oversight System (HIOS).
Mr. Webb said another outstanding issue some stakeholders have raised is the creation of a new special enrollment period (SEP) for individuals who obtained their health insurance coverage through the individual market, but lose income and become eligible for subsidized individual market coverage through the health insurance marketplaces. He said there is no existing SEP that addresses this situation. Mr. Webb said the federal Center for Consumer Information and Insurance Oversight (CCIIO) is relying on its existing SEPs to address loss of health insurance coverage issues due to COVID-19.

Commissioner Altman said NAIC staff prepared a summary compilation chart of the stakeholder letters submitted to the NAIC, which she went through section-by-section to provide each stakeholder the opportunity to provide any additional comments.

Allison Ivie (Eating Disorders Coalition for Research, Policy & Action—EDC), on behalf of the Mental Health Liaison Group (MHLG), said that, as stated in its letter to the NAIC, the MHLG’s most pressing concern is ensuring the continuity of care for its stakeholders via telehealth due to COVID-19. She said it is important that the states provide access to this benefit, regardless of the type of insurance and ensure that consumers can receive this benefit from out-of-network providers, including providers across state lines, if the consumer’s health benefit plan does not have an in-network specialty provider to treat the covered person.

Kate Gilliard (American Physical Therapy Association—APTA) said the APTA realizes that most states have already expanded telehealth to provide physical therapy-related services. She said, however, that this benefit has been provided with respect to established patients, not for new patients requiring an initial evaluation. She said that unless this issue is addressed, it could be problematic moving forward.

Emily Carroll (American Medical Association—AMA) said that as state insurance regulators continue to debate how best and responsibly to address the myriad of health insurance issues that have arisen due to COVID-19, the AMA urges the states to examine current policies that establish or fail to remove roadblocks between patients and their physicians that could threaten continuity of care or access to care, such as policies involving prior authorization and step therapy. She suggested that the states consider suspending such policies during the COVID-19 emergency because physicians are: 1) caring for COVID-19 patients; and 2) physician support staff are not in the office to process these requirements.

Kim Horvath (AMA) stressed the need for plan flexibility for telehealth benefits, particularly for consumers with chronic health conditions. She noted the new requirements the U.S. Department of Health and Human Services (HHS) issued expanding telehealth services for Medicare enrollees. She said the AMA encourages all states to adopt telehealth policies that reflect those now being required under Medicare.

Justine Handelman (BCBSA) stressed the importance of extending the final rate filing deadline for plan 2021 rates, at least until August, because of the uncertainty insurers have in determining rates due to COVID-19. She urged state insurance regulators to use their influence with the CCIIO to move the date.

Kristin Hathaway (AHIP) discussed the work the health insurance industry has done to date related to COVID-19, such as COVID-19 testing and fast-tracking providing credentialing and audits. She said AHIP appreciates the NAIC’s and state insurance regulators’ work providing flexibility in financial filing requirements and collaboration among the states in data requests.

Jessica Adams (American Society for Radiation Oncology—ASTRO) said the ASTRO has similar issues and concerns as those discussed by the AMA, particularly with respect to prior authorization requirements. She urged state insurance regulators to direct insurers to suspend prior authorization requirements for radiation therapy services for the duration of the COVID-19 health emergency because non-treating provider staff members, who would be processing these requests, are working remotely and treating provider staff members are being diverted to COVID-19 response activities, reducing staff manpower to process prior authorization requests.

Molly Collins Offner (American Hospital Association—AHA) said the AHA’s comments are similar to those already expressed. She said the AHA is working with its members to discuss additional operational challenges and areas where state insurance regulatory flexibility would be helpful.

Robert Still (Radiology Business Management Association—RBMA) said the RBMA’s comments are similar to the ASTRO’s, the AMA’s and the AHA’s comments.
Sarah Lueck (Center on Budget and Policy Priorities—CBPP) said that as state insurance regulators encounter challenges in their states and continue to advocate for policy changes to federal law due to the COVID-19 emergency, the NAIC consumer representatives urge state insurance regulators to: 1) maximize access to comprehensive health coverage so people can access the care they need. More limited coverage or coverage that triggers only if a person becomes ill will be less successful at achieving the goals of getting people to proactively seek testing and treatment; 2) find ways to ease financial strain and support people’s ability to comply with social distancing measures, such as ensuring easier access to prescription drug refills, telehealth services and mental health services—especially as the crisis continues; 3) ensure coverage of important health benefits, as well as cost protections, related to treatment and detection of the virus, including protection from surprise medical bills; and 4) continue to protect consumers from fraud and scams.

Katie Morgan (National Infusion Center Association—NICA) said the NICA supports patients’ access to non-hospital non-oncology infusion centers, where they can receive provider-administered medical benefit drugs for the treatment of autoimmune diseases, immunodeficiency disorders, rare and genetic disorders, and other chronic, complex conditions. She said these patient populations are at high risk of severe COVID-19 disease should they be exposed. She said the NICA urges state insurance regulators to provide needed insurance flexibility and consider policy options that proactively facilitate continuity of care for these patients, such as: 1) allowing patients to use an out-of-network site of care at the in-network benefit level in the event they are unable to get treatment in their usual care setting due to a drug shortage or closure related to COVID-19; 2) waiving prior authorization requirements for established patients currently on therapy that are switching site of care; and 3) waiving step therapy policies and formulary restrictions in the event of drug shortages.

Rodney Peele (American Optometric Association—AOA) said the AOA urges state insurance regulators to provide the same regulatory flexibility for vision plans that is being provided for health benefit plans. He said the AOA suggestions for regulatory flexibility include: 1) extending contract renewal deadlines; 2) delaying claims audits and recoupments; 3) extending deadlines for filing claims and appeals; and 4) expanding access to telehealth services. He said state insurance regulators also should promote and respect the role of optometrists in the COVID-19 health emergency, including acknowledging that optometrists: 1) may order or perform COVID-19 testing; 2) provide essential eye health and vision care; and 3) have the autonomy to follow the advice of local, state and public health authorities, and best meet the needs of patients.

Mr. Peele said optometrists take a leading role in patient care with respect to eye health and vision care, as well as general health and well-being. As primary health care providers, optometrists have extensive, ongoing training to examine, diagnose, treat and manage ocular disorders, diseases and injuries, and many of these treatments are essential. He said studies show that the same groups burdened by COVID-19 complications, such as those with hypertension and respiratory conditions, also suffer more vision problems. He said ensuring patient access to urgent and emergency eye care provided by optometrists is critical to ensuring that patients, particularly from at-risk populations, do not needlessly end up in an emergency room and potentially exposed to COVID-19 during this current public health emergency.

Commissioner Altman requested comments from Committee members.

Director Lindley-Myers said she could support the NAIC requesting the federal Centers for Medicare & Medicaid Services (CMS) to push the final 2021 rate filing back to sometime in September to provide additional time for insurers to factor in any changes related to COVID-19.

Superintendent Toal expressed support for Director Lindley-Myers’ comments.

The Committee members discussed whether to make such a request to the CMS. Some Committee members explained that they are maintaining their initial rate filing deadlines, but typically they permit carriers to revise their rate assumptions many times during the rate review process before the rates are final.

After additional discussion, Commissioner Altman said the next step is for this issue to be discussed by the Government Relations (EX) Leadership Council. The Committee agreed.

Commissioner Godfread said the states have addressed on an individual basis the issues stakeholders raised in their letters to the NAIC. He said he thinks the next issue the state insurance regulators will have to address concerns payment for COVID-19 antibody testing. He said it would be nice if there could be some uniformity on how this issue is addressed across the states.
Commissioner Mulready said he also is concerned and has contacted Oklahoma’s U.S. Senate delegation to obtain guidance on this issue and others.

Commissioner Conway said it would be helpful to receive clarification from the CMS on the issue.

Mr. Webb said the CMS anticipates providing additional guidance on the issue, but it has not set a time frame on when such guidance will be released.

3. **Heard an Update from the CCIIO**

Randy Pate (CCIIO) updated the Committee on the CCIIO’s recent activities, particularly its activities related to the COVID-19 health emergency. He said the CCIIO recently released guidance related to the expansion of telehealth services in response to COVID-19. He said that as part of the Trump administration’s efforts to combat the COVID-19, the CMS has postponed the 2019 benefit year HHS Risk Adjustment Data Validation (HHS-RADV) process in order for issuers and providers to focus on the health and safety threats currently faced by enrollees, participants and other impacted individuals due to the COVID-19 pandemic.

Mr. Pate said the CCIIO is working on establishing a new SEP for consumers enrolled in individual health insurance plans off the health insurance marketplace, but due to reduction of income because of job loss or some other event become eligible for subsidized individual health insurance coverage on the health insurance marketplace. He said the CCIIO is working quickly to operationalize this new SEP, but, currently, it does not have a specific date when it will be operational.

Mr. Pate said the CCIIO also is considering providing additional time for submission of final 2021 rates consistent with the Committee’s discussion. The CCIIO is helping to disseminate information to individuals and employees to assist them in taking advantage of SEPs they might be eligible for due to COVID-19 through the HealthCare.gov website.

Mr. Pate said the HHS, through the Health Resources and Services Administration (HRSA), has launched a new COVID-19 Uninsured Program Portal, allowing health care providers who have conducted COVID-19 testing or provided treatment for uninsured COVID-19 individuals on or after Feb. 4 to submit claims for reimbursement. Providers can access the portal at https://COVIDUninsuredClaim.HRSA.gov.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
Health Insurance and Managed Care (B) Committee
E-Vote
February 26, 2020

The Health Insurance and Managed Care (B) Committee conducted an e-vote that concluded Feb. 26, 2020. The following Committee members participated: Jessica K. Altman, Chair (PA); Lori K. Wing-Heier, Vice Chair (AK); Michael Conway (CO); John F. King (GA); Vicki Schmidt (KS); Steve Kelley represented by Grace Arnold (MN); Mike Chaney represented by Bob Williams (MS); Jon Godfread (ND); Glen Mulready (OK); Andrew R. Stolfi (OR); Hodgen Mainda represented by Rachel Jrade-Rice (TN); and Mike Kreidler represented by Molly Nollette (WA).

1. **Adopted the Regulatory Framework (B) Task Force’s 2020 Revised Charges**

The Committee conducted an e-vote to consider adoption of the Regulatory Framework (B) Task Force’s 2020 revised charges, which add 2020 charges for the newly appointed MHPAEA (B) Working Group (see NAIC Proceedings – Summer 2020, Regulatory Framework (B) Task Force, Attachment One-A). A majority of the Committee members voted in favor of adopting the Task Force’s 2020 revised charges. The motion passed unanimously.

Having no further business, the Health Insurance and Managed Care (B) Committee adjourned.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call July 9, 2020. The following Subgroup members participated: Mary Kwei, Chair, (MD); Debra Judy, Vice Chair (CO); Alex Peck, Jenifer Groth and Claire Szpara (IN); LeAnn Crow (KS); Judith Watters (ME); Carrie Couch, Marjorie Thompson, Camille Anderson-Weddel and Amy Hoyt (MO); Laura Arp and Barbara Peterson (NE); Cuc Nguyen (OK); Katie Dzurec and Elizabeth Hart (PA); Gretchen Brodkorb and Jill Kruger (SD); Jennifer Ramcharan (TN); Tanji Northrup, Heidi Clausen, Shelley Wiseman and Jaakob Sundberg (UT); Jennifer Stegall, Julie Walsh, Mary Kay Rodriguez and Christina Keeley (WI). Also participating were: Chelsey Maller (AK); William Rodgers (AL); Vanessa Darrah (AZ); Stephen Kim (CA); Howard Liebers (DC); Pamela White (FL); Teresa Winer (GA); Arlene Ige (HI); Cynthia Banks-Radke and Angela Boston (IA); Kathy McGill and Kristen Finau (ID); Jill Mitchell and Daniel McIlwain (KY); Emily DeLaGarza (MI); Candace Gergen (MN); Kathy Hall (MS); Robert Kurzydlowski and Jennifer Grady (NC); Chanell McDevitt (NJ); Jessica Baker (NM); Tynesia Dorsey (OH); Teresa Luna, Valerie Brown and Scott Helmcamp (TX); Jackie Myers (VA); Barbara Hudson and Joylynn Fix (WV); and Mavis Earnshaw, Denise Burke and Tara Howard (WY).

1. **Discussed its 2020 Work Plan**

Ms. Judy outlined a few potential work products the Subgroup could take up next. She mentioned the consumer guide regarding the claims process, which had been planned by the Subgroup since 2019; materials related to the COVID-19 pandemic; and the “Frequently Asked Questions about Health Care Reform” (FAQ document), which the Subgroup has worked on in each of the past several years and should be updated for plan year 2021.

Some Subgroup members supported consumer-facing documents related to COVID-19, but they were unsure exactly what form they should take. Others suggested a consumer guide related to short-term plans and coverage that is not comprehensive health insurance, such as health care sharing ministries (HCSMs).

Harry Ting (Consumer Advocate Volunteer, Chester County Department of Aging Services – Apprise Program) also suggested a guide focused on short-term plans.

Bonnie Burns (California Health Advocates—CHA) said any guides developed by the Subgroup should reference Medicare.

Kris Hathaway (America’s Health Insurance Plans—AHIP) said enrollment materials, such as the FAQ document, should be updated with COVID-19 in mind.

Chris Petersen (Arbor Strategies) said any materials from the Subgroup related to short-term plans should be aligned with the minimum standards for such plans being developed in other NAIC groups.

Ms. Kwei said the Subgroup plans to work on the FAQ document closer to the beginning of open enrollment. She encouraged Subgroup members and interested parties to submit any feedback via email.

Having no further business, the Consumer Information (B) Subgroup adjourned.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call Jan. 21, 2020. The following Subgroup members participated: Angela Nelson, Chair, Camille Anderson-Weddele, Carrie Couch and Jessica Schrimpf (MO); Anthony L. Williams (AL); Weston Trexler (ID); Michelle Baldock, Ryan Gillespie and Eryn Krueger (IL); LeAnn Crow (KS); Mary Kwei and Joy Hatchette (MD); Kathy Shortt (NC); Cuc Nguyen and Rebecca Ross (OK); Elizabeth Hart (PA); Gretchen Brodkorb and Jill Kruger (SD); Vickie Trice and Jennifer Ramcharan (TN); and Jennifer Stegall, Julie Walsh and Shannon McNally (WI). Also participating were: Chelsey Maller (AK); Julia Yee (CA); Adam Bogess (CO); Matthew Smith and Justine Sorrentino (DC); Matthew Guy and Bryan Peters (FL); Cynthia Banks Radke and Sonya Sellmeyer (IA); Shawn Boggs (KY); Sherri Montana Brown (MN); Bob Williams (MS); Jeannie Keller (MT); Jason Dexter (NH); Jana Jarrett (OH); Scott Helmcamp and Valarie Brown (TX); Yolanda Tennyson (VA); and Dena Wildman, Joylynn Fix and Ellen Potter (WV).

1. **Adopted the Consumer Guide, Using Your Health Plan**

Ms. Nelson noted that the current version of the consumer guide under review is in good shape, and she expressed her hope that after a final walk-through during today’s conference call, the document could be finalized.

The Subgroup then proceeded to review the draft consumer guide, page by page, and discussed any comments received prior to the call or that participants wanted to raise.

In the section titled, “Choose a Primary Care Provider in Your Network,” Ms. Shortt asked whether OB-GYN practitioners should be listed as primary care providers. NAIC staff noted that other providers (e.g., pediatricians) could also be added.

The Subgroup decided that listing types of providers could be too confusing, and no such references were added. It was also noted that the last paragraph of the page did not seem to belong, so it was deleted.

Additional minor edits were made to the document to make it clearer and more readable.

The Subgroup then adopted the amended consumer guide, *Using Your Health Plan* (Attachment Four-A). The consumer guide will be posted to the Subgroup’s page on the NAIC website.

Ms. Nelson said that the next module the Subgroup will be working on is “claims process.” She asked call participants to send to the Subgroup any existing documents on internal/external review that they think would be helpful. She said the Subgroup plans to meet again in mid-February via conference call.

Having no further business, the Consumer Information (B) Subgroup adjourned.
Using Your Health Plan

Adopted by the Consumer Information (B) Subgroup, Jan. 21, 2020
Important Information

You have a health plan. Great news – now you’re insured! But what’s next? You’ll use your plan to access health care.

How much your plan will pay or what services it will cover depends on the plan’s details. This tool will help you know what the details of your health plan mean. It will help you to better understand your plan. With this information, you can make better decisions about your health care.

The examples in this tool are general. They aren’t specific to your health plan.

There are different types of health plans. This tool doesn’t include details about how to use Medicaid [States can customize to identify state Medicaid plan by name], Medicare, or other types of health plans like supplemental policies. See the Health Plan Resources Section to get information and help with Medicaid, Medicare, and other types of health plans.

See the Glossary for definitions for some of the terms used in this tool.

A special thanks to the Maine Health Access Foundation (www.mehaf.org) for information and graphics derived from its original brochure, I Have Health Insurance! Now What?
Using Your Health Plan

Here are a few important things you need to remember:

✔ Always carry your insurance card with you. It has basic information about your health plan. It tells your doctor and other health care providers who the plan covers. Show it when you check in at your doctor’s office or go to the pharmacy.
   → Your Insurance Card

✔ Understand how your health plan works. The best way to avoid surprise health care bills is to understand your plan and what your costs will be ahead of time.
   → Get to Know Your Health Plan
   → Summary of Benefits and Coverage (SBC)
   → Schedule of Benefits/Outline of Coverage
   → Get the Most Out of Your Health Plan

✔ Manage your care and out-of-pocket costs. Pick a Primary Care Provider in your plan’s network. This can be a doctor, nurse, or physician assistant.
   → Cost-Sharing: How You and Your Health Plan Share Costs

✔ Manage your prescription drugs.
   → Your Prescription Medicines

✔ Know what to do in an urgent or emergency medical situation.
   → What to Do in an Emergency

✔ Plan ahead. Know what you need to do if you have a planned health procedure or a surgery. Check to make sure the facility (for example, a hospital or lab) and all health care providers are in your plan’s network. If they aren’t, you’ll have to pay more of the costs yourself. If you’re going to have a major health care service, like a surgery or procedure, you should call your insurer to ask if you need their approval before you use the health care service.
   → Choose a Primary Care Provider in Your Network
   → Avoid Balance Billing
   → Referrals and Prior Authorizations

✔ Understand the key points of your health plan, your health, and your health care.
   → Different Kinds of Health Plans
   → Job-Based Health Plans
   → If You Have More Than One Health Plan:
      → Coordination of Benefits
   → How to File a Claim
   → Health Plan Resources
   → Glossary of Terms

✔ Update your plan if something in your life changes. Life is unpredictable. If you get married, divorced, or have a baby or adopt a child, your health plan needs to change. If you’re turning 65, find out when you need to sign up for Medicare and when you need to cancel your health plan. Call your insurer and let them know if something in your life changes.
   → Life Changes – Your Health Plan Should Too
Get to Know Your Health Plan

Not every health plan is the same. Maybe you can’t remember the details about your plan – what it covers, what it doesn’t, or what your out-of-pocket costs may be.

Don’t worry. You can get that information when you need it. Here is where you can find information about your plan and get help to understand your benefits.

**Check your insurance card.** Your insurance card has some of the most important information you need about your health plan. It tells providers basic information about your plan and who’s covered. Most insurance cards list toll-free phone numbers and website information where you can access the most current information for your plan. Be sure you check the back of the card for important information.

You also may find other important telephone numbers on your insurance card. For example, there may be a number you can call if your plan offers advice from a nurse or telehealth services.

**Check your health plan’s website.** Most health insurers have websites you can use to access the most up-to-date information about your plan. You can learn what your plan covers, what doctors and facilities (for example, hospitals and labs) are in your plan’s network, what prescription drugs the plan covers, what claims the plan has paid, and how much of your deductible you still need to meet. You usually need to register or create an account to log in to get information specific to your health plan.

**Check the SBC.** Ask your insurance company or employer for a Summary of Benefits and Coverage (called an “SBC”). This is a short list of your benefits and deductibles, co-pays, and coinsurance amounts (called cost-sharing).

**Check the policy or certificate.** Be sure you have a copy of your policy and review it for more information about your benefits. If you get your health insurance through work, look for your plan certificate.

Your plan information should include a document called a “Schedule of Benefits” or an “Outline of Coverage.” Both have more information about your costs and benefits. They’ll also tell you what services the plan doesn’t cover (called “exclusions”).

**Call the insurer.** If after looking at your plan documents you still have questions about your plan, call your health insurer.

**Other Resources.** If you bought your plan outside of work, ask your health insurance agent for help. If your health plan is through work, ask your HR Department to explain things.

The next few pages will help you find more information about your health plan.
Your Insurance Card

Some of the most important information you need to use your health plan is on your insurance card. You'll need the information on your card if you talk on the phone about your plan or look for information on your insurer's website.

Your insurance card tells health providers basic information about your plan and who it covers. You'll need to show your insurance card any time you receive a health care service or talk to a health care provider (a doctor, for example) in person. If you're covered under more than one health plan (you have coverage through work, but you're also covered under your spouse's health plan), you need to bring both insurance cards with you.

When you get your insurance card, check the information on the front of the card. Does the information match what you bought? Is the plan type correct? Is the network name what you expected? Are the cost-sharing amounts correct? If there is a Primary Care Provider (PCP) listed on your insurance card, is it correct?

If any of this information is wrong, call your health insurer right away.

Make sure you also check the information on the back of the card. This is where you will find other helpful information – like phone numbers to call your insurer if you have questions.

Health plans usually give you one or two insurance cards. If you don't get a card, call your insurer. You also may be able to print a paper copy of your card from your health insurer's website.

Keep the card with you at all times. Protect your insurance card like you would other sensitive personal and financial information.

Information on your insurance card about your plan and your cost-sharing can help you figure out what your out-of-pocket costs will be. You also can find more information to help you on the Summary of Benefits & Coverage or SBC. For example, you'll find information about deductibles on the SBC. The SBC also tells you the types of services your health plan covers and what co-pays or coinsurance you'll pay. Below is what the front page of an SBC looks like.

A Summary of Benefits & Coverage is usually available when you shop for a health plan on your own or through work, or when you renew or change your plan. If you can't find an SBC for your plan, ask the insurer, your agent, or your employer for one. Just remember, short-term health plans aren't required to give you an SBC. (A short-term plan is one that only covers you for 12 months or less and doesn't have to follow the rules in the Affordable Care Act.)

Below is a picture of the first page of an SBC to give you an idea of what an SBC looks like and the kind of information it gives. If you have questions about what the underlined words mean, remember to check the Glossary at the end of this tool.

Schedule of Benefits/Outline of Coverage

You can get a list of the services your health plan covers, along with which costs you’ll have to pay. You’ll find this list in the Schedule of Benefits (if your plan is through work) or in the Outline of Coverage (if you bought your plan outside of work). Both list the various services a health plan covers, along with what costs you’ll have to pay. This document also shows which services the plan covers and doesn’t cover.

Many health insurers send a printed copy of your Schedule of Benefits (Schedule) or Outline of Coverage (Outline) when you first enroll in a plan. It’s usually with your insurance policy or certificate. You also may have access to an electronic copy in your member portal on the plan’s website. This list will help you get an idea of how much you’ll pay for services. Keep this document with your insurance papers.

“Benefits” is the term health plans use for health care services the plan covers. The Schedule (or Outline) lists the various categories of benefits your plan covers, such as preventive, hospital, medical, surgical, diagnostic, therapeutic, urgent care, and prescription drug services. For example, under preventive services, the schedule may list "Adult physical examination (1 exam per calendar year)."

A Schedule or Outline is usually broken into several sections:

The **heading** gives the basic information about your health plan. It explains what type of health plan you have (HMO, POS, EPO, PPO, or FFS/Indemnity), who the plan is through, the benefit year, and your plan’s start date. If you get your health plan through work, this start date will be for the company, not just you. You can learn more about the different plan types on page 12.

The **responsibilities** section tells you the deductible, co-payments, and coinsurance and what the annual out-of-pocket maximums are. You can learn more about the different types of cost-sharing on page 9.

The **health benefits** section lists the specific covered benefits. This section also often has information about your cost-sharing.

The **pharmacy benefits** section identifies the prescription drug benefits in your health plan and the co-payment. You can learn more about how to use your pharmacy benefits on page 13.

The **network(s)** section tells you the provider network(s) your health plan has contracts with. When you use providers in the network (sometimes called preferred providers), your costs will be lower than if you use providers outside the network.

The **dependent benefits** section lists which dependents your plan covers and for how long.
Cost-Sharing: How You and Your Health Plan Share Costs

Jot down information about your health plan and cost-sharing below. Use your insurance policy or certificate, your insurance card, your Schedule of Benefits/Outline of Coverage, and/or your SBC to find the information. Then read the next few pages to understand what the different terms mean and how your costs are calculated.

**Deductible:** The amount of money you must spend each year on your health care before your plan starts to pay. If family members are covered under your health plan, there will be two deductibles. Once you’ve met the family deductible, you’ve also met the individual deductible. Your plan may pay for some preventive services, like an annual physical, even if you haven’t met your deductible. You may have a separate deductible for prescription drugs.

- Your Deductible (Individual): __________
- Your Deductible (Family): __________
- Prescription Drug (Rx) Deductible:
  - [ ] included in the deductible above
  - [ ] Not included in the deductible above
- Your Rx Deductible (Individual): ________
- Rx Deductible (Family): __________

**Co-Pay:** A fixed fee you pay directly to the provider when you get health care (for example, $40 for every primary care visit).

- Your Co-Pays:
  - In-network Primary Care: __________
  - Out-of-network Primary Care: __________
  - In-network Specialist: __________
  - Out-of-network Specialist: __________
  - In-network Emergency Department: __________
  - Out-of-network Emergency Department: __________
  - In-network Urgent Care: __________
  - Out-of-network Urgent Care: __________
- Prescription: __________

**Coinsurance:** A percentage you pay for most health care even after you meet your deductible. For example, if your coinsurance is 20%, then the insurance company pays 80% of the covered amount and you pay 20% until you reach your out-of-pocket maximum.

- Your Coinsurance:
  - In-network: __________
  - Out-of-network: __________

**Out-of-Pocket Maximum:** The most you pay during a plan period before your health plan pays all of the costs for covered services. This maximum doesn’t include your monthly premium.

- My Out-of-Pocket Maximum: __________
- Family Out-of-Pocket Maximum: __________

**Monthly Premium:** A fixed amount that you pay each month or with each paycheck for your health plan. If you miss payments or pay late, the insurer could cancel your plan.

- Your Monthly Premium: __________
How You and Your Health Plan Share Costs—Example

Jane’s Plan Deductible: $1,500 | Co-Pay: $0 | Coinsurance: 20% | Out-of-Pocket Maximum: $5,000

Jan. 1st
Beginning of Coverage Period

Patient Pays 100%
Plan Pays 0%

Jane hasn’t reached her $1,500 deductible yet.
Her plan doesn’t pay any of the costs.
Office Visit Costs: $125
Jane Pays: $125
Her Plan Pays: $0

Note: All plans pay 100% of included preventive services from the start.

Jane has reached her $1,500 deductible, coinsurance begins.
Jane has seen a doctor several times. Her plan pays some of the costs.
Office Visit Costs: $75
Jane Pays: 20% of $75 = $15
Her Plan Pays: 80% of $75 = $60

Note: Some plans require the patient to pay a “co-pay,” a fixed amount per visit or per prescription filled.

Jane reaches her $5,000 out-of-pocket limit.
Jane has seen the doctor often and paid $5,000 in total. Her plan pays the full cost of her covered health care services for the rest of the year.
Office Visit Costs: $200
Jane Pays: $0
Her Plan Pays: $200
Choose a Primary Care Provider in Your Network

Your insurance company may assign you to a Primary Care Provider. Usually you can change providers if you don’t like the one the plan assigns you. Contact your insurance company to find out how.

For most people, it makes sense to pick a Primary Care Provider from your health plan’s network. You’ll pay the least money out-of-pocket if you use providers in your plan’s network. That’s because the plan has negotiated contracts with the providers.

If you use a provider outside of your health plan’s network when it’s not an emergency, you’ll pay more. And, some plans don’t pay anything for care from non-network providers unless you see them in an emergency.

Your Primary Care Provider is your first stop for health care. It’s where you call or visit each time you need care. They help you get services from any specialists or other health professionals that you need.
How to Choose a Provider in Your Network

To find the names of providers near you who are in your health plan’s network, first you need to know the name of the network. You’ll find the name in your insurance policy or certificate or on your insurance card. Then, go on your insurer’s website and look for the directory of network providers. Or, you can call your insurer. The phone number is on your insurance card. If your health plan is through work, your employer may have a provider directory.

After you find a provider you want to use, call their office and ask:

1. Are you in my plan’s network?
2. Are you accepting new patients?

If you need help, call your insurance company. The number is on your insurance card.

If you need specialized health care, check whether your local hospitals or specialists are part of your plan’s network.

Avoid Balance Billing

Balance bills happen when a provider who isn’t in your health plan’s network charges more than your plan pays, and the provider bills you for the difference. In-network providers have agreed to accept the plan’s payment as full payment and will not send you a balance bill. So, you can avoid the extra cost of balance bills if you choose providers in your health plan’s network.

Sometimes you may not be able to choose a provider who is in your plan’s network. You may need emergency treatment, or you may see an out-of-network provider at an in-network hospital. Or, you may need care from a specialist and there aren’t any in your network. In these cases, your state may have laws to protect you from balance billing. Contact your state insurance department to find out more.
Different Kinds of Health Plans

My plan is: a PPO □ an HMO □ an EPO □ a FFS □ a POS □ I don't know □

**PPO**
Preferred Provider Organization
You can see any provider who will accept the insurance.
You may have higher out-of-pocket costs for out-of-network care.
Monthly premiums are generally higher as you have more choice of providers.
You aren’t required to get a referral from your Primary Care Provider to see specialists.

**HMO**
Health Maintenance Organization
You must choose an in-network Primary Care Provider when you enroll.
You must see in-network providers, except in an emergency.
Premiums and cost-sharing may be lower as you have less choice.
You must get referral from your Primary Care Provider to see any specialist.

**EPO**
Exclusive Provider Organization
You must see in-network providers, except in an emergency.
Premiums are generally lower than PPOs due to network restrictions.
A Primary Care Physician referral is not required to see specialists.

**FFS**
Fee For Service (Indemnity)
You can see any provider.
Once you meet a deductible the plan pays a fixed amount (usually a percentage) of the usual and reasonable cost of the service.
Monthly premiums are higher because you can see any provider.

**POS**
Point of Service
You must choose an in-network Primary Care Provider.
Your cost are lower if you use in-network providers but you have the freedom to seek care outside the network.
You are required to get a referral from your Primary Care Provider to see out-of-network specialists.

See page 11 to learn more about in-network and out-of-network providers.
Job-Based Health Plans

Your health plan may be through your job or a family member’s job. If the employer pays the costs of the health care services these plans cover, the plan is called self-funded health plans. Many large employers, unions, government agencies, and school districts have self-funded health plans.

Self-funded health plans usually use a third-party administrator (TPA) to review and pay claims for the plan. Sometimes, that TPA shares a brand name with a health insurance company. But the employer still is responsible to provide the money to pay claims – not the insurance company. If a unit of government is the employer, then the government is responsible to provide the money to pay claims.

The U.S. Department of Labor’s Employee Benefits Security Administration (DOL-EBSA) regulates self-funded health plans. State insurance laws generally don’t apply to self-funded plans.

Some employer-based plans are fully insured. Unlike self-funded plans, in a fully-insured plan, an insurance company is responsible for covered health care costs. The insurer charges your employer a premium to take on that financial responsibility.

State insurance departments regulate fully-insured health plans. These plans must follow state insurance laws. State insurance departments can help consumers who have fully-insured plans.
Your Prescription Medicines

Health plans help pay the cost of covered prescription medicines. Insurers use a “formulary” that determines how much of the cost you’ll pay. You can find a link to your plan’s formulary in the Summary of Benefits Coverage in the “Common Medical Events” section in the row labeled “if you need drugs to treat your illness or condition.” A formulary usually has different tiers. Prescription medicines listed in one tier may cost you more than those in another tier.

Always show your pharmacy your health insurance card. Prescriptions that you pay for will count toward your annual out-of-pocket maximum.

To find out which prescriptions your plan covers:

- Visit your insurance company website to find your online health plan formulary.
- Check your insurance policy or certificate to learn more about your formulary.
- If you need help, call your insurance company directly to find out what’s covered.

Example: Categories of prescription drugs in a tiered formulary:

$ Tier 1—Generic drugs. These are lower-cost drugs.

$$ Tier 2—Preferred, brand-name drugs. These drugs cost more because they’re unique, and just one drug company makes them.

$$ Tier 3—Non-preferred, brand-name drugs. These are also brand-name drugs. But they may cost you more than other brand name drugs that treat the same condition.

$$ Tier 4—Some plans use this tier for specialty drugs. Other plans have a separate “specialty” tier. These are high-cost drugs that treat rare or complex diseases.

It’s a good idea to talk with your providers about the best affordable medications for you, based on your plan.

If the pharmacy says that your plan doesn’t cover a prescription drug you’ve been taking, some insurance companies may let you refill the prescription once. That will give you time to talk with your provider about other options.

You also can ask your provider to ask your health plan for an exception. With an exception, you can get a prescription medicine that your plan doesn’t normally cover. Your health insurer might agree because:

- All other drugs the plan covers haven’t worked or won’t work as well as the drug the provider prescribed, or
- All other drugs the plan covers have caused or could cause harmful side effects.
Get the Most Out of Your Health Plan

You can use your health plan to get preventive care to stay healthy. Schedule needed appointments for you and your family. Avoid emergency department visits when you can – it’ll save you money. And, your plan may cover other services that can help you stay healthy. Some services that can help you get the most from your health plan include:

- Care for new mothers and babies
- Annual physicals
- Well-baby visits
- Scheduled preventive screenings such as mammograms, colonoscopies, and others
- Other preventive and wellness services
- Counseling and services for substance use disorders
- Prescription medicines
- Laboratory services
- Help to manage diseases like diabetes or high blood pressure
- Services for kids (for example, vision checks)
- Vaccinations

Your plan may pay all of the costs for some of these services even before you meet your deductible. You don’t have to pay anything for some preventive services. Check with your provider and your plan to make sure your service is considered preventive.

Your plan likely covers the Essential Health Benefits.¹ All Qualified Health Plans that you buy through the Health Insurance Marketplace [State Marketplace Brand] cover these benefits. Some grandfathered plans or employer-based plans that you buy outside the Marketplace may not.

---

¹ Essential Health Benefits include these categories:
1. Ambulatory patient services (outpatient services)
2. Emergency services
3. Hospitalization
4. Maternity and newborn care
5. Mental health and substance use disorder services, including behavioral health treatment
6. Prescription drugs
7. Rehabilitative and habilitative services (those that help patients acquire, maintain, or improve skills necessary for daily functioning) and devices
8. Laboratory services
9. Preventive and wellness services and chronic disease management
10. Pediatric services, including oral and vision care
What to Do in an Emergency

Use an emergency department (or ER) only if you have a real emergency, such as any severe pain, like chest or stomach pain, bleeding you can’t stop, or sudden weakness.

You can use urgent care facilities, sometimes called Quick Care, Express Care, or First Care, when you need to see a provider more quickly than you can see your primary provider. They almost always cost less than if you go to the emergency department. If your plan has co-pays, your co-pay for urgent care may not be much more than your co-pay for a doctor visit. Some urgent care facilities take appointments so you may not have to wait long to see a provider.

Contact your insurance company to ask which urgent care facilities near you are in-network.

If you have an emergency or life-threatening situation, call 9-1-1 or go to the nearest emergency department. In an emergency, you should go to the closest hospital. Your health plan can’t require prior authorization before you go to the emergency department or charge you more because the hospital isn’t in your plan’s network. You may still have to pay some of the costs of emergency services, depending on your plan. For instance, you may have to pay a co-pay or part of the costs if you haven’t met your deductible. And, your share of the costs may be more if the hospital wasn’t in your health plan’s network.

If you’re not sure where to go, don’t be afraid to call your Primary Care Provider.
Referrals and Prior Authorizations

Some health plans, mainly Health Maintenance Organizations (HMOs), require a referral before you get care from some providers. A referral is an order from your Primary Care Provider for you to see a specialist or get certain medical services. If you don’t get a referral first, the plan may not pay any of the costs of the services.

Other types of health plans, not just HMOs, may require prior authorization for some services. If you need a special treatment, service, or medical equipment, you may need to get approval first from your health plan. This is called prior authorization. A health plan gives prior authorization when a service is medically necessary. Without it, your health plan may not pay any of the costs. You can ask your provider if you need prior authorization. Some providers will ask the health plan for prior authorization.
If You Have More Than One Health Plan: Coordination of Benefits

If you have more than one health plan, all of your plans work together to pay their shares of your health care costs.

You need to tell your providers if you have more than one health plan. Coordination of benefits rules determine which plan is primary (pays first) and which is secondary (pays second). Talk to both health insurers. Learn what’s expected of you and how the plans will coordinate.

The primary health plan processes your insurance claim first. If there’s still a balance, then the secondary plan processes the claim for the balance. The plans won’t pay more than the total claim amount. You won’t get double the benefits if you have two health plans. And, you have to meet the deductibles and pay your share of the costs in each plan.

Even if you have more than one plan, that doesn’t mean that the plan covers every health care service. A plan only pays for covered benefits. So, for example, if you have cosmetic surgery to improve your looks, neither health plan will pay any of the costs if neither covers cosmetic surgery.

Here’s an example of how coordination of benefits works: Let's say you visit your doctor, and the bill comes to $100. The primary plan pays the amount it covers. Let's say that's $50. If the secondary plan covers the doctor's visit, it might pay up to $50 – if you’ve met your deductible and don’t have any other cost-sharing responsibilities.

A few examples of ways people may have more than one health plan are:

- You’re enrolled in your employer’s health plan, and your spouse has added you to his or her plan.
- A child is covered by both parents’ separate health plans.
- A child has her own health plan (from school or work) and stays on her parent's plan until age 26.
- A child is married and on his spouse's plan and stays on his parent's plan until age 26.
- A person is enrolled in Medicare and also has a private health plan.
- A person is enrolled in Medicaid and also has a private health plan.
- A service member or veteran has TRICARE or coverage through the Veterans Administration (VA) as well as another health plan.

When you use health care services, check that they are in-network for both health plans if you’ll use both health plans.
Life Changes – Your Health Plan Should Too

When life changes — for example, a move, a marriage, a job change — you may need to make changes in your health plan. But often there are special rules about changing your health plan.

Usually you can enroll in health plans only once a year during a set period of time called the annual open enrollment period. Many life changes qualify you to enroll in or change your plan when the change happens. You don’t have to wait for the next open enrollment period. These life changes are called qualifying events. Qualifying events apply to both employer plans and ones you buy on your own.

Changes in Your Family

A family health plan covers more than one family member. When your family changes, due to marriage, divorce, or a child’s birth or adoption, it’s time to review your health plan. You may need to add or remove family members.

You also might need to change your plan when an adult child reaches age 26 and isn’t eligible to stay on your plan. You might need to change from an individual to a family plan – or from a family to an individual plan. You can call your health insurer or visit its website to learn how to add or remove family members. If your health plan is through work, check with Human Resources.

As soon as possible, tell your insurance company when any of these happen:

- Change of address
- Marriage
- Divorce or separation
- Birth or adoption of a child
- Death of covered family member
- A child on your health plan reaches age 26
- An adult on your health plan reaches age 65

Leaving a Group Plan

If you change your job, you might need to change your health plan. If your plan was through work at your old job, you probably have to sign up for a new health plan.

If you lose your job, you may be able to keep the health plan you had through the job. But you’ll have to pay the full premium – your share and the employer’s share. Ask your employer about COBRA continuation coverage. And, if you’re 65 or older when you lose your job and haven’t yet signed up for Medicare, you should do that now to avoid premium penalties or delays in coverage. Contact your State Senior Health Insurance Assistance Program [State SHIP brand] if you have questions.

If you leave a group plan because you can no longer work due to a disability, you can apply for Social Security disability benefits. Once you’ve received these benefits for two years, you’ll be eligible for Medicare.
Check for Affordable Health Plan Options

If your individual or family income changes, it might change your eligibility for help with health plan costs. You can apply at the Marketplace [State Marketplace Brand] to find out if you’re eligible for financial help to buy a Marketplace plan. You also might be eligible for a low- or no-cost health plan through Medicaid or the Children’s Health Insurance Program (CHIP) [State Program Names].

There’s an annual open enrollment period for Marketplace plans. In this period, anyone can enroll in or change their plan. But you might be eligible to enroll or change plans through the Marketplace at other times if one of these happens:

- You lose your health plan, but you paid the premiums
- You lose coverage through Medicare, Medicaid, or Children’s Health Insurance Program
- You can’t stay on the health plan you have now because you’re no longer a dependent
- You move
- You get married
- You divorce or separate from your spouse
- You give birth to or adopt a child
- A covered family member dies

These events qualify you for a special enrollment period – a chance to enroll in or change your health plan without waiting for the next open enrollment period. But you must contact the Marketplace within 60 days of the event. If you missed the special enrollment period, you’d have to wait for the next open enrollment period. You can find out more about special enrollment periods (SEPs) at https://bit.ly/2Df4Wv7.

Medicare

If you’re turning 65 years old soon, find out when you should sign up for Medicare. You should sign up for Medicare Parts A and B if your employer has fewer than 20 employees because Medicare will be primary (pay claims first). If your employer has 20 or more employees and you do not have a Health Savings Account (HSA), then you should sign up for Medicare Part A if you qualify for free coverage. Contact your State Senior Health Insurance Assistance Program [State SHIP brand] if you have questions.

Once you stop working or lose your health plan at work, after you turn 65, you have eight months to sign up for Medicare Part B. If you miss that window, your Medicare premiums will be higher.
How to File a Claim

Most providers file insurance claims for you. That’s why they need your insurance card when you see them. The providers send a bill to your health plan with information about your condition and how they treated you. Your health plan compares your benefits with the services billed and pays your provider. This payment won’t include any amounts that are your responsibility— for example, the deductible, co-payments, or coinsurance. If the plan doesn’t cover any part of your claim or doesn’t cover the health care service, your health care provider can ask you to pay the balance. If you’ll owe coinsurance, many providers estimate the amount and ask you to pay that when you see them.

Some health care providers won’t submit claims for you. You can ask your providers if they will. If you have to submit your own claim, ask your provider to help you so you have the right dates, procedures, and codes on the claim form. Keep in mind that when you submit your own claim, most providers require you to pay the full amount upfront. Then, your health plan will reimburse you after it processes the claim.

When Your Health Plan Pays Your Claims

If your provider submits your claim, don’t pay a bill for a covered service until your health plan has reviewed the claim.

How do you know if the plan has reviewed the claim? Your health plan will send you an “Explanation of Benefits” (EOB) after you receive services. The EOB tells what services the plan paid or didn’t pay, and why.

Your health plan must explain in writing within a set amount of time why it didn’t pay for a service. If you think the plan should have paid for the service, you can appeal the decision.

Your health plan must tell you how you can appeal their decisions. If taking the time to appeal would put your life or ability to fully function at risk, you can file an “expedited” appeal to get a quicker decision.

If you need help to file an appeal, you can contact [State Insurance Agency] Consumer Assistance Program:

[(800) xxx-xxxx ]

[TTY: (xxx) xxx-xxxx | State Website]

You also can contact the [State Insurance Agency] to file a complaint and start an investigation against an insurance company. The [State Insurance Agency] encourages you to call about any problems you have when a health plan denies a claim or service that you believe should have been covered.
Health Plan Resources

The Health Insurance Marketplace [State Marketplace brand] is a resource where individuals, families, and small businesses can learn about their health plan options. You also can compare health plans based on costs, benefits, and other important features; choose a plan; and enroll in a plan.

1 (800) 318-2596 | TTY: 1 (855) 889-4325 | HealthCare.gov

Your state department of insurance regulates the insurance industry. It examines and licenses insurance companies and those who sell insurance, reviews rates and coverage forms, conducts audits, and sponsors programs that increase awareness of State laws.

Consumer Assistance Hotline:
1 (800) | website | other phone number

For seniors and others enrolled in Medicare, each state operates a State Health Insurance Assistance Program (SHIP) [State Brand]. This is a free health benefits counseling service for Medicare beneficiaries and their families or caregivers. Find your state’s SHIP at the number below or at https://www.shiptacenter.org/

State SHIP Program

Medicare beneficiaries also can contact Medicare directly at the following number:

Medicare 800-MEDICARE
Glossary of Terms

**Balance Billing:** When a provider, who isn’t in your plan’s network, charges more than your plan pays and bills you for the difference in addition to cost-sharing.

**Benefits:** The health care services a health plan covers. The plan’s documents define the benefits that it does and doesn’t cover.

**Claim:** A request for your health plan to pay for health care services. You or your health care provider submits to the claim.

**Coinsurance:** The percentage of the cost of a covered health care service you pay (20%, for example) after you've met your deductible.

- If you've met your deductible: You pay 20% of $100 or $20. The insurance company pays the rest.
- If you haven't met your deductible: You pay the full allowed amount, $100.

**Coordination of Benefits:** A way to figure out which plan pays first when two or more health plans are responsible to pay the same claim.

**Co-payments:** A fixed amount ($20, for example) you pay for a covered health care service after you've met your deductible.

- If you've met your deductible: You pay $20, usually at the time of the visit.
- If you haven't met your deductible: You pay $100, the full allowed amount for the visit.

Co-payments (sometimes called "co-pays") can vary within the same plan for different services, like drugs, lab tests, and visits to specialists.

**Cost-Sharing:** The share of costs for covered services that you pay yourself. This term generally includes deductibles, coinsurance, and co-payments. It doesn't include premiums, balance billing amounts for providers not in the network, or the cost of health care services the plan doesn’t cover.

**Deductible:** The amount you pay for covered health care services before your health plan starts to pay. If you have a $2,000 deductible, for example, you pay the first $2,000 of covered services in a plan year. After you've paid $2,000 of your own money for covered services, you usually pay only a co-payment or coinsurance for covered services for the rest of the plan year. Your plan pays the rest.

**Exclusions:** Health care services your health plan doesn’t cover. If you receive these services, you pay all of the costs.

**Network:** The facilities, providers, and suppliers your health plan has a contract with to provide health care services.

**Open Enrollment Period:** A time (once a year) when anyone can enroll in or change their health plan.

**Out-of-Pocket Costs:** Expenses for health care your health plan doesn’t pay. Out-of-pocket costs include deductibles, coinsurance, and co-payments for covered services plus all costs for services your health plan doesn’t cover.

**Out-of-Pocket Maximum/Limit:** The most you have to pay for covered services in a plan year. After you spend this amount on deductibles, co-payments, and coinsurance, your health plan pays all of the costs of covered services.

The out-of-pocket limit doesn't include your monthly premium. It also doesn't include anything you pay for services your plan doesn't cover.
Primary Care: Health services that include a range of prevention and wellness as well as treatments for common illnesses.

Primary Care Providers (PCP): Health care professionals (including doctors, nurses, nurse practitioners, and physician assistants) who manage your care. A PCP often maintains long-term relationships with you. She advises and treats you for a range of health-related issues. A PCP also may coordinate your care with specialists.

Prior Authorization: Approval from a health plan to get a service or fill a prescription. If your plan requires prior authorization and you don’t get it, the plan may not pay any of the costs.

Qualifying Event: A life change (for example, a marriage or a job change) that lets you enroll in or change your health plan before the next open enrollment period.

Referral: An order from your Primary Care Provider to see a specialist or get certain medical services. Many Health Maintenance Organizations (HMOs) require you to have a referral before they pay for health care from anyone other than your Primary Care Provider.

Self-Funded Health Plan: A type of plan where the employer itself collects premiums from enrollees and pays medical claims. Used by many large employers, the employers can contract with a third-party administrator to manage enrollment, process claims, and manage provider networks. Or, the employer can manage the plan itself.

Special Enrollment Period: A time when you can enroll in or change your health plan because of a qualifying event.

Third-Party Administrator: A company that reviews and pays claims for an employer’s self-funded health plan. May share a brand name with a health insurance company.

Urgent Care: Care for an illness, injury, or condition so serious that a reasonable person would seek care right away, but not so serious as to require emergency department care.
The Consumer Information (B) Subgroup of the Health Insurance and Managed Care (B) Committee met via conference call Jan. 7, 2020. The following Subgroup members participated: Angela Nelson, Chair (MO); Anthony L. Williams (AL); Weston Trexler (ID); Michelle Baldock and Eryn Krueger (IL); LeAnn Crow (KS); Judith Watters (ME); Mary Kwei (MD); Laura Arp and Martin Swanson (NE); Cuc Nguyen and Rebecca Ross (OK); Elizabeth Hart (PA); Gretchen Brodkorb and Jill Kruger (SD); Jennifer Ramcharan (TN); Tanji Northrup, Shelley Wiseman, Heidi Clausen and Jaakob Sundberg (UT); and Jennifer Stegall (WI). Also participating were: Chelsy Maller and Jacob Lauten (AK); Debra Judy (CO); Matthew Guy, Bryan Peters and Carolyn Diggs (FL); Cynthia Banks-Radke and Sonya Sellmeyer (IA); Sherri Mortensen-Brown (MN); Bob Williams (MS); Pam Koenig (MT); Tynesia Dorsey (OH); John Garrett (RI); Scott Helmcamp and Doug Danzeiser (TX); Michelle McNamee (VA); Todd Dixon (WA); and Dena Wildman and Joylynn Fix (WV).

1. Discussed the Consumer Guide, *Using Your Health Plan*

Ms. Nelson reviewed the plan of the Subgroup to produce a series of modules for consumer assistance. The one currently under development is to help consumer understand their health plans; the next would be to help consumers use their plans, including claims and appeals. She said she hopes to release the guide titled *Using Your Health Plan* as early as possible in the year. She asked Subgroup members to focus on the edits suggested by consumer representatives who had reviewed the latest draft.

The Subgroup discussed the section on different network types. It considered whether to list network types so that the more commonly used types are listed first.

Ms. Watters observed that the most common types in one state may not be the same in other states.

Ms. Nelson suggested that preferred provider organizations (PPOs), exclusive provider organizations (EPOs) and health maintenance organizations (HMOs) be listed first. Others agreed.

The Subgroup discussed the section on prescription drugs.

Kris Hathaway (America’s Health Insurance Plans—AHIP) suggested that the section reference the Summary of Benefits and Coverage (SBC), because that document describes whether a plan has a formulary. She also said the section should be clear that four formulary tiers is an example; plans could have more or fewer tiers.

The Subgroup discussed the section on coordination of benefits. Members discussed how commonly plans impose a surcharge when covering an enrollee’s spouse who could be covered by his or her own employer insurance plan.

Mr. Trexler pointed out that the presence or absence of a surcharge does not relate to coordination of benefits between two plans on enrollee is enrolled it. He suggested removing the reference to the surcharge and others agreed.

The Subgroup discussed the section on leaving a group health plan.

Ms. Watters said the federal Consolidated Omnibus Budget Reconciliation Act (COBRA) should not be the only option mentioned; individual market coverage should also be presented as an option for those leaving a group plan.

Mr. Swanson said it would also be worth mentioning the different continuation options available depending on the size of the employer. The Subgroup agreed that a few options should be referenced.

The Subgroup discussed circulating a revised version of the guide and considering it for adoption on its next call.

Having no further business, the Consumer Information (B) Subgroup adjourned.
The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met via conference call July 30, 2020. The following Working Group members participated: Marie Ganim, Chair (RI); Andrew R. Stolfi, Vice Chair, TK Keen, Dorothy Bean, Rick Barry and Tashia Sizemore (OR); Martin Swanson, Vice Chair, Bruce R. Ramge, Michael Muldoon, Tracy Burns, and Laura Arp (NE); Sarah Bailey, Jacob Lauten and Mayumi Gabor (AK); Anthony L. Williams, Yada Horace and Steve Ostlund (AL); Howard Liebers and Cheryl Wade (DC); Cynthia Banks Radke, Angela Burke Boston, Johanna Nagel and Sonya Sellmeyer (IA); Alex Peck and Claire Szpara (IN); Barbara Torkelson, Shannon Lloyd, Craig Van Aalst and Tate Flott (KS); Robert Wake, Marti Hooper and Keith Fougere (ME); Jessica Schrimpff, Teresa Kroll, Amy Hoyt, Cynthia Amann, Camille Anderson-Weddle and Christie Kincannon (MO); John Arnold, Ross Hartley, Chyrstal Bartuska and Johnny Palsgraaf (ND); Sarah Cahn and Maureen Belanger (NH); Philip Gennace and Chanell McDevitt (NJ); Paige Duhamel and Viara Janakieva (NM); Mark Garratt, Jeremy Christensen, David Cassetty and Jeremy Goldstone (NV); Lars Thorne, Karen M. Feather, Sandra Y. Ykema, Michael Humphreys, Richard L. Hendrickson, Shannen Logue and Katie Dzurec (PA); Raja Malkani, Luke Bellsnyder, R. Michael Markham, Carol Lo, David Bolduc, Kenisha Schuster, Leah Gillum and Chris Herrick (TX); Tanji Northrup, Heidi Clausen and Jaakob Sundberg (UT); Molly Nollette, Kimberly Tocco, Ali Butler, Mandy Weeks-Green, Pam Brannan, Jane Beyer, Candice Myrum and Sue Hedrick (WA); Julie Walsh, Diane Dambach, Barbara Belling, Nathaniel Houdek, Rebecca Rebolholz and Darcy Paskey (WI); and Joylynn Fix, Tonya Gillespie and Erin K. Hunter (WV). Also participating were: Taryn Lewis, Alan McClain and Melissa Vance (AR); Liane Kidoo (AZ); Lydia Wang, Bob Darnell, Annette Fortman, Lan Brown and David Noronha (CA); Debra Judy and Eric Unger (CO); Paul Lombardo, Jared Kosky and Aza Mosley (CT); Leslie Ledogar (DE); Ray Wegner, Bryan Peters, Matt Guy, Chris Struk, Toma Wilkerson and David Jones (FL); Teresa Winer (GA); Ian Robertson, Jason Asaeda, Arlene Ige and Mavis Ohikari (HI); Kathy McGill, Weston Trexler, Michele Mackenzie and Kristen Finau (ID); Michelle Baldock, Andi VanderKolk, Mike Teer, Kate Morthland, Ryan Gillespie, KC Stralka, Robert Plantholm and Lauren Peters (IL); Heather Quinn, Patrick Smith, Jill Mitchell, Sharon P. Clark and DJ Wasson (KY); Frank Opelka, Gayle Raby, Rachael Lundy-Davis and Richard Piazza (LA); Jackie Horigan (MA); Dytonia Reed, James Williams, Gia Wilkerson, Brad Boban, Adam Zimmerman, Ted Sines and Todd Switzer (MD); Parker Fisher, Chad Arnold, Kevin Dyke, Renee Campbell, Joseph Stoddard and Karen Dennis (MI); Grace Arnold, Sherri Mortensen-Brown, Galen Benshooft, Annelisa Steeber, Cam Jenkins, Adam Goldhammer and Peter Brickwedde (MN); Judy Newton (MS); Jeannie Keller (MT); Robert Croom and Kathy Shorrt (NC); Sylvia Lawson, Alison Gold and Patricia Swolak (NY); Kyla Dembowski, Dan Bradford, Meredith Craig, Laura Miller and Carrie Haughawout (OH); Cuc Nguyen, Lydia Shirley and Ron Kreiter (OK); Katrina Rodon, Joe Cregan, Katie Geer, Shari Miles and Michael Wise (SC); Jill Kruger, Gretchen Brodkorb and Candy Holbrook (SD); Brian Hoffmeister, Bill Huddleston and Rachel Jade-Rice (TN); Bob Grissom, Jackie Myers, Rebecca Nichols, Trish Todd and James Young (VA); Suzette Richards (VI); Jill Rickard, Christine Menard-O'Neil, Emily Brown, Anna Van Fleet, Marcia Violeta and Isabelle Turpin Keiser (VT); and Mavis Earnshaw, Denise Burke and Tana Howard (WY).

1. **Adopted its June 23 Minutes**

Ms. Northrup made a motion, seconded by Ms. Bailey, to adopt the Working Group’s June 23 minutes (Attachment Six-A). The motion passed unanimously.

2. **Heard a Presentation on Federal and State Regulation of Telehealth Coverage**

Randi Seigel (Manatt Health) gave a presentation on privacy requirements for telehealth communications under the Health Insurance Portability and Accountability Act of 1996 (HIPAA). She reviewed which HIPAA standards are required versus addressable, the flexibility established under the COVID-19 pandemic, and other considerations for covered entities in complying with privacy requirements.

3. **Heard Presentations on Telehealth Policies from Stakeholders**

Andrew Sperling (National Alliance on Mental Illness—NAMI) shared poll results and concerns from patients and mental health providers. Kate Berry (America’s Health Insurance Plans—AHIP) reviewed the growth in telehealth services, ongoing
challenges, and what the states can do to further promote telehealth. Stephanie Quinn (American Academy of Family Physicians—AAFP) discussed changes to provider workflows, regulatory flexibilities, and ongoing challenges, including lack of alignment across payers.

Ms. Duhamel asked about paid online talk therapy portals and whether insurance should be required to cover their services. Mr. Sperling said such portals can be helpful, but NAMI has quality concerns and would like to see insurance coverage to promote affordability as well as greater quality. Ms. Dzurec asked what cost saving levers are available by using telehealth. Ms. Berry said there are advantages for consumers from avoided travel and to the health care system from avoided in-person procedures that may not be necessary with timely remote care. Ms. Quinn said over time, staffing models could change based on telehealth and generate savings.

4. **Heard a Presentation on Cost Control, Payment Reform and the Pandemic**

Christopher F. Koller (Milbank Memorial Fund) presented on health care system strategies for cost control, and he suggested five areas in which state insurance regulators can incentivize and encourage greater health care system affordability. He highlighted multi-agency efforts in Colorado and Oregon to promote system affordability.

Health Insurance Commissioner Ganim described opportunities to address cost issues even as state insurance regulators work to put out the fires of the pandemic. Mr. Koller said state insurance regulators should have a long-term notion of where they are headed, which will likely include an environment of more consolidated providers. State insurance regulators may get pulled in to respond to these market changes and higher prices. Ms. Quinn agreed, and she noted that providers continue to feel pressure to join consolidated systems.

Having no further business, the Health Innovations (B) Working Group adjourned.
The Health Innovations (B) Working Group of the Health Insurance and Managed Care (B) Committee met via conference call June 23, 2020. The following Working Group members participated: Marie Ganim, Chair (RI); Martin Swanson, Vice Chair, and Laura Arp (NE); Andrew R. Stolfi, Vice Chair (OR); Sarah Bailey and Jacob Lauten (AK); Anthony L. Williams (AL); Howard Liebers (DC); Cynthia Banks Radke and Sonya Sellmeyer (IA); Julie Holmes and Tate Flott (KS); Carrie Couch, Jessica Schrimpfl, Michelle Vickers, Chlora Lindley-Myers, Amy Hoyt and Cynthia Amann (MO); John Arnold, Sara Gerving and Chrystl Bartuska (ND); Tyler Brannen and Maureen Belanger (NH); Philip Gennace and Chanell McDevitt (NJ); Brittany ODell, Paige Duhamel and Viara Ianakieva (NM); Jeremy Christensen and Jack Childress (NV); Sandra L. Ykema, Jessica K. Altman and Katie Dzurec (PA); Doug Danzeiser, Rachel Bowden and Kenisha Schuster (TX); Molly Nollette (WA); Jennifer Stegall, Diane Dambach, Barbara Belling, Mary Kay Rodriguez, Nathan Houdek, Jody Ullman, and Darcy Paskey (WI); and Joylynn Fix and Vanessa George (WV). Also participating were: Erin Klug and Mary Boatright (AZ); Debra Judy (CO); Chris Struk and Carolyn Diggs (FL); Ian Robertson, Arlene Ige and Mavis Okihara (HI); Kristen Finau (ID); Ryan Gillespie (IL); Claire Szpara and Alex Peck (IN); David Cooney (MD); Grace Arnold (MN); Jeannie Keller (MT); Rosemary Gillespie (NC); Marjorie Ellis (OH); Andrew Dvorine (SC); Jill Kruger, Gretchen Brodkorb and Candy Holbrook (SD); Shelley Wiseman (UT); Julie Blauvelt (VA); and Denise Burke and Tana Howard (WY).

1. Discussed the Regulation of Coverage for Telehealth Services

Health Insurance Commissioner Ganim introduced Joel Ario (Manatt Health) and Jared Augenstein (Manatt Health). Mr. Augenstein presented on state and federal law and regulatory actions related to telehealth. He showed the growth in states with telehealth private payor laws prior to the COVID-19 pandemic. He reviewed federal and state actions taken to expand access to telehealth during the pandemic.

Commissioner Stolfi described Oregon’s recent actions on telehealth and he observed that payment parity can be limited by state authority and disparate access to telecommunications technology is an issue. Mr. Swanson said Nebraska had not issued emergency orders, but the issuers stepped up themselves. He said some fraud issues were emerging. Ms. Arp added that provider groups are asking for extensions of relaxed telehealth policies and for reimbursement parity to be required for at least 12 months. She said stakeholders should be clear that states cannot relax requirements of the Health Insurance Portability and Accountability Act of 1996 (HIPAA).

Mr. Augenstein shared statistics on the utilization of telehealth during the pandemic. He described equity issues raised by telehealth and several other policy considerations for the states. He also outlined an array of policy levers that states and other policymakers could use to regulate telehealth, including coverage, originating and distant sites, eligible services and providers, eligible communications modes, utilization management, and networks.

Ms. Arnold said some insurance carriers have preferential contracts with telehealth providers that are distinct from the carrier’s contracts with other providers, which can make it difficult for traditional providers to engage in telehealth. She said Minnesota changed state law so that payment parity requirements are agnostic to the existence of a preferential contract between carriers and telehealth providers. She said carriers have not resisted this change.

Ms. Judy said preferential networks may also exist for dental care or preventive services. She questioned how network adequacy should be determined with prevalent telehealth, and she said Colorado’s law specifies that telehealth providers do not modify an issuer’s obligation to meet in-person network requirements. She also mentioned concerns about inequities in access.

Silvia Yee (Disability Rights Education and Defense Fund—DREDF) asked whether issuers offer help for people with disabilities who cannot utilize telehealth services without assistance. Mr. Augenstein said North Carolina allows providers to bill for telehealth, and it provides an evaluation and management code for assistive services in the patient’s home.
2. **Discussed Potential Topics for the Summer National Meeting**

Health Insurance Commissioner Ganim asked the Working Group which topics it should address at the Summer National Meeting. Because time was short, she encouraged Working Group members to submit ideas via e-mail.

Having no further business, the Health Innovations (B) Working Group adjourned.

© 2020 National Association of Insurance Commissioners
The Health Actuarial (B) Task Force met virtually Aug. 4, 2020. The following Task Force members participated: Todd E. Kiser, Chair, represented by Jaakob Sundberg (UT); Eric A. Cioppa, Vice Chair, represented by Marti Hooper (ME); Jim L. Ridling represented by Steve Ostlund (AL); Lori K. Wing-Heier represented by Jacob Lauten (AK); Elizabeth Perri (AS); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Dean L. Cameron represented by Weston Trexler (ID); Robert H. Muriel represented by Eric Anderson (IL); Stephen W. Robertson represented by Karl Knable (IN); Vicki Schmidt represented by Nicole Boyd (KS); Chlora Lindley-Meyers represented by William Leung (MO); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Mike Causey represented by Kevin Conley (NC); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Tracie Gray (PA); Kent Sullivan represented by Mike Boerner (TX); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. **Adopted its May 27, April 23 and Feb. 14 Minutes**

During its April 23 meeting, the Task Force discussed issues related to the impact of COVID-19 on the pricing and regulatory review of 2021 (ACA-compliant health insurance policies.

During its Feb. 14 meeting, the Task Force took the following action: 1) adopted its 2019 Fall National Meeting minutes; and 2) adopted changes to the annual financial statement Long-Term Care Insurance Experience Reporting Forms as forwarded by the Long-Term Care Actuarial (B) Working Group.

Mr. Lombardo made a motion, seconded by Ms. Miller, to adopt the Task Force’s May 27 (Attachment One), April 23 (Attachment Two) and Feb. 14 (Attachment Three) minutes. The motion passed unanimously.

2. **Heard an Update from the SOA on Health Insurance Research**

Dale Hall (Society of Actuaries—SOA) gave an update (Attachment Four) on recent SOA health insurance research.

3. **Adopted the Report of the Long-Term Care Actuarial (B) Working Group**

Mr. Kupferman said the Long-Term Care Actuarial (B) Working Group met Aug. 4 and took the following action: 1) adopted the reports of the Long-Term Care Pricing (B) Subgroup and the Long-Term Care Valuation (B) Subgroup; 2) heard an update from the American Academy of Actuaries (Academy) regarding its Long-Term Care Valuation Work Group’s development of mortality and lapse valuation tables for long-term care insurance (LTCI); and 3) heard an update from the SOA on recent work on the SOA’s Long-Term Care Experience Study.

Mr. Kupferman said revisions to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement and instructions for the revised Forms have been adopted by the Blanks (E) Working Group, and will be effective for the 2020 reporting year annual financial statement. He said he is confident the revised Forms will help state insurance regulators better answer LTCI questions from policyholders and media.

Mr. Kupferman made a motion, seconded by Mr. Ostlund, to adopt the report of the Long-Term Care Actuarial (B) Working Group (Attachment Five). The motion passed unanimously.
4. Received the Report of the Health Care Reform Actuarial (B) Working Group

Mr. Shea said the Health Care Reform Actuarial (B) Working Group has not met since the 2019 Fall National Meeting.

Brent Plemons (federal Center for Consumer Information and Insurance Oversight—CCIIO) gave an update on ACA rate filings for the 2021 plan year. He asked state insurance regulators to make sure their insurers are not filing rates using retired Health Insurance Oversight System (HIOS) plan IDs for rate submissions. He said an issuer should not retire a plan and then present a new plan, even if it is the same metal level as the retired plan, using the HIOS ID associated with the retired plan. He said a new HIOS ID should always be used.

Mr. Plemons said the CCIIO has observed occurrences of unintentional market withdrawals. He said each issuer should have renewing plans in the system, and an issuer that does not will be classified as withdrawing from the market. He said guidance on this topic can be found on page 11 of the Uniform Rate Review Template (URRT) instructions.

Ms. Hooper said the CCIIO recently issued guidance on premium holidays and that the Working Group may discuss this guidance during a future conference call.

5. Heard an Update from the Academy Council on Professionalism

Shawna Ackerman (California Earthquake Authority—CEA), Kathleen Riley (Actuarial Standards Board—ASB), and Godfrey Perrott (Actuarial Board for Counseling and Discipline—ABCD) gave a presentation (Attachment Six) on recent ASB and ABCD activities.

6. Heard an Update from the Academy Health Practice Council

Barb Klever (Blue Cross and Blue Shield Association—BCBSA) gave an update (Attachment Seven) on recent Academy Health Practice Council activities and publications.

Having no further business, the Health Actuarial (B) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\HA\HATF 08-04-20.docx
The Health Actuarial (B) Task Force met via conference call May 27, 2020. The following Task Force members participated: Todd E. Kiser, Chair, represented by Jaakob Sundberg (UT); Eric A. Cioppa, Vice Chair, represented by Marti Hooper (ME); Lori K. Wing-Heier represented by Jacob Lauten (AK); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Paul Lombardo (CT); Dean L. Cameron represented by Weston Trexler (ID); Robert H. Muriel represented by Eric Anderson (IL); Stephen W. Robertson represented by Karl Knable (IN); Chlor Lindley-Myers (MO): Mike Causey represented by Ted Hamby (NC); Bruce R. Ramge represented by Rhonda Ahrens (NE); Marlene Caride represented by Seong-min Eom (NJ); Jillian Froment represented by Laura Miller (OH); Jessica K. Altman represented by Tracie Gray (PA); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. Adopted a 2021 ACA Rates COVID-19 Guideline

Mr. Sundberg presented comment letters from America’s Health Insurance Plans (AHIP) (Attachment One-A), the Blue Cross Blue Shield Association (BCBSA) (Attachment One-B), and Risk & Regulatory Consulting LLC (RRC) (Attachment One-C) that were submitted in response to the Task Force’s public exposure of a draft guideline that state insurance regulators may use to assist the states in assessing the impact of COVID-19 on 2021 federal Affordable Care Act (ACA) health insurance rates. He said the guideline is not intended to be prescriptive and is not proposed as a requirement, but is offered by the Task Force only as a guidance document.

Ray Nelson (AHIP) gave an overview of AHIP’s comment letter. He said AHIP member companies agree that the guideline may be helpful, but its use should not be mandatory. He suggested that wording be added to the guideline to stress that it may be used as a guide, but it is not required as a checklist for required information. Mr. Trexler said individual states should be given the discretion and flexibility to use the guideline as they see fit, including making it a requirement. The Task Force decided that the language included on the Overview & Contents tab, which indicates that the guideline is not prescriptive, but a state may require its use, is sufficient. The Task Force agreed to make changes related to mislabeled items and add Milliman’s 2021 COVID Impact document to the Table of Actuarial Resources tab as noted in the comment letter.

Barb Klever (BCSA) gave an overview of the BCBSA’s comment letter.

Becky Sheppard (RRC) gave an overview of RRC’s comment letter. The Task Force agreed to make changes related to making the Table of Actuarial Resources tab a standalone document, additions to the Impact to Risk Adjustment 2021 tab, and fixing various typographical errors as noted in the comment letter.

Mr. Kupferman made a motion, seconded by Mr. Ostlund, to adopt the guideline with the changes described above. Mr. Sundberg said the guideline will be forwarded to the Health Insurance and Managed Care (B) Committee for its consideration.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Re: AHIP’s Comments on the May 2020 Exposure of ACA 2021 COVID-19 Rate Review Guideline

Dear Mr. Sundberg:

On behalf of America’s Health Insurance Plans (AHIP),1 we appreciate the opportunity to provide comments on behalf of our member companies regarding the draft ACA 2021 Coronavirus (“COVID-19”) Rate Review Guideline excel template.

There is significant uncertainty around the potential impacts COVID-19 may have on 2021 health care costs, creating a unique challenge for health insurance providers and regulators as they work to finalize 2021 premiums. We appreciate NAIC’s efforts to provide state regulators with an optional resource to assist in assessing the impact of COVID-19 on 2021 ACA premiums. This tool provides a listing of actuarial resources that can be helpful to carriers and regulators when considering the impact of COVID-19 on 2021 ACA rates, and provides a common format for measuring the impact of numerous factors on proposed rates.

We appreciate the importance of providing optional tools to help regulators and health insurance providers account for the various impacts COVID may have for 2021 rates. However, we recommend the template be used as an optional resource only and not be adopted as a required tool for finalizing rates. We are concerned a standard template is overly prescriptive and the fields are too granular. As a result, requiring such a template could limit the ability of actuaries to adopt an actuarially sound method of estimating COVID cost impacts based on their analyses. At this point in the rate filing and approval timeline, requiring use of the template could create additional challenges for issuers. We are specifically concerned about the following:

1 AHIP is the national association whose members provide coverage for health care and related services to hundreds of millions of Americans every day. Through these offerings, we improve and protect the health and financial security of consumers, families, businesses, communities and the nation. We are committed to market-based solutions and public-private partnerships that improve affordability, value, access, and well-being for consumers. Visit www.ahip.org for more information.
May 22, 2020

- A “one-size-fits-all” template limits the ability of carriers to appropriately assess and price for the potential impacts of COVID. Carriers must develop actuarially-sound rates but do so through different assessments of underlying assumptions and actuarial pricing methods, which in many cases do not fit into the structure of the Excel template.

- The level of granularity suggested by the model does not reflect the various methods used by carriers when developing rates. Actual carrier projections are based on higher level aggregate claims analysis than what is contained in the template. Furthermore, plan actuaries and epidemiologists are unlikely to have the information at the level included in the template.

- The template does not allow issuers to add, modify, or omit COVID-related cost factors to reflect their analyses of projected impacts.

- The level of detail would be onerous for carriers if a state required completion of the template, especially at this point in the rate filing timeline with many initial filing deadlines past or quickly approaching.

Thus, we recommend the Task Force emphasize the template is intended as an optional resource for both carriers and regulatory actuaries and not a prescriptive data collection tool to be mandated by states. We suggest that the spreadsheet be marked as “For Voluntary Use By Carriers” and that the following language be added to the purpose of the template:

This template is not intended to be, and should not be used as, a checklist for rate filings. States should have the option to use this document as a guide only, and should rely in the first instance on the assumptions and underlying requests from issuers. Issuers should describe the basis for the COVID impact in their rate development in whatever level of detail is reasonable for the rate action being requested and should not be required to provide data for elements not material to that issuer.

We recognize that some states are already pursuing state-specific guidance on COVID cost assumptions. We recommend states considering such an approach seek input from their carriers before finalizing guidance.

In addition to the primary concerns discussed above, we have the following detailed comments and questions regarding the spreadsheet:

- The data provided in the spreadsheet—particularly in the “COVID-19 Rate & Factor Impacts” and “COVID Issuer Impact estimates” tabs—is proprietary carrier information that should remain confidential. The “Overview and Contents” tab of the spreadsheet should include a statement that this data is proprietary and will remain confidential and protected from open record disclosures.

- The Premium PMPM calculations in cells R25:R27 on tab “COVID-19 Rate & Factor Impact” appear to hard code an 80% loss ratio. If 80% is not the target loss ratio, are carriers to revise the formula to be consistent with their actual premium development or use the default 80%?
May 22, 2020
Page 3

- Cell B15 on the same tab notes additional scenarios than ‘Most-Likely’ can be added to the spreadsheet. We recommend the template allow for more updated scenarios to be added at a later date as the final pricing scenario will include more updated information and modeling that what was included in the initial filing.
- The factor support tabs for impacts (12), (13) and (14) appear to be mis-numbered in cell B2 on each tab’s sheet.
- The Milliman 2021 COVID Impact should be added to the Table of Actuarial resources since many issuers in the market engage Milliman for pricing work. Thus, the inclusion of this resource will assist in the credibility of the estimates for issuers who utilize Milliman: https://www.milliman.com/en/insight/COVID19-Considerations-for-commercial-health-insurance-rates-in-2021-and-beyond

We appreciate the opportunity to respond to your request for comments. If you have any questions, or would like to discuss any of these comments, please contact me at (501) 333-2621 or contact AHIP consultant Ray Nelson at (rnelson@tripluservices.com).

Sincerely,

Bob Ridgeway

RE: Health Actuarial Task Force COVID-19 Rate Review Guideline Exposure

Dear Commissioner Kiser:

The Blue Cross Blue Shield Association (BCBSA) appreciates the opportunity to provide comments on the Health Actuarial Task Force COVID-19 Rate Review Guideline Exposure posted on May 14, 2020.

BCBSA is a national federation of 36 independent, community-based and locally operated Blue Cross and Blue Shield companies (Plans) that collectively provide healthcare coverage for one in three Americans. For 90 years, Blue Cross and Blue Shield companies have offered quality healthcare coverage in all markets across America – serving those who purchase coverage on their own as well as those who obtain coverage through an employer, Medicare and Medicaid.

The Rate Review Guideline Exposure is an excel template that state DOIs may use to assist in assessing the impact of COVID-19 on 2021 ACA rates. The template includes a resource list and a list of assumptions to be considered in developing the impact of COVID-19 on rates.

BCBSA believes the template could be useful to promote a common understanding between issuers and regulators on the assumptions to be considered in rate development for the COVID-19 impact. However, BCBSA recommends that the template be used only as a guide for issuer and regulatory actuaries on the assumptions related to COVID-19 and not as a prescriptive data collection tool.

We are concerned that the tabs with the rate and factor impacts and projected 2021 claims experience are too detailed and prescriptive for the kinds of projections actuaries could reliably make right now. The template assumes a level of detail in projections that can’t be supported by claims data or scientific studies by the time issuers need to submit their 2021 ACA rate filings. For example, the tab on projected 2021 claims experience includes providing overall claims impact for sixteen assumptions related to COVID-19. This display makes it appear that these factors do not interact with one another and that issuers know the COVID-19 impact to that level of precision. We note that requiring issuers to provide assumptions at this granular level may result in inconsistent responses across carriers because of differing actuarial methods to pricing.
and not due to true actuarial impacts. This, in turn, would devalue one of the stated goals of assessing the impact of COVID-19.

We recommend that regulators provide flexibility in how issuers document and submit the factors related to COVID-19. Issuers have been working on rate filings and may have laid out their assumptions in a different manner than presented in the template. Requiring issuers to fill out the template in a prescriptive manner will add to the administrative burden and may not add value to the process. A more practical solution for the NAIC would be to require commentary in the actuarial memorandum regarding how COVID-19 was recognized in the rating. It would be reasonable to require issuers to provide an explanation within the rate filing of impact of COVID-19 on the overall rate change and the documentation of assumptions related to COVID-19.

In addition, BCBSA recommends that issuers only be required to file one set of rates and not be required to file dual sets of rates – with and without COVID-19. As mentioned above, we think it is reasonable for the rate filing to contain information on the overall impact of COVID-19 on the rates. However, we do not believe that requiring issuers to submit a full rate filing without COVID-19 is useful. We note that a separate rate filing creates administrative burden for rates that do not reflect the reality of the COVID-19 pandemic.

We commend the Task Force for compiling the resources list and the list of assumptions. We note that the resources available will likely continue to evolve over the summer, and both issuer and regulatory actuaries will need to keep up-to-date on the changing situation.

We appreciate your consideration of our comments. If you have any questions or want additional information, please contact Barb Klever at barbara.klever@bcbsa.com.

Sincerely,

Barbara Klever, FSA, MAAA
Senior Actuary, Policy
Memo

To: Eric King, NAIC and Todd E. Kiser, HATF Chair, Commissioner Utah Insurance Department
From: Tricia Matson, Partner and Becky Sheppard, Senior Associate & Actuary
Date: May 22, 2020
Subject: RRC comments regarding the draft template that state DOIs may use to assist in assessing the impact of COVID-19 on 2021 ACA rates

Background

The April 23rd, 2020 Health Actuarial (B) Task Force (HATF) meeting included multiple presentations regarding the potential impact of the ongoing COVID-19 pandemic on the health insurance marketplace. The meeting provided an opportunity for members of HATF, interested regulators, and Interested Parties to gain perspective on considerations that may impact the 2021 Patient Protection and Affordable Care Act (ACA) rate review, and ask questions. Following that meeting, HATF sent out an Excel template titled “ACA 2021 Coronavirus Rate Review Guideline – May 15th.xlsx” (the Guideline) which contained an overview of considerations regarding COVID-19 that may impact the review of 2021 rates. The Guideline is not prescriptive but rather provides potential considerations and possible resources. The Guideline does NOT include estimate values or impacts.

RRC appreciates the opportunity to offer our comments. Should you have any questions, we would be glad to discuss our comments with you and the HATF members.

RRC Comments

- Overall comments:
  - We appreciate that HATF quickly compiled these comprehensive guidelines and feel that they will be a useful tool in preparation for ACA 2021 rate review. The pace and magnitude with which the COVID-19 pandemic is evolving can make it difficult to have timely resources and we appreciate that HATF made the necessary resources available.
  - We agree with the approach of not including actual values or ranges in the guidelines since there is a great deal of uncertainty and the results may have wide variation across issuers.

- Regarding the “Table of Actuarial Resources” tab
  - Given that these resources will likely be evolving during the rate review cycle, we believe it may be beneficial to use this tab as a standalone document that could be updated more frequently.
  - It is unclear whether the intent is for the “Information Contained in Resource” column to be fully populated. It may be helpful and time-saving to know what type of information is in the resource, so we would recommend that if possible.
Regarding the “COVID-19 Rate & Factor Impact” tab
  o It may be helpful to add a cell for the Issuer to describe the “Most-Likely” scenario assumption. For example, they may say “Assumes second wave occurs in 2Q2021 and no vaccine in 2021.”
  o It may be helpful to add formulas to calculate the “COVID-19 impact” in the detailed rate components sections so that reviewers can quickly identify which components had the biggest change.

Regarding the “COVID Issuer Impact Estimates” tab
  o We believe that it may be beneficial to state on this spreadsheet the inherent assumption that the impact for each potential COVID-19 item would be the same at the market level (or that variations by metal level/plan design will be consolidated on this tab).
  o This tab could be quite time consuming for an issuer and reviewer since the results may not align with the Unified Rate Review Template (URRT) or pricing process so we strongly agree with not making these Guidelines prescriptive.
  o We believe that it may be helpful to ask each Issuer to explain how they are defining COVID-19 claims and claimants. For example, is the Issuer using the CPT code 87635 (which was available beginning March 13, 2020) or some other methodology to identify COVID-19 claims? Testing claims should not be used to identify a COVID-19 claimant unless the corresponding lab data confirms the diagnosis. This could be collected in a cell on this tab.

Regarding the detailed COVID-19 Factors Support tabs:
  o On the “(1) COVID Treatment Assumptions” tab, it may be helpful to add a calculation of the percentage in each category based on the counts entered in column C so that reviewers can easily compare the percentages across issuers who may have different counts.
  o On the “(4) Conditions Caused by COVID” tab, an additional item that may be helpful to include is the impact from COVID-19 on existing underlying conditions (for example diabetes, obesity, and heart disease). These co-morbidities can have a long term health impact.
  o We observed minor typographical errors on tab “(6) Pop Movements & Morbidity” (the cell B4 title is incorrect and cell B7 should say “who” rather than “eho”).
  o We observed minor typographical errors on tabs (7) through (11) (cell B4 title is missing).
  o Regarding the “(16) Risk Adjustment” tab, some additional items that may be helpful to include are:
    ▪ How COVID-19 claims will be valued in the ACA risk adjustment model (if assumed 2021 cases actually occur). Will there be a separate COVID-19 HCC or will existing HCCs be utilized.
    ▪ Whether business/provider interruptions impact the 2019 risk adjustment data collections (CMS has allowed an additional 2 weeks), and therefore require different projection assumptions than prior years.
    ▪ Whether changes in the risk pool in 2020 remain in 2021 and, if so, whether that impacts the 2021 Risk Adjustment.

Other comments:
  o The Task Force may want to consider structuring requests for very granular claim impact analyses such that each item provided by the issuer is mutually exclusive. For example, an
issuer may have permanent network changes because a provider goes out of business which
would be a “Provider Network Disruption” and that could also cause an impact to the “Area
Factor Mix” if the removal of that provider impacts the relative cost. We recommend adding
a note in the Guidelines that states some of the COVID-19 considerations may overlap.

o The Task Force may want to consider including in the guidance that some assumptions will be
more or less difficult to be measured in the future. For example, an assumption about when
a vaccine is available, when a second wave occurs, or the distribution of COVID-19 cases by
highest level of treatment can be validated, at least in part, by the future data. However,
other items like how much pent-up demand returns, the long term impacts of COVID-
19/complications, and general morbidity assumptions will be harder to attribute to COVID-19
and measure.

o Provider risk sharing arrangements have led to some anomalies in 2020 (payers making early
payments to providers, etc.). We recommend adding a note on the “(9) Provider NW
Disruption” tab to state that risk sharing arrangements impacted by COVID-19 should be
considered to the extent they are expected or not expected to occur in 2021 and may have
an impact on total claim payment (i.e. if it’s not just timing).
The Health Actuarial (B) Task Force met via conference call April 23, 2020. The following Task Force members participated:

Todd E. Kiser, Chair, represented by Jaakob Sundberg (UT); Eric A. Cioppa, Vice Chair, represented by Marti Hooper (ME); Lori K. Wing-Heier represented by Jacob Lauten (AK); Jim L. Ridling represented by Steve Ostlund (AL); Ricardo Lara represented by Perry Kupferman (CA); Michael Conway (CO); Andrew N. Mais represented by Paul Lombardo (CT); Dean L. Cameron represented by Weston Trexler (ID); Robert H. Muriel represented by Eric Anderson (IL); Vicki Schmidt represented by Nicole Boyd (KS); Chlora Lindley-Myers (MO); Mike Causey represented by David Yetter (NC); Bruce R. Ramge represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Tracie Gray (PA); Kent Sullivan represented by Raja Malkani (TX); Scott A. White represented by David Shea (VA); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. Discussed the Impact of COVID-19 on 2021 ACA Rates

Mr. Sundberg said the Task Force will hear presentations on factors arising from COVID-19 testing and treatment that may affect the pricing of 2021 federal Affordable Care Act (ACA) health insurance policies.

a. Academy

Cori Uccello (American Academy of Actuaries—Academy) gave a presentation (Attachment Two-A) on the effects that COVID-19 may have on 2020 claims experience, changes in enrollment in various health insurance markets, 2021 premium development, and 2021 rate filing deadlines.

Mr. Sundberg asked if the economic downturn and its impact on small businesses may create anti-selection in the small group market or have effects on the individual market if small employers direct employees to obtain individual or Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA) coverage.

Ms. Uccello said she is not sure, but Small Business Administration loans that are part of the federal Coronavirus Aid, Relief, and Economic Security (CARES) Act provide funds for small businesses to continue payment of small group insurance premiums.

Mr. Shea said employees who lose small group coverage may experience financial hardship when presented with the cost of individual market or COBRA coverage.

b. Oliver Wyman

Kurt Giesa (Oliver Wyman) gave a presentation (Attachment Two-B) on behalf of the Blue Cross and Blue Shield Association (BCBSA) related to health plans’ pricing for COVID-19.

Commissioner Conway said he presumes that the Medicare and Medicaid markets will experience greater COVID-19 impacts than commercial markets, and he asked Mr. Giesa if the modeling of this using state-level data has begun.

Mr. Giesa confirmed that work has begun on this, and he agreed with Commissioner Conway’s presumption.

Mr. Sundberg asked if insurers with knowledge of each other’s COVID-19-related pricing assumptions before filing rates will enhance pricing accuracy.

Mr. Giesa said there are advantages and disadvantages to this approach, but he is unable to answer the question.
c. Georgetown University

Justin Giovannelli (Georgetown University) gave a presentation (Attachment Two-C) on behalf of the NAIC consumer representatives regarding their concerns related to the impact of COVID-19 on state insurance markets.

Mr. Sundberg said if a multiple-scenario, multiple-filing system is used, there will still be uncertainties associated with whichever scenario is chosen.

Mr. Giovannelli said the later that the decision is made, the less that uncertainty will be present.

Mr. Muldoon said the Nebraska Department of Insurance supports insurers making a single rate filing that reflects scenarios with no, low, medium and high COVID-19 incidence. He said he does not understand why separate rate filings with each scenario being approved and implemented at an insurer’s discretion will be necessary, and he believes this may be burdensome. He stated that the date for final rate approval would need to be later than the Aug. 19 date currently prescribed by the federal Centers for Medicare & Medicaid Services (CMS) in order for this plan to be feasible.

Director Lindley-Meyers and Mr. Shea agreed that the date of Aug. 19 will need to be extended for a multiple-scenario system to work.

d. AHIP

Commissioner Conway asked if it will enhance pricing accuracy if insurers can know each other’s COVID-19-related pricing assumptions before filing rates.

Ms. Thornton said she will present this question to AHIP member companies, and she has concerns about competitive issues that may arise if this is allowed.

e. SOA, Lewis & Ellis and Axene Health Partners

R. Dale Hall (Society of Actuaries—SOA), Dave Dillon (Lewis & Ellis Inc.) and Greg Fann (Axene Health Partners) gave a presentation (Attachment Two-E) on the SOA’s COVID-19 research and its impact on 2021 pricing.

Having no further business, the Health Actuarial (B) Task Force adjourned.
NAIC Health Actuarial Task Force
April 23, 2020

Comments by Cori Uccello, Senior Health Fellow, American Academy of Actuaries

**2020 Claims Experience**

- COVID-19 is resulting in high-cost hospital utilization. These costs can be significant.
- Because of social distancing (and to a lesser extent freeing up space for COVID-19 patients), utilization of lower cost services such as office visits has declined dramatically. In addition, non-emergency hospital services, including high revenue producing elective surgeries, have also declined.
- There is uncertainty as to the net effect on 2020 claims (could be higher or lower total costs than expected).
- The net effect depends in part on whether deferred services are provided later in 2020, are delayed to 2021, or avoided altogether. Which in turn depends on if there is another wave of the outbreak this year, or perhaps rather how severe the next outbreak is.
- Cost sharing for COVID-19 testing and related services is being waived. And some carriers are waiving cost sharing for COVID-19 treatments as well. But it’s not necessarily clear what services qualify for cost-sharing waivers; depends on how terms are defined. Cost-sharing waivers are probably a less important driver of claims compared to the degree of deferred services, but they will still have an effect.
- Expanded availability of telehealth services is filling in some of the gaps in office visits. But many services can’t be provided through telemedicine, especially those elective surgeries.
- Some carriers are advancing payments to providers, typically on a month-to-month basis, with reconciliation. This will likely have only a minor effect on 2020 plan costs and shouldn’t affect 2021 premium development. In other words these advanced payments address providers’ short-term cash flow concerns but are not meant to act as larger or longer-term loans.
- Prescription drug spending is probably the least affected health spending component, at least for now. Drug spending could decrease if people can’t afford their prescriptions due to loss of income. On the other hand, prescription drug spending could increase if and when there are new COVID-19 drug therapies and/or a vaccine become available.

**The economic effects of the outbreak are resulting in changes in insurance enrollment.**

**Enrollment changes in the individual market**

- Some individuals could drop coverage, even if coverage is subsidized, if they can no longer pay premiums. Insurers already provide long grace periods for subsidized enrollees and many are also extending grace periods for unsubsidized enrollees, either voluntarily or due to state requirements. Although important to help enrollees stay covered, long grace periods could expose insurers to more adverse selection risk. On the other hand, previously uninsured individuals have enrolled during special enrollment periods, where available. New enrollees could include healthy individuals who now see more value in being covered.
- New enrollees could also enter the individual market upon loss of employer coverage. Again, there is potential adverse selection risk, offset in part if individuals are subsidy eligible. But subsidy eligibility depends on annual income, as opposed to Medicaid, which determines eligibility on a monthly basis. COBRA experience during the great recession could provide
some insights on the potential for adverse selection. But again, it’s possible that even those not eligible for subsidies see value in obtaining coverage, which could mitigate adverse selection.

- One aspect of enrollment uncertainty is the extent to which there will be efforts to facilitate workers and their families keeping employer coverage, such as through COBRA premium subsidies.
- The number and risk profile of new enrollees could also depend on whether the state has expanded Medicaid. It may be more difficult for individuals losing jobs to be eligible for Medicaid in non-expansion states, leaving the individual market as the only available option.

**Enrollment changes in the small group market**

- Enrollment in the small group market could decline due to employers going out of business, small employers dropping coverage, and partial layoffs.
- Small employers considering whether to keep or drop coverage could tend to keep coverage if they thought they or a family member (or perhaps other workers) have health care needs. This would tend to increase morbidity. In past recessions, some insurers saw morbidity increases in the small group market along with enrollment declines. But again, this could be a different situation as there may be a greater recognition of the value of coverage, regardless of health status.

**2021 premium development**

- Current uncertainty regarding COVID-19 per case treatment costs.
- Providers, especially hospitals, may have success negotiating (and renegotiating) higher payments from payers (depending in part on what federal relief they receive). Some increases in payment may be temporary in nature, thereby affecting 2021 costs only minimally.
- Services deferred during 2020 could be performed in 2021. Also, because some essential services are also being deferred, individuals with chronic conditions could worsen, resulting in higher future costs.
- Costs of new treatment therapies, antibody tests, and/or vaccines need to be considered for 2021.
- With the increase of telehealth being used to fill some gaps in 2020, there is a question of whether that increase will continue to replace certain office visits or whether treatment patterns will return to pre-COVID trends. [Telemedicine could have lower unit costs than office visits, but a sustained shift to telemedicine could result in telemedicine providers pushing for higher prices. Could also increase utilization.]
- When developing 2021 rates, carriers will run multiple scenarios involving different assumptions on whether new COVID waves will emerge in 2021, the degree of deferred services, the amount of testing (including antibody testing), the availability of vaccines, seasonality, etc. to inform their premium development.
- Greater degrees of uncertainty could lead to more conservative assumptions and risk margins.

**2021 Rate Filing Deadlines**

- More information regarding COVID-19 claims, service deferrals, new enrollment, and risk pool profiles is becoming available every day.
- Allowing carriers to revise initial filings and delaying final filings as much as possible would allow carriers to incorporate the latest information available.
Other Issues
- If claims in 2020 are much below expectations, premium rebates may be required under the MLR. As a reminder, the MLR calculation is done as a 3-year average. Also, the MLR is one-sided; carriers do not receive payments if claims are much higher than 2020 expectations.
- COVID-19 is not a factor in the risk adjustment formula.
- Changes to federal and state rules implemented in reaction to COVID-19 have increased administrative burden, especially for carriers that need to adhere to different rules among states.
- It’s appropriate for regulators to consider the relationship between changes in risk-based capital and profit margins in rate filings.
- 1332 waivers could be affected. For instance, some states fund their reinsurance program through insurer assessments, and these assessments fall primarily on group insurance. The economic downturn could result in declines in group market enrollment and an increase in individual market enrollment. This could lead to a decrease in reinsurance funding with a likely increase in reinsurance claims. For states that are allowed to retrospectively adjust the coinsurance or other reinsurance program parameters to either achieve a specified cost to the state (e.g., $50M) or so that the state’s cost matches the assessments collected, reinsurance payments would go down and carriers would therefore bear more of the risk.
HEALTH PLANS PRICING FOR COVID-19

An unprecedented challenge

April 23, 2020

Kurt Gossa, FSA, MAIA
Marc Lembright, FSA, MAIA

THE CHALLENGE FOR PRICING ACTUARIES

Pricing for COVID-19 will be more difficult than pricing the early years of the ACA.

Key questions:
- How many will be infected?
- What services will be required for those infected, at what cost?
- How much and what type of care will be delayed and how much forgone – over what period of time and with what consequences?
- Impact on risk-adjusted markets?
- Timing and cost of a vaccine?
- Impact of economic consequences?

Answers depend upon:
- Public policy – reopening the economy
- Individual behaviors
- Governmental actions
- Provider policies and capacity
- Local conditions

MODELING THE DIRECT COSTS OF TREATING COVID-19

Uncertainty around modeling the cost of COVID-19:
- Ultimate infection rates and percent treated are uncertain – estimate ranging from less than 1% to more than 50%
- What services will those who are infected require?
- Cost of care depends on patient’s market (Medicare, Medicaid, commercial) and health plan’s contracts (DRG vs per diem)
- Long-term costs of COVID-19 are not well understood
- Timing and cost of testing and effective treatments, uncertain at this time

Assumed utilization patterns in treating COVID-19:

<table>
<thead>
<tr>
<th></th>
<th>Treated</th>
<th>Untreated</th>

<td>Inpatient</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Outpatient</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Not Treated</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

MODELING THE IMPACT OF DELAYED AND DEFERRED CARE DUE TO COVID-19

Uncertainty around modeling cost offsets:
- Forgone and delayed care is occurring.

Complicating factors:
- Second wave – geographic variation in size and timing of the wave
- Public willingness to seek care
- Health status after delays
- Provider capacity and pricing in recovery
- Effective treatment – when

The cost of COVID-19 over time:

A portion of this delayed care will return, and depending on timing, health plans may need to build it into their pricing for 2021.

Qualifications, Assumptions and Limiting Conditions

This report has been prepared by the authors in the course of their professional duties. The report is based on the best available information and analysis. The authors have made every effort to ensure the accuracy and completeness of the report. However, the authors do not guarantee the accuracy of the information contained herein.

The opinions expressed in this report are the authors' personal opinions and do not necessarily reflect the views of NAIC or any of its members. No part of this report may be reproduced or transmitted in any form without the written consent of the authors.

The authors of this report are members of the American Academy of Actuaries and meet the academy's qualifications standards for performing this work.

CONSIDERATIONS

1. **Filing deadlines**
   - Allowing health plans to file premiums with the most up-to-date information available would be helpful to them in navigating through this time of unprecedented uncertainty and in maintaining stable markets.

2. **MLR**
   - The MLR requirements provide a limit on health plans' profits, but make it difficult for health plans to rebuild surplus once it is depleted.

3. **Capital**
   - Health plans’ capital is essential to protect the plans, their customers, and providers from the risk of unprofitable claims and potential insolvency.

4. **2021 premiums**
   - Health plans are in the process of developing premiums for 2021. They and their regulators will have to work in partnership to serve their customers and the public.

FROM THE NAIC CONSUMER REPRESENTATIVES

To: Health Actuarial (B) Task Force
Eric King
Date: April 23, 2020
Re: Impact of COVID-19 on State Insurance Markets

As NAIC consumer representatives, we share your concerns about the impact of the COVID-19 pandemic on patients, insurers, the health care system, and the economy. The crisis has compromised the health, safety, and well-being of millions of Americans, and we are particularly concerned about those who have lost their jobs and may be uninsured at a moment when their health could be at grave risk.

This period of great uncertainty is affecting all NAIC stakeholders, and we are grateful to the members of the Health Actuarial (B) Task Force (HATF) for addressing the impact of COVID-19. To that end, we write to provide resources on projected costs of COVID-19 and two recommendations for the 2021 rate filing process.

Projected Costs of COVID-19

The costs of COVID-19 testing and treatment are expected to be billions of dollars, but there is extreme variation in estimates due to uncertainty about the extent of the crisis. Key factors include the severity of the outbreak, reduced costs as a result of many procedures and services being cancelled, pent-up demand for procedures in 2021, a transition to telehealth services, the cost of a future vaccine once developed, and longer-term effects on network dynamics. Although projections necessarily will be refined as more information becomes available, we hope this compilation of resources is helpful.

- **How Health Costs Might Change with COVID-19.** The Kaiser Family Foundation estimates that about 15 percent of people infected by coronavirus could require hospitalization, with a smaller share needing invasive mechanical ventilation. Costs will vary by severity and payer, but hospitalization will cost about $20,000, with treatment of the most severe cases costing up to $88,000. The brief includes an extended discussion on how delayed or foregone care could offset some costs, with data on how elective procedures represent a substantial share of hospital spending.

- **Health Insurers Do Not Yet Feel the Impact of COVID-19.** Comprehensive data on insurer experience is not available. However, insurer perspectives are becoming clearer in media reports and earnings calls. In mid-March, several health insurance executives reported that insurers were not yet concerned that COVID-19 was going to dramatically increase medical claims and spending. Executives viewed the outbreak as an “extension of the flu season” and noted that leaders were “not expecting a material financial impact.” In a recent earnings call, UnitedHealth Group Inc. played down the effects of COVID-19 on its first quarter performance and announced that it will not adjust its guidance for the remainder of 2020.
A separate analysis from S&P Global found that health insurers are performing better than expected during the first quarter, due primarily to the deferral of elective or discretionary medical services. Although COVID-19 claims are expected to rise in the second quarter, especially in hard-hit regions of the country, the authors expect earnings to revert to normal for full-year 2020 and note that “the attack/infection rate through the majority of the first quarter doesn’t indicate a meaningful strain on medical claims.”

- **Potential Costs of COVID-19 Treatment for People With Employer Coverage.** Comparing the costs of COVID-19 treatment to pneumonia, the Kaiser Family Foundation estimates costs for people insured through a large employer’s private health plan. Hospitalization costs would range from $20,000 to $88,000, depending on severity and comorbidities. Treatment costs for Medicare and Medicaid will be lower due to lower provider reimbursement rates: average hospitalization costs would range from $10,000 to $40,000 under Medicare, depending on severity. The brief includes a discussion of the typical length of hospital stays associated with pneumonia and out-of-pocket costs for pneumonia admissions.

- **COVID-19 Cost Scenario Modeling: Estimating the Cost of COVID-19 Treatment for U.S. Private Insurers.** Wakely, on behalf of America’s Health Insurance Plans, estimates direct costs for COVID-19 testing and treatment may range from $84 to $139 billion in 2020 and $28 to $46 billion in 2021. The analysis assumes an infection rate of 20 percent and reflects costs for private insurers (commercial insurers, Medicaid managed care organizations, and Medicare Advantage plans). Different infection rates would yield dramatically different costs, ranging from a total of $56 to $556 billion. For the commercial group and non-group markets, costs could range from $44.6 billion to $438.5 billion over the next two years.

- **Covered California Releases the First National Projection of the Coronavirus Pandemic’s Cost to Millions of Americans with Employer or Individual Insurance Coverage.** Covered California expects the cost of COVID-19 treatment and testing costs to range from $34 to $251 billion for commercial insurers. These are one-year projected costs in the commercial market, with a premium impact that ranges from 2 percent to 21 percent if built into 2020 premiums. Covered California estimates that individual and employer premiums for 2021 could be 40 percent higher due to COVID-19 costs.

- **Morbidity Stress Test: How A Hypothetical Pandemic Could Affect U.S. Health Insurers.** S&P Global Ratings conducted a stress test for a hypothetical pandemic. Assuming a moderate morbidity, insurers would face a 3 to 4 percent increase in medical claims costs and medical loss ratios would be boosted to 88 to 89 percent. This, S&P concludes, would be manageable for most insurers. More severe morbidity, however, means insurers would face a 10 to 12 percent increase in medical claims costs, increasing medical loss ratios to 95 to 97 percent.

- **COVID-19: The Projected Economic Impact of the COVID-19 Pandemic on the U.S. Healthcare System.** Leveraging its database of private health care claim records, FAIR Health estimates that the total average charge per COVID-19 patient that requires a hospital stay will be more than $73,000, with an average estimated allowed amount per commercially insured patient of $38,000. Total charges for all hospitalized COVID-19 patients range from $362 billion to $1.45 trillion, with $139 to...
$558 billion in estimated allowed amounts. This range varies based on the expected infection rate and the expectation that 4.9 million to 19.8 million people with COVID-19 may require hospitalization.

**Recommendations for the 2021 Rate Filing Process**

Our top priority is to ensure that as many consumers as possible continue to have access to affordable, comprehensive coverage and that insurance markets are stable. This is particularly true for the individual market, which may need to accommodate millions of new enrollees this year and next. We also acknowledge very real concerns about solvency in some states and that regulators must balance premium affordability with solvency. To best protect consumers as insurers develop 2021 rates, we urge HATF and state regulators to consider the two recommendations below and provide guidance to insurers in their states.

**Recommendation #1: Instruct insurers to prepare multiple rate filings to reflect COVID-19 assumptions based on different degrees of severity**

There is a high degree of uncertainty about what the future holds. As reflected in the data above, the impact of the COVID-19 pandemic on commercial insurers could vary significantly based on the ultimate infection rate, morbidity and mortality, geographic variation, the age of those most affected, long-term effects of the virus, and more. We recognize this uncertainty and the challenge that insurers and state regulators face in preparing and reviewing rates for 2021.

We are, however, concerned that consumers could face rate increases for 2021 that are out of sync with actual costs if a worst-case scenario does not materialize. Insurers may be especially prone to overprice their products in the individual market, where many enrollees receive subsidies and are relatively insulated from premium increases.

To address this uncertainty, we encourage HATF and state regulators to instruct insurers to file multiple rates with varying assumptions about the impact of COVID-19 in 2021. While rates are due this spring (when much information remains unknown), multiple filings—that reflect low, medium, and high levels of severity—would provide state regulators with the information to adjust rates as needed in the fall of 2020. These filings would also help regulators compare rate assumptions across insurers to ensure relatively consistent assumptions about COVID-19 costs and pent-up demand.

Multiple rate filings have been used before in response to uncertainty, including in 2017 to anticipate the potential elimination of cost-sharing reduction payments. HATF was instrumental as a forum during this time. During 2017, many state regulators instructed insurers to file dual rates: one rate reflected the assumption that cost-sharing reduction payments would be made and the other assumed that the payments would not be made. Having dual rate filings on hand allowed state insurance regulators and insurers to be nimble when the payments were eliminated in October 2017. Insurers were able to quickly and easily adjust their rates mere weeks before 2018 rates went live.

We believe the uncertainty here calls for similar advance planning and flexibility. Insurers should know more about their actual costs for 2020 later this year, and we should have better predictions about how widespread the pandemic will be by that time. Multi-rate filing will help ensure that all rates for 2021
Recommendation #2: Direct insurers to submit 2021 individual market rate filings that specify the projected amount of rate increase due to COVID-19

Uncertainty related to COVID-19 will likely contribute to higher premiums. However, we believe that consumers would be best served by greater transparency about how much rate impact insurers expect COVID-19 to have in 2021.

To address this concern, we urge HATF and state regulators to require insurers to clearly specify the projected amount of rate increase due to COVID-19. General statements or premium surcharges based on uncertainty provide insufficient information for regulators and the public to evaluate. The inclusion of specific information—ideally alongside assumptions about the COVID-19 infection rate, assumed morbidity rate, and other data—will also help insurers demonstrate to regulators that they are adequately preparing in response to the COVID-19 crisis.

Thank you for everything you are doing to protect consumers during this unprecedented crisis and in the midst of significant uncertainty and economic stress. If you have any further questions, please contact Justin Giovannelli (Justin.Giovannelli@georgetown.edu) or Sarah Lueck (lueck@cbpp.org).

SOA COVID-19 Research Summary Page
https://www.soa.org/programs/covid-19/research-podcast/

SOA COVID-19 Research Brief, April 16
The Health Actuarial (B) Task Force met via conference call Feb. 14, 2020. The following Task Force members participated:
Todd E. Kiser, Chair, represented by Jaakob Sundberg (UT); Eric A. Cioppa, Vice Chair, represented by Marti Hooper (ME); Lori K. Wing-Heier represented by Jacob Lauten (AK); Ricardo Lara represented by Perry Kupferman (CA); Vicki Schmidt represented by Nicole Boyd (KS); Chlora Lindley-Myers represented by William Leung (MO); Mike Causey represented by David Yetter (NC); Bruce R. Ramge represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Andrew Schallhorn (OK); Jessica K. Altman represented by Tracie Gray (PA); Kent Sullivan represented by Mike Boerner (TX); Mike Kreidler represented by Lichiou Lee (WA); and James A. Dodrill represented by Joylynn Fix (WV).

1. Adopted its 2019 Fall National Meeting Minutes

Mr. Lauten made a motion, seconded by Ms. Eom, to adopt the Task Force’s Dec. 6, 2019, minutes (see NAIC Proceedings–Fall 2019, Health Actuarial (B) Task Force). The motion passed unanimously.

2. Adopted a Draft of Revisions to the Forms

Mr. Kupferman presented a draft of revisions (Attachment Three-A) to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement and instructions (Attachment Three-B) for the revised forms as forwarded to the Task Force by the Long-Term Care Actuarial (B) Working Group. He also presented comments (Attachment Three-C) on the revisions submitted by Utah.

Mr. Kupferman gave an overview of the revisions and said the changes suggested in the Utah comment letter will be incorporated into the draft.

Bob Yee (PricewaterhouseCoopers LLP—PwC) suggested that the reserves reported on Form 3 should be recast using current assumptions. Ray Nelson (America’s Health Insurance Plans—AHIP) said AHIP member companies think Form 3 should reflect the actual history of reserves held. He said requiring reserves to be recast would make completion of the forms more difficult and may create systems programming issues. Mr. Sundberg said he agrees with Mr. Nelson. Mr. Yee suggested companies be given the option of recasting reserves, with a checkbox to indicate this has been done on Form 3. The Task Force agreed to this change.

Mr. Nelson suggested that policies that have received contingent nonforfeiture benefits be considered as in-force policies for Forms reporting purposes, as they are still eligible to receive benefits and require a reserve to be held. The Task Force agreed to this classification.

Mr. Nelson suggested that the Form 2 instructions not prescribe the classification of comprehensive policies that later drop rider coverage. The Task Force agreed to this change.

Mr. Sundberg suggested the Forms include a way for companies to indicate whether waiver of premium amounts are included in claims and premium reporting. The Task Force agreed to this change.

Mr. Kupferman made a motion, seconded by Mr. Muldoon, to adopt the revised draft Forms and instructions with the changes discussed. The motion passed unanimously.

Mr. Sundberg said the revised draft forms (Attachment Three-D) and instructions (Attachment Three-E) will be forwarded to the Senior Issues (B) Task Force and the Health Insurance and Managed Care (B) Committee for their consideration.

Having no further business, the Health Actuarial (B) Task Force adjourned.

Stand-alone LTC Current
Life/LTC Hybrid Policies and Riders Current (Acceleration only)
Total Inception-to-Date (Acceleration only)
Current (Extended Benefits Policies)
Total Inception-to-Date (Extended Benefits)
**Long-Term Care Insurance Experience Reporting Forms 1 Through 5**

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2010, and 2011 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident & health, and fraternal annual statement. The list of the various annual statements is: life, accident & health, and fraternal; property/casualty; and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.

Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods:
(1) If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.

(2) If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve would be the paid-up value and future incurred claims will be only for LTC benefits.

Report using (1) above unless there are system limitations which require data to be entered under assumption (2).

When reporting dollar amounts, report the amount in thousands ($000 omitted). For non-dollar values, do not truncate the amounts.

Definition of Incurred Claims:

The amount of developed claims incurred during the calendar year is equal to the present value of all claim payments during the year and any changes in claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

- Paid claims in the year of incurreal are discounted one-quarter year.
- Paid claims subsequent to the year of incurreal are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 of Form 3 are discounted from the valuation date to the midpoint of the incurred year.

If

\[ iy = \text{Incurred year} \]
\[ T = \text{Report year – incurred year} \]
\[ v = \text{Discount rate} \]
\[ t_{\text{Paid Claims}_{iy}} = \text{Paid claims during current or prior calendar year } t \text{ from claims incurred in year } iy \]
\[ t_{\text{Case Reserve}_{iy}} = \text{Case reserve at end of calendar year } t \text{ from claims incurred in } iy \]
\[ t_{\text{Transferred Reserve}_{iy}} = \text{Transferred reserve at end of calendar year } t \text{ from claims incurred in } iy \]
\[ t = iy, iy+1, iy+2, \ldots, iy + T \]

then the Present Value of Incurred Claims for incurred year \( iy \):

For T=0

\[ t_{\text{Paid Claims}_{iy}} \times v^{\frac{1}{4}} + t_{\text{Case Reserve}_{iy}} \times v^{\frac{1}{2}} + t_{\text{IBNR}_{iy}} \times v^{\frac{1}{2}} + t_{\text{Transferred Reserve}_{iy}} \times v^{\frac{1}{2}} \]
For $T>0$

$$\gamma_i \text{Paid Claims}_i \times v^i + \gamma_{i+1} \text{Paid Claims}_{i+1} \times v^{i+1} + \gamma_{i+2} \text{Paid Claims}_{i+2} \times v^{i+2} + \ldots + \gamma_{i+T} \text{Paid Claims}_{i+T} \times v^T +$$

$$\gamma_{i+1} \text{Case Reserve}_{i+1} \times v^{i+1} + (\gamma_{i+1} \text{IBNR}_i \times v^{i+1}) + \gamma_{i+1} \text{Transferred Reserve}_{i+1} \times v^{i+1}$$

If a portion of the IBNR is held for years other than the current calendar year, the value in the parentheses should be used.

The total case reserves and IBNR equal the portion of the total direct liability attributable to LTC business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business for life, accident & health and fraternal only.

This amount includes accrued and unaccrued claims liabilities that are incurred but not yet paid, both reported and not reported.
Instructions for Form 1

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual premium, claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons for direct, assumed, and ceded business are exhibited.

Form 1: Stand-Alone LTC Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Assumed/Ceded Rows
Does not include YRT reinsurance transactions. For columns that are designated with a # rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

Column 1 – Earned Premiums
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Health Companies
Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 2 - Incurred Claims
Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 3 – Claims Opened
The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 4 - Claims Closed
Number of claims that had been opened, which became closed during the year due to recovery, exhaustion of benefits, or death.
Column 5 – Claims Remaining Open

Open claims are all claims that have been opened at any date, but have not been closed as of the end of the year.

Column 6 – Terminations

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, benefit exhaustion, or conversion to non-forfeiture status.

Column 7 – Policies/Certificates In-force at Year End

Total number of policies or certificates in force at the end of the year, not including any in non-forfeiture status.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of active life reserves held for policyholders, including those in non-forfeiture status. The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

The amount reported in annual statement Underwriting and Investment Exhibit 2D, line 2, less the premium deficiency reserve in footnote (a) of that exhibit.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid, including claims on policies in non-forfeiture status.

Column 11 – Other Reserves

Total amount of any other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Instructions for Form 2

Form 2: Direct Individual Experience – Stand-Alone Only

Primary Issue Period Splits

Experience data for each policy should be aggregated in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policies that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders. Policies remain classified as comprehensive after optional riders have been dropped.

Institutional Only
Policies that provide institutional coverage only.

Non-Institutional Only
Policies that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain inforce as of 12/31.

Column 2 – % Male Lives Insured

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.

Column 3 – Average Attained Age

Arithmetic mean of the attained ages of all inforce policyholders in the block at year end.
Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

**Life, Accident & Health, Fraternal and Property/Casualty Only**
- Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

**Health Companies**
- Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, benefit exhaustion, or conversion to non-forfeiture status.

Column 8 – New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
INSTRUCTIONS FOR FORM 3

The purpose of this form is to test the adequacy of claim reserves held on long-term care policies. This form allows for the development of a seven-year trend of losses by incurred calendar year. This form is aggregated on a nationwide basis.

Part 1 – Total Amount Paid Policyholders

Show paid claims by year paid and year incurred. Claims are on a direct basis, including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Column 1.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 2 – Sum of Total Amount Paid Policyholders and Claim Liability and Reserve Outstanding at End of Year

This section provides a claim cost development overview to show the adequacy of claim reserves for a particular incurral year at the end of that year and at the end of subsequent years. The entry in Line X and Column Y is the cumulative claims incurred during year X and paid through the end of year Y for claims incurred in year X, plus the reserve at the end of year Y for claims incurred in year X. All reserves are based on the underlying assumptions for the current reserves.

Claims are on a direct basis including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Line 1, Columns 1 through 8.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 3 – Transferred Reserves

Claim reserves for transfer claims (acquired or sold) are shown here, by claim incurred year, starting from the year of transfer. For sold business, the entries are positive. For acquired business, the entries are negative. For years after the transfer year, the reserves are increased with interest.

Claim reserves for the buyer are the reserves initially set by the buyer, not necessarily equal to the reserves for the seller.

Part 4 – Present Value of Incurred Claims (Interest Adjusted Development of Incurred Claims)

Because claim reserves for long-duration claims are generally discounted, the year-to-year comparison in Part 2 is misleading to the extent interest income on claim reserves is material. To show consistent values; paid claims; transferred reserves and claim reserves are discounted to a common point in time (assumed to be July 1 of the incurred year). The discount rate is the statutory valuation interest rate for case reserves.
Instructions for Form 4

Form 4: Direct Group Experience – Stand-Alone Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of certificates.

Comprehensive
Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

Institutional Only
Certificates that provide institutional coverage only.

Non-Institutional Only
Certificates that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues
Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain in force as of 12/31.

Column 2 – Third Party Funding
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Calculate this in aggregate as \(\text{[Third Party Premiums ÷ Total Premiums]}\)

Column 3 – Average Attained Age
Unweighted average of the attained ages of all in force certificate holders in the block.

Column 4 – Earned Premium
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Column 5 – Incurred Claims
Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserve. The discount rate is the statutory valuation interest rate for case reserve.

Column 6 – Lives In-force Year End
Total number of lives in force at the end of the year. Joint certificates are to be counted as two lives.
Column 7 – Terminations

Total number of certificate holders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC certificates during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
Instructions for Form 5

Form 5 provides LTC sales and claims experience on a state-by-state basis. These are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on life policies or annuity contracts.

Form 5: Standalone and Hybrid Products – Direct State Reporting

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Stand-alone LTC
An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code
The state in which the policy was issued. Example: CA for California

Column 2 – New Lives Insured
Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

Column 3 – Lives In-force Year End
Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.
Column 4 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Column 5 – Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 – Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 7 – Claims Remaining Open

Open claims are all claims that have been opened at any date, but have not been closed as of the end of the year.

Column 8 – Claims Opened

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 9 - New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 10 – Accelerated Benefits Available

Maximum amount of death benefits available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 11 – Extended Benefits Available

Maximum amount of extended benefits available to policyholders with extension of benefit riders.
Long-Term Care Insurance Experience Reporting Forms 1 Through 5

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2010, and 2011 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident & health, and fraternal annual statement. The list of the various annual statements is: life, accident & health, and fraternal; property/casualty; and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.

Commented [JS1]: It looks like there were no changes to form 3 instructions or template. Was any decision made about how to handle changes in the calculation of DLR (whether to implement them only in that year, or to recalculate the DLR on past years under the current newest methodology)?

I recommend adding a paragraph to the form 3 instructions that says if you change DLR reserve bases, don’t go back and recast the prior years using the new basis. Just use the new basis for the current and future years (until the reserve basis changes again).
Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods. If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve and experience fund would be the paid-up value and future incurred claims will be only for LTC benefits. If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve and experience fund will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.

Commented [JS2]: I don’t understand this paragraph. I think it is saying the company needs to be aware of how they are planning to handle waiver of premium. I also don’t know what the “experience fund” is. The paragraph suggests two methods of handling waiver of premium (if I’m reading it right) but none of the spreadsheet forms allow the company to express which method was used.

If you want waiver of premium handled consistently between companies you are better off to explain specifically how you want it handled (including the discounting associated).

There are different reasons for waived premium: on claim in a facility, death of spouse triggers paid-up survivor benefit, policy is h-pay and is already paid up. Addressing how you want each situation handled in the reporting would provide greater consistency in company reporting. I’m not certain if there is a reason to handle them differently.

I recommend that the reports exclude the waiver of premium from both claims and premiums. I recommend a separate column in Form 1 for waiver of premium reserve. Whether you ask the companies to discount the waivers as a present value of paid waived premiums, or discount them based on the incurral date of the claim with which they are associated – I don’t have a preference. But I think the instructions should say one way or the other so that it’s calculated consistently.
Instructions for Form 1

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons are exhibited.

Form 1: Stand-Alone LTC Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Assumed/Ceded Rows
Does not include YRT reinsurance transactions. For columns that are designated with a # rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

Column 1 – Earned Premiums
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Health Companies
Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 2 - Incurred Claims
Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 3 – Claims Opened
The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 4 - Claims Closed
Number of claims that were closed during the year due to recovery, exhaustion of benefits, or death.

Commented [JS3]: Claim reserves are usually made up of a few parts: PVFB on open claims, IBNR, and CBER (closed but expected to reopen). For the CBER, the company is likely holding an ALR (because the person moves from claim status back to active). Do you want the CBER included in the incurred claims if there is a separate ALR held?

Commented [JS4]: Forms 1, 2, 4, and 5 all reference back to form 3 for determining how incurred claims should be considered. We might explain the treatment of incurred claims in the general instructions rather than in the middle form with all others referencing the middle form.

Commented [JS5]: Is it intended here to say that if a claim never exits the elimination period it should never be counted as a claim (open or closed)? It is stated fairly explicitly here in the opened claims, but it isn’t stated that way in the closed claims. The instructions are ambiguous as to whether or not you want them counted at least as closed claims.

How should an IBNR claim be handled? Do you want the company to estimate the number of IBNR claims, or just report actual opened claims for the current year. What about next year – do you want the unreported IBNR claims included only in the total inception to date?

If you want prior year exhibits to tie to the current by some formula like:
Prior year claims remaining open + current year opened claims – current year closed claims = current year claims remaining open It won’t happen if you don’t explain how to handle IBNR and re-opened claims.

Commented [JS6]: What about claims that never get out of the elimination period? Do these count as closed claims?
Column 5 – Claims Remaining Open

Open claims are all claims that have not been closed as of the end of the year.

Column 6 – Terminations

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

Column 7 – Policies/Certificates In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of active life reserves held for policyholders. The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

The amount reported in annual statement Underwriting and Investment Exhibit 2D, line 2, less the premium deficiency reserve in footnote (a) of that exhibit.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid.

Column 11 – Other Reserves

Total amount of other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
**Instructions for Form 2**

Form 2 provides data on direct individual LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

Form 2: Direct Individual Experience – Stand-Alone Only

**Primary Issue Period Splits**

Experience data for each policy form should be included in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

**Definitions and Formulas**

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Comprehensive**
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

**Institutional Only**
Policy forms that provide institutional coverage only.

**Non-Institutional Only**
Policy forms that provide only non-institutional coverage.

**Column 1 – Calendar Year of Peak Issues**

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain in force as of 12/31.

**Column 2 – % Male Lives Insured**

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.
Column 3 – Average Attained Age

Unweighted average of the attained ages of all inforce policyholders in the block.

Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Health Companies

Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
INSTRUCTIONS FOR FORM 3

The purpose of this form is to test the adequacy of reserves held on long-term care policies. This form allows for the development of a seven-year trend of losses incurred by a specific year group of claimants. This form is to be prepared on a nationwide basis.

Report all dollar amounts in thousands ($000 omitted).

Part 1 – Total Amount Paid Policyholders

Show paid claims by year paid and year incurred. Claims are on a direct basis, including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Column 1.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 2 – Sum of Total Amount Paid Policyholders and Claim Liability and Reserve Outstanding at End of Year

This section provides a claim cost development overview to show the adequacy of claim reserves for a particular incurred year at the end of that year and at the end of subsequent years. The entry in Line X and Column Y is the cumulative claims incurred during year X and paid through the end of year Y for claims incurred in year X, plus the reserve at the end of year Y for claims incurred in year X.

Claims are on a direct basis including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Line 1, Columns 1 through 8.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 3 – Transferred Reserves

Claim reserves for transfer claims (acquired or sold) are shown here, by claim incurred year, starting from the year of transfer. For sold business, the entries are positive. For acquired business, the entries are negative. For years after the transfer year, the reserves are increased with interest.

Claim reserves for the buyer are the reserves initially set by the buyer, not necessarily equal to the reserves for the seller.
Part 4 – Present Value of Incurred Claims (Interest Adjusted Development of Incurred Claims)

Because claim reserves for long-duration claims are generally discounted, the year-to-year comparison in Part 2 is misleading to the extent interest income on claim reserves is material. To show consistent values; paid claims; transferred reserves and claim reserves are discounted to a common point in time (assumed to be July 1 of the incurred year).

- Paid claims in the year of incurrence are discounted one-quarter year.
- Paid claims subsequent to the year of incurrence are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 are discounted from the valuation date to the midpoint of the incurred year.
- Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.

Commented [JS27]: Form 1 and 2 describe which discount rate to use, but this form never says what discount rate to use.
Instructions for Form 4

Form 4 provides data on direct group LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

Form 4: Direct Group Experience – Stand-Alone Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of certificates.

Comprehensive
Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

Institutional Only
Certificates that provide institutional coverage only.

Non-Institutional Only
Certificates that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues
Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain inforce as of 12/31.

Column 2 – Third Party Funding
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Calculate this in aggregate as [Third Party Premiums + Total Premiums]

Column 3 – Average Attained Age
Unweighted average of the attained ages of all inforce certificate holders in the block.

Column 4 – Earned Premium
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.
Column 5 – Incurred Claims

Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserve. The discount rate is the statutory valuation interest rate for case reserve. Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint certificates are to be counted as two lives.

Column 7 – Terminations

Total number of certificate holders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC certificates during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
Instructions for Form 5

Form 5 is intended to provide data on a state-by-state basis in relation to LTC sales and claims experience. These lines are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on what is primarily a life policy or annuity contract.

Form 5: Standalone and Hybrid Products – Direct State Reporting

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Stand-alone LTC
An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code
The state for which data is being reported. Example: CA for California

Column 2 – New Lives Insured
Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

Column 3 – Lives In-force Year End
Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

© 2020 National Association of Insurance Commissioners
Column 4 – Earned Premiums
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Column 5 – Incurred LTC Claims
Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.
Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Incurred Extended Benefits Claims
Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.
Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 7 – Claims Remaining Open
Open claims are all claims that have not been closed as of the end of the year.

Column 8 – Claims Opened
The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 9 - New Extended Benefits Claims
The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 10 – Accelerated Benefits Available
Maximum amount of death benefits available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 11 – Extended Benefits Available
Maximum amount of extended benefits available to policyholders with extension of benefit riders.

**Stand-alone LTC**

**Current (Acceleration only)**

**Current (Extended Benefits Policies)**

**Total Inception-to-Date (Acceleration only)**

**Total Inception-to-Date (Extended Benefits)**
Long-Term Care Insurance Experience Reporting Forms 1 Through 5

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2010, and 2011 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident & health, and fraternal annual statement. The list of the various annual statements is: life, accident & health, and fraternal; property/casualty; and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.

Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods:
(1) If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.

(2) If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve would be the paid-up value and future incurred claims will be only for LTC benefits.

Report using (1) above unless there are system limitations which require data to be entered under assumption (2).

When reporting dollar amounts, report the amount in thousands ($000 omitted). For non-dollar values, do not truncate the amounts.

Definition of Incurred Claims:

The amount of developed claims incurred during the calendar year is equal to the present value of all claim payments during the year and any changes in claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

- Paid claims in the year of incurral are discounted one-quarter year.
- Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 of Form 3 are discounted from the valuation date to the midpoint of the incurred year.

If

\[ iy = \text{Incurred year} \]
\[ T = \text{Report year} - \text{incurred year} \]
\[ v = \text{Discount rate} \]
\[ \text{Paid Claims}_{iy} = \text{Paid claims during current or prior calendar year} t \text{ from claims incurred in year} iy \]
\[ \text{Case Reserve}_{iy} = \text{Case reserve at end of calendar year} t \text{ from claims incurred in} iy \]
\[ \text{Transferred Reserve}_{iy} = \text{Transferred reserve at end of calendar year} t \text{ from claims incurred in} iy \text{ and} \]
\[ t = iy, iy+1, iy+2, \ldots, iy + T \]

then the Present Value of Incurred Claims for incurred year iy:

For \( T=0 \)

\[ \text{Paid Claims}_{iy} \times v^{\frac{T}{4}} + \text{Case Reserve}_{iy} \times v^{\frac{T}{2}} + \text{IBNR}_{iy} \times v^{\frac{T}{2}} + \text{Transferred Reserve}_{iy} \times v^{\frac{T}{2}} \]
For $T > 0$

$$\sum_{y=0}^{T} \text{Paid Claims}_{y} \times v^y + \sum_{y=1}^{T} \text{Paid Claims}_{y} \times v^{y+1} + \ldots + \sum_{y=T}^{T+T} \text{Paid Claims}_{y} \times v^{T} +$$

$$\sum_{y=T}^{T+T} \text{Case Reserve}_{y} \times v^{T+y} \times \left( \sum_{y=T+1}^{T+T} \text{IBNR}_{y} \times v^{T+y} \right) + \sum_{y=T+1}^{T+T} \text{Transferred Reserve}_{y} \times v^{T+y}$$

If a portion of the IBNR is held for years other than the current calendar year, the value in the parentheses should be used.

The total case reserves and IBNR equal the portion of the total direct liability attributable to LTC business from Exhibit 8, Part 2, Line 2.1 (life, accident & health and fraternal) plus the portion of the claim liabilities reported on Exhibit 6, Line 14 (life, accident & health) and Line 13 (fraternal) attributable to LTC business for life, accident & health and fraternal only.

This amount includes accrued and unaccrued claims liabilities that are incurred but not yet paid, both reported and not reported.
**Instructions for Form 1**

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual premium, claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons for direct, assumed, and ceded business are exhibited.

**Form 1: Stand-Alone LTC Only**

**Definitions and Formulas**

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Assumed/Ceded Rows**
Does not include YRT reinsurance transactions. For columns that are designated with a # rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

**Column 1 – Earned Premiums**
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

*Life, Accident & Health, Fraternal and Property/Casualty Only*
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

*Health Companies*
Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

**Column 2 - Incurred Claims**
Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

**Column 3 – Claims Opened**
The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

**Column 4 - Claims Closed**
Number of claims that had been opened, which became closed during the year due to recovery, exhaustion of benefits, or death.
Column 5 – Claims Remaining Open

Open claims are all claims that have been opened at any date, but have not been closed as of the end of the year.

Column 6 – Terminations

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

Column 7 – Policies/Certificates In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of active life reserves held for policyholders, including those in non-forfeiture status. The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

The amount reported in annual statement Underwriting and Investment Exhibit 2D, line 2, less the premium deficiency reserve in footnote (a) of that exhibit.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid, including claims on policies in non-forfeiture status.

Column 11 – Other Reserves

Total amount of any other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Instructions for Form 2

Form 2: Direct Individual Experience – Stand-Alone Only

Primary Issue Period Splits

Experience data for each policy should be aggregated in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policies that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policies that provide institutional coverage only.

Non-Institutional Only
Policies that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain inforce as of 12/31.

Column 2 – % Male Lives Insured

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.

Column 3 – Average Attained Age

Arithmetic mean of the attained ages of all inforce policyholders in the block at year end.
Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.  

**Life, Accident & Health, Fraternal and Property/Casualty Only**
- Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

**Health Companies**
- Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
INSTRUCTIONS FOR FORM 3

The purpose of this form is to test the adequacy of claim reserves held on long-term care policies. This form allows for the development of a seven-year trend of losses by incurred calendar year. This form is aggregated on a nationwide basis.

Part 1 – Total Amount Paid Policyholders

Show paid claims by year paid and year incurred. Claims are on a direct basis, including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Column 1.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 2 – Sum of Total Amount Paid Policyholders and Claim Liability and Reserve Outstanding at End of Year

This section provides a claim cost development overview to show the adequacy of claim reserves for a particular incurral year at the end of that year and at the end of subsequent years. The entry in Line X and Column Y is the cumulative claims incurred during year X and paid through the end of year Y for claims incurred in year X, plus the reserve at the end of year Y for claims incurred in year X.

Claims are on a direct basis including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Line 1, Columns 1 through 8.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 3 – Transferred Reserves

Claim reserves for transfer claims (acquired or sold) are shown here, by claim incurred year, starting from the year of transfer. For sold business, the entries are positive. For acquired business, the entries are negative. For years after the transfer year, the reserves are increased with interest.

Claim reserves for the buyer are the reserves initially set by the buyer, not necessarily equal to the reserves for the seller.

Part 4 – Present Value of Incurred Claims (Interest Adjusted Development of Incurred Claims)

Because claim reserves for long-duration claims are generally discounted, the year-to-year comparison in Part 2 is misleading to the extent interest income on claim reserves is material. To show consistent values; paid claims; transferred reserves and claim reserves are discounted to a common point in time (assumed to be July 1 of the incurred year). The discount rate is the statutory valuation interest rate for case reserves.
Instructions for Form 4

Form 4: Direct Group Experience – Stand-Alone Only

Definitions and Formulas

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of certificates.

**Comprehensive**
Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

**Institutional Only**
Certificates that provide institutional coverage only.

**Non-Institutional Only**
Certificates that provide only non-institutional coverage.

**Column 1 – Calendar Year of Peak Issues**
Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain in force as of 12/31.

**Column 2 – Third Party Funding**
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25" in this column.

Calculate this in aggregate as [Third Party Premiums ÷ Total Premiums]

**Column 3 – Average Attained Age**
Arithmetic mean of the attained ages of all in force certificate holders in the block at year end.

**Column 4 – Earned Premium**
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

**Column 5 – Incurred Claims**
Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserve. The discount rate is the statutory valuation interest rate for case reserve.

**Column 6 – Lives In-force Year End**
Total number of lives in force at the end of the year. Joint certificates are to be counted as two lives.
Column 7 – Terminations

Total number of certificate holders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC certificates during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
**Instructions for Form 5**

Form 5 provides LTC sales and claims experience on a state-by-state basis. These are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on life policies or annuity contracts.

**Form 5: Standalone and Hybrid Products – Direct State Reporting**

Definitions and Formulas

**Current**
Current calendar year of reporting.

**Total Inception-to-Date**
Aggregate experience data since issuance of policies.

**Stand-alone LTC**
An LTC product that is sold by itself, not as a rider on another type of insurance.

**Life/LTC Accelerated Benefits Riders**
Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

**LTC Extension of Benefit Riders**
Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

**Column 1 – State Code**
The state in which the policy was issued. Example: CA for California

**Column 2 – New Lives Insured**
Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

**Column 3 – Lives In-force Year End**
Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.
Column 4 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Column 5 – Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 6 – Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Column 7 – Claims Remaining Open

Open claims are all claims that have been opened at any date, but have not been closed as of the end of the year.

Column 8 – Claims Opened

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 9 - New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 10 – Accelerated Benefits Available

Maximum amount of death benefits available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 11 – Extended Benefits Available

Maximum amount of extended benefits available to policyholders with extension of benefit riders.
2021 Health Care Cost Model

Goal: To Assist Regulators, Insurance Company Actuaries and Consulting Actuaries in estimating the impact of COVID-19 on claim costs.

- VBA Excel Model projecting future monthly costs with user inputs
- Commercial Group and Individual, Medicare and Medicaid LOBs
- Model includes different types of trended costs; Updated in July
  - Base Costs
    - Includes Foregone, Deferred, and Recouped Expenses subject to Return Stages
  - Direct COVID-19 Costs
  - SIR Model can generate infection rate scenarios
  - Behavioral Health Costs Due to Social Distancing
  - COVID-19 Testing and Vaccine Costs

© 2020 National Association of Insurance Commissioners
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Aug. 4, 2020. The following Working Group members participated: Perry Kupferman, Chair (CA); Steve Ostlund (AL); Paul Lombardo (CT); Benjamin Ben (FL); Weston Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Bill Carmello (NY); Laura Miller (OH); Tracie Gray (PA); Andrew Dvorine (SC); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Adopted its Jan. 23, 2020, and 2019 Fall National Meeting Minutes

The Working Group met Jan. 23 to adopt a draft of changes to the Long-Term Care Insurance Experience Reporting Forms of the annual financial statement.

Mr. Ostlund made a motion, seconded by Mr. Lombardo, to adopt the Working Group’s Jan. 23, 2020 (Attachment Five-A) and Dec. 6, 2019 (see NAIC Proceedings – Fall 2019, Health Actuarial (B) Task Force, Attachment Four) minutes. The motion passed unanimously.

2. Heard an Update from the Academy on LTC Work Group Activities

Warren Jones (PricewaterhouseCoopers LLP) gave an update (Attachment Five-B) on the American Academy of Actuaries (Academy) Long-Term Care Valuation Work Group’s development of mortality and lapse valuation tables.

Mr. Kupferman asked why, for issue ages 80 and greater, the same mortality table marital status adjustment factors are used for married and single policyholders.

Mr. Jones said this is because a difference between married and single policyholder experience was not observed for issue ages 80 and greater. He said there are other apparently anomalous relationships in the proposed tables and adjustment factors that can be explained by the actual observed experience, and that these will be detailed in the final report to the Working Group.

3. Heard an Update on SOA LTCI Research

Dale Hall (Society of Actuaries—SOA) gave an update (Attachment Five-C) on recent work on the SOA’s Long-Term Care Experience Study.

4. Adopted the Report of the Long-Term Care Pricing (B) Subgroup

Mr. Lombardo said the Long-Term Care Pricing (B) Subgroup met Feb. 6 and Jan. 6. He said the Subgroup discussed long-term care insurance (LTCI) cash value buyouts (CVBs) to policyholders in lieu of rate increases, and recent discussions in the Connecticut legislature concerning the ability of stand-alone LTCI policyholders to convert their policies to some form of hybrid LTCI policy, using some of the accumulated value of the stand-alone policy to offset the cost of the hybrid policy. He said state insurance regulators’ main concern expressed is the possibility of antiselection by policyholders that elect CVBs affecting remaining policyholders. He said the Subgroup will continue CVB discussions during an upcoming conference call.

Mr. Lombardo made a motion, seconded by Mr. Schallhorn, to adopt the report of the Long-Term Care Pricing (B) Subgroup, including its Feb. 6 (Attachment Five-D) and Jan. 6 (Attachment Five-E) minutes. The motion passed unanimously.
5. **Adopted the Report of the Long-Term Care Valuation (B) Subgroup**

Mr. Andersen said the Subgroup has not met since the 2019 Fall National Meeting. He said a review group composed of Subgroup members continues to review *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51)* year-end 2019 filings. He said this is the third year for such reviews. He said the first year of reviews focused on ultimate lapse rates, mortality tables, reliance on future rate increases, morbidity improvement and future investment performance assumptions used for reserve calculations. He said the second year of reviews took a closer look at morbidity assumptions by developing an inquiry letter that resulted in more useful morbidity information being collected related to claim cost, incidence, termination and benefit utilization.

Mr. Andersen said Subgroup members have engaged with insurers, the SOA and actuarial consulting firms to assess the impact of COVID-19 on LTCI valuation. He said initial findings indicate the presence of COVID-19 impacts on claims costs, situs of long-term care (LTC) services and consumer attitudes toward receiving LTC services during the pandemic. He said there will likely be a hesitation among the elderly to enter an LTC facility and that it is unknown if this will be a short-term or long-term change in LTC service utilization. He said COVID-19 mortality is affecting LTCI reserves, and the extent of the impact needs to be analyzed. He said if there is a continued shift in use of facility-based LTC services, the financial impact on LTCI may be greater than that from increased mortality. He said the most certain impact to LTCI reserves over the past five months has been the further decline in interest rates. He said that any past financial concerns for insurers will likely be worse than they were prior to COVID-19. He said the Subgroup will coordinate with the Long-Term Care Pricing (B) Subgroup, as many of the COVID-19 related issues that affect valuation will also affect pricing. He said the Subgroup will be in contact with the Academy and the SOA to determine how its recent work relates to LTCI valuation. He said the Subgroup will present any findings related to COVID-19 during future conference calls over the next few months.

Mr. Andersen made a motion, seconded by Mr. Boerner, to adopt the report of the Long-Term Care Valuation (B) Subgroup. The motion passed unanimously.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

W:\National Meetings\2020\Summer\TF\HA\LTCAWG 08-04-20.docx
The Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Jan. 23, 2020. The following Working Group members participated: Perry Kupferman, Chair (CA); Steve Ostlund (AL); Benjamin Ben (FL); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); Rhonda Ahrens (NE); Anna Krylova (NM); Laura Miller (OH); Andrew Schallhorn (OK); Andrew Dvorine (SC); Raja Malkani (TX); and Jaakob Sundberg (UT).

1. Adopted a Draft of Revisions to the Forms

Mr. Kupferman presented draft of revisions (Attachment Five-A1) to the Long-Term Care Experience Reporting Forms (Forms) found in the annual financial statement and instructions (Attachment Five-A2) for the revised Forms.

Mr. Kupferman said the draft was produced as a response to a referral from the Financial Analysis (E) Working Group that requests assistance from the Long-Term Care Actuarial (B) Working Group with long-term care insurance (LTCI) total reserve reporting in the Forms and the annual financial statement.

Mr. Kupferman said the draft revisions were exposed for public comment, and he presented a comment letter (Attachment Five-A3) from the American Council of Life Insurers (ACLI) and America’s Health Insurance Plans (AHIP).

Ms. Ahrens suggested that the Total Inception-to-Date rows be deleted for the Assumed and Ceded sections of Form 1. The Working Group agreed to these changes.

Jan Graeber (ACLI) asked if the current Form 3 will be retained in the set of Forms. Mr. Kupferman said Form 3 will be retained, and no changes to it have been proposed.

Mr. Ostlund made a motion, seconded by Ms. Ahrens, to adopt the draft Forms (Attachment Five-A4) and instructions (Attachment Five-A5) with changes agreed to during the discussion. The motion passed unanimously.

Mr. Kupferman said the draft Forms and instructions will be forwarded to the Health Actuarial (B) Task Force for its consideration.

Having no further business, the Long-Term Care Actuarial (B) Working Group adjourned.

Long-Term Care Insurance Experience Reporting Forms 1 Through 5

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2009, and 2010 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident & health, and fraternal annual statement. The list of the various annual statements is: life, accident & health, and fraternal; property/casualty; and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.
Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods. If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve and experience fund would be the paid-up value and future incurred claims will be only for LTC benefits. If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve and experience fund will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.
Instructions for Form 1

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons are exhibited.

Form 1: Stand-Alone LTC Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Assumed/Ceded Rows
Does not include YRT reinsurance transactions. For columns that are designated with a # rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

Column 1 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Health Companies
Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 2 - Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 3 – Claims Opened

The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 4 - Claims Closed

Number of claims that were closed during the year due to recovery, exhaustion of benefits, or death.
Column 5 – Claims Remaining Open

Open claims are all claims that have not been closed as of the end of the year.

Column 6 – Terminations

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

Column 7 – Policies/Certificates In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of active life reserves held for policyholders. The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

The amount reported in annual statement Underwriting and Investment Exhibit 2D, line 2, less the premium deficiency reserve in footnote (a) of that exhibit.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid.

Column 11 – Other Reserves

Total amount of other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Instructions for Form 2

Form 2 provides data on direct individual LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

Form 2: Direct Individual Experience – Stand-Alone Only

Primary Issue Period Splits

Experience data for each policy form should be included in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive

Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policy forms that provide institutional coverage only.

Non-Institutional Only
Policy forms that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain inforce as of 12/31.

Column 2 – % Male Lives Insured

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.
Column 3 – Average Attained Age

Unweighted average of the attained ages of all inforce policyholders in the block.

Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

*Life, Accident & Health, Fraternal and Property/Casualty Only*

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

*Health Companies*

Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
**Instructions for Form 4**

Form 4 provides data on direct group LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

**Form 4: Direct Group Experience – Stand-Alone Only**

**Definitions and Formulas**

**Current**  
Current calendar year of reporting.

**Total Inception-to-Date**  
Aggregate experience data since issuance of certificates.

**Comprehensive**  
Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

**Institutional Only**  
Certificates that provide institutional coverage only.

**Non-Institutional Only**  
Certificates that provide only non-institutional coverage.

**Column 1 – Calendar Year of Peak Issues**  
Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain in force as of 12/31.

**Column 2 – Third Party Funding**  
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Calculate this in aggregate as \[\text{Third Party Premiums} \div \text{Total Premiums}\]

**Column 3 – Average Attained Age**  
Unweighted average of the attained ages of all in force certificate holders in the block.

**Column 4 – Earned Premium**  
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.
Column 5 – Incurred Claims

Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserve. The discount rate is the statutory valuation interest rate for case reserve. Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint certificates are to be counted as two lives.

Column 7 – Terminations

Total number of certificate holders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC certificates during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
Instructions for Form 5

Form 5 is intended to provide data on a state-by-state basis in relation to LTC sales and claims experience. These lines are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on what is primarily a life policy or annuity contract.

Form 5: Hybrid Products and Direct State Reporting

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Stand-alone LTC
An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code
The state for which data is being reported. Example: CA for California

Column 2 – New Lives Insured
Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

Column 3 – Lives In-force Year End
Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.
Column 4 – Earned Premiums
Collect premiums + change in due premiums – change in advanced premiums – change in unearned premium reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Column 5 – Incurred LTC Claims
Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Incurred Extended Benefits Claims
Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 7 – Claims Remaining Open
Open claims are all claims that have not been closed as of the end of the year.

Column 8 – Claims Opened
The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 9 - New Extended Benefits Claims
The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 10 – Accelerated Benefits Available
Maximum amount of remaining death benefit available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 11 – Extended Benefits Available
Maximum amount of remaining extended benefits available to policyholders with extension of benefit riders.

Re: LTC Experience Reporting Forms and Instructions Exposed November 11, 2019 by the LTCAWG

Dear Mr. Kupferman and Mr. King,

Thank you for the time you and other regulators have spent on the proposed revisions to the NAIC Long-Term Care Experience Reporting Forms. ACLI and AHIP appreciate the opportunity to provide suggestions/comments regarding the version of the LTC Experience Reporting Forms and Instructions exposed for comment on November 11, 2019.

Form Specific Technical Comments:

Form 1
1) We believe that Form 1 is intended to apply to stand-alone only LTC policies. We request that this be added to the form’s header and/or made clear in the Form 1 instructions.
2) In the Instructions for Column 5 (“# Claims Remaining Open”), we suggest adding “as of the end of the year” to the end of the draft definition so it will read “Open claims are all claims that have not been closed as of the end of the year.”
3) It has been noted by some member companies that current reinsurance agreements may not have been in force in all prior years. It is not clear how “Total Inception-to-date” data should be calculated under “Assumed”, “Ceded” and “Net” when the current reinsurance agreement has not been in place for all prior years. We believe that the “Total Inception-to-date” data is only meaningful for the “Direct” portion of the Form and would suggest that the “Total Inception-to-date” rows be removed in the “Assumed”, “Ceded”, and “Net” subsections for both “Individual” and “Group” business.
4) The Instructions for Column 11 (“Other Reserves”) note that this value should be “The amount reported in annual statement Exhibit 6, Line 2 . . .”. We believe this is not the correct reference. It appears this might be the correct reference for Column 9. Column 11 appears to be Exhibit 6, Line 1 plus Line 3? Since Exhibit 6 is being modified for the 2019 Annual Statement, we suggest reviewing the revised form to assure that the proper references are present for the Instructions.
5) The Instructions for Column 9 (“Active Life Reserves”) read that this is the total of the reserves “held for policyholders who are not currently on claim”. Please note that many insurers continue to hold active live reserves for policyholders that are on claim. We suggest
removing the current definition and inserting a reference to the correct Annual Statement value (which in this case does appear to be Exhibit 6, Line 2.

6) We believe it would make sense for the new instructions for Column 2 (“Incurred Claims”) to be shown at the level of detail as the current Form 1 Instructions? We believe the “Incurred Claims” to be illustrated are intended to be the same developed claim amounts as shown in the Current Form 1. These previous instructions provided more detail and would thus allow for less misunderstanding in completing the Form. Please also amend the Instructions for Forms 2, 4 and 5 “Incurred Claims” to refer back to the definition of Incurred Claims for Form 1.

Form 2
1) We believe that Form 2 is also intended to apply to stand-alone only LTC policies. We request that this be added to the form’s header and/or made clear in the Form 2 instructions. (Please note that this same comment is applicable to Form 4.)

2) We recommend some additional clarification of the Primary Issue Year Periods be included in the Instructions. It would be preferable to clarify the intent that the data for a policy form/series can be included 100% in one of the three Issue Year periods based upon the primary issue years of the form. In addition, some companies might prefer to split the experience of a policy form by issue year. Perhaps an additional Definition along the following lines could be added to the Form 2 Instructions:

Primary Issue Period Splits
Experience data for each policy form should be included in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

3) In Column 8 on the Experience Reporting Form (“# New Lives Insured”) it appears that the three “Total Inception to Date” cells in the “Primarily 2010 and Later Issues” section should also be X’ed out.

Form 5.
1) We wish to note that the reporting of Column 4 (“Earned Premiums”) is likely to present challenges in the “Life/LTC Hybrid” section. In some policies, the premiums may not be separate for the LTC portion of the policy. It is likely that the data provided from company to company will not be consistent. Can more direction be provided in the Instructions for cases where the LTC portion of the premium is not identifiable?

2) In the Instructions for Column 7 (“# Claims Remaining Open”), we suggest adding “as of the end of the year” to the end of the draft definition so it will read “Open claims are all claims that have not been closed as of the end of the year.
3) In Column 10 on the Experience Reporting Form (“$ Accelerated Benefits Available”) it appears that the cell for “Current (Extended Benefit Policies)” should also be X’ed out.

4) In the Instructions for Columns 10 and 11 we suggest removing the word “remaining”. This implies that a company would need to compute the remaining benefit available for policies where a claim is in process and add to the total benefits available for policies not currently on claim. Company administrative systems vary, and inforce policy listings may show the full benefit and not the remaining benefit. Keeping the word ‘remaining’ could cause significant difficulties in reporting for some insurers while the difference between full and remaining benefits will likely not be material for most companies.

5) Companies have concern regarding the providing of LTC claims data at the state level. This data is generally not credible. We believe that Form 5 is most useful for showing market share and volume of new sales data. We would suggest either the removal of the state level Incurred Claims, or at the very least the addition of a footnote along the following lines: “Nationwide data is generally viewed as more representative and credible than individual state data.”

General Instructions
The instructions for the currently used LTC Experience Reporting Forms contains a lengthy introduction before the individual form instructions are reached. In light of the changes to the Experience Reporting Forms, we believe that this introduction in the Instructions needs to be revisited as well.

We would be happy to answer any questions that the Working Group has regarding these comments and suggested changes.

Sincerely,

Raymond Nelson
Consultant to AHIP

Long-Term Care Insurance Experience Reporting Forms 1 Through 5

These reporting forms must be filed with the NAIC by April 1 each year.

The purpose of the Long-Term Care Insurance Experience Reporting Forms is to monitor the amount of such coverage and to provide data specific to this coverage on a nationwide basis. Long-term care expenses may be paid through life policies, annuity contracts and health contracts. When the long-term benefits portion of the contract is subject to rating rules based on the Long-Term Care Insurance Model Regulation (sections on required disclosure or rating practices to customers, loss ratio and premium rate increases), the adequacy of the pricing and reserve assumptions is critical to meeting the expectation of those sections.

For life or annuity products where no portion is subject to these rating rules, the products are not being included in the reporting in these forms. Companies may use an assumption that long-term care benefits that are “incidental” regardless of the date of issue, may be excluded. Incidental means that the value of long-term care benefits provided is less than ten percent (10%) of the total value of the benefits provided over the life of the policy (measured as of the date of issue).

Form 1 gives an overview of the stand-alone LTC business and claims experience for both individual and group policies. Form 2 focuses on the experience of individual policies broken down into three Primary Issue Periods: Prior to 2003, 2003-2010, and 2011 and later. Form 3 focuses on the adequacy of claims reserves by presenting experience based on incurred year over the next several years. Because prior-year values should already be available; this form should be completed for at least the current and past four years. If available, all prior years should be completed. Form 4 focuses on the experience of group business. Form 5 provides a location to report data at the state level and additionally asks for data related to hybrid life or annuity products with LTC extended and/or accelerated benefits.

Because of the relatively small claim rates and variable length and size of long-term care claims, the statistical credibility of long-term care insurance experience is lower than the amount of credibility assigned to similar amounts of experience on other types of health insurance. This should be taken into account when reviewing experience and assessing the adequacy of reserves and the critical assumptions underlying them.

The Long-Term Care Insurance Experience Reporting Forms 1 through 5 should be filed whenever long-term care insurance has been sold, regardless of which annual statement has been filed. These forms are not only applicable to companies filing the life, accident & health, and fraternal annual statement. The list of the various annual statements is: life, accident & health, and fraternal; property/casualty; and health.

Include under the Individual portion both Individual policies and Group certificates if the group is approved by the state under statutes similar to Section 4E(4) of the Long-Term Care Insurance Model Act. Include under the Group portion group certificates if the group is approved by the state under statutes similar to Section 4E(1), (2) or (3) of the model act.
Claims incurred will need to reflect the loss of future premiums. These will occur because of the waiver of premium provision in the contract, waiver due to spouse’s benefit status or other provisions in the contract that make it paid-up or not subject to collection of additional premiums for some future period. The claim incurred in each year will include the amount of the reserve established to reflect the loss of future expected premiums. The effect in future years will depend on the manner in which premiums from these policies are reported in following periods. If the assumption is that the policy is paid-up (no future premiums to be collected), the reserve and experience fund would be the paid-up value and future incurred claims will be only for LTC benefits. If the assumption is that future premiums (gross or net) will be considered as “paid by waiver,” the reserve and experience fund will include in the reserve the present value of future premiums to be waived and the premium waived will be reported as both earned premium and a portion of the incurred claims.
Instructions for Form 1

Long-Term Care Insurance Experience Reporting Form 1 is intended to track actual claims, persistency, and reserves on a nationwide basis. Yearly and cumulative comparisons are exhibited.

Form 1: Stand-Alone LTC Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Assumed/Ceded Rows
Does not include YRT reinsurance transactions. For columns that are designated with a $ rather than a $, assumed/ceded business is only recorded here if the business is 100% coinsured.

Column 1 – Earned Premiums
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

Life, Accident & Health, Fraternal and Property/Casualty Only
Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

Health Companies
Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 2 - Incurred Claims
Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 3 – Claims Opened
The number of claims that have at least one benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 4 - Claims Closed
Number of claims that were closed during the year due to recovery, exhaustion of benefits, or death.
Column 5 – Claims Remaining Open

Open claims are all claims that have not been closed as of the end of the year.

Column 6 – Terminations

Total number of policy or certificate holders whose coverage ended during the year for any reason, including death, lapse, or benefit exhaustion.

Column 7 – Policies/Certificates In-force at Year End

Total number of policies or certificates in force at the end of the year.

Column 8 – Lives In-force at Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 9 – Active Life Reserves

Total amount of active life reserves held for policyholders. The amount reported in annual statement Exhibit 6, Line 2 for life, accident & health, and fraternal only.

The amount reported in annual statement Underwriting and Investment Exhibit 2D, line 2, less the premium deficiency reserve in footnote (a) of that exhibit.

Column 10 – Claim Reserves

Total amount of reserves held for payment of claims that have been incurred but not yet paid.

Column 11 – Other Reserves

Total amount of other reserves associated with long-term care policies, including premium deficiency reserves, unearned premium reserves, and additional actuarial reserves. For the additional actuarial reserve, use the lesser of the aggregate additional reserve and a reserve calculated specifically for LTC business.

A reserve must be carried for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services.
Instructions for Form 2

Form 2 provides data on direct individual LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

Form 2: Direct Individual Experience – Stand-Alone Only

Primary Issue Period Splits

Experience data for each policy form should be included in one of the three Primary Issue Year Periods shown on the experience form. It would be permissible for a company to include 100% of a policy form’s experience in just one of the three Primary Issue Year periods (using the issue year period where the majority of the policies were originally issued). It would also be permissible for a company to split a policy form’s experience by issue year into multiple Primary Issue Year periods shown in the form based upon policy issue year.

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Comprehensive
Policy forms that provide a combination of institutional or facility and non-institutional coverage. These include institutional only policies with non-institutional riders.

Institutional Only
Policy forms that provide institutional coverage only.

Non-Institutional Only
Policy forms that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues

Calendar year in which the largest number of policies in the block were sold. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policies that remain inforce as of 12/31.

Column 2 – % Male Lives Insured

Percentage of males within the block of policyholders. For example, a block consisting of 60% males would be reported as 60. When reporting figures for inception-to-date, include all policies ever sold in the block. For the current year, include only those policyholders that remain insured as of 12/31.
Column 3 – Average Attained Age

Unweighted average of the attained ages of all inforce policyholders in the block.

Column 4 – Earned Premium

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

*Life, Accident & Health, Fraternal and Property/Casualty Only*

Total earned premiums should equal direct earned premiums for LTC business from Schedule H, Part 1, Line 2.

*Health Companies*

Total earned premiums should equal Accident and Health Policy Experience Exhibit Column 1, line 10.3

Column 5 – Incurred Claims

Developed claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.

Column 7 – Terminations

Total number of policyholders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
INSTRUCTIONS FOR FORM 3

The purpose of this form is to test the adequacy of reserves held on long-term care policies. This form allows for the development of a seven-year trend of losses incurred by a specific year group of claimants. This form is to be prepared on a nationwide basis.

Report all dollar amounts in thousands ($000 omitted).

Part 1 – Total Amount Paid Policyholders

Show paid claims by year paid and year incurred. Claims are on a direct basis, including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Column 1.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 2 – Sum of Total Amount Paid Policyholders and Claim Liability and Reserve Outstanding at End of Year

This section provides a claim cost development overview to show the adequacy of claim reserves for a particular incurral year at the end of that year and at the end of subsequent years. The entry in Line X and Column Y is the cumulative claims incurred during year X and paid through the end of year Y for claims incurred in year X, plus the reserve at the end of year Y for claims incurred in year X.

Claims are on a direct basis including transfers before any reinsurance. Claims incurred prior to the year shown on Line 2 should be included in Line 1, Columns 1 through 8.

The “Prior” values in these sections will not be directly comparable to prior statements, as the current year’s statement will include an additional incurred year’s values.

Transfer policies are defined as policies that are either purchased or sold, typically through assumption reinsurance. These policies will be recorded in these parts of this exhibit while the company owns them.

Part 3 – Transferred Reserves

Claim reserves for transfer claims (acquired or sold) are shown here, by claim incurred year, starting from the year of transfer. For sold business, the entries are positive. For acquired business, the entries are negative. For years after the transfer year, the reserves are increased with interest.

Claim reserves for the buyer are the reserves initially set by the buyer, not necessarily equal to the reserves for the seller.
Part 4 – Present Value of Incurred Claims (Interest Adjusted Development of Incurred Claims)

Because claim reserves for long-duration claims are generally discounted, the year-to-year comparison in Part 2 is misleading to the extent interest income on claim reserves is material. To show consistent values; paid claims; transferred reserves and claim reserves are discounted to a common point in time (assumed to be July 1 of the incurred year).

- Paid claims in the year of incurral are discounted one-quarter year.
- Paid claims subsequent to the year of incurral are assumed to be paid mid-year and discounted back to the midpoint of the incurred year.
- Outstanding claim reserves for a given incurred year plus transferred reserves from Part 3 are discounted from the valuation date to the midpoint of the incurred year.
- Negative results are possible for acquired business only. Negative results indicate downward development of ultimate claims.
Instructions for Form 4

Form 4 provides data on direct group LTC experience. Data are to be reported by base policy form. Rider forms will be reported with the base forms to which they are attached. Only summary data by reporting year is illustrated. The reporting company should have detail by calendar duration available upon request.

Form 4: Direct Group Experience – Stand-Alone Only

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of certificates.

Comprehensive
Certificates that provide a combination of institutional or facility and non-institutional coverage. These include institutional only certificates with non-institutional riders.

Institutional Only
Certificates that provide institutional coverage only.

Non-Institutional Only
Certificates that provide only non-institutional coverage.

Column 1 – Calendar Year of Peak Issues
Calendar year in which the largest number of certificates in the block were distributed. When reporting figures for inception-to-date, include all certificates ever issued in the block. For the current year, include only those certificates that remain inforce as of 12/31.

Column 2 – Third Party Funding
Indicate whether premiums are paid in whole or in part by a third party such as an employer. Example: If the level of third party funding is 25%, enter “25” in this column.

Calculate this in aggregate as [Third Party Premiums ÷ Total Premiums]

Column 3 – Average Attained Age
Unweighted average of the attained ages of all inforce certificate holders in the block.

Column 4 – Earned Premium
Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.
Column 5 – Incurred Claims

Developed claim amounts for claims incurred during the calendar year. Equal to the present value of all claim payments and any claim reserve. The discount rate is the statutory valuation interest rate for case reserve. Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Lives In-force Year End

Total number of lives in force at the end of the year. Joint certificates are to be counted as two lives.

Column 7 – Terminations

Total number of certificate holders whose coverage ended during the year for any reason including death, lapse, or benefit exhaustion.

Column 8 – New Lives Insured

Total number of new lives issued LTC certificates during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.
Instructions for Form 5

Form 5 is intended to provide data on a state-by-state basis in relation to LTC sales and claims experience. These lines are the state’s portion of a number of statistics reported on a nationwide basis elsewhere in these experience forms. Form 5 also includes data on products that include extension of and/or acceleration of LTC benefits on what is primarily a life policy or annuity contract.

Form 5: Standalone and Hybrid Products – Direct State Reporting

Definitions and Formulas

Current
Current calendar year of reporting.

Total Inception-to-Date
Aggregate experience data since issuance of policies.

Stand-alone LTC
An LTC product that is sold by itself, not as a rider on another type of insurance.

Life/LTC Accelerated Benefits Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed upon the occurrence of a long-term care need at the cost of reduction in the death benefit or annuity payout benefit.

LTC Extension of Benefit Riders
Riders attached to life insurance or annuity products that allow for a benefit to be claimed above and beyond the initial benefit amount in the event that all accelerated benefits have been claimed and the insured is still in need of long-term care services.

Column 1 – State Code
The state for which data is being reported. Example: CA for California

Column 2 – New Lives Insured
Total number of new lives issued LTC or hybrid policies during the year. Values in rows that are labeled “inception-to-date” should be the sum of all new lives insured in each year during which the form was sold.

Column 3 – Lives In-force Year End
Total number of lives in force at the end of the year. Joint policies are to be counted as two lives.
Column 4 – Earned Premiums

Collected Premiums + Change in Due Premiums – Change in Advanced Premiums – Change in Unearned Premium Reserves.

If necessary, the premium may be derived as the gross premium of the policy with the inclusion of LTC coverage less the gross premium of that policy without LTC coverage.

Column 5 – Incurred LTC Claims

Developed claim amounts for LTC claims incurred during the calendar year including accelerated claims, but not including payments due to extension of benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 6 – Incurred Extended Benefits Claims

Developed claim amounts for LTC claims incurred during the calendar year due to extension of benefits after exhaustion of accelerated benefits. Equal to the present value of all claim payments and any claim reserves. The discount rate is the statutory valuation interest rate for case reserves.

Refer to the instructions for incurred claims included in Form 3, Part 4.

Column 7 – Claims Remaining Open

Open claims are all claims that have not been closed as of the end of the year.

Column 8 – Claims Opened

The number of claims that have at least one LTC benefit payment made during the year after the elimination period but have no payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. For the purpose of including a claim in this count, payments that do not require satisfaction of the elimination period are excluded. A claim that has terminated by the end of the year should be included in the count.

Column 9 - New Extended Benefits Claims

The number of claims that have at least one benefit payment made during the year resulting from extension of benefits, but have no extension of benefits payments in previous years. If a claimant has prior claims, he or she should be counted if the current claim is considered as a new claim. A claim that has terminated by the end of the year should be included in the count.

Column 10 – Accelerated Benefits Available

Maximum amount of death benefits available to be paid on an accelerated basis due to LTC Acceleration of Benefits riders.

Column 11 – Extended Benefits Available

Maximum amount of extended benefits available to policyholders with extension of benefit riders.
Requests of the LTC Valuation Work Group

- Develop a replacement mortality table for LTC active life reserves
  - Based on the 2012 Annuitant Mortality Table
  - Recommend a margin for conservatism
- Develop a replacement lapse table
  - Recommend a margin for conservatism
- Consider developing tables for valuation on total lives basis as well as active lives basis

Progress Since Fall National Meeting
- Completed review of actual-to-expected lapse on total lives basis
- Completed review of reasonableness of total terminations on total lives basis
- Developed mortality improvement from mid-point of exposure period, 2008 – 2011, to 2020 using scale G2
- Developed margins for lapse and mortality
- Developed lapse tables on an active lives basis

Remaining Tasks
- Develop mortality tables on an active lives basis
- Complete Report
### Recommended Underwriting Class Adjustment Factors for Mortality Table (Total Lives)

### Data Credibility for Individual Lapses

- Minimum of Number of Individual Lapses and 1,082 (Full Credibility) by Issue Age Group and Policy Duration

### Data Credibility for Group Lapses

- Minimum of Number of Group Lapses and 1,082 (Full Credibility) by Issue Age Group and Policy Duration
Mortality Improvement to 2020

Recommended Mortality Improvement

- The study period is 2008 through 2011
- Recommend to apply improvement trend using the 2012 IAM G2 scale from 2010 to 2020 (11 years)
- Recommended tables represent industry experience as of 2020
- G2 scale applies to both total lives and active lives

Alternatives for Mortality Improvement

- The mortality tables can be made dynamic by continuing to apply the G2 scale to future valuation dates
- For first principle valuation approach, G2 scale can be applied to both active lives and disabled lives

Recommended Margins
Recommended Margins

- 10% for mortality
- 15% for lapse
- Same for total lives and active lives

Actual Total Lives Mortality to Expected (Based on Recommended Tables) By Company

Actual Individual Total Lives Lapses to Expected (Based on Recommended Tables) By Company

Data

- Data collected on policies exposed between 1/1/2000 and 12/31/2016
- 18 companies submitted data
- Over 80% of all 2016 LTC Earned Premium
- Data requested was expanded from the previous study.
  New data collected:
  - Additional underwriting information
  - Expanded benefit information
  - ICD-9-CM/ICD-10-CM claim information

Status Update

- Completed steps
  - Validation and logic checks defined and programmed
  - Exposure calculations defined and implemented
  - Data validation
  - Contributor data has been validated, exposure calculated and initial database built
- To be completed
  - Build final database
  - Review of aggregated results
  - Database released
Deliverables

- A database of claim termination and incidence data including:
  - Report that defines the database and calculations
  - Summary of data collected
  - High-level results
  - Data will be HIPAA compliant and follow safe harbor reporting rules
    - Results for ages 90+ required to be grouped
    - Other grouping added to satisfy Safe Harbor while maintaining the highest level of detail as the prior study
  - Expected completion date: July 31, 2020
    - Four year lag between latest data collected and publication
    - Comparable to past LTC studies

Challenges of the current study

- Heightened awareness of HIPAA compliance by participating companies
  - Additional research into HIPAA compliance options
  - Contracting between data compiler and contributors
  - Data restrictions
  - Delays in data collection and reporting phases
The Long-Term Care Pricing (B) Subgroup of the Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Feb. 6, 2020. The following Subgroup members participated: Paul Lombardo, Chair (CT); Steve Ostlund (AL); Perry Kupferman (CA); Benjamin Ben (FL); Weston Trexler (ID); Nicole Boyd (KS); Marti Hooper (ME); Fred Andersen (MN); David Yetter (NC); Rhonda Ahrens (NE); David Sky (NH); Anna Krylova (NM); Laura Miller (OH); Tomasz Serbinowski (UT); and Joylynn Fix (WV). Also participating was: Sarah Neil (RI).

1. Discussed LTCI Cash Value Buyouts

Mr. Lombardo said the Subgroup will continue its discussion of pricing considerations for long-term care insurance (LTCI) cash value buyouts (CVBs) to policyholders in lieu of rate increases from its Jan. 6 conference call. He said CVBs offer policyholders an additional option that is beyond the scope of their existing LTCI contracts. He said most LTCI policies were not initially priced assuming CVBs would be offered. He said the amount of the CVB will likely be calculated as a percentage of the statutory reserve held for the given policy and that the percentage used is an important aspect of CVB considerations. He said the percentage needs to be high enough to appeal to policyholders, but not so high that it affects policyholders that continue their LTCI coverage.

Mr. Lombardo said possible factors influencing the CVB take-up rate by policyholders are: 1) the policyholder’s financial situation; 2) the policyholder’s attained age; and 3) the policyholder’s perception of needing long-term care (LTC) in the future. He said state insurance regulators have a responsibility to ensure that the election of CVBs does not result in harm to remaining policyholders or financial harm to insurers due to potential unpriced for increases in claims costs to the remaining block of policyholders. He said he thinks the balance of the statutory reserve that remains after the percentage of it is paid to policyholders electing CVBs should be earmarked for supporting the block of remaining policyholders. Mr. Andersen agreed that these reserve balances should be earmarked.

Mr. Lombardo said insurers that pay out CVBs should consider the effect of morbidity on the remaining block of policyholders for subsequent valuations of liabilities. Mr. Lombardo agreed and said he understands “morbidity” to include claim incidence, claim continuance and percent of maximum allowable benefit utilization. Mr. Andersen agreed with the components of morbidity.

Mr. Lombardo said the Subgroup should discuss whether CVBs should be one-time offers and how long after the offer of a CVB will policyholders be given to decide whether to elect it. He said the number and frequency of CVB offers have the potential to influence the degree of antiselection.

Jan Graeber (American Council of Life Insurers—ACLI) said the ACLI will meet with some of its member companies to discuss the issues above, as well as potential legal issues associated with the offering of CVBs. She said there are concerns that a policyholder or representative could sue an insurer if a CVB were elected, and the CVB recipient later required LTC, or that remaining policyholders could sue the insurer in response to rate increases or financial instability resulting from antiselection against the remaining block. She said ACLI members will also discuss potential tax ramifications to policyholders with tax-qualified LTCI policies upon election of a CVB. She said she will report the results of the ACLI member meeting to the Subgroup during a future conference call.

Ray Nelson (America’s Health Insurance Plans—AHIP) said discussions he has had with AHIP member companies indicate companies are interested in possibly offering CVBs and do not want this option to be prohibited. He said AHIP member companies have expressed the same concerns as those identified by the Subgroup.

Mr. Lombardo said he has discussed the possibility of offering CVBs to policyholders with three insurers. He said one insurer has analyzed the issues associated with CVBs and is interested in further consideration, and two insurers have not analyzed CVBs but are interested in considering offering them.

Ms. Neil asked Ms. Graeber and Mr. Nelson if either are aware of insurers currently offering CVBs. Ms. Graeber and Mr. Nelson said they are not aware if any insurers are or are not. Mr. Lombardo asked Ms. Graeber to ask ACLI members at
the upcoming ACLI meeting if any are currently offering CVBs. Ms. Graeber said she will consult with ACLI legal staff to determine if this is information she can share with the Subgroup.

Mr. Lombardo said the concept of CVBs is also being discussed in one of the workstreams of the Long-Term Care Insurance (EX) Task Force and that Subgroup members might assist the Task Force in this effort.

2. Discussed LTCI Hybrid Products

Mr. Lombardo said there have been recent discussions in the Connecticut Legislature concerning the ability of stand-alone LTCI policyholders to convert their policies to some form of hybrid LTCI policy, using some of the accumulated value of the stand-alone policy to offset the cost of the hybrid policy. He asked if others think this proposal is feasible.

Birny Birnbaum (Center for Economic Justice—CEJ) said there may be issues with calculating what value will be assigned to cancelling the stand-alone coverage that will be transferred to the hybrid coverage that are similar to calculating a CVB value.

Having no further business, the Long-Term Care Pricing (B) Subgroup adjourned.

W:\National Meetings\2020\Spring\TF\HA\Conference Calls\2-6 LTCPKG\02-06-20 LTCPKG min.docx
The Long-Term Care Pricing (B) Subgroup of the Long-Term Care Actuarial (B) Working Group of the Health Actuarial (B) Task Force met via conference call Jan. 6, 2020. The following Subgroup members participated: Paul Lombardo, Chair (CT); Steve Ostlund (AL); Perry Kupferman (CA); Marti Hooper (ME); Fred Andersen (MN); William Leung (MO); Rhonda Ahrens (NE); Anna Krylova (NM); David Yetter (NC); Laura Miller (OH); Raja Malkani (TX); Tomasz Serbinowski (UT); and Joylynn Fix (WV).

1. Discussed LTCI Cash Value Buyouts

Mr. Lombardo said the Subgroup will discuss pricing considerations for long-term care insurance (LTCI) cash value buyouts (CVBs) to policyholders in lieu of rate increases. He said he does not believe most LTCI carriers account for the option of CVBs to policyholders in their initial pricing. He said this may subject carriers to antiselection, and they may become financially disadvantaged in the event policyholders elect CVBs.

Mr. Andersen said he and other state insurance regulators have begun a study of the mathematical aspects of the impacts on policyholders who elect a CVB and the effect on the remaining block of policyholders. He said state insurance regulators’ main concern is that the remaining policyholders may be in a worse position after others have opted for CVBs. He said preliminary findings indicate three factors may influence whether CVB election will harm remaining policyholders. He said the first factor is the amount of the CVB, such as if it is calculated as a percentage of held statutory reserves within a given rating cell, where the risk of harm to remaining policyholders increases as the percentage applied increases. He said the second factor is the percentage of policyholders opting for CVBs, with increasing percentages increasing the risk to remaining policyholders. He said the third factor is the degree of antiselection that may occur if healthier policyholders opt for CVBs, resulting in higher-than-anticipated claims costs among the pool of remaining policyholders.

Mr. Andersen said three factors were identified that may contribute to antiselection in the presence of CVBs. He said it is possible that policyholders that elect CVBs tend to be more likely to lapse in general, whether or not a CVB is offered. He said there may be a tendency for policyholders that are aware that they are likely to die soon to elect CVBs, and when such individuals are no longer in the pool of remaining policyholders, the reduction in remaining pool mortality may result in claims costs in excess of those initially priced for. He said there may be a tendency for policyholders that have expectations that they will have lower-than-average long-term care (LTC) claims costs to elect CVBs, and when such individuals are no longer in the pool of remaining policyholders, the reduction in remaining pool morbidity may result in claims costs in excess of those initially priced for.

Ms. Ahrens said the Nebraska Department of Insurance (DOI) is generally not in favor of CVBs, as it is difficult to determine the effect that policyholder election of CVBs will have on the remaining policyholder block’s experience. She said there are other options for policyholders, and the DOI questions what purpose offering CVBs serves. She said CVBs are extra-contractual benefits and do not preserve insurance benefits.

Mr. Kupferman said he thinks the percentage of policyholders that opt for CVBs is very small. Mr. Serbinowski said since the percentage of policyholders that will elect CVBs is likely small, the Utah Insurance Department likely would not prohibit an insurer from offering CVBs.

Mr. Lombardo said that some policyholders that are eligible for CVBs may also be eligible for nonforfeiture benefits (NFBs), and the CVB will likely be much greater than the NFB amount. He asked if the CVB is in lieu of, and not in addition to, the NFB. Mr. Andersen said he believes the CVB is in lieu of the NFB.

Mr. Andersen said he and other state insurance regulators discussed a scenario where the offered CVB is a low percentage of the held statutory reserve, and the insurer expects to experience a financial gain when the CVB is elected. He asked if state insurance regulators should require the insurer to hold this gain as a reserve for the block of remaining policyholders. He said if this is required, state insurance regulators will need to determine how to measure the amount of the gain.
Jan Graeber (American Council of Life Insurers—ACLI) said she will survey ACLI member companies for their input related to offering CVBs to policyholders, and policyholder take-up rates on the various reduced benefit and nonforfeiture options offered. She said she estimates, in general, that 92% of policyholders presented with a rate increase choose to continue coverage at the unmodified increased premium level. Ray Nelson (America’s Health Insurance Plans—AHIP) said he will survey AHIP member companies for the same information.

Mr. Lombardo said the Subgroup will continue to discuss and analyze CVB options.

Having no further business, the Long-Term Care Pricing (B) Subgroup adjourned.
ACADEMY PROFESSIONALISM TALKING POINTS FOR HATF

Immediate Past President of the American Academy of Actuaries Shawna Ackerman said that the Academy will host a professionalism webinar, “In Times of Uncertainty, Professionalism is Certain,” on August 20, and noted that government regulators are invited free of charge. She also highlighted the Academy’s Annual Meeting and Public Policy Forum on November 5-6 in Washington, D.C., the Life and Health Qualifications Seminar, to be held November 9 – 12 in Arlington, VA, and the Academy’s COVID-19 Resource Page.

Actuarial Standards Board (ASB) Chairperson Kathy Riley gave an overview of revisions to actuarial standards of practice in the health area. ASOP No. 28, now titled Statements of Actuarial Opinion Regarding Health Insurance Assets and Liabilities is open for comment through November 13, 2020. The ASB is requesting that comments be submitted via the new Comment Template, which is designed to encourage commentators to provide suggested edits and the rationale for those edits to enable the ASB to better understand the commentators’ concerns.

The ASB will review exposure drafts of revisions to ASOP No. 3, Continuing Care Retirement Communities, in September, and ASOP No. 18, Long-Term Care Insurance, in December.

The comment period on the first exposure draft of a revision to ASOP No. 11, Reinsurance Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports, ended on June 30, 2020. Two comments were received, one each from the Academy’s Life Practice Council and Health Practice Council. The ASB is scheduled to review the next version of the ASOP at its December meeting.

With respect to cross-practice ASOPs, ASOP No. 56, Modeling, will be effective for work performed on or after October 1, 2020. The ASB began a review of a third exposure draft of the new ASOP on assumptions at its March meeting and will continue the review in September.

In 2014, the ASB had reviewed and approved a revision to ASOP No. 38, now titled Catastrophe Modeling (for all Practice Areas). The revised ASOP No. 38 was held while the Modeling ASOP was developed. The ASOP No. 38 Task Force has reconvened and is reviewing the ASOP in light of the guidance in ASOP No. 56. The ASB expects to review an exposure draft of ASOP No. 38 at its September meeting.

Actuarial Board for Counseling and Discipline (ABCD) member Godfrey Perrott reviewed ABCD activity since the Dec. 2019. The complaints the ABCD completed do not raise issues germane to the NAIC, as most were pension specific. The requests for guidance (RFGs) the ABCD has addressed (72) have covered a wide range of issues. In the health practice area, RFGs have covered qualification for the NAIC Health Blank, disclosure (missing data, optimistic assumptions, etc.), steps to resign as Appointed Actuary, and contingent fees.
American Academy of Actuaries
Health Practice Council Highlights
To the National Association of Insurance Commissioners (NAIC)
Health Actuarial Task Force (HATF)
Tuesday, Aug. 4

- The Health Practice Council (HPC) has continued to actively engage policymakers and regulators in the months since the last NAIC national meeting where HATF has met.

- The HPC has, not surprisingly, been actively engaged in work streams to address implications surrounding the COVID-19 pandemic and its impact on health care including the potential effects of COVID-19 on health insurance markets, consumers, and public programs. The HPC has produced two sets of frequently asked questions (FAQs), on the coronavirus’ effect on the individual and small group markets and on Medicaid.

- In addition HPC committee members have been having conversations with public policy makers including congressional members and committee offices, the Congressional Budget Office, and Congressional Research Service.

- The HPC has also been offering informational virtual forums on COVID-19-related issues, including participating in webinars covering cross-actuarial-practice issues and on a focused regulatory perspective on 2021 ratefilings.

- In addition, the HPC hosted a web briefing in late June for policymakers on issues involved in these 2021 health insurance premium drivers and risk mitigation mechanisms. We had previously published issue briefs on those topics.

- Another focus of the HPC is exploring Health Equity. We are planning on a webinar exploring issues involved in that in the next month or so.

- Before the stay at home orders took effect earlier this year, the HPC held its annual Capitol Hill visits, where volunteers and Academy staff met with congressional leadership, and committee and personal offices, along with a number of federal agencies/departments. Much of this year’s Hill discussions focused on recent HPC publications, including Telehealth, Surprise Medical Bills, Long-Term Care Insurance, and Medicaid. The rising costs of health care, especially on prescription drugs, was a topic of discussion in the meetings as well as the implications of recent legislative and regulatory actions on the individual, small, and large group markets.

- In the May/June edition of Contingencies, members of the Social Determinates of Health (SDOH) subcommittee had an article published, “Toward a More Holistic Look at Wellness,” examining a broad array of issues contributing to an individual’s health and wellness. Also, in the same issue, the Health Practice International Committee (HPIC) submitted a published article, “It’s an Opioid World,” a look at the international opioid crisis.

We also have many initiatives under way within the HPC and its committees, including:

- We have exposed for comment a new practice note on ASOP No. 6 (*Development of Age-Specific Retiree Health Cost Assumptions for Pooled Health Plans, Including Applications to Non-Pooled Health Plans*), to provide information for actuaries valuing retiree health benefit plans. Comments on the exposure draft are due to the Academy by September 30, 2020.

- With the exposure period for the Actuarial Memorandum Practice Note now concluded, the drafting group is now reviewing comments received and expects to public a final practice note soon.

- We have multiple projects underway under Long-term Care: including groups working on LTC Actuarial Equivalence and on COVID-19 papers.

- We are developing a paper on Telehealth with a renewed focus now on the impact of COVID-19. We had previously published an issue brief in 2019, but given the experience of the past few months have decided that we need to revisit the topic.

- Other coronavirus possible workstreams underway include a focus on Medicare and on an international comparison study of how different countries have responded to the pandemic.

- Also on the international front, the Academy’s Health Practice International Committee along with the SOA International Section, and the International Actuarial Association Health Section have been compiling we are nearing completion of schematic diagrams, or a grid, if you will, to capture the main features of health financing systems and funding schemes for about 30 countries.

- The Academy’s 2020 Annual Meeting and Public Policy Forum is November 5-6 will feature sessions on the Future of Health Care Delivery as impacted by COVID-19, a session on International Health Funding, and regulatory changes including those precipitated by the pandemic on ACA markets, Medicare and Medicaid.

- Finally, I am pleased to inform you, if you have not already received the news, that Al Schmitz will be the next Academy Vice President, taking over from Audrey Halvorson during the annual meeting.
REGULATORY FRAMEWORK (B) TASK FORCE

Regulatory Framework (B) Task Force Aug. 4, 2020, Minutes ................................................................. 7-186
Regulatory Framework (B) Task Force Feb. 20, 2020, Minutes (Attachment One) ................................. 7-190
Regulatory Framework (B) Task Force 2020 Revised Charges (Attachment One-A) ........................... 7-191
Accident and Sickness Insurance Minimum Standards (B) Subgroup Dec. 16, 2019, Minutes
(Attachment Two) ....................................................................................................................................... 7-193
ERISA (B) Working Group July 31, 2020, Minutes (Attachment Three) ....................................................... 7-195
HMO Issues (B) Subgroup July 13, 2020, Minutes (Attachment Four) ............................................................. 7-197
HMO Issues (B) Subgroup June 11, 2020, Minutes (Attachment Four-A) ...................................................... 7-198
Health Maintenance Organization Model Act (#430), July 13, 2020, Draft (Attachment Four-B) .......... 7-200
MHPAEA (B) Working Group July 28, 2020, Minutes (Attachment Five) ...................................................... 7-232
MHPAEA (B) Working Group June 24, 2020, Minutes (Attachment Five-A) ................................................. 7-234

[State] Pharmacy Benefit Manager Licensure and Regulation Model Act, July 6, 2020, Draft
(Attachment Six-A) .................................................................................................................................. 7-244
The Regulatory Framework (B) Task Force met Aug. 4, 2020. The following Task Force members participated: Michael Conway, Chair (CO); Bruce R. Ramge, Vice Chair (NE); Lori K. Wing-Heier (AK); Jim L. Ridling represented by Steve Ostlund and Yada Horace (AL); Alan McClain (AR); Ricardo Lara represented by Tyler McKinney (CA); Karima M. Woods (DC); David Altmaier represented by Chris Struk (FL); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Weston Trexler (ID); Robert H. Muriel represented by Kate Morthland (IL); Vicki Schmidt represented by Justin McFarland and Craig Van Aalst (KS); Sharon P. Clark represented by DJ Wasson (KY); Gary Anderson represented by Kevin Beagan (MA); Eric A. Cioppa (ME); Steve Kelley represented by Grace Arnold (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Robert Croom (NC); Jon Godfread (ND); Chris Nicolopoulos represented by Maureen Belanger (NH); Glen Mulready (OK); Andrew R. Stolfi (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Northrup and Jaakob Sundberg (UT); Scott A. White represented by Julie Blauvelt and Don Beatty (VA); Mike Kreidler (WA); Mark Afable represented by Nathan Houdek (WI); and James A. Dodrill (WV).

1. **Adopted its Feb. 20 and 2019 Fall National Meeting Minutes**

The Task Force met Feb. 20 and Dec. 7, 2019. During its Feb. 20 meeting, the Task Force appointed the MHPAEA (B) Working Group and adopted its 2020 proposed charges.

Ms. Kruger made a motion, seconded by Commissioner Godfread, to adopt the Task Force’s Feb. 20 (Attachment One) and Dec. 7, 2019, (see NAIC Proceedings – Fall 2019, Regulatory Framework (B) Task Force) minutes. The motion passed unanimously.

2. **Adopted its Subgroup and Working Group Reports**

Director Ramge made a motion, seconded by Mr. Trexler, to adopt the following reports: the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its Dec. 16, 2019, minutes (Attachment Two); the ERISA (B) Working Group (Attachment Three); the HMO Issues (B) Subgroup, including its July 13 minutes (Attachment Four); the MHPAEA (B) Working Group (Attachment Five); and the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, including its July 16 minutes (Attachment Six). The motion passed unanimously.

Commissioner Conway said in adopting the HMO Issues (B) Subgroup report, the Task Force is not adopting the proposed revisions to the Health Maintenance Organization Model Act (#430). He said the Task Force will meet via conference call in September to consider adoption of the proposed revisions.

3. **Heard an Update on the CHIR’s Work Related to the ACA**

Justin Giovannelli (Center on Health Insurance Reforms—CHIR, Georgetown University Health Policy Institute) provided an update on the CHIR’s work related to the federal Affordable Care Act (ACA) and other issues of interest to state insurance regulators. He highlighted the work the CHIR has been doing related to the COVID-19 pandemic. He said the CHIR has set up a tracking map and database concerning state decisions related to coverage requirements during the pandemic. He said the CHIR has written several issue briefs related to the COVID-19 pandemic. With the support of the Robert Wood Johnson Foundation (RWJF), the CHIR recently issued a research brief trying to gain insight into the insurer perspective regarding coverage decisions during the pandemic. The research brief is based on interviews conducted between late April and June with 25 executives from health insurance plans.

Mr. Giovannelli said the CHIR is continuing its work to track and analyze state regulatory approaches to short-term, limited-duration (STLD) plans in the wake of recent federal rule changes with respect to these products. He said the CHIR is also continuing to track state reforms affecting the individual market, including state actions involving the ACA’s section 1332 waiver program and improving the affordability of comprehensive coverage. He said the CHIR anticipates publishing an issue brief examining state reinsurance programs developed under the section 1332 waiver program. He said initial findings have shown that state reinsurance programs have had a positive effect in terms of creating individual market stability because such programs make coverage more affordable for individuals not eligible for premium subsidies. He suggested that state insurance...
regulators may want to consider looking beyond reinsurance programs and/or looking at options to provide additional individual market stability that might work in tandem with state reinsurance programs to provide stability and benefits to all market participants, including those who are receiving premium subsidies.

Mr. Giovannelli discussed the CHIR’s ongoing state technical assistance regarding insurance regulatory matters with the support of the RWJF through its State Health and Value Strategies Program. He also highlighted the CHIR’s assistance, provided with the support by the Laura and John Arnold Foundation (LJAF), to state and federal policymakers regarding regulatory approaches to balance billing.

Commissioner Conway said Colorado enacted legislation last year providing additional funding to allow the Colorado Department of Insurance (DOI) to look at ways to use its reinsurance program in tandem with other initiatives to provide additional individual market stability. He expressed interest in having additional discussions with the CHIR and other experts on this topic.

4. Heard a Panel Presentation on HCSMs

Mr. Giovannelli provided an overview of health care sharing ministries (HCSMs). He discussed consumer confusion involving HCSMs. He said although HCSMs are careful to say they are not insurance, to consumers, they look like traditional health insurance coverage for a number of reasons, including: 1) the use of defined benefit packages; 2) monthly payment requirements similar to premiums; 3) the use of provider networks; and 4) cost-sharing requirements, such as deductibles, copayment and co-insurance limits. In addition, he said some HCSMs use insurance brokers to sell their plans, and they have marketing campaigns that describe HCSM plans as a replacement for insurance or suggest that consumers can rely on HCSMs for financial protection. He highlighted some examples from HCSM advertising and marketing materials illustrating these concerns and why consumers may be led to believe HCSM plans are traditional health insurance plans.

Mr. Giovannelli discussed potential harms to consumers and the individual health insurance market related to HCSMs, such as: 1) misaligned expectations that their claims will be paid; and 2) risk segmentation and undermining the traditional health insurance market. He also discussed the current regulatory framework for HCSMs, noting that neither the federal mandate exemption under the ACA nor any other federal provision preempts state regulatory authority over HCSMs, and that states can, and some do, set standards for HCSMs, which they enforce.

Mr. Giovannelli offered several regulatory options regarding the regulation of HCSMs, including: 1) active, ongoing oversight to ensure compliance with state standards, such as including demonstration of compliance at the front-end through a registration requirement; 2) prohibiting HCSMs from offering financial incentives for enrollment; and 3) prohibiting marketing materials that suggest that an HCSM is operating in a financially sound manner or that it has had a successful history of meeting subscribers’ financial or medical needs.

Joel Noble (Samaritan Ministries) described Samaritan Ministries’ approach to meeting its members’ health care needs. He said Samaritan Ministries coordinates and connects members to care for the whole need with prayer, encouragement and financial support. Samaritan Ministries believes health care needs are multi-dimensional—emotional and spiritual—as much as physical and financial. Samaritan Ministries has been operating for just over 25 years. Currently, over $30 million is shared each month among over 270,000 members nationwide.

Mr. Noble discussed Samaritan Ministries’ best practices, found at https://www.samaritanministries.org/bestpractices, that it believes all HCSMs should follow. The best practices suggest that an HCSM should: 1) act primarily as a facilitator for the bearing of medical burdens through the voluntary medical burden-sharing process, which does not include the pooling of funds; 2) not assume any transfer of medical risk form its members or make any guarantee of payment for any member medical expenses; 3) conform with the statutory definition of a qualifying HCSM, as required under the ACA; 4) not require its members to apply for government assistance or state aid as part of the ministry’s sharing; 5) ideally not use health insurance agents or brokers to enroll members into the ministry; and 6) clearly communicate in its marketing and advertising materials that the HCSM is not an insurance company. The sharing of medical costs is completely voluntary, and members maintain their legal responsibility to pay their medical bills irrespective of whether they receive payment from the voluntary actions of other members of the ministry through the sharing process.

Mr. Noble said Samaritan Ministries values transparency, and it would not find it burdensome to report information annually if a state mandates such a requirement for HCSMs. He explained that Samaritan Ministries routinely shares financial and other information with state agencies, upon request, and its members. However, he expressed concern with non-insurance entities, such as HCSMs, registering with a state DOI because HCSMs are section 501(c)(3) charities, and they should not be subject...
to any portion of the insurance code. As a charity, HCSMs should be regulated by the state attorney general’s office, and they should be subject to the same state laws that apply to other charities. However, Mr. Noble acknowledged that state DOIs do receive calls from consumers about HCSMs. To address this, he suggested that any information a HCSM shares with the state attorney general’s office should be shared with the state DOI.

Commissioner Conway discussed problems that Colorado has had with the marketing by some HCSMs that lead consumers to believe that they are offering a traditional insurance product. He asked Mr. Noble why Samaritan Ministries’ best practices do not specifically address this issue by specifically suggesting that an HCSM should not use insurance terms in their marketing materials. Mr. Noble said an HCSM’s marketing material should make it clear that the HCSM product is not an insurance product and not use insurance terms. He said Massachusetts has included in its HCSM regulations a prohibition on the use of confusion language and the use insurance terms like “coverage” or “deductible.” He agreed with Commissioner Conway’s concerns related to this issue.

Mr. Sundberg asked Mr. Noble if Samaritan Ministries used actuaries to set the level of monthly members sharing. Mr. Noble said Samaritan Ministries does not use actuaries. He said Samaritan Ministries looks at health care trends and monitors health care costs. Commissioner Conway asked what Samaritan Ministries uses to price the product if it does not employ actuaries. Mr. Noble said because the sharing is member-to-member, Samaritan Ministries is dealing with medical bills after they have been incurred. He said actuaries make assumptions about future events and set premium rates based on those assumptions. HCSMs are dealing with actual medical events after they have happened. Mr. Noble said Samaritan Ministries deals with this situation by including a pro rata provision in its member agreements, such that if the sharing needs exceed the monthly shares, then the sharing is at a pro rata rate. He explained that if such a short fall occurs three times in a row, then under Samaritan Ministries’ guidelines, its members can vote to increase their monthly share amounts to address the current shortfall and avoid future shortfalls.

Commissioner Conway asked Mr. Noble about Samaritan Ministries’ position on the payment of commissions to individuals who enroll people into its HCSM products. Mr. Noble said Samaritan Ministries does not support the payment of commissions because it could lead to possible fraudulent and deceptive practices surrounding enrollment that could be harmful to consumers.

5. Heard a Discussion on Premium Holidays, Early MLR Rebate Payments, and Adjustments to Cost-Sharing Benefits as a Result of Fewer Claims Filings in 2020 Due to COVID-19

Jason Levitis (Levitis Strategies LLC) said as many know, the COVID-19 pandemic has led to a substantial reduction in commercial health insurance claims, partly because consumers are avoiding non-urgent health care. He said some health insurers, particularly in the Medicare market, have responded with premium holidays or rebates. He said with respect to premium holidays and rebates, many state insurance regulators have been supportive of providing rebates and premium holidays to consumers, but it is unclear whether federal rules permit it, particularly with respect to individuals receiving coverage through the health insurance exchanges. He noted that the federal Centers for Medicare & Medicaid Services (CMS) have said subject to the states allowing it, pre-payment of medical loss ratio (MLR) rebates are allowed as an avenue for providing premium discounts; but again, the issue is how to apply it and its implications for those receiving coverage through the health insurance exchanges in light of advanced premium tax credits (APTCs). He said if the CMS does not address the premium holiday and rebating issue, then insurers could be receiving too much money when the rebate lowers the premium amount due; and consumers may be on the hook for paying back the excess amount when they file their taxes. He posed several questions that the CMS needs to consider in issuing any guidance to address this issue, including: 1) the financial impact on consumers; 2) the potential administrative burden on consumers; and 3) the impact on carriers.

Randy Pate (Center for Consumer Information and Insurance Oversight—CCIIO) discussed the CMS’s current work related to the COVID-19 health emergency. He said while focusing on the health emergency, the CMS and the CCIIO are also focusing on the upcoming open enrollment period for 2021, and they are continuing their focus on increasing competition in the individual market and lowering premiums to make health care coverage more affordable. Mr. Pate said while he was speaking, the CMS just released guidance on a new temporary policy that will allow issuers to offer temporary premium reductions for individuals with 2020 coverage in the individual and small group markets. The guidance can be found at https://www.cms.gov/CCIIO/Programs-and-Initiatives/Health-Insurance-Marketplaces/Downloads/Premium-Credit-Guidance.pdf. Mr. Pate provided a general overview of the guidance provisions, noting that it touches on the questions Mr. Levitis posed, such as how the premium reductions will be reported to the Internal Revenue Service (IRS). Mr. Pate said the guidance requires that the premium reduction be a fixed percentage and be prospective only. He also said that he anticipates future rulemaking to address some of the questions that Mr. Levitis raised.
Commissioner Conway asked about carriers who have already provided rebates or premium holidays. Mr. Pate said these carriers should submit the template to the CMS outlining what they have done, which the CMS will review. He said he anticipates the CMS providing flexibility to these insurers. Commissioner Conway asked Mr. Pate what he anticipates will be included in future rulemaking that he anticipates the CMS issuing. Mr. Pate said future rulemaking will most likely address risk adjustment issues.

Having no further business, the Regulatory Framework (B) Task Force adjourned.

W:\National Meetings\2020\Summer\TF\RF\08-rftf.docx
The Regulatory Framework (B) Task Force met via conference call Feb. 20, 2020. The following Task Force members participated: Michael Conway, Chair (CO); Bruce R. Ramge, Vice Chair, represented by Martin Swanson (NE); Lori K. Wing-Heier represented by Jacob Lauten (AK); Jim L. Ridling represented by Anthony Williams (AL); Allen W. Kerr represented by Mel Anderson and William Lacy (AR); Ricardo Lara represented by Tyler McKinney (CA); David Altmaier represented by Chris Struk (FL); Doug Ommen represented by Andria Seip (IA); Dean L. Cameron represented by Kathy McGill, Fernanda Vallejo and October Nickel (ID); Robert H. Muriel represented by Eric Anderson and Sara Stanberry (IL); Vicki Schmidt (KS); Sharon P. Clark (KY); Gary Anderson represented by Kevin Beagan (MA); Steve Kelley represented by Grace Arnold (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Ted Hamby (NC); Jon Godfread represented by Chrystal Bartuska and Sara Gerving (ND); Alexander K. Feldvebel represented by Karen McCallister (NH); Andrew R. Stolli represented by Gayle L. Woods (OR); Jessica K. Altman represented by Michael Humphreys and Katie Dzurec (PA); Raymond G. Farmer represented by Shari Miles (SC); Larry D. Deiter represented by Jill Kruger (SD); Kent Sullivan represented by Rachel Bowden and Matthew Tarpley (TX); Todd E. Kiser represented by Jaakob Sundberg and Heidi Clausen (UT); Scott A. White represented by Yolanda Tennyson (VA); Mike Kreidler represented by Molly Nollette (WA); Mark Afable represented by Nathan Houdek and Jennifer Stegall (WI); and James A. Dodrill represented by Ellen Potter and Tonya Gillespie (WV).

1. Appointed the MHPAEA (B) Working Group and Adopted its 2020 Revised Charges

Commissioner Conway said that prior to the conference call, NAIC staff distributed revised Task Force 2020 charges. He explained that the revised charges add charges for the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group. He said that during this call, the Task Force will consider two motions: 1) a motion to appoint the MHPAEA (B) Working Group; and 2) a motion to adopt the Task Force’s revised 2020 charges adding the charges for the Working Group.

Ms. Kruger made a motion, seconded by Director Lindley-Myers, to appoint the MHPAEA (B) Working Group. The motion passed unanimously.

Director Lindley-Myers made a motion, seconded by Ms. Kruger, to adopt the Task Force’s 2020 revised charges (Attachment One-A). The motion passed unanimously.

Having no further business, the Regulatory Framework (B) Task Force adjourned.
2020 REVISED CHARGES

REGULATORY FRAMEWORK (B) TASK FORCE

The mission of the Regulatory Framework (B) Task Force is to: 1) develop NAIC model acts and regulations for state health care initiatives; and 2) consider policy issues affecting state health insurance regulation.

Ongoing Support of NAIC Programs, Products and Services

1. The Regulatory Framework (B) Task Force will:
   A. Coordinate and develop the provision of technical assistance to the states regarding state-level implementation issues raised by federal health legislation and regulations.
   B. Review managed health care reforms, their delivery systems occurring in the marketplace and other forms of health care delivery. Recommend appropriate revisions to regulatory jurisdiction, authority and structures.
   C. Consider the development of new NAIC model laws and regulations and the revision of existing NAIC model laws and regulations, including those affected by federal legislation and final federal regulations promulgated pursuant to such legislation.
   D. Continue to review NAIC models recommended for revision by the former Affordable Care Act (ACA) Model Review (B) Working Group and, as appropriate, appoint a working group or subgroup to revise the NAIC model(s) prioritized for revision in 2020.
   E. At the direction of the Health Insurance and Managed Care (B) Committee, through the work of the ERISA (B) Working Group, monitor, analyze and report developments related to association health plans (AHPs).
   F. Monitor, analyze and report, as necessary, developments related to short-term, limited-duration (STLD) coverage.

2. The Accident and Sickness Insurance Minimum Standards (B) Subgroup will:
   A. Review and consider revisions to the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171).

3. The ERISA (B) Working Group will:
   A. Monitor, report and analyze developments related to the federal Employee Retirement Income Security Act (ERISA), and make recommendations regarding NAIC strategy and policy with respect to those developments.
   B. Monitor, facilitate and coordinate with the states and the U.S. Department of Labor (DOL) related to sham health plans.
   C. Monitor, facilitate and coordinate with the states and the DOL regarding compliance and enforcement efforts regarding the ACA that relate to ERISA.

4. The HMO Issues (B) Subgroup will:
   A. Revise provisions in the Health Maintenance Organization Model Act (#430) to address conflicts and redundancies with provisions in the Life and Health Insurance Guaranty Association Model Act (#520).

5. The MHPAEA (B) Working Group will:
   A. Monitor, report and analyze developments related to the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA), and make recommendations regarding NAIC strategy and policy with respect to those developments.
   B. Monitor, facilitate and coordinate best practices with the states, the DOL and the U.S. Department of Health and Human Services (HHS) related to the MHPAEA.
   C. Monitor, facilitate and coordinate with the states and the DOL regarding compliance and enforcement efforts regarding the ACA that relate to MHPAEA.
   D. Provide supplemental resources to support documentation and reporting in the MHPAEA chapter of the NAIC Market Regulation Handbook.
6. The **Pharmacy Benefit Manager Regulatory Issues (B) Subgroup** will:
   A. Consider developing a new NAIC model to establish a licensing or registration process for pharmacy benefit managers (PBMs). The Subgroup may consider including in the new NAIC model provisions on PBM prescription drug pricing and cost transparency.

NAIC Support Staff: Jolie H. Matthews/Jennifer R. Cook
The Accident and Sickness Insurance Minimum Standards (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call Dec. 16, 2019. The following Subgroup members participated: Melinda Domzalski-Hansen, Co-Chair (MN); Glen Mulready, Co-Chair, represented by Buddy Combs (OK); Debra Judy (CO); Chris Struk (FL); Gayle Woods (OR); Katie Dzurec (PA); Shari Miles (SC); Rachel Bowden (TX); Heidi Clausen and Shelley Wiseman (UT); Anna Van Fleet (VT); Andrea Philhower (WA); and Jennifer Stegall (WI).

1. Continued Discussion of the July 30 Comments on Sections 1–5 of Model #171

Ms. Domzalski-Hansen said the purpose of today’s conference call is for the Subgroup to continue its discussion section-by-section of the comments received by the July 30 public comment deadline on Sections 1–5 of the Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171), beginning with Section 5L, the definition of “preexisting condition.” She reminded the Subgroup of its discussion of Section 5L during its Nov. 25 conference call.

Sarah Lueck (Center on Budget and Policy Priorities—CBPP) reiterated the purpose of the NAIC consumer representatives’ suggested revisions to the definition of “preexisting condition,” which is to provide an objective definition of the term for consumers because the prudent layperson standard is hard for consumers to understand when completing an application with respect to previous or current health conditions, and the suggested revised language is easier for consumers to understand. She reiterated the concern that consumers may not know they have a medical condition, but after completing an application, the consumer discovers he or her physician included the possibility of a consumer having a certain medical condition in the physician’s notes. Chris Petersen (Arbor Strategies LLC) said the Subgroup needed to review Section 7 of the Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170), which establishes standards related to coverage of preexisting conditions. He suggested that this provision affects the changes the Subgroup can make to the definition of “preexisting condition” in Section 5L. The Subgroup discussed Mr. Petersen’s comments. After discussion, the Subgroup agreed to move the provision highlighted by the Missouri DOI to the appropriate provision or provisions in Section 7—Accident and Sickness Minimum Standards for Benefits.

The Subgroup next discussed Section 5M, the definition of “residual disability.” Ms. Domzalski-Hansen said the Missouri Department of Insurance (DOI) submitted comments on Section 5M suggesting that certain language in the definition should be moved to a substantive provision in Model #171. After discussion, the Subgroup agreed to move the language in Section 7-193.

The Subgroup next discussed Section 5N, the definition of “sickness.” The Subgroup discussed the Missouri DOI’s comments on Section 5N suggesting clarifying changes to the language and moving some of the language to a substantive provision in Model #171. Ms. Lueck said the NAIC consumer representatives also submitted comments on Section 5N suggesting the addition of a drafting note related to the application of any probationary period to a preexisting condition exclusion period. The Subgroup discussed the meaning of probationary period versus waiting period. Ms. Lueck asked about the impact of the Subgroup moving provisions in the various definitions in Section 5 to substantive provisions in Model #171 and whether, after moving the language, if the language would still be considered a minimum standard. The Subgroup discussed and agreed that such language would still be considered a minimum standard.

The Subgroup discussed whether to add the NAIC consumer representatives’ suggested drafting note to Section 5N. The Subgroup decided to add the drafting note. J.P. Wieske (Horizon Government Affairs—HGA) suggested that the proposed drafting note may not be needed if the Subgroup reworks the language in Section 5N to clarify the difference between a probationary period and a waiting period. Ms. Domzalski-Hansen suggested that the Subgroup revisit the language in Section 5N.
Section 5N when it discusses Section 6—Prohibited Policy Provisions. Mr. Petersen volunteered to poll his membership about the appropriate terms, “probationary period” versus “waiting period,” currently being used by industry.

Mollie Zito (UnitedHealthcare) said UnitedHealthcare is withdrawing its comments on Section 5N.

Ms. Domzalski-Hansen said that in order to keep the Subgroup’s discussion moving forward following completion of its review of Section 5, she suggests the Subgroup set a public comment period ending Feb. 7, 2020, to receive comments on Section 6—Prohibited Policy Provisions and Section 7—Accident and Sickness Minimum Standards for Benefits. There was no objection to her suggestion.

Ms. Domzalski-Hansen reiterated the Subgroup’s request for additional information on the issues it discussed related to Section 5L, the definition of “preexisting condition.” She said that following the Subgroup conference call, she would work with NAIC staff to compose an email requesting the information for distribution to Subgroup members and interested parties.

Having no further business, the Accident and Sickness Insurance Minimum Standards (B) Subgroup adjourned.
The ERISA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call July 31, 2020. The following Working Group members participated: Robert Wake, Chair (ME); Steve Ostlund (AL); Jim Brader (AR); Kate Harris and Jason Lapham (CO); Howard Liebers (DC); Angela Burke Boston (IA); Mark McCallin and Craig Van Aalst (KS); Grace Arnold and Jonathan Kelly (MN); Camille Anderson-Weddle, Danielle K. Smith and Carrie Couch (MO); Laura Arp (NE); Alexia Emmermann (NV); Laura Miller (OH); Cuc Nguyen (OK); Travis Jordan (SD); Raja Malkani, Rachel Bowden and David Bolduc (TX); Tanji Northrup (UT); Molly Nollette (WA); and Richard Wicka (WI). Also participating were: Sarah Bailey (AK) Bruce Hinze and Sheirin Ghoddoucy (CA); Fleur McKendell (DE); James Dunn III (FL); Arlene Ige and Jason Asaeda (HI); Weston Trexler and October Nickel (ID); Elizabeth Nunes (IL); Claire Szpara (IN); Glynda Daniels and Mary Kwei (MD); Karen Dennis (MI); Mike Chaney (MS); Diana Sherman (NJ); Paige Duhamel (NM); Colleen Runsey (NY); Tasha Sizemore (OR); Katie Dzurec (PA); Thomas Baldwin, Daniel Morris and Ryan Basnett (SC); Brian Hoffmeister and Bill Huddleston (TN); Julie Blauvelt (VA); Marcia Violette and Jill Rickard (VT); Greg Elam and Ellen Potter (WV); and Denise Burke and Amanda Tarr (WY).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Mr. Wicka made a motion, seconded by Ms. Arp, to adopt the Working Group’s Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Regulatory Framework Task Force, Attachment Eight). The motion passed unanimously.

2. **Discussed the Working Group’s Focus for 2021**

   Mr. Wake said the single item on the Working Group’s open agenda was to discuss what projects the Working Group might want to focus on in the coming year. He said that the Working Group had discussed developing a best practices document for state regulation of multiple employer welfare arrangements (MEWAs) and association health plans (AHPs), both fully insured and self-funded. He said up to this point, there was not clear support to pursue this task pending the appeal of the District Court for the District of Columbia ruling in *New York v. U.S. Department of Labor*, which vacated critical portions of the U.S. Department of Labor’s (DOL) final rule on AHPs.

   Mr. Wake also mentioned the *Prevention of Illegal Multiple Employer Welfare Arrangements (MEWAs) and Other Illegal Health Insurers Model Regulation (#220)*. This model was developed by the ERISA (B) Working Group and adopted by the NAIC in 2010. It has not been adopted in the states, but Mr. Wake suggested that it might be worth taking another look at this model to see if it contains any tools that could be helpful to states as they look to address illegal MEWAs. Mr. Wake explained that the genesis for Model #220 is that often licensed entities, whether deliberately or unwittingly, are involved with sham health plans. Model #220 is designed to require licensed persons and entities to establish and follow responsible procedures to identify and report illegal health insurers. Jennifer Cook (NAIC) also mentioned that at about the same time that this model was adopted, the Working Group developed an insurer and producer bulletin, as well as a consumer alert, on the same topic. Ms. Cook offered to distribute them to the Working Group.

   Mr. Wake asked for feedback on the idea of looking at Model #220. Ms. Seip asked about the harm that Model #220 is designed to address. Mr. Wake said the harm is that people will be defrauded by illegal and unlicensed health plans, and by having licensed entities undertake the procedures in Model #220, consumers will be protected from entities offering fraudulent or otherwise illegal health care coverage. Mr. Lapham said when legitimate players in the market align themselves with questionable, or illegitimate, entities, those bad actors capitalize on the respectability of the legitimate entities and are able to influence not only their potential customers, but also state insurance regulators investigating an entity. Ms. Arp said that provider networks often contract with multiple entities, both fully insured and self-insured, some legitimate, others not and some in between. She said it would certainly make investigating some of these entities a lot easier if there was a way to see a list of the entities a provider network has relationships with. Mr. Wake said that often carriers rent out their networks to self-funded plans and sometimes can have hundreds of clients, so they will not necessarily know exactly who all of them are, but they should have some kind of vetting process in place. He said he would be interested in hearing from the industry about what best practices might be and what state insurance regulators might be able to learn from that. Mr. Wake mentioned that the M-
filings have turned out to be hugely helpful in identifying entities operating in a state without that state’s knowledge. Mr. Wake pointed out that finding illegal health plans can be complicated. He mentioned a case in Maine where a nationwide plan advertised that it had the best provider network, except that the network did not actually have any providers in Maine. Or a plan that advertises that it does not have any copays or deductibles, but it does not have any coverage either. He explained that he mentions these cases to illustrate that there is not always a single answer to what is a complicated, multi-faceted problem of illegal and fraudulent health plans.

Having no further business, the ERISA (B) Working Group adjourned.
The HMO Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call July 13, 2020. The following Subgroup members participated: Don Beatty, Chair (VA); Keith Warburton (CO); Toma Wilkerson (FL); Ryan Gillespie (IL); DJ Wasson (KY); Robert Wake (ME); Chlora Lindley-Myers (MO); Martin Swanson (NE); Nathan Houdek (WI); and Joylynn Fix (WV).

1. **Adopted its June 11 Minutes**

The Subgroup met June 11 to review and discuss the comments received by the March 18 public comment deadline on the proposed revisions to the *Health Maintenance Organization Model Act* (#430).

Ms. Wilkerson made a motion, seconded by Ms. Fix, to adopt the Subgroup’s June 11 minutes (Attachment Four-A). The motion passed unanimously.

2. **Adopted a Motion to Forward Draft Model #430 Revisions to the Regulatory Framework (B) Task Force**

Mr. Beatty said the purpose of the call is for the Subgroup to discuss the draft of proposed revisions to Model #430 which reflect the Subgroup’s discussion during its June 11 conference call and consider forwarding the draft to the Regulatory Framework (B) Task Force for its consideration. He requested comments. There were no comments.

Mr. Wake made a motion, seconded by Ms. Wilkerson, to forward the draft of proposed revisions to Model #430 (Attachment Four-B) to the Regulatory Framework (B) Task Force for its consideration. The motion passed unanimously.

Having no further business, the HMO Issues (B) Subgroup adjourned.
1. Discussed March 18 Comments on Proposed Revisions to Model #430

Mr. Beatty said the purpose of the call is for the Subgroup to discuss the comments received on the proposed revisions to the Health Maintenance Organization Model Act (#430) for consistency with the revised Life and Health Insurance Guaranty Association Model Act (#520). He said the Subgroup received comments from the NAIC consumer representatives, the Blue Cross and Blue Shield Association (BCBSA), and the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA).

Anna Howard (American Cancer Society Cancer Action Network—ACS CAN) said the NAIC consumer representatives strongly urge the Subgroup to retain Section 14—Continuation of Benefits and Section 21—Open Enrollment and Replacement Coverage in the Event of Insolvency because of the explicit consumer protections these sections provide. She said the NAIC consumer representatives have provided language for a potential drafting note for Section 14 suggesting that those states that have adopted the revised Model #520 consider alternative continuation of benefits language for Section 14 to ensure that enrollees’ claims are paid during the transition period and/or while waiting for the commencement of alternative coverage.

Mr. Wake agreed that retaining Section 14 is important for those states that have not adopted the revised Model #520, which added health maintenance organizations (HMOs) as members of the guaranty association. He said, however, that for those states that have adopted the revised Model #520, it is unnecessary to retain Section 14 because continuation of benefits is covered through the guaranty association procedures. He also noted that the proposed drafting note for Section 2—Purpose and Intent alerts those states that have not adopted the revised Model #520 to retain Section 14. Mr. Wake said Section 21 is obsolete because of the guaranteed issue provision and other provisions in the federal Affordable Care Act (ACA). He said this is true regardless of whether a state has adopted the revised Model #520.

Mr. Beatty asked Joni Forsythe (NOLHGA) if the Subgroup needed to address a gap in coverage and retain Section 14. Ms. Forsyth said NOLHGA has not identified any gap in coverage that would require retaining Section 14. Ms. Howard said the NAIC consumer representatives are apprehensive about removing Section 14 just in case there is an issue. Chris Petersen (Arbor Strategies LLC) expressed support for the NAIC consumer representatives’ concern, noting comments he had previously submitted to the Subgroup on this issue. He said, however, that he could support the Subgroup’s decision to remove Section 14 if that is what it decides. Mr. Beatty said the Subgroup would proceed with deleting Section 14, but he urged anyone who believes that there will be a gap in coverage to alert the Subgroup.

Ms. Forsyth said NOLHGA takes no position on the proposed revisions to Model #430 as whole, but it has a few technical comments for the Subgroup’s consideration. She said NOLHGA’s first technical comment concerns the use of the word “conformity” in both option 1 and option 2 of the proposed drafting note to Section 2. She said NOLHGA believes the term “conformity” suggests a higher standard of assimilation with Model #520 than what the Subgroup intends with respect to the Model #430 revisions. To address this concern, she said NOLHGA suggests using the term “reconcile” instead. Ms. Forsyth also said NOLHGA does not understand why neither option 1 nor option 2 of the drafting note explains why Section 21 is being deleted. She said NOLHGA also suggests the Subgroup consider including the full text of the repealed provisions as an appendix to Model #430 in order to preserve the text.

Ms. Forsyth said that if the Subgroup decides to proceed with option 2, NOLHGA suggests clarifying language in option 2 concerning the purpose of the repealed Model #430 provisions by replacing the language “addressed issues arising from the lack of guaranty association protection” with “provided consumer protection for HMO enrollees in the event of an HMO insolvency, in the absence of guaranty association protection.” She said NOLHGA’s final technical comment concerns an additional section in Model #430 the Subgroup has not discussed, but which could conflict with the revised Model #520. She said Section 31—Statutory Construction and Relationship to Other Laws (formerly section 34) provides that, except as provided
in Model Act #430, provisions of state insurance laws do not apply to HMOs. She said Section 28—Rehabilitation, Liquidation or Conservation of Health Maintenance Organizations (formerly section 31) provides that HMOs are subject to state receivership laws, but it does not include any reference to state guaranty association laws. Ms. Forsyth said this potential conflict could be resolved by adding “or other applicable laws” in the opening sentence of Section 31.

John Troy (BCBSA) said the BCBSA supports the Subgroup’s proposed revisions. He said the BCBSA supports including option 2 in the proposed revisions instead of option 1 because it is briefer and more to the point and, as such, more likely to be reasonably well understood.

The Subgroup discussed NOLHGA’s comments. Mr. Wake said he could support NOLHGA’s suggested revision to Section 31 with one change. He suggested the Subgroup add the language “or in other laws expressly referring to health maintenance organizations.” He said he suggests this language because it specifies the type of applicable law. Ms. Arp expressed support for Mr. Wake’s suggested revision because of its similarity to Nebraska law. Mr. Wake also expressed support for NOLHGA’s other suggested technical revisions. Ms. Wilkerson expressed similar support, but she asked if any other NAIC models included an appendix as NOLHGA suggests. Jolie H. Matthews (NAIC) said she has not seen similar appendices in other NAIC models, but that this would not preclude the Subgroup from adding such an appendix as part of the Model #430 revisions.

After additional discussion, the Subgroup directed NAIC staff to prepare another draft of proposed revisions to Model #430 that would include the following: 1) option 2 of the proposed drafting note for Section 2 with NOLHGA’s suggested revisions; 2) NOLHGA’s suggested revision to Section 31, with Mr. Wake’s additional suggested revision; and 3) NOLHGA’s suggestion to add an appendix with the repealed provisions. Mr. Beatty said the Subgroup would hold another conference call sometime in July to consider adopting the proposed revisions and forwarding the revised Model #430 to the Regulatory Framework (B) Task Force for its consideration.

Having no further business, the HMO Issues (B) Subgroup adjourned.

Section 35. Holding Company System Regulatory Act
Section 36. Separability
Section 37. Effective Date
Appendix A. Former Section 3HH, Section 14 and Section 20

Section 1. Short Title

This Act may be cited as the Health Maintenance Organization Act of [insert year].
Section 2. Purpose and Intent

The purpose of this Act is to provide for a system of regulation for health maintenance organizations that is fair and efficient, and promotes the continued solvency of health maintenance organizations. This Act is designed to operate in conjunction with and as a companion to other state laws that establish standards for the regulation of health maintenance organizations, such as [insert state law equivalent to the Managed Care Plan Network Adequacy Model Act, the Quality Assessment and Improvement Model Act, the Health Care Professional Credentialing Verification Model Act, the Utilization Review and Benefit Determination Model Act, the Health Carrier Grievance Procedure Model Act, the Health Carrier External Review Model Act, the Health Information Privacy Model Act, the Unfair Trade Practices Model Act, the Unfair Claims Settlement Practices Model Act, the Insurance Holding Company System Regulatory Act and the Risk-Based Capital (RBC) for Health Organizations Model Act].

Drafting Note: This model act presumes the existence of state laws that are based on the listed NAIC model acts described in this section. States that have not already adopted these laws should consider adopting them to ensure that a comprehensive system of regulation for health maintenance organizations is in place.

Drafting Note: Former Section 14—Continuation of Benefits and Section 20—Uncovered Expenditures provide consumer protections for health maintenance organization enrollees in the event of a health maintenance organization insolvency in the absence of guaranty association protection for health maintenance organization enrollees. Those sections (along with Section 3HH, defining the term “uncovered expenditures”) have been repealed to reconcile this Act with the Life and Health Insurance Guaranty Association Model Act (#520), which was amended in 2017 to make health maintenance organizations members of the guaranty association. States that continue to exclude health maintenance organizations from guaranty association membership should retain provisions, comparable to former Sections 3HH, 14 and 20, requiring health maintenance organizations to develop advance insolvency plans that include procedures to facilitate continuation of benefits after an insolvency, and to post deposits to secure any uncovered expenditures in excess of 10% of total health care expenditures. The language from former Section 14, former Section 20 and the former definition of “uncovered expenditures” in Section 3HH can be found in Appendix A. Former Section 21—Open Enrollment and Replacement Coverage in the Event of Insolvency was repealed as obsolete due to the provisions of the federal Affordable Care Act (ACA).

Section 3. Definitions

A. “Adverse determination” means a determination by a health maintenance organization or its designee utilization review organization that an admission, availability of care, continued stay or other health care service has been reviewed and, based upon the information provided, does not meet the health maintenance organization’s requirements for medical necessity, appropriateness, health care setting, level of care or effectiveness, and the requested service is therefore denied, reduced or terminated.

B. “Basic health care services” includes the following medically necessary services: preventive care, emergency care, inpatient and outpatient hospital and physician care, diagnostic laboratory and diagnostic and therapeutic radiological services. It does not include mental health services or services for alcohol or drug abuse, dental or vision services or long-term rehabilitation treatment.

C. “Capitated basis” means fixed per member per month payment or percentage of premium payment wherein the provider assumes the full risk for the cost of contracted services without regard to the type, value or frequency of services provided. For purposes of this definition, capitated basis includes the cost associated with operating staff model facilities.

D. “Coinsurance” means the percentage amount a covered person must pay under the terms of a health benefit plan in order to receive a health care service that is not fully prepaid.

Drafting Note: States that do not allow HMOs to impose a coinsurance requirement should not adopt this definition nor include the term when it is referenced throughout the model.

E. “Commissioner” means the insurance commissioner of this state.

Drafting Note: Use the title of the chief insurance regulatory official wherever the term “commissioner” appears. If the jurisdiction
of health maintenance organizations lies with some state agency other than the insurance department, or if there is dual regulation, a state should add language referencing that agency to ensure the appropriate coordination of responsibilities.

F. “Copayment” means a specified dollar amount a covered person must pay under the terms of a health benefit plan in order to receive a health care service that is not fully prepaid.

G. “Covered benefits” means those health care services to which a covered person is entitled under the terms of a health benefit plan.

H. “Covered person” means any person eligible to receive covered benefits under the terms of a health benefit plan.

I. “Deductible” means the amount a covered person is responsible to pay out-of-pocket before the health maintenance organization begins to pay the covered expenses associated with treatment.

J. “Enrollee” means an individual whose employment or other status, except family dependency, is the basis for eligibility for enrollment in the health maintenance organization, or in the case of an individual contract, the person in whose name the contract is issued.

K. “Evidence of coverage” means a statement that sets out the coverage and other rights to which the covered person is entitled under the health benefit plan and that may be issued by the health maintenance organization or by the group contract holder to an enrollee electronically or, upon request, in writing.

L. “Extension of benefits” means the continuation of coverage under a particular benefit provided under a contract following termination with respect to a covered person who is totally disabled on the date of termination.

M. “Facility” means an institution providing health care services or a health care setting, including but not limited to hospitals and other licensed inpatient centers, ambulatory surgical or treatment centers, skilled nursing centers, residential treatment centers, diagnostic, laboratory and imaging centers, and rehabilitation and other therapeutic health settings.

N. “Grievance” means a written complaint submitted by or on behalf of a covered person regarding:

1. The availability, delivery or quality of health care services, including a complaint regarding an adverse determination made pursuant to utilization review;

2. Claims payment, handling or reimbursement for health care services; or

3. Matters pertaining to the contractual relationship between a covered person and a health maintenance organization.

O. “Group contract” means a contract for health care services, which by its terms limits eligibility to members of a specified group. The group contract may include coverage for dependents.

P. “Group contract holder” means a person, other than an individual, to which a group contract has been issued.

Q. “Health benefit plan” means a policy, contract, certificate or agreement offered or issued by a health carrier to provide, deliver, arrange for, pay for or reimburse any of the costs of health care services.

R. “Health care professional” means a physician or other health care practitioner license, accredited or certified to perform specified health services consistent with state law.

S. “Health care provider” or “provider” means a health care professional or facility.

T. “Health care services” means services for the diagnosis, prevention, treatment, cure or relief of a health condition, illness, injury or disease.
“Health carrier” or “carrier” means an entity subject to the insurance laws and regulations of this state, or subject to the jurisdiction of the commissioner, that contracts or offers to contract to provide, deliver, arrange for, pay for or reimburse any of the costs of health care services, including a sickness and accident insurance company, managed care organization, health maintenance organization, a nonprofit hospital or medical service corporation, or any other entity providing a plan of health insurance, health benefits or health care services.

**Drafting Note:** States that license health maintenance organizations pursuant to statutes other than the insurance statutes and regulations, such as the public health laws, will want to reference the applicable statutes instead of, or in addition to, the insurance laws and regulations.

**Drafting Note:** The term “hospital or medical service corporation,” as used in the model act, is intended to apply to any nonprofit health, hospital or medical service corporation or similar organization. In order to include such organizations in this section, which are also commonly referred to as “Blue Cross Blue Shield-type” plans, each state should identify these organizations in accordance with its statutory terminology for such plans or by specific statutory citation. Some states also may have to amend other laws to bring these organizations within the scope of this section since the portions of state law applicable to these organizations may provide that no other portion of the insurance code applies to these organizations without a specific reference to the other provision.

“Health maintenance organization” means a person that undertakes to provide or arrange for the delivery of basic health care services to covered persons on a prepaid basis, except for a covered person’s responsibility for copayments, coinsurance or deductibles.

“Individual contract” means a contract for health care services issued to and covering an individual. The individual contract may include dependents of the enrollee.

“Insolvent” or “insolvency” shall mean that the health maintenance organization has been declared insolvent and placed under an order of liquidation by a court of competent jurisdiction.

“Intermediary organization” means a person, other than an individual, authorized to negotiate and execute provider contracts with health maintenance organizations on behalf of a group of health care providers or on behalf of a network, but does not include a provider or group of providers negotiating on its own behalf.

“Network” means the group of participating providers providing services to a health maintenance organization.

“Net worth” means the excess of total admitted assets over total liabilities, but the liabilities shall not include fully subordinated debt.

“Participating provider” means a provider that, under an express or implied contract with the health maintenance organization or with its contractor or subcontractor, has agreed to provide health care services to covered persons with an expectation of receiving payment, other than copayments, coinsurance or deductibles, from the health maintenance organization or other organization under contract with the health maintenance organization to provide payment in accordance with the terms of the contract.

“Person” means an individual, a corporation, a partnership, an association, a joint venture, a joint stock company, a trust, an unincorporated organization, any similar entity or a combination of the foregoing.

“Policyholder” means, for individual contracts, the individual in whose name the contract is issued, and for group contracts, the group contract holder.

“Qualified actuary” means an individual who is a member of the American Academy of Actuaries or meets such reasonable standards and qualifications as the commissioner may require.

“Replacement coverage” means the benefits provided by a succeeding carrier.
GG. “Risk bearing entity” means an intermediary organization that is at financial risk for services provided through contractual assumption of the obligation for the delivery of specified health care services to covered persons of the health maintenance organization.

HH. “Uncovered expenditures” means the costs to the health maintenance organization for health care services that are the obligation of the health maintenance organization, for which a covered person may also be liable in the event of the health maintenance organization’s insolvency and for which no alternative arrangements have been made that are acceptable to the commissioner.

Drafting Note: Subsection HH defines uncovered expenditures for use in Section 20. They will vary in type and amount, depending on the arrangements of the health maintenance organization. They may include out-of-area services, referral services and hospital services. They do not include expenditures for services when a provider has agreed not to bill the covered person even though the provider is not paid by the health maintenance organization, or for services that are guaranteed, insured or assumed by a person or organization other than the health maintenance organization.

HHH. “Utilization review” means a set of formal techniques utilized by or on behalf of the health maintenance organization designed to monitor the use of or evaluate the clinical necessity, appropriateness, efficacy or efficiency of health care services, procedures, providers or facilities. Techniques may include ambulatory review, prospective review, second opinion, certification, concurrent review, case management, discharge planning or retrospective review.

Section 4. Applicability and Scope

This Act applies to all health maintenance organizations and risk bearing entities doing business in this state.

Section 5. Establishment of Health Maintenance Organizations

Option A:

A. Notwithstanding any law of this state to the contrary, any person other than an individual may apply to the commissioner for a certificate of authority to establish and operate a health maintenance organization in compliance with this Act. No person shall establish or operate a health maintenance organization in this state, without obtaining a certificate of authority under this Act. A foreign corporation may qualify under this Act, subject to its registration to do business in this state as a foreign corporation under [insert reference to applicable state law] and compliance with all provisions of this Act and other applicable state laws.

Drafting Note: State laws differ as to whether a health maintenance organization is required to be a domestic corporation. This provision should be adopted if your state wants to permit a foreign corporation to qualify under this Act if it registers to do business in a state as a foreign corporation and complies with all provisions of this Act and other applicable state laws.

Option B:

A. Notwithstanding any law of this state to the contrary, any organization may apply to the commissioner for a certificate of authority to establish and operate a health maintenance organization in compliance with this Act. A person shall not establish or operate a health maintenance organization in this state without obtaining a certificate of authority under this Act.

Drafting Note: State laws differ as to whether a health maintenance organization may be a foreign corporation. This option does not differentiate between foreign and domestic corporations. Whether or not to allow foreign corporations to become health maintenance organizations should be determined in light of a particular state’s regulatory framework.

B. Each application for a certificate of authority shall be verified by an officer or authorized representative of the applicant, shall be in a form prescribed by the commissioner, and shall demonstrate, set forth or be accompanied by the following:

(1) A copy of the organizational documents of the applicant, such as the articles of incorporation,
articles of association, partnership agreement, trust agreement, or other applicable documents, and all amendments thereto;

(2) A copy of the bylaws, rules and regulations, or similar document, if any, regulating the conduct of the internal affairs of the applicant;

(3) (a) A disclosure of the internal organizational structure identifying senior management employees;

(b) A disclosure of the external organizational structure identifying all parent, subsidiary and affiliate organizations; and

(c) If the applicant is a member of a holding company:

(i) Identification of the holding company; and

(ii) A copy of the most recent holding company Form B that includes current financial information for the ultimate controlling party;

(4) The applicant's federal identification number, NAIC number if applicable, corporate address and mailing address;

(5) (a) The names, addresses, official positions and biographical affidavit of the individuals who are to be responsible for the conduct of the affairs of the applicant, including, but not limited to all members of the board of directors, executive committee, and the principal officers accompanied by a completed release of information for each of these individuals, on forms acceptable to the commissioner; and

(b) A disclosure of any person owning or having the right to acquire five percent (5%) or more of the voting securities or subordinated debt of the applicant;

(6) A detailed plan of operation for [insert state name];

(7) A description of the applicant and its personnel, and, where applicable, its facilities, including, but not limited to, location, hours of operation and telephone numbers;

(8) A copy of:

(a) Any contract made or to be made between the applicant and an affiliated or unaffiliated person for managerial or administrative services, including, third party administrators, marketing consultants or persons listed in Paragraph (5); and

(b) Sample contract forms proposed for use between the applicant and persons providing health care services to covered persons, including, participating providers and intermediary organizations.

Drafting Note: Section 811A of the Managed Care Plan Network Adequacy Health Benefit Plan Network Access and Adequacy Model Act requires the filing of substantially similar information to the filing of sample provider contracts required in Paragraph (8)(b). States that have adopted the Managed Care Plan Network Adequacy Health Benefit Plan Network Access and Adequacy Model Act should consider whether it is necessary to include a similar requirement in this Act as well.

(9) A copy of each type of evidence of coverage and identification card or similar document to be issued to the enrollees;

(10) A copy of each type of individual or group policy, contract or agreement to be used;
(11) A copy of all marketing materials;

(12) A copy, if applicable, of the most recent financial examination report made of the health maintenance organization within the previous three (3) years, certified by the insurance regulatory agency of the applicant’s state of domicile;

(13) (a) A copy of the applicant’s financial statements showing the applicant’s assets, liabilities and sources of financial support, including a copy of the applicant’s most recent audited financial statement that complies with [insert reference to state law equivalent to Model Regulation Requiring Annual Audited Financial Reports] and an unaudited current financial statement; or

(b) If the information in Subparagraph (a) of this paragraph is not applicable to the applicant, a list of the assets representing the initial net worth of the applicant;

**Drafting Note:** States should ensure that the state law equivalent to the Model Regulation Requiring Annual Audited Financial Reports is applicable to health maintenance organizations before referencing it in Paragraph (13)(a).

(14) A financial plan that provides a three-year projection of operating results, including:

(a) A projection of balance sheets;

(b) Income and expense statements anticipated from the start of operations until the organization has had net income for at least one year;

(c) Cash flow statements showing any capital expenditures, purchase and sale of investments and deposits with the state;

(d) Detailed enrollment projections;

(e) The methodology for determining premium rates to be charged that has been certified by a qualified actuary; and

(f) A statement as to the sources of working capital as well as any other sources of funding;

(15) The names and addresses of the applicant’s qualified actuary and external auditors;

(16) If the applicant has a parent company and the commissioner determines that additional solvency guarantees are necessary, the parent company’s guaranty, on a form acceptable to the commissioner, that the applicant will maintain the minimum net worth required under this Act. If no parent company exists, a statement regarding the availability of future funds if needed;

(17) A description of the nature and extent of any reinsurance program to be implemented, including a detailed risk retention schedule indicating direct, assumed, ceded and net maximum risk exposures on any one risk;

(18) A demonstration that errors and omission insurance or other arrangements satisfactory to the commissioner will be in place upon the applicant’s receipt of a certificate of authority;

(19) Information regarding the proposed fidelity bond required pursuant to Section 24B21B of this Act;

(20) If the applicant is a foreign corporation, a statement from the appropriate regulatory agency of the applicant's state of domicile stating that:

(a) The applicant is authorized to operate as a health maintenance organization in the state of domicile;
Section 6. Issuance or Denial of Certificate of Authority

A. Within ninety (90) days of receipt of a completed application, the commissioner shall issue a certificate of authority when the commissioner is satisfied that:

(b) The regulatory agency has no objection to the applicant applying for a certificate of authority in this state; and

(c) The applicant is in good standing in the applicant's state of domicile;

(21) The name and address of the applicant’s [insert state name] statutory agent for service of process, notice, or demand, or if not domiciled in this state, a power of attorney duly executed by the applicant, appointing the commissioner and duly authorized deputies, as the true and lawful attorney of the applicant in and for this state upon whom all lawful process in any legal action or proceeding against the health maintenance organization on a cause of action arising in this state may be served;

(22) A description of the proposed policies, standards and procedures for the management of health information, including proposed policies, standards and procedures that guard against the unauthorized collection, use or disclosure of protected health information, that complies with [insert reference to state law equivalent to the Health Information Privacy Model Act];

(23) A description of the proposed quality assessment and improvement activities that comply with [insert reference to state law equivalent to the Quality Assessment and Improvement Model Act] regarding the maintenance and improvement of the quality of health care services provided to covered persons;

(24) If the health maintenance organization will not operate statewide, a statement or map describing the service area;

(25) A list of the names, addresses, and license numbers of all providers with which the health maintenance organization has agreements;

(26) A description of the proposed network adequacy standards that assure the adequacy, accessibility and quality of health care that complies with [insert reference to state law equivalent to the Managed Care Plan Network Adequacy Act];

(27) A description of the proposed health care provider credentialing program in compliance with [insert reference to state law equivalent to the Health Care Professional Credentialing Verification Model Act];

(28) If the health maintenance organization will provide or perform utilization review services, a description of the proposed utilization review procedures that comply with [insert reference to state law equivalent to the Utilization Review and Benefit Determination Model Act] regarding the ongoing assessment and management of health care services;

(29) A description of the proposed internal grievance procedures that comply with [insert reference to state law equivalent to the Health Carrier Grievance Procedure Model Act] regarding the investigation and resolution of covered persons’ complaints and grievances;

(30) A description of the proposed external review procedures that comply with [insert reference to state law equivalent to the Health Carrier External Review Model Act] regarding the external independent review of covered persons’ grievances; and

(31) Any other information the commissioner may require.
(1) The persons responsible for the conduct of the affairs of the applicant are competent, trustworthy and possess good reputations;

(2) The name of the health maintenance organization is not the same as, or deceptively similar to, the name of a domestic insurer, or of a foreign or alien company authorized to transact business in this state, nor does the name of the health maintenance organization tend to deceive or mislead as to the authorization of the health maintenance organization to engage in a specific line of business;

(3) The health maintenance organization will provide or arrange for the provision of basic health care services on a prepaid basis, through insurance or otherwise, except to the extent of reasonable requirements for copayments, coinsurance or deductibles; and

(4) The health maintenance organization is in compliance with the requirements of this Act.

B. A certificate of authority shall be denied only after the commissioner complies with the requirements of Section 2926 of this Act.

Section 7. Powers of Health Maintenance Organizations

A. The powers of a health maintenance organization include, but are not limited to, the following:

(1) The purchase, lease, construction, renovation, operation or maintenance of hospitals, medical facilities, or both, and their ancillary equipment, and property reasonably required for its principal office or for purposes necessary to the transaction of the business of the organization;

(2) Transactions between affiliated entities, including loans and the transfer of responsibility under all contracts (provider, subscriber, etc.) between affiliates or between the health maintenance organization and its parent;

(3) The furnishing of health care services through providers, provider associations, intermediary organizations or agents for providers which are under contract with or employed by the health maintenance organization;

(4) The contracting with a person for the performance on its behalf of certain functions such as marketing, enrollment and administration;

(5) The contracting with an insurance company licensed in this state, or with a hospital or medical service corporation authorized to do business in this state, for the provision of insurance, indemnity or reimbursement against the cost of health care services provided by the health maintenance organization;

(6) The offering of other health care services, in addition to basic health care services. Non-basic health care services may be offered by a health maintenance organization on a prepaid basis without offering basic health care services to any group or individual;

(7) The joint marketing of products with an insurance company licensed in this state or with a hospital or medical service corporation authorized to do business in this state as long as the company that is offering each product is clearly identified.

Drafting Note: States that allow health maintenance organizations to offer a point of services contract may wish to consider additional requirements for those organizations, including but not limited to, additional ongoing net worth and capital, additional deposits, more detailed annual and quarterly financial statement filings, limitations on out-of-plan expenditures and additional reinsurance coverage.

B. (1) A health maintenance organization shall file notice, with adequate supporting information, with the
commissioner prior to the exercise of any power granted in Subsection A(1), (2) or (4) that may affect the financial soundness of the health maintenance organization. The commissioner shall disapprove the exercise of power only if, in the commissioner’s opinion, it would substantially and adversely affect the financial soundness of the health maintenance organization and endanger its ability to meet its obligations. If the commissioner does not disapprove within thirty (30) days of the filing, it shall be deemed approved.

(2) The commissioner may promulgate rules and regulations exempting from the filing requirement of Paragraph (1) those activities having a *de minimis* effect.

(3) Transactions between affiliated entities shall be subject to [insert reference to state law equivalent to NAIC *Insurance Holding Company System Regulatory Act*].

Section 8. Contract Requirements

A. Each group or individual contract holder is entitled to a group or individual contract within thirty (30) days of the effective date of a new or amended contract.

B. The contract shall not contain provisions or statements that:

(1) Are unjust, unfair, inequitable, misleading, or deceptive; or

(2) Encourage misrepresentation as defined by [reference to state law equivalent to the NAIC *Unfair Trade Practices Act*].

C. The contract shall contain a clear statement of the following:

(a) Name and address of the health maintenance organization;

(b) Eligibility requirements;

(c) Benefits and services within the service area;

(d) Emergency care benefits and services;

(e) Out of area benefits and services (if any);

(f) Copayments, coinsurance, deductibles or other out-of-pocket expenses, the financial responsibility of the covered person and how the covered person’s obligation is determined;

(g) Provider hold harmless provisions;

(h) Limitations and exclusions;

(i) covered person termination;

(j) covered person reinstatement (if any);

(k) Claims procedures;

(l) Utilization review procedures;

(m) Grievance procedures;

(n) Procedures for requesting independent external review;
(o) Continuation of coverage;
(p) Conversion;
(q) Extension of benefits (if any);
(r) Coordination of benefits (if applicable);
(s) Subrogation (if any);
(t) Description of the service area;
(u) Procedures for obtaining a provider directory;
(v) The existence of a formulary and procedures for obtaining a copy of the formulary list (if applicable);
(w) Entire contract provision;
(x) Term of coverage;
(y) Cancellation of group or individual contract holder;
(z) Renewal;
(aa) Reinstatement of group or individual contract holder (if any);
(bb) Grace period; and
(cc) Conformity with state law.

(2) An evidence of coverage may be filed as part of the group contract to describe the provisions required in Paragraph (1).

D. (1) In addition to the provisions required in Subsection C(1), an individual contract shall provide for a ten-day period to examine and return the contract and have the premium refunded.

(2) If services were received during the ten-day period, and the individual returns the contract to receive a refund of the premium paid, the individual must pay for those services.

E. The commissioner may adopt regulations establishing readability standards for individual and group contract forms.

**Drafting Note:** The commissioner may adopt standards in the NAIC *Life and Health Insurance Policy Language Simplification Act.*

**Section 9. Risk Bearing Entity Registration and Contracting Requirements**

A. Registration Requirements.

(1) All risk bearing entities shall register annually with the commissioner in this state unless already subject to state insurance regulation.

**Drafting Note:** A state may wish to exempt a risk bearing entity from the registration requirements of this subsection, or modify the provisions of this subsection as they apply to a risk bearing entity, where a risk bearing entity accepts risk exclusively from
a single health maintenance organization, provides direct care to covered persons of that health maintenance organization, and where detail of claims payments is available for examination from the health maintenance organization. A state may want to require the health maintenance organization to demonstrate to the commissioner that the contractual arrangement with the risk bearing entity will allow it to fulfill the provisions of its contract for the contract year. Health maintenance organizations contracting with risk bearing entities that are exempt from this subsection, or subject to modified registration requirements, should be subject to Subsections C and D of this section and Section 4918 of this Act.

(2) The registration shall be in a form approved by the commissioner and shall include:

(a) The name of the risk bearing entity;
(b) The business address of the risk bearing entity;
(c) The principal contact person for risk bearing entity;
(d) The names and positions of senior officers of risk bearing entity, including, President, Chief Executive Officer, Chief Operating Officer, Chief Financial Officer, Executive Vice Presidents, Treasurer and Secretary;
(e) A list of all entities on whose behalf the risk bearing entity has contracts or agreements to provide health care services;
(f) A matrix listing of all major categories of health care services provided by the risk bearing entity;
(g) An approximate number of total covered persons served in all the risk bearing entity’s contracts or agreements;
(h) An annual audited Generally Accepted Accounting Principles (GAAP) financial statement;
(i) A list of all subcontractors of the risk bearing entity;
(j) Sample contract forms proposed for use between subcontractors and the risk bearing entity;
(k) A list of all stop loss arrangements; and
(l) Any other information or financial information requested by the commissioner.

(3) The commissioner may charge a registration fee sufficient to cover the cost of implementing this section.

(4) The risk bearing entity shall permit the commissioner to:

(a) Inspect the risk bearing entity’s books and records; and
(b) Examine, under oath, any officer or agent of the risk bearing entity with respect to the use of its funds and compliance with the terms and conditions of its contracts to provide covered benefits under the health benefit plan.

(5) A risk bearing entity shall file with the commissioner a notice of any material modification of any matter or document furnished pursuant to this section, together with such supporting documents as are necessary to explain the modification.

B. Contracting Requirements

(1) Except as provided in Paragraph (2), a health maintenance organization shall not contract with a risk bearing entity that has not registered in accordance with this section.
(2) The requirements of this section shall apply to any contract entered into, amended or renewed after the effective date of this section and shall apply to all contracts no later than two (2) years after the effective date of this section.

(3) A health maintenance organization shall:

(a) Unless already specified in the contract with the risk bearing entity, provide the following, upon request, to the risk bearing entity with which it contracts:

(i) At the time the contract is entered into, a written statement describing the amount or method of remuneration to be paid to the risk bearing entity. If any part of the remuneration is a calculated amount based on variable factors, the payment methodology upon which the calculated amount will be determined. The statement shall specify the services and expenses for which the risk bearing entity is financially liable in whole or part;

(ii) At the time payment is made, the basis of the calculation of that payment;

(iii) For health benefit plans in which the covered persons are assigned to the risk bearing entity under a capitated payment arrangement, a list of enrollees and payments due to the risk bearing entity, to be provided monthly if not already available to the risk bearing entity;

(iv) At the time the contract is entered into, a copy of the health maintenance organization’s most recent annual statement filed with the NAIC;

(v) Once the contract is in effect, the quarterly or annual statement filed with the NAIC; and

(vi) Any other information requested by the commissioner.

(b) Include in its contracts with a risk bearing entity a provision that requires the risk bearing entity to provide to the health maintenance organization at the time a contract is entered into and annually thereafter:

(i) Annual audited GAAP report;

(ii) Documentation that satisfies the health maintenance organization that the risk bearing entity has sufficient ability to accept risk; and

(iii) Documentation that satisfies the health maintenance organization that the risk bearing entity has appropriate management expertise and infrastructure;

(c) Include in its contracts with a risk bearing entity a provision that requires the risk bearing entity to provide to the health maintenance organization a quarterly status report that includes:

(i) GAAP financial statements;

(ii) An aging report of the percentage of claims that have been paid, pended or denied, across all contracts with risk bearing entities; and

(iii) On a monthly basis, a report of the estimated reported claims and incurred but not reported claims liability of the risk bearing entity; and
(d) Require that a risk bearing entity with which the health maintenance organization contracts provide notice within thirty (30) days to the health maintenance organization of:

(i) Any changes involving the ownership structure of the risk bearing entity;

(ii) Financial or operational concerns regarding the financial viability of the risk bearing entity; or

(iii) Loss of registration.

(4) A health maintenance organization shall provide to the commissioner on a quarterly basis a list of all risk bearing entities with which it has an agreement or contract and the number of covered persons assigned or selected by each risk bearing entity, and any additional information the commissioner may require.

(5) A health maintenance organization shall include in its contracts with a risk bearing entity a provision that allows the commissioner, in the event that a risk bearing entity fails to comply with any provision of this Act, to assign for six (6) months, the risk bearing entity’s contract with providers to furnish covered services.

C. Oversight Responsibility

(1) A health maintenance organization shall have procedures in place to notify the commissioner within a reasonable time that a risk bearing entity has materially failed to perform under its contract with the health maintenance organization. A health maintenance organization is not in violation of this paragraph if it acts in good faith in its attempt to comply. The commissioner may by rule enumerate more specific circumstances under which a report may be filed.

(2) A health maintenance organization shall maintain systems and controls for, including but not limited to, reviewing the information provided to the health maintenance organization by the risk bearing entity pursuant to this Act.

(3) Any information that has been provided to the commissioner by a health maintenance organization pursuant to this subsection is confidential and shall not be disclosed to any person except to the extent that it may be necessary to carry out the purposes of this Act and as allowed by state law, regardless of whether the information is in the form of paper, is preserved on microfilm or is stored in computer readable form. If the information is disclosed pursuant this subsection, the health maintenance organization providing the notice shall not be liable for the disclosure or any subsequent use or misuse of the information. The health maintenance organization shall be entitled to claim any statutory privileges against disclosure that the entity that provided the information to the health maintenance organization is entitled to claim.

(4) Any person acting as a director, officer, employee, contractor or agent of a health maintenance organization, who, in good faith and without malice, makes any decision or takes any action to provide a notice of the type contemplated by this subsection shall not be subject to liability for civil damages or any legal action in consequence of that decision or action, nor shall the health maintenance organization, or any other director, officer, employee, contractor or agent be liable for the activities of the person.

(5) In the event that a health maintenance organization has been notified that the registration of a risk bearing entity has been terminated, revoked, non-renewed or forfeited for any reason, a health maintenance organization shall terminate its contract with the risk bearing entity unless specific permission is provided by the commissioner to maintain the contract at the request of both parties, or enter into an agreement pursuant to which the risk bearing entity ceases to bear risk. The commissioner may set conditions on any agreements between the risk bearing entity and the health maintenance organization.
(6) This subsection is not intended to create a private right of action.

D. Continuity of Care.

Notwithstanding any agreement to the contrary, the health maintenance organization shall:

(1) Retain full responsibility on a prospective basis for the provision of health care services pursuant to any applicable health benefit plan; and

(2) At all times, be able to demonstrate to the satisfaction of the commissioner that the health maintenance organization can fulfill its non-transferable obligation to provide health care services to covered persons in any event, including the failure, for any reason, of a risk bearing entity.

E. Enforcement Against Risk Bearing Entities.

(1) If the commissioner determines that a risk bearing entity has not complied with any provision of this Act, the commissioner may terminate the risk bearing entity’s registration, institute a corrective action against the risk bearing entity, or use any of the commissioner’s other enforcement powers to obtain compliance with this Act.

(2) The commissioner shall, within five (5) business days, inform each health maintenance organization with which a risk bearing entity contracts, in writing:

(a) Of any corrective action undertaken by the commissioner against a risk bearing entity; and

(b) If the registration of a risk bearing entity has been revoked, non-renewed, forfeited or terminated.

(3) The commissioner may, in the event that a risk bearing entity fails to comply with any provision of this Act, require the assignment of the risk bearing entity’s contract to furnish covered services for a period not to exceed six (6) months.

(4) The commissioner may assess fines on a risk bearing entity for every day that the entity has failed to meet the registration requirements of this section.

Section 10. Form and Rate Filing Requirements

Drafting Note: States that require prior approval of policy forms and premium rates should adopt Option A. States that have a system of file and use for policy forms and premium rates should adopt Option B.

Option A. Prior Approval

A. Subject to Subsections B and C, no group or individual contract, evidence of coverage or amendment thereto, shall be delivered or issued for delivery in this state, unless its form has been filed with and approved by the commissioner.

B. (1) Every form required by this section shall be filed with the commissioner not less than thirty (30) days prior to delivery or issue for delivery in this state. At any time during the initial thirty-day period, the commissioner may extend the period for review for an additional thirty (30) days. Notice of an extension shall be in writing. At the end of the review period, the form is deemed approved if the commissioner has taken no action. The filer must notify the commissioner in writing prior to using a form that is deemed approved.

(2) At any time, after thirty (30) days notice and for cause shown, the commissioner may withdraw approval of a form, effective at the end of the thirty-day period.
Whenever the commissioner disapproves a form or withdraws approval of a form, the commissioner shall notify the health maintenance organization in writing of the reasons for the disapproval. The notice shall inform the health maintenance organization that the health maintenance organization has thirty (30) days after the date it receives the notice to make a written request for a hearing. The commissioner shall conduct a hearing within thirty (30) days after the date the commissioner receives the written request for a hearing.

C. (1) A health maintenance organization shall not use a premium rate until either a schedule of premium rates or methodology for determining premium rates has been filed with and approved by the commissioner.

(2) Any schedule of premium rates or rating methodology submitted pursuant to this subsection shall clearly state any copayments, coinsurance or deductibles to be paid by the covered person.

(3) Either a specific schedule of premium rates, or a methodology for determining premium rates, shall be established in accordance with actuarial principles for various categories of covered persons, provided that the premium applicable to a covered person shall not be individually determined based on the status of the covered person’s health. However, the premium rates shall not be excessive, inadequate or unfairly discriminatory. A certification by a qualified actuary or other qualified person acceptable to the commissioner as to the appropriateness of the use of the methodology, based on reasonable assumptions, shall accompany the filing along with adequate supporting information.

Drafting Note: States may wish to vary the type of information required to accompany a rate filing based on the type of rating mechanism in use. For instance, requiring that only the rating methodology for setting premium rates accompany the rate filing may be sufficient for experience rated groups, while requiring the rate filing to include both the schedule of rates and the rating methodology used to set the rates may be more appropriate for community rated or pooled groups. Regardless of whether a rating methodology or schedule of rates is required to accompany the rate filing, states should require that adequate supporting documentation be included.

(4) The commissioner shall approve the schedule of premium rates or methodology for determining premium rates if the requirements of Paragraph (2) are met. If the commissioner disapproves the filing, the commissioner shall notify the health maintenance organization, in writing, of the reasons for the disapproval. The notice shall inform the health maintenance organization that the health maintenance organization has thirty (30) days after the date it receives the notice, to make a written request for a hearing. The commissioner shall conduct a hearing within thirty (30) days after the date the commissioner receives the written request for a hearing. If the commissioner does not take action on the schedule or methodology within thirty (30) days of the date of the filing of the schedule or methodology, it shall be deemed approved.

D. The commissioner may require the submission of whatever relevant information the commissioner deems necessary in determining whether to approve or disapprove a form or rate filing made pursuant to this section.

Option B. File and Use

A. No group or individual contract, evidence of coverage or amendment thereto, shall be delivered or issued for delivery in this state, unless its form and rates have been filed with the commissioner at least thirty (30) days prior to its issuance or delivery.

B. (1) At any time, after its issuance and delivery, and for cause shown, the commissioner may disapprove the use of a form. The disapproval shall be effective thirty (30) days after the health maintenance organization receives the notice described in Paragraph (2).

(2) The commissioner shall notify the health maintenance organization, in writing, of the reasons for disapproval of the form. The notice shall inform the health maintenance organization that the health
A health maintenance organization shall not use a premium rate unless the premium rate or a methodology for determining the premium rate has been filed with the commissioner at least thirty (30) days prior to its use.

The health maintenance organization shall certify that the rates meet the requirements of Paragraph (4).

Any schedule of premium rates or rating methodology submitted pursuant to this subsection shall clearly state any copayments, coinsurance or deductibles to be paid by the covered person.

A specific schedule of premium rates, or a methodology for determining premium rates, shall be established in accordance with actuarial principles for various categories of covered persons, provided that the premium applicable to a covered person shall not be individually determined based on the status of the covered person’s health. However, the premium rates shall not be excessive, inadequate or unfairly discriminatory. A qualified actuary or other qualified person acceptable to the commissioner must certify the appropriateness of the use of the methodology, based on reasonable assumptions, backed by adequate supporting information.

Drafting Note: States may wish to vary the type of information required to accompany a rate filing based on the type of rating mechanism in use. For instance, requiring that only the rating methodology for setting premium rates accompany the rate filing may be sufficient for experience rated groups, while requiring the rate filing to include both the schedule of rates and the rating methodology used to set the rates may be more appropriate for community rated or pooled groups. Regardless of whether a rating methodology or schedule of rates is required to accompany the rate filing, states should require that adequate supporting documentation be included.

At any time after its implementation, and for good cause shown, the commissioner may disapprove the use of a specific rate or rating methodology. The commissioner shall notify the health maintenance organization, in writing, of the reasons for the disapproval. The notice shall inform the health maintenance organization that the health maintenance organization has thirty (30) days after the date it receives the notice, to make a written request for a hearing. The commissioner shall conduct a hearing within thirty (30) days after the date the commissioner receives the written request for a hearing. A written request for hearing shall stay the effect of the disapproval.

Section 11. Evidence of Coverage

A. (1) Every enrollee shall receive an evidence of coverage from the group contract holder or the health maintenance organization.

The evidence of coverage shall not contain provisions or statements that are unfair, unjust, inequitable, misleading, deceptive, or that encourage misrepresentation as defined by [insert reference to state law equivalent to the NAIC Unfair Trade Practices Act].

The evidence of coverage shall contain a clear statement of the provisions required in Section 8C of this Act.

B. If an evidence of coverage issued pursuant to and incorporated in a contract issued in this state is intended for delivery in another state and the evidence of coverage has been approved for use in the state in which it is to be delivered, the evidence of coverage need not be submitted to the commissioner of this state for approval.
Section 12. Marketing and Advertising Materials

A. The advertising and marketing materials of health maintenance organizations are subject to the requirements of [insert reference to state law equivalent to the NAIC Advertisements of Accident and Sickness Insurance Model Regulation].

B. The advertising and marketing materials of health maintenance organizations marketing Medicare supplement insurance are subject to the requirements of [insert reference to state law equivalent to the NAIC Medicare Supplement Insurance Minimum Standards Model Act and the Model Regulation to Implement the NAIC Medicare Supplement Insurance Minimum Standards Model Act].

C. The advertising and marketing materials of health maintenance organizations marketing long-term care insurance are subject to the requirements of [insert reference to state law equivalent to the NAIC Long-Term Care Insurance Model Regulation].

Section 13. Information to Enrollees and Covered Persons

A. A health maintenance organization shall provide, within thirty (30) days, notice to enrollees of any material change in the operation of the organization that will affect them directly.

B. (1) The health maintenance organization shall make written copies of provider directories available to enrollees upon enrollment and re-enrollment.

(2) The health maintenance organization shall provide written copies of provider directories to covered persons upon request.

(3) The health maintenance organization shall provide the directory and any updates to enrollees, in writing or by electronic means, in accordance with the terms of its contract.

C. (1) A health maintenance organization shall notify covered persons of the termination of the primary care provider who currently provides health care services to that covered person.

(2) A health maintenance organization shall establish a method to permit a covered person, at the option of the covered person, to receive notice in writing or by electronic means, of the termination of the primary care provider who currently provides health care services to that covered person.

(3) The health maintenance organization shall provide assistance to the covered person in transferring to another participating primary care provider.

D. The health maintenance organization shall establish a method to permit a covered person, at the option of the covered person, to obtain information in writing or by electronic means, on how services may be obtained, where additional information on access to services may be obtained and a telephone number where covered persons may contact the health maintenance organization, at no cost to the covered person.

Drafting Note: For the purpose of this section any major change in the provider network is considered a material change.

Section 14. Continuation of Benefits

A. The commissioner shall require that each health maintenance organization have a plan for handling insolvency that provides for continuation of benefits for the duration of the contract period for which premiums have been paid and continuation of benefits to covered persons who are confined on the date of insolvency in an inpatient facility until their discharge or expiration of benefits.

B. In considering such a plan, the commissioner may require:

(1) Insurance to cover the expenses to be paid for continued benefits after an insolvency;
Section 4514. Coordination of Benefits

A. Health maintenance organizations are permitted, but not required, to adopt coordination of benefits provisions to avoid overinsurance and to provide for the orderly payment of claims when a person is covered by two (2) or more group health insurance or health benefit plans.

B. If a health maintenance organization adopts coordination of benefits provisions, the provisions shall be consistent with [insert reference to state law equivalent to NAIC Group Coordination of Benefits Model Regulation] in general use in the state for coordinating coverage between two (2) or more group health insurance or health benefit plans.

C. To the extent necessary for health maintenance organizations to meet their obligations as secondary carriers under the rules for coordination consistent with [insert reference to state law equivalent to NAIC Group Coordination of Benefits Model Regulation], health maintenance organizations shall make payments for services that are:

(1) Received from non-participating providers;

(2) Provided outside their service areas; or

(3) Not covered under the terms of their group contracts or evidence of coverage.

Section 4615. Initial Net Worth and Capital Requirements

A. Before the commissioner issues a certificate of authority in accordance with Section 6 of this Act, an applicant seeking to establish or operate a health maintenance organization shall have the greater of:

(1) The amount of capital required under [insert reference in state law equivalent to the Risk-Based Capital (RBC) for Health Organizations Model Act];

(2) An initial net worth of $3,000,000; or

(3) At the commissioner’s discretion, an amount greater than required under Paragraph (1) or (2), as indicated by a business plan and a projected risk-based capital calculation after the first full year of operation based on the most current NAIC Health Annual Statement Blank.

Section 4716. Ongoing Net Worth and Capital Requirements

A. A health maintenance organization shall maintain minimum net worth equal to the greater of $2,500,000 or the amount necessary to maintain capital required pursuant to [insert reference to state law equivalent to the Risk-Based Capital for Health Organizations Model Act].
B. The amount in Subsection A may be adjusted annually for inflation, at the commissioner’s discretion.

Drafting Note: The following definition of “managed hospital payment basis” and formulation for ongoing net worth, based on the 1989 amended version of HMO Model Act, have been included for the benefit of states that have not adopted the Risk-Based Capital for Health Organizations Model Act:

“Managed hospital payment basis” means agreements wherein the financial risk is primarily related to the degree of utilization rather than to the cost of services. Examples of managed hospital payment basis agreements include but are not limited to payments on a DRG or per diem basis or where there is an agreement between a hospital and a health maintenance organization and which are under common ownership or control.

C. A health maintenance organization shall maintain a minimum net worth equal to the greater of $2,500,000; or an amount equal to the sum of:

(1) Eight percent (8%) of annual health care expenditures except those paid on a capitated basis or managed hospital payment basis as reported on the most recent financial statement filed with the commissioner; and

(2) Four percent (4%) of annual hospital expenditures paid on a managed hospital payment basis as reported on the most recent financial statement filed with the commissioner.

Section 1817. Deposit Requirements

A. Unless otherwise provided in this section, a health maintenance organization shall deposit with the commissioner or, at the discretion of the commissioner, with any organization or trustee acceptable to the commissioner through which a custodial or controlled account is utilized, cash, securities, or any combination of these or other measures that are acceptable to the commissioner which at all times shall have a market value of not less than $1,000,000.

B. The deposit shall be an admitted asset of the health maintenance organization in the determination of net worth.

C. All income from deposits shall be an asset of the health maintenance organization. A health maintenance organization that has made a securities deposit may withdraw that deposit or any part thereof after making a substitute deposit of cash, securities or any combination of these or other measures of equal amount and value. Any securities shall be approved by the commissioner before being deposited or substituted.

D. The deposit shall be used to protect the interests of the health maintenance organization’s covered persons and to assure continuation of health care services to covered persons of a health maintenance organization that is in rehabilitation or conservation. The commissioner may use the deposit for administrative costs directly attributable to a rehabilitation, receivership or liquidation. If the health maintenance organization is placed in receivership or liquidation, the deposit shall be an asset subject to the provisions of the liquidation act.

E. The commissioner may reduce or eliminate the deposit requirement if the health maintenance organization deposits with the state treasurer, commissioner, or other official body of the state or jurisdiction of domicile for the protection of all covered persons, wherever located, of the health maintenance organization, cash, acceptable securities or surety, and delivers to the commissioner a certificate to that effect, duly authenticated by the appropriate state official holding the deposit.

Section 1918. Hold Harmless Provision Requirements for Covered Persons

A. Except for coinsurance, deductibles or copayments as specifically provided in the evidence of coverage, in no event, including but not limited to nonpayment by the health maintenance organization, insolvency of the health maintenance organization or breach of contract among the health maintenance organization, risk
bearing entity or participating provider, shall a risk bearing entity or participating provider bill, charge, collect a deposit from, seek compensation, remuneration or reimbursement from, or have any recourse against a covered person or a person (other than the health maintenance organization) acting on behalf of the covered person for covered services provided. No risk bearing entity or participating provider, nor any agent, trustee or assignee of the risk bearing entity or participating provider may maintain an action at law against a covered person to collect sums owed by the health maintenance organization.

B. All contracts among health maintenance organizations, risk bearing entities, and participating providers shall include a hold harmless provision specifying protection for covered persons. Any attempted waiver or amendment in a manner materially adverse to the interests of covered persons of a hold harmless provision shall be null and void and unenforceable.

C. The requirement of Subsection B shall be met by including a provision substantially similar to the following:

“Provider agrees that in no event, including but not limited to nonpayment by the health maintenance organization or intermediary organization, insolvency of the health maintenance organization or intermediary organization, or breach of this agreement, shall the provider bill, charge, collect a deposit from, seek compensation, remuneration or reimbursement from, or have any recourse against a covered person or a person (other than the health maintenance organization or intermediary organization) acting on behalf of the covered person for covered services provided pursuant to this agreement. This agreement does not prohibit the provider from collecting coinsurance, deductibles, copayments or services in excess of limits, as specifically provided in the evidence of coverage, or fees for uncovered services delivered on a fee-for-service basis to covered persons.”

D. (1) Any statement sent to a covered person shall clearly state the amounts billed to the health maintenance organization and include a notice explaining that covered persons are not responsible for amounts owed by the health maintenance organization.

(2) All contracts among health maintenance organizations, risk bearing entities, and participating providers shall require that all statements sent to covered persons clearly state the amounts billed to the health maintenance organization and include a notice explaining that covered persons are not responsible for amounts owed by the health maintenance organization.

(3) The notice requirements in this subsection shall be met by including in the statement to covered persons a provision substantially similar the following:

NOTICE: YOU ARE NOT RESPONSIBLE FOR ANY AMOUNTS OWED BY YOUR HEALTH MAINTENANCE ORGANIZATION

E. Any violation of the provisions of this section shall constitute an unfair trade practice pursuant to [insert reference to state insurance fraud statute] and shall subject the health care provider to monetary penalties in accordance with [insert reference to state insurance fraud statute] and notification to the [insert reference to appropriate licensing entity for type of provider].

Drafting Note: States that do not authorize insurance departments to take action against providers should not adopt Subsection E and should consider other options such as contacting the state attorney general’s office or other appropriate state official.

Drafting Note: States with consumer protection acts that provide covered persons with a private right of action should consider including a reference in Subsection E.

Section 20. Uncovered Expenditures Deposit

A. If at any time uncovered expenditures exceed ten percent (10%) of total health care expenditures, a health maintenance organization shall place an uncovered expenditures insolvency deposit with the commissioner.
with an organization or trustee acceptable to the commissioner through which a custodial or controlled account is maintained, cash or securities that are acceptable to the commissioner. The deposit shall at all times have a fair market value in an amount of 120 percent of the health maintenance organization’s outstanding liability for uncovered expenditures for covered persons in this state, including incurred but not reported claims, and shall be calculated as of the first day of the month and maintained for the remainder of the month. If a health maintenance organization is not otherwise required to file a quarterly report, it shall file a report within forty-five (45) days of the end of the calendar quarter with information sufficient to demonstrate compliance with this section.

B. The deposit required under this section is in addition to the deposit required under Section 18 and is an admitted asset of the health maintenance organization in the determination of net worth. All income from deposits or trust accounts shall be assets of the health maintenance organization and may be withdrawn from the deposit or account quarterly with the approval of the commissioner.

C. A health maintenance organization that has made a deposit may withdraw that deposit or any part of the deposit if:
   (a) A substitute deposit of cash or securities of equal amount and value is made;
   (b) The fair market value exceeds the amount of the required deposit; or
   (c) The required deposit under Subsection A is reduced or eliminated.

D. Deposits, substitutions or withdrawals may be made only with the prior written approval of the commissioner.

E. The commissioner may by regulation prescribe the time, manner and form for filing claims under Subsection D.

F. The commissioner may by regulation or order require health maintenance organizations to file annual, quarterly or more frequent reports deemed necessary to demonstrate compliance with this section. The commissioner may require that the reports include liability for uncovered expenditures as well as an audit opinion.

Section 21. Open Enrollment and Replacement Coverage in the Event of Insolvency

A. Enrollment Period
   (1) In the event of an insolvency of a health maintenance organization, upon order of the commissioner all other carriers that participated in the enrollment process with the insolvent health maintenance organization at a group’s last regular enrollment period shall offer the group’s enrollees of the insolvent health maintenance organization a thirty-day enrollment period commencing upon the date of insolvency. Each carrier shall offer the enrollees of the insolvent health maintenance organization the same coverages and rates that it had offered to the enrollees of the group at its last regular enrollment period.

   (2) If no other carrier had been offered to some groups enrolled in the insolvent health maintenance organization, or if the commissioner determines that the other health benefit plans lack sufficient
health care delivery resources to assure that health care services will be available and accessible to all of the group covered persons of the insolvent health maintenance organization, then the commissioner shall allocate equitably the insolvent health maintenance organization’s group contracts for these groups among all health maintenance organizations that operate within a portion of the insolvent health maintenance organization’s service area, taking into consideration the health care delivery resources of each health maintenance organization. Each health maintenance organization to which a group or groups are so allocated shall offer the group or groups the health maintenance organization’s existing coverage that is most similar to each group’s coverage with the insolvent health maintenance organization at rates determined in accordance with the successor health maintenance organization’s existing rating methodology and in accordance with state law.

(3) The commissioner shall also allocate equitably the insolvent health maintenance organization’s nongroup enrollees that are unable to obtain other coverage among all health maintenance organizations that operate within a portion of the insolvent health maintenance organization’s service area, taking into consideration the health care delivery resources of each health maintenance organization. Each health maintenance organization to which nongroup enrollees are allocated shall offer the nongroup enrollees the health maintenance organization’s existing coverage for individual or conversion coverage as determined by the enrollee’s type of coverage in the insolvent health maintenance organization at rates determined in accordance with the successor health maintenance organization’s existing rating methodology. Successor health maintenance organizations that do not offer direct nongroup enrollment may aggregate all of the allocated nongroup enrollees into one group for rating and coverage purposes.

B. Replacement Coverage

(1) “Discontinuance” shall mean the termination of the contract between the group contract holder and a health maintenance organization due to the insolvency of the health maintenance organization, and does not refer to the termination of any agreement between any individual enrollee and the health maintenance organization.

(2) A health maintenance organization providing replacement coverage hospital, medical or surgical expense or service benefits within a period of sixty (60) days from the date of discontinuance of a prior health maintenance organization, shall immediately cover all covered persons who were validly covered under the previous health maintenance organization at the date of discontinuance and who would otherwise be eligible for coverage under the succeeding health maintenance organization, regardless of any provisions of the contract relating to active employment, hospital confinement or pregnancy.

Drafting Note: Under the Health Insurance Portability and Accountability Act of 1996 (HIPAA), in the group market, a succeeding carrier, including a health maintenance organization, is prohibited from including any nonconfinement rules in its plan of benefits and any actively-at-work rules provided in the succeeding carrier’s plan of benefits must provide that absence from work due to any health status-related factor be treated as being actively-at-work.

(3) Except to the extent benefits for the condition would have been reduced or excluded under the prior carrier’s contract or policy, no provision in a succeeding health maintenance organization’s contract of replacement coverage that would operate to reduce or exclude benefits on the basis that the condition giving rise to benefits preexisted the effective date of the succeeding carrier’s contract shall be applied with respect to those covered persons validly covered under the prior carrier’s contract or policy on the date of discontinuance.

Section 2219. Investment Powers

With the exception of investments made in accordance with Section 7A(1) of this Act, the investment practices of a health maintenance organization shall be governed by [insert reference to state law equivalent to the NAIC Health Maintenance Organization Investment Guidelines].
Section 2320. Accounting Practices

Every health maintenance organization shall maintain its financial records in accordance with [insert reference to state law equivalent to NAIC Accounting Practices and Procedures Manual].

Section 2421. Fiduciary Responsibilities

A. A director, officer, employee or partner of a health maintenance organization who receives, collects, disburses or invests funds in connection with the activities of the health maintenance organization shall be responsible for the funds in a fiduciary relationship to the health maintenance organization.

B. A health maintenance organization shall maintain in force a fidelity bond or fidelity insurance on these employees and officers, directors and partners in an amount not less than $1,000,000 for each health maintenance organization or a maximum of $10,000,000 in aggregate maintained on behalf of health maintenance organizations owned by a common parent corporation, or the sum prescribed by the commissioner.

Drafting Note: As an optional additional subsection, language may be included that would make the appropriate provisions of the state’s insurance laws governing prohibitions or restrictions on activities of directors, officers and certain shareholders applicable to health maintenance organizations.

Section 2522. Annual and Quarterly Financial Statement Filing Requirements

A. (1) Every health maintenance organization shall file annual and quarterly financial statements, as provided in Paragraph (2), with the commissioner and with the National Association of Insurance Commissioners (NAIC).

(2) The annual statement shall be filed by March 1 for the preceding year and a quarterly financial statement by May, August and November 15 for the preceding quarter.

B. The annual and quarterly financial statements shall be prepared on the most current NAIC Health Annual Statement Blank in accordance with the NAIC Annual Statement Instructions and the NAIC Accounting Practices and Procedures Manual.

Section 2623. Reporting Requirements

A. (1) Every health maintenance organization shall annually, on or before March 1, file a report verified by at least two principal officers with the commissioner covering the preceding calendar year. The report shall be on forms prescribed by the commissioner.

(2) In addition, the health maintenance organization shall file by March 1, unless otherwise stated:

(a) Audited financial statements on or before June 1;

(b) A list of participating providers in a form approved by the commissioner; and

(c) (i) A description of the grievance procedures; and

(ii) The total number of grievances handled through these procedures, a compilation of the causes underlying those grievances, and a summary of the final disposition of those grievances.

B. (1) Unless otherwise provided in this Act, a health maintenance organization shall file notice with the commissioner within thirty (30) days of the effective date of a change, describing any material modifications to the documents required to be filed with the application for a certificate of authority as set forth in Section 5B(1) and (2) of this Act.
Unless otherwise provided in this Act, a health maintenance organization shall file with the commissioner advance notice, or if advance notice is not practicable, notice filed as soon as possible, but in no event more than thirty (30) days after the effective date of a change, describing any material modifications to the health maintenance organization’s operations as set forth in the information required by Section 5B of this Act that affects any of the following:

(a) The solvency of the health maintenance organization;

(b) The health maintenance organization’s continued provision of health care services that it has contracted to provide;

(c) The manner in which the health maintenance organization conducts its business; or

(d) Any other matters the commissioner may prescribe by regulation.

C. The commissioner may require additional reports as necessary to carry out the commissioner’s duties under this Act.

Section 2724. Powers of Insurers and [Hospital and Medical Service Corporations]

A. An insurance company licensed in this state, or a hospital or medical service corporation authorized to do business in this state, may either directly or through a subsidiary or affiliate organize and operate a health maintenance organization under the provisions of this Act. Notwithstanding any other law, which may be inconsistent, any two (2) or more insurance companies, hospital or medical service corporations, or subsidiaries or affiliates thereof, may jointly organize and operate a health maintenance organization. The business of insurance is deemed to include the providing of health care services by a health maintenance organization owned or operated by an insurer or its subsidiary.

B. Notwithstanding any provision of insurance and hospital or medical service corporation laws [citations], an insurer or a hospital or medical service corporation may contract with a health maintenance organization to provide insurance or similar protection against the cost of care provided through health maintenance organizations and to provide coverage in the event of the failure of the health maintenance organization to meet its obligations. The covered persons of a health maintenance organization constitute a permissible group under such laws. Among other things, under such contracts, the insurer or hospital or medical service corporation may make benefit payments to health maintenance organizations for health care services rendered by providers.

Section 2825. Examinations

A. The commissioner may make an examination of the affairs of a health maintenance organization, providers and risk bearing entities with which the health maintenance organization has contracts, agreements or other arrangements as often as is reasonably necessary for the protection of the interests of the people of this state, but not less frequently than once every five (5) years.

B. An examination conducted under this section shall be performed in accordance with the provisions of [insert reference to state law equivalent to the NAIC Model Law on Examinations].

C. The expenses of examinations under this section shall be assessed against the health maintenance organization being examined and remitted to the commissioner.

D. In lieu of an examination, the commissioner may accept the report of an examination made by the commissioner of another state provided that the provisions of [insert state law equivalent to Section 3C of the NAIC Model Law on Examinations] are satisfied.
Section 2926. Suspension or Revocation of Certificate of Authority

A. A certificate of authority issued under this Act may be suspended or revoked, and an application for a certificate of authority may be denied, if the commissioner finds that any of the conditions listed below exist:

1. The health maintenance organization is operating significantly in contravention of its basic organizational document or in a manner contrary to that described in any other information submitted under Section 5 of this Act, unless amendments to those submissions have been filed with and approved by the commissioner;

2. The health maintenance organization issues an evidence of coverage or uses a schedule of charges for health care services that does not comply with the requirements of Sections 8 and 9 of this Act;

3. The health maintenance organization does not provide or arrange for basic health care services;

4. The health maintenance organization is unable to fulfill its obligations to furnish health care services;

5. The health maintenance organization is no longer financially responsible and may reasonably be expected to be unable to meet its obligations to covered persons or prospective covered persons;

6. The health maintenance organization has failed to correct any deficiency occurring due to the health maintenance organization’s prescribed minimum net worth being impaired;

Drafting Note: States that have not adopted Risk Based Capital for Health Organizations Model Act should consider including a provision that provides for early warning and correction of insufficient net worth by a health maintenance organization.

7. The health maintenance organization has failed to implement internal grievance procedures in compliance with [insert reference to state law equivalent to the Health Carrier Grievance Procedure Model Act];

8. The health maintenance organization has failed to implement the external review procedures required by [insert reference to state law equivalent to the Health Carrier External Review Model Act];

Drafting Note: States that have adopted Options 1 or 2 of the NAIC Health Carrier External Review Model Act should not adopt this provision.

9. The health maintenance organization, or any person acting on its behalf, has advertised or merchandised its services in an untrue, misrepresentative, misleading, deceptive or unfair manner;

10. The continued operation of the health maintenance organization would be hazardous to its covered persons;

11. The health maintenance organization has otherwise failed substantially to comply with this Act or any regulation adopted pursuant to this Act; or

12. The health maintenance organization or applicant has violated any other provision of the state insurance code.

Drafting Note: States that have adopted an Administrative Procedures Act should adopt Option A. States that have not adopted an Administrative Procedures Act should adopt Option B.

Option A.

B. The provisions of the [insert reference to state Administrative Procedure Act] of this state shall apply to proceedings under this section.
Option B.

B. (1) Suspension or revocation of a certificate of authority or the denial of an application pursuant to this section shall be by written order and shall be sent to the health maintenance organization or applicant by certified or registered mail. The written order shall state the grounds, charges or conduct on which the suspension, revocation or denial or administrative penalty is based. The health maintenance organization or applicant may in writing request a hearing within thirty (30) days from the date of mailing of the order. If no written request is made, the order shall be final upon the expiration of the thirty (30) day period.

(2) If the health maintenance organization or applicant requests a hearing pursuant to this subsection the commissioner shall issue a written notice of hearing and send it to the health maintenance organization or applicant by certified or registered mail stating:

(a) A specific time for the hearing, which may not be less than twenty (20) days nor more than thirty (30) days after mailing of the notice of hearing; and

(b) A specific place for the hearing, which may be either in [location of regulatory body] or in the county where the health maintenance organization’s or applicant’s principal place of business is located.

C. (1) With respect to individual contracts, when the certificate of authority of a health maintenance organization is suspended, during the period of suspension, the health maintenance organization shall not:

(a) Enroll any additional covered persons except newborn children or other newly acquired dependents of existing covered persons; and

(b) Engage in any advertising or solicitation.

(2) With respect to group contracts, when the certificate of authority of a health maintenance organization is suspended, during the period of suspension, the health maintenance organization shall enroll additional enrollees and their eligible dependents and newly acquired eligible dependents of existing enrollees, including individuals who become newly acquired eligible dependents of an enrollee through marriage, birth or adoption or placement for adoption, who meet the requirements for special enrollment in accordance with [cite section of state law or regulation implementing the provisions of Section 2701(f) of the Public Health Service Act] or are otherwise eligible under the health benefit plan.

Drafting Note: Under Section 2701(f) of the Public Health Service Act, as amended by the Health Insurance Portability and Accountability Act of 1996 (HIPAA), for the group market, health maintenance organizations are required during special enrollment periods to enroll individual eligible employees and dependents of eligible employees and newly acquired dependents of already enrolled eligible employees, including individuals who become dependents through marriage, birth or adoption or placement for adoption, who meet the requirements for special enrollment in accordance with [cite section of state law or regulation implementing the provisions of Section 2701(f) of the Public Health Service Act] or are otherwise eligible under the health benefit plan. The language in Paragraph (2) is intended to reflect this requirement.

D. When the certificate of authority of a health maintenance organization is revoked, the organization shall proceed, immediately following the effective date of the order of revocation, to wind up its affairs, and shall conduct no further business except as may be essential to the orderly conclusion of the affairs of the organization. It shall engage in no further advertising or solicitation whatsoever. The commissioner may, by written order, permit further operation of the organization found to be in the best interest of covered persons, to the end that covered persons will be afforded the greatest practical opportunity to obtain continuing health care coverage.
E. A certificate of authority shall be suspended or revoked or an application or a certificate of authority denied or an administrative penalty imposed only after compliance with the requirements of this section.

Section 3027. Summary Orders and Supervision

A. Whenever the commissioner determines that the financial condition of a health maintenance organization is such that its continued operation might be hazardous to covered persons, creditors, or the general public, or that it has violated any provision of this Act, the commissioner may, after notice and hearing, order the health maintenance organization to take action reasonably necessary to rectify the condition or violation, including but not limited to one or more of the following:

1. Reduce the total amount of present and potential liability for benefits by reinsurance or other method acceptable to the commissioner;
2. Reduce the volume of new business being accepted;
3. Reduce expenses by specified methods;
4. Suspend or limit the writing of new business for a period of time;
5. Increase the health maintenance organization’s capital and surplus by contribution; or
6. Take other steps the commissioner may deem appropriate under the circumstances.

B. For purposes of this section, the violation by a health maintenance organization of any law of this state to which the health maintenance organization is subject shall be deemed a violation of this Act.

C. The commissioner is authorized to adopt regulations to set uniform standards and criteria for early warning that the continued operation of any health maintenance organization might be hazardous to covered persons, creditors, or the general public and to set standards for evaluating the financial condition of any health maintenance organization. The standards shall be consistent with the purposes expressed in Subsection A.

D. The remedies and measures available to the commissioner under this section shall be in addition to, and not in lieu of, the remedies and measures available to the commissioner under the provisions of [insert reference to state law equivalent to Section 10 of the NAIC Rehabilitation and Liquidation Model Act].

Section 3428. Rehabilitation, Liquidation or Conservation of Health Maintenance Organizations

A. A rehabilitation, liquidation or conservation of a health maintenance organization shall be deemed to be the rehabilitation, liquidation or conservation of an insurance company and shall be conducted under the supervision of the commissioner pursuant to the law governing the rehabilitation, liquidation or conservation of insurance companies. The commissioner may apply for an order directing the commissioner to rehabilitate, liquidate or conserve a health maintenance organization upon any one or more grounds set out in [insert reference to state rehabilitation law], or when in the commissioner’s opinion the continued operation of the health maintenance organization would be hazardous either to the covered persons or to the people of this state. Covered persons shall have the same priority in the event of liquidation or rehabilitation as the law provides to policyholders of an insurer.

B. For purpose of determining the priority of distribution of general assets, claims of covered persons shall have the same priority as established in [insert reference to state law relating to liquidation of insurers] for policyholders and beneficiaries of insureds of insurance companies. If a covered person is liable to a provider for services provided pursuant to and covered by the health benefit plan, that liability shall have the status of a covered person claim for distribution of general assets. A provider who is obligated by statute or agreement to hold covered persons harmless from liability for services provided pursuant to and covered by a health benefit plan shall have a priority of distribution of the general assets immediately following that of covered persons as described herein, and immediately preceding the priority of distribution described in [insert
Section 3229.  Penalties and Enforcement

A.  In addition to or in lieu of suspension or revocation of a certificate of authority or the denial of an application pursuant to Section 2926 of this Act, the applicant or the health maintenance organization may be subjected to an administrative penalty of up to $[insert number] for each cause for suspension or revocation or application denial.

B.  (1) If the commissioner shall for any reason have cause to believe that a violation of this Act has occurred or is threatened, the commissioner may give notice to the health maintenance organization and to the representatives, or other persons who appear to be involved in the suspected violation, to arrange a conference with the alleged violators or their authorized representatives for the purpose of attempting to ascertain the facts relating to the suspected violation; and, in the event it appears that a violation has occurred or is threatened, to arrive at an adequate and effective means of correcting or preventing the violation.

(2)  Proceedings under this subsection shall not be governed by any formal procedural requirements, and may be conducted in such manner as the commissioner may deem appropriate under the circumstances. However, unless consented to by the health maintenance organization, no rule or order may result from a conference until the requirements of this section of this Act are satisfied.

C.  Notwithstanding any other provisions of this Act, if a health maintenance organization fails to comply with the net worth requirement of this Act or fails to correct its net worth to bring it into compliance with the requirements of this Act, the commissioner is authorized to take appropriate action to assure that the continued operation of the health maintenance organization will not be hazardous to its covered persons.

Drafting Note: In addition to the actions provided in this section that a commissioner may use to enforce a health maintenance organization’s compliance with the provisions of this Act, some states may authorize the commissioner to issue an order to a health maintenance organization or a representative of the health maintenance organization to cease and desist from engaging in an act or practice that is violation of this Act. In addition, the commissioner may also be authorized to institute an action seeking to obtain injunctive or other relief if the health maintenance organization fails to comply with the order to cease and desist. When the commissioner is not granted such statutory powers, the language should be modified to provide for the legal steps to be taken by the attorney general or other appropriate state official.

Section 3330.  Regulations

The commissioner may promulgate regulations to carry out the provisions of this Act. The rules and regulations shall be subject to review in accordance with [insert reference to state law relating to administrative rulemaking and review of rules].

Section 3431.  Statutory Construction and Relationship to Other Laws

A.  Except as otherwise provided in this Act or in other laws expressly referring to health maintenance organizations, provisions of the insurance law and provisions of hospital or medical service corporation laws shall not be applicable to a health maintenance organization granted a certificate of authority under this Act. This provision shall not apply to an insurer or hospital or medical service corporation licensed and regulated pursuant to the insurance law or the hospital or medical service corporation laws of this state except with respect to its health maintenance organization activities authorized and regulated pursuant to this Act.

B.  Solicitation of enrollees by a health maintenance organization granted a certificate of authority, or its representatives, shall not be construed to violate any provision of law relating to solicitation or advertising by health care professionals.

C.  Any health maintenance organization authorized under this Act shall not be deemed to be practicing medicine and shall be exempt from the provision of [insert reference to state law relating to the practice of medicine].
Section 3532. Filings and Reports as Public Documents

All applications, filings and reports required under this Act shall be treated as public documents, except those which are trade secrets or privileged or confidential quality assurance, commercial or financial information, other than any annual financial statement that may be required under Section 3673 of this Act, and any other information that is considered privileged or confidential under state or federal law.

Section 3633. Insurance Holding Company System Regulatory Act

All health maintenance organizations shall meet the requirements of [insert reference to state law equivalent to NAIC Insurance Holding Company System Regulatory Act].

Drafting Note: States that have not included health maintenance organizations within the scope of their state law equivalent to the NAIC Insurance Holding Company System Regulatory Act should not adopt this section.

Section 3734. Separability

If any provision of this Act, or the application of the provision to any person or circumstance shall be held invalid, the remainder of the Act, and the application of the provision to persons or circumstances other than those to which it is held invalid, shall not be affected.

Section 3835. Effective Date

This Act shall be effective [insert date].
APPENDIX A

Former Section 3HH, Section 14 and Section 20

Below are the sections deleted to reconcile the provisions of this model with the 2017 revisions to the Life and Health Insurance Guaranty Association Model Act (#520), which added health maintenance organizations as members of the guaranty association.

Section 3HH. Definition of Uncovered Expenditures

“Uncovered expenditures” means the costs to the health maintenance organization for health care services that are the obligation of the health maintenance organization, for which a covered person may also be liable in the event of the health maintenance organization’s insolvency and for which no alternative arrangements have been made that are acceptable to the commissioner.

Section 14. Continuation of Benefits

A. The commissioner shall require that each health maintenance organization have a plan for handling insolvency that provides for continuation of benefits for the duration of the contract period for which premiums have been paid and continuation of benefits to covered persons who are confined on the date of insolvency in an inpatient facility until their discharge or expiration of benefits.

B. In considering such a plan, the commissioner may require:

(1) Insurance to cover the expenses to be paid for continued benefits after an insolvency;

(2) Provisions in provider contracts that obligate the provider, after the health maintenance organization’s insolvency, to provide covered services through the period for which premium has been paid to the health maintenance organization on behalf of the covered person or until the covered person’s discharge from an inpatient facility, whichever time is greater. Covered benefits to covered persons confined in an inpatient facility on the date of insolvency will continue until their confinement in an inpatient facility is no longer medically necessary;

(3) Insolvency reserves;

(4) Acceptable letters of credit; or

(5) Any other arrangements to assure that benefits are continued as specified above.

Section 20. Uncovered Expenditures Deposit

A. If at any time uncovered expenditures exceed ten percent (10%) of total health care expenditures, a health maintenance organization shall place an uncovered expenditures insolvency deposit with the commissioner, with an organization or trustee acceptable to the commissioner through which a custodial or controlled account is maintained, cash or securities that are acceptable to the commissioner. The deposit shall at all times have a fair market value in an amount of 120 percent of the health maintenance organization’s outstanding liability for uncovered expenditures for covered persons in this state, including incurred but not reported claims, and shall be calculated as of the first day of the month and maintained for the remainder of the month. If a health maintenance organization is not otherwise required to file a quarterly report, it shall file a report within forty-five (45) days of the end of the calendar quarter with information sufficient to demonstrate compliance with this section.

B. The deposit required under this section is in addition to the deposit required under Section 18 and is an admitted asset of the health maintenance organization in the determination of net worth. All income from deposits or trust accounts shall be assets of the health maintenance organization and may be withdrawn from the deposit or account quarterly with the approval of the commissioner.
C. (1) A health maintenance organization that has made a deposit may withdraw that deposit or any part of the deposit if:

(a) A substitute deposit of cash or securities of equal amount and value is made;

(b) The fair market value exceeds the amount of the required deposit; or

(c) The required deposit under Subsection A is reduced or eliminated.

(2) Deposits, substitutions or withdrawals may be made only with the prior written approval of the commissioner.

D. The deposit required under this section is in trust and may be used only as provided under this section. The commissioner may use the deposit of an insolvent health maintenance organization for administrative costs associated with administering the deposit and payment of claims of covered persons of this state for uncovered expenditures in this state. Claims for uncovered expenditures shall be paid on a pro rata basis based on assets available to pay the ultimate liability for incurred expenditures. Partial distribution may be made pending final distribution. Any amount of the deposit remaining shall be paid into the liquidation or receivership of the health maintenance organization.

E. The commissioner may by regulation prescribe the time, manner and form for filing claims under Subsection D.

F. The commissioner may by regulation or order require health maintenance organizations to file annual, quarterly or more frequent reports deemed necessary to demonstrate compliance with this section. The commissioner may require that the reports include liability for uncovered expenditures as well as an audit opinion.
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call July 28, 2020. The following Working Group members participated: Katie Dzurec, Chair (PA); Jane Beyer, Vice Chair (WA); Donna Lambert (AR); Erin Klug (AZ); Cara Cheevers (CO); Kurt Swan (CT); Howard Liebers (DC); Sarah Crittenden (GA); Andria Seip (IA); Ryan Gillespie and Erica Weyhenmeyer (IL); Justin McFarland and Craig Van Aalst (KS); Kathleen A. Birrane and Theresa Morfe (MD); Andrew Kleinnendorst (MN); Jeannie Keller (MT); Crystal Bartuska and Sara Gerving (ND); Maureen Belanger (NH); Gale Simon (NJ); Margaret Pena (NM); Laura Miller (OH); Marie Ganim (RI); Shari Miles (SC); Jill Kruger (SD); Rachel Bowden (TX); Tanji Northrup (UT); Brant Lyons (VA); Barbara Belling (WI); James A. Dodrill, Tim Sigman and Joylynn Fix (WV); and Denise Burke (WY). Also participating were: Trinidad Navarro (DE); and Glen Mulready (OK).

1. **Adopted its June 24 Minutes**

The Working Group met June 24 to discuss the June 18 comments received on the draft quantitative treatment limitation (QTL) template and instructions.

Ms. Beyer made a motion, seconded by Ms. Northrup, to adopt the Working Group’s June 24 minutes (Attachment Five-A). The motion passed unanimously.

2. **Heard a Presentation on MHPAEA Compliance Work and Activities Involving Self-Funded Group Health Plans**

Henry Harbin (The Bowman Family Foundation—BFF), consultant to the BFF, and Beth Ann Middlebrook (B. Middlebrook Consulting LLC) discussed the activities of the BFF to improve plan compliance with the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA). Dr. Harbin highlighted the work the BFF has been doing with Path Forward, which is a five-year initiative undertaken by a number of partners, including the National Alliance of Healthcare Purchaser Coalitions (National Alliance), the American Psychiatric Association (APA), and the APA Foundation Center for Workplace Mental Health. He said employers overwhelmingly identify the need to improve access to effective, affordable and timely behavioral health care as a top priority. He described the five key priorities of Path Forward, which includes: 1) improving in-network access to behavioral health specialists; 2) expanding screening and testing for mental health/substance use disorders (MH/SUD); and 3) ensuring MHPAEA plan compliance.

Dr. Harbin said Path Forward’s main focus among its key priorities is improving access. He discussed Path Forward’s efforts to improve access and its recommendations to employers to address the issue. He also discussed Path Forward’s use of Regional Employer Stakeholder Engagement Teams (RESET Regions) to assist it with achieving improved access. He said Path Forward also sees itself as a partner with state departments of insurance (DOIs) and the U.S. Department of Labor (DOL) in improving MHPAEA plan compliance.

Ms. Middlebrook discussed the findings of the 2019 Milliman Report (Report). Based on claims data, the Report measured disparities in reimbursement rates and access to MH/SUD services with respect to employer-sponsored plans. Ms. Middlebrook also discussed the Mental Health Treatment and Research Institute’s (MHTARI’s) Model Data Request Form (MDRF), which is a tool for the collection of key data on certain MHPAEA plan compliance and network access issues that may exist for MH/SUD services.

Ms. Middlebrook explained that the MDRF contains specific, detailed instructions and definitions developed to elicit targeted, consistent and reliable responses from plans on quantitative measures for determining outcome disparities related to network adequacy and other non-quantitative treatment limitations (NQTLs). The MDRF requests data that measures the following: 1) disparities in out-of-network use for MH/SUD versus medical/surgical (M/S); 2) disparities in reimbursement rates for MH/SUD versus M/S providers; 3) disparities in denial rates for MH/SUD versus M/S services; and 4) the accuracy of network provider directories. Ms. Middlebrook discussed how some large private employers and states, such as Washington, have used the MDRF to assess these disparities and evaluate any red flags that may surface related to a plan’s MHPAEA plan compliance.
Ms. Beyer explained how Washington used the MDRF through its market conduct examination authority to evaluate disparities, particularly with respect to NQTLs, based on the data collected from plans. She said Washington plans to publish an aggregate level report on the findings and recommendations form the University of Washington. NAIC staff will post the report on the Working Group’s webpage.

Ms. Dzurec reminded Working Group members and interested parties about the purposes of establishing the Working Group. One such purpose is to have the Working Group facilitate information-sharing and discussion among state insurance regulators on the work they are doing related to MHPAEA plan compliance and share state best practices, such as what Ms. Beyer discussed related to Washington’s work with the MDRF.

3. **Heard a Presentation on State Legislative Trends in MHPAEA Reporting**

Tim Clement (APA) discussed state legislative action with respect to MHPAEA plan compliance. He said there has been significant and growing state legislative efforts to improve MHPAEA plan compliance. Most of the legislation has focused on NQTLs. Mr. Clement said state legislation has also required market conduct examinations as part of the effort to achieve MHPAEA plan compliance. He discussed state legislation that has been enacted since 2018 and legislation currently pending, noting that his presentation includes links to the legislation.

Mr. Clement advised state insurance regulators to be prepared for legislation to be introduced in their states concerning MHPAEA plan compliance. He said to date, 14 states have introduced legislation, with 13 requiring NQTL stepwise analyses to determine MHPAEA plan compliance. He encouraged state insurance regulators to ensure that any such introduced legislation works for them and is in line with the state DOI staffing and funding resources. He suggested a number of potential technical suggestions and/or amendments that state insurance regulators may want to consider with respect to any legislation introduced, including: 1) effective dates; 2) reporting submission dates; 3) defining terms; 4) specifying that NQTL reporting be staggered rather than one reporting date; and 5) adding provisions for quantitative treatment limitation/financial requirement (QTL/FR) reporting. He also suggested that state insurance regulators should talk to their fellow regulators, particularly those states that are implementing, or have undertaken, significant MHPAEA activities.

4. **Discussed Current MHPAEA Compliance Tools, How the States Can Leverage These Resources, and the Working Group’s Next Steps**

Ms. Dzurec discussed current MHPAEA plan compliance tools, including the MHPAEA chapter (Chapter) in the Market Regulation Handbook. She explained that in having this Chapter, she was able to cross-reference what is in the Chapter with the draft QTL template. She reiterated that the Working Group’s work is to supplement the existing MHPAEA plan compliance tools, such as the Chapter, not replace them. She said she is still working to revise the draft QTL template based on the June 18 comments and her current work cross-referencing the draft QTL template with the Chapter.

Ms. Beyer discussed the Working Group’s future work to develop NQTL compliance tools that the states can use to determine MHPAEA plan compliance. She asked for suggestions from Working Group members on what NQTL categories or types would be most helpful. Ms. Dzurec discussed what the Working Group has discussed to date about potential NQTL topics, such as reimbursement and network adequacy. She said the Working Group will continue this discussion in its upcoming meetings. She suggested that if any Working Group members have thoughts on specific NQTL topics the Working Group should work on to reach out to NAIC staff.

Having no further business, the MHPAEA (B) Working Group adjourned.
Draft: 7/22/20

MHPPAEA (B) Working Group
Conference Call
June 24, 2020

The MHPPAEA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call June 24, 2020. The following Working Group members participated: Katie Dzurec, Chair (PA); Jane Beyer, Vice Chair (WA); Mel Heaps (AR); Erin Klug (AZ); Sheirin Ghoddoucy (CA); Cara Cheevers (CO); Kurt Swan (CT); Sarah Crittenden (GA); Andria Seip (IA); Ryan Gillespie and Erica Weyhenmeyer (IL); Julie Holmes (KS); Erica Bailey (MD); Peter Brickwedde and Grace Arnold (MN); Jeannie Keller (MT); Ted Hamby (NC); Crystal Bartuska and Sara Gerving (ND); Gale Simon and Ralph Boeckman (NJ); Brittany ODell (NM); Laura Miller (OH); Shari Miles (SC); Jill Kruger (SD); Rachel Bowden (TX); Heidi Clausen and Jaakob Sundberg (UT); Brant Lyons (VA); Barbara Belling (VI); Tim Sigman and Joylynn Fix (WV); and Denise Burke (WY). Also participating was: Laura Arp (NE).

1. Adopted its June 5 Minutes

The Working Group met June 5 to review and discuss the draft quantitative treatment limitation (QTL) template and instructions.

Ms. Beyer made a motion, seconded by Mr. Swan, to adopt the Working Group’s June 5 minutes (Attachment Five-A1). The motion passed unanimously.

2. Heard an Update from the DOL on the Proposed 2020 MHPAEA Compliance Tool

Amber Rivers (U.S. Department of Labor—DOL) said the DOL’s Employee Benefits Security Administration (EBSA) released a proposed 2020 self-compliance tool on June 19 intended to help improve compliance with the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPPAEA) and additional related requirements under the federal Employee Retirement Income Security Act (ERISA). The EBSA is requesting public comments on the self-compliance tool proposed revisions by July 24. Ms. Rivers said the proposed revisions update the current 2018 MHPPAEA self-compliance tool. She said the proposed revisions generally fall into four categories: 1) integration of recent guidance; 2) revision of compliance examples; 3) best practices for establishing an internal compliance plan; and 4) warning signs. She said the DOL is hosting an MHPPAEA listening event July 16 focusing on compliance issues. She urged Working Group members to attend.

3. Discussed the June 18 Comments Received on the Draft QTL/FR Template and Instructions

Ms. Dzurec said the Working Group received comments on the draft QTL and financial requirement (QTL/FR) template by the June 18 public comment deadline from the Association for Behavioral Health and Wellness (ABHW); America’s Health Insurance Plans (AHIP); the American Medical Association (AMA); the Blue Cross Blue Shield Association (BCBSA); the Health Coalition in a joint comment submission from Anthem Inc., Cigna, CVS Health, Health Care Service Corporation (HCSC), and UnitedHealthcare; The Kennedy Forum; the Legal Action Center (LAC); the National Association of Health Underwriters (NAHU); the NAIC consumer representatives; the Parity Implementation Coalition (PIC); the Virginia Insurance Bureau; and URAC. She said she reviewed each comment letter, and during her review, she found that the comments generally fell into the following issue categories: 1) addressing plan networks; 2) grouping services; 3) certificate of coverage and schedule of benefits (SOB) cross-reference requirements; 4) a limitation on the number of plans per template; and 5) the addition of non-quantitative treatment limitation (NQTL) elements. She discussed how she planned to address some of these issues in the next draft of the QTL/FR template and instructions, including clarifying in the instructions how plans should account for networks, such as preferred and non-preferred networks; clarifying how plans may be able to group certain services together if the elements are the same; and making the certificate of coverage and SOB cross-references optional.

Ms. Dzurec said some commenters also requested clarification on the states’ use of the proposed QTL/FR template. She said Pennsylvania uses the template for market conduct examinations. However, she said the analysis needed to determine MHPPAEA plan parity compliance is the same regardless of whether the template is used for form review or market conduct examinations. Kris Hathaway (AHIP) asked about the Working Group’s timeline for completing the template. She noted that the states have other tools and templates to use to determine MHPPAEA mental health/substance use disorder (MH/SUD) parity compliance, such as the MHPPAEA chapter and tool in the NAIC Market Regulation Handbook (Handbook). She also expressed concern with the time it will take for a plan to complete the proposed QTL/FR template. Randi Reichel (Health Coalition)
expressed support for Ms. Hathaway’s comments concerning the potential time needed for a plan to complete the proposed template. Ms. Reichel explained that plans are currently doing the analysis to comply with the MHPAEA MH/SUD parity requirements, but operationally the proposed template will require plans to manually input the required information, which could take a lot of time because it cannot be automated.

Ms. Arp discussed her work in developing the MHPAEA chapter and tool in the Handbook. She discussed how she envisioned the proposed QTL/FR template working with the MHPAEA chapter and tools and the merits of having such a template particularly for those states with limited resources to resolve red flags. Ms. Dzurec agreed that the states can use the draft QTL/FR template for that purpose and any other purpose a state feels is appropriate. She noted that she personally would like to use such a template at the beginning of any MHPAEA MH/SUD plan parity analysis because she has seen a lot of violations. She expressed concern that plans are not getting it right and consumers are being harmed.

Ms. Dzurec emphasized that consistent with the Working Group’s charge, the draft QTL/FR template is meant to be supplemental to existing compliance tools. It is not intended to replace any of these existing compliance tools, including the MHPAEA chapter in the Handbook. She asked for comments.

Tim Clement (American Psychiatric Association—APA) said he understands industry concerns. However, he does not believe the draft QTL/FR template is overly burdensome. John Troy (BCBSA) expressed support for AHIP’s and the Health Coalition’s comments regarding their operational concerns with the draft QTL/FR template and its potential to be administratively burdensome for plans to complete. Pamela Greenberg (ABHW) reiterated the ABHW’s concerns with the draft QTL/FR template outlined in its comment letter, including its use, the Working Group’s process, flexibility in its use, and benefit services classifications. David Lloyd (The Kennedy Forum) agreed with Ms. Dzurec’s comments concerning the errors that plans continue to make in their MHPAEA MH/SUD parity analyses and the impact of such errors on consumers.

Ms. Hathaway suggested that the draft QTL/FR template should be something the Market Regulation and Consumer Affairs (D) Committee should be involved in given the year-long project conducted by one of the Committee’s working groups with respect to developing the MHPAEA chapter and tool in the Handbook. Ms. Dzurec explained the Working Group’s next steps with respect to the draft QTL/FR template and the template’s connection with the MHPAEA chapter and tool in the Handbook. She said after the Working Group completes its work on the template, it will not be formally voted on by the Regulatory Framework (B) Task Force or the Health Insurance and Managed Care (B) Committee. She reiterated that, consistent with the Working Group’s charge, the template would be an additional resource the states can use, if they choose to do so, to determine MHPAEA MH/SUD plan parity compliance. The template would not supplant the MHPAEA chapter and tool in the Handbook. Ms. Dzurec said the draft template is just a deeper dive into the analysis required to determine MHPAEA plan parity compliance. She also explained that the template was never meant to be an NAIC supported or endorsed product. However, she cautioned that even if it is not an NAIC supported or endorsed product, some states will still use it, and are currently using it, as part of their processes to determine MHPAEA plan parity compliance.

Ms. Beyer said the MHPAEA is a complex law and the analysis necessary to determine MHPAEA plan parity compliance is complex as well. She said state insurance regulators feel that they have a responsibility to consumers to ensure that they have access to the services they need. Ms. Cheevers expressed support for Ms. Dzurec’s and Ms. Beyer’s comments with respect to the proposed QTL/FR template being an additional tool states can use to dig deeper, particularly when there are red flags.

Ms. Dzurec said within the next few weeks, she will revise the draft QTL/FR template and instructions based on the comments received requesting clarity in some areas. She reiterated that after the Working Group completes its work, it will report on its work to the Regulatory Framework (B) Task Force and the Health Insurance and Managed Care (B) Committee for informational purposes only. Currently, she said the Working Group does not foresee the template being an NAIC supported or endorsed product. However, if the Task Force or the Committee decides that it should be, then the Working Group would go back to the beginning and use the NAIC’s traditional process to work on it. Ms. Dzurec said after the Working Group completes its work on the QTL/FR template, it will begin work on the NQTL models determining what NQTL topics to include.

Having no further business, the MHPAEA (B) Working Group adjourned.
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call June 5, 2020. The following Working Group members participated: Katie Dzurec, Chair (PA); Jane Beyer, Vice Chair (WA); Mel Anderson and Zane Chrisman (AR); Erin Klug (AZ); Jessica Ryan (CA); Cara Cheevers (CO); Kurt Swan (CT); Sarah Crittenden (GA); Andria Seip (IA); Ryan Gillespie and Erica Weyhenmeyer (IL); Julie Holmes (KS); Erica Bailey (MD); Julia Lyng (MN); Jeannie Keller (MT); Ted Hamby (NC); Chrystal Bartuska and Sara Gerving (ND); Gale Simon and Ralph Boeckman (NJ); Paige Duhamel and Viara Ianakieva (NM); Laura Miller (OH); Courtney Miner (RI); Kendell Buchanan (SC); Jill Kruger (SD); Rachel Bowden (TX); Tanji Northrup (UT); Brant Lyons (VA); Barbara Belling (WI); Tim Sigman and Joylynn Fix (WV); and Tana Howard and Bill Cole (WY).

1. **Adopted its March 19 and March 9 Minutes**

The Working Group met March 19 and March 9 to discuss its 2020 activities.

Ms. Beyer made a motion, seconded by Ms. Kruger, to adopt the Working Group’s March 19 (Attachment Five-A1a) and March 9 (Attachment Five-A1b) minutes. The motion passed unanimously.

2. **Discussed the Draft Working Group Work Plan**

Ms. Dzurec discussed her draft work plan for the Working Group’s work related to complete two projects as additional resources and guidance for the states to use as part of their form reviews related to mental health/substance use disorder (MH/SUD) benefits parity requirements under the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA): 1) a quantitative treatment limit (QTL)/financial review (FR) template; and 2) non-quantitative treatment limit (NQTL) models. She said she anticipates the Working Group completing its work on the QTL/FR template by the end of June and sending it to the Regulatory Framework (B) Task Force. She said that because a state’s use of this template is voluntary, she does not anticipate the Task Force adopting it.

Ms. Dzurec said that after the Working Group completes its work on the QTL/FR template, it will begin work on the NQTL models. She said that after the Working Group determines what NQTL topics to include in the models, she anticipates the Working Group possibly forming smaller drafting groups to separately work on each NQTL model topic and complete work on each of the NQTL model topics on a rolling basis before the end of the year. She also discussed the specific timelines for each project.

Ms. Dzurec asked for comments on the proposed work plan. There were no comments.

3. **Reviewed the Draft QTL/FR Template**

Ms. Dzurec said she reviewed the QTL/FR draft template. She said Pennsylvania has been using this template for its MHPAEA parity form reviews. She emphasized that a state’s use of the template is voluntary, reiterating that its development is part of the Working Group’s charge to create additional resources and guidance for the states with respect to MHPAEA parity compliance tools.

Ms. Dzurec described the template’s uses, such as: 1) product development; 2) reporting; 3) form filing; and 4) market conduct examinations. She provided a step-by-step overview of how a state could use the template in its form review to determine plan MHPAEA parity compliance beginning with the input of plan information to the end of the form review. She explained the state’s activities in the review as well as the insurer’s activities, particularly with respect to covered services where the insurer would classify the covered services as medical/surgical services or MH/SUD services and the state would confirm that classification. She said the template does not permit an insurer to classify a covered service as both medical/surgical and MH/SUD. The covered services must be classified as one type of service or the other type of service, not both. She explained that when identifying limitations on a covered service, an insurer cannot include “medical necessity” as a limitation because for a service to be a covered service, it must be medically necessary. She said that at the end of the form review, the template
provides roles for the insurer and the state to adjust and correct any problematic areas that arise in the form review for the plan to comply with the MHPAEA parity requirements.

Ms. Dzurec requested comments. Ms. Beyer asked about the analysis required to determine MHPAEA parity compliance with respect to covered benefit plan limitations—copayments, coinsurance and deductibles. Ms. Dzurec confirmed that the analysis would be based on each QTL. Ms. Chrisman asked if there would be an issue with MHPAEA parity compliance if an MH/SUD benefit was more generous than a medical/surgical benefit. Ms. Dzurec said there would not be an issue with MHPAEA parity compliance in this situation because the federal regulations prohibit plans from imposing more restrictive requirements on MH/SUD benefits than medical/surgical benefits. This prohibition does not operate the other way.

Ms. Dzurec said the Working Group has set a public comment period ending June 18 to receive comments on the draft QTL/FR template. She urged stakeholders to submit comments in order to improve the draft and make it more efficient and helpful to the states as an additional tool in determining MHPAEA parity compliance.

Having no further business, the MHPAEA (B) Working Group adjourned.
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call March 19, 2020. The following Working Group members participated: Katie Dzurec, Chair (PA); Jane Beyer, Vice Chair (WA); William Lacy (AR); Erin Klug (AZ); Jessica Ryan (CA); Cara Cheevers (CO); Kurt Swan (CT); Colin Johnson (DC); Sarah Crittenden (GA); Andria Seip (IA); Ryan Gillespie and Erica Weyhenmeyer (IL); Julie Holmes (KS); Erica Bailey (MD); Candace Gergen (MN); Jeannie Keller (MT); Ted Hamby (NC); Sara Gerving (ND); Maureen Belanger (NH); Ralph Boeckman (NJ); Paige Duhamel and Viara Ianakieva (NM); Marie Ganim (RI); Shari Miles (SC); Jill Kruger (SD); Rachel Bowden (TX); Tanji Northrup (UT); Brant Lyons (VA); Barbara Belling (WI); Tim Sigman and Joylynn Fix (WV); and Denise Burke (WY). Also participating was: Laura Arp (NE).

1. Discussed Current and Potential MHPAEA Compliance State Tools

Ms. Dzurec said that currently there are two main Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) compliance tools available to the states: 1) the U.S. Department of Labor’s (DOL’s) compliance check list, which is updated every two years; and 2) the NAIC Market Regulation Handbook’s MHPAEA chapter. She asked the Working Group to consider the following questions: 1) how much detail is necessary for state insurance regulators to determine plan compliance with MHPAEA’s parity requirements; 2) whether instructions on how to use these tools and any additional tools the Working Group develops would be useful; and 3) what is working and what is not regarding state insurance regulators determining plan parity compliance.

Ms. Dzurec asked the Working Group members to share their experiences with evaluating plan parity compliance. Ms. Cheevers said that in accordance with state requirements, Colorado receives a robust set of data from plans to evaluate compliance. She said the receipt of such data has presented some challenges; as a result, in some cases, Colorado has relied on self-attestation in determining plan compliance. She said the department of insurance (DOI) is looking at ways to prioritize and streamline the data it receives. Ms. Dzurec said Pennsylvania has similar issues with the amount of data it receives. She said this is an area the Working Group could address as part of its work related to nonquantitative treatment limits (NQTLs) guidelines to determine what information state insurance regulators need and what questions they should ask in determining plan parity compliance.

Ms. Arp said that when working on the MHPAEA chapter of the Handbook, the Market Conduct Examination Standards (D) Working Group took a surgical approach in establishing the examination requirements because it realized that state DOIs have limited staff to perform these analyses. She suggested that one way to find out if plans are complying with MHPAEA parity requirements is to reach out to providers. She said Nebraska took such an approach—talking to providers about what the Nebraska DOI would be looking for with respect to MHPAEA violations. Ms. Dzurec agreed that the Working Group could look at utilizing a similar approach, but taking care not to overburden providers in reporting this information to state DOIs. Ms. Arp suggested that to avoid this, the Working Group could consider reaching out to provider associations. Ms. Duhamel said New Mexico has taken a similar approach in its provider outreach efforts. She said it might be useful for the Working Group to create provider outreach materials for the states to use. Ms. Arp said Nebraska has created such materials, including a provider outreach presentation. Ms. Dzurec asked Ms. Arp to share Nebraska’s provider outreach presentation with the Working Group. She suggested that any information the Working Group receives from such outreach could inform the Working Group’s work on identifying which NQTLs the Working Group should focus on. She noted that claim reviews are also helpful in identifying NQTLs and monitoring plan in-operation compliance.

Uma Dua (Dua Enterprises) said the Working Group should consider developing an NQTL data tool for pharmacy benefits. Ms. Beyer said the Bowman Family Foundation (BFF) has developed a model data request form, which the Working Group may want to look at to determine what information state DOIs would want from plans to determine parity compliance. The Working Group discussed additional suggestions on what additional tools the Working Group could create to assist the states in determining plan parity compliance and providing uniformity in responses among carriers, such as developing a standardized side-by-side comparison template of medical/surgical (M/S) benefits and mental health of substance use disorder (MH/SUD) benefits and/or an excel spreadsheet with tabs that pertain to a certain area of mental health.
Matthew Litton (DOL) said the DOL recently issued its 2020 Report (Report) to the U.S. Congress (Congress), as required by the MHPAEA, on compliance of group health plans and health insurance coverage offered in connection with such plans with the MHPAEA’s requirements. He said the DOL is required to submit this Report every two years. He said the Report discusses the DOL’s activities to further parity implementation since its 2018 Report to Congress. Most notably, the Report provides an overview of the DOL’s partnership efforts across the federal agencies, as well as with plans, issuers, consumers, providers, states and other stakeholders. The Report details the DOL’s intent to use the information gathered from these partnerships to develop a roadmap to compliance for the regulated community so that health plan participants and beneficiaries can realize the full benefits of the MHPAEA. Mr. Litton said the DOL also released its fiscal year (FY) 2019 Mental Health Parity and Addiction Equity Act Enforcement Fact Sheet. He said the enforcement fact sheet summarizes the DOL Employee Benefits Security Administration’s (EBSA’s) and the federal Centers for Medicare and Medicaid’s (CMS’s) closed investigations and public inquiries related to MHPAEA during FY 2019.

Ms. Dzurec said that given the states’ short-term focus on COVID-19 issues, she anticipated the Working Group’s work to be slowed somewhat as it moves forward over the next few months. She said her goal is to create a project plan for the Working Group for the remainder of the year consistent with its charges.

Having no further business, the MHPAEA (B) Working Group adjourned.
The MHPAEA (B) Working Group of the Regulatory Framework (B) Task Force met via conference call March 9, 2020. The following Working Group members participated: Katie Dzurec, Chair (PA); Mel Heaps (AR); Catherine O’Neil (AZ); Sheirin Ghoddoucy (CA); Cara Cheevers (CO); Kurt Swan (CT); Howard Liebers (DC); Sarah Crittenden (GA); Andria Seip (IA); Ryan Gillespie (IL); Julie Holmes (KS); Erica Bailey (MD); Sherri Mortensen-Brown and Peter Brickwedde (MN); Jeannie Keller (MT); Rosemary Gillespie (NC); Chrystal Bartuska and Sara Gerving (ND); Maureen Belanger (NH); Gale Simon (NJ); Paige Duhamel (NM); Marie Ganim (RI); Shari Miles and Kendell Buchanan (SC); Jill Kruger (SD); Rachel Bowden (TX); Tanji Northrup (UT); Yolanda Tennyson (VA); Jane Beyer (WA); Barbara Belling (WI); Joylynn Fix (WV); and Denise Burke (WY). Also participating was: Tashia Sizemore (OR).

1. Discussed the Working Group’s 2020 Activities

Ms. Dzurec said the purpose of the Working Group’s conference call is to discuss how the Working Group plans to proceed with its work and how it will operate moving forward. She said she anticipates the Working Group operating similarly to the ERISA (B) Working Group. The Working Group’s main activity will be to review and develop tools for the states to use with respect to plan compliance with the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA). Ms. Dzurec requested suggestions from Working Group members and other stakeholders on what they believe the Working Group should focus on short-term and long-term consistent with the Working Group’s 2020 charges.

Ms. Dzurec described some of the tools and resources currently available to the states to assist in MHPAEA plan compliance, including the U.S. Department of Labor’s (DOL’s) MHPAEA self-compliance tool and the MHPAEA chapter in the NAIC Market Regulation Handbook. She explained that the MHPAEA is not a mandate, but if a plan covers mental health and substance use disorder (MH/SUD) benefits, then the plan is prohibited from imposing limitations on such benefits that are less favorable than the limitations imposed on medical/surgical (M/S) benefits. She said that to determine plan compliance with this parity requirement, state insurance regulators are required to conduct a comparability analysis both at inception and in-operation.

Andrew Sperling (National Alliance on Mental Illness—NAMI) expressed support for the Working Group’s appointment and its 2020 anticipated work. Tim Clement (American Psychiatric Association—APA) also expressed support for the Working Group’s 2020 work, particularly its anticipated work related to in-operation plan parity compliance.

Ms. Dzurec requested comments on issues the states have encountered with plan parity compliance. Ms. Sizemore said Oregon has been having problems with third-party administrators (TPAs) not disclosing their underlying algorithms to support their assertions of parity and compliance with the MHPAEA. Health Insurance Commissioner Ganim said the Rhode Island Office of the Health Insurance Commissioner (OHIC) recently completed three market conduct examinations related to behavioral health coverage. She also said that state departments of insurance (DOIs) welcome input from providers related to parity issues they have encountered with plans. Ms. Dzurec agreed. She said the Working Group might want to consider developing some best practices for ways providers can provide such information to DOIs in such a manner that it is not burdensome to providers. Daniel Blaney-Koen (American Medical Association—AMA) expressed support for any efforts the Working Group undertakes related to provider reporting of plan parity compliance issues.

Ms. Bailey said there is a bill currently pending in the Maryland Legislature to establish reporting requirements related to non-quantitative treatment limits (NQTLs) and associated data. She suggested that the Working Group might want to consider developing best practices related to such reporting requirements. Several Working Group members noted passage of or consideration of legislation like Maryland’s pending legislation, and they expressed support for the Working Group’s efforts to develop resources for the states in this area as Ms. Bailey suggests. Mr. Clement said he would provide the Working Group with a copy of the APA’s tracking of such legislation. Uma Dua (Dua Enterprises, Limited) suggested that the Working Group include a review of pharmacy benefits, particularly concerning pharmacy NQTLs and Pharmacy & Therapeutic (P&T) Committee actions in this area. Jeffrey M. Klein (McIntyre & Lemon) said the American Bankers Association’s (ABA’s) Health Savings Account (HSA) Council has been tracking state legislation related to behavioral services, and he warned the Working Group about potential compliance issues with high deductible health plans (HDHPs) and first dollar coverage for such services. Kris Hathaway (America’s Health Insurance Plans—AHIP) expressed support for the Working Group’s potential
work to develop best practices related to what data elements are most helpful to state insurance regulators to determine NQTL plan compliance.

Ms. Dzurec outlined the Working Group’s potential short-term goals for further discussion during the Working Group’s meeting at the Spring National Meeting. She volunteered to develop basic assumptions for the Working Group to use as it moves forward. She said the Pennsylvania DOI created an automated tool for the testing of quantitative treatment limits (QTLs) that she will share for discussion as another potential resource for the states in their analysis to determine plan parity compliance. Ms. Cheevers expressed support for having a uniform QTL tool for use among the states. Ms. Dzurec agreed, but reminded Working Group members that the intent is for the Working Group to develop resources and tools as an option for the states to use to supplement what they are already doing.

Ms. Dzurec said another short-term goal for the Working Group is to develop an NQTL process for the states to use when conducting their analyses to determine what red flags to look for, how to find them, what to do, and what questions to ask when a state finds them. She explained that the Working Group’s options are limitless in this area, and she suggested that the Working Group select a few NQTLs to start with that are already under review and look for best practices. She said she anticipated each NQTL would be a separate document. She suggested the following NQTLs to review first: 1) reimbursement for MH/SUD providers; 2) fraud, waste and abuse actions that have resulted in NQTLs, such as substance use disorder laboratory work; 3) pharmacy; and 4) soft caps; i.e. not actual visit limits. Working Group members expressed support for Ms. Dzurec’s suggested Working Group short-term goals. Ms. Sizemore said Oregon has been doing some work related to MH/SUD NQTL provider reimbursement that she would be happy to share with the Working Group when it is complete in a few months.

Having no further business, the MHPAEA (B) Working Group adjourned.

W:\National Meetings\2020\Summer\TF\RF\MHPAEAWG\MHPAEAWG 3-9 ConfCallmin.docx
The Pharmacy Benefit Manager Regulatory Issues (B) Subgroup of the Regulatory Framework (B) Task Force met via conference call July 16, 2020. The following Subgroup members participated: TK Keen, Chair (OR); Martin Swanson and Laura Arp, Vice Chairs (NE); Sarah Bailey (AK); Anthony L. Williams (AL); Marjorie Farmer (AR); Bruce Hinze (CA); Howard Liebers (DC); Andria Seip (IA); Vicki Schmidt (KS); Daniel McIIwain (KY); Jeffrey Zewe (LA); Mary Kwei (MD); Chad Arnold (MI); Candace Gergen (MN); Amy Hoyt (MO); Derek Oestreicher (MT); Gale Simon (NJ); Renee Blechner and Paige Duhamel (NM); Michael Humphreys (PA); Rachel Jrade-Rice (TN); James Young (VA); Jennifer Kreitler (WA); Nathan Houdek (WI); Ellen Potter (WV); and Denise Burke (WY).

1. Discussed and Exposed a Draft PBM Model

Mr. Keen said as directed by the Subgroup late last year, the ad hoc drafting group completed its work in developing a draft of a proposed new [State] Pharmacy Benefit Manager Licensure and Regulation Model Act (Attachment Six-A). He reminded the Subgroup that it had directed the ad hoc drafting group to develop a draft pharmacy benefit manager (PBM) model addressing licensing and gag clauses. He explained that during its discussions, the ad hoc drafting group discussed many issues beyond the scope of its charge from the Subgroup, which in many respects is reflected in the draft.

Mr. Keen said the ad hoc drafting group used the National Conference of Insurance Legislators’ (NCOIL’s) Pharmacy Benefits Manager Licensure and Regulation Model Act as a base for the draft. He provided a high-level overview of the draft’s provisions. Ms. Seip asked if those states that have adopted provisions similar to the proposed Section 6—Gag Clauses Prohibited have had any issues with it and if they could share their experiences with its implementation. Ms. Farmer said Arkansas has had a similar provision in its law for years, and it has not experienced any implementation issues. Ms. Duhamel said New Mexico’s experience with its law is the same as Arkansas’ experience.

Mr. Keen said the ad hoc drafting group had a lot of discussion concerning Section 8—Regulations, particularly Section 8B, which includes a list of potential provisions the states could include in any regulations adopted to implement the proposed model’s provisions. Ms. Arp explained that Section 8B was crafted as a compromise between those states that are at the forefront of pharmacy benefit manager (PBM) regulation, as reflected in the discussions during the Subgroup’s information-gathering sessions, and those states that are just beginning to consider PBM regulation. Mr. Humphreys said he has concerns with the inclusion of Section 8B in an NAIC model, noting that his legislature most likely would not support such a provision. He suggested that the Subgroup consider developing a white paper on the topics outlined in Section 8B and a standalone PBM licensing model.

Mr. Oestreicher expressed support for Section 8B because he does not believe PBM licensure and gag clause provisions alone would lower prescription drugs costs for consumers. He said Section 8B gives the states the option to include provisions that would lower costs. He said the states that choose to add these provisions can find language in other state laws, such as Maine’s law and the National Academy for State Health Policy’s (NASHP’s) model legislation. Ms. Seip suggested that it would be useful for the Subgroup to know what language the states have on these topics and their experiences. Mr. Hinze said the ad hoc drafting group considers Section 8B to be a starting point, not the end. Mr. Houdek asked about the Subgroup’s next steps are if the Subgroup decides to move forward with the ad hoc drafting group’s draft. Mr. Keen said assuming the Subgroup decides to move forward with the ad hoc drafting group’s draft, the Subgroup’s next steps would be to expose the draft for public comment and then discuss and make revisions to the draft based on the comments received.

Mr. Keen requested comments from interested parties. Chris Petersen (Arbor Strategies LLC), representing the Pharmaceutical Care Management Association (PCMA), said the PCMA submitted a comment letter suggesting that Section 4—Applicability and Section 6 are in conflict. He also suggested that the Subgroup revise Section 6 to mirror the federal gag clause language. He also said the current draft would not meet the NAIC requirement for an NAIC model to be adopted in a majority of the states because of the proposed language in Section 8B. Amy Killelea (National Alliance of State and Territorial AIDS Directors—NASTAD) said PBM practices have a direct impact on consumer access and affordability; as such, the NAIC consumer representatives would be supportive of more substantive language in Section 8B. Kris Hathaway (America’s Health Insurance Plans—AHIP) said AHIP would be supportive of a PBM licensure model. However, she suggested that the Subgroup keep in mind that PBMs are partners in keeping prescription drug costs low. She said the proposed provisions in Section 8B

© 2020 National Association of Insurance Commissioners
would handcuff plans in lowering prescription drug costs. John Covello (Independent Pharmacy Cooperative) expressed concern with provisions in the draft, such as potential duplicative provisions in Section 3—Definitions and Section 4. Carl Schmid (HIV + Hepatitis Policy Institute) expressed support for Ms. Turner’s comments. He also expressed concerns that Section 5—Licensing Requirement does not include any enforcement or penalty provisions.

Mr. Hinze made a motion, seconded by Mr. Oestreicher, to accept the ad hoc drafting group’s draft as a starting point in the Subgroup work to develop a new NAIC model regulating PBMs. The motion passed unanimously.

Mr. Hinze made a motion, seconded by Ms. Farmer, to expose the draft for a 45-day public comment period. The motion passed unanimously.

Having no further business, the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup adjourned.

A new model

Comments are being requested on this draft by Tuesday, Sept. 1, 2020. Comments should be sent by email only to Jolie Matthews at jmatthews@naic.org.

[STATE] PHARMACY BENEFIT MANAGER LICENSURE AND REGULATION MODEL ACT

Table of Contents

Section 1. Short Title
Section 2. Purpose
Section 3. Definitions
Section 4. Applicability
Section 5. Licensing Requirement
Section 6. Gag Clauses Prohibited
Section 7. Enforcement
Section 8. Regulations
Section 9. Severability
Section 10. Effective Date

Section 1. Short Title

This Act shall be known and may be cited as the [State] Pharmacy Benefit Manager Licensure and Regulation Act.

Section 2. Purpose

A. This Act establishes the standards and criteria for the licensure and regulation of pharmacy benefit managers providing claims processing services or other prescription drug or device services for health benefit plans.

B. The purpose of this Act is to:

   (1) Promote, preserve, and protect the public health, safety and welfare through effective regulation and licensure of pharmacy benefit managers;

   (2) Promote the solvency of the commercial health insurance industry, the regulation of which is reserved to the states by the McCarran-Ferguson Act (15 U.S.C. §§ 1011 – 1015), as well as provide for consumer savings, and fairness in prescription drug benefits;

   (3) Provide for powers and duties of the commissioner; and

   (4) Prescribe penalties and fines for violations of this Act.

Section 3. Definitions

For purposes of this Act:

A. “Claims processing services” means the administrative services performed in connection with the processing and adjudicating of claims relating to pharmacist services that include:

   (1) Receiving payments for pharmacist services;

   (2) Making payments to pharmacists or pharmacies for pharmacist services; or

   (3) Both paragraphs (1) and (2).
B. “Commissioner” means the insurance commissioner of this state.

Drafting Note: Use the title of the chief insurance regulatory official wherever the term “commissioner” appears.

C. (1) “Covered entity” means:
   (a) A nonprofit hospital or medical service corporation, health insurer, health benefit plan or health maintenance organization;
   (b) A health program administered by a department or a state in the capacity of a provider of health coverage; or
   (c) An employer, a labor union or other group of persons organized in the state that provides health coverage to covered individuals who are employed or reside in the state.

(2) “Covered entity” does not include:
   (a) A self-funded plan that is exempt from state regulation pursuant to federal law;
   (b) A plan issued for coverage for federal employees; or
   (c) A health benefit plan that provides coverage only for accidental injury, specified disease, hospital indemnity, Medicare supplement, disability income, long-term care or other limited benefit health insurance policies and contracts.

D. “Covered person” means a member, policyholder, subscriber, enrollee, beneficiary, dependent or other individual participating in a health benefit plan.

E. “Health benefit plan” means a policy, contract, certificate or agreement entered into, offered or issued by a health carrier to provide, deliver, arrange for, pay for or reimburse any of the costs of [physical, mental or behavioral] health care services.

F. “Other prescription drug or device services” means services other than claims processing services, provided directly or indirectly, whether in connection with or separate from claims processing services, including, but not limited to:
   (1) Negotiating rebates, discounts or other financial incentives and arrangements with drug companies;
   (2) Disbursing or distributing rebates;
   (3) Managing or participating in incentive programs or arrangements for pharmacist services;
   (4) Negotiating or entering into contractual arrangements with pharmacists or pharmacies, or both;
   (5) Developing and maintaining formularies;
   (6) Designing prescription benefit programs; or
   (7) Advertising or promoting services.

G. “Pharmacist” means an individual licensed as a pharmacist by the [state] Board of Pharmacy.

H. “Pharmacist services” means products, goods, and services or any combination of products, goods and services, provided as a part of the practice of pharmacy.
“Pharmacy” means the place licensed by the [state] Board of Pharmacy in which drugs, chemicals, medicines, prescriptions and poisons are compounded, dispensed or sold at retail.

“Pharmacy benefit manager” means a person, business or entity, including a wholly or partially owned or controlled subsidiary of a pharmacy benefit manager, that provides claims processing services or other prescription drug or device services, or both, to covered persons who are residents of this state, for health benefit plans.

“Pharmacy benefit manager” does not include:

(a) A health care facility licensed in this state;

(b) A health care professional licensed in this state; or

(c) A consultant who only provides advice as to the selection or performance of a pharmacy benefit manager.

Section 4. Applicability

A. This Act shall apply to a contract or health benefit plan issued, renewed, recredentialed, amended or extended on or after the effective date of this Act, including any covered entity that offers pharmacy benefits through a third party.

Drafting Note: States may want to consider adding language to Subsection A above or Section 10—Effective Date providing additional time for pharmacy benefit managers to come into compliance with the requirements of this Act.

B. As a condition of licensure, any contract in existence on the date the pharmacy benefit manager receives its license to do business in this state shall comply with the requirements of this Act.

C. Nothing in this Act is intended or shall be construed to conflict with existing relevant federal law.

Section 5. Licensing Requirement

A. A person may not establish or operate as a pharmacy benefit manager in this state for health benefit plans without obtaining a license from the commissioner under this Act.

B. The commissioner may adopt regulations establishing the licensing application, financial and reporting requirements for pharmacy benefit managers under this Act.

Drafting Note: States that are restricted in their rulemaking to only what is prescribed in statute may want to consider including in this section specific financial standards required for a person or organization to obtain a license to operate as a pharmacy benefit manager in this state.

C. A person applying for a pharmacy benefit manager license shall submit an application for licensure in the form and manner prescribed by the commissioner.

Drafting Note: States may want to consider reviewing their third party administrator statute if a state wishes to specify what documents must be provided to the commissioner to obtain a pharmacy benefit manager license in the state.

D. A person submitting an application for a pharmacy benefit manager license shall include with the application a non-refundable application fee of $X.

E. The commissioner may refuse to issue a license if the commissioner determines that the applicant or any individual responsible for the conduct of affairs of the applicant is not competent, trustworthy, financially responsible or of good personal and business reputation, or has had an insurance or other certificate of authority or license denied or revoked for cause by any jurisdiction.
Section 6. Gag Clauses Prohibited

A. In any participation contracts between a pharmacy benefit manager and pharmacists or pharmacies providing prescription drug coverage for health benefit plans, no pharmacy or pharmacist may be prohibited, restricted or penalized in any way from disclosing to any covered person any healthcare information that the pharmacy or pharmacist deems appropriate regarding:

(1) The nature of treatment, risks or alternative thereto;
(2) The availability of alternate therapies, consultations, or tests;
(3) The decision of utilization reviewers or similar persons to authorize or deny services;
(4) The process that is used to authorize or deny healthcare services or benefits; or
(5) Information on financial incentives and structures used by the insurer.

B. A pharmacy or pharmacist may provide to a covered person information regarding the covered person’s total cost for pharmacist services for a prescription drug.

C. A pharmacy benefit manager may not prohibit a pharmacy or pharmacist from discussing information regarding the total cost for pharmacist services for a prescription drug or from selling a more affordable alternative to the covered person if a more affordable alternative is available.

D. A pharmacy benefit manager contract with a participating pharmacist or pharmacy may not prohibit, restrict, or limit disclosure of information to the commissioner, law enforcement or state and federal governmental officials investigating or examining a complaint or conducting a review of a pharmacy benefit manager's compliance with the requirements under this Act.

Section 7. Enforcement

A. The commissioner shall enforce compliance with the requirements of this Act.

B. (1) The commissioner may examine or audit the books and records of a pharmacy benefit manager providing claims processing services or other prescription drug or device services for a health benefit plan to determine compliance with this Act.

Drafting Note: States may want to consider including a reference to the cost of examinations in the Model Law on Examinations (#390).

(2) The information or data acquired during an examination under paragraph (1) is:

(a) Considered proprietary and confidential;
(b) Not subject to the [Freedom of Information Act] of this state;
Section 8. Regulations

A. The commissioner may adopt regulations regulating pharmacy benefit managers that are not inconsistent with this Act.

B. The regulations adopted pursuant to Subsection A may include but are not limited to the following:
   (1) Pharmacy benefit manager network adequacy;
   (2) Prohibited market conduct practices;
   (3) Data reporting requirements under state price-gouging laws;
   (4) Rebates;
   (5) Prohibitions and limitations on the corporate practice of medicine (CPOM);
   (6) Compensation;
   (7) Procedures for pharmacy audits conducted by or on behalf of a pharmacy benefit manager;
   (8) Medical loss ratio (MLR) compliance;
   (9) Affiliate information-sharing;
   (10) Lists of health benefit plans administered by a pharmacy benefit manager in this state;
   (11) Reimbursement lists or payment methodology used by pharmacy benefit managers;
   (12) Clawbacks prohibited. A pharmacy benefit manager or representative of a pharmacy benefit manager may not make or permit any reduction of payment for pharmacist services by a pharmacy benefit manager or a covered entity directly or indirectly to a pharmacy under a reconciliation process to an effective rate of reimbursement, including but not limited to, generic effective rates, brand effective rates, direct and indirect remuneration fees or any other reduction or aggregate reduction of payment;
   (13) Affiliate compensation.
      (a) "Pharmacy benefit manager affiliate" means a pharmacy or pharmacist that directly or indirectly, through one or more intermediaries owns or controls, is owned or controlled by, or is under common ownership or control with a pharmacy benefit manager.
      (b) A pharmacy benefit manager may not reimburse a pharmacy or pharmacist in the state an amount less than the amount that the pharmacy benefit manager reimburses a pharmacy benefit manager affiliate for providing the same pharmacist services; and
   (14) Spread pricing prohibited.
      (a) "Spread pricing" means the model of prescription drug pricing in which the pharmacy benefit manager charges a health benefit plan a contracted price for prescription drugs, and the contracted price for the prescription drugs differs from the amount the pharmacy benefit manager directly or indirectly pays the pharmacist or pharmacy for pharmacist services.
(b) A pharmacy benefit manager is prohibited from conducting spread pricing in this state.

**Drafting Note:** Subsection B lists options for a state to consider in adopting regulations to implement the provisions of this Act. Not every option listed will be appropriate for every state.

**Section 9. Severability**

If any provision of this Act, or the application of the provision to any person or circumstance shall be held invalid, the remainder of this Act, and the application of the provision to persons or circumstances other than those to which it is held invalid, shall not be affected.

**Section 10. Effective Date**

This Act shall be effective [insert date]. A person doing business in this state as a pharmacy benefit manager on or before the effective date of this Act shall have [six (6)] months following [insert date that the Act is effective] to come into compliance with the requirements of this Act.
The Senior Issues (B) Task Force met via conference call Aug. 3, 2020. The following Task Force members participated: Marlene Caride, Chair (NJ); Lori K. Wing-Heier, Vice Chair (AK); Jim L. Ridling represented by Steve Ostlund (AL); Alan McClain represented by William Lacy (AR); Ricardo Lara represented by Tyler McKinney (CA); Michael Conway represented by Peg Brown (CO); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Fleur McKendell (DE); David Altmaier (FL); John F. King (GA); Colin M. Hayashida represented by Kathleen Nakasone (HI); Doug Ommen represented by Sonya Sellmeyer (IA); Dean L. Cameron represented by Weston Trexler (ID); Stephen W. Robertson represented by Rebecca Vaughan (IN); Vicki Schmidt represented Craig Van Aalst (KS); James J. Donelon represented by Ron Henderson (LA); Gary Anderson represented by Ruth Moritz (MA); Kathleen A. Birrane represented by Fern Thomas (MD); Eric A. Cioppa represented by Marti Hooper (ME); Anita G. Fox represented by Renee Campbell (MI); Steve Kelley represented by Grace Arnold (MN); Chlora Lindley-Myers (MO); Mike Causey represented by Mary Jo Wegenast (NC); Jon Godfread represented by Chrystal Bartsuka (ND); Bruce R. Ramge (NE); Chris Nicolopoulos represented by Maureen Belanger (NH); Russell Toal represented by Paige Duhamel (NM); Barbara D. Richardson represented by Jack Childress (NV); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Ron Kreiter (OK); Andrew R. Stolfi represented by Gayle L. Woods (OR); Jessica K. Altman (PA); Larry D. Deiter represented by Jill Kruger (SD); Hodgen Mainda represented by Vickie Trice (TN); Kent Sullivan represented by Doug Danzeiser (TX); Todd E. Kiser represented by Jaakob Sundberg (UT); Scott A. White represented by Bob Grissom (VA); Mike Kreidler represented by Michael Bryant (WA); Mark Afable represented by Jennifer Stegall (WI); and James A. Dodrill (WV).

1. **Adopted its March 3 and 2019 Fall National Meeting Minutes**

Director Lindley-Myers made a motion, seconded by Mr. Henderson, to adopt the Task Force’s March 3 (Attachment One) and Dec. 7, 2019, minutes. The motion passed unanimously.

2. **Heard a Federal Legislative Update**

David Torian (NAIC) provided a federal legislative update, including an update on funding for the State Health Insurance Assistance Program (SHIP) and the pending release of the Federal Interagency Task Force on Long-Term Care Insurance’s final report.

3. **Discussed Other Matters**

Director Wing-Heier asked Task Force members about their experience with seniors and COVID-19 and any information that we might not be aware of in respect to the pandemic. She said there are some incidental and anecdotal stories that seniors may be putting off health care needs or the need to go into a long-term care (LTC) facility. She asked whether there is anything from an insurance perspective that we should be taking a look at this time.

Commissioner Caride said New Jersey has managed to control the crisis somewhat, but it is watching as the numbers are beginning to come up again as so many states are seeing resurgence of it. She said she has heard on numerous occasions about seniors who are refusing to go to nursing homes and not wanting to go to the hospital with the concern of getting COVID-19, even if their health requires them to see their doctors.

Commissioner Caride said New Jersey and hospitals are doing a push in marketing and advertising to seniors that they are open for business outside of dealing with a pandemic. She said the numbers have gone down drastically, and it is time for these seniors to come back for either an elective procedure they put off or just for a regular checkup. She said there is a lot of work to be done to encourage seniors not to be afraid to go to their doctors or to go to the hospital. She said one area of promotion is telehealth and telemedicine.

Bonnie Burns (California Health Advocates—CHA) highlighted fraud and COVID-19 among seniors, and she encouraged communication among all parties about any and all fraud circulating. She also said there is the problem with people who are getting home care under long-term care insurance (LTCI) policies. She said these people have family living in their homes who are able and available caregivers, but these family caregivers are excluded under almost all of the LTCI policies. She said the
The pandemic has increased the concern about an outside caregiver, and many are now going without care. She encouraged state insurance regulators and companies to look at the flexibility of having a family caregiver included on a month to month basis during this national emergency.

Director Wing-Heier asked Ms. Burns if there is anything state insurance regulators can do when they speak with carriers about these concerns. Ms. Burns replied that it is important for state insurance regulators to make carriers aware of this fraud and these problems and encourage them to make changes or alternatives during this national emergency.

Commissioner Caride said regarding fraud, she had heard about companies going and taking swabs of seniors and charging the seniors’ insurance. She said she knows the Task Force has talked about different things that are going on around the country regarding seniors. She said that is our watchlist, and it is interesting to hear how other states are handling different situations.

Ms. Burns raised the concern with a lot of emphasis on medical services that plans are able to provide, and while they may be valuable for people who qualify for it, it is not universally applicable to every senior. She said she is seeing a lot of evidence that agents are telling people to sign up for these plans, telling them about medical events and home delivered meals, for instance. But only a very small percentage of people would qualify and actually get that benefit, and that information is not communicated. Ms. Burns said there are all kinds of ads running on TV right now that emphasize these non-medical benefits to the broad population.

Mr. Henderson said he has noticed an uptick in advertisements enticing seniors with plans that offer additional benefits. He said his department is receiving more and more calls from seniors who have called the number of the advertisement and find out that they have been switched to another plan without their knowledge or consent. He said his department is spending a lot of time correcting these changes. He cited as an example, a senior who, unbeknownst to her, was removed from her company retirement plan and put into a Medicare Advantage plan.

Ms. Brown said she is seeing these ads, and they are on many cable channels and often on some specific channels. She said she cannot recall the names of the specific ads that cater to seniors. She said these ads are not from Colorado, but they are being beamed into Colorado, and its department receives calls every day about these ads.

Commissioner Caride asked if there was anything else anyone wished to discuss.

Marcy Buckner (National Association of Health Underwriters—NAHU) raised the issue of the Consolidated Omnibus Budget Reconciliation Act of 1986 (COBRA), and a senior may end up in a COBRA plan and then be penalized that 10% for life for going into COBRA when they should have been on Medicare. She said NAHU is working with Congressman Kurt Schrader of Oregon on a bill he has co-sponsored to allow seniors enrolled in COBRA coverage to transition to Medicare Part B without a penalty, the same as seniors who remain on similar employer-sponsored coverage, by providing for a one-time special enrollment period. She said there is hope that the bill could be brought into a larger Medicare bill later this year. She said she wanted to raise this with the Task Force, and if anyone wants additional information about this bill and topic, she would be happy to share it with the Task Force.

Ms. Burns said she has been dealing with this issue of COBRA and Medicare for three years. She said there are conflicts that exist regarding Medicare eligible individuals who have COBRA protection and Medicare eligible individuals who work for small employers. She said these conflicts between Medicare and COBRA rules have led to confusion about which system and which set of rules governs eligibility for coverage and how responsibility for payment of health care benefits for eligible individuals is determined. She said these conflicts have led to some Medicare eligible individuals being subject to Medicare premium penalties and delays in coverage, mistakes in benefit payment, and claims for recovery of mistakenly paid COBRA benefits. She said the U.S. Department of Labor (DOL) has made efforts to address this matter through notices, but it is far from perfect. She also said the Schrader bill is in the right direction, but it does not deal with late enrollment. She said there needs to be a change in the Coordination of Benefits Model Regulation (#120) to address health benefits based upon the model. She has provided the Task Force with language for the model, and she hopes the Task Force will seriously consider this very complex issue.

Having no further business, the Senior Issues (B) Task Force adjourned.
The Senior Issues (B) Task Force met via conference call March 3, 2020. The following Task Force members participated: Marlene Caride, Chair (NJ); Lori K. Wing-Heier, Vice Chair (AK); Jim L. Ridling represented by Steve Ostlund (AL); Allen W. Kerr represented by William Lacy (AR); Ricardo Lara represented by William Lacy (CA); Michael Conway represented by Peg Brown (CO); Karima M. Woods represented by Howard Liebers (DC); Trinidad Navarro represented by Fleur McKendell (DE); David Altmairer represented by Chris Struk (FL); John F. King represented by Teresa Winer (GA); Colin M. Hayashida represented by Martha Im (HI); Doug Omment represented by Andra Seip (IA); Dean L. Cameron represented by Kathy McGill (ID); Stephen W. Robertson represented by Rebecca Vaughan (IN); Vicki Schmidt (KS); Sharon P. Clark represented by Stephanie McNaughey-Bowker (KY); James J. Donelon represented by Alecia Johnson (LA); Gary Anderson represented by Rebecca Butler (MA); Al Redmer Jr. represented by Adam Zimmerman (MD); Anita G. Fox represented by Renee Campbell (MI); Steve Kelley represented by Fred Andersen (MN); Chlora Lindley-Myers (MO); Mike Causey represented by David Yetter (NC); Jon Godfread represented by Yuri Venjohn (ND); Bruce R. Range represented by Martin Swanson (NE); Chris Nicolopoulos represented by Karen McAllister (NH); Barbara D. Richardson represented by Jack Childress (NV); Jillian Froment represented by Laura Miller (OH); Glen Mulready represented by Ron Kreiter (OK); Andrew R. Stolfi represented by Gayle L. Woods (OR); Jessica K. Altman (PA); Kent Sullivan represented by Doug Danzeiser (TX); Todd E. Kiser represented by Tomasz Serbinowski and Jaakob Sundberg (UT); Scott A. White represented by Craig Chupp (VA); Mike Kedler represented by Michael Bryant (WA); Mark Afable represented by Jennifer Segall (WI); and James A. Dodrill represented by Dena Wildman (WV). Also participating were: Vincent Gosz (AZ); Eric Anderson (IL); Bob Williams (MS); Troy Smith (MT); Martin Wojcik (NY); and Andrew Dvorine (SC).

1. Discussed the Task Force’s 2020 Agenda

Commissioner Caride said the Task Force should consider establishing a working group with the purpose of examining whether the Long-Term Care Insurance Model Act (#640) and Long-Term Care Insurance Model Regulation (#641) should be updated. She asked David Torian (NAIC) to explain this in greater detail.

Mr. Torian said one of the goals of the NAIC is for its committees to periodically review and update its models, as necessary. He said the Task Force’s own charge also states that purpose. He said the model was last reviewed and updated over a decade ago, except for the consumer disclosure sections, which were updated in 2016. He said the Working Group, to be tentatively named the LTCI Model Update (B) Working Group, would be charged with reviewing whether Model #640 and Model #641 should be updated. He said the Working Group would then report its findings to the Task Force and, if updates are necessary, the Working Group would then be charged with making those updates.

Mr. Torian also said that should the Long-Term Care Insurance (EX) Task Force adopt any provisions or suggestions that require a change to Model #640 and Model #641, the Working Group would be operational and prepared to make such changes.

Commissioner Caride asked if anyone had any questions or comments. Mr. Swanson said he supports the establishment of this Working Group. Bonnie Burns (California Health Advocates—CHA) asked about the format of the Working Group. Commissioner Caride asked Mr. Torian to respond, and he said that the Working Group would review the model, section-by-section if it so chooses, to determine what may need to be updated.

Mr. Andersen asked if the one of the reasons for the creation of the Working Group was to examine and address innovation in long-term care (LTC). Commissioner Caride asked Mr. Torian to respond, and he said that was not the intent behind the Working Group, but rather that the models had not been updated in over a decade, other than the consumer disclosure portions, and the main purpose was to do what the Task Force should do, periodically review its models. Director Wing-Heier said that she, Commissioner Caride and Mr. Torian had discussed that a model review would be a good item for the Task Force to embark on in 2020.

Ms. Burns asked who the members would be and whether the interested parties would be able to participate. Mr. Torian said that state insurance regulators should email him with their interest to become members of the new Working Group and to limit the number of members to a manageable number of 12; members would be selected on a “first email-first selected” basis. He
said all interested parties would be part of the new Working Group and receive all notifications of open conference calls and other notifications.

2. **Appointed the LTCI Model Update (B) Working Group**

   Director Wing-Heier made a motion, seconded by Mr. Swanson, to appoint the LTCI Model Update (B) Working Group with the charge to examine whether Model #640 and Model #641 should be updated. The motion passed.

   Having no further business, the Senior Issues (B) Task Force adjourned.
PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

© 2020 National Association of Insurance Commissioners
The Property and Casualty Insurance (C) Committee met via conference Aug. 12, 2020. The following Committee members participated: Vicki Schmidt, Chair (KS); Mike Chaney, Vice Chair (MS); Jim L. Ridling (AL); Ricardo Lara and Bryant Henley (CA); Andrew N. Mais and George Bradner (CT); David Altmaier (FL); Colin M. Hayashida and Martha Im (HI); James J. Donelon and Warren Byrd (LA); Kathleen A. Birrane (MD); Jillian Froment (OH); Glen Mulready represented by Ron Kreiter and Shelly Scott  (OK); Larry D. Deiter (SD); Mike Kreidler (WA); and James A. Dodrill (WV). Also participating were: Travis Grassel (IA); and Andy Case (MS).

1. **Adopted its June 10 Minutes**

The Committee met June 10 and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) adopted edits to the NAIC Uniform Risk Retention Group Registration Form for inclusion in the Risk Retention and Purchasing Group Handbook; 3) discussed regulatory actions related to COVID-19; and 4) adopted the private passenger auto (PPA) insurance study.

Commissioner Lara made a motion, seconded by Commissioner Mais, to adopt the Committee’s June 10 minutes (Attachment One). The motion passed unanimously.

2. **Adopted the Reports of its Task Forces and Working Groups**

Commissioner Chaney made a motion, seconded by Commissioner Lara, to adopt the following task force and working group reports: Casualty Actuarial and Statistical (C) Task Force; Surplus Lines (C) Task Force; Title Insurance (C) Task Force; Workers’ Compensation (C) Task Force; Cannabis Insurance (C) Working Group; Catastrophe Insurance (C) Working Group; Climate Risk and Resilience (C) Working Group (Attachment Three); Lender-Placed Insurance Model Act (C) Working Group; Pet Insurance (C) Working Group (Attachment Four); Terrorism Insurance Implementation (C) Working Group (Attachment Five); and Transparency and Readability of Consumer Information (C) Working Group (Attachment Six). The motion passed unanimously.

3. **Adopted an Extension for Revisions to the Proposed Real Property Lender-Placed Insurance Model Act**

Birny Birnbaum (Center for Economic Justice—CEJ) urged the Committee to redouble its efforts in finalizing revisions to the proposed Real Property Lender-Placed Insurance Model Act as there may be industry abuses such as kickbacks from insurers to servicers as economic conditions deteriorate.

Commissioner Chaney made a motion, seconded by Commissioner Birrane, to adopt an extension to the 2020 Fall National Meeting for revisions to the proposed Real Property Lender-Placed Insurance Model Act. The motion passed unanimously.

4. **Adopted the Workers’ Compensation Policy and the Changing Workforce White Paper**

Mr. Byrd said in 2018, the NAIC/IAIABC Joint (C) Working Group of the Workers’ Compensation (C) Task Force was charged with updating the 2009 white paper, *An Overview of Workers’ Compensation Independent Contractor Regulatory Approaches*. The Working Group expanded this charge to incorporate the draft of a white paper regarding workers’ compensation policy and the changing workforce, and it also updated the independent contractor state standards.

Mr. Byrd said the white paper explores how changes in work and the evolving landscape surrounding the legality of employment options are shifting responsibility for coverage and benefits related to occupational injuries, illnesses and fatalities. The white paper is divided into the following sections: 1) Changing Relationships with Work; 2) Determining Employment Status; and 3) Alternative Coverage Models. The white paper also includes an appendix that provides state standards used to determine independent contractor status. Mr. Byrd said the Workers’ Compensation (C) Task Force adopted the white paper July 22, 2020.

Mr. Byrd made a motion, seconded by Commissioner Mais, to adopt the white paper, *Workers’ Compensation Policy and the Changing Workforce* (Attachment Seven). The motion passed.
5. **Adopted Updates to the NAIC State Disaster Response Plan**

Mr. Bradner said the Catastrophe Insurance (C) Working Group was charged with updating the NAIC State Disaster Response Plan. He said states participating in the drafting group included: Alabama; Connecticut; Louisiana; Maryland; Missouri; and Rhode Island. The NAIC State Disaster Response Plan is a document the state insurance departments can use as a template to create a disaster response plan. Mr. Bradner said the document provides state insurance regulators with information regarding:

1) the purpose of the disaster response plan;
2) NAIC disaster assistance;
3) preparation steps and planning;
4) the data collection process;
5) the disaster response and incident management team and its roles and responsibilities;
6) business continuity organizational charts;
7) response levels and definitions; and
8) sample contact lists that state insurance departments can use.

Mr. Bradner said the state departments of insurance (DOIs) are able to edit and format the document to meet their needs. The Catastrophe Insurance (C) Working Group adopted the document May 26 via e-vote. He said there may be a need to go back to the document and explore the need to expand information regarding pandemics.

Mr. Bradner said in addition to the creation of the NAIC State Disaster Response Plan, it is important to note that the NAIC is creating a disaster program that will provide a “one-stop shop” for state insurance regulators. This resource will include sample bulletins, publications to help state DOIs educate consumers about catastrophic events, information regarding NAIC data calls and various other tools for regulators. The NAIC Communications Division will also help to create interactive tools and podcasts regarding topics around catastrophes.

The NAIC envisions there being a website where state insurance regulators can access information and tools prior to a disaster to be better able to help protect citizens. As part of this project, the NAIC would like to identify a point person in every DOI to be that state’s disaster representative, so someone will be reaching out to the states soon to identify such a person and add information to this online resource.

Mr. Bradner made a motion, seconded by Commissioner Lara, to adopt the NAIC State Disaster Response Plan (Attachment Eight). The motion passed.

6. **Heard a Recap of the FEMA and DOI Flood Workshops**

Mr. Grassel said the Midwest experienced catastrophic flooding in 2019. In September 2019, Federal Emergency Management Agency (FEMA) Region VII hosted a flood insurance roundtable that included FEMA and state DOI staff. A key takeaway was to develop an improved understanding of how states could better coordinate with FEMA. In January 2020, the NAIC Center for Insurance Policy and Research (CIPR) hosted a flood workshop with a goal of communication and coordination between FEMA and DOIs. Iowa, Kansas, Missouri, Nebraska, FEMA, state emergency management agencies and the University of Iowa Flood Center participated and discussed how they can all work together before, during and after a flood. Other topics covered were FEMA’s desk reference guide, FEMA’s flood event response, messaging and data sharing, the NAIC State Disaster Response Plan, and private flood data collection. Mr. Grassel said the Iowa Flood Center discussed capabilities of real-time flood data by using sensors on rivers and creeks to map out current and potential risks.

Jason Hunter (FEMA) said FEMA Region IV encompasses eight southeastern states and that 40% of NFIP policies are in those states. He said FEMA Region IV and CIPR hosted a disaster resilience roundtable in July 2020. State DOIs, emergency management agencies, and FEMA Region IV and national headquarters staff participated. Objectives included building on existing relationships, identifying new partnership opportunities and focusing on how COVID-19 has changed disaster response. The organizational structure of each entity was covered, with a focus on mitigation and recovery. FEMA covered the disaster declaration process, Risk Rating 2.0 and mitigation grants. An outcome of the roundtable was establishment of a working group of FEMA Region IV and the DOIs. A draft charter was subsequently created, with objectives such as the exploration of coordination opportunities, data sharing and messaging.

7. **Heard a Preview of the Southeast Zone Workshop**

Mr. Case said a private flood forum was originally scheduled ahead of a southeastern regulator conference in May, but that was cancelled due to COVID-19. The purpose was to identify barriers to a viable private flood and help states identify steps to take to improve the private flood market. The forum has been rescheduled as a virtual event for the afternoons of Sept. 29 and Sept. 30, and southeastern states and industry representatives will participate. Mr. Case said states will complete a self-assessment prior to the forum to identify where states stand in building the private flood market. An agenda will be created based on those assessments. He said eight states have already agreed to participate in the forum.
8. **Heard a Presentation from the ICC on Building Codes**

Ryan Colker (International Code Council—ICC) said the ICC is best known for development of model building codes, but it also conducts product evaluations, accreditation services, education and training, and the development of community resilience benchmarks. He said model building codes are available for communities to adopt. He said the ICC is interested in working with DOIs to address code-related issues.

Mr. Colker said the ICC has developed 16 different types of codes. He noted that some states’ responsibility for codes might sit within the insurance commissioner’s office. He explained that the National Institute of Building Sciences (NIBS) conducted a study showing a 4-to-1 benefit-cost ratio for investing in hazard mitigation. The initial study focused on federal grants, but an update has found a 6-to-1 benefit-cost ratio when looking at broader mitigation steps. The NIBS has also found adoption of building codes has resulted in an $11 benefit for every $1 in investment. Mr. Colker noted that NIBS also looked at benefit cost ratios of building codes at regional levels for wildfire, hurricane winds and earthquakes. When looking at which stakeholders benefit from building codes, the NIBS found that tenants and title holders were large beneficiaries in addition to builders and communities.

Mr. Colker explained that many communities have not updated building codes, although most consumers assume that their community has up-to-date building codes that will protect their homes. He said building codes and insurance intersect with the Building Code Effectiveness Grading Schedule (BCEGS), which is a score used by insurance companies to underwrite and rate risks. He noted that FEMA looks to provisions within building codes to meet National Flood Insurance Program (NFIP) requirements. Mr. Colker said the NIBS has an initiative regarding how to translate economic numbers into actions. He said the costs typically fall to building owners to make retrofits, but the benefits go to the community, insurers and the financial community. He said the NIBS is looking into how there can be incentives for investment in mitigation strategies.

Mr. Colker said the ICC has drafted white papers on how building codes contribute to resilience. He said energy efficiency codes can improve community and individual resilience. The Alliance for National and Community Resilience (ANCR) looks across the community at functions that can support resilience. He said there is an opportunity for increased collaboration that could include a best practice guide on insurance and codes and how to engage with code officials, including case studies on how commissioners use codes. He also noted that potential research on codes and insurance could be conducted by the CIPR.

Mr. Bradner asked how the ICC could look at the Insurance Institute for Business & Home Safety (IBHS) standards. He said there tends to be reluctance to adopt codes that are not adopted by the ICC but that are recommended by the IBHS. He said it would be helpful for the ICC to look at what the IBHS is doing and adopt some of those measures into codes. He said building trades push back on IBHS recommendations, and he would like to see the ICC adopt additional standards to strengthen homes.

Mr. Colker said the content within the code is generated by those subject matter experts (SMEs) that recommend changes. He said the ICC has strong, ongoing relationships with both the IBHS and the Federal Alliance for Safe Homes (FLASH) and is currently working with the IBHS on joint standards.

9. **Heard a Report on Business Interruption Policies and Claims**

Aaron Brandenburg (NAIC) said state insurance regulators issued a business interruption data call in May, with the premiums portion of the data due June 1. The first part of the data call showed that nearly 8 million commercial insurance policies include business interruption coverage. Of that amount, 90% were for small businesses, as defined as having 100 or fewer employees; 8% for medium businesses; and 2% for large businesses, as defined as having more than 500 employees. Significantly, 83% of all policies included an exclusion for viral contamination, virus, disease or pandemic, and 98% of all policies had a requirement for physical loss. Smaller policyholders generally have a higher percentage of policies with exclusions.

Mr. Brandenburg said the second part of the data call collects claim and loss information on a monthly basis from June through November. As of the July submission, insurers reported approximately 185,000 claims. About 72% of claims have been closed without payment. Less than 1% of claims, about 1,100, have been closed with payment, with about $97 million being paid. Case incurred losses stand at about $1.56 billion. Mr. Brandenburg said cumulative claims data is being submitted by insurers every month, and reports are posted under the business interruption (BI) data call portion of the NAIC website.

Amy Bach (United Policyholders) said there are many questions about BI coverage, such as whether the policy covers COVID-related losses; whether forced closure, loss of use or infiltration of the insured premises constitute a direct physical loss; and whether losses due to mandatory closure qualify for typical 30 days of coverage under civil authority coverage.
Ms. Bach said regulators must balance insurer solvency and profitability with policyholders’ reasonable expectations and need for coverage. She said there is a question as to whether insurers properly communicated exclusions for pandemics when they were first developed and whether exclusions were accompanied by premium reductions. She said insurer trades have stressed that policies do not cover pandemics, but other policies do not include the word “pandemic.” She said each policy is different, and each claim should be evaluated on its merits.

Ms. Bach said total potential losses are unknown and speculative, although the state regulator data call will help discern some of these numbers. She noted there are three court rulings so far, each focused on the physical damage language within the policy. She said there are also some state and federal proposals to pay for business interruption losses. She explained small businesses are bearing the brunt of the losses because they either do not have business interruption coverage or they have a virus exemption.

Ms. Bach said it is important to know what regulators were told by insurers at the time the 2006 Insurance Services Office (ISO) virus exclusion was added and whether there was a rate decrease when the virus exclusion was adopted. She also said that claims that pandemic losses were never covered are contradicted by the fact that severe acute respiratory syndrome (SARS) claims were paid.

Ms. Bach said United Policyholders has a website with information including the tracking of litigation. She noted that the federal Business Interruption Relief Act of 2020 (H.R. 7412), unlike other legislation that looks forward, sets up a fund that assists current policyholders.

10. Discussed a Proposal to Collect Additional Homeowners and Auto Data

Mr. Birnbaum introduced a proposal that would assist in measuring average homeowner and auto premiums (Attachment Nine).

Mr. Birnbaum said there is great interest among stakeholders in understanding average premiums across states and over time. The NAIC publishes two reports that list average premium figures, but the data has about a two-year lag, which hinders its value. He said adding written and earned exposure data fields to the annual and quarterly annual statement for auto and homeowner lines of business will greatly increase the usefulness of the data. Adding exposure data will allow for average premium to be calculated on a written and earned basis.

Commissioner Schmidt said she would like to receive feedback on the proposal and would also like to hear from all parties about the need for additional, more granular, data.

11. Heard a Presentation on Race in the Property/Casualty Insurance Industry

Robert Klein (consultant) said recent events have refocused attention on race and insurance issues, which have been around a long time. He said prior to 1970, the record indicates that many insurers explicitly discriminated against certain groups (e.g., African Americans) in pricing and underwriting. He said the practice of “redlining” was common in property insurance, and certain urban areas were designated as too high-risk or otherwise undesirable for writing insurance. After 1970, explicit redlining and unfair discrimination diminished, but concerns with respect to implicit unfair discrimination have continued.

Mr. Klein said some contend that certain rating or underwriting factors, e.g., credit scores, are unfairly discriminatory because they have a disproportionately negative effect on certain groups and are not good measures of risk. Some also might contend that explicit unfair discrimination has continued to occur.

Mr. Klein said that after the 1992 Los Angeles riots, it was determined that many property owners in certain urban areas lacked “good” insurance coverage. He said this prompted the NAIC to appoint the Subgroup on Urban Insurance Issues, which investigated whether insurers engaged in unfair discrimination in home and auto insurance. Also, during the 1990s, several prominent insurers were the subject of class action lawsuits in which they were alleged to have engaged in redlining or unfair discrimination in home insurance. He said the Insurance Availability and Affordability Task Force in 1998 ultimately found that people living in high-minority, low-income areas tend to pay higher premiums, have less adequate coverage and are more likely to be insured through a residual market. However, the Task Force also asserted that these outcomes could be caused by various factors, including those related to risk as well as industry practices, intended or not. The Task Force recommended that investigation continue and that insurers, state insurance regulators and other stakeholders undertake initiatives to improve the availability and affordability of insurance for low-income and minority consumers.
Mr. Klein said certain academics, who have specialized in lending and housing issues, have published considerable research contending that redlining and unfair discrimination in home insurance was prevalent at least up to 2000. Using different methods, insurance economists have reached different conclusions. Mr. Klein noted that Harrington and Niehaus (1998) did not find evidence of unfair discrimination in pricing against minorities in auto insurance in Missouri. He said Grace and Klein (2001) did not find evidence of unfair discrimination in pricing in home insurance in Texas, but did find a greater predominance of dwelling fire policies in minority or poor areas but could not determine why this was the case. Mr. Klein said the differences in findings are due to differences in methodologies. The researchers who have found evidence of unfair discrimination have tended to focus on the practices of insurers, e.g., underwriting guidelines and using testing to assess agents’ responses to requests for insurance quotes. Insurance economists have tended to focus on outcomes, controlling for other factors (e.g., claim costs), such as loss ratios or the types of policies issued. Mr. Klein said the most rigorous studies were performed using data from the 1990s and have not been updated.

Mr. Klein said several insurance departments, as well as various other groups, think tanks and organizations, have published their own reports on insurers’ practices. Some reports contend the evidence indicates that insurers do engage in unfair discrimination (explicit or implicit), and others contend that the evidence indicates that insurers do not unfairly discriminate. He believes the primary issue faced now is whether the use of certain factors in pricing and underwriting (e.g., credit scores, occupation, education, etc.) are unfairly discriminatory and disproportionately affect certain groups, such as minorities and low-income populations. He said there would be value in updating and extending the studies that were done 20 years ago. One could also research how the use of the factors in question affect certain groups of interest and why. Potentially, such research, combined with proposed standards for unfair discrimination, could be used to develop opinions on how fair these factors are.

Mr. Klein also said regulators may be able to examine the efficiency and equity effects of the prohibition of certain factors. Another potential topic for research is the ability of certain groups to effectively shop for insurance. Markets work better the more informed consumers are and the better able they are to obtain quotes from different carriers. Mr. Klein said another course of study would be to evaluate how well measures intended to improve insurance availability and affordability have worked and what more can be done. He said when a rating factor is prohibited, it compels insurers to place greater weight on the factors they are allowed to use. Assuming claim costs do not decrease, this means that some consumers will pay more and others will pay less due to the prohibited factor. Hence, the equity effects of restrictions on rating factors need to be considered. He also noted that what could be learned from new research will depend on the data that are available to researchers. He believes good research necessitates data at a ZIP code level on premiums, exposures, claim costs and the types of policies issued.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
The Property and Casualty Insurance (C) Committee met via conference call June 10, 2020. The following Committee members participated: Vicki Schmidt, Chair, (KS); Mike Chaney, Vice Chair, (MS); Jim L. Ridling (AL); Ricardo Lara represented by Ken Allen (CA); Andrew N. Mais (CT); David Altmaier (FL); Colin M. Hayashida (HI); James J. Donelon represented by Warren Byrd (LA); Kathleen A. Birrane represented by Joy Hatchette and Robert Baron (MD); Jillian Froment (OH); Glen Mulready (OK); Larry D. Deiter (SD); and Mike Kreidler (WA). Also participating was: Gennady Stolyarov (NV); and Sandra Bigglestone (VT).

1. **Adopted its 2019 Fall National Meeting Minutes**

   Director Froment made a motion, seconded by Commissioner Kreidler, to adopt the Committee’s Dec. 9, 2019, minutes (see NAIC Proceedings – Fall 2019, Property and Casualty Insurance (C) Committee). The motion passed unanimously.

2. **Adopted Edits to the NAIC Uniform Risk Retention Group Registration Form for Inclusion in the Risk Retention and Purchasing Group Handbook**

   Ms. Bigglestone explained that the Risk Retention Group (E) Task Force worked with state insurance regulators and interested parties to address concerns from non-domiciliary states and industry regarding the registration process of risk retention groups (RRGs) in non-domiciliary states. Concerns were discussed regarding extensive registration processing time and fees imposed as well as RRGs attempting to register that were in a hazardous financial condition or were not compliant with the federal Liability Risk Retention Act (LRRA). To help address some of the concerns, the Task Force proposed updates to the NAIC Uniform Risk Retention Group Registration Form (Registration Form), as it is the main way to provide information to non-domiciliary states. The Registration Form was changed to indicate a clear connection to the LRRA. The Registration Form asks for basic information about the RRG to ensure the RRG is operating legally under the LRRA. Ms. Bigglestone said all states should be encouraged to use the Registration Form.

   Director Deiter made a motion, seconded by Commissioner Chaney, to adopt the revisions, as proposed by the Risk Retention Group (E) Task Force, to the Registration Form for inclusion in the Risk Retention and Purchasing Group Handbook (Attachment One-A). The motion passed unanimously.

3. **Discuss Regulatory Actions Related to COVID-19**

   Commissioner Schmidt said the COVID-19 pandemic has greatly affected the insurance world. She noted that state insurance regulators issued a data call in early May to collect information on business interruption policies, including the degree to which the policies have pandemic exclusions or requirements for physical loss. She said claims data is due June 15, and additional information on that data call can be found on the NAIC website. She said the NAIC will release some national aggregate data from this data call in the near future. She also noted that state insurance regulators will receive an email this week about how to access tools giving them the ability to analyze the data received in the data call.

   Commissioner Schmidt said the states quickly took action on a wide variety of property/casualty-related issues affected by COVID-19. She noted that the NAIC has been keeping track of state actions, and those can be found on the NAIC website. In addition, industry and consumer groups sent letters to the states asking for certain regulatory relief actions or actions to help policyholders.

   Commissioner Schmidt reported that the Committee met April 29 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities and individuals) of the NAIC Policy Statement on Open Meetings, to review actions the states had taken on various issues to see if there was a need for any Committee-level activity.

   Doug Heller (Consumer Federation of America—CFA) said the CFA and the Center for Economic Justice (CEJ) urged state insurance regulators to address auto insurance rates because they have become excessive as states have moved to lock downs. He said consumers need protections to ensure that they do not pay excessive auto premiums. He noted that most insurers gave some premium relief, but it was inconsistent and insufficient. He said about 30% average premium relief is needed, which is...
about double what most insurers have offered. California, Michigan and New Jersey have required refunds, but Mr. Heller believes all states should do this. He said driving has rebounded, but it is still down by 25%. He noted that only a few rate reductions go beyond May 31. He believes that rates remain excessive and a monthly refund program should be created and mandated. As consumer credit scores decline, Mr. Heller said the states should issue a moratorium on the use of credit scores. He said the states need a plan to ensure that future rates account for the new normal. He said state insurance regulators need more data and should collect auto insurance accident and loss data on a monthly basis.

Erin Collins (National Association of Mutual Insurance Companies—NAMIC) said NAMIC appreciates the way the states have adjusted their workflow during the COVID-19 pandemic. She noted that adjuster restrictions have been eased and e-commerce has helped consumers. She asked that the NAIC be a force for collaboration and uniformity. She said uniformity in financial reporting has helped, and she encouraged flexibility in general. She said auto insurers have returned billions of dollars in premiums to policyholders. She encouraged state insurance regulators to not increase mandates, as what the industry is doing is working. She asked state insurance regulators to review temporary emergency measures before they expire. She also said state insurance regulators should consider what has worked in terms of virtual inspection and notarization and consider maintaining some regulatory changes.

Keri Kish (Wholesale & Specialty Insurance Association—WSIA) said the WSIA agrees with what NAMIC said. She said the WSIA has a concern about retroactive business interruption coverage, and it is appreciative of the NAIC statements regarding retroactive coverage. She said the WSIA is appreciative of state insurance regulators working with industry on relief efforts related to the pandemic. She said state insurance regulators may wish to consider making some of the temporary relief measures, such as virtual delivery of policies and e-signatures, permanent.

David F. Snyder (American Property Casualty Insurance Association—APCIA) said industry members have seen a constructive relationship with state insurance regulators that has ensured market solvency. He said industry is appreciative that the NAIC opposed retroactive coverage for business interruption policies. He said auto insurers have refunded more than $10 billion in premium to policyholders. He said state insurance regulators allowed this while ensuring solvency. He emphasized that the states differ, and there should not be “one-size-fits-all” solution to these matters. He said some states have enacted the National Council of Insurance Legislators’ (NCOIL) model related to credit-based insurance scores, which includes extraordinary life situation language protecting individuals from declines in their credit-based insurance scores. He said the states without this model might consider it. He said efficiency could be enhanced by making some of the regulatory relief actions permanent.

Mr. Snyder also said the APCIA is in favor of adopting the Private Passenger Automobile Insurance Study and new tools allowing state insurance regulators to look at focused segments of the marketplace.

Mr. Stolyarov asked Mr. Snyder if there have been any federal mandates for lenders to offer forbearance on auto loans, credit cards or personal loans other than mortgages. He also asked whether the insurance industry has the capability to process hundreds of thousands of requests related to extraordinary life circumstances affecting credit.

Mr. Snyder said consumers should exercise those rights, and companies do have the ability to respond. He said he would follow up on the federal activity related to loans, but he said the states have gone beyond what the federal government has done.

Birny Birnbaum (CEJ) said consumer representatives will speak before the NAIC/Consumer Liaison Committee about consumer protections in a pandemic era. He said state insurance regulators have done a tremendous job on grace periods and extending claims deadlines. He noted that some states have gone further in not allowing risk characteristics like credit-based insurance scores. He said federal legislation put a moratorium on lenders reporting negative scores to credit bureaus, and forbearance was offered on federal mortgages. He said in the future, bad credit information will appear and harm individuals’ credit-based insurance scores. He said Pennsylvania issued a bulletin for insurers not to take action because of declining credit scores.

Mr. Birnbaum said the industry would not be able to field millions of requests for extraordinary life events related to credit-based insurance scores, and state insurance regulators would not be able to monitor these. He said consumers should not have the burden of notifying industry of declining scores. He said insurers need accountability, and data collection can help with accountability. He said a transition to a digital interface raises consumer protection issues. He also said protections are needed to protect against biases in algorithms.
Lisa Brown (AICPA) applauded the NAIC for prompt responses related to the business interruption data call.

Amy Bach (United Policyholders) asked whether results from the business interruption data call would be released.

Aaron Brandenburg (NAIC) said national aggregate data would be released soon.

4. **Adopted the Private Passenger Automobile Insurance Study**

Commissioner Schmidt said work on auto insurance affordability issues began seven or eight years ago, noting that several documents were produced prior to discussions related to data collection. She said the Auto Insurance (C/D) Working Group, before it was disbanded in 2018, had previously agreed to receive data from statistical agents in January 2018 that was meant to help analyze the private passenger auto insurance market such as reviewing differences in premiums, as well as losses, compared to incomes at a ZIP code level. She said the Working Group adopted an outline for the report at the 2018 Fall National Meeting, and NAIC staff completed an introductory narrative and a state-by-state analysis described in that outline in early 2019. The Committee then decided to update the study with more recent, 2016 and 2017, data that was received in 2019.

Commissioner Schmidt said the NAIC finalized an updated study in fall 2019, and the states reviewed the data through the end of the year. She said the NAIC has also loaded the data into an analytical tool on iSite, and the states are able to look at geographic areas to learn more about auto rates as they compare to demographic data. She said the Committee may wish to consider how to receive additional auto insurance data in the future, either through statistical agents, the annual financial statement, or some other mechanism such as data calls. She expressed her opinion that the Committee should adopt the study and move forward with future discussions about the possibility of getting additional data.

Commissioner Chaney agreed that it is time to adopt the study and consider additional data collection later.

Mr. Birnbaum said the NAIC has not taken action to address proxy discrimination. He said the report is not as useful as it could be, and the data is handpicked by industry. He said the report does not include prices quoted. He noted that the data is stale, as 2017 is the most recent data. He said it is unclear how the report can be used to address affordability. He said state insurance regulators should collect timely data like they did with the business interruption data call. He recommended that the annual financial statement add columns to the State Page for written and earned exposures for auto and homeowners on a quarterly and annual basis. He said state insurance regulators could have 2019 data in the first quarter of 2020. He also said the Market Conduct Annual Statement (MCAS) should be collected on a quarterly basis.

Commissioner Schmidt said Mr. Birnbaum should take his MCAS request to the Market Regulation and Consumer Affairs (D) Committee, and the Property and Casualty Insurance (C) Committee should consider additional data collection in future conversations.

Commissioner Chaney made a motion, seconded by Director Deiter, to adopt the *Private Passenger Automobile Insurance Study* (Attachment One-B). The motion passed unanimously.

5. **Discussed Other Matters**

Commissioner Schmidt said the Committee would hear an update at the Summer National Meeting on recent and upcoming workshops the states are holding with the Federal Emergency Management Agency (FEMA) regarding disaster preparedness and response.

Having no further business, the Property and Casualty Insurance (C) Committee adjourned.
MEMORANDUM

TO: Property and Casualty Insurance (C) Committee
FROM: Risk Retention Group (E) Task Force
DATE: December 7, 2019
RE: Revisions to the NAIC Uniform Risk Retention Group Registration Form

The Risk Retention Group (E) Task Force has worked to address concerns from non-domiciliary states and industry regarding the registration process of risk retention groups (RRGs) in non-domiciliary states.

Concerns were initially raised by the National Risk Retention Association (NRRA) in a letter to the Task Force dated Nov. 19, 2018. The letter specifically cited extensive registration processing time and fees imposed. In discussions that followed, non-domiciliary states also raised concerns, including RRGs attempting to register that were in a hazardous financial condition or were not compliant with the federal Liability Risk Retention Act (LRRA).

To help address some of the concerns, the Task Force proposed updates to the NAIC Uniform Risk Retention Group Registration Form (Registration Form). The revisions were exposed for two public comment periods before finalizing the attached recommendation to the Property and Casualty Insurance (C) Committee.

The Task Force requests that the Committee consider adopting the proposed revisions to the Registration Form for inclusion in the Risk Retention and Purchasing Group Handbook.

If you have any questions regarding this referral, please contact NAIC staff (Becky Meyer, bmeyer@naic.org).
The following is the uniform registration form adopted in 1991 by the NAIC. This registration form is being filed by a Risk Retention Group (RRG) operating in accordance with the Federal Liability Risk Retention Act of 1986 (LRRA), 15 USC 3901-3906, chartered or licensed to write only liability insurance by the state of domicile listed in #1e. The registration form and supplemental documents are provided in accordance with §3902(d)(2) of the LRRA. Under §3902 of the LRRA, with the exception of the domiciliary state, RRGs are exempt from any state laws, rules, regulations, or orders that would make unlawful, or would regulate, directly or indirectly, the operation of an RRG, except that any state may require an RRG to comply with those laws specified in §3902(a)(1)(A),(B),(C) and (G) of the LRRA. The domiciliary state regulates the formation and operation of the RRG.

**Part A**

**STATE OF [Insert State in which the Risk Retention Group intends to do business]**

**DEPARTMENT OF INSURANCE**

**RISK RETENTION GROUP - NOTICE AND REGISTRATION**

(All Information Should Be Typed)

1a. Name of the Risk Retention Group as it appears on its Certificate of Authority:

________________________________________________________________________

1b. **Address of the Risk Retention Group:**

________________________________________________________________________

1c. **NAIC Company Code:**

________________________________________________________________________

1d. **FEIN:**

________________________________________________________________________

1e. **State of domicile, date licensed and date chartered:**

________________________________________________________________________

1f. **Primary contact person for state of domicile to whom questions regarding the Risk Retention Group should be addressed (include name, phone number and email address):**

________________________________________________________________________
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

2. List any other name(s) by which the Risk Retention Group is known or may be doing business in this State or any other state:

________________________________________________________________________
________________________________________________________________________

3. The Risk Retention Group is chartered and licensed as a liability insurance company under the laws of the State of ________________, and is authorized to engage in the following lines and/or classifications of liability insurance under the laws of its chartering State:

________________________________________________________________________
________________________________________________________________________

4. Give a general description of the liability insurance coverages the Risk Retention Group plans to write in the state it is registering to do business in.

________________________________________________________________________
________________________________________________________________________
________________________________________________________________________

5. Has the Risk Retention Group’s domiciliary state approved the Risk Retention Group to register and expand its writings in the state it is seeking to become registered in?

________________________________________________________________________

6. Ownership of the Risk Retention Group consists of one or the other of the following (check one):

a) _____ the owners of the Group are only persons who comprise the membership of the Group and who are provided insurance by the Group.

b) _____ the sole owner of the Group is: ____________________________

   (Name and Address of Organization)

   an organization which has as its members only persons who comprise the membership of the Group and which has as its owners only persons who comprise the membership of the Group and who are provided insurance by the Group.

7. The Risk Retention Group members are engaged in businesses or activities similar or related with respect to the liability to which such members are exposed by virtue of any related, similar or common business (whether profit or nonprofit), trade, product, services (including professional services), premises or operations. Give a general description of businesses or activities engaged in by the Group’s members:

________________________________________________________________________
________________________________________________________________________

8. (a) List the name, position with the Risk Retention Group, SS#, and address of each officer and

11. In accordance with the Liability Risk Retention Act, we verify the following:

A. The Risk Retention Group is a corporation or other limited liability association whose primary activity consists of assuming and spreading all, or any portion, of the liability
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

exposure of its members.

B. The Risk Retention Group is organized for the primary purpose of conducting the activity described under Item “A” above.

C. The Risk Retention Group does not exclude any person from membership in the Group solely to provide for members of the Group a competitive advantage over such a person.

D. The activities of the Risk Retention Group do not include the provision of insurance other than:
   
   i. liability insurance for assuming and spreading all or any portion of the similar or related liability exposure of its Group members; and
   
   ii. reinsurance with respect to the similar or related liability exposure of another Risk Retention Group (or a member of such other Risk Retention Group) engaged in business or activities so that such Risk Retention Group or member meets the requirement under Item #7 above for membership in the Risk Retention Group which provides such reinsurance.

12. In accordance with the LRRA, if the State in which the Risk Retention Group is registering requires compliance with the following laws and requirements, the RRG agrees to the following:

A. The Risk Retention Group will comply with the unfair claim settlement practices laws of this State.

B. The Risk Retention Group will pay, on a non-discriminatory basis, applicable premium and other taxes which are levied on admitted insurers, surplus line insurers, brokers or policyholders such Group under the laws of this State.

B.C. The Risk Retention Group will participate, on a nondiscriminatory basis, in any mechanism established or authorized under the law of the State for the equitable apportionment among insurers of liability insurance losses and expenses incurred on policies written through such mechanism.

C.D. The Risk Retention Group will designate the Insurance Commissioner [Director, Superintendent] of this State as its agent solely for the purpose of receiving service of legal documents or process by executing Part B of this form, attached hereto.

D.E. The Risk Retention Group will submit to examination by the Insurance Commissioner [Director, Superintendent] of this State to determine the Group’s financial condition, if:

   i. the Insurance Commissioner [Director, Superintendent] of the Group’s chartering State has not begun or has refused to initiate an examination of the Group; and
   
   ii. any such examination by the Insurance Commissioner [Director, Superintendent] shall be coordinated to avoid unjustified duplication and unjustified repetition.

E.F. The Risk Retention Group will comply with a lawful order issued in a delinquency proceeding commenced by the Insurance Commissioner [Director, Superintendent] of this State upon a finding of financial impairment, or in a voluntary dissolution proceeding.

F.G. The Risk Retention Group will comply with the laws of this State concerning regarding
NAIC UNIFORM RISK RETENTION GROUP REGISTRATION FORM

deceptive, false or fraudulent acts or practices, including any injunctions regarding such conduct obtained from a court of competent jurisdiction.

G.H. The Risk Retention Group will comply with an injunction issued by a court of competent jurisdiction upon petition by the Insurance Commissioner [Director, Superintendent] of this State alleging that the Group is in hazardous financial condition or is financially impaired.

H.I. The Risk Retention Group will provide the following notice, in at least 10-point type, in any insurance policy issued by the Group:

NOTICE

This policy is issued by your risk retention group. Your risk retention group may not be subject to all of the insurance laws and regulations of your State. State insurance insolvency guaranty funds are not available for your risk retention group.

42-13. In accordance with the LRRA, the Risk Retention Group affirms that it has submitted to the Insurance Commissioner [Director, Superintendent] as part of this filing and before it has offered any insurance in this State, a copy of the plan of operation or feasibility study which it has filed with the Insurance Commissioner [Director, Superintendent] of its chartering State of domicile. This plan or study includes the name of the State in which the Group is chartered, as well as the Group’s principal place of business, and such plan of operation or feasibility study further includes the coverages, deductibles, coverage limits, rates, and rating classification systems for each line of liability insurance the Group intends to offer. The Group has also will promptly submitted to the Insurance Commissioner [Director, Superintendent] of this State any revisions of such plan of operation or feasibility study to reflect any changes to the plan if the Group intends to offer any additional lines of liability insurance or, including any change in the designation of the State in which it is chartered.

13.14. The Risk Retention Group will submit a copy of its annual financial statement submitted to its chartering state, to the Insurance Commissioner [Director, Superintendent] of this State, by March 1 of each year. The annual financial statement will be certified by an independent public accountant and include a statement of opinion on loss and loss adjustment expense reserves made by a member of the American Academy of Actuaries or a qualified loss reserve specialist. The annual financial statement, certification and statement of opinion on loss and loss adjustment expense reserves will be submitted to the Insurance Commissioner [Director, Superintendent] of this State by the date it is required to be submitted to its chartering state.

14.15. The Risk Retention Group will not solicit or sell insurance to any person in this State who is not eligible for membership in the Group.

15.16. The Risk Retention Group will not solicit or sell insurance in this State, or otherwise operate in this State, if the Group is in hazardous financial condition or is financially impaired.

16.17. The Risk Retention Group will not issue any insurance policy in this State which provides coverage prohibited generally by statute of this State or declared unlawful by the highest court of this State whose law applies to such policy. In accordance with the LRRA, the terms of any insurance policy provided by the Risk Retention Group shall not provide or be construed to provide insurance policy coverage prohibited generally by State statute or declared unlawful by the highest court of the State whose law applies to such policy.

17. The Risk Retention Group has submitted a registration fee of $______________, if applicable, payable to the Insurance Commissioner [Director, Superintendent] of this State.
18. To the extent required by the LRRA, the Risk Retention Group will comply with all other applicable state laws.

19. The Risk Retention Group will notify the Insurance Commissioner [Director, Superintendent] as to any subsequent changes in any of the items included in this form (except for items #1f, #8 and #10).

The undersigned hereby swear and affirm that the foregoing statements and information regarding their principal, the ________________________________ (Name of Risk Retention Group) are true and correct.

President of the Risk Retention Group

Secretary of the Risk Retention Group

Part B

APPOINTMENT OF ATTORNEY TO ACCEPT SERVICE AND DESIGNATION

The______________________________ (“the Group”), a risk retention group which is chartered and licensed as a liability insurance company under the laws of the State of ___________________________, having notified the Insurance Commissioner [Director, Superintendent] of the State of ___________________________ of its intention to do business in this State as a risk retention group pursuant to the federal Liability Risk Retention Act of 1986, hereby appoints the Insurance Commissioner [Director, Superintendent] of the State of ___________________________, any successor in office, and any authorized deputy its true and lawful attorney, in and for the State of ___________________________, upon whom all legal documents or process in any proceeding against it may be served. Such service of legal documents or process shall be of the same legal force and validity as if served personally upon the Group.

The Group designates:

________________________________________
(Name)

________________________________________
(Address)

________________________________________
(City, Town or Village)

________________________________________
(State and ZIP Code)

as its officer, agent or other person to whom shall be forwarded all legal documents or process served upon the Insurance Commissioner [Director, Superintendent] of the State of ____________________________, any successors in office, or any authorized deputy, for the Group. This designation shall continue in full force and effect until superseded by a new written designation filed with the Insurance Commissioner [Director, Superintendent].
This appointment and designation is made pursuant to a resolution by the Group’s governing body authorizing it, and a certified copy of the resolution is attached hereto. This appointment shall be binding upon any person or corporation which as successor acquires the Group’s assets or assumes its liabilities, by merger or consolidation or otherwise.

This appointment may be withdrawn only upon a written notice of termination and, in any event, shall not be terminated by the Group or its successor so long as any contracts or liabilities or duties arising out of contracts entered into by the Group while it was doing business in this State are in effect.

IN WITNESS OF THIS APPOINTMENT AND DESIGNATION, the Group, in accordance with the resolution of its Board of Directors duly passed on _________________, 20__, has affixed its corporate seal, and caused the same to be subscribed and attested in its name by its President and Secretary, at the City of ____________ in the State of ______________ on ________________, 20__.

(See Supplement to NAIC Proceedings – Summer 2020)
The Catastrophe Insurance (C) Working Group met virtually on July 31, 2020. The following Working Group members participated: Mike Chaney, Chair, David Browning, Andy Case, Kim Causey and John Wells (MS); David Altmair, Vice Chair, Ainsley Armstrong, Alexis Bakofsky, Nicole Altieri Crockett, Linda McWilliams, Susanne Murphy, Jane Nelson, Sheryl Parker, Erin Vansickle, Wendy Vincent and Christy Virginia (FL); Mark Fowler, Gina Hunt and Jerry Workman (AL); Katie Hegland and Katrina Kelly (AK); Ken Allen, Patrick Campbell, Wan Choi, Bryant Henley, Kim Hudson, Lucy Labourian, Saffir Rahman, Mirta Sanadajifar, Kenneth Schnoll, Lisbeth Landsman-Smith, Henry Tam, Lynne Wehmueiler and Tianhong Zhao (CA); Susan Andrews, George Bradner, Danny Chan, Wanchin Chou, Qing He and Doris Schirmacher (CT); Melanie Fujiwara, Colin M. Hayashi, Randy Jacobson, Andrew Kurata, Patrick P. Lo, Kathleen Nakasone, Cindy Neeley, Colin Okutsu, John Pang, Roland Teruya and Paul Yuen (HI); Travis Grassel (IA); Patrice Dzire, Judy Mottar, Lauren Peters, KC Straka and Erica Weyhenmeyer (IL); LeAnn Crow, Heather Droege and Tate Flott (KS); Charles Hansberray and Ron Henderson (LA); Caleb Huntington, Richard Looney and Matthew Mancini (MA); Joy Hatchette, Cheryl Kouns, James Mobyly and Joanna Noppenberger (MD); Cynthia Amann, LeAnn Cox, Nicole Huls, Teresa Kroll and Jeanna Thomas (MO); Fred Fuller (NC); Mark McGill and Diane Sherman (NJ); Tom Botsko and Karen Vourvopoulos (OH); Matthew Harmon, Landon Hubbard, Ron Kreiter, Cuc Nguyen and Andrew Schallhorn (OK); Brian Fordham (OR); David Buono, Shannen Logue and Michael McKenney (PA); Elizabeth Kelleher Dwyer and Beth Vollucci (RI); Katie Geer (SC); David Combs, Brian Hoffmeister, Bill Huddleston and Rachel Jade-Rice (TN); Marianne Baker, J’ne Byckovski, Miriam Fisk, sailoa Liao, David Muckequeide, Patty Otto, Bethany Sims, Amy Will and Mark Worman (TX); and David Forte, John Haworth, John Martinson and Eric Slavich (WA). Also participating were: William Lacy (AR); Vanessa Darrah and Brooke Lovallo (AZ); Mitchell Bronson, Peg Brown, Rolf Kaumann and Eric Unger (CO); Christina Miller (DE); Renee Campbell, Adam Goldhammer, Jonathan Kelly, Tammy Lohmann, Connor Meyer, Christine Peters, Alcyia Valento, Megan Verdeja and Phil Vigilatiuro (MN); Chris Aufenthie (ND); Gordon Hay, Bruce R. Range and Connie Vanslyke (NE); Robert Doucette and Anna Krylova (NM); Robert Kasinow, Sylvia Lawson, Rebecca Morrow, Leigh Solomon and Larry Wertel (NY); Carla Colon (PR); Maggie Dell (SD); Todd E. Kiser, Tracey Klausmeier and Tomasz Serbinowski (UT); Rebecca Nichols (VA); Isabelle Keiser and Rosemary Rasza (VT); Rebecca Rebholz (WI); Bill Cole, D’Anna Feurt, Kristi Alma Jose and Amanda Tarr (WY).

1. **Adopted its May 29 Minutes**

   The Working Group conducted an e-vote that concluded May 26 to: 1) adopt its 2019 Fall National Meeting minutes; and 2) adopt the NAIC’s State Disaster Response Plan.

   Commissioner Altmaier made a motion, seconded by Mr. Workman, to adopt the Working Group’s May 26 minutes (Attachment Two-A). The motion passed.

2. **Heard an Update Regarding Federal Flood Insurance**

   Brooke Stringer (NAIC) said the National Flood Insurance Program (NFIP) is currently operating under its 15th short-term extension, which is expiring Sept. 30. The last substantive action taken by the U.S. House Committee on Financial Services took place in June 2019. This action approved a five-year reauthorization bill. However, coastal state lawmakers objected to this bill and introduced an alternative bill as they did not feel the original bill substantially protected policyholders from rate hikes. Neither of these bills proceeded any further in the U.S. House of Representatives, and the U.S. Senate has not focused on any type of reauthorization bill.

   Ms. Stringer said the current NFIP extension is part of the last congressional annual spending packages, and it is likely the next extension will be temporarily extended in the next continuing resolution. She said with hurricane season underway and the focus on disaster preparation, the NAIC sent a letter to House and Senate leaders urging action on a long-term reauthorization. This letter is posted on the NAIC website and includes the following key priorities: 1) encouraging increased growth in the private flood insurance market as a complement to the NFIP to help provide consumers with more choices; 2) encouraging support for mitigation planning and legislative efforts to allow individuals to set aside funds in a tax-preferred savings account for disaster mitigation expenses; 3) support of the inclusion of H.R. 1666 by Rep. Kathy Castor (D-FL) and Blaine Luetkemeyer (R-MO) to ensure that private flood will satisfy the NFIP’s continuous coverage requirements, which allows policyholders who leave the NFIP and purchase a private flood insurance policy to return to the program without penalty or loss of subsidy; 4)
support of the inclusion of the Catastrophe Loss Mitigation Incentive and Tax Parity Act (H.R. 5494), which would ensure that state-based disaster mitigation grants receive the same treatment as federal grants; and 5) urging the Federal Emergency Management Association (FEMA) to provide increased transparency to all stakeholders regarding its decision-making process for developing and updating its flood maps.

Ms. Stringer said currently grants provided through FEMA are excluded from federal income tax, but state grants for the same purpose are not excluded from federal income tax. This means if homeowners receive a state-based grant for disaster mitigation work to protect their homes from catastrophe, they must pay federal income tax on the grant money, on top of their personal investment in these projects. Ms. Stringer said H.R. 5404 would fix this tax inconsistency and provide parity for residential mitigation grants provided by state public entities.

Ms. Stringer said the five federal banking agencies issued new and revised proposed interagency questions and answers (Q&A) regarding flood insurance at the end of June. The document is intended to help lenders meet their responsibilities pursuant to the federal flood insurance laws. The agencies note they are drafting new interagency Q&A related to the 2019 private flood insurance final rule and will propose those at a later date.

FEMA released a guide to help emergency managers and health officials prepare for disasters while continuing to respond to COVID-19. This guide was released at the end of May and outlines updated federal hurricane response and recovery planning in light of the pandemic. The guide, *COVID-19 Pandemic Operational Guidance for 2020 Hurricane Season*, describes anticipated challenges to disaster operations posed by COVID-19, as well as planning considerations for emergency managers. It also outlines how FEMA plans to adapt response and recovery operations to these new realities. FEMA says that while its guide focuses on hurricane season preparedness, most planning considerations can also be applied to any disaster in the COVID-19 environment, including flooding, wildfire and typhoon response.

Ms. Stringer said the guide states, “Due to the risks associated with COVID-19 and congregate sheltering, including standards for occupancy rates, equipment requirements and assessment of at-risk or vulnerable populations, this approach will be adjusted.” Per FEMA’s guidance, local governments are tasked with identifying structures that can be used as “non-congregate shelters,” where people can find shelter while following social distancing guidelines issued by the Centers for Disease Control and Prevention (CDC). According to FEMA, these non-congregate shelters can “include, but are not limited to, hotels, motels and dormitories.”

Ms. Stringer said FEMA released an “Exercise Starter Kit for Preparedness in a Pandemic” June 1 to provide sample documents to state and local governments to use to conduct their own workshops on preparedness in a pandemic. The questions and considerations contained in the guide were developed from FEMA’s *COVID-19 Pandemic Operational Guidance for the 2020 Hurricane Season*.

3. **Heard a Presentation from Milliman on the Concept of a Catastrophe Modeling Clearinghouse**

Nancy Watkins (Milliman) said she believes state insurance regulators are struggling with the use of catastrophe models in the rate-making process while at the same time balancing their need to ensure that rates are not excessive, inadequate or unfairly discriminatory. She said this is the language that guides most rate regulation in the states. The data needed to develop models regarding catastrophic events is typically sparse and volatile, which means past experience may not be a sufficient basis for accurate expectations of the future. Ms. Watkins said as a result, catastrophe models have been created and widely adopted, and there are some areas where insurers would like to use catastrophe models in their rate-making process. She said catastrophe rate-making regulation can affect insurance affordability and availability, which she believes is a concern for everyone attending the conference call today. Ms. Watkins said Milliman is seeing a lot of challenges for state insurance regulators, catastrophe modelers and the insurers that are trying to use the catastrophe models.

Ms. Watkins said catastrophe models start with historical experience and decompose the historical experience—i.e. what happened—and then they decompose that historical experience of the various catastrophic events into their component parts. The questions answered are: What kind of risks were exposed? What kind of insurance did those risks purchase? What kind of events would have happened for the risk? How intense were the events? How vulnerable were the risks that were affected by the events? What would be the calculated damage?

Ms. Watkins said if a catastrophe model is not being used, insurers have to base risk on historical data. She said there are only two ways to make rates: 1) you can use experience; or 2) you can use exposures, as this is the fundamental starting point. Ms. Watkins said catastrophe models do use experience. However, they move into the types of risks that there is exposure to
Ms. Watkins said there is a disconnect between insurance premiums and risk incentivizing property development in harm’s way. Ms. Watkins said one of the reasons wildfires are more damaging in California now is because more houses are in places experiencing wildfires. Ms. Watkins said this is the same issue that occurs with flooding on the coast; there are more houses on the coast. She said this is another reason historical experience alone does not provide an accurate picture.

Ms. Watkins said it is important to be able to measure mitigation. She said there is value and importance in mitigating the risk upfront. She said to provide policyholders with the benefit of making investments to reduce their risks, the change in premium reflecting mitigation needs to reflect the premium reduction due to the mitigation. Catastrophe models can reflect premium changes, while historical data cannot.

Ms. Watkins said catastrophe risk is costing more than it used to cost, and it is not good enough to treat catastrophe risk as it is immaterial. She said there are protection gaps due to a lack of proper measurement for flood risk, for example. Ms. Watkins said there are hardly any private flood insurance policies relative to what is needed. She said part of this is a failure of measurement, and the only way to close that gap is to allow the insurers and reinsurers the ability to use a flood catastrophe model to manage and measure flood risk.

Ms. Watkins said there are rating agencies requiring insurers to use more sophisticated modeling with their risk management process and risk disclosures. She said there are also real estate investors using catastrophe models to decide where to invest, and they are better considering future climate risk as important regarding where they are going to invest their money. Ms. Watkins said there is a disconnect between insurance premiums and risk incentivizing property development in harm’s way.

Ms. Watkins said there are a lot of regulatory challenges regarding catastrophe modeling and that catastrophe model treatment varies widely among states. She said the state of Florida is really the only state that has a government body that is tasked with scientific and technical review of hurricane models. Ms. Watkins said a lot of states do allow catastrophe modeling, but the states vary in terms of the type of validation and rules they require. However, there are some states that explicitly prohibit the use of catastrophe models when establishing rates. She said these states may also restrict catastrophe models to certain lines of business or certain perils.

Ms. Watkins said challenges for state insurance regulators include: 1) the lack of appropriate expertise and/or resources to review catastrophe models comprehensively; 2) the balancing of the needs of affordability, availability, insurance company solvency and consumer protection; and 3) the inability to protect proprietary information of the modelers and insurers.

Ms. Watkins said she has come up with the idea of a catastrophe modeling clearinghouse, and while it might not be the idea everyone agrees with, it is a good starting point for discussion. She said the catastrophe modeling clearinghouse would be available for states that wanted to voluntarily participate, and the clearinghouse would provide some type of expert model review for catastrophe models used in ratemaking. The clearinghouse would consist of a multidisciplinary panel that could develop standards and then select expert reviewers who would conduct the reviews. Ms. Watkins said the third-party experts could perform confidential and very rigorous reviews. She said flood models, for example, would be reviewed for two or three years by the same panel. She said the wildfire models would be reviewed by the same panel, etc. She said this would provide a consistent report card for all the different types of models for a given period of time. Ms. Watkins said some standardized disclosures state insurance regulators could rely on would be helpful for state insurance regulators so they could put them side-by-side between different models. She said validation of high-level items could be released publicly, whereas the private proprietary items would be seen only by the expert reviewers.
Ms. Watkins said there could be a questionnaire that is used by all states. However, states would be able to add their own special supplementary questions. These supplementary questions would include issues that are most important to a particular state. Ms. Watkins said the vision for catastrophe model usage in insurance would include a rigorous framework. She said there should also be continuous improvements in data, modeling and risk communication. Ms. Watkins said there should also be the ability to anticipate, measure and plan for future climate scenarios. It is important to figure out what type of mitigations options are going to be most effective to price risks and get sound actuarial rates in the end. Ms. Watkins said she believes risks can be reduced, which will make insurance more affordable and allow insurers to become more comfortable offering premiums that are accurately priced. This will make insurance more available.

Ms. Watkins said the minimum requirements for the success of a catastrophe modeling clearinghouse include: 1) widespread buy-in among state insurance regulators, insurers and catastrophe modelers; 2) cost and time efficiency; and 3) the flexibility to allow innovation and multiple perspectives.

4. **Heard a Presentation from the RAA on the Use of Catastrophe Models**

Dennis Burke (Reinsurance Association of America—RAA) said it is the RAA’s position that natural catastrophe risks are insurable in the free market as long as the free market is permitted to work. He said the best way for the free market to work is to share infrequent high-severity risks, like natural catastrophes across many balance sheets. Mr. Burke said when he evaluates the best tools available for understanding risk, he looks at demographics and asks if there is anything that is the same as it was 20 years ago. He said there are more homes and more people than there were 20 years ago, and people are moving to the risk and building houses that are much bigger. People have electronics now than were used 20 years ago and so their contents cost more now than the historical records show.

Mr. Burke said there are a lot of risks and considerations that indicate the use of historical data is not the best way to estimate and price risk. He said the extent that state insurance regulators could get comfortable with insurers using the best possible tools, which include catastrophe models, to support the rate filings, the RAA believes this would improve the resiliency of insurance and the ability for insurers to provide reasonably priced insurance in the U.S. and Europe.

Mr. Burke said the RAA encourages this dialogue and encourage state insurance regulators, insurers and models to come together to discuss this issue. He said the RAA believes it is important for the states that do not currently permit insurers to use catastrophe models in their rates to be willing to engage in the proposed process and whether or not that would provide them with the comfort to take steps to authorize insurers to use catastrophe models. Mr. Burke said he understands this might require regulatory changes. These issues need to be understood upfront to understand whether the cost and redundancy potentially involved in this process are worthwhile as a cost benefit. Mr. Burke said the RAA does not know if the Milliman proposal is the answer. However, it is an opening step and a process that will only work if all of the interested parties, including state insurance regulators, catastrophe modelers, insurers and consumer advocates who are stakeholders, to have a comfort level with the outcome of the process. He said confidentiality is important, so all involved need to find a way to deal with these issues without sacrificing trade secrets and the confidentiality of catastrophe models. Mr. Burke said redundancy also needs to be avoided to the extent possible, as work that has already been done needs to be used, as there is no need to reinvent the wheel and increase costs.

Mr. Burke said he thinks if state insurance regulators become comfortable with and understand catastrophe models, it will lead to their willingness to permit insurers to use catastrophe models. He said the RAA believes this proposal is a great way to start conversation with stakeholders, whether it ends up being the answer or not.

5. **Heard a Presentation from the APCIA on the Use of Catastrophe Models**

Lisa Brown (American Property Casualty Insurance Association—APCIA) said the APCIA agrees that historical experience may not be sufficient to measure future risk. She said she believes mitigation is a valuable tool in establishing appropriate pricing through the underwriting process. Ms. Brown said unlike other property perils coverage, be it for flood, wildfire or hurricane, it cannot be reliably priced based on historic loss information. It should be clear based on increased severity and levels of loss that insurers cannot accurately predict future losses based only on those incurred in the past. Ms. Brown said Mr. Burke’s point regarding the quickly changing demographics across the country, especially in catastrophe-prone areas, simply underscores this point. She said she believes everyone agrees catastrophe models are a valuable tool to help insurers manage their exposure to financial risks from an underwriting perspective.
Ms. Brown said one thing that differentiates insurers and the marketing and sales of their products is competition and the ability of one insurer to do things differently from another insurer. She said the catastrophe modeling clearinghouse proposal indicates there are different third-party models, which are not consistently regulated in the rate-making and underwriting context. Ms. Brown said the APCI would like to add that individual rate-making and underwriting practices, at least from a regulatory process, are not always regulated consistently either.

Ms. Brown said if the insurance industrywide standards governing catastrophe models are general and provide the basic framework from which to evaluate and use the model, the freedom should exist as it does in other aspects to the property/casualty (P/C) market to allow for creativity, innovation and specialization, without being subjected to a significant oversight, required standardization or other intrusion to the industry that uses the product. She said the regulation of the insurance industry is related to the products provided and the state insurance regulators’ evaluation of the fact that the rates charged are not inadequate, excessive nor unfairly discriminatory. Ms. Brown said this is not to say the methodology’s inputs, outputs and credibility should be assessed and centralized so that the models are all the same, contain the same data and end up with the same results. She said one of the great things about the process that drives the competition is the variability within that black box that everyone talks about exists. Therefore, different customer bases can be served, and insurers can have different programs and serve different customers.

Ms. Brown said the APCI fully supports the increased ability to insurers to use catastrophe models and would request the states that do not allow their use to amend their laws to allow the use of catastrophe models. She said Milliman’s presentation makes it clear there are several questions that would have to be resolved before moving forward with any type of clearinghouse or any alternative solution. Ms. Brown said the AIPCA can commit to the willingness to be part of ongoing conversations with state insurance regulators and other stakeholders.

6. **Heard an Overview from the CIPR on the CIPR Wildfire Catastrophe Modeling Project**

Jeff Czajkowski (Center for Insurance Policy Research—CIPR) said he will provide an update regarding a wildfire resiliency research project. He said the project has taken on some of the notions discussed head-on with a boots-on-the-ground approach working with state insurance regulators in California and Oregon, as well as the vendors in the catastrophe modeling community, particularly Risk Management Solutions (RMS), as well as organizations on the mitigation side, namely the Insurance Institute for Business Home & Safety (IBHS) and the National Fire Protection Association (NFPA) Firewise USA program.

Mr. Czajkowski said the wildfire risk is increasing for policyholders. He said this indicates an availability or affordability problem. One way to address this issue is through increasing the use of risk reduction. Mr. Czajkowski highlighted fire-resistant modifications to a structure and community-wide abatement. The applications of mitigation in the current use of fire risk models, particularly in California, do not allow for the accounting of this mitigation.

Mr. Czajkowski said one good thing about the use of catastrophe models is that one is able to account for mitigation within the modeling framework. He said for the research efforts of this project, it is important to address the issues of ratemaking, solvency and what is being done around mitigation.

Mr. Czajkowski said a paper released last year by the American Academy of Actuaries (Academy), *Acceptance and Widespread Usage of Wildfire Cat Models are in an Early Stage*, discusses the acceptance and widespread usage of wildfire catastrophe models as being in the relatively early stages as compared to hurricane and earthquake models. He said the paper indicates that vendors are critical partners in educating the insurance industry and state insurance regulators regarding the use of wildfire models. Mr. Czajkowski said state insurance regulators should also be encouraged to become more familiar with the wildfire models. He suggested state insurance regulators think about licensing catastrophe models themselves and begin working through the models if they have the capability to do this.

Mr. Czajkowski said there was a meeting in California with the California Department of Insurance (DOI). He said the Oregon DOI joined the meeting virtually. Mr. Czajkowski said the project has been ongoing and will culminate during the NAIC 2020 Insurance Summit in September. He said the project is focused on bringing the science to the operations and engaging the state insurance regulators around this issue. Mr. Czajkowski said the two main outputs of the project are: 1) to leave state insurance regulators with an educational or reference document they can have in terms of looking at the latest wildfire science; and 2) how this is being approached in the catastrophe modeling community. This reference guide is meant to be a blend between the NAIC *Catastrophe Computer Modeling Handbook* and the more traditional standard practice from the actuarial community.
Mr. Czajkowski said the CIPR wants to highlight how catastrophe models can be used by state insurance regulators in the decision-making perspective for public policy purposes, in particular regarding mitigation. Partnering with FireWise and IBHS in the process allows the ability to show state insurance regulators where the science from these entities is embedded in the catastrophe models, allowing the models to be run in different locations. This project involves three locations in California, three locations in Oregon and three more from a control environment in Colorado. Running these models illustrate both using mitigation and not using mitigation, and a cost-benefit analysis is run from this information.

Mr. Czajkowski said one of the ongoing project goals includes presenting the results of the study during the NAIC Insurance Summit in September. There will be a similar agenda for climate change to again highlight the science and the modeling.

Amy Bach (United Policyholders) said California has been in the middle of an availability and affordability crisis regarding insurance, as well as a legislative battle. She said California has two bills that the insurance lobby is pushing hard to get through this session. One of these bills will force the California DOI to allow catastrophe modeling over their objection. Ms. Bach said as a consumer advocate, she is worried about the dials on the catastrophe model being susceptible to being turned up and down for profit and business objectives. She asked Ms. Watkins if the California DOI should be facing a mandate that they are opposing to allow. Ms. Watkins said they are at a point where the current state of regulation could end up with an availability crisis that would not only affect the people in the most risky areas, but also could actually push insurers to pull their business out of the state of California. She said she believes the state is at a point where things have to change. There have been two years where the insurance industry lost $20 billion on its entire portfolio of California homeowners insurance business. Ms. Watkins said in the prior 26 years, the total profits for the insurance industry were $10 billion. She said there is a formula in California that allows one to recoup his or her bad year’s losses by using a 20-year average. Ms. Watkins asked if one lost two times of his or her 26 years of profit in two years, how many years of experience will it take to load that back in. She said there is not anyone who can defend the current California formula and say that it produces reasonable results. Ms. Watkins said if models would have been used all along, the models could have smoothed out all the rate shock by being implemented more gradually over time. She said the California DOI might have had a difficult time regulating this using its current staff. Ms. Watkins said it takes an enormous amount of manpower to vet numerous wildfire models.

John Huff (Association of Bermuda Insurers and Reinsurers—ABIR) said he believes everyone involved is dealing with catastrophe modeling modernization. He said he knows all of the pressure state insurance regulators are under to balance affordability and accessibility of insurance and believes this is the path to provide those tools. Mr. Huff said he does not know what the end product will look like, but he cannot think of a better use of the NAIC collective brainpower and resources than to help the states with this type of project.

Commissioner Chaney said many states allow the use of catastrophe modeling. However, some states restrict the use of certain models, such as those with warm sea surface temperature. He said he believes Alabama still restricts itself to the use of three models. Commissioner Chaney suggested finding out from states what models they are allowing to be used within their state.

Mr. Bradner said Connecticut has allowed models. He said there was some market disruption in 2008–2009, especially in its homeowners market, as insurers wanted to increase their rates by up to 50%–60%. Mr. Bradner said Connecticut has worked with insurers over the past eight to 10 years and gradually got them up to where insurers are in a good position. He said most insurers in Connecticut are sitting with a loss ratio of 30%–40%.

Mr. Bradner said where he has had problems with the models is that an insurer can project a 40%–50% or 80%–90% loss ratio to the DOI based on its model, catastrophe loads and reinsurance loads, and every year justify a rate increase. He said this is where he struggles and must start pushing back on insurers. Mr. Bradner says while he knows insurers need to have a cushion, it is difficult for state insurance regulators because they are public facing. He said state insurance regulators have to understand how to deal with this issue because it is not simple. Mr. Bradner said he believes insurers should start looking at the states where they are making money and investing in providing greater incentives for mitigation credits.

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.
Catastrophe Insurance (C) Working Group
E-Vote
May 26, 2020

The Catastrophe Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee conducted an e-vote that concluded May 26, 2020. The following Working Group members participated: Mike Chaney, Chair (MS); Jerry Workman (AL); George Bradner (CT); Colin Hayashida (HI); Travis Grassel (IA); Heather Droge (KS); Warren Byrd (LA); Joy Hatchette (MD); LeAnn Cox (MO); Timothy Johnson (NC); Cuc Nguyen (OK); Beth Vollucci (RI); J’ne Byckovski (TX); David Forte (WA); and James A. Dodrill (WV).

1. Adopted its 2019 Fall National Meeting Minutes

The Working Group conducted an e-vote to consider adoption of its 2019 Fall National Meeting minutes. The motion passed, with a majority of the Working Group members voting in favor of adopting its Dec. 7, 2019, minutes (see NAIC Proceedings – Fall 2019, Property and Casualty Insurance (C) Committee, Attachment Three).

2. Adopted Updates to the NAIC State Disaster Response Plan

The Working Group conducted an e-vote to consider adoption of its updates to the NAIC State Disaster Response Plan. The motion passed, with a majority of the Working Group members voting in favor of adopting the NAIC State Disaster Response Plan (see NAIC Proceedings – Summer 2020, Property and Casualty Insurance (C) Committee, Attachment Eight).

Having no further business, the Catastrophe Insurance (C) Working Group adjourned.

W:\National Meetings\2020\Summer\Cmte\C\CatWG\0526 CATWG Minutes.docx
The Climate Risk and Resilience (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call July 31, 2020. The following Working Group members participated: Mike Kreidler, Chair, and Jay Bruns (WA); Ricardo Lara, Vice Chair, represented by Michael Peterson (CA); Alex Romero (AK); Peg Brown (CO); George Bradner (CT); Colin Hayashida and Paul Yuen (HI); Travis Grassel (IA); Judy Mottar (IL); Joy Hatchette and Cheryl Kouns (MD); Peter Brickwede (MN); Brooke Larlo (MT); Bruce R. Ramege (NE); Anna Krylova (NM); Marshal Bozzo (NY); Tom Botsko (OH); Andrew R. Stolfi and Brian Fordham (OR); David Buono, Mike McKenney and Shannen Logue (PA); Rafael Cestero-Lopategui and Carla Colon (PR); and Kevin Gaffney (VT). Also participating were Barbara Richardson (NV) and Lorraine Ratchford (NY).

1. **Adopted its June 18 Minutes**

The Working Group met June 18 and took the following action: 1) received an update on the drafting of the *Insurance Regulatory Discussion Points on Catastrophic Events* document; 2) heard an update on California’s development of a Sustainable Insurance Roadmap; 3) heard a high-level summary of Ceres’ recently released *Addressing Climate as a Systemic Risk: A Call to Action for U.S. Financial Regulators* report; and 4) discussed its work plan for 2020.

Mr. Grassel made a motion, seconded by Mr. Botsko, to adopt the Working Group’s June 18 minutes (Attachment Three-A). The motion passed unanimously.

2. **Heard an Update on the NAIC Climate Risk Disclosure Survey Analyses Being Done by CIPR and the Academy**

Lisa Groshong, Ph.D. (NAIC) said the NAIC Climate Risk Disclosure Survey (Climate Survey) was adopted by the NAIC in 2010, and it is administered in a multi-state initiative—California, Connecticut, Minnesota, New Mexico, New York and Washington—with survey responses being held on a California Department of Insurance (DOI) database. Insurers with over $100 million in direct written premium are required to complete the Climate Survey. Currently, there are more than a thousand survey responses, representing about 70% of the U.S. insurance market. The 2018 Climate Survey responses included nearly 500,000 words. There are nine Yes/No questions and eight narrative responses that ask the respondent to discuss their: 1) plan to assess emissions; 2) risk management; 3) process for identifying risks; 4) risks posed by climate change; 5) investment strategy; 6) policyholder loss reduction efforts; 7) engagement with constituencies; and 8) actions to manage risks. Challenges to analyzing the responses include difficulty interpreting Yes/No questions, a high amount of time needed to digest narrative responses, and numerous duplications among legal entities. The multi-state initiative is currently working towards aligning climate reporting with the Financial Standards Board’s (FSB’s) Task Force on Climate-Related Financial Disclosures (TCFD). It would be helpful to know exactly what information is already being provided, so future surveys should be revised to incorporate findings from previous surveys. The NAIC’s Center for Insurance Policy and Research (CIPR) aims to report in September 2020 on the Climate Survey’s quantitative and qualitative responses for 2018. The focus will be on quantitative relationships and qualitative understanding of responses to individual questions. This is particularly relevant for question 6, which asks for the “steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events.” The CIPR’s research methodology will focus on two research questions: 1) how insurers across all lines of business assess and manage risks related to climate change; and 2) how these responses have changed over the past 10 years. Its quantitative analysis will focus on descriptive statistics of yes/no responses to survey questions. Its qualitative analysis will be a thematic analysis of open-ended responses to the survey questions to identify patterns of meaning across a dataset. The CIPR research team read survey responses for questions 4 through 8 and generated themes. These themes were coded using NVivo software, and the results are currently being compiled. Preliminary quantitative results focus on how to visualize responses to balance the number of companies versus premium dollars. Of the 1,245 responses, 63% were property and casualty insurers, 20% were life insurers, 13% were health insurers, and the remainder were from various other lines of business. Total premium for the six states participating in the multi-state initiative consisted of 40% life, 32% property and casualty, 26% health, and the remainder from various other lines. The analysis will examine distinct responses, rather than all legal entities. It will provide “building blocks” for assessments rather than “grades” for companies. It will also provide multiple-choice questions that might easily be included, capturing responses already being provided in a more easily accessible manner.
Steven Jackson, Ph.D. (American Academy of Actuaries—Academy) said the Academy plans to report its findings on the 2018, 2015 and 2012 Climate Survey responses in December 2020, and TCFD findings and other alternatives will be reported in 2021. The analysis is being conducted by the Academy’s ERM/ORSA Committee, chaired by Michelle Young. The focus is on quantitative relationships and a qualitative understanding of company responses. This may include question 5, which asks for the “impact of climate change on its investment portfolio and...alterations in investment strategy in response to these considerations.” The analysis will focus on addressing the following questions: 1) how companies prepare their responses and if they devote significant time to the task; 2) how much attention companies give to climate risk as reported; 3) what the most commonly and least commonly referenced risks and responses are; 4) With respect to Investment Strategy (question 5), what specific sub-questions companies are answering; and 5) how these answers differ by year, line of business, and size of company. Preliminary results indicate that 8.5% of responses switched from “No” to “Yes” and 4.4% switched from “Yes” to “No” between 2012 and 2015. It is anticipated that more responses will switch from “No” to “Yes” as climate risk gains attention. Explanations for companies’ switching responses from “Yes” to “No” over time are less straightforward, and answers to the questions raise further questions. Like the CIPR’s analyses, the Academy will examine distinct responses, rather than all legal entities. It will provide “building blocks” for assessments rather than “grades” for companies. It will also provide multiple-choice questions that might easily be included, capturing responses already being provided in a more easily accessible manner.

Dennis C. Burke (Reinsurance Association of America—RAA) asked for clarification on Mr. Jackson’s comments related to potential changes to the Climate Survey questions. Commissioner Kreidler said the most significant change is a move to align with the TCFD. Respondents to this year’s Climate Survey were advised that they can submit their TCFD in lieu of the Climate Survey. Those that submitted a Climate Survey were advised to refer to the TCFD guidelines when filling it out. The advantage of the TCFD is that it provides a source of uniform reporting for the insurance and financial services sectors that are not otherwise in place.

3. **Heard an Update on California’s Climate Smart Insurance Product Database**

Mr. Peterson stated that the California DOI partnered with the United Nations Environment Programme (UNEP) to develop a Sustainable Insurance Roadmap. As part of this Roadmap, it launched the Climate Smart Insurance Product Database (Climate Smart Database). The Climate Smart Database is the first consumer-oriented list of climate-related insurance products. There are more than 400 internationally available products that address climate risks, harness new technologies, and build resilience. The California DOI developed the database to help the public understand and access these products and encourage further insurance policy innovation in commercial, homeowners, auto and other lines. Products listed in the database provide green-rebuild coverage and promote fuel-efficiency by offering lower premiums for low-emission vehicles, discounts for green energy use/certification, and discounts for businesses that operate hydrogen and hybrid electric buses and protect low-income communities and natural ecosystems. It is hoped that insurers will explore the database as a starting place for innovative products. The database is searchable by product features and insurance category.

Commissioner Richardson asked if California’s Climate Smart Database provides the ability to search by insurance carriers who invest in green investments. Mr. Peterson said the database just searches products offered by insurers.

Mr. Grassel asked where the Climate Smart Database sources its data. Mr. Peterson said Evan Mills, a researcher from Lawrence Berkeley Labs, accumulated the data over years of research. Future updates will be maintained by the DOI.

4. **Heard a Presentation on Swiss Re’s Approach to Climate Change and Sustainable Insurance Products**

Yommy Chiu (Swiss Re) said Swiss Re created a Macroeconomic Resilience Index to measure the ability of economies to withstand shock events. In using the index to track and compare countries, Swiss Re has found that the world economy has less capacity to absorb shock events than it did a decade ago. Swiss Re also created an Insurance Resilience Index to measure the contribution of insurance to the financial stability of households and organizations. The index indicates that the U.S. insurance gap increased from 2000–2018, with the widest protection gap being health. Results are being driven by the U.S. health care system structure. Insurance supports macroeconomic resilience by funding recovery in an efficient manner. It also provides the public sector with a sustainable financial framework from which to build policy. Swiss Re has a public-private pilot project with the California DOI to address the health care protection gap.

Samantha Dunn (Swiss Re) said modelling dynamic risks like climate change comes with many uncertainties. In the absence of hard data, the approach should be to assess risk in terms of levels of confidence. Longer and more frequent heat waves, droughts, water scarcity and wildfires will increase health issues, mortality and potentially political conflicts. The increase in
frequency of perils, such as hail and tornado, will affect revenue earnings. Melting of glaciers and ice caps will result in sea level rise and storm surge, changing the magnitude of disasters and increasing the potential for epidemics.

Innovative products that support natural ecosystems and maintain biodiversity are important to preventing natural disasters. Biodiversity is also an important component in preserving the plants our medicines are made from and nature-based tourism. The flood protection gap is estimated to be $36 billion, with 40–60% of businesses never reopening after a natural disaster. Mangroves provide flood protection benefits exceeding $65 billion per year. Research from The Nature Conservancy (TNC) shows coastal wetlands can save communities hundreds of millions of dollars and reduce flood damage by up to 29%.

Swiss Re’s public-private partnership with the California DOI is aimed at concreting a solution that will build resiliency for hospitals and health care settings by addressing the scarcity of care capacity for vulnerable people. The pilot concept is to test if access to timely care for uninsured and underinsured vulnerable populations can be increased by offering an influx of cash during an extreme heat event.

5. **Heard a Presentation on Allianz’s Approach to Climate Change and Sustainable Insurance Products**

Nico Ahn (Allianz) said Allianz co-chairs the United Nations (UN)-convened initiative, Global Investors for Sustainable Development (GISD) Alliance, which scales up finance and investment in sustainable development. It is a leading insurer in the Dow Jones Sustainability Indices. It also co-led the Principles for Sustainable Insurance (PSI) initiative to develop the first global guidance on environmental, social and governance (ESG) in property and casualty underwriting. Allianz’s ESG strategy is based on the 17 UN Sustainable Development Goals, which affect its role as insurer, investor, employer and corporate citizen.

A group-wide climate change strategy has been in place since 2005. The strategy is governed by its Group ESG Board, which regularly reports to its Board of Management and Supervisory Board. It has a dedicated climate change center as part of its Corporate Responsibility department. Climate change as risk driver is managed as part of an overarching risk governance architecture, with emerging elements being dealt with separately. The climate change focus is on decarbonization of assets and climate analysis and disclosure. Allianz is committed to net-zero emissions in proprietary investments by 2050. Its Board of Management remuneration is tied to emission targets. It has joined forces with 26 asset owners in the UN-Convened Net-Zero Asset Owner Alliance. It has been reporting against the TCFD framework since 2017. It is working with the UNEP Finance Initiative (FI) to improve its scenario analysis and disclosure for property and casualty underwriting.

Thomas Liesch (Allianz) said Allianz has identified six criteria to identify products with a specific environmental and social added value. Sustainable solutions must: 1) support the development of sustainable technology; 2) conserve natural resources and biodiversity or mitigate climate change; 3) protect from environmental risks and adapt to climate change impacts; 4) support people tackling social challenges; 5) provide for socially disadvantaged groups; and 6) raise awareness via donations or communications campaigns. Allianz’s sustainable solutions fall into three main categories and form part of its action towards the UN Sustainable Development Goals: sustainable insurance, emerging consumers, and sustainable asset management. Its sustainable solutions include agriculture, mobility, environmental liability, sustainable lifestyle, renewables and energy efficiency.

Commissioner Hayashida said it was evident after Hurricane Maria that Puerto Rico had a high percentage of uninsured people. Based on Medicaid, about 47% of the population is at the poverty level. Puerto Rico responded by passing legislation to incorporate catastrophe microinsurance parametric products into the local market. Microinsurance products provide affordable private insurance for Puerto Rico’s low-income population to assist in recovering from catastrophic events. The maximum premium currently allowed is $250 a year. The microinsurance will be sold through places like credit unions to avoid the added expense of producer fees.

Ms. Dunn said Swiss Re’s products frequently have a parametric trigger on an indemnity base. In an ideal world, consumers would have parametric insurance in conjunction to traditional indemnity coverage.

6. **Heard a Presentation on the APCIA’s Domestic and International Climate Risk-Related Activities**

David F. Snyder (American Property Casualty Insurance Association—APCIA) said the APCIA engages on climate risk in many domestic and international forums. Its domestic-focused advocacy activities include a July 1 letter to the chairman and ranking member of the U.S. Senate (Senate) Committee on Environment and Public Works. The letter encourages states and communities to adopt land use measures, including optimizing natural infrastructure. It recommends that climate risk models and resilience standards be used in all public infrastructure projects. It also suggests committing additional funds for resilient
infrastructure and retrofitting for resilience, and it supports research and incentives for mitigation. The APCIA regularly engages at the state level on improving building codes and supporting other mitigation proposals, including the work of the Insurance Institute for Business & Home Safety (IBHS). The APCIA’s website regularly provides information to the public on climate risk mitigation and response. Recent examples include information on preparedness for Tropical Storm Hanna in July and Tropical Storm Cristobal in June and recovery after dam collapses in May. The APCIA annually sponsors the National Flood Conference. It also participates in multi-sector coalitions to improve resiliency efforts. For example, its SmarterSafer policy recommendations include: 1) encouraging efforts and funding for mitigation to reduce damage before disasters; 2) requiring federal standards and a focus on earthquake and wildfire risk; 3) reforming the National Flood Insurance Program (NFIP) to improve modeling and mapping; 4) moving toward risk-based rates with help for low income communities and individuals; 5) allowing private insurance and support mitigation; and 6) encouraging greater coordination among federal agencies. Its international activities are focused on industry coordination. It is a member of the Global Federation of Insurance Associations (GFIA) and an active participant in all climate risk-related activities. It leads the effort to draft positions and key points on climate risk mitigation and adaptation with the Insurance Bureau of Canada (IBC). The APCIA provides stakeholder input to international bodies such as the International Association of Insurance Supervisors (IAIS) and the Organization for Economic Co-operation and Development (OECD). It was a team member in a UN and Allianz sponsored project that created an ESG in non-life insurance guide.

Ms. Ratchford said the Ceres *Addressing Climate as a Systemic Risk: A Call to Action for U.S. Financial Regulators* report suggests that banks should consider reducing their investments and lending to carbon emitters with a target date of 2050. Climate scientists have said we have 10 years to address the problems. She asked what the NAIC and the various insurance departments can do regarding messaging on this issue. She also asked if the NAIC or APCIA could consider working with legislature and administrative agencies to author public policies to discourage development in high-risk zones. Ken Klein (California Western School of Law) said he echoes these ideas; the timeline necessitates very aggressive responses. Commissioner Kreidler said the speakers that the Working Group has heard from during the meeting are part of its efforts to address these concerns. One of the challenges that states insurance regulators have is to not allow major economic sectors to be ignored to the extent that there are no insurance products available to insure investments. It is important that state insurance regulators and insurers advocate for better land use practices and building codes. The creation of a climate task force at the NAIC’s Executive level is an important step in encouraging more state insurance regulators to take up these issues. State insurance regulators need to become much more aggressive at providing guidance to insurers on their investments. There is a lot of concern that certain investments could become stranded in the future, particularly those tied to carbon. State insurance regulators should also be evaluating the potential for stranded assets at the industry level and incorporating stress testing. They should work to make sure insurers do not incur any unnecessary barriers when investing in appropriate green investments.

Mr. Snyder said insurers work directly and indirectly to prevent building in geographically vulnerable areas. This is a great area for state insurance regulators and industry to work jointly. The APCIA believes that there is a large appetite for green investments, and it would like to see those markets grow rapidly.

John M. Huff (Association of Bermuda Insurers and Reinsurers—ABIR) said he encourages state insurance regulators to consider receiving a presentation by the SmarterSafer Coalition. It is a very broad-based coalition with practical approaches to climate risk solutions at the federal and state level.

Having no further business, the Climate Risk and Resilience (C) Working Group adjourned.
The Climate Risk and Resilience Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call June 18, 2020. The following Working Group members participated: Mike Kreidler, Chair, and Jay Bruns; Ricardo Lara, Vice Chair, represented by Michael Peterson (CA); Austin Childs and Alex Romero (AK); Peg Brown (CO); George Bradner (CT); Colin M. Hayashida (HI); Judy Mottar (IL); Travis Grassel (IA); Robert Baron (MD); Peter Brickwedde (MN); Nina Chen (NY); and Tom Botsko (OH).

1. Received an Update on the Drafting of the Insurance Regulatory Discussion Points on Catastrophic Events Document

Mr. Peterson stated the Working Group decided on its Oct. 2, 2019, conference call to develop a product that can assist insurance departments in fielding frequently asked questions (FAQ) related to resilience and catastrophe events. The product was referred to as the Insurance Regulatory Frequently Asked Questions at the time. It was in part inspired by California’s Wildfire Resilience Summit in April after the ferocious fires of the last couple of years in California. The document was designed to be a compilation of questions state insurance regulators find they are frequently being asked. Each insurance department could then voluntarily answer the questions as they relate to its specific state. The original intent was for the responses to be available for dissemination by each insurance department to inform the public and provide guidance to state and local efforts related to resilience and insurance. The Working Group also supported the compilation of each state’s responses for sharing purposes, so states can learn from each other’s efforts. It was decided questions should apply to all states, with the option to develop a more peril-specific version in the future. This makes sense considering the differences one can visualize almost immediately between states such as California and Connecticut.

Further development of the product occurred during informal drafting calls on May 22 and March 11. Summaries of those conference calls were provided in the materials (Attachment Three-A1 and Attachment Three-A2). The March 11 conference call expanded the questions in many of the existing sections and added new sections for adjuster licensure, department-stakeholder interactions and post-catastrophe regulatory response. During the May conference call, the product was converted from public to regulator-only and renamed Insurance Regulatory Discussion Points on Catastrophic Events (CAT Discussion Points). The change was to allow for more robust sharing among states, which is deemed to be the document’s strongest value. However, states can still choose to leverage their response information for public use as they deem appropriate. The Purpose section was revised to specify the questions are meant to be a list of potential discussion points for states to consider in crafting their unique response. States are not expected to answer every question. The May 22 conference call also added sections for technology and the idea of overlapping or sequential crises that occur in the same time period.

The informal drafting group has progressed substantially in its drafting. The next conference call will focus on reviewing the draft to ensure it is not peril-specific and adding questions to the Overlapping Crises section. The informal drafting group will also review catastrophe-related material shared by Minnesota to see if anything additional should be added to the draft.

Jeff Klein (McIntyre & Lemon) stated the CAT Discussion Points document is interesting and recommended it should include the need for states with natural disaster statutes to revisit these to ensure they take pandemic issues into account. He stated his company encountered a similar issue in North Carolina, which has a natural disaster statute affecting premium finance companies. Even with a three- or four-day hurricane occurring with the onset of a pandemic, such as the current one, the time period is a lot more elongated, especially when states had to extend their orders and moratorium. He expressed his willingness to discuss the implications of a prolonged disaster (such as on cancellation nonrenewal moratoriums) further during an informal drafting call.

Commissioner Kreidler agreed with Mr. Klein’s point. He stated the compounding implications of an event such as a pandemic does not necessarily fit the same mold of what state insurance regulators have historically dealt with and will irrevocably change our role as regulators. He also stated it is important to learn from our current circumstances so we can be better prepared for a second virus wave or future pandemic. The additional complications climate change brings to a pandemic are debated by some, but it is not unreasonable to assume climate change is bringing population mobility and thereby increasing transmission of the virus.
Dave Snyder (American Property Casualty Insurance Association—APCIA) asked if there would be an opportunity for interested parties to weigh in on the CAT Discussion Points. Commissioner Kreidler stated there would be an opportunity for anyone to provide comments on the document when it is exposed after the informal drafting group completes the draft.

2. **Heard an Update on California’s Development of a Sustainable Insurance Roadmap**

Mr. Peterson stated the California Department of Insurance (DOI) announced in July 2019 that it had partnered with the United Nations Environment Program (UNEP) to develop a Sustainable Insurance Roadmap. The goal is to provide a comprehensive and cohesive set of policies related to climate change and insurance that can serve as a guide. The Roadmap will enable California to use risk reduction measures, insurance solutions and insurer investments to reduce the magnitude of future events and insurance losses, stabilize rates and increase insurance availability. For example, new insurance products could be developed to promote cooler streets and renewable energy. There could also be insurance solutions designed to protect California’s natural infrastructure—such as wetlands and forests—to reduce climate and disaster risk. Mr. Peterson stated that as recommended by the Ceres report on the agenda today, California is currently developing a database and search tool to allow users to identify insurers offering insurance products that offer climate risk solutions.

3. **Heard a High-Level Summary of Ceres’ Recently Released *Addressing Climate as a Systemic Risk: A Call to Action for U.S. Financial Regulators* Report**

Steven Rothstein (Ceres) commended the six states that are administering the NAIC Climate Risk Disclosure Survey (Climate Survey) for supporting the option for insurers to submit a Task Force for Climate-Risk Financial Disclosure (TCFD) report in lieu of the Climate Survey. He stated Ceres recommends taking additional disclosure initiatives in its *Addressing Climate as a Systemic Risk: A Call to Action for U.S. Financial Regulators* report. The report outlines why and how key U.S. financial regulators can and should take action to protect the financial system and economy from potentially devastating climate-related shocks. The report makes a series of recommendations that build on the existing mandates of the relevant regulatory agencies. It also identifies similar actions being taken by global regulators that could serve as important models for U.S. agencies to consider.

The report’s key recommendations for state and federal insurance regulators include:

- Acknowledging and coordinating action to address the material risks of climate change.
- Assessing the adequacy of current insurer actions for addressing climate risks.
- Joining the Sustainable Insurance Forum.
- Requiring insurers to conduct climate-risk stress tests and scenario analyses.
- Requiring insurers to integrate climate change into their Enterprise Risk Management (ERM) and Own Risk and Solvency Assessments (ORSA) processes.
- State regulators requiring insurers to assess and manage their climate-risk exposure through their investments, and examining how climate trends affect company holdings and long-term solvency.
- State regulators encouraging insurers to develop products for the new technologies, practices and business models that will emerge in response to climate-risk that are responsive to both risks and opportunities.
- State regulators mandating insurer climate-risk disclosure using the TCFD recommendations.
- Assessing the sector’s vulnerabilities to climate change and reporting findings to the Financial Stability Oversight Council (FSOC).

4. **Discussed its Work Plan for 2020**

Mr. Bruns stated the proposed work plan for 2020 included finishing the drafting of the CAT Discussion Points document with adoption hopefully by the Spring National Meeting. It also included a proposal to review the Financial Condition Examiners Handbook for potential climate risk and resilience related revisions. Proposed revisions would then be referred to the Financial Examiners Handbook (E) Technical Group for consideration. The Working Group proposed similar revisions to the Technical Group in 2012 that were adopted into the 2013 Exam Handbook. The changes provided guidance, if needed, to examiners to ask questions about the impact of climate risk on solvency. There is also a proposal that came out of conversations with New York to gain a better understanding of how to effectively communicate climate-risk and the role of insurance, resilience and mitigation to elicit behavior change in consumers through presentations. This includes hearing from experts such as the Yale Program on Climate Change Communication, which performs research on how to identify and understand different audiences to more effectively educate and communicate on issues related to climate change. Presentations from insurers, modelers and climate research organizations on the use of products, incentives and technologies that support resilience in the insurance
industry is also proposed. Hearing from the American Academy of Actuaries (Academy) and Center for Insurance and Policy Research (CIPR) on research being done on the NAIC Climate Risk Disclosure Survey responses is also proposed. The final proposal is to better understand through presentations and dialogues how Moody’s and others, including other jurisdictions and the NAIC, incorporate climate risk into analysis and governance practices.

Commissioner Kreidler asked Mr. Rothstein to share his thoughts on the draft work plan. Mr. Rothstein stated he thinks the draft work plan is thoughtful and comprehensive and focuses on gathering information from lots of people. He stated he supports the Working Group gaining more insight on transparency and welcomes the opportunity to support the Working Group going forward.

Commissioner Kreidler stated he thinks webinars on rating agency actions will be important. He stated he has concerns on the reticence of rating agencies to become more engaged on the vulnerabilities associated with climate change.

Mr. Brickwedde noted the NAIC member call on June 25 included discussing the NAIC Climate Risk and Resilience Key Initiative and asked how that may affect the work plan.

Anne Obersteadt (NAIC) stated she was not sure what the agenda item pertained to, but that it was her understanding it would not include Property and Casualty Insurance (C) Committee activities.

Mr. Peterson stated he thinks the draft work plan included good components but considered climate change communication to be particularly important. The connection insurance regulators have with consumers does not often get mentioned, making the proposal to better communicate climate risk to the client very important. Insurance regulators tend to view risk as specific to perils, such as risk by fire zone or flood zone. It makes sense that the Working Group should investigate the potential of communicating broader shifting risks beyond this binary perspective. Commissioner Kreidler agreed on the importance of communicating climate change risk to consumers.

Mr. Snyder asked if there was a way to focus on climate resilience in post-pandemic rebuilding. Mr. Bradner stated the Working Group has discussed the need to work with industry and states on more aggressively adopting building codes and standards. It would be beneficial to get more states to recognize the advantages of the Insurance Institute for Business & Home Safety (IBHS) FORTIFIED program that helps homeowners protect their properties against weather events. The FORTIFIED program is more developed towards hurricane-prone jurisdictions, such as those in the Southeast, but there are still standards in the program that would benefit other regions of the country. State insurance regulators need to become more involved in their sister agencies’ meetings and advocate for industry to join these meetings as well. There is also a need to find data that illustrates the loss prevention savings of building-resilience measures, such as roof taping. This would be helpful in responding to pushback from builders on the additional costs they incur from such practices.

Commissioner Kreidler agreed building resilience should be added to the Working Group work plan. Mr. Bruns instructed NAIC staff to add “supporting insurance regulators resiliency efforts by holding dialogues with industry and other stakeholders on the importance of incorporating IBHS standards and adopting building codes” to the work plan.

Commissioner Kreidler stated Director Ramge recently discussed Nebraska’s activities in this area with him. Several bills have been introduced related to flooding or climate mitigation in response to Nebraska’s flood losses last year. Additionally, cities such as Lincoln, NE, are establishing Climate Resiliency Task Forces focused on mitigating flood and drought impact on agriculture and exploring renewable energy sources. There is also a bipartisan coalition of governors committed to upholding the provisions of the Paris Climate Agreement.

Commissioner Kreidler asked if any member had a concern on the draft work plan. Hearing none, he deemed a consensus on the work plan.

Having no further business, the Climate Risk and Resilience (C) Working Group adjourned.
Date: 5/22/20

Informal Drafting Call of the

CLIMATE RISK AND RESILIENCE (C) WORKING GROUP
Friday, May 22, 2020
2-3 p.m. CT

Summary Report

The informal drafting group of the Climate Risk and Resilience (C) Working Group met by conference call on Friday, May 22, 2020. The following states participated: Washington, Chair; California, Vice Chair; Alaska; Colorado; Illinois; Maryland; Minnesota; Montana; New York; New Mexico; Ohio; Pennsylvania; Puerto Rico; Vermont. The call was led by California.

During the call, the informal drafting group:

1. Discussed revisions to the Insurance Regulatory Frequently Asked Questions (FAQ) that had been implemented based on the Working Group’s March 11, 2020 conference call. (See 3/11/20 summary for specifics.)

2. Discussed additional revisions, including:
   a. Converting the document from public to regulator-only to allow for more robust sharing among states. States would still be able to leverage information from the FAQ for public use, as deemed appropriate.
   b. Revising the “Purpose” language to specify the questions are meant to be a list of potential discussion points for states to consider in crafting their state’s unique response. States are not expected to answer every question.
   c. Move technology related questions (III.F., IV.D., V.G.) to a newly created Technology section.
   d. Create a new section for Managing Overlapping Crises in a Time of Unknown.

3. Discussed post-call revisions
   a. Drafting members are asked to contemplate if additional revisions are needed to ensure the questions are not peril specific.
   b. Drafting members are asked to contemplate what additional questions are needed in the Overlapping Crises section.
   c. Revisions and additions are to be sent to NAIC staff (aubersteadt@naic.org)

4. Discussed information to be shared by drafting members post-call
   a. MN will share material they send to legislators and other public offices on tornadoes, hail and flood risks in their state.
   b. Getting input from TN on the impact of recent tornadoes in a time of COVID would be helpful.

5. Discussed state-specific disaster management activities.
   a. MN works to make consumers in higher risk areas more aware of proactive steps through sharing tools, such as home inventory lists, at community events and through social media, such as sending out consumer awareness tips on spring flooding in the winter.
b. CO partners with PCIAA, emergency managers and others on mitigation actions and standards. They are also developing a webpage devoted to disasters that can be easily shared with others, such as the Red Cross.

c. CO said responding to disasters in rural areas during the pandemic has had a negative impact on how effectively they can respond. Rural evacuations must be made to disaster centers further out, causing substantial dislocation to victims.

d. They have experienced an increase in concurrent and cascading events. Currently, they are contemplating the implications of fire risk and shelter in a time of COVID-19.

e. MD holds a webinar with the P&C industry to discuss regulatory expectations and company actions (like use of new claims technology) during/post catastrophe.
Date: 3/17/20

Informal Drafting Call of the

CLIMATE RISK AND RESILIENCE (C) WORKING GROUP
Wednesday, March 11, 2020
11 a.m. – 12 p.m.

Summary Report

The informal drafting group of the Climate Risk and Resilience (C) Working Group met by conference call on Wednesday, March 11, 2020. The following states participated: Washington, Chair; California, Vice Chair; Colorado; Maryland; Nevada; New Mexico; Oregon; Pennsylvania; Puerto Rico; Vermont. The call was led by California.

During the call, the informal drafting group:

1. Discussed revisions to the Insurance Regulatory Frequently Asked Questions (FAQ) that had been implemented based on the Working Group’s prior conference call. The FAQ aims to be a compilation of questions state insurance regulators find they are frequently being asked related to resiliency efforts and pre/post catastrophe activities.
   a. To address the suggestion the FAQ should be all-peril, rather than wildfire specific:
      i. Reference to the wildland urban interface was deleted from Section I
      ii. Reference to or questions specific to wildfire were deleted from Section III
   b. To address the suggestion questions on insurance coverages and exclusions be added
      i. The title of Section IV was changed to “Insurance Coverage Adequacy and Exclusions”
      ii. A question was added to Section IV asking if post-disaster studies were required to understand the adequacy of insurance coverages
   c. To address the suggestion a residual market section be added
      i. Section VII titled “Residual Market Questions” was added, with further questions to be drafted by the drafting group
      ii. Two questions were added to Section IV asking how recent building code upgrades are and how they are enforced

2. Discussed adding the following revisions:
   a. Add an introduction to describe the perils the FAQ could apply to.
   b. Add a question related to what data is needed to support mitigation incentives and how this data can be obtained.
   c. Add questions for how much is included in the state’s residual market and if there are any exclusions/inclusions to what is covered.
   d. Amend the question under “Insurance Coverage Adequacy and Exclusions” related to insurers’ requirements to provide estimates of replacement cost to include “and the corresponding change in premium resulting from it.”
   e. Add a question for how states work with building departments to adopt required standards for resiliency, such as taped roofs in Connecticut and updated maps in California. Add a question asking how successful or receptive building departments were when approached.
f. Add an Adjuster Licensure category. Add a question requesting the state’s licensure process. Add a question for steps taken to expedite adjuster’s ability to enter catastrophic areas. 

g. Add questions asking if states are required to upgrade to the newest building code and what state regulations trigger a retrofit of a home. 

h. Add a question on how the insurance department works with sister agencies to promote resilience and building standards. 

i. Add a question related to where consumers go if they can’t get coverage in the admitted market. 

j. Add questions related to proximate or concurrent cause issues. 

i. California noted difficulties related to determining if a mudslide was caused by a wildfire or occurred independently. Colorado noted the rule of if a flood or water caused a mud slide are unintelligible. 

ii. Storm surge or flood (wind vs. water) was an issue in Maryland after Hurricane Sandy (likely FL, SC, LA and TX too). 

iii. Colorado noted cancelations due to a second hail claim within a year from two different hail events. 

iv. Colorado, Iowa and New Mexico commented on the lengthy time it can take for damage to show. 

v. Colorado noted issues after the 2017 hail event included vehicle damage estimates taking a year, supply chain issues, issues with contracted adjusters and reliability of hail proof roofs by some manufactures. 

vi. Vermont noted identification of damage from a 2015 hail event was delayed by out-of-town rental property owners. 

3. General discussion 

a. Discussed the importance of the question related to safeguards against abrupt premium increases. Insurers tend to increase rates after a catastrophe and keep them high in good years. Shareholders benefit through high dividends in the good years, but policyholders do not benefit. 

4. Post-call revisions: 

a. Expanded “Purpose” section to function like an introduction 

5. Mitigation section changes: 

a. Added: 

i. Has the insurance department advocated and/or required insurers to offer incentives in the pricing of insurance policies? 

ii. What data is needed to help support resiliency incentives being built into insurance policies? 

iii. What mitigation tactics do insurers employ most frequently? 

iv. What state regulations trigger a retrofit of a home? 

b. Moved to the Insurance Coverage Adequacy and Exclusions section: 

i. Is there any scenario under which a consumer is “guaranteed” offer/renewal of insurance? 

6. Insurance Premiums section changes: 

a. Reordered from V. to IV. for spacing reasons
7. Insurance Coverage Adequacy and Exclusions section changes:
   a. Reordered from IV. to V. for spacing reasons
   b. Modified to include highlighted:
      i. Are insurers required to provide any regularly updated estimate of replacement cost and the corresponding change in premium to consumers?
   c. Added:
      i. Why do some homeowners policies require separate deductibles?
      ii. Is there parametric coverage available in your state for catastrophes? If so, for what coverages?
   d. Moved from the Mitigation section:
      i. Is there any scenario under which a consumer is “guaranteed” offer/renewal of insurance?

8. Rebuilding Restrictions and Requirements section
   a. Expanded the section name to include “and Requirements”
   b. Added:
      i. Are states required to upgrade to the newest building code?

9. Residual Markets section
   a. Added:
      i. Where do consumers go if they are not able to get coverage in the admitted market?
      ii. How much of the insurance coverage provided in your state comes from your residual market?
      iii. Are there exclusions or specified inclusions to what is covered in your residual market?

10. Adjuster Licensure section (new section)
    a. Added:
      i. What is the state licensure process?
      ii. What steps have you taken to expedite adjusters’ abilities to respond to catastrophic events?

11. Insurance Department Interactions with Stakeholders section (new section)
    a. Added:
      i. How does the insurance department help drive resilience efforts across state and local agencies and departments? This includes any work done with: i. Building departments to adopt more resilient standards requirements (such as roof taping); ii. Land use/development departments to implement resiliency into their planning; iii. Emergency management, natural resources, economic development and health agencies
      ii. What successes and challenges did you encounter in these efforts? How did you address the challenges?
      iii. What data is needed to help support adoption of more resilient standards?
      iv. How does the insurance department liaise with regional entities/organizations on resilience?
      v. How does the insurance department leverage outside research and data (such as from educational institutions, federal scientific agencies, etc.) to gather resilience data, upgrade hazard maps, etc.?
      vi. How do insurance departments help consumers and communities address their at-risk assets? What tools are available to help identify risk, estimate the costs and understand the benefits of protection?
vii. What risk-disclosures do regulators require or request from insurers? What is the most common metric used to disclose severity of impact?

12. Post-Catastrophe Regulatory Response section (new section)
   a. Added:
      i. Where there any post-catastrophe regulatory restrictions (such as on claims or underwriting) placed on the business practices of insurers?
      ii. Where there any post-catastrophe regulations that expanded requirements on insurers (such as mandated or retroactive expansion of benefits)?
      iii. Where there any post-catastrophe regulatory fines or actions taken related to compliance violations?
      iv. What proximate cause or concurrent event issues arose from the catastrophe? How did your insurance department handle them?
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call July 16, 2020. The following Working Group members participated: Don Beatty, Chair, and Jessica Baggarley (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); George Bradner and Kristin Fabian (CT); Angela King (DC); Warren Byrd and Tom Travis (LA); Sheri Cullen (MA); Linas Glemza and Rasheda Chairs (MD); LeAnn Cox (MO); Michael McKenney (PA); Matt Gendron (RI); Kathy Stajduhar (UT); Anna Van Fleet and Jamie Gile (VT); and David Forte and Eric Slavich (WA). Also participating were: Ken Williamson (AL); Michele Mackenzie (ID); Brenda Johnson, Heather Droge and Tate Flott (KS); Chris Aufenthie (ND); Tracy Burns (NE); Rick Campbell and Rodney Beetch (OH); Brian Ryder, J'ne Byckovski and Laura Machado (TX); Jody Ullman (WI); and D’Anna Feurt (WY).

1. **Adopted its March 5 Minutes**

Mr. Byrd made a motion, seconded by Mr. Forte, to adopt the Working Group’s March 5 minutes (Attachment Four-A). The motion passed unanimously.

2. **Discussed Section 4 of the Draft Pet Insurance Model Law**

Mr. Beatty said in Section 4—Disclosures of the draft model, there was a suggestion to add a disclosure regarding brand names. He asked if any Working Group member has any suggested language for this disclosure. Mr. Forte said the concern is to make sure the consumer is aware of who the brand name is and who the direct underwriter is. Mr. Byrd agreed with this concern. Mr. Beatty said NAIC staff will work on language for the proposed disclosure.

Mr. Beatty said in Section 4 of the draft model, there was a suggestion to add a disclosure regarding premium rate increases based on the age of the pet and the geographic location of the policyholder. Mr. Forte said this topic has been highly discussed in Washington, and it can be confusing to consumers. Mr. McKenney asked if this disclosure would include the actual rate changes. Mr. Forte said it would just be a general disclosure; the rate could change based on the age of pet or a change in location of the policyholder. Mr. McKenney said these issues are true over many lines of property and casualty insurance; they are not just characteristic of pet insurance. Lisa Brown (American Property Casualty Insurance Association—APCIA) said this disclosure would fit under the existing disclosure A(4). Brendan Bridgeland (Center for Insurance Research—CIR) agreed that this is a cause of confusion for consumers. He said rate changes may not be easily understood by those that do not often purchase insurance; therefore, he agreed with the proposed disclosure. Kate Jensen (North American Pet Health Insurance Association—NAPHIA) said this is an important issue for consumers and state insurance regulators, and it was highlighted in NAPHIA’s consumer document. Mr. Beatty said NAIC staff will work to draft language for the proposed disclosure.

Mr. Beatty said in Section 4 of the draft model, there was a suggestion to change references to the insurer’s website. Ms. Cox said there should be a link on the main page of the insurer’s website that shows disclosures and policy forms for the insured to review prior to purchasing a policy. Mr. Byrd asked if it would link different policy forms and endorsements, and he asked if that would be confusing to the consumer. Ms. Cox said during discussions, some carriers have said they would provide sample policies for each different policy option they offer. Ms. Salat-Kolm said she agreed that it would be helpful to have a visual of the sample policy. Mr. Bridgeland supported Ms. Cox’s proposal to give access to policy documents before purchase. Ms. Jensen asked if these documents would be in addition to the disclosures provided with the policy and available on the insurer’s website. Ms. Cox said it would be a policy or sample policy form before making payment for a policy. She said it would provide consumers the opportunity to compare policy coverages from different companies. Mr. McKenney said he agrees that it is a good idea to provide the opportunity to review a policy before purchase, but requiring insurers to put the documents on their websites may be too much of a burden, especially for companies that write in all 50 states. Ms. Cox said many websites ask for the consumer’s state, and the website should be able to pull policy forms for that specific state. She said there could be a disclosure that policy forms could change depending on state of residence. Mr. McKenney said there are many requirements in this model that do not exist in other lines of property and casualty insurance. He said he did not want to create requirements that keep smaller insurers out of the market. Mr. Bridgeland said since pet insurance is a relatively new product, it would be easier to require it to be more integrated into websites and technology than more established lines of insurance.
Ms. Brown said if a disclosure is added regarding the insurer’s website, then it should read “insurer or insurer’s program administrator’s website.” Mr. Beatty asked if any Working Group members oppose adding “insurer’s program administrator” to references to “insurer” throughout the draft model law. There was no opposition.

Mr. Beatty said in Section 4(D), there was a suggestion to change “usual and customary” to “reasonable and necessary.” Ms. Van Fleet said this change will occur in Vermont no matter what language passes in the model. Mr. Beatty said “reasonable and necessary” might be easier for companies to administer at this time. Ms. Jensen said NAPHIA has not had an opportunity to evaluate this suggestion.

Mr. Beatty said there was a suggestion to change the term “owner” to “insured.” Ms. Salat-Kolm asked to clarify if the insured is the pet or the owner. Mr. McKenney said “named insured” would be the correct term to use. Mr. Forte and Ms. Brown agreed. Mr. Bridgeland asked if the Working Group would consider adding the term “insured” to the definition section (Section 3). Ms. Salat-Kolm asked who would be defined as the insured in that definition. Mr. Forte said it would be the person named on the declaration page.

Mr. Beatty said on previous calls, there was discussion on the inclusion of the free look period in the draft model law. Mr. McKenney said he does not understand the need for a free look period since the consumer can cancel the policy and get a pro-rata refund and the underwriting company does not lose money for the expenses they incurred to write the policy. Mr. Beatty said the model law is requiring a lot of disclosures, so the consumer should be aware of what they are purchasing. Mr. Forte said there is a question of actuarial soundness for the free look period, and he would suggest not including the free look period. Ms. Salat-Kolm said California has a 30-day free look period. She said these are not typical policies, and the consumer does not have the opportunity to talk to an agent. Mr. Bradner said consumers are now able to buy auto and homeowners policies online without talking to an agent. Ms. Salat-Kolm said this is a newer product, and the consumer should have the opportunity to look over the policy. Mr. McKenney said any length of free look period allows the consumer to get back all their money, and that leads to other consumers paying higher premiums for the lost underwriting expenses of the free look period. Ms. Zoller said the free look period already exists in California, and the free look period was proposed by the industry. Mr. Bradner said this section may need to be left to the individual states to decide how to handle. He said he agrees that the free look period contributes to higher premiums for other consumers. Mr. Byrd said there is a concern from the actuarial perspective. He said having access to the policy, as suggested earlier in Section 4, would be a better option than a free look period. Ms. Jensen said a pre-sale evaluation tool will help consumers understand what they are purchasing, and it may help address common concerns that state insurance regulators are hearing.

Mr. Beatty said there was a suggestion to remove Section 4(H)(3). He said he would not want to discourage consumers from contacting state insurance regulators for any reason. Mr. Forte agreed. Mr. Beatty asked if any Working Group members oppose removing this item. There was no opposition.

Mr. Beatty asked for comments on Section 5 and Section 6 of the draft model law to be submitted prior to the Working Group’s next conference call.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call March 5, 2020. The following Working Group members participated: Don Beatty, Chair, Jessica Baggarley, and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Angela King (DC); Warren Byrd (LA); Sheri Cullen (MA); Linas Glemza and Rasheda Chairs (MD); LeAnn Cox (MO); Michael McKenney (PA); Matt Gendron (RI); Kathy Stajduhar (UT); Anna Van Fleet (VT); and David Forte, Eric Slavich and John Haworth (WA). Also participating were: Ken Williamson (AL); Tom Zuppan (AZ); Brenda Johnson and Tate Flott (KS); Troy Smith (MT); Chris Aufenthie (ND); Rodney Beetch (OH); Cuc Nguyen (OK); and Jody Ullman (WI).

1. **Adopted its Feb. 19 Minutes**

The Working Group met Feb. 19 and took the following action: 1) adopted its Dec. 19, 2019, minutes; and 2) discussed Section 4—Disclosures of the draft Pet Insurance Model Act.

Mr. Byrd made a motion, seconded by Mr. Forte, to adopt the Working Group’s Feb. 19 minutes (Attachment Four-A1). The motion passed unanimously.

2. **Adopted Referrals Regarding Data Collection for Pet Insurance**

Mr. Beatty said the Working Group has previously discussed referrals to other working groups to collect data related to pet insurance. He said NAIC staff has drafted a referral to the Market Conduct Annual Statement (D) Working Group to create a line of business for pet insurance in the Market Conduct Annual Statement (MCAS) and a referral to the Market Information Systems Research and Development (D) Working Group to collect complaints data related to pet insurance.

Mr. Forte noted that the MCAS referral should go through the Market Analysis Procedures (D) Working Group.

Mr. Byrd said the recommendation of the need for data collection was pointed out in the *A Regulator’s Guide to Pet Insurance* white paper.

Mr. Gendron made a motion, seconded by Mr. Byrd, to adopt the referral memorandums and move them on to the appropriate working groups (Attachment Four-A2). The motion passed unanimously.

Birny Birnbaum (Center for Economic Justice—CEJ) said there is a process for adding a line of business to the MCAS, and there would need to be a full proposal developed to present to the Market Analysis Procedures (D) Working Group.

3. **Discussed a Draft Supplement to the Annual Financial Statement**

Mr. Beatty said the Working Group has discussed collecting data related to pet insurance through the NAIC annual financial statement. He said NAIC staff has drafted a preliminary supplement to the annual financial statement to collect that data. He asked for comments to be submitted regarding the supplement, and those comments will be discussed during the next Working Group conference call.

4. **Discussed Section 2 and Section 3 of the Draft Pet Insurance Model Act**

a. **Section 2**

Mr. Beatty said in Section 2—Scope and Purpose, of the draft model there was a suggestion to clarify the term “resident.” He said the *Travel Insurance Model Act* (#632) states, “covers any resident of this state.” Mr. Byrd said the language in Model #632 makes sense for this model, as well.

Mr. Gendron said some of the words would need to be changed because it deals with property owned, rather than a person.
Mr. Forte suggested using the language, “policy issued to any resident of this state.”

b. Section 3

Mr. Beatty said that in Section 3—Definitions, there was a question about whether definitions in the model should be prescribed or if the language could be broadened to use definitions that are substantially similar but not less favorable.

Ms. Zoller asked if that language is common in other model laws.

Mr. Beatty said similar language exists with regard to the Interstate Insurance Product Regulation Commission (Compact), that any standards adopted by the Compact be at least as good as NAIC models, and they could not be any less favorable.

Mr. Byrd clarified that the definitions would be no less favorable to the insured.

John Fielding (North American Pet Health Insurance Association—NAPHIA) said that NAPHIA members do like the idea of flexibility with the definitions.

Mr. Forte said the requirement for the information on pet insurance to be on the “main page” of an insurer’s website may be too stringent, and he suggested instead to say, “product site.”

Lisa Brown (American Property Casualty Insurance Association—ACPIA) said in a different section of the model, the language had been changed to include both the insurer and insurer’s program administrator’s site.

Mr. Fielding asked for time to speak with NAPHIA members about where that information would be best found on their web pages so that consumers can easily find the information.

c. Section 3, “Chronic Condition”

Mr. Beatty said there was a request for a clearer definition for “chronic condition.” He asked if the American Veterinary Medical Association (AVMA) had thoughts or suggested language for the definition.

Isham Jones (AVMA) asked for time to submit written comments on the “chronic condition” definition.

Mr. Haworth said the definition should be clear enough to distinguish from acute conditions that also cannot be cured.

Mr. Fielding said this definition is currently in place in California law, and it does not currently cause any problems.

Mr. Beatty said that, after receiving comments, it has been determined that pet insurance policies are not written as true group policies, but they are written similar to affinity policies.

Mr. Fielding said the policies may evolve into group policies, so they do not want to remove language from the model that refers to group policies.

Mr. Byrd asked if it would be better to remove the references to both individual and group, so as not to limit the language.

Mr. Fielding and Mr. Forte agreed with that suggestion.

d. Section 3, “Veterinary Expenses”

Mr. Beatty said there is a suggestion to replace “veterinary expenses” with “eligible expenses” in the definition of pet insurance.

Mr. Fielding said the definition of veterinary expenses is both too broad and too narrow. He said veterinary expenses are not necessarily the only expenses covered under a pet insurance policy. He said there could also be veterinary expenses that are not covered under the policy. He said the term “eligible expenses” better describes what is covered by the policy. He suggested that the definition of pet insurance read as, “an individual or group insurance policy that primarily provides coverage for eligible medical expenses arising from (1) the covered pet’s sickness or (2) an accident involving the covered pet.”

Ms. Zoller asked for an example of an ineligible expense.

Gavin Friedman (Trupanion) said a veterinarian may sell food or toys at the front desk that would not be eligible under the policy.
Mr. Gendron said things like dental cleanings and organ transplants could be excluded as eligible expenses.

Mr. Fielding said there may be exclusions under medical expenses, but there are other expenses that are not medical expenses that are not covered by the policy but not specifically excluded.

Mr. Forte and Mr. McKenney agreed with using the term “eligible expenses.”

Mr. McKenney said the term “veterinary expenses” is too broad.

Ms. Zoller said the language in the current definition does not preclude an insurer from excluding certain expenses.

Ms. Oates asked if some of the policies include wellness programs.

Mr. Gendron said that in Rhode Island, these policies are referred to as indemnity policies.

Mr. Beatty asked for those that do not agree with the proposed definition to submit alternative language.

   e. Section 3, “Preexisting Condition”

Mr. Beatty said the AVMA had suggested using the term “clinical signs” instead of “signs or symptoms.” He said the Working Group should work to make the policy language clear so that the insured is not surprised that a preexisting clinical sign is not covered by the policy.

Mr. Fielding said the phrase clinical signs needs to be clearly understood and defined.

Mr. Byrd asked if clinical signs is more veterinarian based and signs or symptoms is more owner-based.

Mr. Fielding said it is important to make clear that the clinical sign of an injury or illness, even if not seen by a veterinarian, would not be covered under a policy that is purchased after that clinical sign has been observed. He said claim denials based on preexisting conditions are a low percentage of claim denials.

Mr. Forte asked if the industry would be open to the suggestion by the AVMA to change language in the definition of “preexisting condition” from “consistent with” to “related to.” He said that an upset stomach in a dog due to eating something unagreeable could be seen as consistent with signs of a later diagnosis of stomach cancer, even though the two instances are not related.

Mr. Byrd suggested the language, “related to and contemporaneous with the stated condition.”

Mr. Forte agreed with that suggestion.

Mr. Fielding said he will ask NAPHIA members whether they would agree with that language and if the current language has led to issues with claim denials.

   f. Section 3, “Waiting or Affiliation Period”

Mr. Byrd said the term “affiliation period” does not need to be included, as the term “waiting period” covers the meaning of the time period.

Ms. Salat-Kolm said she agreed that it did not need to be included.

The Working Group will continue discussion on the first four sections of the model draft during future conference calls.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Feb. 19, 2020. The following Working Group members participated: Don Beatty, Chair, and Phyllis Oates (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); George Bradner and Kristin Fabian (CT); Angela King (DC); Warren Byrd and Tom Travis (LA); Sheri Cullen (MA); Shirley Corbin and Rasheda Chairs (MD); Carrie Couch and Lockey Travis (MO); Michael McKenney (PA); Elizabeth Kelleher Dwyer, Matt Gendron, and Beth Vollucci (RI); Anna Van Fleet (VT); and David Forte, Eric Slavich and John Haworth (WA). Also participating were: Erick Wright (AL); Vincent Gosz (AZ); Heather Droge (KS); Troy Smith (MT); Chris Aufenthie (ND); Rodney Beetch (OH); Jody Ullman (WI); and Donna Stewart (WY).

1. **Adopted its Dec. 19, 2019, Minutes**

Mr. Byrd made a motion, seconded by Mr. Forte, to adopt the Working Group’s Dec. 19, 2019, minutes (Attachment Four-A1). The motion passed unanimously.

2. **Discussed Section 4 of the Draft Pet Insurance Model Law**

Mr. Beatty asked for those who submitted comments on Section 4—Disclosures to speak to those comments. Ms. Zoller said California law requires policies to disclose the actual insurer name and contact information for that insurer if the policy is sold under a brand name. Mr. McKenney asked if this should be on the declarations page or if it needs to be in a separate disclosure. Ms. Zoller said requiring a separate disclosure page makes the information more visible to the consumer. Mr. McKenney said brand names are commonly used in other lines of business. Ms. Salat-Kolm said the Working Group cares about adequate disclosure. Ms. Zoller said the disclosure needs to be large and clear enough for the consumer to read and understand. Mr. Byrd said there needs to be clear disclosure of who the underwriting entity is and whether it is in the policy or through an endorsement. Mr. Forte said the disclosure allows the consumer to make a proper complaint against the correct company. John Fielding (North American Pet Health Insurance Association—NAPHIA) said any additional disclosures to what is currently in the model law should be included in the “Insurer Disclosure of Important Policy Provisions,” which is provided to the consumer purchasing a new pet insurance policy and posted on the insurer website.

Mr. Forte said it is important to add a disclosure that premiums will increase as the pet ages and that rates are affected based on where the consumer lives. Mr. McKenney said the wording for a disclosure about premium increases should state: “[i]f the premium increases as your pet ages,” because not all pet insurance products currently offered increase the premium due to age. Mr. Fielding said the specificity of the premium increase would change with the type of policy and animal.

Mr. Forte said Washington’s position on free look periods is that it is free insurance and the cost of offering that is absorbed by other policyholders; therefore, he said mention of the free look period should be removed from this model. Mr. Byrd said free look periods are not actuarially sound. Mr. McKenney agreed that the free look period should be removed. Mr. Fielding said NAPHIA has supported the free look period because it is a good way for consumers to look at and understand the policy to the extent that they have not done that at the time of purchasing the policy. Mr. Gendron said the free look period is a common practice in life and annuity insurance, and it acts as consumer protection. Mr. Forte said the cost of the free look policies must be accounted for in the rates of those that do not have free look policies. He also said in the property and casualty lines of business they would commonly be able to cancel the policy and have their unearned premiums returned on a pro-rata basis. Ms. Salat-Kolm asked how much of an increase the free look period would cause to other policy’s rates, and she said if it is negligible, then the free look period should still be included in the model law. Ms. Zoller said the free look period will help consumers that may not know exactly what they are buying, but having strong disclosures will help this problem as well. Mr. Fielding said as soon as a policyholder makes a claim under a policy, then the free look period is ended. Mr. Byrd asked if the free look period is being used in place of correctly marketing the product. Mr. Forte said if a consumer cannot make a claim, then the consumer does not have insurance. Mr. Fielding said the free look period is standard practice on a nationwide basis, apart from one or two states. Mr. McKenney said Pennsylvania does not allow the free look, and this is not comparable to the use of free look in other lines business. Mr. Gendron asked if there is data on whether people have utilized the free look period. Mr. Beatty asked for industry representatives to investigate the experience on the free look period. Ms. Zoller said the requirement to get the policyholder’s signature on the disclosures was too burdensome, which is what led to the free look period.
Mr. Byrd asked for a clarification about the premium payment within the free look period. Mr. Fielding explained that the premium would be fully paid, but if at the end of the free look period the consumer decides they do not want the policy, they would receive a full refund of the premium. Ms. King asked if there was a concern about the administrative costs during the free look period being refunded to the consumer. Mr. Fielding said the industry believes that the free look period is a good idea. Mr. McKenney said there would be expenses associated with issuing the policy, and loss portion would be based on expected value. Ms. King said issues with free look periods have been resolved by requiring pro-rate refunds to cover the expenses. Mr. McKenney said all other lines in property and casualty are handled this way.

Ms. Van Fleet asked if the disclosure requirement regarding premium increases allowed for increases mid-policy or if it applied only at renewal. Mr. Beatty said there would be no intent to permit mid-term increases. Mr. Byrd agreed that this applies only at renewal.

Lisa Brown (American Property Casualty Insurance Association—ACPIA) said she has heard from members that they use program administrators for the pet insurance program, and the language in the model should reflect both insurers and insurer’s program administrators. Mr. Forte agreed with this change.

Mr. Fielding said NAPHIA suggests that the disclosure section should be adjusted so that all the disclosures are listed together, the free look period is discussed in its own section, and the complaints are discussed in their own section. He said under subsection H(2) the language should be changed from “delivering or mailing” to “notifying in writing.” He said in subsection H(2)(a), the second sentence should be deleted, as it is redundant.

Mr. Forte said the Working Group’s submitted comments about group insurance have been previously discussed. Mr. Beatty asked for clarification on the offering of group pet insurance as an employee benefit. Mr. Fielding said he is not aware of group policies that are underwritten on an individual basis. Ms. Brown said as an employee benefit, the policies are offered for purchase to all employees, with a flat rate and no individual underwriting. Mr. Forte said in Washington, policies are labeled as employee benefit group policies, but they are individual policies with a discount for being an employee.

Ms. Zoller said the language in subsection H(2) should be clarified regarding the owner and the insured. She said the language in subsection I(3) may no longer be necessary in the model and could be removed.

The Working Group will continue discussion on the first four sections of the model draft during future conference calls.

Having no further business, the Pet Insurance (C) Working Group adjourned.
The Pet Insurance (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Nov. 7, 2019. The following Working Group members participated: Don Beatty, Chair, and Jessica Baggarley (VA); Kendra Zoller, Vice Chair, and Risa Salat-Kolm (CA); Kristin Fabian (CT); Warren Byrd (LA); Sheri Cullen (MA); Shirley Corbin (MD); LeAnn Cox (MO); Elizabeth Kelleher Dwyer, Matt Gendron and Beth Vollucci (RI); Anna Van Fleet and Jessica Sherpa (VT); and David Forte and Eric Slavich (WA). Also participating were: Heather Droge (KS); Chris Aufenthie (ND); Anna Krylova (NM); Rodney Beetch (OH); Brian Fordham (OR); Kathy Stajduhar (UT); Jody Ullman (WI); and Donna Stewart (WY).

1. Discussed Section 3 of the Draft Pet Insurance Model Law

Mr. Beatty asked for those who submitted comments on Section 3—Definitions to speak to those comments. Ms. Sherpa said in reference to Section 3E—Preexisting Condition, it would be more objective to have a preexisting condition be something that somebody received care for by a veterinarian as opposed to putting the onus on the owner to recognize signs or symptoms they are not trained to recognize. John Fielding (North American Pet Health Insurance Association—NAPHIA) said NAPHIA supports the current definition, but the end of the definition needs to change from “waiting period” to “waiting or affiliation period.” He said the current definition has worked in California, and there is a concern that tightening down the definition would increase the cost of the pet insurance policy. Lynne Hennessey (Nationwide Insurance) said the proposed change by Ms. Sherpa could increase the chance for policyholder fraud. Mr. Byrd said those instances of fraud would decrease the carrier’s rate of return and, therefore, increase the price for the consumer. He said there had been mention of a baseline medical exam required at policy inception. Ms. Baggarley said Virginia is seeing a growing number of policies that require an exam soon after policy inception. Ms. Sherpa said the carrier could require a recent examination of the animal for consideration of writing the policy. Mr. Fielding said the requirement of an exam prior to underwriting could be a disincentive for buying insurance. He said there is a robust disclosure requirement in the model to require that policy purchasers know what the preexisting conditions are. Superintendent Dwyer asked how often there are denials based on preexisting conditions that have not been treated by a veterinarian. Mr. Beatty said it would be helpful to know that answer before the Working Group decides on the changes to this definition. Isham Jones (American Veterinary Medical Association—AVMA) said multiple conditions can result in the same clinical signs, which should be considered when talking about preexisting conditions. Gail Golab (AVMA) said this could be a concern for those looking to purchase pet insurance that their claim may be denied because clinical signs due to a preexisting condition can reappear due to another condition. She said that the references to symptoms should be changed to “clinical signs.”

Lisa Brown (American Property Casualty Insurance Association—ACPIA) said APCIA has at least one member company that writes pet insurance on a group basis as an employee benefit. Ms. Zoller said MetLife is doing group pet insurance policies through an employer. Mr. Forte said that just because industry already writes group policies does not mean it should be included in the model. He said as a Working Group, they should discuss what would happen if a customer leaves his or her employer but still needed the pet insurance product. He said many states have adopted inland marine definitions, and group coverage would conflict with that definition. Mr. Beatty said he believes they have group policy in property/casualty (P/C) lines. Mr. Fielding confirmed at least eight states have group policy filings in P/C lines. Mr. Beatty said the Working Group could consider a drafting note for including group policies.

Mr. Fielding suggested taking out the California-specific legislation language in Section 3F—Veterinarian. Mr. Beatty said the Working Group would make that change to the model.

Ms. Sherpa said the definition in Section 3G—Veterinary Expenses should include fees, as currently many policies exclude fees that the policyholder would not be able to control. Mr. Gendron asked if that could be addressed in the balance billing section of the model. Ms. Brown said the comment from Ms. Sherpa could be addressed by using the suggestion from Mr. Fielding and NAPHIA that the model should use the term “eligible expenses” instead of “veterinary expenses.” Ms. Zoller asked for examples of other expenses. Ms. Brown said member companies reported expenses from services that may not be provided by the veterinarian but was suggested by the veterinarian, such as behavioral therapies and specialized dog foods. Ms. Sherpa said she does not believe the definition of veterinary expenses precluded a company from offering more benefits. Ms. Brown said the definition currently covers only expenses associated with treatment provided by a veterinarian. Ms. Brown
suggested changing the language to “provided, prescribed or suggested by a veterinarian.” Ms. Zoller asked how the insured would prove an expense that was not specifically prescribed. Gavin Friedman (Trupanion) said the recommendation would be included in the medical records. Ms. Golab suggested changing “provided” to “recommended.” Mr. Gendron asked if the file would identify recommendations from veterinarians. Ms. Golab said the AVMA would encourage veterinarians to put all treatment suggestions into the patient file.

Mr. Fielding said the current definition may be limiting what expenses are covered by pet insurance. He recommended using the term “eligible expenses” and then disclose what is and is not covered in the policy. Superintendent Dwyer said they are currently addressing an issue with a company providing a wellness plan that the company does not believe is an insurance policy. She said that by not defining the expenses, it may leave open the interpretation of what pet insurance is. Ms. Brown suggested adding “which shall include treatment provided, prescribed or suggested by a veterinarian” to Section 3D—Pet Insurance.

The Working Group will continue discussion on these sections during future conference calls.

Having no further business, the Pet Insurance (C) Working Group adjourned.
MEMORANDUM

TO: Market Information Systems Research & Development (D) Working Group
FROM: Pet Insurance (C) Working Group
DATE: February 19, 2020
RE: Collection of Complaints Data for Pet Insurance

The Pet Insurance (C) Working Group has identified that state regulators need to understand the type and volume of complaints received for the pet insurance line of business.

Pet insurance data is currently provided to the NAIC and state insurance departments under the inland marine line of business. With growing company participation and a large potential market of consumers, the Pet Insurance (C) Working Group sees the need to collect pet insurance data separate from the inland marine line.

The Working Group requests that the Market Information Systems Research & Development (D) Working Group consider adding a code allowing for the separate collection of pet insurance complaints within the Market Information Systems’ Complaint Database System.

If you have any questions regarding this referral, please contact NAIC staff (Aaron Brandenburg abrandenburg@naic.org and Libby Crews ecrews@naic.org).

If you have any questions regarding this referral, please contact NAIC staff (Aaron Brandenburg abrandenburg@naic.org and Libby Crews ecrews@naic.org).

MEMORANDUM

TO: Market Conduct Annual Statement Blanks (D) Working Group
FROM: Pet Insurance (C) Working Group
DATE: February 19, 2020
RE: Collection of MCAS Data for Pet Insurance

The Pet Insurance (C) Working Group and state insurance regulators have a need to understand the market for the pet insurance line of business, including information related to number of policies, claims handling and other market behavior.

Market related data for pet insurance is not currently collected through the Market Conduct Annual Statement (MCAS). The Working Group requests that the Market Conduct Annual Statement Blanks (D) Working group consider developing a data collection worksheet and instructions for the purpose of collecting pet insurance data through MCAS.

If you have any questions regarding this referral, please contact NAIC staff (Aaron Brandenburg abrandenburg@naic.org and Libby Crews ecrews@naic.org).

W:\National Meetings\2020\Spring\Cmte\C\PetInsWG\2-10-20 PIWG Referral to MCAS.docx
Terrorism Insurance Implementation (C) Working Group
Virtual Summer National Meeting
July 31, 2020

The Terrorism Insurance Implementation (C) Working Group of the Property and Casualty Insurance (C) Committee met virtually July 31, 2020. The following Working Group members participated: Martha Lees, Chair (NY); Joanne Bennett (AK); Ken Allen (CA); Rolf Kaumann (CO); George Bradner (CT); Angela King (DC); Virginia Christy (FL); Judy Mottar (IL); Heather Droge (KS); Matthew Mancini (MA); Cynthia Amann and Jeana Thomas (MO); Fred Fuller (NC); Carl Sornson (NJ); Cuc Nguyen (OK); Jan Vitus (OR); Beth Vollucci (RI); J’ne Byckovski (TX); David Provost (VT); and Rebecca Nichols (VA).

1. Adopted its March 12 Minutes

The Working Group met March 12 to adopt its Feb. 11 minutes, model bulletin and policyholder disclosures.

Mr. Bradner made a motion, seconded by Ms. Nguyen, to adopt the Working Group’s March 12 minutes (Attachment Five-A). The motion passed unanimously.

2. Heard an Update on the 2020 State Regulator Terrorism Risk Insurance Data Call

Ms. Lees provided an update on the 2020 state regulator terrorism risk insurance data call. She said as in prior years, state regulators issued a joint data call with the U.S. Department of the Treasury (Treasury Department) with data due May 15. She said there were minor changes to the data call, including collecting some information about terrorism insurance for places of worship. Ms. Lees said the NAIC is reviewing the data filed before conducting analysis.

Ms. Lees said the State Supplement was revised in 2019 to greatly simplify the data requested. She said no changes were made for the 2020 State Supplement. She said the letter requesting data for the State Supplement was sent to all insurers on July 1, and data is due Sept. 30.

3. Received an Overview of Data Related to Workers’ Compensation Terrorism Risk

Aaron Brandenburg (NAIC) reported on terrorism risk insurance data concerning workers’ compensation. He said data for the workers’ compensation portion of the data call was received from the National Council on Compensation Insurance (NCCI) and independent bureaus for the 47 non-monopolistic states. Data for 2017 was due to state insurance regulators by March 1, 2020.

The percentage of workers’ compensation policies that have an explicit terrorism charge has fallen slightly, from a little more than 84% in 2011 to about 82.4% in 2017. This means about 17% to 18% of policies cover workers’ compensation terrorism coverage for no charge. The Northeast Zone had the highest percentage of workers’ compensation policies with an explicit charge for terrorism risk.

The analysis next looked at the percentage of the terrorism premium as compared to the total earned premium for policies indicating an explicit terrorism charge. This percentage fell slightly, from about 1.4% in 2011 to 1.3% in 2017, although this percentage rose in the most recent year. The District of Columbia had the highest percentage, with more than 9% of the premium being a terrorism charge. This percentage has fallen slightly since 2015. The Northeast Zone had the highest percentage of terrorism premium compared to the total earned premium for policies indicating an explicit terrorism charge.

The average terrorism premium per policy has risen slightly, from $171 in 2011 to $187 in 2017. The average terrorism premium when there is an explicit charge rose from $210 in 2011 to $227 in 2017. The Northeast Zone had the highest average terrorism premium in the period 2011–2017.

When looking at payroll categories, only the lowest payroll category had fewer than 89% of policies with an explicit terrorism charge. The terrorism premium moved up substantially as the payroll category grew higher. Terrorism premium for
insureds with a payroll category greater than $5 million experienced a drop in average premium of nearly 10% from 2011 to 2017.

4. Received an Overview of Terrorism Data from the 2019 State Supplement

Mr. Brandenburg said the State Supplement portion of the state regulator terrorism risk insurance data call collects ZIP code level data and has had data quality issues in the past. He said the granularity of the data requested was reduced in 2019 and led to better quality data, although some insurers did still struggle with submitting exposure data.

Analysis was presented showing key metrics for several states. The take-up rate across all business lines for New York was 78% for 2018. This is a slight reduction from the prior year. The percent of premium paid was about 7.4%. Most terrorism premium shows up in commercial multi-peril followed by commercial fire and allied lines for New York. Most insurers do show a very high take-up rate, with most insurers above 90%. For California, the take-up rate was 69% and fell slightly from the prior year, with 6.6% of premium being for terrorism risk. Texas showed a take-up rate of 61%, which was a large increase from the prior year. The percent of premium for terrorism coverage was 3.6% for Texas. Missouri had a take-up rate of 71%, which was a large increase from the prior year. The percent of premium for terrorism coverage was about 5% for Missouri.

Mr. Brandenburg also presented an analysis tool that was created for state insurance regulators. He said it will soon be available on iSite. He said it will allow state insurance regulators to access the raw data so comparisons can be made more easily at a ZIP code level for several metrics.

Mr. Brandenburg showed that numerous metrics can be shown at a ZIP code level on a colored map. Those metrics include take-up rate, exposures at risk, average terrorism premium per $1000 of exposure and percent of terrorism exposures covered. Differences in these metrics were shown throughout the state of New York.

Having no further business, the Terrorism Insurance Implementation (C) Working Group adjourned.
Terrorism Insurance Implementation (C) Working Group
Conference Call
March 12, 2020

The Terrorism Insurance Implementation (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call March 12, 2020. The following Working Group members participated: Martha Lees, Chair (NY); Joanne Bennett (AK); Susan Stapp (CA); Rolf Kaumann (CO); Angela King (DC); Heather Droge (KS); Matthew Mancini (MA); Jeana Thomas (MO); Timothy Johnson (NC); Jan Vitus (OR); Mark Worman and J’ne Byckovski (TX); and David Provost (VT).

1. **Adopted its Feb. 11 Minutes**

The Working met Feb. 11 and took the following action: 1) adopted its 2019 Fall National Meeting minutes; 2) discussed the status of the 2020 data call; 3) discussed updates to the federal Terrorism Risk Insurance Act (TRIA) model bulletin and policyholder disclosures.

Ms. Vitus made a motion, seconded by Ms. Bennett, to adopt the Working Group’s Feb. 11 minutes (Attachment Five-A1). The motion passed unanimously.

2. **Adopted the TRIA Model Bulletin and Policyholder Disclosures**

Ms. Lees explained that the changes agreed to during the Feb. 11 conference call were made to the most recent draft of the TRIA model bulletin and policyholder disclosures. She said the Background section: 1) changed the description of the reauthorized acts to include 2019; 2) eliminated the 2015 changes in the bullets; and 3) described the few changes in the Terrorism Risk Insurance Program Reauthorization Act of 2019 (TRIPRA).

Ms. Lees noted that under “Submission of Rates, Policy Form Language and Disclosure Notices,” two paragraphs were eliminated describing the lapse in the previous act and the expedited NAIC System for Electronic Rate and Form Filing (SERFF) filing transmittal documents. An edit was made to say that SERFF can be used for revised terrorism product filings in support of speed to market initiatives, rather than for expedited review.

Ms. Lees said the policyholder disclosures were edited to eliminate references to dates prior to 2020.

Ms. Vitus noted that the policyholder disclosures inadvertently eliminated the reference to when the current federal share came into effect. She also said the model bulletin should note that the 80% federal share is now fixed.

Aaron Brandenburg (NAIC) said the Working Group had originally decided to only note the changes that occurred in TRIPRA 2019.

Robert Woody (American Property Casualty Insurance Association—APCIA) said that because there is no longer a sliding scale for the federal compensation portion, the model bulletin should note that this 80% figure is now fixed. The Working Group agreed to add a bullet-point item indicating that the U.S. government reimbursement level of covered terrorism losses exceeding the statutorily established deductible is now, as of Jan. 1, 2020, a fixed 80%.

Ms. Vitus said she sent in written comments regarding insurers that file in standard fire states. She said if the cause of loss is fire, then limits will be paid up to the limits. She asked if there should be a policyholder notice as an example with consistent language for the industry to use.

Ms. Lees noted that the model bulletin mentions an optional provision for standard fire states.

Stephen C. Clarke (Insurance Services Office—ISO) cautioned against adding a policyholder notice related to standard fire policy states. He said the standard fire policy does present unique issues to consider. He said the ISO has built into its forms with terrorism exclusions policy provisions that deal with the fact that standard fire policies may affect losses caused by fire. He said exceptions do not apply across the entire policy. For example, if the policy covers extra expenses or business income, even under the commercial policy, the standard fire policy does not traditionally extend to those coverages at all. Out of
states with standard fire policies, there are many ways it applies. Mr. Clarke said some states have standard fire policies that do not apply to commercial coverage in marine policies.

Mr. Clarke said a notice may delay release of the model bulletin and a notice that does not include all the state differences may add to confusion. He noted that the policyholder notice satisfies the requirement that insurers advise policyholders of government participation and the cost.

Ms. Vitus agreed, and she said Oregon will address its specific details in its own model bulletin.

Ms. Byckovski pointed out a grammatical correction noting that “this Annual Report” should be changed to “the Secretary’s Annual Report.”

Mr. Kaumann made a motion, seconded by Mr. Mancini, to adopt the TRIA model bulletin and policyholder disclosures with the edits agreed to during the meeting (Attachment Five-A2). The motion passed.

Having no further business, the Terrorism Insurance Implementation (C) Working Group adjourned.
The Terrorism Insurance Implementation (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call Feb. 11, 2020. The following Working Group members participated: Martha Lees, Chair (NY); Joanne Bennett (AK); Susan Stapp (CA); Peter Galasyn (CT); Angela King (DC); Virginia Christy (FL); Keith Fanning (IL); Matthew Mancini (MA); Brent Kabler (MO); Bill Horner (NJ); Timothy Johnson (NC); Cuc Nguyen (OK); Jan Vitus (OR); Beth Vollucci (RI); and J’ne Byckovski (TX). Also participating was: Maureen Motter (OH).

1. Adopted its 2019 Fall National Meeting Minutes

Mr. Galasyn made a motion, seconded by Mr. Mancini, to adopt the Working Group’s Dec. 8, 2019, minutes (see NAIC Proceedings – Fall 2019, Property and Casualty Insurance (C) Committee, Attachment Six). The motion passed unanimously.

2. Discussed the Status of the 2020 Data Call

Ms. Lees said the New York State Department of Financial Services sent a letter to the National Council on Compensation Insurance (NCCI) and independent bureaus on Jan. 30 asking for updated 2017 workers’ compensation data related to terrorism coverage. This data is due by March 1, and NAIC staff plan to provide an overview of the data at the Spring National Meeting.

Ms. Lees said the U.S. Department of the Treasury (Treasury Department) is working on revisions to the joint state insurance regulator/Treasury Department data call template. The data template will be posted on the NAIC website when available, and companies will be asked to submit data by May 15 to the New York portal, as they have in the past. The state supplement data will be due Sept. 30.

3. Discussed Updates to the TRIA Model Bulletin and Policyholder Disclosures

Ms. Lees said state insurance regulators issued a model bulletin in 2015 concerning filing procedures for compliance with the provisions of the federal Terrorism Risk Insurance Program Reauthorization Act of 2015. Many changes were made to the federal Terrorism Risk Insurance Act (TRIA) in 2015, and the Terrorism Risk Insurance Program (Program) had a brief lapse at the end of 2014.

Ms. Lees said the Terrorism Risk Insurance Program Reauthorization Act of 2019 was adopted in late 2019, well in advance of the Program’s expiration in December 2020. The reauthorized act (2019 Act) changed the termination date of the Program from Dec. 31, 2020, to Dec. 31, 2027. There were also changes to Section 103 having to do with timing of the mandatory recoupment that changed each referenced year by moving the date back five years. Two new reports were called for in the 2019 Act. The first is an evaluation of the availability and affordability of terrorism risk insurance, specifically for places of worship. The second is a study on overall vulnerabilities and potential costs of cyber attacks on the U.S., whether state-defined cyber liability under a property/casualty (P/C) line of insurance is adequate coverage for an act of cyber terrorism, whether such risks can be adequately priced by the private market, and whether the current risk-share systems under TRIA are appropriate for a cyber terrorism event.

Aaron Brandenburg (NAIC) reviewed the 2015 model bulletin, noting possible changes to: 1) the subject line noting the year of the 2019 Act; 2) the name of the 2019 Act in the first paragraph; 3) updates to the history of reauthorization bills under “Background”; and 4) updates describing changes made in the 2019 Act under “Background.”

The Working Group agreed that no changes were needed to the section of the model bulletin describing the definition of terrorism. The Working Group reviewed language related to expedited filings. Because the act was reauthorized well in advance of expiration, the Working Group agreed that there was not a need for expedited filings. However, the Working Group agreed that the NAIC System for Electronic Rate and Form Filing (SERFF) should allow for a designation of “TRIA2019” to be used in the product name field to indicate a filing related to terrorism made in connection with the 2019 Act.
Ms. Nguyen asked whether states were having insurers file under the line of business of the underlying policy.

Ms. Vitus said Oregon requires filings under the line of business of the underlying policy.

Ms. Motter said state insurance regulators are only expecting to receive policyholder disclosures, so perhaps a drafting note would be needed to indicate whether a state allows interline filings in order to limit the number of filing submissions.

Ms. Nguyen said Oklahoma will request filings by line of business.

Ms. King said this could be indicated within SERFF instructions instead of within the model bulletin.

Ms. Nguyen said Oklahoma could change the SERFF instructions, if that is how other states are handling it.

Ms. Motter said if state insurance regulators anticipate just policyholder disclosures, perhaps states would want just interline filing submissions so there is only one filing with the policyholder disclosures.

Ms. Vitus said Oregon gets filings with endorsement forms as well.

Steve Clarke (Insurance Services Office—ISO) said states may receive endorsement filings because one way to disclose is by a notice, but another way is through an endorsement or rules filings.

Ms. Motter said SERFF will allow for the identification of speed to market filings.

Ms. Motter said in the past, insurers were filing conditional as well as post-TRIA endorsements. She said the state position is the same as pre-TRIA in that in a post-TRIA world, the only permissible exclusions would be those that are now permitted for noncertified acts of terrorism. She said there was pushback from insurers that in a post-TRIA world with an expired bulletin, insurers could do whatever they wanted.

Ms. Vitus said she would like to see something address what to do in a post-TRIA environment.

Bob Woody (American Property Casualty Insurance Association—APCIA) noted that in a post-TRIA environment, many changes would be needed regarding how insurance coverage for terrorism would work. He said it does not seem helpful to anticipate those changes with this model bulletin, as the model bulletin should focus on the 2019 Act and changes to the Program. He said when dealing with a noncertified act of terrorism, the definition of such an act within the policy would apply.

Mr. Clarke said the ISO’s program has terrorism exclusions with a detailed definition that applies to noncertified acts. He said the model bulletin should focus on the 2019 Act alone. He said conditional and post-TRIA exclusions have existed since 2004. Ms. Motter said the issue is not urgent but as 2027 gets closer with a potential expiration of the Program, state insurance regulators could prepare for post-TRIA and conditional endorsements.

The Working Group agreed to make changes to the policyholder disclosures to eliminate references to government reimbursement percentages prior to 2020.

Mr. Brandenburg said he would make changes to the model bulletin as discussed during the conference call and distribute a revised model bulletin within two weeks.

Ms. Lees said the Working Group would then consider adoption of the TRIA model bulletin and policyholder disclosures during a conference call or at the Spring National Meeting.

Having no further business, the Terrorism Insurance Implementation (C) Working Group adjourned.
MODEL BULLETIN

TO: ALL PROPERTY AND CASUALTY INSURERS WRITING COMMERCIAL LINES INSURANCE PRODUCTS
ALL INSURERS ON THE NAIC QUARTERLY LISTING OF ALIEN INSURERS

RE: FILING PROCEDURES FOR COMPLIANCE WITH THE PROVISIONS OF THE TERRORISM RISK INSURANCE PROGRAM REAUTHORIZATION ACT OF 2019

FROM: [Insert name and title]

DRAFTING NOTE: This bulletin was drafted to expedite the delivery of a common message to insurers related to implementation issues that have developed as a result of the extension of the Terrorism Risk Insurance Act. The basic bulletin recognizes that most jurisdictions have allowed some coverage limitations related to non-certified acts of terrorism that are affected by the reauthorization of the Act. A few jurisdictions have not generally allowed coverage limitations related to other acts of terrorism. Each state needs to review the provisions of the bulletin as they relate to the Act and to existing state regulatory requirements and determine which of its provisions relate to their specific situation. Please note that states might wish to distinguish between filing requirements that apply to admitted insurers and those applicable to surplus lines insurers.

The purpose of this bulletin is to advise you of certain provisions of the Terrorism Risk Insurance Program Reauthorization Act of 2019 amending and extending the Terrorism Risk Insurance Act of 2002 (the Act) by reauthorization, which may require insurers to submit a filing in this state of disclosure notices, policy language, and applicable rates as a result of the Act. For further details related to the Act, please consult the Act itself.

Background

Uncertainty in the markets for commercial lines property and casualty insurance coverage arose following the substantial loss of lives and property experienced on September 11, 2001. Soon after these tragic events, many reinsurers announced that they would no longer provide coverage for acts of terrorism in future reinsurance contracts. This led to a concerted effort on behalf of all interested parties to seek a federal backstop to facilitate the ability of the insurance industry to continue to provide coverage for these unpredictable and potentially catastrophic events. As a result, Congress enacted and the President signed into law in November 2002, the Terrorism Risk Insurance Act of 2002. This federal law provided a federal backstop for defined acts of terrorism and imposed certain obligations on insurers. The Act was extended for a two-year period covering Program Years 2006 and 2007, and for an additional seven years through December 31, 2014 with the enactment of the Terrorism Risk Insurance Program Reauthorization Act of 2007. The Act was extended again with the enactment of the Terrorism Risk Insurance Program Reauthorization Act of 2015, which made substantial changes to the program parameters, including to the insurer deductible, the mandatory recoupment percentage, and the insurance marketplace aggregate retention amount. Most recently, the Act was extended through 2027 with the enactment of the Terrorism Risk Insurance Program Reauthorization Act of 2019, which made no major changes to the parameters of the program.

The reauthorized Act, as amended and extended, contains minimal changes, including:

- Extending the program through December 31, 2027.
- Changing the timing of the mandatory recoupment by moving the date of each referenced year back five years.
- Requiring the Secretary of the Treasury to include in the Secretary’s annual report an evaluation of the availability and affordability of terrorism risk insurance, including specifically for places of worship.
• Requiring the Comptroller General of the United States to conduct a study on: overall vulnerabilities and potential costs of cyber attacks on the U.S.; whether state-defined cyber liability under a property/casualty (P/C) line of insurance is adequate coverage for an act of cyber terrorism; whether such risks can be adequately priced by the private market; and whether the current risk-share systems under TRIA are appropriate for a cyber terrorism event.

• Eliminating outdated language relating to past United States Government reimbursement levels. The reimbursement level of covered terrorism losses exceeding the statutory established deductible is now (as of January 1, 2020) a fixed 80%.

**Definition of Act of Terrorism**

Section 102(1) defines an act of terrorism for purposes of the Act. Please note that the unmodified reference to “the Secretary” refers to the Secretary of the Treasury. The revised Section 102(1)(A) states, “The term ‘act of terrorism’ means any act that is certified by the Secretary, in consultation with the Secretary of Homeland Security, and the Attorney General of the United States—(i) to be an act of terrorism; (ii) to be a violent act or an act that is dangerous to—(I) human life; (II) property; or (III) infrastructure; (iii) to have resulted in damage within the United States, or outside the United States in the case of—(I) an air carrier or vessel described in paragraph (5)(B); or (II) the premises of a United States mission; and (iv) to have been committed by an individual or individuals, as part of an effort to coerce the civilian population of the United States or to influence the policy or affect the conduct of the United States Government by coercion.” Section 102(1)(B) states, “No act shall be certified by the Secretary as an act of terrorism if—(i) the act is committed as part of a war declared by the Congress, except that this clause shall not apply with respect to any coverage for workers’ compensation; or (ii) property and casualty insurance losses resulting from the act, in the aggregate, do not exceed $5,000,000.” Section 102(1)(C) and (E) specify that the determinations are final and not subject to judicial review and that the Secretary of the Treasury cannot delegate the determination to anyone.

**Submission of Rates, Policy Form Language and Disclosure Notices**

If an insurer relies on an advisory organization to file loss costs and related rating systems on its behalf, no rate filing is required unless an insurer plans to use a different loss cost multiplier than is currently on file for coverage for certified losses. Insurers that develop and file rates independently may choose to maintain their currently filed rates or submit a new filing. The rate filing should provide sufficient information for the reviewer to determine what price would be charged to a business seeking to cover certified losses. This state will accept filings that contain a specified percentage of premium to provide for coverage for certified losses. Insurers may also choose to use rating plans that take into account other factors such as geography, building profile, proximity to target risks, and other reasonable rating factors. The insurer should state in the filing the basis that it has for selection of the rates and rating systems that it chooses to apply. The supporting documentation should be sufficient for the reviewer to determine whether the rates are excessive, inadequate or unfairly discriminatory. For the convenience of insurers, this state will waive its requirements for supporting documentation for rates for certified losses for filings that apply an increased premium charge of between 0% and [insert percentage of premium]% and do not vary by application of other rating factors.

**DRAFTING NOTE:** Your state may find that it is in its best interest to waive supporting documentation requirements for filings within a specified range. If not, the last sentence should be eliminated.

**DRAFTING NOTE:** In past bulletins, some states included language similar to what is in the following paragraph concerning non-certified acts. Your state may wish to evaluate whether such language is needed.

This state will not allow exclusions of coverage for acts of terrorism that fail to be certified losses solely because they fall below the $5,000,000 threshold in Section 102(1)(B) on any policy that provides coverage for acts of terrorism that fail to be certified. Insurers required to file policy forms may submit language containing coverage limitations for certified losses that exceed $100 billion in the aggregate.

Insurers subject to policy form regulation must submit the policy language that they intend to use in this state. The policy should define acts of terrorism in ways that are consistent with the Act, as amended, state law and the guidance provided in this bulletin. The definitions, terms and conditions should be complete and accurately describe the coverage that will be provided in the policy. Insurers may conclude that current filings are in compliance with the Act, as amended, state law and the requirements of this bulletin.

**DRAFTING NOTE:** Additional filings may be necessary under state law.
A change introduced in the Terrorism Risk Insurance Program Reauthorization Act of 2007 was a disclosure requirement for any policy issued after the enactment of the Act. Specifically, in addition to other disclosure requirements previously contained in TRIA, insurers since 2007 have had to provide clear and conspicuous disclosure to the policyholder of the existence of the $100 billion cap under Section 103(e)(2), at the time of offer, purchase, and renewal of the policy.

The [insert applicable term—commissioner, director, superintendent, insurance administrator] requests that the disclosure notices be filed for informational purposes, along with the policy forms, rates and rating systems as they are an integral part of the process for notification of policyholders in this state and should be clear and not misleading to business owners in this state. The disclosures should comply with the requirements of the Act, as amended, and should be consistent with the policy language and rates filed by the insurer.

*Drafting Note: Your state may require disclosure notices be filed as a policy form, and not for informational purposes. If so, the second to the last sentence should be modified to eliminate the reference to informational purposes.*

**For states mandating SERFF:**
Filers should use the SERFF system for submitting revised terrorism product filings. In support of speed to market initiatives, filers should use the term “TRIA2019” in the product name field in SERFF to indicate a filing related to terrorism made in connection with the Terrorism Risk Insurance Program Reauthorization Act of 2019. The SERFF system alleviates the need to provide additional information in support of a speed to market tool, although some states may have additional requirements.

**For other states:**
We encourage filers to take advantage of the SERFF system for submitting revised terrorism product filings. Filers should use the term “TRIA2019” in the product name field in SERFF to indicate a filing related to terrorism made in connection with the Terrorism Risk Insurance Program Reauthorization Act of 2019. The SERFF system alleviates the need to provide additional information in support of a speed to market tool, although some states may have additional requirements.

**Optional Provision for Standard Fire Policy States**

*Drafting Note: This is an optional section for those states that have a statutory Standard Fire Policy that does not permit terrorism exclusions. States should also consider whether their Standard Fire Policy includes or excludes commercial inland marine coverages and inform insurers concerning this subject.*

In this state, the requirements for fire coverage are established by law and where applicable, must meet or exceed the provisions of the Standard Fire Policy. These legal requirements cannot be waived. Thus, a business cannot voluntarily waive this statutorily mandated coverage.

**Provision for Workers’ Compensation Policies**

Workers’ compensation insurance coverage is statutorily mandated for nearly all U.S. employers and exemptions are barred in all states. Thus, a business cannot voluntarily waive workers’ compensation insurance (or terrorism coverage provided by a workers’ compensation insurance policy), nor can an insurer exempt terrorism risk from a workers’ compensation policy.

**Effective Date**

This bulletin shall take immediate effect and shall expire on December 31, 2027, unless Congress extends the duration of the Act.
POLICYHOLDER DISCLOSURE NOTICE OF TERRORISM INSURANCE COVERAGE

You are hereby notified that under the Terrorism Risk Insurance Act, as amended, you have a right to purchase insurance coverage for losses resulting from acts of terrorism. As defined in Section 102(1) of the Act: The term “act of terrorism” means any act or acts that are certified by the Secretary of the Treasury—in consultation with the Secretary of Homeland Security, and the Attorney General of the United States—to be an act of terrorism; to be a violent act or an act that is dangerous to human life, property, or infrastructure; to have resulted in damage within the United States, or outside the United States in the case of certain air carriers or vessels or the premises of a United States mission; and to have been committed by an individual or individuals as part of an effort to coerce the civilian population of the United States or to influence the policy or affect the conduct of the United States Government by coercion.

YOU SHOULD KNOW THAT WHERE COVERAGE IS PROVIDED BY THIS POLICY FOR LOSSES RESULTING FROM CERTIFIED ACTS OF TERRORISM, SUCH LOSSES MAY BE PARTIALLY REIMBURSED BY THE UNITED STATES GOVERNMENT UNDER A FORMULA ESTABLISHED BY FEDERAL LAW. HOWEVER, YOUR POLICY MAY CONTAIN OTHER EXCLUSIONS WHICH MIGHT AFFECT YOUR COVERAGE, SUCH AS AN EXCLUSION FOR NUCLEAR EVENTS. UNDER THE FORMULA, THE UNITED STATES GOVERNMENT GENERALLY REIMBURSES 80% BEGINNING ON JANUARY 1, 2020, OF COVERED TERRORISM LOSSES EXCEEDING THE STATUTORILY ESTABLISHED DEDUCTIBLE PAID BY THE INSURANCE COMPANY PROVIDING THE COVERAGE. THE PREMIUM CHARGED FOR THIS COVERAGE IS PROVIDED BELOW AND DOES NOT INCLUDE ANY CHARGES FOR THE PORTION OF LOSS THAT MAY BE COVERED BY THE FEDERAL GOVERNMENT UNDER THE ACT.

YOU SHOULD ALSO KNOW THAT THE TERRORISM RISK INSURANCE ACT, AS AMENDED, CONTAINS A $100 BILLION CAP THAT LIMITS U.S. GOVERNMENT REIMBURSEMENT AS WELL AS INSURERS’ LIABILITY FOR LOSSES RESULTING FROM CERTIFIED ACTS OF TERRORISM WHEN THE AMOUNT OF SUCH LOSSES IN ANY ONE CALENDAR YEAR EXCEEDS $100 BILLION. IF THE AGGREGATE INSURED LOSSES FOR ALL INSURERS EXCEED $100 BILLION, YOUR COVERAGE MAY BE REDUCED.

Acceptance or Rejection of Terrorism Insurance Coverage

| I hereby elect to purchase terrorism coverage for a prospective premium of $____________. |
| I hereby decline to purchase terrorism coverage for certified acts of terrorism. I understand that I will have no coverage for losses resulting from certified acts of terrorism. |

Policyholder/Applicant’s Signature ______________________  Insurance Company ______________________

Date ______________________
POLICYHOLDER DISCLOSURE NOTICE OF TERRORISM INSURANCE COVERAGE

Coverage for acts of terrorism is included in your policy. You are hereby notified that the Terrorism Risk Insurance Act, as amended in 2019, defines an act of terrorism in Section 102(1) of the Act: The term “act of terrorism” means any act or acts that are certified by the Secretary of the Treasury—in consultation with the Secretary of Homeland Security, and the Attorney General of the United States—to be an act of terrorism; to be a violent act or an act that is dangerous to human life, property, or infrastructure; to have resulted in damage within the United States, or outside the United States in the case of certain air carriers or vessels or the premises of a United States mission; and to have been committed by an individual or individuals as part of an effort to coerce the civilian population of the United States or to influence the policy or affect the conduct of the United States Government by coercion. Under your coverage, any losses resulting from certified acts of terrorism may be partially reimbursed by the United States Government under a formula established by the Terrorism Risk Insurance Act, as amended. However, your policy may contain other exclusions which might affect your coverage, such as an exclusion for nuclear events. Under the formula, the United States Government generally reimburses 80% beginning on January 1, 2020, of covered terrorism losses exceeding the statutorily established deductible paid by the insurance company providing the coverage. The Terrorism Risk Insurance Act, as amended, contains a $100 billion cap that limits U.S. Government reimbursement as well as insurers’ liability for losses resulting from certified acts of terrorism when the amount of such losses exceeds $100 billion in any one calendar year. If the aggregate insured losses for all insurers exceed $100 billion, your coverage may be reduced.

The portion of your annual premium that is attributable to coverage for acts of terrorism is ____________, and does not include any charges for the portion of losses covered by the United States government under the Act.

I ACKNOWLEDGE THAT I HAVE BEEN NOTIFIED THAT UNDER THE TERRORISM RISK INSURANCE ACT, AS AMENDED, ANY LOSSES RESULTING FROM CERTIFIED ACTS OF TERRORISM UNDER MY POLICY COVERAGE MAY BE PARTIALLY REIMBURSED BY THE UNITED STATES GOVERNMENT AND MAY BE SUBJECT TO A $100 BILLION CAP THAT MAY REDUCE MY COVERAGE, AND I HAVE BEEN NOTIFIED OF THE PORTION OF MY PREMIUM ATTRIBUTABLE TO SUCH COVERAGE.

The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call July 30, 2020. The following Working Group members participated: Joy Hatchette, Chair, Rashida Chairs, Cheryl Kouns, James Mobley, Joanna Noppenberger, Jocelyn Strand, Kejuan Walton and Gia Wilkerson (MD); Daniel Gates, Yada Horace and Jerry Workman (AL); Brooke Lovallo (AZ); Ken Allen and Joel Laucher (CA); Bobbie Baca and Peg Brown (CO); George Bradner and Doris Schirmacher (CT); Cheryl Wade, Angela King, Arthur Slade and Debra Wadley (DC); Patrice Dziire, Keith Fanning, Litza Mavrothalasitis, Laura Peters, KC Stralka, Andi VanderKolk and Erica Weyhenmeyer (IL); Heather Droge and Shannon Lloyd (KS); Ron Henderson (LA); Rick Cruz, Jonathan Kelly, Jacqueline Olson, Matthew Vatter and Megan Verdeja (MN); Jeania Thomas (MO); Tracy Biehn, Kathy Shortt and Lisa Volpe (NC); Chris Aufenthie, Chrystal Bartuska and John Arnold (ND); Matthew Harmon and Cuc Nguyen (OK); Tricia Goldsmith (OR); David Buono, David Kelly and Shannen Logue (PA); and Marianne Baker, J’ne Byckovski, Allison Eberhart, Regan Ellmer, Randall Evans, Shawn Martin, Kenisha Schuster and Amy Wills (TX). Also participating were: Katie Hegland, Katrina Kelly and Michael Ricker (AK); William Lacy and Taryn Lewis (AR); Vanessa Darrah (AZ); Robin David (DE); Sandra Starnes and Alison Sterrett (FL); Tiffany Chang (HI); Sonya Sellmeyer (IA); Ronda Ankney, Jenifer Groth, Kate Kixmiller, Karl Knable and Claire Szpara (IN); Matthew Mancini and Michael Powers (MA); Renee Campbell (MI); Andy Case and Mike Cheney (MS); Laura Arp and Martin Swanson (NE); Ellen Walsh (NH); Carl Sornson (NJ); Erin Summers (NV); Leigh Solomon (NY); Tynesia Dorsey and Jana Jarrett (OH); Joe Cregan and Katie Greer (SC); Jill Kruger (SD); David Combs, Shelli Isiminger, Joy Little, Jennifer Ramcharan and Vickie Trice (TN); Tracey Klausmeier (UT); Vicki Ayers and Rebecca Nichols (VA); Katie Humphrey, Isabelle Turpin Keiser, Christine Menard-O’Neil, Jessica Sherpa, Anna Van Fleet and Marcia Violette (VT); Lisa Brandt and Lynn Welsh (WI); and Bill Cole, D’Anna Feurt, Kristi Alma Jose, Donna Stewart and Amanda Tarr (WY).

1. **Adopted its July 16 and June 16 Minutes**

   Ms. Shortt made a motion, seconded by Mr. Bradner, to adopt the Working Group’s July 16 (Attachment Six-A) and June 16 (Attachment Six-B) minutes. The motion passed unanimously.

2. **Discussed the Need for Consumer Disclosures Regarding Significant Premium Increases on P/C Insurance Products**

   Ms. Hatchette said the Working Group received permission from the Property and Casualty Insurance (C) Committee to discuss premium increase disclosures in an effort to determine if there is something the Working Group can do to help consumers understand premium increase notices. Consumers do not always understand why their premiums are increasing and departments of insurance (DOIs) oftentimes receive questions from consumers regarding premium increases. Consumers need to be able to make informed decisions regarding whether notices correctly reflect the premium increases. Ms. Hatchette said the discussion today should allow the Working Group to inform the Committee regarding next steps.

   Mr. Bradner said state insurance regulators receive inquiries from consumers regarding premium increases. Oftentimes, the consumer does not have a lot of information regarding the reason for the premium increase or the factors involved in causing the premium increase. Mr. Bradner said consumers might see significant premium increases, which further complicates consumer understanding. He said DOIs have seen rate changes from various insurers that have exceeded 50% at times. Oftentimes, consumers affected by these rate changes do not know what precipitated this change or the degree of the change.

   Mr. Bradner said as insurers are increasingly using big data, state insurance regulators are seeing larger rate increases that are impacting the individual policyholder. He said it is important for consumers to have a better understanding of the key elements causing insurers to increase rates, which in turn cause a consumer’s premium to increase. He said it would be optimal to provide a consumer with the top five characteristics contributing to their premium increase. This would provide consumers with a more transparent understanding, help consumers to identity risky behavior and the potential for incorrect or incomplete information that the consumer may be able to address with the insurer, and educate consumers.

   Mr. Bradner said many states allow an insurer the flexibility to transition a rate over a period of time if they are moving a book of business to one of their other companies. The period of time a state allows an insurer to transition a rate varies by state; some states may allow a three-year period, while another state may allow a five-year period. Mr. Bradner said a consumer should understand that over the next three to five years, their premium will increase on average a certain percentage each year as the
insurer transitions the policyholder to a new rating plan. He said consumers also need to understand that the premium may increase more due to other factors during this transition period. It would be helpful for consumers to receive information broken down by transition increases, as well as other increases. In this way, there is transparency and consumers understand what is guiding increases.

Mr. Bradner said the Working Group is not looking for a recommendation to create a model law; instead, the idea is to try to provide better disclosure to consumers so they understand what is driving their overall premium.

Mr. Allen said California’s consumer services department gets numerous questions from consumers regarding why their premium increased. He said consumers research the increase online and see that there was actually a decrease filing, and they want to know why they received a premium increase. He said he believes there needs to be better disclosures regarding these types of issues and a threshold regarding what triggers explanation needs to be set. He said he believes this is something the Working Group needs to pursue. Mr. Bradner agreed, and he said the Working Group will need to have discussions regarding where the threshold is set.

Ms. Ramcharan said Tennessee gets a lot of questions from consumers regarding premium increase as well. She said she believes this is a topic worth pursuing. Mr. Henderson said Louisiana gets these questions as well. He said the feedback received in Louisiana from consumers is that the state insurance regulators allow the insurers to increase premiums for unknown reasons.

Ms. Baca said Colorado encounters these same issues. She said one thing that is unique to Colorado is that they do have a disclosure requirement for a premium that has increased as a result to adverse activity, such as a motor vehicle violation, an at-fault accident, or a credit-based insurance score going up. She said the insurer has to notify the consumer that the amount of the premium increase is a result of the adverse activity. She said she does not oppose disclosures regarding general rate increases, but she is unsure of how state insurance regulators would be able to enforce them without some type of a model regulation.

Ms. Sherpa said Vermont does not require giving a policyholder a specific breakdown regarding premium increases; however, it does have a statutory requirement stating that if an insurer is renewing a policy, they have to provide notice regarding premium increases. She said she does not believe Vermont has any requirements that state that the insurer has to specify the reason if the premium is increasing. She said she is also unsure how they would enforce a requirement regarding disclosures.

Mr. Bradner said he believes it would be of interest to the Working Group for states to provide specific statutes regarding the notification process of premium increases if they have them in place. He asked states on the call to share this information with NAIC staff so the Working Group can review what other states are doing. He said Washington may have something in place, and NAIC staff will reach out following this call. Ms. Baca said she would send information regarding the process used in Colorado.

Mr. Mancini said prior to making changes to regulation, it might be prudent to provide some overall education to the consumer regarding the difference between “rate” and “premium.” He said most consumers do not understand the correlation between rate and premium. Mr. Bradner agreed. Ms. Hatchette asked the states to provide copies of any frequently asked questions (FAQ) or educational materials they are currently using to inform consumers about the difference between rate increases and premium increases or anything else they are doing to educate consumers regarding this topic.

Ms. Droge said Kansas has the top 30 writers of automobile and homeowners insurance in the state submit what they call an extraordinary memo. She said they provide this memo to their consumer assistance division. She said these memos reduce the questions they receive from consumers. She said they require the insurer to provide detailed information about their maximum increase and what is driving the increase. The insurer has to provide talking points to the consumer for the DOI to use to pass the information on to the consumer to specifically explain the cause of a premium increase. Ms. Droge said this has helped the DOI address consumer complaints regarding premium increases. She said she will share this information with NAIC staff to disseminate to the Working Group. Ms. Sherpa said she is interested in receiving this information, as she believes the consumer division in her DOI could benefit from this model.

Ms. Droge said Kansas also requires each insurer to submit a rate rule checklist, which provides an explanation of the maximum and minimum increase, the maximum dollar change, a histogram, etc. She said it requires a lot of detail from the insurer, and the rating division also provides rating information to the consumer assistance division. Mr. Bradner said this type of supplement would be helpful to a DOI.
Mr. Bradner said an insurer may change its tiering structure. A policyholder may have been in tier A, and due to a rating element or risk factor that has changed, this moves the policyholder to tier C. This can cause a significant premium increase, and it is important for the policyholder to understand what happened. Ms. Droge said it has been helpful to educate the consumer assistance division regarding the factors involved in approving a rate increase. Mr. Bradner asked if the market conduct division uses the tools as well. Ms. Droge said the market conduct division also uses the tools. She said the information is distributed to the financial surveillance, consumer assistance and market conduct divisions. She said if any of these divisions have any questions, they can reach out with questions. She said she would send this information to NAIC staff for distribution.

Ms. Sherpa asked Ms. Droge if the insurers provide them with the rate changes based on the filings that were filed and either approved or marked use and file, so that if a consumer contacts the consumer services division, the consumer services division can look back to the filings for more information. Ms. Droge said they do keep all this information, as well as the System for Electronic Rate and Form Filing (SERFF) numbers. She said they often go back and refer to older filings. For example, there was an insurer for which the state of Kansas received a lot of complaints. It was helpful to go back and look at the historical information.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said she would contact her state filing subcommittee and ask about states that are asking for insurers to report additional information.

Brenda J. Cude (University of Georgia) said it is important for consumers to get notices that they can read and understand in a timely fashion. She volunteered to help with this effort.

Kimberly Donavan (Consumer Representative) said she has received some calls from consumers in which the consumers have called their insurer regarding rate increases. Consumers have reported that insurer representatives are oftentimes unable to explain why their premiums increased. Ms. Donavan said she believes this conversation is important.

Ms. Hatchette asked the states that have information regarding this topic to send in by Sept. 1. NAIC staff will compile this information to distribute to the Working Group. Ms. Hatchette asked the Working Group members to reach out to other states if they have heard of anything they have been doing regarding this topic.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call July 16, 2020. The following Working Group members participated: Joy Hatchette, Chair (MD); Bobbie Baca (CO); George Bradner (CT); Ron Henderson (LA); Carrie Couch (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Sarah Graves (OR); and Marianne Baker (TX). Also participating were: Jennifer Ramcharan (TN); and Manabu Mizushima (WA).

1. **Heard a Presentation from the APCIA**

Ms. Hatchette said the purpose of this call is to hear some presentations to help the Working Group determine some best practices regarding ways to enhance a department of insurance’s (DOI’s) communication to consumers.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said consumers may not follow their state DOI on social media, but they may follow their insurer on social media. She said many people are currently working from home during the COVID-19 pandemic, which makes consumers and businesses more dependent upon social media. She said insurers have recently done a lot of work to expand their social media reach.

Lauren Pavluk (APCIA) said social media focuses on a business’s individual brand, and the social media page needs to identify the organization’s brand and top public priorities and positions. Insurers are primarily using social media as a central hub to define their brand and tell their story through messages geared toward consumer education and preparedness, industry and talent promotion, diversity and inclusion, and societal good and philanthropy. Associations also provide information regarding advocacy.

Ms. Pavluk said each social media platform has its own niche. For example, Twitter’s platform is used to promote advocacy and relay news; Facebook’s platform encompasses more consumer-based family and personal content; and LinkedIn’s platform embodies the business community. When tailoring communication that an organization drafts, it should do so based on the platform it is using.

Ms. Pavluk said the APCIA and its member companies are running various campaigns to promote consumer education and preparedness throughout the year. Currently, the APCIA is running campaigns regarding wildfire safety and preparation, hurricane preparedness, and auto safety; it is also providing information regarding general insurance policy tips. The APCIA also uses social media to promote events it hosts, such as the National Flood Conference held in June.

Ms. Pavluk said the challenge is for insurers and associations to get the content in front of the appropriate audience. She said it is important to be creative about how the message is relayed to the target audience.

Ms. Pavluk said associations, such as the NAIC and the APCIA, generally use social media for advocacy reasons; however, you do not generally see insurers weighing in on advocacy issues. She said Twitter is a good platform to use when advocating because it is a very news heavy platform. It is important to put position statements on social media platforms when promoting advocacy.

Ms. Pavluk said the APCIA also uses social media for industry and talent promotion. She said the APCIA discusses talent recruitment and retention issues via social media. The APCIA is promoting the insurance industry as an exciting place to work, and insurers are involved in this space. Insurers promote the benefits of being a part of their organizations. Ms. Pavluk said the APCIA is currently running a campaign called “Insurance Keeping Us Connected.” She said this campaign discusses how to stay connected in the new virtual environment, as well as how to get to know your coworkers.

Ms. Pavluk said diversity and inclusion has been a priority for the insurance industry for a long time, but due to the current social environment, the APCIA and insurers are stepping up and speaking out regarding this topic. She said she believes the insurance industry will make strides in this area over the upcoming months. She said earlier this year, the APCIA hosted a “Women & Diversity” conference. She said overall, she believes insurers are making positive strides in this area.
Ms. Pavluk said societal good and philanthropy is the area where the APCIA sees some thought leadership from the insurance industry. She said Hartford’s chief executive officer (CEO) is holding conversations around things such as addiction and ways to combat the opioid epidemic. This conversation started around openness and a discussion around its own staff and their families who might be struggling. Ms. Pavluk said the CSAA Insurance Group held conversations regarding mental health during mental health awareness month. These conversations were started to help reduce the stigma regarding mental health. Ms. Pavluk said there are many stories regarding how insurance companies have given back during the COVID-19 pandemic. Social media is becoming the place for insurance companies to make these types of statements and hold these conversations.

Ms. Pavluk said the DOIs are doing a great job putting content together for consumers. She said the content is well put together and tailored to the state doing the education. She said she believes the challenge is that consumers are not actively seeking this information on a day to day basis. She said if a consumer is looking to see what their policy covers, it is due to experiencing some type of loss. She said there are ways to be creative to get these messages in front of consumers. For example, she said she might be more receptive to receiving safety tips if she is already on a website like Angie’s List looking for a contractor to waterproof her basement. She said the APCIA is getting ready to launch a wildfire preparedness campaign with Nextdoor, which is a neighborhood app that separates people by zip code. She said they will be able to target precise zip codes. Ms. Pavluk said you do have to advertise on Nextdoor; however, it is much less expensive to advertise on the app than the costs for other types of advertising. She said it is also inexpensive to advertise on Facebook.

Ms. Pavluk said the APCIA would like to collaborate more with other entities. She said if your social media channels look the same at the end of March as they did in January and you are not addressing COVID-19 and the new reality that people find themselves in today, then you should be rethinking your strategy. She said younger consumers are looking for organizations to take a stand on social issues and acknowledge the events people are experiencing.

2. **Heard a Presentation from the NAIC Communications Department**

Laura Kane (NAIC) said the NAIC Communications Department uses an integrated approach when building a communications campaign. This enables the Communications Department to leverage its assets and build an audience. Ms. Kane said the Communications Department also partners with like-minded organizations to help the NAIC broaden its reach, and it is a cost-effective way to gain greater visibility for its messages. Partnering with like-minded organizations also expands the NAIC’s media coverage, reinforces the key messages, and improves the search results. NAIC staff will be sending an example of an NAIC Communications Department toolkit following the call.

Ms. Kane said the elements of the NAIC “Your Risk is Real” campaign included infographics, social media posts, Twitter chats, videos, story ideas, draft public service announcement (PSA) audio/news releases, consumer insights, satellite media tours, and web pages. The Communications Department created some interactive items for consumers to use. One item it created was a quiz for consumers called “What the Flood.” This interactive piece includes education regarding flood followed by quiz questions with explanations about the answers.

Ms. Kane said another interactive piece created by the Communications Department includes putting together a “go bag.” This interactive piece allows the consumer to drop items into a bag that they believe they would need to take with them if they needed to evacuate their home due to a disaster. The website reminds the consumer about the NAIC Home Inventory App for consumers to use to inventory their home prior to a disaster. The web page includes a link to the app. Ms. Kane said the NAIC is in the process of updating this app to improve the look and feel.

Ms. Kane said the Communications Department created a set of key messages, as well as sub-messages, to fit into each of the key message categories. Many people still believe that their homeowners insurance policy will cover a flood event, which is a misnomer. Ms. Kane said a survey the Communications Department conducted revealed that approximately 50% of the consumers surveyed believed their homeowners policy covered a flood event. She said when a person is insured, they will recover faster than a person that is not insured.

Ms. Kane said the Communications Department sent out a toolkit to the DOIs to let them know when various events are going to occur and when it is going to send out press releases. She said the Communications Department created information both graphically and photographically. She said people need to see a message at least seven times before they notice the message. She said it may need to even be more than seven times with social media; repetition is a strong learning tool. She said consumers need to see messages on multiple platforms.
Ms. Kane said the Communications Division also uses Twitter chats as part of the way it communicates. The NAIC conducted these Twitter chats in conjunction with other groups, such as the Federal Emergency Management Agency (FEMA), the Insurance Institute for Business & Home Safety (IBHS), Nextdoor, and the APCIA. This helps to increase the number of NAIC Twitter followers.

Ms. Kane said the Communications Division released written press releases, as well as audio news releases. It also organized two satellite media tours. Superintendent Eric A. Cioppa (ME) participated in one of the satellite media tours, and Director Raymond G. Farmer (SC) participated in the other satellite media tour. The reach on these satellite media tours was in the neighborhood of 10,000,000 people. The “Risk is Real” campaign has also brought new reporters to the NAIC asking for information.

David Dunston (NAIC) demonstrated some of the tools created by the Communications Division. He also demonstrated where the NAIC website houses the flood information. Currently, the Communications Division is working on a campaign regarding health insurance education. Mr. Dunston also outlined the current health care campaign the Communications Division is working on.

3. Heard a Presentation from Brenda J. Cude

Brenda J. Cude (University of Georgia) asked the Working Group members to realize that it is a normal human reaction to rationalize decisions, as well as believe these decisions are good. She said she calls this smoothing out our deficiencies, as no one wants to say they have made a poor decision.

Ms. Cude said there are certainly people who do believe that their homeowners insurance covers a flood event. However, it is useful to also consider why someone might think their homeowners insurance covers such an event. She said it is important to think about things people have heard that might reinforce false beliefs regarding what their homeowners policy covers.

Ms. Cude said some homeowners made insurance decisions years ago and do not remember the thought process behind their decisions, while others may just not believe that their home is ever going to flood. She said if a person has never experienced a flood, it might be difficult to imagine that one would ever occur. She said managing the risk of flood is another topic the Working Group might want to consider conveying to homeowners or renters.

Ms. Cude said another category of consumers may hold the belief that the federal government will bail them out in the event of a flood. Consumers often hear about government programs, and they may assume that these programs will take care of the damage they might experience due to flooding. Ms. Cude said this might justify educating the consumer regarding the true economic fallout they would experience in the case that they do not have flood insurance coverage.

Ms. Cude said other homeowners may have thought about purchasing flood insurance, but thought it was too expensive to purchase even if they are unaware of the cost. She suggested that it might be important to educate consumers regarding some information around the cost of flood insurance.

Ms. Cude said many times when people are making insurance decisions, they are also making many other decisions. She said in this case, flood insurance may not get the person’s attention. She said there may also be those homeowners that know they may need flood insurance but decide to take the risk and not purchase flood insurance.

Ms. Cude suggested an app that hits the high points of distinct types of insurance decisions consumers are making that would be beneficial. For example, she said when purchasing a home, a consumer might be thinking of more than one type of insurance (TOI) purchase during that time, so an opportunity for education exists.

Karrol Kitt (Consumer Advocates) said she and Ms. Cude gave a report last summer during the NAIC/Consumer Liaison Committee meeting last summer. She said it is important to do consumer testing for materials that are written for consumers; however, the drawback is the cost of such testing. She said she and Ms. Cude realize that informal testing, where consumers provide their thoughts about materials that are developed by state DOIs, can also be a valuable resource.

Ms. Kitt said the report focused on 20 members of the NAIC. Each of the members were asked to comment on how they engaged consumers when designing their consumer educational and disclosure materials. There were five states in the western
zone, five states in the southern zone, five states in the midwestern zone, and five states in the northeastern zone. Ms. Kitt said 17 of the 20 states provided information.

Ms. Kitt said some of these states directly involved consumers in the design of consumer educational and disclosure materials. She said other states indirectly involved consumers or have plans to involve consumers in the future. She said she and Ms. Cude learned that the states are getting some direct feedback, but not necessarily from individual consumers. Some of those they received feedback from were experts in an area or groups the states partner with on various projects. Ms. Kitt said the states also had some testing done regarding the usefulness and usability of their websites. She said the states learned about consumer attitudes, what consumers are interested in learning about, various organizations’ styles, and the content itself. She said it is important for the states to use informal testing when they do not have the resources to perform formal testing.

Ken Klein (California Western School of Law) said he would encourage state insurance regulators to consider another issue with flood insurance. He said the National Flood Insurance Program (NFIP) coverage is capped at a level that is significantly below the actual reconstruction cost of many homes. For homeowners who do not have access to enough money to cover the shortfall, flood insurance will look like a bad buy. This in turn, will drive up the percentage of people in the insurance pool who only buy flood insurance because they are required by their mortgage to do so. This will make the pricing function like high risk pools; therefore, it all becomes a rigorous cycle.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.
The Transparency and Readability of Consumer Information (C) Working Group of the Property and Casualty Insurance (C) Committee met via conference call June 16, 2020. The following Working Group members participated: Joy Hatchette, Chair (MD); Bobbie Baca (CO); George Bradner (CT); Angela King (DC); Heather Droge and Tate Flott (KS); Ron Henderson (LA); Jeana Thomas (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Landon Hubbart, Ron Kreiter and Cuc Nguyen (OK); Tricia Goldsmith (OR); Marianne Baker (TX); and Dena Wildman (WV). Also participating were: Kate Kixmiller (IN); Renee Campbell (MI); Troy Smith (MT); Tynesia Dorsey and Jana Jarrett (OH); Manabu Mizushima (WA); and Jody Ullman (WI).

1. Discussed Creating Social Media Content and the Best Formats to Use to Communicate with Consumers

Ms. Hatchette said there is a need to help consumers better understand their insurance policies and the things that affect the insurance policy. The latest project the Working Group completed is the NAIC Consumer Claims Guide. Some of the state departments of insurance (DOIs) have already used this claims guide following a disaster. Ms. Hatchette said the claims guide helps answer some of the day-to-day questions that consumers have following a disaster. She said the Working Group will want to discuss other avenues to distribute the information contained in the consumer claims guide to the consumer.

Ms. Hatchette said the consumer claims guide is available to DOIs in both portable document format (PDF) file and Microsoft Word format. State DOIs may want to make some changes in the consumer claims guide to meet the needs in their state and can do so easily using the Microsoft Word version of the document.

Ms. Hatchette said one of the items discussed regarding the consumer claims guide was that many consumers, especially younger consumers, are using social media more and more to obtain information. She said one of the Working Group’s previous discussions included considering ways to take the information presented in the consumer claims guide and using chunks of the information to create social media posts.

Ms. Thomas said if the Working Group took this approach, their communications team would post this information on their social media communications.

Ms. Baca said Colorado would take advantage of this opportunity, as well.

Lisa Brown (American Property Casualty Insurance Association—APCIA) said the APCIA would also be willing to post this information on its social media pages too. She said she would also suggest encouraging insurers to use any information the Working Group created in their social media campaigns. She said this would increase the outreach to consumers, as many of them might follow their insurer on social media.

Mr. Bradner said the Working Group needs to consider discussing how to reach younger consumers, as well as identifying the various vehicles for reaching that audience. He said it is unlikely that younger consumers are looking at a DOI’s social media communication.

Ms. Baker said the Texas Department of Insurance (TDI) is using social media and YouTube videos to inform consumers and believes it would be beneficial to explore these vehicles as well, as there will likely be a number of vehicles that state DOIs will need to use to reach the largest number of consumers.

Ken Klein (California Western School of Law) said the vehicle used today may change tomorrow. He said once the Working Group creates the social media snippets, the DOI can use whatever platform is applicable at the time. He said the state DOIs need to track where their audience goes to obtain information at any one moment in time.

Ms. Hatchette asked the Working Group if it is the will of the group to discuss and explore social media platforms before working on putting the information into a format to be used on social media. The Working Group agreed.
Mr. Bradner said once the Working Group determines the platforms that need to be used and the audience the DOIs want to reach, then the Working Group can look at the message the Working Group wants to get out and make it interesting for the audience.

Lisa Groshong (NAIC Center for Insurance Policy and Research—CIPR) said the CIPR is interested in being more involved in this Working Group. She said she would like to know more about the priorities of the Working Group and to help with various projects.

Ms. Hatchette asked NAIC staff to see if the NAIC Communications Division would be willing to join the next Working Group conference call to discuss options regarding messaging. She said she would also be interested in hearing the insurers’ viewpoints regarding the communications strategies they have found to be successful.

Ms. Brown said she would be happy to reach out to the APCIA’s members and present some information to the Working Group during the next conference call. She said many of its members are active on social media and reach a significant percentage of their policyholders through social media.

Ms. Shortt said one of the things North Carolina does is to “like” the Facebook pages of other sources, such as the towns they visit and the fire departments they visit, and then “tag” them in their posts so it will show up on all of the pages they “like” too. She said this allows them to build partnerships with others.

Mr. Henderson said Louisiana’s communications team is active with social media. He said Louisiana also has a high school-based program and a college-based program, so its DOI has a lot of younger people following the DOI. He said these people are interested in insurance as a career path or wanting the DOI to speak at a school. He said the DOI also has a newsletter that it sends out monthly.

Karrol Kitt (University of Texas at Austin) reminded the Working Group that she and Brenda J. Cude (University of Georgia) presented at the NAIC/Consumer Liaison Committee at the 2019 Summer National Meeting regarding a research study they did about what states do engage consumers when designing consumer information education and disclosure. She said they would be willing to send the Working Group presentations for distribution by NAIC staff.

Ms. Cude said it is important to keep in mind the teachable moment when communicating to consumers. She said, for example, people want to know about flood insurance during and after a flood event, which we know is not the right time, but a reality. It is important to think about other times when it might be possible to get people’s interest about flood insurance.

Ms. Hatchette asked NAIC staff to line up some presentations for the next conference call to present the Working Group with information regarding social media outlets and to help the Working Group determine the types of outreach the Working Group should consider. Once the Working Group has decided on the types of outreach, it will begin working on the message.

Ms. King said the District of Columbia does some podcasting, which has been working to reach consumers. She added that a podcast can be inserted into a document.

Ms. Hatchette said it is up to individual states to choose what works for their respective jurisdiction.

2. Discussed Flood Insurance Disclosures

Ms. Hatchette said the Property and Casualty Insurance (C) Committee asked the Working Group to consider creating a disclosure regarding flood insurance. She asked the Working Group for its thoughts, as there are consumers who still believe their homeowners insurance policy will cover a flood event. Even if the consumer does know about flood insurance, he or she may still have questions regarding the limitations of the flood insurance product.

Ms. Bach said the private flood insurance market has been developing relatively slowly, but there is some private flood insurance available. She suggested the Working Group consider taking on the task of preparing a comparison between a National Flood Insurance Program (NFIP) flood policy and a private flood insurance policy.
Mr. Bradner said he would caution the Working Group on taking on too much right now, as the Federal Emergency Management Agency (FEMA) is in the process of working on Risk Rating 2.0. This means there are going to be some changes regarding flood insurance policies. He said he is under the impression that FEMA will also possibly be making significant changes to the flood insurance contract and may possibly include coverage for loss of use, items in finished basements, etc. He said if the Working Group wants to take on this project, it might be a good idea to do so in parallel with changes put into place by FEMA.

Ms. Vollucci said FEMA has deferred Risk Rating 2.0 until October 2021.

The Working Group discussed the idea of creating a disclosure for a policyholder’s standard homeowners policy stating that the policy does not cover flood events.

Ms. Baker said during the last legislative session in Texas, the legislature adopted a statute requiring homeowners policies that do not include flood insurance to have a disclosure that says, “You may also need to consider the purchase of flood insurance. Your insurance policy does not include coverage for damage resulting from a flood, even if hurricane winds and rain cause the flood to occur. Without separate flood insurance coverage, you may have uncovered losses covered by a flood. Please discuss the need to purchase separate flood insurance coverage with your insurance agent or insurance company or visit www.floodsmart.gov.” She said the legislation requires any residential insurance policy or commercial insurance policy that does not include flood insurance to include this disclosure.

Mr. Bradner said that while he thinks the disclosure is a great one, one of the problems regarding disclosures is that many people receive their insurance policy in the mail and never even open the mail or read disclosures. He said after every flood event, a certain number of consumers continue to voice that they did not realize flood insurance is not covered by their homeowners insurance policy. He said this is a frustrating experience for state insurance regulators.

Ms. Brown said she agrees that many consumers do not read their insurance policies. She said that one of the APCIA’s members received kudos from state insurance regulators years ago for putting a piece of paper in the policy’s envelope that would fall out; it read something like, “Water, water everywhere and you are not covered.” She said she believes that for this particular issue, the message is going to have to be extremely simple and that is readily noticeable; otherwise, consumers are not going to be truly aware.

Ms. Hatchette asked Ms. Brown if she believes using the social media the Working Group will gain from its next discussion will aid in consumer understanding.

Ms. Brown said she believes it is a great start and suggested the state DOIs follow local news apps and social media and tag them in posts, as well. She said simple posts, such as, “By the way, did you know your homeowners insurance does not cover you for flood risk, regardless of the cause of your flood?” and tagging the various outlets will spread the message to more consumers. Ms. Brown said if regulators are considering a disclosure from an insurer, she would not suggest putting this disclosure on a declarations page or somewhere in the insurance policy, because consumers oftentimes do not read their policy.

Ms. Cude said consumers are more likely to read their billing information than their insurance policy. She said messages sent to a consumer need to be put on all communications they receive. She said consumers also tend to believe that if they incur damage and do not have insurance, government funds will bail them out. She said this is not true and regulators need to be sure consumers receive this message.

Peter Kochenburger (University of Connecticut School of Law) agreed and said the Working Group needs to find ways to make the disclosures more obvious.

Ms. Brown said the Working Group will also need to consider how to get information to consumers that receive all of their communications regarding their insurance policy digitally. She suggested something on the payment page.

Mr. Bradner said it would also be an innovative idea if a policyholder had an idea how much flood insurance would cost if he or she were to want to consider purchasing flood insurance. If insurers were able to provide this information, it might help consumers make the decision to purchase flood insurance. He said the statement could say, “Your insurance policy does not cover flood damage, but if you were to purchase flood insurance, it might cost $X per year. Contact your agent.”
Ms. Brown said even if an insurer is not a write-your-own (WYO) company, it could provide a link to more information.

Ms. King said District of Columbia received some complaints from consumers who thought they had coverage for sewer backup and overflow. She said this might also need addressing at some point. Ms. King also said in terms of reaching the consumer, there are some avenues the Working Group could consider for first-time homebuyers. She said there are real estate companies and groups that hold home-buying classes. This information could possibly be emphasized and disseminated in these classes.

Having no further business, the Transparency and Readability of Consumer Information (C) Working Group adjourned.

W:\National Meetings\2020\Summer\Cmte\C\TransparencyWG\0726 Transparency Minutes.docx
Workers’ Compensation Policy and the Changing Workforce

ABSTRACT

This paper explores how changes in work and the evolving landscape of legal employment are shifting responsibility for coverage and benefits for occupational injuries, illnesses, and fatalities. Policymakers and regulators need to understand how these changes may create gaps in coverage for workers and leave employers vulnerable to uncertain liability for injuries and deaths on the job. The paper also explores alternative policy solutions to ensure workers have access to benefits if they suffer workplace injury.

INTRODUCTION

Today’s workforce and workplace look very different from the workforce and workplace when the first workers’ compensation laws were passed. The cumulative impact of these changes has made it important to consider the role public policy plays in protecting workers from the health and economic consequences of an occupational injury, illness, or fatality. For most of the past century, a significant portion of workers in the U.S. labor force were protected against economic strain and physical harm through state workers’ compensation laws. As work relationships have grown increasingly complex, there is uncertainty in workers’ compensation protections for some in the labor force. The changes and discussions in this paper are a part of broader discussions on how employment benefits and protections might be revised, redesigned, or reimagined to reflect the contemporary work environment more accurately.

The twenty-first century workforce is more diverse, more de-centralized and more mobile than ever before. This is often at odds with employment classification laws, which were adopted when workers were predominately male and work was conducted in centralized facilities with a rigidly defined management hierarchy. Increasing work fluidity and the application of often conflicting state and federal law are resulting in business uncertainty and legislative proposals across the country. This paper presents an overview of the existing employment classification models and describes the latest legislation aimed at clarifying employment status.

Finally, the paper raises important policy questions that must be considered in light of the new work environment. Policymakers, in addition to business and labor leaders, will also appreciate the description of models and pilot programs that seek to deliver health and economic benefits to injured workers beyond the traditional workers’ compensation system. Discussion and development of solutions is essential for continued economic prosperity and social stability.
Part I: Changing Relationships with Work

Background

An individual’s connection to work shapes his or her life in visible and invisible ways – from lifestyle habits to self-esteem to social benefits. Throughout the last two centuries, those connections to work have become more formal and enshrined in local, state, and federal law. This work, or employment relationship, is important to individuals and their families as benefits and social protections are frequently gained through employment.¹

The first workers’ compensation laws in the United States arose out of changes in the nature and connection to work. The Industrial Revolution saw workers move from farms and villages to cities, transitioning from farm and community-based work to manufacturing and industrial jobs. These changes resulted in more workers in employee/employer relationships with defined wages, hours, and job requirements.

Workers’ compensation insurance prevents employees from taking legal action against their employers for workplace injuries, illnesses and deaths. In return, employees get defined benefits for covered injuries, illnesses and deaths regardless of fault or liability.²

Industrial work was dangerous, and work injuries and fatalities rose, reaching more than 61,000 deaths at work in the U.S. in 1914.³ Recognizing the economic and social cost of these injuries and deaths, state policymakers successfully passed workers’ compensation laws in the majority of states by 1920. Workers’ compensation was no-fault, providing guaranteed wage replacement and medical benefits for employees injured or killed at work.

A Century of Change

The past century has witnessed a transformation across the workforce and the workplace. The number of women in the labor force has steadily increased since 1948. Women represented 57.1% of the U.S. labor force in 2018.⁴ The labor force has increased in ethnic diversity. Hispanics represented 17% of the U.S. labor force in 2016 and all minorities (African-Americans, Asian-Americans, Hispanics/Latinos, and Native Americans) are projected to make up 37% of the working-age population by 2020.⁵ The labor force is steadily getting older. Workers 55 and older are projected to be close to 25% of the labor force by 2024. Union participation has been in decline; 10.7% of wage and salary workers were union members in 2017 (Figure 1).⁶ Higher education has also played a part in the labor force. Between 1992 and 2016, workers with college degrees, including advanced degrees, has increased steadily.⁷

¹ Employment benefits can include health, disability, and/or life insurance, retirement contributions, paid time off, flexible spending accounts, and/or tuition reimbursement. Social protections can include unemployment, workers’ compensation, accommodations, equal opportunity, etc.
⁴ The National Center for Public Policy and Higher Education, figure 1. See: https://www.google.com/url?sa=i&source=images&cd=&ved=2ahUKEwi7Ijymw9JAhWQop4K1cyCDgUQFjAQoAYBgewIBw&usg=AOvVaw3uOJbMnZKdRIm1CfoRP
⁵ Union Rates: https://www.bls.gov/news.release/union2.nr0.htm
⁶ Higher education has also played a part in the labor force. Between 1992 and 2016, workers with college degrees, including advanced degrees, has increased steadily.⁷
The workplace is physically different. Offices that had rows of desks with telephones and typewriters have been replaced by flex workstations and collaboration rooms. It is estimated that 4.3 million employees, close to 3% of the U.S. labor force, worked at home at least half the time in 2016. Additionally, regular work-at-home by employees have grown 140% over the last decade.8 Manufacturing facilities have moved from manually operated heavy equipment to technology-run, highly automated processing. https://globalworkplaceanalytics.com/telecommuting-statistics

The kind of work is changing. The last century saw steady decline in agricultural work, manufacturing has remained steady, and service work has dramatically increased. The U.S. Bureau of Labor Statistics (BLS) projects that nine out of 10 new jobs in the next decade will be in the service-providing sector.9 Healthcare, personal care, community and social services, and computer and mathematical employment are some of the expected fastest-growing occupations.

These changes have dramatically impacted the way people work and live across the U.S. The cumulative impact of these changes is an expansion of the U.S. economy. Real gross domestic product (GDP) has grown from approximately $3 trillion in 1957 to $19 trillion in 2019.10 Labor productivity was 3.8 times higher in 2016 than in 1950 (Figure 2).11

Over the century, work has also gotten safer. Workplace injuries and fatalities have declined dramatically. The workplace fatality rate was 3.5 workers per 100,000 in 2018 compared to 61 workers per 100,000 in 1914. The rate of injuries/illnesses requiring time away from work was 2.8 per 100 workers in 2018 compared to five per 100 workers in 1914.

The decrease in occupational injuries, illnesses, and fatalities is especially good for workers’ compensation. These declines are keeping more employees engaged in the labor force and making it more affordable for businesses to obtain coverage. However, demographic and work changes have raised other challenges for the workers’ compensation system. The kinds of injuries and illnesses are different, compensability questions are different, and treatment options are different. These, taken with the evolving employment relationship landscape, raise important questions about the central principles of workers’ compensation and if and how they should evolve in the future.

Connections to Work

Another significant change happening within the U.S. labor force is how individuals are connected to work. From the legal perspective, there are two classifications of workers - employees and independent contractors. The common picture of an independent contractor is a person with specialized skills, talents, or expertise who works on a project basis. Independent contractors would typically have multiple clients and conduct their work with a fair degree of autonomy. Businesses would use independent contractors to supplement knowledge or experience of their existing workforce on a temporary basis to meet demand or deadlines.

Employee or Independent Contractor

Workers’ compensation is generally compulsory for employers, and each state has rules that define employees for the purpose of workers’ compensation coverage. Securing workers’ compensation coverage for each of its employees is a direct business cost. In contrast, independent contractors are generally not required to have workers’ compensation coverage.

---

15 All states, except Texas and South Dakota, have compulsory workers’ compensation requirements for employers. Exclusions for certain employers or kinds of employees exist in most states. The IAIABC/WCRI Inventory of Workers’ Compensation laws describes coverage exclusions for each of the states.
Defining an employee or independent contractor has been a challenge within state workers’ compensation systems, but classification has become more difficult as employment relationships have increased in complexity. These changes have important implications for workers’ compensation, including which workers should be covered under workers’ compensation and who should bear the costs of coverage. Additionally, policymakers are needed to explore how coverage requirements align incentives for businesses and workers.

While many businesses use independent contractors for highly specialized or project-based work, many organizations have made contract labor a more permanent part of their workforce. July 2018 headlines noted that the number of contractors now exceeds the number of employees at Google.16 Countless large businesses, including Apple, Facebook, and Amazon, have noted the same trend. Contract labor is used by businesses for everything from security and food service to coding and sales.

The decision by a business in how to classify its workers is significant as many protections and benefits for workers are tied to employment, including workers’ compensation coverage requirements. Businesses weigh many factors when considering utilizing employees or independent contractors, but the direct cost to businesses for employees is estimated at 20-30% higher than independent contractors.

Alternative Work Arrangements

Whether a worker benefits from the protection of a workers’ compensation policy depends on whether he or she is classified as an employee or an independent contractor. However, several alternative work relationships exist that fall along the spectrum of employee and independent contractor. These alternative work relationships create additional complexity in determining employment classification. The following alternative work arrangements are defined and tracked by the BLS:

- **Independent contractors:** Workers identified as independent contractors, independent consultants, or freelance workers, regardless of whether they are self-employed or wage and salary workers.
- **On-call workers:** Workers called to work only as needed, although they can be scheduled to work for several days or weeks in a row.
- **Temporary help agency workers:** Workers paid by a temporary help agency, whether or not their job is temporary.
- **Workers provided by contract firms:** Workers employed by a company that provides them or their services to others under contract, are usually assigned to only one customer, and usually work at the customer’s work site.

For the purposes of this paper, alternative work arrangements refer to any work performed by anyone not legally defined as an “employee.” Alternative work arrangements raise important questions about coverage for injuries, illnesses, or fatalities occurred while working.

**Platform Work**

Alternative work arrangements are not new; however, expanded internet connectivity has created new ways to connect to work. Companies allowing workers or service providers to connect to clients or customers via the internet are often described as online platforms. Online platforms have created additional complexity in defining the legal work relationship. The rise of online platforms is often seen as being synonymous with the sharing or “gig” economy; however, these platforms reflect an example of a way to facilitate an alternative work arrangement.

Some platform workers may use this type of work as supplemental income while having a full-time job. Others work for multiple platforms at one time, piecing together a living wage.17 Platform work has expanded broadly across industries, with many types of work and services offered.

**By the Numbers**

Quantifying the number of individuals within these various work arrangements is important in understanding how many workers are not covered if they have an occupational injury, illness or fatality. A rising number of individuals in alternative work arrangements could necessitate the need for new private or public solutions to address coverage gaps. Design and implementation of new programs will be influenced by who and how many workers they will serve.

Numerous public and private research efforts have attempted to quantify individuals in various work arrangements. Estimates range from less than 3% to more than 40% of the workforce. There are many

reasons for the significant difference in estimates, including data sources, survey methodology, definitions of work arrangements, and counting primary or supplemental income.\(^{18}\)

</tr>
</tbody>
</table>

This broad range and lack of research consensus has resulted in inconsistent focus and no clear mandate for policy change.

Beyond measuring the number of individuals in different types of work arrangements, it is also useful to examine multi-year trends. Besides the 2017 BLS Contingent Workforce Supplement, most studies have charted an increase over the last decade in the percentage of individuals engaged in independent or alternative work for primary or supplemental income. If this trend continues it may have important implications for labor and employment policy, including workers’ compensation programs.

### Impact of Change

These changes and continued technological advancement will influence the U.S. workforce and workplace in the years to come.

Some of these changes have a direct impact on workers’ compensation systems. The long-term trend of declining injuries and illnesses has translated to stable or reduced premiums for employers and robust private insurance markets in most states. Other changes have influenced how care is delivered and return-to-work opportunities for those displaced from work.

Other changes, including labor force demographics and new work environments, could influence workers’ compensation both directly and indirectly. Demographic changes are influencing who, how, and where individuals are connecting to work. The differing needs (flexibility, portability, supplemental income, debt repayment, etc.) of these diverse workers may result in accelerating growth in alternative work arrangements. The ability to engage and perform services in new ways, virtual and remote, blurs lines between control and the direction of work.

Taken in whole, these changes are increasing the need to examine existing labor law and how social benefits and protections are delivered in the future. The workers’ compensation system does not exist in a vacuum. Coverage for an occupational injury, illness, or fatality must be considered in the context of the large-scale changes within the

\(^{18}\) Cornell University’s School of Industrial and Labor Relations and the Aspen Institute’s Future of Work Initiative maintain the Gig Economy Data Hub which catalogues public and private research efforts to quantify various alternative work arrangements.

\(^{19}\) Offline services could include caregiving or house-cleaning and offline sales could include flea markets or thrift sales; online services could include platform or app work and online sales could include selling items online.
economy. At the heart of this discussion is how workers are connecting to work and who will bear responsibility for any occupational injury, illness, or fatality that occurs.

**Part II: Determining Employment Status**

Employment status is essential for understanding the benefits and protections to which a worker is entitled and the financial obligations a business must pay. The rules for this determination are found in federal and state statute. This is a complex and nuanced area of the law, with determinations of employment status dependent on the application of various tests and characteristics.\(^{20}\) There is no coordination of employment determination between federal and state law.

**Federal Standard**

Federal statutes define “employee” in many different ways. Employment related tests are considered by the Internal Revenue Service (IRS), U.S. Social Security system, Federal Insurance Contributions Act (FICA), federal Fair Labor Standards Act (FLSA), federal Civil Rights Act, federal Age Discrimination in Employment Act (ADEA), Americans with Disabilities Act (ADA), Federal Unemployment Tax Act (FUTA), and many others.

Three tests have been used in employment determination under federal law. Depending on the law, test used, and case-specific facts, a worker could be considered an employee under one law and an independent contractor under another. Employee determination under federal law does not influence workers’ compensation coverage obligations under state law. However, there are similarities in the many characteristics considered at the state and federal level. In addition, continued changes in how workers connect to work may result in pressure to clarify and/or align employment under various areas of the law.

**Tests for Employment Determination under Federal Law\(^{21}\)**

- **Common law (control):** The common law test hinges on control of the means and methods of work. This can include a variety of different factors including direction and supervision of work activities, tools and materials, payment, and intent of the relationship. The IRS uses the common law test and advises three broad categories of consideration: 1) behavioral control; 2) financial control; and 3) relationship of the parties.\(^{22}\)
- **Economic realities:** The economic realities test looks at the financial dependence of a worker on services performed for a specific business. This can include a variety of different factors, including the level of financial risk, whether services are integral to the business operation, and investment in facilities and equipment. The economic realities test is commonly applied under the FLSA which governs minimum wage and overtime requirements. The economic realities test is broader than the control test and generally favors employee status.
- **Hybrid:** The hybrid test looks at both economic and common law factors. Under the hybrid test, economic realities are more heavily weighted than common law characteristics. The hybrid test has been applied in employment determinations under Title VII of the Civil Rights Act. (see https://www.bls.gov/opub/mnl/2002/01/art1full.pdf)

Numerous cases have tested the interpretation of federal law in determining employment status. A series of FedEx cases across 20 states\(^{23}\) found the company improperly classified ground delivery drivers as independent contractors. The decisions hinged largely on the direction and control of drivers. Factors considered included requirements by FedEx drivers to wear uniforms, adhere to appearance standards, drive approved vehicles, and deliver packages on specific days and within certain times.

Decisions of the National Labor Relations Board (NLRB) have also been influential in the interpretation of federal law in this area. Most recently, a January 2019 ruling overturned a 2014 decision\(^{24}\) in favor of employee status based on the application of factors related to entrepreneurial opportunity. The NLRB decision in SuperShuttle DFW noted the independence of drivers in setting hours, ownership/lease of vans, and control of payment methods results in

---

\(^{20}\) Even the courts have expressed frustration in the lack of clarity in employment determinations. The Supreme Court, for example, has referred to the definition of an employee under the Americans with Disabilities Act as a “mere ‘nominal definition,'” Clackamas Gastroenterology Assocs. v. Wells, 538 U.S. 440, 444 (2003), and has stated that the definition of an employee under the Employee Retirement Income Security Act is “completely circular and explains nothing,” Nationwide Mut. Ins. Co. v. Darden, 503 U.S. 318, 323 (1992).

\(^{22}\) See IRS at https://www.irs.gov/newsroom/understanding-employee-vs-contractor-designation

\(^{23}\) Numerous lawsuits against FedEx were filed beginning in 2004. Two class action lawsuits were heard and decided by the Seventh Circuit Court of Appeals and the Ninth Circuit Court. The decisions resulted in mediated settlements with FedEx of more than $400 million.

\(^{24}\) NLRB in a 2014 FedEx case found in favor of employee status for drivers based on application of the common law test emphasizing direction and control.
significant entrepreneurial opportunity. The greater the entrepreneurial opportunity the more likely it is an independent business which would favor independent contractor status. (see SuperShuttle DFW, Inc. and Amalgamated Transit Union Local 1338.)

This decision was influential in shaping the NLRB Advice Memorandum related to Uber and Uber drivers’ ability to unionize. The memo finds drivers for Uber are independent contractors based on the factors discussed in SuperShuttle DFW, with significance placed on control over manner and means and how the driver is compensated. Both decisions cite entrepreneurial independence as a key consideration in independent contractor status.

The NLRB notes, “Whether to take advantage of these opportunities were among the many entrepreneurial judgments UberX drivers made due to their freedom to set their work schedules, choose log-in locations, and pursue earnings opportunities outside the Uber system.” The ability to work for competitors beyond Uber outweighed other factors of control asserted by the platform, including baseline fares, inability to subcontract work or repeated rejection of trips. Additionally, they noted that minimum service standards and driver ratings had little impact on the driver’s earning potential. (see Uber Technologies, Inc. Cases 13-CA-163062, 14-CA-158833, and 29-CA-177483).

In considering platform workers, the U.S. Department of Labor (DOL) issued an opinion letter in April 2019 which designated service providers of one platform as independent contractors under the FLSA. In applying the “economic realities” test, the U.S. DOL considered six factors of service providers who secured jobs through the virtual platform. The opinion letter described the platform as a referral service not an employer.

These recent opinions have been interpreted by many as a signal of the current administration’s leaning toward liberal application of independent contractor status. It is noted again these interpretations have no bearing in employment classification status under state workers’ compensation laws. It remains to be seen if state courts will evaluate control or economic realities tests in similar ways.

State Standards

In 2017, more than 140 million U.S. jobs were covered under state workers’ compensation systems (NASI, Workers’ Compensation Benefits, Cost, and Coverage, 2019). State law defines workers’ compensation coverage requirements across the U.S. In all states but Texas and South Dakota, coverage is compulsory for employers. However, coverage exemptions are common. Many states do not require that workers’ compensation coverage be purchased for domestic and agricultural workers and small employers.

The general trend over the past century has been expansion of coverage to increase the number of workers protected under the workers’ compensation system. The rise of alternative employment relationships may signal a reversal of this trend. The more workers that find themselves in alternative work arrangements, the more likely they will fall outside the protection of workers’ compensation.

Much like federal law, there may be multiple definitions of “employee” within a state that apply to different areas of the law. This can include intra-state variation across the department of revenue, unemployment insurance, and/or workers’ compensation.

In an effort to simplify and reduce confusion from differing “employment” determinations across state agencies, some states have sought to develop a statewide definition of “employee.” One such effort was in Maine, when the governor created a cross-agency task force compromised of the Maine DOL, Maine Workers’ Compensation Board, and the Maine Attorney General’s Office, to develop a single definition of “employee.” The result was the following:

> Services performed by an individual for remuneration are considered to be employment subject to this chapter unless it is shown to the satisfaction of the bureau, that the individual is free from the essential direction and control of the employing unit, both under the individual's contract of service and in fact, the employing unit proves that the individual meets all of the criteria in Number 1 and three (3) of the criteria in Number 2 as listed below. (See [https://www.maine.gov/labor/misclass/employment_standard.shtml](https://www.maine.gov/labor/misclass/employment_standard.shtml))

---

25 The six factors included control; permanency of relation; investment in facilities, equipment, and helpers; skill, initiative, judgment, or foresight required; opportunity for profit and loss; and integrality.

26 Workers’ compensation is voluntary in both Texas and South Dakota. In both states, employers lose the right to the exclusive remedy if they fail to purchase coverage.

27 Recently, exemptions for agricultural workers have been challenged. The New Mexico Supreme Court ruled in 2016 that the agricultural exemption was unconstitutional.

28 A list of state-by-state exemptions can be found in Table 2 of the WCRI/IAIABC Workers’ Compensation Laws as of January 1, 2019.
A similar effort is underway in Alaska, which is in response to the adoption of a new eight-part independent contractor test passed in 2018. (See HB 79).

**State Employment Classification**

Classification of a worker as an employee or independent contractor is essential for the workers’ compensation system as it determines the coverage obligation. From the legal perspective, states are varied in their approach to employment classification. In general, states fall into the following categories:

- **“Employee” Presumption:** Twenty-five states presume a worker is an employee unless they meet the requirements of an independent contractor. A worker may be found to be an independent contractor by meeting certain criteria as defined by law (i.e. they meet all nine provisions set forth in statute) or as determined by an opinion of a judicial body (i.e., determination by a commissioner or judge based on case specific facts).

- **“Independent Contractor” Presumption:** Two states presume independent contractor status for those workers who have completed necessary requirements before beginning work. These requirements generally include a written contract/form filed with the state confirming independent contractor status. The presumption of independent contractor status can be overcome.

- **Silent:** Twenty-three states have no presumption of status for a worker. The criteria for determining employment status may be described but are applied to cases individually.

Appendix A compiles the state standards used to determine employment classification status for purposes of workers’ compensation coverage.

**State Employment Tests**

Similar to federal law, states have developed a variety of tests and/or criteria that are used in the decision of employment status. There are numerous factors considered in state law but generally states evaluate based on:

- **Control of the means, manner, and methods of work:** Rooted in common-law, decisions about what work must be accomplished and how it should be done are central to considering control in the employment relationship. Factors of control vary across states but include who sets days/hours of work, manner in how work is conducted, service standards, appearance requirements, quality specifications or other factors interpreted as giving direction to a worker.

- **Relative nature of work:** Considers the type of work and how it relates to core business functions. Examines how fundamental the work is to what the business does or how it operates.

- **Hybrid:** Weighs factors of both control and the relative nature of work.

Each state has a body of case law that interprets statutes and rules based on case-specific facts. A single decision may be precedential, resulting in more or less workers considered employees for purposes of workers’ compensation coverage. The opinion of the California Supreme Court in Dynamex demonstrates the time, cost, complexities and impact a case can have with respect to employment classification.

In 2004, Dynamex converted its delivery drivers to independent contractors. The company was sued, and the final ruling was issued in 2018, which found the delivery drivers were in fact employees of the company. In the decision, the California Supreme Court applied the ABC test, which requires all three factors be met to be considered an independent contractor. The three factors include:

1. Freedom from control or direction in the performance of work under the contract or engagement.
2. Work is outside the work of the hiring entities normal business.
3. Worker is engaged in an independently established trade, occupation or business of which they are performing the work.

Many have interpreted the application of the ABC test as significantly expanding those workers considered employees in California.

---

29 Employment status may also affect the funding mechanism of state worker’ compensation agencies. In many states, the agency is funded through a maintenance tax or surcharge of gross workers’ compensation insurance premiums. Typically, workers’ compensation premium is calculated based on an employer’s payroll. The lower the payroll, the lower the premium, which results in less maintenance tax collected to support the workers’ compensation system administration in the state.

30 The ABC test standard for employment classification in California took effect on January 1, 2020 as a result of the passage of House Bill 5.
In contrast, courts in other states did not find an employer-employee relationship based on similar factors. In 2018, the New York Appellate Division held there was no employer-employee relationship in Vega vs. Postmates Inc. because couriers failed to provide sufficient proof of Postmates’ control over the way work was performed. Sebago vs. Boston Cab Dispatch in 2015 found that taxicab drivers were independent contractors because they were free from control and direction of the cab companies.

**Marketplace Contractors**

The state-by-state nature of employment law, uncertainty, cost and time to confirm employment status creates a volatile business environment. In the past several years, platform companies have worked to change laws to clarify the status of platform service providers as independent contractors. A new term of art, marketplace contractors, was defined, which applies to service providers who are connecting to work through a virtual platform.

Between 2016 and 2018, eight states successfully passed legislation or rule related to marketplace contractors. The eight states are: Arizona, Florida, Indiana, Iowa, Kentucky, Tennessee, Texas, and Utah. Under these new laws, platform service providers are independent contractors if they meet certain requirements. Common marketplace contractor criteria include:

- Written agreement between the platform and the marketplace contractor that says the marketplace contractor is providing services as an independent contractor and not an employee. Most of the legislation granted retroactive status if these agreements were in place previously.
- The platform must be virtual: a web, mobile application or software program. Some legislative language specifically excludes phone or fax services or prohibits services being carried out in a physical location within the state.
- Payment for services performed must be paid on a contract or rate basis. The marketplace contractor is responsible for all tax obligations.
- The marketplace contractor is responsible for providing their own tools or materials to complete the work.
- The marketplace contractor can set his or her own hours.

Some states may have exclusions include transportation networking companies (TNCs), freight transportation, political subdivisions, religious/charitable/educational organizations, and American Indian tribes.

**Impact of Legal Uncertainty of Employment Classification**

Changes in the workforce noted in Part I raise questions about the application and applicability of current methods of determining employment status, especially as related to control of means and methods of work. Work is being organized and performed in ways that allow both independence and oversight in ways that does not fit neatly within current legal frameworks described in Part II. The continued evolution of workers connecting and performing work in new ways may require revision or a redesigned framework for employment classification.

**Part III: Alternative Coverage Models**

Changes in work relationships raise important public policy questions about the protections and benefits currently linked to employment. A continued increase in alternative work arrangements may necessitate new models and programs for social protections, including wage replacement and medical care for occupational injuries, illnesses and fatalities. New programs might exist within the current workers’ compensation system or outside of it. Regardless, consideration of the human, economic and social costs of injuries, illnesses and fatalities at work is an important element to be included in future policy conversations.

Several ideas have emerged that consider benefits and protections in new forms. The following are strategies considered for protecting workers and businesses from the health and economic costs of a work injury:

**Independent Contractor Coverage**

One way to extend coverage is to amend the state workers’ compensation statute to allow a business to optionally provide workers’ compensation coverage to designated independent contractors. Elective coverage for an independent contractor would extend exclusive remedy for the business and be considered

---

31 The Texas Workforce Commission adopted a rule (40 T.A.C. § 815.134) which defines a “Marketplace Contractor” as an independent contractor and makes those individuals ineligible for unemployment benefits. Since workers’ compensation is optional in Texas it has no impact on workers’ compensation coverage.

32 There have been discussion papers on alternative options for employment classification. Some have argued for dependent contractor and others have lobbied for independent workers. Any new direction would clearly need to identify which benefits and protections, including workers’ compensation, would be conferred by that status.
a benefit for the contractor. If properly structured, this would not affect the individual’s independent contractor status for unemployment insurance and wage purposes. Texas allows this option for hiring contractors in Texas Labor Code, Section 406.144.

Black Car Fund

The Black Car Fund is a mechanism that provides workers’ compensation coverage for more than 70,000 black car drivers in New York. The Fund was created in 1999 and is funded by a surcharge paid by the customer on each ride provided by an eligible driver.33 Drivers obtain coverage through their dispatch organizations, which are members of the Fund. The unique statutory nature of the Black Car Fund designates drivers as “employees,” so they are eligible for workers’ compensation benefits under New York state law. They retain independent contractor status for all other purposes.

More generically, this concept could be considered a “guild model” where workers providing services in a specific industry (transportation, hairdressing, engineering, etc.) could access workers’ compensation coverage collectively. This could be an attractive alternative for platform companies because the statutory nature of the fund gets around paying “benefits” that could be interpreted as “employee status.”

Occupational Accident Insurance

The private insurance market offers occupational accident insurance policies for those workers not eligible for workers’ compensation. These policies are often associated with high-risk industries with a significant number of independent operators/contractors (i.e. long-haul trucking). An occupational accident insurance policy offers defined coverage for a work-related injury or fatality by the policyholder. Coverage can be purchased directly by an operator/independent contractor or offered by a platform/contracting company.

As a general matter, occupational accident insurance typically includes coverages and benefits associated with workers’ compensation insurance including medical, wage replacement and death benefits. However, there are important differences in a workers’ compensation policy and an occupational accident policy. Occupational accident policies generally have a total benefits cap: a cap on medical benefits, and a cap on wage replacement. In addition, there may be no compensation for permanent impairment or consideration of vocational rehabilitation. There are often exclusions for kinds of injuries/illnesses covered, and abbreviated injury or claim reporting requirements. While there is limited access to an external dispute resolution system, occupational accident insurance is subject to the standard insurance claim dispute processes (e.g., a claimant is permitted to file a complaint with his/her state insurance department, and the insurer is subject to fair claims handling and bad faith laws).

One example is the driver injury protection policy offered to Uber drivers by Aon and Atlantic Specialty Insurance. Uber drivers pay $0.03 per mile, and coverage includes medical benefits, wage replacement benefits and death benefits if they suffer a covered injury while on the app is on. Likewise, as of June 2019, DoorDash now maintains occupational accident insurance on behalf of all U.S. “Dashers” while on a delivery.

Occupational accident insurance is regulated under a different line of insurance than workers’ compensation. This may create a disconnect or confusion for both businesses and workers regarding benefits across the two types of coverage.

Disability Insurance

Another mechanism for providing coverage is expanded use of disability insurance. Disability insurance provides wage replacement benefits for an individual who suffers a sickness or injury. Disability insurance has both private and public insurance options, and five states34 have mandatory disability insurance programs.

There are key differences between disability insurance and workers’ compensation: Disability insurance does not pay medical benefits, wage replacement is capped, and there is no consideration of either permanent partial or total disability or fatalities.

33 The current surcharge is 2.5%, https://www.nybcf.org/faqs
34 California, Hawaii, New Jersey, New York, and Rhode Island
Portable Benefits

Portable Benefit accounts de-couple social protections from the employer and offer coverages to an individual worker. An account is funded and can then be used to obtain various coverages including healthcare, disability or occupational accident insurance, and/or workers’ compensation. Funding of the account could be designed in many ways but could include contributions from an employer(s), platform(s), contract organization(s), client(s), and/or the worker.

Portable benefit accounts have been conceptually supported by policymakers, businesses, labor leaders, and think tank organizations but have not been widely piloted. Important policy, design, and administrative questions must be defined in order to understand if portable accounts would be effective in deliver benefits for work-related injuries, illnesses, and fatalities.

Each of these mechanisms could serve as a model for extending work-related injury, illness and fatality coverage for workers in alternative work arrangements.

Policy Questions and Considerations

Exclusive remedy: One of the central principles of workers’ compensation is exclusive remedy. Employees who have a work-related injury, illness or fatality receive the medical and wage replacement benefits afforded to them by state law. Once those have been received, employers have no further liabilities. If alternative coverage mechanisms are developed, should exclusive remedy be afforded to those businesses? What provisions or standards must be met to have exclusive remedy?

Universal coverage: Workers’ compensation started off as a voluntary program but trended toward universal coverage (with some exceptions). Coverage had clear benefit for both employers and employees. If universal coverage is desirable, you must decouple the mandate from the employment relationship (i.e., employee only) and determine how coverage can be delivered in different environments (i.e., Do independent contractors have to purchase a workers’ compensation policy?).

Standard benefits: Workers’ compensation benefits (wage replacement and medical) are defined in state statute and applied in the same way for all employees in a state. The advantage of a statutory benefit scheme is that it creates equity across all employees/employers and promotes societal stability (given adequacy of benefits). The disadvantage of this scheme is that benefits may not always be “fair” (i.e., account for pain/suffering; maximums penalize high income earners, etc.).

Funding/Delivery: Workers’ compensation policies are funded by employers who pay premiums or self-fund. In nonstandard work arrangements, the financial responsibility for an occupational injury is ambiguous and, therefore, who funds coverage bears discussion. Is it the contracting firm’s responsibility (i.e. for all workers regardless of employment status), or is there a cost-sharing obligation by classification or work type?

Market Access: Workers’ compensation has developed market solutions for businesses who are unable to purchase coverage in the voluntary market (residual market or insurer of last resort). Is a solution like this required or desired for workers in alternative work arrangements? Should the cost of coverage be a consideration in developing or determining solutions (i.e., if you are making $1,000 a year in additional income should you have to buy a policy that costs you some fraction of that?)?

Safe Harbor: Safe harbor provisions exist for businesses who purchase or offer some coverages (health, workers’ compensations, etc.) to ensure they are not interpreted as employment status? What provisions would need to be met for safe harbor? What liabilities would the business and worker face in these situations?
Conclusions

Workers’ compensation is an essential element of the protections and benefits businesses and workers have had in the last century. Employers gain certainty and limit their liability to injuries, illnesses, or fatalities that occur at work. Employees receive healthcare and wage replacement to heal and recover with lessened financial burden. This fragile balance has resulted in sustained stability and equity for most American businesses and their workers.

The employee-employer framework on which the U.S. workers’ compensation system is built has become increasingly complex. Businesses are relying more and more on a labor force that does not neatly fit within legally defined employees and independent contractors. These external changes have the potential for significantly changing employment related protections and benefits.

This presents real questions for the workers’ compensation system. Policymakers, labor, management, and other system stakeholders need to begin considering and preparing for these impacts. 100 years ago, workers’ compensation was adopted after countless lives were lost or seriously damaged by a work injury. Proactively addressing new changes in work and the workplace are the key to responding without more lives lost by American workers.
## Appendix A: State Standards Used to Determine Independent Contractor Status (2019)

| AL    | No provision                  | ALA. CODE § 25-5-50 (2017)        | If the employer’s right of control over the individual extends no further than directing what is to be ultimately accomplished, the individual is an independent contractor. The employer must not retain the right to dictate the manner of operation or how the work should be done. The factors to be considered in determining whether an individual or an entity has retained the right of control include:  
  1. Direct evidence demonstrating a right or an exercise of control.  
  2. The method of payment for services.  
  3. Whether equipment is furnished.  
  4. Whether the other party has the right to terminate the employment.  
| AK    | No Alaska Pulp Corp. v. United Paperworkers Int’l Union, 791 P.2d 1008 (Alaska 1990) | ALASKA STAT. § 23.30.230 (2017) | The Alaska Supreme Court has adopted the “relative nature of the work” test for distinguishing between employees and independent contractors. The test first considers the character of the individual’s work or business, which is determined by considering three factors:  
  1. The degree of skill involved.  
  2. Whether the individual holds himself out to the public as a separate business.  
  3. Whether the individual bears the accident burden.  
  The test then considers the relationship of the individual’s work or business to the purported employer’s business, which is also broken into three factors:  
  1. The extent to which the individual’s work is a regular part of the employer’s regular work.  
  2. Whether the individual’s work is continuous or intermittent.  
  3. Whether the duration of the work is such that it amounts to hiring of continuous services rather than a contract for a specific job.  

© 2020 National Association of Insurance Commissioners
And person performing the services entered into either a written or oral contract, the employment status the parties believed they were creating in the contract will be given deference. However, the contract will be construed in view of the circumstances under which it was made and the conduct of the parties while the job is being performed.

(2) Is a regular part of the employer’s business or service. If it is a regular part of the employer’s business, there is an inference of employee status.

(3) Can be expected to carry its own accident burden. This element is more important than factors (4)-(6). If the person performing the services is unlikely to be able to meet the costs of industrial accidents out of the payment for the services, there is a strong inference of employee status.

(4) Involves little or no skill or experience. If so, there is an inference of employee status.

(5) Is sufficient to amount to the hiring of continuous services, as distinguished from contracting for the completion of a particular job. If the work amounts to hiring of continuous services, there is an inference of employee status.

(6) Is intermittent, as opposed to continuous. If the work is intermittent, there is a weak inference of no employee status.

AZ Rebuttable presumption of independent contractor status created upon the execution of a written agreement compliant with ARIZ. REV. STAT. ANN. § 23-902 (2017).

An independent contractor is a person engaged in work for a business who is:

(1) Independent of that business in the execution of the work and not subject to the rule or control of the business for which the work is done.

(2) Engaged only in the performance of a definite job or piece of work.

(3) Subordinate to that business only in effecting a result in accordance with that business design.

As for the first element, Arizona courts have adopted the “right to control” test, which examines the following factors:

(1) The duration of the employment.

(2) The method of payment.

(3) Who furnishes necessary equipment.

(4) The right to hire and fire.

(5) The extent to which the employer may exercise control over the details of the work.

(6) Whether the work was performed in the usual and regular course of the employer’s business.

A business or independent contractor may prove the existence of an independent contractor relationship by executing a written agreement stating that the business:

(1) Does not require the independent contractor to perform work exclusively for the business.

(2) Does not provide the independent contractor with any business registrations or licenses required to perform the specific services set forth in the contract.

(3) Does not pay the independent contractor a salary or hourly rate instead of an amount fixed by contract.

(4) Will not terminate the independent contractor before the expiration of the contract period, unless the independent contractor breaches the contract or violates the Arizona law.

(5) Does not provide tools for the independent contractor.

(6) Does not dictate the time of performance.

(7) Pays the independent contractor in the name appearing on the written agreement.

(8) Will not combine business operations with the person performing the services rather than maintaining these operations separately.

| DE    | DEL. CODE. ANN. tit. 19, §§ 2301; 2307; 2308; 2316 (2017) | Delaware courts have adopted § 220 of the Restatement (Second) of Agency in determining a worker’s status. The Restatement requires consideration of the following factors:  
1. The extent of control, which, by the agreement, the master may exercise over the details of the work.  
2. Whether or not the one employed is engaged in a distinct occupation or business.  
3. The kind of occupation, with reference to whether, in the locality, the work is usually done under the discretion of the employer or by a specialist without supervision.  
4. The skill required in the particular occupation.  
5. Whether the employer or the workman supplies the instrumentalities, tools, and the place of work for the person doing the work.  
6. The length of time for which the person is employed.  
7. The method of payment, whether by the time or by the job.  
8. Whether or not the work is a part of the regular business of the employer.  
9. Whether or not the parties believe they are creating the relation of master and servant.  
10. Whether the principal is or is not in business.  
| DC    | D.C. CODE § 32-1501 (2017) | The Department of Employment Services (DOES) applies the “relative nature of the work” test to determine a worker’s status, which focuses on whether the individual is hired to do work in which the company specializes. There are two prongs to the test. First, the nature and character of the individual’s work or business is considered by analyzing three factors:  
1. The degree of skill involved.  
2. The degree to which it is a separate calling or business.  
3. The extent to which it can be expected to carry its own accident burden.  
The second prong analyzes the relationship of the individual’s work to the purported employer’s business. 3 factors are considered:  
1. The extent to which the individual’s work is a regular part of the employer’s regular work.  
2. Whether individual’s work is continuous or intermittent.  
3. Whether the duration is sufficient to amount to the hiring of continuous services, as distinguished from contracting for the completion of a particular job.  
| FL    | FLA. STAT. § 440.02 (2017) | A worker is considered an independent contractor provided at least 4 of the following criteria are met:  
1. The independent contractor maintains a separate business with his or her own work facility, truck, equipment, materials, or similar accommodations.  
2. The independent contractor holds or has applied for a federal employer identification number, unless the independent contractor is a sole proprietor who is not required to obtain a federal employer identification number under state or federal regulations.  
3. The independent contractor receives compensation for services rendered or work performed, and such compensation is paid to a business rather than to an individual. |
(4) The independent contractor holds one or more bank accounts in the name of the business entity for purposes of paying business expenses or other expenses related to services rendered or work performed for compensation.

(5) The independent contractor performs work or is able to perform work for any entity in addition to or besides the employer at his or her own election without the necessity of completing an employment application or process.

(6) The independent contractor receives compensation for work or services rendered on a competitive-bid basis or completion of a task or a set of tasks as defined by a contractual agreement, unless such contractual agreement expressly states that an employment relationship exists.

If four of the criteria above do not exist, an individual may still be presumed to be an independent contractor and not an employee based on full consideration of the nature of the individual situation with regard to satisfying any of the following conditions:

(1) The independent contractor performs or agrees to perform specific services or work for a specific amount of money and controls the means of performing the services or work.

(2) The independent contractor incurs the principal expenses related to the service or work that he or she performs or agrees to perform.

(3) The independent contractor is responsible for the satisfactory completion of the work or services that he or she performs or agrees to perform.

(4) The independent contractor receives compensation for work or services performed for a commission or on a per-job basis and not on any other basis.

(5) The independent contractor may realize a profit or suffer a loss in connection with performing work or services.

(6) The independent contractor has continuing or recurring business liabilities or obligations.

(7) The success or failure of the independent contractor’s business depends on the relationship of business receipts to expenditures.

**FLA. STAT. § 440.02 (2017).**

| GA | No provision | GA. CODE ANN. § 34-9-2 (2017) | An individual is an independent contractor if such person meets all of the following criteria:

(1) Is a party to a contract which intends to create an independent contractor relationship.

(2) Has the right to exercise control over the time, manner, and method of the work to be performed.

(3) Is paid on a set price per job or a per unit basis, rather than on a salary or hourly basis. |

**GA. CODE ANN. § 34-9-2 (2017).**

| HI | No provision | HAW. REV. STAT. § 386-1 (2017) | Both the “control” and “relative nature of the work” tests are used to determine an individual’s status.

Under the “control” test, an employment relationship exists when the person in whose behalf the work is done has the power to dictate the means and methods by which the work is to be accomplished. Conversely, “[o]ne who contracts with another to do a specific piece of work for him [or her], and who furnishes and has the absolute control of his [or her] assistants, and who executes the work entirely in accord with his [or her] ideas, or with a plan previously given him [or her] by the person for whom the work is done, without being subject to the latter's orders in respect of the details of the work, with absolute control thereof…is an independent contractor.”

The “relative nature of the work test” involves a balancing of factors regarding the general relationships which the employee has with regard to the work performed for each of his employers. Relevant factors include:

(1) Whether the work done is an integral part of the employer’s regular business.

(2) Whether the worker, in relation to the employer's business, is in a business or profession of his own. |

<th>Details</th>
</tr>
</thead>
</table>
| ID    | Yes       | IDAHO CODE §§ 72-102; 72-212 (2017) | The test to determine an individual’s status is whether the contract gives, or the employer assumes, the right to control the time, manner and method of executing the work, as distinguished from the right merely to require certain definite results. The Idaho courts use a four-factor test to determine an individual’s status:  
1. There must be evidence of the employer’s right to control the employee.  
2. The method of payment.  
3. Whether the employer or individual furnishes major items of equipment.  
4. Whether either party has the right to terminate the relationship at will, or whether one is liable to the other in the event of a preemptory termination. |
| IL    | No provision | 820 ILL. COMP. STAT. 305/1 (2017) | A number of factors are considered in determining an individual’s status. The most important factor is whether the purported employer has a right to control the actions of the individual, followed by the nature of the work performed by the individual in relation to the general business of the employer. Additional relevant, albeit less important, factors include:  
1. The method of payment.  
2. The right to discharge.  
3. The skill the work requires.  
4. Which party provides the needed instrumentalities.  
5. Whether income tax has been withheld.  
6. The label the parties place upon their relationship. |
| IN    | Yes       | IND. CODE §§ 22-3-2-9; 22-3-6-1 (2017) | The Indiana Supreme Court has adopted the test articulated in § 220 of the Restatement (Second) of Agency in determining a worker’s status. The Restatement requires consideration of the following factors:  
1. The extent of control which, by the agreement, the master may exercise over the details of the work.  
2. Whether or not the one employed is engaged in a distinct occupation or business.  
3. The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.  
4. The skill required in the particular occupation.  
5. Whether the employer or the workman supplies the instrumentalities, tools, and the place of work for the person doing the work.  
6. The length of time for which the person is employed.  
7. The method of payment, whether by the time or by the job.  
8. Whether the work is a part of the regular business of the employer.  
9. Whether the parties believe they are creating the relation of master and servant.  
10. Whether the principal is or is not in business. |
| IA    | Yes       | IOWA CODE § 85.61 (2016) | Iowa courts have adopted two tests for determining a worker’s status. First, in determining the existence of an employer-employee relationship, the courts analyze the following five factors:  
1. The right of selection, or to employ at will.  
2. Responsibility for payment of wages by the employer.  
3. The right to discharge or terminate the relationship.  
4. The right to control the work.  
5. The identity of the employer as the authority in charge of the work or for whose benefit it is performed. Second, in determining whether a worker qualifies as an independent contractor, the courts consider the following eight factors: |
<table>
<thead>
<tr>
<th>State</th>
<th>Status</th>
<th>Statute/Code</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| KS    | No provision | KAN. STAT. ANN. § 44-508 (2014) | Kansas courts have adopted the Restatement factors in determining a worker’s status. However, the single most important factor is whether the employer controls, or has the right to control, the manner and methods of the worker in doing the particular task. Additional considerations include:  
1. Whether or not the one employed is engaged in a distinct occupation or business.  
2. The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.  
3. The skill required in the particular occupation.  
4. Whether the employer or the workman supplies the instrumentalities, tools and the place of work for the person doing the work.  
5. The length of time for which the person is employed.  
6. The method of payment, whether by the time or by the job.  
7. Whether the work is part of the regular business of the employer.  
8. Whether the parties believe they are creating the relation of master and servant.  
9. Whether the principal is or is not in business.  
| KY    | Yes    | KY. REV. STAT. ANN. § 342.640 (2014) | Kentucky courts analyze four predominant factors to determine a worker’s status:  
1. The alleged employer’s right to control the details of the work.  
2. The nature of the work as related to the business generally carried on by the alleged employer.  
3. The professional skill of the individual.  
4. The true intent of the parties.  
The “right to control” factor is the most important in the analysis, which is determined by analyzing the following factors:  
1. Method of payment.  
2. Which party furnishes the equipment.  
3. Whether the alleged employer has the right to discharge the individual performing the work.  
| LA    | Yes    | LA. REV. STAT. ANN. § 23:1021 (2013) | Louisiana courts consider the following factors in determining a worker’s status:  
1. Whether there is a valid contract between the parties.  
2. Whether the work being done is of an independent nature such that the individual may employ non-exclusive means in accomplishing it.  
3. Whether the contract calls for specific piecework as a unit to be done according to the individual’s own methods without being subject to the control and direction of the principal, except as to the result of the services to be rendered.  
4. Whether there is a specific price for the overall undertaking. |
<table>
<thead>
<tr>
<th>State</th>
<th>Yes</th>
<th>Statute/Code References</th>
<th>Criteria</th>
</tr>
</thead>
</table>
| ME    | Yes | ME. REV. STAT. tit. 39-A, § 102 (2013) | An individual is presumed to be an employee unless the employing unit proves that the person is free from the essential direction and control of the employing unit. In order for an individual to be an independent contractor, the following criteria must be met:  
(1) The person has the essential right to control the means and progress of the work except as to final results.  
(2) The person is customarily engaged in an independently established trade, occupation, profession or business.  
(3) The person has the opportunity for profit and loss as a result of the services being performed for the other individual or entity.  
(4) The person hires and pays the person’s assistants, if any, and, to the extent such assistants are employees, supervise the details of the assistants’ work.  
(5) The person makes the person’s services available to some client or customer community even if the person’s right to do so is voluntary not exercised or is temporarily restricted.  
Additionally, at least three of the following criteria must be met:  
(1) The person has a substantive investment in the facilities, tools, instruments, materials and knowledge used by the person to complete the work.  
(2) The person is not required to work exclusively for the other individual or entity.  
(3) The person is responsible for satisfactory completion of the work and may be held contractually responsible for failure to complete the work.  
(4) The parties have a contract that defines the relationship and gives contractual rights in the event the contract is terminated by the other individual or entity prior to completion of the work.  
(5) Payment to the person is based on factors directly related to the work performed and not solely on the amount of time expended by the person.  
(6) The work is outside the usual course of business for which the service is performed.  
(7) The person has been determined to be an independent contractor by the federal Internal Revenue Service (IRS). |
| MD    | Yes | MD. CODE ANN. LAB. & EMP. §§ 9-203 to 9-236 (2009) | Maryland courts consider five criteria in determining a worker’s status. The decisive consideration is the “control” test: whether the employer has the right to control and direct the employee in the performance of the work and in the manner in which the work is done. The following factors are also relevant:  
(1) The power to select and hire the employee.  
(2) The payment of wages.  
(3) The power to discharge.  
(4) Whether the work is part of the regular business of the employer. |
| MA    | Yes | MASS. GEN. LAWS ch. 152, § 1 (2011) | The standard in determining a worker’s status is the same as the common law agency standard, the primary factor being the right to control. Massachusetts courts consider the factors set out in the Restatement (Second) of Agency, which are as follows:  
(1) The extent of control which, by the agreement, the master may exercise over the details of the work.  
(2) Whether or not the one employed is engaged in a distinct occupation or business.  
(3) The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.  
(4) The skill required in the particular occupation. |
Whether the employer or the workman supplies the instrumentalities, tools, and the place of work for the person doing the work.
(6) The length of time for which the person is employed.
(7) The method of payment, whether by the time or by the job.
(8) Whether or not the work is part of the regular business of the employer.
(9) Whether the parties believe they are creating the relation of master and servant.
(10) Whether the principal is or is not in business.

| MI | No provision | MICH. COMP. LAWS §§ 418.115 to 418.120; 418.161 (2017) | In order for a worker to be considered an employee, three criteria must be met. The worker must not:

1. Maintain a separate business.
2. Hold himself or herself out to and render service to the public.
3. Be an employer subject to the worker’s compensation act.

| MN | No provision | Minnesota regulations set forth criteria for 34 specific occupations. Minn. R. 5224.0010 to 5224.0340 (2017). | Minnesota courts have adopted a five-factor test to determine the status of workers not specifically engaged in the occupations enumerated in MINN. R. 5224.0010 to 5224.0340 (2017):

1. The right to control the means and manner of performance.
2. The mode of payment.
3. The furnishing of tools and materials.
4. Control over the premises where the work was done.
5. The right of discharge.

Of the factors, the right to control is the most important. A number of considerations are used to determine whether the employer possesses such a right to control, including:

1. Employer’s authority over the individual’s assistants.
2. The individual’s compliance with instructions.
3. Whether oral or written reports are required to be submitted to the employer.
4. Whether the work is performed on the employer’s premises.
5. Whether services must be personally rendered to the employer.
6. Whether there is a continuing relationship between the parties.
7. Whether the employee has set hours of work.
8. Whether the individual has been trained by the employer.
9. Whether the individual has simultaneous contracts with different firms.
10. Whether tools and materials have been furnished by the employer.
11. Whether the individual’s expenses are reimbursed.
12. Whether the individual’s compensation is dependent on the number of hours worked.
13. Whether the employer is required to enforce standards or restrictions imposed by regulatory and licensing agencies.

Guhlke v. Roberts Truck Lines, 128 N.W.2d 324 (Minn. 1964); Hunter v. Crawford Door Sales, 501 N.W.2d 623 (Minn. 1993); MINN. R. 5224.0330 (2017); Minn. Dept. of Lab. And Indus., Workers’ Compensation – Determining Independent Contractor or Employee Status, https://www.dli.mn.gov/business/workers-compensation/work-comp-independent-contractor-or-employee |

| MS | No provision | MISS. CODE ANN. §§ 71-3-3; 71-3-5 (West 2017) | Mississippi courts have adopted the “right to control” test to determine a worker’s status. The test consists of the following factors:

1. Direct evidence of right or exercise of control.
2. The method of payment.
3. The furnishing of equipment.
4. The employer’s right to fire.

Se. Auto Brokers v. Graves, 210 So.3d 1012 (Miss. Ct. App. 2015); MISS. CODE ANN. § 71-3-3 (West 2011). |

| MO | No | MO. REV. STAT. § 287.020 (2017) | The primary test to determine a worker’s status is the right to control. If an employer has the right to control the means and manner of a worker’s service, the |
worker is an employee rather than an independent contractor. A number of factors are considered in this analysis:

1. The extent of control.
2. The actual exercise of control.
3. The duration of the employment.
4. The right to discharge.
5. The method of payment.
6. The degree to which the alleged employer furnished equipment.
7. The extent to which the work is the regular business of the employer.
8. The employment contract.

Where the control analysis does not settle the issue, the “relative nature of the work” test is also applied. This test analyzes the economic and functional relationship between the nature of the work and a business’ operation. The following factors are considered:

1. The amount of skill the worker’s job requires.
2. The degree to which the work is a separate calling or enterprise.
3. The extent to which the job might be expected to carry its own accident burden.
4. The relation of the job to the employer’s business.
5. Whether the job being performed is continuous or intermittent.
6. Whether the job’s duration amounts to the hiring of continuous services rather than a contract for the completion of a particular job.

Missouri law allows some independent contractors to recover under worker’s compensation law. Individuals having work done under contract on or about their premises that is an operation of the usual business that they carry are considered an employer and are liable to all workers, regardless of status, for worker’s compensation.

MT Yes

In determining whether an individual is an independent contractor, the court will consider the following factors:

1. Direct evidence of right or exercise of control.
2. Method of payment.
3. Furnishing of equipment.
4. Right of employer to fire.

Under MONT. CODE ANN. § 39-71-417 (2011), a worker can apply for an “Independent Contractor Certification” if, among other things, the worker swears to and acknowledges:

1. That the applicant has been and will continue to be free from control or direction over the performance of the person’s own services, both under contract and in fact.
2. That the applicant is engaged in an independently established trade, occupation, profession or business and will provide sufficient documentation of that fact to the department.

NE Yes

| NEB. REV. STAT. §§ 48-106 (2010) |

Nebraska’s workers’ compensation law and case law suggest there is no single test for determining whether one is an employee or independent contractor, but instead the following factors will be considered in the determination of status:

1. The extent of control that the employer may exercise over the details of the work.
2. Whether the one employed is engaged in a distinct occupation or business.
3. The kind of occupation, with reference to whether, in the locality, the work is usually done under the direction of the employer or by a specialist without supervision.
4. The skill required in the particular occupation.
5. Whether the employer or the one employed supplies the instrumentalities, tools, and the place of work for the person doing the work.
6. The length of time for which the one employed is engaged.
7. The method of payment, whether by time or by the job.

| NV    | No       | NEV. REV. STAT. §§ 616A.105 to 616A.360 (2013) | Nevada’s worker’s compensation law defines an independent contractor as any person who renders service for a specified recompense for a specified result, under the control of the person’s principal as to the result of the person’s work only and not as to the means as to which the result is accomplished. Under Nevada’s Industrial Insurance Act, if a worker meets three or more of the following criteria, there is a presumption that the worker is an independent contractor:

1. The person has control and discretion over the means and manner of the performance of any work and the result of the work, rather than the means or manner by which the work is performed, and is the primary item bargained for by the principal in the contract.
2. The person generally has control over the time the work is performed.
3. The person is not required to work exclusively for one principal unless a law, regulation or ordinance otherwise prohibits the person from providing services to more than one principal or the person has entered into a written contract to provide services to only one principal.
4. The person is free to hire employees to assist with the work.
5. The person contributes a substantial investment of capital in the business of the person, including without limitation:
   a. Purchase or lease of ordinary tools, material and equipment.
   b. Obtaining of a license or other permission from the principal to access any work space of the principal to perform the work.
   c. Lease of any work space from the principal required to perform the work for which the person was engaged.

The fact that a person does not satisfy three or more of the listed criteria does not automatically create a presumption that the person is an employee. |
| NH    | Yes      | N.H. REV. STAT. ANN. § 281-A:2 (2017) | Under New Hampshire’s worker’s compensation law, the presumption of employee status can be rebutted if a person meets all of the following criteria:

1. The person possesses or has applied for a federal employer identification number or a social security number, or in the alternative, has agreed in writing to carry out the responsibility imposed on employers under this chapter.
2. The person has control and discretion over the means and manner of performance of the work, in that the result of the work, rather than the means or manner by which the work is performed, is the primary element bargained for by the employer.
3. The person has control over the time when the work is performed, and the time of performance is not dictated by the employer, although the employer may still prescribe a completion schedule, range of work hours and maximum number of work hours to be provided by the person.
4. The person hires and pays the person’s assistants, if any, and to the extent such assistants are employees, supervises the details of the assistants’ work.
5. The person holds himself or herself out to be in business for himself or herself or is registered with the state as a business and the person has continuing or recurring business liabilities or obligations.
6. The person is responsible for satisfactory completion of work and may be held contractually responsible for failure to complete the work.
7. The person is not required to work exclusively for the employer. |

| NJ    | Yes    | N.J. STAT. ANN. § 43:21-19 (2010) | Under New Jersey’s unemployment law, services provided for remuneration shall be deemed to be under an employment relationship unless it is shown that:  
 1. An individual has been and will continue to be free from control or direction over the performance of such service, both under his contract of service and in fact.  
 2. Such service is either outside the usual course of the business for which such service is performed, or that such service is performed outside of all the places of business of the enterprise for which such service is performed.  
 3. Such individual is customarily engaged in an independently established trade, occupation, profession or business.  
The New Jersey Supreme Court in Hargrove v. Sleepy’s, LLC, 106 A.3d 449 (2015) adopted the above test for worker’s compensation purposes and stated that for determining whether an individual is an employee or an independent contractor, the courts must consider twelve factors:  
 1. The employer’s right to control the means and manner of the worker’s performance.  
 2. The kind of occupation and whether the work is supervised or unsupervised.  
 3. The amount of skill involved.  
 4. Who furnishes the equipment and workplace.  
 5. The length of time in which the individual has worked.  
 6. The method of payment.  
 7. The manner of termination of the work relationship.  
 8. Whether there is annual leave.  
 9. Whether the work is an integral part of the business of the employer.  
10. Whether the worker accrues retirement benefits.  
11. Whether the employer pays social security taxes.  
12. The intention of the parties.  
| NM    | Yes    | No provision | New Mexico courts will first employ a “right-to-control” test to determine whether a worker is an employee or independent contractor. If the right-to-control test points to independence, the court will then apply a “relative-nature of the work” test.  
Factors that may be considered in determining existence of employment relationship include:  
1. Direct evidence of exercise of control.  
2. The right to terminate employment relationship at will by either party without liability  
3. The right to delegate work or to hire and fire assistants.  
4. The method of payment whether by time or by job.  
5. Whether the party employed engages in distinct operation or business.  
6. Whether the work is part of employer’s regular business.  
7. Skill required in particular occupation.  
8. Whether the employer supplies instrumentalities, tools or place of work.  
9. Duration of person’s employment.  
10. Whether the person works full-time or part-time of control by one and submission to control by the other.  
| NY    | Yes    | Presumption for employment for construction workers unless the worker is a “separate business entity” § 861-c; N.Y. WORKER’S | An independent contractor is one who is:  
1. Free from control and direction in performing the job, both under his contract and in fact.  
2. The service is performed outside the usual course of business for which the service is performed.  
3. The individual is customarily engaged in an independently established trade, occupation, profession or business that is similar to the service at issue.  
When making a determination of whether an employer-employee relationship exists, the New York courts will consider factors such as the right to control the |

North Carolina courts define “independent contractor” as one who exercises an independent employment and contracts to do certain work according to his own judgment and method, without being subject to his employer except as to the result of his work.

The determinative factor in North Carolina courts as to whether a person is an employee or independent contractor for purposes of workers’ compensation is control. North Carolina courts will use the “right to control” when determining whether a person is an employee or an independent contractor for purposes of the Workers’ Compensation Act. Generally, where an employer has the right to control over the means and the methods of an employee’s work, there will be an employer-employee relationship. The requirement of control is sufficiently met where its extent is commensurate with that degree of supervision that is necessary and appropriate considering the type of work to be done and the capabilities of the person doing it.

The North Carolina courts will also look at eight factors which indicate classification as independent contractor, including:

1. The worker is engaged in independent business, calling, or occupation.
2. The worker has independent use of his or her special skill, knowledge, or training in execution of work.
3. The worker is doing specified piece of work at fixed price or for lump sum or upon quantitative basis.
4. The worker is not subject to discharge because he adopts one method of doing work rather than another.
5. The worker is not in regular employ of other contracting party.
6. The worker is free to use such assistants as he or she may think proper.
7. The worker has full control over such assistants.
8. The worker is able to select his or her own time.

North Dakota courts consider 20 factors when determining whether a worker is an independent contractor or an employee:

1. The amount of instructions given to the employee by the employer.
2. The amount of training given to the employee.
3. The amount of integration of a person’s services into the business operations.
4. Services rendered personally. If the services must be rendered personally, the person whom the services are performed for are interested in the methods used, which goes towards employer-employee relationship.
5. The ability to hire, supervise, and pay assistants.
6. The continuing relationship between the person and person(s) for whom the services are performed.
7. Set hours of work.
8. Whether full-time is required. An independent contractor is one who is free to work when and for whom he or she chooses. Full-time required suggests an employer-employee relationship.
9. Where the work is performed.
10. The order or sequence set the work must be performed.
11. Whether there is a requirement for regular oral or written reports.
12. How the worker is paid.
13. Whether there is payment of business or traveling expenses, or both.
14. Who is responsible for furnishing of tools and materials.
15. Whether there is significant investment in facilities used by the workman.
16. Realization of profit or loss: A person who may realize a profit or suffer a loss as a result of the person’s services (in addition to the profit or loss ordinarily realized by employees) is generally an independent contractor, but the person who cannot is an employee.

</tbody>
</table>

The general test for determining independent contractor status considers the following factors: who has the right to direct what shall be done and when and how it shall be done; the existence of a contract for the performance by a person of a certain piece or kind of work at a fixed price; the independent nature of the worker’s business; the worker’s employment of assistants with the right to supervise their activities; his or her obligation to furnish the necessary tools, supplies, and materials; his or her right to control the progress of the work except as to final results; the time for which the workman is employed; the method of payment, whether by time or by job; and whether the work is part of the regular business of the employer.

Gillum v. Ind. Com’n, 141 Ohio St. 373 (1943).
